D	Image (Teaser › Image)	Select the asset tall.svg (/en/media/tall.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	A team in a modern office	No	Alt text / animation label	Empty if decorative	None
(F)	Image ratio (Teaser › Image)	Portrait (8:9)	No	Image proportion	Portrait for people	Options: Default (10:9), Portrait (8:9), Square (1:1), Original; shown for Image & Text and Text split
(G)	Vertical alignment (Teaser › Style)	Top	No	Vertical alignment of columns	Top for long text	Options: Layout default, Top, Center, Bottom
H	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
I	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
J	Secondary CTA Title (Teaser › Links)	Explore cloud services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
K	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services/cloud	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The tall.svg image at 8:9 on the left; the eyebrow "Cloud services" level with its top edge, followed by the title "Text aligned to the top of the image", the description and the two buttons, leaving space below.
- **Rendering behaviour:** valign-top sets align-items start on the grid (from 900 px); in Background image it also sets justify-content flex-start.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; tall.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Top is useful for long text next to a tall image.
- Keep Layout default for Card: Top changes how the card content stretches.
- Below 900 px the columns stack, so Top has no visible effect for Image & Text.

Common Authoring Mistakes

Error	Root Cause	Resolution
No change is visible on the phone	Columns stack below 900 px	Check at 900 px or wider
Card links move to the top	Vertical alignment Top used on a Card	Set Vertical alignment to Layout default on Cards

Troubleshooting

- **Symptoms:** The text stays centred against the image at 1440 px.
- **Cause:** Vertical alignment was saved as Layout default or set on a different teaser.
- **Resolution:** Select this teaser, set Vertical alignment to Top and publish the page.
- **Verification Steps:** The block has the class valign-top and the eyebrow aligns with the image top.

Use Cases: Long text next to a tall image.

Authoring Guidelines: Vertical alignment = Top.

Business Rules: Recommended: keep Layout default for Card (the option changes how the card content stretches).

Rendering Rules: `align-items: start`; Background image also `justify-content: flex-start`.

Responsive Behaviour: Desktop (900 px+) for Image & Text / Text split; all widths for Background image.

SEO Impact: None.

Accessibility Compliance: None.

Variation 28 — Vertical alignment "Center"

Variation Name: Vertical alignment "Center" (class `valign-middle`).

Business Purpose: Centre the columns against each other, e.g. in Text split.

Visual Example:

Figure 31: Centre alignment — A Text split teaser at 1440 px with Vertical alignment Center: the eyebrow Insights above; the short title AI at scale on the left, vertically centred against the right column with the long description and the List rows Cloud migration, Business and technology consulting and Industries we serve. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-valign-middle.jpg)

Screenshot Details — Centre alignment

Item	Detail
Screenshot Name	`screenshots/teaser-valign-middle.jpg`

Item	Detail
Screenshot Purpose	Centre alignment
Screen Description	A Text split teaser at 1440 px with Vertical alignment Center: the eyebrow Insights above; the short title AI at scale on the left, vertically centred against the right column with the long description and the List rows Cloud migration, Business and technology consulting and Industries we serve.
Business Context	An AI research section where a short title faces a long body with three related links, so the title is centred against the right column.
Author Objective	Set Vertical alignment to Center on a Text split teaser with three List links.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	AI at scale	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Our research across 1,500 enterprises shows that the leaders connect data across functions, automate routine decisions and invest early in the skills their teams need. They treat AI as an operating model, not a project, and measure value in every release.	No	Main text	Up to 300 characters (Recommended)	None
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(E)	Vertical alignment (Teaser › Style)	Center	No	Vertical alignment of columns	Top for long text	Options: Layout default, Top, Center, Bottom
(F)	Multiple links (Teaser › Links)	On	No	List of links instead of two CTAs	On for 3+ links	None
G	CTA Title (Teaser › Links › Links › Item 1)	Cloud migration	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
H	CTA Link (Teaser › Links › Links › Item 1)	Select the page or enter /en/services/cloud/migration	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(I)	CTA Link Style (Teaser › Links › Links › Item 1)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
J	CTA Title (Teaser › Links › Links › Item 2)	Business and technology consulting	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
K	CTA Link (Teaser › Links › Links › Item 2)	Select the page or enter /en/services/consulting	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(L)	CTA Link Style (Teaser › Links › Links › Item 2)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
M	CTA Title (Teaser › Links › Links › Item 3)	Industries we serve	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
N	CTA Link (Teaser › Links › Links › Item 3)	Select the page or enter /en/industries	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(O)	CTA Link Style (Teaser › Links › Links › Item 3)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow "Insights" across the top; the short title "AI at scale" on the left, vertically centred against the right column with the long description and the List rows "Cloud migration", "Business and technology consulting" and "Industries we serve".
- **Rendering behaviour:** valign-middle sets align-items center; in Text split from 900 px the content grid also centres its columns. Below 900 px the content is a single column.
- **Publishing behaviour:** Only the page is published. Publish to Preview, open the three List link targets, then Publish to Live.

Business Rules

- Text split defaults to top alignment; Center is an explicit choice here.
- The three Links items use CTA Link Style List and share one list with dividers.
- Description up to about 600 characters in Text split.

Common Authoring Mistakes

Error	Root Cause	Resolution
The title stays at the top	Vertical alignment left on Layout default (top for Text split)	Set Vertical alignment to Center

Error	Root Cause	Resolution
The rows show without dividers	CTA Link Style left on Text link	Set CTA Link Style to List in each item

Troubleshooting

- **Symptoms:** One of the three List rows is missing.
- **Cause:** That Links item has a CTA Title but no CTA Link, and items without a link are dropped.
- **Resolution:** Select the page in the item's CTA Link (for example /en/industries) and publish.
- **Verification Steps:** Three rows with dividers between them render under the description.

Use Cases: Text split with a short title and a long body.

Authoring Guidelines: Vertical alignment = Center.

Business Rules: Equals the default for Image & Text and Background image.

Rendering Rules: `align-items: center`; in Text split from 900 px the content grid `align-items: center`.

Responsive Behaviour: Desktop for the two-column layouts.

SEO Impact: None.

Accessibility Compliance: None.

Variation 29 — Vertical alignment "Bottom"

Variation Name: Vertical alignment "Bottom" (class `valign-bottom`).

Business Purpose: Align the text to the bottom of the image, or put Background image text at the bottom.

Visual Example:

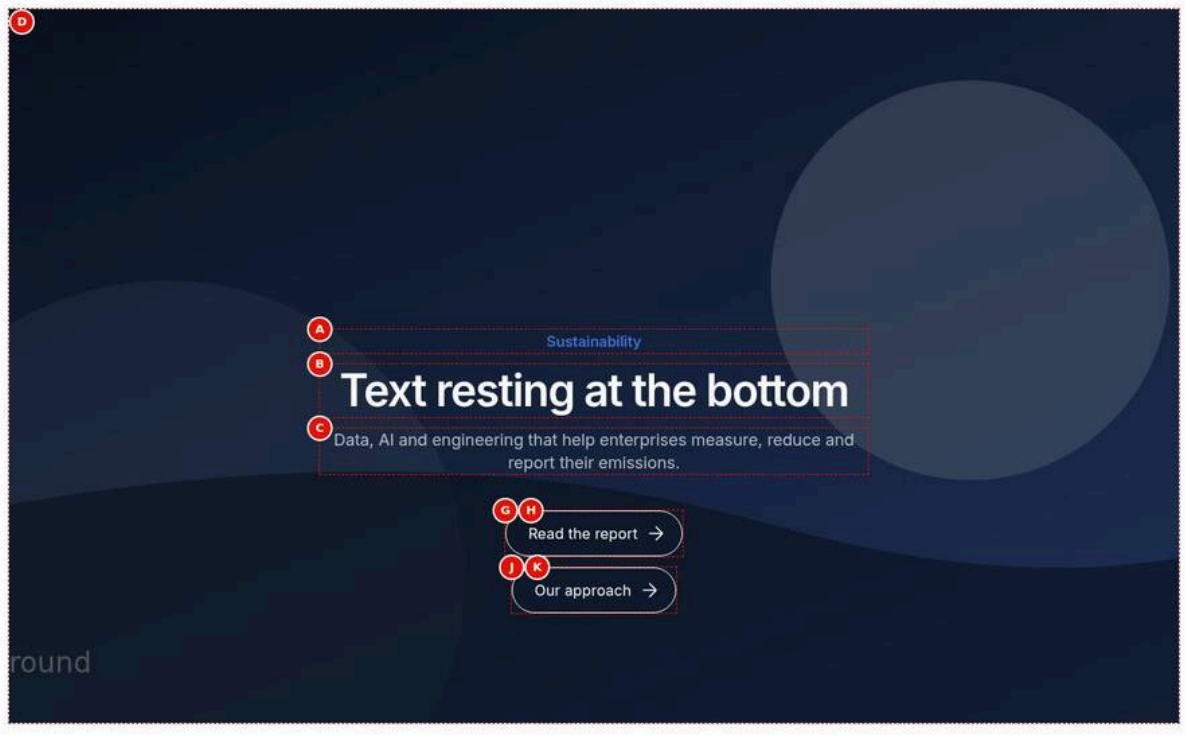

Figure 32: Bottom alignment — A Background image teaser at 1440 px with Vertical alignment Bottom: wide.svg under the dark overlay, with the centred eyebrow Sustainability, the white title Text resting at the bottom, the description and the white outline buttons Read the report and Our approach in the lower part of the banner. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-valign-bottom.jpg)

Screenshot Details — Bottom alignment

Item	Detail
Screenshot Name	`screenshots/teaser-valign-bottom.jpg`
Screenshot Purpose	Bottom alignment
Screen Description	A Background image teaser at 1440 px with Vertical alignment Bottom: wide.svg under the dark overlay, with the centred eyebrow Sustainability, the white title Text resting at the bottom, the description and the white outline buttons Read the report and Our approach in the lower part of the banner.
Business Context	An editorial sustainability banner whose statement rests at the bottom of the background image, leaving the top of the picture free.
Author Objective	Set Vertical alignment to Bottom on a Background image teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Sustainability	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Text resting at the bottom	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Data, AI and engineering that help enterprises measure, reduce and report their emissions.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset wide.svg (/en/media/wide.svg)	No	Image or animation	See Layout for placement	None
(E)	Layout (Teaser › Style)	Background image	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(F)	Vertical alignment (Teaser › Style)	Bottom	No	Vertical alignment of columns	Top for long text	Options: Layout default, Top, Center, Bottom
G	Primary CTA Title (Teaser › Links)	Read the report	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/insights	No	Primary CTA target	Page or URL	Shown only with Multiple links off
(I)	Primary CTA Link Style (Teaser › Links)	Secondary Button	No	Primary CTA style	Keep Primary	Options: Text link, List, Primary Button, Secondary Button; shown only with Multiple links off

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
J	Secondary CTA Title (Teaser › Links)	Our approach	No	Secondary CTA text	Verb first	Shown only with Multiple links off
K	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (E), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The wide.svg banner under the dark overlay with the centred eyebrow "Sustainability", the white title "Text resting at the bottom", the description and the two white outline buttons placed at the bottom of the banner.
- **Rendering behaviour:** valign-bottom sets justify-content flex-end on the Background image flex column, at every width; the text stays horizontally centred.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; wide.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- For Background image the vertical position works at all widths.
- Avoid Bottom on Card: it changes how the card content stretches.
- Keep the bottom area of the image calm so the white text stays readable.

Common Authoring Mistakes

Error	Root Cause	Resolution
The text sits over a busy part of the image	The image has detail at the bottom	Choose an image with a calm lower area or use Layout default
Nothing moves in Image & Text on phones	Bottom only applies where columns sit side by side	Check at 900 px or wider

Troubleshooting

- **Symptoms:** The banner is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** wide.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish wide.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the banner shows the picture.

Use Cases: Editorial banners.

Authoring Guidelines: Vertical alignment = Bottom.

Business Rules: As Top (avoid for Card).

Rendering Rules: `align-items: end`; Background image `justify-content: flex-end`; Text split grid `align-items: end` from 900 px.

Responsive Behaviour: As Top.

SEO Impact: None.

Accessibility Compliance: None.

Variation 30 — Title size "Layout default"

Variation Name: Title size "Layout default" (no class).

Business Purpose: The layout's designed title size.

Visual Example:

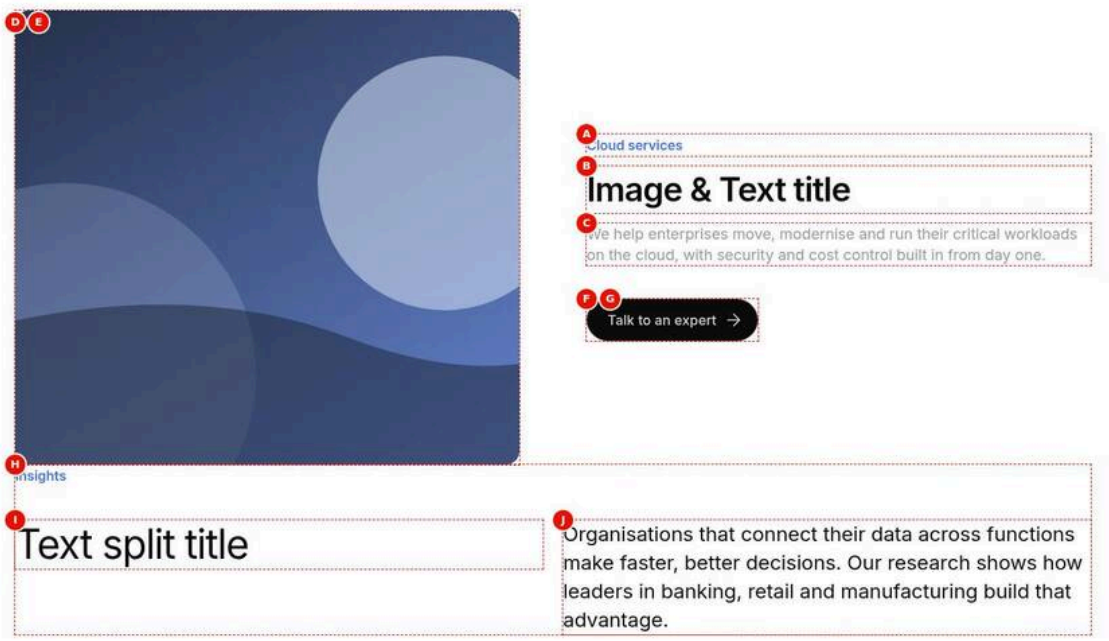

Figure 33: Default title size — Two teasers at 1440 px stacked one above the other: an Image & Text teaser with photo-2 and the semibold 2.5rem title Image & Text title with the button Talk to an expert; below it a Text split teaser with the regular-weight 3rem title Text split title on the left and the description on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-title-default.jpg)

Screenshot Details — Default title size

Item	Detail
Screenshot Name	`screenshots/teaser-title-default.jpg`
Screenshot Purpose	Default title size
Screen Description	Two teasers at 1440 px stacked one above the other: an Image & Text teaser with photo-2 and the semibold 2.5rem title Image & Text title with the button Talk to an expert; below it a Text split teaser with the regular-weight 3rem title Text split title on the left and the description on the right.
Business Context	Two teasers comparing the designed title sizes: the Image & Text title beside an image and the larger Text split title.
Author Objective	Add an Image & Text and a Text split teaser and keep Title size on Layout default for both.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Image & Text title	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
H	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
I	Title (Teaser › Content)	Text split title	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
J	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.	No	Main text	Up to 300 characters (Recommended)	None
(K)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (K), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Top: photo-2 on the left with the semibold 2.5rem title "Image & Text title" and a button. Below: the regular-weight 3rem title "Text split title" on the left and the description on the right.
- **Rendering behaviour:** Image & Text with media uses heading XL (2.5rem from 900 px, 1.75rem below); every other layout heading XXL (3rem, 2rem).
- **Publishing behaviour:** Publish photo-2.svg with the page, then Publish to Preview and Live; both teasers go out with the page.

Business Rules

- Layout default: 2.5rem beside an image, 3rem in all other layouts.
- Title Type does not change the size; only Title size does.
- The sizes step at 900 px.

Common Authoring Mistakes

Error	Root Cause	Resolution
The author changes Title Type to make a title bigger	Heading level confused with size	Use Title size and keep the right heading level
Titles of neighbouring teasers differ in size	Different layouts have different default sizes	Set the same Title size on both if they must match

Troubleshooting

- **Symptoms:** The first teaser's image column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-2.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-2.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the first teaser's image column shows the picture.

Use Cases: Default.

Authoring Guidelines: Style tab: Title size = Layout default.

Business Rules: Heading XL (1.75rem mobile, 2.5rem desktop) for Image & Text with media; heading XXL (2rem, 3rem) for every other layout.

Rendering Rules: `.teaser-title` and the layout rules.

Responsive Behaviour: Steps at 900 px.

SEO Impact: None.

Accessibility Compliance: Text resizes with browser zoom (rem units).

Variation 31 — Title size "Medium (40px)"

Variation Name: Title size "Medium (40px)" (class `title-m`).

Business Purpose: A smaller title in layouts that default to XXL.

Visual Example:

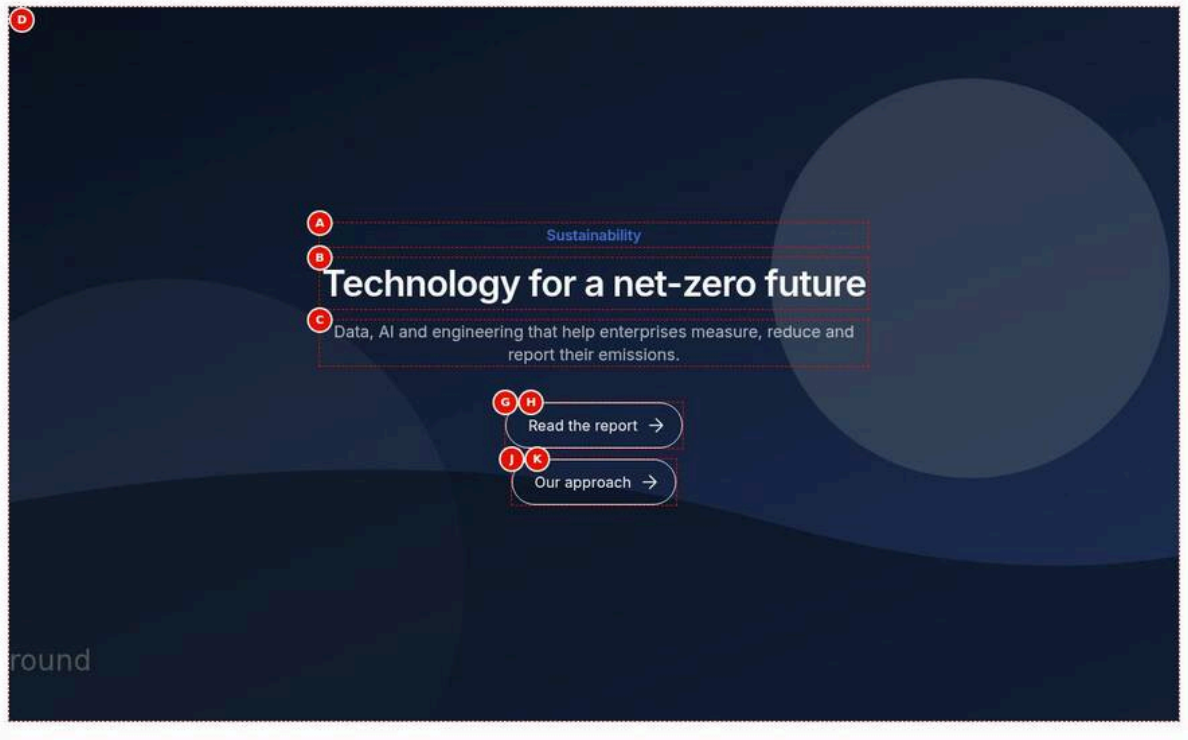

Figure 34: Medium title — A Background image teaser at 1440 px with Title size Medium: wide.svg under the dark overlay with the centred eyebrow Sustainability, the 2.5rem white title Technology for a net-zero future, the description and the white outline buttons Read the report and Our approach. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-title-m.jpg)

Screenshot Details — Medium title

Item	Detail
Screenshot Name	`screenshots/teaser-title-m.jpg`
Screenshot Purpose	Medium title
Screen Description	A Background image teaser at 1440 px with Title size Medium: wide.svg under the dark overlay with the centred eyebrow Sustainability, the 2.5rem white title Technology for a net-zero future, the description and the white outline buttons Read the report and Our approach.
Business Context	A sustainability banner with a long title, reduced to the Medium size so it fits the Background image banner in fewer lines.
Author Objective	Set Title size to Medium (40px) on a Background image teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Sustainability	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Technology for a net-zero future	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Description (Teaser › Content)	Data, AI and engineering that help enterprises measure, reduce and report their emissions.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset wide.svg (/en/media/wide.svg)	No	Image or animation	See Layout for placement	None
(E)	Layout (Teaser › Style)	Background image	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(F)	Title size (Teaser › Style)	Medium (40px)	No	Title size	Display only for 1–3 words	Options: Layout default, Medium (40px), Large (48px), Extra large (64px), Display (96px)
G	Primary CTA Title (Teaser › Links)	Read the report	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/insights	No	Primary CTA target	Page or URL	Shown only with Multiple links off
(I)	Primary CTA Link Style (Teaser › Links)	Secondary Button	No	Primary CTA style	Keep Primary	Options: Text link, List, Primary Button, Secondary Button; shown only with Multiple links off
J	Secondary CTA Title (Teaser › Links)	Our approach	No	Secondary CTA text	Verb first	Shown only with Multiple links off
K	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (E), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The wide.svg banner under the dark overlay with the centred eyebrow, the 2.5rem white title "Technology for a net-zero future" (smaller than the layout's 3rem), the description and the two white outline buttons.
- **Rendering behaviour:** title-m uses –heading-font-size-xl: 2.5rem from 900 px, 1.75rem below, line height 1.4 and letter spacing -0.025 of the size.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; wide.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Medium is the default size only for Image & Text with an image; here it reduces the 3rem default.
- The 40px label is the desktop size.

- Primary CTA Link Style Secondary Button keeps both buttons white on the overlay.

Common Authoring Mistakes

Error	Root Cause	Resolution
The size does not change	Title size set on another teaser of the page	Select this teaser and set Title size again
The title wraps awkwardly on phones	A long title at 1.75rem on 375 px	Shorten the title

Troubleshooting

- **Symptoms:** The banner is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** wide.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish wide.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the banner shows the picture.

Use Cases: Long titles, dense pages.

Authoring Guidelines: Title size = Medium (40px).

Business Rules: 40 px is the desktop size; mobile 1.75rem (28 px).

Rendering Rules: `font-size: var(--heading-font-size-xl)`, line height 1.4, letter spacing –0.025 of the size.

Responsive Behaviour: 1.75rem below 900 px, 2.5rem from 900 px.

SEO Impact: None (size only).

Accessibility Compliance: None.

Variation 32 — Title size "Large (48px)"

Variation Name: Title size "Large (48px)" (class `title-l`).

Business Purpose: A larger title for Image & Text teasers.

Visual Example:

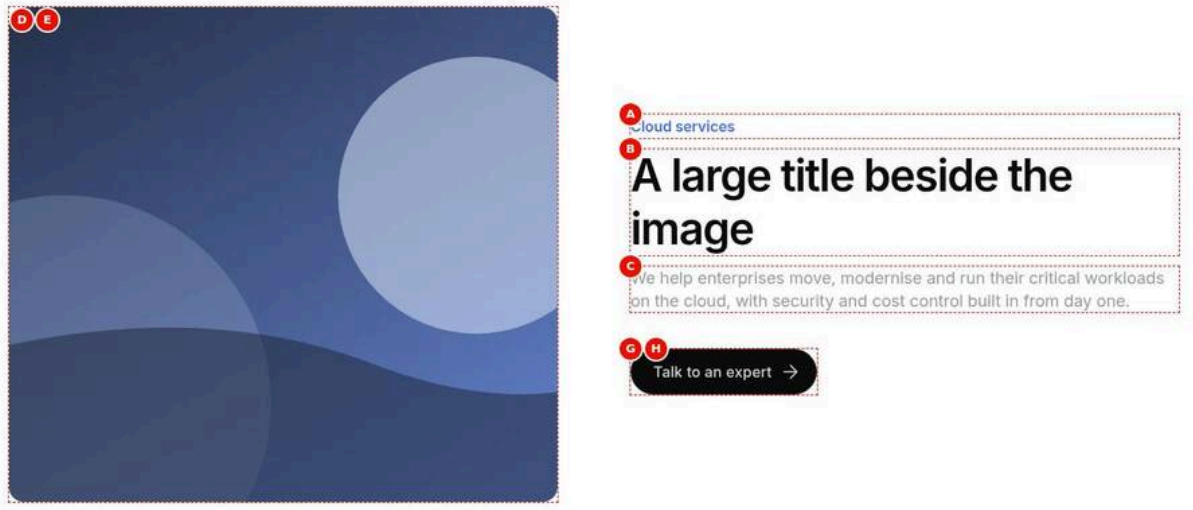

Figure 35: Large title — An Image & Text teaser at 1440 px: the rounded image photo-2 on the left; the brand-blue eyebrow Cloud services, the semibold title A large title beside the image at 3rem (Title size Large) over two lines, the description and the button Talk to an expert on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-title-l.jpg)

Screenshot Details — Large title

Item	Detail
Screenshot Name	`screenshots/teaser-title-l.jpg`
Screenshot Purpose	Large title
Screen Description	An Image & Text teaser at 1440 px: the rounded image photo-2 on the left; the brand-blue eyebrow Cloud services, the semibold title A large title beside the image at 3rem (Title size Large) over two lines, the description and the button Talk to an expert on the right.
Business Context	A key cloud services promotion whose title should be more prominent than the default Image & Text title.
Author Objective	Set Title size to Large (48px) on an Image & Text teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	A large title beside the image	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
(F)	Title size (Teaser › Style)	Large (48px)	No	Title size	Display only for 1–3 words	Options: Layout default, Medium (40px), Large (48px), Extra large (64px), Display (96px)
G	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-2 on the left; on the right the eyebrow "Cloud services", the 3rem semibold title "A large title beside the image" over two lines, the description and the "Talk to an expert" button.
- **Rendering behaviour:** title-l uses –heading-font-size-xxl: 3rem from 900 px, 2rem below, line height 1.2, letter spacing –0.03 of the size.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Large is the default for layouts without an image; here it enlarges the Image & Text title.
- Use it for key promotions, not on every teaser of a page.
- Title weight stays semibold unless changed.

Common Authoring Mistakes

Error	Root Cause	Resolution
The title pushes the button below the image height	A long title at 3rem	Shorten the title to two lines
The teaser shows centred text without the picture	Image left empty, Hide Image on, or the asset not selected from AEM Assets	Select photo-2.svg in Image and keep Hide Image off

Troubleshooting

- **Symptoms:** The left column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-2.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-2.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Use Cases: Key promotions.

Authoring Guidelines: Title size = Large (48px).

Business Rules: 48 px desktop, 2rem (32 px) mobile.

Rendering Rules: `--heading-font-size-xxl`, line height 1.2, letter spacing –0.03.

Responsive Behaviour: Steps at 900 px.

SEO Impact: None.

Accessibility Compliance: None.

Variation 33 — Title size "Extra large (64px)"

Variation Name: Title size "Extra large (64px)" (class `title-xl`).

Business Purpose: Hero-like titles inside the page, e.g. secondary page headers.

Visual Example:

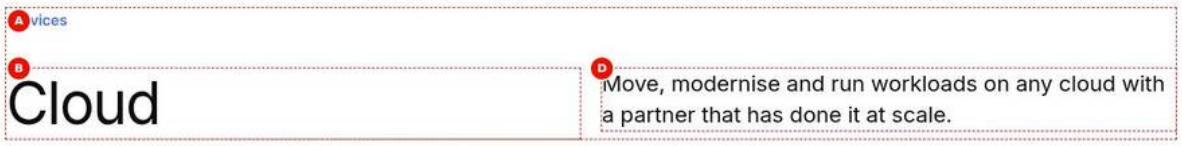

Figure 36: Extra large title — A Text split teaser at 1440 px with Title Type H1 and Title size Extra large: the eyebrow Services above, the 4rem regular-weight title Cloud on the left and the description Move, modernise and run workloads on any cloud… on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-title-xl.jpg)

Screenshot Details — Extra large title

Item	Detail
Screenshot Name	`screenshots/teaser-title-xl.jpg`
Screenshot Purpose	Extra large title
Screen Description	A Text split teaser at 1440 px with Title Type H1 and Title size Extra large: the eyebrow Services above, the 4rem regular-weight title Cloud on the left and the description Move, modernise and run workloads on any cloud… on the right.
Business Context	The page-opening statement of a cloud services landing page: a one-word title at 64 px carries the page and is its H1.
Author Objective	Set Title Type H1 and Title size Extra large (64px) on a Text split teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Cloud	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Title Type (Teaser › Content)	H1	No	Heading level	H2 in the page flow; H1 only for a page-opening teaser	Options: H1, H2, H3, H4, H5, H6
D	Description (Teaser › Content)	Move, modernise and run workloads on any cloud with a partner that has done it at scale.	No	Main text	Up to 300 characters (Recommended)	None
(E)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(F)	Title size (Teaser › Style)	Extra large (64px)	No	Title size	Display only for 1–3 words	Options: Layout default, Medium (40px), Large (48px), Extra large (64px), Display (96px)

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow "Services" above; the very large regular-weight title "Cloud" on the left and the description "Move, modernise and run workloads…" on the right.
- **Rendering behaviour:** title-xl uses –display-font-size-2: 4rem from 900 px, 2.5rem below, line height 1.2; the title is an h1 element with class teaser-title.
- **Publishing behaviour:** Only the page is published. Publish to Preview, check that the page has exactly one H1, then Publish to Live.

Business Rules

- Title Type H1 only when no Hero or Page Header provides the H1.
- The 64px in the label is the desktop size; phones show 2.5rem.
- Text split keeps its regular weight unless Title weight is changed.
- Keep XL titles short; long titles wrap over many lines.

Common Authoring Mistakes

Error	Root Cause	Resolution
The page ends up with two H1 headings	Title Type set to H1 on a teaser below a Hero or Page Header	Keep Title Type H2 for teasers in the page flow and use Title size to make the title bigger
The title wraps over five lines on phones	A long title with Extra large	Shorten the title or use Large (48px)

Troubleshooting

- **Symptoms:** An SEO check reports two H1 headings on the page.
- **Cause:** This teaser uses Title Type H1 and the page also has a Hero or Page Header.
- **Resolution:** Set Title Type back to H2 on the teaser and keep the size with Title size.
- **Verification Steps:** The accessibility tree shows one H1 and the teaser title as H2 with the same look.

Use Cases: Secondary page headers, campaign statements.

Authoring Guidelines: Title size = Extra large (64px).

Business Rules: 64 px desktop, 2.5rem (40 px) mobile.

Rendering Rules: `--display-font-size-2`, line height 1.2, letter spacing –0.03.

Responsive Behaviour: Steps at 900 px.

SEO Impact: Consider Title Type H1 when the teaser opens a page without a Hero / Page Header.

Accessibility Compliance: None.

Variation 34 — Title size "Display (96px)"

Variation Name: Title size "Display (96px)" (class `title-display`).

Business Purpose: The largest display title.

Visual Example:

Figure 37: Display title — A teaser at 1440 px with only a title and Title size Display: the semibold 6rem title Built on belief centred on the white page over two lines, without eyebrow, description or links. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-title-display.jpg)

Screenshot Details — Display title

Item	Detail
Screenshot Name	`screenshots/teaser-title-display.jpg`
Screenshot Purpose	Display title
Screen Description	A teaser at 1440 px with only a title and Title size Display: the semibold 6rem title Built on belief centred on the white page over two lines, without eyebrow, description or links.
Business Context	A brand statement between page sections: three words at the largest display size, without eyebrow, description or links.
Author Objective	Add a teaser with only a Title and set Title size to Display (96px).

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Title (Teaser › Content)	Built on belief	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
(B)	Title size (Teaser › Style)	Display (96px)	No	Title size	Display only for 1–3 words	Options: Layout default, Medium

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
						(40px), Large (48px), Extra large (64px), Display (96px)

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Centred on the white page the semibold title "Built on belief" at 6rem over two lines; nothing else.
- **Rendering behaviour:** title-display uses –display-font-size-1 (2.75rem below 900 px) and from 900 px font-size 6rem with letter spacing –0.12rem; without an image the content is centred in a 37.5rem column.
- **Publishing behaviour:** Only the page is published. Publish to Preview, check the title at 320 px and 375 px, then Publish to Live.

Business Rules

- Keep Display titles to one to three words (up to about 25 characters).
- A teaser with only a title is valid; empty parts are not rendered.
- The heading is still an H2 by default; set Title Type to fit the page outline.
- Long words may overflow narrow screens: test at 320 px.

Common Authoring Mistakes

Error	Root Cause	Resolution
A word runs off the screen on phones	A long word at 2.75rem on a 320 px screen	Use shorter words or Title size Extra large
The title is not centred	Text alignment set to Left	Set Text alignment to Layout default

Troubleshooting

- **Symptoms:** On a 320 px phone the title "Built on belief" overflows to the right.
- **Cause:** The Display size is 2.75rem below 900 px and a long word does not fit the column.
- **Resolution:** Shorten the words or choose Title size Extra large, then publish.
- **Verification Steps:** In responsive mode at 320 px the title fits without a horizontal scroll bar.

Use Cases: One- to three-word statements.

Authoring Guidelines: Title size = Display (96px); keep the title very short.

Business Rules: 96 px (6rem) from 900 px, 2.75rem (44 px) below.

Rendering Rules: `--display-font-size-1`, line height 1.2; from 900 px `font-size: 6rem`, `letter-spacing: -0.12rem`.

Responsive Behaviour: Steps at 900 px.

SEO Impact: None.

Accessibility Compliance: Long words may overflow narrow screens: test at 320 px.

Variation 35 — Title weight "Layout default"

Variation Name: Title weight "Layout default" (no class).

Business Purpose: The layout's designed weight.

Visual Example:

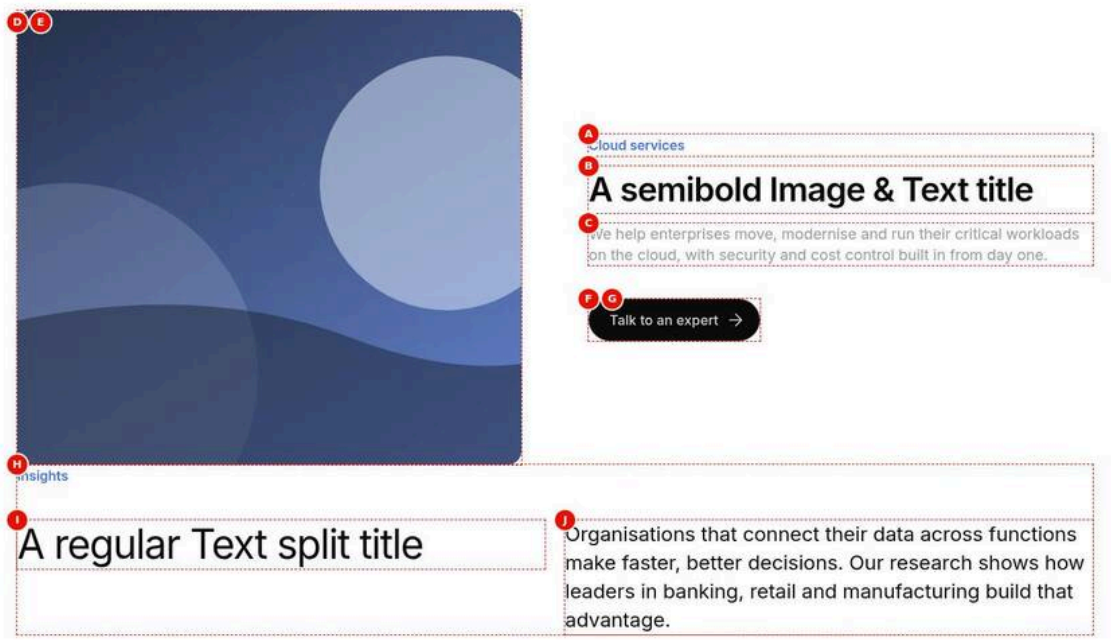

Figure 38: Default title weight — Two teasers at 1440 px stacked one above the other: an Image & Text teaser with photo-2 and the semibold title A semibold Image & Text title with the button Talk to an expert; below it a Text split teaser with the regular-weight title A regular Text split title on the left and the description on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-title-weight-default.jpg)

Screenshot Details — Default title weight

Item	Detail
Screenshot Name	`screenshots/teaser-title-weight-default.jpg`
Screenshot Purpose	Default title weight
Screen Description	Two teasers at 1440 px stacked one above the other: an Image & Text teaser with photo-2 and the semibold title A semibold Image & Text title with the button Talk to an expert; below it a Text split teaser with the regular-weight title A regular Text split title on the left and the description on the right.
Business Context	Two teasers comparing the designed title weights: semibold beside an image and regular in Text split.
Author Objective	Add an Image & Text and a Text split teaser and keep Title weight on Layout default.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	A semibold Image & Text title	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
H	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
I	Title (Teaser › Content)	A regular Text split title	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
J	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.	No	Main text	Up to 300 characters (Recommended)	None
(K)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (K), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Top: photo-2 beside the semibold title "A semibold Image & Text title" with a button. Below: the regular-weight title "A regular Text split title" on the left and the description on the right.
- **Rendering behaviour:** The default is semibold (600) for every layout except Text split, which uses regular (400) through .teaser.no-image .teaser-title.
- **Publishing behaviour:** Publish photo-2.svg with the page, then Publish to Preview and Live.

Business Rules

- Layout default: semibold except Text split.
- Title weight Regular or Semibold overrides the layout weight.
- Weight does not change the heading level.

Common Authoring Mistakes

Error	Root Cause	Resolution
Two neighbouring titles look inconsistent	One teaser is Text split and the other Image & Text	Set the same Title weight on both
"Talk to an expert" is missing on the page	The CTA title was entered but its link field left empty; a CTA without a link is skipped	Select the page or enter /en/contact in the matching CTA Link field

Troubleshooting

- **Symptoms:** The first teaser's image column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-2.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-2.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the first teaser's image column shows the picture.

Use Cases: Default.

Authoring Guidelines: Title weight = Layout default.

Business Rules: Semibold (600) except Text split, which is regular (400).

Rendering Rules: `.teaser-title` / `.teaser.no-image .teaser-title`.

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: None.

Variation 36 — Title weight "Regular"

Variation Name: Title weight "Regular" (class `title-regular`).

Business Purpose: A lighter, editorial title.

Visual Example:

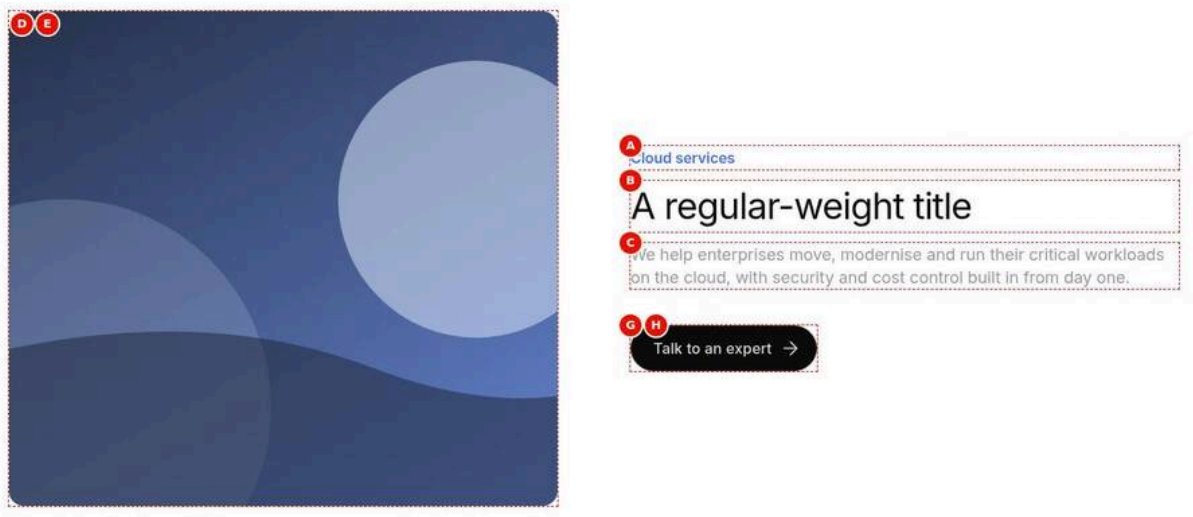

Figure 39: Regular title — An Image & Text teaser at 1440 px: the rounded image photo-2 on the left; the brand-blue eyebrow Cloud services, the title A regular-weight title in regular weight (Title weight Regular), the description and the button Talk to an expert on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-title-regular.jpg)

Screenshot Details — Regular title

Item	Detail
Screenshot Name	`screenshots/teaser-title-regular.jpg`
Screenshot Purpose	Regular title
Screen Description	An Image & Text teaser at 1440 px: the rounded image photo-2 on the left; the brand-blue eyebrow Cloud services, the title A regular-weight title in regular weight (Title weight Regular), the description and the button Talk to an expert on the right.
Business Context	An editorial cloud services teaser with a lighter title, matching large regular-weight headings elsewhere on the page.
Author Objective	Set Title weight to Regular on an Image & Text teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	A regular-weight title	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost con-	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		trol built in from day one.				
D	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
(F)	Title weight (Teaser › Style)	Regular	No	Title weight	As designed	Options: Layout default, Regular, Semibold
G	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-2 on the left; on the right the eyebrow, the 2.5rem title "A regular-weight title" in regular weight (400), the description and the "Talk to an expert" button.
- **Rendering behaviour:** title-regular sets font-weight var(–font-weight-regular) on .teaser-title at every width.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Regular suits large titles (Extra large, Display) and editorial looks.
- It overrides the semibold layout default.
- Check that the title still stands out from the description.

Common Authoring Mistakes

Error	Root Cause	Resolution
The title looks too similar to the text	Regular weight at the default size beside a long description	Keep Layout default or use a larger Title size
The teaser shows centred text without the picture	Image left empty, Hide Image on, or the asset not selected from AEM Assets	Select photo-2.svg in Image and keep Hide Image off

Troubleshooting

- **Symptoms:** The left column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-2.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-2.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Use Cases: Large titles (XL, Display).

Authoring Guidelines: Title weight = Regular.

Business Rules: Overrides the layout weight.

Rendering Rules: `font-weight: var(--font-weight-regular)`.

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: None.

Variation 37 — Title weight "Semibold"

Variation Name: Title weight "Semibold" (class `title-semibold`).

Business Purpose: A stronger title, e.g. in Text split.

Visual Example:

Figure 40: Semibold title — A Text split teaser at 1440 px with Title weight Semibold: the eyebrow Insights above, the 3rem semibold title A semibold Text split title on the left and the description on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-title-semibold.jpg)

Screenshot Details — Semibold title

Item	Detail
Screenshot Name	`screenshots/teaser-title-semibold.jpg`
Screenshot Purpose	Semibold title
Screen Description	A Text split teaser at 1440 px with Title weight Semibold: the eyebrow Insights above, the 3rem semibold title A semibold Text split title on the left and the description on the right.
Business Context	An insights Text split section whose title needs more emphasis than the layout's regular weight.
Author Objective	Set Title weight to Semibold on a Text split teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	A semibold Text split title	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.	No	Main text	Up to 300 characters (Recommended)	None
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(E)	Title weight (Teaser › Style)	Semibold	No	Title weight	As designed	Options: Layout default, Regular, Semibold

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow "Insights" above; the 3rem semibold title "A semibold Text split title" on the left and the 1.5rem description on the right.
- **Rendering behaviour:** title-semibold sets font-weight var(–font-weight-semibold), overriding .teaser.no-image .teaser-title regular weight.
- **Publishing behaviour:** Only the page is published. Publish to Preview and Live.

Business Rules

- Semibold overrides the Text split default (regular).
- Use it consistently across Text split teasers of one page.
- No image or links are needed for a valid Text split teaser.

Common Authoring Mistakes

Error	Root Cause	Resolution
The weight is still regular	Title weight set on another teaser	Select this teaser and set Semibold
Every heading of the page looks heavy	Semibold applied to all teasers	Keep Layout default where emphasis is not needed

Troubleshooting

- **Symptoms:** The Text split title stays regular weight after choosing Semibold.
- **Cause:** The page was not republished, so aem.page still serves the previous version.
- **Resolution:** Publish the page to Preview again and reload with the cache disabled.
- **Verification Steps:** The block has the class title-semibold and the title renders at weight 600.

Use Cases: Emphasis.

Authoring Guidelines: Title weight = Semibold.

Business Rules: Overrides the layout weight.

Rendering Rules: `font-weight: var(--font-weight-semibold).`

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: None.

Variation 38 — Description size "Layout default"

Variation Name: Description size "Layout default" (no class).

Business Purpose: The layout's designed text size.

Visual Example:

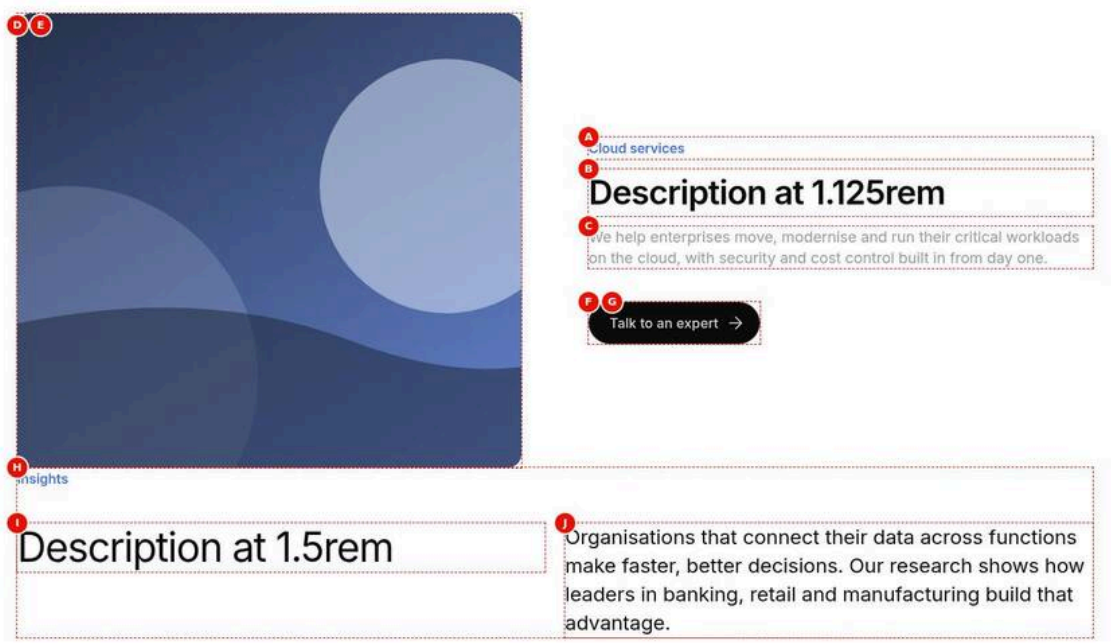

Figure 41: Default description size — Two teasers at 1440 px stacked one above the other: an Image & Text teaser with photo-2, the title Description at 1.125rem, grey 1.125rem body text and a button; below it a Text split teaser with the title Description at 1.5rem on the left and the larger black description on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-description-default.jpg)

Screenshot Details — Default description size

Item	Detail
Screenshot Name	`screenshots/teaser-description-default.jpg`
Screenshot Purpose	Default description size
Screen Description	Two teasers at 1440 px stacked one above the other: an Image & Text teaser with photo-2, the title Description at 1.125rem, grey 1.125rem body text and a button; below it a Text split teaser with the title Description at 1.5rem on the left and the larger black description on the right.
Business Context	Two teasers comparing the designed description sizes: standard body text beside an image and the larger lead text of Text split.
Author Objective	Add an Image & Text and a Text split teaser and keep Description size on Layout default.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Description at 1.125rem	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
H	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
I	Title (Teaser › Content)	Description at 1.5rem	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
J	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.	No	Main text	Up to 300 characters (Recommended)	None
(K)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (K), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Top: photo-2 beside the title "Description at 1.125rem" with grey 1.125rem body text and a button. Below: "Description at 1.5rem" on the left and the larger black description on the right.
- **Rendering behaviour:** Body M (1rem below 900 px, 1.125rem from 900 px, line height 1.39) for most layouts; Body L (1rem, 1.5rem, line height 1.417) for Text split; the same applies to the Short Description.
- **Publishing behaviour:** Publish photo-2.svg with the page, then Publish to Preview and Live.

Business Rules

- Layout default: 1.125rem with an image, 1.5rem in Text split.
- Text split also uses the default text colour (black) instead of grey.
- Description size affects the Short Description too.

Common Authoring Mistakes

Error	Root Cause	Resolution
The Text split description looks too large for long copy	The layout default is 1.5rem	Set Description size Regular (18px)
Description and title of two teasers do not match	Different layouts have different defaults	Set the same Description size on both

Troubleshooting

- **Symptoms:** The first teaser's image column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-2.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-2.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the first teaser's image column shows the picture.

Use Cases: Default.

Authoring Guidelines: Description size = Layout default.

Business Rules: Body M (1rem / 1.125rem, line height 1.39) for most layouts; Body L (1rem / 1.5rem, line height 1.417) for Text split. Applies to the description and the short description.

Rendering Rules: `.teaser-description`, `.teaser-short-description`.

Responsive Behaviour: Steps at 900 px.

SEO Impact: None.

Accessibility Compliance: None.

Variation 39 — Description size "Regular (18px)"

Variation Name: Description size "Regular (18px)" (class `text-regular`).

Business Purpose: Regular body text, e.g. long Text split copy.

Visual Example:

Figure 42: Regular description — A Text split teaser at 1440 px with Description size Regular: the eyebrow Insights above, the regular-weight title Regular body text on the left and on the right the description at 1.125rem, smaller than the Text split default. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-description-regular.jpg)

Screenshot Details — Regular description

Item	Detail
Screenshot Name	`screenshots/teaser-description-regular.jpg`
Screenshot Purpose	Regular description
Screen Description	A Text split teaser at 1440 px with Description size Regular: the eyebrow Insights above, the regular-weight title Regular body text on the left and on the right the description at 1.125rem, smaller than the Text split default.
Business Context	An insights Text split section with longer copy, set in regular body size for comfortable reading.
Author Objective	Set Description size to Regular (18px) on a Text split teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Regular body text	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.	No	Main text	Up to 300 characters (Recommended)	None
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(E)	Description size (Teaser › Style)	Regular (18px)	No	Text size	Large for short copy	Options: Layout default, Regular (18px), Large (24px)

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow "Insights" above; the regular-weight title "Regular body text" on the left and on the right the description at 1.125rem with a generous line height, smaller than the Text split default.
- **Rendering behaviour:** text-regular sets –body-font-size-m (1.125rem from 900 px, 1rem below) and line height 1.61 for the description and short description.
- **Publishing behaviour:** Only the page is published. Publish to Preview and Live.

Business Rules

- Regular suits long Text split copy (up to about 600 characters).
- 18px is the desktop size; phones show 16px.
- The Short Description follows the same size.

Common Authoring Mistakes

Error	Root Cause	Resolution
No visible change on phones	Both Regular and the default are 1rem below 900 px	Check at 900 px or wider
The description looks smaller than intended	Regular chosen for short lead copy	Use Layout default or Large (24px)

Troubleshooting

- **Symptoms:** The description still renders at 1.5rem on desktop.
- **Cause:** Description size was saved as Layout default.
- **Resolution:** Set Description size to Regular (18px) and publish the page.
- **Verification Steps:** The block has the class text-regular and the description is 1.125rem at 1440 px.

Use Cases: Longer copy.

Authoring Guidelines: Description size = Regular (18px).

Business Rules: 18 px desktop, 16 px mobile.

Rendering Rules: `--body-font-size-m`, line height 1.61.

Responsive Behaviour: Steps at 900 px.

SEO Impact: None.

Accessibility Compliance: Comfortable line height for reading.

Variation 40 — Description size "Large (24px)"

Variation Name: Description size "Large (24px)" (class `text-large`).

Business Purpose: Lead-paragraph sized text.

Visual Example:

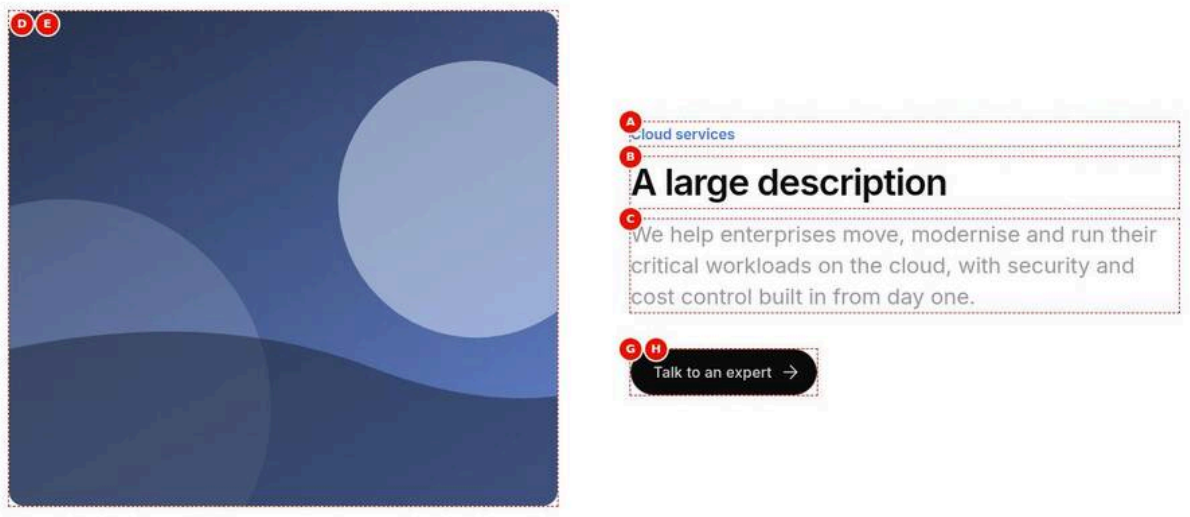

Figure 43: Large description — An Image & Text teaser at 1440 px: the rounded image photo-2 on the left; the brand-blue eyebrow Cloud services, the semibold title A large description, the description at 1.5rem (Description size Large) over four lines and the button Talk to an expert on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-description-large.jpg)

Screenshot Details — Large description

Item	Detail
Screenshot Name	`screenshots/teaser-description-large.jpg`
Screenshot Purpose	Large description
Screen Description	An Image & Text teaser at 1440 px: the rounded image photo-2 on the left; the brand-blue eyebrow Cloud services, the semibold title A large description, the description at 1.5rem (Description size Large) over four lines and the button Talk to an expert on the right.
Business Context	A short, impactful cloud services message whose description is set like a lead paragraph beside the image.
Author Objective	Set Description size to Large (24px) on an Image & Text teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	A large description	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
(F)	Description size (Teaser › Style)	Large (24px)	No	Text size	Large for short copy	Options: Layout default, Regular (18px), Large (24px)
G	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-2 on the left; on the right the eyebrow, the title "A large description", the grey description at 1.5rem over four lines and the "Talk to an expert" button.
- **Rendering behaviour:** text-large sets –body-font-size-l (1.5rem from 900 px, 1rem below) and line height 1.417.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Large suits one or two sentences; long copy becomes heavy.
- 24px is the desktop size; phones show 16px.
- The grey description colour of Image & Text is kept.

Common Authoring Mistakes

Error	Root Cause	Resolution
The text column becomes taller than the image	A long description at 1.5rem	Shorten the description or use Layout default
The teaser shows centred text without the picture	Image left empty, Hide Image on, or the asset not selected from AEM Assets	Select photo-2.svg in Image and keep Hide Image off

Troubleshooting

- **Symptoms:** The left column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-2.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-2.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Use Cases: Short, impactful copy.

Authoring Guidelines: Description size = Large (24px).

Business Rules: 24 px desktop, 16 px mobile.

Rendering Rules: `--body-font-size-l`, line height 1.417.

Responsive Behaviour: Steps at 900 px.

SEO Impact: None.

Accessibility Compliance: None.

Variation 41 — Eyebrow style "Brand"

Variation Name: Eyebrow style "Brand" (default, no class).

Business Purpose: The brand-blue kicker.

Visual Example:

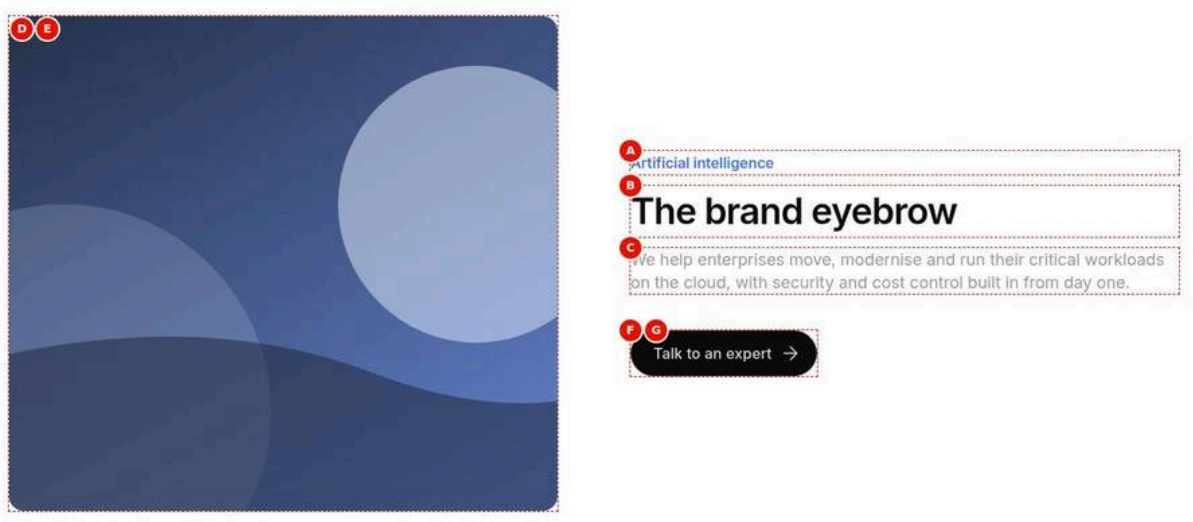

Figure 44: Brand eyebrow — An Image & Text teaser at 1440 px: the rounded image photo-2 on the left; the brand-blue eyebrow Artificial intelligence, the semibold title The brand eyebrow, the description and the button Talk to an expert on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-eyebrow-brand.jpg)

Screenshot Details — Brand eyebrow

Item	Detail
Screenshot Name	`screenshots/teaser-eyebrow-brand.jpg`
Screenshot Purpose	Brand eyebrow
Screen Description	An Image & Text teaser at 1440 px: the rounded image photo-2 on the left; the brand-blue eyebrow Artificial intelligence, the semibold title The brand eyebrow, the description and the button Talk to an expert on the right.
Business Context	An AI promotion with the default brand-blue eyebrow naming the topic above the title.
Author Objective	Keep Eyebrow style on Brand and enter the eyebrow "Artificial intelligence".

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Artificial intelligence	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	The brand eyebrow	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** photo-2 on the left; on the right the semibold brand-blue eyebrow "Artificial intelligence" above the title "The brand eyebrow", the description and the button.
- **Rendering behaviour:** .teaser-eyebrow uses –color-text-brand, semibold, 1rem at all widths, and takes the full row of the kicker.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Eyebrow up to about 40 characters.
- Brand blue is used on every background, also dark panels: check contrast there.
- The eyebrow shows only when filled and Show Eyebrow is on (default).

Common Authoring Mistakes

Error	Root Cause	Resolution
The eyebrow is missing	Show Eyebrow turned off	Turn Show Eyebrow on
The eyebrow appears grey and uppercase	Eyebrow style set to Label	Set Eyebrow style to Brand

Troubleshooting

- **Symptoms:** The left column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-2.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-2.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Use Cases: Default.

Authoring Guidelines: Eyebrow style = Brand.

Business Rules: Brand colour on every background (also dark ones).

Rendering Rules: `.teaser-eyebrow` `--color-text-brand`, Body L (1rem) / Body S (1rem) semibold; takes the full row of the kicker.

Responsive Behaviour: 1rem at all widths.

SEO Impact: None.

Accessibility Compliance: Check brand blue contrast on dark panels.

Variation 42 — Eyebrow style "Label (uppercase, grey)"

Variation Name: Eyebrow style "Label" (class `eyebrow-label`).

Business Purpose: A small uppercase label like the tags (article headers, media coverage).

Visual Example:

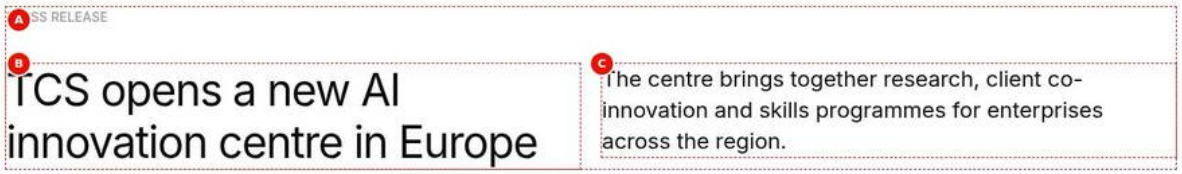

Figure 45: Label eyebrow — A Text split teaser at 1440 px with Eyebrow style Label: the small grey uppercase label PRESS RELEASE above, the regular-weight title TCS opens a new AI innovation centre in Europe on the left and the description on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-eyebrow-label.jpg)

Screenshot Details — Label eyebrow

Item	Detail
Screenshot Name	`screenshots/teaser-eyebrow-label.jpg`
Screenshot Purpose	Label eyebrow
Screen Description	A Text split teaser at 1440 px with Eyebrow style Label: the small grey uppercase label PRESS RELEASE above, the regular-weight title TCS opens a new AI innovation centre in Europe on the left and the description on the right.
Business Context	A press release teaser in the newsroom, where the eyebrow names the content type as a small uppercase label like the tags.
Author Objective	Set Eyebrow style to Label (uppercase, grey) on a Text split teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Press release	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	TCS opens a new AI innovation centre in Europe	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	The centre brings together research, client co-innovation and skills programmes for enterprises across the region.	No	Main text	Up to 300 characters (Recommended)	None
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(E)	Eyebrow style (Teaser › Style)	Label (uppercase, grey)	No	Eyebrow look	Label for content types	Options: Brand, Label (uppercase, grey)

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The small grey uppercase label "PRESS RELEASE" above; the regular-weight title "TCS opens a new AI innovation centre in Europe" on the left and the description on the right.
- **Rendering behaviour:** eyebrow-label uses the meta colour (grey, 70 % white on dark), Body XS (0.75rem below 900 px, 0.875rem from 900 px), medium weight and uppercase through CSS.
- **Publishing behaviour:** Only the page is published. Publish to Preview and Live.

Business Rules

- Enter the eyebrow in normal case ("Press release"); CSS shows it in capitals.
- Label suits content types such as Insight or Press release.
- Small text: check contrast, especially on dark panels.

Common Authoring Mistakes

Error	Root Cause	Resolution
Screen readers spell out the label	Eyebrow typed in capitals	Type "Press release" and let the style uppercase it
The label shows in brand blue	Eyebrow style left on Brand	Set Eyebrow style to Label

Troubleshooting

- **Symptoms:** The eyebrow still appears as a large blue label.
- **Cause:** Eyebrow style was saved as Brand.
- **Resolution:** Set Eyebrow style to Label (uppercase, grey) and publish the page.

- **Verification Steps:** The block has the class eyebrow-label and the eyebrow shows small, grey and uppercase.

Use Cases: Content-type labels (Insight, Press release).

Authoring Guidelines: Eyebrow style = Label (uppercase, grey).

Business Rules: Uses the meta colour (grey; 70 % white on dark).

Rendering Rules: Body XS (0.75rem / 0.875rem), medium, uppercase, letter spacing 0.01.

Responsive Behaviour: Steps at 900 px.

SEO Impact: None (CSS uppercase; the text stays as authored).

Accessibility Compliance: Small text: check contrast.

Variation 43 — Top spacing "Default"

Variation Name: Top spacing "Default" (no class).

Business Purpose: Normal spacing in the page flow.

Visual Example:

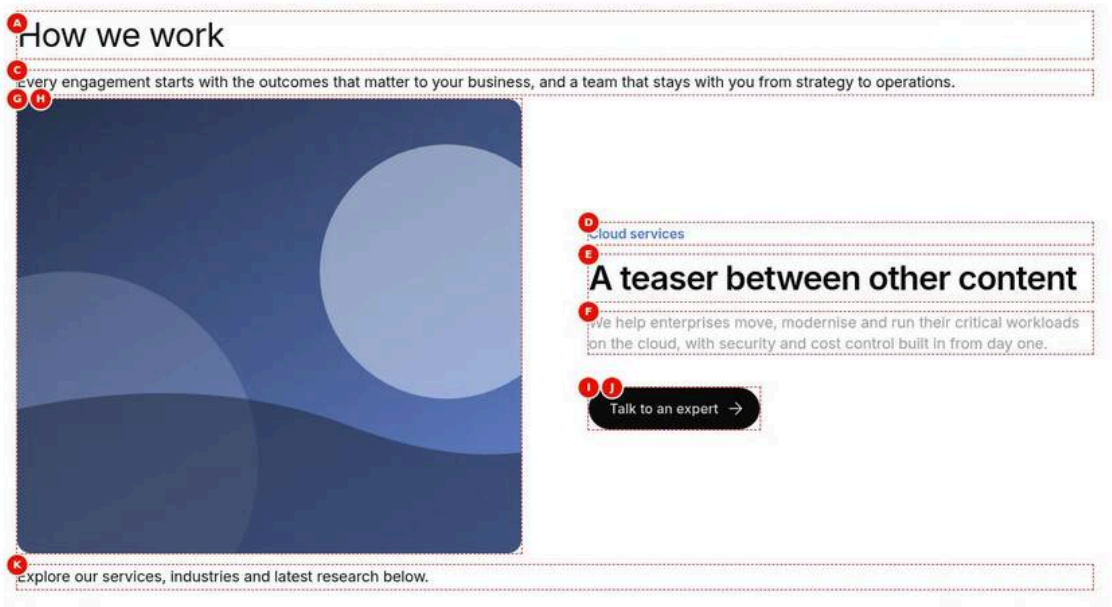

Figure 46: Default top spacing — A section at 1440 px: the H2 How we work and the intro text, then an Image & Text teaser with photo-2, the eyebrow Cloud services, the title A teaser between other content and the button Talk to an expert, then the text Explore our services, industries and latest research below, with normal spacing. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-top-spacing-default.jpg)

Screenshot Details — Default top spacing

Item	Detail
Screenshot Name	`screenshots/teaser-top-spacing-default.jpg`
Screenshot Purpose	Default top spacing
Screen Description	A section at 1440 px: the H2 How we work and the intro text, then an Image & Text teaser with photo-2, the eyebrow Cloud services, the title A teaser between other content and the button Talk to an expert, then the text Explore our services, industries and latest research below, with normal spacing.
Business Context	A teaser placed between a Title, a Text and another Text component on a "How we work" page, using the normal flow spacing.
Author Objective	Add a teaser between other components and keep Top spacing on Default.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	How we work	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
(B)	Title Type (Title)	h2	No	Heading level	H2 in the page flow; H1 only for a page-opening teaser	Options: H1, H2, H3, H4, H5, H6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Every engagement starts with the outcomes that matter to your business, and a team that stays with you from strategy to operations.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
D	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
E	Title (Teaser › Content)	A teaser between other content	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
F	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
G	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
H	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
I	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
J	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree,	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Text	
K	Text (Text)	Explore our services, industries and latest research below.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The H2 "How we work" and an intro paragraph above; then the teaser with photo-2 on the left and "A teaser between other content" with a button on the right; then the line "Explore our services, industries and latest research below."
- **Rendering behaviour:** Default adds no padding; the teaser follows the section spacing like the Title and Text components around it.
- **Publishing behaviour:** Publish photo-2.svg with the page, then Publish to Preview and Live; the Title and Text components are part of the same page.

Business Rules

- Use Default for teasers in the middle of a page.
- Page header spacing is only for a teaser that opens a page.
- The teaser title stays H2 under the H2 "How we work"; choose H3 if it belongs to that topic.

Common Authoring Mistakes

Error	Root Cause	Resolution
A large gap above the teaser	Top spacing set to Page header	Set Top spacing to Default
The heading outline is flat	Teaser title H2 under a section H2 it belongs to	Set Title Type H3

Troubleshooting

- **Symptoms:** The teaser image column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-2.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-2.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the teaser image column shows the picture.

Use Cases: Default.

Authoring Guidelines: Top spacing = Default.

Business Rules: No extra padding.

Rendering Rules: No class.

Responsive Behaviour: Not applicable.

SEO Impact: None.

Accessibility Compliance: None.

Variation 44 — Top spacing "Page header (extra space above)"

Variation Name: Top spacing "Page header" (class `spacing-header`).

Business Purpose: The larger space above a teaser that opens a page (Figma "Secondary Page Header").

Visual Example:

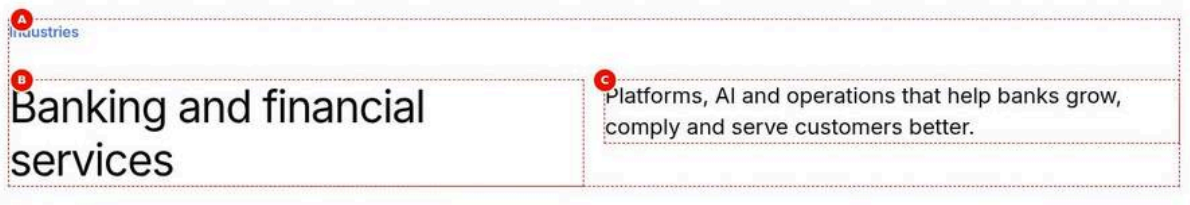

Figure 47: Page header spacing — A Text split teaser at 1440 px with Top spacing Page header: a large empty space above, then the eyebrow Industries, the regular-weight title Banking and financial services on the left and the description on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-spacing-header.jpg)

Screenshot Details — Page header spacing

Item	Detail
Screenshot Name	`screenshots/teaser-spacing-header.jpg`
Screenshot Purpose	Page header spacing
Screen Description	A Text split teaser at 1440 px with Top spacing Page header: a large empty space above, then the eyebrow Industries, the regular-weight title Banking and financial services on the left and the description on the right.
Business Context	The opening of a banking industry landing page without a Hero (Figma "Secondary Page Header"): extra space above the title separates it from the header.
Author Objective	Set Top spacing to Page header on a Text split teaser that opens the page.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Industries	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Banking and financial services	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Platforms, AI and operations that help banks grow,	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
		comply and serve customers better.				
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(E)	Top spacing (Teaser › Style)	Page header (extra space above)	No	Extra space above	Page header for page-opening teasers	Options: Default, Page header (extra space above)

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A large empty area above the teaser, then the eyebrow "Industries", the regular-weight title "Banking and financial services" on the left and the 1.5rem description on the right.
- **Rendering behaviour:** spacing-header adds padding-top var(–space-5000) (12.5rem) from 900 px and var(–space-1600) (4rem) below.
- **Publishing behaviour:** Only the page is published. Publish to Preview, check the space under the header at 1440 px and 375 px, then Publish to Live.

Business Rules

- Use Page header only for the first teaser of a page without a Hero or Page Header.
- No effect with Background image or Card (finding F-18, open).
- Additional tab Padding top overrides it.
- Consider Title Type H1 for a page-opening teaser.

Common Authoring Mistakes

Error	Root Cause	Resolution
A large gap appears mid-page	Page header spacing used on a teaser that is not first	Set Top spacing to Default
The extra space is missing	Additional tab Padding top is set	Reset Padding top to Default

Troubleshooting

- **Symptoms:** The page-header teaser starts directly under the header with no extra space.
- **Cause:** Padding top in the Additional tab overrides Top spacing, or the Layout is Background image / Card.
- **Resolution:** Reset Padding top to Default and keep Layout Text split or Image & Text; publish the page.
- **Verification Steps:** The block has the class spacing-header and 12.5rem padding above at 1440 px.

Use Cases: Landing pages without a Hero.

Authoring Guidelines: Style tab: Top spacing = Page header.

Business Rules: No effect with Background image or Card (their padding wins); Additional tab Padding top overrides it.

Rendering Rules: `padding-top: var(--space-1600)` (4rem); `var(--space-5000)` (12.5rem) from 900 px.

Responsive Behaviour: 4rem below 900 px, 12.5rem from 900 px.

SEO Impact: Consider Title Type H1 for a page-opening teaser.

Accessibility Compliance: None.

Variation 45 — Links "Primary and Secondary CTA" (Multiple links off)

Variation Name: Multiple links off (default).

Business Purpose: Up to two CTAs, each with its own style.

Visual Example:

Figure 48: Two CTAs — A Text split teaser at 1440 px: the eyebrow Insights above, the title Two calls to action on the left; on the right the description, the black button Talk to an expert and below it the outline button Explore our services. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-links-primary-secondary.jpg)

Screenshot Details — Two CTAs

Item	Detail
Screenshot Name	`screenshots/teaser-links-primary-secondary.jpg`
Screenshot Purpose	Two CTAs
Screen Description	A Text split teaser at 1440 px: the eyebrow Insights above, the title Two calls to action on the left; on the right the description, the black button Talk to an expert and below it the outline button Explore our services.
Business Context	An insights Text split section closing with two actions: talk to an expert (main action) or explore the services (alternative).
Author Objective	Leave Multiple links off and fill the Primary and Secondary CTA fields of a Text split teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Two calls to action	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.				
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
E	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
F	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
G	Secondary CTA Title (Teaser › Links)	Explore our services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
H	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow "Insights" above; the title "Two calls to action" on the left; on the right the description, the black "Talk to an expert" button and below it the outline "Explore our services" button.
- **Rendering behaviour:** div.teaser-links is a column with items at the start and a 0.75rem gap; the CTAs are a.button.primary and a.button.secondary, stacked at every width.
- **Publishing behaviour:** Only the page is published. Publish to Preview, open /en/contact and /en/services from the buttons, then Publish to Live.

Business Rules

- With Multiple links off only Primary CTA and Secondary CTA are used (in that order).
- Missing style rows fall back to Primary Button and Secondary Button; an empty style is Text link.
- CTAs without a link are skipped.
- One Primary Button per teaser; start the titles with a verb.

Common Authoring Mistakes

Error	Root Cause	Resolution
"Explore our services" is missing on the page	The CTA title was entered but its link field left empty; a CTA without a link is skipped	Select the page or enter /en/services in the matching CTA Link field
Both buttons are black	Secondary CTA Link Style changed to Primary Button	Set Secondary CTA Link Style to Secondary Button

Troubleshooting

- **Symptoms:** Neither button appears although both titles were entered.
- **Cause:** Multiple links is on, so the Primary / Secondary CTA fields are hidden and ignored.
- **Resolution:** Turn Multiple links off (or add the links as Links items) and publish the page.

- **Verification Steps:** div.teaser-links renders the black and the outline button under the description.

Use Cases: Most teasers.

Authoring Guidelines: Links tab: Multiple links off; fill Primary CTA Title / Link / Link Type / Link Style and the Secondary equivalents.

Business Rules: Missing style rows fall back to Primary Button and Secondary Button; an empty style is a Text link; CTAs without a link are skipped.

Rendering Rules: `div.teaser-links` (column, items start, 0.75rem gap).

Responsive Behaviour: Stacked at every width.

SEO Impact: Crawlable links.

Accessibility Compliance: Descriptive link texts.

Variation 46 — Links "Multiple links"

Variation Name: Multiple links on.

Business Purpose: Any number of links, each with its own style (e.g. a list of resources).

Visual Example:

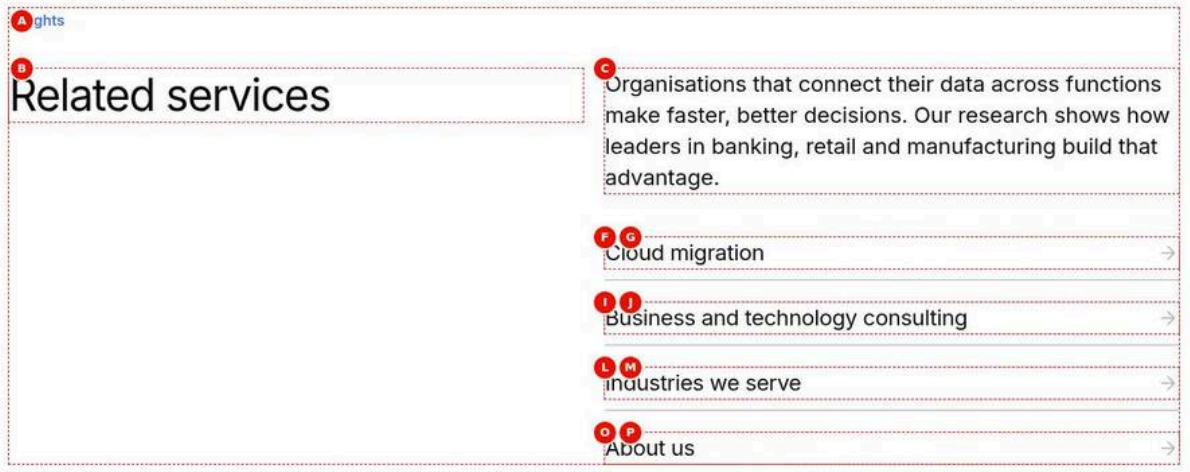

Figure 49: Multiple links — A Text split teaser at 1440 px: the eyebrow Insights above, the title Related services on the left; on the right the description and four List rows Cloud migration, Business and technology consulting, Industries we serve and About us with grey dividers and right arrows. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-links-multiple.jpg)

Screenshot Details — Multiple links

Item	Detail
Screenshot Name	`screenshots/teaser-links-multiple.jpg`
Screenshot Purpose	Multiple links
Screen Description	A Text split teaser at 1440 px: the eyebrow Insights above, the title Related services on the left; on the right the description and four List rows Cloud migration, Business and technology consulting, Industries we serve and About us with grey dividers and right arrows.
Business Context	An insights section listing four related destinations (cloud migration, consulting, industries, about us) as a resource list.
Author Objective	Turn Multiple links on and add four Links items with CTA Link Style List.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Related services	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.	No	Main text	Up to 300 characters (Recommended)	None
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(E)	Multiple links (Teaser › Links)	On	No	List of links instead of two CTAs	On for 3+ links	None
F	CTA Title (Teaser › Links › Links › Item 1)	Cloud migration	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
G	CTA Link (Teaser › Links › Links › Item 1)	Select the page or enter /en/services/cloud/migration	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(H)	CTA Link Style (Teaser › Links › Links › Item 1)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
I	CTA Title (Teaser › Links › Links › Item 2)	Business and technology consulting	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
J	CTA Link (Teaser › Links › Links › Item 2)	Select the page or enter /en/services/consulting	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(K)	CTA Link Style (Teaser › Links › Links › Item 2)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
L	CTA Title (Teaser › Links › Links › Item 3)	Industries we serve	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
M	CTA Link (Teaser › Links › Links › Item 3)	Select the page or enter /en/industries	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(N)	CTA Link Style (Teaser › Links › Links › Item 3)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
O	CTA Title (Teaser › Links › Links › Item 4)	About us	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
P	CTA Link (Teaser › Links › Links › Item 4)	Select the page or enter /en/about	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(Q)	CTA Link Style (Teaser › Links › Links › Item 4)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow "Insights" above; the title "Related services" on the left; on the right the description and four full-width rows "Cloud migration", "Business and technology consulting", "Industries we serve" and "About us", separated by grey lines, each with a right arrow.
- **Rendering behaviour:** Consecutive List items form one ul.teaser-link-list; rows are 1.5rem apart with 0.75rem padding and a #b2b2b2 divider under all but the last; text Heading M (1.125rem, 1.5rem from 900 px).
- **Publishing behaviour:** Only the page is published. Publish to Preview, open the four targets, then Publish to Live.

Business Rules

- Multiple links On hides and ignores the Primary / Secondary CTA fields.
- Links render in the authored order, each in its own CTA Link Style.
- Items without a CTA Link are dropped.
- List titles up to about 60 characters, parallel in form.

Common Authoring Mistakes

Error	Root Cause	Resolution
A link is missing	The item has no CTA Link	Select the page in that item's CTA Link
The items render as text links	CTA Link Style left empty (Text link)	Set CTA Link Style to List on each item

Troubleshooting

- **Symptoms:** The row "About us" is missing from the list on the published page.
- **Cause:** That Links item has a CTA Title but an empty CTA Link; items without a link are dropped.
- **Resolution:** Open the item, select the page or enter /en/about in CTA Link and publish the page.

- **Verification Steps:** Every item renders as a row inside ul.teaser-link-list and opens its target.

Use Cases: Related links, resource lists.

Authoring Guidelines: Links tab: Multiple links on; add items in Links (CTA Title, CTA Link, CTA Link Type, CTA Link Style).

Business Rules: Primary / Secondary CTA fields are hidden and ignored. Items without a link are skipped. Items without a style use the legacy Multi Link Style row if present, else Text link.

Rendering Rules: Links in authored order; consecutive List items share one list.

Responsive Behaviour: Stacked at every width.

SEO Impact: Crawlable links.

Accessibility Compliance: List-style links are in a `<ul>` (WCAG 1.3.1).

Variation 47 — Link style "Text link"

Variation Name: CTA Link Style "Text link" (value "").

Business Purpose: A light text CTA with an arrow.

Visual Example:

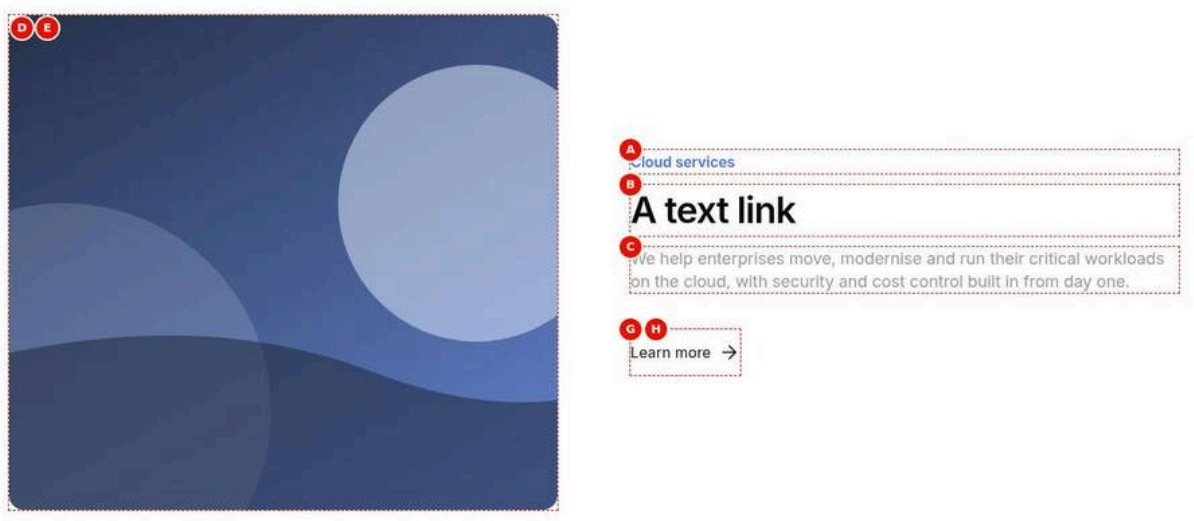

Figure 50: Text link — An Image & Text teaser at 1440 px: the rounded image photo-2 on the left; the brand-blue eyebrow Cloud services, the semibold title A text link, the description and the text link Learn more with a right arrow on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-link-text.jpg)

Screenshot Details — Text link

Item	Detail
Screenshot Name	`screenshots/teaser-link-text.jpg`
Screenshot Purpose	Text link
Screen Description	An Image & Text teaser at 1440 px: the rounded image photo-2 on the left; the brand-blue eyebrow Cloud services, the semibold title A text link, the description and the text link Learn more with a right arrow on the right.
Business Context	A cloud services teaser with a single light action, where a text link fits better than a button.
Author Objective	Turn Multiple links on and add one Links item without a CTA Link Style (Text link).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	A text link	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
(F)	Multiple links (Teaser › Links)	On	No	List of links instead of two CTAs	On for 3+ links	None
G	CTA Title (Teaser › Links › Links › Item 1)	Learn more	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
H	CTA Link (Teaser › Links › Links › Item 1)	Select the page or enter /en/services/cloud	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-2 on the left; on the right the eyebrow, the title "A text link", the description and "Learn more" in black text with a right arrow, turning blue on hover.
- **Rendering behaviour:** A Text link renders as a.button.tertiary (text with an arrow); on dark panels, Background image and Card it is white with a light-blue hover.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- An item without CTA Link Style is a Text link (unless a legacy Multi Link Style row exists).
- "Learn more" is vague out of context; prefer "Learn more about cloud services".
- The arrow is decorative.

Common Authoring Mistakes

Error	Root Cause	Resolution
Screen readers announce many identical “Learn more” links	Generic link text repeated across teasers	Write specific link text naming the target
The teaser shows centred text without the picture	Image left empty, Hide Image on, or the asset not selected from AEM Assets	Select photo-2.svg in Image and keep Hide Image off

Troubleshooting

- **Symptoms:** The left column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-2.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-2.svg in AEM Assets (or select it in the page’s Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Use Cases: Secondary actions.

Authoring Guidelines: Any Link Style = Text link.

Business Rules: Rendered as a tertiary button.

Rendering Rules: `a.button.tertiary`; white on dark / background / card, light blue on hover there.

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: Arrow is decorative.

Variation 48 — Link style “List”

Variation Name: CTA Link Style “List” (value `list`).

Business Purpose: Full-width link rows with dividers.

Visual Example:

Figure 51: List links — A Text split teaser at 1440 px: the eyebrow Insights above, the title Explore more on the left; on the right the description and three List rows Cloud migration, Business and technology consulting and Industries we serve with grey dividers and right arrows. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-link-list.jpg)

Screenshot Details — List links

Item	Detail
Screenshot Name	`screenshots/teaser-link-list.jpg`
Screenshot Purpose	List links
Screen Description	A Text split teaser at 1440 px: the eyebrow Insights above, the title Explore more on the left; on the right the description and three List rows Cloud migration, Business and technology consulting and Industries we serve with grey dividers and right arrows.
Business Context	An insights section pointing to three related services as divided link rows (Figma link list).
Author Objective	Add three Links items with CTA Link Style List to a Text split teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Explore more	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.	No	Main text	Up to 300 characters (Recommended)	None
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(E)	Multiple links (Teaser › Links)	On	No	List of links instead of two CTAs	On for 3+ links	None
F	CTA Title (Teaser › Links › Links › Item 1)	Cloud migration	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
G	CTA Link (Teaser › Links › Links › Item 1)	Select the page or enter /en/services/cloud/migration	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(H)	CTA Link Style (Teaser › Links › Links › Item 1)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
I	CTA Title (Teaser › Links › Links › Item 2)	Business and technology consulting	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
J	CTA Link (Teaser › Links › Links › Item 2)	Select the page or enter /en/services/consulting	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(K)	CTA Link Style (Teaser › Links › Links › Item 2)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
L	CTA Title (Teaser › Links › Links › Item 3)	Industries we serve	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
M	CTA Link (Teaser › Links › Links › Item 3)	Select the page or enter /en/industries	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(N)	CTA Link Style (Teaser › Links › Links › Item 3)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow "Insights" above; the title "Explore more" on the left; on the right the description and three full-width rows "Cloud migration", "Business and technology consulting" and "Industries we serve" with grey dividers and right arrows.
- **Rendering behaviour:** ul.teaser-link-list > li > a.teaser-link-list-item; rows 1.5rem apart, divider #b2b2b2 below all but the last; hover turns the text and arrow brand blue.
- **Publishing behaviour:** Only the page is published. Publish to Preview, open the three targets, then Publish to Live.

Business Rules

- Consecutive List links share one list; another style ends it.
- A new-window List link shows an up-right arrow instead of the right arrow.
- Use List for three or more related links.

Common Authoring Mistakes

Error	Root Cause	Resolution
Two separate lists appear	A Text link or button item placed between List items	Group the List items together
A row is missing	Its CTA Link is empty	Select the page in the item's CTA Link

Troubleshooting

- **Symptoms:** The row "Industries we serve" is missing from the list on the published page.
- **Cause:** That Links item has a CTA Title but an empty CTA Link; items without a link are dropped.
- **Resolution:** Open the item, select the page or enter /en/industries in CTA Link and publish the page.

- **Verification Steps:** Every item renders as a row inside ul.teaser-link-list and opens its target.

Use Cases: Related services, resource lists.

Authoring Guidelines: Link Style = List (Multiple links on, or for the Primary / Secondary CTA).

Business Rules: Consecutive List links form one `<ul>`; a new-window link shows an up-right arrow; the List arrow option changes the arrow of same-window links.

Rendering Rules: `ul.teaser-link-list > li > a.teaser-link-list-item`; rows 1.5rem apart, 0.75rem padding and a divider (`#b2b2b2`, `#767676` on dark) below all but the last; text Heading M (1.125rem / 1.5rem); hover: brand colour (light blue on dark).

Responsive Behaviour: Full width at every breakpoint.

SEO Impact: Crawlable list of links.

Accessibility Compliance: Semantic list; the arrow is a decorative pseudo-element.

Variation 49 — Link style "Primary Button"

Variation Name: CTA Link Style "Primary Button" (value `primary`).

Business Purpose: The main action.

Visual Example:

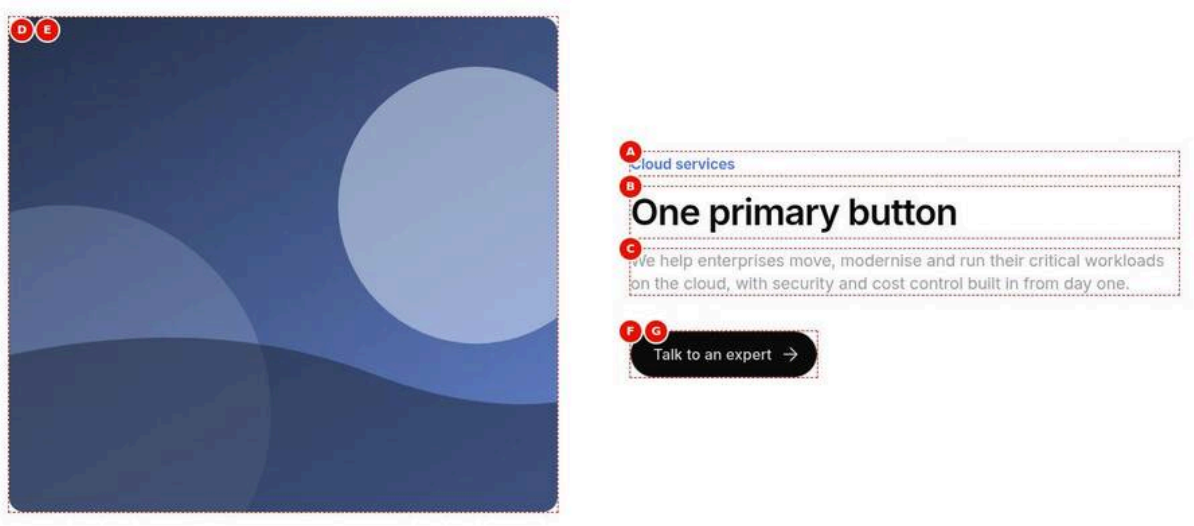

Figure 52: Primary button — An Image & Text teaser at 1440 px: the rounded image photo-2 on the left; the brand-blue eyebrow Cloud services, the semibold title One primary button, the description and the black pill button Talk to an expert on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-link-primary.jpg)

Screenshot Details — Primary button

Item	Detail
Screenshot Name	`screenshots/teaser-link-primary.jpg`
Screenshot Purpose	Primary button
Screen Description	An Image & Text teaser at 1440 px: the rounded image photo-2 on the left; the brand-blue eyebrow Cloud services, the semibold title One primary button, the description and the black pill button Talk to an expert on the right.
Business Context	A cloud services teaser with one clear main action: talk to an expert.

Item	Detail
Author Objective	Fill only the Primary CTA (style Primary Button by default) on an Image & Text teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	One primary button	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** photo-2 on the left; on the right the eyebrow, the title "One primary button", the description and the black pill button "Talk to an expert" with a white arrow.
- **Rendering behaviour:** a.button.primary in div.teaser-links; the button does not wrap its text; global focus styles apply.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Primary Button is the default style of the Primary CTA.
- One Primary Button per teaser.
- An empty Secondary CTA is simply not rendered.

Common Authoring Mistakes

Error	Root Cause	Resolution
"Talk to an expert" is missing on the page	The CTA title was entered but its link field left empty; a CTA without a link is skipped	Select the page or enter /en/contact in the matching CTA Link field
The button looks like a text link	Primary CTA Link Style set to Text link	Set Primary CTA Link Style to Primary Button

Troubleshooting

- **Symptoms:** The left column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-2.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-2.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Use Cases: "Contact us", "Download the report".

Authoring Guidelines: Link Style = Primary Button (default for Primary CTA).

Business Rules: Recommended: one per teaser.

Rendering Rules: `a.button.primary`.

Responsive Behaviour: Does not wrap its text.

SEO Impact: None.

Accessibility Compliance: Global button focus styles.

Variation 50 — Link style "Secondary Button"

Variation Name: CTA Link Style "Secondary Button" (value `secondary`).

Business Purpose: The alternative action.

Visual Example:

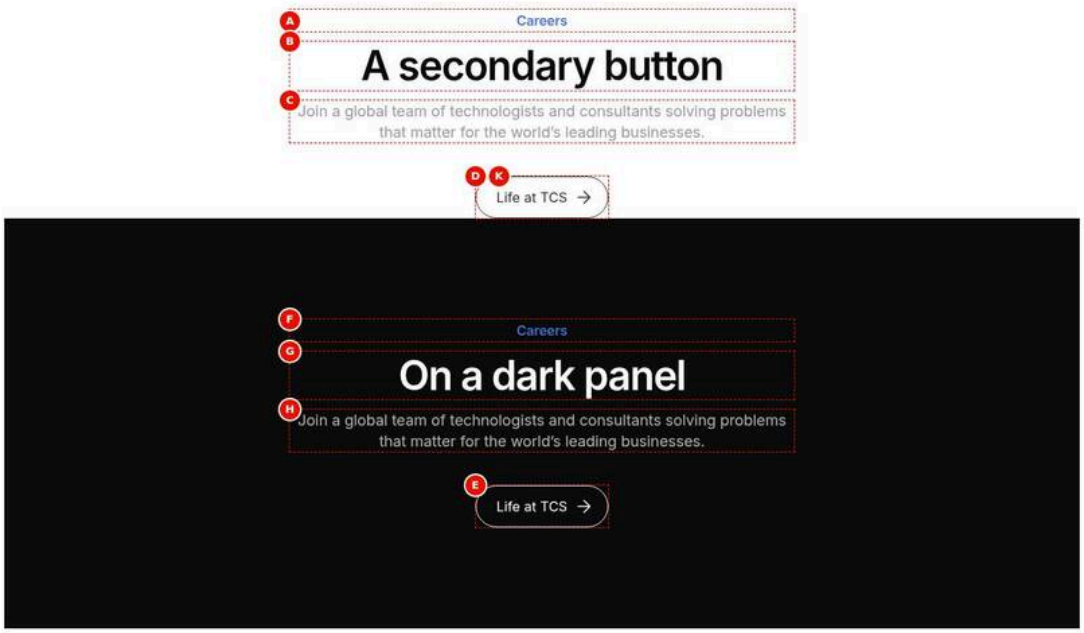

Figure 53: Secondary button — Two centred teasers at 1440 px stacked one above the other: on white, the eyebrow Careers, the title A secondary button, the description and the outline button Life at TCS; below it on a near-black panel, the title On a dark panel with the same button as a white outline. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-link-secondary.jpg)

Screenshot Details — Secondary button

Item	Detail
Screenshot Name	`screenshots/teaser-link-secondary.jpg`
Screenshot Purpose	Secondary button
Screen Description	Two centred teasers at 1440 px stacked one above the other: on white, the eyebrow Careers, the title A secondary button, the description and the outline button Life at TCS; below it on a near-black panel, the title On a dark panel with the same button as a white outline.
Business Context	Two careers teasers showing the Secondary Button on white and on a dark panel, where it switches to a white outline.
Author Objective	Fill only the Secondary CTA on two centred teasers, the second with BG Color Dark.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Careers	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	A secondary button	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Description (Teaser › Content)	Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.	No	Main text	Up to 300 characters (Recommended)	None
D	Secondary CTA Title (Teaser › Links)	Life at TCS	No	Secondary CTA text	Verb first	Shown only with Multiple links off
E	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
F	Eyebrow (Teaser › Content)	Careers	No	Kicker above the title	Up to 40 characters (Recommended)	None
G	Title (Teaser › Content)	On a dark panel	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
H	Description (Teaser › Content)	Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.	No	Main text	Up to 300 characters (Recommended)	None
(I)	BG Color (Teaser › Style)	Dark	No	Panel colour	Dark for contrast sections	Options: Default, Grey, Dark, Dark green
(J)	Secondary CTA Title (Teaser › Links)	Life at TCS	No	Secondary CTA text	Verb first	Shown only with Multiple links off
K	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (I), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Top: centred eyebrow "Careers", title "A secondary button", description and the outline button "Life at TCS". Below: a near-black panel with "On a dark panel" and the same button as a white outline.
- **Rendering behaviour:** a.button.secondary; on Dark, Dark green, Background image and Card the border and text become white; both teasers are centred because they have no image.
- **Publishing behaviour:** Only the page is published. Publish to Preview, open /en/about from both buttons, then Publish to Live.

Business Rules

- Secondary Button is the default style of the Secondary CTA.
- A Secondary CTA without a Primary CTA is valid; it renders alone.

- On dark backgrounds the outline turns white automatically.

Common Authoring Mistakes

Error	Root Cause	Resolution
"Life at TCS" is missing on the page	The CTA title was entered but its link field left empty; a CTA without a link is skipped	Select the page or enter /en/about in the matching CTA Link field
The dark-panel button looks black	Secondary CTA Link Style changed to Primary Button	Set it back to Secondary Button

Troubleshooting

- **Symptoms:** On the dark panel the "Life at TCS" outline is dark and invisible.
- **Cause:** The dark colour comes from a section style instead of the teaser's BG Color, so the white button style is not applied.
- **Resolution:** Set BG Color Dark on the teaser itself and publish the page.
- **Verification Steps:** The block has the class bg-dark and the button shows a white outline.

Use Cases: "Explore more".

Authoring Guidelines: Link Style = Secondary Button (default for Secondary CTA).

Business Rules: White outline and text on Dark, Dark green, Background image and Card.

Rendering Rules: `a.button.secondary`.

Responsive Behaviour: Does not wrap its text.

SEO Impact: None.

Accessibility Compliance: As Primary.

Variation 51 — Mixed link styles

Variation Name: Links in different styles in one teaser.

Business Purpose: Combine a button with list rows or text links.

Visual Example:

Figure 54: Mixed links — A Text split teaser at 1440 px: the eyebrow Insights above, the title Mixed link styles on the left; on the right the description, the List rows Cloud migration and Business and technology consulting with a divider and arrows, then the black button Talk to an expert. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-links-mixed.jpg)

Screenshot Details — Mixed links

Item	Detail
Screenshot Name	`screenshots/teaser-links-mixed.jpg`
Screenshot Purpose	Mixed links
Screen Description	A Text split teaser at 1440 px: the eyebrow Insights above, the title Mixed link styles on the left; on the right the description, the List rows Cloud migration and Business and technology consulting with a divider and arrows, then the black button Talk to an expert.
Business Context	A resource list that ends with a final action: two related service rows followed by a Talk to an expert button.
Author Objective	Add three Links items: two with CTA Link Style List and one with Primary Button.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Mixed link styles	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.	No	Main text	Up to 300 characters (Recommended)	None
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(E)	Multiple links (Teaser › Links)	On	No	List of links instead of two CTAs	On for 3+ links	None
F	CTA Title (Teaser › Links › Links › Item 1)	Cloud migration	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
G	CTA Link (Teaser › Links › Links › Item 1)	Select the page or enter /en/services/cloud/migration	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(H)	CTA Link Style (Teaser › Links › Links › Item 1)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
I	CTA Title (Teaser › Links › Links › Item 2)	Business and technology consulting	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
J	CTA Link (Teaser › Links › Links › Item 2)	Select the page or enter /en/services/consulting	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(K)	CTA Link Style (Teaser › Links › Links › Item 2)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
L	CTA Title (Teaser › Links › Links › Item 3)	Talk to an expert	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
M	CTA Link (Teaser › Links › Links › Item 3)	Select the page or enter /en/contact	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(N)	CTA Link Style (Teaser › Links › Links › Item 3)	Primary Button	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow "Insights" above; the title "Mixed link styles" on the left; on the right the description, the rows "Cloud migration" and "Business and technology consulting" with a divider and arrows, then the black "Talk to an expert" button.
- **Rendering behaviour:** The two List links share one ul; the Primary Button ends the list; the container gets teaser-links-mixed instead of a single teaser-links-{style}.
- **Publishing behaviour:** Only the page is published. Publish to Preview, open the three targets, then Publish to Live.

Business Rules

- A non-List link ends the current list; a later List link starts a new one.
- Each item keeps its own CTA Link Style.
- Put the button last so the list reads as one group.

Common Authoring Mistakes

Error	Root Cause	Resolution
The list is split in two	The button item placed between the List items	Move the Primary Button item to the end
The button renders as a row	Its CTA Link Style left on List	Set CTA Link Style to Primary Button

Troubleshooting

- **Symptoms:** "Talk to an expert" appears as a third divided row instead of a button.
- **Cause:** The third Links item has CTA Link Style List.
- **Resolution:** Set the third item's CTA Link Style to Primary Button and publish the page.

- **Verification Steps:** div.teaser-links has the class teaser-links-mixed and the last link is a black button.

Use Cases: Resource lists with a final action.

Authoring Guidelines: Give the links different CTA Link Styles.

Business Rules: A non-List link ends the current list; the next List link starts a new one.

Rendering Rules: The container gets `teaser-links-mixed` (one style: `teaser-links-{style}`, `teaser-links-default` for Text links).

Responsive Behaviour: Stacked.

SEO Impact: None.

Accessibility Compliance: None.

Variation 52 — List arrow "Right"

Variation Name: List arrow "Right" (default, value "").

Business Purpose: The standard arrow of List rows.

Visual Example:

Figure 55: Right arrow — A Text split teaser at 1440 px: the title List rows with right arrows on the left; on the right the description and three divided List rows Cloud migration, Business and technology consulting and Industries we serve, each ending in a grey right arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-list-arrow-right.jpg)

Screenshot Details — Right arrow

Item	Detail
Screenshot Name	`screenshots/teaser-list-arrow-right.jpg`
Screenshot Purpose	Right arrow
Screen Description	A Text split teaser at 1440 px: the title List rows with right arrows on the left; on the right the description and three divided List rows Cloud migration, Business and technology consulting and Industries we serve, each ending in a grey right arrow.
Business Context	An insights link list with the standard right-pointing arrows of the List link style.
Author Objective	Add three List-style Links items and keep List arrow on Right (default).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	List rows with right arrows	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.	No	Main text	Up to 300 characters (Recommended)	None
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(E)	Multiple links (Teaser › Links)	On	No	List of links instead of two CTAs	On for 3+ links	None
F	CTA Title (Teaser › Links › Links › Item 1)	Cloud migration	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
G	CTA Link (Teaser › Links › Links › Item 1)	Select the page or enter /en/services/cloud/migration	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(H)	CTA Link Style (Teaser › Links › Links › Item 1)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
I	CTA Title (Teaser › Links › Links › Item 2)	Business and technology consulting	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
J	CTA Link (Teaser › Links › Links › Item 2)	Select the page or enter /en/services/consulting	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(K)	CTA Link Style (Teaser › Links › Links › Item 2)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
L	CTA Title (Teaser › Links › Links › Item 3)	Industries we serve	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
M	CTA Link (Teaser › Links › Links › Item 3)	Select the page or enter /en/industries	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(N)	CTA Link Style (Teaser › Links › Links › Item 3)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "List rows with right arrows" on the left; on the right the description and three divided rows "Cloud migration", "Business and technology consulting" and "Industries we serve", each ending in a grey right arrow.
- **Rendering behaviour:** The arrow is a CSS mask of icons/arrow-right.svg in the divider colour, turning brand blue on hover or focus.
- **Publishing behaviour:** Only the page is published (the arrow icons are code). Publish to Preview and Live.

Business Rules

- List arrow affects List-style links only.
- New-window List links always show the up-right arrow.
- The arrow is decorative and not announced.

Common Authoring Mistakes

Error	Root Cause	Resolution
One row shows an up-right arrow	That item has CTA Link Type Open in New Window	Expected; use Default if the link should open in the same tab
No arrows appear	Items are Text links, not List	Set CTA Link Style to List

Troubleshooting

- **Symptoms:** The row "Cloud migration" is missing from the list on the published page.
- **Cause:** That Links item has a CTA Title but an empty CTA Link; items without a link are dropped.
- **Resolution:** Open the item, select the page or enter /en/services/cloud/migration in CTA Link and publish the page.
- **Verification Steps:** Every item renders as a row inside ul.teaser-link-list and opens its target.

Use Cases: Default.

Authoring Guidelines: Links tab: List arrow = Right.

Business Rules: New-window links always show the up-right arrow.

Rendering Rules: `arrow-right.svg` mask.

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: Decorative.

Variation 53 — List arrow "Down right"

Variation Name: List arrow "Down right" (class `arrow-down-right`).

Business Purpose: The diagonal down-right arrow of some Figma frames.

Visual Example:

Figure 56: Down-right arrow — A Text split teaser at 1440 px with List arrow Down right: the title List rows with down-right arrows on the left; on the right the description and three divided List rows, each ending in a grey diagonal arrow pointing down and right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-list-arrow-down-right.jpg)

Screenshot Details — Down-right arrow

Item	Detail
Screenshot Name	`screenshots/teaser-list-arrow-down-right.jpg`
Screenshot Purpose	Down-right arrow
Screen Description	A Text split teaser at 1440 px with List arrow Down right: the title List rows with down-right arrows on the left; on the right the description and three divided List rows, each ending in a grey diagonal arrow pointing down and right.
Business Context	An insights link list using the diagonal down-right arrow of some Figma frames.
Author Objective	Set List arrow to Down right on a teaser with three List-style links.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	List rows with down-right arrows	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better decisions. Our re-	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		search shows how leaders in banking, retail and manufacturing build that advantage.				
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(E)	Multiple links (Teaser › Links)	On	No	List of links instead of two CTAs	On for 3+ links	None
F	CTA Title (Teaser › Links › Links › Item 1)	Cloud migration	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
G	CTA Link (Teaser › Links › Links › Item 1)	Select the page or enter /en/services/cloud/migration	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(H)	CTA Link Style (Teaser › Links › Links › Item 1)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
I	CTA Title (Teaser › Links › Links › Item 2)	Business and technology consulting	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
J	CTA Link (Teaser › Links › Links › Item 2)	Select the page or enter /en/services/consulting	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(K)	CTA Link Style (Teaser › Links › Links › Item 2)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
L	CTA Title (Teaser › Links › Links › Item 3)	Industries we serve	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
M	CTA Link (Teaser › Links › Links › Item 3)	Select the page or enter /en/industries	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(N)	CTA Link Style (Teaser › Links › Links › Item 3)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
(O)	List arrow (Teaser › Links)	Down right	No	Arrow of List-style links	Down right per design	Options: Right, Down right

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title “List rows with down-right arrows” on the left; on the right the description and three divided rows, each ending in a grey diagonal arrow pointing down and right.
- **Rendering behaviour:** arrow-down-right replaces the mask with icons/arrow-up-right.svg rotated 90 degrees for same-window List links.
- **Publishing behaviour:** Only the page is published. Publish to Preview and Live.

Business Rules

- Down right applies to same-window List links only.
- The List arrow field is always visible but has no effect on buttons or Text links.
- Use one arrow style per page for consistency.

Common Authoring Mistakes

Error	Root Cause	Resolution
Buttons do not change	List arrow only affects List rows	Expected; buttons keep their own arrow
A new-window row still points up-right	New-window rows always use the up-right arrow	Expected behaviour

Troubleshooting

- **Symptoms:** The rows still show right arrows after choosing Down right.
- **Cause:** List arrow was saved as Right, or the page was not republished.
- **Resolution:** Set List arrow to Down right and publish the page to Preview again.
- **Verification Steps:** The block has the class arrow-down-right and the arrows point diagonally down.

Use Cases: Design-specific link lists.

Authoring Guidelines: List arrow = Down right (the field is always visible; it only affects List links).

Business Rules: Applies to same-window List links only.

Rendering Rules: `arrow-up-right.svg` rotated 90 degrees.

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: Decorative.

Variation 54 — Stats

Variation Name: Teaser with Stats (Stats tab).

Business Purpose: Headline numbers that prove the message (Figma “Text Section - 2 Columns” with stats).

Visual Example:

Figure 57: Stats — A Text split teaser at 1440 px: the eyebrow Results above, the title Cloud modernisation in numbers on the left; on the right the description and the stats Lower operating cost 40%, Faster releases 3x and Applications migrated 1,200, each label above a large brand-blue value. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-stats.jpg)

Screenshot Details — Stats

Item	Detail
Screenshot Name	`screenshots/teaser-stats.jpg`
Screenshot Purpose	Stats
Screen Description	A Text split teaser at 1440 px: the eyebrow Results above, the title Cloud modernisation in numbers on the left; on the right the description and the stats Lower operating cost 40%, Faster releases 3x and Applications migrated 1,200, each label above a large brand-blue value.
Business Context	A cloud case-study results section where three headline numbers prove the claim (Figma “Text Section - 2 Columns” with stats).
Author Objective	Add three Stats items to a Text split teaser, each with a Stats Title and a one-line Stats Value.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Results	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Cloud modernisation in numbers	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	What our clients achieved in the first two years after moving their core applications to the cloud.	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
E	Stats Title (Teaser › Stats › Stats › Item 1)	Lower operating cost	No (Recommended)	What the number measures	Short label	None
F	Stats Value (Teaser › Stats › Stats › Item 1)	40%	No (Recommended)	The number	A single line, e.g. 40%	None (single line is guidance; the last element of the item is used as the value)
G	Stats Title (Teaser › Stats › Stats › Item 2)	Faster releases	No (Recommended)	What the number measures	Short label	None
H	Stats Value (Teaser › Stats › Stats › Item 2)	3x	No (Recommended)	The number	A single line, e.g. 40%	None (single line is guidance; the last element of the item is used as the value)
I	Stats Title (Teaser › Stats › Stats › Item 3)	Applications migrated	No (Recommended)	What the number measures	Short label	None
J	Stats Value (Teaser › Stats › Stats › Item 3)	1,200	No (Recommended)	The number	A single line, e.g. 40%	None (single line is guidance; the last element of the item is used as the value)

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow "Results" above; the title "Cloud modernisation in numbers" on the left; on the right the description and the stats "Lower operating cost" 40%, "Faster releases" 3x and "Applications migrated" 1,200, each label above a large brand-blue value.
- **Rendering behaviour:** dl.teaser-stats with one div.teaser-stat (dt label, dd value) per item; items at least 11.25rem wide and wrapping; values 6rem from 900 px, 2.75rem below, no wrap.
- **Publishing behaviour:** Only the page is published (stats are text). Publish to Preview, check the values at 375 px, then Publish to Live.

Business Rules

- The last element of an item is the value, the elements before it the label.
- Keep values to about 6 characters (40%, 3x, 1,200) so they do not overflow.
- Stats appear after the description and before the links.
- 2 to 4 stats per teaser.

Common Authoring Mistakes

Error	Root Cause	Resolution
A label shows as the large value	Stats Value empty or several lines	Enter a single-line Stats Value in every item
A value overflows on phones	A long value such as "1,200 apps"	Keep the unit in the label

Troubleshooting

- **Symptoms:** "Applications migrated" appears in large blue type with no number.
- **Cause:** The third item's Stats Value is empty, so the last line of the title is used as the value.
- **Resolution:** Enter 1,200 in Stats Value of the third item and publish the page.
- **Verification Steps:** Each stat shows its label above its value in dl.teaser-stats.

Use Cases: Case-study results, company facts.

Authoring Guidelines: Stats tab: add an item per stat with Stats Title and Stats Value (a single line).

Business Rules: In each item the last element is the value and the elements before it the title; stats appear after the description (and image) and before the links.

Rendering Rules: `buildStats` → `dl.teaser-stats > div.teaser-stat > dt.teaser-stat-label + dd.teaser-stat-value`; items flex at least 11.25rem wide, wrapping; value Display 1 (2.75rem; 6rem from 900 px), no wrap, brand blue (light blue on dark).

Responsive Behaviour: Several per row on desktop, wrapping to one per row on mobile.

SEO Impact: Numbers are text (indexable).

Accessibility Compliance: Description list associates each label with its value (WCAG 1.3.1).

Variation 55 — Date

Variation Name: Show Date with Date, Date Format and Date label.

Business Purpose: Publication date in article-style headers.

Visual Example:

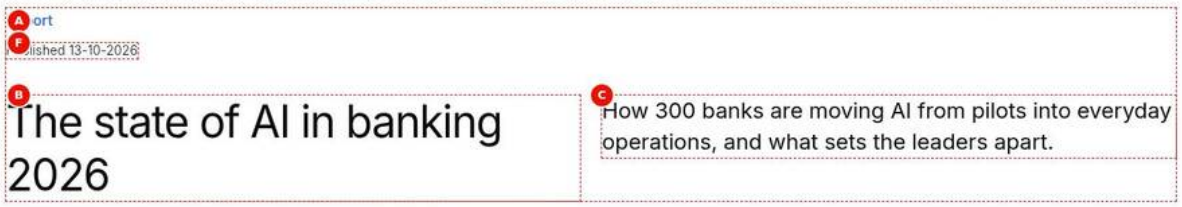

Figure 58: Date — A Text split teaser at 1440 px: the eyebrow Report, and below it on the left (not at the right of the kicker, as there are no tags) the small text Published 13-10-2026; then the regular-weight title The state of AI in banking 2026 on the left and the description How 300 banks are moving AI from pilots into everyday operations… on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-date.jpg)

Screenshot Details — Date

Item	Detail
Screenshot Name	`screenshots/teaser-date.jpg`
Screenshot Purpose	Date
Screen Description	A Text split teaser at 1440 px: the eyebrow Report, and below it on the left (not at the right of the kicker, as there are no tags) the small text Published 13-10-2026; then the regular-weight title The state of AI in bank-

Item	Detail
	ing 2026 on the left and the description How 300 banks are moving AI from pilots into everyday operations… on the right.
Business Context	The header of a banking AI report teaser that tells readers when the research was published.
Author Objective	Turn Show Date on, pick 13 October 2026 and enter the Date label “Published”.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Report	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	The state of AI in banking 2026	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	How 300 banks are moving AI from pilots into everyday operations, and what sets the leaders apart.	No	Main text	Up to 300 characters (Recommended)	None
(D)	Show Date (Teaser › Content)	On	No	Show the date	On for dated content	None
(E)	Date (Teaser › Content)	2026-10-13	No	Publication date	Pick a date	Date picker
F	Date label (Teaser › Content)	Published	No	Text before the date	Short word	None
(G)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card

All other fields keep their default values. Each callout letter marks the field’s output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Under the eyebrow “Report” the small light text “Published 13-10-2026”; below, the regular-weight title on the left and the description on the right.
- **Rendering behaviour:** p.teaser-date holds the label and a time element with datetime 2026-10-13 in the kicker’s info row; without tags the info row starts at the left under the eyebrow.
- **Publishing behaviour:** Only the page is published; the date is stored in the teaser. Publish to Preview and Live.

Business Rules

- The date shows only with Show Date on and a Date.
- Date Format default DD-MM-YYYY gives 13-10-2026; MMM d, yyyy uses English month names in every locale.
- Date, Date Format and Date label are hidden until Show Date is on.
- Keep the date consistent with the page’s publish-date metadata when the teaser describes the same report.

Common Authoring Mistakes

Error	Root Cause	Resolution
The Date field cannot be found	Show Date is off	Turn Show Date on
The date shows as 2026-10-13T00:00:00.000Z	A typed non-date value	Pick the date with the date picker

Troubleshooting

- **Symptoms:** No date appears although a Date was picked.
- **Cause:** Show Date was turned off again; the stored Date is kept but ignored.
- **Resolution:** Turn Show Date on and publish the page.
- **Verification Steps:** "Published 13-10-2026" appears and the time element has datetime="2026-10-13".

Use Cases: Insights, news, events.

Authoring Guidelines: Content tab: Show Date on; choose Date, Date Format and optional Date label.

Business Rules: Shown only with Show Date on and a Date; formats DD-MM-YYYY (default), MM-DD-YYYY, MMM d, yyyy (English month abbreviations), DD/MM/YY.

Rendering Rules: `p.teaser-date` with the label and `<time datetime="YYYY-MM-DD">`.

Responsive Behaviour: Wraps under the tags on narrow screens.

SEO Impact: Machine-readable `datetime`.

Accessibility Compliance: `<time>` element.

Variation 56 — Reading time

Variation Name: Reading time.

Business Purpose: Tell readers how long the content takes.

Visual Example:

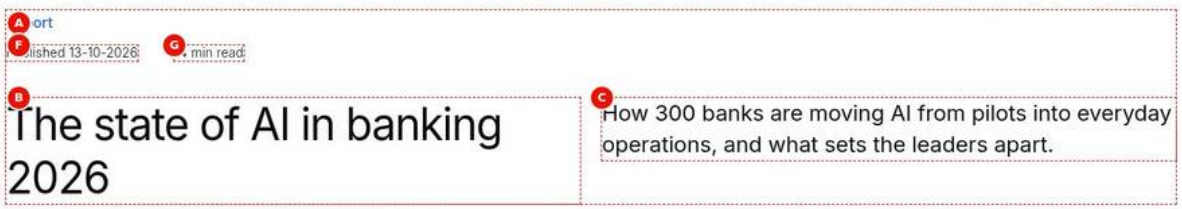

Figure 59: Reading time — A Text split teaser at 1440 px: the eyebrow Report, and below it on the left the small text Published 13-10-2026 followed by 14 min read; then the regular-weight title The state of AI in banking 2026 on the left and the description How 300 banks are moving AI from pilots into everyday operations… on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-reading-time.jpg)

Screenshot Details — Reading time

Item	Detail
Screenshot Name	`screenshots/teaser-reading-time.jpg`
Screenshot Purpose	Reading time
Screen Description	A Text split teaser at 1440 px: the eyebrow Report, and below it on the left the small text Published 13-10-2026 followed by 14 min read; then the regular-weight title The state of AI in banking 2026 on the left and the description How 300 banks are moving AI from pilots into everyday operations… on the right.
Business Context	The banking AI report teaser adding how long the report takes to read, next to its publication date.

Item	Detail
Author Objective	Enter Reading time 14 on the dated report teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Report	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	The state of AI in banking 2026	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	How 300 banks are moving AI from pilots into everyday operations, and what sets the leaders apart.	No	Main text	Up to 300 characters (Recommended)	None
(D)	Show Date (Teaser › Content)	On	No	Show the date	On for dated content	None
(E)	Date (Teaser › Content)	2026-10-13	No	Publication date	Pick a date	Date picker
F	Date label (Teaser › Content)	Published	No	Text before the date	Short word	None
G	Reading time (Teaser › Content)	14	No	Reading time	Minutes as a number	None
(H)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Under the eyebrow "Report" the small text "Published 13-10-2026" followed by "14 min read"; below, the title on the left and the description on the right.
- **Rendering behaviour:** p.teaser-reading-time in div.teaser-info; a whole number becomes the placeholder minRead "{n} min read"; the row wraps on narrow screens.
- **Publishing behaviour:** Publish the page to Preview and Live; the "min read" text comes from the published /{locale}/placeholders.json (key minRead), which is a separate publish step.

Business Rules

- Digits only become "{n} min read"; any other text is shown as typed.
- Enter minutes, not "14 minutes", so each locale shows its own wording.
- Reading time shows without Show Date too.

Common Authoring Mistakes

Error	Root Cause	Resolution
"14 minutes" shows in English on the German site	Text typed instead of a number	Enter 14 and let the placeholder translate
"14 min read" is English on a localised site	The locale's placeholders lack minRead	Add minRead to the locale placeholders and publish them

Troubleshooting

- **Symptoms:** The reading time shows the English "14 min read" on a non-English locale.
- **Cause:** The key minRead is missing from that locale's placeholders sheet or the sheet is not published.
- **Resolution:** Add minRead with the translated "{n}" text to the locale placeholders and publish the sheet.
- **Verification Steps:** Open /{locale}/placeholders.json and find minRead; reload the page and the translated text shows.

Use Cases: Articles, reports.

Authoring Guidelines: Content tab: Reading time = minutes (e.g. 14) or any text.

Business Rules: A whole number becomes the placeholder `minRead` ("{n} min read"); other text is shown as typed.

Rendering Rules: `p.teaser-reading-time` in `div.teaser-info`.

Responsive Behaviour: Wraps with the info row.

SEO Impact: None.

Accessibility Compliance: Plain text.

Variation 57 — Page actions (listen, download, share)

Variation Name: Listen link, Download and Share.

Business Purpose: Let visitors listen to, print / save or share the page.

Visual Example:

Figure 60: Page actions — A Text split teaser at 1440 px after selecting Share: under the eyebrow Report, on the left, the headphones, download and share icon buttons with Link copied to clipboard below them, its first letter cut off at the left edge; then the regular-weight title The state of AI in banking 2026 on the left and the description How 300 banks are moving AI from pilots into everyday operations… on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-page-actions.jpg)

Screenshot Details — Page actions

Item	Detail
Screenshot Name	`screenshots/teaser-page-actions.jpg`
Screenshot Purpose	Page actions
Screen Description	A Text split teaser at 1440 px after selecting Share: under the eyebrow Report, on the left, the headphones, download and share icon buttons with Link copied to clipboard below them, its first letter cut off at the left

Item	Detail
	edge; then the regular-weight title The state of AI in banking 2026 on the left and the description How 300 banks are moving AI from pilots into everyday operations… on the right.
Business Context	The report teaser offering readers an audio version, a printable version and sharing, as in the article header (Figma "L3 Header").
Author Objective	Set the Listen link and turn Download and Share on, then test Share on a desktop browser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Report	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	The state of AI in banking 2026	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	How 300 banks are moving AI from pilots into everyday operations, and what sets the leaders apart.	No	Main text	Up to 300 characters (Recommended)	None
D	Listen link (Teaser › Content)	Select the page or enter /en/insights/ai-in-banking-podcast	No	Audio version of the page	Audio page or file	None
(E)	Download (Teaser › Content)	On	No	Show the download (print) icon	For printable content	None
(F)	Share (Teaser › Content)	On	No	Show the share icon	For shareable content	None
(G)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
—	Action (Preview)	Select Share (desktop browser without a share dialog)	—	Check on the preview (not stored in the content)	Select Share (desktop browser without a share dialog)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (E), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Under the eyebrow "Report" three icon buttons: headphones, download and share; after selecting Share the text "Link copied to clipboard" appears below the icons; then the title and description.
- **Rendering behaviour:** div.teaser-actions holds tertiary icon buttons and p.teaser-status (role status); Share uses the device share dialog where available, otherwise copies the URL and shows the message for 3 seconds.

- **Publishing behaviour:** Publish the page and the podcast page /en/insights/ai-in-banking-podcast; the button labels come from the published locale placeholders (listenToThisPage, downloadThisPage, shareThisPage, linkCopied).

Business Rules

- Listen replaces the link text with "Listen to this page" and shows the headphones icon.
- Download opens the browser print dialog (print or save as PDF).
- Share uses the teaser title "The state of AI in banking 2026" as the share title.
- Without a share dialog the URL is copied; a blocked clipboard fails silently.

Common Authoring Mistakes

Error	Root Cause	Resolution
Share seems to do nothing	Tested on a non-HTTPS host where the clipboard is blocked	Test on aem.page or aem.live
The listen icon leads to a 404	The podcast page not published	Publish /en/insights/ai-in-banking-podcast

Troubleshooting

- **Symptoms:** Selecting Share on desktop shows no dialog and no message.
- **Cause:** The browser has no Web Share API and the clipboard is blocked (non-HTTPS host or denied permission).
- **Resolution:** Test on the HTTPS aem.page / aem.live host and allow clipboard access.
- **Verification Steps:** "Link copied to clipboard" appears for 3 seconds and the page URL can be pasted.

Use Cases: Article headers (Figma "L3 Header").

Authoring Guidelines: Content tab: Listen link (audio page or file), Download on, Share on.

Business Rules: Listen: the link becomes an icon button labelled `listenToThisPage` ("Listen to this page"). Download: `window.print()` (print or save as PDF), label `downloadThisPage`. Share: the device share dialog (title = teaser title or page title), else the URL is copied and "Link copied to clipboard" (`linkCopied`) shows for 3 seconds.

Rendering Rules: `div.teaser-actions` with tertiary icon buttons and `p.teaser-status` (`role="status"`).

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: Icon buttons have accessible names; the copy confirmation is announced through the live status region.

Variation 58 — Author lockup

Variation Name: Author name, designation and image.

Business Purpose: Credit the author of an insight.

Visual Example:

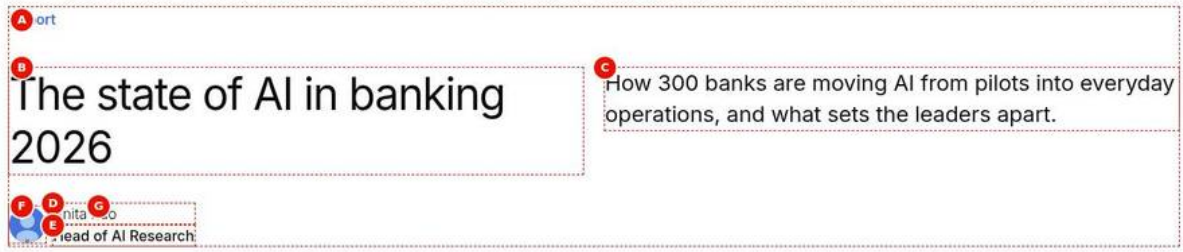

Figure 61: Author — A Text split teaser at 1440 px: the eyebrow Report above; on the left the title The state of AI in banking 2026 and below it a round portrait with Anita Rao and Head of AI Research; on the right the description. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-author.jpg)

Screenshot Details — Author

Item	Detail
Screenshot Name	`screenshots/teaser-author.jpg`
Screenshot Purpose	Author
Screen Description	A Text split teaser at 1440 px: the eyebrow Report above; on the left the title The state of AI in banking 2026 and below it a round portrait with Anita Rao and Head of AI Research; on the right the description.
Business Context	A thought-leadership teaser crediting the report author, Anita Rao, Head of AI Research.
Author Objective	Enter Author name, Author designation and Author image on the report teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Report	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	The state of AI in banking 2026	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	How 300 banks are moving AI from pilots into everyday operations, and what sets the leaders apart.	No	Main text	Up to 300 characters (Recommended)	None
D	Author name (Teaser › Content)	Anita Rao	No	Author's name	Full name	None
E	Author designation (Teaser › Content)	Head of AI Research	No	Author's role	e.g. TCS Role	None
F	Author image (Teaser › Content)	Select the asset person-1.svg (/en/media/person-1.svg)	No	Author portrait	Square portrait	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
G	Author image alt text (Teaser › Content)	Anita Rao	No	Portrait alt text	Empty if decorative	None
(H)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (H), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "The state of AI in banking 2026" on the left with, below it, a round 2.5rem portrait next to "Anita Rao" (light) and "Head of AI Research" (medium); the description on the right.
- **Rendering behaviour:** div.teaser-author below the heading row: div.teaser-author-image (round, cover) and div.teaser-author-details; in Text split it sits in the left column.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; person-1.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- The lockup appears only with a name or a designation; an image alone is not shown.
- Author image alt text "Anita Rao" repeats the visible name; it may be left empty because the name is next to it.
- Keep the author consistent with the page's author-id metadata where the teaser describes the same report.
- Use a square portrait of at least 160 x 160 px.

Common Authoring Mistakes

Error	Root Cause	Resolution
Only the portrait was entered and nothing shows	Author name and Author designation empty	Enter Anita Rao and Head of AI Research
The portrait looks squashed	A non-square source image	Use a square image; it is cropped to a circle

Troubleshooting

- **Symptoms:** The author portrait is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** person-1.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish person-1.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the author portrait shows the picture.

Use Cases: Thought-leadership teasers and headers.

Authoring Guidelines: Content tab: Author name, Author designation, Author image, Author image alt text.

Business Rules: Shown only with a name or a designation (an image alone is not shown).

Rendering Rules: `div.teaser-author` (image `div.teaser-author-image`, round, cover) and `div.teaser-author-details` (`p.teaser-author-name` light, `p.teaser-author-designation` medium), below the title row; in Text split in the left column.

Responsive Behaviour: Same at every width.

SEO Impact: Author names are indexable text.

Accessibility Compliance: Author image alt text (usually the name, or empty when the name is next to it).

Variation 59 — Tags

Variation Name: Display Tags with Tags.

Business Purpose: Show topic labels (Figma "BANKING | AI NATIVE").

Visual Example:

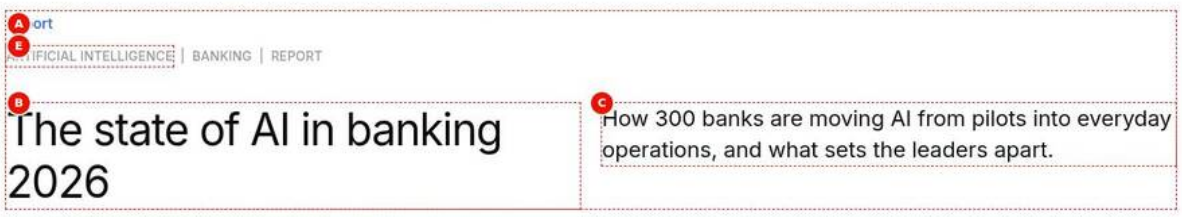

Figure 62: Tags — A Text split teaser at 1440 px: the eyebrow Report, below it the grey uppercase tags ARTIFICIAL INTELLIGENCE, BANKING and REPORT separated by bars; then the regular-weight title The state of AI in banking 2026 on the left and the description How 300 banks are moving AI from pilots into everyday operations… on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-tags.jpg)

Screenshot Details — Tags

Item	Detail
Screenshot Name	`screenshots/teaser-tags.jpg`
Screenshot Purpose	Tags
Screen Description	A Text split teaser at 1440 px: the eyebrow Report, below it the grey uppercase tags ARTIFICIAL INTELLIGENCE, BANKING and REPORT separated by bars; then the regular-weight title The state of AI in banking 2026 on the left and the description How 300 banks are moving AI from pilots into everyday operations… on the right.
Business Context	The report teaser labelled with its topic, industry and content type so readers recognise the subject at a glance.
Author Objective	Turn Display Tags on and add the tags tcs-corp:topic/ai, tcs-corp:industry/banking and tcs-corp:content-type/report.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Report	No	Kicker above the title	Up to 40 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Title (Teaser › Content)	The state of AI in banking 2026	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	How 300 banks are moving AI from pilots into everyday operations, and what sets the leaders apart.	No	Main text	Up to 300 characters (Recommended)	None
(D)	Display Tags (Teaser › Content)	On	No	Show the tags	On to show Tags	None
E	Tags (Teaser › Content)	Add the tags tcs-corp:topic/ai, tcs-corp:industry/banking, tcs-corp:content-type/report	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
(F)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Under the eyebrow "Report" the small grey uppercase tags ARTIFICIAL INTELLIGENCE, BANKING and REPORT separated by vertical bars; below, the title on the left and the description on the right.
- **Rendering behaviour:** div.teaser-meta > ul.teaser-tags > li[data-tag]; labels resolved from /en/taxonomy.json (the locale's language sheet when translated), uppercased by CSS; the row wraps.
- **Publishing behaviour:** Publish the page; the labels come from the published /en/taxonomy page, which must be published after tags are added or renamed.

Business Rules

- Tags render only with Display Tags on and at least one tag.
- Tags missing from the taxonomy show a label derived from the ID.
- Tags are display only: not written to page metadata or used by List / Filter List.
- Use 1 to 3 tags; the content-type tag here repeats the eyebrow "Report".

Common Authoring Mistakes

Error	Root Cause	Resolution
A tag reads "AI" instead of its full title	The tag is missing from the taxonomy	Add it to /en/taxonomy and publish
The tags do not show	Display Tags off	Turn Display Tags on

Troubleshooting

- **Symptoms:** The first tag reads "AI" instead of "ARTIFICIAL INTELLIGENCE".
- **Cause:** tcs-corp:topic/ai is missing from /en/taxonomy.json or the taxonomy page is not published, so the label is derived from the last part of the ID.
- **Resolution:** Add the tag with the title "Artificial intelligence" to the en taxonomy page and publish it.

- **Verification Steps:** Open /en/taxonomy.json on aem.live and find the tag; reload the page and the full label shows.

Use Cases: Insights, industry teasers.

Authoring Guidelines: Content tab: Display Tags on; choose Tags.

