1. Block Library and Curated Design Pages

The block library and the curated design pages are AEM content of the language master (`/content/tcs-corp/language-masters/en/block-library/...` and `.../curated-design-pages/...`), built as a content package from the corrected models; the build workspace (`.home-work/`, with `render-lib.mjs` for the local preview and `bl/bl-migrate.mjs` for migrations) is not in git. Each locale also has a `block-library/` folder, excluded from publishing in `paths.json`; the language master is published at `/language-masters/en` while it is under review (temporary, `REVIEW_*` in `utils/site.js`).

Uses:

- **Validation of every variation**: each block has library pages (e.g. `block-library/list/sources`, `block-library/animation/speed-and-trigger`, `block-library/foundations/section-colours-with-blocks` for the dark-background theme contract).
- **Design reference**: 11 curated design pages (case study, collection, home, industry landing page, insights, media and investor, product, services, story, what we do, who we are) rebuild Figma page designs from blocks.
- **Regression runs**: the audits loaded every library and curated page at 5 widths with axe and data-layer checks (188 pages, 940 loads) and compared aem.page with the local preview.
- **Example values in the READMEs**: `npm run build:docs` reads the library snapshot for the "Example" column and the usage section of each README.

Usage recorded in tools/docs/library-snapshot.json (package 1.0.14; instances in all pages; pages counted once per block; "other" are the dummy pages used as List and Filter List sources):

Block	Instances	Library pages	Curated pages	Other pages