Business Rules: Labels come from the locale's taxonomy (`/{locale}/taxonomy.json`); tags missing there show a label derived from the tag ID.

Rendering Rules: `div.teaser-meta > ul.teaser-tags > li[data-tag]`.

Responsive Behaviour: Wraps.

SEO Impact: Display only; tags are not written to page metadata.

Accessibility Compliance: Semantic list.

Variation 60 — View All link

Variation Name: View All Text and View All Link.

Business Purpose: A "View all" button beside the title (e.g. above a related list).

Visual Example:

Figure 63: View All — A teaser without an image at 1440 px with Text alignment Left: the eyebrow Insights, the title Latest research on the left with the black View all button at the right of the same row, and the description Reports, articles and case studies from our experts below. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-view-all.jpg)

Screenshot Details — View All

Item	Detail
Screenshot Name	`screenshots/teaser-view-all.jpg`
Screenshot Purpose	View All
Screen Description	A teaser without an image at 1440 px with Text alignment Left: the eyebrow Insights, the title Latest research on the left with the black View all button at the right of the same row, and the description Reports, articles and case studies from our experts below.
Business Context	A "Latest research" heading above a list of insights, with a View all button to the full insights page.
Author Objective	Enter View All Text and View All Link and set Text alignment Left on a teaser without image.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Title (Teaser › Content)	Latest research	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Reports, articles and case studies from our experts.	No	Main text	Up to 300 characters (Recommended)	None
D	View All Text (Teaser › Content)	View all	No	View All button text	Specific text	None
E	View All Link (Teaser › Content)	Select the page or enter /en/insights	No	View All target	A listing page	None
(F)	Text alignment (Teaser › Style)	Left	No	Text alignment	Layout default in most cases	Options: Layout default, Left, Center, Right

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow "Insights", the title "Latest research" on the left and a black "View all" button at the right of the same row; the description below.
- **Rendering behaviour:** a.teaser-view-all.button.primary in div.teaser-heading-row (space-between, wrapping); Text alignment Left lifts the centred column of the no-image layout; on narrow screens the button moves below the title.
- **Publishing behaviour:** Only the page is published. Publish to Preview, check /en/insights opens, then Publish to Live.

Business Rules

- View All is always a Primary Button and has no new-window option.
- Both View All Text and View All Link are needed.
- Prefer specific text such as "View all insights".
- Without Text alignment Left the no-image teaser would be centred.

Common Authoring Mistakes

Error	Root Cause	Resolution
The button does not appear	View All Link empty	Select /en/insights in View All Link
The title and button are centred	Text alignment left on Layout default	Set Text alignment to Left

Troubleshooting

- **Symptoms:** The View all button is missing.
- **Cause:** Only View All Text was entered; the button needs View All Link.
- **Resolution:** Select the insights page in View All Link and publish the page.
- **Verification Steps:** a.teaser-view-all appears at the right of the title row and opens /en/insights.

Use Cases: Section headings for news or insights.

Authoring Guidelines: Content tab: View All Text and View All Link.

Business Rules: Always a primary button; no new-window option.

Rendering Rules: `a.teaser-view-all.button.primary` in `div.teaser-heading-row` (space-between, wrapping).

Responsive Behaviour: Moves below the title when space runs out.

SEO Impact: Crawlable link.

Accessibility Compliance: Use a specific text ("View all insights").

Variation 61 — Hide Title

Variation Name: Hide Title on.

Business Purpose: Keep a heading for structure and screen readers without showing it.

Visual Example:

Figure 64: Hidden title — A centred teaser without an image at 1440 px with Hide Title on: no visible title; the description Join a global team of technologists… and the buttons Search jobs and Life at TCS, centred. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-hide-title.jpg)

Screenshot Details — Hidden title

Item	Detail
Screenshot Name	`screenshots/teaser-hide-title.jpg`
Screenshot Purpose	Hidden title
Screen Description	A centred teaser without an image at 1440 px with Hide Title on: no visible title; the description Join a global team of technologists… and the buttons Search jobs and Life at TCS, centred.
Business Context	A careers call to action whose design has no visible heading but which still needs a heading for screen readers and the page outline.
Author Objective	Turn Hide Title on so "Build the future with us" stays in the page but is not shown.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Title (Teaser › Content)	Build the future with us	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
(B)	Hide Title (Teaser › Content)	On	No	Visually hide the title	Use rarely	None
C	Description (Teaser › Content)	Join a global team of technologists and consultants solving problems	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		that matter for the world's leading businesses.				
D	Primary CTA Title (Teaser › Links)	Search jobs	No	Primary CTA text	Verb first	Shown only with Multiple links off
E	Primary CTA Link (Teaser › Links)	Select the page or enter /en/careers	No	Primary CTA target	Page or URL	Shown only with Multiple links off
F	Secondary CTA Title (Teaser › Links)	Life at TCS	No	Secondary CTA text	Verb first	Shown only with Multiple links off
G	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A centred teaser that starts with the description "Join a global team…" followed by "Search jobs" and "Life at TCS"; no visible title.
- **Rendering behaviour:** The h2 keeps its place in the DOM with the class visually-hidden; screen readers and the data layer dc:title still use it.
- **Publishing behaviour:** Only the page is published. Publish to Preview, check the heading in the accessibility tree, then Publish to Live.

Business Rules

- Prefer Hide Title to deleting the title when no heading is visible.
- The hidden heading should match the visible content (no keyword stuffing).
- The title is also the share title and the data layer dc:title.

Common Authoring Mistakes

Error	Root Cause	Resolution
The title was deleted instead	Removing the visible heading	Re-enter the title and turn Hide Title on
The title still shows	Hide Title off	Turn Hide Title on

Troubleshooting

- **Symptoms:** Screen readers announce no heading for the careers teaser.
- **Cause:** The Title field was cleared instead of using Hide Title.
- **Resolution:** Enter "Build the future with us" in Title, turn Hide Title on and publish.
- **Verification Steps:** The accessibility tree shows the H2 while the page shows no title.

Use Cases: Designs without a visible heading.

Authoring Guidelines: Content tab: Hide Title on.

Business Rules: The title stays in the DOM and in the data layer `dc:title`.

Rendering Rules: `hideVisually()` adds `visually-hidden`.

Responsive Behaviour: Hidden at every width.

SEO Impact: Visually hidden headings should match visible content; avoid stuffing keywords.

Accessibility Compliance: Preserves the heading structure (WCAG 1.3.1).

Variation 62 — Short description

Variation Name: Short Description.

Business Purpose: A note after the links (legal text, footnote).

Visual Example:

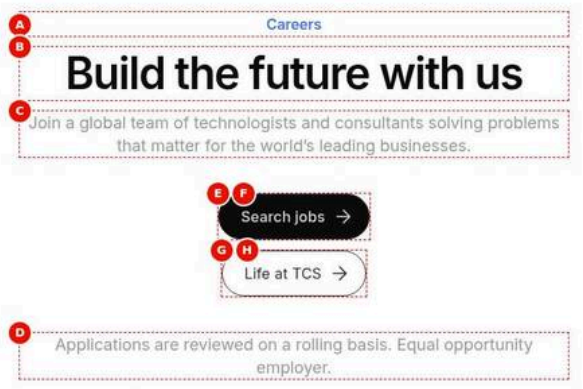

Figure 65: Short description — A centred teaser without an image at 1440 px: the eyebrow Careers, the title Build the future with us, the description, the buttons Search jobs and Life at TCS and below them the short note Applications are reviewed on a rolling basis. Equal opportunity employer. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-short-description.jpg)

Screenshot Details — Short description

Item	Detail
Screenshot Name	`screenshots/teaser-short-description.jpg`
Screenshot Purpose	Short description
Screen Description	A centred teaser without an image at 1440 px: the eyebrow Careers, the title Build the future with us, the description, the buttons Search jobs and Life at TCS and below them the short note Applications are reviewed on a rolling basis. Equal opportunity employer.
Business Context	A careers call to action with a short legal note after the buttons.
Author Objective	Enter a Short Description that appears below the CTAs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Careers	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Build the future with us	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Description (Teaser › Content)	Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.	No	Main text	Up to 300 characters (Recommended)	None
D	Short Description (Teaser › Content)	Applications are reviewed on a rolling basis. Equal opportunity employer.	No	Note after the links	Footnotes, sources	None
E	Primary CTA Title (Teaser › Links)	Search jobs	No	Primary CTA text	Verb first	Shown only with Multiple links off
F	Primary CTA Link (Teaser › Links)	Select the page or enter /en/careers	No	Primary CTA target	Page or URL	Shown only with Multiple links off
G	Secondary CTA Title (Teaser › Links)	Life at TCS	No	Secondary CTA text	Verb first	Shown only with Multiple links off
H	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** Centred: the eyebrow "Careers", the title "Build the future with us", the description, the two buttons and below them the note "Applications are reviewed on a rolling basis. Equal opportunity employer."
- **Rendering behaviour:** div.teaser-short-description is the last element of the body, styled like the description (Description size applies).
- **Publishing behaviour:** Only the page is published. Publish to Preview and Live.

Business Rules

- The Short Description is always shown when filled (no toggle).
- Show Description off does not hide it.
- Keep it under about 200 characters (footnotes, sources).

Common Authoring Mistakes

Error	Root Cause	Resolution
The note appears above the buttons	Typed into Description	Move it to Short Description
The note cannot be hidden	No Show toggle exists for it	Clear the field to remove it

Troubleshooting

- **Symptoms:** The legal note stays visible after Show Description was turned off.
- **Cause:** Show Description only affects the Description, not the Short Description.
- **Resolution:** Clear the Short Description field if the note must go and publish.
- **Verification Steps:** No div.teaser-short-description is rendered.

Use Cases: Footnotes, sources of statistics.

Authoring Guidelines: Content tab: Short Description.

Business Rules: Always shown when filled (no toggle).

Rendering Rules: `div.teaser-short-description`, styled like the description.

Responsive Behaviour: Same as description.

SEO Impact: Indexable text.

Accessibility Compliance: None.

Variation 63 — Show Eyebrow off

Variation Name: Show Eyebrow off.

Business Purpose: Hide an authored eyebrow without deleting it.

Visual Example:

Figure 66: Hidden eyebrow — A centred teaser without an image at 1440 px with Show Eyebrow off: no eyebrow; the title Build the future with us, the description and the buttons Search jobs and Life at TCS. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-eyebrow-hidden.jpg)

Screenshot Details — Hidden eyebrow

Item	Detail
Screenshot Name	`screenshots/teaser-eyebrow-hidden.jpg`
Screenshot Purpose	Hidden eyebrow
Screen Description	A centred teaser without an image at 1440 px with Show Eyebrow off: no eyebrow; the title Build the future with us, the description and the buttons Search jobs and Life at TCS.
Business Context	A careers teaser whose shared copy includes an eyebrow that is not wanted on this page.
Author Objective	Turn Show Eyebrow off to hide “Careers” without deleting it.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
(A)	Eyebrow (Teaser › Content)	Careers	No	Kicker above the title	Up to 40 characters (Recommended)	None
(B)	Show Eyebrow (Teaser › Content)	Off	No	Show / hide the eyebrow	Keep on	None
C	Title (Teaser › Content)	Build the future with us	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Description (Teaser › Content)	Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.	No	Main text	Up to 300 characters (Recommended)	None
E	Primary CTA Title (Teaser › Links)	Search jobs	No	Primary CTA text	Verb first	Shown only with Multiple links off
F	Primary CTA Link (Teaser › Links)	Select the page or enter /en/careers	No	Primary CTA target	Page or URL	Shown only with Multiple links off
G	Secondary CTA Title (Teaser › Links)	Life at TCS	No	Secondary CTA text	Verb first	Shown only with Multiple links off
H	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Centred: the title "Build the future with us", the description and the two buttons; no eyebrow above the title.
- **Rendering behaviour:** With Show Eyebrow false no p.teaser-eyebrow is output (removed, not visually hidden).
- **Publishing behaviour:** Only the page is published. Publish to Preview and Live.

Business Rules

- Show Eyebrow is on by default; only an explicit off hides it.
- The eyebrow text is not output at all, so it is not indexed.
- Turn it back on later without retyping.

Common Authoring Mistakes

Error	Root Cause	Resolution
The eyebrow still shows	Show Eyebrow left on	Turn Show Eyebrow off
The eyebrow is needed for screen readers	Show Eyebrow removes it completely	Keep it on

Troubleshooting

- **Symptoms:** "Careers" still appears above the title on aem.page.
- **Cause:** The page was not republished after turning Show Eyebrow off.
- **Resolution:** Publish the page to Preview again and reload.
- **Verification Steps:** No p.teaser-eyebrow is in the teaser.

Use Cases: Temporary changes, shared copy.

Authoring Guidelines: Content tab: Show Eyebrow off.

Business Rules: Default on; only an explicit off hides the eyebrow (removed from the page, not just visually).

Rendering Rules: No `p.teaser-eyebrow`.

Responsive Behaviour: Not applicable.

SEO Impact: The text is not output.

Accessibility Compliance: None.

Variation 64 — Show Description off

Variation Name: Show Description off.

Business Purpose: Hide the description without deleting it.

Visual Example:

Figure 67: Hidden description — A centred teaser without an image at 1440 px with Show Description off: the eyebrow Careers, the title Build the future with us and the buttons Search jobs and Life at TCS, without a description. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-description-hidden.jpg)

Screenshot Details — Hidden description

Item	Detail
Screenshot Name	`screenshots/teaser-description-hidden.jpg`
Screenshot Purpose	Hidden description
Screen Description	A centred teaser without an image at 1440 px with Show Description off: the eyebrow Careers, the title Build the future with us and the buttons Search jobs and Life at TCS, without a description.
Business Context	A compact careers teaser showing only the title and the CTAs, keeping the description for later use.
Author Objective	Turn Show Description off to hide the description without deleting it.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Careers	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Build the future with us	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
(C)	Description (Teaser › Content)	Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(D)	Show Description (Teaser › Content)	Off	No	Show / hide the description	Keep on	None
E	Primary CTA Title (Teaser › Links)	Search jobs	No	Primary CTA text	Verb first	Shown only with Multiple links off
F	Primary CTA Link (Teaser › Links)	Select the page or enter /en/careers	No	Primary CTA target	Page or URL	Shown only with Multiple links off
G	Secondary CTA Title (Teaser › Links)	Life at TCS	No	Secondary CTA text	Verb first	Shown only with Multiple links off
H	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Centred: the eyebrow "Careers", the title "Build the future with us" and the two buttons; no description.
- **Rendering behaviour:** With Show Description false no div.teaser-description is output; the Short Description is unaffected.
- **Publishing behaviour:** Only the page is published. Publish to Preview and Live.

Business Rules

- Show Description is on by default.
- The hidden text is not output and not indexed.
- The Short Description stays visible if filled.

Common Authoring Mistakes

Error	Root Cause	Resolution
The description still shows	Show Description on	Turn Show Description off
A note still shows	It is the Short Description	Clear Short Description

Troubleshooting

- **Symptoms:** The description still appears after Show Description was turned off.
- **Cause:** The page was not republished, or the text is in Short Description.
- **Resolution:** Check which field holds the text, then publish the page again.
- **Verification Steps:** No div.teaser-description is in the teaser.

Use Cases: Compact teasers.

Authoring Guidelines: Content tab: Show Description off.

Business Rules: Default on; the Short Description is not affected.

Rendering Rules: No `div.teaser-description`.

Responsive Behaviour: Not applicable.

SEO Impact: The text is not output.

Accessibility Compliance: None.

Variation 65 — Title Type (heading level H1–H6)

Variation Name: Title Type H1, H2 (default), H3, H4, H5 or H6.

Business Purpose: The correct heading level for the teaser's place in the page outline.

Visual Example:

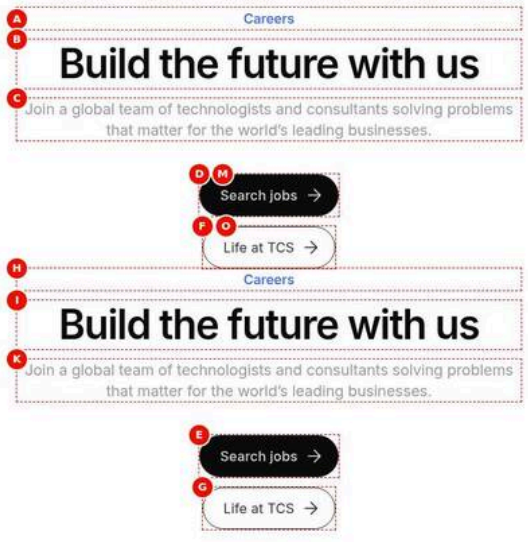

Figure 68: Heading level — Two identical-looking centred teasers at 1440 px stacked one above the other, each with the eyebrow Careers, the title Build the future with us, the description and the buttons Search jobs and Life at TCS; the first title is an H2, the second an H3. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-title-type.jpg)

Screenshot Details — Heading level

Item	Detail
Screenshot Name	`screenshots/teaser-title-type.jpg`
Screenshot Purpose	Heading level
Screen Description	Two identical-looking centred teasers at 1440 px stacked one above the other, each with the eyebrow Careers, the title Build the future with us, the description and the buttons Search jobs and Life at TCS; the first title is an H2, the second an H3.
Business Context	Two identical-looking careers teasers whose headings sit at different levels of the page outline (H2 and H3).
Author Objective	Keep Title Type H2 on the first teaser and set H3 on the second.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Careers	No	Kicker above the title	Up to 40 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Title (Teaser › Content)	Build the future with us	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.	No	Main text	Up to 300 characters (Recommended)	None
D	Primary CTA Title (Teaser › Links)	Search jobs	No	Primary CTA text	Verb first	Shown only with Multiple links off
E	Primary CTA Link (Teaser › Links)	Select the page or enter /en/careers	No	Primary CTA target	Page or URL	Shown only with Multiple links off
F	Secondary CTA Title (Teaser › Links)	Life at TCS	No	Secondary CTA text	Verb first	Shown only with Multiple links off
G	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
H	Eyebrow (Teaser › Content)	Careers	No	Kicker above the title	Up to 40 characters (Recommended)	None
I	Title (Teaser › Content)	Build the future with us	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
(J)	Title Type (Teaser › Content)	H3	No	Heading level	H2 in the page flow; H1 only for a page-opening teaser	Options: H1, H2, H3, H4, H5, H6
K	Description (Teaser › Content)	Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.	No	Main text	Up to 300 characters (Recommended)	None
(L)	Primary CTA Title (Teaser › Links)	Search jobs	No	Primary CTA text	Verb first	Shown only with Multiple links off
M	Primary CTA Link (Teaser › Links)	Select the page or enter /en/careers	No	Primary CTA target	Page or URL	Shown only with Multiple links off
(N)	Secondary CTA Title (Teaser › Links)	Life at TCS	No	Secondary CTA text	Verb first	Shown only with Multiple links off
O	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (J), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two centred careers teasers that look the same: eyebrow, title "Build the future with us", description and two buttons; only the accessibility tree shows H2 and H3.
- **Rendering behaviour:** buildHeading creates h2 or h3 with the class teaser-title; the size comes from the layout and Title size, not from the level.
- **Publishing behaviour:** Only the page is published. Publish to Preview, check the heading outline, then Publish to Live.

Business Rules

- Choose the level that fits the outline; never skip levels for looks.
- An invalid level falls back to the authored level, else H2.
- One H1 per page.

Common Authoring Mistakes

Error	Root Cause	Resolution
A heading level is skipped	H4 under an H2	Use H3
H1 used for size	Level confused with size	Use Title size

Troubleshooting

- **Symptoms:** An accessibility check reports a skipped heading level.
- **Cause:** The second teaser uses H4 directly below an H2.
- **Resolution:** Set Title Type H3 and publish the page.
- **Verification Steps:** The accessibility tree shows H2 followed by H3.

Use Cases: H1 for a page-opening teaser without Hero / Page Header; H3 inside a section with its own H2.

Authoring Guidelines: Content tab: Title Type.

Business Rules: The look does not depend on the level (Title size controls it).

Rendering Rules: `buildHeading()` creates the chosen element with class `teaser-title`.

Responsive Behaviour: Not applicable.

SEO Impact: One H1 per page; logical hierarchy.

Accessibility Compliance: WCAG 1.3.1, 2.4.6.

Variation 66 — Personalization marker

Variation Name: Personalization on.

Business Purpose: Mark a teaser as a candidate for personalization (e.g. by Adobe Target).

Visual Example:

Steps — Personalization marker: The browser's element inspector showing the teaser with class personalization and data-personalization="true"; the page looks unchanged.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Teaser
2	Teaser › Content	Eyebrow / Title / Description	Cloud services / Modernise your core on any cloud / We help enterprises move, modernise and run their critical workloads on the cloud …
3	Teaser › Image	Image	Select the asset photo-1.svg (/en/media/photo-1.svg)

Step	Where	Field / control	Value / action
4	Teaser › Style	Personalization	On
5	Preview (browser)	Developer tools › Elements	Inspect the teaser block
6	Developer tools › Elements	Teaser element	Shows class “personalization” and data-personalization=“true”; the page looks unchanged

Use Cases: Future Target activities.

Authoring Guidelines: Style tab: Personalization on.

Business Rules: No visible change; no personalization runs today (Adobe Target is Not implemented (as of this handover)).

Rendering Rules: Adds class `personalization` and `data-personalization="true"`.

Responsive Behaviour: Not applicable.

SEO Impact: None.

Accessibility Compliance: None.

6.11.4 Authoring Experience

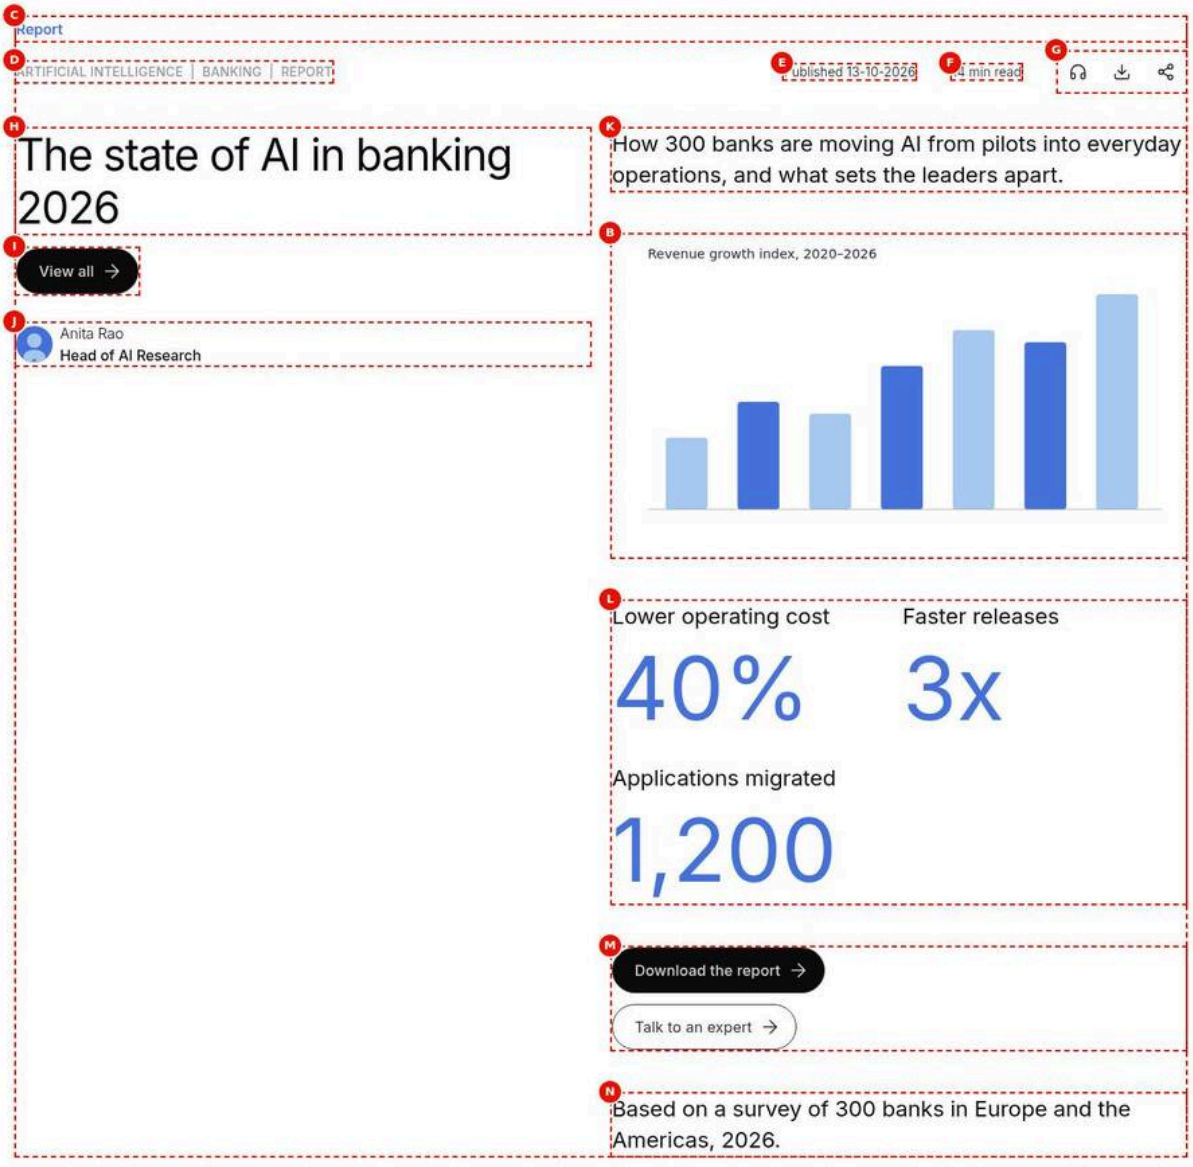

Figure 69: Universal Editor canvas — The fully populated Text split teaser at 1440 px in editor mode with markers A to N (A shares the top-left corner with C): eyebrow Report, tags, Published 13-10-2026, 14 min read and action icons above; title, View all and Anita Rao on the left; description, chart, stats 40%, 3x, 1,200, two buttons and the short description on the right. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/teaser-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/teaser-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	The fully populated Text split teaser at 1440 px in editor mode with markers A to N (A shares the top-left corner with C): eyebrow Report, tags, Published 13-10-2026, 14 min read and action icons above; title, View all and Anita Rao on the left; description, chart, stats 40%, 3x, 1,200, two buttons and the short description on the right.

Item	Detail
Business Context	The fully populated article-style teaser of the State of AI in banking 2026 report, annotated in editor mode to show where each field renders.
Author Objective	Fill every Content, Image, Links and Stats field of a Text split teaser and identify markers A to N.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
—	Eyebrow (Teaser › Content)	Report	No	Kicker above the title	Up to 40 characters (Recommended)	None
—	Title (Teaser › Content)	The state of AI in banking 2026	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
—	Description (Teaser › Content)	How 300 banks are moving AI from pilots into everyday operations, and what sets the leaders apart.	No	Main text	Up to 300 characters (Recommended)	None
—	Short Description (Teaser › Content)	Based on a survey of 300 banks in Europe and the Americas, 2026.	No	Note after the links	Footnotes, sources	None
—	View All Text (Teaser › Content)	View all	No	View All button text	Specific text	None
—	View All Link (Teaser › Content)	Select the page or enter /en/insights	No	View All target	A listing page	None
—	Show Date (Teaser › Content)	On	No	Show the date	On for dated content	None
—	Date (Teaser › Content)	2026-10-13	No	Publication date	Pick a date	Date picker
—	Date label (Teaser › Content)	Published	No	Text before the date	Short word	None
—	Reading time (Teaser › Content)	14	No	Reading time	Minutes as a number	None
—	Display Tags (Teaser › Content)	On	No	Show the tags	On to show Tags	None
—	Tags (Teaser › Content)	Add the tags tcs-corp:topic/ai, tcs-corp:industry/banking, tcs-corp:content-type/report	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
—	Listen link (Teaser › Content)	Select the page or enter /en/insights/ai-in-banking-podcast	No	Audio version of the page	Audio page or file	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Download (Teaser › Content)	On	No	Show the download (print) icon	For printable content	None
—	Share (Teaser › Content)	On	No	Show the share icon	For shareable content	None
—	Author name (Teaser › Content)	Anita Rao	No	Author's name	Full name	None
—	Author designation (Teaser › Content)	Head of AI Research	No	Author's role	e.g. TCS Role	None
—	Author image (Teaser › Content)	Select the asset person-1.svg (/en/media/person-1.svg)	No	Author portrait	Square portrait	None
—	Author image alt text (Teaser › Content)	Anita Rao	No	Portrait alt text	Empty if decorative	None
—	Image (Teaser › Image)	Select the asset chart.svg (/en/media/chart.svg)	No	Image or animation	See Layout for placement	None
—	Image alt text (Teaser › Image)	Bar chart: the revenue growth index rises from 120 in 2020 to 360 in 2026	No	Alt text / animation label	Empty if decorative	None
—	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
—	Primary CTA Title (Teaser › Links)	Download the report	No	Primary CTA text	Verb first	Shown only with Multiple links off
—	Primary CTA Link (Teaser › Links)	Select the page or enter /en/insights	No	Primary CTA target	Page or URL	Shown only with Multiple links off
—	Secondary CTA Title (Teaser › Links)	Talk to an expert	No	Secondary CTA text	Verb first	Shown only with Multiple links off
—	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Secondary CTA target	Page or URL	Shown only with Multiple links off
—	Stats Title (Teaser › Stats › Stats › Item 1)	Lower operating cost	No (Recommended)	What the number measures	Short label	None
—	Stats Value (Teaser › Stats › Stats › Item 1)	40%	No (Recommended)	The number	A single line, e.g. 40%	None (single line is guidance; the last element of the item is used as the value)
—	Stats Title (Teaser › Stats › Stats › Item 2)	Faster releases	No (Recommended)	What the number measures	Short label	None
—	Stats Value (Teaser › Stats › Stats › Item 2)	3x	No (Recommended)	The number	A single line, e.g. 40%	None (single line is guidance; the last element of the item is used as the value)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Stats Title (Teaser › Stats › Stats › Item 3)	Applications migrated	No (Recommended)	What the number measures	Short label	None
—	Stats Value (Teaser › Stats › Stats › Item 3)	1,200	No (Recommended)	The number	A single line, e.g. 40%	None (single line is guidance; the last element of the item is used as the value)

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** Kicker: eyebrow "Report", tags, "Published 13-10-2026", "14 min read", listen / download / share icons. Left: title, View all button, Anita Rao lockup. Right: description, chart, stats 40% / 3x / 1,200, "Download the report" and "Talk to an expert", short description.
- **Rendering behaviour:** Text split from 900 px: kicker across both columns, heading and author left, body right; below 900 px one column in DOM order. Empty parts would not be rendered.
- **Publishing behaviour:** Publish the page with chart.svg and person-1.svg, the podcast page and, if new tags or labels were added, /en/taxonomy and /en/placeholders; each is a separate publish.

Business Rules

- Only Layout Text split places the chart in the right column.
- Date, Date label and Tags appear in the dialog only after Show Date and Display Tags are on.
- Multiple links off: Primary and Secondary CTA are used; Links items would be ignored.
- Stats come before the links and the Short Description last.
- Markers A to N match the Field Annotation Mapping (6.11.7).

Common Authoring Mistakes

Error	Root Cause	Resolution
The canvas does not show Date	Show Date off	Turn Show Date on
The chart sits beside the text	Layout not Text split	Set Layout Text split
A stat shows its label as value	Empty Stats Value	Enter a one-line value

Troubleshooting

- **Symptoms:** Fields such as Date, Tags or Links are missing from the properties panel.
- **Cause:** Their condition hides them: Show Date / Display Tags off, or Multiple links off for Links.
- **Resolution:** Turn on the controlling toggle (Show Date, Display Tags, Multiple links) in the dialog.
- **Verification Steps:** The field appears in the panel and its value renders on the canvas.

Annotations

- A = Teaser block (select it to open its properties: Content, Image, Style, Links, Stats, Additional).
- B = Image or Lottie animation.
- C = Eyebrow.
- D = Tags.
- E = Date (with its label).
- F = Reading time.
- G = Page actions (listen, download, share icons).
- H = Title.

- I = View All button.
- J = Author (image, name, designation).
- K = Description.
- L = Stats.
- M = Links (Primary / Secondary CTA or the Links list).
- N = Short Description.

Notes on the canvas: the teaser is a key-value block, so its content is edited in the properties panel (texts that keep their editor instrumentation, such as the title, eyebrow and description, can also be selected on the canvas). Fields hidden by a `condition` (for example Date when Show Date is off) disappear from the panel until their toggle or Layout allows them. The Lottie animation plays in the editor. Personalization has no visible effect.

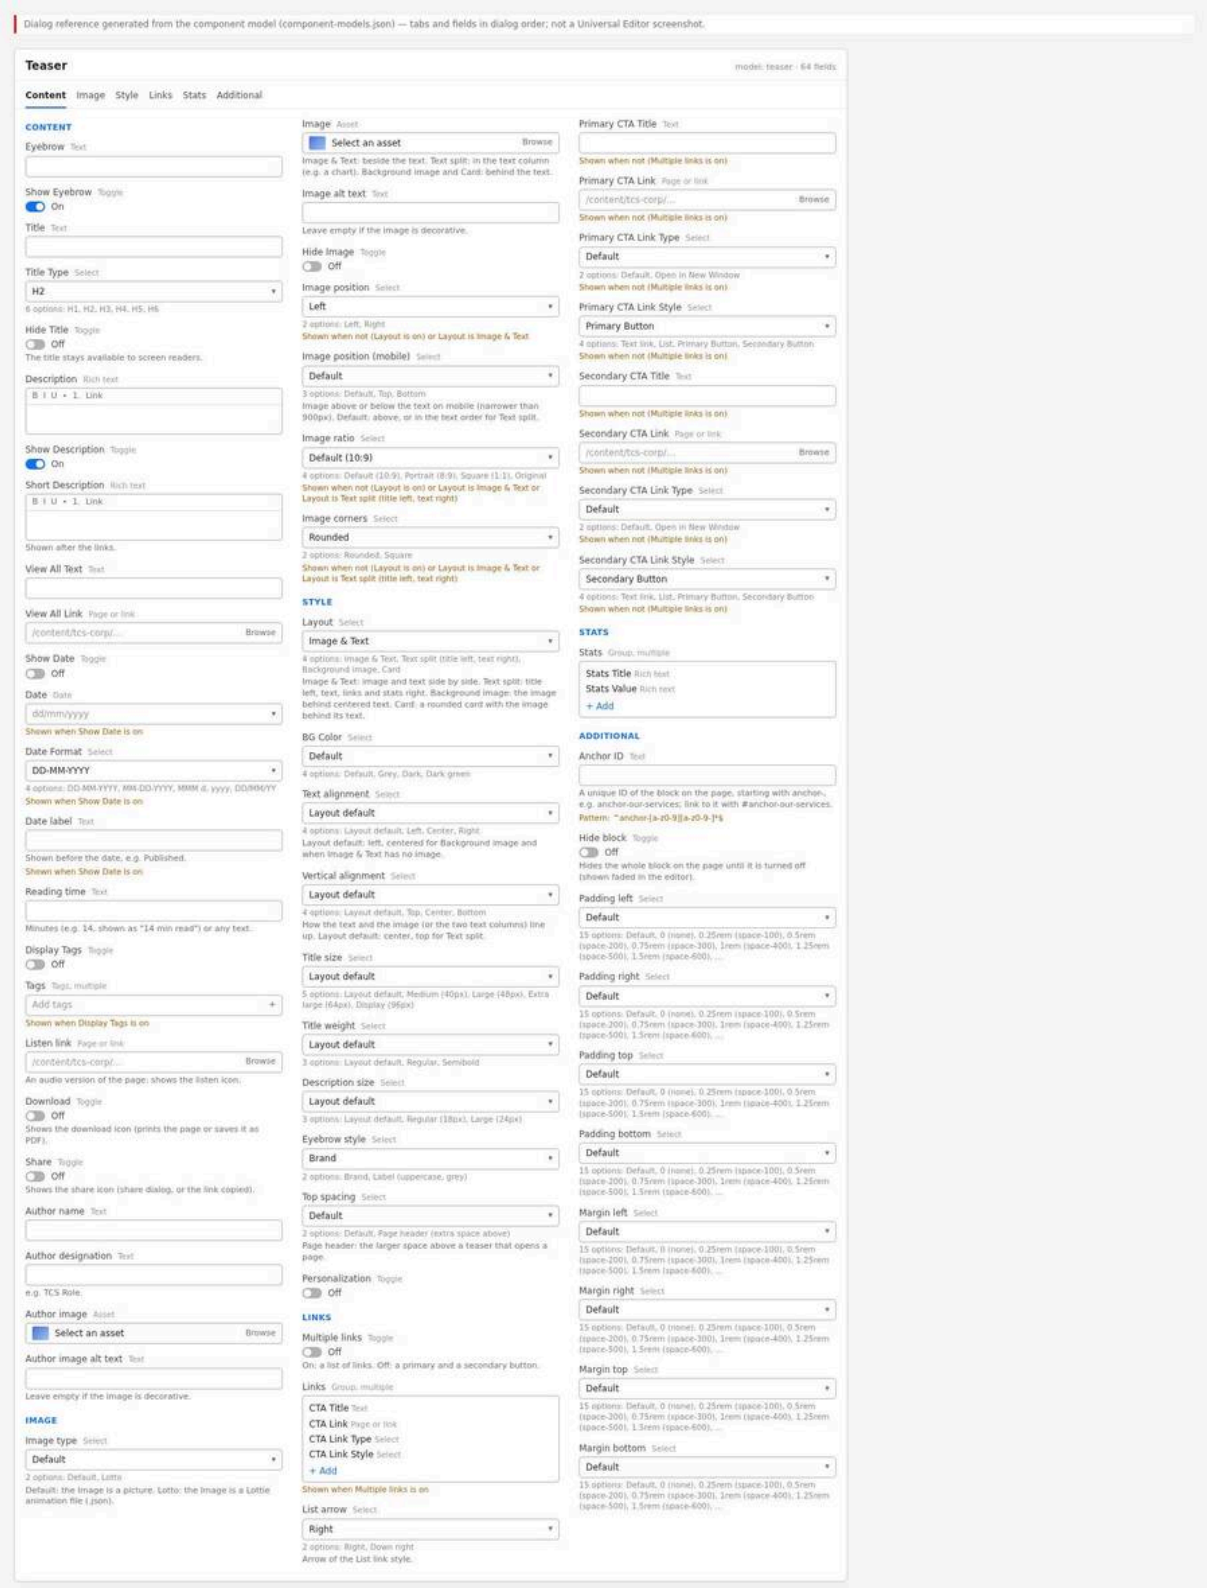

Figure 70: Properties panel — The Teaser properties panel with its six tabs (Content, Image, Style, Links, Stats, Additional), the Content tab open with Show Date on so that Date, Date Format and Date label are visible. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/teaser-properties-panel.jpg)

Properties panel tabs and fields

- **Content** — Eyebrow, Show Eyebrow, Title, Title Type (H1–H6), Hide Title, Description, Show Description, Short Description, View All Text, View All Link, Show Date, Date, Date Format and Date label (the last three only with Show Date on), Reading time, Display Tags, Tags (only with Display Tags on), Listen link, Download, Share, Author name, Author designation, Author image, Author image alt text.
- **Image** — Image type (Default, Lotto), Image, Image alt text, Hide Image, Image position (only for Layout Image & Text), Image position (mobile), Image ratio and Image corners (only for Layouts Image & Text and Text split).
- **Style** — Layout (Image & Text, Text split, Background image, Card), BG Color (Default, Grey, Dark, Dark green), Text alignment, Vertical alignment, Title size, Title weight, Description size, Eyebrow style, Top spacing, Personalization.
- **Links** — Multiple links; Links multifield (only with Multiple links on: CTA Title, CTA Link, CTA Link Type, CTA Link Style); List arrow; Primary CTA Title / Link / Link Type / Link Style and Secondary CTA Title / Link / Link Type / Link Style (only with Multiple links off).
- **Stats** — Stats multifield (Stats Title, Stats Value).
- **Additional** — Anchor ID, Hide block, Padding left / right / top / bottom, Margin left / right / top / bottom.

6.11.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites browse to the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit.

Expected Result: The page opens in Universal Editor.

Steps — Open the page: Universal Editor with the page loaded and the content tree visible.

Step	Where	Field / control	Value / action
1	AEM Sites console	Browse	/content/tcs-corp/us/en
2	AEM Sites console	Select	The page to edit
3	AEM Sites console toolbar	Edit	Opens the page in Universal Editor
4	Universal Editor	Content tree	Open the content tree panel

Step 2 — Add the Teaser block

Action: Select the target section, choose Add (+) and pick **Teaser**.

Expected Result: An empty Teaser is added with the defaults Title Type H2, Image position Left, Show Eyebrow and Show Description on, Date Format DD-MM-YYYY, Primary CTA style Primary Button and Secondary CTA style Secondary Button.

Steps — Add the block: The component picker with Teaser highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the target section
2	Universal Editor › Content tree	Section › Add (+)	Teaser

Step 3 — Choose the Layout first

Action: Open the **Style** tab and choose **Layout** (Image & Text, Text split, Background image or Card), so that the dialog shows the fields that apply.

Expected Result: The Image tab shows or hides Image position, Image ratio and Image corners according to the Layout.

Steps — Choose the layout: The Layout select open with its four options.

Step	Where	Field / control	Value / action
1	Content tree	Teaser	Select the block
2	Teaser › Style	Layout	Open the select: Image & Text, Text split (title left, text right), Background image, Card
3	Teaser › Style	Layout	Image & Text

Step 4 — Enter the eyebrow and title

Action: Open the **Content** tab; enter **Eyebrow** (keep Show Eyebrow on), **Title**, choose **Title Type**, and leave Hide Title off unless the title must be hidden.

Expected Result: Eyebrow and title render on the canvas.

Steps — Eyebrow and title: The Content tab with Eyebrow, Title and Title Type filled in.

Step	Where	Field / control	Value / action
1	Teaser › Content	Eyebrow	Cloud services
2	Teaser › Content	Show Eyebrow	On (default)
3	Teaser › Content	Title	Modernise your core on any cloud
4	Teaser › Content	Title Type	H2
5	Teaser › Content	Hide Title	Off (default)

Step 5 — Enter the description and short description

Action: Enter **Description** (keep Show Description on) and, if needed, **Short Description** (shown after the links).

Expected Result: The description appears under the title (in the right column for Text split).

Steps — Description: The rich-text Description field and the rendered text.

Step	Where	Field / control	Value / action
1	Teaser › Content	Description	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.
2	Teaser › Content	Show Description	On (default)
3	Teaser › Content	Short Description	Optional: shown after the links

Step 6 — Add the article meta (optional)

Action: For article-style teasers: turn **Show Date** on and choose **Date**, **Date Format** and **Date label**; enter **Reading time**; turn **Display Tags** on and choose **Tags**; set **Listen link**, **Download** and **Share**; enter **View All Text** and **View All Link** if a View All button is needed.

Expected Result: Tags, date, reading time and action icons appear in the kicker row; View All appears beside the title.

Steps — Article meta: The Content tab with Show Date and Display Tags on, and the kicker row on the canvas showing tags, date, reading time and icons.

Step	Where	Field / control	Value / action
1	Teaser › Content	Show Date	On
2	Teaser › Content	Date	2026-10-13
3	Teaser › Content	Date Format	DD-MM-YYYY
4	Teaser › Content	Date label	Published
5	Teaser › Content	Reading time	14
6	Teaser › Content	Display Tags	On
7	Teaser › Content	Tags	Add the tags tcs-corp:topic/ai, tcs-corp:industry/banking, tcs-corp:content-type/report
8	Teaser › Content	Listen link / Download / Share	Select the page /en/insights/ai-in-banking-podcast / On / On

Step 7 — Add the author (optional)

Action: Enter **Author name**, **Author designation**, choose **Author image** and enter **Author image alt text**.

Expected Result: The author lockup appears below the title.

Steps — Author: The author fields filled in and the round portrait with name and designation on the canvas.

Step	Where	Field / control	Value / action
1	Teaser › Content	Author name	Anita Rao
2	Teaser › Content	Author designation	Head of AI Research
3	Teaser › Content	Author image	Select the asset person-1.svg (/en/media/person-1.svg)
4	Teaser › Content	Author image alt text	Anita Rao

Step 8 — Add the image or animation

Action: Open the **Image** tab: choose **Image type** (Default or Lotto), **Image** (a picture or a Lottie `.json`), **Image alt text**; then the layout options **Image position**, **Image position (mobile)**, **Image ratio**, **Image corners** as shown.

Expected Result: The image appears beside the text (Image & Text), in the text column (Text split) or behind the text (Background image, Card).

Steps — Image: The Image tab with an image selected, Image position Right and Image ratio Portrait.

Step	Where	Field / control	Value / action
1	Teaser › Image	Image type	Default
2	Teaser › Image	Image	Select the asset photo-1.svg (/en/media/photo-1.svg)
3	Teaser › Image	Image alt text	Engineers reviewing a cloud architecture
4	Teaser › Image	Image position	Right
5	Teaser › Image	Image ratio	Portrait (8:9)

Step 9 — Set the Style options

Action: In the **Style** tab choose **BG Color**, **Text alignment**, **Vertical alignment**, **Title size**, **Title weight**, **Description size**, **Eyebrow style** and **Top spacing**; leave **Personalization** off unless requested by the personalization team.

Expected Result: The canvas updates with the chosen colours, alignment and type sizes.

Steps — Style options: The Style tab with BG Color Dark and Title size Large, and the dark teaser on the canvas.

Step	Where	Field / control	Value / action
1	Teaser › Style	BG Color	Dark
2	Teaser › Style	Title size	Large (48px)
3	Teaser › Style	Text alignment / Vertical alignment	Layout default
4	Teaser › Style	Personalization	Off (default)

Step 10 — Add the links

Action: Open the **Links** tab. For one or two CTAs leave **Multiple links** off and fill the Primary and Secondary CTA fields (Title, Link, Link Type, Link Style). For more links turn **Multiple links** on and add items to **Links**, each with CTA Title, CTA Link, CTA Link Type and CTA Link Style. Choose **List arrow** if you use the List style.

Expected Result: Buttons, text links or list rows appear below the description and stats.

Steps — Links: The Links tab with Multiple links on and three List-style items, rendered as divided rows.

Step	Where	Field / control	Value / action
1	Teaser › Links	Multiple links	On
2	Teaser › Links › Links	Add	Item 1: CTA Title = Cloud migration, CTA Link = /en/services/cloud/migration, CTA Link Style = List
3	Teaser › Links › Links	Add	Item 2: CTA Title = Business and technology consulting, CTA Link = /en/services/consulting, CTA Link Style = List
4	Teaser › Links › Links	Add	Item 3: CTA Title = Industries we serve, CTA Link = /en/industries, CTA Link Style = List
5	Teaser › Links	List arrow	Right (default)

Step 11 — Add stats (optional)

Action: Open the **Stats** tab, add an item per stat and enter **Stats Title** and **Stats Value** (a single line such as `40%`).

Expected Result: Each stat shows its title above a large brand-blue value.

Steps — Stats: The Stats tab with three items and the stats row on the canvas.

Step	Where	Field / control	Value / action
1	Teaser › Stats › Stats	Add	Item 1: Stats Title = Lower operating cost, Stats Value = 40%
2	Teaser › Stats › Stats	Add	Item 2: Stats Title = Faster releases, Stats Value = 3x
3	Teaser › Stats › Stats	Add	Item 3: Stats Title = Applications migrated, Stats Value = 1,200

Step 12 — Set the Additional options (optional)

Action: Open the **Additional** tab; enter an **Anchor ID** (e.g. `anchor-our-services`) if the teaser is a link target; adjust padding / margin only when the design requires it; leave **Hide block** off.

Expected Result: A valid Anchor ID is accepted; spacing updates.

Steps — Additional tab: The Additional tab with an Anchor ID entered.

Step	Where	Field / control	Value / action
1	Teaser › Additional	Anchor ID	anchor-our-services
2	Teaser › Additional	Hide block	Off (default)
3	Teaser › Additional	Padding / Margin	Default (only when the design requires it)

Step 13 — Preview

Action: Switch to Preview mode, then publish to Preview and open `https://main--tcs-corp--sradha-tcs.aem.page/{path}`.

Expected Result: The teaser renders as on the live site; Share and Download work.

Steps — Preview: The teaser on the .aem.page preview host at desktop width.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode and check the teaser
2	Universal Editor toolbar	Publish	Publish to Preview
3	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/{path}
4	Browser	Screen width	1440 px (desktop)

Step 14 — Validate

Action: Run the Validation checklist below at desktop, tablet and mobile widths.

Expected Result: All items pass.

Steps — Validate: The teaser at 375 px width in the browser's responsive mode.

Step	Where	Field / control	Value / action
1	Browser › Developer tools	Responsive mode	On
2	Browser › Responsive mode	Screen width	375 px (mobile)
3	Preview	Validation checklist	Check layout, image order, links, stats, date, tags and actions; repeat at 768 px and 1440 px

Step 15 — Publish

Action: Choose Publish → Live in Universal Editor (or publish from the Sites console).

Expected Result: The page is updated on `https://main--tcs-corp--sradha-tcs.aem.live/{path}`.

Steps — Publish: The Publish dialog with the page selected for Live.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Open the Publish dialog
2	Publish dialog	Destination	Live
3	Publish dialog	Pages	Select the page (and newly used assets)
4	Publish dialog	Publish	Confirm

Preview Process

1. Universal Editor saves each change automatically.
2. Use Preview mode for a first check, then publish to Preview (`.aem.page`) for review.

3. Check 1440 px, 1024 px, 768 px and 375 px widths; check light and dark BG Colors.
4. Check that the placeholders sheet and taxonomy of the locale are published if the teaser uses reading time, actions or tags.

Publishing Process

1. Complete the Validation checklist.
2. Publish the page (and newly used assets) to Live.
3. If tags are new, publish the locale's taxonomy page so that their labels resolve.
4. Reload the live page with the cache disabled to confirm.

Validation Process

- ☐ The Layout matches the design; options hidden for the layout are not relied on.
- ☐ Title present with the right Title Type (one H1 per page; H2 / H3 in the page flow).
- ☐ Image alt text set for meaningful images and charts; empty for decorative ones.
- ☐ Image crop (Image ratio) keeps the subject; Text split charts are fully visible.
- ☐ Image position (mobile) gives the intended order at 375 px.
- ☐ Background image / Card: text readable over the overlay; an image is selected.
- ☐ Links: each link has a title and a target; styles are as designed; List rows divide correctly; new-window links open a new tab.
- ☐ Multiple links: the Primary / Secondary CTA fields are not expected to show.
- ☐ Stats: each item shows a title and a single-line value.
- ☐ Date shows in the chosen format; reading time reads "{n} min read" (localised).
- ☐ Tags show localised labels (from the taxonomy), not raw IDs.
- ☐ Listen, Download and Share work; "Link copied to clipboard" appears where sharing is not supported.
- ☐ Author shows name and designation (an image alone is not shown).
- ☐ Lotto: animation plays, pause / play works.
- ☐ Anchor ID unique; Hide block off; Personalization off unless requested.
- ☐ No console errors.

Rollback Process

1. Restore the previous page version in AEM (Versions / Timeline) or undo in Universal Editor.
2. Publish the restored version.
3. Revert or replace changed assets in AEM Assets and republish.
4. Emergency: turn Hide block on (Additional tab) and publish.
5. Code regressions: the development team reverts the commit on `main` (`blocks/teaser/*` or the shared decorators).

The walkthroughs below repeat the steps above for each variation of chapter 6.11.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Layout "Image & Text", image left (default)

Reproduces the screenshot `screenshots/teaser-image-text-left.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Consulting; **Title** (B) = Strategy that turns into results; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow “Consulting” and the title “Strategy that turns into results” appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (E) = Consultants in a workshop.

Expected Result: photo-2.svg fills the left column as a rounded 10:9 image and the text moves into the right half.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Talk to an expert; **Primary CTA Link** (G) = Select the page or enter /en/contact; **Secondary CTA Title** (H) = Explore cloud services; **Secondary CTA Link** (I) = Select the page or enter /en/services/cloud.

Expected Result: “Talk to an expert” renders as a black Primary Button above the outline “Explore cloud services” Secondary Button, stacked under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The rounded 10:9 photo-2 image (consultants in a workshop) fills the left half; on the right the eyebrow “Consulting”, the title “Strategy that turns into results”, the description and the two stacked buttons.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 8 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Layout “Image & Text”, image right

Reproduces the screenshot `screenshots/teaser-image-text-right.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cybersecurity; **Title** (B) = Resilience by design; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Cybersecurity" and the title "Resilience by design" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Image alt text** (E) = A security operations centre; **Image position** (F) = Right.

Expected Result: photo-3.svg appears as a rounded 10:9 image; after Image position Right it moves to the right column with the text on the left.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Talk to an expert; **Primary CTA Link** (H) = Select the page or enter /en/contact; **Secondary CTA Title** (I) = Explore cloud services; **Secondary CTA Link** (J) = Select the page or enter /en/services/cloud.

Expected Result: "Talk to an expert" renders as a black Primary Button above the outline "Explore cloud services" Secondary Button, stacked under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The text column is on the left: eyebrow "Cybersecurity", title "Resilience by design", description and the two stacked buttons; the rounded 10:9 photo-3 image of a security operations centre fills the right half.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-3.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 8 — Verify

Action: On the live page check: At 1440 px the image is in the right column and the block element has the class image-right.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Layout "Image & Text" without image (centred)

Reproduces the screenshot `screenshots/teaser-image-text-no-image.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Careers; **Title** (B) = Build the future with us; **Description** (C) = Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.

Expected Result: The eyebrow "Careers" and the title "Build the future with us" appear on the canvas with the description below them, all centred in a narrow column.

Step 4 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (D) = Search jobs; **Primary CTA Link** (E) = Select the page or enter /en/careers; **Secondary CTA Title** (F) = Life at TCS; **Secondary CTA Link** (G) = Select the page or enter /en/about.

Expected Result: "Search jobs" renders as a black Primary Button above the outline "Life at TCS" Secondary Button, centred under the description.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A centred column at most 37.5rem wide: the brand-blue eyebrow "Careers", the large title "Build the future with us", the grey description and the "Search jobs" (black) and "Life at TCS" (outline) buttons centred one above the other.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published (no asset). Publish to Preview, check /en/careers and /en/about resolve, then Publish to Live.

Step 7 — Verify

Action: On the live page check: The block has no teaser-has-media class and the text is centred in a 37.5rem column.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Layout "Text split"

Reproduces the screenshot `screenshots/teaser-text-split.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = Turning enterprise data into decisions; **Description** (C) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage; **Display Tags** (D) = On; **Tags** (E) = Add the tags tcs-corp:topic/ai, tcs-corp:industry/banking, tcs-corp:content-type/report.

Expected Result: The eyebrow "Insights", the title and the description appear; with Display Tags on, the three tags show as grey uppercase labels under the eyebrow.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (F) = Text split (title left, text right).

Expected Result: With Layout Text split the title moves to the left column at regular weight and the description to the right column.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Multiple links** (G) = On; **Links** › Item 1: **CTA Title** (H) = Read the report, **CTA Link** (I) = Select the page or enter /en/insights; **Links** › Item 2: **CTA Title** (J) = Explore data and analytics, **CTA Link** (K) = Select the page or enter /en/services/consulting.

Expected Result: Multiple links On hides the CTA fields; the items "Read the report" and "Explore data and analytics" appear as text links with arrows.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Across the top the eyebrow "Insights" and the grey uppercase tags ARTIFICIAL INTELLIGENCE, BANKING and REPORT separated by bars; below, the regular-weight title "Turning enterprise data into decisions" on the left and on the right the 1.5rem description with "Read the report" and "Explore data and analytics" as text links with arrows.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page to Preview, then Live. The tag labels come from /en/taxonomy.json, which must itself be published; the links appear as soon as the page is published.

Step 8 — Verify

Action: On the live page check: Open /en/taxonomy.json on aem.live and find the tag; reload the page and the localised label shows.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Layout "Text split" with an image in the text column

Reproduces the screenshot `screenshots/teaser-text-split-image.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = Growth follows data maturity; **Description** (C) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The eyebrow "Insights" and the title "Growth follows data maturity" appear on the canvas with the description below them, centred because no image or layout is set yet.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset chart.svg (/en/media/chart.svg); **Image alt text** (E) = Bar chart: the revenue growth index rises from 120 in 2020 to 360 in 2026.

Expected Result: chart.svg appears as a rounded 10:9 image beside the text until the Layout is changed.

Step 5 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (F) = Text split (title left, text right).

Expected Result: With Text split the title moves left and the chart drops into the right column under the description, uncropped and square-cornered.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow "Insights" above the regular-weight title "Growth follows data maturity" on the left; on the right the description and below it the bar chart "Revenue growth index, 2020–2026" shown whole, without rounded corners.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish chart.svg in AEM Assets together with the page, then Publish to Preview and Live; the SVG is served as uploaded (no rendition), so it must already be optimised.

Step 8 — Verify

Action: On the live page check: The whole chart including its title and baseline is visible at 1440 px and 375 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Layout "Background image"

Reproduces the screenshot `screenshots/teaser-background-image.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Sustainability; **Title** (B) = Technology for a net-zero future; **Description** (C) = Data, AI and engineering that help enterprises measure, reduce and report their emissions.

Expected Result: The eyebrow "Sustainability" and the title "Technology for a net-zero future" appear on the canvas with the description below them, centred because no image is set yet.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: wide.svg appears as a rounded 10:9 image beside the text until the Layout is changed.

Step 5 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (E) = Background image.

Expected Result: With Layout Background image the picture moves behind the text under a dark overlay and the text turns white and centred.

Step 6 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Read the report; **Primary CTA Link** (G) = Select the page or enter /en/insights; **Primary CTA Link Style** (H) = Secondary Button; **Secondary CTA Title** (I) = Our approach; **Secondary CTA Link** (J) = Select the page or enter /en/about.

Expected Result: With Primary CTA Link Style Secondary Button, "Read the report" and "Our approach" both appear as white outline buttons.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The wide.svg image covers the banner under a 60 % dark overlay; centred on it the brand-blue eyebrow "Sustainability", the white 3rem title "Technology for a net-zero future", the 70 % white description and the white outline buttons "Read the report" and "Our approach" stacked.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; wide.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 9 — Verify

Action: On the live page check: The image is visible behind the overlay at 1440 px and 375 px and the white title is readable.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Layout "Card"

Reproduces the screenshot `screenshots/teaser-card.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Media kit; **Title** (B) = Brand assets and company facts; **Description** (C) = Logos, executive photography and fact sheets for journalists and partners.

Expected Result: The eyebrow "Media kit" and the title "Brand assets and company facts" appear on the canvas with the description below them, centred because no image is set yet.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-4.svg (/en/media/photo-4.svg).

Expected Result: photo-4.svg appears as a rounded 10:9 image beside the text until the Layout is changed.

Step 5 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (E) = Card.

Expected Result: With Layout Card the image moves behind the text in a rounded dark card, title at the top and body at the bottom.

Step 6 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Multiple links** (F) = On; **Links** › Item 1: **CTA Title** (G) = Download the media kit, **CTA Link** (H) = Select the page or enter /en/media-kit, **CTA Link Style** (I) = List; **Links** › Item 2: **CTA Title** (J) = Contact the press office, **CTA Link** (K) = Select the page or enter /en/contact, **CTA Link Style** (L) = List.

Expected Result: With Multiple links on, the two List items appear as full-width rows with a divider and right arrows at the bottom of the card.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A rounded card with photo-4 under a 70 % black overlay: the brand-blue eyebrow “Media kit” and the white title “Brand assets and company facts” at the top left; at the bottom the description and two full-width rows “Download the media kit” and “Contact the press office”, divided by a grey line, each with a right arrow.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-4.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 9 — Verify

Action: On the live page check: Both links render as full-width rows inside ul.teaser-link-list with a divider between them.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — Image type “Lotto” (Lottie animation)

Reproduces the screenshot `screenshots/teaser-lotto-animation.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Innovation; **Title** (B) = AI that learns with your business; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow “Innovation” and the title “AI that learns with your business” appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image type** (D) = Lotto; **Image** (E) = Select the asset animation.json (/en/media/animation.json); **Image alt text** (F) = Animated illustration of connected data points.

Expected Result: With Image type Lotto and animation.json the Lottie plays in the left column with a pause button in its corner.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Talk to an expert; **Primary CTA Link** (H) = Select the page or enter /en/contact; **Secondary CTA Title** (I) = Explore cloud services; **Secondary CTA Link** (J) = Select the page or enter /en/services/cloud.

Expected Result: “Talk to an expert” renders as a black Primary Button above the outline “Explore cloud services” Secondary Button, stacked under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The left column plays the animation.json Lottie (a blue shape) contained in the 10:9 media box, with a round pause button at its bottom right; the right column shows the eyebrow "Innovation", the title "AI that learns with your business", the description and the two buttons.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish animation.json in AEM Assets with the page, then Publish to Preview and Live; the Pause / Play labels come from the published /en/placeholders.json (pauseAnimation, playAnimation).

Step 8 — Verify

Action: On the live page check: The .json request returns 200, the animation loops and the pause button toggles it to Play animation.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — Image position (mobile) "Default"

Reproduces the screenshot `screenshots/teaser-mobile-image-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Retail; **Title** (B) = Personalised experiences at scale; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Retail" and the title "Personalised experiences at scale" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Image alt text** (E) = A retail analytics dashboard.

Expected Result: photo-5.svg fills the left column as a rounded 10:9 image and the text moves into the right half.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Talk to an expert; **Primary CTA Link** (G) = Select the page or enter /en/contact; **Secondary CTA Title** (H) = Explore cloud services; **Secondary CTA Link** (I) = Select the page or enter /en/services/cloud.

Expected Result: "Talk to an expert" renders as a black Primary Button above the outline "Explore cloud services" Secondary Button, stacked under the description.

Step 6 — Preview

Action: Screen width: 375 px (mobile).

Expected Result: At 375 px the photo-5 image sits on top, followed by eyebrow, title, description and the two buttons.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 375 px the rounded 10:9 photo-5 retail dashboard image is on top; below it the eyebrow "Retail", the title "Personalised experiences at scale", the description and the two stacked buttons.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-5.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 9 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the top of the mobile teaser shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 10 — Image position (mobile) "Top"

Reproduces the screenshot `screenshots/teaser-mobile-image-top.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = Growth follows data maturity; **Description** (C) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The eyebrow "Insights" and the title "Growth follows data maturity" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset chart.svg (/en/media/chart.svg); **Image alt text** (E) = Bar chart: the revenue growth index rises from 120 in 2020 to 360 in 2026; **Image position (mobile)** (F) = Top.

Expected Result: chart.svg appears beside the text with Image position (mobile) Top stored for narrow screens.

Step 5 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (G) = Text split (title left, text right).

Expected Result: With Layout Text split the chart joins the right column; on narrow widths it now precedes the description.

Step 6 — Preview

Action: Screen width: 375 px (mobile).

Expected Result: At 375 px the chart appears directly under the title and above the description.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 375 px: the eyebrow "Insights", the title "Growth follows data maturity", then the uncropped bar chart, then the description "Organisations that connect their data…".

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish chart.svg with the page, then Publish to Preview and Live; nothing else is needed for the mobile order, which is pure CSS.

Step 9 — Verify

Action: On the live page check: The block has the class mobile-image-top and the chart appears between the title and the description.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 11 — Image position (mobile) "Bottom"

Reproduces the screenshot `screenshots/teaser-mobile-image-bottom.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Manufacturing; **Title** (B) = Smart factories, connected supply chains; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Manufacturing" and the title "Smart factories, connected supply chains" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Image alt text** (E) = A modern factory floor; **Image position (mobile)** (F) = Bottom.

Expected Result: photo-6.svg fills the left column as a rounded 10:9 image and the text moves into the right half; Image position (mobile) Bottom is stored for narrow screens.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Talk to an expert; **Primary CTA Link** (H) = Select the page or enter /en/contact; **Secondary CTA Title** (I) = Explore cloud services; **Secondary CTA Link** (J) = Select the page or enter /en/services/cloud.

Expected Result: "Talk to an expert" renders as a black Primary Button above the outline "Explore cloud services" Secondary Button, stacked under the description.

Step 6 — Preview

Action: Screen width: 375 px (mobile).

Expected Result: At 375 px the text and both buttons come first and the photo-6 image follows below the buttons.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 375 px: the eyebrow "Manufacturing", the title "Smart factories, connected supply chains", the description and the two buttons, then the rounded 10:9 photo-6 factory floor image at the bottom.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-6.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 9 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the bottom of the mobile teaser shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 12 — Image ratio "Default (10:9)"

Reproduces the screenshot `screenshots/teaser-ratio-10-9.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = A default 10:9 image; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Cloud services" and the title "A default 10:9 image" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (E) = Consultants in a workshop.

Expected Result: photo-2.svg appears in the left column cropped to 10:9 with rounded corners.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Talk to an expert; **Primary CTA Link** (G) = Select the page or enter /en/contact.

Expected Result: "Talk to an expert" renders as a black Primary Button under the description; no secondary CTA is set.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The photo-2 workshop image is shown slightly wider than tall (10:9) with 1rem rounded corners on the left; on the right the eyebrow, the title "A default 10:9 image", the description and one black "Talk to an expert" button.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 8 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the image column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 13 — Image ratio "Portrait (8:9)"

Reproduces the screenshot `screenshots/teaser-ratio-8-9.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = A portrait 8:9 image; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Cloud services" and the title "A portrait 8:9 image" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Image alt text** (E) = A security operations centre; **Image ratio** (F) = Portrait (8:9).

Expected Result: photo-3.svg appears in the left column; with Image ratio Portrait (8:9) it becomes taller than wide.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Talk to an expert; **Primary CTA Link** (H) = Select the page or enter /en/contact.

Expected Result: "Talk to an expert" renders as a black Primary Button under the description; no secondary CTA is set.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The photo-3 image is slightly taller than wide (8:9) with rounded corners on the left; the eyebrow, the title "A portrait 8:9 image", the description and the "Talk to an expert" button are centred vertically beside it.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-3.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 8 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the image column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 14 — Image ratio "Square (1:1)"

Reproduces the screenshot `screenshots/teaser-ratio-1-1.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = A square 1:1 image; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow “Cloud services” and the title “A square 1:1 image” appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Image alt text** (E) = A retail analytics dashboard; **Image ratio** (F) = Square (1:1).

Expected Result: photo-5.svg appears in the left column; with Image ratio Square (1:1) it becomes a rounded square.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Talk to an expert; **Primary CTA Link** (H) = Select the page or enter /en/contact.

Expected Result: “Talk to an expert” renders as a black Primary Button under the description; no secondary CTA is set.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The photo-5 image is a rounded square on the left; the eyebrow “Cloud services”, the title “A square 1:1 image”, the description and the “Talk to an expert” button sit beside it, vertically centred.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-5.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 8 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the image column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 15 — Image ratio “Original”

Reproduces the screenshot `screenshots/teaser-ratio-original.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = The image in its original ratio; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Cloud services" and the title "The image in its original ratio" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Image alt text** (E) = A modern factory floor; **Image ratio** (F) = Original.

Expected Result: photo-6.svg appears in the left column; with Image ratio Original it shows uncropped at 16:9.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Talk to an expert; **Primary CTA Link** (H) = Select the page or enter /en/contact.

Expected Result: "Talk to an expert" renders as a black Primary Button under the description; no secondary CTA is set.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The wide photo-6 image is shown uncropped at 16:9 with rounded corners on the left, lower than the default box; the text "The image in its original ratio", the description and the button are vertically centred beside it.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-6.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 8 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the image column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 16 — Image corners "Rounded" (default)

Reproduces the screenshot `screenshots/teaser-corners-rounded.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = Rounded image corners; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow “Cloud services” and the title “Rounded image corners” appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-7.svg (/en/media/photo-7.svg); **Image alt text** (E) = A team in a modern office.

Expected Result: photo-7.svg appears in the left column with 1rem rounded corners.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Talk to an expert; **Primary CTA Link** (G) = Select the page or enter /en/contact.

Expected Result: “Talk to an expert” renders as a black Primary Button under the description; no secondary CTA is set.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The photo-7 office team image on the left has 1rem rounded corners at 10:9; on the right the eyebrow, the title “Rounded image corners”, the description and the “Talk to an expert” button.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-7.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 8 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the image column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 17 — Image corners “Square”

Reproduces the screenshot `screenshots/teaser-corners-square.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = Square image corners; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Cloud services" and the title "Square image corners" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-8.svg (/en/media/photo-8.svg); **Image alt text** (E) = A city skyline at dusk; **Image corners** (F) = Square.

Expected Result: photo-8.svg appears in the left column; with Image corners Square its corners become sharp.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Talk to an expert; **Primary CTA Link** (H) = Select the page or enter /en/contact.

Expected Result: "Talk to an expert" renders as a black Primary Button under the description; no secondary CTA is set.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The photo-8 city skyline image on the left has sharp 90-degree corners at 10:9; the eyebrow, the title "Square image corners", the description and the button sit beside it.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-8.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 8 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the image column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 18 — BG Color "Default"

Reproduces the screenshot `screenshots/teaser-bg-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = Modernise your core on any cloud; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow “Cloud services” and the title “Modernise your core on any cloud” appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (E) = Consultants in a workshop.

Expected Result: photo-2.svg fills the left column as a rounded 10:9 image and the text moves into the right half.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Talk to an expert; **Primary CTA Link** (G) = Select the page or enter /en/contact; **Secondary CTA Title** (H) = Explore cloud services; **Secondary CTA Link** (I) = Select the page or enter /en/services/cloud.

Expected Result: “Talk to an expert” renders as a black Primary Button above the outline “Explore cloud services” Secondary Button, stacked under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: On the white page the rounded 10:9 photo-2 image is on the left; the eyebrow “Cloud services”, the title “Modernise your core on any cloud”, the grey description and the two stacked buttons on the right, with no extra padding around the block.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 8 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 19 — BG Color "Grey"

Reproduces the screenshot `screenshots/teaser-bg-grey.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = Turning enterprise data into decisions; **Description** (C) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The eyebrow "Insights" and the title "Turning enterprise data into decisions" appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right); **BG Color** (E) = Grey.

Expected Result: With Layout Text split the title moves left and the description right; BG Color Grey puts the teaser on a padded light grey panel.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Multiple links** (F) = On; **Links** › Item 1: **CTA Title** (G) = Read the report, **CTA Link** (H) = Select the page or enter /en/insights.

Expected Result: Multiple links On hides the CTA fields; "Read the report" appears as a text link with an arrow under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A light grey panel with generous padding: the eyebrow "Insights" above, the regular-weight title "Turning enterprise data into decisions" on the left, the 1.5rem description and the text link "Read the report" with an arrow on the right.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published (no asset). Publish to Preview, check /en/insights opens from the link, then Publish to Live.

Step 8 — Verify

Action: On the live page check: The block has the class bg-grey and a light grey panel with padding shows at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 20 — BG Color "Dark"

Reproduces the screenshot `screenshots/teaser-bg-dark.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Results; **Title** (B) = Cloud modernisation in numbers; **Description** (C) = What our clients achieved in the first two years after moving their core applications to the cloud.

Expected Result: The eyebrow "Results" and the title "Cloud modernisation in numbers" appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right); **BG Color** (E) = Dark.

Expected Result: Text split moves the title left and the text right; BG Color Dark turns the panel near-black with white text.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Talk to an expert; **Primary CTA Link** (G) = Select the page or enter /en/contact; **Secondary CTA Title** (H) = Read the case studies; **Secondary CTA Link** (I) = Select the page or enter /en/insights.

Expected Result: "Talk to an expert" and the white outline "Read the case studies" appear stacked under the description.

Step 6 — Fill in Teaser › Stats

Action: Select **Teaser** in the content tree and open the **Stats** tab of the properties panel. Enter: **Stats** › Item 1: **Stats Title** (J) = Lower operating cost, **Stats Value** (K) = 40%; **Stats** › Item 2: **Stats Title** (L) = Faster releases, **Stats Value** (M) = 3x; **Stats** › Item 3: **Stats Title** (N) = Applications migrated, **Stats Value** (O) = 1,200.

Expected Result: Three stats appear between the description and the buttons, each a white label above a large light-blue value.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A near-black panel: the eyebrow "Results" and the white title "Cloud modernisation in numbers" on the left; on the right the 70 % white description, the stats Lower operating cost 40%, Faster releases 3x and

Applications migrated 1,200 with light-blue values, then “Talk to an expert” and the white outline “Read the case studies”.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, check both CTA targets and the stats at 375 px, then Publish to Live.

Step 9 — Verify

Action: On the live page check: Both CTAs show a white outline or white text on the dark panel at 1440 px and 375 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 21 — BG Color “Dark green”

Reproduces the screenshot `screenshots/teaser-bg-dark-green.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Sustainability; **Title** (B) = Engineering a net-zero future; **Description** (C) = We help enterprises measure, reduce and report their emissions with data and AI.

Expected Result: The eyebrow “Sustainability” and the title “Engineering a net-zero future” appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (D) = Dark green.

Expected Result: BG Color Dark green turns the teaser into a padded #003b39 panel with white text.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (E) = Our commitments; **Primary CTA Link** (F) = Select the page or enter /en/about; **Secondary CTA Title** (G) = Read the report; **Secondary CTA Link** (H) = Select the page or enter /en/insights.

Expected Result: “Our commitments” and the white outline “Read the report” appear centred and stacked under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A dark green (#003b39) panel with centred content: the brand-blue eyebrow “Sustainability”, the white title “Engineering a net-zero future”, the 70 % white description and “Our commitments” above the white outline “Read the report”.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, check /en/about and /en/insights, then Publish to Live.

Step 8 — Verify

Action: On the live page check: The block has the class bg-dark-green and the title renders white.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 22 — Text alignment “Layout default”

Reproduces the screenshot `screenshots/teaser-text-layout-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Two empty Teasers are added one below the other in the section, each with Title Type H2 and the Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Consulting; **Title** (B) = Left aligned by default; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The first teaser shows “Left aligned by default” under the eyebrow “Consulting”; the second “Centred by default” under “Sustainability”.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (E) = Consultants in a workshop.

Expected Result: photo-2.svg appears beside the first teaser’s text; wide.svg is set on the second teaser.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Talk to an expert; **Primary CTA Link** (G) = Select the page or enter /en/contact; **Secondary CTA Title** (H) = Explore cloud services; **Secondary CTA Link** (I) = Select the page or enter /en/services/cloud.

Expected Result: The first teaser gets “Talk to an expert” and “Explore cloud services”; the second “Read the report” and “Our approach”.

Step 6 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Two empty Teasers are added one below the other in the section, each with Title Type H2 and the Primary / Secondary Button link styles preset.

Step 7 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (J) = Sustainability; **Title** (K) = Centred by default; **Description** (L) = Data, AI and engineering that help enterprises measure, reduce and report their emissions.

Expected Result: The first teaser shows "Left aligned by default" under the eyebrow "Consulting"; the second "Centred by default" under "Sustainability".

Step 8 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (M) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: photo-2.svg appears beside the first teaser's text; wide.svg is set on the second teaser.

Step 9 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (N) = Background image.

Expected Result: Layout Background image on the second teaser puts wide.svg behind its centred white text; the first stays left aligned.

Step 10 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (O) = Read the report; **Primary CTA Link** (P) = Select the page or enter /en/insights; **Primary CTA Link Style** (Q) = Secondary Button; **Secondary CTA Title** (R) = Our approach; **Secondary CTA Link** (S) = Select the page or enter / en/about.

Expected Result: The first teaser gets "Talk to an expert" and "Explore cloud services"; the second "Read the report" and "Our approach".

Step 11 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Top: photo-2 on the left and the left-aligned "Left aligned by default" text with two buttons on the right. Below it: the wide.svg Background image banner with the centred eyebrow, the white title "Centred by default", the description and two white outline buttons.

Step 12 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish photo-2.svg and wide.svg in AEM Assets with the page, then Publish to Preview and Live; both teasers are part of the same page publish.

Step 13 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the banner of the second teaser shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 23 — Text alignment "Left"

Reproduces the screenshot `screenshots/teaser-text-left.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Sustainability; **Title** (B) = Left-aligned text over the image; **Description** (C) = Data, AI and engineering that help enterprises measure, reduce and report their emissions.

Expected Result: The eyebrow "Sustainability" and the title "Left-aligned text over the image" appear on the canvas with the description below them, centred because no image is set yet.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: wide.svg appears as a rounded 10:9 image beside the text until the Layout is changed.

Step 5 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (E) = Background image; **Text alignment** (F) = Left.

Expected Result: Layout Background image puts wide.svg behind the text; Text alignment Left then aligns the lines to the left.

Step 6 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Read the report; **Primary CTA Link** (H) = Select the page or enter /en/insights; **Primary CTA Link Style** (I) = Secondary Button; **Secondary CTA Title** (J) = Our approach; **Secondary CTA Link** (K) = Select the page or enter /en/about.

Expected Result: "Read the report" and "Our approach" appear as white outline buttons, because Primary CTA Link Style is Secondary Button.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The wide.svg banner under the dark overlay; the eyebrow "Sustainability", the white title "Left-aligned text over the image", the description and the two white outline buttons are left aligned within a text block that sits in the middle of the banner.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; wide.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 9 — Verify

Action: On the live page check: The block has the class text-left and each line of the title and description starts at the same left position.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 24 — Text alignment "Center"

Reproduces the screenshot `screenshots/teaser-text-center.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cybersecurity; **Title** (B) = Centred next to the image; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Cybersecurity" and the title "Centred next to the image" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Image alt text** (E) = A security operations centre.

Expected Result: photo-3.svg fills the left column as a rounded 10:9 image and the text moves into the right half.

Step 5 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Text alignment** (F) = Center.

Expected Result: With Text alignment Center the eyebrow, title, description and buttons are centred in the right column.

Step 6 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Talk to an expert; **Primary CTA Link** (H) = Select the page or enter /en/contact; **Secondary CTA Title** (I) = Explore cloud services; **Secondary CTA Link** (J) = Select the page or enter /en/services/cloud.

Expected Result: "Talk to an expert" renders as a black Primary Button above the outline "Explore cloud services" Secondary Button, centred under the description.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: photo-3 on the left at 10:9; in the right column the eyebrow “Cybersecurity”, the title “Centred next to the image”, the description and the two stacked buttons, all centred within the column.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-3.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 9 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 25 — Text alignment “Right”

Reproduces the screenshot `screenshots/teaser-text-right.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Media kit; **Title** (B) = Brand assets and company facts; **Description** (C) = Logos, executive photography and fact sheets for journalists and partners.

Expected Result: The eyebrow “Media kit” and the title “Brand assets and company facts” appear on the canvas with the description below them, centred because no image is set yet.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-4.svg (/en/media/photo-4.svg).

Expected Result: photo-4.svg appears as a rounded 10:9 image beside the text until the Layout is changed.

Step 5 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (E) = Card; **Text alignment** (F) = Right.

Expected Result: Layout Card puts photo-4 behind the text; Text alignment Right moves the eyebrow, title and description to the right.

Step 6 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Multiple links** (G) = On; **Links** › Item 1: **CTA Title** (H) = Download the media kit, **CTA Link** (I) = Select the page or enter /en/media-

kit, **CTA Link Style** (J) = List; **Links** › Item 2: **CTA Title** (K) = Contact the press office, **CTA Link** (L) = Select the page or enter /en/contact, **CTA Link Style** (M) = List.

Expected Result: The two List items appear as full-width divided rows with arrows at the bottom of the card.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The dark rounded Card with photo-4 behind the overlay: the eyebrow "Media kit", the title "Brand assets and company facts" and the description aligned to the right; the List rows "Download the media kit" and "Contact the press office" stay full width with the label on the left and the arrow on the right.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-4.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 9 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the card background shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 26 — Vertical alignment "Layout default"

Reproduces the screenshot `screenshots/teaser-valign-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = Modernise your core on any cloud; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Cloud services" and the title "Modernise your core on any cloud" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset tall.svg (/en/media/tall.svg); **Image alt text** (E) = A team in a modern office; **Image ratio** (F) = Portrait (8:9).

Expected Result: tall.svg appears in the left column at 8:9 (Image ratio Portrait) with the text centred vertically beside it.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Talk to an expert; **Primary CTA Link** (H) = Select the page or enter /en/contact; **Secondary CTA Title** (I) = Explore cloud services; **Secondary CTA Link** (J) = Select the page or enter /en/services/cloud.

Expected Result: "Talk to an expert" renders as a black Primary Button above the outline "Explore cloud services" Secondary Button, stacked under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The tall.svg office image at 8:9 on the left; on the right the eyebrow "Cloud services", the title "Modernise your core on any cloud", the description and the two buttons in the vertical middle of the image height.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; tall.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 8 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 27 — Vertical alignment "Top"

Reproduces the screenshot `screenshots/teaser-valign-top.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = Text aligned to the top of the image; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Cloud services" and the title "Text aligned to the top of the image" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset tall.svg (/en/media/tall.svg); **Image alt text** (E) = A team in a modern office; **Image ratio** (F) = Portrait (8:9).

Expected Result: tall.svg appears in the left column at 8:9 with the text centred vertically beside it.

Step 5 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Vertical alignment** (G) = Top.

Expected Result: With Vertical alignment Top the text column moves up so the eyebrow is level with the top of the image.

Step 6 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (H) = Talk to an expert; **Primary CTA Link** (I) = Select the page or enter /en/contact; **Secondary CTA Title** (J) = Explore cloud services; **Secondary CTA Link** (K) = Select the page or enter /en/services/cloud.

Expected Result: "Talk to an expert" renders as a black Primary Button above the outline "Explore cloud services" Secondary Button, stacked under the description.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The tall.svg image at 8:9 on the left; the eyebrow "Cloud services" level with its top edge, followed by the title "Text aligned to the top of the image", the description and the two buttons, leaving space below.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; tall.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 9 — Verify

Action: On the live page check: The block has the class valign-top and the eyebrow aligns with the image top.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 28 — Vertical alignment "Center"

Reproduces the screenshot `screenshots/teaser-valign-middle.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = AI at scale; **Description** (C) = Our research across 1,500 enterprises shows that the leaders connect data across functions, automate routine decisions and invest early in the skills their teams need. They treat AI as an operating model, not a project, and measure value in every release.

Expected Result: The eyebrow "Insights" and the title "AI at scale" appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right); **Vertical alignment** (E) = Center.

Expected Result: Text split moves the title left; Vertical alignment Center centres it against the taller right column.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Multiple links** (F) = On; **Links** › Item 1: **CTA Title** (G) = Cloud migration, **CTA Link** (H) = Select the page or enter /en/services/cloud/migration, **CTA Link Style** (I) = List; **Links** › Item 2: **CTA Title** (J) = Business and technology consulting, **CTA Link** (K) = Select the page or enter /en/services/consulting, **CTA Link Style** (L) = List; **Links** › Item 3: **CTA Title** (M) = Industries we serve, **CTA Link** (N) = Select the page or enter /en/industries, **CTA Link Style** (O) = List.

Expected Result: The three List items appear as full-width rows with dividers and right arrows under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow "Insights" across the top; the short title "AI at scale" on the left, vertically centred against the right column with the long description and the List rows "Cloud migration", "Business and technology consulting" and "Industries we serve".

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, open the three List link targets, then Publish to Live.

Step 8 — Verify

Action: On the live page check: Three rows with dividers between them render under the description.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 29 — Vertical alignment "Bottom"

Reproduces the screenshot `screenshots/teaser-valign-bottom.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Sustainability; **Title** (B) = Text resting at the bottom; **Description** (C) = Data, AI and engineering that help enterprises measure, reduce and report their emissions.

Expected Result: The eyebrow "Sustainability" and the title "Text resting at the bottom" appear on the canvas with the description below them, centred because no image is set yet.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: wide.svg appears as a rounded 10:9 image beside the text until the Layout is changed.

Step 5 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (E) = Background image; **Vertical alignment** (F) = Bottom.

Expected Result: Layout Background image puts wide.svg behind the text; Vertical alignment Bottom moves the text to the bottom of the banner.

Step 6 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Read the report; **Primary CTA Link** (H) = Select the page or enter /en/insights; **Primary CTA Link Style** (I) = Secondary Button; **Secondary CTA Title** (J) = Our approach; **Secondary CTA Link** (K) = Select the page or enter /en/about.

Expected Result: "Read the report" and "Our approach" appear as white outline buttons, because Primary CTA Link Style is Secondary Button.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The wide.svg banner under the dark overlay with the centred eyebrow "Sustainability", the white title "Text resting at the bottom", the description and the two white outline buttons placed at the bottom of the banner.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; wide.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 9 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the banner shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 30 — Title size "Layout default"

Reproduces the screenshot `screenshots/teaser-title-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Two empty Teasers are added one below the other in the section, each with Title Type H2 and the Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = Image & Text title; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The first teaser shows "Image & Text title", the second "Text split title", each with eyebrow and description.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (E) = Consultants in a workshop.

Expected Result: photo-2.svg appears beside the first teaser's text, whose title becomes the smaller 2.5rem size.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Talk to an expert; **Primary CTA Link** (G) = Select the page or enter /en/contact.

Expected Result: "Talk to an expert" appears as a black Primary Button in the first teaser.

Step 6 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Two empty Teasers are added one below the other in the section, each with Title Type H2 and the Primary / Secondary Button link styles preset.

Step 7 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (H) = Insights; **Title** (I) = Text split title; **Description** (J) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The first teaser shows "Image & Text title", the second "Text split title", each with eyebrow and description.

Step 8 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (K) = Text split (title left, text right).

Expected Result: Layout Text split on the second teaser puts its 3rem regular-weight title on the left.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Top: photo-2 on the left with the semibold 2.5rem title "Image & Text title" and a button. Below: the regular-weight 3rem title "Text split title" on the left and the description on the right.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish photo-2.svg with the page, then Publish to Preview and Live; both teasers go out with the page.

Step 11 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the first teaser's image column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 31 — Title size "Medium (40px)"

Reproduces the screenshot `screenshots/teaser-title-m.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Sustainability; **Title** (B) = Technology for a net-zero future; **Description** (C) = Data, AI and engineering that help enterprises measure, reduce and report their emissions.

Expected Result: The eyebrow "Sustainability" and the title "Technology for a net-zero future" appear on the canvas with the description below them, centred because no image is set yet.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: wide.svg appears as a rounded 10:9 image beside the text until the Layout is changed.

Step 5 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (E) = Background image; **Title size** (F) = Medium (40px).

Expected Result: Layout Background image puts wide.svg behind the text; Title size Medium reduces the white title to 2.5rem.

Step 6 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Read the report; **Primary CTA Link** (H) = Select the page or enter /en/insights; **Primary CTA Link Style** (I) = Secondary Button; **Secondary CTA Title** (J) = Our approach; **Secondary CTA Link** (K) = Select the page or enter /en/about.

Expected Result: "Read the report" and "Our approach" appear as white outline buttons, because Primary CTA Link Style is Secondary Button.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The wide.svg banner under the dark overlay with the centred eyebrow, the 2.5rem white title "Technology for a net-zero future" (smaller than the layout's 3rem), the description and the two white outline buttons.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; wide.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 9 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the banner shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 32 — Title size "Large (48px)"

Reproduces the screenshot `screenshots/teaser-title-l.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = A large title beside the image; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Cloud services" and the title "A large title beside the image" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (E) = Consultants in a workshop.

Expected Result: photo-2.svg fills the left column as a rounded 10:9 image and the text moves into the right half and the title drops to 2.5rem.

Step 5 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Title size** (F) = Large (48px).

Expected Result: Title size Large raises the title beside the image to 3rem.

Step 6 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Talk to an expert; **Primary CTA Link** (H) = Select the page or enter /en/contact.

Expected Result: "Talk to an expert" renders as a black Primary Button under the description.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: photo-2 on the left; on the right the eyebrow "Cloud services", the 3rem semibold title "A large title beside the image" over two lines, the description and the "Talk to an expert" button.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 9 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 33 — Title size "Extra large (64px)"

Reproduces the screenshot `screenshots/teaser-title-xl.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Services; **Title** (B) = Cloud; **Title Type** (C) = H1; **Description** (D) = Move, modernise and run workloads on any cloud with a partner that has done it at scale.

Expected Result: The eyebrow "Services", the title "Cloud" as an H1 and the description appear on the canvas, centred.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (E) = Text split (title left, text right); **Title size** (F) = Extra large (64px).

Expected Result: Text split moves "Cloud" to the left column; Title size Extra large makes it 4rem.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow "Services" above; the very large regular-weight title "Cloud" on the left and the description "Move, modernise and run workloads…" on the right.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, check that the page has exactly one H1, then Publish to Live.

Step 7 — Verify

Action: On the live page check: The accessibility tree shows one H1 and the teaser title as H2 with the same look.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 34 — Title size "Display (96px)"

Reproduces the screenshot `screenshots/teaser-title-display.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Built on belief.

Expected Result: The title "Built on belief" appears centred on its own, without eyebrow or description.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Title size** (B) = Display (96px).

Expected Result: Title size Display enlarges the title to 6rem at desktop width.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Centred on the white page the semibold title "Built on belief" at 6rem over two lines; nothing else.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, check the title at 320 px and 375 px, then Publish to Live.

Step 7 — Verify

Action: On the live page check: In responsive mode at 320 px the title fits without a horizontal scroll bar.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 35 — Title weight "Layout default"

Reproduces the screenshot `screenshots/teaser-title-weight-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Two empty Teasers are added one below the other in the section, each with Title Type H2 and the Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = A semibold Image & Text title; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The first teaser shows "A semibold Image & Text title", the second "A regular Text split title".

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (E) = Consultants in a workshop.

Expected Result: photo-2.svg appears beside the first teaser's semibold title.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Talk to an expert; **Primary CTA Link** (G) = Select the page or enter /en/contact.

Expected Result: "Talk to an expert" appears as a black Primary Button in the first teaser.

Step 6 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Two empty Teasers are added one below the other in the section, each with Title Type H2 and the Primary / Secondary Button link styles preset.

Step 7 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (H) = Insights; **Title** (I) = A regular Text split title; **Description** (J) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The first teaser shows “A semibold Image & Text title”, the second “A regular Text split title”.

Step 8 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (K) = Text split (title left, text right).

Expected Result: Layout Text split on the second teaser shows its title in regular weight on the left.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Top: photo-2 beside the semibold title “A semibold Image & Text title” with a button. Below: the regular-weight title “A regular Text split title” on the left and the description on the right.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish photo-2.svg with the page, then Publish to Preview and Live.

Step 11 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the first teaser’s image column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 36 — Title weight “Regular”

Reproduces the screenshot `screenshots/teaser-title-regular.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = A regular-weight title; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow “Cloud services” and the title “A regular-weight title” appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (E) = Consultants in a workshop.

Expected Result: photo-2.svg fills the left column as a rounded 10:9 image and the text moves into the right half.

Step 5 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Title weight** (F) = Regular.

Expected Result: Title weight Regular turns the semibold title into regular weight.

Step 6 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Talk to an expert; **Primary CTA Link** (H) = Select the page or enter /en/contact.

Expected Result: "Talk to an expert" renders as a black Primary Button under the description.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: photo-2 on the left; on the right the eyebrow, the 2.5rem title "A regular-weight title" in regular weight (400), the description and the "Talk to an expert" button.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 9 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 37 — Title weight "Semibold"

Reproduces the screenshot `screenshots/teaser-title-semibold.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = A semibold Text split title; **Description** (C) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The eyebrow "Insights" and the title "A semibold Text split title" appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right); **Title weight** (E) = Semibold.

Expected Result: Layout Text split moves the title left; Title weight Semibold makes it bold again.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow "Insights" above; the 3rem semibold title "A semibold Text split title" on the left and the 1.5rem description on the right.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview and Live.

Step 7 — Verify

Action: On the live page check: The block has the class title-semibold and the title renders at weight 600.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 38 — Description size "Layout default"

Reproduces the screenshot `screenshots/teaser-description-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Two empty Teasers are added one below the other in the section, each with Title Type H2 and the Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = Description at 1.125rem; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The first teaser shows "Description at 1.125rem", the second "Description at 1.5rem", each with eyebrow and description.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (E) = Consultants in a workshop.

Expected Result: photo-2.svg appears beside the first teaser's text.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Talk to an expert; **Primary CTA Link** (G) = Select the page or enter /en/contact.

Expected Result: "Talk to an expert" appears as a black Primary Button in the first teaser.

Step 6 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Two empty Teasers are added one below the other in the section, each with Title Type H2 and the Primary / Secondary Button link styles preset.

Step 7 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (H) = Insights; **Title** (I) = Description at 1.5rem; **Description** (J) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The first teaser shows "Description at 1.125rem", the second "Description at 1.5rem", each with eyebrow and description.

Step 8 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (K) = Text split (title left, text right).

Expected Result: Layout Text split on the second teaser enlarges its description to 1.5rem in the right column.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Top: photo-2 beside the title "Description at 1.125rem" with grey 1.125rem body text and a button. Below: "Description at 1.5rem" on the left and the larger black description on the right.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish photo-2.svg with the page, then Publish to Preview and Live.

Step 11 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the first teaser's image column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 39 — Description size "Regular (18px)"

Reproduces the screenshot `screenshots/teaser-description-regular.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = Regular body text; **Description** (C) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The eyebrow "Insights" and the title "Regular body text" appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right); **Description size** (E) = Regular (18px).

Expected Result: Text split moves the description right; Description size Regular reduces it to 1.125rem.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow "Insights" above; the regular-weight title "Regular body text" on the left and on the right the description at 1.125rem with a generous line height, smaller than the Text split default.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview and Live.

Step 7 — Verify

Action: On the live page check: The block has the class text-regular and the description is 1.125rem at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 40 — Description size "Large (24px)"

Reproduces the screenshot `screenshots/teaser-description-large.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = A large description; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Cloud services" and the title "A large description" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (E) = Consultants in a workshop.

Expected Result: photo-2.svg fills the left column as a rounded 10:9 image and the text moves into the right half.

Step 5 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Description size** (F) = Large (24px).

Expected Result: Description size Large enlarges the description to 1.5rem beside the image.

Step 6 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (G) = Talk to an expert; **Primary CTA Link** (H) = Select the page or enter /en/contact.

Expected Result: "Talk to an expert" renders as a black Primary Button under the description.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: photo-2 on the left; on the right the eyebrow, the title "A large description", the grey description at 1.5rem over four lines and the "Talk to an expert" button.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 9 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 41 — Eyebrow style "Brand"

Reproduces the screenshot `screenshots/teaser-eyebrow-brand.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Artificial intelligence; **Title** (B) = The brand eyebrow; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Artificial intelligence" and the title "The brand eyebrow" appear on the canvas with the description below them, the eyebrow in brand blue.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (E) = Consultants in a workshop.

Expected Result: photo-2.svg fills the left column as a rounded 10:9 image and the text moves into the right half.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Talk to an expert; **Primary CTA Link** (G) = Select the page or enter /en/contact.

Expected Result: "Talk to an expert" renders as a black Primary Button under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: photo-2 on the left; on the right the semibold brand-blue eyebrow "Artificial intelligence" above the title "The brand eyebrow", the description and the button.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 8 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 42 — Eyebrow style "Label (uppercase, grey)"

Reproduces the screenshot `screenshots/teaser-eyebrow-label.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Press release; **Title** (B) = TCS opens a new AI innovation centre in Europe; **Description** (C) = The centre brings together research, client co-innovation and skills programmes for enterprises across the region.

Expected Result: The eyebrow “Press release” and the title “TCS opens a new AI innovation centre in Europe” appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right); **Eyebrow style** (E) = Label (uppercase, grey).

Expected Result: Text split moves the title left; Eyebrow style Label turns “Press release” into a small grey uppercase label.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The small grey uppercase label “PRESS RELEASE” above; the regular-weight title “TCS opens a new AI innovation centre in Europe” on the left and the description on the right.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview and Live.

Step 7 — Verify

Action: On the live page check: The block has the class eyebrow-label and the eyebrow shows small, grey and uppercase.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 43 — Top spacing “Default”

Reproduces the screenshot `screenshots/teaser-top-spacing-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title, a Text, a Teaser and another Text component are added to the section in this order.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = How we work; **Title Type** (B) = h2.

Expected Result: The heading “How we work” appears as an H2 at the top of the section.

Step 4 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Title, a Text, a Teaser and another Text component are added to the section in this order.

Step 5 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Every engagement starts with the outcomes that matter to your business, and a team that stays with you from strategy to operations.

Expected Result: The paragraphs “Every engagement starts…” and “Explore our services…” appear above and below the teaser.

Step 6 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: A Title, a Text, a Teaser and another Text component are added to the section in this order.

Step 7 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (D) = Cloud services; **Title** (E) = A teaser between other content; **Description** (F) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow “Cloud services” and the title “A teaser between other content” appear on the canvas with the description below them.

Step 8 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (G) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (H) = Consultants in a workshop.

Expected Result: photo-2.svg fills the left column as a rounded 10:9 image and the text moves into the right half.

Step 9 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (I) = Talk to an expert; **Primary CTA Link** (J) = Select the page or enter /en/contact.

Expected Result: “Talk to an expert” renders as a black Primary Button under the description.

Step 10 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Title, a Text, a Teaser and another Text component are added to the section in this order.

Step 11 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (K) = Explore our services, industries and latest research below.

Expected Result: The paragraphs “Every engagement starts…” and “Explore our services…” appear above and below the teaser.

Step 12 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The H2 “How we work” and an intro paragraph above; then the teaser with photo-2 on the left and “A teaser between other content” with a button on the right; then the line “Explore our services, industries and latest research below.”

Step 13 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish photo-2.svg with the page, then Publish to Preview and Live; the Title and Text components are part of the same page.

Step 14 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the teaser image column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 44 — Top spacing "Page header (extra space above)"

Reproduces the screenshot `screenshots/teaser-spacing-header.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Industries; **Title** (B) = Banking and financial services; **Description** (C) = Platforms, AI and operations that help banks grow, comply and serve customers better.

Expected Result: The eyebrow "Industries" and the title "Banking and financial services" appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right); **Top spacing** (E) = Page header (extra space above).

Expected Result: Text split moves the title left and the description right; Top spacing Page header adds a large space above.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A large empty area above the teaser, then the eyebrow "Industries", the regular-weight title "Banking and financial services" on the left and the 1.5rem description on the right.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, check the space under the header at 1440 px and 375 px, then Publish to Live.

Step 7 — Verify

Action: On the live page check: The block has the class spacing-header and 12.5rem padding above at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 45 — Links "Primary and Secondary CTA" (Multiple links off)

Reproduces the screenshot `screenshots/teaser-links-primary-secondary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = Two calls to action; **Description** (C) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The eyebrow "Insights" and the title "Two calls to action" appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right).

Expected Result: Text split moves the title left and the description right.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (E) = Talk to an expert; **Primary CTA Link** (F) = Select the page or enter /en/contact; **Secondary CTA Title** (G) = Explore our services; **Secondary CTA Link** (H) = Select the page or enter /en/services.

Expected Result: "Talk to an expert" renders as a black Primary Button above the outline "Explore our services" Secondary Button, stacked under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow "Insights" above; the title "Two calls to action" on the left; on the right the description, the black "Talk to an expert" button and below it the outline "Explore our services" button.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, open /en/contact and /en/services from the buttons, then Publish to Live.

Step 8 — Verify

Action: On the live page check: div.teaser-links renders the black and the outline button under the description.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 46 — Links "Multiple links"

Reproduces the screenshot `screenshots/teaser-links-multiple.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = Related services; **Description** (C) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The eyebrow "Insights" and the title "Related services" appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right).

Expected Result: Text split moves the title left and the description right.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Multiple links** (E) = On; **Links** › Item 1: **CTA Title** (F) = Cloud migration, **CTA Link** (G) = Select the page or enter /en/services/cloud/migration, **CTA Link Style** (H) = List; **Links** › Item 2: **CTA Title** (I) = Business and technology consulting, **CTA Link** (J) = Select the page or enter /en/services/consulting, **CTA Link Style** (K) = List; **Links** › Item 3: **CTA Title** (L) = Industries we serve, **CTA Link** (M) = Select the page or enter /en/industries, **CTA Link Style** (N) = List; **Links** › Item 4: **CTA Title** (O) = About us, **CTA Link** (P) = Select the page or enter /en/about, **CTA Link Style** (Q) = List.

Expected Result: The four List items appear as full-width rows with grey dividers and right arrows under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow "Insights" above; the title "Related services" on the left; on the right the description and four full-width rows "Cloud migration", "Business and technology consulting", "Industries we serve" and "About us", separated by grey lines, each with a right arrow.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, open the four targets, then Publish to Live.

Step 8 — Verify

Action: On the live page check: Every item renders as a row inside ul.teaser-link-list and opens its target.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 47 — Link style "Text link"

Reproduces the screenshot `screenshots/teaser-link-text.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = A text link; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Cloud services" and the title "A text link" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (E) = Consultants in a workshop.

Expected Result: photo-2.svg fills the left column as a rounded 10:9 image and the text moves into the right half.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Multiple links** (F) = On; **Links** › Item 1: **CTA Title** (G) = Learn more, **CTA Link** (H) = Select the page or enter /en/services/cloud.

Expected Result: Multiple links On hides the CTA fields; the single item "Learn more" appears as a text link with an arrow.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: photo-2 on the left; on the right the eyebrow, the title "A text link", the description and "Learn more" in black text with a right arrow, turning blue on hover.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 8 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 48 — Link style "List"

Reproduces the screenshot `screenshots/teaser-link-list.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = Explore more; **Description** (C) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The eyebrow "Insights" and the title "Explore more" appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right).

Expected Result: Text split moves the title left and the description right.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Multiple links** (E) = On; **Links** › Item 1: **CTA Title** (F) = Cloud migration, **CTA Link** (G) = Select the page or enter /en/services/cloud/migration, **CTA Link Style** (H) = List; **Links** › Item 2: **CTA Title** (I) = Business and technology consulting, **CTA Link** (J) = Select the page or enter /en/services/consulting, **CTA Link Style** (K) = List; **Links** › Item 3: **CTA Title** (L) = Industries we serve, **CTA Link** (M) = Select the page or enter /en/industries, **CTA Link Style** (N) = List.

Expected Result: The three List items appear as full-width rows with grey dividers and right arrows under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow "Insights" above; the title "Explore more" on the left; on the right the description and three full-width rows "Cloud migration", "Business and technology consulting" and "Industries we serve" with grey dividers and right arrows.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, open the three targets, then Publish to Live.

Step 8 — Verify

Action: On the live page check: Every item renders as a row inside ul.teaser-link-list and opens its target.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 49 — Link style "Primary Button"

Reproduces the screenshot `screenshots/teaser-link-primary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Cloud services; **Title** (B) = One primary button; **Description** (C) = We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.

Expected Result: The eyebrow "Cloud services" and the title "One primary button" appear on the canvas with the description below them.

Step 4 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Image alt text** (E) = Consultants in a workshop.

Expected Result: photo-2.svg fills the left column as a rounded 10:9 image and the text moves into the right half.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Talk to an expert; **Primary CTA Link** (G) = Select the page or enter /en/contact.

Expected Result: "Talk to an expert" renders as a black Primary Button under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: photo-2 on the left; on the right the eyebrow, the title "One primary button", the description and the black pill button "Talk to an expert" with a white arrow.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 8 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 50 — Link style "Secondary Button"

Reproduces the screenshot `screenshots/teaser-link-secondary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Two empty Teasers are added one below the other in the section, each with Title Type H2 and the Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Careers; **Title** (B) = A secondary button; **Description** (C) = Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.

Expected Result: Both teasers show the centred eyebrow "Careers" with the titles "A secondary button" and "On a dark panel".

Step 4 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Secondary CTA Title** (D) = Life at TCS; **Secondary CTA Link** (E) = Select the page or enter /en/about.

Expected Result: "Life at TCS" appears as an outline Secondary Button in each teaser.

Step 5 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Two empty Teasers are added one below the other in the section, each with Title Type H2 and the Primary / Secondary Button link styles preset.

Step 6 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (F) = Careers; **Title** (G) = On a dark panel; **Description** (H) = Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.

Expected Result: Both teasers show the centred eyebrow "Careers" with the titles "A secondary button" and "On a dark panel".

Step 7 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (I) = Dark.

Expected Result: BG Color Dark turns the second teaser into a near-black panel and its button outline white.

Step 8 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Secondary CTA Title** (J) = Life at TCS; **Secondary CTA Link** (K) = Select the page or enter /en/about.

Expected Result: "Life at TCS" appears as an outline Secondary Button in each teaser.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Top: centred eyebrow "Careers", title "A secondary button", description and the outline button "Life at TCS". Below: a near-black panel with "On a dark panel" and the same button as a white outline.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, open /en/about from both buttons, then Publish to Live.

Step 11 — Verify

Action: On the live page check: The block has the class bg-dark and the button shows a white outline.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 51 — Mixed link styles

Reproduces the screenshot `screenshots/teaser-links-mixed.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = Mixed link styles; **Description** (C) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The eyebrow "Insights" and the title "Mixed link styles" appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right).

Expected Result: Text split moves the title left and the description right.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Multiple links** (E) = On; **Links** › Item 1: **CTA Title** (F) = Cloud migration, **CTA Link** (G) = Select the page or enter /en/services/cloud/migration, **CTA Link Style** (H) = List; **Links** › Item 2: **CTA Title** (I) = Business and technology consulting, **CTA Link**

(J) = Select the page or enter /en/services/consulting, **CTA Link Style** (K) = List; **Links** › Item 3: **CTA Title** (L) = Talk to an expert, **CTA Link** (M) = Select the page or enter /en/contact, **CTA Link Style** (N) = Primary Button.

Expected Result: Two divided List rows appear under the description, followed by the black "Talk to an expert" button.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow "Insights" above; the title "Mixed link styles" on the left; on the right the description, the rows "Cloud migration" and "Business and technology consulting" with a divider and arrows, then the black "Talk to an expert" button.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, open the three targets, then Publish to Live.

Step 8 — Verify

Action: On the live page check: div.teaser-links has the class teaser-links-mixed and the last link is a black button.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 52 — List arrow "Right"

Reproduces the screenshot `screenshots/teaser-list-arrow-right.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = List rows with right arrows; **Description** (C) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The eyebrow "Insights" and the title "List rows with right arrows" appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right).

Expected Result: Text split moves the title left and the description right.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Multiple links** (E) = On; **Links** › Item 1: **CTA Title** (F) = Cloud migration, **CTA Link** (G) = Select the page or enter /en/services/cloud/migration, **CTA Link Style** (H) = List; **Links** › Item 2: **CTA Title** (I) = Business and technology consulting, **CTA Link** (J) = Select the page or enter /en/services/consulting, **CTA Link Style** (K) = List; **Links** › Item 3: **CTA Title** (L) = Industries we serve, **CTA Link** (M) = Select the page or enter /en/industries, **CTA Link Style** (N) = List.

Expected Result: The three List items appear as full-width rows with grey dividers and right arrows under the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title “List rows with right arrows” on the left; on the right the description and three divided rows “Cloud migration”, “Business and technology consulting” and “Industries we serve”, each ending in a grey right arrow.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published (the arrow icons are code). Publish to Preview and Live.

Step 8 — Verify

Action: On the live page check: Every item renders as a row inside ul.teaser-link-list and opens its target.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 53 — List arrow “Down right”

Reproduces the screenshot `screenshots/teaser-list-arrow-down-right.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = List rows with down-right arrows; **Description** (C) = Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.

Expected Result: The eyebrow “Insights” and the title “List rows with down-right arrows” appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right).

Expected Result: Text split moves the title left and the description right.

Step 5 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Multiple links** (E) = On; **Links** › Item 1: **CTA Title** (F) = Cloud migration, **CTA Link** (G) = Select the page or enter /en/services/cloud/migration, **CTA Link Style** (H) = List; **Links** › Item 2: **CTA Title** (I) = Business and technology consulting, **CTA Link** (J) = Select the page or enter /en/services/consulting, **CTA Link Style** (K) = List; **Links** › Item 3: **CTA Title** (L) = Industries we serve, **CTA Link** (M) = Select the page or enter /en/industries, **CTA Link Style** (N) = List; **List arrow** (O) = Down right.

Expected Result: The three List items appear as divided rows; List arrow Down right turns their arrows diagonally down.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "List rows with down-right arrows" on the left; on the right the description and three divided rows, each ending in a grey diagonal arrow pointing down and right.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview and Live.

Step 8 — Verify

Action: On the live page check: The block has the class arrow-down-right and the arrows point diagonally down.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 54 — Stats

Reproduces the screenshot `screenshots/teaser-stats.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Results; **Title** (B) = Cloud modernisation in numbers; **Description** (C) = What our clients achieved in the first two years after moving their core applications to the cloud.

Expected Result: The eyebrow "Results" and the title "Cloud modernisation in numbers" appear on the canvas with the description below them, centred because no image is set.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Text split (title left, text right).

Expected Result: Text split moves the title left and the description right.

Step 5 — Fill in Teaser › Stats

Action: Select **Teaser** in the content tree and open the **Stats** tab of the properties panel. Enter: **Stats** › Item 1: **Stats Title** (E) = Lower operating cost, **Stats Value** (F) = 40%; **Stats** › Item 2: **Stats Title** (G) = Faster releases, **Stats Value** (H) = 3x; **Stats** › Item 3: **Stats Title** (I) = Applications migrated, **Stats Value** (J) = 1,200.

Expected Result: Three stats appear under the description, each a label above a large brand-blue value.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow “Results” above; the title “Cloud modernisation in numbers” on the left; on the right the description and the stats “Lower operating cost” 40%, “Faster releases” 3x and “Applications migrated” 1,200, each label above a large brand-blue value.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published (stats are text). Publish to Preview, check the values at 375 px, then Publish to Live.

Step 8 — Verify

Action: On the live page check: Each stat shows its label above its value in dl.teaser-stats.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 55 — Date

Reproduces the screenshot `screenshots/teaser-date.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Report; **Title** (B) = The state of AI in banking 2026; **Description** (C) = How 300 banks are moving AI from pilots into everyday operations, and what sets the leaders apart; **Show Date** (D) = On; **Date** (E) = 2026-10-13; **Date label** (F) = Published.

Expected Result: The eyebrow “Report”, the title “The state of AI in banking 2026” and the description appear, with “Published 13-10-2026” under the eyebrow.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (G) = Text split (title left, text right).

Expected Result: Text split moves the title left and the description right; the date stays in the row above.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Under the eyebrow "Report" the small light text "Published 13-10-2026"; below, the regular-weight title on the left and the description on the right.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published; the date is stored in the teaser. Publish to Preview and Live.

Step 7 — Verify

Action: On the live page check: "Published 13-10-2026" appears and the time element has datetime="2026-10-13".

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 56 — Reading time

Reproduces the screenshot `screenshots/teaser-reading-time.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Report; **Title** (B) = The state of AI in banking 2026; **Description** (C) = How 300 banks are moving AI from pilots into everyday operations, and what sets the leaders apart; **Show Date** (D) = On; **Date** (E) = 2026-10-13; **Date label** (F) = Published; **Reading time** (G) = 14.

Expected Result: The eyebrow "Report", the title "The state of AI in banking 2026" and the description appear, with "Published 13-10-2026" and "14 min read" under the eyebrow.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (H) = Text split (title left, text right).

Expected Result: Text split moves the title left and the description right; date and reading time stay above.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Under the eyebrow "Report" the small text "Published 13-10-2026" followed by "14 min read"; below, the title on the left and the description on the right.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page to Preview and Live; the "min read" text comes from the published /{locale}/placeholders.json (key minRead), which is a separate publish step.

Step 7 — Verify

Action: On the live page check: Open /{locale}/placeholders.json and find minRead; reload the page and the translated text shows.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 57 — Page actions (listen, download, share)

Reproduces the screenshot `screenshots/teaser-page-actions.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Report; **Title** (B) = The state of AI in banking 2026; **Description** (C) = How 300 banks are moving AI from pilots into everyday operations, and what sets the leaders apart; **Listen link** (D) = Select the page or enter /en/insights/ai-in-banking-podcast; **Download** (E) = On; **Share** (F) = On.

Expected Result: The eyebrow "Report", the title "The state of AI in banking 2026" and the description appear, with the listen, download and share icons under the eyebrow.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (G) = Text split (title left, text right).

Expected Result: Text split moves the title left and the description right; the icons stay in the row above.

Step 5 — Preview

Action: Action: Select Share (desktop browser without a share dialog).

Expected Result: Selecting Share copies the page URL and "Link copied to clipboard" appears below the icons for 3 seconds.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Under the eyebrow "Report" three icon buttons: headphones, download and share; after selecting Share the text "Link copied to clipboard" appears below the icons; then the title and description.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and the podcast page /en/insights/ai-in-banking-podcast; the button labels come from the published locale placeholders (listenToThisPage, downloadThisPage, shareThisPage, linkCopied).

Step 8 — Verify

Action: On the live page check: "Link copied to clipboard" appears for 3 seconds and the page URL can be pasted.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 58 — Author lockup

Reproduces the screenshot `screenshots/teaser-author.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Report; **Title** (B) = The state of AI in banking 2026; **Description** (C) = How 300 banks are moving AI from pilots into everyday operations, and what sets the leaders apart; **Author name** (D) = Anita Rao; **Author designation** (E) = Head of AI Research; **Author image** (F) = Select the asset person-1.svg (/en/media/person-1.svg); **Author image alt text** (G) = Anita Rao.

Expected Result: The eyebrow "Report", the title "The state of AI in banking 2026" and the description appear, with the round portrait, "Anita Rao" and "Head of AI Research" below the title.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (H) = Text split (title left, text right).

Expected Result: Text split puts the title and the author lockup in the left column and the description on the right.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "The state of AI in banking 2026" on the left with, below it, a round 2.5rem portrait next to "Anita Rao" (light) and "Head of AI Research" (medium); the description on the right.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; person-1.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Step 7 — Verify

Action: On the live page check: Reload the published page with the cache disabled; the image request returns 200 and the author portrait shows the picture.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 59 — Tags

Reproduces the screenshot `screenshots/teaser-tags.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Report; **Title** (B) = The state of AI in banking 2026; **Description** (C) = How 300 banks are moving AI from pilots into everyday operations, and what sets the leaders apart; **Display Tags** (D) = On; **Tags** (E) = Add the tags tcs-corp:topic/ai, tcs-corp:industry/banking, tcs-corp:content-type/report.

Expected Result: The eyebrow “Report”, the title “The state of AI in banking 2026” and the description appear; with Display Tags on, the three uppercase tags show under the eyebrow.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (F) = Text split (title left, text right).

Expected Result: Text split moves the title left and the description right; the tags stay in the row above.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Under the eyebrow “Report” the small grey uppercase tags ARTIFICIAL INTELLIGENCE, BANKING and REPORT separated by vertical bars; below, the title on the left and the description on the right.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the labels come from the published /en/taxonomy page, which must be published after tags are added or renamed.

Step 7 — Verify

Action: On the live page check: Open /en/taxonomy.json on aem.live and find the tag; reload the page and the full label shows.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 60 — View All link

Reproduces the screenshot `screenshots/teaser-view-all.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Insights; **Title** (B) = Latest research; **Description** (C) = Reports, articles and case studies from our experts; **View All Text** (D) = View all; **View All Link** (E) = Select the page or enter /en/insights.

Expected Result: The eyebrow “Insights”, the title “Latest research”, the “View all” button and the description appear, centred.

Step 4 — Fill in Teaser › Style

Action: Select **Teaser** in the content tree and open the **Style** tab of the properties panel. Enter: **Text alignment** (F) = Left.

Expected Result: Text alignment Left moves the title to the left and the View all button to the right of the same row.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow “Insights”, the title “Latest research” on the left and a black “View all” button at the right of the same row; the description below.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, check /en/insights opens, then Publish to Live.

Step 7 — Verify

Action: On the live page check: a.teaser-view-all appears at the right of the title row and opens /en/insights.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 61 — Hide Title

Reproduces the screenshot `screenshots/teaser-hide-title.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Build the future with us; **Hide Title** (B) = On; **Description** (C) = Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.

Expected Result: The title disappears from the canvas with Hide Title on; only the centred description remains visible.

Step 4 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (D) = Search jobs; **Primary CTA Link** (E) = Select the page or enter /en/careers; **Secondary CTA Title** (F) = Life at TCS; **Secondary CTA Link** (G) = Select the page or enter /en/about.

Expected Result: "Search jobs" (black) and "Life at TCS" (outline) appear centred and stacked under the description.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A centred teaser that starts with the description "Join a global team…" followed by "Search jobs" and "Life at TCS"; no visible title.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, check the heading in the accessibility tree, then Publish to Live.

Step 7 — Verify

Action: On the live page check: The accessibility tree shows the H2 while the page shows no title.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 62 — Short description

Reproduces the screenshot `screenshots/teaser-short-description.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Careers; **Title** (B) = Build the future with us; **Description** (C) = Join a global team of technologists and consultants solving problems that matter for the world's leading businesses; **Short Description** (D) = Applications are reviewed on a rolling basis. Equal opportunity employer.

Expected Result: The centred eyebrow "Careers", title and description appear, and the note "Applications are reviewed on a rolling basis…" is added at the end.

Step 4 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (E) = Search jobs; **Primary CTA Link** (F) = Select the page or enter /en/careers; **Secondary CTA Title** (G) = Life at TCS; **Secondary CTA Link** (H) = Select the page or enter /en/about.

Expected Result: "Search jobs" and "Life at TCS" appear centred and stacked between the description and the note.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Centred: the eyebrow "Careers", the title "Build the future with us", the description, the two buttons and below them the note "Applications are reviewed on a rolling basis. Equal opportunity employer."

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview and Live.

Step 7 — Verify

Action: On the live page check: No div.teaser-short-description is rendered.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 63 — Show Eyebrow off

Reproduces the screenshot `screenshots/teaser-eyebrow-hidden.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Careers; **Show Eyebrow** (B) = Off; **Title** (C) = Build the future with us; **Description** (D) = Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.

Expected Result: The eyebrow "Careers" disappears with Show Eyebrow off; the centred title and description remain.

Step 4 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (E) = Search jobs; **Primary CTA Link** (F) = Select the page or enter /en/careers; **Secondary CTA Title** (G) = Life at TCS; **Secondary CTA Link** (H) = Select the page or enter /en/about.

Expected Result: "Search jobs" (black) and "Life at TCS" (outline) appear centred and stacked under the description.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Centred: the title "Build the future with us", the description and the two buttons; no eyebrow above the title.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview and Live.

Step 7 — Verify

Action: On the live page check: No p.teaser-eyebrow is in the teaser.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 64 — Show Description off

Reproduces the screenshot `screenshots/teaser-description-hidden.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: An empty Teaser is added to the section with Title Type H2, Image position Left, Show Eyebrow and Show Description on and Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Careers; **Title** (B) = Build the future with us; **Description** (C) = Join a global team of technologists and consultants solving problems that matter for the world's leading businesses; **Show Description** (D) = Off.

Expected Result: The description disappears with Show Description off; the centred eyebrow and title remain.

Step 4 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (E) = Search jobs; **Primary CTA Link** (F) = Select the page or enter /en/careers; **Secondary CTA Title** (G) = Life at TCS; **Secondary CTA Link** (H) = Select the page or enter /en/about.

Expected Result: "Search jobs" (black) and "Life at TCS" (outline) appear centred and stacked under the title.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Centred: the eyebrow "Careers", the title "Build the future with us" and the two buttons; no description.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview and Live.

Step 7 — Verify

Action: On the live page check: No div.teaser-description is in the teaser.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 65 — Title Type (heading level H1–H6)

Reproduces the screenshot `screenshots/teaser-title-type.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Two empty Teasers are added one below the other in the section, each with Title Type H2 and the Primary / Secondary Button link styles preset.

Step 3 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Careers; **Title** (B) = Build the future with us; **Description** (C) = Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.

Expected Result: Both teasers show the centred eyebrow "Careers" and the title; the second title becomes an H3 with the same look.

Step 4 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (D) = Search jobs; **Primary CTA Link** (E) = Select the page or enter /en/careers; **Secondary CTA Title** (F) = Life at TCS; **Secondary CTA Link** (G) = Select the page or enter /en/about.

Expected Result: "Search jobs" and "Life at TCS" appear centred under each description.

Step 5 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Two empty Teasers are added one below the other in the section, each with Title Type H2 and the Primary / Secondary Button link styles preset.

Step 6 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (H) = Careers; **Title** (I) = Build the future with us; **Title Type** (J) = H3; **Description** (K) = Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.

Expected Result: Both teasers show the centred eyebrow "Careers" and the title; the second title becomes an H3 with the same look.

Step 7 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (L) = Search jobs; **Primary CTA Link** (M) = Select the page or enter /en/careers; **Secondary CTA Title** (N) = Life at TCS; **Secondary CTA Link** (O) = Select the page or enter /en/about.

Expected Result: "Search jobs" and "Life at TCS" appear centred under each description.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two centred careers teasers that look the same: eyebrow, title "Build the future with us", description and two buttons; only the accessibility tree shows H2 and H3.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the page is published. Publish to Preview, check the heading outline, then Publish to Live.

Step 10 — Verify

Action: On the live page check: The accessibility tree shows H2 followed by H3.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.11.6 Authorable Field Specification

The Teaser model `teaser` has 70 fields (excluding the six tab separators): 64 block fields, 4 fields per Links item and 2 per Stats item. The block definition sets `key-value: true`. Only the Anchor ID has an enforced validation; no field is marked required. Visibility conditions are listed in the Field details.

Block model `teaser` — Content tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Eyebrow (`eyebrow`)	text	No	No	Empty	Kicker above the title	Up to 40 characters (Recommended)	None	Insights
Show Eyebrow (`showEyebrow`)	boolean	No	No	true	Show / hide the eyebrow	Keep on	None	true
Title (`title`)	text	No (Recommended)	No	Empty	Heading of the teaser	Up to 70 characters (Recommended)	None	Banking on AI
Title Type (`titleType`)	select	No	No	H2	Heading level	H2 in the page flow; H1 only for a page-opening teaser	Options: H1, H2, H3, H4, H5, H6	h2

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Hide Title (`titleHidden`)	boolean	No	No	false	Visually hide the title	Use rarely	None	false
Description (`description`)	richtext	No	No	Empty	Main text	Up to 300 characters (Recommended)	None	How banks scale AI responsibly.
Show Description (`showDescription`)	boolean	No	No	true	Show / hide the description	Keep on	None	true
Short Description (`shortDescription`)	richtext	No	No	Empty	Note after the links	Footnotes, sources	None	Source: TCS AI study 2026.
View All Text (`viewAllText`)	text	No	No	Empty	View All button text	Specific text	None	View all insights
View All Link (`viewAll`)	aem-content	No	No	Empty	View All target	A listing page	None	`/content/tcs-corp/us/en/insights`
Show Date (`showDate`)	boolean	No	No	false	Show the date	On for dated content	None	true
Date (`date`)	date-time	No	No	Empty	Publication date	Pick a date	Date picker	2026-10-13
Date Format (`dateFormat`)	select	No	No	DD-MM-YYYY	Date display format	Match the locale's convention	Options: DD-MM-YYYY; MM-DD-YYYY; MMM d, yyyy; DD/MM/YY	dd/mm/yy
Date label (`dateLabel`)	text	No	No	Empty	Text before the date	Short word	None	Published
Reading time (`readingTime`)	text	No	No	Empty	Reading time	Minutes as a number	None	14
Display Tags (`displayTags`)	boolean	No	No	false	Show the tags	On to show Tags	None	true
Tags (`tags`)	aem-tag	No	Yes	Empty	Topic tags	1–3 tags (Recommended)	AEM tag picker	tcs-corp:industry/banking
Listen link (`listenLink`)	aem-content	No	No	Empty	Audio version of the page	Audio page or file	None	`/content/dam/tcs/audio/ai.mp3`
Download (`download`)	boolean	No	No	false	Show the download (print) icon	For printable content	None	true
Share (`socialShare`)	boolean	No	No	false	Show the share icon	For shareable content	None	true
Author name (`authorName`)	text	No	No	Empty	Author's name	Full name	None	Priya Sharma

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Author designation (`authorDesignation`)	text	No	No	Empty	Author's role	e.g. TCS Role	None	Head of AI Research, TCS
Author image (`authorImage`)	reference (asset)	No	No	Empty	Author portrait	Square portrait	None	`/content/dam/tcs/people/priya.jpg`
Author image alt text (`authorImageAlt`)	text	No	No	Empty	Portrait alt text	Empty if decorative	None	Priya Sharma

Block model `teaser` — Image tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Image type (`imageFormat`)	select	No	No	Default ("")	Picture or Lottie	Lotto only with `.json`	Options: Default, Lotto	lottie
Image (`image`)	reference (asset)	No	No	Empty	Image or animation	See Layout for placement	None	`/content/dam/tcs/teaser/cloud.jpg`
Image alt text (`imageAlt`)	text	No	No	Empty	Alt text / animation label	Empty if decorative	None	Cloud migration dashboard
Hide Image (`hideImage`)	boolean	No	No	false	Hide the image	Keeps the asset reference	None	false
Image position (`imagePosition`)	select	No	No	Left	Image side (desktop)	Alternate in sequences	Options: Left, Right; shown only for Layout Image & Text	right
Image position (mobile) (`imagePositionMobile`)	select	No	No	Default ("")	Image order below 900 px	Bottom to lead with text	Options: Default, Top, Bottom	mobile-image-bottom
Image ratio (`imageRatio`)	select	No	No	Default (10:9)	Image proportion	Portrait for people	Options: Default (10:9), Portrait (8:9), Square (1:1), Original; shown for Image & Text and Text split	ratio-8-9
Image corners (`imageCorners`)	select	No	No	Rounded ("")	Corner style	Square for diagrams	Options: Rounded, Square; shown for Image & Text and Text split	square

Block model `teaser` — Style tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Layout (`classes`)	select	No	No	Image & Text ("")	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card	no-image
BG Color (`bgColor`)	select	No	No	Default ("")	Panel colour	Dark for contrast sections	Options: Default, Grey, Dark, Dark green	dark

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Text alignment (`textAlignment`)	select	No	No	Layout default (“”)	Text alignment	Layout default in most cases	Options: Layout default, Left, Center, Right	text-left
Vertical alignment (`verticalAlignment`)	select	No	No	Layout default (“”)	Vertical alignment of columns	Top for long text	Options: Layout default, Top, Center, Bottom	valign-top
Title size (`titleSize`)	select	No	No	Layout default (“”)	Title size	Display only for 1–3 words	Options: Layout default, Medium (40px), Large (48px), Extra large (64px), Display (96px)	title-l
Title weight (`titleWeight`)	select	No	No	Layout default (“”)	Title weight	As designed	Options: Layout default, Regular, Semibold	title-regular
Description size (`descriptionSize`)	select	No	No	Layout default (“”)	Text size	Large for short copy	Options: Layout default, Regular (18px), Large (24px)	text-large
Eyebrow style (`eyebrowStyle`)	select	No	No	Brand (“”)	Eyebrow look	Label for content types	Options: Brand, Label (uppercase, grey)	eyebrow-label
Top spacing (`topSpacing`)	select	No	No	Default (“”)	Extra space above	Page header for page-opening teasers	Options: Default, Page header (extra space above)	spacing-header
Personalization (`personalization`)	boolean	No	No	false	Personalization marker	Only on request	None	false

Block model `teaser` — Links tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Multiple links (`multiLinks`)	boolean	No	No	false	List of links instead of two CTAs	On for 3+ links	None	true
Links (`links`)	container (composite multifield)	No	Yes	No items	The links list	See the Links item table	Shown only with Multiple links on	3 items
List arrow (`linkArrow`)	select	No	No	Right (“”)	Arrow of List-style links	Down right per design	Options: Right, Down right	arrow-down-right
Primary CTA Title (`primaryCtaText`)	text	No	No	Empty	Primary CTA text	Verb first	Shown only with Multiple links off	Contact us
Primary CTA Link (`primaryCta`)	aem-content	No	No	Empty	Primary CTA target	Page or URL	Shown only with Multiple links off	`/content/tcs-corp/us/en/contact-us`

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Primary CTA Link Type (`primaryCtaTarget`)	select	No	No	Default (“”)	Same / new window	New window for external	Options: Default, Open in New Window; shown only with Multiple links off	new-window
Primary CTA Link Style (`primaryCtaStyle`)	select	No	No	Primary Button	Primary CTA style	Keep Primary	Options: Text link, List, Primary Button, Secondary Button; shown only with Multiple links off	primary
Secondary CTA Title (`secondaryCtaText`)	text	No	No	Empty	Secondary CTA text	Verb first	Shown only with Multiple links off	Our services
Secondary CTA Link (`secondaryCta`)	aem-content	No	No	Empty	Secondary CTA target	Page or URL	Shown only with Multiple links off	`/content/tcs-corp/us/en/services`
Secondary CTA Link Type (`secondaryCtaTarget`)	select	No	No	Default (“”)	Same / new window	As above	Options: Default, Open in New Window; shown only with Multiple links off	(Default)
Secondary CTA Link Style (`secondaryCtaStyle`)	select	No	No	Secondary Button	Secondary CTA style	Secondary or Text link	Options: Text link, List, Primary Button, Secondary Button; shown only with Multiple links off	secondary

Block model `teaser` — Stats tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Stats (`stats`)	container (composite multifield)	No	Yes	No items	Headline statistics	2–4 stats (Recommended); see the Stats item table	None	3 items

Block model `teaser` — Additional tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Anchor ID (`classes_anchor`)	text	No	No	Empty	ID for in-page links	Unique, starts with `anchor-`	Enforced regExp `^anchor-[a-z0-9][a-z0-9-]*$` (“Start with anchor-, then lowercase letters, digits and hyphens.”)	anchor-our-services
Hide block (`classes_hideblock`)	boolean	No	No	false	Temporarily hide	Off before go-live	None	false
Padding left (`classes_paddingleft`)	select	No	No	Default (“”)	Left padding	Only when the design needs it	Options: Default, 0, space-100 … space-3000	pl-600
Padding right (`classes_paddingright`)	select	No	No	Default (“”)	Right padding	As above	Options: Default, 0, space-100 … space-3000	pr-600

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Padding top (`classes_paddingtop`)	select	No	No	Default ("")	Top padding (overrides Top spacing and panel padding)	As above	Options: Default, 0, space-100 … space-3000	pt-1000
Padding bottom (`classes_paddingbottom`)	select	No	No	Default ("")	Bottom padding	As above	Options: Default, 0, space-100 … space-3000	pb-1000
Margin left (`classes_marginleft`)	select	No	No	Default ("")	Left margin	As above	Options: Default, 0, space-100 … space-3000	ml-0
Margin right (`classes_marginright`)	select	No	No	Default ("")	Right margin	As above	Options: Default, 0, space-100 … space-3000	mr-0
Margin top (`classes_margintop`)	select	No	No	Default ("")	Space above	As above	Options: Default, 0, space-100 … space-3000	mt-800
Margin bottom (`classes_marginbottom`)	select	No	No	Default ("")	Space below	As above	Options: Default, 0, space-100 … space-3000	mb-800

Item model — Links item (fields of the `links` container)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
CTA Title (`ctaText`)	text	No (Recommended)	No	Empty	Link text	Descriptive, up to 60 characters for List rows	None	Cloud migration services
CTA Link (`cta`)	aem-content	Yes in practice (items without a link are dropped)	No	Empty	Link target	Page, URL or anchor	None in the model	`/content/tcs-corp/us/en/services/cloud`
CTA Link Type (`ctaTarget`)	select	No	No	Default ("")	Same / new window	New window for external	Options: Default, Open in New Window	new-window
CTA Link Style (`ctaStyle`)	select	No	No	Text link ("")	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button	list

Item model — Stats item (fields of the `stats` container)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Stats Title (`statLabel`)	rich-text	No (Recommended)	No	Empty	What the number measures	Short label	None	Reduction in run costs

Field Name	Field Type	Mandatory	Multi Value	De-fault Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Stats Value (`statValue`)	rich-text	No (Rec-om-mended)	No	Empty	The num-ber	A single line, e.g. 40%	None (single line is guidance; the last element of the item is used as the value)	40%

Field details

Content tab:

- **Eyebrow (`eyebrow`)** — Purpose: kicker above the title. Allowed Values: plain text. Character Limits: Recommended up to 40 characters. Business Rules: shown only when filled and Show Eyebrow is not off; rendered as `p.teaser-eyebrow`, full width of the kicker row; style from Eyebrow style. Dependency Rules: Show Eyebrow, Eyebrow style. Visibility Rules: always visible. Sample Content: Insights.
- **Show Eyebrow (`showEyebrow`)** — Purpose: toggles the eyebrow. Allowed Values: on / off. Character Limits: not applicable. Business Rules: default on; a missing value counts as on; only an explicit off hides it. Dependency Rules: Eyebrow. Visibility Rules: always visible. Sample Content: on.
- **Title (`title`)** — Purpose: the teaser heading. Allowed Values: plain text. Character Limits: Recommended up to 70 characters (up to 25 for Display size). Business Rules: no title, no heading; it is also the share title and the data layer `dc:title`. Dependency Rules: Title Type, Hide Title, Title size, Title weight. Visibility Rules: always visible. Sample Content: Banking on AI.
- **Title Type (`titleType`)** — Purpose: heading level. Allowed Values: `h1`–`h6`. Business Rules: default H2 (model and template); an invalid value falls back to the authored heading level, else H2. Dependency Rules: Title. Visibility Rules: always visible. Sample Content: h3.
- **Hide Title (`titleHidden`)** — Purpose: hide the title visually. Allowed Values: on / off. Business Rules: the heading stays in the DOM with `visually-hidden`. Dependency Rules: Title. Visibility Rules: always visible. Sample Content: off.
- **Description (`description`)** — Purpose: main text. Allowed Values: rich text. Character Limits: Recommended up to 300 characters (Image & Text), 600 (Text split). Business Rules: shown when filled and Show Description is not off; paragraphs separated by 1.5rem. Dependency Rules: Show Description, Description size. Visibility Rules: always visible. Sample Content: How leading banks scale AI responsibly across the enterprise.
- **Show Description (`showDescription`)** — Purpose: toggles the description. Allowed Values: on / off. Business Rules: default on; a missing value counts as on. Dependency Rules: Description. Visibility Rules: always visible. Sample Content: on.
- **Short Description (`shortDescription`)** — Purpose: note after the links. Allowed Values: rich text. Character Limits: Recommended up to 200 characters. Business Rules: always shown when filled; last element of the body. Dependency Rules: Description size applies. Visibility Rules: always visible. Sample Content: Source: TCS Global AI Study 2026.
- **View All Text (`viewAllText`)** — Purpose: View All button text. Allowed Values: plain text. Character Limits: Recommended up to 25 characters. Business Rules: combined with View All Link into one link. Dependency Rules: View All Link. Visibility Rules: always visible. Sample Content: View all insights.
- **View All Link (`viewAll`)** — Purpose: View All target. Allowed Values: AEM page or URL. Business Rules: rendered as a primary button beside the title; no new-window option. Dependency Rules: View All Text. Visibility Rules: always visible. Sample Content: `/content/tcs-corp/us/en/insights`.
- **Show Date (`showDate`)** — Purpose: shows the date. Allowed Values: on / off. Business Rules: default off; the date is shown only when on and a Date is set. Dependency Rules: Date, Date Format, Date label. Visibility Rules: always visible; controls the visibility of the three date fields. Sample Content: on.
- **Date (`date`)** — Purpose: the date. Allowed Values: a date from the picker (stored as an ISO date / date-time). Business Rules: formatted from its calendar date (no time-zone shift); a value that is not a date is shown as

stored. Dependency Rules: Show Date. Visibility Rules: shown only when Show Date is on (`showDate === true`). Sample Content: 2026-10-13.

- **Date Format (`dateFormat`)** — Purpose: display format. Allowed Values: `dd-mm-yyyy` (13-10-2026), `mm-dd-yyyy` (10-13-2026), `mmm-d-yyyy` (Oct 13, 2026; English month abbreviations), `dd/mm/yy` (13/10/26). Business Rules: default `dd-mm-yyyy`. Dependency Rules: Date. Visibility Rules: shown only when Show Date is on. Sample Content: dd/mm/yy.
- **Date label (`dateLabel`)** — Purpose: text before the date. Allowed Values: plain text. Character Limits: Recommended up to 20 characters. Business Rules: followed by a space and the date. Dependency Rules: Date. Visibility Rules: shown only when Show Date is on. Sample Content: Published.
- **Reading time (`readingTime`)** — Purpose: reading time. Allowed Values: whole number of minutes or free text. Character Limits: Recommended up to 20 characters. Business Rules: a number becomes the localised placeholder `minRead` ("{n} min read"); other text is shown as typed. Dependency Rules: none. Visibility Rules: always visible. Sample Content: 14.
- **Display Tags (`displayTags`)** — Purpose: shows the tags. Allowed Values: on / off. Business Rules: default off. Dependency Rules: Tags. Visibility Rules: always visible; controls the visibility of Tags. Sample Content: on.
- **Tags (`tags`)** — Purpose: topic labels. Allowed Values: AEM tags (multi). Character Limits: Recommended 1–3 tags. Business Rules: labels resolved from `/{locale}/taxonomy.json` (the locale's language sheet when translated); unknown IDs are turned into a label from the last part of the ID (e.g. `tcs-corp:topic/artificial-intelligence` → "Artificial intelligence"). Dependency Rules: Display Tags. Visibility Rules: shown only when Display Tags is on. Sample Content: tcs-corp:industry/banking; tcs-corp:topic/ai-native.
- **Listen link (`listenLink`)** — Purpose: audio version. Allowed Values: AEM page, asset or URL. Business Rules: the link text is replaced by the localised label "Listen to this page" and shown as a headphones icon button. Dependency Rules: none. Visibility Rules: always visible. Sample Content: `/content/dam/tcs/audio/banking-on-ai.mp3`.
- **Download (`download`)** — Purpose: print / save as PDF. Allowed Values: on / off. Business Rules: the icon button calls the browser's print dialog. Dependency Rules: none. Visibility Rules: always visible. Sample Content: on.
- **Share (`socialShare`)** — Purpose: share the page. Allowed Values: on / off. Business Rules: opens the device share sheet (Web Share API) with the teaser title (or page title) and URL; without it, copies the URL and shows "Link copied to clipboard" for 3 seconds; a dismissed dialog or blocked clipboard is ignored silently. Dependency Rules: none. Visibility Rules: always visible. Sample Content: on.
- **Author name (`authorName`)** — Purpose: author's name. Allowed Values: plain text. Character Limits: Recommended up to 50 characters. Business Rules: the author lockup is shown only with a name or designation. Dependency Rules: none. Visibility Rules: always visible. Sample Content: Priya Sharma.
- **Author designation (`authorDesignation`)** — Purpose: author's role. Allowed Values: plain text. Character Limits: Recommended up to 60 characters. Business Rules: as Author name. Visibility Rules: always visible. Sample Content: Head of AI Research, TCS.
- **Author image (`authorImage`)** — Purpose: portrait. Allowed Values: one image. Business Rules: shown round at 2.5rem, only together with a name or designation. Dependency Rules: Author name / designation. Visibility Rules: always visible. Sample Content: `/content/dam/tcs/people/priya-sharma.jpg`.
- **Author image alt text (`authorImageAlt`)** — Purpose: portrait alt text. Allowed Values: plain text. Business Rules: empty makes the image decorative (`alt=""`). Dependency Rules: Author image. Visibility Rules: always visible. Sample Content: Priya Sharma.

Image tab:

- **Image type (`imageFormat`)** — Purpose: picture or Lottie. Allowed Values: Default (""), Lotto (`lottie`). Business Rules: Lotto plays the animation only when Image is a `.json` file; Default with a `.json` file shows no media. Dependency Rules: Image. Visibility Rules: always visible. Sample Content: lottie.
- **Image (`image`)** — Purpose: the media. Allowed Values: one image or Lottie JSON asset. Business Rules: placement depends on Layout (beside, in the text column, or behind); ignored when Hide Image is on.

Dependency Rules: Image type, Layout. Visibility Rules: always visible. Sample Content: `/content/dam/tcs/teaser/cloud.jpg`.

- **Image alt text (`imageAlt`)** — Purpose: alt text or animation label. Allowed Values: plain text. Character Limits: Recommended up to 125 characters. Business Rules: empty makes the image decorative (`alt=""`) or the animation `aria-hidden`. Dependency Rules: Image. Visibility Rules: always visible. Sample Content: A cloud migration dashboard on a laptop.
- **Hide Image (`hideImage`)** — Purpose: hide the media. Allowed Values: on / off. Business Rules: Image & Text without media centres the content (Variation 3). Dependency Rules: Image. Visibility Rules: always visible. Sample Content: off.
- **Image position (`imagePosition`)** — Purpose: image side on desktop. Allowed Values: `left`, `right`. Business Rules: default Left; applied only to Image & Text with media, from 900 px. Dependency Rules: Layout. Visibility Rules: shown only when Layout is Image & Text (`classes` empty or unset). Sample Content: right.
- **Image position (mobile) (`imagePositionMobile`)** — Purpose: image order below 900 px. Allowed Values: Default (“”), `mobile-image-top`, `mobile-image-bottom`. Business Rules: no effect from 900 px or for Background image / Card. Dependency Rules: Image. Visibility Rules: always visible. Sample Content: mobile-image-bottom.
- **Image ratio (`imageRatio`)** — Purpose: image proportion. Allowed Values: Default (“”), `ratio-8-9`, `ratio-1-1`, `ratio-original`. Business Rules: default 10:9 (original proportion in Text split); Original affects images only. Dependency Rules: Layout. Visibility Rules: shown only when Layout is Image & Text or Text split. Sample Content: ratio-1-1.
- **Image corners (`imageCorners`)** — Purpose: corner style. Allowed Values: Rounded (“”), `square`. Business Rules: images in Text split are always square. Dependency Rules: Layout. Visibility Rules: shown only when Layout is Image & Text or Text split. Sample Content: square.

Style tab:

- **Layout (`classes`)** — Purpose: overall layout. Allowed Values: Image & Text (“”), `no-image` (Text split), `background`, `card`. Business Rules: stored as a block class (also read from a `classes` row); controls the visibility of Image position, Image ratio and Image corners. Dependency Rules: none. Visibility Rules: always visible. Sample Content: no-image.
- **BG Color (`bgColor`)** — Purpose: panel colour. Allowed Values: Default (“”), `grey`, `dark`, `dark-green` (rendered as `bg-grey`, `bg-dark`, `bg-dark-green`). Business Rules: adds panel padding; dark options switch text to white. Visibility Rules: always visible. Sample Content: dark.
- **Text alignment (`textAlignment`)** — Purpose: text alignment. Allowed Values: Layout default (“”), `text-left`, `text-center`, `text-right`. Business Rules: Center has no effect in Text split. Visibility Rules: always visible. Sample Content: text-center.
- **Vertical alignment (`verticalAlignment`)** — Purpose: vertical alignment. Allowed Values: Layout default (“”), `valign-top`, `valign-middle`, `valign-bottom`. Business Rules: affects the two-column layouts from 900 px and Background image at all widths. Visibility Rules: always visible. Sample Content: valign-top.
- **Title size (`titleSize`)** — Purpose: title size. Allowed Values: Layout default (“”), `title-m`, `title-l`, `title-xl`, `title-display`. Business Rules: the pixel sizes in the labels are desktop sizes; mobile sizes are smaller. Visibility Rules: always visible. Sample Content: title-xl.
- **Title weight (`titleWeight`)** — Purpose: title weight. Allowed Values: Layout default (“”), `title-regular`, `title-semibold`. Visibility Rules: always visible. Sample Content: title-regular.
- **Description size (`descriptionSize`)** — Purpose: description and short description size. Allowed Values: Layout default (“”), `text-regular`, `text-large`. Visibility Rules: always visible. Sample Content: text-large.
- **Eyebrow style (`eyebrowStyle`)** — Purpose: eyebrow look. Allowed Values: Brand (“”), `eyebrow-label`. Visibility Rules: always visible. Sample Content: eyebrow-label.

- **Top spacing (`topSpacing`)** — Purpose: page-header spacing. Allowed Values: Default (""), `spacing-header`. Business Rules: 4rem / 12.5rem top padding; no effect for Background image and Card; Additional Padding top overrides it. Visibility Rules: always visible. Sample Content: spacing-header.
- **Personalization (`personalization`)** — Purpose: personalization marker. Allowed Values: on / off. Business Rules: adds class `personalization` and `data-personalization="true"`; no visible change and no personalization engine connected. Visibility Rules: always visible. Sample Content: off.

Links tab:

- **Multiple links (`multiLinks`)** — Purpose: chooses the links mode. Allowed Values: on / off. Business Rules: on uses Links; off uses the Primary / Secondary CTA fields. Dependency Rules: controls visibility of the link fields. Visibility Rules: always visible. Sample Content: on.
- **Links (`links`)** — Purpose: list of links. Allowed Values: any number of items. Business Rules: items rendered in order in their own style; items without a link dropped; consecutive List items share one list. Visibility Rules: shown only when Multiple links is on. Sample Content: 4 List-style items.
- **List arrow (`linkArrow`)** — Purpose: arrow of List links. Allowed Values: Right (""), `arrow-down-right`. Business Rules: affects same-window List links only. Visibility Rules: always visible. Sample Content: arrow-down-right.
- **Primary CTA Title (`primaryCtaText`)** — Purpose: first CTA text. Allowed Values: plain text. Character Limits: Recommended up to 25 characters (buttons do not wrap). Visibility Rules: shown only when Multiple links is off. Sample Content: Contact us.
- **Primary CTA Link (`primaryCta`)** — Purpose: first CTA target. Allowed Values: page / URL / anchor. Business Rules: without a link the CTA is not rendered. Visibility Rules: Multiple links off. Sample Content: `/content/tcs-corp/us/en/contact-us`.
- **Primary CTA Link Type (`primaryCtaTarget`)** — Purpose: new window. Allowed Values: Default (""), `new-window`. Visibility Rules: Multiple links off. Sample Content: (Default).
- **Primary CTA Link Style (`primaryCtaStyle`)** — Purpose: style. Allowed Values: Text link (""), `list`, `primary`, `secondary`. Business Rules: default Primary Button; when the value is missing the code uses Primary Button, an empty value is Text link. Visibility Rules: Multiple links off. Sample Content: primary.
- **Secondary CTA Title (`secondaryCtaText`)** — As Primary CTA Title. Sample Content: Our services.
- **Secondary CTA Link (`secondaryCta`)** — As Primary CTA Link. Sample Content: `/content/tcs-corp/us/en/services`.
- **Secondary CTA Link Type (`secondaryCtaTarget`)** — As Primary CTA Link Type.
- **Secondary CTA Link Style (`secondaryCtaStyle`)** — As Primary CTA Link Style, default Secondary Button (fallback Secondary Button when missing). Sample Content: secondary.
- **CTA Title (`ctaText`, Links item)** — Purpose: link text. Character Limits: Recommended up to 60 characters for List rows, 25 for buttons. Visibility Rules: always visible in the item. Sample Content: Cloud migration services.
- **CTA Link (`cta`, Links item)** — Purpose: link target. Business Rules: item dropped without it. Sample Content: `/content/tcs-corp/us/en/services/cloud`.
- **CTA Link Type (`ctaTarget`, Links item)** — Allowed Values: Default (""), `new-window`. Business Rules: new-window List links show an up-right arrow. Sample Content: new-window.
- **CTA Link Style (`ctaStyle`, Links item)** — Allowed Values: Text link (""), `list`, `primary`, `secondary`. Business Rules: an item without a style uses the legacy Multi Link Style value of older teasers, else Text link. Sample Content: list.

Stats tab:

- **Stats (`stats`)** — Purpose: statistics. Allowed Values: any number of items. Character Limits: Recommended 2–4 items. Business Rules: rendered as a description list after the description / image and before the links; omitted when empty. Visibility Rules: always visible. Sample Content: 3 items.

- **Stats Title (`statLabel`, Stats item)** — Purpose: label. Allowed Values: rich text. Character Limits: Recommended up to 50 characters. Business Rules: all elements of the item except the last form the label. Sample Content: Reduction in run costs.
- **Stats Value (`statValue`, Stats item)** — Purpose: value. Allowed Values: rich text, a single line. Character Limits: Recommended up to 6 characters (no wrapping at 6rem). Business Rules: the last element of the item is the value; if the value is empty, the last line of the title becomes the value. Sample Content: 40%.

Additional tab:

- **Anchor ID (`classes_anchor`)** — Purpose: in-page link target. Allowed Values: `anchor-` + lower-case letters, digits, hyphens. Character Limits: Enforced pattern. Business Rules: becomes the block id (duplicates get `-2`, `-3`) and the data layer component id. Visibility Rules: always visible. Sample Content: anchor-our-services.
- **Hide block (`classes_hideblock`)** — Purpose: hide without deleting. Business Rules: hidden on preview / live, faded in the editor. Sample Content: off.
- **Padding left / right / top / bottom (`classes_paddingleft`, `classes_paddingright`, `classes_paddingtop`, `classes_paddingbottom`)** — Purpose: block padding. Allowed Values: Default, `p{l,r,t,b}-0`, `-100` (0.25rem), `-200` (0.5rem), `-300` (0.75rem), `-400` (1rem), `-500` (1.25rem), `-600` (1.5rem), `-800` (2rem), `-1000` (2.5rem), `-1200` (3rem), `-1600` (4rem), `-2000` (5rem), `-2400` (6rem), `-3000` (7.5rem). Business Rules: override the teaser's own padding (BG Color panels, Top spacing, Background image, Card) at every breakpoint. Visibility Rules: always visible. Sample Content: pt-1000.
- **Margin left / right / top / bottom (`classes_marginleft`, `classes_marginright`, `classes_margintop`, `classes_marginbottom`)** — Purpose: block margin. Allowed Values: Default, `m{l,r,t,b}-0` … `-3000` (same 14 steps). Business Rules: applied by `styles.css`. Visibility Rules: always visible. Sample Content: mb-800.

6.11.7 Field Annotation Mapping

Marker	Field	Purpose
A	Teaser block (Style tab: Layout, BG Color, alignments, sizes, Eyebrow style, Top spacing, Personalization; Additional tab)	Layout and style of the whole teaser
B	Image type, Image, Image alt text, Hide Image, Image position, Image position (mobile), Image ratio, Image corners	The image or Lottie animation
C	Eyebrow, Show Eyebrow	The kicker above the title
D	Display Tags, Tags	The topic tags
E	Show Date, Date, Date Format, Date label	The date
F	Reading time	The reading time
G	Listen link, Download, Share	The page action icons
H	Title, Title Type, Hide Title	The heading
I	View All Text, View All Link	The View All button
J	Author name, Author designation, Author image, Author image alt text	The author lockup
K	Description, Show Description	The main text
L	Stats (Stats Title, Stats Value)	The statistics
M	Multiple links, Links (CTA Title, CTA Link, CTA Link Type, CTA Link Style), List arrow, Primary / Secondary CTA fields	The links
N	Short Description	The note after the links

6.11.8 Component Specification

Attribute	Value
Component Name	Teaser (`teaser`; Universal Editor title "Teaser")
Version	1.0
Owner	[To be confirmed: product owner — owner: Digital Marketing]; technical owner: development team
Dependencies	`scripts/aem.js`, `scripts/scripts.js`; decorators `a11y`, `animation`, `article-meta`, `date`, `button`, `icon-button`, `content`, `heading`, `image`, `link`, `stats`, `tag`; utils `properties`, `links`, `multifield`, `media`, `lottie`, `placeholders`, `tags`, `taxonomy`, `site`, `dates`, `ids`, `environment`, `viewport`; `styles/styles.css`
Component Type	Key-value block (`key-value: true`, resource type `core/franklin/components/block/v1/block`, model `teaser`); Links and Stats are composite multifields inside the block
Supported Variants	Layouts Image & Text (left / right / no image), Text split (with / without image), Background image, Card; Image type Default / Lotto; mobile image position; 4 image ratios; 2 corner styles; 4 BG Colors; 4 text alignments; 4 vertical alignments; 5 title sizes; 3 title weights; 3 description sizes; 2 eyebrow styles; 2 top spacings; links mode (two CTAs / multiple); 4 link styles; 2 list arrows; content features (stats, date, reading time, actions, author, tags, View All, hidden title, short description, personalization marker)
Supported Templates	Any page; allowed in Section and Gen Carousel
Supported Metadata	None read from page metadata (date, reading time, author and listen link are authored in the block; the share fallback title is `document.title`)
Supported Tags	AEM tags in the Tags field; labels from the locale taxonomy (`/{locale}/taxonomy.json`)
Supported Personalization	Personalization marker only (`data-personalization="true"`); no Adobe Target integration (Not implemented (as of this handover)); the block is in the data layer as `tcs-corp/components/teaser`
Caching Considerations	Page HTML cached by the Edge Delivery CDN; placeholders and taxonomy fetched once per page (in-memory promise) and cached by the CDN as published sheets; republish the sheets after changes
Performance Considerations	Decorated in the eager phase when in the first section (its first image is the LCP candidate via `waitForFirstImage`), else lazily with its section; `await getPlaceholders()` (and the taxonomy when tags are shown) runs before rendering — one small JSON request each, cached per page; the Lottie player loads only near the viewport in idle time
Accessibility Compliance	WCAG 2.1 AA: selectable heading level and visually hidden title (1.3.1, 2.4.6); alt texts (1.1.1); stats as `<dl>`; links in `<ul>` for List style; icon buttons with localised accessible names; live status for "Link copied" (4.1.3); Lottie pause / play (2.2.2) and reduced motion; white text on dark panels and overlays (1.4.3); no automatic new-window hint
SEO Compliance	Server-delivered text content (crawlable); heading level control; `<time datetime>` for dates; image alt texts; crawlable links

6.11.9 Input Model

Content Inputs: eyebrow, title, description, short description, View All link, date and label, reading time, listen link, author name / designation / image, image or Lottie file with alt text, links (two CTAs or the Links multifield), stats.

Metadata Inputs: none from page metadata; `document.title` is used as the share title when the teaser has no title.

Tags Inputs: the Tags field (AEM tag IDs such as `tcs-corp:industry/banking`), resolved through `/{locale}/taxonomy.json`.

Page Context Inputs: the locale (placeholders and taxonomy paths); the visitor's reduced motion preference (Lottie); Web Share API / clipboard availability (Share).

Query Inputs: none (no query index).

Manual Inputs: every field; Layout also from the block class `no-image` / `background` / `card`; style values from rows or matching block classes; a legacy `image-right` class and a legacy `multiLinkStyle` row are honoured.

Authored HTML received from AEM (one row per property: name | value; abridged):

```
<div class="teaser no-image">
  <div><div>eyebrow</div><div><p>Insights</p></div></div>
  <div><div>title</div><div><h2>Banking on AI</h2></div></div>
  <div><div>description</div><div><p>How leading banks scale AI.</p></div></div>
  <div><div>showDate</div><div><p>true</p></div></div>
  <div><div>date</div><div><p>2026-10-13T00:00:00.000Z</p></div></div>
  <div><div>dateFormat</div><div><p>dd-mm-yyyy</p></div></div>
  <div><div>dateLabel</div><div><p>Published</p></div></div>
  <div><div>readingTime</div><div><p>14</p></div></div>
  <div><div>displayTags</div><div><p>true</p></div></div>
  <div><div>tags</div><div><ul><li>tcs-corp:industry/banking</li></ul></div></div>
  <div><div>socialShare</div><div><p>true</p></div></div>
  <div><div>multiLinks</div><div><p>true</p></div></div>
  <div><div>links</div><div>
    <p><a href="/en/services/cloud">Cloud services</a></p><p>list</p>
    <hr>
    <p><a href="https://example.com/report.pdf">AI report</a></p><p>new-window</
p><p>list</p>
  </div></div>
  <div><div>stats</div><div>
    <p>Reduction in run costs</p><p>40%</p>
    <hr>
    <p>Faster onboarding</p><p>3x</p>
  </div></div>
</div>
```

6.11.10 Output Model

Rendered Output

`teaser.js` reads the rows, then replaces them with at most two children. Classes added to the block: the Layout (`no-image`, `background`, `card`), `bg-{color}`, the style option classes (`text-*`, `valign-*`, `mobile-image-*`, `title-*`, `text-regular` / `text-large`, `eyebrow-label`, `spacing-header`, `ratio-*`, `square`, `arrow-down-right`), `image-right` and `teaser-has-media` (Image & Text with media only), and `personalization`.

- `div.teaser` (+ classes)
  - `div.teaser-media` (Image & Text, Background image, Card: first child) with `<picture>` or `div.teaser-animation` + `button.animation-toggle`
  - `div.teaser-content`
    - `div.teaser-header`
      - `div.teaser-kicker`: `p.teaser-eyebrow`; `div.teaser-meta > ul.teaser-tags > li[data-tag]`; `div.teaser-info` (`p.teaser-date` with `<time>`, `p.teaser-reading-time`, `div.teaser-actions` with icon buttons and `p.teaser-status[role=status]`)
      - `div.teaser-intro`: `div.teaser-heading-row` (`h2.teaser-title`, `a.teaser-view-all.button.primary`); `div.teaser-author` (`div.teaser-author-image`, `div.teaser-author-details` with `p.teaser-author-name`, `p.teaser-author-designation`)
    - `div.teaser-body`: `div.teaser-description`; `div.teaser-media` (Text split only); `dl.teaser-stats > div.teaser-stat > dt.teaser-stat-label + dd.teaser-stat-value`; `div.teaser-links.teaser-links-{default|list|primary|secondary|mixed}` with `a.button` and / or `ul.teaser-link-list > li > a.teaser-link-list-item`; `div.teaser-short-description`

Empty containers are not rendered. Universal Editor instrumentation is moved to the rendered elements (eyebrow, title, description, pictures, links, stats).

Generated HTML

```
<div class="teaser block no-image bg-grey" data-block-name="teaser" data-cmp-
id="teaser-1">
  <div class="teaser-content">
    <div class="teaser-header">
      <div class="teaser-kicker">
        <p class="teaser-eyebrow">Insights</p>
        <div class="teaser-meta"><ul class="teaser-tags">
          <li data-tag="tcs-corp:industry/banking">Banking</li></ul></div>
        <div class="teaser-info">
          <p class="teaser-date">Published <time datetime="2026-10-13">13-10-2026</time></
p>
          <p class="teaser-reading-time">14 min read</p>
          <div class="teaser-actions">
            <button type="button" class="button tertiary icon-button"
              aria-label="Share this page" data-cmp-interaction="share"></button>
            <p class="teaser-status" role="status" id="teaser-status-1"></p>
          </div>
        </div>
      </div>
      <div class="teaser-intro"><div class="teaser-heading-row">
        <h2 class="teaser-title">Banking on AI</h2></div></div>
    </div>
    <div class="teaser-body">
      <div class="teaser-description"><p>How leading banks scale AI.</p></div>
      <dl class="teaser-stats"><div class="teaser-stat">
        <dt class="teaser-stat-label"><p>Reduction in run costs</p></dt>
        <dd class="teaser-stat-value"><p>40%</p></dd></div></dl>
      <div class="teaser-links teaser-links-list"><ul class="teaser-link-list">
        <li><a href="/en/services/cloud" class="teaser-link-list-item">Cloud services</
a></li>
      </ul></div>
    </div>
  </div>
</div>
```

Generated JSON: none.

Generated Metadata: none (no `<head>` changes).

Analytics Tracking

Component state (id = Anchor ID, else `teaser-{n}`; `dc:title` = the first heading, also when visually hidden):

```
{
  "component": {
    "teaser-1": {
      "@type": "tcs-corp/components/teaser",
      "parentId": "page-1x2y3z",
      "dc:title": "Banking on AI"
    }
  }
}
```

Click events (`cmp:click`) with `interaction`:

Element	`interaction`	Other eventInfo
CTA, link, List row, View All	`link`	`dc:title` (link text), `xdm:linkURL`, `xdm:linkType` (`other`, `exit`, `download`), `breakpoint`
Listen icon	`listen`	`xdm:linkURL` of the audio link
Download icon	`download`	`xdm:linkType` `other` (it is a button)
Share icon	`share`	—
Lottie pause / play	`animation`	`dc:title` "Pause animation" / "Play animation"

```
{
  "event": "cmp:click",
  "eventInfo": {
    "path": "component.teaser-1",
    "interaction": "share",
    "dc:title": "Share this page",
    "xdm:linkType": "other",
    "breakpoint": "mobile"
  }
}
```

The share result (shared, copied, cancelled) is not tracked. No tag manager consumes the data layer yet (Adobe Tags / Web SDK integration-ready, not implemented).

Personalization Output: with Personalization on, `class="personalization"` and `data-personalization="true"` on the block, for a future personalization script; nothing else.

Search Index Output: none; the query index reads only `<head>` metadata. Teaser text is crawlable HTML.

Target Personalization Output: None in the block today. Personalization on adds only class personalization and data-personalization="true" for a future script; Adobe Target is Not implemented (as of this handover). The block is in the data layer as tcs-corp/components/teaser (id = Anchor ID, else teaser-{n}, dc:title = the title) with link, listen, download, share and animation clicks.

6.11.11 Business Rules

1. Properties are read from two-cell rows by normalised name (lower case, no hyphens); rows with another number of cells are ignored.
2. Toggles are on only when the value is `true`; Show Eyebrow and Show Description are on unless explicitly `false` (a missing row means shown).
3. Select values are read from the row, else from a matching block class (so block options and rows both work).
4. Layout: `no-image`, `background`, `card` or Image & Text; layout and BG Color classes are removed and re-added from the resolved values.
5. BG Color `grey`, `dark`, `dark-green` becomes `bg-grey`, `bg-dark`, `bg-dark-green`.
6. The eyebrow renders only when filled and shown; the kicker renders only with an eyebrow, tags or info.
7. Tags render only with Display Tags on and at least one tag; labels from the locale taxonomy, else derived from the tag ID; authored titles (no `:` or `/`) are shown as typed.
8. Date renders only with Show Date on and a Date; default format `dd-mm-yyyy`; the `<time>` gets `datetime="YYYY-MM-DD"`; non-date text is shown as stored.
9. Reading time: digits only → `minRead` placeholder "{n} min read"; else as typed.
10. Page actions: Listen link (icon button, label `listenToThisPage`), Download (`window.print()`, `downloadThisPage`), Share (Web Share API with title = teaser title or `document.title`, else clipboard copy and `linkCopied` for 3 seconds; errors ignored). The actions container is omitted when none is set.

11. Title: built only when filled; level from Title Type (invalid → authored level → H2); Hide Title applies `visually-hidden`.
12. View All: a primary button in the heading row; requires a link.
13. Author lockup: requires a name or designation; the image is optional.
14. Description renders when filled and shown; Short Description whenever filled.
15. Media: none when Hide Image is on or no Image; Lotto needs a `.json` link (else no media unless a picture exists); animation fit "slice" for Background image / Card, "meet" otherwise; label from Image alt text.
16. Media placement: in the body after the description for Text split; first child of the block for the other layouts.
17. `teaser-has-media` and `image-right` are set only for Image & Text with media; Image position Right (or a legacy `image-right` class) moves the image right from 900 px.
18. Stats: items split by `<hr>` or list items; the last element is the value, the others the label; omitted when no item.
19. Links mode: Multiple links on → Links items with their CTA Link Style (fallback: legacy Multi Link Style, else Text link); off → Primary CTA (fallback style Primary Button) then Secondary CTA (fallback Secondary Button); an empty style row means Text link; CTAs without a link are skipped; the links container is omitted when empty.
20. List style: consecutive List links share one `<ul>`; any other style ends the list; new-window List links get `target="_blank"` / `rel="noopener noreferrer"` and an up-right arrow; List arrow Down right changes same-window arrows.
21. Text link renders as a tertiary button; Primary / Secondary as buttons; the links container gets `teaser-links-{style}` or `teaser-links-mixed`.
22. Layout-specific CSS: options without effect (Top spacing on Background image / Card, Text alignment Center on Text split, image corners in Text split, Image ratio Original on animations) are ignored silently.
23. Dialog conditions: Date / Date Format / Date label need Show Date; Tags needs Display Tags; Image position needs Layout Image & Text; Image ratio and Image corners need Image & Text or Text split; Links needs Multiple links; the eight Primary / Secondary CTA fields need Multiple links off. Hidden fields keep their stored values, which the code ignores where the controlling toggle is off.
24. Personalization adds a marker class and data attribute only.
25. Additional tab: Anchor ID pattern enforced and applied as the block id (unique); Hide block hides outside edit mode; padding / margin classes override the teaser's own spacing.
26. Error handling: missing placeholders or taxonomy fall back to English labels and ID-derived tag labels; Lottie failures log `failed to play the Lottie animation`; no other errors are logged by the block.

6.11.12 Author Best Practices

Recommended Content Length

Element	Recommended
Eyebrow	Up to 40 characters
Title	Up to 70 characters (Display size: 1–3 words)
Description	Up to 300 characters (Image & Text, Background image, Card); up to 600 (Text split)
Short Description	Up to 200 characters
CTA / button titles	Up to 25 characters
List link titles	Up to 60 characters
Stats	2–4 items; values up to 6 characters; labels up to 50 characters
Tags	1–3

Element	Recommended
Author designation	Up to 60 characters

Image Dimensions

Layout / option	Recommended image
Image & Text, Default ratio (10:9)	1200 × 1080 px
Image ratio Portrait (8:9)	1200 × 1350 px
Image ratio Square (1:1)	1200 × 1200 px
Image ratio Original / Text split charts	Native size, at least 1200 px wide; transparent PNG or SVG for charts
Background image	2400 × 1350 px (16:9) or wider; cropped to cover a 35rem–48.75rem high banner
Card	1200 × 1200 px or 4:3; cropped to cover the card (min. 25rem / 35.625rem high)
Author image	Square, at least 160 × 160 px (shown round at 40 px)
Lottie	Lottie JSON for the SVG renderer, ideally under 500 KB, designed at 10:9 (beside) or 16:9 (behind)

CTA Writing Guidelines

- Start with a verb; be specific (“Read the banking report”).
- One Primary Button per teaser; Secondary Button or Text link for alternatives.
- Use List style for three or more related links; keep List titles parallel in form.
- Mention new windows or file types in the text (“(PDF)”).
- View All text names what is listed (“View all insights”).

Accessibility Guidelines

- Choose the Title Type that fits the page outline; never skip levels for looks — use Title size instead.
- Alt text for meaningful images and charts (state the key data in the description too).
- Check contrast for Background image and Card (white text) and brand-blue eyebrows on dark panels.
- Prefer Hide Title over deleting a title when the design has no visible heading.
- Keep stats values short so they do not overflow on mobile.

SEO Guidelines

- Write the key message in the title and description as text, not inside images.
- Link to canonical locale pages; avoid “Click here”.
- Use one H1 per page (a page-opening teaser may use H1 when there is no Hero or Page Header).

Metadata Guidelines: the Teaser does not read page metadata; author dates, reading time and author details in the block and keep them consistent with the page’s own metadata (`publish-date`, `reading-time`, `author-id`) where the teaser describes the same page.

Taxonomy Guidelines: use tags from the TCS taxonomy only; make sure each tag has a title in the locale’s taxonomy (and its language sheet) so that a translated label is shown; publish the taxonomy after adding tags.

Localization Guidelines

- Translate every text field per locale; link to same-locale pages.
- Labels “{n} min read”, “Listen to this page”, “Download this page”, “Share this page”, “Link copied to clipboard”, “Pause animation”, “Play animation” come from each locale’s placeholders (`minRead`, `listenToThisPage`, `downloadThisPage`, `shareThisPage`, `linkCopied`, `pauseAnimation`, `playAnimation`).

- Date Format "MMM d, yyyy" uses English month names in every locale; prefer the numeric formats on non-English sites.
- Allow for 30 % longer text in German, French and Dutch.

6.11.13 Troubleshooting Guide

Issue 1 — A field is missing from the dialog

Symptoms: The author cannot find Date, Tags, Image position, Image ratio, Image corners, Links or the Primary / Secondary CTA fields.

Root Cause: The field's `condition` hides it: Show Date / Display Tags off; Layout not Image & Text (Image position) or not Image & Text / Text split (ratio, corners); Multiple links off (Links) or on (Primary / Secondary CTA).

Diagnosis Steps: Check the controlling toggle or Layout in the dialog.

Resolution Steps: Turn the toggle on / off or change the Layout; the field appears.

Validation Steps: The field is visible and its value renders.

Preventive Measures: Choose the Layout and the link mode first (Steps 3 and 10).

Issue 2 — Links do not appear

Symptoms: No buttons or link rows render.

Root Cause: Multiple links is on but only the Primary / Secondary fields were filled (or the reverse); or the link fields are empty.

Diagnosis Steps: Check Multiple links and which fields hold links; inspect the `.plain.html` rows `multiLinks`, `links`, `primaryCta`.

Resolution Steps: Fill the fields of the active mode (or switch the toggle back).

Validation Steps: `div.teaser-links` renders with the expected styles.

Preventive Measures: Decide on two CTAs vs. a list before authoring.

Issue 3 — Tags show raw or English labels

Symptoms: Tags appear like "Ai native" or in English on a localised site.

Root Cause: The tag is missing from `/{locale}/taxonomy.json`, the taxonomy is not published, or the locale's language sheet lacks a translation.

Diagnosis Steps: Open `https://main--tcs-corp--sradha-tcs.aem.live/{locale}/taxonomy.json` and look for the tag ID.

Resolution Steps: Add the tag and its title to the locale's taxonomy and publish it.

Validation Steps: Reload the page; the localised label shows.

Preventive Measures: Publish the taxonomy with every new tag.

Issue 4 — The Background image / Card teaser looks grey with unreadable text

Symptoms: White text on a grey box, no picture.

Root Cause: No Image (or Hide Image on, or a `.json` with Image type Default): the dark overlay is drawn over the white page.

Diagnosis Steps: Check Image, Hide Image and Image type.

Resolution Steps: Select an image (or set Lotto for a `.json`), or choose BG Color Dark / Dark green, or switch Layout to Image & Text.

Validation Steps: The image shows behind the overlay; contrast is sufficient.

Preventive Measures: Always pair Background image / Card with an image.

Issue 5 — The image is cropped or the chart is cut off
Symptoms: Important parts of the image are missing.

Root Cause: Image ratio 10:9 / 8:9 / 1:1 crops with `object-fit: cover`; Background image and Card always crop.

Diagnosis Steps: Check Image ratio and Layout.

Resolution Steps: Use Image ratio Original (Image & Text) or Default / Original in Text split; recompose the image.

Validation Steps: The whole chart is visible at all widths.

Preventive Measures: Use the Text split layout for charts.

Issue 6 — The date shows the wrong format or no date
Symptoms: No date, or a date like "2026-10-13T00:00:00.000Z".

Root Cause: Show Date off; Date empty; or a non-ISO value.

Diagnosis Steps: Check Show Date and the stored Date value.

Resolution Steps: Turn Show Date on and pick the date with the date picker; choose the Date Format.

Validation Steps: "Published 13-10-2026" (or the chosen format) shows.

Preventive Measures: Use the picker, not typed text.

Issue 7 — Share does nothing on desktop
Symptoms: Clicking Share shows no dialog.

Root Cause: Without the Web Share API the URL is copied to the clipboard and "Link copied to clipboard" shows for 3 seconds; if the clipboard is blocked (non-HTTPS or permissions), nothing happens.

Diagnosis Steps: Check for the status message; test on HTTPS; check browser permissions.

Resolution Steps: Test on the `.aem.page` / `.aem.live` hosts (HTTPS).

Validation Steps: The message appears and the URL is in the clipboard.

Preventive Measures: Document the expected behaviour for testers.

Issue 8 — Stats show the wrong value
Symptoms: The title text appears as the large value.

Root Cause: The Stats Value is empty or contains several lines: the last element of the item is taken as the value.

Diagnosis Steps: Open the Stats items.

Resolution Steps: Enter a single-line Stats Value in every item.

Validation Steps: Each stat shows its label above its value.

Preventive Measures: Keep values to one short line.

6.11.14 Support Runbook
Monitoring Requirements

- Visual checks of key pages with teasers in each locale after releases.
- Availability of `/{locale}/placeholders.json` and `/{locale}/taxonomy.json` (HTTP 200).
- Core Web Vitals of pages that open with a teaser.

Logs

- Browser console: `failed to play the Lottie animation` (animation decorator). The Teaser logs no other messages; missing placeholders / taxonomy fail silently (English fallbacks, ID-derived tag labels).
- Admin API / AEM Sidekick: preview and publish status of the page, assets, placeholders and taxonomy.
- AEM author: publish / replication logs (Cloud Manager).

Common Errors

Error	Likely cause	Fix
Field not in dialog	Hidden by a `condition`	Change the toggle / Layout
No links	Wrong link mode filled	Fill the active mode's fields
Raw tag labels	Taxonomy not published / tag missing	Update and publish the taxonomy
Grey Background / Card	No image	Add an image or change layout
English labels on a localised page	Placeholder keys missing in the locale sheet	Add the keys and publish
Console "failed to play the Lottie animation"	Bad / missing `.json`	Re-export / republish
Anchor ID rejected	Pattern not matched	Use `anchor-` + lower case
Teaser missing live	Hide block on	Turn off and publish

Escalation Matrix

Level	Who	Checks
L1	Author support / content team lead	Dialog values, conditions, toggles, link mode, assets published, Hide block, checklist
L2	AMS / site admin	Publish status of page, assets, placeholders and taxonomy (Sidekick / admin API); CDN cache; console errors
L3	Development team	`blocks/teaser/*` and the shared decorators / utils; CSS regressions; Code Sync of `main`
L4	Adobe Support	Edge Delivery Services or AEM as a Cloud Service / Universal Editor incidents

Recovery Procedures

1. Restore the previous page version and publish.
2. Republish the placeholders / taxonomy sheets if labels are wrong.
3. Replace broken assets and republish.
4. Hide block on as a temporary measure.
5. Revert the code commit on `main` for regressions.

Health Checks

- `curl -s https://main--tcs-corp--sradha-tcs.aem.live/{path}.plain.html` shows the teaser rows.
- `curl -s -o /dev/null -w "%{http_code}" https://main--tcs-corp--sradha-tcs.aem.live/en/placeholders.json` returns 200 (same for `taxonomy.json` and each locale).
- Block-library pages render every teaser variation without console errors.

Operational Procedures

- Dialog changes: edit `_teaser.json`, run `npm run build:json` and `npm run lint`, open a pull request with a preview link; keep old values working (the code already honours the legacy `image-right` class and `multiLinkStyle` row).
- Maintain the placeholder keys listed above in all 13 locale sheets.
- Publish the taxonomy whenever tags are added.

Known Limitations

- No video media type (Not implemented (as of this handover)).
- No automatic "opens in a new tab" hint for new-window links.
- Personalization is a marker only; no Target integration.
- Date Format "MMM d, yyyy" uses English month names.
- Text alignment Center has no effect in Text split; Top spacing has no effect in Background image and Card; Image ratio Original does not apply to animations.
- The Lottie light player does not support After Effects expressions.
- View All has no new-window option and is always a primary button.
- The share outcome is not tracked in the data layer.

6.11.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
A field is missing from the dialog	Its condition hides it: Show Date or Display Tags off, Layout not Image & Text (Image position), Multiple links on or off	Turn the toggle on or off or change the Layout; the field appears
No links render	The fields of the inactive link mode were filled (Multiple links on with Primary / Secondary CTA, or the reverse)	Fill the fields of the active mode or switch Multiple links
Background image or Card shows white text on grey	No Image, Hide Image on, the asset unpublished or a .json with Image type Default	Select and publish an image, or set Image type Lotto for a .json
Tags show derived labels such as "AI"	The tag is missing from /{locale}/taxonomy.json or the taxonomy is not published	Add the tag and its title to the locale taxonomy and publish it
A chart is cut off	Image ratio Portrait or Square, or Layout Background image / Card, which always crop	Use Text split with Image ratio Default, or Original in Image & Text
A stat label appears as the large value	Stats Value empty or several lines; the last element of the item is the value	Enter a single short line in every Stats Value
No date appears	Show Date off or no Date picked	Turn Show Date on and pick the date with the date picker
The page has two H1 headings	Title Type H1 used to make a teaser title bigger	Keep the right level and use Title size
The Lotto image column is empty	Image type Default with a .json, or an invalid or unpublished Lottie file	Set Image type Lotto and publish a valid .json
The Primary Button is nearly invisible on a dark panel	Primary Button keeps its black fill on Dark and Dark green	Use Secondary Button or Text link on dark panels

6.11.16 Author Quick Reference Guide

Mandatory Fields

- Title — not required in the model, but needed for the heading, the share title and the data layer dc:title
- Primary CTA Link / Secondary CTA Link — needed for each CTA to render; a CTA with only a title is skipped
- CTA Link (Links item) — needed with Multiple links on; items without a link are dropped
- Image — needed for Background image and Card (otherwise white text over a grey overlay) and for the Image & Text image column
- Date — needed for the date to show when Show Date is on

- Author name or Author designation — needed for the author lockup; an Author image alone is not shown
- View All Link — needed for the View All button; View All Text alone renders nothing

Recommended Fields

- Layout — chosen first in the Style tab so the Image tab shows the fields that apply
- Eyebrow — the kicker above the title, up to 40 characters
- Description — the main text, up to 300 characters (600 in Text split)
- Title Type — H2 in the page flow, H1 only for a page-opening teaser
- Image alt text — for meaningful images, charts and Lotto animations; empty for decorative images
- Primary CTA Title — verb first, up to 25 characters
- Stats Value — one short line per item, e.g. 40%

Optional Fields

- Show Eyebrow, Hide Title, Show Description
- Short Description — a note after the links
- View All Text with View All Link
- Show Date, Date Format, Date label and Reading time
- Display Tags and Tags
- Listen link, Download and Share
- Author designation, Author image, Author image alt text
- Image type (Default or Lotto) and Hide Image
- Image position, Image position (mobile), Image ratio, Image corners
- BG Color, Text alignment, Vertical alignment
- Title size, Title weight, Description size, Eyebrow style, Top spacing
- Personalization — marker only, on request
- Multiple links, Links, List arrow, CTA Link Type and CTA Link Style
- Stats (Stats Title, Stats Value)
- Additional tab: Anchor ID, Hide block, Padding and Margin

Authoring Checklist

1. Choose Layout in the Style tab before filling the Image tab
2. Decide between two CTAs (Multiple links off) and a link list (Multiple links on) before entering links
3. Keep one Primary Button per teaser; use Secondary Button or Text link for alternatives
4. On BG Color Dark / Dark green, Background image and Card use Secondary Button or Text link; the Primary Button keeps its black fill
5. Use Image type Lotto only with a Lottie .json file and give it Image alt text
6. Use Text split with Image ratio Default for charts so they show whole
7. Change the look with Title size, not with Title Type
8. Turn Show Date and Display Tags on before looking for Date and Tags
9. Use Top spacing Page header only for a teaser that opens a page

Pre-Publish Checklist

1. Preview on aem.page at 1440, 1024, 768 and 375 px
2. Check the image order at 375 px against Image position (mobile)
3. Check every CTA and Links item has a link and the intended style
4. Publish the image, chart, portrait or Lottie .json in AEM Assets
5. Publish the locale taxonomy for new tags and the placeholders for changed labels
6. Check white text contrast on Background image, Card and dark BG Colors
7. Check one H1 per page and no skipped heading levels
8. Confirm Hide block is off and Personalization off unless requested

Post-Publish Validation Checklist

1. Open the page on aem.live and reload with the cache disabled
2. Check the image, portrait and animation requests return 200
3. Select every CTA, List row and View All button and confirm the target
4. Test Share (Link copied to clipboard on desktop) and Download (print dialog)
5. Check the tag labels and "min read" text are localised
6. Check the Lottie pause / play button works
7. Check window.adobeDataLayer lists the teaser with the expected dc:title

6.11.17 Component Execution Example

Business example: Article-style Text split teaser for the State of AI in banking 2026 report.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Teaser
Eyebrow (Teaser › Content)	Report
Title (Teaser › Content)	The state of AI in banking 2026
Description (Teaser › Content)	How 300 banks are moving AI from pilots into everyday operations, and what sets the leaders apart.
Short Description (Teaser › Content)	Based on a survey of 300 banks in Europe and the Americas, 2026.
View All Text (Teaser › Content)	View all
View All Link (Teaser › Content)	Select the page or enter /en/insights
Show Date (Teaser › Content)	On
Date (Teaser › Content)	2026-10-13
Date label (Teaser › Content)	Published
Reading time (Teaser › Content)	14
Display Tags (Teaser › Content)	On
Tags (Teaser › Content)	Add the tags tcs-corp:topic/ai, tcs-corp:industry/banking, tcs-corp:content-type/report
Listen link (Teaser › Content)	Select the page or enter /en/insights/ai-in-banking-podcast
Download (Teaser › Content)	On
Share (Teaser › Content)	On
Author name (Teaser › Content)	Anita Rao
Author designation (Teaser › Content)	Head of AI Research
Author image (Teaser › Content)	Select the asset person-1.svg (/en/media/person-1.svg)
Author image alt text (Teaser › Content)	Anita Rao
Image (Teaser › Image)	Select the asset chart.svg (/en/media/chart.svg)
Image alt text (Teaser › Image)	Bar chart: the revenue growth index rises from 120 in 2020 to 360 in 2026
Layout (Teaser › Style)	Text split (title left, text right)
Primary CTA Title (Teaser › Links)	Download the report

Field	Value
Primary CTA Link (Teaser › Links)	Select the page or enter /en/insights
Secondary CTA Title (Teaser › Links)	Talk to an expert
Secondary CTA Link (Teaser › Links)	Select the page or enter /en/contact
Stats Title (Teaser › Stats › Stats › Item 1)	Lower operating cost
Stats Value (Teaser › Stats › Stats › Item 1)	40%
Stats Title (Teaser › Stats › Stats › Item 2)	Faster releases
Stats Value (Teaser › Stats › Stats › Item 2)	3x
Stats Title (Teaser › Stats › Stats › Item 3)	Applications migrated
Stats Value (Teaser › Stats › Stats › Item 3)	1,200

All other fields keep their default values.

Rendered Result:

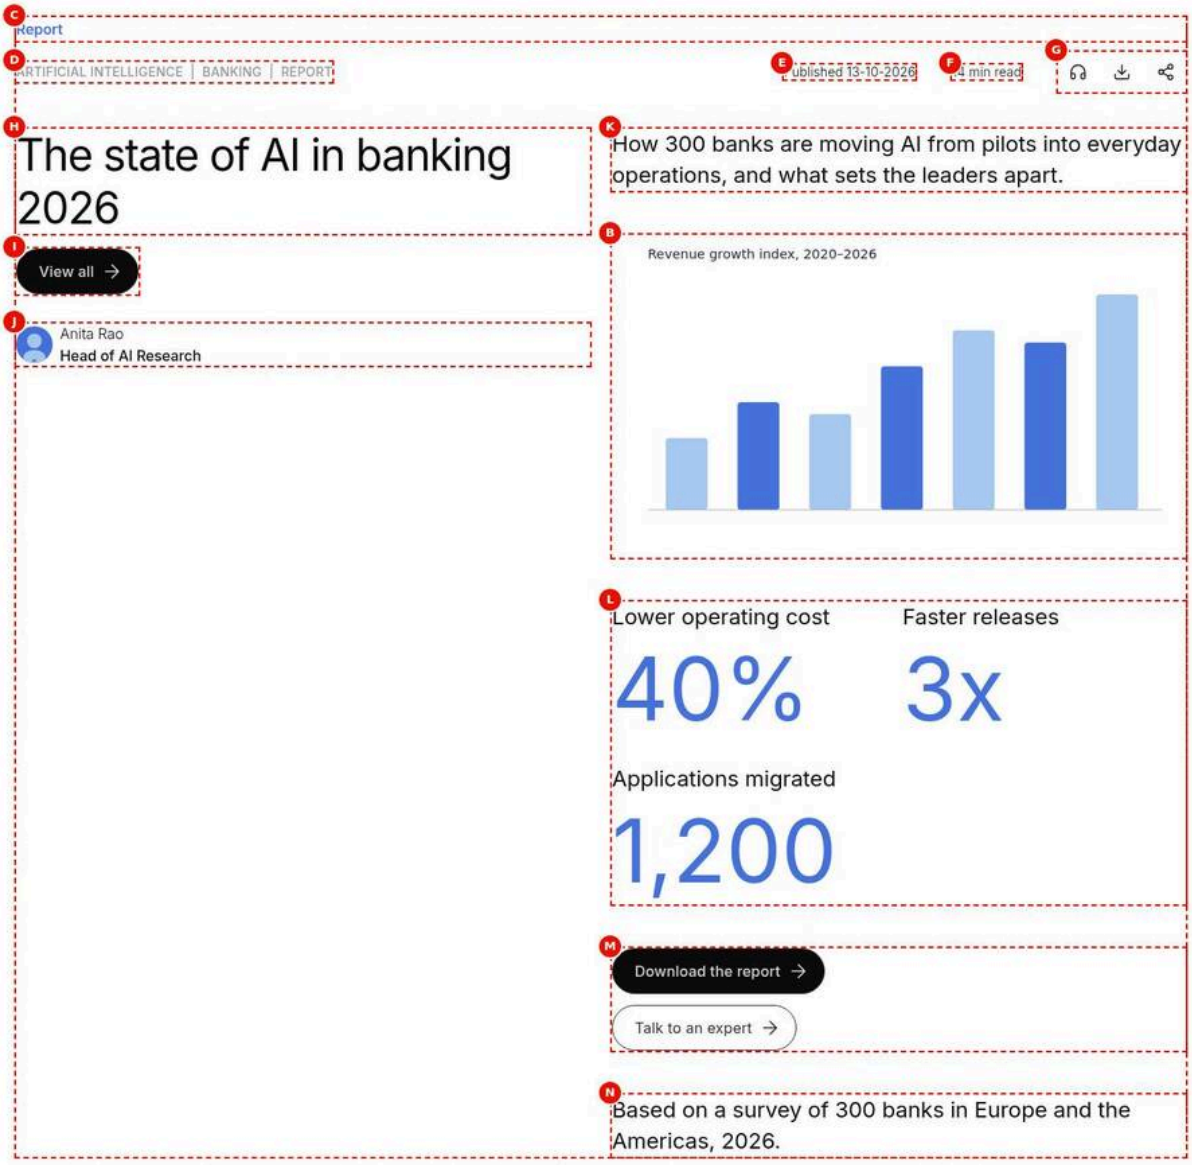

Figure 71: Execution example — The fully populated Text split teaser at 1440 px in editor mode with markers A to N (A shares the top-left corner with C): eyebrow Report, tags, Published 13-10-2026, 14 min read and action icons above; title, View all and Anita Rao on the left; description, chart, stats 40%, 3x, 1,200, two buttons and the short description on the right. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/teaser-authoring-view.jpg)

Author Notes

- Set Layout Text split first; the Image tab then hides Image position and keeps Image ratio and Image corners
- Turn Show Date and Display Tags on to reveal Date, Date label and Tags; Reading time 14 renders "14 min read"
- Leave Multiple links off: Primary CTA "Download the report" and Secondary CTA "Talk to an expert" keep their default button styles
- Add three Stats items with the one-line values 40%, 3x and 1,200
- Give chart.svg its data-bearing alt text; the Author image alt text may stay empty because the name is shown

Business Notes

- The teaser promotes the State of AI in banking 2026 report and routes readers to /en/insights and /en/contact
- The stats give the headline evidence: 40% lower operating cost, 3x faster releases, 1,200 applications migrated
- The author lockup credits Anita Rao, Head of AI Research, for thought-leadership credibility

- Listen, Download and Share let readers consume and pass on the report; their use is tracked as clicks

Technical Notes

- Key-value block: each property is a row; teaser.js reads them with readProperties and rebuilds the DOM
- The kicker holds the eyebrow, the tags (resolveTags from /en/taxonomy.json) and the info row with date, reading time and actions
- In Text split the chart is placed in div.teaser-body after the description, uncropped and square-cornered
- Labels minRead, listenToThisPage, downloadThisPage, shareThisPage and linkCopied come from /en/placeholders.json
- Clicks are captured centrally by the data layer decorator with interaction link, listen, download or share

TCS Corporate Website — Project Handover

Volume 5 of 13 — Components 6.12–6.14: Quote, Testimonial, Columns

Date: October 14, 2026

Adobe

Table of Contents

Part 6 — Component Library (continued) 3
6.12 Quote Block 3
6.13 Testimonial Block 54
6.14 Columns Block 119

Part 6 — Component Library (continued)

> **Note:** This is volume 5 of 13 of the TCS Corporate Website project handover (version 2.0). Volume 1 holds the document control, the audience guide and the conventions.

6.12 Quote Block

The Quote block (`blocks/quote`) presents a single highlighted statement, for example a client or leadership quote, as a card with large brand-blue quotation marks that overlaps a portrait image. An optional eyebrow and section title sit above the card. It implements the TCS.com design system Figma component "Text & Image Overlap" (node 2590-300067).

6.12.1 Component Purpose

Business Objective: Give a single voice (a client, partner, analyst or TCS leader) visual prominence on a page, combining the statement with a portrait so that the quote is attributed to a real person and reads as a credible endorsement.

Business Use Cases:

- A client quote on a case study or industry page, with the client's portrait.
- A leadership statement (for example the CEO's view) on a corporate, investor or press page.
- A partner endorsement on a partnership or alliance page.
- An analyst or award jury statement on a recognition page.
- A pull quote in an article or blog post, with or without an image.

When To Use:

- One statement deserves emphasis on its own and should stand out from the body copy.
- A portrait (or a relevant image) is available and the overlapping card layout is wanted.
- The statement needs an attributed author (name, designation, organisation).

When Not To Use:

- For a testimonial that needs stats, a round author photo or a centred layout: use the Testimonial block (6.13).
- For several quotes side by side or a carousel of quotes: use Cards / List or a Gen Carousel section with several Quote blocks (one quote per block).
- For ordinary inline quotations inside running text: use a Text component (rich text).
- For a promotional message with a call to action: use the Teaser or Hero block. The Quote block has no CTA field.

Dependencies:

Type	Dependency	Use
Block code	`blocks/quote/quote.js`, `blocks/quote/quote.css`	Decoration and styles
Model	`blocks/quote/_quote.json` (aggregated in `component-definition.json`, `component-models.json`)	Universal Editor dialog
Decorator	`decorators/content-decorator.js` `fromCell`	Moves eyebrow, quote and author content into new elements, keeping editor instrumentation

Type	Dependency	Use
Decorator	`decorators/heading-decorator.js` `buildHeading`	Builds the title heading at the Title Type level
Decorator	`decorators/image-decorator.js` `pictureOf`	Takes the authored picture and applies the Image Alt Text field
Util	`utils/properties.js` `readProperties`, `optionOf`, `textOf`	Reads the key-value property rows and the select values
Global	`decorators/block-options-decorator.js`, `styles/styles.css`	Additional tab (anchor, hide, padding, margin)
Global	`decorators/data-layer-decorator.js`, `utils/analytics.js`	Adobe Client Data Layer component entry and click events
Global	`decorators/content-buttons-decorator.js`	A standalone link in the quote or author rich text becomes a link button
Data sources	None	The block reads no sheet, placeholder, taxonomy or query index
Placeholders	None	The block renders no fixed UI text

Related Components: Testimonial (6.13) for centred testimonials with stats; Teaser for image and text with CTAs; Columns (6.14) for free side-by-side layouts; Text (default content) for inline quotations.

Applicable Templates: Any page. The block is allowed in every section (section filter in `models/_section.json`), so it can be used on Home, Article, Blog, Press Release and pages without a Page Type. No template adds or requires it.

Supported Content Types: Client stories, case studies, leadership statements, partner and analyst endorsements, articles, blogs and press releases (as a pull quote).

Business Problem Solved

Client, partner and leadership statements were placed as ordinary rich text, so they neither stood out from the body copy nor showed clearly who said them. The Quote block gives one attributed statement a card with brand-blue quotation marks overlapping a portrait (Figma 'Text & Image Overlap'), with fixed crops, two image positions and a grey option, so every locale site presents endorsements the same way.

Supported Taxonomy

None: the Quote has no tag field and reads no page tags, taxonomy or metadata; tag the page itself if it should appear in List or Filter List results. Quote content is not part of the query index.

6.12.2 Visual Overview

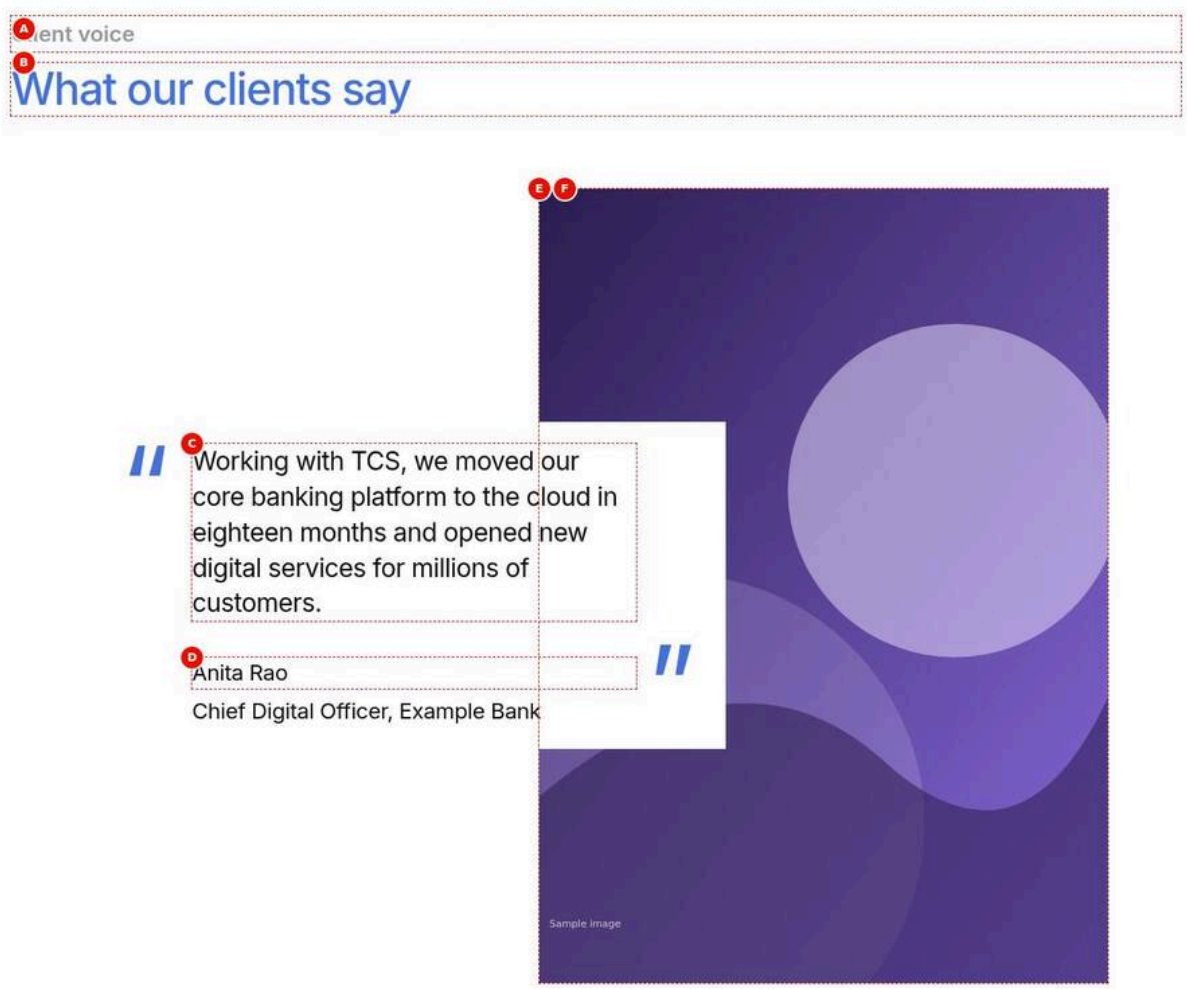

Figure 1: Desktop rendering — The Quote at 1440 px: the grey eyebrow Client voice and the brand-blue H2 What our clients say above a white card with large blue opening and closing quote marks, holding the quote Working with TCS, we moved our core banking platform… and Anita Rao / Chief Digital Officer, Example Bank; the card on the left overlaps the portrait tall.svg on the right and is vertically centred against it. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/quote-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/quote-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Quote at 1440 px: the grey eyebrow Client voice and the brand-blue H2 What our clients say above a white card with large blue opening and closing quote marks, holding the quote Working with TCS, we moved our core banking platform… and Anita Rao / Chief Digital Officer, Example Bank; the card on the left overlaps the portrait tall.svg on the right and is vertically centred against it.
Business Context	The overview example of chapter 6.12: a client quote from Anita Rao of Example Bank, as it would appear on an English case study or industry page, checked at 1440 px before sign-off.
Author Objective	Add a Quote with eyebrow, H2 title, quote text, a two-line author and a portrait with alt text, and confirm the desktop overlap layout.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Quote	Yes	Adds the Quote to the page	Select the section in the content tree, choose Add (+) and pick Quote	Only components the section allows (section filter)
A	Eyebrow (Quote › Content)	Client voice	No	Short label above the title	A category or context, a few words	None
B	Title (Quote › Content)	What our clients say	No	Section heading above the quote	Short, descriptive heading	None
C	Quote (Quote › Content)	Working with TCS, we moved our core banking platform to the cloud in eighteen months and opened new digital services for millions of customers.	No (Recommended)	The statement shown in the card	Do not type quote marks; keep it concise	None
D	Quote Author (Quote › Content)	Anita Rao Chief Digital Officer, Example Bank	No (Recommended)	Attribution below the quote	Name on line 1, then designation and organisation	None
E	Image (Quote › Content)	Select the asset tall.svg (/en/media/tall.svg)	No	Portrait overlapped by the card	Portrait from AEM Assets	Asset reference (single)
F	Image Alt Text (Quote › Content)	Portrait of Anita Rao	No	Alternative text of the image	Describe the image; empty if decorative	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** 'Client voice' in grey semibold and 'What our clients say' as a 3rem brand-blue H2 sit above the body; the white card with 7.5rem blue opening and closing marks holds the quote and 'Anita Rao' / 'Chief Digital Officer, Example Bank' and overlaps tall.svg on the right.
- **Rendering behaviour:** From 900 px the body is centred at up to 70rem as a 498 : 204 : 418 grid: the card spans columns 1–2, vertically centred and above the image (z-index 1), the image columns 2–3, cropped to 622 : 869. The block gets quote-has-media and neither image-left nor image-bottom.
- **Publishing behaviour:** Publish to Preview shows the block on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN after the purge. tall.svg must be published with the page (referenced assets in the Publish dialog), otherwise the card renders without the portrait.

Business Rules

- Quote holds only the statement, without typed quotation marks; the 7.5rem marks are CSS content with empty alternative text.
- Quote Author has two paragraphs: 'Anita Rao' first, then 'Chief Digital Officer, Example Bank'; it renders as the figcaption.
- Title Type stays H2 (model default), so 'What our clients say' fits under the page's H1.
- Image Alt Text 'Portrait of Anita Rao' replaces the asset's alt; left empty, the image would be decorative (alt="").
- Image Position (Desktop) Right and Image Position (Mobile) Top are the block template defaults; the overlap needs a picture in Image.

Common Authoring Mistakes

Error	Root Cause	Resolution
The quote shows a second pair of quotation marks	The statement was typed or pasted with its own quotation marks into Quote	Remove the typed marks at the start and end of the Quote text
Name and designation run together on one line	'Anita Rao Chief Digital Officer, Example Bank' entered as one paragraph in Quote Author	Press Enter after 'Anita Rao' so the designation becomes a second paragraph
Card and image are stacked without overlap at 1440 px	tall.svg is not selected or not published, so quote-has-media is not set	Re-select tall.svg in Image and publish it with the page

Troubleshooting

- **Symptoms:** At 1440 px the card fills the 70rem column and no portrait appears beside it.
- **Cause:** The Image reference points to an asset that is unpublished or was moved, so no picture reaches the block and quote-has-media is missing.
- **Resolution:** Re-select /en/media/tall.svg (or the approved portrait) in Image, publish the asset and publish the page again.
- **Verification Steps:** Reload the aem.page URL at 1440 px; the block has the class quote-has-media and a .quote-media element, and the card overlaps the portrait.

Desktop (900px and wider): The eyebrow (grey, semibold, 1.5rem) and the title (brand blue, medium weight, 3rem, tight letter-spacing) are stacked, 0.75rem apart, with 5rem space below them. The body is centred with a maximum width of 70rem (1120px). When an image is present, the body is a three-column grid in the proportions 498 : 204 : 418. The card spans the first two columns (702 of 1120, about 63%), the image the last two (622 of 1120, about 56%), so the card overlaps the image by 204/1120 (about 18%). The card sits above the image (z-index 1) and is vertically centred against it. The image has a 622 : 869 portrait aspect ratio (cropped with object-fit: cover). Inside the card, a three-column grid holds the opening quote mark (column 4.125rem), the text, and the closing quote mark (column 2.875rem, aligned to the bottom). The quote marks are 7.5rem high, in brand blue. The card padding is 1.5rem top and bottom and 2.5rem left and right. The quote text is 1.75rem (line height 1.39); the author is 1.5rem (line height 1.417); there is 2.5rem between quote and author.

Figure 2: Tablet rendering — The Quote at 768 px in the stacked layout: Client voice and the H2 What our clients say on top, tall.svg across the block width at 4 : 5, and the white card with 5rem quote marks, the quote and Anita Rao / Chief Digital Officer, Example Bank overlapping the image's bottom edge, inset 1rem on each side. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/quote-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/quote-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The Quote at 768 px in the stacked layout: Client voice and the H2 What our clients say on top, tall.svg across the block width at 4 : 5, and the white card with 5rem quote marks, the quote and Anita Rao / Chief Digital Officer, Example Bank overlapping the image's bottom edge, inset 1rem on each side.
Business Context	The same Anita Rao client quote checked at 768 px, the tablet width at which the Quote still uses its stacked mobile layout.

Item	Detail
Author Objective	Reuse the overview Quote and confirm that at 768 px the portrait comes first and the card overlaps its bottom edge.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Quote	Yes	Adds the Quote to the page	Select the section in the content tree, choose Add (+) and pick Quote	Only components the section allows (section filter)
A	Eyebrow (Quote › Content)	Client voice	No	Short label above the title	A category or context, a few words	None
B	Title (Quote › Content)	What our clients say	No	Section heading above the quote	Short, descriptive heading	None
C	Quote (Quote › Content)	Working with TCS, we moved our core banking platform to the cloud in eighteen months and opened new digital services for millions of customers.	No (Recommended)	The statement shown in the card	Do not type quote marks; keep it concise	None
D	Quote Author (Quote › Content)	Anita Rao Chief Digital Officer, Example Bank	No (Recommended)	Attribution below the quote	Name on line 1, then designation and organisation	None
E	Image (Quote › Content)	Select the asset tall.svg (/en/media/tall.svg)	No	Portrait overlapped by the card	Portrait from AEM Assets	Asset reference (single)
F	Image Alt Text (Quote › Content)	Portrait of Anita Rao	No	Alternative text of the image	Describe the image; empty if decorative	None
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** 'Client voice' and the 2rem title 'What our clients say' on top; tall.svg fills the block width at 4 : 5; the white card, inset 1rem left and right, moves 3rem up over the bottom of the image, with 5rem quote marks.
- **Rendering behaviour:** The block's only breakpoint is 900 px, so at 768 px .quote-media gets order –1 and the card a negative 3rem top margin; the section side padding is 2.5rem from 600 px. Screen readers still read header, quote, author, then image (DOM order).
- **Publishing behaviour:** The tablet layout needs no separate publish: Publish to Preview (aem.page) and Publish to Live (aem.live) deliver the same page, and the CSS chooses the layout by screen width. tall.svg is published as a referenced asset.

Business Rules

- There is no tablet-specific field; Image Position (Desktop) has no effect below 900 px.
- Image Position (Mobile) Top (default) places tall.svg above the card at 768 px.
- The portrait is cropped to 4 : 5 with object-fit: cover; keep the face in the upper-middle area.
- Type uses the mobile token sizes at 768 px: title 2rem, quote 1.5rem, author 1.125rem, eyebrow 1rem.

Common Authoring Mistakes

Error	Root Cause	Resolution
Image Position (Desktop) Left changes nothing at 768 px	Left applies only from 900 px; tablet uses the mobile layout	Use Image Position (Mobile) for tablet and check Left at desktop width
The head of the portrait is cut off at 768 px	A landscape or tightly framed asset is cropped to 4 : 5	Use a portrait rendition with space around the face

Troubleshooting

- **Symptoms:** At 768 px the card sits above the portrait instead of overlapping its bottom edge.
- **Cause:** Image Position (Mobile) is set to Bottom (class image-bottom), which applies to every width below 900 px, tablet included.
- **Resolution:** Set Image Position (Mobile) back to Top in the Content tab and publish the page.
- **Verification Steps:** In device mode at 768 px the image comes first and the card overlaps its bottom edge; the block has no image-bottom class.

Tablet (600px to 899px): The block uses the stacked mobile layout (the block's only breakpoint is 900px). The image comes first and fills the width with a 4 : 5 aspect ratio. The card follows and moves up over the bottom of the image by 3rem (`--space-1200`), inset 1rem (`--space-400`) on the left and right. Type uses the mobile sizes of the tokens (title 2rem, quote 1.5rem, author 1.125rem, eyebrow 1rem, quote marks 5rem in a 2.5rem column). From 600px the section's side padding grows to 2.5rem (`--section-padding-inline`), so the block is narrower than the screen by 5rem.

Figure 3: Mobile rendering — The Quote at 375 px: Client voice and What our clients say stacked, tall.svg full width at 4 : 5, and the white card with the smaller 5rem blue quote marks, the quote and Anita Rao / Chief Digital Officer, Example Bank overlapping the image's bottom edge by 3rem. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/quote-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/quote-mobile-view.jpg`
Screenshot Purpose	Mobile rendering

Item	Detail
Screen Description	The Quote at 375 px: Client voice and What our clients say stacked, tall.svg full width at 4 : 5, and the white card with the smaller 5rem blue quote marks, the quote and Anita Rao / Chief Digital Officer, Example Bank overlapping the image's bottom edge by 3rem.
Business Context	The Anita Rao client quote checked at 375 px, the width most visitors of case study pages use on phones.
Author Objective	Reuse the overview Quote and confirm the mobile layout: portrait first, card overlapping its bottom edge, smaller quote marks.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Quote	Yes	Adds the Quote to the page	Select the section in the content tree, choose Add (+) and pick Quote	Only components the section allows (section filter)
A	Eyebrow (Quote › Content)	Client voice	No	Short label above the title	A category or context, a few words	None
B	Title (Quote › Content)	What our clients say	No	Section heading above the quote	Short, descriptive heading	None
C	Quote (Quote › Content)	Working with TCS, we moved our core banking platform to the cloud in eighteen months and opened new digital services for millions of customers.	No (Recommended)	The statement shown in the card	Do not type quote marks; keep it concise	None
D	Quote Author (Quote › Content)	Anita Rao Chief Digital Officer, Example Bank	No (Recommended)	Attribution below the quote	Name on line 1, then designation and organisation	None
E	Image (Quote › Content)	Select the asset tall.svg (/en/media/tall.svg)	No	Portrait overlapped by the card	Portrait from AEM Assets	Asset reference (single)
F	Image Alt Text (Quote › Content)	Portrait of Anita Rao	No	Alternative text of the image	Describe the image; empty if decorative	None
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** 'Client voice' and 'What our clients say' are stacked 0.75rem apart with 2.5rem below; tall.svg fills the width at 4 : 5; the white card with 5rem blue marks and 1.5rem padding overlaps the image's bottom edge by 3rem, inset 1rem.
- **Rendering behaviour:** Below 600 px the section side padding is 1.5rem; the card's three-column grid keeps 2.5rem columns for the quote marks. The layout switches to the overlap grid only at 900 px.
- **Publishing behaviour:** Same page as the desktop and tablet views: Publish to Preview shows it on aem.page, Publish to Live on aem.live; no mobile-only content exists. tall.svg must be published with the page.

Business Rules

- Image Position (Mobile) Top (default) keeps the portrait above the card on phones.

- The quote is read before the image by screen readers, although the image is shown first (CSS order –1).
- Keep the quote within 100 to 300 characters (Recommended) so the card stays readable at 375 px.
- Quote Author keeps the name and the designation on separate paragraphs; long designations wrap inside the card.

Common Authoring Mistakes

Error	Root Cause	Resolution
The card is very long on mobile and pushes the author below the fold	A quote far beyond 300 characters	Shorten the Quote to the approved key statement
The portrait shows only shoulders at 375 px	Subject placed low in the asset; the 4 : 5 crop is centred	Use a portrait with the face in the upper-middle area

Troubleshooting

- **Symptoms:** At 375 px the portrait is missing and the card starts directly under the title without overlap.
- **Cause:** The Image reference holds no picture (asset unpublished or deleted), so quote-has-media and the negative card margin are not applied.
- **Resolution:** Re-select the portrait in Image, publish the asset and the page.
- **Verification Steps:** Reload the preview URL in device mode at 375 px; the portrait shows first and the card overlaps it by 3rem.

Mobile (below 600px): As for tablet, with the section side padding of 1.5rem. The header has 0.75rem between eyebrow and title and 2.5rem below it. The card padding is 1.5rem on all sides and the quote marks are 5rem high. With Image Position (Mobile) = Bottom, the image is below the card and the card overlaps the top edge of the image instead. With BG Color = Grey, the whole block has a light grey background with 2.5rem top and bottom and 1.5rem side padding (7.5rem and 5rem from 900px).

6.12.3 Component Variations

The Style select (`classes`) has only the Default option, so there are no style classes. The variations come from Image Position (Desktop), Image Position (Mobile), BG Color and whether an image is set. These options combine freely (for example Image Left + Image Bottom + Grey).

Variation 1 — Default (Image Right, Image Top on Mobile)

Variation Name: Default — image on the right on desktop, above the quote on mobile and tablet.

Business Purpose: The standard Figma “Text & Image Overlap” presentation: the quote card reads first (left) on desktop and the portrait sits to the right.

Visual Example:

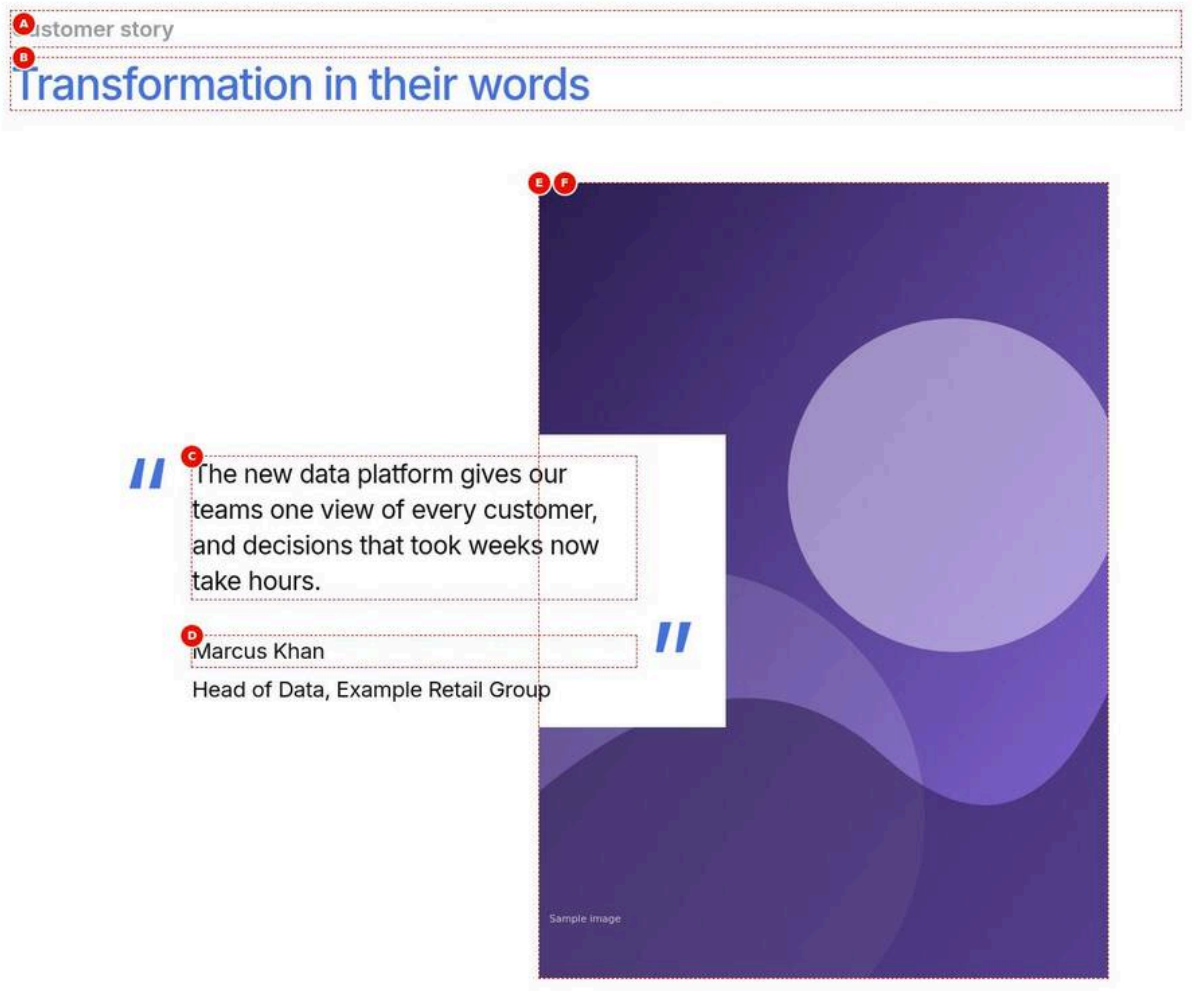

Figure 4: Default variation — The Quote at 1440 px on a white background: the eyebrow Customer story and the H2 Transformation in their words above the white card with the data platform quote and Marcus Khan / Head of Data, Example Retail Group; the card on the left overlaps the portrait tall.svg on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/quote-default-image-right.jpg)

Screenshot Details — Default variation

Item	Detail
Screenshot Name	`screenshots/quote-default-image-right.jpg`
Screenshot Purpose	Default variation
Screen Description	The Quote at 1440 px on a white background: the eyebrow Customer story and the H2 Transformation in their words above the white card with the data platform quote and Marcus Khan / Head of Data, Example Retail Group; the card on the left overlaps the portrait tall.svg on the right.
Business Context	Variation 1, the standard Figma 'Text & Image Overlap': a customer story quote from Marcus Khan of Example Retail Group, the card reading first on the left.
Author Objective	Author a Quote with eyebrow 'Customer story', title 'Transformation in their words', quote, author and portrait, leaving the positions and BG Color at their defaults.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Quote	Yes	Adds the Quote to the page	Select the section in the content tree, choose Add (+) and pick Quote	Only components the section allows (section filter)
A	Eyebrow (Quote › Content)	Customer story	No	Short label above the title	A category or context, a few words	None
B	Title (Quote › Content)	Transformation in their words	No	Section heading above the quote	Short, descriptive heading	None
C	Quote (Quote › Content)	The new data platform gives our teams one view of every customer, and decisions that took weeks now take hours.	No (Recommended)	The statement shown in the card	Do not type quote marks; keep it concise	None
D	Quote Author (Quote › Content)	Marcus Khan Head of Data, Example Retail Group	No (Recommended)	Attribution below the quote	Name on line 1, then designation and organisation	None
E	Image (Quote › Content)	Select the asset tall.svg (/en/media/tall.svg)	No	Portrait overlapped by the card	Portrait from AEM Assets	Asset reference (single)
F	Image Alt Text (Quote › Content)	Portrait of Marcus Khan	No	Alternative text of the image	Describe the image; empty if decorative	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** On a white background the card with the blue quote marks, the data platform quote and 'Marcus Khan' / 'Head of Data, Example Retail Group' sits on the left and overlaps the portrait on the right by about 18 %.
- **Rendering behaviour:** The block gets quote-has-media only; from 900 px the card spans grid columns 1–2 and the image columns 2–3 of the 498 : 204 : 418 grid. Below 900 px the image is above the card, overlapped by 3rem.
- **Publishing behaviour:** Publish to Preview shows the quote on aem.page and Publish to Live on aem.live; the portrait is published as a referenced asset with the page. The block reads no sheet or placeholder, so nothing else needs publishing.

Business Rules

- Image Position (Desktop) Right and Image Position (Mobile) Top are the model and template defaults; a missing or unknown value falls back to them.
- BG Color Default (empty) keeps the white –color-bg-default background for block and card.
- Style has only Default; it adds no class.
- Image Alt Text 'Portrait of Marcus Khan' identifies the person; the name is also in the figcaption.

Common Authoring Mistakes

Error	Root Cause	Resolution
The portrait appears on the left	Image Position (Desktop) changed to Left on a copied block	Set Image Position (Desktop) back to Right

Error	Root Cause	Resolution
'Transformation in their words' shows as an H1	Title Type set to H1 while the page already has a Page Header H1	Set Title Type to H2
The block background is grey	BG Color left on Grey from a copied block	Set BG Color to Default

Troubleshooting

- **Symptoms:** The card and the portrait appear one after the other on desktop, without the overlap.
- **Cause:** The Image field is empty or holds a broken asset reference, so quote-has-media is not set and the grid is not applied.
- **Resolution:** Select the portrait again in Image from AEM Assets and publish the asset and the page.
- **Verification Steps:** Inspect the block on aem.page: it has quote-has-media and a .quote-media element, and the card overlaps the image at 1440 px.

Use Cases: Client and leadership quotes on most pages; the first quote on a page.

Authoring Guidelines: Set Quote, Quote Author and Image (with Image Alt Text, or leave it empty for a decorative image). Leave Image Position (Desktop) = Right, Image Position (Mobile) = Top and BG Color = Default. These are the defaults of a new block.

Business Rules: Right and Top are the defaults of the model (`value`) and of the block template, and the code falls back to them when the rows are missing or hold an unknown value.

Rendering Rules: The block gets the class `quote-has-media`; neither `image-left` nor `image-bottom` is set. The desktop grid places the card in columns 1-2 and the image in columns 2-3.

Responsive Behaviour: Desktop: card left, image right, 18% overlap, card vertically centred. Tablet and mobile: image above (4 : 5), card overlapping its bottom edge by 3rem, inset 1rem.

SEO Impact: The title is a real heading (H2 by default) that contributes to the page outline. The quote is a `<blockquote>` and the author is a `<figcaption>`, which search engines can read as a quotation and its attribution. The image alt text is indexed for image search when set.

Accessibility Compliance: The quote marks are CSS-generated content with an empty alternative text (`content: '\201C' / ''`), so screen readers do not announce them. The image alt text comes from Image Alt Text; empty alt marks the image as decorative. DOM order is header, card, image, so screen readers read the quote before the image even on mobile, where the image is shown first (CSS `order: -1`). Text colours (black on white, brand blue for title) meet WCAG 2.1 AA contrast [To be confirmed: contrast measurement of brand-500 on white — owner: design lead].

Variation 2 — Image Left (Desktop)

Variation Name: Image Position (Desktop) = Left.

Business Purpose: A mirrored layout, so the portrait is on the left and the card on the right. Used to alternate the direction of several Quote blocks on one page, or when the person in the image faces right.

Visual Example:

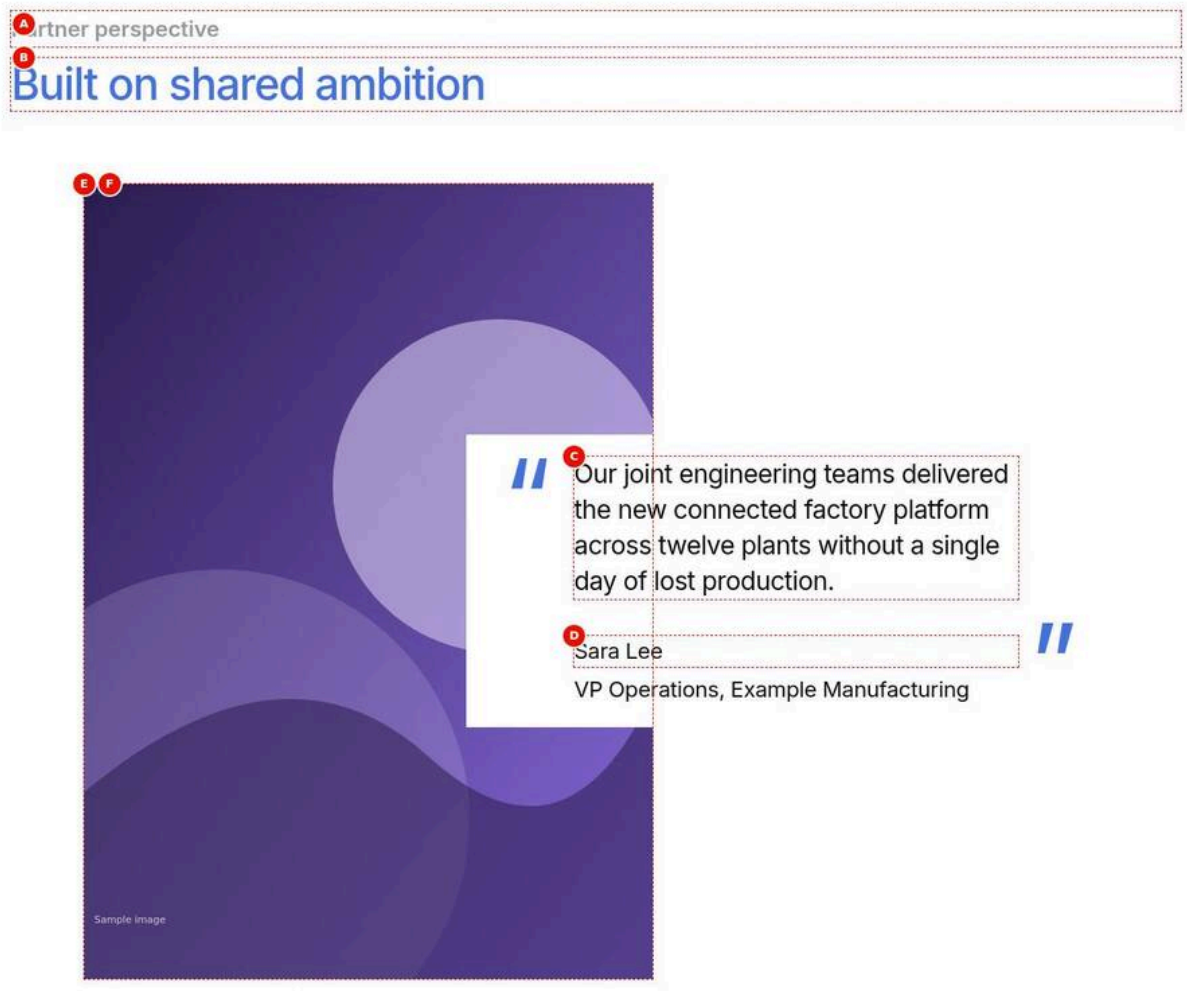

Figure 5: Image Left variation — The Quote at 1440 px with Image Position (Desktop) Left: Partner perspective and the H2 Built on shared ambition above; the portrait tall.svg on the left and the white card with the connected factory quote and Sara Lee / VP Operations, Example Manufacturing on the right, overlapping the image's right edge. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/quote-image-left.jpg)

Screenshot Details — Image Left variation

Item	Detail
Screenshot Name	`screenshots/quote-image-left.jpg`
Screenshot Purpose	Image Left variation
Screen Description	The Quote at 1440 px with Image Position (Desktop) Left: Partner perspective and the H2 Built on shared ambition above; the portrait tall.svg on the left and the white card with the connected factory quote and Sara Lee / VP Operations, Example Manufacturing on the right, overlapping the image's right edge.
Business Context	Variation 2: a partner endorsement from Sara Lee of Example Manufacturing, mirrored so the portrait sits on the left, for example as the second of two Quote blocks on a partnership page.
Author Objective	Author a Quote with the connected factory quote and portrait and set Image Position (Desktop) to Left.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Quote	Yes	Adds the Quote to the page	Select the section in the content tree, choose Add (+) and pick Quote	Only components the section allows (section filter)
A	Eyebrow (Quote › Content)	Partner perspective	No	Short label above the title	A category or context, a few words	None
B	Title (Quote › Content)	Built on shared ambition	No	Section heading above the quote	Short, descriptive heading	None
C	Quote (Quote › Content)	Our joint engineering teams delivered the new connected factory platform across twelve plants without a single day of lost production.	No (Recommended)	The statement shown in the card	Do not type quote marks; keep it concise	None
D	Quote Author (Quote › Content)	Sara Lee VP Operations, Example Manufacturing	No (Recommended)	Attribution below the quote	Name on line 1, then designation and organisation	None
E	Image (Quote › Content)	Select the asset tall.svg (/en/media/tall.svg)	No	Portrait overlapped by the card	Portrait from AEM Assets	Asset reference (single)
F	Image Alt Text (Quote › Content)	Portrait of Sara Lee	No	Alternative text of the image	Describe the image; empty if decorative	None
(G)	Image Position (Desktop) (Quote › Content)	Left	No	Side of the image from 900px	Right or Left	right or left; other values fall back to right

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Under 'Partner perspective' and 'Built on shared ambition', the portrait is on the left and the white card with the quote and 'Sara Lee' / 'VP Operations, Example Manufacturing' sits on the right, overlapping the image's right edge.
- **Rendering behaviour:** The block gets image-left; from 900 px the grid becomes 418 : 204 : 498, the image spans columns 1–2 and the card columns 2–3. Below 900 px Left has no effect and the Top mobile layout applies.
- **Publishing behaviour:** Publish to Preview and Publish to Live deliver the mirrored layout on aem.page and aem.live; the portrait must be published with the page. The DOM order (card before image) is unchanged.

Business Rules

- Left is applied only with an image (quote-has-media); without an image the option has no visible effect.
- Image Position (Desktop) accepts right or left; any other value falls back to Right.
- Only the visual order changes; screen readers still read the card first, then the image (WCAG 1.3.2).
- Alternate Right and Left when two Quote blocks follow each other on the page.

Common Authoring Mistakes

Error	Root Cause	Resolution
The image stays above the card on a phone	Image Position (Desktop) Left expected to change the mobile layout	Use Image Position (Mobile) for widths below 900 px
Left has no visible effect at 1440 px	Image is empty, so the overlap grid is not built	Select the portrait in Image

Troubleshooting

- **Symptoms:** With Image Position (Desktop) Left, the portrait is still on the right at desktop width.
- **Cause:** The page was not republished after the change, or the check was made below 900 px where Left does not apply.
- **Resolution:** Publish the page again and check the preview URL at 1440 px.
- **Verification Steps:** The block has the class image-left and the image spans the first two grid columns at 1440 px.

Use Cases: The second of two Quote blocks on a page (zig-zag rhythm); portraits whose subject looks to the right.

Authoring Guidelines: In the Content tab, set Image Position (Desktop) to Left. An Image must be set; without an image the option has no visible effect.

Business Rules: The value `left` is applied only when it is one of the allowed values (`right`, `left`); anything else falls back to Right.

Rendering Rules: The block gets the class `image-left`. From 900px the body grid becomes 418 : 204 : 498; the image spans columns 1-2 and the card columns 2-3. The rules only apply with `quote-has-media`.

Responsive Behaviour: Desktop: image left, card right, overlap 204/1120. Tablet and mobile: no effect; the mobile position (Top or Bottom) applies.

SEO Impact: None beyond Variation 1; DOM order is unchanged (card before image).

Accessibility Compliance: Only the visual order changes; the reading order stays card first, then image, which keeps the meaning (WCAG 1.3.2 Meaningful Sequence).

Variation 3 — Image Bottom (Mobile and Tablet)

Variation Name: Image Position (Mobile) = Bottom.

Business Purpose: On small screens, show the quote before the portrait, for example when the quote should be read before the reader scrolls past a tall image.

Visual Example:

Figure 6: Image Bottom (mobile) variation — The Quote at 375 px with Image Position (Mobile) Bottom: Client voice and What our clients say on top, then the white card with 5rem quote marks, the quote and Anita Rao / Chief Digital Officer, Example Bank, and below it tall.svg full width at 4 : 5, its top edge overlapped by the card. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/quote-image-bottom-mobile.jpg)

Screenshot Details — Image Bottom (mobile) variation

Item	Detail
Screenshot Name	`screenshots/quote-image-bottom-mobile.jpg`

Item	Detail
Screenshot Purpose	Image Bottom (mobile) variation
Screen Description	The Quote at 375 px with Image Position (Mobile) Bottom: Client voice and What our clients say on top, then the white card with 5rem quote marks, the quote and Anita Rao / Chief Digital Officer, Example Bank, and below it tall.svg full width at 4 : 5, its top edge overlapped by the card.
Business Context	Variation 3 on a phone: the Anita Rao quote placed high on a case study page, with the statement shown before the tall portrait at 375 px.
Author Objective	Set Image Position (Mobile) to Bottom so the card comes first below 900 px, and check it at 375 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Quote	Yes	Adds the Quote to the page	Select the section in the content tree, choose Add (+) and pick Quote	Only components the section allows (section filter)
A	Eyebrow (Quote › Content)	Client voice	No	Short label above the title	A category or context, a few words	None
B	Title (Quote › Content)	What our clients say	No	Section heading above the quote	Short, descriptive heading	None
C	Quote (Quote › Content)	Working with TCS, we moved our core banking platform to the cloud in eighteen months and opened new digital services for millions of customers.	No (Recommended)	The statement shown in the card	Do not type quote marks; keep it concise	None
D	Quote Author (Quote › Content)	Anita Rao Chief Digital Officer, Example Bank	No (Recommended)	Attribution below the quote	Name on line 1, then designation and organisation	None
E	Image (Quote › Content)	Select the asset tall.svg (/en/media/tall.svg)	No	Portrait overlapped by the card	Portrait from AEM Assets	Asset reference (single)
F	Image Alt Text (Quote › Content)	Portrait of Anita Rao	No	Alternative text of the image	Describe the image; empty if decorative	None
(G)	Image Position (Mobile) (Quote › Content)	Bottom	No	Image above or below the card below 900px	Top or Bottom	top or bottom; other values fall back to top
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Under the eyebrow and title, the white card with 5rem quote marks, the quote and the two author lines comes first, inset 1rem; tall.svg follows full width at 4 : 5, its top edge covered by the card by 3rem.

- **Rendering behaviour:** The block gets image-bottom; below 900 px .quote-media gets order 1 and the card a negative 3rem bottom margin. From 900 px the option has no effect and the desktop grid (here Right) applies.
- **Publishing behaviour:** Publish to Preview shows the layout on aem.page; Publish to Live on aem.live. The setting is part of the block, so the published page carries it at every phone and tablet width.

Business Rules

- Image Position (Mobile) accepts top or bottom; any other value falls back to Top.
- Bottom applies to every width below 900 px, tablet included.
- Visual order now matches DOM order: card, then image.
- An Image must be set; without it the card simply fills the width.

Common Authoring Mistakes

Error	Root Cause	Resolution
The portrait is still above the card at 1440 px	Image Position (Mobile) expected to change the desktop layout	Use Image Position (Desktop) for 900 px and wider
Bottom checked in the editor at desktop width shows no change	The canvas is wider than 900 px	Switch the Universal Editor emulation to Mobile

Troubleshooting

- **Symptoms:** At 375 px the card is first but does not overlap the image; there is a gap between them.
- **Cause:** The image is missing (no quote-has-media), so the negative bottom margin of the card is not applied.
- **Resolution:** Select tall.svg (or the approved portrait) in Image and publish the asset and the page.
- **Verification Steps:** At 375 px the block has image-bottom and quote-has-media, and the card overlaps the image's top edge by 3rem.

Use Cases: Quotes high on a page on mobile; long portraits where the quote should stay above the fold.

Authoring Guidelines: In the Content tab, set Image Position (Mobile) to Bottom. An Image must be set.

Business Rules: The value `bottom` is applied only when it is one of the allowed values (`top`, `bottom`); anything else falls back to Top.

Rendering Rules: The block gets the class `image-bottom`. Below 900px the image gets `order: 1` (after the card) and the card gets a negative bottom margin of 3rem with 1rem side insets, so it overlaps the image's top edge.

Responsive Behaviour: Desktop: no effect (the desktop grid places card and image). Tablet and mobile: card first, image below, overlapping by 3rem.

SEO Impact: None.

Accessibility Compliance: Visual order matches the DOM order (card, then image).

Variation 4 — Grey Background

Variation Name: BG Color = Grey.

Business Purpose: Sets the quote apart from neighbouring white sections with a light grey panel, as in the Figma grey variant.

Visual Example:

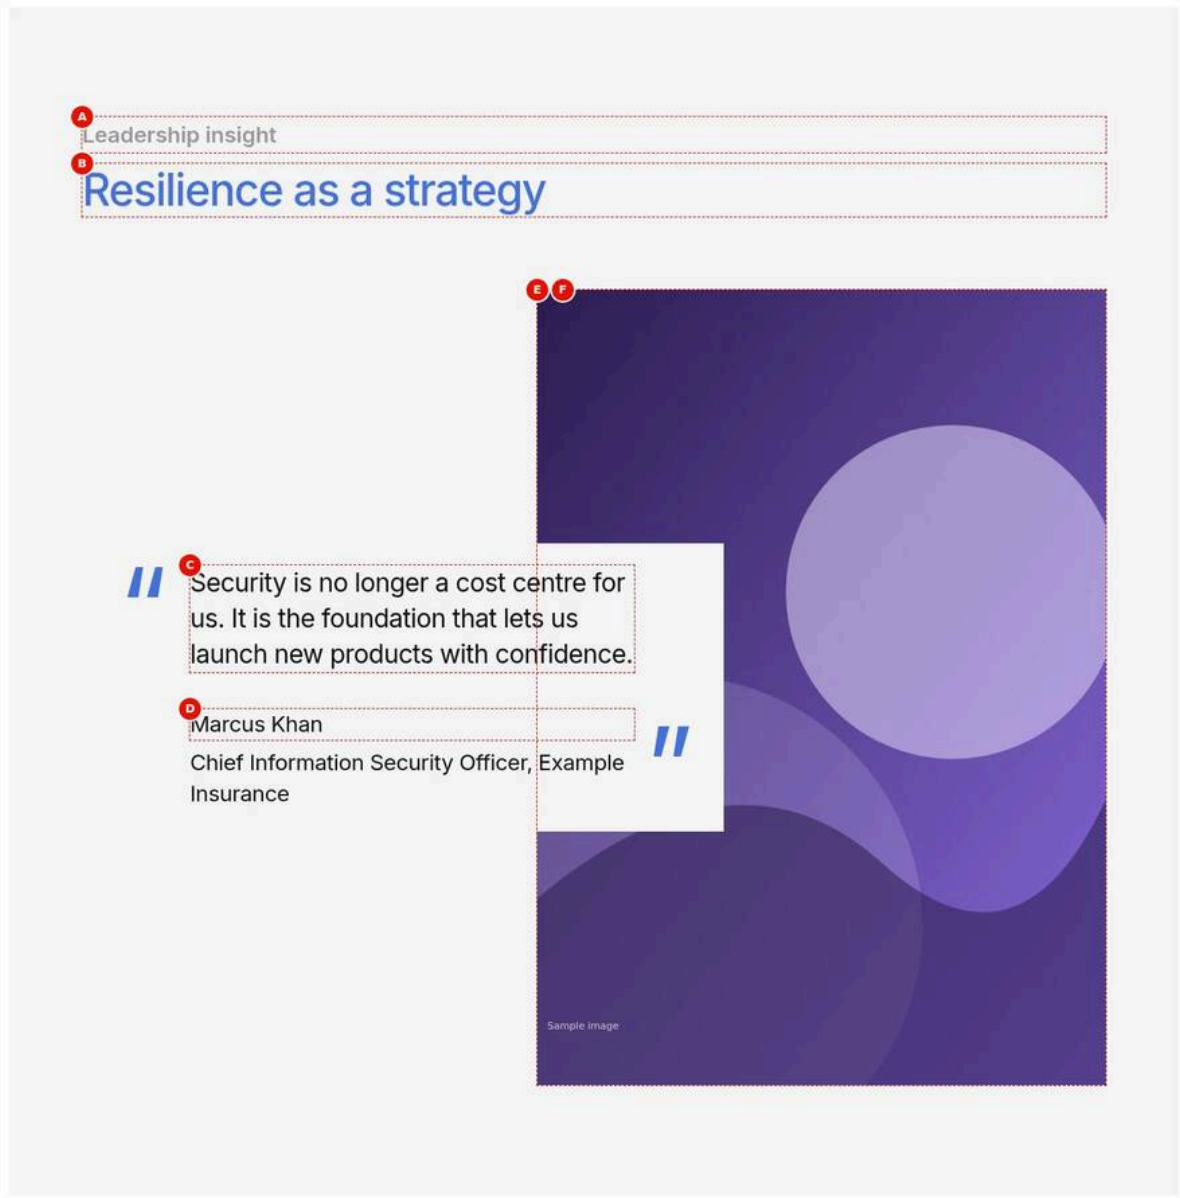

Figure 7: Grey background variation — The Quote at 1440 px with BG Color Grey: the whole block and the card are light grey with 7.5rem / 5rem padding; Leadership insight and the H2 Resilience as a strategy above the card with the security quote and Marcus Khan / Chief Information Security Officer, Example Insurance, overlapping tall.svg on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/quote-grey-background.jpg)

Screenshot Details — Grey background variation

Item	Detail
Screenshot Name	`screenshots/quote-grey-background.jpg`
Screenshot Purpose	Grey background variation
Screen Description	The Quote at 1440 px with BG Color Grey: the whole block and the card are light grey with 7.5rem / 5rem padding; Leadership insight and the H2 Resilience as a strategy above the card with the security quote and Marcus Khan / Chief Information Security Officer, Example Insurance, overlapping tall.svg on the right.
Business Context	Variation 4: a leadership insight from Marcus Khan, CISO of Example Insurance, set apart on a light grey panel between two white text sections.

Item	Detail
Author Objective	Author a Quote with eyebrow 'Leadership insight', title 'Resilience as a strategy', quote, author and portrait, and set BG Color to Grey.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Quote	Yes	Adds the Quote to the page	Select the section in the content tree, choose Add (+) and pick Quote	Only components the section allows (section filter)
A	Eyebrow (Quote › Content)	Leadership insight	No	Short label above the title	A category or context, a few words	None
B	Title (Quote › Content)	Resilience as a strategy	No	Section heading above the quote	Short, descriptive heading	None
C	Quote (Quote › Content)	Security is no longer a cost centre for us. It is the foundation that lets us launch new products with confidence.	No (Recommended)	The statement shown in the card	Do not type quote marks; keep it concise	None
D	Quote Author (Quote › Content)	Marcus Khan Chief Information Security Officer, Example Insurance	No (Recommended)	Attribution below the quote	Name on line 1, then designation and organisation	None
E	Image (Quote › Content)	Select the asset tall.svg (/en/media/tall.svg)	No	Portrait overlapped by the card	Portrait from AEM Assets	Asset reference (single)
F	Image Alt Text (Quote › Content)	Portrait of Marcus Khan	No	Alternative text of the image	Describe the image; empty if decorative	None
(G)	BG Color (Quote › Content)	Grey	No	Background of block and card	Default (white) or Grey	Only grey is applied

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The whole block is a light grey (grey-100) panel with generous padding; the card is grey too, so the quote marks, the security quote and Marcus Khan's two lines read on grey while the card overlaps the portrait on the right.
- **Rendering behaviour:** The block gets bg-grey; –quote-bg becomes –color-bg-secondary for block and card. Padding is 7.5rem top and bottom and 5rem left and right from 900 px, 2.5rem and 1.5rem below.
- **Publishing behaviour:** Publish to Preview shows the grey panel on aem.page and Publish to Live on aem.live; the portrait is published as a referenced asset. No sheet or placeholder is involved.

Business Rules

- BG Color accepts only grey; Default (empty) is the white background.
- Any earlier bg-grey class is removed before the value is applied, so switching back to Default in the editor takes effect at once.
- Padding selects of the Additional tab override the Grey padding.

- Brand blue and black text on grey-100 must keep 4.5 : 1 contrast [To be confirmed: contrast measurement on grey-100 — owner: design lead].

Common Authoring Mistakes

Error	Root Cause	Resolution
The grey panel has almost no padding	Padding top / bottom set in the Additional tab, which overrides the Grey padding	Reset the Padding selects to Default
Two grey blocks merge into one grey area	BG Color Grey on neighbouring blocks	Use Grey only between white sections

Troubleshooting

- **Symptoms:** BG Color is Grey in the properties panel, but the published quote is white.
- **Cause:** The page was not published after the change, so aem.live still serves the version without bg-grey.
- **Resolution:** Publish the page again from Universal Editor.
- **Verification Steps:** On aem.live the block has the class bg-grey and a grey background with 7.5rem vertical padding at 1440 px.

Use Cases: Pages with several white blocks in a row; emphasising a quote between two text sections.

Authoring Guidelines: In the Content tab, set BG Color to Grey.

Business Rules: Only `grey` is allowed; Default (empty) means the default white background.

Rendering Rules: The block gets the class `bg-grey` (any previous `bg-grey` class is removed first). `--quote-bg` becomes `--color-bg-secondary` (grey-100); the block and the card use it. Padding: 2.5rem top/bottom and 1.5rem left/right below 900px; 7.5rem and 5rem from 900px. The Additional tab padding selects override this padding.

Responsive Behaviour: Desktop: large padding (7.5rem / 5rem). Tablet and mobile: 2.5rem / 1.5rem.

SEO Impact: None.

Accessibility Compliance: Black text on grey-100 and brand blue on grey-100 must keep 4.5 : 1 contrast [To be confirmed: contrast measurement on grey-100 — owner: design lead].

Variation 5 — Text Only (No Image)

Variation Name: Quote without an image.

Business Purpose: A pull quote when no suitable image is available, or in articles where an image would compete with other media.

Visual Example:

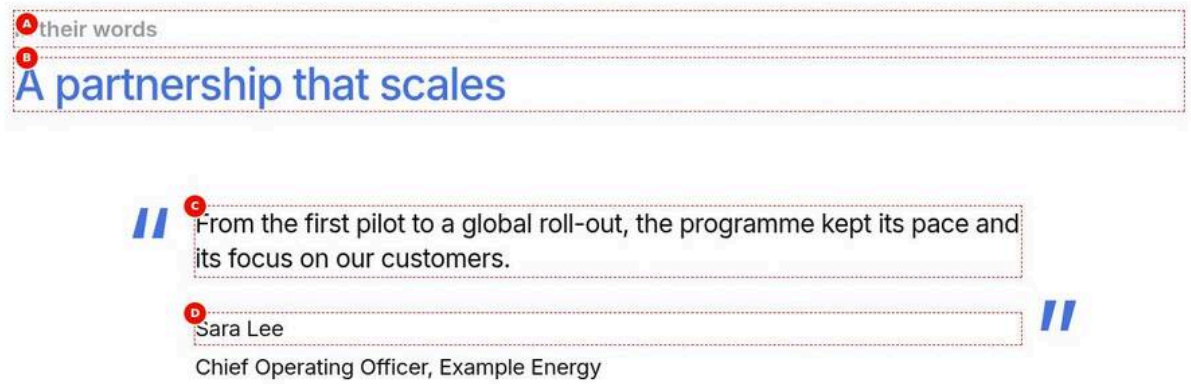

Figure 8: Text-only variation — The Quote at 1440 px without an image: In their words and the H2 A partnership that scales above a white card centred in the 70rem body, with the large blue quote marks around the roll-out quote and Sara Lee / Chief Operating Officer, Example Energy. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/quote-text-only.jpg)

Screenshot Details — Text-only variation

Item	Detail
Screenshot Name	`screenshots/quote-text-only.jpg`
Screenshot Purpose	Text-only variation
Screen Description	The Quote at 1440 px without an image: In their words and the H2 A partnership that scales above a white card centred in the 70rem body, with the large blue quote marks around the roll-out quote and Sara Lee / Chief Operating Officer, Example Energy.
Business Context	Variation 5: a pull quote from Sara Lee of Example Energy for an article or blog post where no approved portrait is available.
Author Objective	Author a Quote with eyebrow, title, quote and author only, leaving Image empty.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Quote	Yes	Adds the Quote to the page	Select the section in the content tree, choose Add (+) and pick Quote	Only components the section allows (section filter)
A	Eyebrow (Quote › Content)	In their words	No	Short label above the title	A category or context, a few words	None
B	Title (Quote › Content)	A partnership that scales	No	Section heading above the quote	Short, descriptive heading	None
C	Quote (Quote › Content)	From the first pilot to a global roll-out, the programme kept its pace and its focus on our customers.	No (Recommended)	The statement shown in the card	Do not type quote marks; keep it concise	None
D	Quote Author (Quote › Content)	Sara Lee Chief Operating Officer, Example Energy	No (Recommended)	Attribution below the quote	Name on line 1, then designation and organisation	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** 'In their words' and 'A partnership that scales' above a white card with the large blue opening and closing marks around the roll-out quote and 'Sara Lee' / 'Chief Operating Officer, Example Energy'; no image.
- **Rendering behaviour:** No .quote-media element and no quote-has-media class; from 900 px the card fills the centred body up to 70rem with 4.125rem and 2.875rem mark columns and 1.5rem / 2.5rem padding. Below 900 px it fills the block width.
- **Publishing behaviour:** Publish to Preview shows the pull quote on aem.page and Publish to Live on aem.live; with no image there is no asset to publish with the page.

Business Rules

- Leave Image empty; Image Alt Text, Image Position (Desktop) and Image Position (Mobile) then have no effect.
- quote-has-media is set only when Image holds a picture.
- The card needs Quote or Quote Author; with neither, only the eyebrow and title render.
- Keep the heading level of 'A partnership that scales' consistent with the article outline (H2 default).

Common Authoring Mistakes

Error	Root Cause	Resolution
An empty white area appears beside the quote	An asset that is not a picture, or an unpublished one, selected in Image	Clear the Image field for a text-only quote
The card is missing and only the title shows	The quote text was entered in Title or Eyebrow instead of Quote	Move the statement into Quote

Troubleshooting

- **Symptoms:** Only 'In their words' and 'A partnership that scales' appear; the card with the quote is missing.
- **Cause:** Quote and Quote Author are empty (for example the text was pasted into Title), so no figure.quote-card is built.
- **Resolution:** Enter the statement in Quote and the name and designation in Quote Author, then publish.
- **Verification Steps:** The preview page shows the card with the blue quote marks, and the block contains a blockquote and a figcaption.

Use Cases: Article and blog pull quotes; quotes from people without an approved portrait.

Authoring Guidelines: Leave Image empty. Image Alt Text and both Image Position selects then have no effect.

Business Rules: The class `quote-has-media` is only set when the Image field holds a picture.

Rendering Rules: No `.quote-media` element is created. The card has no negative margin. From 900px the card uses the 4.125rem / 2.875rem quote mark columns and 1.5rem / 2.5rem padding inside the 70rem centred body.

Responsive Behaviour: Desktop: the card fills the centred body up to 70rem. Tablet and mobile: the card fills the block width with 1.5rem padding.

SEO Impact: As Variation 1, without an image.

Accessibility Compliance: As Variation 1.

6.12.4 Authoring Experience

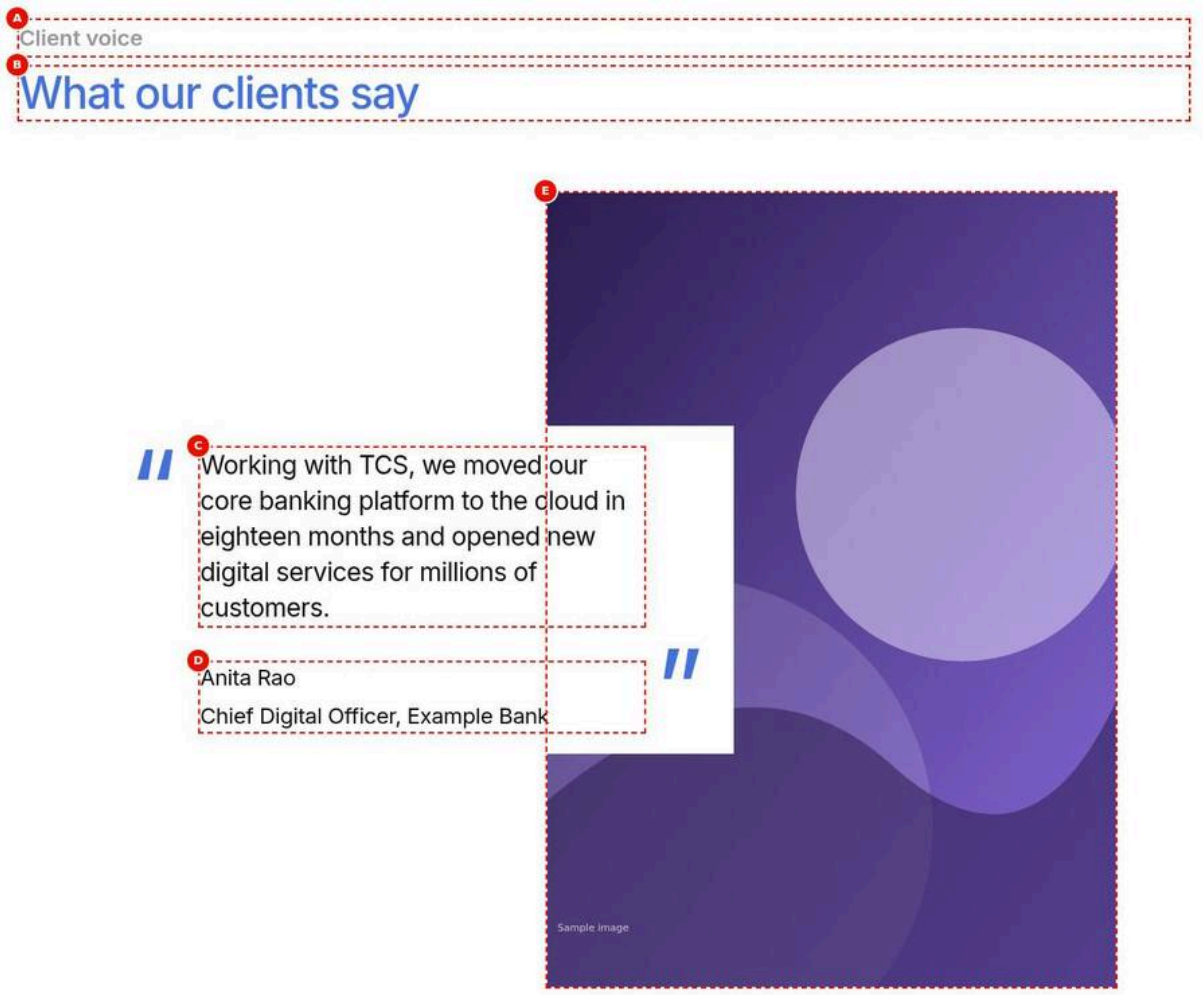

Figure 9: Universal Editor canvas — The Quote in Universal Editor edit mode at 1440 px, selected, with letters A on the eyebrow Client voice, B on the H2 What our clients say, C on the quote text, D on Anita Rao / Chief Digital Officer, Example Bank and E on the portrait tall.svg, which the card overlaps on the right. An annotated preview, not a Universal Editor screenshot. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/quote-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/quote-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	The Quote in Universal Editor edit mode at 1440 px, selected, with letters A on the eyebrow Client voice, B on the H2 What our clients say, C on the quote text, D on Anita Rao / Chief Digital Officer, Example Bank and E on the portrait tall.svg, which the card overlaps on the right. An annotated preview, not a Universal Editor screenshot.
Business Context	The Universal Editor view of the Anita Rao quote, used to show authors which canvas element each field fills (letters A to E).
Author Objective	Select the Quote block in edit mode and identify Eyebrow, Title, Quote, Quote Author and Image on the canvas.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Quote	Yes	Adds the Quote to the page	Select the section in the content tree, choose Add (+) and pick Quote	Only components the section allows (section filter)
—	Eyebrow (Quote › Content)	Client voice	No	Short label above the title	A category or context, a few words	None
—	Title (Quote › Content)	What our clients say	No	Section heading above the quote	Short, descriptive heading	None
—	Quote (Quote › Content)	Working with TCS, we moved our core banking platform to the cloud in eighteen months and opened new digital services for millions of customers.	No (Recommended)	The statement shown in the card	Do not type quote marks; keep it concise	None
—	Quote Author (Quote › Content)	Anita Rao Chief Digital Officer, Example Bank	No (Recommended)	Attribution below the quote	Name on line 1, then designation and organisation	None
—	Image (Quote › Content)	Select the asset tall.svg (/en/media/tall.svg)	No	Portrait overlapped by the card	Portrait from AEM Assets	Asset reference (single)
—	Image Alt Text (Quote › Content)	Portrait of Anita Rao	No	Alternative text of the image	Describe the image; empty if decorative	None
—	Select (Universal Editor canvas)	The Quote block (edit mode)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The selected Quote block on the canvas with A on 'Client voice', B on 'What our clients say', C on the quote text, D on the author lines and E on the portrait.
- **Rendering behaviour:** In edit mode the data-aue and data-richtext attributes are moved to the rendered eyebrow, title, blockquote, figcaption and picture, so Quote and Quote Author are editable in place; every change re-decorates the block.
- **Publishing behaviour:** Edits in the canvas are saved to AEM at once but are not public until Publish to Preview (aem.page) or Publish to Live (aem.live) is selected.

Business Rules

- Quote (C) and Quote Author (D) are rich text and can be edited in place on the canvas.
- The Image (E) is changed only through the properties panel (asset picker).
- A block with Hide block on is shown faded with an outline in edit mode, and not on the page.
- The panel has two tabs, Content and Additional; the layout options are in Content.

Common Authoring Mistakes

Error	Root Cause	Resolution
Typing on the canvas over the title does not change the heading level	The level is set by Title Type, not by in-place formatting	Choose the level in Title Type
Changes are visible in the editor but not on aem.live	The page was edited but not published	Select Publish and publish to Live

Troubleshooting

- **Symptoms:** Clicking the quote text on the canvas opens no inline editor.
- **Cause:** The block was not selected first, or the click landed on the CSS quote mark, which is not part of the rich text.
- **Resolution:** Select the Quote block in the content tree, then click inside the quote text (C).
- **Verification Steps:** The rich text toolbar appears and the edit is saved to the Quote field in the properties panel.

Annotations:

- A = Eyebrow (text above the title)
- B = Title (heading at the Title Type level)
- C = Quote (rich text in the card, editable in place)
- D = Quote Author (rich text below the quote, editable in place)
- E = Image (portrait, selected from AEM Assets)

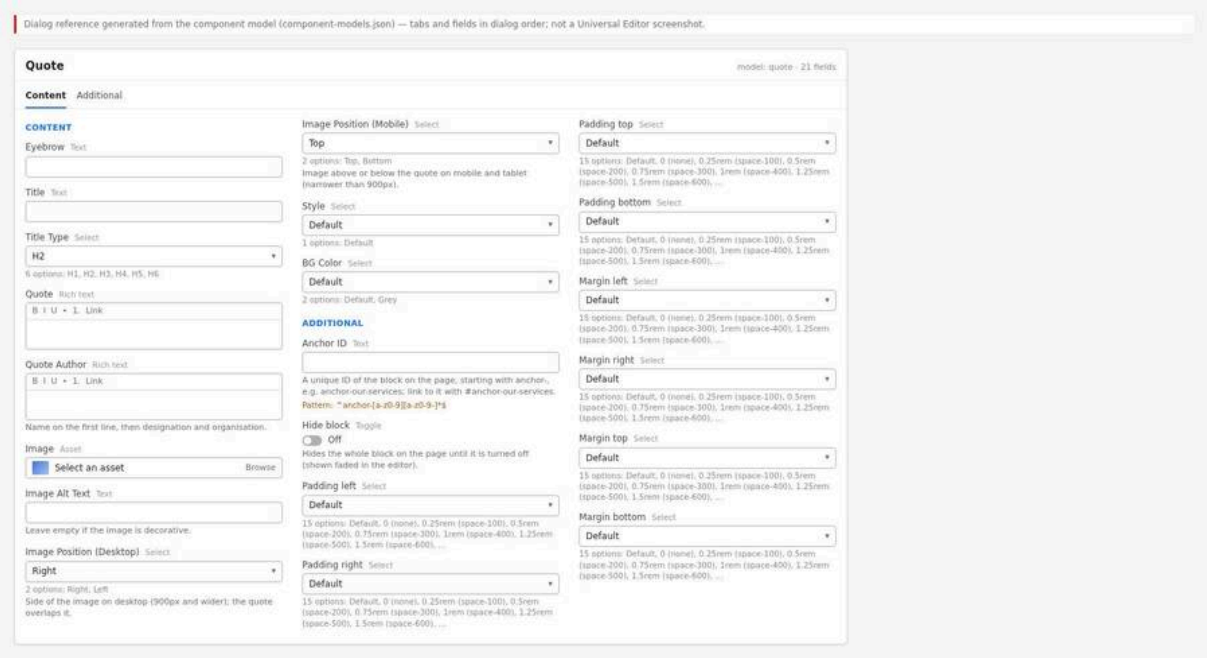

Figure 10: Properties panel — The Universal Editor properties panel of the Quote block showing the Content tab with all fields and the Additional tab header. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/quote-properties-panel.jpg)

The properties panel has two tabs:

- **Content:** Eyebrow (text), Title (text), Title Type (select H1-H6, default H2), Quote (rich text), Quote Author (rich text; "Name on the first line, then designation and organisation."), Image (asset reference), Image Alt Text (text; "Leave empty if the image is decorative."), Image Position (Desktop) (Right / Left), Image Position (Mobile) (Top / Bottom), Style (Default only) and BG Color (Default / Grey).
- **Additional:** Anchor ID (validated text), Hide block (toggle), Padding left, Padding right, Padding top, Padding bottom, Margin left, Margin right, Margin top and Margin bottom (selects of the spacing tokens).

6.12.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites, open the locale's site (for example `/content/tcs-corp/us/en`), select the page and choose Edit, which opens it in Universal Editor.

Expected Result: The page is shown in the Universal Editor canvas in edit mode.

Steps — Open the page: AEM Sites console with the page selected and the Edit action highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Sites › tcs-corp › us › en
2	AEM Sites console	Select	The page /content/tcs-corp/us/en/about
3	AEM Sites console toolbar	Edit	Select Edit (opens the page in Universal Editor)

Step 2 — Select the section

Action: In the canvas or the content tree, select the section that will hold the quote.

Expected Result: The section is highlighted and the Add (+) action is available.

Steps — Select the section: A section selected in the content tree with the Add button visible.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Main › Section	Select the section that will hold the quote
2	Universal Editor › Content tree	Section	Check that the Add (+) action is shown

Step 3 — Add the Quote block

Action: Select Add (+) and choose Quote from the component list.

Expected Result: An empty Quote block is added, with Title Type = H2, Image Position (Desktop) = Right and Image Position (Mobile) = Top preset. The block shows no content yet.

Steps — Add the block: The component picker with Quote highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section › Add (+)	Open the component list
2	Component list	Blocks	Quote
3	Quote › Content	Title Type, Image Position (Desktop), Image Position (Mobile)	Preset: H2, Right, Top

Step 4 — Fill the header

Action: In the Content tab, enter the Eyebrow (optional), the Title (optional) and choose the Title Type that fits the page's heading outline.

Expected Result: The eyebrow and title appear above the card.

Steps — Eyebrow and title: Properties panel with Eyebrow, Title and Title Type filled; the canvas shows them above the card.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Select	Quote
2	Quote › Content	Eyebrow	Client voice
3	Quote › Content	Title	What our clients say
4	Quote › Content	Title Type	H2

Step 5 — Write the quote and the author

Action: Enter the statement in Quote, without typing quotation marks (the block adds them). In Quote Author, put the name on the first line and the designation and organisation on the next line(s).

Expected Result: The card shows the quote between large blue quote marks, with the author below it.

Steps — Quote and author: Rich text editor with the quote; the canvas showing the quote card with the author lines.

Step	Where	Field / control	Value / action
1	Quote › Content	Quote	Working with TCS, we moved our core banking platform to the cloud in eighteen months and opened new digital services for millions of customers. (no quotation marks)
2	Quote › Content	Quote Author	Line 1: Anita Rao
3	Quote › Content	Quote Author	Line 2: Chief Digital Officer, Example Bank

Step 6 — Add the image

Action: In Image, select a portrait from AEM Assets. Enter Image Alt Text describing it (for example "Portrait of Jane Doe"), or leave it empty if the image is decorative.

Expected Result: The image appears and the card overlaps it.

Steps — Image and alt text: Asset picker with a portrait selected, and the Image Alt Text field filled.

Step	Where	Field / control	Value / action
1	Quote › Content	Image	Open the asset picker (Select)
2	Asset picker	Asset	Select the portrait tall.svg (/en/media/tall.svg)
3	Quote › Content	Image Alt Text	Portrait of Anita Rao

Step 7 — Set the layout options

Action: Choose Image Position (Desktop) (Right or Left), Image Position (Mobile) (Top or Bottom) and BG Color (Default or Grey). Leave Style = Default.

Expected Result: The canvas updates; desktop and mobile positions can be checked by resizing the canvas (emulation) in Universal Editor.

Steps — Layout options: The Image Position and BG Color selects open in the properties panel.

Step	Where	Field / control	Value / action
1	Quote › Content	Image Position (Desktop)	Right (or Left)
2	Quote › Content	Image Position (Mobile)	Top (or Bottom)
3	Quote › Content	BG Color	Default (or Grey)
4	Quote › Content	Style	Default (keep)
5	Universal Editor toolbar	Emulation	Desktop, then Mobile to check both positions

Step 8 — Fill the Additional tab (optional)

Action: Open the Additional tab. Enter an Anchor ID if other content links to the quote (for example `anchor-client-voice`). Adjust padding and margin only if the design asks for it. Use Hide block to prepare the block without showing it on the page.

Expected Result: The Anchor ID is accepted only if it matches the pattern; spacing changes are visible on the canvas; a hidden block appears faded with a dashed outline in edit mode.

Steps — Additional tab: Additional tab with Anchor ID, Hide block and spacing selects.

Step	Where	Field / control	Value / action
1	Quote › Additional	Anchor ID	anchor-client-voice
2	Quote › Additional	Hide block	Off
3	Quote › Additional	Padding / Margin selects	Default (change only if the design asks for it)

Step 9 — Preview

Action: Switch Universal Editor to Preview mode and check the block at desktop, tablet and mobile widths.

Expected Result: The block renders as on the live site; Hide block blocks are not shown.

Steps — Preview: Universal Editor in Preview mode with the Quote block rendered.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	Universal Editor toolbar	Emulation	Desktop (1440 px), Tablet (768 px), Mobile (375 px)
3	Canvas	Check	Card overlaps the image; hidden blocks are not shown

Step 10 — Validate

Action: Run the Validation Process checklist below.

Expected Result: All checks pass.

Steps — Validation: The block on the preview URL with the browser's accessibility tree showing the blockquote and figcaption.

Step	Where	Field / control	Value / action
1	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/about
2	Browser developer tools	Accessibility tree	Select the Quote block: heading (H2), blockquote, figcaption
3	Browser developer tools	Elements	Image alt = "Portrait of Anita Rao"; no typed quotation marks in the quote
4	Browser developer tools	Device mode	375 px, 768 px, 1440 px; image position switches at 900 px

Step 11 — Publish

Action: Select Publish in Universal Editor and publish the page (to preview first if your process requires it, then live).

Expected Result: The page is published; the change is visible on `https://main--tcs-corp--sradha-tcs.aem.live/{locale}/{path}` after the CDN refresh.

Steps — Publish: The Universal Editor Publish dialog with the page selected.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Select Publish
2	Publish dialog	Pages	Keep the current page (and its referenced assets) selected
3	Publish dialog	Destination	Publish to Live (Publish to Preview first if your process requires it)

Step	Where	Field / control	Value / action
4	Publish dialog	Publish	Select Publish
5	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.live/en/{path} after the CDN refresh

Preview Process

1. In Universal Editor, use Preview mode for a quick check of the rendering.
2. Publish to preview (where available) and open `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}`.
3. Check the block at 375px, 768px and 1440px wide (browser developer tools device mode).
4. Check that the desktop image position switches at 900px.

Publishing Process

1. Publish the page from Universal Editor (or from the Sites console with Quick Publish / Manage Publication).
2. The Edge Delivery live URL updates once the content is published; the Edge Delivery CDN serves the new version after its cache is purged by the publish.
3. Referenced images from AEM Assets are published with the page.

Validation Process

- ☐ The title uses the right heading level for the page outline (only one H1 per page).
- ☐ The quote text contains no typed quotation marks (the block adds them).
- ☐ The author's name is on the first line and the designation and organisation follow.
- ☐ The image has meaningful alt text, or none if decorative.
- ☐ The portrait's subject is not cut off by the 4 : 5 (mobile) or 622 : 869 (desktop) crop.
- ☐ The card overlaps the image as expected at desktop and mobile widths.
- ☐ The chosen Image Position (Desktop / Mobile) and BG Color are as designed.
- ☐ Anchor ID (if set) is unique on the page and links to it with `#anchor-...` work.
- ☐ Hide block is off when the quote should be visible.
- ☐ Quote approval and usage rights of the quote and portrait are documented [To be confirmed: approval process for client quotes — owner: content lead].

Rollback Process

1. In AEM Sites, open the page's version history (Timeline or Versions) and restore the version before the change, or undo the change in Universal Editor.
2. To remove the quote quickly without deleting it, switch on Hide block (Additional tab).
3. Publish the page again; the Edge Delivery live page updates after publishing.
4. If the whole page must be withdrawn, unpublish it from the Sites console.

The walkthroughs below repeat the steps above for each variation of chapter 6.12.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Default (Image Right, Image Top on Mobile)

Reproduces the screenshot `screenshots/quote-default-image-right.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Quote

Action: Select the section in the content tree, choose **Add (+)** and pick **Quote**.

Expected Result: An empty Quote is added with Title Type H2, Image Position (Desktop) Right and Image Position (Mobile) Top preset.

Step 3 — Fill in Quote › Content

Action: Select **Quote** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Customer story; **Title** (B) = Transformation in their words; **Quote** (C) = The new data platform gives our teams one view of every customer, and decisions that took weeks now take hours; **Quote Author** (D) = Marcus Khan Head of Data, Example Retail Group; **Image** (E) = Select the asset tall.svg (/en/media/tall.svg); **Image Alt Text** (F) = Portrait of Marcus Khan.

Expected Result: 'Customer story' and 'Transformation in their words' appear above the card; the quote and Marcus Khan's two lines fill the card, which overlaps the portrait on the right.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: On a white background the card with the blue quote marks, the data platform quote and 'Marcus Khan' / 'Head of Data, Example Retail Group' sits on the left and overlaps the portrait on the right by about 18 %.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the quote on aem.page and Publish to Live on aem.live; the portrait is published as a referenced asset with the page. The block reads no sheet or placeholder, so nothing else needs publishing.

Step 6 — Verify

Action: On the live page check: Inspect the block on aem.page: it has quote-has-media and a .quote-media element, and the card overlaps the image at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Image Left (Desktop)

Reproduces the screenshot `screenshots/quote-image-left.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Quote

Action: Select the section in the content tree, choose **Add (+)** and pick **Quote**.

Expected Result: An empty Quote is added with Title Type H2, Image Position (Desktop) Right and Image Position (Mobile) Top preset.

Step 3 — Fill in Quote › Content

Action: Select **Quote** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Partner perspective; **Title** (B) = Built on shared ambition; **Quote** (C) = Our joint engineering teams delivered the new connected factory platform across twelve plants without a single day of lost production; **Quote Author** (D) = Sara Lee VP Operations, Example Manufacturing; **Image** (E) = Select the asset tall.svg (/en/media/tall.svg); **Image Alt Text** (F) = Portrait of Sara Lee; **Image Position (Desktop)** (G) = Left.

Expected Result: With Image Position (Desktop) Left the portrait moves to the left and the card with Sara Lee's quote overlaps its right edge.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Under 'Partner perspective' and 'Built on shared ambition', the portrait is on the left and the white card with the quote and 'Sara Lee' / 'VP Operations, Example Manufacturing' sits on the right, overlapping the image's right edge.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview and Publish to Live deliver the mirrored layout on aem.page and aem.live; the portrait must be published with the page. The DOM order (card before image) is unchanged.

Step 6 — Verify

Action: On the live page check: The block has the class image-left and the image spans the first two grid columns at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Image Bottom (Mobile and Tablet)

Reproduces the screenshot `screenshots/quote-image-bottom-mobile.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Quote

Action: Select the section in the content tree, choose **Add (+)** and pick **Quote**.

Expected Result: An empty Quote is added with Title Type H2, Image Position (Desktop) Right and Image Position (Mobile) Top preset.

Step 3 — Fill in Quote › Content

Action: Select **Quote** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Client voice; **Title** (B) = What our clients say; **Quote** (C) = Working with TCS, we moved our core banking platform to the cloud in eighteen months and opened new digital services for millions of customers; **Quote Author** (D) = Anita Rao Chief Digital Officer, Example Bank; **Image** (E) = Select the asset tall.svg (/en/media/tall.svg); **Image Alt Text** (F) = Portrait of Anita Rao; **Image Position (Mobile)** (G) = Bottom.

Expected Result: With Image Position (Mobile) Bottom the canvas still shows the desktop overlap at full width; the change shows only below 900 px.

Step 4 — Preview

Action: Screen width: 375 px (mobile).

Expected Result: At 375 px the card with the quote comes first and the portrait follows below, its top edge overlapped by the card.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Under the eyebrow and title, the white card with 5rem quote marks, the quote and the two author lines comes first, inset 1rem; tall.svg follows full width at 4 : 5, its top edge covered by the card by 3rem.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the layout on aem.page; Publish to Live on aem.live. The setting is part of the block, so the published page carries it at every phone and tablet width.

Step 7 — Verify

Action: On the live page check: At 375 px the block has image-bottom and quote-has-media, and the card overlaps the image's top edge by 3rem.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Grey Background

Reproduces the screenshot `screenshots/quote-grey-background.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Quote

Action: Select the section in the content tree, choose **Add (+)** and pick **Quote**.

Expected Result: An empty Quote is added with Title Type H2, Image Position (Desktop) Right and Image Position (Mobile) Top preset.

Step 3 — Fill in Quote › Content

Action: Select **Quote** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Leadership insight; **Title** (B) = Resilience as a strategy; **Quote** (C) = Security is no longer a cost centre for us. It is the foundation that lets us launch new products with confidence; **Quote Author** (D) = Marcus Khan Chief Information Security Officer, Example Insurance; **Image** (E) = Select the asset tall.svg (/en/media/tall.svg); **Image Alt Text** (F) = Portrait of Marcus Khan; **BG Color** (G) = Grey.

Expected Result: With BG Color Grey the block and the card turn light grey with large padding, and the card with the security quote overlaps the portrait.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The whole block is a light grey (grey-100) panel with generous padding; the card is grey too, so the quote marks, the security quote and Marcus Khan's two lines read on grey while the card overlaps the portrait on the right.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the grey panel on aem.page and Publish to Live on aem.live; the portrait is published as a referenced asset. No sheet or placeholder is involved.

Step 6 — Verify

Action: On the live page check: On aem.live the block has the class bg-grey and a grey background with 7.5rem vertical padding at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Text Only (No Image)

Reproduces the screenshot `screenshots/quote-text-only.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Quote

Action: Select the section in the content tree, choose **Add (+)** and pick **Quote**.

Expected Result: An empty Quote is added with Title Type H2, Image Position (Desktop) Right and Image Position (Mobile) Top preset.

Step 3 — Fill in Quote › Content

Action: Select **Quote** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = In their words; **Title** (B) = A partnership that scales; **Quote** (C) = From the first pilot to a global roll-out, the programme kept its pace and its focus on our customers; **Quote Author** (D) = Sara Lee Chief Operating Officer, Example Energy.

Expected Result: The eyebrow and title appear above a centred card holding the quote and Sara Lee's two lines, without an image.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: 'In their words' and 'A partnership that scales' above a white card with the large blue opening and closing marks around the roll-out quote and 'Sara Lee' / 'Chief Operating Officer, Example Energy'; no image.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the pull quote on aem.page and Publish to Live on aem.live; with no image there is no asset to publish with the page.

Step 6 — Verify

Action: On the live page check: The preview page shows the card with the blue quote marks, and the block contains a blockquote and a figcaption.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.12.6 Authorable Field Specification

Model `quote` — Content tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Eyebrow (`eyebrow`)	text	No	No	empty	Short label above the title	A category or context, a few words	None	Client voice
Title (`title`)	text	No	No	empty	Section heading above the quote	Short, descriptive heading	None	What our clients say
Title Type (`titleType`)	select	No	No	h2	Heading level of the title	Choose the level that fits the outline	One of h1-h6 (select)	h2
Quote (`quote`)	rich-text	No (Recommended)	No	empty	The statement shown in the card	Do not type quote marks; keep it concise	None	TCS helped us transform our data estate in record time.
Quote Author (`author`)	rich-text	No (Recommended)	No	empty	Attribution below the quote	Name on line 1, then designation and organisation	None	Jane Doe; Chief Digital Officer, Example Bank
Image (`image`)	reference	No	No	empty	Portrait overlapped by the card	Portrait from AEM Assets	Asset reference (single)	/content/dam/tcs-corp/people/jane-doe.jpg
Image Alt Text (`imageAlt`)	text	No	No	empty	Alternative text of the image	Describe the image; empty if decorative	None	Portrait of Jane Doe
Image Position (Desktop) (`imagePosition`)	select	No	No	right	Side of the image from 900px	Right or Left	right or left; other values fall back to right	left
Image Position (Mobile) (`imagePositionMobile`)	select	No	No	top	Image above or below the card below 900px	Top or Bottom	top or bottom; other values fall back to top	bottom
Style (`classes`)	select	No	No	Default (empty)	Reserved for style variants	Leave Default	Only Default exists	Default
BG Color (`bgColor`)	select	No	No	Default (empty)	Background of block and card	Default (white) or Grey	Only grey is applied	grey

Model `quote` — Additional tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Anchor ID (`classes_anchor`)	text	No	No	empty	Id for in-page links	Start with anchor-, lower case	Enforced: regExp `^anchor-[a-z0-9][a-z0-9-]*$`	anchor-client-voice
Hide block (`classes_hideblock`)	boolean	No	No	false	Hide the block on the page	Use to prepare or temporarily remove	Toggle	false
Padding left (`classes_paddingleft`)	select	No	No	Default (empty)	Left padding from the spacing tokens	Only when the design asks	One of 15 options (pl-0 … pl-3000)	pl-400
Padding right (`classes_paddingright`)	select	No	No	Default (empty)	Right padding	Only when the design asks	One of 15 options (pr-0 … pr-3000)	pr-400
Padding top (`classes_paddingtop`)	select	No	No	Default (empty)	Top padding	Only when the design asks	One of 15 options (pt-0 … pt-3000)	pt-1000
Padding bottom (`classes_paddingbottom`)	select	No	No	Default (empty)	Bottom padding	Only when the design asks	One of 15 options (pb-0 … pb-3000)	pb-1000
Margin left (`classes_marginleft`)	select	No	No	Default (empty)	Left margin	Only when the design asks	One of 15 options (ml-0 … ml-3000)	ml-0
Margin right (`classes_marginright`)	select	No	No	Default (empty)	Right margin	Only when the design asks	One of 15 options (mr-0 … mr-3000)	mr-0
Margin top (`classes_margintop`)	select	No	No	Default (empty)	Top margin	Only when the design asks	One of 15 options (mt-0 … mt-3000)	mt-1600
Margin bottom (`classes_marginbottom`)	select	No	No	Default (empty)	Bottom margin	Only when the design asks	One of 15 options (mb-0 … mb-3000)	mb-1600

The 15 options of every padding and margin select are: Default (empty), 0 (none), 0.25rem (space-100), 0.5rem (space-200), 0.75rem (space-300), 1rem (space-400), 1.25rem (space-500), 1.5rem (space-600), 2rem (space-800), 2.5rem (space-1000), 3rem (space-1200), 4rem (space-1600), 5rem (space-2000), 6rem (space-2400) and 7.5rem (space-3000). The values are the class prefix (`pl`, `pr`, `pt`, `pb`, `ml`, `mr`, `mt`, `mb`) plus the token number, for example `pt-1000`.

Field details

Eyebrow (`eyebrow`)

- Purpose: A short label above the title that gives context (for example the topic or the type of voice).
- Allowed Values: Plain text.
- Character Limits: None enforced. Recommended: up to 40 characters.
- Business Rules: Rendered as `<p class="quote-eyebrow">` only when it has text.
- Dependency Rules: Independent of Title; an eyebrow can be shown without a title.
- Visibility Rules: Always visible in the dialog (no `condition`).
- Sample Content: “Client voice”.

Title (`title`)

- Purpose: The heading of the quote section.
- Allowed Values: Plain text.
- Character Limits: None enforced. Recommended: up to 60 characters (one or two lines at 3rem).
- Business Rules: Rendered only when it has text, as the heading level of Title Type.

- Dependency Rules: Title Type sets the level; without a title, Title Type has no effect.
- Visibility Rules: Always visible.
- Sample Content: “What our clients say”.

Title Type (`titleType`)

- Purpose: Sets the HTML heading level of the title.
- Allowed Values: H1, H2, H3, H4, H5, H6 (values h1-h6). Default h2.
- Character Limits: Not applicable.
- Business Rules: An invalid or missing value falls back to a heading level found in the title cell, else H2 (`buildHeading`). The visual style is the same for every level.
- Dependency Rules: Only used when Title has text.
- Visibility Rules: Always visible.
- Sample Content: h2.

Quote (`quote`)

- Purpose: The statement shown in the card.
- Allowed Values: Rich text (paragraphs, bold, italic, links).
- Character Limits: None enforced. Recommended: up to 300 characters (about 3 to 6 lines on desktop).
- Business Rules: Rendered as `<blockquote class="quote-text">` when it has text. Paragraphs inside are spaced 0.5rem apart. A link alone in its own paragraph is turned into a link button by the content buttons decorator.
- Dependency Rules: The card is created when Quote or Quote Author has text.
- Visibility Rules: Always visible.
- Sample Content: “TCS helped us transform our data estate in record time.”

Quote Author (`author`)

- Purpose: Attribution of the quote.
- Allowed Values: Rich text; name on the first line, then designation and organisation.
- Character Limits: None enforced. Recommended: name up to 40 characters, designation and organisation up to 80 characters.
- Business Rules: Rendered as `<figcaption class="quote-author">` when it has text; all lines use the same style (1.125rem / 1.5rem), paragraphs 0.5rem apart.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: “Jane Doe” / “Chief Digital Officer, Example Bank”.

Image (`image`)

- Purpose: The portrait the card overlaps.
- Allowed Values: One image asset from AEM Assets.
- Character Limits: Not applicable.
- Business Rules: When the cell holds a picture, the block gets `quote-has-media` and the overlap layout. Cropped to 4 : 5 below 900px and 622 : 869 from 900px.
- Dependency Rules: Image Alt Text, Image Position (Desktop) and Image Position (Mobile) only have an effect with an image.
- Visibility Rules: Always visible.
- Sample Content: `/content/dam/tcs-corp/people/jane-doe.jpg`.

Image Alt Text (`imageAlt`)

- Purpose: Alternative text of the image for screen readers and search engines.
- Allowed Values: Plain text; empty for a decorative image.

- Character Limits: None enforced. Recommended: up to 125 characters.
- Business Rules: When set, it replaces the image's alt; when empty and the image has no alt, `alt=""` is set (decorative).
- Dependency Rules: Requires Image.
- Visibility Rules: Always visible.
- Sample Content: "Portrait of Jane Doe".

Image Position (Desktop) (`imagePosition`)

- Purpose: The side of the image from 900px.
- Allowed Values: Right (right, default), Left (left).
- Character Limits: Not applicable.
- Business Rules: Left adds `image-left`; any other value is treated as Right.
- Dependency Rules: Requires Image.
- Visibility Rules: Always visible.
- Sample Content: left.

Image Position (Mobile) (`imagePositionMobile`)

- Purpose: The image above or below the card below 900px.
- Allowed Values: Top (top, default), Bottom (bottom).
- Character Limits: Not applicable.
- Business Rules: Bottom adds `image-bottom`; any other value is treated as Top.
- Dependency Rules: Requires Image.
- Visibility Rules: Always visible.
- Sample Content: bottom.

Style (`classes`)

- Purpose: Reserved for future style variants of the block.
- Allowed Values: Default (empty) only.
- Character Limits: Not applicable.
- Business Rules: Adds no class today.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: Default.

BG Color (`bgColor`)

- Purpose: The background colour of the block and the card.
- Allowed Values: Default (empty, white), Grey (grey).
- Character Limits: Not applicable.
- Business Rules: Grey adds `bg-grey` (grey-100 background and the block's own padding).
- Dependency Rules: The Additional tab padding overrides the grey padding.
- Visibility Rules: Always visible.
- Sample Content: grey.

Anchor ID (`classes_anchor`)

- Purpose: Gives the block an id for links like `#anchor-client-voice`.
- Allowed Values: `anchor-` followed by lower-case letters, digits and hyphens.
- Character Limits: None enforced. Recommended: up to 40 characters.
- Business Rules: Enforced by the model regExp `^anchor-[a-z0-9][a-z0-9-]*$` (error "Start with anchor-, then lower-case letters, digits and hyphens."). The block options decorator sets it as the block id; a duplicate on the page gets `-2`, `-3`, … appended.

- Dependency Rules: The id is also used as the block's data layer component id.
- Visibility Rules: Always visible.
- Sample Content: `anchor-client-voice`.

Hide block (`classes_hideblock`)

- Purpose: Hides the whole block on the page without deleting it.
- Allowed Values: On / Off (default Off).
- Character Limits: Not applicable.
- Business Rules: Adds the class `hideblock`; the block and its wrapper are not displayed outside edit mode; in Universal Editor edit mode the block is shown at 45% opacity with a dashed outline.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: Off.

Padding left (`classes_paddingleft`)

- Purpose: Left inner spacing of the block.
- Allowed Values: The 15 options listed above (class `pl-{token}`).
- Character Limits: Not applicable.
- Business Rules: Styled in `styles/styles.css` with a selector that outranks the block's own padding (including the Grey padding).
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 1rem (space-400).

Padding right (`classes_paddingright`)

- Purpose: Right inner spacing.
- Allowed Values: The 15 options (class `pr-{token}`).
- Character Limits: Not applicable.
- Business Rules: As Padding left.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 1rem (space-400).

Padding top (`classes_paddingtop`)

- Purpose: Top inner spacing.
- Allowed Values: The 15 options (class `pt-{token}`).
- Character Limits: Not applicable.
- Business Rules: As Padding left.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 2.5rem (space-1000).

Padding bottom (`classes_paddingbottom`)

- Purpose: Bottom inner spacing.
- Allowed Values: The 15 options (class `pb-{token}`).
- Character Limits: Not applicable.
- Business Rules: As Padding left.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 2.5rem (space-1000).

Margin left (`classes_marginleft`)

- Purpose: Left outer spacing of the block.
- Allowed Values: The 15 options (class `ml-{token}`).
- Character Limits: Not applicable.
- Business Rules: Styled in `styles/styles.css`.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 0 (none).

Margin right (`classes_marginright`)

- Purpose: Right outer spacing.
- Allowed Values: The 15 options (class `mr-{token}`).
- Character Limits: Not applicable.
- Business Rules: As Margin left.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 0 (none).

Margin top (`classes_margintop`)

- Purpose: Space above the block.
- Allowed Values: The 15 options (class `mt-{token}`).
- Character Limits: Not applicable.
- Business Rules: As Margin left.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 4rem (space-1600).

Margin bottom (`classes_marginbottom`)

- Purpose: Space below the block.
- Allowed Values: The 15 options (class `mb-{token}`).
- Character Limits: Not applicable.
- Business Rules: As Margin left.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 4rem (space-1600).

6.12.7 Field Annotation Mapping

Marker	Field	Purpose
A	Eyebrow (`eyebrow`)	Context label above the title
B	Title (`title`) with Title Type (`titleType`)	Section heading
C	Quote (`quote`)	The statement in the card
D	Quote Author (`author`)	Name, designation and organisation
E	Image (`image`) with Image Alt Text (`imageAlt`)	Portrait overlapped by the card

6.12.8 Component Specification

Attribute	Value
Component Name	Quote (`quote`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`decorators/content-decorator.js`; `decorators/heading-decorator.js`; `decorators/image-decorator.js`; `utils/properties.js`; global block options, buttons and data layer decorators
Component Type	Block (key-value block, `core/franklin/components/block/v1/block`, no child items)
Supported Variants	Image Position (Desktop) Right / Left; Image Position (Mobile) Top / Bottom; BG Color Default / Grey; with or without image; Style: Default only
Supported Templates	Any page (allowed in every section); not added by any template
Supported Metadata	None read by the block
Supported Tags	None
Supported Personalization	None in the block; the data layer entry could be used by Adobe Target once Adobe Tags is integrated (not implemented)
Caching Considerations	Content is part of the page HTML cached by the Edge Delivery CDN and purged on publish; no sheet or query index is fetched
Performance Considerations	Decorated synchronously when its section loads; the image is the authored picture with Edge Delivery optimized sources; if the block is in the first section, its first image becomes the LCP candidate and is loaded eagerly (`waitForFirstImage`)
Accessibility Compliance	Semantic figure, blockquote and figcaption; heading level selectable; quote marks hidden from screen readers; alt text field; reading order card before image
SEO Compliance	Real heading for the title; quote text in the HTML (rendered client side from authored content); image alt text

6.12.9 Input Model

- **Content Inputs:** Eyebrow, Title, Title Type, Quote, Quote Author, Image, Image Alt Text, Image Position (Desktop), Image Position (Mobile), BG Color (property rows).
- **Metadata Inputs:** None.
- **Tags Inputs:** None.
- **Page Context Inputs:** None (the block does not read the page path, locale or Page Type).
- **Query Inputs:** None.
- **Manual Inputs:** All content is authored manually in the block; the Style and Additional tab fields arrive as block classes.

The block receives one row per property: the first cell holds the property name, the second its value. The code reads the names case-insensitively (`readProperties`).

```
<div class="quote image-left anchor-client-voice">
  <div><div>eyebrow</div><div><p>Client voice</p></div></div>
  <div><div>title</div><div><p>What our clients say</p></div></div>
  <div><div>titleType</div><div><p>h2</p></div></div>
  <div><div>quote</div><div><p>TCS helped us transform our data estate.</p></div></div>
  <div><div>author</div><div><p>Jane Doe</p><p>CDO, Example Bank</p></div></div>
  <div><div>image</div><div><picture><img src="./media_1a2b.jpeg" alt=""></picture></
div></div>
```

```
  <div><div>imageAlt</div><div><p>Portrait of Jane Doe</p></div></div>
  <div><div>imagePosition</div><div><p>left</p></div></div>
  <div><div>imagePositionMobile</div><div><p>top</p></div></div>
  <div><div>bgColor</div><div><p>grey</p></div></div>
</div>
```

6.12.10 Output Model

Rendered Output: The block's rows are replaced by up to two parts:

- `div.quote-header` with `p.quote-eyebrow` and the title heading `.quote-title` (only if one of them has text).
- `div.quote-body` with `figure.quote-card` (containing `div.quote-card-text` with `blockquote.quote-text` and `figcaption.quote-author`) and `div.quote-media` (the picture).

Block classes set by the code: `bg-grey`, `quote-has-media`, `image-left`, `image-bottom`. The block options decorator sets the `id` from the Anchor ID.

Generated HTML:

```
<div class="quote image-left bg-grey quote-has-media block" id="anchor-client-voice"
  data-block-name="quote" data-block-status="loaded">
  <div class="quote-header">
    <p class="quote-eyebrow">Client voice</p>
    <h2 class="quote-title">What our clients say</h2>
  </div>
  <div class="quote-body">
    <figure class="quote-card">
      <div class="quote-card-text">
        <blockquote class="quote-text"><p>TCS helped us transform our data estate.</p>
        </blockquote>
        <figcaption class="quote-author"><p>Jane Doe</p><p>CDO, Example Bank</p></
figcaption>
      </div>
    </figure>
    <div class="quote-media">
      <picture><img src="..." alt="Portrait of Jane Doe"></picture>
    </div>
  </div>
</div>
```

Generated JSON: None.

Generated Metadata: None.

Analytics Tracking: After the sections load, the data layer decorator pushes the block's component state; its id is the block id (Anchor ID) or `quote-{n}` in page order, and its title is the first heading in the block. Clicks on links or buttons inside the quote or author text push `cmp:click`.

```
{
  "component": {
    "anchor-client-voice": {
      "@type": "tcs-corp/components/quote",
      "parentId": "page-1k3x9q",
      "dc:title": "What our clients say"
    }
  }
}
```

```
{
  "event": "cmp:click",
  "eventInfo": {
    "path": "component.anchor-client-voice",
    "interaction": "link",
    "dc:title": "Read the case study",
    "xdm:linkURL": "https://main--tcs-corp--sradha-tcs.aem.live/en/case-studies/example",
    "xdm:linkType": "other",
    "breakpoint": "desktop"
  }
}
```

Personalization Output: None.

Search Index Output: None. The query index (`helix-query.yaml`) reads page metadata only, not block content. The quote text is part of the page HTML that search engines crawl.

Target Personalization Output: None in the block today: no personalisation marker or Target mbox. The Quote is in the data layer as tcs-corp/components/quote (id = Anchor ID or quote-n, dc:title = the title), which Adobe Target could use once Adobe Tags is integrated (Not implemented (as of this handover)).

6.12.11 Business Rules

1. The block is a key-value block: each authored row with exactly two cells is a property; rows with another number of cells are ignored.
2. The eyebrow is rendered only when it has text (after trimming).
3. The title is rendered only when it has text; its level is Title Type (h1-h6), else a heading level found in the title cell, else H2.
4. The header is left out when it has neither eyebrow nor title.
5. The quote is rendered as a blockquote only when it has text; the author as a figcaption only when it has text.
6. The card (`figure.quote-card`) is added only when it holds a quote or an author.
7. The image part is added only when the Image cell contains a picture; the block then gets `quote-has-media`.
8. Image Alt Text, when set, replaces the image's alt; otherwise an image without alt gets `alt=""` (decorative).
9. Image Position (Desktop) accepts `right` or `left`; a missing or unknown value means Right.
10. Image Position (Mobile) accepts `top` or `bottom`; a missing or unknown value means Top.
11. BG Color accepts only `grey`; any `bg-grey` class is removed before the current value is applied, so re-decoration in the editor never leaves a stale colour.
12. Select values are also read from the block classes as a fallback (`optionOf`), so a class `grey`, `left` or `bottom` on the block has the same effect.
13. The body is left out when it has neither card nor image; an empty block renders nothing.
14. The quote marks are always added by CSS; authors must not type them.
15. The desktop layout (overlap grid) starts at 900px; below 900px the stacked layout applies.
16. The Additional tab padding overrides the Grey padding (higher-specificity selectors).
17. Hide block hides the block on the published page and in preview; in edit mode it is shown faded.
18. Editor-only behaviour: editor instrumentation (`data-aue-*`, `data-richtext-*`) is moved to the rendered elements so in-place editing works; each change re-decorates the block.
19. Error handling: the block code has no try/catch of its own; an error is caught and logged by the block loader (`failed to load module for quote`), and the authored rows stay in place.

6.12.12 Author Best Practices

Recommended Content Length: Eyebrow up to 40 characters; Title up to 60 characters; Quote 100 to 300 characters; author name up to 40 characters and designation plus organisation up to 80. (All Recommended; nothing is enforced.)

Image Dimensions: Portrait images. The CSS crops them to 4 : 5 below 900px and to 622 : 869 (about 5 : 7) from 900px, with the image up to about 622px wide on desktop. Recommended: at least 1244 x 1738 px, with the face in the upper-middle area so that both crops keep it.

CTA Writing Guidelines: The block has no CTA field. If a link is needed (for example to the full case study), put it in its own paragraph at the end of the quote or author text, with a descriptive label ("Read the Example Bank case study"); it becomes a link button.

Accessibility Guidelines: Pick the heading level that fits the page outline; write alt text that identifies the person ("Portrait of Jane Doe"), or leave it empty if the name is in the caption and the image adds nothing; do not type quote marks; do not use colour or bold alone to convey meaning.

SEO Guidelines: Use a descriptive title; keep the exact wording approved by the person quoted; include the full name and organisation in the author text.

Metadata Guidelines: The block reads no metadata. Page-level metadata (title, description) is set in the page properties or the metadata sheet.

Taxonomy Guidelines: The block has no tags; tag the page itself if it should appear in List or Filter List results.

Localization Guidelines: Translate the eyebrow, title, quote and designation in each locale site; keep the person's name as approved; check that longer translations (for example German) still fit the card on mobile; translated quotes must be approved by the quoted person [To be confirmed: translation approval for quotes — owner: localisation lead].

6.12.13 Troubleshooting Guide

Issue 1 — The image does not overlap the card

Symptoms: The quote card and the image are shown one after the other without overlap.

Root Cause: The Image field is empty or holds no picture (for example a broken asset reference), so `quote-has-media` is not set.

Diagnosis Steps: Inspect the block in the browser; check whether it has the class `quote-has-media` and a `.quote-media` element.

Resolution Steps: Select the image again in the Image field from AEM Assets and publish the asset and the page.

Validation Steps: Reload the preview page; the block has `quote-has-media` and the card overlaps the image.

Preventive Measures: Publish referenced assets with the page; avoid deleting or moving assets that are in use.

Issue 2 — Image Position has no effect

Symptoms: Choosing Left (desktop) or Bottom (mobile) changes nothing.

Root Cause: The setting is checked at the wrong width (Left only applies from 900px, Bottom only below 900px), or there is no image.

Diagnosis Steps: Check the block classes (`image-left`, `image-bottom`) and the viewport width.

Resolution Steps: Resize the browser past 900px (Left) or below 900px (Bottom); make sure an image is set.

Validation Steps: The image moves to the chosen side at the right widths.

Preventive Measures: Validate both breakpoints in preview before publishing.

Issue 3 — Double quotation marks
Symptoms: The quote shows two sets of quote marks.

Root Cause: The author typed quotation marks in the Quote field; the block adds its own.

Diagnosis Steps: Look at the Quote rich text in the properties panel.

Resolution Steps: Remove the typed quotation marks at the start and end.

Validation Steps: Only the large blue marks remain.

Preventive Measures: Add the rule to the author training and the validation checklist.

Issue 4 — The face is cut off
Symptoms: The person's head is cropped on mobile or desktop.

Root Cause: The image is cropped to 4 : 5 (mobile) and 622 : 869 (desktop) with `object-fit: cover`, centred; a landscape or tightly framed image loses its edges.

Diagnosis Steps: Compare the source image's proportions with the two crops.

Resolution Steps: Use a portrait image with the face in the upper-middle area, or create a rendition with more space around the subject.

Validation Steps: Check at 375px, 768px and 1440px.

Preventive Measures: Brief photographers and DAM editors on the crop ratios.

Issue 5 — The anchor link does not jump to the quote
Symptoms: A link to `#anchor-...` does not scroll to the block.

Root Cause: The Anchor ID was rejected by validation, differs from the link, or another element already uses it (the block then gets `-2`).

Diagnosis Steps: Inspect the block's `id` attribute and compare it with the link's hash.

Resolution Steps: Use a unique Anchor ID and update the link.

Validation Steps: Open the page with the hash; it scrolls to the quote.

Preventive Measures: Keep a list of anchors per page; use descriptive, unique ids.

Issue 6 — The block is missing on the published page
Symptoms: The quote is visible in the editor (faded) but not on the page.

Root Cause: Hide block is on, or the page was not published after the change.

Diagnosis Steps: Check the Additional tab (Hide block) and the page's publication status.

Resolution Steps: Turn off Hide block and publish the page.

Validation Steps: The block appears on the live URL.

Preventive Measures: Use Hide block only on purpose and note it in the page's change log.

Issue 7 — The title has the wrong heading level
Symptoms: Accessibility checkers report skipped heading levels or several H1s.

Root Cause: Title Type is set to a level that does not fit the page outline.

Diagnosis Steps: Inspect the heading tag of `.quote-title`; review the page outline.

Resolution Steps: Change Title Type (for example to H2 or H3).

Validation Steps: Re-run the accessibility check.

Preventive Measures: Keep H1 for the page title (Page Header) only.

6.12.14 Support Runbook

Monitoring Requirements: No block-specific monitoring exists. Monitor the pages that use the block with Real User Monitoring (Edge Delivery operational telemetry) for LCP and layout shifts, and check browser console errors on key pages after code deployments.

Logs:

- Browser console: the block emits no messages of its own. A decoration error is logged by the block loader as `failed to load module for quote` (with the error); a CSS or network problem as `failed to load block quote`.
- Admin API: publish and preview status of the page (`https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`) shows whether the latest content is published.
- Author logs: AEM as a Cloud Service author logs and the page's Timeline (publication events).

Common Errors:

Error	Likely Cause	Action
No overlap, image missing	Image empty or asset unpublished	Re-select and publish the asset
Image Position ignored	Checked at the wrong width or no image	Check at the right breakpoint
Double quote marks	Marks typed in Quote	Remove them
Anchor ID rejected	Pattern not matched	Use `anchor-` plus lower case, digits, hyphens
Block not visible	Hide block on, or page not published	Turn off, publish
`failed to load module for quote`	Code error or unexpected markup	Escalate to L3 with the page URL

Escalation Matrix:

Level	Team	Checks
L1	Author support	Field values, Hide block, image and alt text, publication status, checklist
L2	AMS / site admin	Page and asset replication, Admin API status, CDN cache, console errors, recent deployments
L3	Development team	Block code, CSS, models, decorators; reproduce locally with `aem up`; fix and deploy
L4	Adobe Support	Platform issues (Universal Editor, Edge Delivery publishing, CDN) with the program and environment ids

Recovery Procedures: Restore the previous page version and republish; hide the block with Hide block while a fix is prepared; for code regressions, revert the commit on `main` (Code Sync deploys it).

Health Checks: Open a page with the block on the live host; check that the classes `quote-has-media` (if an image is set) and the expected position classes are present, that no console errors appear, and that the layout switches at 900px.

Operational Procedures: Content changes follow the standard publish workflow; code changes go through a feature branch, preview URL, pull request and merge to `main`. After `_quote.json` changes, run `npm run build:json` and `npm run lint`.

Known Limitations:

- Style has only the Default option; there are no other style variants.
- Only one quote per block; no carousel or multiple quotes.
- No CTA field; links can only be added in the rich text.

- The figcaption is inside a `div` within the figure rather than a direct child of it, which HTML validators report and which may weaken the figure/caption association for assistive technology.
- Image crops are fixed (4 : 5 and 622 : 869); there is no focal point setting.
- The layout switches at 900px only; tablet uses the mobile layout.

6.12.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
Double quotation marks	Quotation marks typed in Quote; the block adds its own	Remove the typed marks
No overlap between card and image	Image empty or asset unpublished, so quote-has-media is not set	Re-select the portrait and publish it with the page
Image Position has no visible effect	Left checked below 900 px or Bottom checked from 900 px, or no image	Check each option at its breakpoint with an image set
The face is cut off	Landscape or tightly framed image cropped to 4 : 5 or 622 : 869	Use a portrait with space around the face
Name and designation on one line	Quote Author entered as one paragraph	Put the name and the designation in separate paragraphs
Two H1 headings on the page	Title Type set to H1 beside a Page Header	Set Title Type to H2 or H3
Anchor link does not jump to the quote	Anchor ID rejected by the pattern or duplicated (the block gets –2)	Use a unique anchor- id and update the link
The quote is missing on the published page	Hide block on, or the page not published	Turn off Hide block and publish
The grey panel has little padding	Additional tab padding overrides the Grey padding	Reset the Padding selects to Default

6.12.16 Author Quick Reference Guide

Mandatory Fields

- Quote — not required in the model, but needed for the card: without Quote and Quote Author no card renders, only the eyebrow and title

Recommended Fields

- Quote Author — name on the first paragraph, designation and organisation on the next; becomes the figcaption
- Image — the portrait; needed for the overlap layout and for the Image Position options
- Image Alt Text — 'Portrait of' plus the name; leave empty only for a decorative image
- Title — short heading above the card
- Title Type — H2 by default; pick the level that fits the page outline

Optional Fields

- Eyebrow — a few words of context above the title
- Image Position (Desktop) — Right (default) or Left, from 900 px
- Image Position (Mobile) — Top (default) or Bottom, below 900 px
- BG Color — Default (white) or Grey
- Style — Default only
- Anchor ID — anchor- plus lower-case letters, digits and hyphens
- Hide block — prepare the quote without showing it

- Padding / Margin selects — only when the design asks for it

Authoring Checklist

1. One quote per Quote block; use several blocks for several quotes
2. Do not type quotation marks in Quote; the block adds them
3. Put the name on the first paragraph of Quote Author and the designation and organisation on the next
4. Use a portrait with the face in the upper-middle area (crops 4 : 5 and 622 : 869)
5. Alternate Image Position (Desktop) Right and Left for consecutive quotes
6. Use BG Color Grey to separate the quote from white neighbours, not on adjacent blocks
7. Keep the quote within 100 to 300 characters (Recommended)
8. Leave Image empty for a text-only pull quote

Pre-Publish Checklist

1. Preview at 375 px, 768 px and 1440 px and check the layout switch at 900 px
2. Check the card overlaps the portrait at desktop and mobile widths
3. Check the face is not cut off by either crop
4. Check only the large blue quote marks appear
5. Check Title Type fits the page outline (only one H1 per page)
6. Check Image Alt Text, or that the image is decorative on purpose
7. Check Hide block is off and the Anchor ID (if any) is unique
8. Confirm approval of the quote and portrait [To be confirmed: approval process for client quotes — owner: content lead]

Post-Publish Validation Checklist

1. Open the page on aem.live and check the portrait loads (no 404 for the asset)
2. Check the block has quote-has-media when an image is set
3. Check the browser console shows no 'failed to load module for quote'
4. Follow any #anchor- link to the quote and check it scrolls to the block
5. Check the accessibility tree shows the heading, blockquote and figcaption
6. Check the translated quotes in the other locale sites fit the card on mobile

6.12.17 Component Execution Example

Business example: Leadership insight on a grey panel.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Quote
Eyebrow (Quote › Content)	Leadership insight
Title (Quote › Content)	Resilience as a strategy
Quote (Quote › Content)	Security is no longer a cost centre for us. It is the foundation that lets us launch new products with confidence.
Quote Author (Quote › Content)	Marcus Khan Chief Information Security Officer, Example Insurance
Image (Quote › Content)	Select the asset tall.svg (/en/media/tall.svg)
Image Alt Text (Quote › Content)	Portrait of Marcus Khan
BG Color (Quote › Content)	Grey

All other fields keep their default values.

Rendered Result:

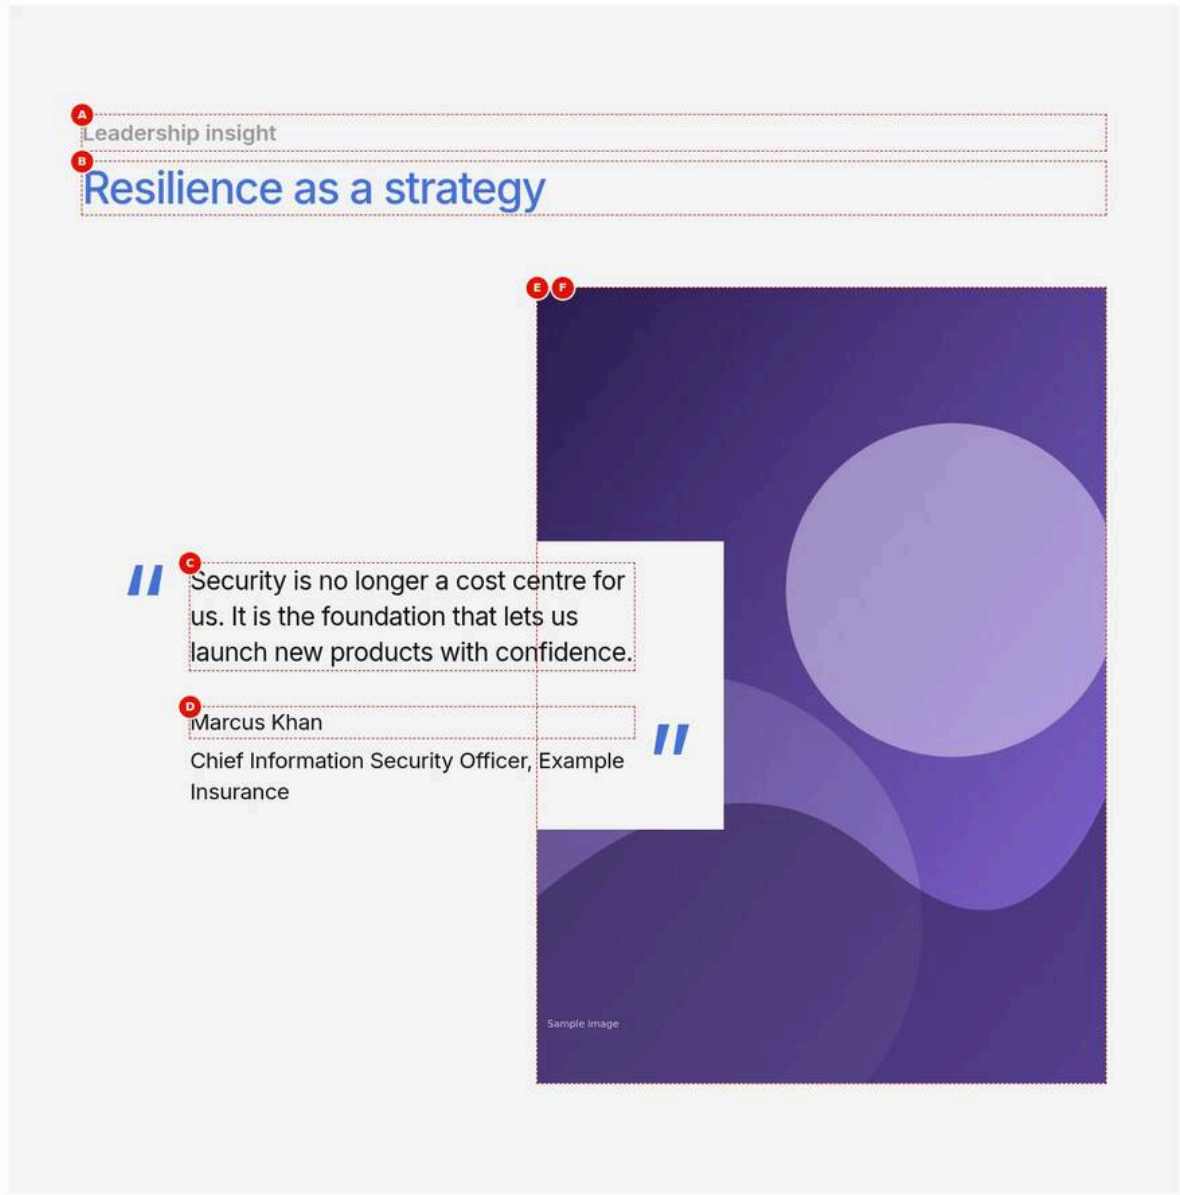

Figure 11: Execution example — The Quote at 1440 px with BG Color Grey: the whole block and the card are light grey with 7.5rem / 5rem padding; Leadership insight and the H2 Resilience as a strategy above the card with the security quote and Marcus Khan / Chief Information Security Officer, Example Insurance, overlapping tall.svg on the right. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/quote-grey-background.jpg)

Author Notes

- Add the Quote and enter 'Leadership insight', 'Resilience as a strategy' and the security quote without quotation marks.
- Enter 'Marcus Khan' and 'Chief Information Security Officer, Example Insurance' as two paragraphs in Quote Author.
- Select tall.svg in Image with the alt text 'Portrait of Marcus Khan' and set BG Color to Grey.
- Leave the Padding selects at Default so the Grey padding applies.

Business Notes

- A named CISO statement makes the security message credible on an insurance or cyber security page.
- The grey panel separates the quote from surrounding white text sections.
- The quote and portrait need approval by the person quoted [To be confirmed: approval process for client quotes — owner: content lead].

Technical Notes

- The block gets bg-grey and quote-has-media; –quote-bg becomes –color-bg-secondary for block and card.
- Padding is 7.5rem / 5rem from 900 px and 2.5rem / 1.5rem below; Additional tab padding overrides it.
- The quote is a blockquote and the author a figcaption inside a div in the figure (F-24, open).
- The block is in the data layer as tcs-corp/components/quote with dc:title 'Resilience as a strategy'.

6.13 Testimonial Block

The Testimonial block (`blocks/testimonial`) shows a section title, then a centred testimonial: an eyebrow, the quote (Description) in large brand-blue type and the author (name, round photo, designation and location), followed by an optional row of stats (a title above a large value) under a divider. It implements the TCS.com design system Figma "Testimonial Block" (nodes 3291-268576 and 404-29822).

6.13.1 Component Purpose

Business Objective: Build trust by presenting a client's or partner's own words together with measurable results (stats), so a visitor sees both the endorsement and the business outcome.

Business Use Cases:

- A client testimonial with the outcomes of an engagement ("40% faster time to market").
- A case study summary: the client's statement and three or four key results.
- A results band without a quote (stats only), with the description and author hidden.
- A short endorsement with the author's name and role only (no photo).

When To Use:

- A single testimonial should be the focus of a section, centred and in large type.
- Quantified results support the testimonial.
- An author photo is small (a 3rem round avatar) rather than a large portrait.

When Not To Use:

- For a large portrait overlapped by the quote: use the Quote block (6.12).
- For several testimonials in a row or a slider: use Cards / List, or a Gen Carousel section with one Testimonial block per slide.
- For stats with images or CTAs per item: use Cards (Stat card style) or List.
- For a call to action: the block has no CTA field; use Teaser or Hero.

Dependencies:

Type	Dependency	Use
Block code	`blocks/testimonial/testimonial.js`, `blocks/testimonial/testimonial.css`	Decoration and styles
Model	`blocks/testimonial/_testimonial.json` (aggregated in `component-definition.json`, `component-models.json`)	Universal Editor dialog

Type	Dependency	Use
Decorator	`decorators/stats-decorator.js` `buildStats` (with `utils/multifield.js` `readMultifieldItems`)	Builds the stats description list from the Stats multifield
Decorator	`decorators/a11y-decorator.js` `hideVisually`	Hide Title keeps the title for screen readers
Decorator	`decorators/content-decorator.js` `fromCell`	Moves eyebrow, description, author and designation into new elements, keeping editor instrumentation
Decorator	`decorators/heading-decorator.js` `buildHeading`	Title at the Title Type level
Decorator	`decorators/image-decorator.js` `pictureOf`	Author image with its alt text
Util	`utils/properties.js` `readProperties`, `isOn`, `optionOf`, `textOf`	Property rows, toggles and selects
Global	`decorators/block-options-decorator.js`, `styles/styles.css` (`.visually-hidden`, block options)	Additional tab; visually hidden title
Global	`decorators/data-layer-decorator.js`, `utils/analytics.js`	Data layer component entry and click events
Global	`decorators/content-buttons-decorator.js`	A standalone link in rich text becomes a link button
Data sources	None	No sheet, query index or taxonomy is read
Placeholders	None	No fixed UI text

Related Components: Quote (6.12); Teaser (also has a Stats multifield built by the same stats decorator); Cards / List (Stat card style for stat grids); Page Header (author data from the Authors sheet, which the Testimonial does not use).

Applicable Templates: Any page; the block is allowed in every section (section filter). Not added by any template.

Supported Content Types: Client stories, case studies, industry and service pages, partner pages, results summaries.

Business Problem Solved

Client endorsements and engagement results were shown separately, so visitors saw either a statement or numbers but rarely both. The Testimonial block presents a centred client statement with its attribution and up to a row of quantified results (stats) in one Figma 'Testimonial Block', with toggles to hide the eyebrow, title, description or author without deleting them, so the same block serves testimonials, results bands and pending approvals.

Supported Taxonomy

None: the Testimonial has no tag field and reads no page tags, taxonomy, metadata or Authors sheet; tag the page itself if it should appear in List or Filter List results. Its content is not in the query index.

6.13.2 Visual Overview

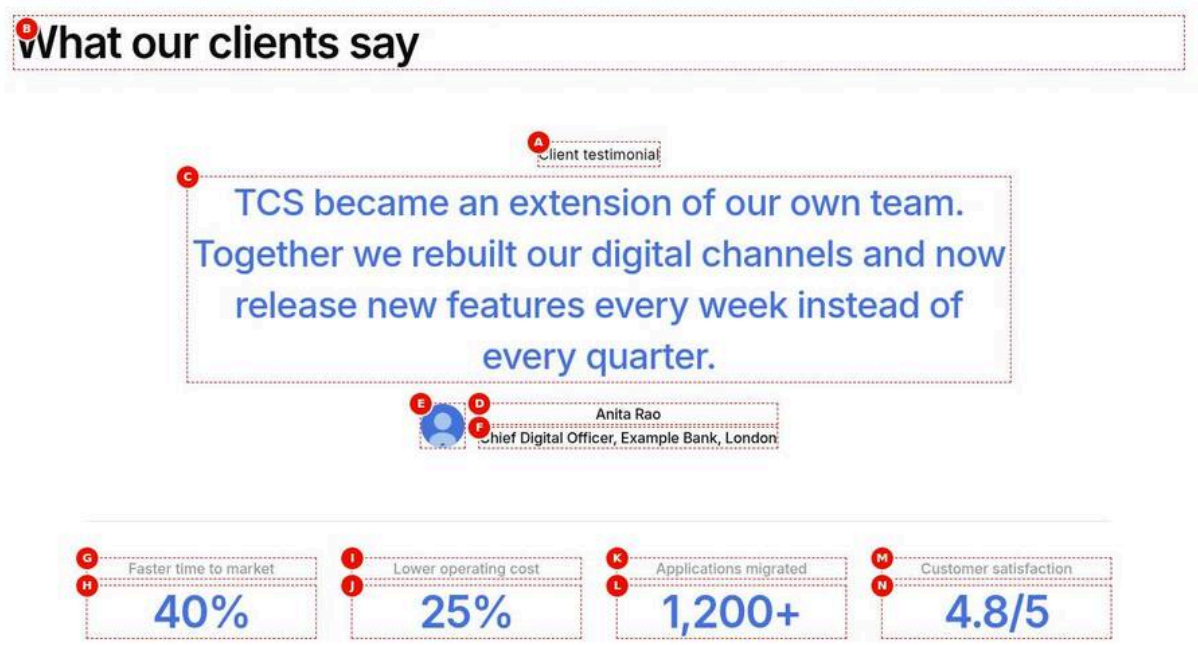

Figure 12: Desktop rendering — The Testimonial at 1440 px: the H2 What our clients say left aligned in the default text colour; centred below, the eyebrow Client testimonial, the 2.5rem brand-blue quote TCS became an extension of our own team… and the 3rem round photo person-1.svg beside Anita Rao / Chief Digital Officer, Example Bank, London; under a divider four stats in one row: 40%, 25%, 1,200+ and 4.8/5. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/testimonial-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/testimonial-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Testimonial at 1440 px: the H2 What our clients say left aligned in the default text colour; centred below, the eyebrow Client testimonial, the 2.5rem brand-blue quote TCS became an extension of our own team… and the 3rem round photo person-1.svg beside Anita Rao / Chief Digital Officer, Example Bank, London; under a divider four stats in one row: 40%, 25%, 1,200+ and 4.8/5.
Business Context	The overview example of chapter 6.13: Anita Rao of Example Bank endorses TCS on a case study page, backed by four engagement results, checked at 1440 px.
Author Objective	Add a Testimonial with eyebrow, H2 title, description, author with photo and designation, and four stats, and confirm the desktop layout.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Testimonial	Yes	Adds the Testimonial to the page	Select the section in the content tree, choose Add (+) and pick Testimonial	Only components the section allows (section filter)
A	Eyebrow (Testimonial › Content)	Client testimonial	No	Centred label above the quote	A few words of context	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Title (Testimonial › Content)	What our clients say	No	Section title	Short heading	None
C	Description (Testimonial › Content)	TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.	No (Recommended)	The testimonial quote	Concise, approved wording	None
D	Author (Testimonial › Author)	Anita Rao	No	The author's name	Name (and role if no designation)	None
E	Author Image (Testimonial › Author)	Select the asset person-1.svg (/en/media/person-1.svg)	No	Round author photo	Square headshot	Single asset
F	Designation & Location (Testimonial › Author)	Chief Digital Officer, Example Bank, London	No	Role, organisation, location	One or two lines	None
G	Stats Title (Testimonial › Stats › Stats › Item 1)	Faster time to market	No (Recommended)	What the value measures	Short phrase	None
H	Stats Value (Testimonial › Stats › Stats › Item 1)	40%	No (Recommended)	The figure	A single line	None (single line Recommended)
I	Stats Title (Testimonial › Stats › Stats › Item 2)	Lower operating cost	No (Recommended)	What the value measures	Short phrase	None
J	Stats Value (Testimonial › Stats › Stats › Item 2)	25%	No (Recommended)	The figure	A single line	None (single line Recommended)
K	Stats Title (Testimonial › Stats › Stats › Item 3)	Applications migrated	No (Recommended)	What the value measures	Short phrase	None
L	Stats Value (Testimonial › Stats › Stats › Item 3)	1,200+	No (Recommended)	The figure	A single line	None (single line Recommended)
M	Stats Title (Testimonial › Stats › Stats › Item 4)	Customer satisfaction	No (Recommended)	What the value measures	Short phrase	None
N	Stats Value (Testimonial › Stats › Stats › Item 4)	4.8/5	No (Recommended)	The figure	A single line	None (single line Recommended)

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** 'What our clients say' is left aligned at 3rem; below, centred, 'Client testimonial', the 2.5rem brand-blue quote, and the 3rem round photo beside 'Anita Rao' / 'Chief Digital Officer, Example Bank, London'; under a 1px divider the four stats 40%, 25%, 1,200+ and 4.8/5 in one row.

- **Rendering behaviour:** From 900 px the parts are 5rem apart; the figure is centred at up to 59.375rem and the stats grid at up to 70rem with columns of at least 10rem, so the four stats share one row. Each stat title is a dt above its value dd.
- **Publishing behaviour:** Publish to Preview shows the block on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live, served by the CDN after the purge. person-1.svg must be published with the page as a referenced asset.

Business Rules

- Show Description is on (block template default), so the Description renders as the blockquote.
- Author Image Alt Text is empty, so person-1.svg gets alt="" and the name is not announced twice.
- Each Stats item holds a Stats Title ('Faster time to market') and a one-line Stats Value ('40%'); the last element of an item is the value.
- Title Type stays H2; the title is the block's dc:title in the data layer.
- Keep 2 to 5 stats (Recommended); up to five fit one row at 70rem.

Common Authoring Mistakes

Error	Root Cause	Resolution
'Faster time to market' appears in large blue type and 40% as the small title	Title and value entered the other way round in the Stats item	Put the measure in Stats Title and the number in Stats Value
A stat shows its value without a title	Only one field of the item filled; a one-element item becomes the value	Fill both Stats Title and Stats Value
The round photo shows only part of the face	A landscape asset cropped to a 3rem circle	Use a square headshot with the face centred

Troubleshooting

- **Symptoms:** The large blue quote is missing at 1440 px; the eyebrow is followed directly by the author row.
- **Cause:** Show Description is off, or the block was authored before the field existed and has no Show Description value, which counts as off (F-25, open).
- **Resolution:** Open the Show / Hide tab, switch Show Description on and publish the page.
- **Verification Steps:** The preview page shows the quote, and the block contains blockquote.testimonial-description.

Desktop (900px and wider): The block is a vertical stack with 5rem between its parts (title, testimonial, stats). The section title is left aligned, 3rem, semibold, in the default text colour. The testimonial is centred (maximum width 59.375rem) with 0.75rem gaps: the eyebrow (1rem, regular, line height 1.625), the description (2.5rem, medium, brand blue, line height 1.4, maximum width 56.25rem; paragraphs 1rem apart) and the author 1.5rem lower (the 0.75rem gap plus the caption's 0.75rem top margin). The author is a centred row: a 3rem round photo (cropped to a circle) and the text (name and designation, both 1rem medium, 0.25rem apart). The stats are a centred grid (maximum width 70rem) with a 1px grey divider on top and 2.5rem padding above the items. Each column is at least 10rem wide (`repeat(auto-fit, minmax(10rem, 1fr))`), so up to five stats fit in one row at 70rem; more wrap to a new row (gaps 2rem vertical, 2.5rem horizontal). Each stat shows its title (1rem, medium, grey) above its value (3rem, semibold, brand blue).

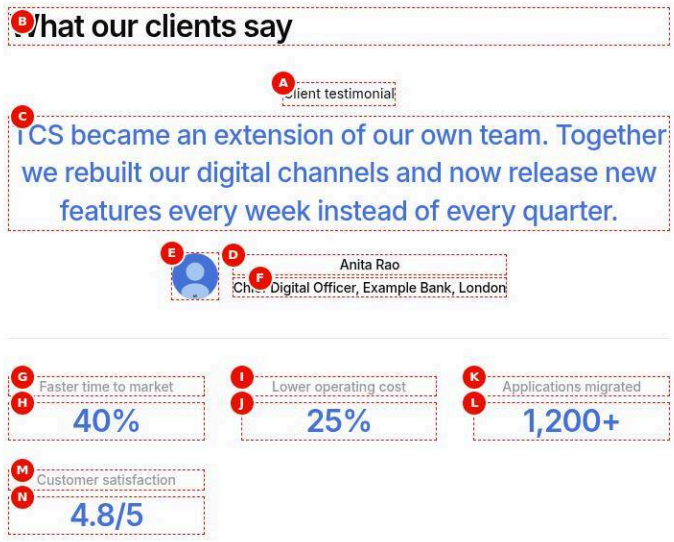

Figure 13: Tablet rendering — The Testimonial at 768 px with the smaller base sizes: the 2rem title What our clients say, the centred eyebrow, the 1.75rem blue quote and the author row with person-1.svg; under the divider three stats (40%, 25%, 1,200+) in the first row and 4.8/5 Customer satisfaction alone in the second. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/testimonial-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/testimonial-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The Testimonial at 768 px with the smaller base sizes: the 2rem title What our clients say, the centred eyebrow, the 1.75rem blue quote and the author row with person-1.svg; under the divider three stats (40%, 25%, 1,200+) in the first row and 4.8/5 Customer satisfaction alone in the second.
Business Context	The Anita Rao testimonial with four results checked at 768 px, where the block uses its smaller base sizes.
Author Objective	Reuse the overview Testimonial and confirm the tablet type sizes and the stats wrapping at 768 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Testimonial	Yes	Adds the Testimonial to the page	Select the section in the content tree, choose Add (+) and pick Testimonial	Only components the section allows (section filter)
A	Eyebrow (Testimonial › Content)	Client testimonial	No	Centred label above the quote	A few words of context	None
B	Title (Testimonial › Content)	What our clients say	No	Section title	Short heading	None
C	Description (Testimonial › Content)	TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week	No (Recommended)	The testimonial quote	Concise, approved wording	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		instead of every quarter.				
D	Author (Testimonial › Author)	Anita Rao	No	The author's name	Name (and role if no designation)	None
E	Author Image (Testimonial › Author)	Select the asset person-1.svg (/en/media/person-1.svg)	No	Round author photo	Square headshot	Single asset
F	Designation & Location (Testimonial › Author)	Chief Digital Officer, Example Bank, London	No	Role, organisation, location	One or two lines	None
G	Stats Title (Testimonial › Stats › Stats › Item 1)	Faster time to market	No (Recommended)	What the value measures	Short phrase	None
H	Stats Value (Testimonial › Stats › Stats › Item 1)	40%	No (Recommended)	The figure	A single line	None (single line Recommended)
I	Stats Title (Testimonial › Stats › Stats › Item 2)	Lower operating cost	No (Recommended)	What the value measures	Short phrase	None
J	Stats Value (Testimonial › Stats › Stats › Item 2)	25%	No (Recommended)	The figure	A single line	None (single line Recommended)
K	Stats Title (Testimonial › Stats › Stats › Item 3)	Applications migrated	No (Recommended)	What the value measures	Short phrase	None
L	Stats Value (Testimonial › Stats › Stats › Item 3)	1,200+	No (Recommended)	The figure	A single line	None (single line Recommended)
M	Stats Title (Testimonial › Stats › Stats › Item 4)	Customer satisfaction	No (Recommended)	What the value measures	Short phrase	None
N	Stats Value (Testimonial › Stats › Stats › Item 4)	4.8/5	No (Recommended)	The figure	A single line	None (single line Recommended)
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** The 2rem title, the centred 1.75rem quote and the author row with the round photo; under the divider three stats in the first row and 4.8/5 Customer satisfaction alone in the second.
- **Rendering behaviour:** The only breakpoint is 900 px, so at 768 px the parts are 2.5rem apart and the base sizes apply. With 2.5rem section padding about 43rem remain, room for three 10rem columns with 2.5rem gaps; the fourth stat wraps.
- **Publishing behaviour:** The tablet layout needs no separate publish: aem.page (Publish to Preview) and aem.live (Publish to Live) serve one page and the CSS chooses the sizes by width. person-1.svg is published with the page.

Business Rules

- There is no tablet field; the stats wrap automatically with repeat(auto-fit, minmax(10rem, 1fr)).
- Four stats give three plus one at 768 px; three or five stats wrap more evenly at this width.
- Stat values stay short (up to 8 characters, Recommended) so '1,200+' fits a 10rem column at 2rem.
- Description up to 250 characters (Recommended) keeps the centred quote within a few lines.

Common Authoring Mistakes

Error	Root Cause	Resolution
The fourth stat sits alone in a second row	Four stats at a width that fits three columns	Accept the wrap or use three stats for tablet-heavy pages
A long stat value breaks over two lines	A value such as '1,200 applications' entered in Stats Value	Keep the number in Stats Value and the words in Stats Title

Troubleshooting

- **Symptoms:** At 768 px the stats are uneven: three in one row, one alone below.
- **Cause:** The auto-fit grid fits as many 10rem columns as the width allows; four items do not fit three columns.
- **Resolution:** Use three or five stats where tablet wrapping matters, or accept the wrap (the grid cannot be configured).
- **Verification Steps:** Check the preview in device mode at 768 px and 1440 px; at 1440 px all stats share one row.

Tablet (600px to 899px): The block uses the base (mobile) sizes; the only breakpoint of the block is 900px. Gaps between parts are 2.5rem. Type: title 2rem, description 1.75rem, eyebrow and author 0.875rem, stat values 2rem. The stats grid fits as many 10rem columns as the width allows (typically three at 768px).

Figure 14: Mobile rendering — The Testimonial at 375 px: the title What our clients say, the centred eyebrow and blue quote, the round photo with Anita Rao / Chief Digital Officer, Example Bank, London centred, then the four stats stacked one per row under the divider. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/testimonial-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/testimonial-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The Testimonial at 375 px: the title What our clients say, the centred eyebrow and blue quote, the round photo with Anita Rao / Chief Digital Officer, Example Bank, London centred, then the four stats stacked one per row under the divider.
Business Context	The Anita Rao testimonial with four results checked at 375 px, the phone width of most case study visitors.

Item	Detail
Author Objective	Reuse the overview Testimonial and confirm the stacked stats and the wrapping author row at 375 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Testimonial	Yes	Adds the Testimonial to the page	Select the section in the content tree, choose Add (+) and pick Testimonial	Only components the section allows (section filter)
A	Eyebrow (Testimonial › Content)	Client testimonial	No	Centred label above the quote	A few words of context	None
B	Title (Testimonial › Content)	What our clients say	No	Section title	Short heading	None
C	Description (Testimonial › Content)	TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.	No (Recommended)	The testimonial quote	Concise, approved wording	None
D	Author (Testimonial › Author)	Anita Rao	No	The author's name	Name (and role if no designation)	None
E	Author Image (Testimonial › Author)	Select the asset person-1.svg (/en/media/person-1.svg)	No	Round author photo	Square headshot	Single asset
F	Designation & Location (Testimonial › Author)	Chief Digital Officer, Example Bank, London	No	Role, organisation, location	One or two lines	None

H	Stats Value (Testimonial › Stats › Stats › Item 1)	40%	No (Recommended)	The figure	A single line	None (single line Recommended)
I	Stats Title (Testimonial › Stats › Stats › Item 2)	Lower operating cost	No (Recommended)	What the value measures	Short phrase	None
J	Stats Value (Testimonial › Stats › Stats › Item 2)	25%	No (Recommended)	The figure	A single line	None (single line Recommended)
K	Stats Title (Testimonial › Stats › Stats › Item 3)	Applications migrated	No (Recommended)	What the value measures	Short phrase	None
L	Stats Value (Testimonial › Stats › Stats › Item 3)	1,200+	No (Recommended)	The figure	A single line	None (single line Recommended)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
M	Stats Title (Testimonial › Stats › Stats › Item 4)	Customer satisfaction	No (Recommended)	What the value measures	Short phrase	None
N	Stats Value (Testimonial › Stats › Stats › Item 4)	4.8/5	No (Recommended)	The figure	A single line	None (single line Recommended)
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** The 2rem title, the centred quote in 1.75rem blue type, the photo and the author text centred (wrapping onto separate lines if needed), then the four stats stacked one per row under the divider.
- **Rendering behaviour:** Below 600 px the section side padding is 1.5rem, leaving about 20.4rem; two 10rem columns with a 2.5rem gap need 22.5rem, so each stat takes a full row. Parts stay 2.5rem apart.
- **Publishing behaviour:** Same page as desktop and tablet: Publish to Preview shows it on aem.page and Publish to Live on aem.live; there is no mobile-only content.

Business Rules

- The author row wraps, centred, when the photo and text do not fit on one line.
- Stats are one per row on phones; four stats make a tall band, so keep the count small.
- The 3rem round photo keeps its size at every width.
- The description has no length limit in the model; long quotes become long on 375 px.

Common Authoring Mistakes

Error	Root Cause	Resolution
The testimonial takes several screens on a phone	A long description plus five or more stats	Shorten the Description and keep 2 to 5 stats
The designation breaks awkwardly under the photo	Name, designation and location typed into Author	Put only the name in Author and the rest in Designation & Location

Troubleshooting

- **Symptoms:** At 375 px the round photo is missing; only the name and designation are centred under the quote.
- **Cause:** person-1.svg was not published or the Author Image reference is broken, so no picture reaches the block.
- **Resolution:** Re-select the headshot in Author Image and publish the asset and the page.
- **Verification Steps:** In device mode at 375 px the 3rem round photo appears in the author row and its request returns 200.

Mobile (below 600px): As tablet, with the section side padding of 1.5rem. The author's photo and text wrap onto separate lines when there is not enough room (the author row wraps, centred). The stats are usually one per row (two columns need about 22.5rem). With BG Color = Grey, the block has a light grey background and 2.5rem / 1.5rem padding (7.5rem / 5rem from 900px).

6.13.3 Component Variations

The Style select (`classes`) has only the Default option. The variations are BG Color, the author presentation, the stats and the Show / Hide toggles; they combine freely.

Variation 1 — Default Testimonial

Variation Name: Default — title, eyebrow, description and author on a white background.

Business Purpose: The standard Figma testimonial: one centred statement with attribution.

Visual Example:

Figure 15: Default variation — The Testimonial at 1440 px on white: the H2 Partners in transformation left aligned; centred below, Customer story, the large blue quote about the real-time view of stock and demand, and Marcus Khan / Chief Operating Officer, Example Retail Group, Toronto; no photo, no stats. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/testimonial-default.jpg)

Screenshot Details — Default variation

Item	Detail
Screenshot Name	`screenshots/testimonial-default.jpg`
Screenshot Purpose	Default variation
Screen Description	The Testimonial at 1440 px on white: the H2 Partners in transformation left aligned; centred below, Customer story, the large blue quote about the real-time view of stock and demand, and Marcus Khan / Chief Operating Officer, Example Retail Group, Toronto; no photo, no stats.
Business Context	Variation 1: a customer story testimonial from Marcus Khan of Example Retail Group on a retail industry page, without photo or stats.
Author Objective	Author a Testimonial with eyebrow 'Customer story', title 'Partners in transformation', the store programme quote, the author name and designation.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Testimonial	Yes	Adds the Testimonial to the page	Select the section in the content tree, choose Add (+) and pick Testimonial	Only components the section allows (section filter)
A	Eyebrow (Testimonial › Content)	Customer story	No	Centred label above the quote	A few words of context	None
B	Title (Testimonial › Content)	Partners in transformation	No	Section title	Short heading	None
C	Description (Testimonial › Content)	The programme gave every store the same real-time view of stock and	No (Recommended)	The testimonial quote	Concise, approved wording	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		demand, and our customers noticed the difference within weeks.				
D	Author (Testimonial › Author)	Marcus Khan	No	The author's name	Name (and role if no designation)	None
E	Designation & Location (Testimonial › Author)	Chief Operating Officer, Example Retail Group, Toronto	No	Role, organisation, location	One or two lines	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** On white, 'Partners in transformation' left aligned; centred below, 'Customer story', the large blue quote about real-time stock and demand, and 'Marcus Khan' over 'Chief Operating Officer, Example Retail Group, Toronto'; no photo, no stats.
- **Rendering behaviour:** Output order is the H2 title, then figure.testimonial-quote with the eyebrow, blockquote and figcaption; no stats list. From 900 px the parts are 5rem apart, below 2.5rem.
- **Publishing behaviour:** Publish to Preview shows the testimonial on aem.page and Publish to Live on aem.live. Without an image there is no asset to publish, and the block reads no sheet or placeholder.

Business Rules

- Show Description is on by default; the description renders only when it is on and has text.
- Author holds only 'Marcus Khan'; designation, organisation and city go into Designation & Location.
- BG Color Default and all Show / Hide toggles at their defaults (only Show Description on).
- With the Stats tab empty, no divider or stats list is rendered.

Common Authoring Mistakes

Error	Root Cause	Resolution
Two H1 headings on the page	Title Type set to H1 for 'Partners in transformation' on a page with a Page Header	Set Title Type to H2
Name and role appear twice	'Marcus Khan, Chief Operating Officer' typed into Author and again in Designation & Location	Keep only the name in Author

Troubleshooting

- **Symptoms:** On a Testimonial copied from an older page, the eyebrow is followed directly by Marcus Khan's name; the quote is missing.
- **Cause:** The copied block has no Show Description value, and a missing value counts as off (F-25, open).
- **Resolution:** Open the Show / Hide tab, switch Show Description on and publish the page.
- **Verification Steps:** The preview page shows the blue quote and the block contains blockquote.testimonial-description.

Use Cases: Client testimonials on service, industry and case study pages.

Authoring Guidelines: Fill Eyebrow, Title, Description (Content tab), Author and Designation & Location (Author tab). Leave BG Color = Default and all Show / Hide toggles at their defaults (Show Description on, the others off).

Business Rules: Show Description is on by default (model value and block template); the description is shown only when it is on and has text.

Rendering Rules: Output order: title heading, `figure.testimonial-quote` (eyebrow, `blockquote.testimonial-description`, `figcaption` with the author), then the stats if any.

Responsive Behaviour: Desktop: 5rem gaps, large type. Tablet and mobile: 2.5rem gaps, smaller type, author row wraps if needed.

SEO Impact: The title is a real heading (H2 by default); the quote is a `<blockquote>` with a `<figcaption>` attribution, readable by search engines.

Accessibility Compliance: Semantic `figure` / `blockquote` / `figcaption`; selectable heading level; centred text is limited to 59.375rem for readability. Brand blue on white must keep 4.5 : 1 contrast for the 1.75rem+ description (large text needs 3 : 1) [To be confirmed: contrast measurement — owner: design lead].

Variation 2 — Grey Background

Variation Name: BG Color = Grey.

Business Purpose: Sets the testimonial apart from surrounding white content.

Visual Example:

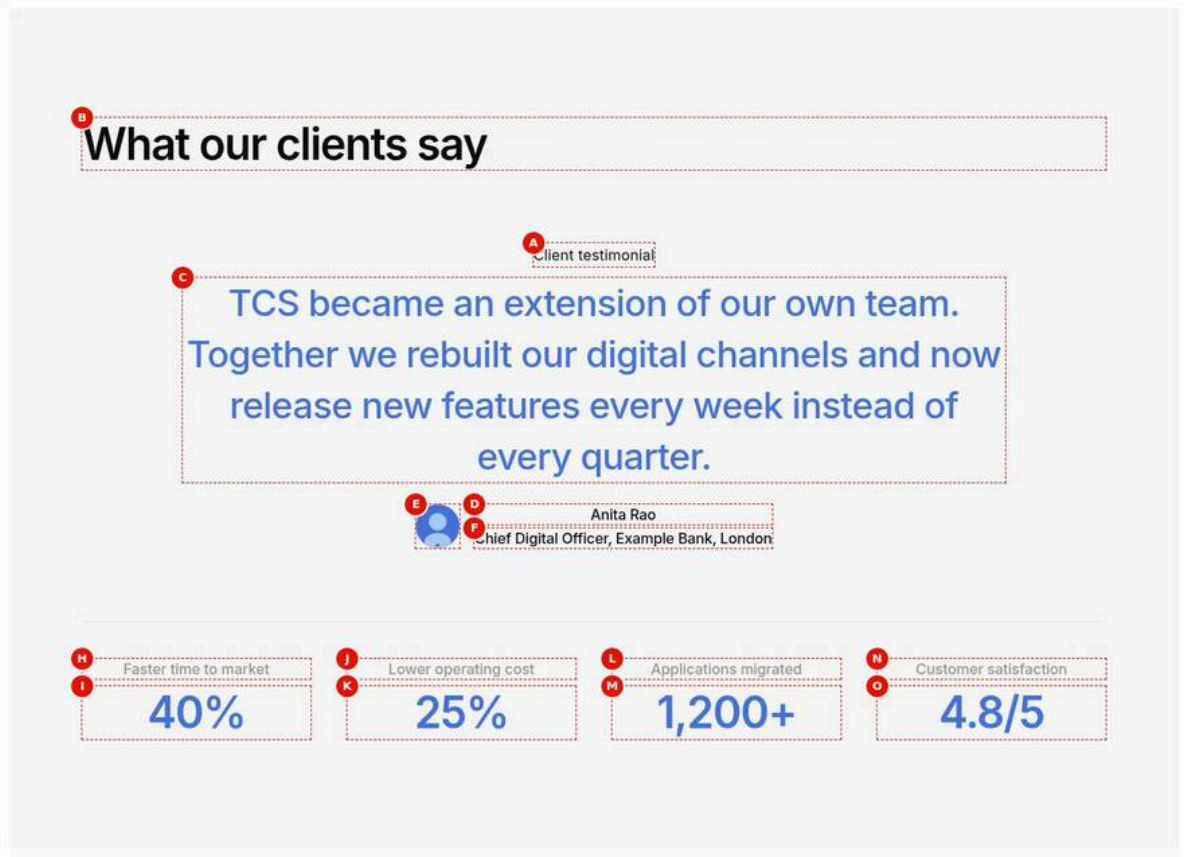

Figure 16: Grey background variation — The Testimonial at 1440 px with BG Color Grey: the title What our clients say, the centred eyebrow, the blue quote, the author row with person-1.svg and the four stats under the divider, all on a light grey panel with 7.5rem / 5rem padding. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/testimonial-grey-background.jpg)

Screenshot Details — Grey background variation

Item	Detail
Screenshot Name	`screenshots/testimonial-grey-background.jpg`

Item	Detail
Screenshot Purpose	Grey background variation
Screen Description	The Testimonial at 1440 px with BG Color Grey: the title What our clients say, the centred eyebrow, the blue quote, the author row with person-1.svg and the four stats under the divider, all on a light grey panel with 7.5rem / 5rem padding.
Business Context	Variation 2: the Anita Rao testimonial and its four results framed as one light grey panel between white sections of a case study page.
Author Objective	Author the full Testimonial with photo and four stats and set BG Color to Grey in the Style tab.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Testimonial	Yes	Adds the Testimonial to the page	Select the section in the content tree, choose Add (+) and pick Testimonial	Only components the section allows (section filter)
A	Eyebrow (Testimonial › Content)	Client testimonial	No	Centred label above the quote	A few words of context	None
B	Title (Testimonial › Content)	What our clients say	No	Section title	Short heading	None
C	Description (Testimonial › Content)	TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.	No (Recommended)	The testimonial quote	Concise, approved wording	None
D	Author (Testimonial › Author)	Anita Rao	No	The author's name	Name (and role if no designation)	None
E	Author Image (Testimonial › Author)	Select the asset person-1.svg (/en/media/person-1.svg)	No	Round author photo	Square headshot	Single asset
F	Designation & Location (Testimonial › Author)	Chief Digital Officer, Example Bank, London	No	Role, organisation, location	One or two lines	None
(G)	BG Color (Testimonial › Style)	Grey	No	Background	Default or Grey	Only grey applied
H	Stats Title (Testimonial › Stats › Stats › Item 1)	Faster time to market	No (Recommended)	What the value measures	Short phrase	None
I	Stats Value (Testimonial › Stats › Stats › Item 1)	40%	No (Recommended)	The figure	A single line	None (single line Recommended)
J	Stats Title (Testimonial › Stats › Stats › Item 2)	Lower operating cost	No (Recommended)	What the value measures	Short phrase	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
K	Stats Value (Testimonial › Stats › Stats › Item 2)	25%	No (Recommended)	The figure	A single line	None (single line Recommended)
L	Stats Title (Testimonial › Stats › Stats › Item 3)	Applications migrated	No (Recommended)	What the value measures	Short phrase	None
M	Stats Value (Testimonial › Stats › Stats › Item 3)	1,200+	No (Recommended)	The figure	A single line	None (single line Recommended)
N	Stats Title (Testimonial › Stats › Stats › Item 4)	Customer satisfaction	No (Recommended)	What the value measures	Short phrase	None
O	Stats Value (Testimonial › Stats › Stats › Item 4)	4.8/5	No (Recommended)	The figure	A single line	None (single line Recommended)

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title, the centred quote, the author row with the round photo and the four stats under the divider all sit on a light grey (grey-100) panel with large padding.
- **Rendering behaviour:** The block gets bg-grey: background –color-bg-secondary, padding 7.5rem top and bottom and 5rem left and right from 900 px, 2.5rem and 1.5rem below. The Additional tab padding overrides it.
- **Publishing behaviour:** Publish to Preview shows the grey panel on aem.page and Publish to Live on aem.live; person-1.svg is published with the page. No sheet or placeholder is involved.

Business Rules

- BG Color accepts only grey; the bg-grey class is reset on each decoration.
- BG Color is in the Style tab, not in Content.
- Text colours must keep contrast on grey-100 [To be confirmed: contrast measurement on grey-100 — owner: design lead].
- Do not put two grey blocks next to each other; they merge into one area.

Common Authoring Mistakes

Error	Root Cause	Resolution
The grey panel has almost no padding	Padding selects set in the Additional tab override the Grey padding	Reset the Padding selects to Default
BG Color searched for in the Content tab	The field is in the Style tab	Open the Style tab and choose Grey

Troubleshooting

- **Symptoms:** BG Color is Grey in the panel but the published testimonial is white.
- **Cause:** The page was not published after the change, so aem.live still serves the version without bg-grey.
- **Resolution:** Publish the page again from Universal Editor.
- **Verification Steps:** On aem.live the block has the class bg-grey and a grey background with 7.5rem vertical padding at 1440 px.

Use Cases: Between white sections; to frame the testimonial and stats as one panel.

Authoring Guidelines: Style tab: BG Color = Grey.

Business Rules: Only `grey` is allowed; the class is reset on each decoration.

Rendering Rules: Class `bg-grey`: background `--color-bg-secondary` (grey-100), padding 2.5rem / 1.5rem below 900px and 7.5rem / 5rem from 900px. The Additional tab padding overrides it.

Responsive Behaviour: Padding changes at 900px as above.

SEO Impact: None.

Accessibility Compliance: Text colours must keep contrast on grey-100 [To be confirmed: contrast measurement on grey-100 — owner: design lead].

Variation 3 — Author with Photo

Variation Name: Author image set.

Business Purpose: Puts a face to the testimonial, as in Figma 404-29822.

Visual Example:

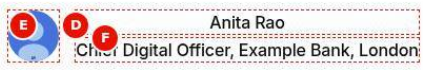

Figure 17: Author with photo — A detail of the Testimonial at 1440 px showing the author row below the quote: the centred author row with the 3rem round photo person-1.svg on the left of Anita Rao and Chief Digital Officer, Example Bank, London. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/testimonial-author-photo.jpg)

Screenshot Details — Author with photo

Item	Detail
Screenshot Name	`screenshots/testimonial-author-photo.jpg`
Screenshot Purpose	Author with photo
Screen Description	A detail of the Testimonial at 1440 px showing the author row below the quote: the centred author row with the 3rem round photo person-1.svg on the left of Anita Rao and Chief Digital Officer, Example Bank, London.
Business Context	Variation 3, a detail capture: the author row of the Anita Rao testimonial with her approved headshot, as used for named client executives.
Author Objective	Select person-1.svg in Author Image so a round photo appears beside the name and designation.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Testimonial	Yes	Adds the Testimonial to the page	Select the section in the content tree, choose Add (+) and pick Testimonial	Only components the section allows (section filter)
(A)	Eyebrow (Testimonial › Content)	Client testimonial	No	Centred label above the quote	A few words of context	None
(B)	Title (Testimonial › Content)	What our clients say	No	Section title	Short heading	None
(C)	Description (Testimonial › Content)	TCS became an extension of our own team. Together we	No (Recommended)	The testimonial quote	Concise, approved wording	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		rebuilt our digital channels and now release new features every week instead of every quarter.				
D	Author (Testimonial › Author)	Anita Rao	No	The author's name	Name (and role if no designation)	None
E	Author Image (Testimonial › Author)	Select the asset person-1.svg (/en/media/person-1.svg)	No	Round author photo	Square headshot	Single asset
F	Designation & Location (Testimonial › Author)	Chief Digital Officer, Example Bank, London	No	Role, organisation, location	One or two lines	None
—	Capture (Preview)	The author row below the quote (detail)	—	Check on the preview (not stored in the content)	The author row below the quote (detail)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Below the quote, a centred row: the 3rem round photo on the left, then 'Anita Rao' and 'Chief Digital Officer, Example Bank, London', both 1rem medium, 0.25rem apart.
- **Rendering behaviour:** div.testimonial-author-image comes before div.testimonial-author-text inside div.testimonial-author; the image is 3rem square with border-radius full and object-fit cover. On narrow screens the text wraps below the photo.
- **Publishing behaviour:** Publish to Preview and Publish to Live deliver the author row; person-1.svg must be selected as a referenced asset in the Publish dialog, otherwise the row shows text only.

Business Rules

- The image part is created only when Author Image holds a picture.
- Author Image Alt Text is left empty because the name is next to the photo; the image gets alt="".
- Use a square headshot of at least 96 x 96 px with the face centred (Recommended).
- The photo keeps its 3rem size at every breakpoint.

Common Authoring Mistakes

Error	Root Cause	Resolution
Screen readers read the name twice	Author Image Alt Text set to 'Anita Rao' although the name is next to the photo	Leave Author Image Alt Text empty
The face is cropped at the forehead	A tall portrait cropped to the circle with object-fit cover	Use a square rendition with the face centred

Troubleshooting

- **Symptoms:** The author row shows a broken or empty circle beside the name.
- **Cause:** The Author Image asset is unpublished or was moved after selection.
- **Resolution:** Re-select person-1.svg (or the approved headshot) in Author Image and publish it with the page.
- **Verification Steps:** The preview page shows the round photo and its request returns 200.

Use Cases: Named client executives with an approved headshot.

Authoring Guidelines: Author tab: select Author Image from AEM Assets. Leave Author Image Alt Text empty when the author's name is shown next to the photo (the dialog's guidance), otherwise describe the person.

Business Rules: The image part is created only when the Author Image cell holds a picture; the alt text is applied by `pictureOf` (empty alt = decorative).

Rendering Rules: `div.testimonial-author-image` before `div.testimonial-author-text` inside `div.testimonial-author`; the image is 3rem x 3rem, `border-radius: full`, `object-fit: cover`.

Responsive Behaviour: Same size at every breakpoint; on narrow screens the text wraps below the photo.

SEO Impact: Minimal (decorative avatar).

Accessibility Compliance: A decorative photo has `alt=""` so the name is not announced twice.

Variation 4 — Author Text Only (No Photo)

Variation Name: Author without image.

Business Purpose: An attribution when no approved photo exists.

Visual Example:

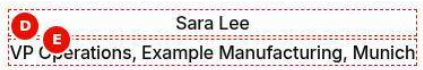

Figure 18: Author text only — A detail of the Testimonial at 1440 px showing the author row below the quote: Sara Lee and VP Operations, Example Manufacturing, Munich centred on two lines, without a photo. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/testimonial-author-text-only.jpg)

Screenshot Details — Author text only

Item	Detail
Screenshot Name	`screenshots/testimonial-author-text-only.jpg`
Screenshot Purpose	Author text only
Screen Description	A detail of the Testimonial at 1440 px showing the author row below the quote: Sara Lee and VP Operations, Example Manufacturing, Munich centred on two lines, without a photo.
Business Context	Variation 4, a detail capture: the attribution of a Sara Lee testimonial when no approved photo of her exists.
Author Objective	Fill Author and Designation & Location and leave Author Image empty.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Testimonial	Yes	Adds the Testimonial to the page	Select the section in the content tree, choose Add (+) and pick Testimonial	Only components the section allows (section filter)
(A)	Eyebrow (Testimonial › Content)	Client testimonial	No	Centred label above the quote	A few words of context	None
(B)	Title (Testimonial › Content)	What our clients say	No	Section title	Short heading	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Description (Testimonial › Content)	TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.	No (Recommended)	The testimonial quote	Concise, approved wording	None
D	Author (Testimonial › Author)	Sara Lee	No	The author's name	Name (and role if no designation)	None
E	Designation & Location (Testimonial › Author)	VP Operations, Example Manufacturing, Munich	No	Role, organisation, location	One or two lines	None
—	Capture (Preview)	The author row below the quote (detail)	—	Check on the preview (not stored in the content)	The author row below the quote (detail)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Below the quote, 'Sara Lee' and 'VP Operations, Example Manufacturing, Munich' centred on two lines, with no photo.
- **Rendering behaviour:** Only div.testimonial-author-text is built, with p.testimonial-author-name from Author and div.testimonial-author-details from Designation & Location; it is centred at every breakpoint.
- **Publishing behaviour:** Publish to Preview shows the attribution on aem.page and Publish to Live on aem.live; with no Author Image there is no asset to publish.

Business Rules

- The author part is built from whichever of image, name and designation has content.
- Author is plain text: the name only, 'Sara Lee'.
- Designation & Location is rich text: role, organisation and city on one line.
- With Author, Author Image and Designation & Location all empty, no figcaption is added.

Common Authoring Mistakes

Error	Root Cause	Resolution
An empty gap appears left of the name	An unpublished asset left in Author Image	Clear the Author Image field
The designation is bold or large	Formatting such as a heading applied in the Designation & Location rich text	Use a plain paragraph

Troubleshooting

- **Symptoms:** No attribution appears below the quote.
- **Cause:** Hide Author Details is on in the Show / Hide tab, so no author part is built whatever the Author tab contains.
- **Resolution:** Switch Hide Author Details off and publish the page.
- **Verification Steps:** The preview page shows 'Sara Lee' and her designation inside a figcaption.

Use Cases: Anonymous or role-only attributions ("CIO, a leading European bank").

Authoring Guidelines: Author tab: fill Author and/or Designation & Location, leave Author Image empty.

Business Rules: The author part is built from whichever of image, name and designation has content; with none, no figcaption is added.

Rendering Rules: `p.testimonial-author-name` (from Author) and `div.testimonial-author-details` (from Designation & Location, rich text) in `div.testimonial-author-text`.

Responsive Behaviour: Centred at every breakpoint.

SEO Impact: The attribution text is in the HTML.

Accessibility Compliance: As Variation 1.

Variation 5 — With Stats

Variation Name: Stats added (Stats tab).

Business Purpose: Shows measurable results of the engagement below the testimonial.

Visual Example:

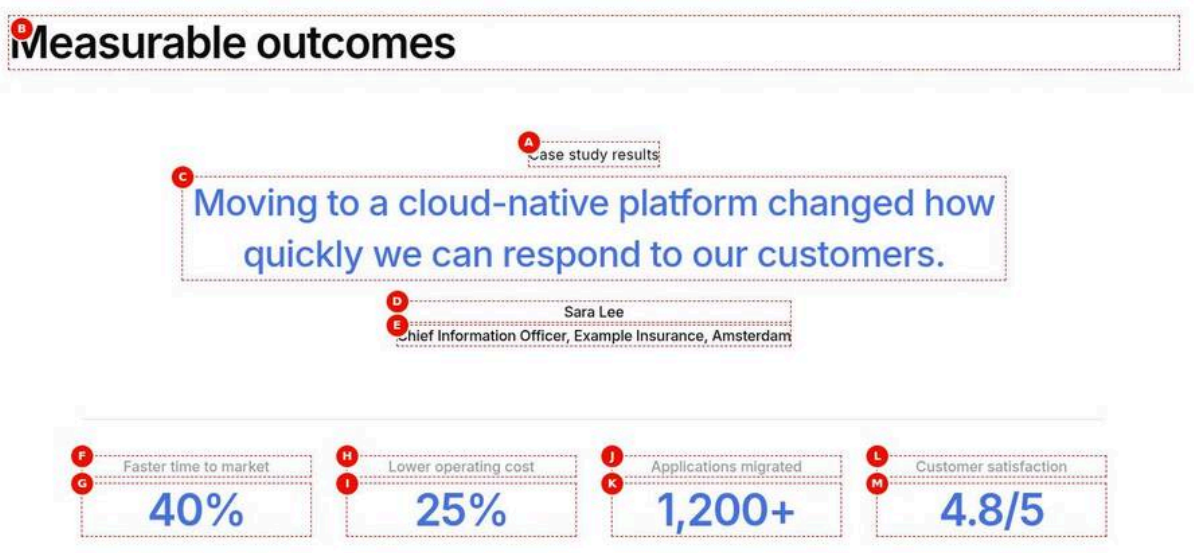

Figure 19: Stats variation — The Testimonial at 1440 px: the H2 Measurable outcomes left aligned, the centred Case study results, the cloud-native quote and Sara Lee / Chief Information Officer, Example Insurance, Amsterdam; under a 1px divider four stats in one row, grey titles above 3rem blue values: Faster time to market 40%, Lower operating cost 25%, Applications migrated 1,200+, Customer satisfaction 4.8/5. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/testimonial-with-stats.jpg)

Screenshot Details — Stats variation

Item	Detail
Screenshot Name	`screenshots/testimonial-with-stats.jpg`
Screenshot Purpose	Stats variation
Screen Description	The Testimonial at 1440 px: the H2 Measurable outcomes left aligned, the centred Case study results, the cloud-native quote and Sara Lee / Chief Information Officer, Example Insurance, Amsterdam; under a 1px divider four stats in one row, grey titles above 3rem blue values: Faster time to market 40%, Lower operating cost 25%, Applications migrated 1,200+, Customer satisfaction 4.8/5.
Business Context	Variation 5: a case study results band in which Sara Lee of Example Insurance states the effect of the cloud-native platform and four stats quantify it.

Item	Detail
Author Objective	Author a Testimonial with eyebrow 'Case study results', title 'Measurable outcomes', quote, author and four Stats items.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Testimonial	Yes	Adds the Testimonial to the page	Select the section in the content tree, choose Add (+) and pick Testimonial	Only components the section allows (section filter)
A	Eyebrow (Testimonial › Content)	Case study results	No	Centred label above the quote	A few words of context	None
B	Title (Testimonial › Content)	Measurable outcomes	No	Section title	Short heading	None
C	Description (Testimonial › Content)	Moving to a cloud-native platform changed how quickly we can respond to our customers.	No (Recommended)	The testimonial quote	Concise, approved wording	None
D	Author (Testimonial › Author)	Sara Lee	No	The author's name	Name (and role if no designation)	None
E	Designation & Location (Testimonial › Author)	Chief Information Officer, Example Insurance, Amsterdam	No	Role, organisation, location	One or two lines	None
F	Stats Title (Testimonial › Stats › Stats › Item 1)	Faster time to market	No (Recommended)	What the value measures	Short phrase	None
G	Stats Value (Testimonial › Stats › Stats › Item 1)	40%	No (Recommended)	The figure	A single line	None (single line Recommended)
H	Stats Title (Testimonial › Stats › Stats › Item 2)	Lower operating cost	No (Recommended)	What the value measures	Short phrase	None
I	Stats Value (Testimonial › Stats › Stats › Item 2)	25%	No (Recommended)	The figure	A single line	None (single line Recommended)
J	Stats Title (Testimonial › Stats › Stats › Item 3)	Applications migrated	No (Recommended)	What the value measures	Short phrase	None
K	Stats Value (Testimonial › Stats › Stats › Item 3)	1,200+	No (Recommended)	The figure	A single line	None (single line Recommended)
L	Stats Title (Testimonial › Stats › Stats › Item 4)	Customer satisfaction	No (Recommended)	What the value measures	Short phrase	None
M	Stats Value (Testimonial › Stats › Stats › Item 4)	4.8/5	No (Recommended)	The figure	A single line	None (single line Recommended)

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** 'Measurable outcomes' left aligned, the centred quote and 'Sara Lee' / 'Chief Information Officer, Example Insurance, Amsterdam'; under a 1px divider four stats in one row, each a grey title above a 3rem blue value: 40%, 25%, 1,200+, 4.8/5.
- **Rendering behaviour:** The Stats multifield becomes dl.testimonial-stats with one div.testimonial-stat per item, dt title first and dd value below, in an auto-fit grid of 10rem columns up to 70rem wide.
- **Publishing behaviour:** Publish to Preview shows the results on aem.page and Publish to Live on aem.live. The stats are page content; they are not read from a sheet, so there is nothing else to publish.

Business Rules

- Each item's last element is the value and the elements before it are the title.
- Stats Value is a single line ('40%'); a value of several paragraphs moves all but the last into the title.
- Items without content are skipped; with no items, no stats list is rendered.
- Write the stat title so it explains the value ('Faster time to market' / '40%').
- Localise number formats in other locales [To be confirmed: number format rules per locale — owner: localisation lead].

Common Authoring Mistakes

Error	Root Cause	Resolution
'Lower operating cost' shows in large blue type	Stats Title and Stats Value swapped in item 2	Put '25%' in Stats Value and the measure in Stats Title
The value '1,200+' shows as two lines, one in the title	'1,200+' and 'applications' entered as two paragraphs in Stats Value	Keep one line in Stats Value
A fifth, empty-looking stat appears	An item with stray formatting left in the multifield	Delete the item in the Stats tab

Troubleshooting

- **Symptoms:** A stat shows its value with the title text above it in blue, or a value without a title.
- **Cause:** In that item only one field holds text, or Stats Value has several paragraphs, so the last element is taken as the value (F-25, open).
- **Resolution:** Fill both Stats Title and Stats Value with one paragraph each and publish.
- **Verification Steps:** Each div.testimonial-stat on the preview page has a dt with the title and a dd with the number.

Use Cases: Case study results; programme outcomes; benefit summaries.

Authoring Guidelines: Stats tab: add one item per stat; enter Stats Title (what is measured) and Stats Value (a single line, for example "40%").

Business Rules: Each item's last element is the value and the elements before it are the title. A Stats Value of several paragraphs therefore moves all but the last into the title; an item with only one filled field shows that text as the value without a title. Items without content are skipped; with no items, no stats are shown.

Rendering Rules: `dl.testimonial-stats` with one `div.testimonial-stat` per item, containing `dt.testimonial-stat-label` (title) and `dd.testimonial-stat-value` (value), shown title first.

Responsive Behaviour: Auto-fit grid of columns at least 10rem wide: up to five per row on desktop, about three on tablet, one or two on mobile.

SEO Impact: The stats are text in the HTML (not images), so they can be indexed.

Accessibility Compliance: A description list associates each title (term) with its value (definition) for screen readers.

Variation 6 — Hide Eyebrow

Variation Name: Hide Eyebrow on.

Business Purpose: Removes the eyebrow without deleting its text (for example for a variant of the page).

Visual Example:

Figure 20: Hide Eyebrow variation — The Testimonial at 1440 px with Hide Eyebrow on: the H2 What our clients say, then directly the centred blue quote and the author row with person-1.svg and Anita Rao / Chief Digital Officer, Example Bank, London; no Client testimonial label and no stats. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/testimonial-hide-eyebrow.jpg)

Screenshot Details — Hide Eyebrow variation

Item	Detail
Screenshot Name	`screenshots/testimonial-hide-eyebrow.jpg`
Screenshot Purpose	Hide Eyebrow variation
Screen Description	The Testimonial at 1440 px with Hide Eyebrow on: the H2 What our clients say, then directly the centred blue quote and the author row with person-1.svg and Anita Rao / Chief Digital Officer, Example Bank, London; no Client testimonial label and no stats.
Business Context	Variation 6: the Anita Rao testimonial on a page where the title already gives the context, so the 'Client testimonial' label is switched off without deleting it.
Author Objective	Keep the eyebrow text but switch Hide Eyebrow on in the Show / Hide tab.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Testimonial	Yes	Adds the Testimonial to the page	Select the section in the content tree, choose Add (+) and pick Testimonial	Only components the section allows (section filter)
(A)	Eyebrow (Testimonial › Content)	Client testimonial	No	Centred label above the quote	A few words of context	None
B	Title (Testimonial › Content)	What our clients say	No	Section title	Short heading	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Description (Testimonial › Content)	TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.	No (Recommended)	The testimonial quote	Concise, approved wording	None
D	Author (Testimonial › Author)	Anita Rao	No	The author's name	Name (and role if no designation)	None
E	Author Image (Testimonial › Author)	Select the asset person-1.svg (/en/media/person-1.svg)	No	Round author photo	Square headshot	Single asset
F	Designation & Location (Testimonial › Author)	Chief Digital Officer, Example Bank, London	No	Role, organisation, location	One or two lines	None
(G)	Hide Eyebrow (Testimonial › Show / Hide)	On	No	Hide the eyebrow	On to hide	Toggle

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** 'What our clients say' left aligned, then directly the centred blue quote and the author row with the round photo; the 'Client testimonial' label is gone.
- **Rendering behaviour:** No p.testimonial-eyebrow is created, so the eyebrow text is not in the HTML at all; the figure starts with the blockquote. Spacing is unchanged.
- **Publishing behaviour:** Publish to Preview and Publish to Live remove the eyebrow from aem.page and aem.live; the text stays saved in the Eyebrow field for later reuse.

Business Rules

- The eyebrow renders only when Hide Eyebrow is off and Eyebrow has text.
- Hide Eyebrow removes the text from the page, not only visually.
- Toggles count as on only when their value is exactly true; a missing value means off.
- Use Hide Eyebrow when the title already states the context.

Common Authoring Mistakes

Error	Root Cause	Resolution
Hide Eyebrow used to keep the label for screen readers	Hide Eyebrow removes the eyebrow from the HTML	Clear the need or keep the eyebrow visible
The eyebrow still shows after the change	The page was not published again	Publish the page

Troubleshooting

- **Symptoms:** 'Client testimonial' still appears on aem.live although Hide Eyebrow is on.
- **Cause:** The change was saved in the editor but the page was not published again.
- **Resolution:** Publish the page from Universal Editor.

- **Verification Steps:** On aem.live the figure has no p.testimonial-eyebrow and starts with the quote.

Use Cases: When the title already gives the context.

Authoring Guidelines: Show / Hide tab: Hide Eyebrow on.

Business Rules: The eyebrow is shown only when Hide Eyebrow is off and the Eyebrow has text.

Rendering Rules: No `p.testimonial-eyebrow` is created (it is not in the HTML).

Responsive Behaviour: No difference between breakpoints.

SEO Impact: The eyebrow text is not in the page.

Accessibility Compliance: Not applicable (content removed).

Variation 7 — Hide Title (Visually Hidden)

Variation Name: Hide Title on.

Business Purpose: Matches designs without a visible section title while keeping a heading for screen-reader navigation and the page outline.

Visual Example:

Figure 21: Hide Title variation — The Testimonial at 1440 px with Hide Title on: no visible title; the block starts with the centred eyebrow Client testimonial, then the blue quote and the author row with person-1.svg and Anita Rao. The H2 stays in the HTML for screen readers. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/testimonial-hide-title.jpg)

Screenshot Details — Hide Title variation

Item	Detail
Screenshot Name	`screenshots/testimonial-hide-title.jpg`
Screenshot Purpose	Hide Title variation
Screen Description	The Testimonial at 1440 px with Hide Title on: no visible title; the block starts with the centred eyebrow Client testimonial, then the blue quote and the author row with person-1.svg and Anita Rao. The H2 stays in the HTML for screen readers.
Business Context	Variation 7: the Anita Rao testimonial placed directly below a section heading in default content, so its own title is hidden visually but kept for screen readers.
Author Objective	Keep Title 'What our clients say' filled and switch Hide Title on in the Show / Hide tab.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Testimonial	Yes	Adds the Testimonial to the page	Select the section in the content tree, choose Add (+) and pick Testimonial	Only components the section allows (section filter)
A	Eyebrow (Testimonial › Content)	Client testimonial	No	Centred label above the quote	A few words of context	None
B	Title (Testimonial › Content)	What our clients say	No	Section title	Short heading	None
C	Description (Testimonial › Content)	TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.	No (Recommended)	The testimonial quote	Concise, approved wording	None
D	Author (Testimonial › Author)	Anita Rao	No	The author's name	Name (and role if no designation)	None
E	Author Image (Testimonial › Author)	Select the asset person-1.svg (/en/media/person-1.svg)	No	Round author photo	Square headshot	Single asset
F	Designation & Location (Testimonial › Author)	Chief Digital Officer, Example Bank, London	No	Role, organisation, location	One or two lines	None
(G)	Hide Title (Testimonial › Show / Hide)	On	No	Hide the title visually	Title stays for screen readers	Toggle

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The block starts with the centred 'Client testimonial' eyebrow, then the blue quote and the author row; no visible title above them.
- **Rendering behaviour:** The H2 stays in the HTML with the class visually-hidden (clipped to 1px by styles/styles.css); screen readers announce it and it remains the block's dc:title in the data layer.
- **Publishing behaviour:** Publish to Preview and Publish to Live deliver the hidden heading to aem.page and aem.live; the heading still counts in the page outline.

Business Rules

- Fill Title even when it is hidden; without Title text there is nothing to hide.
- Hide Title keeps the heading for screen readers and the outline (WCAG 1.3.1, 2.4.6).
- Title Type still applies to the hidden heading; keep H2 under the page's H1.
- Hide Title is different from Hide Eyebrow, which removes the eyebrow from the HTML.

Common Authoring Mistakes

Error	Root Cause	Resolution
Title cleared instead of hidden	Author deleted 'What our clients say' to hide it	Restore the Title and switch Hide Title on
The hidden title causes a skipped heading level	Title Type set to H4 under an H2 section heading	Set Title Type to H3

Troubleshooting

- **Symptoms:** An accessibility check reports that the testimonial section has no heading.
- **Cause:** The Title field is empty, so Hide Title has nothing to keep for screen readers.
- **Resolution:** Enter 'What our clients say' in Title, keep Hide Title on and publish.
- **Verification Steps:** The browser's accessibility tree shows the H2 'What our clients say' in the block while the page shows no visible title.

Use Cases: Testimonials directly below a section heading in default content.

Authoring Guidelines: Fill Title anyway, then Show / Hide tab: Hide Title on.

Business Rules: The title stays in the HTML with the class `visually-hidden`; without Title text there is nothing to hide.

Rendering Rules: The heading is clipped to 1px (`.visually-hidden` in `styles/styles.css`).

Responsive Behaviour: Hidden at every breakpoint.

SEO Impact: The heading remains in the HTML and the outline.

Accessibility Compliance: Screen readers still announce the heading (WCAG 1.3.1, 2.4.6); it remains the block's `dc:title` in the data layer.

Variation 8 — Description Hidden (Show Description off)

Variation Name: Show Description off.

Business Purpose: Uses the block for the author and stats only, for example a results band.

Visual Example:

Figure 22: Show Description off — The Testimonial at 1440 px with Show Description off: the H2 What our clients say, the centred eyebrow Client testimonial and directly the author row with person-1.svg and Anita Rao; under the divider the four stats 40%, 25%, 1,200+ and 4.8/5; no quote. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/testimonial-description-hidden.jpg)

Screenshot Details — Show Description off

Item	Detail
Screenshot Name	`screenshots/testimonial-description-hidden.jpg`
Screenshot Purpose	Show Description off
Screen Description	The Testimonial at 1440 px with Show Description off: the H2 What our clients say, the centred eyebrow Client testimonial and directly the author row with person-1.svg and Anita Rao; under the divider the four stats 40%, 25%, 1,200+ and 4.8/5; no quote.
Business Context	Variation 8: the Anita Rao block reused as a results band while the quote awaits client approval, showing the author and the four stats only.
Author Objective	Keep the Description text but switch Show Description off in the Show / Hide tab.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Testimonial	Yes	Adds the Testimonial to the page	Select the section in the content tree, choose Add (+) and pick Testimonial	Only components the section allows (section filter)
A	Eyebrow (Testimonial › Content)	Client testimonial	No	Centred label above the quote	A few words of context	None
B	Title (Testimonial › Content)	What our clients say	No	Section title	Short heading	None
(C)	Description (Testimonial › Content)	TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.	No (Recommended)	The testimonial quote	Concise, approved wording	None
D	Author (Testimonial › Author)	Anita Rao	No	The author's name	Name (and role if no designation)	None
E	Author Image (Testimonial › Author)	Select the asset person-1.svg (/en/media/person-1.svg)	No	Round author photo	Square headshot	Single asset
F	Designation & Location (Testimonial › Author)	Chief Digital Officer, Example Bank, London	No	Role, organisation, location	One or two lines	None
(G)	Show Description (Testimonial › Show / Hide)	Off	No	Show the quote	Keep on to show the quote	Toggle
H	Stats Title (Testimonial › Stats › Stats › Item 1)	Faster time to market	No (Recommended)	What the value measures	Short phrase	None
I	Stats Value (Testimonial › Stats › Stats › Item 1)	40%	No (Recommended)	The figure	A single line	None (single line Recommended)
J	Stats Title (Testimonial › Stats › Stats › Item 2)	Lower operating cost	No (Recommended)	What the value measures	Short phrase	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
K	Stats Value (Testimonial › Stats › Stats › Item 2)	25%	No (Recommended)	The figure	A single line	None (single line Recommended)
L	Stats Title (Testimonial › Stats › Stats › Item 3)	Applications migrated	No (Recommended)	What the value measures	Short phrase	None
M	Stats Value (Testimonial › Stats › Stats › Item 3)	1,200+	No (Recommended)	The figure	A single line	None (single line Recommended)
N	Stats Title (Testimonial › Stats › Stats › Item 4)	Customer satisfaction	No (Recommended)	What the value measures	Short phrase	None
O	Stats Value (Testimonial › Stats › Stats › Item 4)	4.8/5	No (Recommended)	The figure	A single line	None (single line Recommended)

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** 'What our clients say', the centred 'Client testimonial' eyebrow and directly the author row with the round photo; under the divider the four stats 40%, 25%, 1,200+ and 4.8/5.
- **Rendering behaviour:** No blockquote.testimonial-description is created; the figure holds the eyebrow and the figcaption. The quote text is not in the HTML.
- **Publishing behaviour:** Publish to Preview and Publish to Live remove the quote from aem.page and aem.live; the text stays saved in Description until Show Description is switched on again.

Business Rules

- The description renders only when Show Description is exactly true and Description has text.
- A missing Show Description value also hides the description (F-25, open).
- The stats and author are not affected by Show Description.
- Combine with Hide Author Details for a stats-only band.

Common Authoring Mistakes

Error	Root Cause	Resolution
The quote is gone on a block where it should show	Show Description switched off by mistake or missing on an older block	Switch Show Description on
Unapproved quote still visible on aem.live	Show Description switched off but the page not published	Publish the page

Troubleshooting

- **Symptoms:** After switching Show Description back on, the quote still does not appear.
- **Cause:** The Description field is empty, so there is no text to render even with the toggle on.
- **Resolution:** Enter the approved quote in Description (Content tab) and publish.
- **Verification Steps:** The preview page shows the large blue quote between the eyebrow and the author row.

Use Cases: Stats bands; reusing a block while the quote awaits approval.

Authoring Guidelines: Show / Hide tab: Show Description off.

Business Rules: The description is shown only when Show Description is explicitly on (`true`). A block whose Show Description row is missing (for example authored before the field existed) shows no description.

Rendering Rules: No `blockquote.testimonial-description` is created.

Responsive Behaviour: No difference.

SEO Impact: The quote text is not in the page.

Accessibility Compliance: Not applicable (content removed).

Variation 9 — Hide Author Details

Variation Name: Hide Author Details on.

Business Purpose: Hides the attribution (name, photo, designation and location) without deleting it, for example while approval is pending or for stats-only bands.

Visual Example:

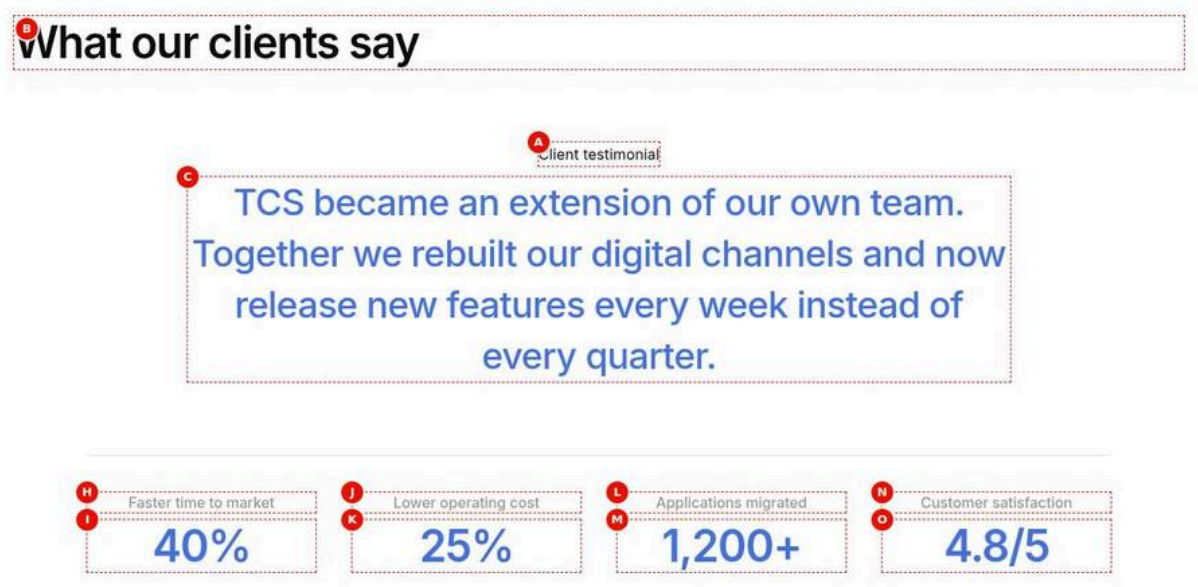

Figure 23: Hide Author Details variation — The Testimonial at 1440 px with Hide Author Details on: the H2 What our clients say, the centred eyebrow and the blue quote, then directly the divider and the four stats 40%, 25%, 1,200+ and 4.8/5; no photo, name or designation. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/testimonial-hide-author.jpg)

Screenshot Details — Hide Author Details variation

Item	Detail
Screenshot Name	`screenshots/testimonial-hide-author.jpg`
Screenshot Purpose	Hide Author Details variation
Screen Description	The Testimonial at 1440 px with Hide Author Details on: the H2 What our clients say, the centred eyebrow and the blue quote, then directly the divider and the four stats 40%, 25%, 1,200+ and 4.8/5; no photo, name or designation.
Business Context	Variation 9: the Example Bank testimonial shown anonymously while Anita Rao's approval of the attribution is pending, with the four results kept.
Author Objective	Keep the Author tab filled and switch Hide Author Details on in the Show / Hide tab.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Testimonial	Yes	Adds the Testimonial to the page	Select the section in the content tree, choose Add (+) and pick Testimonial	Only components the section allows (section filter)
A	Eyebrow (Testimonial › Content)	Client testimonial	No	Centred label above the quote	A few words of context	None
B	Title (Testimonial › Content)	What our clients say	No	Section title	Short heading	None
C	Description (Testimonial › Content)	TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.	No (Recommended)	The testimonial quote	Concise, approved wording	None
(D)	Author (Testimonial › Author)	Anita Rao	No	The author's name	Name (and role if no designation)	None
(E)	Author Image (Testimonial › Author)	Select the asset person-1.svg (/en/media/person-1.svg)	No	Round author photo	Square headshot	Single asset
(F)	Designation & Location (Testimonial › Author)	Chief Digital Officer, Example Bank, London	No	Role, organisation, location	One or two lines	None
(G)	Hide Author Details (Testimonial › Show / Hide)	On	No	Hide name, photo, designation	On to hide	Toggle
H	Stats Title (Testimonial › Stats › Stats › Item 1)	Faster time to market	No (Recommended)	What the value measures	Short phrase	None
I	Stats Value (Testimonial › Stats › Stats › Item 1)	40%	No (Recommended)	The figure	A single line	None (single line Recommended)
J	Stats Title (Testimonial › Stats › Stats › Item 2)	Lower operating cost	No (Recommended)	What the value measures	Short phrase	None
K	Stats Value (Testimonial › Stats › Stats › Item 2)	25%	No (Recommended)	The figure	A single line	None (single line Recommended)
L	Stats Title (Testimonial › Stats › Stats › Item 3)	Applications migrated	No (Recommended)	What the value measures	Short phrase	None
M	Stats Value (Testimonial › Stats › Stats › Item 3)	1,200+	No (Recommended)	The figure	A single line	None (single line Recommended)
N	Stats Title (Testimonial › Stats › Stats › Item 4)	Customer satisfaction	No (Recommended)	What the value measures	Short phrase	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
O	Stats Value (Testimonial › Stats › Stats › Item 4)	4.8/5	No (Recommended)	The figure	A single line	None (single line Recommended)

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title, the centred 'Client testimonial' eyebrow and the blue quote, then directly the divider and the four stats; no photo, name or designation.
- **Rendering behaviour:** No author part and no figcaption are built, whatever the Author tab contains; the figure holds the eyebrow and the blockquote. If eyebrow and description were absent too, the whole figure would be left out.
- **Publishing behaviour:** Publish to Preview and Publish to Live remove the attribution from aem.page and aem.live; the Author tab values stay saved for when approval arrives.

Business Rules

- Hide Author Details hides Author, Author Image and Designation & Location together.
- The author content is not in the HTML, so it is not indexed.
- An anonymous quote should say in the text who is speaking if it matters to the meaning.
- person-1.svg is no longer shown but may still be listed as a referenced asset when publishing.

Common Authoring Mistakes

Error	Root Cause	Resolution
Only the photo was meant to be hidden but the name is gone too	Hide Author Details hides all author parts	Clear Author Image instead
The name still shows on aem.live	Toggle switched on but the page not published	Publish the page

Troubleshooting

- **Symptoms:** Hide Author Details is on, but the author row still appears on aem.page.
- **Cause:** The page was not published to preview after the change, so the old version is still served.
- **Resolution:** Publish the page to preview (or live) again.
- **Verification Steps:** The figure on the page contains no figcaption; the quote is followed by the stats divider.

Use Cases: Anonymous testimonials; stats-only bands (together with Show Description off).

Authoring Guidelines: Show / Hide tab: Hide Author Details on.

Business Rules: No author part is built, whatever the Author tab contains.

Rendering Rules: No `figcaption`. If eyebrow and description are also absent, the whole figure is left out.

Responsive Behaviour: No difference.

SEO Impact: The attribution is not in the page.

Accessibility Compliance: A quote without attribution should say who is speaking in the text if it matters to the meaning.

6.13.4 Authoring Experience

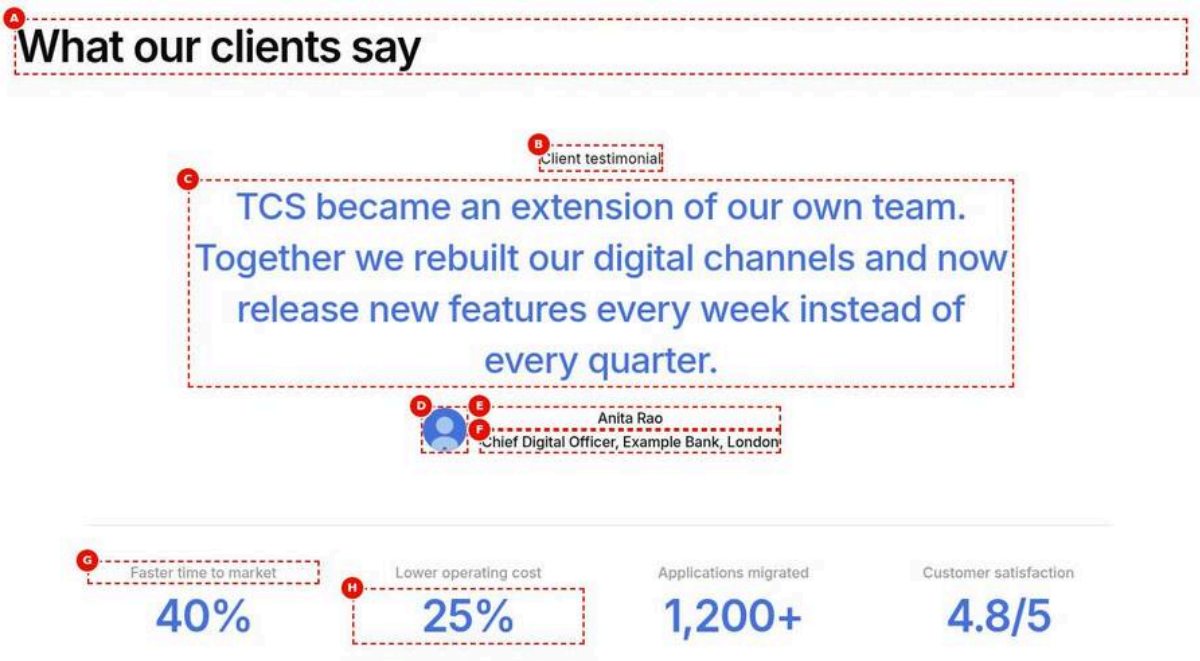

Figure 24: Universal Editor canvas — The Testimonial in Universal Editor edit mode at 1440 px, selected, with letters A on the title, B on the eyebrow, C on the quote, D on person-1.svg, E on Anita Rao, F on the designation, G on the stat titles and H on the stat values. An annotated preview, not a Universal Editor screenshot. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/testimonial-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/testimonial-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	The Testimonial in Universal Editor edit mode at 1440 px, selected, with letters A on the title, B on the eyebrow, C on the quote, D on person-1.svg, E on Anita Rao, F on the designation, G on the stat titles and H on the stat values. An annotated preview, not a Universal Editor screenshot.
Business Context	The Universal Editor view of the Anita Rao testimonial, used to show authors which canvas element each field fills (letters A to H).
Author Objective	Select the Testimonial in edit mode and identify Title, Eyebrow, Description, Author Image, Author, Designation & Location and the stats.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Testimonial	Yes	Adds the Testimonial to the page	Select the section in the content tree, choose Add (+) and pick Testimonial	Only components the section allows (section filter)
—	Eyebrow (Testimonial › Content)	Client testimonial	No	Centred label above the quote	A few words of context	None
—	Title (Testimonial › Content)	What our clients say	No	Section title	Short heading	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Description (Testimonial › Content)	TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.	No (Recommended)	The testimonial quote	Concise, approved wording	None
—	Author (Testimonial › Author)	Anita Rao	No	The author's name	Name (and role if no designation)	None
—	Author Image (Testimonial › Author)	Select the asset person-1.svg (/en/media/person-1.svg)	No	Round author photo	Square headshot	Single asset
—	Designation & Location (Testimonial › Author)	Chief Digital Officer, Example Bank, London	No	Role, organisation, location	One or two lines	None
—	Stats Title (Testimonial › Stats › Stats › Item 1)	Faster time to market	No (Recommended)	What the value measures	Short phrase	None
—	Stats Value (Testimonial › Stats › Stats › Item 1)	40%	No (Recommended)	The figure	A single line	None (single line Recommended)
—	Stats Title (Testimonial › Stats › Stats › Item 2)	Lower operating cost	No (Recommended)	What the value measures	Short phrase	None
—	Stats Value (Testimonial › Stats › Stats › Item 2)	25%	No (Recommended)	The figure	A single line	None (single line Recommended)
—	Stats Title (Testimonial › Stats › Stats › Item 3)	Applications migrated	No (Recommended)	What the value measures	Short phrase	None
—	Stats Value (Testimonial › Stats › Stats › Item 3)	1,200+	No (Recommended)	The figure	A single line	None (single line Recommended)
—	Stats Title (Testimonial › Stats › Stats › Item 4)	Customer satisfaction	No (Recommended)	What the value measures	Short phrase	None
—	Stats Value (Testimonial › Stats › Stats › Item 4)	4.8/5	No (Recommended)	The figure	A single line	None (single line Recommended)
—	Select (Universal Editor canvas)	The Testimonial block (edit mode)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The selected block with A on the title, B on the eyebrow, C on the quote, D on the round photo, E on 'Anita Rao', F on the designation, G on the stat titles and H on the stat values.

- **Rendering behaviour:** In edit mode the editor instrumentation is moved to the rendered elements, so Description, Designation & Location and the stats are editable in place; every change re-decorates the block. The panel has six tabs.
- **Publishing behaviour:** Edits on the canvas are saved to AEM at once but reach aem.page or aem.live only after Publish to Preview or Publish to Live.

Business Rules

- Description (C) and Designation & Location (F) are rich text and editable in place.
- Author (E) is plain text; Author Image (D) is changed through the asset picker.
- Stats (G, H) are items of the Stats multifield in the Stats tab.
- A block with Hide block on is shown faded with an outline in edit mode, and not on the page.

Common Authoring Mistakes

Error	Root Cause	Resolution
A stat cannot be added from the canvas	Stats items are added in the Stats tab of the properties panel	Open the Stats tab and add an item
The edit is visible in the editor but not on aem.live	The page was not published	Select Publish and publish to Live

Troubleshooting

- **Symptoms:** The BG Color and Show / Hide fields cannot be found in the Content tab.
- **Cause:** The Testimonial panel splits its fields over six tabs: Content, Author, Style, Show / Hide, Stats and Additional.
- **Resolution:** Open the Style tab for BG Color and the Show / Hide tab for the four toggles.
- **Verification Steps:** Changing BG Color to Grey in the Style tab turns the block grey on the canvas.

Annotations:

- A = Title (heading, left aligned)
- B = Eyebrow (centred label)
- C = Description (the testimonial quote, rich text)
- D = Author Image (round photo)
- E = Author (name)
- F = Designation & Location (rich text)
- G = Stats Title (one per stat)
- H = Stats Value (one per stat)

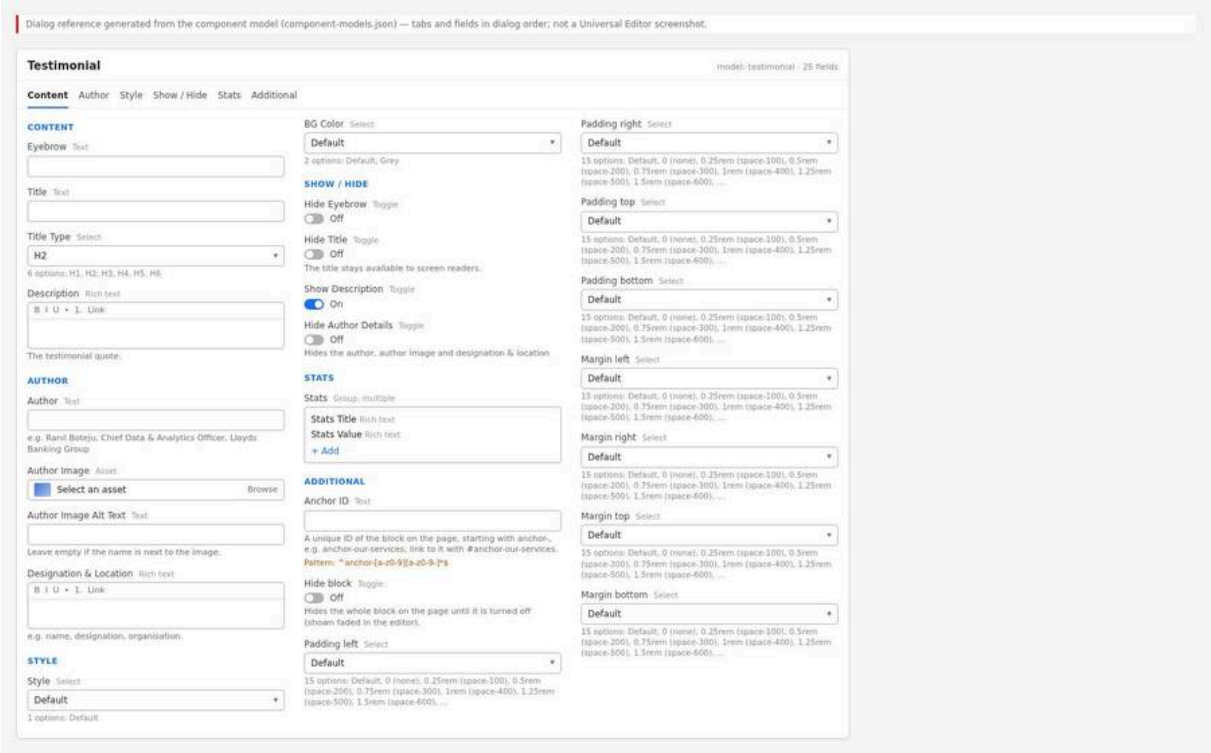

Figure 25: Properties panel — The Testimonial properties panel showing the six tabs (Content, Author, Style, Show / Hide, Stats, Additional) with the Stats tab open and two items. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/testimonial-properties-panel.jpg)

The properties panel has six tabs:

- **Content:** Eyebrow (text), Title (text), Title Type (H1-H6, default H2), Description (rich text, "The testimonial quote.").
- **Author:** Author (text, for example "Ranil Boteju, Chief Data & Analytics Officer, Lloyds Banking Group"), Author Image (asset reference), Author Image Alt Text (text, "Leave empty if the name is next to the image."), Designation & Location (rich text, "e.g. name, designation, organisation.").
- **Style:** Style (Default only), BG Color (Default / Grey).
- **Show / Hide:** Hide Eyebrow (off), Hide Title (off; "The title stays available to screen readers."), Show Description (on), Hide Author Details (off; "Hides the author, author image and designation & location").
- **Stats:** Stats (multifield; each item has Stats Title and Stats Value, "A single line, e.g. 40%.").
- **Additional:** Anchor ID, Hide block, Padding left / right / top / bottom, Margin left / right / top / bottom.

6.13.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites, open the locale site, select the page and choose Edit.

Expected Result: The page opens in the Universal Editor canvas.

Steps — Open the page: AEM Sites console with the page selected and Edit highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Sites › tcs-corp › us › en
2	AEM Sites console	Select	The page /content/tcs-corp/us/en/industries/banking
3	AEM Sites console toolbar	Edit	Select Edit (opens the page in Universal Editor)

Step 2 — Add the Testimonial block

Action: Select the target section, select Add (+) and choose Testimonial.

Expected Result: An empty Testimonial block is added with Title Type = H2 and Show Description on.

Steps — Add the block: The component picker with Testimonial highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Main › Section	Select the target section
2	Universal Editor › Content tree	Section › Add (+)	Open the component list
3	Component list	Blocks	Testimonial
4	Testimonial › Content	Title Type; Show / Hide › Show Description	Preset: H2; On

Step 3 — Fill the Content tab

Action: Enter Eyebrow, Title, choose Title Type and write the Description (the testimonial quote).

Expected Result: The title appears on the left; eyebrow and quote are centred below it.

Steps — Content tab: Content tab filled; canvas showing title, eyebrow and quote.

Step	Where	Field / control	Value / action
1	Testimonial › Content	Eyebrow	Client testimonial
2	Testimonial › Content	Title	What our clients say
3	Testimonial › Content	Title Type	H2
4	Testimonial › Content	Description	TCS became an extension of our own team. Together we re-built our digital channels and now release new features every week instead of every quarter.

Step 4 — Fill the Author tab

Action: Enter Author (the name), select Author Image, set Author Image Alt Text (or leave it empty when the name is next to the photo) and enter Designation & Location.

Expected Result: The author row appears centred below the quote, with the round photo.

Steps — Author tab: Author tab filled; canvas showing the author row with photo.

Step	Where	Field / control	Value / action
1	Testimonial › Author	Author	Anita Rao
2	Testimonial › Author	Author Image	Select the asset person-1.svg (/en/media/person-1.svg)
3	Testimonial › Author	Author Image Alt Text	Leave empty (the name is next to the photo)
4	Testimonial › Author	Designation & Location	Chief Digital Officer, Example Bank, London

Step 5 — Choose the style

Action: In the Style tab, choose BG Color (Default or Grey). Leave Style = Default.

Expected Result: The background changes accordingly.

Steps — Style tab: Style tab with BG Color = Grey and the grey block on the canvas.

Step	Where	Field / control	Value / action
1	Testimonial › Style	Style	Default (keep)
2	Testimonial › Style	BG Color	Grey

Step 6 — Set Show / Hide

Action: In the Show / Hide tab, set Hide Eyebrow, Hide Title, Show Description and Hide Author Details as the design requires.

Expected Result: The hidden parts disappear from the canvas (the hidden title stays in the HTML for screen readers).

Steps — Show / Hide tab: Show / Hide toggles with Hide Title on.

Step	Where	Field / control	Value / action
1	Testimonial › Show / Hide	Hide Eyebrow	Off
2	Testimonial › Show / Hide	Hide Title	On (the title stays available to screen readers)
3	Testimonial › Show / Hide	Show Description	On
4	Testimonial › Show / Hide	Hide Author Details	Off

Step 7 — Add stats

Action: In the Stats tab, add an item for each stat; enter Stats Title (for example “Faster time to market”) and Stats Value (for example “40%”). Reorder items as needed.

Expected Result: The stats appear under a divider, title above value.

Steps — Stats tab: Stats multifield with three items; canvas showing the stats row.

Step	Where	Field / control	Value / action
1	Testimonial › Stats	Stats › Add	Item 1
2	Testimonial › Stats › Item 1	Stats Title; Stats Value	Faster time to market; 40%
3	Testimonial › Stats	Stats › Add	Item 2
4	Testimonial › Stats › Item 2	Stats Title; Stats Value	Lower operating cost; 25%
5	Testimonial › Stats	Stats › Add	Item 3
6	Testimonial › Stats › Item 3	Stats Title; Stats Value	Applications migrated; 1,200+
7	Testimonial › Stats	Reorder	Drag the items into the order to show

Step 8 — Fill the Additional tab (optional)

Action: Set an Anchor ID (for example `anchor-client-results`), Hide block, and spacing only when needed.

Expected Result: Invalid anchors are rejected; spacing changes are visible.

Steps — Additional tab: Additional tab with Anchor ID filled.

Step	Where	Field / control	Value / action
1	Testimonial › Additional	Anchor ID	anchor-client-results
2	Testimonial › Additional	Hide block	Off
3	Testimonial › Additional	Padding / Margin selects	Default (change only when needed)

Step 9 — Preview

Action: Switch to Preview mode and check desktop, tablet and mobile widths.

Expected Result: Layout and stats wrap as described in 6.13.2.

Steps — Preview: Preview mode at mobile width with stats stacked.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	Universal Editor toolbar	Emulation	Mobile (375 px): stats one per row
3	Universal Editor toolbar	Emulation	Tablet (768 px) and Desktop (1440 px)

Step 10 — Validate

Action: Run the Validation Process checklist.

Expected Result: All checks pass.

Steps — Validation: Accessibility tree showing the heading, blockquote, figcaption and description list.

Step	Where	Field / control	Value / action
1	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/industries/banking
2	Browser developer tools	Accessibility tree	Select the Testimonial block
3	Accessibility tree	Check	heading (H2), blockquote, figcaption, description list (term / definition per stat)
4	Browser developer tools	Device mode	375 px, 768 px, 1440 px; the stats wrap cleanly

Step 11 — Publish

Action: Publish the page from Universal Editor.

Expected Result: The live page shows the testimonial after publishing.

Steps — Publish: Universal Editor Publish dialog.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Select Publish
2	Publish dialog	Pages	Keep the current page (and its referenced assets) selected
3	Publish dialog	Destination	Publish to Live (Publish to Preview first if your process requires it)
4	Publish dialog	Publish	Select Publish
5	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.live/en/{path} after the CDN refresh

Preview Process

1. Use Universal Editor Preview mode for a quick check.
2. Open the preview URL `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}` after publishing to preview (where available).
3. Check at 375px, 768px and 1440px; check that the stats wrap cleanly.

Publishing Process

1. Publish the page from Universal Editor or the Sites console.
2. Referenced images (Author Image) are published with the page.
3. The Edge Delivery live page updates after publishing.

Validation Process

- ☐ The title's heading level fits the page outline (Hide Title still counts as a heading).
- ☐ Show Description is on when the quote should be shown.
- ☐ The author name and designation are correct and approved.
- ☐ The author photo is square, shows the face centred and has correct alt text (or none).
- ☐ Each Stats Value is a single line (for example "40%"), each Stats Title describes it.
- ☐ Stats are factual, sourced and approved [To be confirmed: approval process for published stats — owner: content lead].
- ☐ The stats row wraps well at mobile and tablet widths.
- ☐ Anchor ID (if any) is unique.
- ☐ Hide block is off when the block should be visible.

Rollback Process

1. Restore the previous page version from the page's version history, or undo the change.
2. Use Hide block (Additional tab) or Hide Author Details / Show Description off to withdraw a part quickly.
3. Publish the page again.

The walkthroughs below repeat the steps above for each variation of chapter 6.13.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Default Testimonial

Reproduces the screenshot `screenshots/testimonial-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Testimonial

Action: Select the section in the content tree, choose **Add (+)** and pick **Testimonial**.

Expected Result: An empty Testimonial is added with Title Type H2 and Show Description on preset.

Step 3 — Fill in Testimonial › Content

Action: Select **Testimonial** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Customer story; **Title** (B) = Partners in transformation; **Description** (C) = The programme gave every store the same real-time view of stock and demand, and our customers noticed the difference within weeks.

Expected Result: 'Partners in transformation' appears left aligned, with 'Customer story' and the blue quote centred below.

Step 4 — Fill in Testimonial › Author

Action: Select **Testimonial** in the content tree and open the **Author** tab of the properties panel. Enter: **Author** (D) = Marcus Khan; **Designation & Location** (E) = Chief Operating Officer, Example Retail Group, Toronto.

Expected Result: 'Marcus Khan' and 'Chief Operating Officer, Example Retail Group, Toronto' appear centred under the quote, without a photo.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: On white, 'Partners in transformation' left aligned; centred below, 'Customer story', the large blue quote about real-time stock and demand, and 'Marcus Khan' over 'Chief Operating Officer, Example Retail Group, Toronto'; no photo, no stats.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the testimonial on aem.page and Publish to Live on aem.live. Without an image there is no asset to publish, and the block reads no sheet or placeholder.

Step 7 — Verify

Action: On the live page check: The preview page shows the blue quote and the block contains blockquote.testimonial-description.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Grey Background

Reproduces the screenshot `screenshots/testimonial-grey-background.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Testimonial

Action: Select the section in the content tree, choose **Add (+)** and pick **Testimonial**.

Expected Result: An empty Testimonial is added with Title Type H2 and Show Description on preset.

Step 3 — Fill in Testimonial › Content

Action: Select **Testimonial** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Client testimonial; **Title** (B) = What our clients say; **Description** (C) = TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.

Expected Result: The title, eyebrow and blue quote appear on the canvas.

Step 4 — Fill in Testimonial › Author

Action: Select **Testimonial** in the content tree and open the **Author** tab of the properties panel. Enter: **Author** (D) = Anita Rao; **Author Image** (E) = Select the asset person-1.svg (/en/media/person-1.svg); **Designation & Location** (F) = Chief Digital Officer, Example Bank, London.

Expected Result: The round photo, the name and the designation appear under the quote.

Step 5 — Fill in Testimonial › Style

Action: Select **Testimonial** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (G) = Grey.

Expected Result: With BG Color Grey the whole block turns light grey with large padding.

Step 6 — Fill in Testimonial › Stats

Action: Select **Testimonial** in the content tree and open the **Stats** tab of the properties panel. Enter: **Stats** › Item 1: **Stats Title** (H) = Faster time to market, **Stats Value** (I) = 40%; **Stats** › Item 2: **Stats Title** (J) = Lower operating cost, **Stats Value** (K) = 25%; **Stats** › Item 3: **Stats Title** (L) = Applications migrated, **Stats Value** (M) = 1,200+; **Stats** › Item 4: **Stats Title** (N) = Customer satisfaction, **Stats Value** (O) = 4.8/5.

Expected Result: The four stats appear under the divider inside the grey panel.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title, the centred quote, the author row with the round photo and the four stats under the divider all sit on a light grey (grey-100) panel with large padding.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the grey panel on aem.page and Publish to Live on aem.live; person-1.svg is published with the page. No sheet or placeholder is involved.

Step 9 — Verify

Action: On the live page check: On aem.live the block has the class bg-grey and a grey background with 7.5rem vertical padding at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Author with Photo

Reproduces the screenshot `screenshots/testimonial-author-photo.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Testimonial

Action: Select the section in the content tree, choose **Add (+)** and pick **Testimonial**.

Expected Result: An empty Testimonial is added with Title Type H2 and Show Description on preset.

Step 3 — Fill in Testimonial › Content

Action: Select **Testimonial** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Client testimonial; **Title** (B) = What our clients say; **Description** (C) = TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.

Expected Result: The title, eyebrow and blue quote appear on the canvas.

Step 4 — Fill in Testimonial › Author

Action: Select **Testimonial** in the content tree and open the **Author** tab of the properties panel. Enter: **Author** (D) = Anita Rao; **Author Image** (E) = Select the asset person-1.svg (/en/media/person-1.svg); **Designation & Location** (F) = Chief Digital Officer, Example Bank, London.

Expected Result: The round photo appears to the left of 'Anita Rao' and her designation.

Step 5 — Preview

Action: Capture: The author row below the quote (detail).

Expected Result: The capture shows the author row below the quote in detail.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Below the quote, a centred row: the 3rem round photo on the left, then 'Anita Rao' and 'Chief Digital Officer, Example Bank, London', both 1rem medium, 0.25rem apart.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview and Publish to Live deliver the author row; person-1.svg must be selected as a referenced asset in the Publish dialog, otherwise the row shows text only.

Step 8 — Verify

Action: On the live page check: The preview page shows the round photo and its request returns 200.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Author Text Only (No Photo)

Reproduces the screenshot `screenshots/testimonial-author-text-only.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Testimonial

Action: Select the section in the content tree, choose **Add (+)** and pick **Testimonial**.

Expected Result: An empty Testimonial is added with Title Type H2 and Show Description on preset.

Step 3 — Fill in Testimonial › Content

Action: Select **Testimonial** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Client testimonial; **Title** (B) = What our clients say; **Description** (C) = TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.

Expected Result: The title, eyebrow and blue quote appear on the canvas.

Step 4 — Fill in Testimonial › Author

Action: Select **Testimonial** in the content tree and open the **Author** tab of the properties panel. Enter: **Author** (D) = Sara Lee; **Designation & Location** (E) = VP Operations, Example Manufacturing, Munich.

Expected Result: 'Sara Lee' and 'VP Operations, Example Manufacturing, Munich' appear centred under the quote, without a photo.

Step 5 — Preview

Action: Capture: The author row below the quote (detail).

Expected Result: The capture shows the text-only author row below the quote in detail.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Below the quote, 'Sara Lee' and 'VP Operations, Example Manufacturing, Munich' centred on two lines, with no photo.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the attribution on aem.page and Publish to Live on aem.live; with no Author Image there is no asset to publish.

Step 8 — Verify

Action: On the live page check: The preview page shows 'Sara Lee' and her designation inside a figcaption.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — With Stats

Reproduces the screenshot `screenshots/testimonial-with-stats.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Testimonial

Action: Select the section in the content tree, choose **Add (+)** and pick **Testimonial**.

Expected Result: An empty Testimonial is added with Title Type H2 and Show Description on preset.

Step 3 — Fill in Testimonial › Content

Action: Select **Testimonial** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Case study results; **Title** (B) = Measurable outcomes; **Description** (C) = Moving to a cloud-native platform changed how quickly we can respond to our customers.

Expected Result: 'Measurable outcomes', 'Case study results' and the cloud-native quote appear on the canvas.

Step 4 — Fill in Testimonial › Author

Action: Select **Testimonial** in the content tree and open the **Author** tab of the properties panel. Enter: **Author** (D) = Sara Lee; **Designation & Location** (E) = Chief Information Officer, Example Insurance, Amsterdam.

Expected Result: 'Sara Lee' and her designation appear centred under the quote.

Step 5 — Fill in Testimonial › Stats

Action: Select **Testimonial** in the content tree and open the **Stats** tab of the properties panel. Enter: **Stats** › Item 1: **Stats Title** (F) = Faster time to market, **Stats Value** (G) = 40%; **Stats** › Item 2: **Stats Title** (H) = Lower operating cost, **Stats Value** (I) = 25%; **Stats** › Item 3: **Stats Title** (J) = Applications migrated, **Stats Value** (K) = 1,200+; **Stats** › Item 4: **Stats Title** (L) = Customer satisfaction, **Stats Value** (M) = 4.8/5.

Expected Result: A divider and four stats appear, each with its grey title above the large blue value.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: 'Measurable outcomes' left aligned, the centred quote and 'Sara Lee' / 'Chief Information Officer, Example Insurance, Amsterdam'; under a 1px divider four stats in one row, each a grey title above a 3rem blue value: 40%, 25%, 1,200+, 4.8/5.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the results on aem.page and Publish to Live on aem.live. The stats are page content; they are not read from a sheet, so there is nothing else to publish.

Step 8 — Verify

Action: On the live page check: Each div.testimonial-stat on the preview page has a dt with the title and a dd with the number.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Hide Eyebrow

Reproduces the screenshot `screenshots/testimonial-hide-eyebrow.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Testimonial

Action: Select the section in the content tree, choose **Add (+)** and pick **Testimonial**.

Expected Result: An empty Testimonial is added with Title Type H2 and Show Description on preset.

Step 3 — Fill in Testimonial › Content

Action: Select **Testimonial** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Client testimonial; **Title** (B) = What our clients say; **Description** (C) = TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.

Expected Result: The title, the eyebrow 'Client testimonial' and the blue quote appear on the canvas.

Step 4 — Fill in Testimonial › Author

Action: Select **Testimonial** in the content tree and open the **Author** tab of the properties panel. Enter: **Author** (D) = Anita Rao; **Author Image** (E) = Select the asset person-1.svg (/en/media/person-1.svg); **Designation & Location** (F) = Chief Digital Officer, Example Bank, London.

Expected Result: The round photo, the name and the designation appear under the quote.

Step 5 — Fill in Testimonial › Show / Hide

Action: Select **Testimonial** in the content tree and open the **Show / Hide** tab of the properties panel. Enter: **Hide Eyebrow** (G) = On.

Expected Result: With Hide Eyebrow on, 'Client testimonial' disappears and the quote moves up below the title.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: 'What our clients say' left aligned, then directly the centred blue quote and the author row with the round photo; the 'Client testimonial' label is gone.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview and Publish to Live remove the eyebrow from aem.page and aem.live; the text stays saved in the Eyebrow field for later reuse.

Step 8 — Verify

Action: On the live page check: On aem.live the figure has no p.testimonial-eyebrow and starts with the quote.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Hide Title (Visually Hidden)

Reproduces the screenshot `screenshots/testimonial-hide-title.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Testimonial

Action: Select the section in the content tree, choose **Add (+)** and pick **Testimonial**.

Expected Result: An empty Testimonial is added with Title Type H2 and Show Description on preset.

Step 3 — Fill in Testimonial › Content

Action: Select **Testimonial** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Client testimonial; **Title** (B) = What our clients say; **Description** (C) = TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.

Expected Result: 'What our clients say' appears left aligned above the eyebrow and the blue quote.

Step 4 — Fill in Testimonial › Author

Action: Select **Testimonial** in the content tree and open the **Author** tab of the properties panel. Enter: **Author** (D) = Anita Rao; **Author Image** (E) = Select the asset person-1.svg (/en/media/person-1.svg); **Designation & Location** (F) = Chief Digital Officer, Example Bank, London.

Expected Result: The round photo, the name and the designation appear under the quote.

Step 5 — Fill in Testimonial › Show / Hide

Action: Select **Testimonial** in the content tree and open the **Show / Hide** tab of the properties panel. Enter: **Hide Title** (G) = On.

Expected Result: With Hide Title on, the title disappears from view and the block starts with the eyebrow.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The block starts with the centred 'Client testimonial' eyebrow, then the blue quote and the author row; no visible title above them.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview and Publish to Live deliver the hidden heading to aem.page and aem.live; the heading still counts in the page outline.

Step 8 — Verify

Action: On the live page check: The browser's accessibility tree shows the H2 'What our clients say' in the block while the page shows no visible title.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — Description Hidden (Show Description off)

Reproduces the screenshot `screenshots/testimonial-description-hidden.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Testimonial

Action: Select the section in the content tree, choose **Add (+)** and pick **Testimonial**.

Expected Result: An empty Testimonial is added with Title Type H2 and Show Description on preset.

Step 3 — Fill in Testimonial › Content

Action: Select **Testimonial** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Client testimonial; **Title** (B) = What our clients say; **Description** (C) = TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.

Expected Result: The title, eyebrow and the blue quote appear on the canvas.

Step 4 — Fill in Testimonial › Author

Action: Select **Testimonial** in the content tree and open the **Author** tab of the properties panel. Enter: **Author** (D) = Anita Rao; **Author Image** (E) = Select the asset person-1.svg (/en/media/person-1.svg); **Designation & Location** (F) = Chief Digital Officer, Example Bank, London.

Expected Result: The round photo, the name and the designation appear under the quote.

Step 5 — Fill in Testimonial › Show / Hide

Action: Select **Testimonial** in the content tree and open the **Show / Hide** tab of the properties panel. Enter: **Show Description** (G) = Off.

Expected Result: With Show Description off, the blue quote disappears and the author row follows the eyebrow.

Step 6 — Fill in Testimonial › Stats

Action: Select **Testimonial** in the content tree and open the **Stats** tab of the properties panel. Enter: **Stats** › Item 1: **Stats Title** (H) = Faster time to market, **Stats Value** (I) = 40%; **Stats** › Item 2: **Stats Title** (J) = Lower operating cost, **Stats Value** (K) = 25%; **Stats** › Item 3: **Stats Title** (L) = Applications migrated, **Stats Value** (M) = 1,200+; **Stats** › Item 4: **Stats Title** (N) = Customer satisfaction, **Stats Value** (O) = 4.8/5.

Expected Result: The four stats appear under the divider below the author row.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: 'What our clients say', the centred 'Client testimonial' eyebrow and directly the author row with the round photo; under the divider the four stats 40%, 25%, 1,200+ and 4.8/5.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview and Publish to Live remove the quote from aem.page and aem.live; the text stays saved in Description until Show Description is switched on again.

Step 9 — Verify

Action: On the live page check: The preview page shows the large blue quote between the eyebrow and the author row.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — Hide Author Details

Reproduces the screenshot `screenshots/testimonial-hide-author.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Testimonial

Action: Select the section in the content tree, choose **Add (+)** and pick **Testimonial**.

Expected Result: An empty Testimonial is added with Title Type H2 and Show Description on preset.

Step 3 — Fill in Testimonial › Content

Action: Select **Testimonial** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Client testimonial; **Title** (B) = What our clients say; **Description** (C) = TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.

Expected Result: The title, eyebrow and blue quote appear on the canvas.

Step 4 — Fill in Testimonial › Author

Action: Select **Testimonial** in the content tree and open the **Author** tab of the properties panel. Enter: **Author** (D) = Anita Rao; **Author Image** (E) = Select the asset person-1.svg (/en/media/person-1.svg); **Designation & Location** (F) = Chief Digital Officer, Example Bank, London.

Expected Result: The round photo, the name and the designation appear under the quote.

Step 5 — Fill in Testimonial › Show / Hide

Action: Select **Testimonial** in the content tree and open the **Show / Hide** tab of the properties panel. Enter: **Hide Author Details** (G) = On.

Expected Result: With Hide Author Details on, the whole author row disappears.

Step 6 — Fill in Testimonial › Stats

Action: Select **Testimonial** in the content tree and open the **Stats** tab of the properties panel. Enter: **Stats** › Item 1: **Stats Title** (H) = Faster time to market, **Stats Value** (I) = 40%; **Stats** › Item 2: **Stats Title** (J) = Lower operating

cost, **Stats Value** (K) = 25%; **Stats** › Item 3: **Stats Title** (L) = Applications migrated, **Stats Value** (M) = 1,200+; **Stats** › Item 4: **Stats Title** (N) = Customer satisfaction, **Stats Value** (O) = 4.8/5.

Expected Result: The four stats appear under the divider, directly after the quote.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title, the centred 'Client testimonial' eyebrow and the blue quote, then directly the divider and the four stats; no photo, name or designation.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview and Publish to Live remove the attribution from aem.page and aem.live; the Author tab values stay saved for when approval arrives.

Step 9 — Verify

Action: On the live page check: The figure on the page contains no figcaption; the quote is followed by the stats divider.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.13.6 Authorable Field Specification

Model `testimonial` — Content, Author, Style, Show / Hide and Stats tabs

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Eyebrow (`eyebrow`)	text	No	No	empty	Centred label above the quote	A few words of context	None	Client success
Title (`title`)	text	No	No	empty	Section title	Short heading	None	What our clients say
Title Type (`titleType`)	select	No	No	h2	Heading level	Fit the outline	h1-h6	h2
Description (`description`)	richtext	No (Recommended)	No	empty	The testimonial quote	Concise, approved wording	None	TCS gave us a platform for growth.
Author (`authorName`)	text	No	No	empty	The author's name	Name (and role if no designation)	None	Ranil Boteju
Author Image (`authorImage`)	reference	No	No	empty	Round author photo	Square headshot	Single asset	/content/dam/tcs-corp/people/rb.jpg
Author Image Alt Text (`authorImageAlt`)	text	No	No	empty	Alt text of the photo	Empty if the name is next to it	None	Photo of Ranil Boteju
Designation & Location (`designationLocation`)	richtext	No	No	empty	Role, organisation, location	One or two lines	None	Chief Data & Analytics Officer, Lloyds Banking Group

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Style (`classes`)	select	No	No	Default (empty)	Reserved for styles	Leave Default	Only Default	Default
BG Color (`bgColor`)	select	No	No	Default (empty)	Background	Default or Grey	Only grey applied	grey
Hide Eyebrow (`hideEyebrow`)	boolean	No	No	false	Hide the eyebrow	On to hide	Toggle	false
Hide Title (`titleHidden`)	boolean	No	No	false	Hide the title visually	Title stays for screen readers	Toggle	true
Show Description (`showDescription`)	boolean	No	No	true	Show the quote	Keep on to show the quote	Toggle	true
Hide Author Details (`hideAuthor`)	boolean	No	No	false	Hide name, photo, designation	On to hide	Toggle	false
Stats (`stats`)	container (multifield)	No	Yes	no items	Results below the testimonial	One item per stat	None	2 items

Model `testimonial` — Stats item (container `stats`, `multi: true`)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Stats Title (`statLabel`)	richtext	No (Recommended)	No	empty	What the value measures	Short phrase	None	Faster time to market
Stats Value (`statValue`)	richtext	No (Recommended)	No	empty	The figure	A single line	None (single line Recommended)	40%

Model `testimonial` — Additional tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Anchor ID (`classes_anchor`)	text	No	No	empty	Id for in-page links	Start with anchor-	Enforced: regExp `^anchor-[a-z0-9][a-z0-9-]*$`	anchor-client-results
Hide block (`classes_hideblock`)	boolean	No	No	false	Hide the block	Prepare or withdraw	Toggle	false
Padding left (`classes_paddingleft`)	select	No	No	Default (empty)	Left padding	Only when the design asks	15 options (pl-0 … pl-3000)	pl-400
Padding right (`classes_paddingright`)	select	No	No	Default (empty)	Right padding	Only when the design asks	15 options (pr-0 … pr-3000)	pr-400

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Padding top (`classes_paddingtop`)	select	No	No	Default (empty)	Top padding	Only when the design asks	15 options (pt-0 … pt-3000)	pt-1000
Padding bottom (`classes_paddingbottom`)	select	No	No	Default (empty)	Bottom padding	Only when the design asks	15 options (pb-0 … pb-3000)	pb-1000
Margin left (`classes_marginleft`)	select	No	No	Default (empty)	Left margin	Only when the design asks	15 options (ml-0 … ml-3000)	ml-0
Margin right (`classes_marginright`)	select	No	No	Default (empty)	Right margin	Only when the design asks	15 options (mr-0 … mr-3000)	mr-0
Margin top (`classes_margintop`)	select	No	No	Default (empty)	Top margin	Only when the design asks	15 options (mt-0 … mt-3000)	mt-1600
Margin bottom (`classes_marginbottom`)	select	No	No	Default (empty)	Bottom margin	Only when the design asks	15 options (mb-0 … mb-3000)	mb-1600

The padding and margin selects offer the same 15 options as the Quote block (6.12.6): Default, 0 (none), 0.25rem (space-100), 0.5rem (space-200), 0.75rem (space-300), 1rem (space-400), 1.25rem (space-500), 1.5rem (space-600), 2rem (space-800), 2.5rem (space-1000), 3rem (space-1200), 4rem (space-1600), 5rem (space-2000), 6rem (space-2400) and 7.5rem (space-3000).

Field details

Eyebrow (`eyebrow`)

- Purpose: Context label, centred above the quote.
- Allowed Values: Plain text.
- Character Limits: None enforced. Recommended: up to 40 characters.
- Business Rules: Shown as `p.testimonial-eyebrow` when it has text and Hide Eyebrow is off.
- Dependency Rules: Hide Eyebrow.
- Visibility Rules: Always visible in the dialog (no `condition`).
- Sample Content: “Client success”.

Title (`title`)

- Purpose: Section title above the testimonial.
- Allowed Values: Plain text.
- Character Limits: None enforced. Recommended: up to 60 characters.
- Business Rules: Rendered as the heading of Title Type; visually hidden when Hide Title is on.
- Dependency Rules: Title Type, Hide Title.
- Visibility Rules: Always visible.
- Sample Content: “What our clients say”.

Title Type (`titleType`)

- Purpose: Heading level of the title.
- Allowed Values: H1-H6 (h1-h6), default h2.
- Character Limits: Not applicable.
- Business Rules: Invalid or missing: the heading level found in the cell, else H2.
- Dependency Rules: Only with Title text.

- Visibility Rules: Always visible.
- Sample Content: h2.

Description (`description`)

- Purpose: The testimonial quote.
- Allowed Values: Rich text.
- Character Limits: None enforced. Recommended: up to 250 characters (it is set at 1.75rem / 2.5rem).
- Business Rules: Shown as `blockquote.testimonial-description` only when Show Description is on and it has text; paragraphs 1rem apart.
- Dependency Rules: Show Description.
- Visibility Rules: Always visible.
- Sample Content: "TCS gave us a platform for growth."

Author (`authorName`)

- Purpose: The author's name (the dialog example also shows role and organisation in one line).
- Allowed Values: Plain text.
- Character Limits: None enforced. Recommended: up to 80 characters.
- Business Rules: Shown as `p.testimonial-author-name` when it has text and Hide Author Details is off.
- Dependency Rules: Hide Author Details.
- Visibility Rules: Always visible.
- Sample Content: "Ranil Boteju".

Author Image (`authorImage`)

- Purpose: Round photo of the author.
- Allowed Values: One image asset.
- Character Limits: Not applicable.
- Business Rules: Shown 3rem x 3rem, cropped to a circle; only when the cell holds a picture and Hide Author Details is off.
- Dependency Rules: Author Image Alt Text; Hide Author Details.
- Visibility Rules: Always visible.
- Sample Content: `/content/dam/tcs-corp/people/ranil-boteju.jpg`.

Author Image Alt Text (`authorImageAlt`)

- Purpose: Alt text of the photo.
- Allowed Values: Plain text; empty when the name is next to the image.
- Character Limits: None enforced. Recommended: up to 100 characters.
- Business Rules: Replaces the image's alt when set; otherwise an image without alt gets `alt=""`.
- Dependency Rules: Requires Author Image.
- Visibility Rules: Always visible.
- Sample Content: empty (name shown next to it).

Designation & Location (`designationLocation`)

- Purpose: Role, organisation and location of the author.
- Allowed Values: Rich text.
- Character Limits: None enforced. Recommended: up to 100 characters.
- Business Rules: Shown as `div.testimonial-author-details` (rich text kept) below the name.
- Dependency Rules: Hide Author Details.
- Visibility Rules: Always visible.
- Sample Content: "Chief Data & Analytics Officer, Lloyds Banking Group".

Style (`classes`)

- Purpose: Reserved for style variants.
- Allowed Values: Default only.
- Character Limits: Not applicable.
- Business Rules: Adds no class.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: Default.

BG Color (`bgColor`)

- Purpose: Background colour.
- Allowed Values: Default (white), Grey (grey).
- Character Limits: Not applicable.
- Business Rules: Grey adds `bg-grey` with its own padding.
- Dependency Rules: Additional tab padding overrides it.
- Visibility Rules: Always visible.
- Sample Content: grey.

Hide Eyebrow (`hideEyebrow`)

- Purpose: Leaves out the eyebrow.
- Allowed Values: On / Off (default Off).
- Character Limits: Not applicable.
- Business Rules: Only an authored `true` turns it on.
- Dependency Rules: Eyebrow.
- Visibility Rules: Always visible.
- Sample Content: Off.

Hide Title (`titleHidden`)

- Purpose: Hides the title visually, keeping it for screen readers.
- Allowed Values: On / Off (default Off).
- Character Limits: Not applicable.
- Business Rules: Adds `visually-hidden` to the heading.
- Dependency Rules: Title must have text.
- Visibility Rules: Always visible.
- Sample Content: On.

Show Description (`showDescription`)

- Purpose: Shows the quote.
- Allowed Values: On / Off (default On).
- Character Limits: Not applicable.
- Business Rules: Only an authored `true` shows the description; a missing value hides it.
- Dependency Rules: Description.
- Visibility Rules: Always visible.
- Sample Content: On.

Hide Author Details (`hideAuthor`)

- Purpose: Leaves out the author, author image and designation & location.
- Allowed Values: On / Off (default Off).
- Character Limits: Not applicable.
- Business Rules: When on, no figcaption is built.
- Dependency Rules: Author tab fields.

- Visibility Rules: Always visible.
- Sample Content: Off.

Stats (`stats`)

- Purpose: A list of results shown under a divider.
- Allowed Values: Zero or more items, each with Stats Title and Stats Value.
- Character Limits: None enforced. Recommended: 2 to 5 items (five fit one desktop row).
- Business Rules: Empty items are skipped; with no items no stats are rendered.
- Dependency Rules: None (independent of the Show / Hide toggles).
- Visibility Rules: Always visible.
- Sample Content: “Faster time to market / 40%”, “Cost reduction / 25%”.

Stats Title (`statLabel`)

- Purpose: What the value measures, shown above it.
- Allowed Values: Rich text.
- Character Limits: None enforced. Recommended: up to 40 characters.
- Business Rules: All elements of an item before the last become the title (`dt`).
- Dependency Rules: Stats Value.
- Visibility Rules: Always visible within the item.
- Sample Content: “Faster time to market”.

Stats Value (`statValue`)

- Purpose: The figure.
- Allowed Values: Rich text; a single line (“A single line, e.g. 40%.”).
- Character Limits: None enforced. Recommended: up to 8 characters.
- Business Rules: The last element of an item is the value (`dd`); extra paragraphs move into the title.
- Dependency Rules: Stats Title.
- Visibility Rules: Always visible within the item.
- Sample Content: “40%”.

Anchor ID (`classes_anchor`)

- Purpose: Block id for `#anchor-...` links.
- Allowed Values: `anchor-` plus lower-case letters, digits and hyphens.
- Character Limits: None enforced. Recommended: up to 40 characters.
- Business Rules: Enforced by regExp `^anchor-[a-z0-9][a-z0-9-]*$`; duplicates get `-2`, `-3`.
- Dependency Rules: Becomes the data layer component id.
- Visibility Rules: Always visible.
- Sample Content: `anchor-client-results`.

Hide block (`classes_hideblock`)

- Purpose: Hides the whole block on the page.
- Allowed Values: On / Off (default Off).
- Character Limits: Not applicable.
- Business Rules: Not displayed outside edit mode; faded with a dashed outline in edit mode.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: Off.

Padding left (`classes_paddingleft`)

- Purpose: Left inner spacing.
- Allowed Values: The 15 options (class `pl-{token}`).

- Character Limits: Not applicable.
- Business Rules: Outranks the block's own padding (including Grey).
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 1rem (space-400).

Padding right (`classes_paddingright`)

- Purpose: Right inner spacing.
- Allowed Values: The 15 options (class `pr-{token}`).
- Character Limits: Not applicable.
- Business Rules: As Padding left.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 1rem (space-400).

Padding top (`classes_paddingtop`)

- Purpose: Top inner spacing.
- Allowed Values: The 15 options (class `pt-{token}`).
- Character Limits: Not applicable.
- Business Rules: As Padding left.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 2.5rem (space-1000).

Padding bottom (`classes_paddingbottom`)

- Purpose: Bottom inner spacing.
- Allowed Values: The 15 options (class `pb-{token}`).
- Character Limits: Not applicable.
- Business Rules: As Padding left.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 2.5rem (space-1000).

Margin left (`classes_marginleft`)

- Purpose: Left outer spacing.
- Allowed Values: The 15 options (class `ml-{token}`).
- Character Limits: Not applicable.
- Business Rules: Styled in `styles/styles.css`.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 0 (none).

Margin right (`classes_marginright`)

- Purpose: Right outer spacing.
- Allowed Values: The 15 options (class `mr-{token}`).
- Character Limits: Not applicable.
- Business Rules: As Margin left.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 0 (none).

Margin top (`classes_margintop`)

- Purpose: Space above the block.
- Allowed Values: The 15 options (class `mt-{token}`).
- Character Limits: Not applicable.
- Business Rules: As Margin left.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 4rem (space-1600).

Margin bottom (`classes_marginbottom`)

- Purpose: Space below the block.
- Allowed Values: The 15 options (class `mb-{token}`).
- Character Limits: Not applicable.
- Business Rules: As Margin left.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: 4rem (space-1600).

6.13.7 Field Annotation Mapping

Marker	Field	Purpose
A	Title (`title`), Title Type (`titleType`)	Section heading
B	Eyebrow (`eyebrow`)	Context label above the quote
C	Description (`description`)	The testimonial quote
D	Author Image (`authorImage`), Author Image Alt Text (`authorImageAlt`)	Round author photo
E	Author (`authorName`)	Author's name
F	Designation & Location (`designationLocation`)	Role, organisation, location
G	Stats Title (`statLabel`)	What each stat measures
H	Stats Value (`statValue`)	The figure of each stat

6.13.8 Component Specification

Attribute	Value
Component Name	Testimonial (`testimonial`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`decorators/stats-decorator.js`; `utils/multifield.js`; `decorators/a11y-decorator.js`; `decorators/content-decorator.js`; `decorators/heading-decorator.js`; `decorators/image-decorator.js`; `utils/properties.js`; global block options, buttons and data layer decorators
Component Type	Block (key-value block with a composite multifield, no child components)
Supported Variants	BG Color Default / Grey; author with or without photo; with or without stats; Hide Eyebrow; Hide Title; Show Description; Hide Author Details; Style: Default only
Supported Templates	Any page (allowed in every section)

Attribute	Value
Supported Metadata	None read by the block
Supported Tags	None
Supported Personalization	None in the block; Adobe Target via the data layer once Adobe Tags is integrated (not implemented)
Caching Considerations	Part of the page HTML cached by the Edge Delivery CDN; no data fetched
Performance Considerations	Synchronous decoration; small author image (3rem) from the authored, optimized picture; no scripts or data requests
Accessibility Compliance	Figure / blockquote / figcaption; description list for stats; visually hidden title option; alt text field; selectable heading level
SEO Compliance	Real heading; quote and stats as text; title kept in the HTML when hidden visually

6.13.9 Input Model

- **Content Inputs:** Eyebrow, Title, Title Type, Description, Author, Author Image, Author Image Alt Text, Designation & Location, BG Color, the Show / Hide toggles, Stats.
- **Metadata Inputs:** None (the Authors data sheet is not used by this block).
- **Tags Inputs:** None.
- **Page Context Inputs:** None.
- **Query Inputs:** None.
- **Manual Inputs:** All content is authored in the block; Style and Additional tab values arrive as block classes.

Authored HTML (one row per property; the Stats cell holds the items as runs of elements separated by `<hr>`, or as list items when an item has a single element):

```
<div class="testimonial">
  <div><div>eyebrow</div><div><p>Client success</p></div></div>
  <div><div>title</div><div><p>What our clients say</p></div></div>
  <div><div>titleType</div><div><p>h2</p></div></div>
  <div><div>description</div><div><p>TCS gave us a platform for growth.</p></div></div>
  <div><div>authorName</div><div><p>Ranil Boteju</p></div></div>
  <div><div>authorImage</div><div><picture><img src="./media_9f.jpeg" alt=""></picture></
div>
  </div>
  <div><div>designationLocation</div><div><p>CDAO, Lloyds Banking Group</p></div></div>
  <div><div>bgColor</div><div><p>grey</p></div></div>
  <div><div>showDescription</div><div><p>true</p></div></div>
  <div><div>stats</div><div>
    <p>Faster time to market</p><p>40%</p><hr><p>Cost reduction</p><p>25%</p>
  </div></div>
</div>
```

6.13.10 Output Model

Rendered Output: The rows are replaced by, in order: the title heading `.testimonial-title` (with `visually-hidden` when Hide Title is on); `figure.testimonial-quote` with `p.testimonial-eyebrow`, `blockquote.testimonial-description` and `figcaption > div.testimonial-author` (`div.testimonial-author-image`, `div.testimonial-author-text` with `p.testimonial-author-name` and `div.testimonial-author-details`); and `dl.testimonial-stats` with `div.testimonial-stat > dt.testimonial-stat-label + dd.testimonial-stat-value`. Parts without content are left out. Block class from the code: `bg-grey`.

Generated HTML:

```
<div class="testimonial bg-grey block" data-block-name="testimonial">
  <h2 class="testimonial-title">What our clients say</h2>
  <figure class="testimonial-quote">
    <p class="testimonial-eyebrow">Client success</p>
    <blockquote class="testimonial-description"><p>TCS gave us a platform for growth.</p>
    </blockquote>
    <figcaption>
      <div class="testimonial-author">
        <div class="testimonial-author-image"><picture><img src="..." alt=""></picture></
div>
        <div class="testimonial-author-text">
          <p class="testimonial-author-name">Ranil Boteju</p>
          <div class="testimonial-author-details"><p>CDAO, Lloyds Banking Group</p></div>
        </div>
      </div>
    </figcaption>
  </figure>
  <dl class="testimonial-stats">
    <div class="testimonial-stat">
      <dt class="testimonial-stat-label"><p>Faster time to market</p></dt>
      <dd class="testimonial-stat-value"><p>40%</p></dd>
    </div>
  </dl>
</div>
```

Generated JSON: None.

Generated Metadata: None.

Analytics Tracking: The block is added to the data layer after the sections load (id = Anchor ID, else `testimonial-{n}`; `dc:title` = the title heading, even when visually hidden). Links in the rich text push `cmp:click`.

```
{
  "component": {
    "testimonial-1": {
      "@type": "tcs-corp/components/testimonial",
      "parentId": "page-1k3x9q",
      "dc:title": "What our clients say"
    }
  }
}
```

Personalization Output: None.

Search Index Output: None (the query index reads page metadata only).

Target Personalization Output: None in the block today: no personalisation marker or Target mbox. The Testimonial is in the data layer as tcs-corp/components/testimonial (id = Anchor ID or testimonial-n, dc:title = the title, also when hidden), which Adobe Target could use once Adobe Tags is integrated (Not implemented (as of this handover)).

6.13.11 Business Rules

1. Key-value block: only rows with exactly two cells are properties; property names are matched case-insensitively.
2. The title is rendered only when it has text, at Title Type (h1-h6), else a heading level in the cell, else H2.
3. Hide Title adds `visually-hidden` to the title; the heading stays in the HTML.
4. The eyebrow is rendered only when Hide Eyebrow is off and the eyebrow has text.

5. The description is rendered only when Show Description is `true` and it has text; a missing Show Description value hides the description.
6. Toggles are on only when their value is exactly `true` (case-insensitive); a missing row means off.
7. Hide Author Details on: no author part, whatever the Author tab contains.
8. The author part is built from the parts with content (photo, name, designation); without any, no figcaption is added.
9. The author image's alt is Author Image Alt Text when set, else `alt=""` if the image has no alt.
10. The figure is left out when it has no eyebrow, description or author.
11. Stats: the multifield items are read as list items or as runs of elements between `<hr>`s; a list item's children are its elements; empty items are skipped.
12. In each stat, the last element is the value and all earlier elements are the title; a one-element item has a value and an empty title.
13. With no stat items, no stats list is rendered.
14. BG Color accepts only `grey`; the `bg-grey` class is reset on each decoration; a block class `grey` is a fallback.
15. The layout switches at 900px (gaps and Grey padding).
16. Stats columns are at least 10rem wide and wrap automatically; up to five fit one row at the 70rem maximum width.
17. The Additional tab padding overrides the Grey padding; Hide block hides the block outside edit mode.
18. Editor-only: instrumentation is moved to the rendered elements so in-place editing works; changes re-decorate the block.
19. Errors are caught by the block loader (`failed to load module for testimonial`).

6.13.12 Author Best Practices

Recommended Content Length: Eyebrow up to 40 characters; Title up to 60; Description up to 250 (large type); Author up to 80; Designation & Location up to 100; 2 to 5 stats with titles up to 40 characters and values up to 8 characters. (All Recommended.)

Image Dimensions: Author Image is shown 3rem x 3rem (48px) in a circle with `object-fit: cover`. Recommended: a square (1 : 1) headshot of at least 96 x 96 px, face centred.

CTA Writing Guidelines: No CTA field. If needed, add a link in its own paragraph in the description (it becomes a link button) with a descriptive label.

Accessibility Guidelines: Keep a title even when it is hidden (Hide Title) so the section has a heading; leave the alt text empty when the name is next to the photo; write stats so that the title explains the value ("Faster time to market" / "40%"); do not use only colour to convey meaning.

SEO Guidelines: Use a descriptive title; write numbers as text (not images); include the organisation name in the designation.

Metadata Guidelines: The block reads no page metadata.

Taxonomy Guidelines: No tags in the block; tag the page if it should appear in discovery lists.

Localization Guidelines: Translate eyebrow, title, description, designation and stat titles; localise number formats in values (for example "40 %" in French) [To be confirmed: number format rules per locale — owner: localisation lead]; keep names unchanged.

6.13.13 Troubleshooting Guide

Issue 1 — The quote (description) does not appear

Symptoms: Title and author are shown, but not the large quote.

Root Cause: Show Description is off, or its value is missing (blocks authored before the field existed), or the Description is empty.

Diagnosis Steps: Check the Show / Hide tab and the Description field.

Resolution Steps: Switch Show Description on (toggle it off and on again if it shows as on but the value was never saved) and fill the Description.

Validation Steps: The `blockquote.testimonial-description` appears.

Preventive Measures: Add the Show Description check to the validation checklist.

Issue 2 — A stat value appears in the title position or vice versa

Symptoms: A stat shows text where the value should be, or the value is missing.

Root Cause: The last element of an item is always the value; an empty Stats Value makes the title the value, and a multi-paragraph value moves its first paragraphs into the title.

Diagnosis Steps: Inspect the item's `dt` and `dd` in the HTML; open the item in the Stats tab.

Resolution Steps: Fill both fields; keep Stats Value on a single line.

Validation Steps: Title above, value below for each item.

Preventive Measures: Train authors on the single-line rule.

Issue 3 — The author row is missing

Symptoms: No name, photo or designation below the quote.

Root Cause: Hide Author Details is on, or all three author fields are empty.

Diagnosis Steps: Check the Show / Hide and Author tabs.

Resolution Steps: Turn Hide Author Details off and fill the fields.

Validation Steps: The `figcaption` with the author appears.

Preventive Measures: Use Hide Author Details only on purpose.

Issue 4 — The title is not visible

Symptoms: The section title is missing on the page but heard by screen readers.

Root Cause: Hide Title is on (visually hidden by design).

Diagnosis Steps: Check the `visually-hidden` class on `.testimonial-title`.

Resolution Steps: Turn Hide Title off if the title should be seen.

Validation Steps: The title is visible.

Preventive Measures: Document per page whether the title should be hidden.

Issue 5 — The author photo is distorted or cropped badly

Symptoms: The face is off-centre or cut in the circle.

Root Cause: A non-square or off-centre image is cropped to a 3rem circle.

Diagnosis Steps: Check the source image proportions.

Resolution Steps: Use a square, centred headshot.

Validation Steps: The face fills the circle.

Preventive Measures: Keep a library of approved square headshots.

Issue 6 — Stats wrap unevenly
Symptoms: For example four stats show as three plus one on tablet.

Root Cause: The grid fits as many 10rem columns as the width allows (`auto-fit`).

Diagnosis Steps: Check the viewport width and the number of items.

Resolution Steps: Use a number of stats that wraps well (for example 3 or 6), or shorten the values.

Validation Steps: Check at 375px, 768px and 1440px.

Preventive Measures: Plan the number of stats with the design team.

Issue 7 — The eyebrow is missing
Symptoms: The label above the quote is not shown.

Root Cause: Hide Eyebrow is on, or the Eyebrow is empty.

Diagnosis Steps: Check the Show / Hide tab.

Resolution Steps: Turn Hide Eyebrow off and fill the Eyebrow.

Validation Steps: `p.testimonial-eyebrow` appears.

Preventive Measures: Validate before publishing.

6.13.14 Support Runbook
Monitoring Requirements: No block-specific monitoring. Monitor key pages with Real User Monitoring (Edge Delivery operational telemetry) and check the console after deployments.

Logs:

- Browser console: no messages of its own; decoration errors appear as `failed to load module for testimonial`, CSS or loading errors as `failed to load block testimonial`.
- Admin API: page status at `https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`.
- Author logs: AEM author logs and the page Timeline.

Common Errors:

Error	Likely Cause	Action
Quote missing	Show Description off or missing	Turn it on
Author missing	Hide Author Details on or fields empty	Turn off, fill fields
Stat value and title swapped	Empty value or multi-line value	Fill both, single-line value
Title not visible	Hide Title on	Turn off if needed
Anchor ID rejected	Pattern not matched	Use `anchor-...`
`failed to load module for testimonial`	Code error	Escalate to L3

Escalation Matrix:

Level	Team	Checks
L1	Author support	Field values, Show / Hide toggles, stats items, images, publication
L2	AMS / site admin	Replication, Admin API status, CDN cache, console errors, deployments
L3	Development team	Block, stats decorator, multifield reading, CSS; local reproduction with `aem up`
L4	Adobe Support	Universal Editor, Edge Delivery publishing or CDN platform issues

Recovery Procedures: Restore the previous page version and republish; use Hide block or the Show / Hide toggles to withdraw parts; revert code regressions on `main`.

Health Checks: On a live page with the block, check that the figure, the author row and the stats list render, there are no console errors and the gaps change at 900px.

Operational Procedures: Standard publish workflow for content; feature branch, preview, pull request and merge for code. After `_testimonial.json` changes run `npm run build:json` and `npm run lint`. Changes to `decorators/stats-decorator.js` also affect the Teaser block.

Known Limitations:

- Style has only the Default option.
- One testimonial per block; no carousel.
- The block does not use the Authors data sheet; author data is entered per block.
- No CTA field.
- Stats are text only (no icons, no counting animation).
- Show Description must be explicitly on; blocks without the value hide the description.
- The layout switches at 900px only.

6.13.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
The quote does not appear	Show Description off or missing (F-25, open), or Description empty	Switch Show Description on and fill Description
Stat title and value swapped	Number entered in Stats Title and measure in Stats Value	Put the number in Stats Value
A stat shows a value without a title	Only one field of the item filled	Fill both Stats Title and Stats Value
The author row is missing	Hide Author Details on, or all author fields empty	Switch it off and fill the Author tab
The title is not visible	Hide Title on, or Title empty	Switch Hide Title off or fill Title
The eyebrow is missing	Hide Eyebrow on, or Eyebrow empty	Switch Hide Eyebrow off and fill Eyebrow
The author photo is distorted or badly cropped	Non-square image cropped to a 3rem circle	Use a square headshot with the face centred
Name announced twice by screen readers	Author Image Alt Text repeats the name shown next to the photo	Leave Author Image Alt Text empty
Stats wrap unevenly on tablet	Four stats at a width that fits three 10rem columns	Use three or five stats, or accept the wrap

6.13.16 Author Quick Reference Guide

Mandatory Fields

- Description — not required in the model, but it is the testimonial; it renders only with Show Description on
- Show Description — must be on (template default) for the Description to render; a missing value means off

Recommended Fields

- Title — section heading; keep it even when Hide Title is on
- Author — the name only
- Designation & Location — role, organisation and city
- Stats — 2 to 5 items, each with Stats Title and a one-line Stats Value

- Title Type — H2 by default; fit the page outline

Optional Fields

- Eyebrow — a few words of context
- Author Image — a square headshot shown as a 3rem circle
- Author Image Alt Text — leave empty when the name is next to the photo
- BG Color (Style tab) — Default or Grey
- Hide Eyebrow, Hide Title, Hide Author Details (Show / Hide tab)
- Style — Default only
- Anchor ID, Hide block, Padding / Margin (Additional tab)

Authoring Checklist

1. One testimonial per block; use several blocks in a Gen Carousel section for a slider
2. Put only the name in Author and the role, organisation and city in Designation & Location
3. Enter the measure in Stats Title and only the number in Stats Value
4. Keep the Description within about 250 characters (Recommended)
5. Use a square headshot for Author Image
6. Hide Title instead of clearing Title when no visible title is wanted
7. Use Hide Author Details or Show Description off to withhold content pending approval
8. Check Show Description is on when copying older blocks

Pre-Publish Checklist

1. Preview at 375 px, 768 px and 1440 px
2. Check the quote shows (Show Description on and Description filled)
3. Check every stat shows a title above a blue value
4. Check the author row shows the photo, name and designation as intended
5. Check the Title Type fits the page outline, also when the title is hidden
6. Check the headshot is published and not cut off in the circle
7. Confirm quote and results approval [To be confirmed: approval process for client quotes — owner: content lead]

Post-Publish Validation Checklist

1. Open the page on aem.live and check the quote, author and stats
2. Check the author photo request returns 200
3. Check the browser console shows no ‘failed to load module for testimonial’
4. Check the accessibility tree shows the heading, blockquote, figcaption and description list
5. Follow any #anchor- link to the block
6. Check translated blocks in the other locales fit and use local number formats

6.13.17 Component Execution Example

Business example: Example Bank testimonial with four results.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Testimonial
Eyebrow (Testimonial › Content)	Client testimonial
Title (Testimonial › Content)	What our clients say

Field	Value
Description (Testimonial › Content)	TCS became an extension of our own team. Together we rebuilt our digital channels and now release new features every week instead of every quarter.
Author (Testimonial › Author)	Anita Rao
Author Image (Testimonial › Author)	Select the asset person-1.svg (/en/media/person-1.svg)
Designation & Location (Testimonial › Author)	Chief Digital Officer, Example Bank, London
Stats Title (Testimonial › Stats › Stats › Item 1)	Faster time to market
Stats Value (Testimonial › Stats › Stats › Item 1)	40%
Stats Title (Testimonial › Stats › Stats › Item 2)	Lower operating cost
Stats Value (Testimonial › Stats › Stats › Item 2)	25%
Stats Title (Testimonial › Stats › Stats › Item 3)	Applications migrated
Stats Value (Testimonial › Stats › Stats › Item 3)	1,200+
Stats Title (Testimonial › Stats › Stats › Item 4)	Customer satisfaction
Stats Value (Testimonial › Stats › Stats › Item 4)	4.8/5

All other fields keep their default values.

Rendered Result:

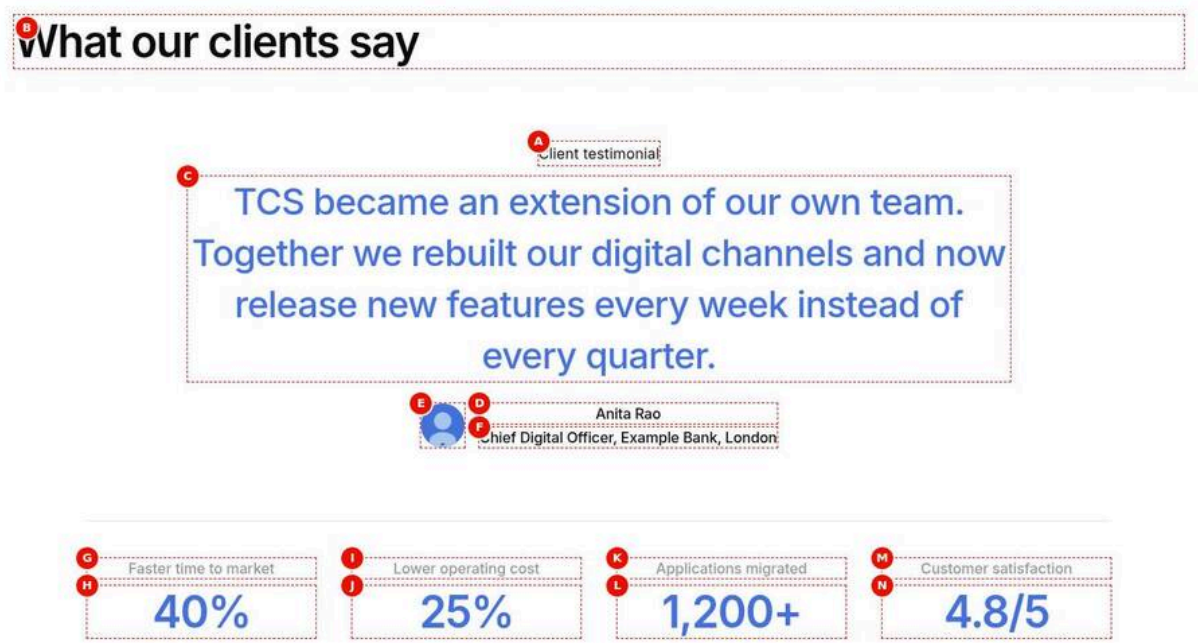

Figure 26: Execution example — The Testimonial at 1440 px: the H2 What our clients say left aligned in the default text colour; centred below, the eyebrow Client testimonial, the 2.5rem brand-blue quote TCS became an extension of our own team… and the 3rem round photo person-1.svg beside Anita Rao / Chief Digital Officer, Example Bank, London; under a divider four stats in one row: 40%, 25%, 1,200+ and 4.8/5. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/testimonial-desktop-view.jpg)

Author Notes

- In Content enter 'Client testimonial', 'What our clients say' and the quote about weekly releases.

- In Author enter 'Anita Rao', select person-1.svg and enter 'Chief Digital Officer, Example Bank, London'; leave the alt text empty.
- In Stats add four items: Faster time to market 40%, Lower operating cost 25%, Applications migrated 1,200+, Customer satisfaction 4.8/5.
- Leave Show Description on and the other toggles off.

Business Notes

- The client's own words and four measurable outcomes make the case study credible in one band.
- The results must match the approved case study figures.
- Quote and figures need client approval [To be confirmed: approval process for client quotes — owner: content lead].

Technical Notes

- Output: H2, figure.testimonial-quote (eyebrow, blockquote, figcaption), then dl.testimonial-stats.
- Stats come from the Stats multifield via decorators/stats-decorator.js; the last element of each item is the value.
- The stats grid uses repeat(auto-fit, minmax(10rem, 1fr)) up to 70rem; four stats share one row at 1440 px.
- The block is in the data layer as tcs-corp/components/testimonial with dc:title 'What our clients say'.

6.14 Columns Block

The Columns block (`blocks/columns`) places content side by side: a grid of rows and columns whose cells hold default content (Text, Image, Button, Title). It is the boilerplate Columns block of the AEM Edge Delivery Services xwalk project with the project's Additional tab. Columns are stacked on mobile and tablet and shown side by side, with equal widths, from 900px.

6.14.1 Component Purpose

Business Objective: Give authors a simple, flexible way to put text, images and buttons next to each other without a purpose-built block, for layouts not covered by the designed components.

Business Use Cases:

- Image and text side by side (for example a service description next to an illustration).
- Two or three text columns (for example "Our mission", "Our vision", "Our values").
- A row of logos or images with captions.
- Contact or address blocks next to each other.
- Several rows of image and text pairs.

When To Use:

- The content is simple default content (text, headings, images, buttons) that should sit in columns.
- No designed component (Teaser, Cards, List, Quote, Testimonial) fits the need.

When Not To Use:

- For card grids with consistent card styling, links and responsive column control: use Cards or List (they have per-breakpoint column settings; Columns does not).
- For an image with text and CTAs in the design system style: use Teaser or Hero.
- For tabular data: use Table or Table List.
- For a quote with a portrait: use Quote.
- When columns of very different widths are needed: Columns always gives equal widths.

Dependencies:

Type	Dependency	Use
Block code	`blocks/columns/columns.js`, `blocks/columns/columns.css`	Column count class, image column detection, layout
Model	`blocks/columns/_columns.json` (definition, model `columns`, filters `columns` and `column`)	Universal Editor dialog and allowed content
Default content models	`models/_text.json`, `models/_title.json`, `models/_image.json`, `models/_button.json`	The components allowed in each column
Global	`decorators/content-buttons-decorator.js`	Links and Button components in the columns become buttons or link buttons
Global	`decorators/block-options-decorator.js`, `styles/styles.css`	Additional tab
Global	`decorators/data-layer-decorator.js`, `utils/analytics.js`	Data layer component entry and click events
Data sources / placeholders	None	The block reads no sheet, query index or placeholder

The block's JavaScript imports no decorators or utils.

Related Components: Cards and List (structured card grids); Teaser (designed image and text); Table; the default content components Text, Title, Image and Button that go into the columns.

Applicable Templates: Any page. Columns is allowed in every section (section filter) and in Tabs sections (tabs filter). Not added by any template.

Supported Content Types: Any page content: corporate, service, industry, about, contact, article and press release pages.

Business Problem Solved

Authors needed to place simple content (text, headings, images, buttons) side by side for layouts that no designed component covers, without asking for a new block each time. Columns gives a grid of rows and equal-width columns filled with the standard Text, Title, Image and Button components, stacked on mobile and tablet with image-only columns first, so ad hoc side-by-side layouts stay authorable on every locale site.

Supported Taxonomy

None: the Columns block has no tag field and reads no page tags, taxonomy or metadata; tag the page itself if it should appear in List or Filter List results. Column content is not part of the query index.

6.14.2 Visual Overview

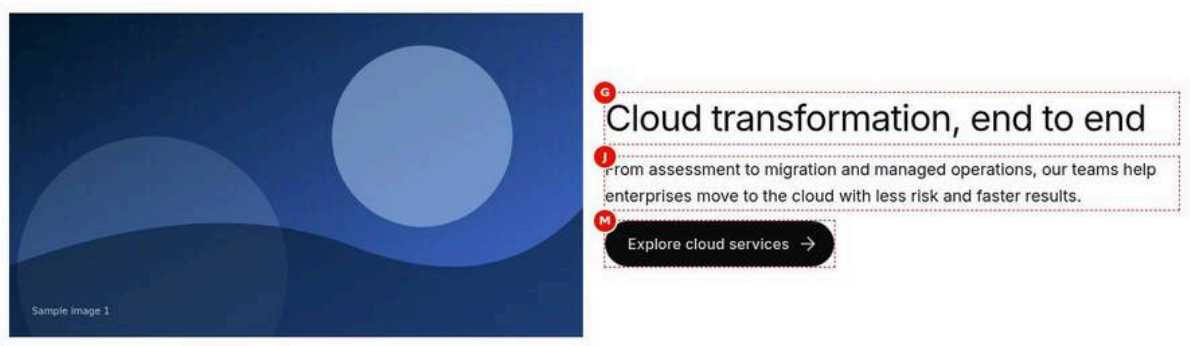

Figure 27: Desktop rendering — The Columns block at 1440 px with two equal columns 1.5rem apart: photo-1.svg on the left; on the right, vertically centred, the H2 Cloud transformation, end to end, the paragraph From assessment to migration and managed operations… and the button Explore cloud services. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/columns-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/columns-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Columns block at 1440 px with two equal columns 1.5rem apart: photo-1.svg on the left; on the right, vertically centred, the H2 Cloud transformation, end to end, the paragraph From assessment to migration and managed operations… and the button Explore cloud services.
Business Context	The overview example of chapter 6.14: a cloud services introduction on an English service page, with an illustration beside the heading, text and CTA, checked at 1440 px.
Author Objective	Add a two-column Columns block with an Image in Column 1 and a Title, Text and Button in Column 2, and confirm the desktop layout.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(A)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(B)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(C)	Component (Content tree › Columns › Row 1 › Column 1 › Add (+))	Image	No	—	—	None
(D)	Image (Columns › Row 1 › Column 1 › Image)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(E)	Alt Text (Columns › Row 1 › Column 1 › Image)	Consultants reviewing a cloud architecture on a large screen	No	—	—	None
(F)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Title	No	—	—	None
G	Title (Columns › Row 1 › Column 2 › Title)	Cloud transformation, end to end	No	—	—	None
(H)	Title Type (Columns › Row 1 › Column 2 › Title)	h2	No	—	—	None
(I)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Text	No	—	—	None
J	Text (in place) (Columns › Row 1 › Column 2 › Text)	From assessment to migration and managed operations, our teams help enterprises move to the cloud with less risk and faster results.	No	—	—	None
(K)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Button	No	—	—	None
(L)	Link (Columns › Row 1 › Column 2 › Button)	Select the page or enter /en/services/cloud	No	—	—	None
M	Text (Columns › Row 1 › Column 2 › Button)	Explore cloud services	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-1.svg fills the left half; on the right, vertically centred, the H2 'Cloud transformation, end to end', the paragraph about assessment, migration and managed operations, and the 'Explore cloud services' button.
- **Rendering behaviour:** The block gets columns-2-cols; from 900 px the row is a flex row with a 1.5rem gap, both columns flex: 1 (equal width) and centred vertically. The image keeps its own aspect ratio at full column width; Column 1 has columns-img-col.

- **Publishing behaviour:** Publish to Preview shows the block on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live, served by the CDN after the purge; photo-1.svg must be published with the page as referenced assets. The /en/services/cloud page must itself be published for the button to work.

Business Rules

- Column widths are always equal; there is no width setting (F-23, open).
- Column 1 holds only the Image, so it gets columns-img-col and is shown first below 900 px.
- The Title in Column 2 uses H2 so the block's heading fits under the page H1.
- Alt Text 'Consultants reviewing a cloud architecture on a large screen' describes the meaningful image.
- Use one Button per column; 'Explore cloud services' is the only call to action.

Common Authoring Mistakes

Error	Root Cause	Resolution
The image is not first on mobile	A caption Text added to Column 1 beside the Image, so the column loses columns-img-col	Keep the Image alone in its column; move the caption to Column 2
The heading is bold body text	Text component formatted bold instead of a Title component	Add a Title component with Title Type H2
The button leads to a 404	/en/services/cloud is not published, or the Link was typed with a typo	Select the page with the picker and publish it

Troubleshooting

- **Symptoms:** The image column is wider or narrower than the text column on desktop.
- **Cause:** Columns always share the row equally (flex: 1); a very wide image or long unbroken text does not change that, but different image ratios change the row height.
- **Resolution:** Accept equal widths or use Teaser or Cards for other proportions; use an image with a ratio that suits half the row.
- **Verification Steps:** At 1440 px both columns are equal width with a 1.5rem gap and centred vertically.

Desktop (900px and wider): Each row is a horizontal flex row with a 1.5rem gap between columns. Every column takes an equal share of the width (`flex: 1`), whatever the number of columns, and the columns of a row are vertically centred against each other (`align-items: center`). Images fill their column's width (`width: 100%`, height automatic, no crop). The columns appear in authored order. There is no gap between rows other than the content's own margins.

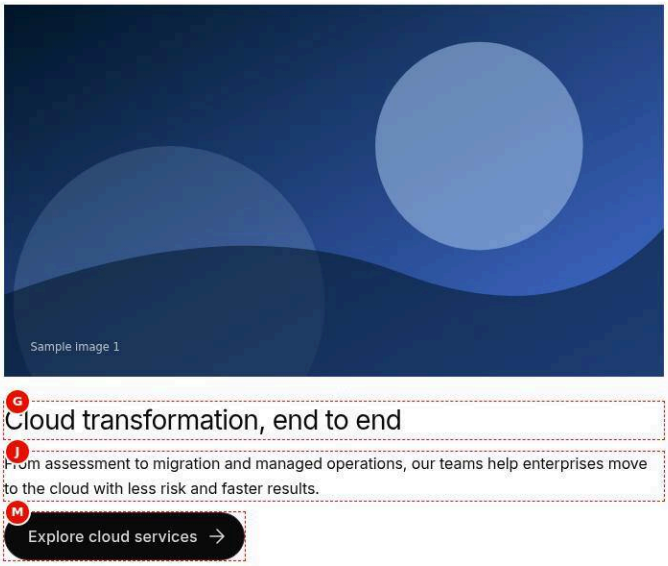

Figure 28: Tablet rendering — The Columns block at 768 px, stacked: photo-1.svg at full width on top, then the H2 Cloud transformation, end to end, the paragraph and the button Explore cloud services below it. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/columns-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/columns-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The Columns block at 768 px, stacked: photo-1.svg at full width on top, then the H2 Cloud transformation, end to end, the paragraph and the button Explore cloud services below it.
Business Context	The same cloud services Columns block checked at 768 px, where the block stacks its columns.
Author Objective	Reuse the overview Columns block and confirm the stacked tablet layout with the image first.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(A)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(B)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(C)	Component (Content tree › Columns › Row 1 › Column 1 › Add (+))	Image	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(D)	Image (Columns › Row 1 › Column 1 › Image)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	—	—	None
(E)	Alt Text (Columns › Row 1 › Column 1 › Image)	Consultants reviewing a cloud architecture on a large screen	No	—	—	None
(F)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Title	No	—	—	None
G	Title (Columns › Row 1 › Column 2 › Title)	Cloud transformation, end to end	No	—	—	None
(H)	Title Type (Columns › Row 1 › Column 2 › Title)	h2	No	—	—	None
(I)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Text	No	—	—	None
J	Text (in place) (Columns › Row 1 › Column 2 › Text)	From assessment to migration and managed operations, our teams help enterprises move to the cloud with less risk and faster results.	No	—	—	None
(K)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Button	No	—	—	None
(L)	Link (Columns › Row 1 › Column 2 › Button)	Select the page or enter /en/services/cloud	No	—	—	None
M	Text (Columns › Row 1 › Column 2 › Button)	Explore cloud services	No	—	—	None
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-1.svg fills the width at the top; below it the H2 'Cloud transformation, end to end', the paragraph and the 'Explore cloud services' button, all full width.

- **Rendering behaviour:** Below 900 px each row is a vertical flex stack; the image-only column has order 0 and the text column order 1. There is no gap other than content margins; the section side padding is 2.5rem from 600 px.
- **Publishing behaviour:** The tablet layout needs no separate publish: aem.page (Publish to Preview) and aem.live (Publish to Live) serve one page and the CSS stacks the columns by width.

Business Rules

- There is no two-up tablet layout; Columns switches only at 900 px.
- Only a column whose only content is an image moves first.
- The DOM order is unchanged; screen readers read the columns in authored order.
- Images are not cropped; their height follows their own aspect ratio.

Common Authoring Mistakes

Error	Root Cause	Resolution
Columns expected side by side at 768 px	The block only goes horizontal from 900 px	Check the side-by-side layout at desktop width
The image is very tall on tablet	A portrait-format asset shown at full width	Use a landscape image such as 16 : 9

Troubleshooting

- **Symptoms:** At 768 px the text comes before the image.
- **Cause:** Column 1 holds another component beside the Image (for example a caption Text), so it does not get columns-img-col.
- **Resolution:** Move the caption to Column 2 so the Image is alone in Column 1, then publish.
- **Verification Steps:** At 768 px the image is first and Column 1 has the class columns-img-col.

Tablet (600px to 899px): Each row is a vertical stack: the columns are full width, one under the other. A column that holds only an image is moved to the top of its row (CSS `order: 0`; other columns have `order: 1`). There is no gap between the stacked columns other than content margins. The section's side padding is 2.5rem from 600px.

Figure 29: Mobile rendering — The Columns block at 375 px, stacked within 1.5rem side padding: photo-1.svg first, then the H2 Cloud transformation, end to end, the paragraph and the button Explore cloud services. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/columns-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/columns-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The Columns block at 375 px, stacked within 1.5rem side padding: photo-1.svg first, then the H2 Cloud transformation, end to end, the paragraph and the button Explore cloud services.
Business Context	The cloud services Columns block checked at 375 px, the phone width of most visitors of service pages.
Author Objective	Reuse the overview Columns block and confirm the stacked mobile layout with the image first.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(A)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(B)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(C)	Component (Content tree › Columns › Row 1 › Column 1 › Add (+))	Image	No	—	—	None
(D)	Image (Columns › Row 1 › Column 1 › Image)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	—	—	None
(E)	Alt Text (Columns › Row 1 › Column 1 › Image)	Consultants reviewing a cloud architecture on a large screen	No	—	—	None
(F)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Title	No	—	—	None
G	Title (Columns › Row 1 › Column 2 › Title)	Cloud transformation, end to end	No	—	—	None
(H)	Title Type (Columns › Row 1 › Column 2 › Title)	h2	No	—	—	None
(I)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Text	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
J	Text (in place) (Columns › Row 1 › Column 2 › Text)	From assessment to migration and managed operations, our teams help enterprises move to the cloud with less risk and faster results.	No	—	—	None
(K)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Button	No	—	—	None
(L)	Link (Columns › Row 1 › Column 2 › Button)	Select the page or enter /en/services/cloud	No	—	—	None
M	Text (Columns › Row 1 › Column 2 › Button)	Explore cloud services	No	—	—	None
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-1.svg at full width at the top, then the H2 'Cloud transformation, end to end', the paragraph and the 'Explore cloud services' button below, within 1.5rem side padding.
- **Rendering behaviour:** As tablet: each row stacks its columns, the image-only column first (order 0); below 600 px the section side padding is 1.5rem. The button styling comes from the global content buttons decorator.
- **Publishing behaviour:** Same page as desktop and tablet: Publish to Preview shows it on aem.page and Publish to Live on aem.live; photo-1.svg is published with the page.

Business Rules

- Below 900 px all columns are full width, one under the other.
- The heading in Column 2 helps screen-reader users find the stacked content.
- Keep about 600 characters per column at most (Recommended) so the stack stays short.
- Do not refer to 'left' or 'right' in the text; on mobile the columns are stacked.

Common Authoring Mistakes

Error	Root Cause	Resolution
Text says 'see the image on the right' but the image is above	Copy written for the desktop layout	Remove position references from the text
The image shows below the text	Image and Text in the same column	Put the Image alone in its own column

Troubleshooting

- **Symptoms:** At 375 px the image is missing and only the heading, text and button show.
- **Cause:** photo-1.svg was not published or the Image reference is broken.

- **Resolution:** Re-select the asset in the Image component and publish it with the page.
- **Verification Steps:** In device mode at 375 px the image shows at the top and its request returns 200.

Mobile (below 600px): As tablet, with the section side padding of 1.5rem.

6.14.3 Component Variations

Columns has no Style select and no style classes. The variations are the number of columns, the number of rows and image-only columns. The column count only changes how many equal columns share the row; the CSS has no rules per count.

Variation 1 — Two Columns

Variation Name: Two columns (the default of a new block: 2 columns, 1 row).

Business Purpose: The most common split: image and text, or two text blocks side by side.

Visual Example:

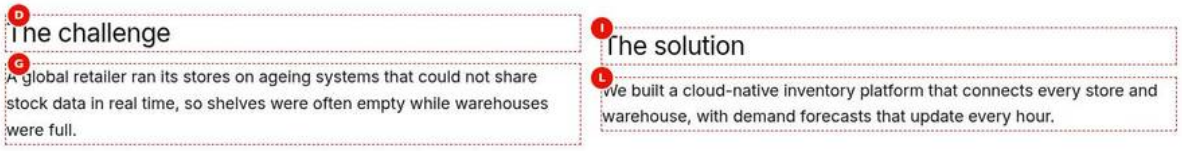

Figure 30: Two-column variation — The Columns block at 1440 px with two equal columns: the H3 The challenge and the paragraph about ageing store systems on the left, the H3 The solution and the cloud-native inventory platform paragraph on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/columns-two-columns.jpg)

Screenshot Details — Two-column variation

Item	Detail
Screenshot Name	`screenshots/columns-two-columns.jpg`
Screenshot Purpose	Two-column variation
Screen Description	The Columns block at 1440 px with two equal columns: the H3 The challenge and the paragraph about ageing store systems on the left, the H3 The solution and the cloud-native inventory platform paragraph on the right.
Business Context	Variation 1: the 'challenge and solution' summary of a retail case study, two text columns side by side.
Author Objective	Add a two-column Columns block with an H3 Title and a Text in each column.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(A)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(B)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Component (Content tree › Columns › Row 1 › Column 1 › Add (+))	Title	No	—	—	None
D	Title (Columns › Row 1 › Column 1 › Title)	The challenge	No	—	—	None
(E)	Title Type (Columns › Row 1 › Column 1 › Title)	h3	No	—	—	None
(F)	Component (Content tree › Columns › Row 1 › Column 1 › Add (+))	Text	No	—	—	None
G	Text (in place) (Columns › Row 1 › Column 1 › Text)	A global retailer ran its stores on ageing systems that could not share stock data in real time, so shelves were often empty while warehouses were full.	No	—	—	None
(H)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Title	No	—	—	None
I	Title (Columns › Row 1 › Column 2 › Title)	The solution	No	—	—	None
(J)	Title Type (Columns › Row 1 › Column 2 › Title)	h3	No	—	—	None
(K)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Text	No	—	—	None
L	Text (in place) (Columns › Row 1 › Column 2 › Text)	We built a cloud-native inventory platform that connects every store and warehouse, with demand forecasts that update every hour.	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two equal columns: 'The challenge' with the paragraph about ageing store systems on the left, 'The solution' with the cloud-native inventory platform paragraph on the right.

- **Rendering behaviour:** The block gets columns-2-cols; from 900 px each column is half the row minus the 1.5rem gap, vertically centred. Below 900 px 'The solution' stacks below 'The challenge'; no column moves because neither is image-only.
- **Publishing behaviour:** Publish to Preview shows the block on aem.page and Publish to Live on aem.live. The block holds no assets or links, so only the page is published.

Business Rules

- Columns 2 and Rows 1 are the template defaults of a new block.
- The class columns-2-cols is counted from the cells of the first row, not read from the Columns field (F-23, open).
- Both Titles use H3, below the H2 of the case study section.
- Keep the two paragraphs of similar length so the columns balance.

Common Authoring Mistakes

Error	Root Cause	Resolution
Both texts in one column	Title and Text of 'The solution' added to Column 1	Move the components to Column 2 in the content tree
The headings skip a level	Title Type H4 used under an H2 section	Use H3 for both column headings

Troubleshooting

- **Symptoms:** The two columns start at different heights on desktop.
- **Cause:** From 900 px the columns are centred vertically (align-items: center), so a shorter column sits lower.
- **Resolution:** Balance the text length of 'The challenge' and 'The solution'.
- **Verification Steps:** At 1440 px both headings start at nearly the same height.

Use Cases: Image and description; "Challenge" and "Solution"; two contact addresses.

Authoring Guidelines: Add the Columns block (it starts with Columns = 2 and Rows = 1); add Text, Title, Image or Button components to each column.

Business Rules: The block gets the class `columns-2-cols`, counted from the cells of the first row.

Rendering Rules: Each column is 50% of the row minus the 1.5rem gap on desktop.

Responsive Behaviour: Desktop: side by side, equal width, centred vertically. Tablet and mobile: stacked, image-only columns first.

SEO Impact: Content stays in the HTML in authored order; headings inside the columns contribute to the page outline.

Accessibility Compliance: The reading order is the authored order (row by row, column by column), except that on mobile an image-only column is shown before the text column visually; screen readers still follow the DOM order. Use headings inside columns so screen-reader users can navigate them.

Variation 2 — Three or More Columns

Variation Name: Three or more columns.

Business Purpose: Short parallel items: values, pillars, steps, logos.

Visual Example:

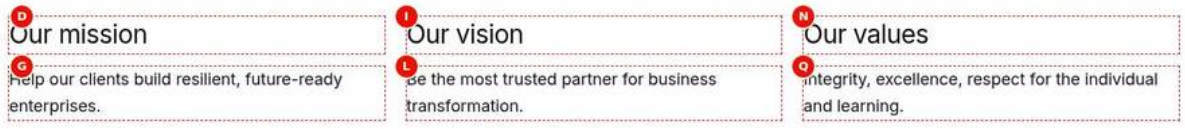

Figure 31: Three-column variation — The Columns block at 1440 px with three equal columns: the H3s Our mission, Our vision and Our values, each with its one-sentence text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/columns-three-columns.jpg)

Screenshot Details — Three-column variation

Item	Detail
Screenshot Name	`screenshots/columns-three-columns.jpg`
Screenshot Purpose	Three-column variation
Screen Description	The Columns block at 1440 px with three equal columns: the H3s Our mission, Our vision and Our values, each with its one-sentence text.
Business Context	Variation 2: the 'Our mission, Our vision, Our values' statements of an About page, three short parallel items.
Author Objective	Set Columns to 3 and add an H3 Title and a one-line Text to each column.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(A)	Columns (Columns › Content)	3	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(B)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(C)	Component (Content tree › Columns › Row 1 › Column 1 › Add (+))	Title	No	—	—	None
D	Title (Columns › Row 1 › Column 1 › Title)	Our mission	No	—	—	None
(E)	Title Type (Columns › Row 1 › Column 1 › Title)	h3	No	—	—	None
(F)	Component (Content tree › Columns › Row 1 › Column 1 › Add (+))	Text	No	—	—	None
G	Text (in place) (Columns › Row 1 › Column 1 › Text)	Help our clients build resilient, future-ready enterprises.	No	—	—	None
(H)	Component (Content tree ›	Title	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
	Columns › Row 1 › Column 2 › Add (+))					
I	Title (Columns › Row 1 › Column 2 › Title)	Our vision	No	—	—	None
(J)	Title Type (Columns › Row 1 › Column 2 › Title)	h3	No	—	—	None
(K)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Text	No	—	—	None
L	Text (in place) (Columns › Row 1 › Column 2 › Text)	Be the most trusted partner for business transformation.	No	—	—	None
(M)	Component (Content tree › Columns › Row 1 › Column 3 › Add (+))	Title	No	—	—	None
N	Title (Columns › Row 1 › Column 3 › Title)	Our values	No	—	—	None
(O)	Title Type (Columns › Row 1 › Column 3 › Title)	h3	No	—	—	None
(P)	Component (Content tree › Columns › Row 1 › Column 3 › Add (+))	Text	No	—	—	None
Q	Text (in place) (Columns › Row 1 › Column 3 › Text)	Integrity, excellence, respect for the individual and learning.	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three equal columns: 'Our mission' with 'Help our clients build resilient, future-ready enterprises.', 'Our vision' and 'Our values' with their single sentences.
- **Rendering behaviour:** The block gets columns-3-cols; from 900 px three equal columns 1.5rem apart, vertically centred. Below 900 px they stack in authored order; there is no two-up tablet layout.
- **Publishing behaviour:** Publish to Preview shows the block on aem.page and Publish to Live on aem.live; the block has no assets or links to publish separately.

Business Rules

- Columns 3 creates three cells per row; the class columns-3-cols comes from the first row's cells.

- No maximum is enforced, but keep about 300 characters per column with three columns (Recommended).
- Each column starts with an H3 Title so the items can be found by heading navigation.
- The column-count class has no styles of its own; widths are always equal.

Common Authoring Mistakes

Error	Root Cause	Resolution
Only two columns show	Columns left at the template value 2	Set Columns to 3 in the Content tab
Lines are very short between 900 and 1199 px	Long paragraphs in three columns	Keep each column to a sentence or two

Troubleshooting

- **Symptoms:** A third column was added but appears empty on the canvas.
- **Cause:** Columns was changed to 3 but no components were added to Column 3 in the content tree.
- **Resolution:** Select Row 1 › Column 3 › Add (+) and add the Title 'Our values' and its Text.
- **Verification Steps:** The preview page shows three columns, each with a heading and a sentence.

Use Cases: "Mission / Vision / Values"; three key facts; a row of four logos.

Authoring Guidelines: Set Columns to 3 (or more) in the Content tab and fill each column.

Business Rules: The class is `columns-{n}-cols`, where n is the number of cells in the first row (for example `columns-3-cols`). No maximum is enforced.

Rendering Rules: n equal columns from 900px, 1.5rem apart. The class has no styles of its own.

Responsive Behaviour: Desktop: n equal columns (narrow with 4 or more). Tablet and mobile: stacked. There is no intermediate two-up tablet layout.

SEO Impact: As Variation 1.

Accessibility Compliance: Keep column text short; with many columns, text lines become very short on 900px to 1199px screens, which hurts readability.

Variation 3 — Image Column

Variation Name: A column whose only content is an image.

Business Purpose: Image and text layouts in which the image should appear above the text on small screens.

Visual Example:

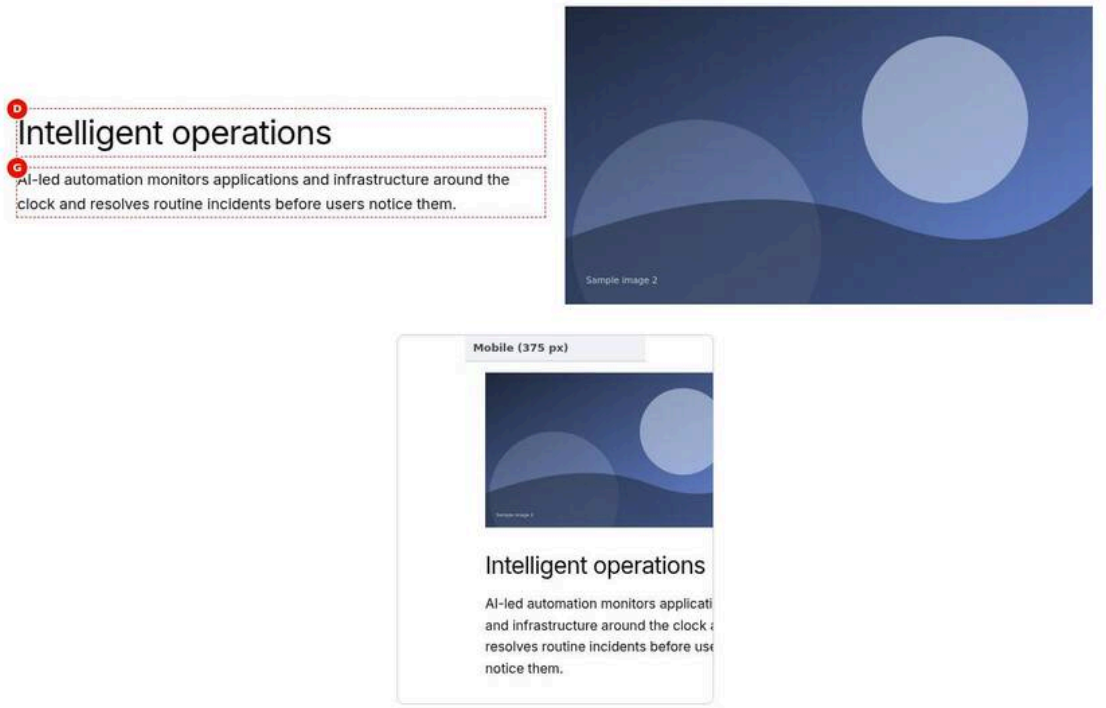

Figure 32: Image column variation — The Columns block at 1440 px: the H2 Intelligent operations and the AI-led automation paragraph on the left, photo-2.svg on the right; an inset shows the same block at 375 px with the image moved above the text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/columns-image-column.jpg)

Screenshot Details — Image column variation

Item	Detail
Screenshot Name	`screenshots/columns-image-column.jpg`
Screenshot Purpose	Image column variation
Screen Description	The Columns block at 1440 px: the H2 Intelligent operations and the AI-led automation paragraph on the left, photo-2.svg on the right; an inset shows the same block at 375 px with the image moved above the text.
Business Context	Variation 3: the intelligent operations section of a service page, text on the left and a dashboard image on the right that must lead on mobile.
Author Objective	Add a two-column Columns block with Title and Text in Column 1 and only an Image in Column 2, and check desktop and mobile.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(A)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(C)	Component (Content tree › Columns › Row 1 › Column 1 › Add (+))	Title	No	—	—	None
D	Title (Columns › Row 1 › Column 1 › Title)	Intelligent operations	No	—	—	None
(E)	Title Type (Columns › Row 1 › Column 1 › Title)	h2	No	—	—	None
(F)	Component (Content tree › Columns › Row 1 › Column 1 › Add (+))	Text	No	—	—	None
G	Text (in place) (Columns › Row 1 › Column 1 › Text)	AI-led automation monitors applications and infrastructure around the clock and resolves routine incidents before users notice them.	No	—	—	None
(H)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Image	No	—	—	None
(I)	Image (Columns › Row 1 › Column 2 › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	—	—	None
(J)	Alt Text (Columns › Row 1 › Column 2 › Image)	Operations dashboard with real-time service health	No	—	—	None
—	Screen width (Preview)	1440 px (desktop); inset: the same block at 375 px (mobile)	—	Check on the preview (not stored in the content)	1440 px (desktop); inset: the same block at 375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Desktop: 'Intelligent operations' and the AI-led automation paragraph on the left, photo-2.svg on the right; the 375 px inset shows the image moved above the text.
- **Rendering behaviour:** Column 2 holds only the picture, so it gets columns-img-col: order 0 below 900 px (the text column has order 1). From 900 px the authored order applies, text left, image right.
- **Publishing behaviour:** Publish to Preview shows the block on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live, served by the CDN after the purge; photo-2.svg must be published with the page as referenced assets.

Business Rules

- A column gets columns-img-col only when the picture is its only content.
- From 900 px the authored position (image right) applies; below 900 px the image comes first.
- Alt Text 'Operations dashboard with real-time service health' must make sense when read after the text (DOM order).
- Images are not cropped; use a ratio that suits half the row.

Common Authoring Mistakes

Error	Root Cause	Resolution
The image stays below the text on mobile	A caption Text added to Column 2 beside the Image	Remove the extra component so the Image is alone
The image is announced without meaning	Alt Text left empty on a meaningful dashboard image	Enter a description in Alt Text

Troubleshooting

- **Symptoms:** At 375 px the dashboard image appears after the paragraph.
- **Cause:** Column 2 contains another component next to the Image, so columns-img-col is not set.
- **Resolution:** Delete the extra component from Column 2 and publish.
- **Verification Steps:** At 375 px the image comes first; Column 2 has the class columns-img-col.

Use Cases: Text with an illustration on the right on desktop, image first on mobile.

Authoring Guidelines: Put only an Image component in the column (no text or button with it).

Business Rules: A column gets `columns-img-col` when it contains a picture and the element around it (the column cell) has exactly one child. A column with an image and text does not get the class.

Rendering Rules: `columns-img-col` has `order: 0` on mobile and tablet (other columns `order: 1`), so the image comes first; the image is a block element at full column width.

Responsive Behaviour: Desktop: authored position. Tablet and mobile: first in its row.

SEO Impact: Set Alt Text on the Image component for image search.

Accessibility Compliance: The visual reorder on mobile does not change the DOM order; if the image carries meaning, its alt text must make sense wherever it is read.

Variation 4 — Multiple Rows

Variation Name: Several rows.

Business Purpose: A repeated pattern, such as alternating image and text rows (zig-zag), or a grid of items.

Visual Example:

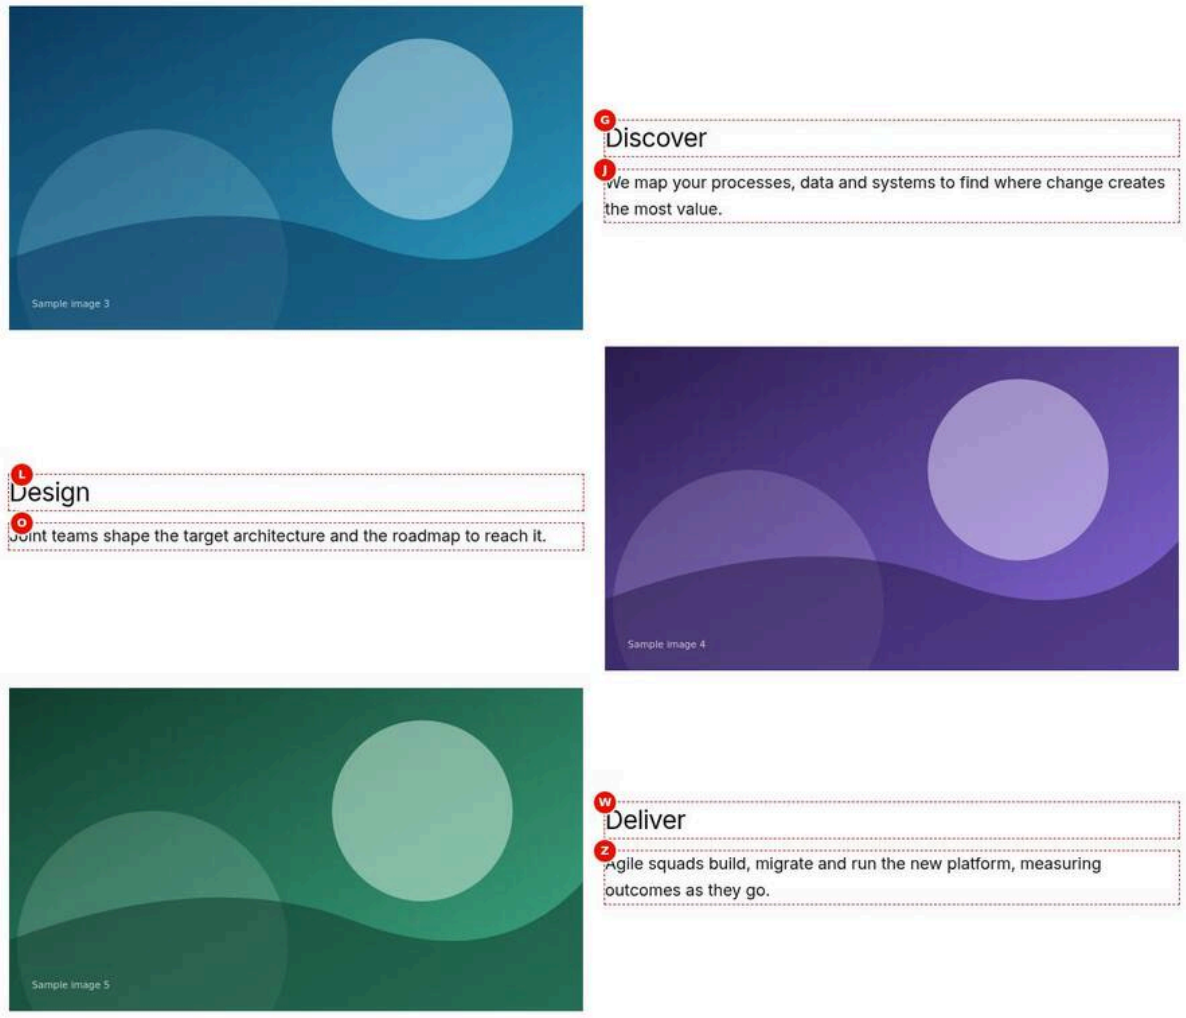

Figure 33: Multiple rows variation — The Columns block at 1440 px with three rows of two equal columns: photo-3.svg beside the H3 Discover, the H3 Design beside photo-4.svg, and photo-5.svg beside the H3 Deliver, each heading with its short paragraph, so the image alternates left, right, left. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/columns-multiple-rows.jpg)

Screenshot Details — Multiple rows variation

Item	Detail
Screenshot Name	`screenshots/columns-multiple-rows.jpg`
Screenshot Purpose	Multiple rows variation
Screen Description	The Columns block at 1440 px with three rows of two equal columns: photo-3.svg beside the H3 Discover, the H3 Design beside photo-4.svg, and photo-5.svg beside the H3 Deliver, each heading with its short paragraph, so the image alternates left, right, left.
Business Context	Variation 4: a 'Discover, Design, Deliver' approach section on a consulting page, three image and text rows with the image alternating sides.
Author Objective	Set Rows to 3 and fill each row with an Image and an H3 Title with Text, alternating the image between Column 1 and Column 2.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(A)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(B)	Rows (Columns › Content)	3	No	Number of rows	As many as needed	Number value type; no range enforced
(C)	Component (Content tree › Columns › Row 1 › Column 1 › Add (+))	Image	No	—	—	None
(D)	Image (Columns › Row 1 › Column 1 › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No	—	—	None
(E)	Alt Text (Columns › Row 1 › Column 1 › Image)	Data engineers at work	No	—	—	None
(F)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Title	No	—	—	None
G	Title (Columns › Row 1 › Column 2 › Title)	Discover	No	—	—	None
(H)	Title Type (Columns › Row 1 › Column 2 › Title)	h3	No	—	—	None
(I)	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Text	No	—	—	None
J	Text (in place) (Columns › Row 1 › Column 2 › Text)	We map your processes, data and systems to find where change creates the most value.	No	—	—	None
(K)	Component (Content tree › Columns › Row 2 › Column 1 › Add (+))	Title	No	—	—	None
L	Title (Columns › Row 2 › Column 1 › Title)	Design	No	—	—	None
(M)	Title Type (Columns › Row 2 › Column 1 › Title)	h3	No	—	—	None
(N)	Component (Content tree ›	Text	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
	Columns › Row 2 › Column 1 › Add (+))					
O	Text (in place) (Columns › Row 2 › Column 1 › Text)	Joint teams shape the target architecture and the roadmap to reach it.	No	—	—	None
(P)	Component (Content tree › Columns › Row 2 › Column 2 › Add (+))	Image	No	—	—	None
(Q)	Image (Columns › Row 2 › Column 2 › Image)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No	—	—	None
(R)	Alt Text (Columns › Row 2 › Column 2 › Image)	Workshop with sticky notes on a wall	No	—	—	None
(S)	Component (Content tree › Columns › Row 3 › Column 1 › Add (+))	Image	No	—	—	None
(T)	Image (Columns › Row 3 › Column 1 › Image)	Select the asset photo-5.svg (/en/media/photo-5.svg)	No	—	—	None
(U)	Alt Text (Columns › Row 3 › Column 1 › Image)	Engineers deploying a release	No	—	—	None
(V)	Component (Content tree › Columns › Row 3 › Column 2 › Add (+))	Title	No	—	—	None
W	Title (Columns › Row 3 › Column 2 › Title)	Deliver	No	—	—	None
(X)	Title Type (Columns › Row 3 › Column 2 › Title)	h3	No	—	—	None
(Y)	Component (Content tree › Columns › Row 3 › Column 2 › Add (+))	Text	No	—	—	None
Z	Text (in place) (Columns › Row 3 › Column 2 › Text)	Agile squads build, migrate and run the new platform, measuring outcomes as they go.	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Row 1: photo-3.svg left, 'Discover' right; Row 2: 'Design' left, photo-4.svg right; Row 3: photo-5.svg left, 'Deliver' right, each with its short paragraph.
- **Rendering behaviour:** Each row is its own flex row with equal columns from 900 px; the class columns-2-cols comes from the first row. Below 900 px every image-only column comes first in its row, so the zig-zag becomes image, text, image, text, image, text.
- **Publishing behaviour:** Publish to Preview shows the block on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live, served by the CDN after the purge; photo-3.svg, photo-4.svg and photo-5.svg must be published with the page as referenced assets.

Business Rules

- Rows 3 creates three rows of two cells; each row is laid out on its own.
- To alternate, the image is in Column 1 of Rows 1 and 3 and in Column 2 of Row 2.
- Each image is alone in its column, so all three move first on mobile.
- Each row starts its text with an H3 Title ('Discover', 'Design', 'Deliver').
- Use the same aspect ratio for photo-3.svg, photo-4.svg and photo-5.svg so the rows look even.

Common Authoring Mistakes

Error	Root Cause	Resolution
Row 2 shows text first on mobile while the others show the image first	An extra Text added next to photo-4.svg in Row 2, Column 2	Keep each Image alone in its column
Rows do not line up	A row with a different number of cells, or images of different ratios	Use two cells per row and images of one ratio
The steps are hard to navigate with a screen reader	Step names typed as bold text	Use Title components with H3

Troubleshooting

- **Symptoms:** On desktop the rows have different heights and the text sits at different positions.
- **Cause:** The images have different aspect ratios; the columns are vertically centred and images are not cropped.
- **Resolution:** Replace the images with renditions of the same ratio (for example 16 : 9).
- **Verification Steps:** At 1440 px the three rows have equal heights and the text is centred beside each image.

Use Cases: Feature lists with images; step-by-step explanations; zig-zag layouts.

Authoring Guidelines: Set Rows to the number of rows; to alternate the image side, put the image in the first column of one row and the second column of the next.

Business Rules: The column count class is taken from the first row only; each row is laid out on its own.

Rendering Rules: Each row is its own flex container; rows with fewer cells share the width among their own cells.

Responsive Behaviour: Desktop: each row side by side. Tablet and mobile: all cells stacked row after row; image-only columns first within their row, so a zig-zag becomes image, text, image, text.

SEO Impact: As Variation 1.

Accessibility Compliance: Use a heading per row so each pair can be found by heading navigation.

6.14.4 Authoring Experience

Figure 34: Universal Editor canvas — The Columns block in Universal Editor edit mode at 1440 px with three columns: the H2 Banking reimagined and its text, square-1.svg, and a text with the button Banking and financial services; letters A on the block, B on a column, C on the title, D on the text and E on the image. An annotated preview, not a Universal Editor screenshot. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/columns-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/columns-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	The Columns block in Universal Editor edit mode at 1440 px with three columns: the H2 Banking reimagined and its text, square-1.svg, and a text with the button Banking and financial services; letters A on the block, B on a column, C on the title, D on the text and E on the image. An annotated preview, not a Universal Editor screenshot.
Business Context	The Universal Editor view of a three-column banking Columns block, used to show authors the block, a column and the components inside (letters A to E).
Author Objective	Select the Columns block in edit mode and identify the block, a column, the Title, the Text and the Image.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
—	Columns (Columns › Content)	3	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
—	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
—	Component (Content tree › Columns › Row 1 › Column 1 › Add (+))	Title	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Title (Columns › Row 1 › Column 1 › Title)	Banking reimagined	No	—	—	None
—	Title Type (Columns › Row 1 › Column 1 › Title)	h2	No	—	—	None
—	Component (Content tree › Columns › Row 1 › Column 1 › Add (+))	Text	No	—	—	None
—	Text (in place) (Columns › Row 1 › Column 1 › Text)	Composable platforms that let banks launch products in weeks.	No	—	—	None
—	Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Image	No	—	—	None
—	Image (Columns › Row 1 › Column 2 › Image)	Select the asset square-1.svg (/en/media/square-1.svg)	No	—	—	None
—	Alt Text (Columns › Row 1 › Column 2 › Image)	Abstract illustration of connected services	No	—	—	None
—	Component (Content tree › Columns › Row 1 › Column 3 › Add (+))	Text	No	—	—	None
—	Text (in place) (Columns › Row 1 › Column 3 › Text)	Talk to our banking specialists about your modernisation roadmap.	No	—	—	None
—	Component (Content tree › Columns › Row 1 › Column 3 › Add (+))	Button	No	—	—	None
—	Link (Columns › Row 1 › Column 3 › Button)	Select the page or enter /en/industries/banking	No	—	—	None
—	Text (Columns › Row 1 › Column 3 › Button)	Banking and financial services	No	—	—	None
—	Select (Universal Editor canvas)	The Columns block (edit mode)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The selected block with A on the block outline, B on a column, C on the H2 'Banking reimagined', D on the text 'Composable platforms…' and E on square-1.svg in Column 2; Column 3 holds the text and the 'Banking and financial services' button.
- **Rendering behaviour:** In edit mode each change re-decorates the block; the block gets columns-3-cols and Column 2, holding only square-1.svg, gets columns-img-col. The Columns and Rows fields are not read by the code (F-23, open).
- **Publishing behaviour:** Edits are saved to AEM at once but reach aem.page or aem.live only after Publish to Preview or Publish to Live; square-1.svg and /en/industries/banking must be published too.

Business Rules

- The Columns block panel holds only Columns, Rows and the Additional tab; content goes into the column components.
- Only Text, Image, Button and Title can be added to a column (filter column).
- Text is edited in place; Title, Image and Button have their own panels.
- A block with Hide block on is shown faded in edit mode and not on the page.

Common Authoring Mistakes

Error	Root Cause	Resolution
No component can be added directly to the block	Only columns can be added to the block (filter columns)	Select a column in the content tree and use its Add (+)
A Teaser or Cards cannot be added to a column	The column filter allows only Text, Image, Button and Title	Use a separate block outside the Columns block

Troubleshooting

- **Symptoms:** The Columns block shows nothing on the canvas and the console logs 'failed to load module for columns'.
- **Cause:** All rows were deleted from the block in the content tree, so there is no first row to count (F-23, open).
- **Resolution:** Undo the change or add the block again with Columns 3 and Rows 1, then refill the columns.
- **Verification Steps:** The canvas shows the three columns and the console shows no error for columns.

Annotations:

- A = Columns block (select it to edit Columns, Rows and the Additional tab)
- B = A column (the container that accepts Text, Image, Button and Title)
- C = Title component inside a column
- D = Text component inside a column (rich text, editable in place)
- E = Image component inside a column (or a Button component)

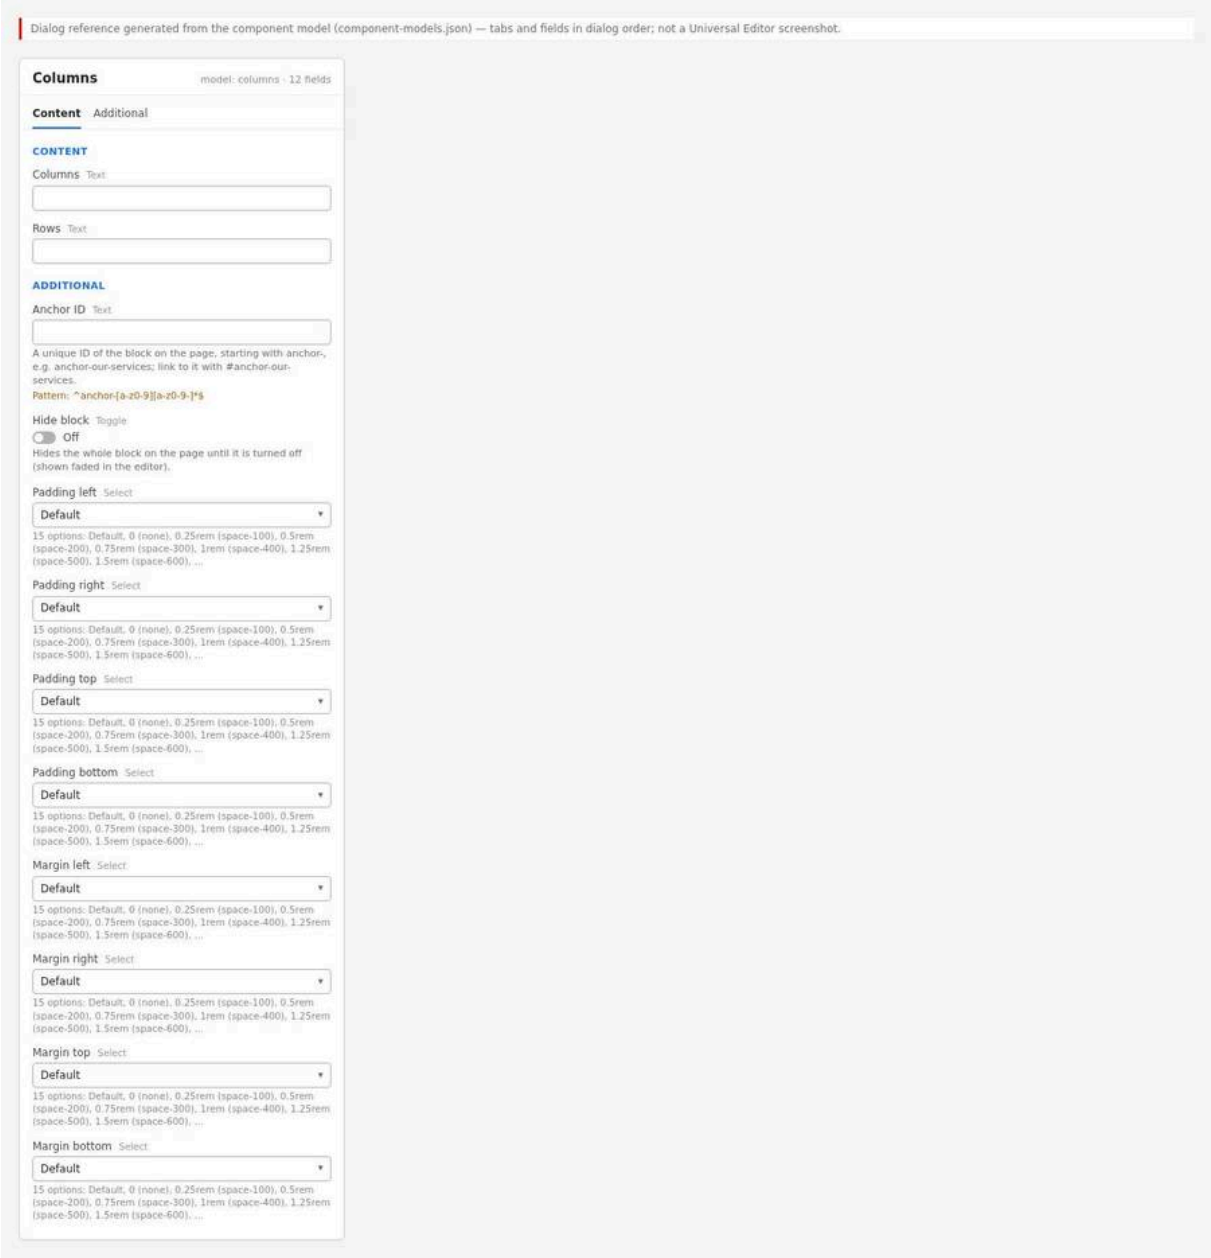

Figure 35: Properties panel — The Columns properties panel with the Content tab (Columns, Rows) and the Additional tab header. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/columns-properties-panel.jpg)

The properties panel of the block has two tabs:

- **Content:** Columns (number, default 2 in a new block) and Rows (number, default 1). They set the grid of the block in AEM (one cell per column in each row); the block's code does not read them, it counts the cells of the first row.
- **Additional:** Anchor ID, Hide block, Padding left / right / top / bottom, Margin left / right / top / bottom.

The components inside the columns have their own panels: Title (Title, Title Type), Image (Image, Alt Text), Button (Link, Text, Title, Views, Type, Icon, Alignment) and Text (edited in place in the canvas).

6.14.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites, select the page in the locale site and choose Edit.

Expected Result: The page opens in the Universal Editor canvas.

Steps — Open the page: Sites console with the page selected and Edit highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Sites › tcs-corp › us › en
2	AEM Sites console	Select	The page /content/tcs-corp/us/en/about
3	AEM Sites console toolbar	Edit	Select Edit (opens the page in Universal Editor)

Step 2 — Add the Columns block

Action: Select the section (or a Tabs section), select Add (+) and choose Columns.

Expected Result: A Columns block with two empty columns in one row is added.

Steps — Add the block: The component picker with Columns highlighted; the new empty block on the canvas.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Main › Section	Select the section (or a Tabs section)
2	Universal Editor › Content tree	Section › Add (+)	Open the component list
3	Component list	Blocks	Columns
4	Canvas	Check	One row with two empty columns (Columns = 2, Rows = 1 preset)

Step 3 — Set the number of columns and rows

Action: With the block selected, set Columns and Rows in the Content tab.

Expected Result: The grid shows the requested number of cells.

Steps — Columns and Rows: Content tab with Columns = 3 and Rows = 1, and the three empty columns on the canvas.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Select	Columns
2	Columns › Content	Columns	3
3	Columns › Content	Rows	1
4	Canvas	Check	Three empty columns in one row

Step 4 — Add content to each column

Action: Select a column, select Add (+) and choose Title, Text, Image or Button. Repeat for each column.

Expected Result: The components appear in the column; only these four component types are offered.

Steps — Add column content: The Add menu of a column listing Text, Image, Button and Title.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Select	Columns › Row 1 › Column 1
2	Content tree › Columns › Row 1 › Column 1	Add (+)	Open the component list

Step	Where	Field / control	Value / action
3	Component list	Offered components	Text, Image, Button, Title
4	Component list	Select	Image
5	Content tree › Columns › Row 1 › Column 2	Add (+)	Title, then Text, then Button

Step 5 — Fill the components

Action: Enter the Title and its Title Type, write the Text in place, select the Image and its Alt Text, and set the Button's Link, Text, Views, Type and Alignment.

Expected Result: The columns show the content; on desktop they sit side by side.

Steps — Fill the content: A filled two-column block: image left, title, text and button right.

Step	Where	Field / control	Value / action
1	Columns › Row 1 › Column 1 › Image	Image	Select the asset photo-1.svg (/en/media/photo-1.svg)
2	Columns › Row 1 › Column 1 › Image	Alt Text	Consultants reviewing a cloud architecture on a large screen
3	Columns › Row 1 › Column 2 › Title	Title; Title Type	Cloud transformation, end to end; h2
4	Columns › Row 1 › Column 2 › Text	Text (in place)	From assessment to migration and managed operations, our teams help enterprises move to the cloud with less risk and faster results.
5	Columns › Row 1 › Column 2 › Button	Link; Text	/en/services/cloud; Explore cloud services
6	Columns › Row 1 › Column 2 › Button	Views; Type; Alignment	Button; Primary; Left

Step 6 — Order the content

Action: Drag components within a column, or between columns, in the content tree to change their order.

Expected Result: The canvas reflects the new order.

Steps — Reorder: The content tree with a component being moved between columns.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Expand	Columns › Row 1 › Column 1 and Column 2
2	Content tree	Drag	Button from Column 2 to below the Image in Column 1
3	Content tree	Drag	Within a column: move Title above Text
4	Canvas	Check	The new order is shown

Step 7 — Fill the Additional tab (optional)

Action: Select the block and set an Anchor ID, Hide block or spacing if required.

Expected Result: Anchor IDs that do not match the pattern are rejected.

Steps — Additional tab: Additional tab of the Columns block.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Select	Columns
2	Columns › Additional	Anchor ID	anchor-cloud-overview
3	Columns › Additional	Hide block	Off
4	Columns › Additional	Padding / Margin selects	Default (change only if required)

Step 8 — Preview

Action: Use Preview mode; check the layout at desktop, tablet and mobile widths.

Expected Result: Columns side by side from 900px, stacked below, image-only columns first.

Steps — Preview: Preview at mobile width with the image above the text.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	Universal Editor toolbar	Emulation	Mobile (375 px): the image-only column above the text
3	Universal Editor toolbar	Emulation	Desktop (1440 px): columns side by side from 900 px

Step 9 — Validate

Action: Run the Validation Process checklist.

Expected Result: All checks pass.

Steps — Validation: The page's heading outline and image alt texts checked in the browser tools.

Step	Where	Field / control	Value / action
1	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/about
2	Browser developer tools	Accessibility tree / heading outline	Headings in the columns follow the page outline (H2 below the page H1)
3	Browser developer tools	Elements	Every column image has an alt text (or is decorative on purpose)
4	Browser developer tools	Device mode	375 px, 768 px, 900 px, 1440 px

Step 10 — Publish

Action: Publish the page from Universal Editor.

Expected Result: The live page shows the columns.

Steps — Publish: Universal Editor Publish dialog.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Select Publish
2	Publish dialog	Pages	Keep the current page (and its referenced assets) selected
3	Publish dialog	Destination	Publish to Live (Publish to Preview first if your process requires it)
4	Publish dialog	Publish	Select Publish

Step	Where	Field / control	Value / action
5	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.live/en/{path} after the CDN refresh

Preview Process

1. Check in Universal Editor Preview mode.
2. Open the preview URL `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}` after publishing to preview (where available).
3. Check at 375px, 768px, 900px and 1440px; the layout switches at 900px.

Publishing Process

1. Publish the page from Universal Editor or the Sites console.
2. Images used in the columns are published with the page.
3. The live page updates after publishing.

Validation Process

- ☐ Every row has the intended number of columns (the first row sets the column count class).
- ☐ No column is empty (an empty cell still takes an equal share of the width).
- ☐ Images have Alt Text (or are decorative on purpose).
- ☐ Image-only columns appear first on mobile as intended.
- ☐ Headings in the columns follow the page outline.
- ☐ Buttons have clear labels and correct links.
- ☐ Text stays readable at 900px to 1199px with the chosen number of columns.
- ☐ Anchor ID (if any) is unique; Hide block is off when the block should be visible.

Rollback Process

1. Restore the previous page version from the version history, or undo the change.
2. Use Hide block to withdraw the block quickly.
3. Publish the page again.

The walkthroughs below repeat the steps above for each variation of chapter 6.14.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Two Columns

Reproduces the screenshot `screenshots/columns-two-columns.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: An empty Columns block is added with the template grid of 2 columns and 1 row; the content tree shows Row 1 with Column 1 and Column 2.

Step 3 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (A) = 2; **Rows** (B) = 1.

Expected Result: With Columns 2 and Rows 1 the content tree shows 1 row of 2 empty columns (Column 1, Column 2); the block will get columns-2-cols.

Step 4 — Fill in Content tree › Columns › Row 1 › Column 1 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 1 › Add (+)** tab of the properties panel. Enter: **Component** (C) = Title.

Expected Result: Title and Text components are added to Row 1, Column 1 in this order, empty until their fields are filled.

Step 5 — Fill in Columns › Row 1 › Column 1 › Title

Action: Select **Columns** in the content tree and open the **Row 1 › Column 1 › Title** tab of the properties panel. Enter: **Title** (D) = The challenge; **Title Type** (E) = h3.

Expected Result: 'The challenge' appears as an H3 at the top of Row 1, Column 1.

Step 6 — Fill in Content tree › Columns › Row 1 › Column 1 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 1 › Add (+)** tab of the properties panel. Enter: **Component** (F) = Text.

Expected Result: Title and Text components are added to Row 1, Column 1 in this order, empty until their fields are filled.

Step 7 — Fill in Columns › Row 1 › Column 1 › Text

Action: Select **Columns** in the content tree and open the **Row 1 › Column 1 › Text** tab of the properties panel. Enter: **Text (in place)** (G) = A global retailer ran its stores on ageing systems that could not share stock data in real time, so shelves were often empty while warehouses were full.

Expected Result: The paragraph 'A global retailer ran its stores on ageing systems…' appears in Row 1, Column 1, typed in place on the canvas.

Step 8 — Fill in Content tree › Columns › Row 1 › Column 2 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 2 › Add (+)** tab of the properties panel. Enter: **Component** (H) = Title.

Expected Result: Title and Text components are added to Row 1, Column 2 in this order, empty until their fields are filled.

Step 9 — Fill in Columns › Row 1 › Column 2 › Title

Action: Select **Columns** in the content tree and open the **Row 1 › Column 2 › Title** tab of the properties panel. Enter: **Title** (I) = The solution; **Title Type** (J) = h3.

Expected Result: 'The solution' appears as an H3 at the top of Row 1, Column 2.

Step 10 — Fill in Content tree › Columns › Row 1 › Column 2 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 2 › Add (+)** tab of the properties panel. Enter: **Component** (K) = Text.

Expected Result: Title and Text components are added to Row 1, Column 2 in this order, empty until their fields are filled.

Step 11 — Fill in Columns › Row 1 › Column 2 › Text

Action: Select **Columns** in the content tree and open the **Row 1 › Column 2 › Text** tab of the properties panel. Enter: **Text (in place)** (L) = We built a cloud-native inventory platform that connects every store and warehouse, with demand forecasts that update every hour.

Expected Result: The paragraph 'We built a cloud-native inventory platform that connects every…' appears in Row 1, Column 2, typed in place on the canvas.

Step 12 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two equal columns: 'The challenge' with the paragraph about ageing store systems on the left, 'The solution' with the cloud-native inventory platform paragraph on the right.

Step 13 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the block on aem.page and Publish to Live on aem.live. The block holds no assets or links, so only the page is published.

Step 14 — Verify

Action: On the live page check: At 1440 px both headings start at nearly the same height.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Three or More Columns

Reproduces the screenshot `screenshots/columns-three-columns.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: An empty Columns block is added with the template grid of 2 columns and 1 row; the content tree shows Row 1 with Column 1 and Column 2.

Step 3 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (A) = 3; **Rows** (B) = 1.

Expected Result: With Columns 3 and Rows 1 the content tree shows 1 row of 3 empty columns (Column 1, Column 2, Column 3); the block will get columns-3-cols.

Step 4 — Fill in Content tree › Columns › Row 1 › Column 1 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 1 › Add (+)** tab of the properties panel. Enter: **Component** (C) = Title.

Expected Result: Title and Text components are added to Row 1, Column 1 in this order, empty until their fields are filled.

Step 5 — Fill in Columns › Row 1 › Column 1 › Title

Action: Select **Columns** in the content tree and open the **Row 1 › Column 1 › Title** tab of the properties panel. Enter: **Title** (D) = Our mission; **Title Type** (E) = h3.

Expected Result: 'Our mission' appears as an H3 at the top of Row 1, Column 1.

Step 6 — Fill in Content tree › Columns › Row 1 › Column 1 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 1 › Add (+)** tab of the properties panel. Enter: **Component** (F) = Text.

Expected Result: Title and Text components are added to Row 1, Column 1 in this order, empty until their fields are filled.

Step 7 — Fill in Columns › Row 1 › Column 1 › Text

Action: Select **Columns** in the content tree and open the **Row 1 › Column 1 › Text** tab of the properties panel. Enter: **Text (in place)** (G) = Help our clients build resilient, future-ready enterprises.

Expected Result: The paragraph 'Help our clients build resilient, future-ready enterprises.' appears in Row 1, Column 1, typed in place on the canvas.

Step 8 — Fill in Content tree › Columns › Row 1 › Column 2 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 2 › Add (+)** tab of the properties panel. Enter: **Component** (H) = Title.

Expected Result: Title and Text components are added to Row 1, Column 2 in this order, empty until their fields are filled.

Step 9 — Fill in Columns › Row 1 › Column 2 › Title

Action: Select **Columns** in the content tree and open the **Row 1 › Column 2 › Title** tab of the properties panel. Enter: **Title** (I) = Our vision; **Title Type** (J) = h3.

Expected Result: 'Our vision' appears as an H3 at the top of Row 1, Column 2.

Step 10 — Fill in Content tree › Columns › Row 1 › Column 2 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 2 › Add (+)** tab of the properties panel. Enter: **Component** (K) = Text.

Expected Result: Title and Text components are added to Row 1, Column 2 in this order, empty until their fields are filled.

Step 11 — Fill in Columns › Row 1 › Column 2 › Text

Action: Select **Columns** in the content tree and open the **Row 1 › Column 2 › Text** tab of the properties panel. Enter: **Text (in place)** (L) = Be the most trusted partner for business transformation.

Expected Result: The paragraph 'Be the most trusted partner for business transformation.' appears in Row 1, Column 2, typed in place on the canvas.

Step 12 — Fill in Content tree › Columns › Row 1 › Column 3 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 3 › Add (+)** tab of the properties panel. Enter: **Component** (M) = Title.

Expected Result: Title and Text components are added to Row 1, Column 3 in this order, empty until their fields are filled.

Step 13 — Fill in Columns › Row 1 › Column 3 › Title

Action: Select **Columns** in the content tree and open the **Row 1 › Column 3 › Title** tab of the properties panel. Enter: **Title** (N) = Our values; **Title Type** (O) = h3.

Expected Result: 'Our values' appears as an H3 at the top of Row 1, Column 3.

Step 14 — Fill in Content tree › Columns › Row 1 › Column 3 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 3 › Add (+)** tab of the properties panel. Enter: **Component** (P) = Text.

Expected Result: Title and Text components are added to Row 1, Column 3 in this order, empty until their fields are filled.

Step 15 — Fill in Columns › Row 1 › Column 3 › Text

Action: Select **Columns** in the content tree and open the **Row 1 › Column 3 › Text** tab of the properties panel. Enter: **Text (in place)** (Q) = Integrity, excellence, respect for the individual and learning.

Expected Result: The paragraph 'Integrity, excellence, respect for the individual and learning.' appears in Row 1, Column 3, typed in place on the canvas.

Step 16 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three equal columns: 'Our mission' with 'Help our clients build resilient, future-ready enterprises.', 'Our vision' and 'Our values' with their single sentences.

Step 17 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the block on aem.page and Publish to Live on aem.live; the block has no assets or links to publish separately.

Step 18 — Verify

Action: On the live page check: The preview page shows three columns, each with a heading and a sentence.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Image Column

Reproduces the screenshot `screenshots/columns-image-column.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: An empty Columns block is added with the template grid of 2 columns and 1 row; the content tree shows Row 1 with Column 1 and Column 2.

Step 3 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (A) = 2; **Rows** (B) = 1.

Expected Result: With Columns 2 and Rows 1 the content tree shows 1 row of 2 empty columns (Column 1, Column 2); the block will get columns-2-cols.

Step 4 — Fill in Content tree › Columns › Row 1 › Column 1 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 1 › Add (+)** tab of the properties panel. Enter: **Component** (C) = Title.

Expected Result: Title and Text components are added to Row 1, Column 1 in this order, empty until their fields are filled.

Step 5 — Fill in Columns › Row 1 › Column 1 › Title

Action: Select **Columns** in the content tree and open the **Row 1 › Column 1 › Title** tab of the properties panel. Enter: **Title** (D) = Intelligent operations; **Title Type** (E) = h2.

Expected Result: 'Intelligent operations' appears as an H2 at the top of Row 1, Column 1.

Step 6 — Fill in Content tree › Columns › Row 1 › Column 1 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 1 › Add (+)** tab of the properties panel. Enter: **Component** (F) = Text.

Expected Result: Title and Text components are added to Row 1, Column 1 in this order, empty until their fields are filled.

Step 7 — Fill in Columns › Row 1 › Column 1 › Text

Action: Select **Columns** in the content tree and open the **Row 1 › Column 1 › Text** tab of the properties panel. Enter: **Text (in place)** (G) = AI-led automation monitors applications and infrastructure around the clock and resolves routine incidents before users notice them.

Expected Result: The paragraph 'AI-led automation monitors applications and infrastructure around the clock…' appears in Row 1, Column 1, typed in place on the canvas.

Step 8 — Fill in Content tree › Columns › Row 1 › Column 2 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 2 › Add (+)** tab of the properties panel. Enter: **Component** (H) = Image.

Expected Result: An Image component is added to Row 1, Column 2; as the only content of the column it will get columns-img-col.

Step 9 — Fill in Columns › Row 1 › Column 2 › Image

Action: Select **Columns** in the content tree and open the **Row 1 › Column 2 › Image** tab of the properties panel. Enter: **Image** (I) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Alt Text** (J) = Operations dashboard with real-time service health.

Expected Result: photo-2.svg fills Row 1, Column 2 at full width with the alt text 'Operations dashboard with real-time service health'; being alone in the column, it is shown first below 900 px.

Step 10 — Preview

Action: Screen width: 1440 px (desktop); inset: the same block at 375 px (mobile).

Expected Result: At 1440 px the text is on the left and photo-2.svg on the right; at 375 px the image moves above the text.

Step 11 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Desktop: 'Intelligent operations' and the AI-led automation paragraph on the left, photo-2.svg on the right; the 375 px inset shows the image moved above the text.

Step 12 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the block on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live, served by the CDN after the purge; photo-2.svg must be published with the page as referenced assets.

Step 13 — Verify

Action: On the live page check: At 375 px the image comes first; Column 2 has the class columns-img-col.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Multiple Rows

Reproduces the screenshot `screenshots/columns-multiple-rows.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: An empty Columns block is added with the template grid of 2 columns and 1 row; the content tree shows Row 1 with Column 1 and Column 2.

Step 3 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (A) = 2; **Rows** (B) = 3.

Expected Result: With Columns 2 and Rows 3 the content tree shows 3 rows of 2 empty columns (Column 1, Column 2); the block will get columns-2-cols.

Step 4 — Fill in Content tree › Columns › Row 1 › Column 1 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 1 › Add (+)** tab of the properties panel. Enter: **Component** (C) = Image.

Expected Result: An Image component is added to Row 1, Column 1; as the only content of the column it will get columns-img-col.

Step 5 — Fill in Columns › Row 1 › Column 1 › Image

Action: Select **Columns** in the content tree and open the **Row 1 › Column 1 › Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Alt Text** (E) = Data engineers at work.

Expected Result: photo-3.svg fills Row 1, Column 1 at full width with the alt text 'Data engineers at work'; being alone in the column, it is shown first below 900 px.

Step 6 — Fill in Content tree › Columns › Row 1 › Column 2 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 2 › Add (+)** tab of the properties panel. Enter: **Component** (F) = Title.

Expected Result: Title and Text components are added to Row 1, Column 2 in this order, empty until their fields are filled.

Step 7 — Fill in Columns › Row 1 › Column 2 › Title

Action: Select **Columns** in the content tree and open the **Row 1 › Column 2 › Title** tab of the properties panel. Enter: **Title** (G) = Discover; **Title Type** (H) = h3.

Expected Result: 'Discover' appears as an H3 at the top of Row 1, Column 2.

Step 8 — Fill in Content tree › Columns › Row 1 › Column 2 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 1 › Column 2 › Add (+)** tab of the properties panel. Enter: **Component** (I) = Text.

Expected Result: Title and Text components are added to Row 1, Column 2 in this order, empty until their fields are filled.

Step 9 — Fill in Columns › Row 1 › Column 2 › Text

Action: Select **Columns** in the content tree and open the **Row 1 › Column 2 › Text** tab of the properties panel. Enter: **Text (in place)** (J) = We map your processes, data and systems to find where change creates the most value.

Expected Result: The paragraph 'We map your processes, data and systems to find…' appears in Row 1, Column 2, typed in place on the canvas.

Step 10 — Fill in Content tree › Columns › Row 2 › Column 1 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 2 › Column 1 › Add (+)** tab of the properties panel. Enter: **Component** (K) = Title.

Expected Result: Title and Text components are added to Row 2, Column 1 in this order, empty until their fields are filled.

Step 11 — Fill in Columns › Row 2 › Column 1 › Title

Action: Select **Columns** in the content tree and open the **Row 2 › Column 1 › Title** tab of the properties panel. Enter: **Title** (L) = Design; **Title Type** (M) = h3.

Expected Result: 'Design' appears as an H3 at the top of Row 2, Column 1.

Step 12 — Fill in Content tree › Columns › Row 2 › Column 1 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 2 › Column 1 › Add (+)** tab of the properties panel. Enter: **Component** (N) = Text.

Expected Result: Title and Text components are added to Row 2, Column 1 in this order, empty until their fields are filled.

Step 13 — Fill in Columns › Row 2 › Column 1 › Text

Action: Select **Columns** in the content tree and open the **Row 2 › Column 1 › Text** tab of the properties panel. Enter: **Text (in place)** (O) = Joint teams shape the target architecture and the roadmap to reach it.

Expected Result: The paragraph 'Joint teams shape the target architecture and the roadmap…' appears in Row 2, Column 1, typed in place on the canvas.

Step 14 — Fill in Content tree › Columns › Row 2 › Column 2 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 2 › Column 2 › Add (+)** tab of the properties panel. Enter: **Component** (P) = Image.

Expected Result: An Image component is added to Row 2, Column 2; as the only content of the column it will get columns-img-col.

Step 15 — Fill in Columns › Row 2 › Column 2 › Image

Action: Select **Columns** in the content tree and open the **Row 2 › Column 2 › Image** tab of the properties panel. Enter: **Image** (Q) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Alt Text** (R) = Workshop with sticky notes on a wall.

Expected Result: photo-4.svg fills Row 2, Column 2 at full width with the alt text 'Workshop with sticky notes on a wall'; being alone in the column, it is shown first below 900 px.

Step 16 — Fill in Content tree › Columns › Row 3 › Column 1 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 3 › Column 1 › Add (+)** tab of the properties panel. Enter: **Component** (S) = Image.

Expected Result: An Image component is added to Row 3, Column 1; as the only content of the column it will get columns-img-col.

Step 17 — Fill in Columns › Row 3 › Column 1 › Image

Action: Select **Columns** in the content tree and open the **Row 3 › Column 1 › Image** tab of the properties panel. Enter: **Image** (T) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Alt Text** (U) = Engineers deploying a release.

Expected Result: photo-5.svg fills Row 3, Column 1 at full width with the alt text 'Engineers deploying a release'; being alone in the column, it is shown first below 900 px.

Step 18 — Fill in Content tree › Columns › Row 3 › Column 2 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 3 › Column 2 › Add (+)** tab of the properties panel. Enter: **Component** (V) = Title.

Expected Result: Title and Text components are added to Row 3, Column 2 in this order, empty until their fields are filled.

Step 19 — Fill in Columns › Row 3 › Column 2 › Title

Action: Select **Columns** in the content tree and open the **Row 3 › Column 2 › Title** tab of the properties panel. Enter: **Title** (W) = Deliver; **Title Type** (X) = h3.

Expected Result: 'Deliver' appears as an H3 at the top of Row 3, Column 2.

Step 20 — Fill in Content tree › Columns › Row 3 › Column 2 › Add (+)

Action: Select **Content tree** in the content tree and open the **Columns › Row 3 › Column 2 › Add (+)** tab of the properties panel. Enter: **Component** (Y) = Text.

Expected Result: Title and Text components are added to Row 3, Column 2 in this order, empty until their fields are filled.

Step 21 — Fill in Columns › Row 3 › Column 2 › Text

Action: Select **Columns** in the content tree and open the **Row 3 › Column 2 › Text** tab of the properties panel. Enter: **Text (in place)** (Z) = Agile squads build, migrate and run the new platform, measuring outcomes as they go.

Expected Result: The paragraph 'Agile squads build, migrate and run the new platform,…' appears in Row 3, Column 2, typed in place on the canvas.

Step 22 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Row 1: photo-3.svg left, 'Discover' right; Row 2: 'Design' left, photo-4.svg right; Row 3: photo-5.svg left, 'Deliver' right, each with its short paragraph.

Step 23 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the block on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live, served by the CDN after the purge; photo-3.svg, photo-4.svg and photo-5.svg must be published with the page as referenced assets.

Step 24 — Verify

Action: On the live page check: At 1440 px the three rows have equal heights and the text is centred beside each image.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.14.6 Authorable Field Specification

Model `columns` — Content and Additional tabs

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Columns (`columns`)	text (number)	No	No	empty in the model; 2 in a new block (template)	Number of columns of the grid	2 to 4	Number value type; no range enforced	3
Rows (`rows`)	text (number)	No	No	empty in the model; 1 in a new block (template)	Number of rows	As many as needed	Number value type; no range enforced	2
Anchor ID (`classes_anchor`)	text	No	No	empty	Id for in-page links	Start with anchor-	Enforced: regExp `^anchor-[a-z0-9][a-z0-9-]*$`	anchor-our-values
Hide block (`classes_hideblock`)	boolean	No	No	false	Hide the block	Prepare or withdraw	Toggle	false
Padding left (`classes_paddingleft`)	select	No	No	Default (empty)	Left padding	Only when the design asks	15 options (pl-0 … pl-3000)	pl-400
Padding right (`classes_paddingright`)	select	No	No	Default (empty)	Right padding	Only when the design asks	15 options (pr-0 … pr-3000)	pr-400
Padding top (`classes_paddingtop`)	select	No	No	Default (empty)	Top padding	Only when the design asks	15 options (pt-0 … pt-3000)	pt-800
Padding bottom (`classes_paddingbottom`)	select	No	No	Default (empty)	Bottom padding	Only when the design asks	15 options (pb-0 … pb-3000)	pb-800
Margin left (`classes_marginleft`)	select	No	No	Default (empty)	Left margin	Only when the design asks	15 options (ml-0 … ml-3000)	ml-0
Margin right (`classes_marginright`)	select	No	No	Default (empty)	Right margin	Only when the design asks	15 options (mr-0 … mr-3000)	mr-0
Margin top (`classes_margintop`)	select	No	No	Default (empty)	Top margin	Only when the design asks	15 options (mt-0 … mt-3000)	mt-1600
Margin bottom (`classes_marginbottom`)	select	No	No	Default (empty)	Bottom margin	Only when the design asks	15 options (mb-0 … mb-3000)	mb-1600

The padding and margin selects have the same 15 options as in 6.12.6 (Default, 0 (none), and the tokens space-100 to space-3000).

Column item (`column`)

The column has no model of its own (no fields). Its filter allows four components: Text, Image, Button and Title. Their fields:

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Text (Text component)	rich text (edited in place)	No	No	empty	Paragraphs, lists, links	Keep it short in narrow columns	None	Our values guide every engagement.
Title (Title component)	text	No	No	empty	Heading in the column	Short heading	None	Our mission
Title Type (Title component)	select	No	No	none set	Heading level	h1-h6; fit the outline	h1-h6	h3
Image (Image component)	reference	No	No	empty	Image in the column	From AEM Assets	Single asset	/content/dam/tcs-corp/illustrations/cloud.png
Alt Text (Image component)	text	No	No	empty	Image alternative text	Describe the image	None	Cloud migration illustration
Link (Button component)	aem-content	No	No	empty	Button target	Page or URL	None	/content/tcs-corp/us/en/services/cloud
Text (Button component)	text	No	No	empty	Button label	Action-oriented	None	Explore cloud services
Title (Button component)	text	No	No	empty	Link title attribute	Optional extra description	None	Cloud services overview
Views (Button component)	select	No	No	button	Button, Icon or Link	Choose the view	button, icon, link	button
Type (Button component)	select	No	No	primary	Button style	Primary, Secondary, Tertiary	Shown when Views is empty, Button or Icon	secondary
Icon (Button component)	select	No	No	none	Icon of an icon button	Arrow right, Chevron right, Chevron down, Search	Shown when Views is Icon	arrow-right
Alignment (Button component)	select	No	No	left	Button alignment	Left, Center, Right	left, center, right	left

Field details

Columns (`columns`)

- Purpose: The number of columns of the grid.
- Allowed Values: A number (value type number); a new block starts with 2.
- Character Limits: Not applicable. No range is enforced. Recommended: 2 to 4.
- Business Rules: Used by AEM to build the grid; the code counts the first row's cells for the `columns-{n}-cols` class.
- Dependency Rules: Rows.

- Visibility Rules: Always visible (no `condition`).
- Sample Content: 3.

Rows (`rows`)

- Purpose: The number of rows.
- Allowed Values: A number; a new block starts with 1.
- Character Limits: Not applicable. No range is enforced.
- Business Rules: Each row is laid out on its own.
- Dependency Rules: Columns.
- Visibility Rules: Always visible.
- Sample Content: 2.

Anchor ID (`classes_anchor`)

- Purpose: Block id for `#anchor-...` links.
- Allowed Values: `anchor-` plus lower-case letters, digits and hyphens.
- Character Limits: None enforced. Recommended: up to 40 characters.
- Business Rules: Enforced by regExp `^anchor-[a-z0-9][a-z0-9-]*$`; duplicates get `-2`, `-3`.
- Dependency Rules: Becomes the data layer component id.
- Visibility Rules: Always visible.
- Sample Content: `anchor-our-values`.

Hide block (`classes_hideblock`)

- Purpose: Hides the block on the page.
- Allowed Values: On / Off (default Off).
- Character Limits: Not applicable.
- Business Rules: Not displayed outside edit mode; faded with a dashed outline in edit mode.
- Dependency Rules: None.
- Visibility Rules: Always visible.
- Sample Content: Off.

Padding left / right / top / bottom (`classes_paddingleft`, `classes_paddingright`, `classes_paddingtop`, `classes_paddingbottom`) — each field separately:

- Padding left — Purpose: left inner spacing; Allowed Values: the 15 options (`pl-{token}`); Character Limits: not applicable; Business Rules: styled in `styles/styles.css`; Dependency Rules: none; Visibility Rules: always visible; Sample Content: 1rem (space-400).
- Padding right — Purpose: right inner spacing; Allowed Values: the 15 options (`pr-{token}`); Character Limits: not applicable; Business Rules: as Padding left; Dependency Rules: none; Visibility Rules: always visible; Sample Content: 1rem (space-400).
- Padding top — Purpose: top inner spacing; Allowed Values: the 15 options (`pt-{token}`); Character Limits: not applicable; Business Rules: as Padding left; Dependency Rules: none; Visibility Rules: always visible; Sample Content: 2rem (space-800).
- Padding bottom — Purpose: bottom inner spacing; Allowed Values: the 15 options (`pb-{token}`); Character Limits: not applicable; Business Rules: as Padding left; Dependency Rules: none; Visibility Rules: always visible; Sample Content: 2rem (space-800).

Margin left / right / top / bottom (`classes_marginleft`, `classes_marginright`, `classes_margintop`, `classes_marginbottom`) — each field separately:

- Margin left — Purpose: left outer spacing; Allowed Values: the 15 options (`ml-{token}`); Character Limits: not applicable; Business Rules: styled in `styles/styles.css`; Dependency Rules: none; Visibility Rules: always visible; Sample Content: 0 (none).

- Margin right — Purpose: right outer spacing; Allowed Values: the 15 options (`mr-{token}`); Character Limits: not applicable; Business Rules: as Margin left; Dependency Rules: none; Visibility Rules: always visible; Sample Content: 0 (none).
- Margin top — Purpose: space above the block; Allowed Values: the 15 options (`mt-{token}`); Character Limits: not applicable; Business Rules: as Margin left; Dependency Rules: none; Visibility Rules: always visible; Sample Content: 4rem (space-1600).
- Margin bottom — Purpose: space below the block; Allowed Values: the 15 options (`mb-{token}`); Character Limits: not applicable; Business Rules: as Margin left; Dependency Rules: none; Visibility Rules: always visible; Sample Content: 4rem (space-1600).

Column content (Text, Title, Image, Button components)

- Purpose: The content of each column.
- Allowed Values: Only Text, Image, Button and Title can be added to a column (filter `column`).
- Character Limits: None enforced. Recommended: a heading up to 40 characters and up to 300 characters of text per column in three-column layouts.
- Business Rules: A standalone link in a paragraph and the Button component are turned into buttons or link buttons by the content buttons decorator; an image alone in a column makes it an image column.
- Dependency Rules: Button Type is shown only when Views is empty, Button or Icon; Button Icon only when Views is Icon (model `condition`).
- Visibility Rules: As above for the Button fields; all other fields always visible.
- Sample Content: Title “Our mission” (h3), Text “We help enterprises…”, Button “Learn more”.

6.14.7 Field Annotation Mapping

Marker	Field	Purpose
A	Columns block (Columns, Rows, Additional tab)	Grid size and block options
B	Column (container, no fields)	Holds the column’s components
C	Title component (Title, Title Type)	Heading in a column
D	Text component (rich text)	Body text in a column
E	Image component (Image, Alt Text) or Button component	Image or call to action in a column

6.14.8 Component Specification

Attribute	Value
Component Name	Columns (`columns`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	No imports in the block code; default content models (Text, Title, Image, Button); global buttons, block options and data layer decorators
Component Type	Container block (`core/franklin/components/columns/v1/columns`), with column items holding default content
Supported Variants	Any number of columns and rows; image-only columns; no style options
Supported Templates	Any page; allowed in sections and Tabs sections
Supported Metadata	None

Attribute	Value
Supported Tags	None
Supported Personalization	None; Adobe Target via the data layer once Adobe Tags is integrated (not implemented)
Caching Considerations	Part of the page HTML cached by the Edge Delivery CDN; nothing fetched
Performance Considerations	Very small synchronous decoration; images are the authored, optimized pictures; in the first section the first image is the LCP candidate and loaded eagerly
Accessibility Compliance	DOM order kept; image alt text from the Image component; headings from the Title component; visual reorder of image columns on mobile only
SEO Compliance	All content in the HTML; headings and alt texts authored per component

6.14.9 Input Model

- **Content Inputs:** The rows and cells of the grid, each cell holding Text, Title, Image and Button content.
- **Metadata Inputs:** None.
- **Tags Inputs:** None.
- **Page Context Inputs:** None.
- **Query Inputs:** None.
- **Manual Inputs:** Columns and Rows (grid size), the column content and the Additional tab values (as block classes).

Authored HTML (one `div` per row, one `div` per column):

```
<div class="columns anchor-our-values">
  <div>
    <div><picture><img src="./media_4c.png" alt="Cloud migration illustration"></
picture></div>
    <div>
      <h3>Our mission</h3>
      <p>We help enterprises grow with technology.</p>
      <p><a href="/en/about">Learn more</a></p>
    </div>
  </div>
</div>
```

6.14.10 Output Model

Rendered Output: The rows and cells keep their structure. The code adds the class `columns-{n}-cols` to the block (n = cells in the first row) and `columns-img-col` to each image-only column. Links and Button components were already turned into buttons (`p.button-wrapper`, `a.button`) by the content buttons decorator before the block loads. The block options decorator sets the `id` from the Anchor ID.

Generated HTML:

```
<div class="columns anchor-our-values columns-2-cols block" id="anchor-our-values"
  data-block-name="columns" data-block-status="loaded">
  <div>
    <div class="columns-img-col"><picture><img src="..." alt="Cloud migration
illustration">
    </picture></div>
    <div>
      <h3>Our mission</h3>
      <p>We help enterprises grow with technology.</p>
```

```
      <p class="button-wrapper">
        <a href="/en/about" title="Learn more" class="link-button">Learn more</a>
      </p>
    </div>
  </div>
</div>
```

An unformatted standalone link becomes a link button (`link-button`); a bold or italic link, or a Button component with Views = Button, becomes a button (`button primary`, `button secondary` or `button tertiary`); Views = Icon adds `icon-button`. See the Button chapter for details.

Generated JSON: None.

Generated Metadata: None.

Analytics Tracking: The block is added to the data layer after the sections load (id = Anchor ID, else `columns-{n}`; `dc:title` = the first heading in any column). Clicks on links and buttons in the columns push `cmp:click` with the link URL and type (`other`, `exit` or `download`).

```
{
  "event": "cmp:click",
  "eventInfo": {
    "path": "component.anchor-our-values",
    "interaction": "link",
    "dc:title": "Learn more",
    "xdm:linkURL": "https://main--tcs-corp--sradha-tcs.aem.live/en/about",
    "xdm:linkType": "other",
    "breakpoint": "tablet"
  }
}
```

Personalization Output: None.

Search Index Output: None (the query index reads page metadata only).

Target Personalization Output: None in the block today: no personalisation marker or Target mbox. The block is in the data layer as tcs-corp/components/columns (id = Anchor ID or columns-n, dc:title = its first heading) with cmp:click for its links and buttons, which Adobe Target could use once Adobe Tags is integrated (Not implemented (as of this handover)).

6.14.11 Business Rules

1. The column count class is `columns-{n}-cols`, with n the number of cells in the first row.
2. Columns and Rows are not read by the code; they define the grid authored in AEM.
3. A column gets `columns-img-col` when it contains a picture and the picture's nearest `div` (the column) has exactly one child.
4. A column with an image plus other content is a normal column.
5. Below 900px each row stacks its columns; image-only columns are shown first (`order: 0`), the others after (`order: 1`).
6. From 900px each row is horizontal, columns have equal widths (`flex: 1`), a 1.5rem gap and are vertically centred; the authored order applies.
7. Images fill their column's width; there is no crop or fixed aspect ratio.
8. Only Text, Image, Button and Title can be added to a column (filter `column`); only columns can be added to the block (filter `columns`).

9. Links and Button components are decorated as buttons or link buttons by the global content buttons decorator.
10. An empty Columns block (no rows) fails to decorate (no first row); the error is logged by the block loader as `failed to load module for columns` and nothing is rendered.
11. The Additional tab works as for every block: Anchor ID (validated), Hide block (hidden outside edit mode, faded in edit mode), padding and margin classes.
12. Editor-only: each change re-decorates the block.
13. There are no style options and no per-breakpoint column settings.

6.14.12 Author Best Practices

Recommended Content Length: Two columns: up to about 600 characters per column; three columns: up to about 300; four columns: up to about 150. A heading per column up to 40 characters. (Recommended.)

Image Dimensions: Images are shown at the full width of their column with their own aspect ratio. Use the same aspect ratio for images in the same row (for example 16 : 9 or 1 : 1) so the row looks even; width at least twice the displayed column width (for example 1200px for a two-column block at 1200px wide).

CTA Writing Guidelines: Use the Button component (or a standalone link in its own paragraph) with an action-oriented label ("Explore cloud services"); one primary button per column at most.

Accessibility Guidelines: Start each column with a Title at the right level; set Alt Text on every meaningful image; do not rely on the side-by-side position to convey meaning (on mobile the columns are stacked and image columns move up).

SEO Guidelines: Use real headings (Title component) rather than bold text; use descriptive link labels.

Metadata Guidelines: The block reads no metadata.

Taxonomy Guidelines: No tags in the block.

Localization Guidelines: Translations can be much longer (for example German); check that columns still balance on desktop and keep text short in three- and four-column layouts.

6.14.13 Troubleshooting Guide

Issue 1 — The block shows nothing

Symptoms: An empty space or nothing where the Columns block should be; the console shows `failed to load module for columns`.

Root Cause: The block has no rows (for example all rows were removed), so the code finds no first row.

Diagnosis Steps: Inspect the block in the browser; check for rows and the console error.

Resolution Steps: Set Rows to at least 1 and Columns to at least 1 and add content, or delete the block.

Validation Steps: The block renders and the error is gone.

Preventive Measures: Delete unused Columns blocks rather than emptying them.

Issue 2 — Columns have different widths than expected

Symptoms: A column is wider or narrower than intended, or a design asks for 1/3 and 2/3.

Root Cause: Columns always share the row equally; there is no width setting.

Diagnosis Steps: Check the number of cells in the row.

Resolution Steps: Use the equal split, or a designed block (Teaser) for asymmetric layouts; request a new variant from development if needed.

Validation Steps: Review at 1440px.

Preventive Measures: Agree layouts with the design team before authoring.

Issue 3 — The image is not first on mobile

Symptoms: On mobile the text appears before the image.

Root Cause: The image column also contains text or a button, so it is not an image column.

Diagnosis Steps: Check whether the column has the class `columns-img-col`.

Resolution Steps: Move the other content to another column, leaving only the Image.

Validation Steps: On mobile the image appears first.

Preventive Measures: Keep images in their own column.

Issue 4 — Columns are too narrow on small laptops

Symptoms: At 900px to 1199px the text in four or more columns wraps after a few words.

Root Cause: The layout becomes horizontal at 900px whatever the number of columns.

Diagnosis Steps: Check at 900px and 1024px.

Resolution Steps: Reduce the number of columns or shorten the text; use Cards or List for many items (they have per-breakpoint columns).

Validation Steps: Text is readable at 900px.

Preventive Measures: Prefer 2 to 3 columns.

Issue 5 — A link shows as a button (or not)

Symptoms: A text link in a column is shown as a link button, or a Button component looks different than expected.

Root Cause: A link alone in its paragraph is turned into a link button by the content buttons decorator; Button components are styled from their Views and Type.

Diagnosis Steps: Check whether the link is alone in its paragraph; check the Button's Views and Type.

Resolution Steps: Put the link inside a sentence to keep it inline, or set the Button's Views and Type.

Validation Steps: The link or button looks as intended.

Preventive Measures: Use the Button component for calls to action.

Issue 6 — Rows do not line up

Symptoms: Items in a multi-row block do not align in a grid.

Root Cause: Each row is a separate flex row; rows with fewer cells share the width among fewer columns, and images of different ratios have different heights.

Diagnosis Steps: Count the cells per row; compare image ratios.

Resolution Steps: Use the same number of cells in every row and images with the same aspect ratio.

Validation Steps: Rows align at 1440px.

Preventive Measures: Use Cards or List for regular grids.

6.14.14 Support Runbook

Monitoring Requirements: No block-specific monitoring; monitor key pages with Real User Monitoring and check the console after deployments.

Logs:

- Browser console: no messages of its own; decoration errors appear as `failed to load module for columns` and CSS or loading errors as `failed to load block columns`.
- Admin API: page status at `https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`.
- Author logs: AEM author logs and the page Timeline.

Common Errors:

Error	Likely Cause	Action
`failed to load module for columns`	Block without rows, or code error	Add a row or delete the block; else L3
Image not first on mobile	Image column has other content	Keep the image alone in its column
Unequal or unwanted widths	Equal split by design	Use another block or request a variant
Narrow text on small laptops	Many columns at 900px	Fewer columns or shorter text
Anchor ID rejected	Pattern not matched	Use `anchor-...`

Escalation Matrix:

Level	Team	Checks
L1	Author support	Rows and columns, column content, alt texts, Hide block, publication
L2	AMS / site admin	Replication, Admin API status, CDN cache, console errors, deployments
L3	Development team	`columns.js` / `columns.css`, filters, button decoration; local reproduction with `aem up`
L4	Adobe Support	Universal Editor columns component or Edge Delivery platform issues

Recovery Procedures: Restore the previous page version and republish; hide the block with Hide block; revert code regressions on `main`.

Health Checks: On a live page with the block, check that the block has `columns-{n}-cols`, image-only columns have `columns-img-col`, there are no console errors and the layout switches at 900px.

Operational Procedures: Standard publish workflow for content; feature branch, preview, pull request and merge for code. After `_columns.json` changes run `npm run build:json` and `npm run lint`.

Known Limitations:

- No style options, no column width ratios and no per-breakpoint column counts.
- The `columns-{n}-cols` class has no styles; the count only affects how many equal columns share the row.
- No tablet-specific layout: stacked until 900px.
- No gap between stacked columns or between rows other than content margins.
- An empty block (no rows) fails to decorate.
- Columns and Rows have no enforced range.

6.14.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
The block shows nothing	No rows in the block; the decoration fails (F-23, open)	Add the block again with Columns and Rows set and fill the cells
Columns are not the widths wanted	Widths are always equal (flex: 1)	Use Teaser or Cards for other proportions

Error	Root Cause	Resolution
The image is not first on mobile	Another component shares the image's column	Keep the Image alone in its column
Columns too narrow on small laptops	Four or more columns with long text	Use fewer columns or shorter text
A link shows as a button	The link is alone in its paragraph and becomes a link button	Put the link inside a sentence or use a Button component
Rows do not line up	Different cell counts per row or images of different ratios	Use the same cells per row and one image ratio
A Teaser cannot be added to a column	The column filter allows only Text, Image, Button and Title	Place the Teaser outside the Columns block
Changing Columns in the panel expects new widths	The field sets the grid only; the code counts cells	Add or remove the column components in the content tree

6.14.16 Author Quick Reference Guide

Mandatory Fields

- At least one row with content — not required in the model, but an empty Columns block (no rows) fails to decorate and logs failed to load module for columns (F-23, open)

Recommended Fields

- Columns — 2 to 4; sets the cells per row in AEM (the code counts the first row's cells)
- Rows — as many as needed; each row is laid out on its own
- Title component per column — at the right Title Type for the outline
- Image Alt Text — on every meaningful image
- Button component — for a call to action, one per column at most

Optional Fields

- Text component — paragraphs, lists and inline links, edited in place
- Image component alone in a column — moves the image first on mobile
- Anchor ID — anchor- plus lower-case letters, digits and hyphens
- Hide block — prepare the block without showing it
- Padding / Margin selects — only when the design asks for it

Authoring Checklist

1. Use Columns only when no designed block (Teaser, Cards, List, Quote, Testimonial) fits
2. Set Columns and Rows when adding the block; widths are always equal (F-23, open)
3. Put an Image alone in its column when it should come first on mobile
4. Start each column or row with a Title component
5. Use the same number of cells in every row and images of the same ratio
6. Keep text short with three or four columns (about 300 / 150 characters)
7. Alternate the image column for a zig-zag of several rows
8. Do not refer to left or right in the text; columns stack below 900 px

Pre-Publish Checklist

1. Preview at 375 px, 768 px and 1440 px; the layout switches at 900 px
2. Check image-only columns come first on mobile
3. Check columns balance in height at 1440 px
4. Check heading levels inside the columns fit the page outline
5. Check every meaningful image has Alt Text

6. Check button links point to published pages
7. Check the block is not empty and Hide block is off

Post-Publish Validation Checklist

1. Open the page on aem.live and check all images load
2. Check the browser console shows no 'failed to load module for columns'
3. Click every button and link in the columns
4. Check the block has the expected columns-{n}-cols class
5. Follow any #anchor- link to the block
6. Check translated pages still balance, especially German

6.14.17 Component Execution Example

Business example: Discover, Design, Deliver approach in three rows.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Columns
Columns (Columns › Content)	2
Rows (Columns › Content)	3
Component (Content tree › Columns › Row 1 › Column 1 › Add (+))	Image
Image (Columns › Row 1 › Column 1 › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)
Alt Text (Columns › Row 1 › Column 1 › Image)	Data engineers at work
Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Title
Title (Columns › Row 1 › Column 2 › Title)	Discover
Title Type (Columns › Row 1 › Column 2 › Title)	h3
Component (Content tree › Columns › Row 1 › Column 2 › Add (+))	Text
Text (in place) (Columns › Row 1 › Column 2 › Text)	We map your processes, data and systems to find where change creates the most value.
Component (Content tree › Columns › Row 2 › Column 1 › Add (+))	Title
Title (Columns › Row 2 › Column 1 › Title)	Design
Title Type (Columns › Row 2 › Column 1 › Title)	h3
Component (Content tree › Columns › Row 2 › Column 1 › Add (+))	Text
Text (in place) (Columns › Row 2 › Column 1 › Text)	Joint teams shape the target architecture and the roadmap to reach it.
Component (Content tree › Columns › Row 2 › Column 2 › Add (+))	Image
Image (Columns › Row 2 › Column 2 › Image)	Select the asset photo-4.svg (/en/media/photo-4.svg)
Alt Text (Columns › Row 2 › Column 2 › Image)	Workshop with sticky notes on a wall
Component (Content tree › Columns › Row 3 › Column 1 › Add (+))	Image

Field	Value
Image (Columns › Row 3 › Column 1 › Image)	Select the asset photo-5.svg (/en/media/photo-5.svg)
Alt Text (Columns › Row 3 › Column 1 › Image)	Engineers deploying a release
Component (Content tree › Columns › Row 3 › Column 2 › Add (+))	Title
Title (Columns › Row 3 › Column 2 › Title)	Deliver
Title Type (Columns › Row 3 › Column 2 › Title)	h3
Component (Content tree › Columns › Row 3 › Column 2 › Add (+))	Text
Text (in place) (Columns › Row 3 › Column 2 › Text)	Agile squads build, migrate and run the new platform, measuring outcomes as they go.

All other fields keep their default values.

Rendered Result:

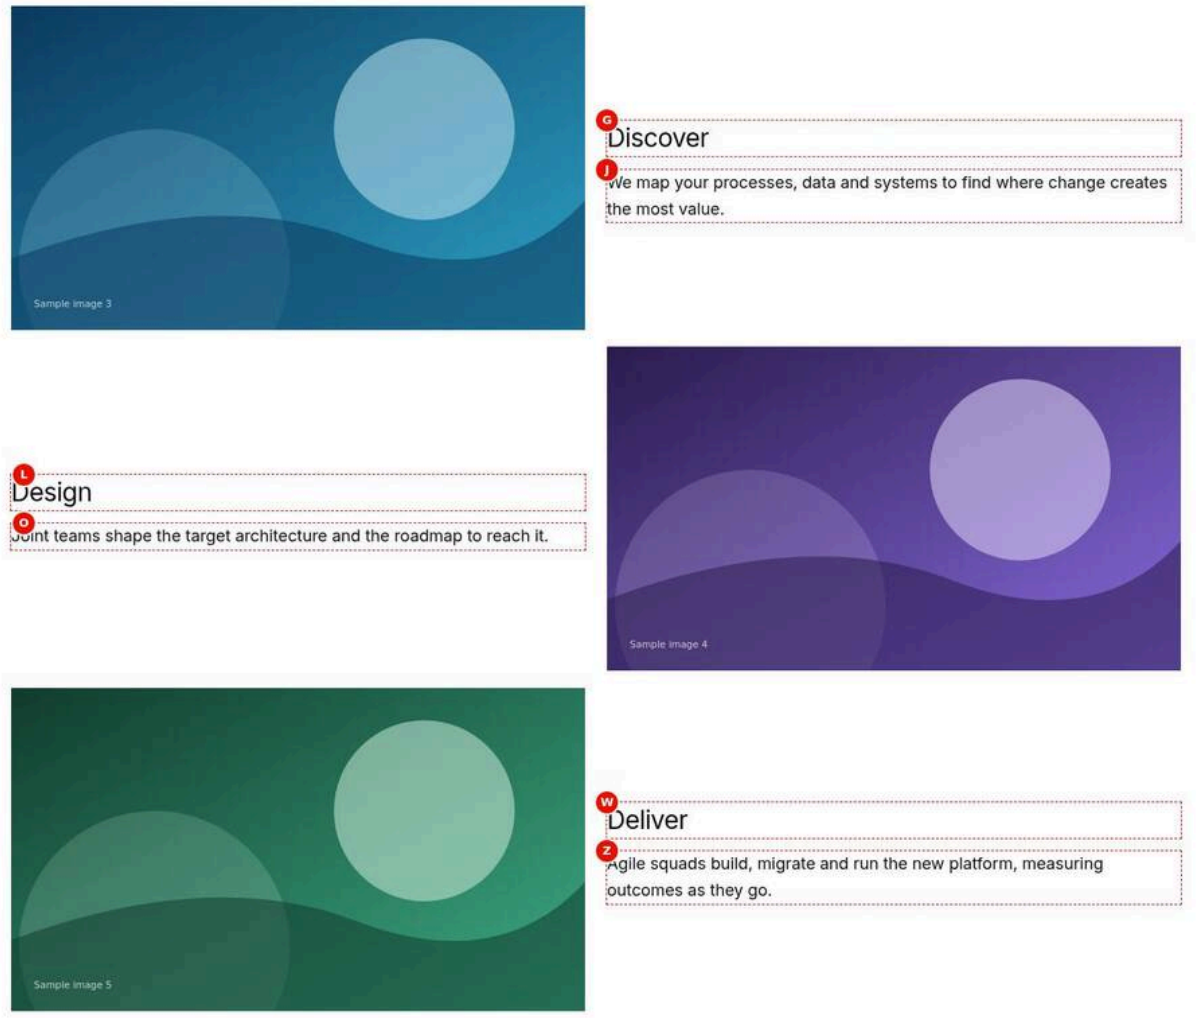

Figure 36: Execution example — The Columns block at 1440 px with three rows of two equal columns: photo-3.svg beside the H3 Discover, the H3 Design beside photo-4.svg, and photo-5.svg beside the H3 Deliver, each heading with its short paragraph, so the image alternates left, right, left. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/columns-multiple-rows.jpg)

Author Notes

- Add Columns with Columns 2 and Rows 3.
- Row 1: Image photo-3.svg in Column 1, Title ‘Discover’ (H3) and Text in Column 2.
- Row 2: Title ‘Design’ and Text in Column 1, Image photo-4.svg in Column 2.
- Row 3: Image photo-5.svg in Column 1, Title ‘Deliver’ and Text in Column 2; set Alt Text on each image.

Business Notes

- The zig-zag explains the three-phase approach step by step on a consulting page.
- The H3 step names let readers and screen-reader users jump between the phases.
- For a styled, regular grid with links, Cards or List would be the better choice.

Technical Notes

- The block gets columns-2-cols from the first row; Columns and Rows are not read by the code (F-23, open).
- Each row is its own flex row; from 900 px columns are flex: 1 with a 1.5rem gap, centred vertically.
- Each image-only column gets columns-img-col and order 0 below 900 px.
- The block is in the data layer as tcs-corp/components/columns with dc:title ‘Discover’.

TCS Corporate Website — Project Handover

Volume 6 of 13 — Component 6.15: Cards and Card

Date: October 14, 2026

Adobe

Table of Contents

Part 6 — Component Library (continued) 3
6.15 Cards Block 3

Part 6 — Component Library (continued)

> **Note:** This is volume 6 of 13 of the TCS Corporate Website project handover (version 2.0). Volume 1 holds the document control, the audience guide and the conventions.

6.15 Cards Block

The Cards block shows **manually authored cards**: authors type each card's image, eyebrow, title, description, label, tags, date, link and call to action directly in the block. It is the authoring alternative to the List block (chapter 6.16), which builds its cards from the metadata of pages. Both blocks share one presentation, the TCS.com Design System (DS) Figma "List" variations 1–14, and one set of block settings, so a Cards block looks exactly like a List with the same settings: image, panel, report and statistic cards, a large feature card or rows of links, shown in a grid or a horizontal scroller chosen separately for desktop, tablet and mobile.

Source files: `blocks/cards/cards.js`, `blocks/cards/cards-data.js`, `blocks/cards/cards.css` (imports `styles/card-list.css`), `blocks/cards/_cards.json`, `blocks/cards/README.md`; shared with List: `decorators/card-list-decorator.js`, `utils/card-list-config.js`, `styles/card-list.css`, `models/_card-list.json`; unit tests: `test/cards/cards-data.test.mjs`.

> **Important:** Cards blocks created before the redesign (pull request #62) behave differently: they have no block model, so their settings can't be edited, and they render with the new design instead of the original bordered grid (variation 45, Issue 6). The refactoring proposal `docs/proposals/cards-card-refactoring.md` restores the original look as a "Classic" presentation for them, migrates their instances, and plans the Cards container and Card item extensions (findings F-34, F-41, F-42).

6.15.1 Component Purpose

Business Objective

Let authors present curated, hand-written content as consistent, brand-compliant cards without creating a page for every card. Typical content is not a page of its own: statistics ("4bn revenue"), capabilities, services described in campaign wording, partner logos with a text, or a set of promotions pointing to pages or external sites. Because Cards uses the same design and settings as the List, a page can mix curated cards and page lists without visual differences.

Business Use Cases

- "At a glance" statistic rows on corporate, investor and about pages (big number, label and explanation, in brand or grey colours).
- Capability or service overviews with an image, a title, a rich text description and a link.
- Themed panels (dark, brand blue, image background) linking to topic hubs.
- A "featured" spotlight card followed by smaller cards (First card as feature).
- Report or download teasers (report cards with a "Download" call to action).
- Rows of links (title, eyebrow, description, date) for news-style link lists that are not driven by the query index.
- Horizontally scrolling card rails on mobile (or on every breakpoint) with a scroll indicator and previous / next buttons.
- Cards created with the earlier Block Collection Cards (image + rich text) keep working and render in the new design.

When To Use

- The cards' content is written for this placement and doesn't exist as page metadata.
- A card must link to an external site, to any URL, or to nothing at all.
- The description needs rich text (paragraphs, bold, bullet lists, inline links).
- Statistic cards with typed numbers and labels.
- The order of the cards is curated and must not change when pages are added.

When Not To Use

- The cards represent pages of the site that already have their metadata (card title, card description, card image): use the **List** block (6.16) so the cards update with the pages.
- The list must grow automatically with new child pages or tagged pages: use **List** (Child pages or Tagged pages source).
- Visitors must filter, sort or search the cards: use **Filter List**.
- A single image-and-text promotion: use **Teaser**.
- Slides that rotate: use the Gen Carousel block (6.24); Cards has no auto-rotation (by design).
- Tabular data: use **Table** or **Table List**.

Dependencies

Type	Dependency	Used for
Decorator	`decorators/card-list-decorator.js` (`buildCardListHeader`, `renderCardList`, `renderCardListEmpty`, `applyCardListLayout`, `cardListId`, `trackCardList`)	Header, cards, feature card, rows of links, grid / scroll classes, empty state, data layer state (shared with List)
Decorator	`decorators/scroller-decorator.js` `createScroller` (through the card list decorator)	Previous / next buttons, scroll indicator, mouse drag, keyboard, loop, initial item
Decorator	`decorators/button-decorator.js`, `decorators/icon-button-decorator.js`	Header CTA, card calls to action, previous / next icon buttons
Decorator	`decorators/link-decorator.js` (`setLinkTarget`, `announceNewTab`)	`target="_blank"`, `rel="noopener noreferrer"` and the "(opens in a new tab)" text
Decorator	`decorators/heading-decorator.js` `buildHeading`	The block title in the chosen heading level
Decorator	`decorators/responsive-image-decorator.js` `buildImage`	Card images (the authored picture is cloned)
Decorator	`decorators/data-layer-decorator.js`	Page entry (`trackPage`) and the click events (`cmp:click`)
Util	`utils/card-list-config.js` (`normalizePresentation`, `kindOf`, `isSafeUrl`, `toISODate`, …)	Settings, defaults, validation, card kind (shared with List)
Util	`blocks/cards/cards-data.js` (`buildManualCards`, `itemToCard`)	A Card's values as the card model (no DOM; unit tested)
Util	`utils/cells.js` `matchCells`	Reads Card cells when AEM leaves out fields that were never set
Util	`utils/properties.js`, `utils/tags.js`, `utils/taxonomy.js` `resolveTags`	Key-value rows, tag values, tag labels
Util	`utils/dates.js` `formatDate`	The card date in the block's Date format
Util	`utils/placeholders.js` `getPlaceholders`	UI text (see below)
Util	`utils/environment.js` `isEditing`	Editor hint instead of hiding an empty block

Type	Dependency	Used for
Util	`utils/analytics.js` `pushComponents`, `utils/ids.js` `uniqueId`	Data layer state; generated ids
Script	`scripts/scripts.js` `moveInstrumentation`	Keeps Universal Editor instrumentation on rebuilt cards and the rich text
Styles	`styles/card-list.css` (imported by `blocks/cards/cards.css`)	The whole presentation (shared with List)
Sheet	`/{locale}/placeholders.json`	`cards`, `cardsEditorHint`, `listPrevious`, `listNext`, `opensInNewTab`, `explore`, `download`, `listEmpty`, `minutesShort`
Sheet	`/{locale}/taxonomy.json`	Labels of the cards' tags (fallback: labels derived from the tag IDs)
Data sources	None	Cards doesn't read the query index, the redirects sheet or the Authors sheet

Related Components

- **List** (6.16): the same presentation for pages (child pages, fixed list, tagged pages).
- **Filter List** (6.17): page discovery with filter pills and sorting.
- **Teaser** (6.11) and **Hero** (6.10): single promotions.
- **Columns** (6.14): free side-by-side layouts without card styling.
- **Section** (6.5, with its style and width options): the container of the block.

Applicable Templates

Any page: the section filter allows Cards in every section, and no page template (home, article, blog, press-release) adds or removes it. Typical placements are home and landing pages (statistics, capabilities), article and blog pages (related content curated by hand) and press-release pages (downloads).

Supported Content Types

Manually entered content per card: image from AEM Assets (with alt text), plain text (eyebrow, title, label, content type, reading time), rich text (description), AEM tags (taxonomy), a date, an internal page link or an external URL (`https://…`, `mailto:`, `tel:`), and display options (card style, card colour). No page metadata, query index or content fragment is used.

Business Problem Solved

Curated content that isn't a page of its own (statistics, capabilities, campaign promotions, report downloads, external partner links) had no brand-compliant card presentation; authors either created pages only to feed a List or used free layouts. Cards lets authors type each card's image, texts, tags, date, link and call to action directly, with exactly the List's Figma presentation (image, panel, report, statistic, feature, rows of links; grid or scroll per breakpoint), so curated cards and page lists look identical on one page.

Supported Taxonomy

Each Card has a Tags field (AEM tags, multi value) with tag IDs such as tcs-corp:industry/banking; labels come from the locale's /{locale}/taxonomy.json (translated per language sheet), else a label derived from the tag ID. Up to 3 tags show on image cards and the feature card, the first tag on panels (without eyebrow) and rows. Cards reads no page tags or metadata.

6.15.2 Visual Overview

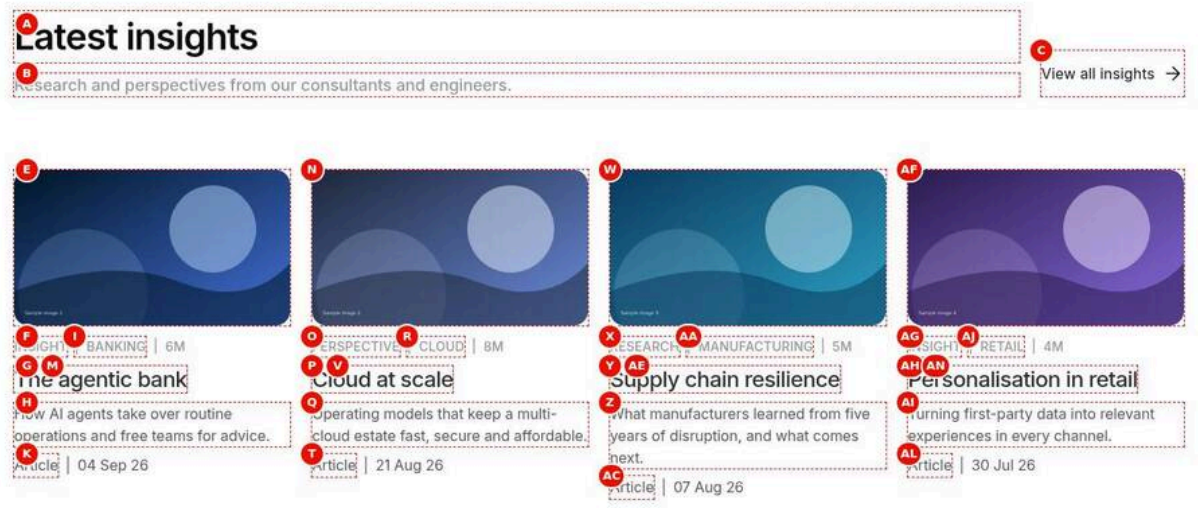

Figure 1: Desktop rendering — The Cards block at 1440 px with default settings: the header with the H2 “Latest insights” and its description on the left and the “View all insights” text link on the right, above four image cards in one row (photo-1.svg to photo-4.svg in 16:9 frames, kickers such as “Insight”, the tag label and “6m”, titles from “The agentic bank” to “Personalisation in retail”, descriptions and meta rows “Article” with dates from “04 Sep 26”). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/cards-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Cards block at 1440 px with default settings: the header with the H2 “Latest insights” and its description on the left and the “View all insights” text link on the right, above four image cards in one row (photo-1.svg to photo-4.svg in 16:9 frames, kickers such as “Insight”, the tag label and “6m”, titles from “The agentic bank” to “Personalisation in retail”, descriptions and meta rows “Article” with dates from “04 Sep 26”).
Business Context	The insights section of the English home page: four hand-picked articles are promoted as cards, with a header link to the full insights overview at /en/insights.
Author Objective	Add a Cards block with a header (title, description, CTA) and four image cards, each with image, eyebrow, tag, reading time, date and link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
A	Title (Cards › Content)	Latest insights	No	Heading of the block	Short, descriptive; up to 60 characters (Recommended)	None
B	Description (Cards › Content)	Research and perspectives from our consultants and engineers.	No	Intro text under the title	One or two sentences	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	CTA link (Cards › Content)	Select the page or enter /en/insights	No	Header call to action destination	A page or URL; leave empty for no CTA	None
(D)	CTA text (Cards › Content)	View all insights	No	Header CTA label	Action wording, 2–4 words	None
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
E	Image (Card 1 › Content)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
F	Eyebrow (Card 1 › Content)	Insight	No	Label above the title	1–3 words	None
G	Title (Card 1 › Content)	The agentic bank	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
H	Description (Card 1 › Content)	How AI agents take over routine operations and free teams for advice.	No	Card text	1–3 sentences; lists and links allowed	None
I	Tags (Card 1 › Content)	Add the tags tcs-corp:industry/banking	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(J)	Date (Card 1 › Content)	2026-09-04	No	Card date	—	Read as YYYY-MM-DD
K	Content type (Card 1 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(L)	Reading time (Card 1 › Content)	6	No	Minutes after the tags	Digits only (6 shows `6m`)	None
M	Link (Card 1 › Link)	Select the page or enter /en/insights/agentic-bank	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the header shows "Latest insights" (2.5rem) and its description on the left and "View all insights" on the right; below, four 16:9 image cards in one row with the kicker, title, description and the meta row "Article" with the date (04 Sep 26 for the first card).
- **Rendering behaviour:** Defaults apply: Card style Image card, Desktop display Grid with 4 columns and a 24 px (1.5rem) gap, Image loading Lazy. Card titles are H3 (one level below the H2 title) and each whole card is clickable through its title link.
- **Publishing behaviour:** Publish sends the page to aem.page (preview) or aem.live (live); the referenced photo-1.svg to photo-4.svg assets and the four linked insight pages must be published too, otherwise the images are missing or the card links lead to the 404 page.

Business Rules

- A Card is shown only with a Title, a Description or an Image; all four cards here have all three.
- Image cards have no default call to action: without a Call to action label the title is the card's one link.
- The kicker joins the Eyebrow, up to 3 tag labels and the Reading time ("6" shows as "6m"); Show tags off hides tags and reading time.
- The date is shown in the block's Date format (default dd-mmm-yy, so 2026-09-04 shows as 04 Sep 26) inside a time element.
- The header CTA shows only because CTA link is set; with an empty CTA style it renders as a text link (tertiary).

Common Authoring Mistakes

Error	Root Cause	Resolution
A tag shows as "Banking" derived from the ID instead of the business wording	tcs-corp:industry/banking is missing from /en/taxonomy.json or the taxonomy page isn't published	Add the tag to the en taxonomy, publish it, then reload the page
Reading time shows "6 min" twice or as text	The author typed "6 min" instead of the digits 6	Enter digits only in Reading time; the placeholder minutesShort adds the unit
A card is missing from the row	The Card has no Title, Description or Image, or its link uses javascript: or data:	Fill the Title and pick the link with the page picker

Troubleshooting

- **Symptoms:** The four cards show grey placeholder boxes instead of photographs on aem.page.
- **Cause:** The image assets were not published with the page, so the cloned picture references fail.
- **Resolution:** Publish photo-1.svg to photo-4.svg from AEM Assets (or with the page's references in the publish dialog) and republish the page.
- **Verification Steps:** Reload the preview without cache; each card shows its image in the 16:9 frame and the image requests return 200.

Desktop (1200 px and wider). The block is a vertical stack with a 5rem gap between the header, the cards and the navigation row. The header puts the title slot (title and description) on the left and the CTA on the right, aligned to the bottom; the title is 2.5rem, semibold, line height 1.4, near-black (`--color-text-default`), the description 1.125rem medium grey (`--color-text-secondary`, #999). By default the cards are a 4-column grid (`--list-columns-desktop`, 1–6) with a 1.5rem gap (Desktop gap, 24 px). Image cards show the image in a 16:9 frame with a 1rem radius (`--radius-l`) and a light grey placeholder background (#d9d9d9), then the kicker (eyebrow, up to 3 tags and the reading time, uppercase, 0.875rem, separated by "|"), the card title (1.5rem, medium, line height 1.42), the description (1rem, 70 % black) and the meta row (content type and date, 1rem). Panel, report and statistic cards are coloured panels with a 1.5rem padding (from 900 px) and a 2:3 portrait shape by default. In horizontal scroll mode, 4.2 cards are visible by default (the fifth card is cut off to show that the row scrolls) and the row runs to the right edge of the section (edge bleed).

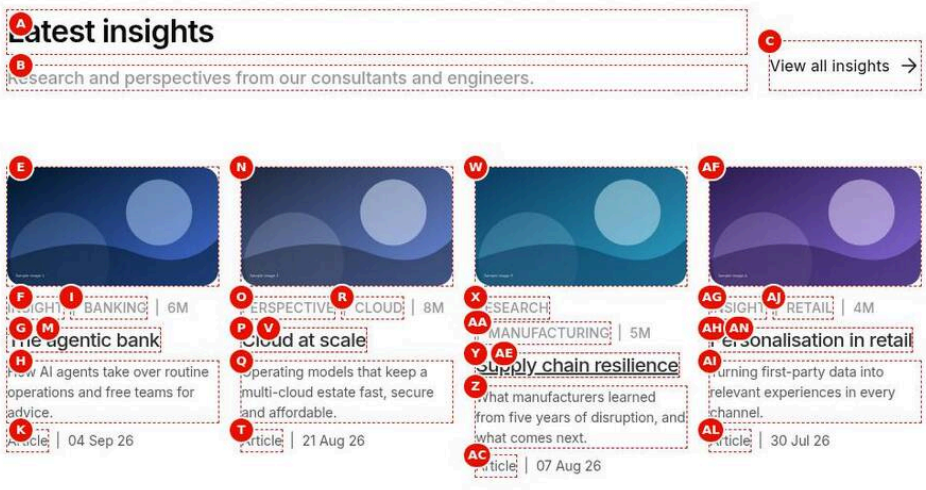

Figure 2: Tablet rendering — The same Latest insights block at 1024 px: the 2rem title with "View all insights" still on the right, and the four image cards in one row (Tablet columns 4 by default) with 1.25rem card titles and 0.875rem kickers and meta rows. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-tablet-view.jpg)

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The header title shrinks to 2rem with the CTA still on the right; the four image cards stay in one row with smaller card titles (1.25rem) and kicker and meta text at 0.875rem.
- **Rendering behaviour:** Between 600 and 1199 px the Tablet display (Grid) and Tablet columns (default 4) apply with a 24 px gap; images keep the 16:9 ratio, so there is no layout shift. Setting Tablet columns to 2 or 3 gives wider cards.
- **Publishing behaviour:** Universal Editor saves each field change; Publish to preview (aem.page) to review in a real tablet browser, then publish to live. Linked pages and photo-1.svg to photo-4.svg are published separately.

Business Rules

- Tablet settings apply from 600 to 1199 px only; desktop and mobile keep their own display, columns and gap.
- Tablet columns accepts 1 to 6 and is rounded; an invalid value falls back to 4.
- Card titles wrap; keep them under about 60 characters so four columns stay balanced.
- The header CTA stays beside the title only while the title slot has at least 20rem; otherwise it wraps below.

Common Authoring Mistakes

Error	Root Cause	Resolution
Cards look cramped at 768 px	Tablet columns left at the default 4 for long titles	Set Tablet columns to 2 or 3, or use Tablet display Horizontal scroll
Changing Desktop columns has no effect on the tablet preview	Each breakpoint has its own columns field	Change Tablet columns in the Layout tab

Troubleshooting

- **Symptoms:** At 1024 px the card titles break into four or more lines and the row looks uneven.
- **Cause:** Four tablet columns with long titles such as "Supply chain resilience" leave about 13rem per card.
- **Resolution:** Set Tablet columns to 2 (or shorten the titles) in the Layout tab and save.
- **Verification Steps:** Resize the Universal Editor preview to 1024 px and 768 px; titles wrap to at most two or three lines.

Tablet (600–1199 px). The layout uses the tablet settings: grid with 4 columns by default (Tablet columns, 1–6) and a 1.5rem gap, or a horizontal scroller with 3.3 cards visible by default. The block gap stays 5rem. Type sizes step down: block title 2rem (line height 1.4), card titles 1.25rem, kicker and meta 0.875rem, panel titles 1.5rem, statistic numbers up to 4rem. The card padding of coloured cards is 1rem below 900 px and 1.5rem from 900 px. Rows of links lose their bottom border unless the Dividers style option is set. Because four columns can be narrow on a 600 px screen, authors often set Tablet columns to 2 or 3 or use horizontal scroll.

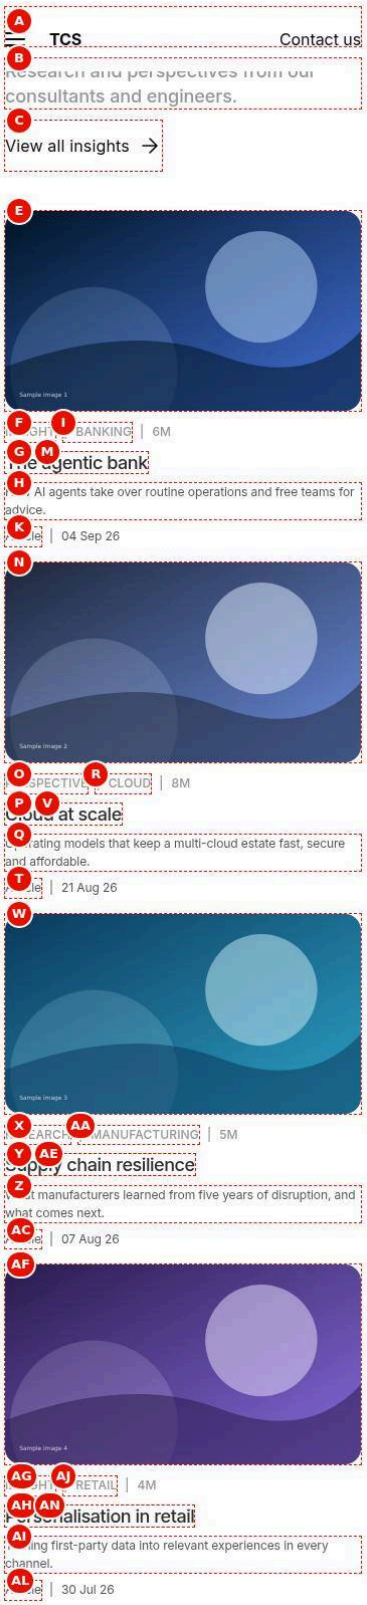

Figure 3: Mobile rendering — The Latest insights block at 402 px: the header stacked (title, description, then "View all insights" below), and the four image cards one per row in a single column with a 16 px gap, 1.125rem titles and 0.75rem kickers and meta rows. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The header stacks: "Latest insights" (1.75rem), the description, then "View all insights" below; the four image cards follow one per row with a 16 px gap, titles at 1.125rem and kicker and meta at 0.75rem.
- **Rendering behaviour:** Below 600 px Mobile display Grid with Mobile columns 1 and Mobile gap 16 px apply; the block gap is 2.5rem. The 16:9 image ratio is kept, and the scroll indicator default (on) has no effect because the breakpoint is a grid.
- **Publishing behaviour:** Publish to preview (aem.page) and check on a phone; publish to live (aem.live) when approved. The CDN serves the new HTML after publishing; images are optimised renditions.

Business Rules

- Mobile columns defaults to 1; 2 suits only small statistic tiles.
- Scroll indicator on mobile is on by default but only shows when Mobile display is Horizontal scroll and the cards overflow.
- Four cards in one column make a long section; consider Mobile display Horizontal scroll for more than four cards.
- The header CTA always wraps below the description on mobile.

Common Authoring Mistakes

Error	Root Cause	Resolution
The section is very long on phones	Many cards in the default single column	Set Mobile display to Horizontal scroll (1.2 visible by default)
Mobile columns set to 2 makes titles unreadable	Image cards with long titles in a 2-column phone grid	Keep Mobile columns 1 for image cards

Troubleshooting

- **Symptoms:** On a phone the CTA "View all insights" appears above the cards but the description is missing.
- **Cause:** The Description field of the block holds only an empty paragraph, which isn't rendered.
- **Resolution:** Enter the text "Research and perspectives from our consultants and engineers." in the Content tab Description and save.
- **Verification Steps:** Preview at 402 px: title, description and CTA appear stacked in that order.

Mobile (below 600 px). One column by default (Mobile columns 1) with a 1rem gap (Mobile gap, 16 px); the block gap is 2.5rem. The header wraps: the title slot takes the full width and the CTA moves below it. Type: block title 1.75rem (line height 1.39), card titles 1.125rem, kicker, meta and description 0.75rem, statistic numbers up to 5rem (they shrink to fit narrow cards, at most 26 % of the card width). In horizontal scroll mode 1.2 cards are visible by default and the scroll indicator (a 0.25rem grey track with a darker thumb) is shown by default; the scroller bleeds to the right edge of the screen.

6.15.3 Component Variations

The Cards block has no "variant" select of its own: its presentation comes from the shared settings of `models/_card-list.json` (Cards, Layout, Scroll and Advanced tabs) and from each Card's own Card style and Card colour. Every distinct mode an author can choose is documented below as its own variation. The TCS DS Figma variations 1–14 are combinations of these modes; they are documented one by one for the List in 6.16.3 and are reproduced in Cards with the same settings (Cards README):

Figma variation	Cards settings
1 Themes	Card style Panel; each card's Card colour (dark, brand, image); Mobile display Horizontal scroll with indicator
2 Insight & Opinion	Card style Mixed; First card as feature; Image ratio 1:1; header CTA link
3 Related; 8 Media coverage	Mixed or Report; Horizontal scroll on every breakpoint
4 Intelligence in Action; 11 2-up	Image cards; Image ratio 1:1; 3 or 2 columns
5 News	Display as teaser off; Style option Dividers between rows
6, 7, 10, 12, 13, 14 Statistics	Card style Statistic (Title: the number; Label; Description); card colours; Compact statistic title

Variation 1 — Image Card (default)

Variation Name: Card style "Image card" (`image`, the default).

Business Purpose: The standard editorial card: a picture with a short text and a link, for capabilities, services and curated content.

Visual Example:

Figure 4: Image card style — Four image cards in a row at 1440 px (default Card style Image card, 4 columns): 16:9 rounded images, uppercase grey kickers (e.g. "Insight", the tag label, "6m"), the titles "The agentic bank", "Cloud at scale", "Supply chain resilience" and "Personalisation in retail", two-line descriptions and the meta row "Article" with the date (e.g. "04 Sep 26"). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-image-card.jpg)

Screenshot Details — Image card style

Item	Detail
Screenshot Name	`screenshots/cards-image-card.jpg`
Screenshot Purpose	Image card style
Screen Description	Four image cards in a row at 1440 px (default Card style Image card, 4 columns): 16:9 rounded images, uppercase grey kickers (e.g. "Insight", the tag label, "6m"), the titles "The agentic bank", "Cloud at scale", "Supply chain resilience" and "Personalisation in retail", two-line descriptions and the meta row "Article" with the date (e.g. "04 Sep 26").

Item	Detail
Business Context	A related-content row on an insights hub where each card promotes an article with a photograph, typed by the author rather than taken from page metadata.
Author Objective	Add a Cards block with the default Card style (Image card) and four Cards with image, eyebrow, tags, date, content type, reading time and link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
A	Image (Card 1 › Content)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
B	Eyebrow (Card 1 › Content)	Insight	No	Label above the title	1–3 words	None
C	Title (Card 1 › Content)	The agentic bank	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
D	Description (Card 1 › Content)	How AI agents take over routine operations and free teams for advice.	No	Card text	1–3 sentences; lists and links allowed	None
E	Tags (Card 1 › Content)	Add the tags tcs-corp:industry/banking	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(F)	Date (Card 1 › Content)	2026-09-04	No	Card date	—	Read as YYYY-MM-DD
G	Content type (Card 1 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(H)	Reading time (Card 1 › Content)	6	No	Minutes after the tags	Digits only (6 shows `6m`)	None
I	Link (Card 1 › Link)	Select the page or enter /en/insights/agentic-bank	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
J	Image (Card 2 › Content)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
K	Eyebrow (Card 2 › Content)	Perspective	No	Label above the title	1–3 words	None
L	Title (Card 2 › Content)	Cloud at scale	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
M	Description (Card 2 › Content)	Operating models that keep a multicloud estate fast, secure and affordable.	No	Card text	1–3 sentences; lists and links allowed	None
N	Tags (Card 2 › Content)	Add the tags tcs-corp:topic/cloud	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(O)	Date (Card 2 › Content)	2026-08-21	No	Card date	—	Read as YYYY-MM-DD
P	Content type (Card 2 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(Q)	Reading time (Card 2 › Content)	8	No	Minutes after the tags	Digits only (6 shows `6m`)	None
R	Link (Card 2 › Link)	Select the page or enter /en/insights/cloud-at-scale	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
S	Image (Card 3 › Content)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
T	Eyebrow (Card 3 › Content)	Research	No	Label above the title	1–3 words	None
U	Title (Card 3 › Content)	Supply chain resilience	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
V	Description (Card 3 › Content)	What manufacturers learned from five years of disruption, and what comes next.	No	Card text	1–3 sentences; lists and links allowed	None
W	Tags (Card 3 › Content)	Add the tags tcs-corp:industry/manufacturing	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(X)	Date (Card 3 › Content)	2026-08-07	No	Card date	—	Read as YYYY-MM-DD
Y	Content type (Card 3 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(Z)	Reading time (Card 3 › Content)	5	No	Minutes after the tags	Digits only (6 shows `6m`)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
AA	Link (Card 3 › Link)	Select the page or enter /en/insights/supply-chain-resilience	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
AB	Image (Card 4 › Content)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
AC	Eyebrow (Card 4 › Content)	Insight	No	Label above the title	1–3 words	None
AD	Title (Card 4 › Content)	Personalisation in retail	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
AE	Description (Card 4 › Content)	Turning first-party data into relevant experiences in every channel.	No	Card text	1–3 sentences; lists and links allowed	None
AF	Tags (Card 4 › Content)	Add the tags tcs-corp:industry/retail	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(AG)	Date (Card 4 › Content)	2026-07-30	No	Card date	—	Read as YYYY-MM-DD
AH	Content type (Card 4 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(AI)	Reading time (Card 4 › Content)	4	No	Minutes after the tags	Digits only (6 shows `6m`)	None
AJ	Link (Card 4 › Link)	Select the page or enter /en/insights/retail-personalisation	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four image cards in a row: 16:9 images with 1rem rounded corners on a #d9d9d9 placeholder, an uppercase grey kicker such as "Insight", "Banking", "6m", the title, a two-line description and the meta row "Article" with "04 Sep 26".
- **Rendering behaviour:** Card style Image card is the default, so no block setting is needed. The authored picture is cloned with loading="lazy"; the title link's ::before covers the whole card and a focus ring surrounds it on keyboard focus.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; publish the assets photo-1.svg to photo-4.svg and the four linked insight pages first. Tag labels come from /en/taxonomy.json, which is published on its own.

Business Rules

- With no Card style chosen the block uses Image card; a Card's own Card style (Display tab) would override it.
- Up to 3 tags are shown in the kicker of an image card.
- Without a Call to action label, the title is the link; with a label a tertiary text link becomes the card's one link.
- Image alt text left empty makes the image decorative (alt="").
- The grey kicker (#999) is about 2.8:1 on white [To be confirmed: design sign-off of the Figma secondary text colour - owner: design lead].

Common Authoring Mistakes

Error	Root Cause	Resolution
The image is cropped badly	A portrait photo was used in the default 16:9 frame	Use landscape images (1600 x 900 px) or change Image ratio
Screen readers announce "image" with no description	Image alt text left empty on an informative image	Enter Image alt text that describes the picture
Two links per card in the tab order	A link to the same page was also added in the Description	Remove the duplicate description link; the card link is enough

Troubleshooting

- **Symptoms:** The kicker shows only "Insight" without the tag and reading time.
- **Cause:** Show tags is off on the Cards tab; it hides both the tags and the reading time.
- **Resolution:** Turn Show tags on in the Cards tab.
- **Verification Steps:** The kicker of Card 1 reads "Insight", "Banking", "6m" in preview.

Use Cases: Service and capability overviews; "Explore more" rows; related content.

Authoring Guidelines: Cards tab: Display as teaser on, Card style = Image card. Per Card: Image and Image alt text, Eyebrow, Title, Description, optional Tags, Date, Content type, Reading time, Link (and optionally Call to action label).

Business Rules: A card needs a Title, a Description or an Image, otherwise it isn't shown. The image shows only when Show image is on and the card has an image. Up to 3 tags are shown. Image cards have no default call to action: without a Call to action label the title is the link.

Rendering Rules: `article.list-card.list-card-image` with, in order: `div.list-card-media` (the authored `<picture>` cloned; `loading` from Image loading), `p.list-card-kicker` (eyebrow, tags, reading time — the reading time only when Show tags is on), the title heading (`.list-card-title`, one level below the block title), the description (`div.list-card-body` rich text), `p.list-card-meta` (content type, `<time datetime>`), and `p.list-card-action` when a call to action is shown (tertiary button). The card's link covers the whole card (`.list-card-link::before`, `inset: 0`).

Responsive Behaviour: Desktop: title 1.5rem, kicker and description 0.875rem / 1rem; grid of 4 columns by default. Tablet: title 1.25rem, kicker / meta 0.875rem; 4 columns by default. Mobile: title 1.125rem, kicker / meta / description 0.75rem; 1 column. The image keeps its ratio (16:9 by default) at every breakpoint, so there is no layout shift.

SEO Impact: Real headings and links with the title as anchor text; images with alt text are indexable. Card titles are headings one level below the block heading, keeping the outline valid.

Accessibility Compliance: `<ul>/<li>` list in a labelled region; one link per card; decorative images `alt=""` when Image alt text is empty; visible focus ring around the whole card (WCAG 2.4.7). The grey kicker colour (#999) on white is about 2.8:1, below the 4.5:1 of WCAG 1.4.3 for small text — [To be confirmed: design sign-off of the Figma secondary text colour — owner: design lead].

Variation 2 — Panel Card

Variation Name: Card style "Panel" (`panel`).

Business Purpose: A bold coloured panel with a large title and an "Explore" call to action, for themes, topic hubs and navigation tiles (Figma variation 1 "Themes").

Visual Example:

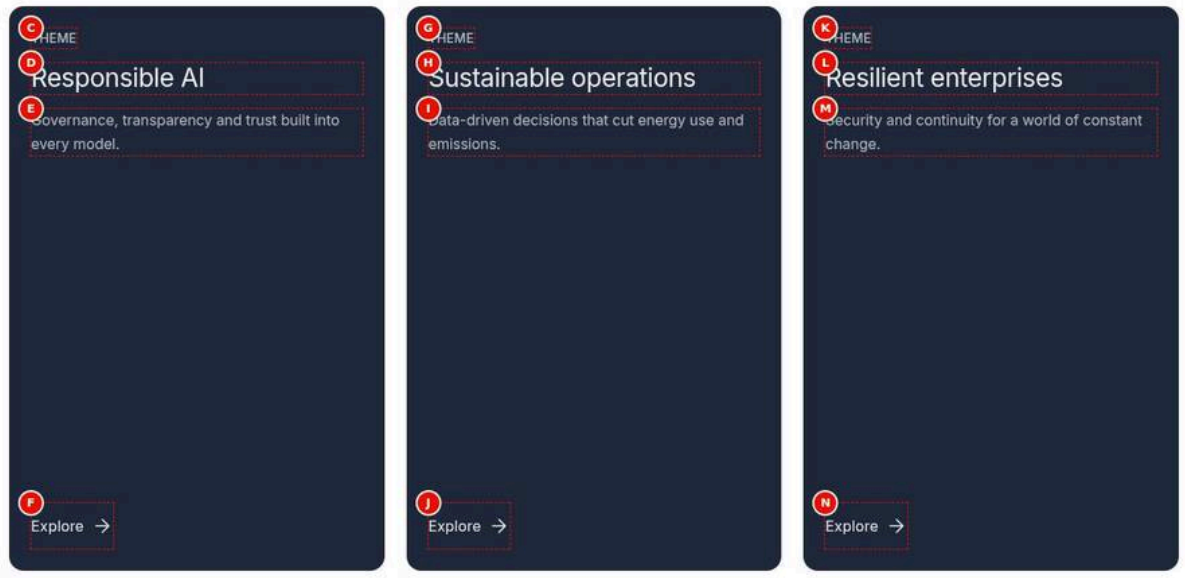

Figure 5: Panel card style — Three tall 2:3 dark navy-grey (#20293c) panels in a 3-column row at 1440 px, each with the light kicker "Theme", a large light title ("Responsible AI", "Sustainable operations", "Resilient enterprises"), a muted description and the "Explore" text link at the bottom. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-panel-card.jpg)

Screenshot Details — Panel card style

Item	Detail
Screenshot Name	`screenshots/cards-panel-card.jpg`
Screenshot Purpose	Panel card style
Screen Description	Three tall 2:3 dark navy-grey (#20293c) panels in a 3-column row at 1440 px, each with the light kicker "Theme", a large light title ("Responsible AI", "Sustainable operations", "Resilient enterprises"), a muted description and the "Explore" text link at the bottom.
Business Context	Theme tiles on a corporate landing page (Figma "Themes"): three dark panels route visitors to the AI, manufacturing and cybersecurity pages.
Author Objective	Set Card style to Panel and Desktop columns to 3, and add three Cards with an eyebrow, a title, a description and a link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Panel	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Eyebrow (Card 1 › Content)	Theme	No	Label above the title	1–3 words	None
D	Title (Card 1 › Content)	Responsible AI	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
E	Description (Card 1 › Content)	Governance, transparency and trust built into every model.	No	Card text	1–3 sentences; lists and links allowed	None
F	Link (Card 1 › Link)	Select the page or enter /en/services/ai	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
G	Eyebrow (Card 2 › Content)	Theme	No	Label above the title	1–3 words	None
H	Title (Card 2 › Content)	Sustainable operations	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
I	Description (Card 2 › Content)	Data-driven decisions that cut energy use and emissions.	No	Card text	1–3 sentences; lists and links allowed	None
J	Link (Card 2 › Link)	Select the page or enter /en/industries/manufacturing	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
K	Eyebrow (Card 3 › Content)	Theme	No	Label above the title	1–3 words	None
L	Title (Card 3 › Content)	Resilient enterprises	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
M	Description (Card 3 › Content)	Security and continuity for a world of constant change.	No	Card text	1–3 sentences; lists and links allowed	None
N	Link (Card 3 › Link)	Select the page or enter /en/services/cybersecurity	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`,

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
						`data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three tall 2:3 panels on dark navy-grey #20293c with a small light kicker "Theme", a large light title such as "Responsible AI", a muted description and an "Explore" text link at the bottom.
- **Rendering behaviour:** Panels are coloured cards with 1rem padding (1.5rem from 900 px), radius 1rem and overflow hidden; the title is 1.75rem on desktop and mobile, 1.5rem on tablet. The Explore link is pushed to the bottom and takes the light card text colour.
- **Publishing behaviour:** Publish the page to preview, then live; the three linked pages (/en/services/ai, /en/industries/manufacturing, /en/services/cybersecurity) must be published too. The "Explore" label comes from the en placeholders sheet.

Business Rules

- Panels get the default call to action "Explore" (placeholder explore) when the card is linked and Show call to action and Link items are on.
- The kicker shows the Eyebrow, else the first tag.
- Images aren't shown on panels unless Card colour is Image background.
- With Panel height Portrait (2:3) long descriptions are clipped; keep them under about 120 characters.
- The Explore link's accessible name is "Explore: {title}", e.g. "Explore: Responsible AI".

Common Authoring Mistakes

Error	Root Cause	Resolution
The description is cut off at the bottom of the panel	Portrait panel height with a long descrip-tion	Shorten the text or set Panel height to Content
Every panel says "Explore" though another label was wanted	Call to action label left empty	Enter a Call to action label on each Card's Link tab
An image added to a panel doesn't show	Panels only show images with Card colour Image background	Set Card colour to Image background or use Image card style

Troubleshooting

- **Symptoms:** The Explore link is missing on one panel.
- **Cause:** That Card has no Link, so it isn't linked and no call to action is rendered.
- **Resolution:** Select the Card, open the Link tab and pick the target page.
- **Verification Steps:** The panel shows "Explore" and the whole panel opens the page in preview.

Use Cases: Theme and topic tiles; industry entry points; campaign navigation.

Authoring Guidelines: Cards tab: Card style = Panel (or a Card's own Card style = Panel); optional Card colour; Panel height. Per Card: Eyebrow (or a Tag), Title, Description, Link; optionally a Call to action label (else "Explore").

Business Rules: The default call to action is the placeholder `explore` ("Explore"), shown when the card is linked, Link items is on and Show call to action is on. The kicker shows the eyebrow, else the first tag. Images aren't shown on panels unless Card colour is Image background (Variation 15).

Rendering Rules: `article.list-card.list-card-panel` (padding 1rem, 1.5rem from 900 px; radius 1rem; `overflow: hidden`), background `--list-card-bg` (dark #20293c by default), text #f3f3f3, muted kicker and description in 70 % white. Title 1.75rem / 1.5rem / 1.75rem (mobile / tablet / desktop), regular weight, line height 1.21. The action paragraph is pushed to the bottom (`margin-top: auto`); the tertiary button takes the card's light text colour.

Responsive Behaviour: Desktop: 2:3 portrait panels, description 1rem. Tablet: description 0.875rem, title 1.5rem. Mobile: description 0.75rem, title 1.75rem, 1 column or a scroller. With Panel height Portrait a long text is clipped (`overflow: hidden`) — keep texts short or use Panel height Content.

SEO Impact: As Variation 1; the call to action carries `aria-label="Explore: {title}"`, so the link's name includes the card title.

Accessibility Compliance: Light text on the dark panel meets WCAG 1.4.3; the call to action is the card's only link (no duplicate links); the accessible name joins the label and the title (WCAG 2.4.4).

Variation 3 — Report Card

Variation Name: Card style "Report" (`report`).

Business Purpose: A download-style teaser for reports, studies and white papers, with a "Download" call to action (Figma variations 8 and 9).

Visual Example:

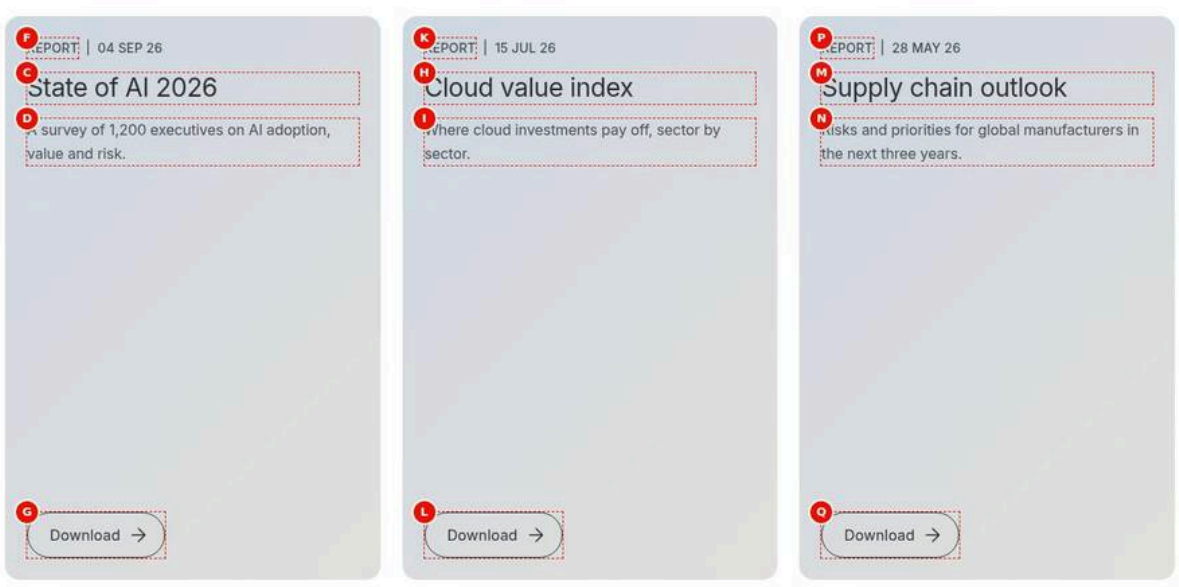

Figure 6: Report card style — Three tall 2:3 report cards in a 3-column row at 1440 px on the light blue-grey to warm grey gradient: kickers "Report" with the dates "04 Sep 26", "15 Jul 26" and "28 May 26", the dark titles "State of AI 2026", "Cloud value index" and "Supply chain outlook", descriptions and an outlined "Download" button at the bottom. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-report-card.jpg)

Screenshot Details — Report card style

Item	Detail
Screenshot Name	`screenshots/cards-report-card.jpg`
Screenshot Purpose	Report card style

Item	Detail
Screen Description	Three tall 2:3 report cards in a 3-column row at 1440 px on the light blue-grey to warm grey gradient: kickers “Report” with the dates “04 Sep 26”, “15 Jul 26” and “28 May 26”, the dark titles “State of AI 2026”, “Cloud value index” and “Supply chain outlook”, descriptions and an outlined “Download” button at the bottom.
Business Context	A research downloads row on the insights hub: three reports (State of AI 2026, Cloud value index, Supply chain outlook) are promoted with a Download call to action.
Author Objective	Set Card style to Report and Desktop columns to 3, and add three Cards with content type Report, date, title, description and link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Report	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Title (Card 1 › Content)	State of AI 2026	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
D	Description (Card 1 › Content)	A survey of 1,200 executives on AI adoption, value and risk.	No	Card text	1–3 sentences; lists and links allowed	None
(E)	Date (Card 1 › Content)	2026-09-04	No	Card date	—	Read as YYYY-MM-DD
F	Content type (Card 1 › Content)	Report	No	Meta label; Report in Mixed	Article, Report, …	None
G	Link (Card 1 › Link)	Select the page or enter /en/insights/state-of-ai-2026	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
H	Title (Card 2 › Content)	Cloud value index	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
I	Description (Card 2 › Content)	Where cloud investments pay off, sector by sector.	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(J)	Date (Card 2 › Content)	2026-07-15	No	Card date	—	Read as YYYY-MM-DD
K	Content type (Card 2 › Content)	Report	No	Meta label; Report in Mixed	Article, Report, …	None
L	Link (Card 2 › Link)	Select the page or enter /en/insights/cloud-at-scale	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
M	Title (Card 3 › Content)	Supply chain outlook	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
N	Description (Card 3 › Content)	Risks and priorities for global manufacturers in the next three years.	No	Card text	1–3 sentences; lists and links allowed	None
(O)	Date (Card 3 › Content)	2026-05-28	No	Card date	—	Read as YYYY-MM-DD
P	Content type (Card 3 › Content)	Report	No	Meta label; Report in Mixed	Article, Report, …	None
Q	Link (Card 3 › Link)	Select the page or enter /en/insights/supply-chain-resilience	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three tall cards on the light blue-grey to warm grey gradient with dark text, the kicker "Report" and the date (04 Sep 26), a large title, the description and an outlined "Download" button at the bottom.
- **Rendering behaviour:** Report cards use background linear-gradient(135deg, #cfd9e3, #e2e1dd) and text #303030 in the 2:3 portrait shape; the call to action is a secondary (outlined) button. A link to a file such as .pdf is reported as xdm:linkType download in the data layer.
- **Publishing behaviour:** Publish the page and the linked report pages (or PDF assets in AEM Assets) to preview and live; a link to an unpublished asset or page ends on the 404 page.

Business Rules

- The kicker shows the Content type (else the Eyebrow) and the date.
- The default call to action is "Download" (placeholder download); a Call to action label replaces it.
- Report cards show no image and no tags.
- The button's accessible name is "Download: {title}", e.g. "Download: State of AI 2026".
- State the file type and size in the description when the link points to a file.

Common Authoring Mistakes

Error	Root Cause	Resolution
The kicker shows “Report” but no date	Date empty or not in YYYY-MM-DD form	Pick the date with the date picker
“Download” opens a web page	The Link points to a page, not a file	Use the label “Read the report” for pages, or link the PDF asset

Troubleshooting

- **Symptoms:** The cards show “Download” but clicking one returns a 404 page on aem.live.
- **Cause:** The linked report page (for example /en/insights/state-of-ai-2026) or PDF wasn’t published to live.
- **Resolution:** Publish the target page or asset, then republish the Cards page if the link was changed.
- **Verification Steps:** Click each Download button on aem.live; the report opens with HTTP 200.

Use Cases: Reports, research, annual report downloads, investor documents.

Authoring Guidelines: Card style = Report (block or Card). Per Card: Content type (e.g. Report; shown in the kicker), Date, Title, Description, Link (e.g. a PDF in AEM Assets or a page); optionally Call to action label (else “Download”).

Business Rules: The kicker shows the content type, else the eyebrow, and the date. The default call to action is the placeholder `download` (“Download”). No image, no tags.

Rendering Rules: `article.list-card.list-card-report`, background `--list-gradient` (`linear-gradient(135deg, #cfd9e3, #e2e1dd)`), text #303030, muted text 70 % black; the call to action is a secondary (outlined) button. A link to a file (`.pdf`, `.docx`, `.zip`, …) is reported as `xdm:linkType: download` in the data layer.

Responsive Behaviour: As panels (2:3 by default; title 1.75rem / 1.5rem / 1.75rem; description 1rem / 0.875rem / 0.75rem).

SEO Impact: The title is a heading; the button’s accessible name is “Download: {title}”. File links aren’t indexed as pages; describe the file in the title and description.

Accessibility Compliance: Dark text on the light gradient meets WCAG 1.4.3. State the file type and size in the description when linking to files (WCAG 2.4.4 recommended practice).

Variation 4 — Statistic Card

Variation Name: Card style “Statistic” (`stat`).

Business Purpose: Key figures with a large number, a label and an explanation (“At a glance”, “Banking today”; Figma variations 6, 7, 10, 12, 13, 14).

Visual Example:

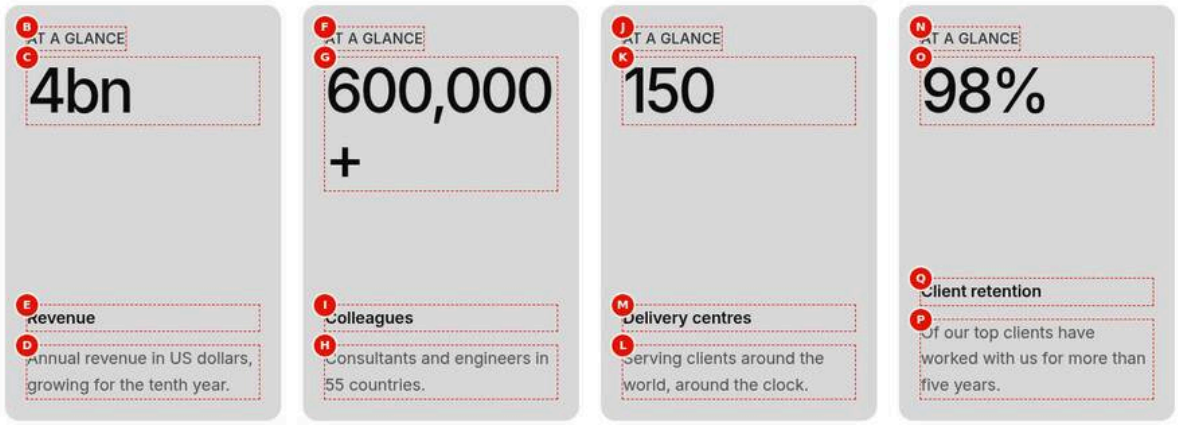

Figure 7: Statistic card style — Four light grey (#d9d9d9) 2:3 statistic cards in a row at 1440 px, each with "At a glance" at the top, a very large number ("4bn", "600,000+", "150", "98%") and at the bottom a bold label ("Revenue", "Colleagues", "Delivery centres", "Client retention") with a short description; no links or buttons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-statistic-card.jpg)

Screenshot Details — Statistic card style

Item	Detail
Screenshot Name	`screenshots/cards-statistic-card.jpg`
Screenshot Purpose	Statistic card style
Screen Description	Four light grey (#d9d9d9) 2:3 statistic cards in a row at 1440 px, each with "At a glance" at the top, a very large number ("4bn", "600,000+", "150", "98%") and at the bottom a bold label ("Revenue", "Colleagues", "Delivery centres", "Client retention") with a short description; no links or buttons.
Business Context	The "At a glance" facts row of the About page: revenue, colleagues, delivery centres and client retention as large numbers without links.
Author Objective	Set Card style to Statistic and add four Cards with an eyebrow, the number as Title, a Label and a Description.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
B	Eyebrow (Card 1 › Content)	At a glance	No	Label above the title	1–3 words	None
C	Title (Card 1 › Content)	4bn	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Description (Card 1 › Content)	Annual revenue in US dollars, growing for the tenth year.	No	Card text	1–3 sentences; lists and links allowed	None
E	Label (Card 1 › Content)	Revenue	No	Statistic label above the description	1–3 words	None
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
F	Eyebrow (Card 2 › Content)	At a glance	No	Label above the title	1–3 words	None
G	Title (Card 2 › Content)	600,000+	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
H	Description (Card 2 › Content)	Consultants and engineers in 55 countries.	No	Card text	1–3 sentences; lists and links allowed	None
I	Label (Card 2 › Content)	Colleagues	No	Statistic label above the description	1–3 words	None
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
J	Eyebrow (Card 3 › Content)	At a glance	No	Label above the title	1–3 words	None
K	Title (Card 3 › Content)	150	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
L	Description (Card 3 › Content)	Serving clients around the world, around the clock.	No	Card text	1–3 sentences; lists and links allowed	None
M	Label (Card 3 › Content)	Delivery centres	No	Statistic label above the description	1–3 words	None
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
N	Eyebrow (Card 4 › Content)	At a glance	No	Label above the title	1–3 words	None
O	Title (Card 4 › Content)	98%	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
P	Description (Card 4 › Content)	Of our top clients have worked with us for more than five years.	No	Card text	1–3 sentences; lists and links allowed	None
Q	Label (Card 4 › Content)	Client retention	No	Statistic label above the description	1–3 words	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four light grey (#d9d9d9) cards, each with "At a glance" at the top, a very large number (4bn, 600,000+, 150, 98%) and at the bottom a bold label such as "Revenue" and a short description.
- **Rendering behaviour:** Statistic cards spread a top block (kicker, number) and a bottom block (label, description); the number is min(6rem, 26 % of the card width) on desktop, 4rem on tablet, 5rem on mobile, and wraps anywhere. The cards are unlinked, so no pointer or button shows.
- **Publishing behaviour:** Publish the page to preview and live; there are no images or linked pages to publish. The figures are page content, so updating a number needs a page republish.

Business Rules

- Title holds the number; keep it to about 8 characters (4bn, 600,000+).
- Label (subtitle) and Description are shown only on statistic cards.
- Statistic cards show no image, tags or date.
- Without a Link the card is plain text; with a Link and no Call to action label the number becomes the link.
- Use the locale's number style (e.g. 4 Mrd. in German) in translated copies.

Common Authoring Mistakes

Error	Root Cause	Resolution
The number wraps into two lines	A phrase such as "Net zero by 2030" typed into Title	Use the Style option Compact statistic title for phrases
The label appears above the number	The label was typed into Eyebrow	Put "Revenue" in Label and keep Eyebrow for "At a glance"
Numbers lose meaning for screen readers	Label and Description left empty	Always fill Label and Description to explain the number

Troubleshooting

- **Symptoms:** "600,000+" shrinks or breaks onto two lines on the desktop row.
- **Cause:** The number size is capped at 26 % of the card width, and four columns leave narrow cards.
- **Resolution:** Shorten the value (e.g. "600k+") or set Desktop columns to 3.
- **Verification Steps:** At 1440 px each number fits on one line in its card.

Use Cases: Company facts, investor highlights, impact numbers, survey results.

Authoring Guidelines: Card style = Statistic. Per Card: Eyebrow (optional, small label at the top), Title = the number (e.g. `4bn`, `600,000+`), Label (`subtitle`, e.g. Revenue), Description; optional Link with a Call to action label.

Business Rules: Statistic cards have no default call to action: a link shows a button only with a Call to action label; otherwise the number (title) is the link. No image, tags or date are shown on statistic cards.

Rendering Rules: `article.list-card.list-card-stat` with `div.list-card-top` (kicker, number) and `div.list-card-bottom` (`p.list-card-subtitle`, description), spread top and bottom (`justify-content: space-between`). The number uses `min(var(--list-stat-number-size), 26cqi)` (6rem desktop, 4rem tablet, 5rem mobile at most; it shrinks with narrow cards) and wraps anywhere. Default background #d9d9d9, text #0c0c0d. The call to action is a secondary button.

Responsive Behaviour: Desktop: number up to 6rem, label and description 1.125rem. Tablet: number up to 4rem, texts 1rem. Mobile: number up to 5rem; usually a scroller (Figma 6, 10).

SEO Impact: The number is a heading; give the Label and Description the context (a number alone has little meaning for search engines and screen readers).

Accessibility Compliance: The label and description follow the number in reading order; avoid units that are only visual (use "4bn" rather than an image of a number).

Variation 5 — Mixed Card Style

Variation Name: Card style "Mixed (by page)" (`mixed`).

Business Purpose: One block that mixes image cards, panels and report cards automatically, as in Figma variations 2, 3, 8 and 9.

Visual Example:

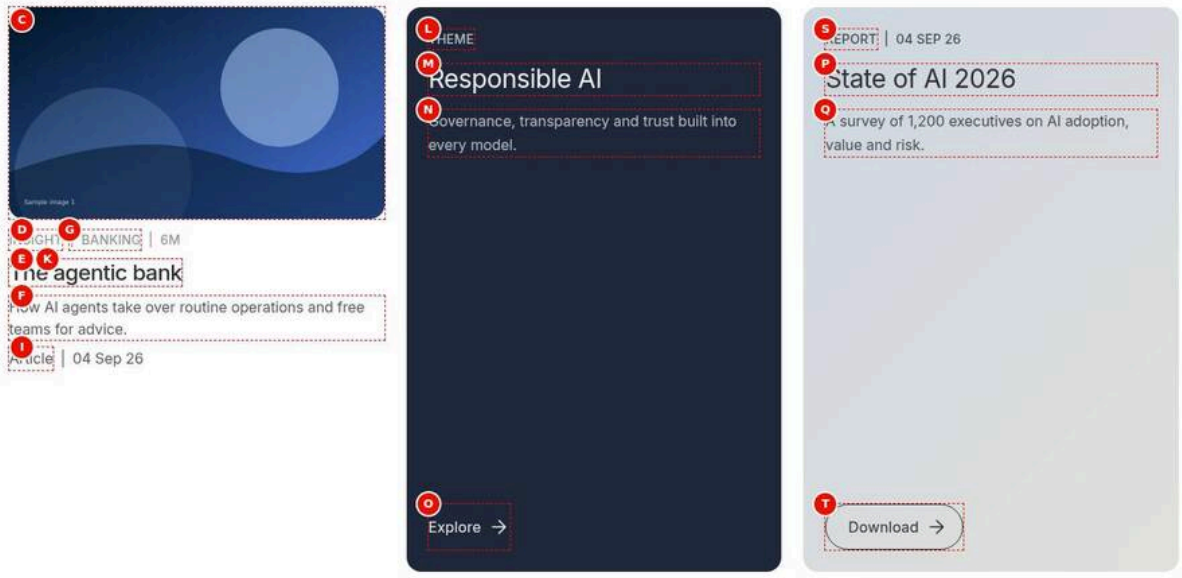

Figure 8: Mixed card style — A 3-column row at 1440 px with Card style Mixed: the image card "The agentic bank" (photo-1.svg), the dark #20293c panel "Responsible AI" (no image) with "Explore", and the gradient report card "State of AI 2026" (Content type Report) with the kicker "Report", "04 Sep 26" and a Download button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-mixed.jpg)

Screenshot Details — Mixed card style

Item	Detail
Screenshot Name	`screenshots/cards-mixed.jpg`
Screenshot Purpose	Mixed card style
Screen Description	A 3-column row at 1440 px with Card style Mixed: the image card "The agentic bank" (photo-1.svg), the dark #20293c panel "Responsible AI" (no image) with "Explore", and the gradient report card "State of AI 2026" (Content type Report) with the kicker "Report", "04 Sep 26" and a Download button.
Business Context	An insight row that mixes an article, a theme tile and a report (Figma "Insight & Opinion" and "Related") in one block.
Author Objective	Set Card style to Mixed (by page) and Desktop columns to 3, and add an image card, a card without image and a Report card.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Mixed (by page)	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Image (Card 1 › Content)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
D	Eyebrow (Card 1 › Content)	Insight	No	Label above the title	1–3 words	None
E	Title (Card 1 › Content)	The agentic bank	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
F	Description (Card 1 › Content)	How AI agents take over routine operations and free teams for advice.	No	Card text	1–3 sentences; lists and links allowed	None
G	Tags (Card 1 › Content)	Add the tags tcs-corp:industry/banking	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(H)	Date (Card 1 › Content)	2026-09-04	No	Card date	—	Read as YYYY-MM-DD
I	Content type (Card 1 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(J)	Reading time (Card 1 › Content)	6	No	Minutes after the tags	Digits only (6 shows `6m`)	None
K	Link (Card 1 › Link)	Select the page or enter /en/insights/agentic-bank	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
L	Eyebrow (Card 2 › Content)	Theme	No	Label above the title	1–3 words	None
M	Title (Card 2 › Content)	Responsible AI	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
N	Description (Card 2 › Content)	Governance, transparency and trust built into every model.	No	Card text	1–3 sentences; lists and links allowed	None
O	Link (Card 2 › Link)	Select the page or enter /en/services/ai	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
P	Title (Card 3 › Content)	State of AI 2026	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
Q	Description (Card 3 › Content)	A survey of 1,200 executives on AI adoption, value and risk.	No	Card text	1–3 sentences; lists and links allowed	None
(R)	Date (Card 3 › Content)	2026-09-04	No	Card date	—	Read as YYYY-MM-DD
S	Content type (Card 3 › Content)	Report	No	Meta label; Report in Mixed	Article, Report, …	None
T	Link (Card 3 › Link)	Select the page or enter /en/insights/state-of-ai-2026	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** One row of three: an image card for "The agentic bank", a dark #20293c panel for "Responsible AI" with "Explore", and a gradient report card "State of AI 2026" with the kicker "Report" and "04 Sep 26" and a Download button.
- **Rendering behaviour:** kindOf() decides per card: a Content type containing "report" gives a report card, an image gives an image card, otherwise a panel; a Card's own Card style would win. The block gets the class style-mixed and the data layer variant "mixed".
- **Publishing behaviour:** Publish the page with photo-1.svg and the three linked pages (/en/insights/agentic-bank, /en/services/ai, /en/insights/state-of-ai-2026) to preview and live.

Business Rules

- Card 3 is a report card only because its Content type is "Report"; Card 1 is an image card because it has an Image.
- Card 2 has no image and no report content type, so it renders as a panel with the default "Explore".
- A Card's Display tab Card style always wins over Mixed.
- Keep Stretch cards to row height on so the image card lines up with the 2:3 panels.

Common Authoring Mistakes

Error	Root Cause	Resolution
An article shows as a report card	Its Content type contains the word “report” (e.g. “Report summary”)	Change the Content type or set the Card style to Image card
A card meant as panel shows as image card	An image was added to it	Remove the image or set the Card’s Card style to Panel

Troubleshooting

- **Symptoms:** The third card renders as a dark panel instead of a gradient report card.
- **Cause:** Its Content type is empty or misspelt, so Mixed falls back to panel for a card without image.
- **Resolution:** Enter “Report” in the Card’s Content type (or set its Card style to Report).
- **Verification Steps:** The card shows the gradient, the kicker “Report” and “04 Sep 26”, and a Download button.

Use Cases: Insight rows that combine articles, opinions and reports.

Authoring Guidelines: Card style = Mixed. Per Card: set Content type `Report` for report cards, add an Image for image cards, leave the image empty for panels — or set the Card’s own Card style, which always wins.

Business Rules: `kindOf()`: a Card’s own Card style first; else a content type containing “report” (any case) gives a report card; else a card with an image is an image card; else a panel.

Rendering Rules: Each `<li>` holds the card kind’s markup (Variations 1–4); the block has the class `style-mixed`; the data layer state reports `xdm:variant: "mixed"`.

Responsive Behaviour: As each card kind. Panels (2:3) and image cards (image ratio plus text) have different heights: keep Stretch cards to row height on (default) so a row lines up.

SEO Impact: As the card kinds.

Accessibility Compliance: As the card kinds; the mixed colours don’t change the reading order.

Variation 6 — Feature Card (First card as feature)

Variation Name: First card as feature (`featureFirst` on).

Business Purpose: A large spotlight for the most important item, above the other cards (Figma variation 2 “Insight & Opinion”).

Visual Example:

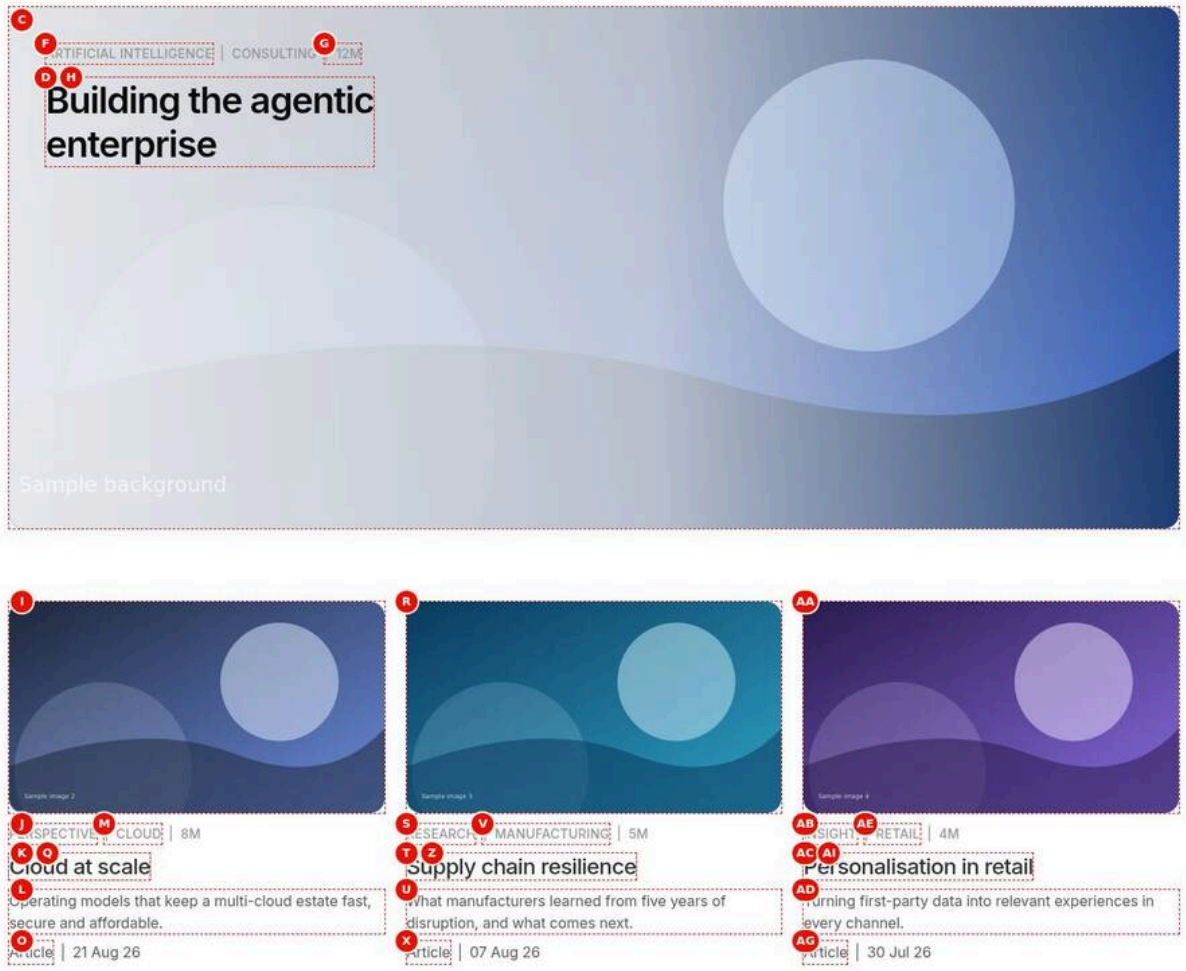

Figure 9: Feature card — At 1440 px a full-width feature card (about 35.6rem high) with wide.svg filling it under a white gradient from the left, the two tag labels and "12m" and the large title "Building the agentic enterprise" (no description); below it three image cards ("Cloud at scale", "Supply chain resilience", "Personalisation in retail") in a 3-column row. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-feature-card.jpg)

Screenshot Details — Feature card

Item	Detail
Screenshot Name	`screenshots/cards-feature-card.jpg`
Screenshot Purpose	Feature card
Screen Description	At 1440 px a full-width feature card (about 35.6rem high) with wide.svg filling it under a white gradient from the left, the two tag labels and "12m" and the large title "Building the agentic enterprise" (no description); below it three image cards ("Cloud at scale", "Supply chain resilience", "Personalisation in retail") in a 3-column row.
Business Context	The lead story of an insights section (Figma "Insight & Opinion"): the agentic enterprise guide as a large spotlight above three related articles.
Author Objective	Turn on First card as feature, set Desktop columns to 3, and add a first Card with a wide image, tags, reading time and link plus three image cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	First card as feature (Cards › Cards)	On	No	First card as a large spotlight	The first card needs an image	Boolean; teaser on
(B)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Image (Card 1 › Content)	Select the asset wide.svg (/en/media/wide.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
D	Title (Card 1 › Content)	Building the agentic enterprise	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
(E)	Description (Card 1 › Content)	A practical guide to AI agents in operations.	No	Card text	1–3 sentences; lists and links allowed	None
F	Tags (Card 1 › Content)	Add the tags tcs-corp:topic/ai, tcs-corp:service/consulting	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
G	Reading time (Card 1 › Content)	12	No	Minutes after the tags	Digits only (6 shows `6m`)	None
H	Link (Card 1 › Link)	Select the page or enter /en/insights/state-of-ai-2026	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
I	Image (Card 2 › Content)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
J	Eyebrow (Card 2 › Content)	Perspective	No	Label above the title	1–3 words	None
K	Title (Card 2 › Content)	Cloud at scale	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
L	Description (Card 2 › Content)	Operating models that keep a multi-cloud estate fast, secure and affordable.	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
M	Tags (Card 2 › Content)	Add the tags tcs-corp:topic/cloud	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(N)	Date (Card 2 › Content)	2026-08-21	No	Card date	—	Read as YYYY-MM-DD
O	Content type (Card 2 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(P)	Reading time (Card 2 › Content)	8	No	Minutes after the tags	Digits only (6 shows `6m`)	None
Q	Link (Card 2 › Link)	Select the page or enter /en/insights/cloud-at-scale	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
R	Image (Card 3 › Content)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
S	Eyebrow (Card 3 › Content)	Research	No	Label above the title	1–3 words	None
T	Title (Card 3 › Content)	Supply chain resilience	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
U	Description (Card 3 › Content)	What manufacturers learned from five years of disruption, and what comes next.	No	Card text	1–3 sentences; lists and links allowed	None
V	Tags (Card 3 › Content)	Add the tags tcs-corp:industry/manufacturing	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(W)	Date (Card 3 › Content)	2026-08-07	No	Card date	—	Read as YYYY-MM-DD
X	Content type (Card 3 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(Y)	Reading time (Card 3 › Content)	5	No	Minutes after the tags	Digits only (6 shows `6m`)	None
Z	Link (Card 3 › Link)	Select the page or enter /en/insights/supply-chain-resilience	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
AA	Image (Card 4 › Content)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
AB	Eyebrow (Card 4 › Content)	Insight	No	Label above the title	1–3 words	None
AC	Title (Card 4 › Content)	Personalisation in retail	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
AD	Description (Card 4 › Content)	Turning first-party data into relevant experiences in every channel.	No	Card text	1–3 sentences; lists and links allowed	None
AE	Tags (Card 4 › Content)	Add the tags tcs-corp:industry/retail	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(AF)	Date (Card 4 › Content)	2026-07-30	No	Card date	—	Read as YYYY-MM-DD
AG	Content type (Card 4 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(AH)	Reading time (Card 4 › Content)	4	No	Minutes after the tags	Digits only (6 shows `6m`)	None
AI	Link (Card 4 › Link)	Select the page or enter /en/insights/retail-personalisation	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A full-width feature card (about 35.6rem high on desktop) with wide.svg filling it under a white gradient from the left, the tag labels and "12m" and the large title "Building the agentic enterprise"; below, a row of three image cards.
- **Rendering behaviour:** The first shown card becomes article.list-feature before the list and is removed from it; the authored picture is cloned and always shown. Minimum heights are 35.625rem desktop, 27.1875rem tablet and 32.5rem mobile; the title is 2.5rem (2rem on mobile).
- **Publishing behaviour:** Publish the page with wide.svg and photo-2.svg to photo-4.svg and the four linked pages; publish to preview first to check the gradient legibility over the image.

Business Rules

- The feature needs Display as teaser on and at least one card; it always shows its image, even with Show image off.
- The feature shows tags (up to 3), reading time and title only: Card 1's description is not displayed.
- Cards has no author lockup on the feature card (only the List takes it from the page author).
- Clicks on the feature are reported with the block's data layer path, not as a list item.
- Use an image with its subject on the right (2400 x 1200 px), as the text sits on the left gradient.

Common Authoring Mistakes

Error	Root Cause	Resolution
The feature card has no picture area content	The first Card has no Image	Give the first Card a wide image

Error	Root Cause	Resolution
The feature description doesn't appear	The feature card never shows the description, eyebrow or date	Put the key message into the title or tags
The wrong item is featured	Card order in the content tree	Drag the lead Card to the first position

Troubleshooting

- **Symptoms:** The title is hard to read over the photograph on tablet.
- **Cause:** The image has a busy, dark subject on the left behind the white gradient.
- **Resolution:** Replace the asset with one whose subject sits on the right, or crop it in AEM Assets.
- **Verification Steps:** At 1024 and 1440 px the dark title reads clearly over the gradient.

Use Cases: Lead story of an insights section; campaign spotlight.

Authoring Guidelines: Cards tab: Display as teaser on, First card as feature on. The first Card should have an Image, a Title, Tags and Reading time, and a Link.

Business Rules: Only with Display as teaser on and at least one card. The first shown card becomes the feature and is removed from the list. The feature always shows its image (even with Show image off). It shows tags (up to 3) and the reading time (with Show tags on) and the title — not the eyebrow, description, date or call to action. Cards has no author lockup on the feature card (the List takes it from the page's author).

Rendering Rules: `article.list-feature` before the list region: the image (`div.list-card-media`, absolute, cover) under a white gradient (`90deg`, 90 % → 70 % white → transparent) and `div.list-feature-content` (kicker, `.list-feature-title`, semibold, max width 31.25rem). The block has the class `feature-first`. Clicks on the feature card are reported with the block's data layer path (it isn't one of the list items).

Responsive Behaviour: Minimum height 35.625rem (desktop), 27.1875rem (tablet), 32.5rem (mobile); title 2.5rem (tablet and desktop) / 2rem (mobile); content padding 2.5rem (tablet+) / 1.5rem (mobile). Images 1600 px wide from 900 px, 750 px below (when built from a URL).

SEO Impact: The feature title is a heading at the card level; the image is a real `<img>` with its alt text.

Accessibility Compliance: Dark title on the white gradient; check legibility with busy images. The feature is a separate `<article>` outside the `<ul>`, so screen readers announce the list with one item less.

Variation 7 — Rows of Links (Display as teaser off)

Variation Name: Display as teaser off (`links`).

Business Purpose: A text-only list of links with large titles and arrows, for news and announcement lists (Figma variation 5 "News").

Visual Example:

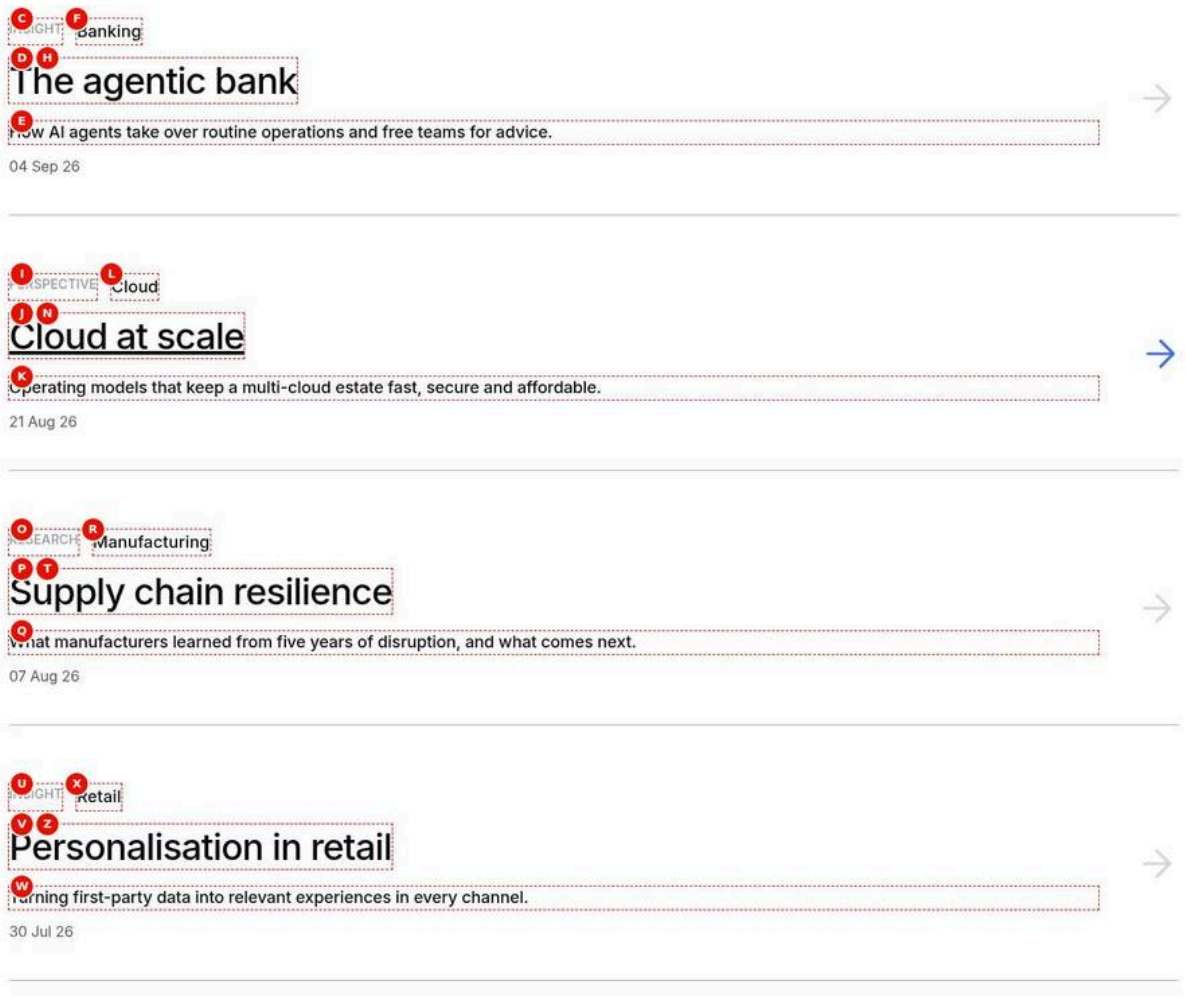

Figure 10: Rows of links — Four full-width rows of links at 1440 px, each with the uppercase eyebrow and first tag, a large title (“The agentic bank”, “Cloud at scale”, …), a description, the date and a grey arrow on the right, separated by thin grey lines (Dividers between rows); the pointer is on the second row, whose arrow is blue and moved. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-rows-of-links.jpg)

Screenshot Details — Rows of links

Item	Detail
Screenshot Name	`screenshots/cards-rows-of-links.jpg`
Screenshot Purpose	Rows of links
Screen Description	Four full-width rows of links at 1440 px, each with the uppercase eyebrow and first tag, a large title (“The agentic bank”, “Cloud at scale”, …), a description, the date and a grey arrow on the right, separated by thin grey lines (Dividers between rows); the pointer is on the second row, whose arrow is blue and moved.
Business Context	A news list on the newsroom page (Figma “News”): four insights as text rows with large titles and arrows, without images.
Author Objective	Turn Display as teaser off, add the Style option Dividers between rows and four Cards with eyebrow, tag, title, description, date and link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Display as teaser (Cards › Cards)	Off	No	Cards (on) or rows of links (off)	Off for news-style link lists	Boolean
(B)	Style options (Cards › Advanced)	Dividers between rows	No	Extra styles	Only as designed	stat-compact, dividers, header-center
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Eyebrow (Card 1 › Content)	Insight	No	Label above the title	1–3 words	None
D	Title (Card 1 › Content)	The agentic bank	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
E	Description (Card 1 › Content)	How AI agents take over routine operations and free teams for advice.	No	Card text	1–3 sentences; lists and links allowed	None
F	Tags (Card 1 › Content)	Add the tags tcs-corp:industry/banking	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(G)	Date (Card 1 › Content)	2026-09-04	No	Card date	—	Read as YYYY-MM-DD
H	Link (Card 1 › Link)	Select the page or enter /en/insights/agentic-bank	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
I	Eyebrow (Card 2 › Content)	Perspective	No	Label above the title	1–3 words	None
J	Title (Card 2 › Content)	Cloud at scale	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
K	Description (Card 2 › Content)	Operating models that keep a multicloud estate fast, secure and affordable.	No	Card text	1–3 sentences; lists and links allowed	None
L	Tags (Card 2 › Content)	Add the tags tcs-corp:topic/cloud	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(M)	Date (Card 2 › Content)	2026-08-21	No	Card date	—	Read as YYYY-MM-DD

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
N	Link (Card 2 › Link)	Select the page or enter /en/insights/cloud-at-scale	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
O	Eyebrow (Card 3 › Content)	Research	No	Label above the title	1–3 words	None
P	Title (Card 3 › Content)	Supply chain resilience	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
Q	Description (Card 3 › Content)	What manufacturers learned from five years of disruption, and what comes next.	No	Card text	1–3 sentences; lists and links allowed	None
R	Tags (Card 3 › Content)	Add the tags tcs-corp:industry/manufacturing	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(S)	Date (Card 3 › Content)	2026-08-07	No	Card date	—	Read as YYYY-MM-DD
T	Link (Card 3 › Link)	Select the page or enter /en/insights/supply-chain-resilience	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
U	Eyebrow (Card 4 › Content)	Insight	No	Label above the title	1–3 words	None
V	Title (Card 4 › Content)	Personalisation in retail	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
W	Description (Card 4 › Content)	Turning first-party data into relevant experiences in every channel.	No	Card text	1–3 sentences; lists and links allowed	None
X	Tags (Card 4 › Content)	Add the tags tcs-corp:industry/retail	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(Y)	Date (Card 4 › Content)	2026-07-30	No	Card date	—	Read as YYYY-MM-DD
Z	Link (Card 4 › Link)	Select the page or enter /en/insights/retail-personalisation	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Action (Preview)	Point at the second row (its arrow turns blue and moves)	—	Check on the preview (not stored in the content)	Point at the second row (its arrow turns blue and moves)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Full-width rows, each with an uppercase eyebrow and the first tag, a 2.5rem title, the description, the date and a grey arrow on the right; thin grey #b2b2b2 lines separate the rows, and the second row's arrow turns blue and moves on hover.
- **Rendering behaviour:** With Display as teaser off the block has the class links and renders article.list-row items (2.5rem top and bottom padding), always one per line. Dividers keep the bottom border from 600 px; on mobile the rows always have dividers. The arrow animates on hover and focus, not with reduced motion.
- **Publishing behaviour:** Publish the page and the four linked insight pages to preview and live; no images are needed. Tag labels come from the published /en/taxonomy.json.

Business Rules

- Card style, Card colour, Image ratio, Panel height and First card as feature are hidden and ignored with Display as teaser off.
- Rows show no image and no call to action button; the title is the link.
- The kicker shows the Eyebrow (else the Content type) and only the first tag.
- The arrow is shown only for a linked row with a title, and is aria-hidden.
- Dividers between rows affects tablet and desktop only.

Common Authoring Mistakes

Error	Root Cause	Resolution
The images authored in the Cards don't show	Rows of links never show images	Turn Display as teaser on for image cards
No lines between rows on desktop	The Style option Dividers between rows isn't selected	Add Dividers between rows in the Advanced tab
A row has no arrow	The Card has no Link or no Title	Add both a Title and a Link

Troubleshooting

- **Symptoms:** Hovering a row does not animate the arrow.
- **Cause:** The visitor's system has reduced motion enabled, or the row has no link.
- **Resolution:** Check the Card's Link; with reduced motion the missing animation is intended.
- **Verification Steps:** In preview without reduced motion, hovering the second row turns its arrow blue and moves it.

Use Cases: News lists, announcements, press links, document lists.

Authoring Guidelines: Cards tab: Display as teaser off. Per Card: Eyebrow (or Content type), Tags (the first one is shown), Title, Description, Date, Link. Add the Style option Dividers between rows for lines on tablet and desktop.

Business Rules: Card style, Card colour, Image ratio, Panel height and First card as feature are hidden in the dialog and ignored. Images and calls to action aren't shown. The arrow shows only for a linked card with a title. Always one row per line (columns ignored).

Rendering Rules: Block classes `links`; `article.list-row` (grid: text column and arrow column; padding 2.5rem top and bottom) with `p.list-card-kicker` (eyebrow or content type, then the first tag in normal case), `.list-row-title`, `div.list-row-description`, `p.list-card-meta` (date) and `span.list-row-arrow` (`aria-hidden`). Data layer variant `links`.

Responsive Behaviour: Desktop: title 2.5rem medium, arrow 3rem centred. Tablet: title 2rem semibold, arrow 3rem; no borders unless Dividers. Mobile: title 1.75rem, arrow 2rem at the top, grey border under every row.

SEO Impact: Text-rich rows with descriptive anchor texts are good for internal linking.

Accessibility Compliance: The arrow is decorative (`aria-hidden="true"`); one link per row (the title) covering the row; hover and focus both animate the arrow (`:focus-within`), with no animation for reduced motion.

Variation 8 — Card Colour "Dark"

Variation Name: Card colour "Dark" (`dark`).

Business Purpose: The dark navy-grey Figma panel colour (#20293c) for strong contrast tiles.

Visual Example:

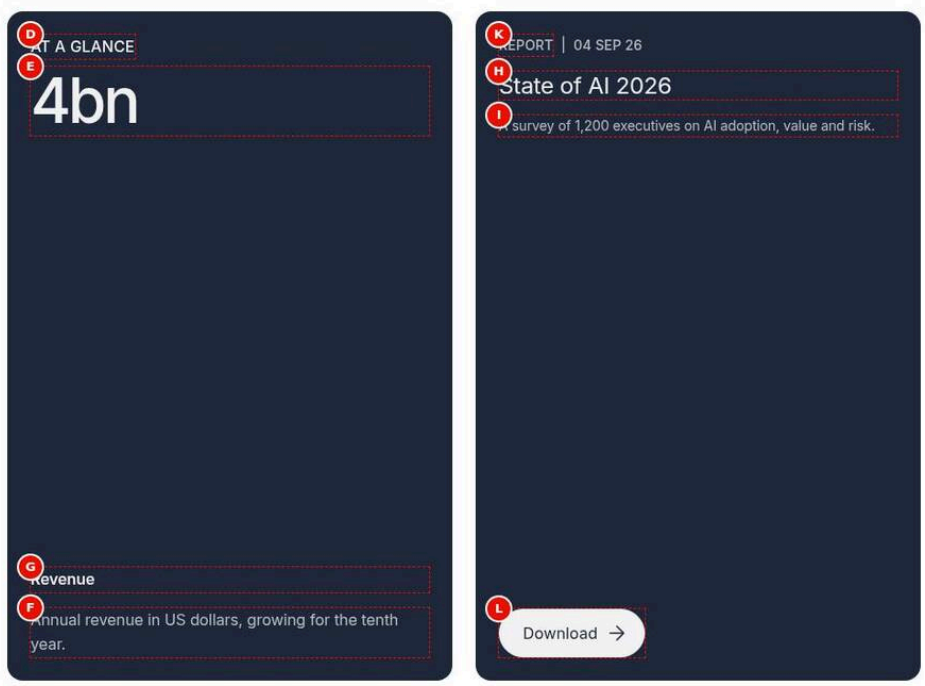

Figure 11: Dark card colour — At 1024 px two cards side by side (Tablet columns 2) on dark #20293c with light text: the statistic "4bn" with "At a glance", "Revenue" and its description, and the report card "State of AI 2026" with the kicker "Report", "04 Sep 26", the description and a light outlined Download button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-colour-dark.jpg)

Screenshot Details — Dark card colour

Item	Detail
Screenshot Name	`screenshots/cards-colour-dark.jpg`
Screenshot Purpose	Dark card colour
Screen Description	At 1024 px two cards side by side (Tablet columns 2) on dark #20293c with light text: the statistic "4bn" with "At a glance", "Revenue" and its description, and the report card "State of AI 2026" with the kicker "Report", "04 Sep 26", the description and a light outlined Download button.
Business Context	An investor highlights strip on a light section: one key figure and the annual AI report shown as strong dark tiles that stand out from the page.
Author Objective	Set Card style Statistic and Card colour Dark for the block, give Card 2 the Card style Report and a link, and check the row on tablet.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Card colour (Cards › Cards)	Dark	No	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on
(C)	Tablet columns (Cards › Layout)	2	No	Grid columns on tablet	2–3 often fit better	Enforced 1–6; grid only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
D	Eyebrow (Card 1 › Content)	At a glance	No	Label above the title	1–3 words	None
E	Title (Card 1 › Content)	4bn	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
F	Description (Card 1 › Content)	Annual revenue in US dollars, growing for the tenth year.	No	Card text	1–3 sentences; lists and links allowed	None
G	Label (Card 1 › Content)	Revenue	No	Statistic label above the description	1–3 words	None
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
H	Title (Card 2 › Content)	State of AI 2026	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
I	Description (Card 2 › Content)	A survey of 1,200 executives on AI adoption, value and risk.	No	Card text	1–3 sentences; lists and links allowed	None
(J)	Date (Card 2 › Content)	2026-09-04	No	Card date	—	Read as YYYY-MM-DD
K	Content type (Card 2 › Content)	Report	No	Meta label; Report in Mixed	Article, Report, …	None
L	Link (Card 2 › Link)	Select the page or enter /en/insights/state-of-ai-2026	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
(M)	Card style (Card 2 › Display)	Report	No	This card's kind	Overrides the block	'', image, panel, report, stat

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Screen width (Preview)	1024 px (tablet)	—	Check on the preview (not stored in the content)	1024 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1024 px two cards side by side on #20293c: the statistic "4bn" with "Revenue" in light text, and the report card "State of AI 2026" with the kicker "Report" and "04 Sep 26" and a light outlined Download button.
- **Rendering behaviour:** Class theme-dark sets background #20293c, text #f3f3f3 and muted text at 70 % white; the secondary Download button switches to the light text colour and, since version 1.4 (F-48 fixed), inverts on hover and keyboard focus (light fill, dark text). Tablet columns 2 gives two columns from 600 to 1199 px.
- **Publishing behaviour:** Publish the page and the linked report page /en/insights/state-of-ai-2026 to preview and live. The block colour is a page setting: republish the page after changing it.

Business Rules

- The block's Card colour applies to every card unless a Card sets its own colour.
- Card 2's Display tab Card style Report wins over the block's Statistic style.
- Colours change panel, report and statistic cards; image cards show no visible change.
- On Dark, the secondary button hover and focus is the inverse (card text colour as fill, card colour as text) since version 1.4.
- Light text on #20293c exceeds the 4.5:1 contrast of WCAG 1.4.3.

Common Authoring Mistakes

Error	Root Cause	Resolution
The report card shows as a statistic card	Card style left As the block on Card 2	Set Card style to Report on the Card's Display tab
Only one card turns dark	The colour was set on one Card's Display tab instead of the block	Set Card colour on the block's Cards tab
Changing the block colour has no effect on one card	That Card has its own Card colour	Set the Card's Card colour back to As the block

Troubleshooting

- **Symptoms:** The Download button appears as an empty white pill when hovered or focused on the dark card.
- **Cause:** The page is served with code older than version 1.4 (finding F-48), or the CDN still serves an old styles/card-list.css.
- **Resolution:** Confirm main contains the 1.4 card-list.css inverse rule; republish the page or purge the cache if an old stylesheet is served.
- **Verification Steps:** Hover and Tab to the Download button on aem.page: it shows a light fill with dark "Download" text.

Use Cases: Themes; statistics on a light section; making one card stand out.

Authoring Guidelines: Cards tab: Card colour = Dark (all cards), or a Card's Display tab: Card colour = Dark (that card).

Business Rules: A Card's own colour wins over the block's. Colours change panel, report and statistic cards; on image cards they have no visible effect. Dark is the panel default.

Rendering Rules: Class `theme-dark` on the `article`: background #20293c, text #f3f3f3, muted text 70 % white, statistic kicker #f3f3f3; tertiary and secondary buttons switch to the light text colour.

Responsive Behaviour: Colour is the same on every breakpoint.

SEO Impact: None (presentation only).

Accessibility Compliance: Light text on #20293c exceeds 4.5:1 (WCAG 1.4.3).

Variation 9 — Card Colour "Navy"

Variation Name: Card colour "Navy" (`navy`).

Business Purpose: The brand's darkest blue (`--brand-600`, #011627), used for report cards in Figma variations 8 and 9.

Visual Example:

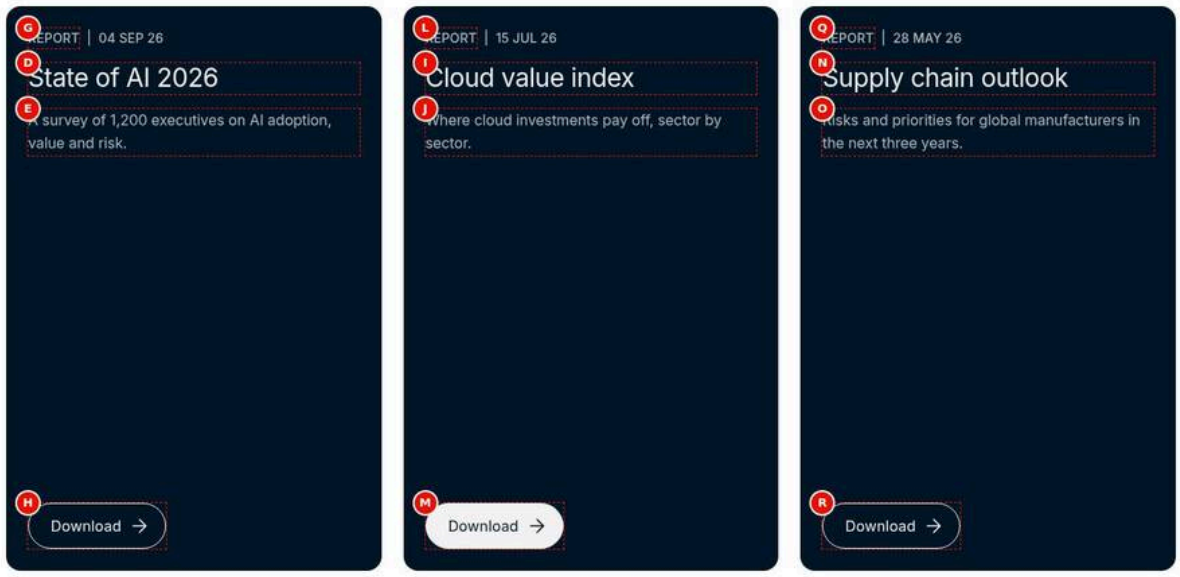

Figure 12: Navy card colour — Three 2:3 report cards in a 3-column row at 1440 px on near-black navy (#011627) with light text: the kicker "Report" with the date, the titles "State of AI 2026", "Cloud value index" and "Supply chain outlook", muted descriptions and a light outlined Download button at the bottom. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-colour-navy.jpg)

Screenshot Details — Navy card colour

Item	Detail
Screenshot Name	`screenshots/cards-colour-navy.jpg`
Screenshot Purpose	Navy card colour
Screen Description	Three 2:3 report cards in a 3-column row at 1440 px on near-black navy (#011627) with light text: the kicker "Report" with the date, the titles "State of AI 2026", "Cloud value index" and "Supply chain outlook", muted descriptions and a light outlined Download button at the bottom.
Business Context	A media coverage and investor reports row (Figma variations 8 and 9) on the newsroom page, using the brand's darkest navy for premium report tiles.
Author Objective	Set Card style Report, Card colour Navy and Desktop columns 3, and add three report Cards with content type, date, title, description and link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Report	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Card colour (Cards › Cards)	Navy	No	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on
(C)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
D	Title (Card 1 › Content)	State of AI 2026	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
E	Description (Card 1 › Content)	A survey of 1,200 executives on AI adoption, value and risk.	No	Card text	1–3 sentences; lists and links allowed	None
(F)	Date (Card 1 › Content)	2026-09-04	No	Card date	—	Read as YYYY-MM-DD
G	Content type (Card 1 › Content)	Report	No	Meta label; Report in Mixed	Article, Report, …	None
H	Link (Card 1 › Link)	Select the page or enter /en/insights/state-of-ai-2026	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
I	Title (Card 2 › Content)	Cloud value index	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
J	Description (Card 2 › Content)	Where cloud investments pay off, sector by sector.	No	Card text	1–3 sentences; lists and links allowed	None
(K)	Date (Card 2 › Content)	2026-07-15	No	Card date	—	Read as YYYY-MM-DD
L	Content type (Card 2 › Content)	Report	No	Meta label; Report in Mixed	Article, Report, …	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
M	Link (Card 2 › Link)	Select the page or enter /en/insights/cloud-at-scale	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
N	Title (Card 3 › Content)	Supply chain outlook	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
O	Description (Card 3 › Content)	Risks and priorities for global manufacturers in the next three years.	No	Card text	1–3 sentences; lists and links allowed	None
(P)	Date (Card 3 › Content)	2026-05-28	No	Card date	—	Read as YYYY-MM-DD
Q	Content type (Card 3 › Content)	Report	No	Meta label; Report in Mixed	Article, Report, …	None
R	Link (Card 3 › Link)	Select the page or enter /en/insights/supply-chain-resilience	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three tall report cards on near-black navy #011627 with light text, the kicker "Report" and the date, the title, the muted description and a light outlined Download button at the bottom.
- **Rendering behaviour:** Class theme-navy sets background #011627 (–brand-600), text #f3f3f3 and muted 70 % white; the secondary button uses the light colour and, since version 1.4 (F-48), inverts on hover and focus. Cards keep the 2:3 portrait shape.
- **Publishing behaviour:** Publish the page and the three linked pages (/en/insights/state-of-ai-2026, /en/insights/cloud-at-scale, /en/insights/supply-chain-resilience) to preview and live.

Business Rules

- Navy is a block-wide colour here; any Card can override it on its Display tab.
- Report cards show the Content type and date in the kicker and "Download" by default.
- Navy gives very high contrast for light text (WCAG 1.4.3 and 1.4.6).
- On hover and focus the Download button inverts (light fill, navy text).

Common Authoring Mistakes

Error	Root Cause	Resolution
Cards render on the grey gradient instead of navy	Card colour left at Default for the style	Choose Navy in the Cards tab Card colour
Download text unreadable on hover	Code older than 1.4 still served (F-48)	Republish after the 1.4 release; escalate to L2 if the old stylesheet persists

Troubleshooting

- **Symptoms:** The first card's description is clipped at the bottom on tablet.
- **Cause:** Portrait panel height (2:3) with overflow hidden and a long description in a narrow column.
- **Resolution:** Shorten the description to about 120 characters or set Panel height to Content.
- **Verification Steps:** At 1024 and 768 px the description and the Download button are fully visible.

Use Cases: Media coverage and investor relations report cards; premium highlights.

Authoring Guidelines: Card colour = Navy on the block or on a Card.

Business Rules: As Variation 8.

Rendering Rules: `theme-navy`: background #011627, text #f3f3f3, muted 70 % white; buttons in the light colour.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: None.

Accessibility Compliance: Very high contrast for light text (WCAG 1.4.3 and 1.4.6).

Variation 10 — Card Colour "Brand blue"

Variation Name: Card colour "Brand blue" (`brand`).

Business Purpose: The TCS brand blue (#4673db) for highlighted statistics and themes (Figma variations 1, 10 and 13).

Visual Example:

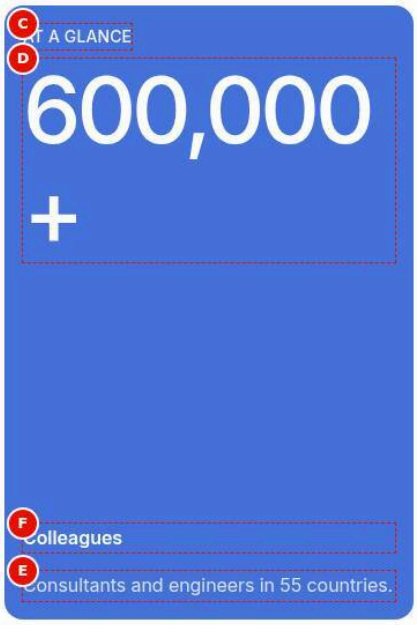

Figure 13: Brand blue card colour — At 402 px a single brand blue (#4673db) statistic card filling the column: "At a glance" at the top, the white number "600,000+", and at the bottom the label "Colleagues" with the description in 60 % white. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-colour-brand.jpg)

Screenshot Details — Brand blue card colour

Item	Detail
Screenshot Name	`screenshots/cards-colour-brand.jpg`

Item	Detail
Screenshot Purpose	Brand blue card colour
Screen Description	At 402 px a single brand blue (#4673db) statistic card filling the column: “At a glance” at the top, the white number “600,000+”, and at the bottom the label “Colleagues” with the description in 60 % white.
Business Context	One highlighted figure (600,000+ colleagues) on a careers landing page, shown in the TCS brand blue on a phone.
Author Objective	Set Card style Statistic and Card colour Brand blue, add one statistic Card and check it at 402 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Card colour (Cards › Cards)	Brand blue	No	Colour of panel / report / statistic cards	A Card’s own colour wins	‘’, dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Eyebrow (Card 1 › Content)	At a glance	No	Label above the title	1–3 words	None
D	Title (Card 1 › Content)	600,000+	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
E	Description (Card 1 › Content)	Consultants and engineers in 55 countries.	No	Card text	1–3 sentences; lists and links allowed	None
F	Label (Card 1 › Content)	Colleagues	No	Statistic label above the description	1–3 words	None
—	Screen width (Preview)	402 px (mobile)	—	Check on the preview (not stored in the content)	402 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field’s output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A single brand blue (#4673db) statistic card with “At a glance” at the top, the white number “600,000+”, the label “Colleagues” and the description in 60 % white.
- **Rendering behaviour:** Class theme-brand sets background –color-bg-brand (#4673db), white text, muted text at 60 % white and the statistic kicker #f3f3f3; secondary buttons (none here) would invert on hover since version 1.4. On mobile the number is at most 5rem.

- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the card has no image or link, so nothing else needs publishing. The colour is a block setting stored with the page, so a colour change is live after the page is republished.

Business Rules

- White on #4673db is about 4.2:1: enough for large text (the number) but not for small body text [To be confirmed: design sign-off - owner: design lead].
- Keep descriptions on brand blue short, or prefer Navy or Dark for long text.
- Statistic cards show no image, tags or date.
- The block colour applies to all its cards unless a Card sets its own.

Common Authoring Mistakes

Error	Root Cause	Resolution
The description is hard to read	Long small text in 60 % white on brand blue	Shorten the text or use Card colour Navy
The number shows in black	Card colour Light blue chosen instead of Brand blue	Select Brand blue

Troubleshooting

- **Symptoms:** An accessibility check flags the description text of the brand blue card.
- **Cause:** Muted white (60 %) on #4673db is below 4.5:1 for small text.
- **Resolution:** Shorten the description or switch the card to Navy or Dark; record the case for the design sign-off.
- **Verification Steps:** Re-run the contrast checker; the chosen colour passes for the description text.

Use Cases: One highlighted statistic in a row; brand themes.

Authoring Guidelines: Card colour = Brand blue on the block or a Card.

Business Rules: As Variation 8.

Rendering Rules: `theme-brand`: background `--color-bg-brand` (#4673db), text white, muted text 60 % white, statistic kicker #f3f3f3; buttons in white.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: None.

Accessibility Compliance: White on #4673db is about 4.2:1: it meets WCAG 1.4.3 for large text (numbers, panel titles) but not for small body text, and the 60 % white muted text is lower. Keep descriptions on brand blue short and large, or use Navy / Dark — [To be confirmed: design sign-off — owner: design lead].

Variation 11 — Card Colour "Light blue"

Variation Name: Card colour "Light blue" (`brand-light`).

Business Purpose: A soft brand tint (#a7c8f1) for friendly statistic tiles (Figma variation 13).

Visual Example:

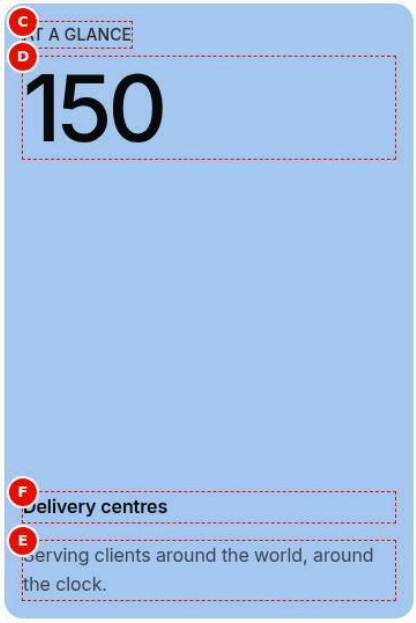

Figure 14: Light blue card colour — At 402 px a single light blue statistic card filling the column: “At a glance” at the top, the black number “150”, and at the bottom the label “Delivery centres” with a dark description. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-colour-brand-light.jpg)

Screenshot Details — Light blue card colour

Item	Detail
Screenshot Name	`screenshots/cards-colour-brand-light.jpg`
Screenshot Purpose	Light blue card colour
Screen Description	At 402 px a single light blue statistic card filling the column: “At a glance” at the top, the black number “150”, and at the bottom the label “Delivery centres” with a dark description.
Business Context	A friendly statistic tile (150 delivery centres) for alternating colour rows on an About page (Figma variation 13), checked on a phone.
Author Objective	Set Card style Statistic and Card colour Light blue, add one statistic Card and check it at 402 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Card colour (Cards › Cards)	Light blue	No	Colour of panel / report / statistic cards	A Card’s own colour wins	‘’, dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Eyebrow (Card 1 › Content)	At a glance	No	Label above the title	1–3 words	None
D	Title (Card 1 › Content)	150	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
E	Description (Card 1 › Content)	Serving clients around the world, around the clock.	No	Card text	1–3 sentences; lists and links allowed	None
F	Label (Card 1 › Content)	Delivery centres	No	Statistic label above the description	1–3 words	None
—	Screen width (Preview)	402 px (mobile)	—	Check on the preview (not stored in the content)	402 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A single light blue (–brand-300, #a7c8f1) statistic card with "At a glance", the black number "150", the label "Delivery centres" and a dark description.
- **Rendering behaviour:** Class theme-brand-light sets background –brand-300, text #0c0c0d and muted text 70 % black; buttons keep their default dark colours. The number is at most 5rem on mobile.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the card has no image or link, so nothing else needs publishing. The colour is a block setting stored with the page, so a colour change is live after the page is republished.

Business Rules

- Light blue uses dark text; buttons are not inverted on this colour.
- Dark text on light blue meets WCAG 1.4.3.
- Title holds the number "150"; Label and Description explain it.
- Card colour on a Card's Display tab overrides the block colour.

Common Authoring Mistakes

Error	Root Cause	Resolution
The card turns grey	Card colour left at Default for the style (statistic default is light grey)	Choose Light blue
"Delivery centres" appears above the number	The label was entered in Eyebrow	Enter it in Label

Troubleshooting

- **Symptoms:** The card shows the number but no label.
- **Cause:** The Label field is empty or the text was typed into Description only.
- **Resolution:** Enter "Delivery centres" in the Card's Label field.
- **Verification Steps:** At 402 px the bold label shows above the description at the bottom of the card.

Use Cases: Statistic rows with alternating colours.

Authoring Guidelines: Card colour = Light blue.

Business Rules: As Variation 8.

Rendering Rules: `theme-brand-light`: background `--brand-300`, text #0c0c0d, muted text 70 % black; buttons keep their default (dark) colours.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: None.

Accessibility Compliance: Dark text on light blue meets WCAG 1.4.3.

Variation 12 — Card Colour "Light grey"

Variation Name: Card colour "Light grey" (`grey`).

Business Purpose: The neutral grey (#d9d9d9); the statistic default, also usable for panels and reports (Figma variation 6).

Visual Example:

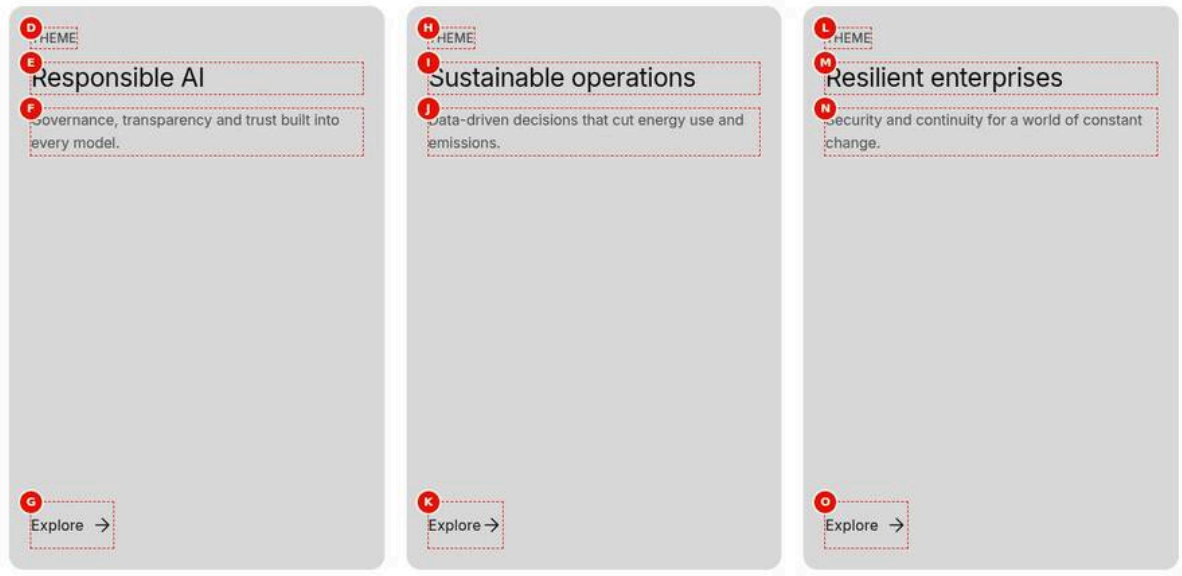

Figure 15: Light grey card colour — Three 2:3 panels in a 3-column row at 1440 px on light grey (#d9d9d9) with black text instead of the dark panel default: the kicker "Theme", the titles "Responsible AI", "Sustainable operations" and "Resilient enterprises", the descriptions and a black "Explore" link. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-colour-grey.jpg)

Screenshot Details — Light grey card colour

Item	Detail
Screenshot Name	`screenshots/cards-colour-grey.jpg`
Screenshot Purpose	Light grey card colour
Screen Description	Three 2:3 panels in a 3-column row at 1440 px on light grey (#d9d9d9) with black text instead of the dark panel default: the kicker "Theme", the titles "Responsible AI", "Sustainable operations" and "Resilient enterprises", the descriptions and a black "Explore" link.
Business Context	Calm, neutral theme tiles for a sustainability page where the dark panel default would be too strong.

Item	Detail
Author Objective	Set Card style Panel, Card colour Light grey and Desktop columns 3, and add three panel Cards with eyebrow, title, description and link.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Panel	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Card colour (Cards › Cards)	Light grey	No	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on
(C)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
D	Eyebrow (Card 1 › Content)	Theme	No	Label above the title	1–3 words	None
E	Title (Card 1 › Content)	Responsible AI	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
F	Description (Card 1 › Content)	Governance, transparency and trust built into every model.	No	Card text	1–3 sentences; lists and links allowed	None
G	Link (Card 1 › Link)	Select the page or enter /en/services/ai	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
H	Eyebrow (Card 2 › Content)	Theme	No	Label above the title	1–3 words	None
I	Title (Card 2 › Content)	Sustainable operations	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
J	Description (Card 2 › Content)	Data-driven decisions that cut energy use and emissions.	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
K	Link (Card 2 › Link)	Select the page or enter /en/industries/manufacturing	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
L	Eyebrow (Card 3 › Content)	Theme	No	Label above the title	1–3 words	None
M	Title (Card 3 › Content)	Resilient enterprises	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
N	Description (Card 3 › Content)	Security and continuity for a world of constant change.	No	Card text	1–3 sentences; lists and links allowed	None
O	Link (Card 3 › Link)	Select the page or enter /en/services/cybersecurity	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three 2:3 panels on light grey #d9d9d9 with black titles ("Responsible AI", "Sustainable operations", "Resilient enterprises"), a dark muted description and an "Explore" text link in black.
- **Rendering behaviour:** Class theme-grey sets background –color-bg-tertiary (#d9d9d9), text #0c0c0d and muted 70 % black; on a panel the tertiary Explore link takes the panel text colour (black on grey).
- **Publishing behaviour:** Publish the page and the three linked pages to preview and live; "Explore" comes from the en placeholders sheet (key explore).

Business Rules

- Light grey is the statistic default but must be chosen explicitly for panels (their default is dark).
- Panels show "Explore" when linked, with Show call to action and Link items on.
- All text on light grey meets WCAG 1.4.3.
- Panels show no image unless Card colour is Image background.

Common Authoring Mistakes

Error	Root Cause	Resolution
Panels stay dark	Card colour left at Default for the style	Choose Light grey on the Cards tab
One panel is still dark	That Card has Card colour Dark on its Display tab	Set it to As the block

Troubleshooting

- **Symptoms:** The Explore link shows white text on the grey panel.
- **Cause:** A Card overrides the colour to Dark while another style is expected, or an old stylesheet is cached.
- **Resolution:** Check the Card's Display tab Card colour; republish the page.

- **Verification Steps:** All three panels show black text and a black Explore link on #d9d9d9.

Use Cases: Calm, neutral panels; “At a glance” statistics.

Authoring Guidelines: Card colour = Light grey.

Business Rules: As Variation 8. On a panel the tertiary “Explore” button keeps the panel’s text colour (black on grey).

Rendering Rules: `theme-grey`: background `--color-bg-tertiary` (#d9d9d9), text #0c0c0d, muted 70 % black.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: None.

Accessibility Compliance: Meets WCAG 1.4.3 for all text.

Variation 13 — Card Colour “Mid grey”

Variation Name: Card colour “Mid grey” (`mid-grey`).

Business Purpose: A darker neutral (#999) for contrast in colour rows (Figma variation 13).

Visual Example:

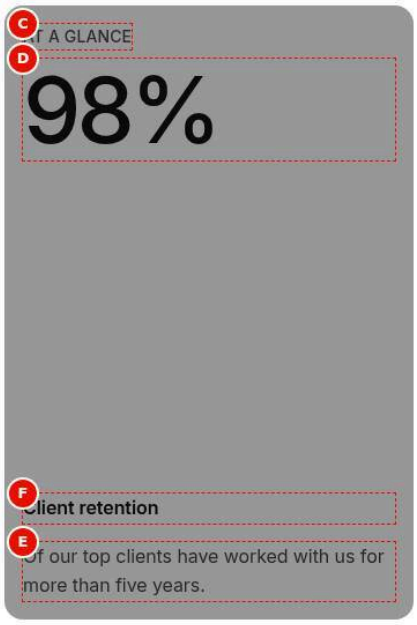

Figure 16: Mid grey card colour — At 402 px a single mid grey (#999) statistic card filling the column: “At a glance” at the top, the black number “98%”, and at the bottom the label “Client retention” with a dark grey description. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-colour-mid-grey.jpg)

Screenshot Details — Mid grey card colour

Item	Detail
Screenshot Name	`screenshots/cards-colour-mid-grey.jpg`
Screenshot Purpose	Mid grey card colour
Screen Description	At 402 px a single mid grey (#999) statistic card filling the column: “At a glance” at the top, the black number “98%”, and at the bottom the label “Client retention” with a dark grey description.

Item	Detail
Business Context	A contrast tile in a four-up statistic row (Figma variation 13): client retention in mid grey, checked on a phone.
Author Objective	Set Card style Statistic and Card colour Mid grey, add one statistic Card and check it at 402 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Card colour (Cards › Cards)	Mid grey	No	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Eyebrow (Card 1 › Content)	At a glance	No	Label above the title	1–3 words	None
D	Title (Card 1 › Content)	98%	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
E	Description (Card 1 › Content)	Of our top clients have worked with us for more than five years.	No	Card text	1–3 sentences; lists and links allowed	None
F	Label (Card 1 › Content)	Client retention	No	Statistic label above the description	1–3 words	None
—	Screen width (Preview)	402 px (mobile)	—	Check on the preview (not stored in the content)	402 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A single mid grey (#999) statistic card with "At a glance", the black number "98%", the label "Client retention" and a dark grey description.
- **Rendering behaviour:** Class theme-mid-grey sets background –grey-400 (#999), text #0c0c0d and muted text –black-600. The number is at most 5rem on mobile and keeps the top and bottom spread.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the card has no image or link, so nothing else needs publishing. The colour is a block setting stored with the page, so a colour change is live after the page is republished.

Business Rules

- Black on #999 is about 6.9:1; check the semi-transparent description text with a contrast checker.
- Mid grey suits rows that alternate colours; one colour per card is set on the Card's Display tab.
- Statistic cards show no image, tags or date.

Common Authoring Mistakes

Error	Root Cause	Resolution
The tile looks too light	Light grey chosen instead of Mid grey	Select Mid grey
"98%" is typed as "98 %" and breaks	A space inside the number wraps on narrow cards	Use "98%" without a space

Troubleshooting

- **Symptoms:** The description fails a contrast check on the mid grey card.
- **Cause:** The muted –black-600 text on #999 is close to the 4.5:1 limit for small text.
- **Resolution:** Shorten the description or use Light grey for the card.
- **Verification Steps:** The contrast checker reports at least 4.5:1 for the description.

Use Cases: Four-up statistic rows with different colours.

Authoring Guidelines: Card colour = Mid grey.

Business Rules: As Variation 8.

Rendering Rules: `theme-mid-grey`: background `--grey-400` (#999), text #0c0c0d, muted text `--black-600`.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: None.

Accessibility Compliance: Black on #999 is about 6.9:1; check the muted description text (semi-transparent black) on #999 with a contrast checker.

Variation 14 — Card Colour "Grey gradient"

Variation Name: Card colour "Grey gradient" (`gradient`).

Business Purpose: The Figma grey gradient (the report default) for any card kind (Figma variation 13).

Visual Example:

Figure 17: Grey gradient card colour — At 402 px a single statistic card on the diagonal light blue-grey to warm grey gradient: "At a glance" at the top, the dark number "4bn", and at the bottom the label "Revenue" with its description. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-colour-gradient.jpg)

Screenshot Details — Grey gradient card colour

Item	Detail
Screenshot Name	`screenshots/cards-colour-gradient.jpg`
Screenshot Purpose	Grey gradient card colour
Screen Description	At 402 px a single statistic card on the diagonal light blue-grey to warm grey gradient: "At a glance" at the top, the dark number "4bn", and at the bottom the label "Revenue" with its description.
Business Context	A revenue statistic that should match the report cards on the same investor page, using the grey gradient (Figma variation 13).
Author Objective	Set Card style Statistic and Card colour Grey gradient, add one statistic Card and check it at 402 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Card colour (Cards › Cards)	Grey gradient	No	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Eyebrow (Card 1 › Content)	At a glance	No	Label above the title	1–3 words	None
D	Title (Card 1 › Content)	4bn	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
E	Description (Card 1 › Content)	Annual revenue in US dollars, growing for the tenth year.	No	Card text	1–3 sentences; lists and links allowed	None
F	Label (Card 1 › Content)	Revenue	No	Statistic label above the description	1–3 words	None
—	Screen width (Preview)	402 px (mobile)	—	Check on the preview (not stored in the content)	402 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A single card with the diagonal light blue-grey to warm grey gradient, "At a glance", the dark number "4bn", the label "Revenue" and the description.
- **Rendering behaviour:** Class theme-gradient sets background linear-gradient(135deg, #cfd9e3, #e2e1dd), text #303030 and muted 70 % black. The gradient is the report default; on a statistic card it must be chosen.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the card has no image or link, so nothing else needs publishing. The colour is a block setting stored with the page, so a colour change is live after the page is republished.

Business Rules

- Grey gradient works for any card kind; it is the default only for report cards.
- Dark text on the light gradient meets WCAG 1.4.3.
- The number "4bn" stays on one line; up to about 8 characters fit.

Common Authoring Mistakes

Error	Root Cause	Resolution
The card is flat grey	Card colour left at Default for the style (statistic default is light grey)	Choose Grey gradient
The gradient covers an image card with no effect	Colours don't change image cards	Use the colour on panel, report or statistic cards

Troubleshooting

- **Symptoms:** The gradient card looks identical to light grey in preview.
- **Cause:** The Card has its own Card colour Light grey, which wins over the block.
- **Resolution:** Set the Card's Card colour to As the block, or to Grey gradient.
- **Verification Steps:** At 402 px the card shows the diagonal light blue-grey to warm grey gradient.

Use Cases: Statistic or panel cards that should match report cards.

Authoring Guidelines: Card colour = Grey gradient.

Business Rules: As Variation 8.

Rendering Rules: `theme-gradient`: background `linear-gradient(135deg, #cfd9e3, #e2e1dd)`, text #303030, muted 70 % black.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: None.

Accessibility Compliance: Dark text on the light gradient meets WCAG 1.4.3.

Variation 15 — Card Colour "Image background"

Variation Name: Card colour "Image background" (`image`).

Business Purpose: A panel with the card's image filling it behind the text (Figma variation 1 "Themes").

Visual Example:

Figure 18: Image background card colour — At 402 px a single tall 2:3 panel whose image light.svg covers the whole card, with the kicker "Theme", the title "Future-ready cities", the description and the "Explore" link in dark text on top of the image (no overlay). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-colour-image.jpg)

Screenshot Details — Image background card colour

Item	Detail
Screenshot Name	`screenshots/cards-colour-image.jpg`
Screenshot Purpose	Image background card colour
Screen Description	At 402 px a single tall 2:3 panel whose image light.svg covers the whole card, with the kicker "Theme", the title "Future-ready cities", the description and the "Explore" link in dark text on top of the image (no overlay).
Business Context	A theme tile with photography between solid panels (Figma "Themes"): "Future-ready cities" linking to the industries overview, checked on a phone.

Item	Detail
Author Objective	Set Card style Panel and Card colour Image background, add one Card with an image, eyebrow, title, description and link, and check it at 402 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Panel	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Card colour (Cards › Cards)	Image background	No	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Image (Card 1 › Content)	Select the asset light.svg (/en/media/light.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
D	Eyebrow (Card 1 › Content)	Theme	No	Label above the title	1–3 words	None
E	Title (Card 1 › Content)	Future-ready cities	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
F	Description (Card 1 › Content)	Connected infrastructure and services for growing urban populations.	No	Card text	1–3 sentences; lists and links allowed	None
G	Link (Card 1 › Link)	Select the page or enter /en/industries	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Screen width (Preview)	402 px (mobile)	—	Check on the preview (not stored in the content)	402 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A tall 2:3 panel whose image light.svg covers the whole card, with the kicker "Theme", the title "Future-ready cities", the description and the "Explore" link in dark text on top.

- **Rendering behaviour:** Class theme-image sets background #f5f5f5, text #303030 and muted #999; the media div is absolute (inset 0, cover) and the texts are positioned above it. There is no overlay behind the text, so contrast depends on the image.
- **Publishing behaviour:** Publish the page, the asset light.svg and the linked page /en/industries to preview and live; an unpublished image leaves the panel light grey.

Business Rules

- Only panel cards render the image behind the text; report and statistic cards ignore it.
- Show image must be on for the image background to appear.
- Choose light, calm images so the dark text keeps 4.5:1 contrast; check every image.
- The image is cropped to the panel shape (2:3 here) at every breakpoint.

Common Authoring Mistakes

Error	Root Cause	Resolution
The panel shows only the light grey background	No Image on the Card, or Show image off	Select an image and keep Show image on
Text is unreadable over the photo	A dark or busy image with dark text and no overlay	Use a light, calm image
The image appears behind an image card's text	Image background used with Card style Image card	Use Image background only with Panel

Troubleshooting

- **Symptoms:** On aem.live the panel is light grey without the photograph.
- **Cause:** The asset light.svg wasn't published, so the picture can't load.
- **Resolution:** Publish the asset from AEM Assets and republish the page.
- **Verification Steps:** At 402 px the image fills the panel behind the text on aem.live.

Use Cases: Theme tiles with photography between solid-colour panels.

Authoring Guidelines: Card style = Panel (block or Card), Card colour = Image background, and an Image (with alt text if it carries meaning). Show image must be on.

Business Rules: Only panel cards render the image behind the text; report and statistic cards ignore the image (they only get the light background). Not intended for image cards (their image would be positioned behind the card's text without a panel background).

Rendering Rules: `theme-image`: background #f5f5f5, text #303030, muted #999; the `div.list-card-media` is absolute (`inset: 0`, cover), the texts are positioned above it. Images are requested 1600 px wide from 900 px and 750 px below (when built from a URL).

Responsive Behaviour: The image is cropped to the panel's shape (2:3 portrait, 9:10 compact or the content height) at every breakpoint.

SEO Impact: The image is a real `<img>` with its alt text.

Accessibility Compliance: There is no overlay behind the text: choose light, calm images so the dark text keeps a 4.5:1 contrast (WCAG 1.4.3); check every image.

Variation 16 — Image Ratio 1:1

Variation Name: Image ratio "1:1" (`1-1`).

Business Purpose: Square images, as in Figma variations 2, 4 and 11.

Visual Example:

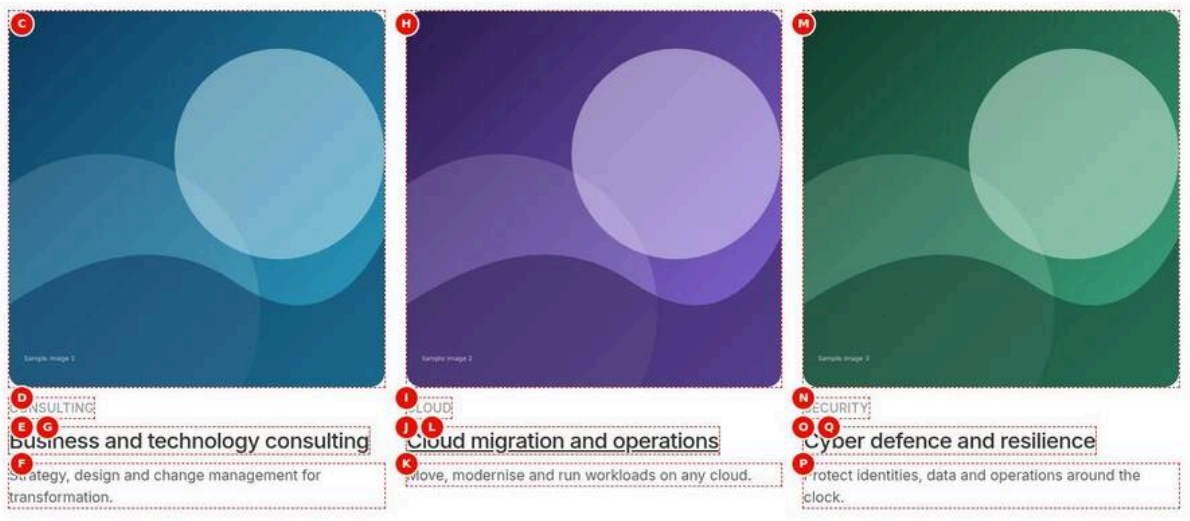

Figure 19: Square image ratio — Three image cards in a 3-column row at 1440 px with square images (square-1.svg to square-3.svg), the kickers “Consulting”, “Cloud” and “Security”, the titles “Business and technology consulting”, “Cloud migration and operations” and “Cyber defence and resilience” and their descriptions; no meta row (no content type or date). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-ratio-1-1.jpg)

Screenshot Details — Square image ratio

Item	Detail
Screenshot Name	`screenshots/cards-ratio-1-1.jpg`
Screenshot Purpose	Square image ratio
Screen Description	Three image cards in a 3-column row at 1440 px with square images (square-1.svg to square-3.svg), the kickers “Consulting”, “Cloud” and “Security”, the titles “Business and technology consulting”, “Cloud migration and operations” and “Cyber defence and resilience” and their descriptions; no meta row (no content type or date).
Business Context	A services overview (Figma “Intelligence in Action” and “2-up”) where square images present consulting, cloud and security capabilities.
Author Objective	Set Image ratio to 1:1 and Desktop columns to 3, and add three image Cards with eyebrow, title, description and link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Image ratio (Cards › Cards)	1:1	No	Image shape of image cards	Match the photography	16-9, 1-1, 4-3, 3-2; teaser on
(B)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree,	Only the item types the Cards allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Card	
C	Image (Card 1 › Content)	Select the asset square-1.svg (/en/media/square-1.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
D	Eyebrow (Card 1 › Content)	Consulting	No	Label above the title	1–3 words	None
E	Title (Card 1 › Content)	Business and technology consulting	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
F	Description (Card 1 › Content)	Strategy, design and change management for transformation.	No	Card text	1–3 sentences; lists and links allowed	None
G	Link (Card 1 › Link)	Select the page or enter /en/services/consulting	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
H	Image (Card 2 › Content)	Select the asset square-2.svg (/en/media/square-2.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
I	Eyebrow (Card 2 › Content)	Cloud	No	Label above the title	1–3 words	None
J	Title (Card 2 › Content)	Cloud migration and operations	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
K	Description (Card 2 › Content)	Move, modernise and run workloads on any cloud.	No	Card text	1–3 sentences; lists and links allowed	None
L	Link (Card 2 › Link)	Select the page or enter /en/services/cloud	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
M	Image (Card 3 › Content)	Select the asset square-3.svg (/en/media/square-3.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
N	Eyebrow (Card 3 › Content)	Security	No	Label above the title	1–3 words	None
O	Title (Card 3 › Content)	Cyber defence and resilience	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
P	Description (Card 3 › Content)	Protect identities, data and operations around the clock.	No	Card text	1–3 sentences; lists and links allowed	None
Q	Link (Card 3 › Link)	Select the page or enter /en/services/cybersecurity	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three image cards with square images (square-1.svg to square-3.svg) above the kicker ("Consulting", "Cloud", "Security"), the title and the description.
- **Rendering behaviour:** Block class ratio-1-1 gives .list-card-media aspect-ratio 1 with object-fit cover; the image height follows the column width at every breakpoint. The cards have no date, tags or content type, so no meta row is rendered.
- **Publishing behaviour:** Publish the page, square-1.svg to square-3.svg and the linked service pages (/en/services/consulting, /en/services/cloud, /en/services/cybersecurity) to preview and live.

Business Rules

- Image ratio applies to image cards (and image cards in Mixed), not to the feature card or image-background panels.
- Images are cropped by CSS; keep the subject centred (1200 x 1200 px recommended).
- Image ratio is shown only with Display as teaser on.
- Cropping must not cut off content the alt text describes.

Common Authoring Mistakes

Error	Root Cause	Resolution
Faces are cut off	Landscape photos cropped to a square	Use square or centred images
Changing Image ratio doesn't affect the panels	Ratio applies to image cards only	Use Panel height for coloured cards

Troubleshooting

- **Symptoms:** Images still look 16:9 after choosing 1:1.
- **Cause:** Display as teaser is off or the cards are panels, so the ratio class doesn't apply to them.
- **Resolution:** Turn Display as teaser on and keep Card style Image card.
- **Verification Steps:** The three images are square in preview at 1440 px and 402 px.

Use Cases: Portrait-like photography; "Intelligence in Action" and "2-up" layouts.

Authoring Guidelines: Cards tab: Image ratio = 1:1 (Display as teaser on).

Business Rules: Applies to image cards (and the image of a Mixed image card); the feature card and image-background panels are not affected.

Rendering Rules: Block class `ratio-1-1`; `.list-card-media { aspect-ratio: 1 }`, the image is cropped with `object-fit: cover`.

Responsive Behaviour: Square at every breakpoint; the image height follows the column width.

SEO Impact: None (the same image, cropped by CSS).

Accessibility Compliance: Cropping must not cut off content that the alt text describes.

Variation 17 — Image Ratio 4:3

Variation Name: Image ratio "4:3" (`4-3`).

Business Purpose: A taller landscape image for product and people photography.

Visual Example:

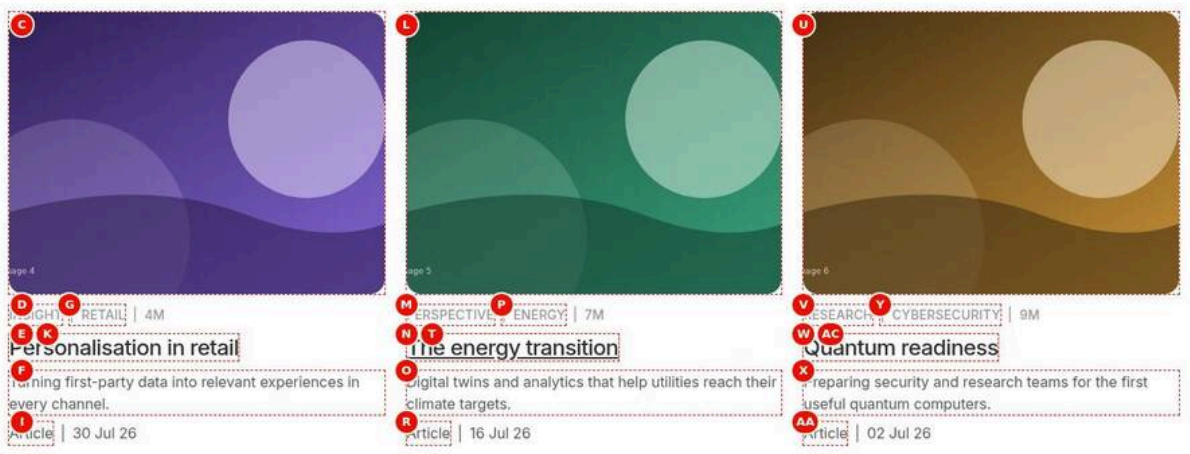

Figure 20: 4:3 image ratio — Three image cards in a 3-column row at 1440 px with 4:3 images (photo-4.svg to photo-6.svg), kickers with eyebrow, tag label and reading time, the titles "Personalisation in retail", "The energy transition" and "Quantum readiness", descriptions and the meta rows "Article" with "30 Jul 26", "16 Jul 26" and "02 Jul 26". (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-ratio-4-3.jpg)

Screenshot Details — 4:3 image ratio

Item	Detail
Screenshot Name	`screenshots/cards-ratio-4-3.jpg`
Screenshot Purpose	4:3 image ratio
Screen Description	Three image cards in a 3-column row at 1440 px with 4:3 images (photo-4.svg to photo-6.svg), kickers with eyebrow, tag label and reading time, the titles "Personalisation in retail", "The energy transition" and "Quantum readiness", descriptions and the meta rows "Article" with "30 Jul 26", "16 Jul 26" and "02 Jul 26".
Business Context	Insight cards with product and people photography that would be cropped too much at 16:9.
Author Objective	Set Image ratio to 4:3 and Desktop columns to 3, and add three image Cards with all content fields and links.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Image ratio (Cards › Cards)	4:3	No	Image shape of image cards	Match the photography	16-9, 1-1, 4-3, 3-2; teaser on
(B)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Image (Card 1 › Content)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
D	Eyebrow (Card 1 › Content)	Insight	No	Label above the title	1–3 words	None
E	Title (Card 1 › Content)	Personalisation in retail	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
F	Description (Card 1 › Content)	Turning first-party data into relevant experiences in every channel.	No	Card text	1–3 sentences; lists and links allowed	None
G	Tags (Card 1 › Content)	Add the tags tcs-corp:industry/retail	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(H)	Date (Card 1 › Content)	2026-07-30	No	Card date	—	Read as YYYY-MM-DD
I	Content type (Card 1 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(J)	Reading time (Card 1 › Content)	4	No	Minutes after the tags	Digits only (6 shows `6m`)	None
K	Link (Card 1 › Link)	Select the page or enter /en/insights/retail-personalisation	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
L	Image (Card 2 › Content)	Select the asset photo-5.svg (/en/media/photo-5.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
M	Eyebrow (Card 2 › Content)	Perspective	No	Label above the title	1–3 words	None
N	Title (Card 2 › Content)	The energy transition	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
O	Description (Card 2 › Content)	Digital twins and analytics that help utilities reach their climate targets.	No	Card text	1–3 sentences; lists and links allowed	None
P	Tags (Card 2 › Content)	Add the tags tcs-corp:industry/energy	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(Q)	Date (Card 2 › Content)	2026-07-16	No	Card date	—	Read as YYYY-MM-DD

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
R	Content type (Card 2 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(S)	Reading time (Card 2 › Content)	7	No	Minutes after the tags	Digits only (6 shows `6m`)	None
T	Link (Card 2 › Link)	Select the page or enter /en/insights/energy-transition	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
U	Image (Card 3 › Content)	Select the asset photo-6.svg (/en/media/photo-6.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
V	Eyebrow (Card 3 › Content)	Research	No	Label above the title	1–3 words	None
W	Title (Card 3 › Content)	Quantum readiness	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
X	Description (Card 3 › Content)	Preparing security and research teams for the first useful quantum computers.	No	Card text	1–3 sentences; lists and links allowed	None
Y	Tags (Card 3 › Content)	Add the tags tcs-corp:topic/security	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(Z)	Date (Card 3 › Content)	2026-07-02	No	Card date	—	Read as YYYY-MM-DD
AA	Content type (Card 3 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(AB)	Reading time (Card 3 › Content)	9	No	Minutes after the tags	Digits only (6 shows `6m`)	None
AC	Link (Card 3 › Link)	Select the page or enter /en/insights/quantum-readiness	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three image cards with taller 4:3 images (photo-4.svg to photo-6.svg), the kicker such as "Insight", "Retail", "4m", the title, the description and the meta row "Article" with the date.
- **Rendering behaviour:** Block class ratio-4-3 sets aspect-ratio 4 / 3 with object-fit cover on the card images at every breakpoint; the space is reserved, so there is no layout shift.
- **Publishing behaviour:** Publish the page, photo-4.svg to photo-6.svg and the three linked insight pages to preview and live; tag labels need the published en taxonomy.

Business Rules

- Recommended source size for 4:3 is 1600 x 1200 px.
- Image ratio affects only image cards.
- Up to 3 tags and the reading time appear in the kicker when Show tags is on.
- Dates use the block's Date format (default dd-mmm-yy, so 30 Jul 26).

Common Authoring Mistakes

Error	Root Cause	Resolution
Images look stretched	Very wide images cropped into 4:3 lose their sides	Use 4:3 sources or choose 16:9
Dates show the wrong order for a European audience	Date format mm-dd-yyyy chosen	Use dd-mmm-yy or dd-mm-yyyy

Troubleshooting

- **Symptoms:** The second card shows no date in its meta row.
- **Cause:** The Date was typed as text (e.g. "16 July") instead of picked, so it isn't a YYYY-MM-DD value.
- **Resolution:** Pick 2026-07-16 with the date picker on Card 2's Content tab.
- **Verification Steps:** The meta row of Card 2 reads "Article" and "16 Jul 26".

Use Cases: Photography that would be cropped too much at 16:9.

Authoring Guidelines: Image ratio = 4:3.

Business Rules: As Variation 16.

Rendering Rules: Class `ratio-4-3`; `aspect-ratio: 4 / 3`, cover.

Responsive Behaviour: 4:3 at every breakpoint.

SEO Impact: None.

Accessibility Compliance: As Variation 16.

Variation 18 — Image Ratio 3:2

Variation Name: Image ratio "3:2" (`3-2`).

Business Purpose: The classic photo ratio between 16:9 and 4:3.

Visual Example:

Figure 21: 3:2 image ratio — Three image cards in a 3-column row at 1440 px with 3:2 images (photo-6.svg to photo-8.svg), the titles “Quantum readiness”, “The future of work” and “Touchless insurance claims”, descriptions and the meta rows “Article” with “02 Jul 26”, “Article” with “18 Jun 26” and “Case study” with “04 Jun 26”. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-ratio-3-2.jpg)

Screenshot Details — 3:2 image ratio

Item	Detail
Screenshot Name	`screenshots/cards-ratio-3-2.jpg`
Screenshot Purpose	3:2 image ratio
Screen Description	Three image cards in a 3-column row at 1440 px with 3:2 images (photo-6.svg to photo-8.svg), the titles “Quantum readiness”, “The future of work” and “Touchless insurance claims”, descriptions and the meta rows “Article” with “02 Jul 26”, “Article” with “18 Jun 26” and “Case study” with “04 Jun 26”.
Business Context	An insights row with camera photography (research, future of work, a case study) shown in the classic 3:2 photo ratio without re-cropping.
Author Objective	Set Image ratio to 3:2 and Desktop columns to 3, and add three image Cards with all content fields and links.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Image ratio (Cards › Cards)	3:2	No	Image shape of image cards	Match the photography	16-9, 1-1, 4-3, 3-2; teaser on
(B)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Image (Card 1 › Content)	Select the asset photo-6.svg (/en/media/photo-6.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Eyebrow (Card 1 › Content)	Research	No	Label above the title	1–3 words	None
E	Title (Card 1 › Content)	Quantum readiness	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
F	Description (Card 1 › Content)	Preparing security and research teams for the first useful quantum computers.	No	Card text	1–3 sentences; lists and links allowed	None
G	Tags (Card 1 › Content)	Add the tags tcs-corp:topic/security	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(H)	Date (Card 1 › Content)	2026-07-02	No	Card date	—	Read as YYYY-MM-DD
I	Content type (Card 1 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(J)	Reading time (Card 1 › Content)	9	No	Minutes after the tags	Digits only (6 shows 6m)	None
K	Link (Card 1 › Link)	Select the page or enter /en/insights/quantum-readiness	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
L	Image (Card 2 › Content)	Select the asset photo-7.svg (/en/media/photo-7.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
M	Eyebrow (Card 2 › Content)	Insight	No	Label above the title	1–3 words	None
N	Title (Card 2 › Content)	The future of work	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
O	Description (Card 2 › Content)	Skills, tools and workplaces for teams that collaborate with AI every day.	No	Card text	1–3 sentences; lists and links allowed	None
P	Tags (Card 2 › Content)	Add the tags tcs-corp:topic/ai	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(Q)	Date (Card 2 › Content)	2026-06-18	No	Card date	—	Read as YYYY-MM-DD
R	Content type (Card 2 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(S)	Reading time (Card 2 › Content)	6	No	Minutes after the tags	Digits only (6 shows 6m)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
T	Link (Card 2 › Link)	Select the page or enter /en/insights/future-of-work	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
U	Image (Card 3 › Content)	Select the asset photo-8.svg (/en/media/photo-8.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
V	Eyebrow (Card 3 › Content)	Case study	No	Label above the title	1–3 words	None
W	Title (Card 3 › Content)	Touchless insurance claims	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
X	Description (Card 3 › Content)	How an insurer settles most motor claims within a day, end to end.	No	Card text	1–3 sentences; lists and links allowed	None
Y	Tags (Card 3 › Content)	Add the tags tcs-corp:industry/insurance	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(Z)	Date (Card 3 › Content)	2026-06-04	No	Card date	—	Read as YYYY-MM-DD
AA	Content type (Card 3 › Content)	Case study	No	Meta label; Report in Mixed	Article, Report, …	None
(AB)	Reading time (Card 3 › Content)	5	No	Minutes after the tags	Digits only (6 shows `6m`)	None
AC	Link (Card 3 › Link)	Select the page or enter /en/insights/insurance-claims	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three image cards with 3:2 images (photo-6.svg to photo-8.svg), kickers such as "Research", "Security", "9m", the titles "Quantum readiness", "The future of work" and "Touchless insurance claims", descriptions and meta rows such as "Case study" with "04 Jun 26".
- **Rendering behaviour:** Block class ratio-3-2 sets aspect-ratio 3 / 2 with object-fit cover on every breakpoint; the default ratio without a choice is 16:9.
- **Publishing behaviour:** Publish the page, photo-6.svg to photo-8.svg and the three linked pages to preview and live; republish after replacing an asset only if the asset reference changes.

Business Rules

- Recommended source size for 3:2 is 1500 x 1000 px.
- Image ratio applies to image cards only; Panel height shapes coloured cards.

- Content type “Case study” is shown in the meta row as typed.
- Up to 3 tags show in the kicker; each card here has one.

Common Authoring Mistakes

Error	Root Cause	Resolution
The ratio change shows no effect	Display as teaser off (rows of links show no images)	Turn Display as teaser on
The case study shows as a report card	Card style Mixed with a content type containing “report”	Keep Card style Image card for these cards

Troubleshooting

- **Symptoms:** Card 3's kicker shows “Insurance” instead of the expected business label.
- **Cause:** tcs-corp:industry/insurance has no title in /en/taxonomy.json, so a label is derived from the ID.
- **Resolution:** Add the tag title to the en taxonomy and publish the taxonomy page.
- **Verification Steps:** Reload in a new session; the kicker shows the taxonomy title.

Use Cases: Camera photography without re-cropping.

Authoring Guidelines: Image ratio = 3:2.

Business Rules: As Variation 16. The default ratio is 16:9 (Variation 1).

Rendering Rules: Class `ratio-3-2`; `aspect-ratio: 3 / 2`, cover.

Responsive Behaviour: 3:2 at every breakpoint.

SEO Impact: None.

Accessibility Compliance: As Variation 16.

Variation 19 — Panel Height “Compact”

Variation Name: Panel height “Compact” (`compact`, 9:10).

Business Purpose: Shorter, almost square coloured cards for statistic rows and dense panels.

Visual Example:

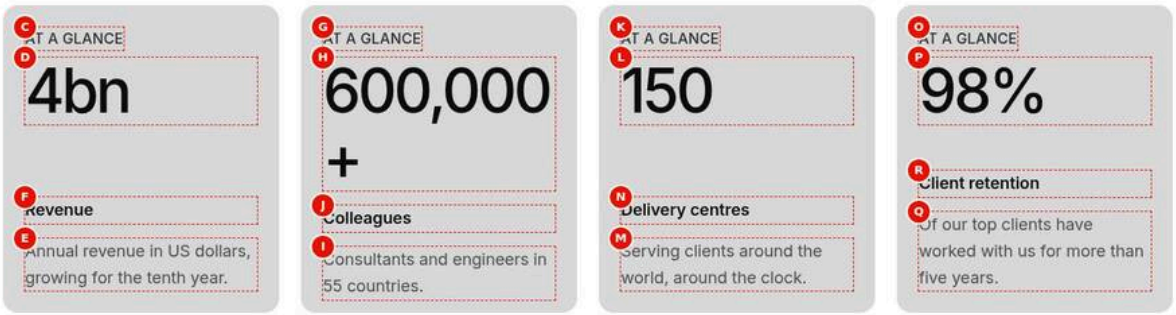

Figure 22: Compact panel height — Four nearly square (9:10) light grey statistic cards in a row at 1440 px instead of tall 2:3 ones, each with “At a glance”, the number (“4bn”, “600,000+”, “150”, “98%”), the label and the description. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-panel-compact.jpg)

Screenshot Details — Compact panel height

Item	Detail
Screenshot Name	`screenshots/cards-panel-compact.jpg`

Item	Detail
Screenshot Purpose	Compact panel height
Screen Description	Four nearly square (9:10) light grey statistic cards in a row at 1440 px instead of tall 2:3 ones, each with “At a glance”, the number (“4bn”, “600,000+”, “150”, “98%”), the label and the description.
Business Context	A dense “At a glance” statistic row (Figma variations 6, 10 and 13) where tall portrait tiles would take too much height.
Author Objective	Set Card style Statistic and Panel height Compact, and add four statistic Cards with eyebrow, number, label and description.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Panel height (Cards › Cards)	Compact	No	Shape of coloured cards	Content for long texts	portrait, compact, auto; teaser on
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Eyebrow (Card 1 › Content)	At a glance	No	Label above the title	1–3 words	None
D	Title (Card 1 › Content)	4bn	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
E	Description (Card 1 › Content)	Annual revenue in US dollars, growing for the tenth year.	No	Card text	1–3 sentences; lists and links allowed	None
F	Label (Card 1 › Content)	Revenue	No	Statistic label above the description	1–3 words	None
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
G	Eyebrow (Card 2 › Content)	At a glance	No	Label above the title	1–3 words	None
H	Title (Card 2 › Content)	600,000+	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
I	Description (Card 2 › Content)	Consultants and engineers in 55 countries.	No	Card text	1–3 sentences; lists and links allowed	None
J	Label (Card 2 › Content)	Colleagues	No	Statistic label above the description	1–3 words	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
K	Eyebrow (Card 3 › Content)	At a glance	No	Label above the title	1–3 words	None
L	Title (Card 3 › Content)	150	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
M	Description (Card 3 › Content)	Serving clients around the world, around the clock.	No	Card text	1–3 sentences; lists and links allowed	None
N	Label (Card 3 › Content)	Delivery centres	No	Statistic label above the description	1–3 words	None
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
O	Eyebrow (Card 4 › Content)	At a glance	No	Label above the title	1–3 words	None
P	Title (Card 4 › Content)	98%	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
Q	Description (Card 4 › Content)	Of our top clients have worked with us for more than five years.	No	Card text	1–3 sentences; lists and links allowed	None
R	Label (Card 4 › Content)	Client retention	No	Statistic label above the description	1–3 words	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four nearly square (9:10) light grey statistic cards instead of tall portrait ones, each with "At a glance", the number (4bn, 600,000+, 150, 98%), the label and the description.
- **Rendering behaviour:** Block class panel-compact gives aspect-ratio 9 / 10 to panel, report and statistic cards; overflow hidden clips text that doesn't fit, especially in narrow columns on tablet.
- **Publishing behaviour:** Publish the page to preview and live; no assets or linked pages are involved, as the cards are unlinked.

Business Rules

- Panel height applies to panel, report and statistic cards; image cards and rows are not affected.
- The default is Portrait (2:3); Compact is 9:10; Content fits the text.
- Clipped text stays in the HTML and is read by screen readers but is invisible (WCAG 1.4.10 risk): keep texts short.
- Panel height is shown only with Display as teaser on.

Common Authoring Mistakes

Error	Root Cause	Resolution
Descriptions are cut off on tablet	Compact height with four narrow tablet columns	Set Tablet columns to 2 or Panel height Content
Image cards don't get shorter	Panel height doesn't apply to image cards	Use Image ratio for image cards

Troubleshooting

- **Symptoms:** The description of "600,000+" is not visible at 768 px.
- **Cause:** The 9:10 shape with overflow hidden clips the bottom block in a narrow column.
- **Resolution:** Shorten the description, reduce Tablet columns or choose Panel height Content.
- **Verification Steps:** At 1440, 1024 and 768 px each card shows its label and full description.

Use Cases: Statistic rows (Figma 6, 10, 13); panels with short texts.

Authoring Guidelines: Cards tab: Panel height = Compact.

Business Rules: Applies to panel, report and statistic cards; image cards and rows aren't affected. The default is Portrait (2:3).

Rendering Rules: Block class `panel-compact`; `aspect-ratio: 9 / 10` on the coloured cards; `overflow: hidden` clips text that doesn't fit.

Responsive Behaviour: The ratio is kept at every breakpoint; on narrow cards long texts may be clipped — use Content (Variation 20) for long texts.

SEO Impact: None (clipped text is still in the HTML).

Accessibility Compliance: Text clipped by `overflow: hidden` is still read by screen readers but invisible to sighted users (WCAG 1.4.10 risk): keep the texts short.

Variation 20 — Panel Height "Content"

Variation Name: Panel height "Content" (`auto`).

Business Purpose: Coloured cards as tall as their content, for texts of varying length.

Visual Example:

Figure 23: Content panel height — Three dark #20293c panels in a 3-column row at 1440 px whose height fits their text instead of the 2:3 shape; with Stretch cards to row height on they share the tallest height, each with the kicker "Theme", the title, the description and "Explore" at the bottom. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-panel-content.jpg)

Screenshot Details — Content panel height

Item	Detail
Screenshot Name	`screenshots/cards-panel-content.jpg`
Screenshot Purpose	Content panel height
Screen Description	Three dark #20293c panels in a 3-column row at 1440 px whose height fits their text instead of the 2:3 shape; with Stretch cards to row height on they share the tallest height, each with the kicker “Theme”, the title, the description and “Explore” at the bottom.
Business Context	Theme panels with descriptions of different length, where a fixed portrait shape would clip or leave empty space.
Author Objective	Set Card style Panel, Panel height Content and Desktop columns 3, and add three panel Cards with eyebrow, title, description and link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Panel	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Panel height (Cards › Cards)	Content	No	Shape of coloured cards	Content for long texts	portrait, compact, auto; teaser on
(C)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
D	Eyebrow (Card 1 › Content)	Theme	No	Label above the title	1–3 words	None
E	Title (Card 1 › Content)	Responsible AI	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
F	Description (Card 1 › Content)	Governance, transparency and trust built into every model, from the first data set to production monitoring. Our responsible AI framework covers fairness, explainability, privacy and security.	No	Card text	1–3 sentences; lists and links allowed	None
G	Link (Card 1 › Link)	Select the page or enter /en/services/ai	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
H	Eyebrow (Card 2 › Content)	Theme	No	Label above the title	1–3 words	None
I	Title (Card 2 › Content)	Sustainable operations	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
J	Description (Card 2 › Content)	Data-driven decisions that cut energy use and emissions.	No	Card text	1–3 sentences; lists and links allowed	None
K	Link (Card 2 › Link)	Select the page or enter /en/industries/manufacturing	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
L	Eyebrow (Card 3 › Content)	Theme	No	Label above the title	1–3 words	None
M	Title (Card 3 › Content)	Resilient enterprises	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
N	Description (Card 3 › Content)	Security and continuity for a world of constant change. **Includes:** • Threat management • Identity and access • Recovery planning	No	Card text	1–3 sentences; lists and links allowed	None
O	Link (Card 3 › Link)	Select the page or enter /en/services/cybersecurity	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three dark #20293c panels whose height fits their text; with Stretch cards to row height on, the three panels of the row share the tallest height and the Explore links line up at the bottom.
- **Rendering behaviour:** Block class panel-auto removes the aspect ratio of coloured cards, so heights follow the text at every breakpoint and nothing is clipped. The default panel colour is dark.
- **Publishing behaviour:** Publish the page and the three linked pages (/en/services/ai, /en/industries/manufacturing, /en/services/cybersecurity) to preview and live.

Business Rules

- Content height (value auto) never clips text; text reflows (WCAG 1.4.10).

- Stretch cards to row height (default on) makes the panels of a row equally tall.
- Panels show the default call to action “Explore” when linked.
- Panel height is ignored with Display as teaser off.

Common Authoring Mistakes

Error	Root Cause	Resolution
Panels have different heights in one row	Stretch cards to row height turned off	Turn it on in the Layout tab
Panels look short and wide	Content height with very short texts	Use Portrait or Compact for short texts

Troubleshooting

- **Symptoms:** The Explore links don’t line up at the bottom of the row.
- **Cause:** Stretch cards to row height is off, so each panel keeps its own height.
- **Resolution:** Turn Stretch cards to row height on in the Layout tab.
- **Verification Steps:** At 1440 px the three panels are equally tall with Explore at the same height.

Use Cases: Panels with long descriptions or rich text lists.

Authoring Guidelines: Panel height = Content.

Business Rules: No fixed shape; with Stretch cards to row height on (default) the cards of a row are as tall as the row.

Rendering Rules: Block class `panel-auto`; no aspect ratio on the coloured cards.

Responsive Behaviour: Heights follow the text at every breakpoint.

SEO Impact: None.

Accessibility Compliance: Nothing is clipped; text reflows (WCAG 1.4.10).

Variation 21 — Style Option “Compact statistic title”

Variation Name: Style options: Compact statistic title (`stat-compact`).

Business Purpose: Statements and short phrases in statistic cards instead of a single number (Figma variations 7 and 12 “Statements”).

Visual Example:

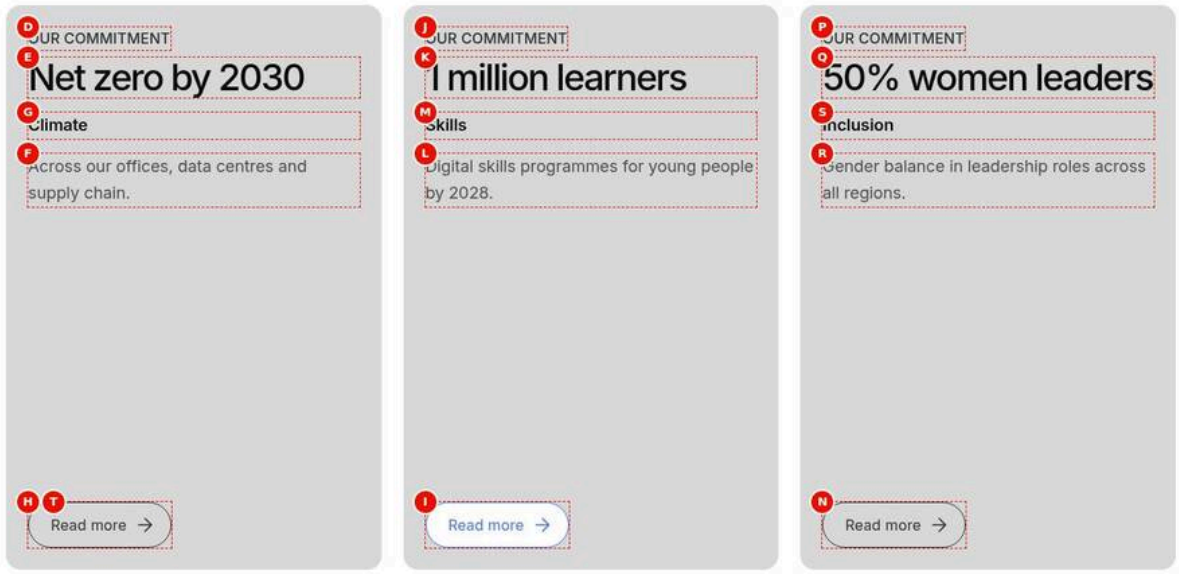

Figure 24: Compact statistic title — Three light grey statistic cards in a 3-column row at 1440 px with medium-size titles (“Net zero by 2030”, “1 million learners”, “50% women leaders”) instead of huge numbers, the kicker “Our commitment”, the labels “Climate”, “Skills” and “Inclusion”, descriptions and an outlined “Read more” button each. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-stat-compact.jpg)

Screenshot Details — Compact statistic title

Item	Detail
Screenshot Name	`screenshots/cards-stat-compact.jpg`
Screenshot Purpose	Compact statistic title
Screen Description	Three light grey statistic cards in a 3-column row at 1440 px with medium-size titles (“Net zero by 2030”, “1 million learners”, “50% women leaders”) instead of huge numbers, the kicker “Our commitment”, the labels “Climate”, “Skills” and “Inclusion”, descriptions and an outlined “Read more” button each.
Business Context	Sustainability and people commitments on the About page (Figma “Statements”): short phrases instead of single numbers, each linking to more detail.
Author Objective	Set Card style Statistic, Desktop columns 3 and the Style option Compact statistic title, and add three Cards with a phrase, label, description, link and Read more label.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Style options (Cards › Advanced)	Compact statistic title	No	Extra styles	Only as designed	stat-compact, dividers, header-center
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
D	Eyebrow (Card 1 › Content)	Our commitment	No	Label above the title	1–3 words	None
E	Title (Card 1 › Content)	Net zero by 2030	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
F	Description (Card 1 › Content)	Across our offices, data centres and supply chain.	No	Card text	1–3 sentences; lists and links allowed	None
G	Label (Card 1 › Content)	Climate	No	Statistic label above the description	1–3 words	None
H	Link (Card 1 › Link)	Select the page or enter /en/about	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
I	Call to action label (Card 1 › Link)	Read more	No	Shows a button as the card's link	1–3 words, a verb	None
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
J	Eyebrow (Card 2 › Content)	Our commitment	No	Label above the title	1–3 words	None
K	Title (Card 2 › Content)	1 million learners	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
L	Description (Card 2 › Content)	Digital skills programmes for young people by 2028.	No	Card text	1–3 sentences; lists and links allowed	None
M	Label (Card 2 › Content)	Skills	No	Statistic label above the description	1–3 words	None
N	Link (Card 2 › Link)	Select the page or enter /en/about	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
(O)	Call to action label (Card 2 › Link)	Read more	No	Shows a button as the card's link	1–3 words, a verb	None
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
P	Eyebrow (Card 3 › Content)	Our commitment	No	Label above the title	1–3 words	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
Q	Title (Card 3 › Content)	50% women leaders	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
R	Description (Card 3 › Content)	Gender balance in leadership roles across all regions.	No	Card text	1–3 sentences; lists and links allowed	None
S	Label (Card 3 › Content)	Inclusion	No	Statistic label above the description	1–3 words	None
T	Link (Card 3 › Link)	Select the page or enter /en/about	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
(U)	Call to action label (Card 3 › Link)	Read more	No	Shows a button as the card's link	1–3 words, a verb	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three light grey statistic cards with "Our commitment" at the top, medium-size titles such as "Net zero by 2030", the labels "Climate", "Skills" and "Inclusion", descriptions and an outlined "Read more" button.
- **Rendering behaviour:** Block class stat-compact sets the statistic title to 0.42 times the number size (about 2.52rem desktop, 1.68rem tablet, 2.1rem mobile) without the 26 % width cap. The call to action of statistic cards is a secondary button.
- **Publishing behaviour:** Publish the page and /en/about to preview and live; "Read more" is authored per Card, so it must be translated in each locale copy.

Business Rules

- Compact statistic title affects only statistic cards.
- Statistic cards have no default call to action: the "Read more" label makes the button appear.
- The button's accessible name is "Read more: {title}", e.g. "Read more: Net zero by 2030".
- All three cards link to /en/about; descriptive labels help when cards share a destination.

Common Authoring Mistakes

Error	Root Cause	Resolution
The phrases appear huge and break	Compact statistic title not selected	Add it in the Advanced tab Style options
No button shows although a label is set	The Card has no Link, or Show call to action is off	Add the Link and keep Show call to action on
Three identical "Read more" names	An Accessibility label copied to all cards	Leave Accessibility label empty so the title is added

Troubleshooting

- **Symptoms:** The "Read more" buttons are missing on aem.live but show in the editor.
- **Cause:** Link items was turned off on the Cards tab before publishing.
- **Resolution:** Turn Link items on and republish the page.
- **Verification Steps:** Each card shows an outlined Read more button that opens /en/about.

Use Cases: Commitments, statements, short claims.

Authoring Guidelines: Card style = Statistic; Advanced tab: Style options = Compact statistic title. Often 3 columns and a Call to action label per Card.

Business Rules: Only affects statistic cards.

Rendering Rules: Block class `stat-compact`; the statistic title size becomes 0.42 × the number size (about 2.52rem desktop, 1.68rem tablet, 2.1rem mobile), without the 26 % width cap.

Responsive Behaviour: As statistic cards, with the smaller title.

SEO Impact: None.

Accessibility Compliance: As Variation 4.

Variation 22 — Style Option "Dividers between rows"

Variation Name: Style options: Dividers between rows (`dividers`).

Business Purpose: Grey lines between the rows of links on tablet and desktop (Figma variation 5).

Visual Example:

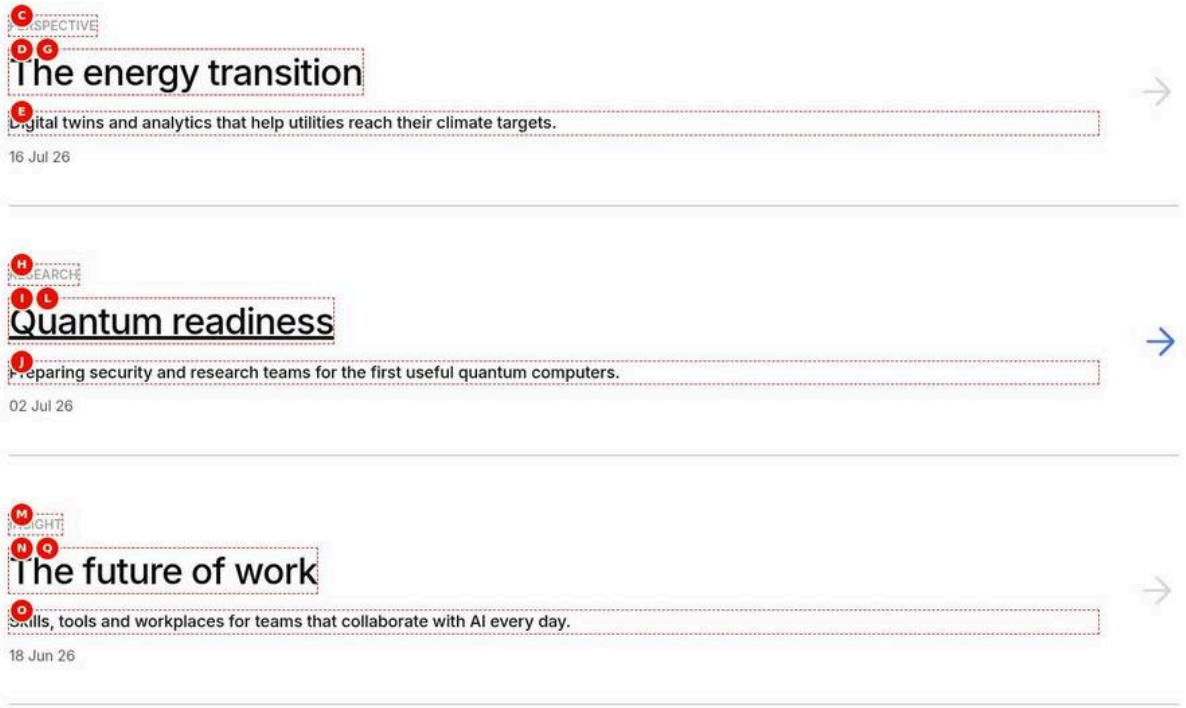

Figure 25: Dividers between rows — Three rows of links at 1440 px separated by thin grey (#b2b2b2) lines, each with the eyebrow ("Perspective", "Research", "Insight"), the large title ("The energy transition", "Quantum readiness", "The future of work"), the description, the date and a grey arrow on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-dividers.jpg)

Screenshot Details — Dividers between rows

Item	Detail
Screenshot Name	`screenshots/cards-dividers.jpg`
Screenshot Purpose	Dividers between rows

Item	Detail
Screen Description	Three rows of links at 1440 px separated by thin grey (#b2b2b2) lines, each with the eyebrow (“Perspective”, “Research”, “Insight”), the large title (“The energy transition”, “Quantum readiness”, “The future of work”), the description, the date and a grey arrow on the right.
Business Context	A text-only list of recent insights (Figma variation 5 “News”) that needs visual separation between rows on desktop.
Author Objective	Turn Display as teaser off, select the Style option Dividers between rows, and add three Cards with eyebrow, title, description, date and link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Display as teaser (Cards › Cards)	Off	No	Cards (on) or rows of links (off)	Off for news-style link lists	Boolean
(B)	Style options (Cards › Advanced)	Dividers between rows	No	Extra styles	Only as designed	stat-compact, dividers, header-center
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Eyebrow (Card 1 › Content)	Perspective	No	Label above the title	1–3 words	None
D	Title (Card 1 › Content)	The energy transition	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
E	Description (Card 1 › Content)	Digital twins and analytics that help utilities reach their climate targets.	No	Card text	1–3 sentences; lists and links allowed	None
(F)	Date (Card 1 › Content)	2026-07-16	No	Card date	—	Read as YYYY-MM-DD
G	Link (Card 1 › Link)	Select the page or enter /en/insights/energy-transition	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
H	Eyebrow (Card 2 › Content)	Research	No	Label above the title	1–3 words	None
I	Title (Card 2 › Content)	Quantum readiness	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
J	Description (Card 2 › Content)	Preparing security and research teams	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		for the first useful quantum computers.				
(K)	Date (Card 2 › Content)	2026-07-02	No	Card date	—	Read as YYYY-MM-DD
L	Link (Card 2 › Link)	Select the page or enter /en/insights/quantum-readiness	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
M	Eyebrow (Card 3 › Content)	Insight	No	Label above the title	1–3 words	None
N	Title (Card 3 › Content)	The future of work	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
O	Description (Card 3 › Content)	Skills, tools and workplaces for teams that collaborate with AI every day.	No	Card text	1–3 sentences; lists and links allowed	None
(P)	Date (Card 3 › Content)	2026-06-18	No	Card date	—	Read as YYYY-MM-DD
Q	Link (Card 3 › Link)	Select the page or enter /en/insights/future-of-work	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three full-width rows on desktop, each with the eyebrow, the large title ("The energy transition", "Quantum readiness", "The future of work"), the description, the date and an arrow, separated by thin grey #b2b2b2 lines.
- **Rendering behaviour:** Block class dividers keeps the 1-border-width –slate-400 bottom border of .list-row from 600 px; without the option tablet and desktop rows have a transparent border, while mobile always shows lines.
- **Publishing behaviour:** Publish the page and the three linked insight pages to preview and live; the change is page content only.

Business Rules

- Dividers between rows affects only rows of links (Display as teaser off).
- On mobile the rows always have dividers, with or without the option.
- Rows always take one line each; columns are ignored.
- The rows here have no tags, so the kicker shows only the eyebrow.

Common Authoring Mistakes

Error	Root Cause	Resolution
Selecting Dividers changes nothing	Display as teaser is still on	Turn Display as teaser off
Lines show on mobile without the option	Mobile rows always have dividers	No action needed; this is by design

Troubleshooting

- **Symptoms:** No lines between the rows at 1440 px.
- **Cause:** Style options was saved empty, or the option was added to another Cards block.
- **Resolution:** Select the block, open the Advanced tab and choose Dividers between rows.
- **Verification Steps:** At 1024 and 1440 px grey lines separate the three rows.

Use Cases: News and document lists that need visual separation.

Authoring Guidelines: Display as teaser off; Advanced tab: Style options = Dividers between rows.

Business Rules: Only affects rows of links. On mobile the rows always have dividers.

Rendering Rules: Block class `dividers`; from 600 px `.list-row` keeps its `border-bottom` (1 border width, `--slate-400`) instead of a transparent one.

Responsive Behaviour: Desktop and tablet: lines with the option, none without. Mobile: lines always.

SEO Impact: None.

Accessibility Compliance: Decorative borders only.

Variation 23 — Style Option "Header centred"

Variation Name: Style options: Header centred (`header-center`).

Business Purpose: A centred title, description and CTA above the cards.

Visual Example:

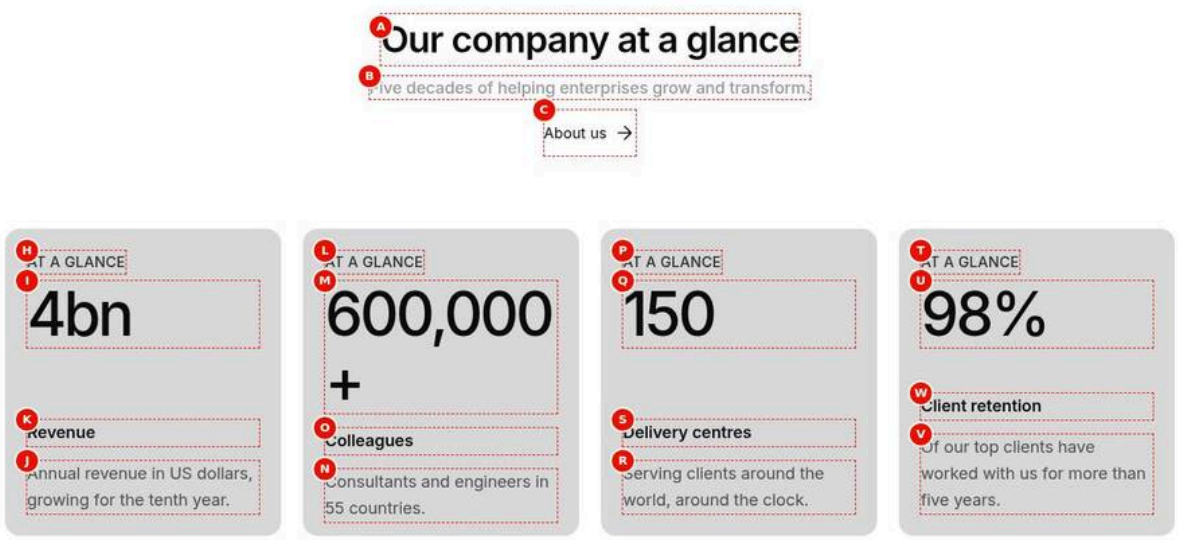

Figure 26: Centred header — At 1440 px the title "Our company at a glance", its description and the "About us" text link centred above a row of four compact (9:10) light grey statistic cards ("4bn", "600,000+", "150", "98%"). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-header-centred.jpg)

Screenshot Details — Centred header

Item	Detail
Screenshot Name	`screenshots/cards-header-centred.jpg`
Screenshot Purpose	Centred header
Screen Description	At 1440 px the title “Our company at a glance”, its description and the “About us” text link centred above a row of four compact (9:10) light grey statistic cards (“4bn”, “600,000+”, “150”, “98%”).
Business Context	The company facts section of the About page, introduced by a centred heading and an “About us” link above four statistics.
Author Objective	Add a Cards block with a title, description and CTA, Card style Statistic, Panel height Compact and the Style option Header centred, with four statistic Cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
A	Title (Cards › Content)	Our company at a glance	No	Heading of the block	Short, descriptive; up to 60 characters (Recommended)	None
B	Description (Cards › Content)	Five decades of helping enterprises grow and transform.	No	Intro text under the title	One or two sentences	None
C	CTA link (Cards › Content)	Select the page or enter /en/about	No	Header call to action destination	A page or URL; leave empty for no CTA	None
(D)	CTA text (Cards › Content)	About us	No	Header CTA label	Action wording, 2–4 words	None
(E)	Card style (Cards › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on

T	Eyebrow (Card 4 › Content)	At a glance	No	Label above the title	1–3 words	None
U	Title (Card 4 › Content)	98%	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
V	Description (Card 4 › Content)	Of our top clients have worked with us for more than five years.	No	Card text	1–3 sentences; lists and links allowed	None
W	Label (Card 4 › Content)	Client retention	No	Statistic label above the description	1–3 words	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title “Our company at a glance”, the description and the “About us” text link centred above a row of four compact light grey statistic cards (4bn, 600,000+, 150, 98%).
- **Rendering behaviour:** Block class header-center turns .list-header into a centred column (text-align center) with the CTA below the texts on every breakpoint; the cards keep their alignment and their 9:10 compact shape.
- **Publishing behaviour:** Publish the page and the CTA target /en/about to preview and live.

Business Rules

- Header centred centres only the header; cards are unchanged.
- The CTA shows only with a CTA link; CTA text replaces the link text.
- Keep centred descriptions short; long centred paragraphs are harder to read.
- The title is an H2 by default and the card titles are H3.

Common Authoring Mistakes

Error	Root Cause	Resolution
The cards are expected centred too	Header centred affects only the header	Use fewer columns to change the card layout
“About us” doesn’t appear	CTA link left empty while CTA text is set	Select /en/about in CTA link

Troubleshooting

- **Symptoms:** The header stays left-aligned in preview.
- **Cause:** Header centred wasn’t saved in Style options (Advanced tab).
- **Resolution:** Select the block, choose Header centred in Style options and wait for the save.
- **Verification Steps:** Title, description and About us are centred at 1440 and 402 px.

Use Cases: Statistic rows and campaign sections with a centred heading.

Authoring Guidelines: Advanced tab: Style options = Header centred.

Business Rules: Only the header is centred; the cards keep their alignment.

Rendering Rules: Block class `header-center`: `.list-header` becomes a centred column (`text-align: center`), the CTA below the texts.

Responsive Behaviour: Centred on every breakpoint.

SEO Impact: None.

Accessibility Compliance: Keep centred texts short (long centred paragraphs are harder to read).

Variation 24 — Header Call to Action

Variation Name: Header with a CTA (CTA link, CTA text, CTA style: Text link, Primary button, Secondary button).

Business Purpose: A “View all” or “Explore more” link next to the title.

Visual Example:

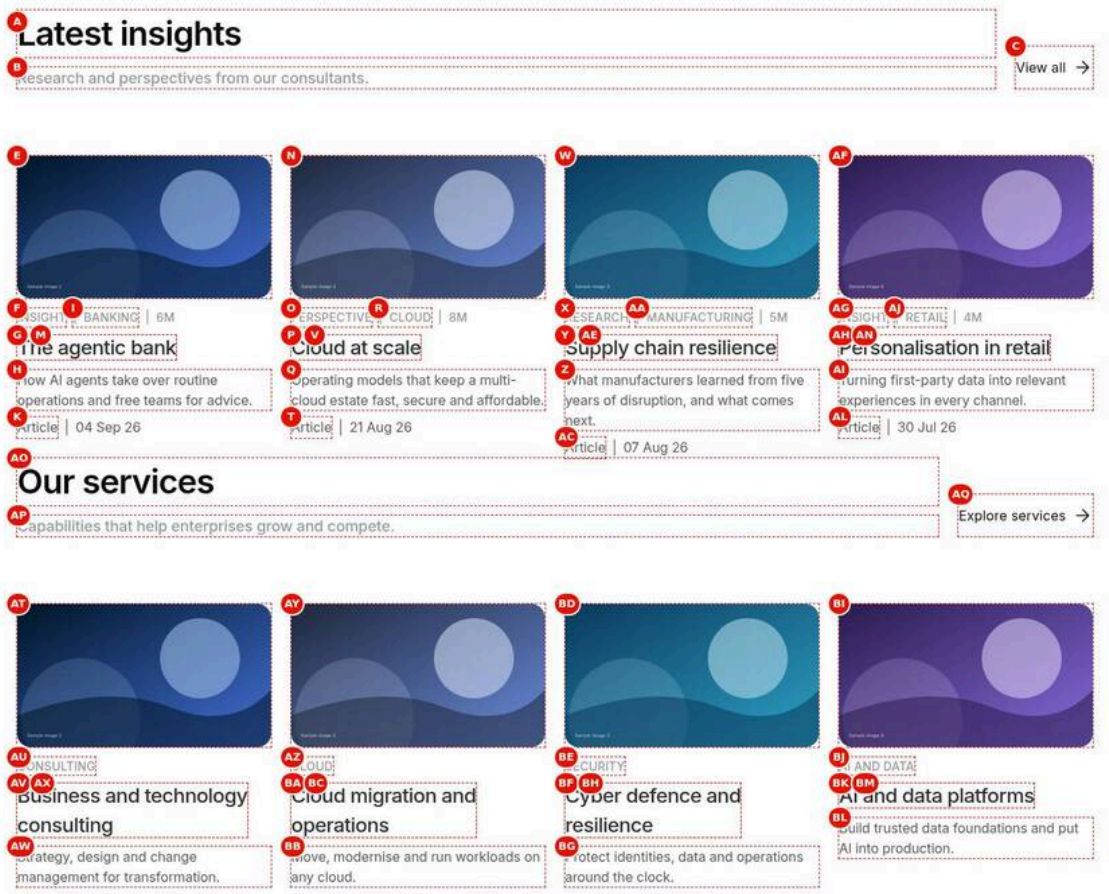

Figure 27: Header call to action — One section at 1440 px with two Cards blocks in a single capture: “Latest insights” with a “View all” text link on the right above four insight image cards, then “Our services” with a filled primary “Explore services” button above four service image cards. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-header-cta.jpg)

Screenshot Details — Header call to action

Item	Detail
Screenshot Name	`screenshots/cards-header-cta.jpg`
Screenshot Purpose	Header call to action
Screen Description	One section at 1440 px with two Cards blocks in a single capture: “Latest insights” with a “View all” text link on the right above four insight image cards, then “Our services” with a filled primary “Explore services” button above four service image cards.
Business Context	Two sections of a home page compared: an insights row with a “View all” text link and a services row with a primary “Explore services” button in the header.
Author Objective	Add two Cards blocks, each with title, description, CTA link and CTA text, leave the first CTA style as Text link and set the second to Primary button.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)

—	Note (Preview)	Two Cards blocks in one section: the first with the default CTA style (Text link), the second with Primary button	—	Check on the preview (not stored in the content)	Two Cards blocks in one section: the first with the default CTA style (Text link), the second with Primary button	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The first header shows "Latest insights" with a "View all" text link and arrow on the right; the second "Our services" with a filled primary "Explore services" button; each block shows four image cards below.
- **Rendering behaviour:** The CTA is decorated by the button decorator: empty CTA style gives a tertiary text link, Primary button a filled button; both carry data-cmp-interaction "cta". The CTA sits right of the title slot when it has 20rem, else below.
- **Publishing behaviour:** Publish the page, photo-1.svg to photo-4.svg, /en/insights, /en/services and the eight card targets to preview and live.

Business Rules

- The header CTA shows only with a CTA link; CTA text replaces the link's own text as the label.

- CTA style values other than Primary or Secondary button give the text link.
- Use buttons sparingly: one primary button per screen is the norm.
- The header CTA is reported in the data layer as interaction "cta".
- Write descriptive CTA texts ("View all insights") rather than "Click here".

Common Authoring Mistakes

Error	Root Cause	Resolution
The CTA shows the page title instead of "View all"	CTA text left empty	Enter the CTA text
Both headers show buttons	CTA style set on both blocks	Leave CTA style empty (Text link) on secondary sections

Troubleshooting

- **Symptoms:** The second block's "Explore services" shows as a text link.
- **Cause:** CTA style wasn't saved as Primary button on the second block (the first block was selected).
- **Resolution:** Select the second Cards block and choose Primary button in CTA style.
- **Verification Steps:** The second header shows a filled button; the first keeps the text link.

Use Cases: Linking to an overview page of all items.

Authoring Guidelines: Content tab: CTA link (a page or URL), CTA text, CTA style (Text link = default, Primary button, Secondary button).

Business Rules: The CTA shows only with a CTA link; CTA text replaces the link text. Values other than primary / secondary give the text link (tertiary).

Rendering Rules: `div.list-cta-slot` with the link decorated by the button decorator (`button tertiary` / `primary` / `secondary`), `data-cmp-interaction="cta"` (data layer interaction `cta`).

Responsive Behaviour: Right of the title slot, aligned to its bottom, when it fits (the title slot is at least 20rem); otherwise it wraps below the title (mobile).

SEO Impact: A descriptive CTA text ("View all insights") helps internal linking; avoid "Click here".

Accessibility Compliance: A link with a visible name; the button decorator handles focus styles and new-window links.

Variation 25 — Grid on Every Breakpoint

Variation Name: Desktop, Tablet and Mobile display = Grid (the default).

Business Purpose: All cards visible at once in columns (Figma variations 2 and 11).

Visual Example:

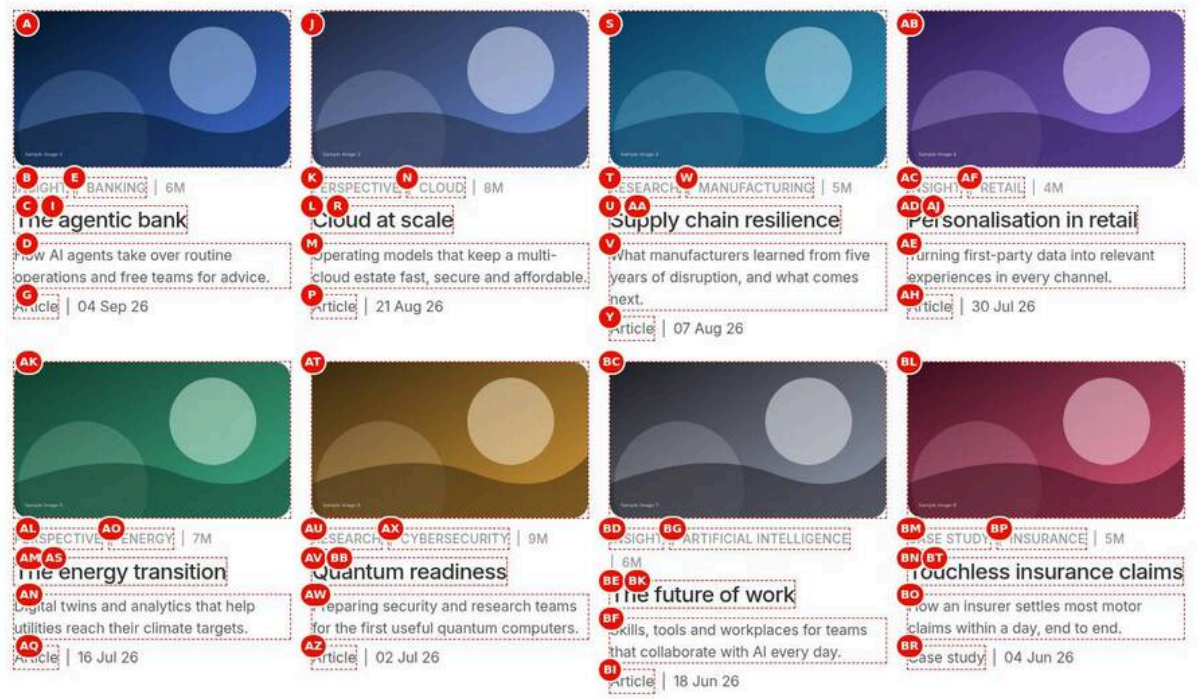

Figure 28: Grid on every breakpoint — At 1440 px eight image cards in two rows of four (default Grid, 4 columns), from "The agentic bank" to "Touchless insurance claims"; only the desktop layout is captured (below 600 px the cards would stack in one column). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-grid-all.jpg)

Screenshot Details — Grid on every breakpoint

Item	Detail
Screenshot Name	`screenshots/cards-grid-all.jpg`
Screenshot Purpose	Grid on every breakpoint
Screen Description	At 1440 px eight image cards in two rows of four (default Grid, 4 columns), from "The agentic bank" to "Touchless insurance claims"; only the desktop layout is captured (below 600 px the cards would stack in one column).
Business Context	An insights archive section where all eight articles must be visible at once, without any scrolling interaction (Figma variations 2 and 11).
Author Objective	Add a Cards block with eight image Cards and keep the default Grid display on desktop, tablet and mobile.

—	Note (Preview)	Desktop and tablet: two rows of four (columns 4); below 600 px the same cards in one column (Mobile columns 1)	—	Check on the preview (not stored in the content)	Desktop and tablet: two rows of four (columns 4); below 600 px the same cards in one column (Mobile columns 1)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** On desktop and tablet two rows of four image cards (photo-1.svg to photo-8.svg); below 600 px the same eight cards in one column.

- **Rendering behaviour:** Block classes desktop-grid tablet-grid mobile-grid with –list-columns 4 / 4 / 1 and gaps 24 / 24 / 16 px (converted to rem); grid-template-columns repeat(columns, minmax(0, 1fr)). No previous / next buttons or indicator are rendered.
- **Publishing behaviour:** Publish the page, the eight assets and the eight linked insight pages to preview and live.

Business Rules

- Grid is the default display on every breakpoint.
- Columns are validated 1 to 6 (rounded) and gaps 0 to 120 px; invalid values fall back to the defaults.
- Use a multiple of the columns (4 or 8 cards) so rows are complete.
- All cards are in the HTML and visible; there is no horizontal scrolling.

Common Authoring Mistakes

Error	Root Cause	Resolution
The last row has a single card	Nine cards in a 4-column grid	Use 8 or 12 cards, or change the columns
Eight cards make a very long mobile page	Mobile display Grid with 1 column	Use Mobile display Horizontal scroll

Troubleshooting

- **Symptoms:** Only seven cards show in the grid.
- **Cause:** One Card has no Title, Description or Image, or an unsafe link, so it is dropped.
- **Resolution:** Select each Card in the content tree and fill the missing Title or fix the Link.
- **Verification Steps:** document.querySelectorAll('.cards.card-list .list-item').length returns 8 on the preview page.

Use Cases: Overviews where every card must be visible without interaction.

Authoring Guidelines: Layout tab: Desktop / Tablet / Mobile display = Grid; set Desktop / Tablet / Mobile columns (1–6; defaults 4 / 4 / 1) and gaps (0–120 px; defaults 24 / 24 / 16).

Business Rules: Columns are validated (1–6, rounded); gaps (0–120); invalid values fall back to the defaults. Cards wrap to new rows.

Rendering Rules: Block classes `desktop-grid tablet-grid mobile-grid`; custom properties `--list-columns-{bp}` and `--list-gap-{bp}` (px converted to rem); `grid-template-columns: repeat(var(--list-columns), minmax(0, 1fr))`. No previous / next buttons or indicator.

Responsive Behaviour: Desktop: Desktop columns; tablet: Tablet columns; mobile: Mobile columns, each with its gap.

SEO Impact: All cards are in the HTML and visible.

Accessibility Compliance: No horizontal scrolling; content reflows (WCAG 1.4.10).

Variation 26 — Horizontal Scroll on Every Breakpoint

Variation Name: Desktop, Tablet and Mobile display = Horizontal scroll.

Business Purpose: A card rail that scrolls sideways on all devices (Figma variations 3, 8 and 9).

Visual Example:

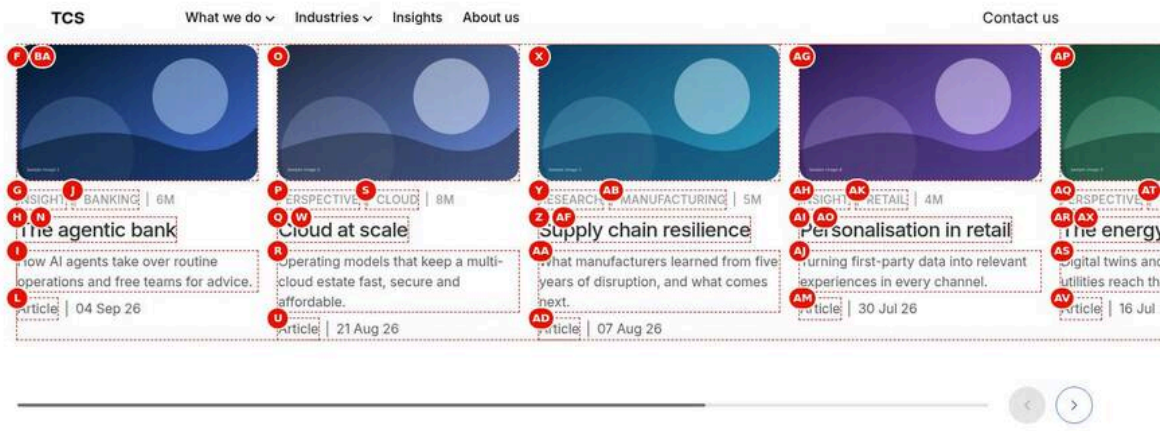

Figure 29: Horizontal scroll on every breakpoint — At 1440 px a scrolling row with 4.2 image cards visible, the fifth cut off at the right screen edge (bleed), with the scroll indicator and the round previous / next buttons below (Previous disabled at the start); only the desktop layout is captured. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-scroll-all.jpg)

Screenshot Details — Horizontal scroll on every breakpoint

Item	Detail
Screenshot Name	`screenshots/cards-scroll-all.jpg`
Screenshot Purpose	Horizontal scroll on every breakpoint
Screen Description	At 1440 px a scrolling row with 4.2 image cards visible, the fifth cut off at the right screen edge (bleed), with the scroll indicator and the round previous / next buttons below (Previous disabled at the start); only the desktop layout is captured.
Business Context	A related-content rail (Figma variations 3, 8 and 9) that keeps six articles in a single row on every device.
Author Objective	Set Desktop, Tablet and Mobile display to Horizontal scroll, turn on Previous / next buttons and Scroll indicator on desktop, and add six image Cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)

—	Note (Preview)	Tablet (3.3 visible) and mobile (1.2 visible, scroll indicator) scroll too	—	Check on the preview (not stored in the content)	Tablet (3.3 visible) and mobile (1.2 visible, scroll indicator) scroll too	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** On desktop 4.2 cards are visible, the fifth cut off at the right screen edge, with the scroll indicator and two round previous / next buttons below; tablet shows 3.3 cards and mobile 1.2 with the indicator.
- **Rendering behaviour:** Classes desktop-scroll tablet-scroll mobile-scroll; .list-scroller has overflow-x auto with scroll snap (start) and a hidden scrollbar; each card width is (100cqi - bleed - (visible - 1) x gap) / visible. The scroller is enhanced only while the cards overflow.
- **Publishing behaviour:** Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the scroller needs no extra data, as all cards are in the page HTML.

Business Rules

- Items visible defaults are 4.2 / 3.3 / 1.2; a fraction shows part of the next card.
- Buttons and indicators are per breakpoint and show only while the cards overflow.
- The Previous button is disabled at the start unless Loop is on.
- While it scrolls the region is focusable and scrolls with arrow keys, Home and End.
- There is no auto-rotation (by design).

Common Authoring Mistakes

Error	Root Cause	Resolution
No buttons on tablet	Previous / next buttons were turned on for desktop only	Turn on Previous / next buttons on tablet
The row doesn't scroll on desktop	Only four cards with 4.2 visible, so nothing overflows	Add cards or lower Desktop items visible

Troubleshooting

- **Symptoms:** The desktop buttons and indicator are missing.
- **Cause:** All cards fit (data-overflow is not "true"), so the controls are hidden.
- **Resolution:** Add more cards or reduce Desktop items visible.
- **Verification Steps:** Inspect .list-scroller: data-overflow="true" and the buttons show at 1440 px.

Use Cases: Related content, media coverage, long sets of cards in little vertical space.

Authoring Guidelines: Layout tab: each Display = Horizontal scroll; set Items visible (1–8; defaults 4.2 / 3.3 / 1.2) or Card width (px); optionally Previous / next buttons and Scroll indicator per breakpoint; the Scroll tab for snap, drag, keyboard, step, loop and edge.

Business Rules: Items visible can be a decimal (the fraction shows part of the next card). The scroller is enhanced only when the cards don't fit (`data-overflow="true"`); otherwise it behaves like a row and the buttons and indicator are hidden.

Rendering Rules: Block classes `desktop-scroll tablet-scroll mobile-scroll`; `.list-scroller` has `overflow-x: auto` and `overscroll-behavior-x: contain`; the `<ul>` is a flex row; each item's width is the Card width or `(100cqi - bleed - (visible - 1) × gap) / visible`. Scroll snap (`x mandatory`, start) and hidden scrollbars by default. No carousel library and no auto-rotation.

Responsive Behaviour: Each breakpoint uses its own Items visible / Card width, gap, buttons and indicator; resizing or rotating recalculates (ResizeObserver).

SEO Impact: All cards are in the HTML (none are loaded later), so all links are crawlable.

Accessibility Compliance: While it scrolls the region is focusable (`tabindex="0"`) and scrolls with arrow keys, Home and End; links stay reachable with Tab; nothing traps focus; buttons are named and `disabled` at the ends.

Variation 27 — Scroll on Desktop Only

Variation Name: Desktop = Horizontal scroll; Tablet = Grid; Mobile = Grid.

Business Purpose: A single rail on wide screens, all cards stacked on smaller screens.

Visual Example:

Figure 30: Desktop-only scroll — At 1440 px a scrolling row of the six image cards with 4.2 visible, the fifth cut off at the screen edge, and the previous / next buttons at the bottom right; only the desktop layout is captured (tablet would be a 2-column grid, mobile one column). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-scroll-desktop-only.jpg)

Screenshot Details — Desktop-only scroll

Item	Detail
Screenshot Name	`screenshots/cards-scroll-desktop-only.jpg`
Screenshot Purpose	Desktop-only scroll
Screen Description	At 1440 px a scrolling row of the six image cards with 4.2 visible, the fifth cut off at the screen edge, and the previous / next buttons at the bottom right; only the desktop layout is captured (tablet would be a 2-column grid, mobile one column).
Business Context	A long set of six insights on wide screens, where a two-row grid would be too tall, while tablet and phone show all cards stacked.
Author Objective	Set Desktop display to Horizontal scroll with Previous / next buttons, Tablet columns to 2, and add six image Cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules

—	Note (Preview)	Tablet: a 2-column grid; mobile: one column	—	Check on the preview (not stored in the content)	Tablet: a 2-column grid; mobile: one column	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Desktop: one scrolling row with 4.2 cards visible and the previous / next buttons at the bottom right; tablet: a 2-column grid of the six cards; mobile: one column.
- **Rendering behaviour:** Classes desktop-scroll tablet-grid mobile-grid; the mobile scroll styles don't apply, and from 600 px the grid styles reset the scroller (overflow-x visible). Only from 1200 px does the row scroll.
- **Publishing behaviour:** Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the scroller needs no extra data, as all cards are in the page HTML.

Business Rules

- Breakpoints are independent: only desktop scrolls here.
- Tablet columns applies only while Tablet display is Grid.
- Previous / next buttons on desktop is off by default and is turned on here.
- Buttons are disabled at the ends unless Loop is on.

Common Authoring Mistakes

Error	Root Cause	Resolution
Tablet also scrolls	Tablet display set to Horizontal scroll	Set Tablet display to Grid
The tablet grid has four narrow columns	Tablet columns left at 4	Set Tablet columns to 2

Troubleshooting

- **Symptoms:** At 1440 px the cards scroll but there are no buttons.
- **Cause:** Previous / next buttons on desktop was not saved, or all cards fit.
- **Resolution:** Turn the desktop buttons on in the Layout tab and keep more than 4.2 cards.
- **Verification Steps:** Two round buttons show at the bottom right; Previous is disabled at the start.

Use Cases: Long sets on wide screens where a grid would be too tall.

Authoring Guidelines: Desktop display = Horizontal scroll (Items visible, buttons, indicator); Tablet and Mobile display = Grid (columns).

Business Rules: Breakpoints are independent: only desktop scrolls.

Rendering Rules: Classes `desktop-scroll tablet-grid mobile-grid`; the mobile scroll styles don't apply, and from 600 px the grid styles reset the scroller (`overflow-x: visible`).

Responsive Behaviour: Desktop (1200 px+) scrolls; tablet and mobile show grids.

SEO Impact: None.

Accessibility Compliance: As Variations 25 and 26 per breakpoint.

Variation 28 — Scroll on Tablet Only

Variation Name: Desktop = Grid; Tablet = Horizontal scroll; Mobile = Grid.

Business Purpose: Avoid cramped tablet grids while keeping desktop and mobile as grids.

Visual Example:

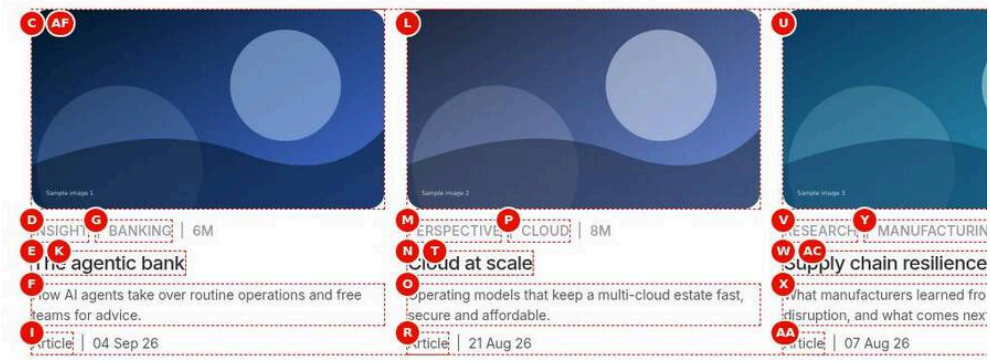

Figure 31: Tablet-only scroll — At 1024 px a scrolling row with 2.5 image cards visible ("The agentic bank", "Cloud at scale" and half of "Supply chain resilience"), cut off at the right edge, without buttons or indicator (tablet defaults off). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-scroll-tablet-only.jpg)

Screenshot Details — Tablet-only scroll

Item	Detail
Screenshot Name	`screenshots/cards-scroll-tablet-only.jpg`
Screenshot Purpose	Tablet-only scroll

Item	Detail
Screen Description	At 1024 px a scrolling row with 2.5 image cards visible ("The agentic bank", "Cloud at scale" and half of "Supply chain resilience"), cut off at the right edge, without buttons or indicator (tablet defaults off).
Business Context	Six insights that fit a 4-column desktop grid and a phone column, but would be cramped as a 4-column tablet grid.
Author Objective	Set Tablet display to Horizontal scroll with Tablet items visible 2.5, keep desktop and mobile as grids, and add six image Cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Screen width (Preview)	1024 px (tablet)	—	Check on the preview (not stored in the content)	1024 px (tablet)	—
—	Note (Preview)	Desktop: a 4-column grid; mobile: one column	—	Check on the preview (not stored in the content)	Desktop: a 4-column grid; mobile: one column	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1024 px one scrolling row with two and a half image cards visible, the third cut off at the right edge; desktop shows a 4-column grid and mobile one column.
- **Rendering behaviour:** Classes desktop-grid tablet-scroll mobile-grid; only 600 to 1199 px scrolls, with –list-visible-tablet 2.5 and the 24 px tablet gap. Tablet buttons and indicator stay off (their defaults), so visitors swipe, drag or use the arrow keys.
- **Publishing behaviour:** Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Business Rules

- Tablet items visible accepts 1 to 8 with decimals; 2.5 shows half of the third card.
- Desktop and mobile keep Grid, so their columns (4 and 1) apply.
- Previous / next buttons on tablet and Scroll indicator on tablet are off by default.
- The scroller is focusable and keyboard scrollable only while the cards overflow.

Common Authoring Mistakes

Error	Root Cause	Resolution
Mouse users on a tablet-width window can't find the next cards	No buttons or indicator on tablet	Turn on Previous / next buttons on tablet or the tablet indicator
Tablet items visible has no effect	Tablet display still Grid	Set Tablet display to Horizontal scroll

Troubleshooting

- **Symptoms:** At 1024 px the cards show as a grid instead of a row.
- **Cause:** The Tablet display value wasn't saved, so the default Grid applies.
- **Resolution:** Select the block, set Tablet display to Horizontal scroll and Tablet items visible to 2.5.
- **Verification Steps:** The block has the class tablet-scroll and 2.5 cards are visible at 1024 px.

Use Cases: Many columns on desktop that don't fit tablets.

Authoring Guidelines: Tablet display = Horizontal scroll (Tablet items visible); the others Grid.

Business Rules: As Variation 27.

Rendering Rules: Classes `desktop-grid tablet-scroll mobile-grid`.

Responsive Behaviour: Only 600–1199 px scrolls.

SEO Impact: None.

Accessibility Compliance: As Variations 25 and 26.

Variation 29 — Scroll on Mobile Only

Variation Name: Desktop = Grid; Tablet = Grid; Mobile = Horizontal scroll.

Business Purpose: The most common Figma pattern (variations 1, 4, 6 and 10): a grid on large screens, a swipeable rail with an indicator on phones.

Visual Example:

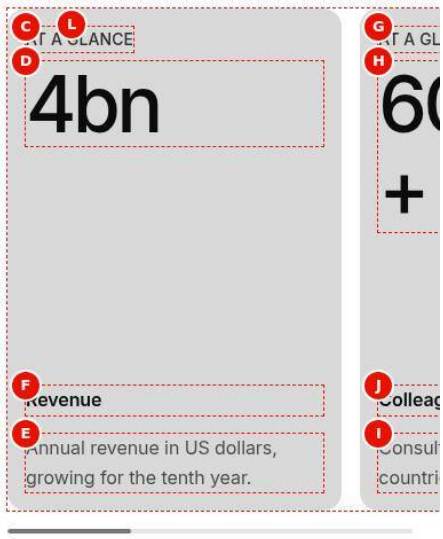

Figure 32: Mobile-only scroll — At 402 px a rail of light grey statistic cards with 1.2 visible: "4bn" and part of "600,000+" peeking at the right edge, with the grey scroll indicator below. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-scroll-mobile-only.jpg)

Screenshot Details — Mobile-only scroll

Item	Detail
Screenshot Name	`screenshots/cards-scroll-mobile-only.jpg`
Screenshot Purpose	Mobile-only scroll
Screen Description	At 402 px a rail of light grey statistic cards with 1.2 visible: "4bn" and part of "600,000+" peeking at the right edge, with the grey scroll indicator below.
Business Context	The most common Figma pattern (variations 1, 4, 6 and 10): the "At a glance" statistics as a grid on large screens and a swipeable rail on phones.
Author Objective	Set Card style Statistic and Mobile display Horizontal scroll, and add four statistic Cards; check the rail at 402 px.

(R)	Label (Card 4 › Content)	Client retention	No	Statistic label above the description	1–3 words	None
—	Screen width (Preview)	402 px (mobile)	—	Check on the preview (not stored in the content)	402 px (mobile)	—
—	Note (Preview)	Desktop and tablet: a 4-column grid	—	Check on the preview (not stored in the content)	Desktop and tablet: a 4-column grid	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 402 px 1.2 statistic cards are visible, the next card peeking at the right edge, with the grey scroll indicator below; desktop and tablet show a 4-column grid.
- **Rendering behaviour:** Classes desktop-grid tablet-grid mobile-scroll mobile-indicator; below 600 px the row scrolls with touch swipe and snaps to the start of each card. The scroller bleeds to the right edge of the screen (Edge default bleed).
- **Publishing behaviour:** Publish the page to preview and live; the cards have no images or links to publish. Check the swipe on a real phone on aem.page.

Business Rules

- Mobile items visible defaults to 1.2 and Scroll indicator on mobile to on.
- The indicator is decorative (aria-hidden) and appears only while the cards overflow.
- Desktop and tablet keep Grid with 4 columns.
- Touch swipe is on by default; turning it off sets touch-action pan-y.

Common Authoring Mistakes

Error	Root Cause	Resolution
No indicator on the phone	Scroll indicator on mobile was turned off	Turn it back on (default)
The rail scrolls on desktop too	Desktop display set to Horizontal scroll	Keep Desktop display Grid

Troubleshooting

- **Symptoms:** On a phone the four statistics stack in one column instead of a rail.
- **Cause:** Mobile display is still Grid on the published page (the change wasn't republished).
- **Resolution:** Check Mobile display is Horizontal scroll and republish the page.
- **Verification Steps:** At 402 px on aem.live 1.2 cards show with the indicator below.

Use Cases: Statistic rows and themes that would be very long as a single column.

Authoring Guidelines: Mobile display = Horizontal scroll (Mobile items visible 1.2 default; Scroll indicator on mobile is on by default); Desktop and Tablet display = Grid.

Business Rules: As Variation 27.

Rendering Rules: Classes `desktop-grid tablet-grid mobile-scroll mobile-indicator`.

Responsive Behaviour: Below 600 px the row scrolls with touch swipe; from 600 px a grid.

SEO Impact: None.

Accessibility Compliance: As Variations 25 and 26.

Variation 30 — Scroll on Desktop and Tablet, Grid on Mobile

Variation Name: Desktop = Horizontal scroll; Tablet = Horizontal scroll; Mobile = Grid.

Business Purpose: Rails on large screens, a simple stacked list on phones.

Visual Example:

Figure 33: Desktop and tablet scroll — At 1024 px a scrolling row with 3.3 image cards visible, the fourth cut off at the right edge, and the previous / next buttons at the bottom right (Previous disabled at the start). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-scroll-desktop-tablet.jpg)

Screenshot Details — Desktop and tablet scroll

Item	Detail
Screenshot Name	`screenshots/cards-scroll-desktop-tablet.jpg`
Screenshot Purpose	Desktop and tablet scroll
Screen Description	At 1024 px a scrolling row with 3.3 image cards visible, the fourth cut off at the right edge, and the previous / next buttons at the bottom right (Previous disabled at the start).
Business Context	A related-insights rail on large screens, with a simple stacked list on phones where swiping isn't wanted.
Author Objective	Set Desktop and Tablet display to Horizontal scroll with Previous / next buttons on both, keep Mobile Grid, and add six image Cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Desktop display (Cards › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll

—	Screen width (Preview)	1024 px (tablet)	—	Check on the preview (not stored in the content)	1024 px (tablet)	—

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Note (Preview)	Desktop scrolls too (4.2 visible, buttons); mobile: one column	—	Check on the preview (not stored in the content)	Desktop scrolls too (4.2 visible, buttons); mobile: one column	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1024 px a scrolling row with 3.3 cards visible and the previous / next buttons at the bottom right; desktop scrolls with 4.2 visible and buttons; mobile shows one column.
- **Rendering behaviour:** Classes desktop-scroll tablet-scroll mobile-grid desktop-controls tablet-controls; from 600 px the row scrolls, below 600 px a single column (Mobile columns 1). The buttons step one card by default.
- **Publishing behaviour:** Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Business Rules

- Buttons are per breakpoint: here they are on for desktop and tablet.
- The Previous button is disabled at the start and Next at the end unless Loop is on.
- Buttons are named by the placeholders listPrevious ("Previous items") and listNext ("Next items").
- Mobile stays a grid, so no mobile scroll settings apply.

Common Authoring Mistakes

Error	Root Cause	Resolution
Buttons appear on desktop but not tablet	Previous / next buttons on tablet left off	Turn it on in the Layout tab
Button names show in English on a translated page	listPrevious / listNext not translated in the locale placeholders	Translate the keys and publish the placeholders sheet

Troubleshooting

- **Symptoms:** Pressing Next on tablet does nothing.
- **Cause:** The row is already at its end, or all six cards fit, so the button is disabled or hidden.
- **Resolution:** Scroll back to the start, or lower Tablet items visible if all cards fit.
- **Verification Steps:** At 1024 px Next moves the row one card and Previous becomes enabled.

Use Cases: Content where swiping on phones isn't wanted.

Authoring Guidelines: Desktop and Tablet display = Horizontal scroll; Mobile display = Grid.

Business Rules: As Variation 27.

Rendering Rules: Classes `desktop-scroll tablet-scroll mobile-grid`.

Responsive Behaviour: 600 px and wider scroll; below, one column (or Mobile columns).

SEO Impact: None.

Accessibility Compliance: As Variations 25 and 26.

Variation 31 — Scroll on Desktop and Mobile, Grid on Tablet

Variation Name: Desktop = Horizontal scroll; Tablet = Grid; Mobile = Horizontal scroll.

Business Purpose: Rails where a tablet grid fits better (for example 2 columns).

Visual Example:

Figure 34: Desktop and mobile scroll — At 402 px a rail of image cards with 1.2 visible, "The agentic bank" and part of "Cloud at scale" at the right edge, with the grey scroll indicator below (mobile buttons off by default). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-scroll-desktop-mobile.jpg)

Screenshot Details — Desktop and mobile scroll

Item	Detail
Screenshot Name	`screenshots/cards-scroll-desktop-mobile.jpg`
Screenshot Purpose	Desktop and mobile scroll
Screen Description	At 402 px a rail of image cards with 1.2 visible, "The agentic bank" and part of "Cloud at scale" at the right edge, with the grey scroll indicator below (mobile buttons off by default).
Business Context	Six insights whose count suits a 2-column tablet grid, shown as rails on desktop and on phones.
Author Objective	Set Desktop display Horizontal scroll with buttons, Tablet columns 2 and Mobile display Horizontal scroll, and add six image Cards; check at 402 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 402 px a rail with 1.2 cards visible and the grey scroll indicator; desktop scrolls with 4.2 cards and buttons; tablet shows a 2-column grid of the six cards.
- **Rendering behaviour:** Classes desktop-scroll tablet-grid mobile-scroll with desktop-controls and the default mobile-indicator; 1200 px and wider and below 600 px scroll, 600 to 1199 px is a grid.
- **Publishing behaviour:** Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Business Rules

- Breakpoints are independent: tablet uses its grid columns (2) while the others scroll.
- The mobile indicator is on by default; mobile buttons are off by default.
- On mobile the scroller bleeds to the right screen edge by default.

- Six cards in a 2-column tablet grid make three complete rows.

Common Authoring Mistakes

Error	Root Cause	Resolution
Tablet shows a rail too	Tablet display set to Horizontal scroll	Keep Tablet display Grid with Tablet columns 2
Mobile shows a single column	Mobile display not saved as Horizontal scroll	Set Mobile display to Horizontal scroll

Troubleshooting

- **Symptoms:** On a phone the rail has no indicator.
- **Cause:** Scroll indicator on mobile was turned off, or the cards fit the screen.
- **Resolution:** Turn Scroll indicator on mobile on and keep Mobile items visible below the card count.
- **Verification Steps:** At 402 px the grey track and thumb show under the cards and move while swiping.

Use Cases: Card sets whose count suits a 2-column tablet grid.

Authoring Guidelines: Desktop and Mobile display = Horizontal scroll; Tablet display = Grid (Tablet columns e.g. 2).

Business Rules: As Variation 27.

Rendering Rules: Classes `desktop-scroll tablet-grid mobile-scroll`.

Responsive Behaviour: 1200 px+ and below 600 px scroll; 600–1199 px grid.

SEO Impact: None.

Accessibility Compliance: As Variations 25 and 26.

Variation 32 — Grid on Desktop, Scroll on Tablet and Mobile

Variation Name: Desktop = Grid; Tablet = Horizontal scroll; Mobile = Horizontal scroll.

Business Purpose: Everything visible on desktop, rails on touch devices.

Visual Example:

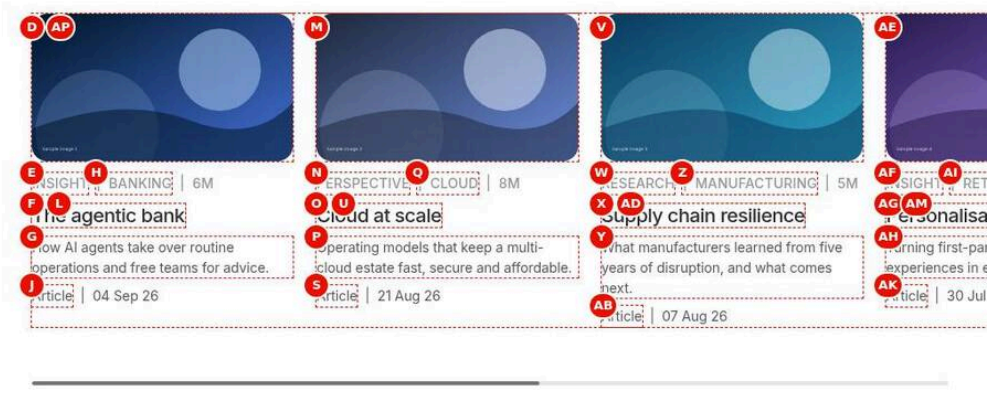

Figure 35: Tablet and mobile scroll — At 1024 px a scrolling row with 3.3 image cards visible, the fourth cut off at the right edge, and a thin grey scroll indicator below; no previous / next buttons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-scroll-tablet-mobile.jpg)

Screenshot Details — Tablet and mobile scroll

Item	Detail
Screenshot Name	`screenshots/cards-scroll-tablet-mobile.jpg`
Screenshot Purpose	Tablet and mobile scroll
Screen Description	At 1024 px a scrolling row with 3.3 image cards visible, the fourth cut off at the right edge, and a thin grey scroll indicator below; no previous / next buttons.
Business Context	Four or more insights in one row on desktop, swipeable on touch devices (tablets and phones).
Author Objective	Set Tablet display Horizontal scroll with Scroll indicator on tablet, and Mobile display Horizontal scroll, and add six image Cards; check at 1024 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Tablet display (Cards › Layout)	Horizontal scroll	No	Grid or scroll at 600–1199 px	—	grid, horizontal-scroll

(BC)	Content type (Card 6 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(BD)	Reading time (Card 6 › Content)	9	No	Minutes after the tags	Digits only (6 shows 6m)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(BE)	Link (Card 6 › Link)	Select the page or enter /en/insights/quantum-readiness	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Screen width (Preview)	1024 px (tablet)	—	Check on the preview (not stored in the content)	1024 px (tablet)	—
—	Note (Preview)	Desktop: a 4-column grid; mobile scrolls too (1.2 visible, indicator)	—	Check on the preview (not stored in the content)	Desktop: a 4-column grid; mobile scrolls too (1.2 visible, indicator)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1024 px a scrolling row with 3.3 cards visible and a thin grey indicator below; desktop shows a 4-column grid; mobile scrolls with 1.2 visible and its indicator.
- **Rendering behaviour:** Classes desktop-grid tablet-scroll mobile-scroll tablet-indicator mobile-indicator; below 1200 px the cards scroll. The thumb width shows the visible share (at least 5rem) and moves with the scroll position.
- **Publishing behaviour:** Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Business Rules

- Scroll indicator on tablet is off by default and turned on here.
- The indicator is decorative, not a control; visitors scroll by swipe, drag or keys.
- Desktop keeps the Grid with Desktop columns 4.
- Each breakpoint uses its own Items visible (3.3 tablet, 1.2 mobile).

Common Authoring Mistakes

Error	Root Cause	Resolution
Visitors expect to drag the indicator	The indicator is a progress bar only	Add Previous / next buttons on tablet if a control is needed
Desktop shows only one row of four	Six cards in a 4-column grid leave two in the second row	Use 4 or 8 cards, or Desktop columns 3

Troubleshooting

- **Symptoms:** At 1024 px the indicator doesn't appear.
- **Cause:** Scroll indicator on tablet wasn't saved, or all cards fit the row.
- **Resolution:** Turn Scroll indicator on tablet on in the Layout tab.
- **Verification Steps:** The block has the class tablet-indicator and the grey track shows at 1024 px.

Use Cases: Four or more cards that should be one row on desktop and swipeable elsewhere.

Authoring Guidelines: Desktop display = Grid; Tablet and Mobile display = Horizontal scroll.

Business Rules: As Variation 27.

Rendering Rules: Classes `desktop-grid tablet-scroll mobile-scroll`.

Responsive Behaviour: Below 1200 px the cards scroll.

SEO Impact: None.

Accessibility Compliance: As Variations 25 and 26.

Variation 33 — Previous / Next Buttons

Variation Name: Previous / next buttons on desktop, tablet or mobile (`{bp}Controls`).

Business Purpose: Visible controls for mouse and keyboard users to move through a rail.

Visual Example:

Figure 36: Previous and next buttons — At 1440 px a scrolling row of six image cards with 4.2 visible and two round chevron icon buttons at the bottom right under the row; the Previous button is disabled at the start and Next is enabled. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-previous-next.jpg)

Screenshot Details — Previous and next buttons

Item	Detail
Screenshot Name	`screenshots/cards-previous-next.jpg`
Screenshot Purpose	Previous and next buttons
Screen Description	At 1440 px a scrolling row of six image cards with 4.2 visible and two round chevron icon buttons at the bottom right under the row; the Previous button is disabled at the start and Next is enabled.
Business Context	A desktop insights rail with six articles where mouse and keyboard users need visible controls to move through the cards.
Author Objective	Set Desktop display Horizontal scroll, turn on Previous / next buttons on desktop and add six image Cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two round chevron icon buttons at the bottom right under the scrolling row of 4.2 cards; the Previous button is disabled at the start.
- **Rendering behaviour:** div.list-nav holds the buttons button.list-previous and button.list-next with aria-controls pointing to the region and data-cmp-interaction previous / next; block class desktop-controls. The nav row sits 1.5rem closer to the cards than the block gap.
- **Publishing behaviour:** Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Business Rules

- Buttons show only where the breakpoint scrolls and the cards overflow.
- Buttons are disabled at the start and end unless Loop is on.
- Scroll step One card (default) moves one card per click.

- Clicks never move focus; the buttons are real buttons with names (WCAG 4.1.2).
- Button clicks are reported in the data layer as interaction previous or next.

Common Authoring Mistakes

Error	Root Cause	Resolution
The buttons are missing on tablet and mobile	They were turned on for desktop only	Turn them on per breakpoint if needed
Previous looks broken at page load	It is disabled at the start by design	Turn Loop on if the row should wrap

Troubleshooting

- **Symptoms:** The buttons don't appear at 1440 px.
- **Cause:** All cards fit the row (data-overflow isn't true) or Desktop display is still Grid.
- **Resolution:** Check Desktop display Horizontal scroll and keep more cards than Desktop items visible (4.2).
- **Verification Steps:** At 1440 px the two buttons show; Next moves one card and enables Previous.

Use Cases: Desktop rails; rails with many cards.

Authoring Guidelines: Layout tab, for a breakpoint with Display = Horizontal scroll: Previous / next buttons on {breakpoint} on. Scroll tab: Scroll step (One card or Viewport) and Loop.

Business Rules: Shown only where that breakpoint scrolls and the cards don't fit. Disabled at the start / end unless Loop is on. Default off on every breakpoint.

Rendering Rules: `div.list-nav > div.list-controls` with two icon buttons (`button.list-previous`, `button.list-next`, chevron-left / chevron-right) named by the placeholders `listPrevious` ("Previous items") and `listNext` ("Next items"), `aria-controls` the region, `data-cmp-interaction previous / next`. Block class `{bp}-controls`.

Responsive Behaviour: Each breakpoint independently; the nav row sits 1.5rem closer to the cards than the block gap.

SEO Impact: None (buttons, not links).

Accessibility Compliance: Real `<button>`s with names (WCAG 4.1.2), `disabled` state at the ends, keyboard operable; clicks never move focus.

Variation 34 — Scroll Indicator

Variation Name: Scroll indicator on desktop, tablet or mobile (`{bp}Indicator`).

Business Purpose: A thin progress bar that shows how far the rail is scrolled (Figma variations 1, 6 and 10 on mobile).

Visual Example:

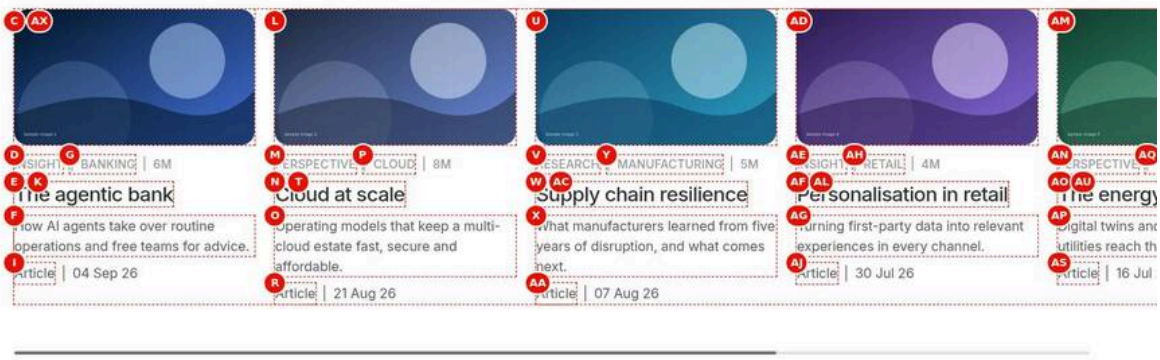

Figure 37: Scroll indicator — At 1440 px a scrolling row of six image cards with 4.2 visible and below it a 4-pixel light grey track with a darker grey thumb at the start whose width shows the visible share; no buttons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-scroll-indicator.jpg)

Screenshot Details — Scroll indicator

Item	Detail
Screenshot Name	`screenshots/cards-scroll-indicator.jpg`
Screenshot Purpose	Scroll indicator
Screen Description	At 1440 px a scrolling row of six image cards with 4.2 visible and below it a 4-pixel light grey track with a darker grey thumb at the start whose width shows the visible share; no buttons.
Business Context	A desktop insights rail where a thin progress bar tells visitors how far they have scrolled (Figma variations 1, 6 and 10).
Author Objective	Set Desktop display Horizontal scroll, turn on Scroll indicator on desktop and add six image Cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Desktop display (Cards › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(B)	Scroll indicator on desktop (Cards › Layout)	On	No	Show the progress bar	—	Boolean; scroll only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Image (Card 1 › Content)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
D	Eyebrow (Card 1 › Content)	Insight	No	Label above the title	1–3 words	None

(BC)	Reading time (Card 6 › Content)	9	No	Minutes after the tags	Digits only (6 shows `6m`)	None
(BD)	Link (Card 6 › Link)	Select the page or enter /en/insights/quantum-readiness	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 4-pixel light grey track under the scrolling cards with a darker grey thumb whose width shows the visible share of the row.
- **Rendering behaviour:** div.list-indicator (aria-hidden, 0.25rem high) holds span.list-indicator-thumb with width max(5rem, visible share), offset by –scroller-thumb-offset as the row scrolls; block class desktop-indicator. It fills the nav row.
- **Publishing behaviour:** Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Business Rules

- Scroll indicator on desktop is off by default; mobile is on by default.
- The indicator shows only where the breakpoint scrolls and the cards overflow.
- It is hidden from assistive technology and isn't a control.
- Combine it with Previous / next buttons for mouse users.

Common Authoring Mistakes

Error	Root Cause	Resolution
The indicator is expected to be draggable	It is decorative only	Turn on Previous / next buttons on desktop for a control
The indicator shows on mobile but not desktop	Only the mobile default is on	Turn on Scroll indicator on desktop

Troubleshooting

- **Symptoms:** The thumb fills the whole track and doesn't move.

- **Cause:** The row barely overflows, so the visible share is almost 100 %.
- **Resolution:** Add cards or reduce Desktop items visible so the row clearly overflows.
- **Verification Steps:** At 1440 px the thumb is shorter than the track and moves while scrolling.

Use Cases: Mobile rails (on by default for mobile).

Authoring Guidelines: Layout tab: Scroll indicator on {breakpoint} (with Display = Horizontal scroll). Default: off on desktop and tablet, on for mobile.

Business Rules: Shown only where the breakpoint scrolls and the cards don't fit.

Rendering Rules: `div.list-indicator` (`aria-hidden="true"`, 0.25rem high, track #e6e6e6) with `span.list-indicator-thumb` (#767676; width `max(5rem, visible share)`, offset by the scroll position via `--scroller-thumb-size` / `--scroller-thumb-offset`). Block class `{bp}-indicator`.

Responsive Behaviour: Per breakpoint; fills the nav row next to the buttons.

SEO Impact: None.

Accessibility Compliance: Decorative (hidden from assistive technology); not a control.

Variation 35 — Fixed Card Width

Variation Name: Card width (px) per breakpoint (`{bp}CardWidth` ≥ 120).

Business Purpose: Cards of a fixed width in a rail instead of a number of visible cards.

Visual Example:

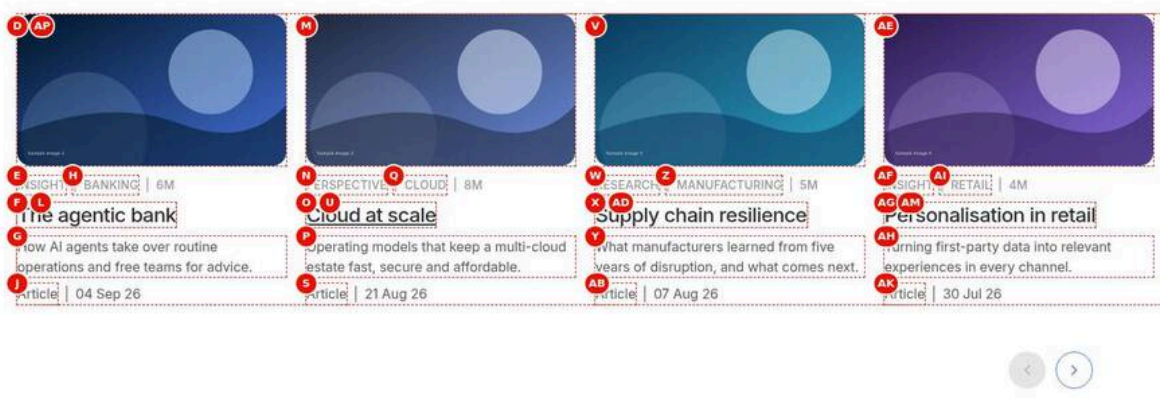

Figure 38: Fixed card width — At 1440 px a scrolling row of fixed 320 px (20rem) image cards, about four visible with the last cut off at the screen edge, and the previous / next buttons below. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-fixed-card-width.jpg)

Screenshot Details — Fixed card width

Item	Detail
Screenshot Name	`screenshots/cards-fixed-card-width.jpg`
Screenshot Purpose	Fixed card width
Screen Description	At 1440 px a scrolling row of fixed 320 px (20rem) image cards, about four visible with the last cut off at the screen edge, and the previous / next buttons below.
Business Context	A desktop rail where each card should keep the same 320 px width regardless of the screen size, as for logos or statistic tiles.

Item	Detail
Author Objective	Set Desktop display Horizontal scroll, Desktop card width 320 px and Previous / next buttons on desktop, and add six image Cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Desktop display (Cards › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(B)	Desktop card width (px) (Cards › Layout)	320	No	Fixed card width instead	0 uses Items visible	Enforced 0–1200; below 120 treated as 0; scroll only
(C)	Previous / next buttons on desktop (Cards › Layout)	On	No	Show the buttons	On for desktop rails	Boolean; scroll only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows

(BC)	Content type (Card 6 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(BD)	Reading time (Card 6 › Content)	9	No	Minutes after the tags	Digits only (6 shows `6m`)	None
(BE)	Link (Card 6 › Link)	Select the page or enter /en/insights/quantum-readiness	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A scrolling row of 320 px (20rem) wide cards on desktop; the number of visible cards depends on the screen width, with the buttons below.
- **Rendering behaviour:** –list-card-width-desktop is set to 20rem (px / 16) and replaces the Items visible calculation from 1200 px; tablet and mobile keep their grids.
- **Publishing behaviour:** Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Business Rules

- Card width accepts 0 to 1200 px; values below 120 count as 0 and Items visible is used.
- Card width applies only where the breakpoint scrolls.
- Each breakpoint has its own card width field.
- With a fixed width the last visible card may be cut at any point.

Common Authoring Mistakes

Error	Root Cause	Resolution
Card width 100 has no effect	Values below 120 are treated as 0	Enter 120 or more
Items visible changes nothing	Card width is set and wins	Set Desktop card width to 0

Troubleshooting

- **Symptoms:** Cards remain 4.2 per row despite the card width.
- **Cause:** The width was entered on Tablet card width instead of Desktop card width.
- **Resolution:** Enter 320 in Desktop card width (px) and 0 in the tablet field.
- **Verification Steps:** Inspect the block style: –list-card-width-desktop: 20rem; each card is 320 px wide.

Use Cases: Statistic cards or logos with a consistent width on all screens.

Authoring Guidelines: Layout tab, Display = Horizontal scroll: {Breakpoint} card width (px), 120–1200. 0 uses Items visible.

Business Rules: Values below 120 are treated as 0 (Items visible); above 1200 are capped.

Rendering Rules: `--list-card-width-{bp}` in rem (px / 16) replaces the Items visible calculation.

Responsive Behaviour: Per breakpoint.

SEO Impact: None.

Accessibility Compliance: As Variation 26.

Variation 36 — Edge "Inside the content width"

Variation Name: Scroll tab: Edge = Inside the content width (`none`); default Cards run to the edge (`bleed`).

Business Purpose: Choose whether a rail runs to the screen edge (Figma) or stops at the content width.

Visual Example:

Figure 39: Scroller inside the content width — One section at 1440 px with two desktop rails of five image cards in a single capture: in the first (bleed) the last visible card is cut by the screen edge; in the second (Inside the content width) it is cut at the section's right padding. Both have previous / next buttons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-edge-none.jpg)

Screenshot Details — Scroller inside the content width

Item	Detail
Screenshot Name	`screenshots/cards-edge-none.jpg`
Screenshot Purpose	Scroller inside the content width
Screen Description	One section at 1440 px with two desktop rails of five image cards in a single capture: in the first (bleed) the last visible card is cut by the screen edge; in the second (Inside the content width) it is cut at the section's right padding. Both have previous / next buttons.
Business Context	A boxed section with a background where a rail that runs to the screen edge looks wrong; two blocks compare the default bleed and the contained version.
Author Objective	Add two Cards blocks with Desktop display Horizontal scroll and buttons and five image Cards each, and set Edge to Inside the content width on the second.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Desktop display (Cards › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(B)	Previous / next buttons on desktop (Cards › Layout)	On	No	Show the buttons	On for desktop rails	Boolean; scroll only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Image (Card 1 › Content)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
D	Eyebrow (Card 1 › Content)	Insight	No	Label above the title	1–3 words	None

—	Note (Preview)	Two Cards blocks in one section: the first with Edge "Cards run to the edge" (default), the second with "Inside the content width"	—	Check on the preview (not stored in the content)	Two Cards blocks in one section: the first with Edge "Cards run to the edge" (default), the second with "Inside the content width"	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The first rail's last visible card is cut by the screen edge (bleed); the second rail stops at the section's right padding, so its last card is cut at the content width.
- **Rendering behaviour:** With bleed (class edge-bleed) the scroller gets a negative right margin of the section padding (5rem desktop, 2.5rem tablet, 1.5rem mobile) and the visible-cards calculation subtracts it; Edge none removes the class. Grids are never bled.
- **Publishing behaviour:** Publish the page, photo-1.svg to photo-5.svg and the five linked insight pages to preview and live; both blocks are on the same page.

Business Rules

- Edge only applies where the breakpoint scrolls.
- The default is Cards run to the edge (bleed), as in the Figma design.
- Use Inside the content width for boxed sections or sections with a background colour.
- Edge is a Scroll tab setting shared by all breakpoints.

Common Authoring Mistakes

Error	Root Cause	Resolution
The rail overflows a coloured section box	Edge left at bleed	Set Edge to Inside the content width
Edge changes nothing	The breakpoint shown is a grid	Check the display of that breakpoint

Troubleshooting

- **Symptoms:** The second rail still runs to the screen edge.

- **Cause:** Edge was set on the first block, not the second.
- **Resolution:** Select the second Cards block and set Edge to Inside the content width.
- **Verification Steps:** Only the first block has the class edge-bleed; the second stops at the content width.

Use Cases: Boxed sections or sections with a background where bleed looks wrong.

Authoring Guidelines: Scroll tab: Edge.

Business Rules: Only applies where the breakpoint scrolls.

Rendering Rules: Bleed: class `edge-bleed`; in scroll mode the scroller gets a negative right margin of the section padding (1.5rem mobile, 2.5rem tablet, 5rem desktop) and the list the same right padding; the visible-cards calculation subtracts it.

Responsive Behaviour: Per breakpoint in scroll mode; grids are never bled.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 37 — Snap Alignment "Center"

Variation Name: Scroll tab: Snap alignment = Center (Scroll snap on).

Business Purpose: Centre the snapped card instead of aligning it left.

Visual Example:

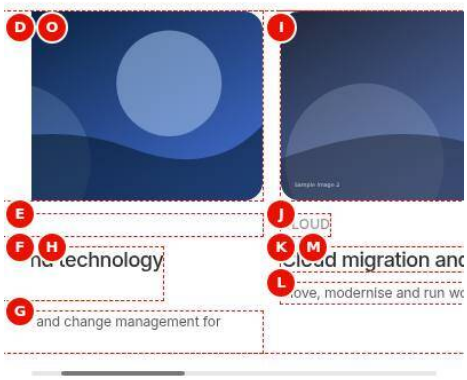

Figure 40: Centre snap alignment — At 402 px a rail of service image cards opened at the second card (Initial item index 1): "Cloud migration and operations" centred, with parts of the first and third cards visible on both sides, and the scroll indicator below. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-snap-center.jpg)

Screenshot Details — Centre snap alignment

Item	Detail
Screenshot Name	`screenshots/cards-snap-center.jpg`
Screenshot Purpose	Centre snap alignment
Screen Description	At 402 px a rail of service image cards opened at the second card (Initial item index 1): "Cloud migration and operations" centred, with parts of the first and third cards visible on both sides, and the scroll indicator below.
Business Context	A services rail on phones where the current card should sit centred with its neighbours peeking on both sides.
Author Objective	Set Mobile display Horizontal scroll, Snap alignment Center and Initial item index 1, and add four service Cards; check at 402 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)

(T)	Eyebrow (Card 4 › Content)	AI and data	No	Label above the title	1–3 words	None
(U)	Title (Card 4 › Content)	AI and data platforms	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
(V)	Description (Card 4 › Content)	Build trusted data foundations and put AI into production.	No	Card text	1–3 sentences; lists and links allowed	None
(W)	Link (Card 4 › Link)	Select the page or enter /en/services/ai	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Screen width (Preview)	402 px (mobile)	—	Check on the preview (not stored in the content)	402 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 402 px the second card ("Cloud migration and operations") is centred with parts of the first and third cards visible on both sides.
- **Rendering behaviour:** Classes snap snap-center give scroll-snap-align center; Initial item index 1 scrolls instantly to the second card once, without moving focus. Snap is suspended while dragging with a mouse.
- **Publishing behaviour:** Publish the page, the four images and the linked service pages (/en/services/consulting, /en/services/cloud, …) to preview and live; check the swipe on a phone.

Business Rules

- Snap alignment is shown only when Scroll snap is on (default).
- Initial item index counts from 0: 1 is the second card.
- Center suits 1.2 to 1.5 visible cards on mobile.
- Screen readers still read the cards from the first.

Common Authoring Mistakes

Error	Root Cause	Resolution
The first card is centred instead of the second	Initial item index set to 0	Enter 1 for the second card
Snap alignment field missing	Scroll snap turned off	Turn Scroll snap on

Troubleshooting

- **Symptoms:** On desktop the setting has no visible effect.
- **Cause:** Only mobile scrolls; desktop and tablet are grids, which ignore snap and initial index.
- **Resolution:** No change needed, or set the other displays to Horizontal scroll.
- **Verification Steps:** At 402 px the second card opens centred.

Use Cases: Mobile rails with 1.2 to 1.5 visible cards.

Authoring Guidelines: Scroll tab: Scroll snap on, Snap alignment = Center. Scroll snap off gives free scrolling.

Business Rules: The alignment field shows only when Scroll snap is on.

Rendering Rules: Classes `snap snap-center`; `scroll-snap-align: center`. Snap is suspended while dragging with a mouse.

Responsive Behaviour: Where a breakpoint scrolls.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 38 — Scroll Step "Viewport"

Variation Name: Scroll tab: Scroll step = Viewport (default One card).

Business Purpose: Page through a rail a screen at a time instead of card by card.

Visual Example:

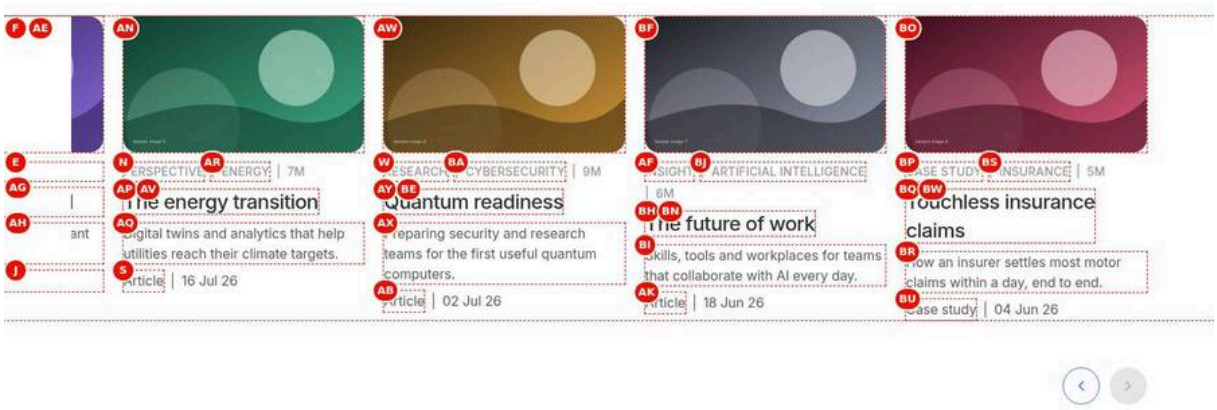

Figure 41: Viewport scroll step — At 1440 px the rail of eight image cards after one click on Next (a single capture, not before and after): the next set of cards fills the view and the Previous button is enabled. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-step-viewport.jpg)

Screenshot Details — Viewport scroll step

Item	Detail
Screenshot Name	`screenshots/cards-step-viewport.jpg`
Screenshot Purpose	Viewport scroll step
Screen Description	At 1440 px the rail of eight image cards after one click on Next (a single capture, not before and after): the next set of cards fills the view and the Previous button is enabled.
Business Context	A long desktop rail of eight insights where visitors page through a whole screen of cards per click instead of one card at a time.
Author Objective	Set Desktop display Horizontal scroll with Previous / next buttons on desktop and Scroll step Viewport, and add eight image Cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Desktop display (Cards › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(B)	Previous / next buttons on desktop (Cards › Layout)	On	No	Show the buttons	On for desktop rails	Boolean; scroll only
(C)	Scroll step (Cards › Scroll)	Viewport	No	Step of buttons and keys	—	one-card, viewport
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(D)	Image (Card 1 › Content)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None

—	Action (Preview)	Click Next once (the next set of cards replaces the visible set)	—	Check on the preview (not stored in the content)	Click Next once (the next set of cards replaces the visible set)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Before and after pressing Next: the visible set of about four cards is replaced by the next set, so the fifth card moves to the left edge.
- **Rendering behaviour:** With Scroll step Viewport the buttons and arrow keys call scrollBy with the scroller's width; One card (default) scrolls to the next card's start. With Reduced motion support on, the scroll is instant for visitors who prefer reduced motion.

- **Publishing behaviour:** Publish the page, photo-1.svg to photo-8.svg and the eight linked insight pages to preview and live.

Business Rules

- Scroll step applies to the previous / next buttons and the arrow keys.
- Viewport suits long rails on desktop; One card is the default.
- The buttons are disabled at the ends unless Loop is on.
- There is no auto-rotation; the rail moves only on visitor action.

Common Authoring Mistakes

Error	Root Cause	Resolution
Next jumps past cards visitors wanted to see	Viewport step on a short rail	Use Scroll step One card for rails of five or six cards
Scroll step has no effect	Previous / next buttons are off and the visitor only swipes	Turn the desktop buttons on; swiping isn't stepped

Troubleshooting

- **Symptoms:** Pressing Next moves only one card.
- **Cause:** Scroll step is still One card (default) on the Scroll tab.
- **Resolution:** Set Scroll step to Viewport and save.
- **Verification Steps:** At 1440 px one click on Next replaces the visible set of cards.

Use Cases: Long rails on desktop.

Authoring Guidelines: Scroll step = Viewport.

Business Rules: Applies to the buttons and the arrow keys.

Rendering Rules: `scrollBy` the scroller's width; One card scrolls to the next card's start.

Responsive Behaviour: Where a breakpoint scrolls.

SEO Impact: None.

Accessibility Compliance: Smooth scrolling is turned off for visitors who prefer reduced motion (Reduced motion support on).

Variation 39 — Loop

Variation Name: Scroll tab: Loop on.

Business Purpose: "Next" at the end returns to the start (and "Previous" at the start goes to the end).

Visual Example:

Figure 42: Loop — At 1440 px the rail of six image cards scrolled to its end ("Quantum readiness" visible at the right) with the Next button still enabled because Loop is on; the capture shows the end state, not the return to the first card. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-loop.jpg)

Screenshot Details — Loop

Item	Detail
Screenshot Name	`screenshots/cards-loop.jpg`
Screenshot Purpose	Loop
Screen Description	At 1440 px the rail of six image cards scrolled to its end ("Quantum readiness" visible at the right) with the Next button still enabled because Loop is on; the capture shows the end state, not the return to the first card.
Business Context	A short desktop rail of six insights that should never dead-end: Next at the last card returns to the first.
Author Objective	Set Desktop display Horizontal scroll with Previous / next buttons on desktop and Loop on, and add six image Cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Desktop display (Cards › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(B)	Previous / next buttons on desktop (Cards › Layout)	On	No	Show the buttons	On for desktop rails	Boolean; scroll only
(C)	Loop (Cards › Scroll)	On	No	Next at the end goes to the start	—	Boolean
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(D)	Image (Card 1 › Content)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None

BE	Link (Card 6 › Link)	Select the page or enter /en/insights/quantum-readiness	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Action (Preview)	Scroll to the last card: Next stays enabled and returns to the first card	—	Check on the preview (not stored in the content)	Scroll to the last card: Next stays enabled and returns to the first card	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At the last card the Next button is still enabled; pressing it scrolls the row back to the first card ("The agentic bank").
- **Rendering behaviour:** With Loop on the scroller jumps to 0 or to the end instead of disabling the buttons; the cards aren't cloned, so the row scrolls back visibly rather than continuing endlessly.
- **Publishing behaviour:** Publish the page, the card images and the linked insight pages to preview (aem.page) and live (aem.live); the scroll behaviour is block configuration and needs no extra publish step.

Business Rules

- With Loop on the buttons are never disabled at the ends.
- Previous at the start goes to the end.
- Loop doesn't auto-rotate: there is no automatic movement (WCAG 2.2.2 not triggered).
- Loop affects only breakpoints that scroll.

Common Authoring Mistakes

Error	Root Cause	Resolution
Visitors expect the rail to rotate by itself	Cards has no auto-rotation by design	Use the Gen Carousel block (6.24) for rotating slides
Next still disabled at the end	Loop wasn't saved	Turn Loop on in the Scroll tab

Troubleshooting

- **Symptoms:** The Next button greys out at the last card.
- **Cause:** Loop is off (default) on the Scroll tab.
- **Resolution:** Turn Loop on and save.
- **Verification Steps:** At the last card Next is enabled and returns to the first card.

Use Cases: Short rails that should never "dead-end".

Authoring Guidelines: Loop on.

Business Rules: The buttons are never disabled at the ends. No auto-rotation.

Rendering Rules: The scroller jumps to 0 or to the end; the cards aren't cloned.

Responsive Behaviour: Where a breakpoint scrolls.

SEO Impact: None.

Accessibility Compliance: No automatic movement (WCAG 2.2.2 not triggered).

Variation 40 — Initial Item

Variation Name: Scroll tab: Initial item index > 0.

Business Purpose: Start a rail at a given card (for example the current year in a timeline-like row).

Visual Example:

Figure 43: Initial item — At 1440 px a rail of six image cards that opens scrolled to its third card, "Supply chain resilience", at the left edge (Initial item index 2), with the Previous button enabled. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-initial-item.jpg)

Screenshot Details — Initial item

Item	Detail
Screenshot Name	`screenshots/cards-initial-item.jpg`
Screenshot Purpose	Initial item

Item	Detail
Screen Description	At 1440 px a rail of six image cards that opens scrolled to its third card, “Supply chain resilience”, at the left edge (Initial item index 2), with the Previous button enabled.
Business Context	A desktop rail of six insights that should open at the most relevant item, the third card, rather than the first.
Author Objective	Set Desktop display Horizontal scroll with Previous / next buttons on desktop and Initial item index 2, and add six image Cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Desktop display (Cards › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(B)	Previous / next buttons on desktop (Cards › Layout)	On	No	Show the buttons	On for desktop rails	Boolean; scroll only
(C)	Initial item index (Cards › Scroll)	2	No	Card shown first	0 = first	Enforced 0–200
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
(D)	Image (Card 1 › Content)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None

(BD)	Reading time (Card 6 › Content)	9	No	Minutes after the tags	Digits only (6 shows 6m)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
BE	Link (Card 6 › Link)	Select the page or enter /en/insights/quantum-readiness	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The rail opens scrolled to its third card ("Supply chain resilience") with the Previous button enabled.
- **Rendering behaviour:** Initial item index 2 calls scrollToItem(2, instant) once, without animation and without moving focus; out-of-range values go to the last card. Grids ignore the setting.
- **Publishing behaviour:** Publish the page, the card images and the linked insight pages to preview (aem.page) and live (aem.live); the scroll behaviour is block configuration and needs no extra publish step.

Business Rules

- The index counts from 0: 2 is the third card.
- The value is limited to 0 to 200.
- Screen readers still read the cards from the first.
- Only breakpoints that scroll apply the initial item.

Common Authoring Mistakes

Error	Root Cause	Resolution
The rail opens at the second card	Index 1 entered for "the second" by counting from 1	Count from 0 (third card = 2)
Nothing happens on tablet	Tablet is a grid	Set Tablet display to Horizontal scroll if needed

Troubleshooting

- **Symptoms:** The rail opens at the last card.
- **Cause:** The index is larger than the number of cards (out of range goes to the last card).
- **Resolution:** Enter an index below the card count, here 2.
- **Verification Steps:** At 1440 px the rail opens with the third card at the left edge and Previous enabled.

Use Cases: Rails where the most relevant card is not the first.

Authoring Guidelines: Initial item index (0 = the first card; 0–200).

Business Rules: Applied once, when the scroller first scrolls; focus isn't moved. Out-of-range values go to the last card.

Rendering Rules: `scrollToItem(index, instant)` without animation.

Responsive Behaviour: Where a breakpoint scrolls; grids ignore it.

SEO Impact: None.

Accessibility Compliance: Screen readers still read the cards from the first.

Variation 41 — Equal Card Height

Variation Name: Layout tab: Equal card height on.

Business Purpose: All grid rows as tall as the tallest card.

Visual Example:

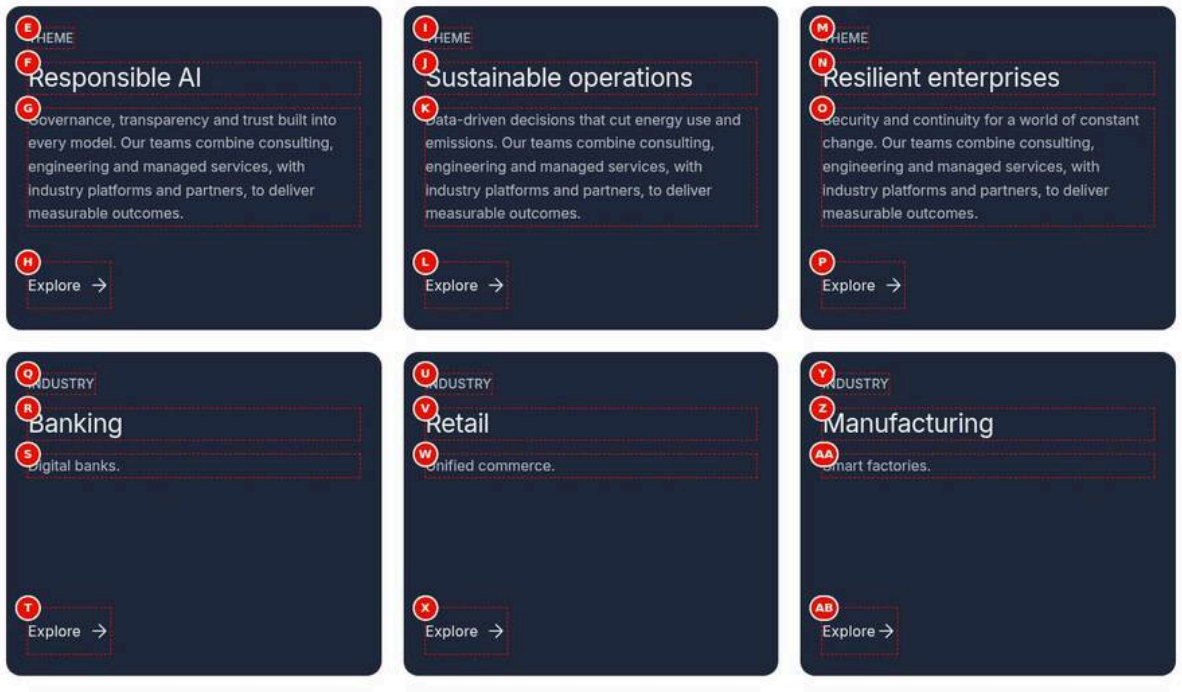

Figure 44: Equal card height — At 1440 px six dark #20293c panels (Panel height Content) in two rows of three with the same height, although the second row ("Banking", "Retail", "Manufacturing", with one-line descriptions) has much shorter texts than the first. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-equal-height.jpg)

Screenshot Details — Equal card height

Item	Detail
Screenshot Name	`screenshots/cards-equal-height.jpg`
Screenshot Purpose	Equal card height
Screen Description	At 1440 px six dark #20293c panels (Panel height Content) in two rows of three with the same height, although the second row ("Banking", "Retail", "Manufacturing", with one-line descriptions) has much shorter texts than the first.
Business Context	A two-row grid of theme and industry panels where the second row's short texts must still match the first row's height.
Author Objective	Set Card style Panel, Panel height Content, Desktop columns 3 and Equal card height on, and add six panel Cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Card style (Cards › Cards)	Panel	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Panel height (Cards › Cards)	Content	No	Shape of coloured cards	Content for long texts	portrait, compact, auto; teaser on
(C)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
(D)	Equal card height (Cards › Layout)	On	No	All rows equally tall	For multi-row grids	Boolean
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
E	Eyebrow (Card 1 › Content)	Theme	No	Label above the title	1–3 words	None
F	Title (Card 1 › Content)	Responsible AI	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
G	Description (Card 1 › Content)	Governance, transparency and trust built into every model. Our teams combine consulting, engineering and managed services, with industry platforms and partners, to deliver measurable outcomes.	No	Card text	1–3 sentences; lists and links allowed	None

J	Title (Card 2 › Content)	Sustainable operations	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
K	Description (Card 2 › Content)	Data-driven decisions that cut energy use and emissions. Our teams combine consulting, engineering and managed services, with industry platforms and part-	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		ners, to deliver measurable outcomes.				
L	Link (Card 2 › Link)	Select the page or enter /en/industries/manufacturing	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
M	Eyebrow (Card 3 › Content)	Theme	No	Label above the title	1–3 words	None
N	Title (Card 3 › Content)	Resilient enterprises	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
O	Description (Card 3 › Content)	Security and continuity for a world of constant change. Our teams combine consulting, engineering and managed services, with industry platforms and partners, to deliver measurable outcomes.	No	Card text	1–3 sentences; lists and links allowed	None
P	Link (Card 3 › Link)	Select the page or enter /en/services/cybersecurity	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
Q	Eyebrow (Card 4 › Content)	Industry	No	Label above the title	1–3 words	None
R	Title (Card 4 › Content)	Banking	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
S	Description (Card 4 › Content)	Digital banks.	No	Card text	1–3 sentences; lists and links allowed	None
T	Link (Card 4 › Link)	Select the page or enter /en/industries/banking	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
U	Eyebrow (Card 5 › Content)	Industry	No	Label above the title	1–3 words	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
V	Title (Card 5 › Content)	Retail	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
W	Description (Card 5 › Content)	Unified commerce.	No	Card text	1–3 sentences; lists and links allowed	None
X	Link (Card 5 › Link)	Select the page or enter /en/industries/retail	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
Y	Eyebrow (Card 6 › Content)	Industry	No	Label above the title	1–3 words	None
Z	Title (Card 6 › Content)	Manufacturing	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
AA	Description (Card 6 › Content)	Smart factories.	No	Card text	1–3 sentences; lists and links allowed	None
AB	Link (Card 6 › Link)	Select the page or enter /en/industries/manufacturing	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two grid rows of three dark panels of the same height, although the second row (Banking, Retail, Manufacturing) has much shorter descriptions.
- **Rendering behaviour:** Class equal-height sets grid-auto-rows 1fr, so every grid row is as tall as the tallest card; with Panel height Content the panels have no fixed shape. It applies to grid modes only.
- **Publishing behaviour:** Publish the page and the six linked pages (/en/services/ai, /en/industries/banking, /en/industries/retail, …) to preview and live.

Business Rules

- Equal card height is off by default.
- It works on grids with several rows; one-row grids already match through Stretch cards to row height.
- Panels show "Explore" by default when linked.
- Panel height Content avoids clipping; Equal card height then aligns the rows.

Common Authoring Mistakes

Error	Root Cause	Resolution
The second row looks empty and tall	Very short texts next to long ones with Equal card height on	Balance the text lengths or turn the option off
Rows still differ in height	Equal card height not saved	Turn it on in the Layout tab

Troubleshooting

- **Symptoms:** At 402 px the panels have different heights.
- **Cause:** On mobile with one column each card is its own row; equal rows then follow the tallest card per row only.
- **Resolution:** No change needed, or shorten the longer descriptions.
- **Verification Steps:** At 1440 px both rows of three panels have the same height.

Use Cases: Grids with several rows of panels.

Authoring Guidelines: Equal card height on.

Business Rules: Default off.

Rendering Rules: Class `equal-height`; `grid-auto-rows: 1fr`.

Responsive Behaviour: In grid modes.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 42 — Cards Not Stretched

Variation Name: Layout tab: Stretch cards to row height off (default on).

Business Purpose: Let each card keep its own height in a row.

Visual Example:

Figure 45: Cards not stretched — At 1440 px three image cards in a 3-column row (“Business and technology consulting”, “Cloud migration and operations”, “Cyber defence and resilience”) of different heights, aligned to the top of the row. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-no-stretch.jpg)

Screenshot Details — Cards not stretched

Item	Detail
Screenshot Name	`screenshots/cards-no-stretch.jpg`
Screenshot Purpose	Cards not stretched
Screen Description	At 1440 px three image cards in a 3-column row (“Business and technology consulting”, “Cloud migration and operations”, “Cyber defence and resilience”) of different heights, aligned to the top of the row.
Business Context	Service cards with very different text lengths where empty space under the shorter cards is unwanted.
Author Objective	Set Desktop columns 3 and turn Stretch cards to row height off, and add three image Cards with eyebrow, title, description and link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
(B)	Stretch cards to row height (Cards › Layout)	Off	No	Cards fill the row height	Keep on	Boolean
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Image (Card 1 › Content)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
D	Eyebrow (Card 1 › Content)	Consulting	No	Label above the title	1–3 words	None
E	Title (Card 1 › Content)	Business and technology consulting	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
F	Description (Card 1 › Content)	Strategy, design and change management for transformation, from the first business case to adoption across the enterprise. Our consultants work with your teams on site.	No	Card text	1–3 sentences; lists and links allowed	None
G	Link (Card 1 › Link)	Select the page or enter /en/services/consulting	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
H	Image (Card 2 › Content)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
I	Eyebrow (Card 2 › Content)	Cloud	No	Label above the title	1–3 words	None
J	Title (Card 2 › Content)	Cloud migration and operations	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
K	Description (Card 2 › Content)	Move and run workloads on any cloud.	No	Card text	1–3 sentences; lists and links allowed	None
L	Link (Card 2 › Link)	Select the page or enter /en/services/cloud	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
M	Image (Card 3 › Content)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
N	Eyebrow (Card 3 › Content)	Security	No	Label above the title	1–3 words	None
O	Title (Card 3 › Content)	Cyber defence and resilience	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
P	Description (Card 3 › Content)	Protect identities, data and operations around the clock.	No	Card text	1–3 sentences; lists and links allowed	None
Q	Link (Card 3 › Link)	Select the page or enter /en/services/cybersecurity	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three image cards of different heights aligned to the top of the row; the shorter cards end after their description.
- **Rendering behaviour:** Without the stretch class, .list-items uses align-items start, so each card keeps its own height in grid and scroll modes. The default (on) stretches the cards to the row height.
- **Publishing behaviour:** Publish the page, photo-1.svg to photo-3.svg and the three linked service pages to preview and live.

Business Rules

- Stretch cards to row height is on by default.
- With stretch on, panel calls to action line up at the bottom; off, they don't.
- The setting applies in grid and scroll modes.
- Image cards keep their image ratio, so image tops still align.

Common Authoring Mistakes

Error	Root Cause	Resolution
Panel Explore links no longer line up	Stretch turned off for coloured cards	Keep stretch on for panels

Error	Root Cause	Resolution
Cards still the same height	Equal card height or stretch still on	Turn Stretch cards to row height off

Troubleshooting

- **Symptoms:** Hover and focus outlines are as tall as the row although stretch is off.
- **Cause:** The change wasn't saved, so the default stretch class is still on the block.
- **Resolution:** Turn Stretch cards to row height off again and wait for the save.
- **Verification Steps:** Inspect the block: no stretch class; cards end after their text.

Use Cases: Image cards with very different text lengths where empty space is unwanted.

Authoring Guidelines: Stretch cards to row height off.

Business Rules: With stretch on (default) the call to action of panels lines up at the bottom.

Rendering Rules: Without the `stretch` class, `.list-items` uses `align-items: start`.

Responsive Behaviour: In grid and scroll modes.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 43 — Unlinked Cards

Variation Name: Cards tab: Link items off, or Cards without a Link.

Business Purpose: Informational cards (for example statistics) that don't navigate.

Visual Example:

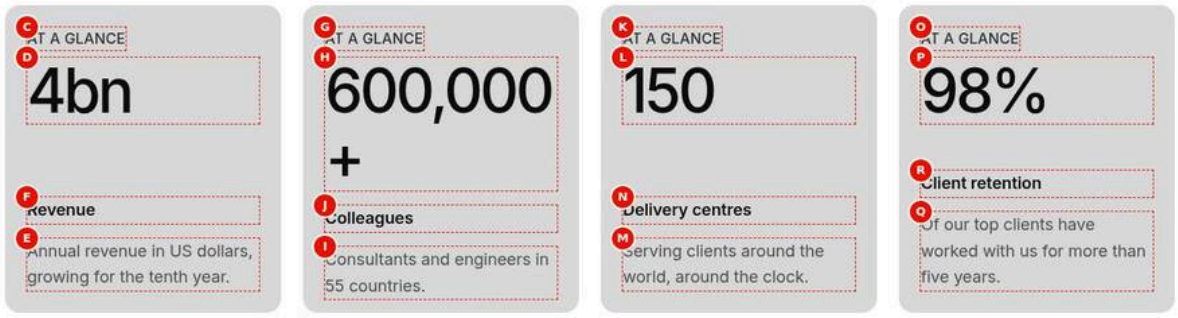

Figure 46: Unlinked cards — At 1440 px four compact (9:10) light grey statistic cards ("4bn", "600,000+", "150", "98%") without any link or button; the pointer rests on the second card and shows no hand cursor or link styling. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-unlinked.jpg)

Screenshot Details — Unlinked cards

Item	Detail
Screenshot Name	`screenshots/cards-unlinked.jpg`
Screenshot Purpose	Unlinked cards
Screen Description	At 1440 px four compact (9:10) light grey statistic cards ("4bn", "600,000+", "150", "98%") without any link or button; the pointer rests on the second card and shows no hand cursor or link styling.
Business Context	Company facts that inform but don't navigate: four statistics on the About page without links or buttons.
Author Objective	Set Card style Statistic and Panel height Compact, and add four statistic Cards without a Link; check that no card is clickable.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Card style (Cards › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(B)	Panel height (Cards › Cards)	Compact	No	Shape of coloured cards	Content for long texts	portrait, compact, auto; teaser on
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
C	Eyebrow (Card 1 › Content)	At a glance	No	Label above the title	1–3 words	None
D	Title (Card 1 › Content)	4bn	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
E	Description (Card 1 › Content)	Annual revenue in US dollars, growing for the tenth year.	No	Card text	1–3 sentences; lists and links allowed	None
F	Label (Card 1 › Content)	Revenue	No	Statistic label above the description	1–3 words	None
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
G	Eyebrow (Card 2 › Content)	At a glance	No	Label above the title	1–3 words	None
H	Title (Card 2 › Content)	600,000+	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
I	Description (Card 2 › Content)	Consultants and engineers in 55 countries.	No	Card text	1–3 sentences; lists and links allowed	None
J	Label (Card 2 › Content)	Colleagues	No	Statistic label above the description	1–3 words	None
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
K	Eyebrow (Card 3 › Content)	At a glance	No	Label above the title	1–3 words	None
L	Title (Card 3 › Content)	150	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
M	Description (Card 3 › Content)	Serving clients around the world, around the clock.	No	Card text	1–3 sentences; lists and links allowed	None
N	Label (Card 3 › Content)	Delivery centres	No	Statistic label above the description	1–3 words	None
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
O	Eyebrow (Card 4 › Content)	At a glance	No	Label above the title	1–3 words	None
P	Title (Card 4 › Content)	98%	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
Q	Description (Card 4 › Content)	Of our top clients have worked with us for more than five years.	No	Card text	1–3 sentences; lists and links allowed	None
R	Label (Card 4 › Content)	Client retention	No	Statistic label above the description	1–3 words	None
—	Action (Preview)	Point at the second card (no pointer, no link)	—	Check on the preview (not stored in the content)	Point at the second card (no pointer, no link)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four compact light grey statistic cards (4bn, 600,000+, 150, 98%) without any link or button; pointing at the second card shows no pointer.
- **Rendering behaviour:** Without a Link no a.list-card-link is rendered, so the title is plain text and no call to action appears, even with a label. Links inside a rich text description would still work.
- **Publishing behaviour:** Publish the page to preview and live; nothing else is referenced. The data layer still lists the cards (without xdm:linkURL) when Analytics is on.

Business Rules

- A card is linked only with a Link and Link items on.
- Link items off unlinks every card of the block; an empty Link unlinks one card.
- Without a link there is no call to action button, even with a label.
- No empty or duplicate links are created (WCAG 2.4.4).

Common Authoring Mistakes

Error	Root Cause	Resolution
A "Read more" label shows no button	The Card has no Link	Add a Link or remove the label
Cards stay clickable after removing links	The link remains in one Card's Link tab	Clear the Link of each Card or turn Link items off

Troubleshooting

- **Symptoms:** One statistic still opens a page when clicked.
- **Cause:** That Card still has a Link value on its Link tab.
- **Resolution:** Clear the Link field of the Card, or turn Link items off on the Cards tab.
- **Verification Steps:** Pointing at each card in preview shows no pointer and no link.

Use Cases: Facts and figures; capability lists without detail pages.

Authoring Guidelines: Link items off (all cards), or leave a Card's Link empty (that card).

Business Rules: Without a link there is no call to action button (even with a label) and the title is plain text. Links inside the rich text description still work.

Rendering Rules: No `a.list-card-link`; rows of links show no arrow.

Responsive Behaviour: Unchanged.

SEO Impact: No links are passed from the cards.

Accessibility Compliance: No empty or duplicate links (WCAG 2.4.4).

Variation 44 — Open Links in a New Tab

Variation Name: Cards tab: Open links in a new tab; Card: Open in a new tab (As the block, Yes, No).

Business Purpose: Open external destinations in a new browser tab.

Visual Example:

Figure 47: New-tab links — At 1440 px three image cards in a 3-column row; the pointer is on the third card's title "Partner summit 2026" (Event, "20 Oct 26"), which links to https://www.example.com/partner-summit in a new tab; the browser status bar isn't part of the page capture. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-new-tab.jpg)

Screenshot Details — New-tab links

Item	Detail
Screenshot Name	`screenshots/cards-new-tab.jpg`
Screenshot Purpose	New-tab links
Screen Description	At 1440 px three image cards in a 3-column row; the pointer is on the third card's title "Partner summit 2026" (Event, "20 Oct 26"), which links to https://www.example.com/partner-summit in a new tab; the browser status bar isn't part of the page capture.
Business Context	An insights row that also promotes an external partner event; only that card should open in a new tab.
Author Objective	Set Desktop columns 3, add two internal image Cards and a third Card with an external https link and Open in a new tab Yes.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
(A)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
B	Image (Card 1 › Content)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
C	Eyebrow (Card 1 › Content)	Insight	No	Label above the title	1–3 words	None
D	Title (Card 1 › Content)	The agentic bank	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
E	Description (Card 1 › Content)	How AI agents take over routine operations and free teams for advice.	No	Card text	1–3 sentences; lists and links allowed	None
F	Tags (Card 1 › Content)	Add the tags tcs-corp:industry/banking	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(G)	Date (Card 1 › Content)	2026-09-04	No	Card date	—	Read as YYYY-MM-DD
H	Content type (Card 1 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(I)	Reading time (Card 1 › Content)	6	No	Minutes after the tags	Digits only (6 shows `6m`)	None
J	Link (Card 1 › Link)	Select the page or enter /en/insights/agentic-bank	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
K	Image (Card 2 › Content)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
L	Eyebrow (Card 2 › Content)	Perspective	No	Label above the title	1–3 words	None
M	Title (Card 2 › Content)	Cloud at scale	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
N	Description (Card 2 › Content)	Operating models that keep a multi-cloud estate fast, secure and affordable.	No	Card text	1–3 sentences; lists and links allowed	None
O	Tags (Card 2 › Content)	Add the tags tcs-corp:topic/cloud	No	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy
(P)	Date (Card 2 › Content)	2026-08-21	No	Card date	—	Read as YYYY-MM-DD
Q	Content type (Card 2 › Content)	Article	No	Meta label; Report in Mixed	Article, Report, …	None
(R)	Reading time (Card 2 › Content)	8	No	Minutes after the tags	Digits only (6 shows 6m)	None
S	Link (Card 2 › Link)	Select the page or enter /en/insights/cloud-at-scale	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
T	Image (Card 3 › Content)	Select the asset photo-6.svg (/en/media/photo-6.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
U	Eyebrow (Card 3 › Content)	Event	No	Label above the title	1–3 words	None
V	Title (Card 3 › Content)	Partner summit 2026	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
W	Description (Card 3 › Content)	Join our partners and clients for two days of talks and demos.	No	Card text	1–3 sentences; lists and links allowed	None
(X)	Date (Card 3 › Content)	2026-10-20	No	Card date	—	Read as YYYY-MM-DD
Y	Content type (Card 3 › Content)	Event	No	Meta label; Report in Mixed	Article, Report, …	None
Z	Link (Card 3 › Link)	Select the page or enter https://www.example.com/partner-summit	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
(AA)	Open in a new tab (Card 3 › Link)	Yes	No	New tab for this card	Yes for external sites	'', true, false
—	Action (Preview)	Point at the third card: the browser status bar shows https://www.example.com/partner-summit; a click opens a new tab	—	Check on the preview (not stored in the content)	Point at the third card: the browser status bar shows https://www.example.com/partner-summit; a click opens a new tab	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three image cards; the third, "Partner summit 2026" (Event, 20 Oct 26), links to https://www.example.com/partner-summit, shown in the browser status bar, and opens a new tab.
- **Rendering behaviour:** The third card's link gets target="_blank", rel="noopener noreferrer", data-external="true" and the hidden text "(opens in a new tab)" (placeholder opensInNewTab); the data layer reports xdm:linkType exit.
- **Publishing behaviour:** Publish the page, the three images and the two internal insight pages to preview and live; the external site needs no publish but should be checked for availability.

Business Rules

- A Card's Open in a new tab (Yes / No) wins over the block's Open links in a new tab.
- Use new tabs only for external destinations.
- The new-tab hint is announced on title links; on call to action buttons the generated aria-label replaces it unless the Accessibility label mentions it.
- Links to another origin are marked data-external="true".

Common Authoring Mistakes

Error	Root Cause	Resolution
All cards open new tabs	Open links in a new tab turned on for the block	Turn the block setting off and set Yes on the external Card only
The external card is missing	The link was entered as "www.example.com" without https:// or with an unsafe scheme	Enter the full https:// URL
The new-tab warning isn't announced on a button	A Call to action label was added without an Accessibility label	Mention the new tab in the Accessibility label

Troubleshooting

- **Symptoms:** The partner summit card opens in the same tab.
- **Cause:** The Card's Open in a new tab is As the block and the block setting is off.
- **Resolution:** Set Open in a new tab to Yes on Card 3's Link tab.
- **Verification Steps:** Inspect the title link: target="_blank" and rel="noopener noreferrer"; a click opens a new tab.

Use Cases: Partner sites, external press articles.

Authoring Guidelines: Block default on the Cards tab; per Card on the Link tab.

Business Rules: A Card's Yes / No wins over the block's setting.

Rendering Rules: `target="_blank" rel="noopener noreferrer"`; a hidden "(opens in a new tab)" text (placeholder `opensInNewTab`) is added to title links. External links get `data-external="true"`; the data layer reports `xdm:linkType: exit`.

Responsive Behaviour: Unchanged.

SEO Impact: None.

Accessibility Compliance: The new-tab hint is announced on title links (WCAG 3.2.5 advisory). Known gap: on call to action buttons the generated `aria-label` ("Explore: {title}") replaces the hidden hint, so the new-tab warning isn't announced there unless an Accessibility label is set that mentions it.

Variation 45 — Cards Made Before (backward compatible)

Variation Name: Cards created with the earlier Block Collection Cards (image + rich text per card, no block settings).

Business Purpose: Existing pages keep working after the redesign.

> **Note:** These blocks were created from the original definition, whose template had no block model (`{ name: Cards, filter: cards }`). Universal Editor keeps the template stored on each instance, so they show no usable block properties, and they now use the new design. Restoring their original look (Classic) and migrating the instances is Phase 0 of `docs/proposals/cards-card-refactoring.md`.

Visual Example:

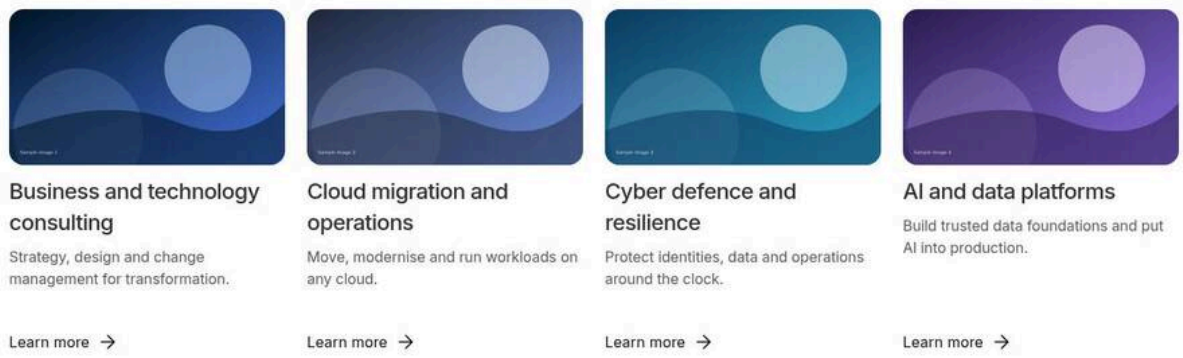

Figure 48: Legacy cards in the new design — At 1440 px an older Cards block (image and rich text cells, no block settings) rendered in the new design as four image cards in a row: each heading (“Business and technology consulting”, …) as the title, the sentence as description and “Learn more” as the call to action text link. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-legacy.jpg)

Screenshot Details — Legacy cards in the new design

Item	Detail
Screenshot Name	`screenshots/cards-legacy.jpg`
Screenshot Purpose	Legacy cards in the new design
Screen Description	At 1440 px an older Cards block (image and rich text cells, no block settings) rendered in the new design as four image cards in a row: each heading (“Business and technology consulting”, …) as the title, the sentence as description and “Learn more” as the call to action text link.
Business Context	An existing services page whose Cards block was created before the redesign (pull request #62): it still renders, in the new design, without author action.
Author Objective	Check how an older Cards block (image and rich text cells, no block settings) renders after the redesign, and recognise it.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Cards (Existing page (Cards block made before the redesign))	No block settings (the default settings apply: image cards, 4 / 4 / 1 columns)	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Image (Card 1 (image | text))	photo-1.svg (/en/media/photo-1.svg), alt text "Consultants in a client workshop"	No	—	—	None
—	Text (Card 1 (image | text))	Heading 3: Business and technology consulting; Strategy, design and change management for transformation. Learn more (link /en/services/consulting, alone in the last paragraph)	—	Check on the preview (not stored in the content)	Heading 3: Business and technology consulting; Strategy, design and change management for transformation. Learn more (link /en/services/consulting, alone in the last paragraph)	—
(C)	Image (Card 2 (image | text))	photo-2.svg (/en/media/photo-2.svg), alt text "Data centre corridor"	No	—	—	None
(D)	Text (Card 2 (image | text))	Heading 3: Cloud migration and operations; Move, modernise and run workloads on any cloud. Learn more (link /en/services/cloud, alone in the last paragraph)	No	—	—	None
(E)	Image (Card 3 (image | text))	photo-3.svg (/en/media/photo-3.svg), alt text "Security operations centre"	No	—	—	None
—	Text (Card 3 (image | text))	Heading 3: Cyber defence and resilience; Protect identities, data and operations around the clock. Learn more (link /en/services/cybersecurity, alone in the last paragraph)	—	Check on the preview (not stored in the content)	Heading 3: Cyber defence and resilience; Protect identities, data and operations around the clock. Learn more (link /en/services/cybersecurity, alone in the last paragraph)	—
(F)	Image (Card 4 (image | text))	photo-4.svg (/en/media/photo-4.svg), alt text "Data scientists at a screen"	No	—	—	None
(G)	Text (Card 4 (image | text))	Heading 3: AI and data platforms; Build trusted data foundations and put AI into production. Learn more (link /en/services/ai, alone in the last paragraph)	No	—	—	None

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four image cards with photo-1.svg to photo-4.svg; each heading ("Business and technology consulting", …) is the card title, the sentence the description and "Learn more" the call to action text link.
- **Rendering behaviour:** Rows of two cells or fewer are read as cards made before: the image cell is the image, the other the rich text; the first heading becomes the title and a link alone in the last paragraph the call to action. Default settings apply (image cards, 4 / 4 / 1 columns).
- **Publishing behaviour:** No author action is needed; the page renders with the new design once the code is live. Republishing the page doesn't restore the original bordered grid (findings F-34 and F-41).

Business Rules

- Older blocks have no block model and aren't key-value blocks, so their settings can't be edited (F-34).
- They render with the new design instead of the original bordered auto-fill grid (F-41); the Classic presentation is planned in docs/proposals/cards-card-refactoring.md (Phase 0).
- In the Card dialog the title stays inside Description (F-42); it still renders as the title.
- To use the new settings, add a new Cards block and move the cards into it.

Common Authoring Mistakes

Error	Root Cause	Resolution
Changing settings has no effect on the block	The block was made before the redesign and has no block model	Replace it with a new Cards block
A card title renders as body text	The title is a plain paragraph, not a heading or bold-only first paragraph	Format the title as a heading in the rich text
"Learn more" renders inside the description	Other text shares the last paragraph with the link	Put the link alone in the last paragraph

Troubleshooting

- **Symptoms:** The properties panel of the block shows no Cards, Layout or Scroll tabs.
- **Cause:** The block was created from the original definition without a block model (Issue 6, F-34).
- **Resolution:** Add a new Cards block, set it up and recreate the cards; the planned AMS migration is in docs/proposals/cards-card-refactoring.md section 7.
- **Verification Steps:** The new block shows all tabs and responds to Card style and Layout changes.

Use Cases: Pages created before this version.

Authoring Guidelines: No action needed. To use the new settings, add a new Cards block and move the cards into it (old blocks are not key-value blocks).

Business Rules: A row with two cells or fewer is read as a card made before: the cell with an image is the image, the other the rich text. In the text the first heading (or a bold first paragraph) becomes the title, a link alone in the last paragraph becomes the call to action (its text the label), the rest is the description. Default settings apply (image cards, 4 / 4 / 1 columns).

Rendering Rules: As Variation 1.

Responsive Behaviour: As Variation 25.

SEO Impact: Headings may change level (card titles are one level below the block title).

Accessibility Compliance: As Variation 1.

Variation 46 — Empty State

Variation Name: Advanced tab: When there are no cards = Hide the block (default) or Show a message.

Business Purpose: Control what visitors see when no card has content.

Visual Example:

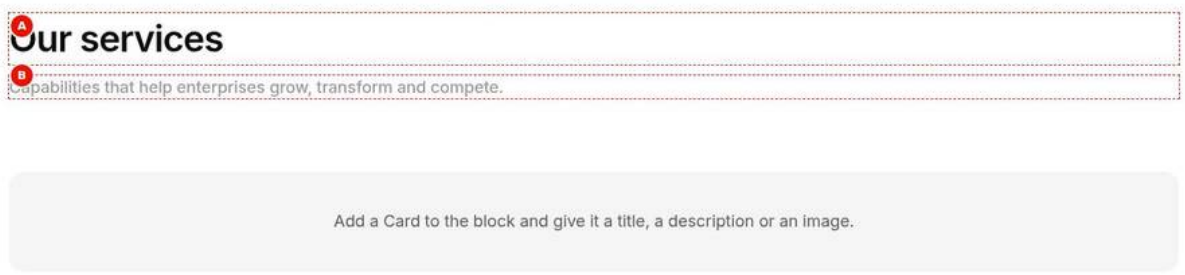

Figure 49: Empty state — In Universal Editor edit mode at 1440 px: the header "Our services" with its description, and below it a grey box with "Add a Card to the block and give it a title, a description or an image." (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/cards-empty-state.jpg)

Screenshot Details — Empty state

Item	Detail
Screenshot Name	`screenshots/cards-empty-state.jpg`
Screenshot Purpose	Empty state
Screen Description	In Universal Editor edit mode at 1440 px: the header "Our services" with its description, and below it a grey box with "Add a Card to the block and give it a title, a description or an image."
Business Context	A newly added services block on a landing page that has its header but no cards yet, as the author sees it in Universal Editor.
Author Objective	Add a Cards block with a title and description but no Card, and check the editor hint and what visitors would see.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
A	Title (Cards › Content)	Our services	No	Heading of the block	Short, descriptive; up to 60 characters (Recommended)	None
B	Description (Cards › Content)	Capabilities that help enterprises grow, transform and compete.	No	Intro text under the title	One or two sentences	None
(C)	Mode (Universal Editor)	Edit (the block has no Card yet: the editor hint shows)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** In Universal Editor: the header "Our services" with its description and below it a grey box with the text "Add a Card to the block and give it a title, a description or an image."
- **Rendering behaviour:** In edit mode the hint (placeholder cardsEditorHint) is always shown in p.list-empty (centred, 2.5rem padding, light grey, radius 1rem). On the page, When there are no cards = Hide the block (default) empties and hides the block and its block wrapper; Show a message shows the Empty message, else listEmpty.
- **Publishing behaviour:** If published like this with the default Hide the block, preview and live show nothing for the block. Add Cards before publishing, or choose Show a message during content build-up.

Business Rules

- A Card counts only with a Title, a Description or an Image.
- The editor hint shows only in edit mode, never to visitors.
- Hide the block (default) also hides the block's wrapper on the page.
- Show a message uses the Empty message, else "There are no items to show." (placeholder listEmpty).

Common Authoring Mistakes

Error	Root Cause	Resolution
The block is missing on aem.page	No card has content and Hide the block is the default	Add Cards with content, or choose Show a message
The hint shows although Cards exist	The Cards have no Title, Description or Image	Fill at least the Title of each Card

Troubleshooting

- **Symptoms:** The section is empty on the preview page while the editor shows the block header.
- **Cause:** No Card has content, so When there are no cards = Hide the block hides the block and its wrapper (Issue 2).
- **Resolution:** Add a Card with a title, or set When there are no cards to Show a message with an Empty message.
- **Verification Steps:** Republish to preview: the cards, or the empty message, appear under "Our services".

Use Cases: Newly added blocks; blocks whose cards were removed.

Authoring Guidelines: Advanced tab: When there are no cards; Empty message (shown when Show a message is chosen).

Business Rules: In the editor (edit mode) the hint is always shown. On the page: Hide removes the block and hides its wrapper; Show a message shows the Empty message, else the placeholder `listEmpty` ("There are no items to show.").

Rendering Rules: `p.list-empty` (centred, 2.5rem padding, light grey background, radius 1rem) after the header.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: A hidden block outputs nothing.

Accessibility Compliance: The message is plain text in reading order.

6.15.4 Authoring Experience

Cards is a container block: the block holds the settings (key-value properties edited in the properties panel) and **Card** items (one per card) that are added, duplicated, deleted and reordered in the content tree. The decorated cards keep the Universal Editor instrumentation of their Card rows, so selecting a card on the canvas selects its Card item; the rich text Description can be edited in place on the canvas.

Figure 50: Universal Editor canvas — An annotated preview in editor mode at 1440 px (not a Universal Editor screenshot): the header "Our services" with description and "View all services" (A to C) and a rail of four service image cards with 3.2 visible (D to J), with buttons and indicator (K). The content tree with its four Card items (L) isn't part of the capture. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/cards-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/cards-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	An annotated preview in editor mode at 1440 px (not a Universal Editor screenshot): the header "Our services" with description and "View all services" (A to C) and a rail of four service image cards with 3.2 visible (D to J), with buttons and indicator (K). The content tree with its four Card items (L) isn't part of the capture.
Business Context	The services rail of a corporate landing page as authors see it in Universal Editor, with the annotations A to L mapping canvas parts to dialog fields.
Author Objective	Build a Cards block with header, a desktop rail (3.2 visible, buttons, indicator) and four service Cards, and locate each field on the canvas.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
—	Title (Cards › Content)	Our services	No	Heading of the block	Short, descriptive; up to 60 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Description (Cards › Content)	Capabilities that help enterprises grow, transform and compete.	No	Intro text under the title	One or two sentences	None
—	CTA link (Cards › Content)	Select the page or enter /en/services	No	Header call to action destination	A page or URL; leave empty for no CTA	None
—	CTA text (Cards › Content)	View all services	No	Header CTA label	Action wording, 2–4 words	None
—	Desktop display (Cards › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
—	Desktop items visible (Cards › Layout)	3.2	No	Cards in view when scrolling	A fraction shows part of the next	Enforced 1–8; scroll only
—	Previous / next buttons on desktop (Cards › Layout)	On	No	Show the buttons	On for desktop rails	Boolean; scroll only
—	Scroll indicator on desktop (Cards › Layout)	On	No	Show the progress bar	—	Boolean; scroll only

—	Link (Card 4 › Link)	Select the page or enter /en/services/ai	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Cards (Universal Editor › Content tree (L))	The block with its four Card items (add, duplicate, delete, drag to reorder); not part of this capture	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** In edit mode: the header "Our services" with description and "View all services" (A to C), about three image cards with images, kickers, titles, descriptions and dates (D to I), the "Learn more" link on the first card (J) and the buttons and indicator (K).
- **Rendering behaviour:** The decorated cards keep the Universal Editor instrumentation of their Card rows, so selecting a card on the canvas selects its Card item and the rich text Description is editable in place. In edit mode clicks select content rather than follow links.
- **Publishing behaviour:** Universal Editor saves each change; Publish sends the page to preview or live. Publish the four images and the linked service pages too; the annotations exist only in this documentation capture.

Business Rules

- Card 1's Call to action label "Learn more" makes a text link its only link, named "Learn more: Business and technology consulting".
- Desktop items visible 3.2 shows about three cards with part of the fourth.

- Only the Description is editable on the canvas; other Card fields are edited in the properties panel.
- Add, duplicate, delete and reorder Cards in the content tree (L).
- Card 1's Image alt text "Consultants in a client workshop" is used as the image alt.

Common Authoring Mistakes

Error	Root Cause	Resolution
The + of the content tree doesn't offer Card	A Card was selected instead of the Cards block	Select the Cards block itself, then use + (Issue 11)
Clicking a card on the canvas doesn't open the page	Edit mode selects content	Switch to Preview mode to test links
Typing in the canvas title doesn't change it	Only the Description is editable in place	Edit the Title in the properties panel

Troubleshooting

- **Symptoms:** Selecting a card on the canvas selects the whole Cards block instead of the Card.
- **Cause:** The block was made before the redesign or the page uses outdated component definitions.
- **Resolution:** Compare with a new Cards block on a test page; escalate to L3 with the page path if a new block behaves the same (O-20).
- **Verification Steps:** Clicking a card selects its Card item in the content tree and opens its properties.

Annotations

- A = Block title (Content tab: Title, rendered in the Heading type)
- B = Block description (Content tab: Description)
- C = Header call to action (Content tab: CTA link, CTA text, CTA style)
- D = A Card item on the canvas (selecting it selects the Card in the content tree)
- E = Card image (Card, Content tab: Image, Image alt text)
- F = Card kicker: eyebrow, tags and reading time (Card: Eyebrow, Tags, Reading time)
- G = Card title (Card: Title; the link when there is no call to action)
- H = Card description, rich text editable in place (Card: Description)
- I = Card meta row: content type and date (Card: Content type, Date)
- J = Card call to action (Card, Link tab: Call to action label, Link)
- K = Previous / next buttons and scroll indicator (Layout tab, per breakpoint, in scroll mode)
- L = Content tree: the Cards block with its Card items (add, duplicate, delete, drag to reorder)

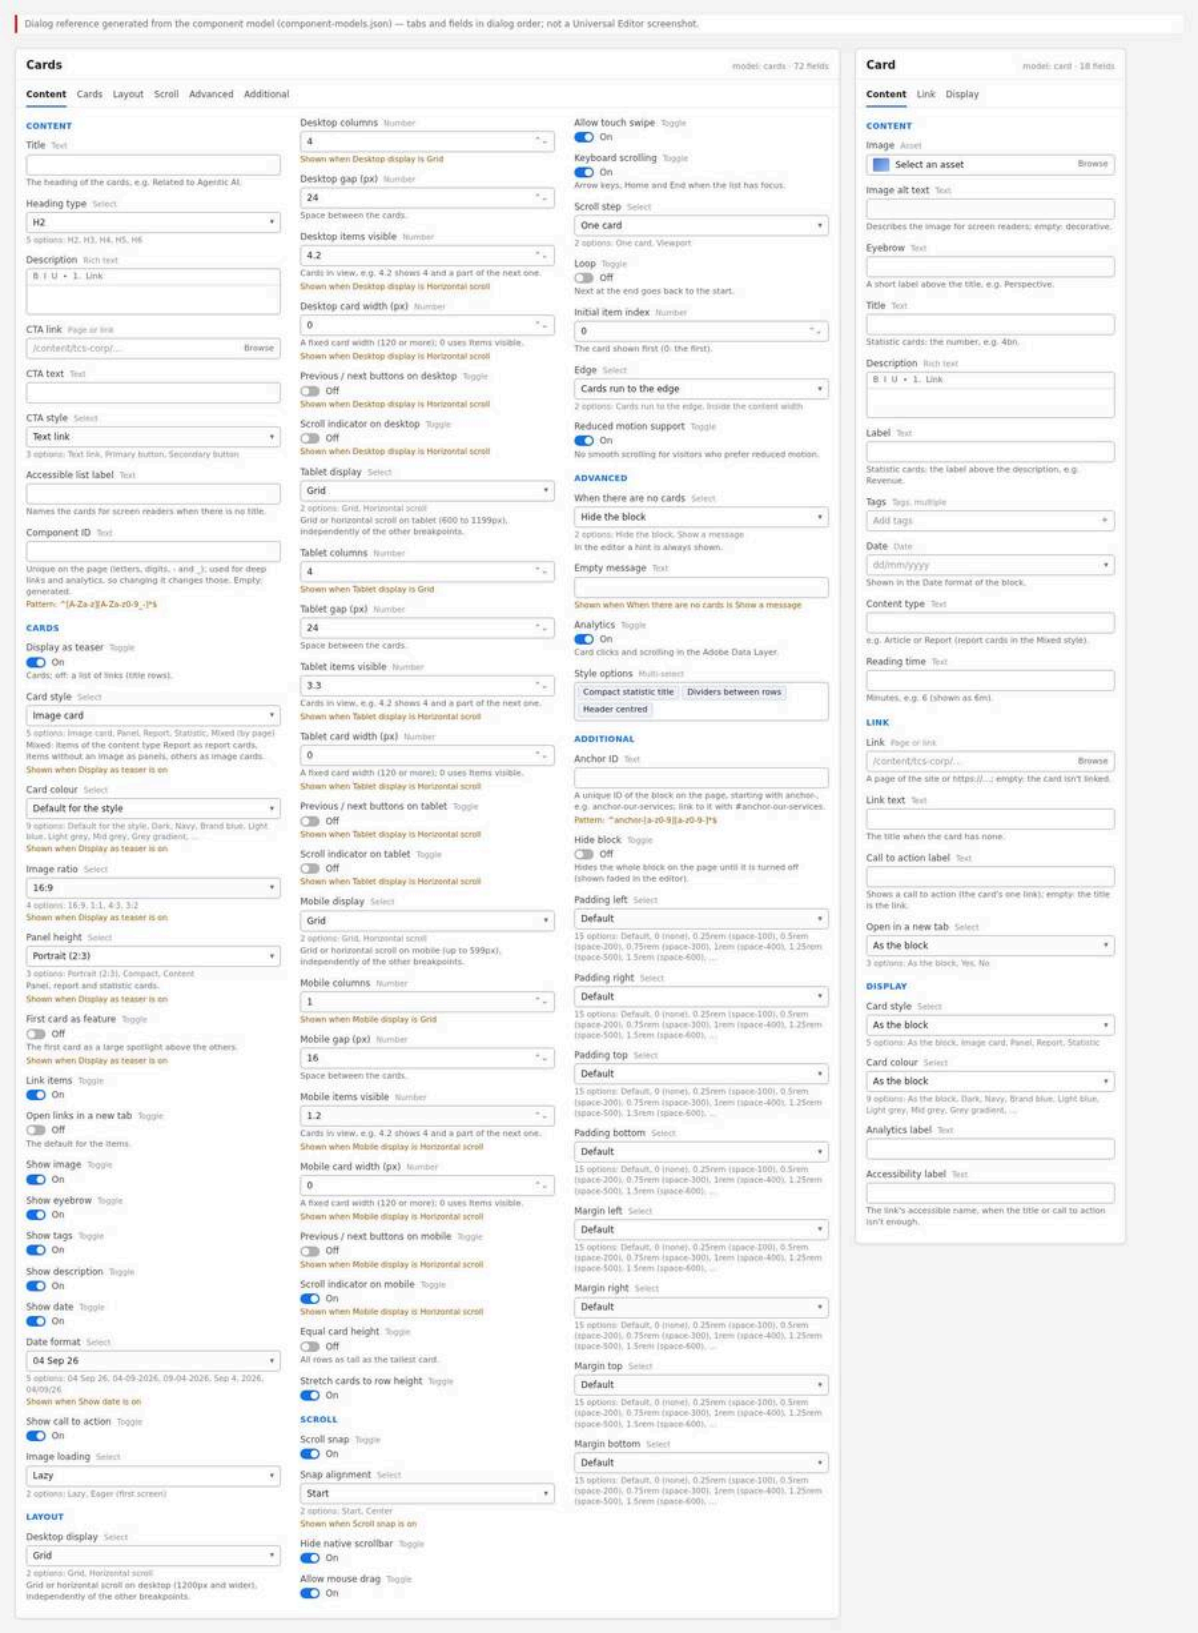

Figure 51: Properties panel — The Universal Editor properties panel of a selected Cards block showing the tabs Content, Cards, Layout, Scroll, Advanced and Additional, with the Cards tab open (Display as teaser, Card style, Card colour, Image ratio, Panel height, First card as feature, the Show switches, Date format, Image loading). (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/cards-properties-panel.jpg)

Block tabs (Cards)

- **Content:** Title; Heading type (H2–H6, default H2); Description (rich text); CTA link; CTA text; CTA style (Text link, Primary button, Secondary button); Accessible list label; Component ID (validated: starts with a letter, then letters, digits, - and _).
- **Cards:** Display as teaser (on: cards; off: rows of links); Card style (Image card, Panel, Report, Statistic, Mixed); Card colour (Default for the style, Dark, Navy, Brand blue, Light blue, Light grey, Mid grey, Grey gradient, Image background); Image ratio (16:9, 1:1, 4:3, 3:2); Panel height (Portrait 2:3, Compact, Content); First card as feature — these five are shown only when Display as teaser is on; Link items; Open links in a new tab; Show image; Show eyebrow; Show tags; Show description; Show date; Date format (shown when Show date is on); Show call to action; Image loading (Lazy, Eager).
- **Layout:** for Desktop, Tablet and Mobile: display (Grid, Horizontal scroll); columns (grid only); gap (px); items visible, card width (px), previous / next buttons, scroll indicator (scroll only); then Equal card height and Stretch cards to row height.
- **Scroll:** Scroll snap; Snap alignment (when snap is on); Hide native scrollbar; Allow mouse drag; Allow touch swipe; Keyboard scrolling; Scroll step (One card, Viewport); Loop; Initial item index; Edge (Cards run to the edge, Inside the content width); Reduced motion support.
- **Advanced:** When there are no cards (Hide the block, Show a message); Empty message (when Show a message); Analytics; Style options (Compact statistic title, Dividers between rows, Header centred).
- **Additional:** Anchor ID; Hide block; Padding left / right / top / bottom; Margin left / right / top / bottom (spacing tokens 0 to 3000).

Item tabs (Card)

- **Content:** Image; Image alt text; Eyebrow; Title; Description (rich text); Label; Tags (multi); Date; Content type; Reading time.
- **Link:** Link; Link text; Call to action label; Open in a new tab (As the block, Yes, No).
- **Display:** Card style (As the block, Image card, Panel, Report, Statistic); Card colour (As the block, or a colour); Analytics label (at most 120 characters); Accessibility label.

6.15.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites, select the page (for example `/content/tcs-corp/us/en/...`) and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders in the editor canvas with the content tree available.

Steps — Open the page: The Sites console with the page selected and the Edit action highlighted, then the page open in Universal Editor.

Step	Where	Field / control	Value / action
1	AEM Sites console	Page	Select the page, e.g. /content/tcs-corp/us/en/about
2	AEM Sites console › Action bar	Edit	Click (the page opens in Universal Editor)

Step 2 — Add the Cards block to a section

Action: Select the section in the content tree (or on the canvas), choose Add (+) and pick **Cards** from the component list.

Expected Result: An empty Cards block is inserted with the default settings; in edit mode the hint "Add a Card to the block and give it a title, a description or an image." is shown.

Steps — Add the block: The add-component menu of a section with Cards highlighted, and the new empty Cards block with the editor hint.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section
2	Section › Add (+)	Component	Cards
3	Canvas	Result	An empty Cards block with the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill the Content tab

Action: With the block selected, open the properties panel, Content tab: enter the Title, choose the Heading type (H2 for a top-level section, H3 inside a section that already has an H2), enter the Description, and optionally the CTA link, CTA text and CTA style. If there is no title, enter an Accessible list label. Leave Component ID empty unless analytics or deep links need a fixed name.

Expected Result: The header shows the title, description and CTA.

Steps — Content tab: The Content tab filled with title "Our services", heading type H2, a description and a "View all services" CTA, and the header updated on the canvas.

Step	Where	Field / control	Value / action
1	Cards › Content	Title	Our services
2	Cards › Content	Heading type	H2
3	Cards › Content	Description	Capabilities that help enterprises grow, transform and compete.
4	Cards › Content	CTA link	Select the page or enter /en/services
5	Cards › Content	CTA text	View all services
6	Cards › Content	CTA style	Text link

Step 4 — Set the Cards tab

Action: Choose Display as teaser (cards) or turn it off (rows of links); choose the Card style and Card colour, Image ratio, Panel height and First card as feature; set Link items, Open links in a new tab, the Show switches, Date format and Image loading (Eager only when the block is on the first screen of the page).

Expected Result: The canvas re-renders with the chosen card style.

Steps — Cards tab: The Cards tab with Card style Statistic and Card colour Light grey selected.

Step	Where	Field / control	Value / action
1	Cards › Cards	Display as teaser	On (default)
2	Cards › Cards	Card style	Statistic
3	Cards › Cards	Card colour	Light grey

Step 5 — Set the Layout tab

Action: For Desktop, Tablet and Mobile choose Grid (and the columns) or Horizontal scroll (Items visible or Card width, Previous / next buttons, Scroll indicator), and the gaps; set Equal card height and Stretch cards to row height.

Expected Result: The canvas shows the layout of the editor's current width; resize the editor's device preview to check the other breakpoints.

Steps — Layout tab: The Layout tab with Desktop display Grid (3 columns), Tablet display Grid (2 columns) and Mobile display Horizontal scroll (1.2 items visible, scroll indicator on).

Step	Where	Field / control	Value / action
1	Cards › Layout	Desktop display	Grid
2	Cards › Layout	Desktop columns	3
3	Cards › Layout	Tablet display	Grid
4	Cards › Layout	Tablet columns	2
5	Cards › Layout	Mobile display	Horizontal scroll
6	Cards › Layout	Mobile items visible	1.2 (default)
7	Cards › Layout	Scroll indicator on mobile	On (default)

Step 6 — Set the Scroll tab (only for scrolling breakpoints)

Action: Adjust Scroll snap, Snap alignment, Hide native scrollbar, Allow mouse drag, Allow touch swipe, Keyboard scrolling, Scroll step, Loop, Initial item index, Edge and Reduced motion support. The defaults suit most rails.

Expected Result: Scrolling behaviour changes where a breakpoint scrolls; grids are not affected.

Steps — Scroll tab: The Scroll tab with the default values (snap on, start, scrollbar hidden, drag, swipe and keyboard on, one card, loop off, index 0, bleed, reduced motion on).

Step	Where	Field / control	Value / action
1	Cards › Scroll	Scroll snap; Snap alignment	On; Start (defaults)
2	Cards › Scroll	Hide native scrollbar	On (default)
3	Cards › Scroll	Allow mouse drag; Allow touch swipe; Keyboard scrolling	On; On; On (defaults)
4	Cards › Scroll	Scroll step	One card (default)
5	Cards › Scroll	Loop	Off (default)
6	Cards › Scroll	Initial item index	0 (default)
7	Cards › Scroll	Edge	Cards run to the edge (default)
8	Cards › Scroll	Reduced motion support	On (default)

Step 7 — Set the Advanced tab

Action: Choose When there are no cards (Hide the block is the default) and the Empty message; keep Analytics on; add Style options (Compact statistic title, Dividers between rows, Header centred) if the design requires them.

Expected Result: The style options apply on the canvas.

Steps — Advanced tab: The Advanced tab with Style options "Header centred" selected.

Step	Where	Field / control	Value / action
1	Cards › Advanced	When there are no cards	Hide the block (default)
2	Cards › Advanced	Analytics	On (default)

Step	Where	Field / control	Value / action
3	Cards › Advanced	Style options	Header centred

Step 8 — Set the Additional tab

Action: Optionally enter an Anchor ID (`anchor-…`), and padding or margin values from the spacing scale. Leave Hide block off.

Expected Result: The block's spacing changes; the anchor makes `#anchor-…` links scroll to the block.

Steps — Additional tab: The Additional tab with Anchor ID "anchor-our-services" and Margin top "mt-1000".

Step	Where	Field / control	Value / action
1	Cards › Additional	Anchor ID	anchor-our-services
2	Cards › Additional	Hide block	Off (default)
3	Cards › Additional	Margin top	2.5rem (space-1000)

Step 9 — Add a Card

Action: In the content tree, select the Cards block, choose Add (+) and pick **Card**.

Expected Result: A new Card item appears in the tree; it isn't shown on the canvas until it has a title, a description or an image.

Steps — Add a Card: The content tree with the Cards block expanded and the add menu offering Card.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Cards	Select the block and expand it
2	Content tree › Cards › Add (+)	Item	Card
3	Content tree	Result	Card appears under Cards (shown on the canvas once it has a title, a description or an image)

Step 10 — Fill the Card's Content tab

Action: Select an Image from AEM Assets and enter the Image alt text (empty for a decorative image); enter Eyebrow, Title (for statistic cards: the number), Description (rich text), Label (statistic cards), Tags, Date, Content type (e.g. Report for report cards in Mixed) and Reading time (minutes, e.g. `6`).

Expected Result: The card renders with its content.

Steps — Card Content tab: The Card's Content tab filled in and the matching image card on the canvas.

Step	Where	Field / control	Value / action
1	Card 1 › Content	Image	Select the asset photo-1.svg (/en/media/photo-1.svg)
2	Card 1 › Content	Image alt text	Consultants in a client workshop
3	Card 1 › Content	Eyebrow	Consulting
4	Card 1 › Content	Title	Business and technology consulting
5	Card 1 › Content	Description	Strategy, design and change management for transformation.
6	Card 1 › Content	Tags	Add the tag tcs-corp:service/consulting

Step	Where	Field / control	Value / action
7	Card 1 › Content	Date	2026-09-04
8	Card 1 › Content	Reading time	6

Step 11 — Fill the Card's Link tab

Action: Choose the Link (a page of the site or an `https://…` URL; empty for an unlinked card), the Link text (only used as title when the card has none), the Call to action label (to show a button) and Open in a new tab.

Expected Result: The card's title (or its call to action) becomes the link.

Steps — Card Link tab: The Link tab with a page selected and Call to action label "Learn more", and the card showing the button.

Step	Where	Field / control	Value / action
1	Card 1 › Link	Link	Select the page or enter /en/services/consulting
2	Card 1 › Link	Call to action label	Learn more
3	Card 1 › Link	Open in a new tab	As the block (default)

Step 12 — Fill the Card's Display tab

Action: Optionally override the Card style and Card colour for this card, and enter an Analytics label and an Accessibility label.

Expected Result: The card uses its own style and colour.

Steps — Card Display tab: The Display tab with Card colour Brand blue; the card on the canvas turns brand blue.

Step	Where	Field / control	Value / action
1	Card 1 › Display	Card style	As the block (default)
2	Card 1 › Display	Card colour	Brand blue
3	Canvas	Result	The card turns brand blue

Step 13 — Add, duplicate and reorder the cards

Action: Repeat Steps 9–12, or duplicate a Card in the content tree and change it; drag the Cards in the tree to reorder them.

Expected Result: The cards show in the authored order.

Steps — Reorder cards: A Card being dragged to a new position in the content tree.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Card 2 › Duplicate	Click (a copy is added below Card 2); change its fields
2	Universal Editor › Content tree	Card 3	Drag above Card 1 and drop
3	Canvas	Result	The cards show in the new order

Step 14 — Preview

Action: Switch Universal Editor to Preview mode, then use the device sizes (desktop, tablet, mobile); publish to Preview for a review on `aem.page`.

Expected Result: Links work, scrollers scroll, the layout matches the design at every breakpoint.

Steps — Preview: The page in Universal Editor preview mode at mobile width with the cards in a scroller.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	Universal Editor toolbar	Device	Mobile
3	Canvas	Cards	Swipe the scroller; check the links and the scroll indicator
4	Universal Editor toolbar	Publish	Publish to Preview (review on aem.page)

Step 15 — Validate

Action: Run the Validation Process checklist below.

Expected Result: All checks pass.

Steps — Validate: The preview page with the browser's accessibility inspector showing the cards list region and its name.

Step	Where	Field / control	Value / action
1	Preview page (aem.page)	Browser developer tools › Accessibility	Select the cards list
2	Accessibility tree	Role and name	region "Our services" (named by the block title)
3	Validation Process checklist	Each item	Check and tick

Step 16 — Publish

Action: Publish the page (and new assets) to Live from Universal Editor or the Sites console.

Expected Result: The cards are visible on `https://main--tcs-corp--sradha-tcs.aem.live/{path}`.

Steps — Publish: The Universal Editor publish dialog with the page and its referenced images selected.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Publish to Live
2	Publish dialog	Page and references	Keep the page and its referenced images selected
3	Publish dialog	Publish	Confirm

Preview Process

1. Universal Editor saves each field change automatically.
2. Use Preview mode in Universal Editor to try links, scrolling, buttons and keyboard (in edit mode clicks select content).
3. Publish to Preview and review `https://main--tcs-corp--sradha-tcs.aem.page/{path}`.
4. Check desktop (1440 px), tablet (1024 px and 768 px) and mobile (402 px or 375 px).

Publishing Process

1. Confirm the Validation Process checklist.
2. Publish the page to Live from Universal Editor or the Sites console, with the referenced images (and any linked PDF documents).
3. Pages linked from the cards must be published too (otherwise the links lead to the 404 page).
4. Open the live URL and reload without cache to confirm.

Validation Process

- ☐ Every card has a title (or a description / image) and shows as intended; no card is missing (cards without content or with a `javascript:` / `data:` link are dropped).
- ☐ The card style and colours match the design; text on coloured cards is readable.
- ☐ Statistic cards: Title holds the number, Label and Description explain it.
- ☐ Report cards: Content type and date in the kicker; the Download link points to the file.
- ☐ Each linked card has exactly one link; calls to action have meaningful labels.
- ☐ New-tab cards open a new tab; external links work.
- ☐ Images have alt text when they carry meaning; decorative ones have it empty.
- ☐ The block title's heading level fits the page outline (card titles are one level below).
- ☐ Desktop, tablet and mobile show the intended grid or scroller; scroll buttons and the indicator appear only where the cards don't fit.
- ☐ Panels with Portrait or Compact height don't clip text.
- ☐ Dates show in the chosen format; tags show their taxonomy labels (not IDs).
- ☐ Anchor ID (if any) is unique; Hide block is off.
- ☐ With Analytics on, `window.adobeDataLayer` contains the block and its cards (preview page, browser console).

Rollback Process

1. Restore the previous page version in AEM (Versions / Timeline) or undo in Universal Editor.
2. Publish the restored version.
3. Revert or replace changed assets in AEM Assets and republish them.
4. Emergency: turn Hide block on (Additional tab) and publish; the block disappears until fixed.
5. Code regressions: the development team reverts the commit on `main` (`blocks/cards/*` or the shared `decorators/card-list-decorator.js`, `utils/card-list-config.js`, `styles/card-list.css` — which also affect the List block).

The walkthroughs below repeat the steps above for each variation of chapter 6.15.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Image Card (default)

Reproduces the screenshot `screenshots/cards-image-card.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 4 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (A) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (B) = Insight; **Title** (C) = The agentic bank; **Description** (D) = How AI agents take over routine operations and free teams for advice; **Tags** (E) = Add the tags tcs-corp:industry/banking; **Date** (F) = 2026-09-04; **Content type** (G) = Article; **Reading time** (H) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 5 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (I) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title "The agentic bank" becomes the card's only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 6 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 7 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (J) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (K) = Perspective; **Title** (L) = Cloud at scale; **Description** (M) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (N) = Add the tags tcs-corp:topic/cloud; **Date** (O) = 2026-08-21; **Content type** (P) = Article; **Reading time** (Q) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker "Perspective", "Cloud" and "8m", the title "Cloud at scale" and the description, then the meta row "Article" and "21 Aug 26".

Step 8 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (R) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title "Cloud at scale" becomes the card's only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 9 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 10 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (S) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (T) = Research; **Title** (U) = Supply chain resilience; **Description** (V) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (W) = Add the tags tcs-corp:industry/manufacturing; **Date** (X) = 2026-08-07; **Content type** (Y) = Article; **Reading time** (Z) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker "Research", "Manufacturing" and "5m", the title "Supply chain resilience" and the description, then the meta row "Article" and "07 Aug 26".

Step 11 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AA) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title “Supply chain resilience” becomes the card’s only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 12 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 13 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AB) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AC) = Insight; **Title** (AD) = Personalisation in retail; **Description** (AE) = Turning first-party data into relevant experiences in every channel; **Tags** (AF) = Add the tags tcs-corp:industry/retail; **Date** (AG) = 2026-07-30; **Content type** (AH) = Article; **Reading time** (AI) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker “Insight”, “Retail” and “4m”, the title “Personalisation in retail” and the description, then the meta row “Article” and “30 Jul 26”.

Step 14 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AJ) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title “Personalisation in retail” becomes the card’s only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 15 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four image cards in a row: 16:9 images with 1rem rounded corners on a #d9d9d9 placeholder, an uppercase grey kicker such as “Insight”, “Banking”, “6m”, the title, a two-line description and the meta row “Article” with “04 Sep 26”.

Step 16 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; publish the assets photo-1.svg to photo-4.svg and the four linked insight pages first. Tag labels come from /en/taxonomy.json, which is published on its own.

Step 17 — Verify

Action: On the live page check: The kicker of Card 1 reads “Insight”, “Banking”, “6m” in preview.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Panel Card

Reproduces the screenshot `screenshots/cards-panel-card.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Panel.

Expected Result: With Card style Panel the canvas switches the cards to dark coloured panels.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (B) = 3.

Expected Result: With Desktop columns 3 the desktop grid has three columns, so the three panels fill one row.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = Theme; **Title** (D) = Responsible AI; **Description** (E) = Governance, transparency and trust built into every model.

Expected Result: Card 1 renders as a 2:3 portrait panel on dark navy-grey (#20293c) with the kicker "Theme", the title "Responsible AI" and the description in muted text.

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (F) = Select the page or enter /en/services/ai.

Expected Result: An "Explore" text link appears at the bottom of the panel and becomes the card's only link, to /en/services/ai.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (G) = Theme; **Title** (H) = Sustainable operations; **Description** (I) = Data-driven decisions that cut energy use and emissions.

Expected Result: Card 2 renders as a 2:3 portrait panel on dark navy-grey (#20293c) with the kicker "Theme", the title "Sustainable operations" and the description in muted text.

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (J) = Select the page or enter /en/industries/manufacturing.

Expected Result: An "Explore" text link appears at the bottom of the panel and becomes the card's only link, to /en/industries/manufacturing.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (K) = Theme; **Title** (L) = Resilient enterprises; **Description** (M) = Security and continuity for a world of constant change.

Expected Result: Card 3 renders as a 2:3 portrait panel on dark navy-grey (#20293c) with the kicker "Theme", the title "Resilient enterprises" and the description in muted text.

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (N) = Select the page or enter /en/services/cybersecurity.

Expected Result: An "Explore" text link appears at the bottom of the panel and becomes the card's only link, to /en/services/cybersecurity.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three tall 2:3 panels on dark navy-grey #20293c with a small light kicker "Theme", a large light title such as "Responsible AI", a muted description and an "Explore" text link at the bottom.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page to preview, then live; the three linked pages (/en/services/ai, /en/industries/manufacturing, /en/services/cybersecurity) must be published too. The "Explore" label comes from the en placeholders sheet.

Step 16 — Verify

Action: On the live page check: The panel shows "Explore" and the whole panel opens the page in preview.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Report Card

Reproduces the screenshot `screenshots/cards-report-card.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Report.

Expected Result: With Card style Report the cards turn into tall cards on the grey gradient.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (B) = 3.

Expected Result: With Desktop columns 3 the three report cards fill one desktop row.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (C) = State of AI 2026; **Description** (D) = A survey of 1,200 executives on AI adoption, value and risk; **Date** (E) = 2026-09-04; **Content type** (F) = Report.

Expected Result: Card 1 renders as a report card on grey gradient with the kicker "Report" and "04 Sep 26", the title "State of AI 2026" and the description.

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (G) = Select the page or enter /en/insights/state-of-ai-2026.

Expected Result: A "Download" outlined (secondary) button appears at the bottom and becomes the card's only link, to /en/insights/state-of-ai-2026.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (H) = Cloud value index; **Description** (I) = Where cloud investments pay off, sector by sector; **Date** (J) = 2026-07-15; **Content type** (K) = Report.

Expected Result: Card 2 renders as a report card on grey gradient with the kicker "Report" and "15 Jul 26", the title "Cloud value index" and the description.

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (L) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: A "Download" outlined (secondary) button appears at the bottom and becomes the card's only link, to /en/insights/cloud-at-scale.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (M) = Supply chain outlook; **Description** (N) = Risks and priorities for global manufacturers in the next three years; **Date** (O) = 2026-05-28; **Content type** (P) = Report.

Expected Result: Card 3 renders as a report card on grey gradient with the kicker “Report” and “28 May 26”, the title “Supply chain outlook” and the description.

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (Q) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: A “Download” outlined (secondary) button appears at the bottom and becomes the card’s only link, to /en/insights/supply-chain-resilience.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three tall cards on the light blue-grey to warm grey gradient with dark text, the kicker “Report” and the date (04 Sep 26), a large title, the description and an outlined “Download” button at the bottom.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and the linked report pages (or PDF assets in AEM Assets) to preview and live; a link to an unpublished asset or page ends on the 404 page.

Step 16 — Verify

Action: On the live page check: Click each Download button on aem.live; the report opens with HTTP 200.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Statistic Card

Reproduces the screenshot `screenshots/cards-statistic-card.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint “Add a Card to the block and give it a title, a description or an image.”

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Statistic.

Expected Result: With Card style Statistic the cards become light grey tiles with a large number area.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = At a glance; **Title** (C) = 4bn; **Description** (D) = Annual revenue in US dollars, growing for the tenth year; **Label** (E) = Revenue.

Expected Result: Card 1 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "4bn" in large type, and the label "Revenue" with the description at the bottom.

Step 6 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 7 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (F) = At a glance; **Title** (G) = 600,000+; **Description** (H) = Consultants and engineers in 55 countries; **Label** (I) = Colleagues.

Expected Result: Card 2 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "600,000+" in large type, and the label "Colleagues" with the description at the bottom.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (J) = At a glance; **Title** (K) = 150; **Description** (L) = Serving clients around the world, around the clock; **Label** (M) = Delivery centres.

Expected Result: Card 3 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "150" in large type, and the label "Delivery centres" with the description at the bottom.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (N) = At a glance; **Title** (O) = 98%; **Description** (P) = Of our top clients have worked with us for more than five years; **Label** (Q) = Client retention.

Expected Result: Card 4 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "98%" in large type, and the label "Client retention" with the description at the bottom.

Step 12 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four light grey (#d9d9d9) cards, each with "At a glance" at the top, a very large number (4bn, 600,000+, 150, 98%) and at the bottom a bold label such as "Revenue" and a short description.

Step 13 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page to preview and live; there are no images or linked pages to publish. The figures are page content, so updating a number needs a page republish.

Step 14 — Verify

Action: On the live page check: At 1440 px each number fits on one line in its card.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Mixed Card Style

Reproduces the screenshot `screenshots/cards-mixed.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Mixed (by page).

Expected Result: With Card style Mixed (by page) each card's kind will follow its own content.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (B) = 3.

Expected Result: With Desktop columns 3 the three cards share one row on desktop.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (C) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (D) = Insight; **Title** (E) = The agentic bank; **Description** (F) = How AI agents take over routine operations and free teams for advice; **Tags** (G) = Add the tags tcs-corp:industry/banking; **Date** (H) = 2026-09-04; **Content type** (I) = Article; **Reading time** (J) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (K) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title "The agentic bank" becomes the card's only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (L) = Theme; **Title** (M) = Responsible AI; **Description** (N) = Governance, transparency and trust built into every model.

Expected Result: Card 2 renders as a 2:3 portrait panel on dark navy-grey (#20293c) with the kicker "Theme", the title "Responsible AI" and the description in muted text.

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (O) = Select the page or enter /en/services/ai.

Expected Result: An "Explore" text link appears at the bottom of the panel and becomes the card's only link, to /en/services/ai.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (P) = State of AI 2026; **Description** (Q) = A survey of 1,200 executives on AI adoption, value and risk; **Date** (R) = 2026-09-04; **Content type** (S) = Report.

Expected Result: Card 3 renders as a report card on grey gradient with the kicker "Report" and "04 Sep 26", the title "State of AI 2026" and the description.

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (T) = Select the page or enter /en/insights/state-of-ai-2026.

Expected Result: A "Download" outlined (secondary) button appears at the bottom and becomes the card's only link, to /en/insights/state-of-ai-2026.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: One row of three: an image card for "The agentic bank", a dark #20293c panel for "Responsible AI" with "Explore", and a gradient report card "State of AI 2026" with the kicker "Report" and "04 Sep 26" and a Download button.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page with photo-1.svg and the three linked pages (/en/insights/agentic-bank, /en/services/ai, /en/insights/state-of-ai-2026) to preview and live.

Step 16 — Verify

Action: On the live page check: The card shows the gradient, the kicker "Report" and "04 Sep 26", and a Download button.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Feature Card (First card as feature)

Reproduces the screenshot `screenshots/cards-feature-card.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **First card as feature** (A) = On.

Expected Result: With First card as feature on, the block is prepared to show its first card as a large spotlight.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (B) = 3.

Expected Result: With Desktop columns 3 the cards after the feature form a three-column desktop row.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (C) = Select the asset wide.svg (/en/media/wide.svg); **Title** (D) = Building the agentic enterprise; **Description** (E) = A practical guide to AI agents in operations; **Tags** (F) = Add the tags tcs-corp:topic/ai, tcs-corp:service/consulting; **Reading time** (G) = 12.

Expected Result: Card 1 becomes the full-width feature card: wide.svg fills it under the white gradient, with the kicker "Ai", "Consulting" and "12m" and the title "Building the agentic enterprise" on the left; its description isn't shown.

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (H) = Select the page or enter /en/insights/state-of-ai-2026.

Expected Result: The feature title "Building the agentic enterprise" becomes its link to /en/insights/state-of-ai-2026; the link area covers the whole feature card.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (I) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (J) = Perspective; **Title** (K) = Cloud at scale; **Description** (L) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (M) = Add the tags tcs-corp:topic/cloud; **Date** (N) = 2026-08-21; **Content type** (O) = Article; **Reading time** (P) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker "Perspective", "Cloud" and "8m", the title "Cloud at scale" and the description, then the meta row "Article" and "21 Aug 26".

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (Q) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title "Cloud at scale" becomes the card's only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (R) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (S) = Research; **Title** (T) = Supply chain resilience; **Description** (U) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (V) = Add the tags tcs-corp:industry/manufacturing; **Date** (W) = 2026-08-07; **Content type** (X) = Article; **Reading time** (Y) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker "Research", "Manufacturing" and "5m", the title "Supply chain resilience" and the description, then the meta row "Article" and "07 Aug 26".

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (Z) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title "Supply chain resilience" becomes the card's only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 14 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 15 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AA) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AB) = Insight; **Title** (AC) = Personalisation in retail; **Description** (AD) = Turning first-party data into relevant experiences in every channel; **Tags** (AE) = Add the tags tcs-corp:industry/retail; **Date** (AF) = 2026-07-30; **Content type** (AG) = Article; **Reading time** (AH) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker "Insight", "Retail" and "4m", the title "Personalisation in retail" and the description, then the meta row "Article" and "30 Jul 26".

Step 16 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AI) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title "Personalisation in retail" becomes the card's only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 17 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A full-width feature card (about 35.6rem high on desktop) with wide.svg filling it under a white gradient from the left, the tag labels and "12m" and the large title "Building the agentic enterprise"; below, a row of three image cards.

Step 18 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page with wide.svg and photo-2.svg to photo-4.svg and the four linked pages; publish to preview first to check the gradient legibility over the image.

Step 19 — Verify

Action: On the live page check: At 1024 and 1440 px the dark title reads clearly over the gradient.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Rows of Links (Display as teaser off)

Reproduces the screenshot `screenshots/cards-rows-of-links.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Display as teaser** (A) = Off.

Expected Result: With Display as teaser off the card style fields disappear from the panel and the block renders text rows instead of cards.

Step 4 — Fill in Cards › Advanced

Action: Select **Cards** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Style options** (B) = Dividers between rows.

Expected Result: Dividers between rows adds thin grey lines under each row on tablet and desktop.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = Insight; **Title** (D) = The agentic bank; **Description** (E) = How AI agents take over routine operations and free teams for advice; **Tags** (F) = Add the tags tcs-corp:industry/banking; **Date** (G) = 2026-09-04.

Expected Result: Row 1 shows the kicker “Insight” and “Banking”, the large title “The agentic bank”, the description and the date 04 Sep 26, without image or button.

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (H) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title “The agentic bank” becomes the row’s link to /en/insights/agentic-bank and the grey arrow appears on the right of the row.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (I) = Perspective; **Title** (J) = Cloud at scale; **Description** (K) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (L) = Add the tags tcs-corp:topic/cloud; **Date** (M) = 2026-08-21.

Expected Result: Row 2 shows the kicker “Perspective” and “Cloud”, the large title “Cloud at scale”, the description and the date 21 Aug 26, without image or button.

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (N) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title “Cloud at scale” becomes the row’s link to /en/insights/cloud-at-scale and the grey arrow appears on the right of the row.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (O) = Research; **Title** (P) = Supply chain resilience; **Description** (Q) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (R) = Add the tags tcs-corp:industry/manufacturing; **Date** (S) = 2026-08-07.

Expected Result: Row 3 shows the kicker "Research" and "Manufacturing", the large title "Supply chain resilience", the description and the date 07 Aug 26, without image or button.

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (T) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title "Supply chain resilience" becomes the row's link to /en/insights/supply-chain-resilience and the grey arrow appears on the right of the row.

Step 14 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 15 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (U) = Insight; **Title** (V) = Personalisation in retail; **Description** (W) = Turning first-party data into relevant experiences in every channel; **Tags** (X) = Add the tags tcs-corp:industry/retail; **Date** (Y) = 2026-07-30.

Expected Result: Row 4 shows the kicker "Insight" and "Retail", the large title "Personalisation in retail", the description and the date 30 Jul 26, without image or button.

Step 16 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (Z) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title "Personalisation in retail" becomes the row's link to /en/insights/retail-personalisation and the grey arrow appears on the right of the row.

Step 17 — Preview

Action: Action: Point at the second row (its arrow turns blue and moves).

Expected Result: Pointing at the second row ("Cloud at scale") turns its arrow blue and moves it to the right.

Step 18 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Full-width rows, each with an uppercase eyebrow and the first tag, a 2.5rem title, the description, the date and a grey arrow on the right; thin grey #b2b2b2 lines separate the rows, and the second row's arrow turns blue and moves on hover.

Step 19 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and the four linked insight pages to preview and live; no images are needed. Tag labels come from the published /en/taxonomy.json.

Step 20 — Verify

Action: On the live page check: In preview without reduced motion, hovering the second row turns its arrow blue and moves it.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — Card Colour "Dark"

Reproduces the screenshot `screenshots/cards-colour-dark.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Statistic; **Card colour** (B) = Dark.

Expected Result: With Card style Statistic and Card colour Dark the cards become #20293c tiles with light text.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Tablet columns** (C) = 2.

Expected Result: Tablet columns 2 makes the tablet grid two columns wide, so both cards share one row at 1024 px.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (D) = At a glance; **Title** (E) = 4bn; **Description** (F) = Annual revenue in US dollars, growing for the tenth year; **Label** (G) = Revenue.

Expected Result: Card 1 renders as a statistic card on dark navy-grey (#20293c): "At a glance" at the top, the number "4bn" in large type, and the label "Revenue" with the description at the bottom.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (H) = State of AI 2026; **Description** (I) = A survey of 1,200 executives on AI adoption, value and risk; **Date** (J) = 2026-09-04; **Content type** (K) = Report.

Expected Result: Card 2 shows “State of AI 2026” and its description as a dark statistic tile until its own style is set.

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (L) = Select the page or enter /en/insights/state-of-ai-2026.

Expected Result: Card 2 becomes linked to /en/insights/state-of-ai-2026; as a statistic card without a label its title is the link.

Step 10 — Fill in Card 2 › Display

Action: Select **Card 2** in the content tree and open the **Display** tab of the properties panel. Enter: **Card style** (M) = Report.

Expected Result: With Card style Report, Card 2 switches to a report card on dark with the kicker “Report”, “04 Sep 26” and a light Download button.

Step 11 — Preview

Action: Screen width: 1024 px (tablet).

Expected Result: At 1024 px the statistic and the report card sit side by side in the two tablet columns.

Step 12 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1024 px two cards side by side on #20293c: the statistic “4bn” with “Revenue” in light text, and the report card “State of AI 2026” with the kicker “Report” and “04 Sep 26” and a light outlined Download button.

Step 13 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and the linked report page /en/insights/state-of-ai-2026 to preview and live. The block colour is a page setting: republish the page after changing it.

Step 14 — Verify

Action: On the live page check: Hover and Tab to the Download button on aem.page: it shows a light fill with dark “Download” text.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — Card Colour “Navy”

Reproduces the screenshot `screenshots/cards-colour-navy.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Report; **Card colour** (B) = Navy.

Expected Result: With Card style Report and Card colour Navy the cards become dark navy report tiles.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (C) = 3.

Expected Result: With Desktop columns 3 the three reports fill one desktop row.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (D) = State of AI 2026; **Description** (E) = A survey of 1,200 executives on AI adoption, value and risk; **Date** (F) = 2026-09-04; **Content type** (G) = Report.

Expected Result: Card 1 renders as a report card on navy (#011627) with the kicker "Report" and "04 Sep 26", the title "State of AI 2026" and the description.

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (H) = Select the page or enter /en/insights/state-of-ai-2026.

Expected Result: A "Download" outlined (secondary) button appears at the bottom and becomes the card's only link, to /en/insights/state-of-ai-2026.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (I) = Cloud value index; **Description** (J) = Where cloud investments pay off, sector by sector; **Date** (K) = 2026-07-15; **Content type** (L) = Report.

Expected Result: Card 2 renders as a report card on navy (#011627) with the kicker "Report" and "15 Jul 26", the title "Cloud value index" and the description.

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (M) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: A "Download" outlined (secondary) button appears at the bottom and becomes the card's only link, to /en/insights/cloud-at-scale.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (N) = Supply chain outlook; **Description** (O) = Risks and priorities for global manufacturers in the next three years; **Date** (P) = 2026-05-28; **Content type** (Q) = Report.

Expected Result: Card 3 renders as a report card on navy (#011627) with the kicker "Report" and "28 May 26", the title "Supply chain outlook" and the description.

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (R) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: A "Download" outlined (secondary) button appears at the bottom and becomes the card's only link, to /en/insights/supply-chain-resilience.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three tall report cards on near-black navy #011627 with light text, the kicker "Report" and the date, the title, the muted description and a light outlined Download button at the bottom.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and the three linked pages (/en/insights/state-of-ai-2026, /en/insights/cloud-at-scale, /en/insights/supply-chain-resilience) to preview and live.

Step 16 — Verify

Action: On the live page check: At 1024 and 768 px the description and the Download button are fully visible.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 10 — Card Colour "Brand blue"

Reproduces the screenshot `screenshots/cards-colour-brand.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Statistic; **Card colour** (B) = Brand blue.

Expected Result: With Card style Statistic and Card colour Brand blue every statistic card of the block takes the Brand blue background.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = At a glance; **Title** (D) = 600,000+; **Description** (E) = Consultants and engineers in 55 countries; **Label** (F) = Colleagues.

Expected Result: Card 1 renders as a statistic card on brand blue (#4673db): "At a glance" at the top, the number "600,000+" in large type, and the label "Colleagues" with the description at the bottom.

Step 6 — Preview

Action: Screen width: 402 px (mobile).

Expected Result: At 402 px the single card fills the column, with the number "600,000+" at up to 5rem, in white on brand blue.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A single brand blue (#4673db) statistic card with "At a glance" at the top, the white number "600,000+", the label "Colleagues" and the description in 60 % white.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the card has no image or link, so nothing else needs publishing. The colour is a block setting stored with the page, so a colour change is live after the page is republished.

Step 9 — Verify

Action: On the live page check: Re-run the contrast checker; the chosen colour passes for the description text.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 11 — Card Colour "Light blue"

Reproduces the screenshot `screenshots/cards-colour-brand-light.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Statistic; **Card colour** (B) = Light blue.

Expected Result: With Card style Statistic and Card colour Light blue every statistic card of the block takes the Light blue background.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = At a glance; **Title** (D) = 150; **Description** (E) = Serving clients around the world, around the clock; **Label** (F) = Delivery centres.

Expected Result: Card 1 renders as a statistic card on light blue: "At a glance" at the top, the number "150" in large type, and the label "Delivery centres" with the description at the bottom.

Step 6 — Preview

Action: Screen width: 402 px (mobile).

Expected Result: At 402 px the single card fills the column, with the number "150" at up to 5rem, in black.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A single light blue (–brand-300, #a7c8f1) statistic card with "At a glance", the black number "150", the label "Delivery centres" and a dark description.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the card has no image or link, so nothing else needs publishing. The colour is a block setting stored with the page, so a colour change is live after the page is republished.

Step 9 — Verify

Action: On the live page check: At 402 px the bold label shows above the description at the bottom of the card.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 12 — Card Colour "Light grey"

Reproduces the screenshot `screenshots/cards-colour-grey.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Panel; **Card colour** (B) = Light grey.

Expected Result: With Card style Panel and Card colour Light grey the panels turn light grey with black text.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (C) = 3.

Expected Result: With Desktop columns 3 the three panels fill one desktop row.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (D) = Theme; **Title** (E) = Responsible AI; **Description** (F) = Governance, transparency and trust built into every model.

Expected Result: Card 1 renders as a 2:3 portrait panel on light grey (#d9d9d9) with the kicker "Theme", the title "Responsible AI" and the description in muted text.

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (G) = Select the page or enter /en/services/ai.

Expected Result: An "Explore" text link appears at the bottom of the panel and becomes the card's only link, to /en/services/ai.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (H) = Theme; **Title** (I) = Sustainable operations; **Description** (J) = Data-driven decisions that cut energy use and emissions.

Expected Result: Card 2 renders as a 2:3 portrait panel on light grey (#d9d9d9) with the kicker "Theme", the title "Sustainable operations" and the description in muted text.

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (K) = Select the page or enter /en/industries/manufacturing.

Expected Result: An “Explore” text link appears at the bottom of the panel and becomes the card’s only link, to /en/industries/manufacturing.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (L) = Theme; **Title** (M) = Resilient enterprises; **Description** (N) = Security and continuity for a world of constant change.

Expected Result: Card 3 renders as a 2:3 portrait panel on light grey (#d9d9d9) with the kicker “Theme”, the title “Resilient enterprises” and the description in muted text.

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (O) = Select the page or enter /en/services/cybersecurity.

Expected Result: An “Explore” text link appears at the bottom of the panel and becomes the card’s only link, to /en/services/cybersecurity.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three 2:3 panels on light grey #d9d9d9 with black titles (“Responsible AI”, “Sustainable operations”, “Resilient enterprises”), a dark muted description and an “Explore” text link in black.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and the three linked pages to preview and live; “Explore” comes from the en placeholders sheet (key explore).

Step 16 — Verify

Action: On the live page check: All three panels show black text and a black Explore link on #d9d9d9.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 13 — Card Colour “Mid grey”

Reproduces the screenshot `screenshots/cards-colour-mid-grey.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint “Add a Card to the block and give it a title, a description or an image.”

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Statistic; **Card colour** (B) = Mid grey.

Expected Result: With Card style Statistic and Card colour Mid grey every statistic card of the block takes the Mid grey background.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = At a glance; **Title** (D) = 98%; **Description** (E) = Of our top clients have worked with us for more than five years; **Label** (F) = Client retention.

Expected Result: Card 1 renders as a statistic card on mid grey (#999): "At a glance" at the top, the number "98%" in large type, and the label "Client retention" with the description at the bottom.

Step 6 — Preview

Action: Screen width: 402 px (mobile).

Expected Result: At 402 px the single card fills the column, with the number "98%" at up to 5rem, in black on #999.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A single mid grey (#999) statistic card with "At a glance", the black number "98%", the label "Client retention" and a dark grey description.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the card has no image or link, so nothing else needs publishing. The colour is a block setting stored with the page, so a colour change is live after the page is republished.

Step 9 — Verify

Action: On the live page check: The contrast checker reports at least 4.5:1 for the description.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 14 — Card Colour "Grey gradient"

Reproduces the screenshot `screenshots/cards-colour-gradient.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Statistic; **Card colour** (B) = Grey gradient.

Expected Result: With Card style Statistic and Card colour Grey gradient every statistic card of the block takes the Grey gradient background.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = At a glance; **Title** (D) = 4bn; **Description** (E) = Annual revenue in US dollars, growing for the tenth year; **Label** (F) = Revenue.

Expected Result: Card 1 renders as a statistic card on grey gradient: "At a glance" at the top, the number "4bn" in large type, and the label "Revenue" with the description at the bottom.

Step 6 — Preview

Action: Screen width: 402 px (mobile).

Expected Result: At 402 px the single card fills the column, with the number "4bn" at up to 5rem, in dark text on the gradient.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A single card with the diagonal light blue-grey to warm grey gradient, "At a glance", the dark number "4bn", the label "Revenue" and the description.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the card has no image or link, so nothing else needs publishing. The colour is a block setting stored with the page, so a colour change is live after the page is republished.

Step 9 — Verify

Action: On the live page check: At 402 px the card shows the diagonal light blue-grey to warm grey gradient.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 15 — Card Colour "Image background"

Reproduces the screenshot `screenshots/cards-colour-image.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Panel; **Card colour** (B) = Image background.

Expected Result: With Card style Panel and Card colour Image background the panel is ready to show its image behind the text.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (C) = Select the asset light.svg (/en/media/light.svg); **Eyebrow** (D) = Theme; **Title** (E) = Future-ready cities; **Description** (F) = Connected infrastructure and services for growing urban populations.

Expected Result: Card 1 renders as a panel with light.svg covering it, and the kicker "Theme", the title "Future-ready cities" and the description in dark text on top.

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (G) = Select the page or enter /en/industries.

Expected Result: An "Explore" text link appears at the bottom of the panel and becomes the card's only link, to /en/industries.

Step 7 — Preview

Action: Screen width: 402 px (mobile).

Expected Result: At 402 px the image-background panel fills the column in its 2:3 shape with the text over the image.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A tall 2:3 panel whose image light.svg covers the whole card, with the kicker "Theme", the title "Future-ready cities", the description and the "Explore" link in dark text on top.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, the asset light.svg and the linked page /en/industries to preview and live; an unpublished image leaves the panel light grey.

Step 10 — Verify

Action: On the live page check: At 402 px the image fills the panel behind the text on aem.live.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 16 — Image Ratio 1:1

Reproduces the screenshot `screenshots/cards-ratio-1-1.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Image ratio** (A) = 1:1.

Expected Result: With Image ratio 1:1 the image frames of the cards become square.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (B) = 3.

Expected Result: With Desktop columns 3 the three service cards fill one desktop row.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (C) = Select the asset square-1.svg (/en/media/square-1.svg); **Eyebrow** (D) = Consulting; **Title** (E) = Business and technology consulting; **Description** (F) = Strategy, design and change management for transformation.

Expected Result: Card 1 renders as an image card: square-1.svg in a 1:1 frame, the kicker "Consulting", the title "Business and technology consulting" and the description.

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (G) = Select the page or enter /en/services/consulting.

Expected Result: The title "Business and technology consulting" becomes the card's only link, to /en/services/consulting; the clickable area covers the whole card.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (H) = Select the asset square-2.svg (/en/media/square-2.svg); **Eyebrow** (I) = Cloud; **Title** (J) = Cloud migration and operations; **Description** (K) = Move, modernise and run workloads on any cloud.

Expected Result: Card 2 renders as an image card: square-2.svg in a 1:1 frame, the kicker "Cloud", the title "Cloud migration and operations" and the description.

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (L) = Select the page or enter /en/services/cloud.

Expected Result: The title "Cloud migration and operations" becomes the card's only link, to /en/services/cloud; the clickable area covers the whole card.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (M) = Select the asset square-3.svg (/en/media/square-3.svg); **Eyebrow** (N) = Security; **Title** (O) = Cyber defence and resilience; **Description** (P) = Protect identities, data and operations around the clock.

Expected Result: Card 3 renders as an image card: square-3.svg in a 1:1 frame, the kicker "Security", the title "Cyber defence and resilience" and the description.

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (Q) = Select the page or enter /en/services/cybersecurity.

Expected Result: The title "Cyber defence and resilience" becomes the card's only link, to /en/services/cybersecurity; the clickable area covers the whole card.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three image cards with square images (square-1.svg to square-3.svg) above the kicker ("Consulting", "Cloud", "Security"), the title and the description.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, square-1.svg to square-3.svg and the linked service pages (/en/services/consulting, /en/services/cloud, /en/services/cybersecurity) to preview and live.

Step 16 — Verify

Action: On the live page check: The three images are square in preview at 1440 px and 402 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 17 — Image Ratio 4:3

Reproduces the screenshot `screenshots/cards-ratio-4-3.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Image ratio** (A) = 4:3.

Expected Result: With Image ratio 4:3 the image frames of the cards become taller landscape frames.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (B) = 3.

Expected Result: With Desktop columns 3 the three cards fill one desktop row.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (C) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (D) = Insight; **Title** (E) = Personalisation in retail; **Description** (F) = Turning first-party data into relevant experiences in every channel; **Tags** (G) = Add the tags tcs-corp:industry/retail; **Date** (H) = 2026-07-30; **Content type** (I) = Article; **Reading time** (J) = 4.

Expected Result: Card 1 renders as an image card: photo-4.svg in a 4:3 frame, the kicker "Insight", "Retail" and "4m", the title "Personalisation in retail" and the description, then the meta row "Article" and "30 Jul 26".

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (K) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title "Personalisation in retail" becomes the card's only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (L) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (M) = Perspective; **Title** (N) = The energy transition; **Description** (O) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (P) = Add the tags tcs-corp:industry/energy; **Date** (Q) = 2026-07-16; **Content type** (R) = Article; **Reading time** (S) = 7.

Expected Result: Card 2 renders as an image card: photo-5.svg in a 4:3 frame, the kicker "Perspective", "Energy" and "7m", the title "The energy transition" and the description, then the meta row "Article" and "16 Jul 26".

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (T) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title "The energy transition" becomes the card's only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (U) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (V) = Research; **Title** (W) = Quantum readiness; **Description** (X) = Preparing security and research teams for the first useful quantum computers; **Tags** (Y) = Add the tags tcs-corp:topic/security; **Date** (Z) = 2026-07-02; **Content type** (AA) = Article; **Reading time** (AB) = 9.

Expected Result: Card 3 renders as an image card: photo-6.svg in a 4:3 frame, the kicker "Research", "Security" and "9m", the title "Quantum readiness" and the description, then the meta row "Article" and "02 Jul 26".

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AC) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title "Quantum readiness" becomes the card's only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three image cards with taller 4:3 images (photo-4.svg to photo-6.svg), the kicker such as "Insight", "Retail", "4m", the title, the description and the meta row "Article" with the date.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-4.svg to photo-6.svg and the three linked insight pages to preview and live; tag labels need the published en taxonomy.

Step 16 — Verify

Action: On the live page check: The meta row of Card 2 reads "Article" and "16 Jul 26".

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 18 — Image Ratio 3:2

Reproduces the screenshot `screenshots/cards-ratio-3-2.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Image ratio** (A) = 3:2.

Expected Result: With Image ratio 3:2 the image frames of the cards change to the 3:2 photo shape.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (B) = 3.

Expected Result: With Desktop columns 3 the three cards fill one desktop row.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (C) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (D) = Research; **Title** (E) = Quantum readiness; **Description** (F) = Preparing security and research teams for the first useful quantum computers; **Tags** (G) = Add the tags tcs-corp:topic/security; **Date** (H) = 2026-07-02; **Content type** (I) = Article; **Reading time** (J) = 9.

Expected Result: Card 1 renders as an image card: photo-6.svg in a 3:2 frame, the kicker "Research", "Security" and "9m", the title "Quantum readiness" and the description, then the meta row "Article" and "02 Jul 26".

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (K) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title "Quantum readiness" becomes the card's only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (L) = Select the asset photo-7.svg (/en/media/photo-7.svg); **Eyebrow** (M) = Insight; **Title** (N) = The future of work; **Description** (O) = Skills, tools and workplaces for teams that collaborate with AI every day; **Tags** (P) = Add the tags tcs-corp:topic/ai; **Date** (Q) = 2026-06-18; **Content type** (R) = Article; **Reading time** (S) = 6.

Expected Result: Card 2 renders as an image card: photo-7.svg in a 3:2 frame, the kicker "Insight", "Ai" and "6m", the title "The future of work" and the description, then the meta row "Article" and "18 Jun 26".

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (T) = Select the page or enter /en/insights/future-of-work.

Expected Result: The title "The future of work" becomes the card's only link, to /en/insights/future-of-work; the clickable area covers the whole card.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (U) = Select the asset photo-8.svg (/en/media/photo-8.svg); **Eyebrow** (V) = Case study; **Title** (W) = Touchless insurance claims; **Description** (X) = How an insurer settles most motor claims within a day, end to end; **Tags** (Y) = Add the tags tcs-corp:industry/insurance; **Date** (Z) = 2026-06-04; **Content type** (AA) = Case study; **Reading time** (AB) = 5.

Expected Result: Card 3 renders as an image card: photo-8.svg in a 3:2 frame, the kicker "Case study", "Insurance" and "5m", the title "Touchless insurance claims" and the description, then the meta row "Case study" and "04 Jun 26".

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AC) = Select the page or enter /en/insights/insurance-claims.

Expected Result: The title "Touchless insurance claims" becomes the card's only link, to /en/insights/insurance-claims; the clickable area covers the whole card.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three image cards with 3:2 images (photo-6.svg to photo-8.svg), kickers such as "Research", "Security", "9m", the titles "Quantum readiness", "The future of work" and "Touchless insurance claims", descriptions and meta rows such as "Case study" with "04 Jun 26".

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-6.svg to photo-8.svg and the three linked pages to preview and live; republish after replacing an asset only if the asset reference changes.

Step 16 — Verify

Action: On the live page check: Reload in a new session; the kicker shows the taxonomy title.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 19 — Panel Height "Compact"

Reproduces the screenshot `screenshots/cards-panel-compact.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Statistic; **Panel height** (B) = Compact.

Expected Result: With Card style Statistic and Panel height Compact the statistic tiles become nearly square (9:10).

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = At a glance; **Title** (D) = 4bn; **Description** (E) = Annual revenue in US dollars, growing for the tenth year; **Label** (F) = Revenue.

Expected Result: Card 1 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "4bn" in large type, and the label "Revenue" with the description at the bottom.

Step 6 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 7 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (G) = At a glance; **Title** (H) = 600,000+; **Description** (I) = Consultants and engineers in 55 countries; **Label** (J) = Colleagues.

Expected Result: Card 2 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "600,000+" in large type, and the label "Colleagues" with the description at the bottom.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (K) = At a glance; **Title** (L) = 150; **Description** (M) = Serving clients around the world, around the clock; **Label** (N) = Delivery centres.

Expected Result: Card 3 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "150" in large type, and the label "Delivery centres" with the description at the bottom.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (O) = At a glance; **Title** (P) = 98%; **Description** (Q) = Of our top clients have worked with us for more than five years; **Label** (R) = Client retention.

Expected Result: Card 4 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "98%" in large type, and the label "Client retention" with the description at the bottom.

Step 12 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four nearly square (9:10) light grey statistic cards instead of tall portrait ones, each with "At a glance", the number (4bn, 600,000+, 150, 98%), the label and the description.

Step 13 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page to preview and live; no assets or linked pages are involved, as the cards are unlinked.

Step 14 — Verify

Action: On the live page check: At 1440, 1024 and 768 px each card shows its label and full description.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 20 — Panel Height "Content"

Reproduces the screenshot `screenshots/cards-panel-content.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Panel; **Panel height** (B) = Content.

Expected Result: With Card style Panel and Panel height Content the panels lose their fixed 2:3 shape and fit their text.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (C) = 3.

Expected Result: With Desktop columns 3 the three panels fill one desktop row.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (D) = Theme; **Title** (E) = Responsible AI; **Description** (F) = Governance, transparency and trust built into every model, from the first data set to production monitoring. Our responsible AI framework covers fairness, explainability, privacy and security.

Expected Result: Card 1 renders as a content-height panel on dark navy-grey (#20293c) with the kicker “Theme”, the title “Responsible AI” and the description in muted text.

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (G) = Select the page or enter /en/services/ai.

Expected Result: An “Explore” text link appears at the bottom of the panel and becomes the card’s only link, to /en/services/ai.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (H) = Theme; **Title** (I) = Sustainable operations; **Description** (J) = Data-driven decisions that cut energy use and emissions.

Expected Result: Card 2 renders as a content-height panel on dark navy-grey (#20293c) with the kicker “Theme”, the title “Sustainable operations” and the description in muted text.

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (K) = Select the page or enter /en/industries/manufacturing.

Expected Result: An “Explore” text link appears at the bottom of the panel and becomes the card’s only link, to /en/industries/manufacturing.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (L) = Theme; **Title** (M) = Resilient enterprises; **Description** (N) = Security and continuity for a world of constant change. **Includes:** • Threat management • Identity and access • Recovery planning.

Expected Result: Card 3 renders as a content-height panel on dark navy-grey (#20293c) with the kicker "Theme", the title "Resilient enterprises" and the description in muted text.

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (O) = Select the page or enter /en/services/cybersecurity.

Expected Result: An "Explore" text link appears at the bottom of the panel and becomes the card's only link, to /en/services/cybersecurity.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three dark #20293c panels whose height fits their text; with Stretch cards to row height on, the three panels of the row share the tallest height and the Explore links line up at the bottom.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and the three linked pages (/en/services/ai, /en/industries/manufacturing, /en/services/cybersecurity) to preview and live.

Step 16 — Verify

Action: On the live page check: At 1440 px the three panels are equally tall with Explore at the same height.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 21 — Style Option "Compact statistic title"

Reproduces the screenshot `screenshots/cards-stat-compact.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Statistic.

Expected Result: With Card style Statistic the three cards become light grey statistic tiles.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (B) = 3.

Expected Result: With Desktop columns 3 the three statements fill one desktop row.

Step 5 — Fill in Cards › Advanced

Action: Select **Cards** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Style options** (C) = Compact statistic title.

Expected Result: Compact statistic title shrinks the statistic titles so phrases such as "Net zero by 2030" fit on two lines.

Step 6 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 7 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (D) = Our commitment; **Title** (E) = Net zero by 2030; **Description** (F) = Across our offices, data centres and supply chain; **Label** (G) = Climate.

Expected Result: Card 1 renders as a statistic card on light grey (#d9d9d9): "Our commitment" at the top, the number "Net zero by 2030" in large type, and the label "Climate" with the description at the bottom.

Step 8 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (H) = Select the page or enter /en/about; **Call to action label** (I) = Read more.

Expected Result: A "Read more" secondary button appears under the description and becomes the card's only link, to /en/about.

Step 9 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 10 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (J) = Our commitment; **Title** (K) = 1 million learners; **Description** (L) = Digital skills programmes for young people by 2028; **Label** (M) = Skills.

Expected Result: Card 2 renders as a statistic card on light grey (#d9d9d9): "Our commitment" at the top, the number "1 million learners" in large type, and the label "Skills" with the description at the bottom.

Step 11 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (N) = Select the page or enter /en/about; **Call to action label** (O) = Read more.

Expected Result: A "Read more" secondary button appears under the description and becomes the card's only link, to /en/about.

Step 12 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 13 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (P) = Our commitment; **Title** (Q) = 50% women leaders; **Description** (R) = Gender balance in leadership roles across all regions; **Label** (S) = Inclusion.

Expected Result: Card 3 renders as a statistic card on light grey (#d9d9d9): "Our commitment" at the top, the number "50% women leaders" in large type, and the label "Inclusion" with the description at the bottom.

Step 14 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (T) = Select the page or enter /en/about; **Call to action label** (U) = Read more.

Expected Result: A "Read more" secondary button appears under the description and becomes the card's only link, to /en/about.

Step 15 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three light grey statistic cards with "Our commitment" at the top, medium-size titles such as "Net zero by 2030", the labels "Climate", "Skills" and "Inclusion", descriptions and an outlined "Read more" button.

Step 16 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and /en/about to preview and live; "Read more" is authored per Card, so it must be translated in each locale copy.

Step 17 — Verify

Action: On the live page check: Each card shows an outlined Read more button that opens /en/about.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 22 — Style Option "Dividers between rows"

Reproduces the screenshot `screenshots/cards-dividers.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Display as teaser** (A) = Off.

Expected Result: With Display as teaser off the cards become full-width text rows with arrows.

Step 4 — Fill in Cards › Advanced

Action: Select **Cards** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Style options** (B) = Dividers between rows.

Expected Result: Dividers between rows adds thin grey lines under each row on tablet and desktop.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = Perspective; **Title** (D) = The energy transition; **Description** (E) = Digital twins and analytics that help utilities reach their climate targets; **Date** (F) = 2026-07-16.

Expected Result: Row 1 shows the kicker "Perspective", the large title "The energy transition", the description and the date 16 Jul 26, without image or button.

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (G) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title "The energy transition" becomes the row's link to /en/insights/energy-transition and the grey arrow appears on the right of the row.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (H) = Research; **Title** (I) = Quantum readiness; **Description** (J) = Preparing security and research teams for the first useful quantum computers; **Date** (K) = 2026-07-02.

Expected Result: Row 2 shows the kicker "Research", the large title "Quantum readiness", the description and the date 02 Jul 26, without image or button.

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (L) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title "Quantum readiness" becomes the row's link to /en/insights/quantum-readiness and the grey arrow appears on the right of the row.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (M) = Insight; **Title** (N) = The future of work; **Description** (O) = Skills, tools and workplaces for teams that collaborate with AI every day; **Date** (P) = 2026-06-18.

Expected Result: Row 3 shows the kicker "Insight", the large title "The future of work", the description and the date 18 Jun 26, without image or button.

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (Q) = Select the page or enter /en/insights/future-of-work.

Expected Result: The title "The future of work" becomes the row's link to /en/insights/future-of-work and the grey arrow appears on the right of the row.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three full-width rows on desktop, each with the eyebrow, the large title ("The energy transition", "Quantum readiness", "The future of work"), the description, the date and an arrow, separated by thin grey #b2b2b2 lines.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and the three linked insight pages to preview and live; the change is page content only.

Step 16 — Verify

Action: On the live page check: At 1024 and 1440 px grey lines separate the three rows.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 23 — Style Option "Header centred"

Reproduces the screenshot `screenshots/cards-header-centred.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Content

Action: Select **Cards** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Our company at a glance; **Description** (B) = Five decades of helping enterprises grow and transform; **CTA link** (C) = Select the page or enter /en/about; **CTA text** (D) = About us.

Expected Result: The header shows “Our company at a glance”, its description and the “About us” text link, still left-aligned.

Step 4 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (E) = Statistic; **Panel height** (F) = Compact.

Expected Result: With Card style Statistic and Panel height Compact the four cards become nearly square grey statistic tiles.

Step 5 — Fill in Cards › Advanced

Action: Select **Cards** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Style options** (G) = Header centred.

Expected Result: Header centred moves the title, description and About us link into a centred column.

Step 6 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 7 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (H) = At a glance; **Title** (I) = 4bn; **Description** (J) = Annual revenue in US dollars, growing for the tenth year; **Label** (K) = Revenue.

Expected Result: Card 1 renders as a statistic card on light grey (#d9d9d9): “At a glance” at the top, the number “4bn” in large type, and the label “Revenue” with the description at the bottom.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (L) = At a glance; **Title** (M) = 600,000+; **Description** (N) = Consultants and engineers in 55 countries; **Label** (O) = Colleagues.

Expected Result: Card 2 renders as a statistic card on light grey (#d9d9d9): “At a glance” at the top, the number “600,000+” in large type, and the label “Colleagues” with the description at the bottom.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (P) = At a glance; **Title** (Q) = 150; **Description** (R) = Serving clients around the world, around the clock; **Label** (S) = Delivery centres.

Expected Result: Card 3 renders as a statistic card on light grey (#d9d9d9): “At a glance” at the top, the number “150” in large type, and the label “Delivery centres” with the description at the bottom.

Step 12 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 13 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (T) = At a glance; **Title** (U) = 98%; **Description** (V) = Of our top clients have worked with us for more than five years; **Label** (W) = Client retention.

Expected Result: Card 4 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "98%" in large type, and the label "Client retention" with the description at the bottom.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Our company at a glance", the description and the "About us" text link centred above a row of four compact light grey statistic cards (4bn, 600,000+, 150, 98%).

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and the CTA target /en/about to preview and live.

Step 16 — Verify

Action: On the live page check: Title, description and About us are centred at 1440 and 402 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 24 — Header Call to Action

Reproduces the screenshot `screenshots/cards-header-cta.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block with the editor hint is inserted; the step is repeated for the second block.

Step 3 — Fill in Cards › Content

Action: Select **Cards** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights; **Description** (B) = Research and perspectives from our consultants; **CTA link** (C) = Select the page or enter /en/insights; **CTA text** (D) = View all.

Expected Result: The first header shows "Latest insights" with the "View all" text link; the second "Our services" with the primary "Explore services" button.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (E) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (F) = Insight; **Title** (G) = The agentic bank; **Description** (H) = How AI agents take over routine operations and free teams for advice; **Tags** (I) = Add the tags tcs-corp:industry/banking; **Date** (J) = 2026-09-04; **Content type** (K) = Article; **Reading time** (L) = 6.

Expected Result: In the first block the card shows "The agentic bank" with photo-1.svg; in the second block "Business and technology consulting" with the eyebrow "Consulting".

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (M) = Select the page or enter /en/insights/agentic-bank.

Expected Result: In the first block the card shows links to /en/insights/agentic-bank; in the second block links to /en/services/consulting through its title.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (N) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (O) = Perspective; **Title** (P) = Cloud at scale; **Description** (Q) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (R) = Add the tags tcs-corp:topic/cloud; **Date** (S) = 2026-08-21; **Content type** (T) = Article; **Reading time** (U) = 8.

Expected Result: In the first block the card shows "Cloud at scale" with photo-2.svg; in the second block "Cloud migration and operations" with the eyebrow "Cloud".

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (V) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: In the first block the card shows links to /en/insights/cloud-at-scale; in the second block links to /en/services/cloud through its title.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (W) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (X) = Research; **Title** (Y) = Supply chain resilience; **Description** (Z) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (AA) = Add the tags tcs-corp:industry/manufacturing; **Date** (AB) = 2026-08-07; **Content type** (AC) = Article; **Reading time** (AD) = 5.

Expected Result: In the first block the card shows "Supply chain resilience" with photo-3.svg; in the second block "Cyber defence and resilience" with the eyebrow "Security".

Step 12 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AE) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: In the first block the card shows links to /en/insights/supply-chain-resilience; in the second block links to /en/services/cybersecurity through its title.

Step 13 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 14 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AF) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AG) = Insight; **Title** (AH) = Personalisation in retail; **Description** (AI) = Turning first-party data into relevant experiences in every channel; **Tags** (AJ) = Add the tags tcs-corp:industry/retail; **Date** (AK) = 2026-07-30; **Content type** (AL) = Article; **Reading time** (AM) = 4.

Expected Result: In the first block the card shows "Personalisation in retail" with photo-4.svg; in the second block "AI and data platforms" with the eyebrow "AI and data".

Step 15 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AN) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: In the first block the card shows links to /en/insights/retail-personalisation; in the second block links to /en/services/ai through its title.

Step 16 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block with the editor hint is inserted; the step is repeated for the second block.

Step 17 — Fill in Cards › Content

Action: Select **Cards** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (AO) = Our services; **Description** (AP) = Capabilities that help enterprises grow and compete; **CTA link** (AQ) = Select the page or enter /en/services; **CTA text** (AR) = Explore services; **CTA style** (AS) = Primary button.

Expected Result: The first header shows "Latest insights" with the "View all" text link; the second "Our services" with the primary "Explore services" button.

Step 18 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 19 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AT) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (AU) = Consulting; **Title** (AV) = Business and technology consulting; **Description** (AW) = Strategy, design and change management for transformation.

Expected Result: In the first block the card shows "The agentic bank" with photo-1.svg; in the second block "Business and technology consulting" with the eyebrow "Consulting".

Step 20 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AX) = Select the page or enter /en/services/consulting.

Expected Result: In the first block the card shows links to /en/insights/agentic-bank; in the second block links to /en/services/consulting through its title.

Step 21 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 22 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AY) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (AZ) = Cloud; **Title** (BA) = Cloud migration and operations; **Description** (BB) = Move, modernise and run workloads on any cloud.

Expected Result: In the first block the card shows “Cloud at scale” with photo-2.svg; in the second block “Cloud migration and operations” with the eyebrow “Cloud”.

Step 23 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BC) = Select the page or enter /en/services/cloud.

Expected Result: In the first block the card shows links to /en/insights/cloud-at-scale; in the second block links to /en/services/cloud through its title.

Step 24 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 25 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (BD) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (BE) = Security; **Title** (BF) = Cyber defence and resilience; **Description** (BG) = Protect identities, data and operations around the clock.

Expected Result: In the first block the card shows “Supply chain resilience” with photo-3.svg; in the second block “Cyber defence and resilience” with the eyebrow “Security”.

Step 26 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BH) = Select the page or enter /en/services/cybersecurity.

Expected Result: In the first block the card shows links to /en/insights/supply-chain-resilience; in the second block links to /en/services/cybersecurity through its title.

Step 27 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 28 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (BI) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (BJ) = AI and data; **Title** (BK) = AI and data platforms; **Description** (BL) = Build trusted data foundations and put AI into production.

Expected Result: In the first block the card shows "Personalisation in retail" with photo-4.svg; in the second block "AI and data platforms" with the eyebrow "AI and data".

Step 29 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BM) = Select the page or enter /en/services/ai.

Expected Result: In the first block the card shows links to /en/insights/retail-personalisation; in the second block links to /en/services/ai through its title.

Step 30 — Preview

Action: Note: Two Cards blocks in one section: the first with the default CTA style (Text link), the second with Primary button.

Expected Result: The two blocks show one above the other: the text link header first, the primary button header second.

Step 31 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The first header shows "Latest insights" with a "View all" text link and arrow on the right; the second "Our services" with a filled primary "Explore services" button; each block shows four image cards below.

Step 32 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-1.svg to photo-4.svg, /en/insights, /en/services and the eight card targets to preview and live.

Step 33 — Verify

Action: On the live page check: The second header shows a filled button; the first keeps the text link.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 25 — Grid on Every Breakpoint

Reproduces the screenshot `screenshots/cards-grid-all.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 4 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (A) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (B) = Insight; **Title** (C) = The agentic bank; **Description** (D) = How AI agents take over routine operations and free teams for advice; **Tags** (E) = Add the tags tcs-corp:industry/banking; **Date** (F) = 2026-09-04; **Content type** (G) = Article; **Reading time** (H) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 5 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (I) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title "The agentic bank" becomes the card's only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 6 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 7 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (J) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (K) = Perspective; **Title** (L) = Cloud at scale; **Description** (M) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (N) = Add the tags tcs-corp:topic/cloud; **Date** (O) = 2026-08-21; **Content type** (P) = Article; **Reading time** (Q) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker "Perspective", "Cloud" and "8m", the title "Cloud at scale" and the description, then the meta row "Article" and "21 Aug 26".

Step 8 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (R) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title "Cloud at scale" becomes the card's only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 9 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 10 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (S) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (T) = Research; **Title** (U) = Supply chain resilience; **Description** (V) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (W) = Add the tags tcs-corp:industry/manufacturing; **Date** (X) = 2026-08-07; **Content type** (Y) = Article; **Reading time** (Z) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker “Research”, “Manufacturing” and “5m”, the title “Supply chain resilience” and the description, then the meta row “Article” and “07 Aug 26”.

Step 11 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AA) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title “Supply chain resilience” becomes the card’s only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 12 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 13 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AB) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AC) = Insight; **Title** (AD) = Personalisation in retail; **Description** (AE) = Turning first-party data into relevant experiences in every channel; **Tags** (AF) = Add the tags tcs-corp:industry/retail; **Date** (AG) = 2026-07-30; **Content type** (AH) = Article; **Reading time** (AI) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker “Insight”, “Retail” and “4m”, the title “Personalisation in retail” and the description, then the meta row “Article” and “30 Jul 26”.

Step 14 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AJ) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title “Personalisation in retail” becomes the card’s only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 15 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 16 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AK) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AL) = Perspective; **Title** (AM) = The energy transition; **Description** (AN) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AO) = Add the tags tcs-corp:industry/energy; **Date** (AP) = 2026-07-16; **Content type** (AQ) = Article; **Reading time** (AR) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker “Perspective”, “Energy” and “7m”, the title “The energy transition” and the description, then the meta row “Article” and “16 Jul 26”.

Step 17 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AS) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title “The energy transition” becomes the card’s only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 18 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 19 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AT) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (AU) = Research; **Title** (AV) = Quantum readiness; **Description** (AW) = Preparing security and research teams for the first useful quantum computers; **Tags** (AX) = Add the tags tcs-corp:topic/security; **Date** (AY) = 2026-07-02; **Content type** (AZ) = Article; **Reading time** (BA) = 9.

Expected Result: Card 6 renders as an image card: photo-6.svg in a 16:9 frame, the kicker “Research”, “Security” and “9m”, the title “Quantum readiness” and the description, then the meta row “Article” and “02 Jul 26”.

Step 20 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BB) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title “Quantum readiness” becomes the card’s only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 21 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 22 — Fill in Card 7 › Content

Action: Select **Card 7** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (BC) = Select the asset photo-7.svg (/en/media/photo-7.svg); **Eyebrow** (BD) = Insight; **Title** (BE) = The future of work; **Description** (BF) = Skills, tools and workplaces for teams that collaborate with AI every day; **Tags** (BG) = Add the tags tcs-corp:topic/ai; **Date** (BH) = 2026-06-18; **Content type** (BI) = Article; **Reading time** (BJ) = 6.

Expected Result: Card 7 renders as an image card: photo-7.svg in a 16:9 frame, the kicker “Insight”, “Ai” and “6m”, the title “The future of work” and the description, then the meta row “Article” and “18 Jun 26”.

Step 23 — Fill in Card 7 › Link

Action: Select **Card 7** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BK) = Select the page or enter /en/insights/future-of-work.

Expected Result: The title “The future of work” becomes the card’s only link, to /en/insights/future-of-work; the clickable area covers the whole card.

Step 24 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 25 — Fill in Card 8 › Content

Action: Select **Card 8** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (BL) = Select the asset photo-8.svg (/en/media/photo-8.svg); **Eyebrow** (BM) = Case study; **Title** (BN) = Touchless insurance claims; **Description** (BO) = How an insurer settles most motor claims within a day, end to end; **Tags** (BP) = Add the tags tcs-corp:industry/insurance; **Date** (BQ) = 2026-06-04; **Content type** (BR) = Case study; **Reading time** (BS) = 5.

Expected Result: Card 8 renders as an image card: photo-8.svg in a 16:9 frame, the kicker "Case study", "Insurance" and "5m", the title "Touchless insurance claims" and the description, then the meta row "Case study" and "04 Jun 26".

Step 26 — Fill in Card 8 › Link

Action: Select **Card 8** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BT) = Select the page or enter /en/insights/insurance-claims.

Expected Result: The title "Touchless insurance claims" becomes the card's only link, to /en/insights/insurance-claims; the clickable area covers the whole card.

Step 27 — Preview

Action: Note: Desktop and tablet: two rows of four (columns 4); below 600 px the same cards in one column (Mobile columns 1).

Expected Result: Desktop and tablet show two rows of four cards; at 402 px the eight cards stack in one column.

Step 28 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: On desktop and tablet two rows of four image cards (photo-1.svg to photo-8.svg); below 600 px the same eight cards in one column.

Step 29 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, the eight assets and the eight linked insight pages to preview and live.

Step 30 — Verify

Action: On the live page check: document.querySelectorAll('.cards.card-list .list-item').length returns 8 on the preview page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 26 — Horizontal Scroll on Every Breakpoint

Reproduces the screenshot `screenshots/cards-scroll-all.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (A) = Horizontal scroll; **Previous / next buttons on desktop** (B) = On; **Scroll indicator on desktop** (C) = On; **Tablet display** (D) = Horizontal scroll; **Mobile display** (E) = Horizontal scroll.

Expected Result: All three breakpoints switch to a horizontal row; on desktop the buttons and the scroll indicator appear below the cards.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (F) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (G) = Insight; **Title** (H) = The agentic bank; **Description** (I) = How AI agents take over routine operations and free teams for advice; **Tags** (J) = Add the tags tcs-corp:industry/banking; **Date** (K) = 2026-09-04; **Content type** (L) = Article; **Reading time** (M) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker “Insight”, “Banking” and “6m”, the title “The agentic bank” and the description, then the meta row “Article” and “04 Sep 26”.

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (N) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title “The agentic bank” becomes the card’s only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (O) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (P) = Perspective; **Title** (Q) = Cloud at scale; **Description** (R) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (S) = Add the tags tcs-corp:topic/cloud; **Date** (T) = 2026-08-21; **Content type** (U) = Article; **Reading time** (V) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker “Perspective”, “Cloud” and “8m”, the title “Cloud at scale” and the description, then the meta row “Article” and “21 Aug 26”.

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (W) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title “Cloud at scale” becomes the card’s only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (X) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (Y) = Research; **Title** (Z) = Supply chain resilience;

Description (AA) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (AB) = Add the tags tcs-corp:industry/manufacturing; **Date** (AC) = 2026-08-07; **Content type** (AD) = Article; **Reading time** (AE) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker "Research", "Manufacturing" and "5m", the title "Supply chain resilience" and the description, then the meta row "Article" and "07 Aug 26".

Step 12 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AF) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title "Supply chain resilience" becomes the card's only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 13 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 14 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AG) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AH) = Insight; **Title** (AI) = Personalisation in retail; **Description** (AJ) = Turning first-party data into relevant experiences in every channel; **Tags** (AK) = Add the tags tcs-corp:industry/retail; **Date** (AL) = 2026-07-30; **Content type** (AM) = Article; **Reading time** (AN) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker "Insight", "Retail" and "4m", the title "Personalisation in retail" and the description, then the meta row "Article" and "30 Jul 26".

Step 15 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AO) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title "Personalisation in retail" becomes the card's only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 16 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 17 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AP) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AQ) = Perspective; **Title** (AR) = The energy transition; **Description** (AS) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AT) = Add the tags tcs-corp:industry/energy; **Date** (AU) = 2026-07-16; **Content type** (AV) = Article; **Reading time** (AW) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker "Perspective", "Energy" and "7m", the title "The energy transition" and the description, then the meta row "Article" and "16 Jul 26".

Step 18 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AX) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title "The energy transition" becomes the card's only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 19 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 20 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AY) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (AZ) = Research; **Title** (BA) = Quantum readiness; **Description** (BB) = Preparing security and research teams for the first useful quantum computers; **Tags** (BC) = Add the tags tcs-corp:topic/security; **Date** (BD) = 2026-07-02; **Content type** (BE) = Article; **Reading time** (BF) = 9.

Expected Result: Card 6 renders as an image card: photo-6.svg in a 16:9 frame, the kicker "Research", "Security" and "9m", the title "Quantum readiness" and the description, then the meta row "Article" and "02 Jul 26".

Step 21 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BG) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title "Quantum readiness" becomes the card's only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 22 — Preview

Action: Note: Tablet (3.3 visible) and mobile (1.2 visible, scroll indicator) scroll too.

Expected Result: Tablet shows 3.3 cards and mobile 1.2 cards with the grey scroll indicator; both rows scroll sideways.

Step 23 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: On desktop 4.2 cards are visible, the fifth cut off at the right screen edge, with the scroll indicator and two round previous / next buttons below; tablet shows 3.3 cards and mobile 1.2 with the indicator.

Step 24 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the scroller needs no extra data, as all cards are in the page HTML.

Step 25 — Verify

Action: On the live page check: Inspect .list-scroller: data-overflow="true" and the buttons show at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 27 — Scroll on Desktop Only

Reproduces the screenshot `screenshots/cards-scroll-desktop-only.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (A) = Horizontal scroll; **Previous / next buttons on desktop** (B) = On; **Tablet columns** (C) = 2.

Expected Result: Desktop becomes a scrolling row with previous / next buttons, and the tablet grid switches to two columns.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (E) = Insight; **Title** (F) = The agentic bank; **Description** (G) = How AI agents take over routine operations and free teams for advice; **Tags** (H) = Add the tags tcs-corp:industry/banking; **Date** (I) = 2026-09-04; **Content type** (J) = Article; **Reading time** (K) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (L) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title "The agentic bank" becomes the card's only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (M) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (N) = Perspective; **Title** (O) = Cloud at scale; **Description** (P) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (Q) = Add the tags tcs-corp:topic/cloud; **Date** (R) = 2026-08-21; **Content type** (S) = Article; **Reading time** (T) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker "Perspective", "Cloud" and "8m", the title "Cloud at scale" and the description, then the meta row "Article" and "21 Aug 26".

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (U) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title “Cloud at scale” becomes the card’s only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (V) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (W) = Research; **Title** (X) = Supply chain resilience; **Description** (Y) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (Z) = Add the tags tcs-corp:industry/manufacturing; **Date** (AA) = 2026-08-07; **Content type** (AB) = Article; **Reading time** (AC) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker “Research”, “Manufacturing” and “5m”, the title “Supply chain resilience” and the description, then the meta row “Article” and “07 Aug 26”.

Step 12 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AD) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title “Supply chain resilience” becomes the card’s only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 13 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 14 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AE) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AF) = Insight; **Title** (AG) = Personalisation in retail; **Description** (AH) = Turning first-party data into relevant experiences in every channel; **Tags** (AI) = Add the tags tcs-corp:industry/retail; **Date** (AJ) = 2026-07-30; **Content type** (AK) = Article; **Reading time** (AL) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker “Insight”, “Retail” and “4m”, the title “Personalisation in retail” and the description, then the meta row “Article” and “30 Jul 26”.

Step 15 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AM) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title “Personalisation in retail” becomes the card’s only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 16 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 17 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AN) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AO) = Perspective; **Title** (AP) = The energy transition; **Description** (AQ) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AR) = Add the tags tcs-corp:industry/energy; **Date** (AS) = 2026-07-16; **Content type** (AT) = Article; **Reading time** (AU) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker "Perspective", "Energy" and "7m", the title "The energy transition" and the description, then the meta row "Article" and "16 Jul 26".

Step 18 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AV) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title "The energy transition" becomes the card's only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 19 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 20 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AW) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (AX) = Research; **Title** (AY) = Quantum readiness; **Description** (AZ) = Preparing security and research teams for the first useful quantum computers; **Tags** (BA) = Add the tags tcs-corp:topic/security; **Date** (BB) = 2026-07-02; **Content type** (BC) = Article; **Reading time** (BD) = 9.

Expected Result: Card 6 renders as an image card: photo-6.svg in a 16:9 frame, the kicker "Research", "Security" and "9m", the title "Quantum readiness" and the description, then the meta row "Article" and "02 Jul 26".

Step 21 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BE) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title "Quantum readiness" becomes the card's only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 22 — Preview

Action: Note: Tablet: a 2-column grid; mobile: one column.

Expected Result: Tablet shows a 2-column grid of the six cards and mobile a single column.

Step 23 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Desktop: one scrolling row with 4.2 cards visible and the previous / next buttons at the bottom right; tablet: a 2-column grid of the six cards; mobile: one column.

Step 24 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the scroller needs no extra data, as all cards are in the page HTML.

Step 25 — Verify

Action: On the live page check: Two round buttons show at the bottom right; Previous is disabled at the start.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 28 — Scroll on Tablet Only

Reproduces the screenshot `screenshots/cards-scroll-tablet-only.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Tablet display** (A) = Horizontal scroll; **Tablet items visible** (B) = 2.5.

Expected Result: Between 600 and 1199 px the cards become a sideways row with 2.5 cards visible; desktop and mobile stay grids.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (C) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (D) = Insight; **Title** (E) = The agentic bank; **Description** (F) = How AI agents take over routine operations and free teams for advice; **Tags** (G) = Add the tags tcs-corp:industry/banking; **Date** (H) = 2026-09-04; **Content type** (I) = Article; **Reading time** (J) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (K) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title "The agentic bank" becomes the card's only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (L) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (M) = Perspective; **Title** (N) = Cloud at scale; **Description** (O) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (P) = Add the tags tcs-corp:topic/cloud; **Date** (Q) = 2026-08-21; **Content type** (R) = Article; **Reading time** (S) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker "Perspective", "Cloud" and "8m", the title "Cloud at scale" and the description, then the meta row "Article" and "21 Aug 26".

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (T) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title "Cloud at scale" becomes the card's only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (U) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (V) = Research; **Title** (W) = Supply chain resilience; **Description** (X) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (Y) = Add the tags tcs-corp:industry/manufacturing; **Date** (Z) = 2026-08-07; **Content type** (AA) = Article; **Reading time** (AB) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker "Research", "Manufacturing" and "5m", the title "Supply chain resilience" and the description, then the meta row "Article" and "07 Aug 26".

Step 12 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AC) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title "Supply chain resilience" becomes the card's only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 13 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 14 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AD) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AE) = Insight; **Title** (AF) = Personalisation in retail; **Description** (AG) = Turning first-party data into relevant experiences in every channel; **Tags** (AH) = Add the tags tcs-corp:industry/retail; **Date** (AI) = 2026-07-30; **Content type** (AJ) = Article; **Reading time** (AK) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker "Insight", "Retail" and "4m", the title "Personalisation in retail" and the description, then the meta row "Article" and "30 Jul 26".

Step 15 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AL) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title “Personalisation in retail” becomes the card’s only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 16 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 17 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AM) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AN) = Perspective; **Title** (AO) = The energy transition; **Description** (AP) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AQ) = Add the tags tcs-corp:industry/energy; **Date** (AR) = 2026-07-16; **Content type** (AS) = Article; **Reading time** (AT) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker “Perspective”, “Energy” and “7m”, the title “The energy transition” and the description, then the meta row “Article” and “16 Jul 26”.

Step 18 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AU) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title “The energy transition” becomes the card’s only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 19 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 20 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AV) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (AW) = Research; **Title** (AX) = Quantum readiness; **Description** (AY) = Preparing security and research teams for the first useful quantum computers; **Tags** (AZ) = Add the tags tcs-corp:topic/security; **Date** (BA) = 2026-07-02; **Content type** (BB) = Article; **Reading time** (BC) = 9.

Expected Result: Card 6 renders as an image card: photo-6.svg in a 16:9 frame, the kicker “Research”, “Security” and “9m”, the title “Quantum readiness” and the description, then the meta row “Article” and “02 Jul 26”.

Step 21 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BD) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title “Quantum readiness” becomes the card’s only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 22 — Preview

Action: Screen width: 1024 px (tablet).

Expected Result: At 1024 px the row shows two and a half cards; desktop is a 4-column grid and mobile one column.

Step 23 — Preview

Action: Note: Desktop: a 4-column grid; mobile: one column.

Expected Result: At 1024 px the row shows two and a half cards; desktop is a 4-column grid and mobile one column.

Step 24 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1024 px one scrolling row with two and a half image cards visible, the third cut off at the right edge; desktop shows a 4-column grid and mobile one column.

Step 25 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Step 26 — Verify

Action: On the live page check: The block has the class tablet-scroll and 2.5 cards are visible at 1024 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 29 — Scroll on Mobile Only

Reproduces the screenshot `screenshots/cards-scroll-mobile-only.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Statistic.

Expected Result: With Card style Statistic the cards become light grey statistic tiles.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Mobile display** (B) = Horizontal scroll.

Expected Result: Below 600 px the cards switch to a swipeable row with the scroll indicator; larger screens keep the grid.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = At a glance; **Title** (D) = 4bn; **Description** (E) = Annual revenue in US dollars, growing for the tenth year; **Label** (F) = Revenue.

Expected Result: Card 1 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "4bn" in large type, and the label "Revenue" with the description at the bottom.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (G) = At a glance; **Title** (H) = 600,000+; **Description** (I) = Consultants and engineers in 55 countries; **Label** (J) = Colleagues.

Expected Result: Card 2 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "600,000+" in large type, and the label "Colleagues" with the description at the bottom.

Step 9 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 10 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (K) = At a glance; **Title** (L) = 150; **Description** (M) = Serving clients around the world, around the clock; **Label** (N) = Delivery centres.

Expected Result: Card 3 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "150" in large type, and the label "Delivery centres" with the description at the bottom.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (O) = At a glance; **Title** (P) = 98%; **Description** (Q) = Of our top clients have worked with us for more than five years; **Label** (R) = Client retention.

Expected Result: Card 4 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "98%" in large type, and the label "Client retention" with the description at the bottom.

Step 13 — Preview

Action: Screen width: 402 px (mobile).

Expected Result: At 402 px 1.2 cards are visible with the next one peeking and the grey indicator below.

Step 14 — Preview

Action: Note: Desktop and tablet: a 4-column grid.

Expected Result: At 402 px 1.2 cards are visible with the next one peeking and the grey indicator below.

Step 15 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 402 px 1.2 statistic cards are visible, the next card peeking at the right edge, with the grey scroll indicator below; desktop and tablet show a 4-column grid.

Step 16 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page to preview and live; the cards have no images or links to publish. Check the swipe on a real phone on aem.page.

Step 17 — Verify

Action: On the live page check: At 402 px on aem.live 1.2 cards show with the indicator below.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 30 — Scroll on Desktop and Tablet, Grid on Mobile

Reproduces the screenshot `screenshots/cards-scroll-desktop-tablet.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (A) = Horizontal scroll; **Previous / next buttons on desktop** (B) = On; **Tablet display** (C) = Horizontal scroll; **Previous / next buttons on tablet** (D) = On.

Expected Result: Desktop and tablet become scrolling rows with previous / next buttons; mobile keeps the single-column grid.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (E) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (F) = Insight; **Title** (G) = The agentic bank; **Description** (H) = How AI agents take over routine operations and free teams for advice; **Tags** (I) = Add the tags tcs-corp:industry/banking; **Date** (J) = 2026-09-04; **Content type** (K) = Article; **Reading time** (L) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker “Insight”, “Banking” and “6m”, the title “The agentic bank” and the description, then the meta row “Article” and “04 Sep 26”.

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (M) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title “The agentic bank” becomes the card’s only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (N) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (O) = Perspective; **Title** (P) = Cloud at scale; **Description** (Q) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (R) = Add the tags tcs-corp:topic/cloud; **Date** (S) = 2026-08-21; **Content type** (T) = Article; **Reading time** (U) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker “Perspective”, “Cloud” and “8m”, the title “Cloud at scale” and the description, then the meta row “Article” and “21 Aug 26”.

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (V) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title “Cloud at scale” becomes the card’s only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (W) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (X) = Research; **Title** (Y) = Supply chain resilience; **Description** (Z) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (AA) = Add the tags tcs-corp:industry/manufacturing; **Date** (AB) = 2026-08-07; **Content type** (AC) = Article; **Reading time** (AD) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker “Research”, “Manufacturing” and “5m”, the title “Supply chain resilience” and the description, then the meta row “Article” and “07 Aug 26”.

Step 12 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AE) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title “Supply chain resilience” becomes the card’s only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 13 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 14 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AF) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AG) = Insight; **Title** (AH) = Personalisation in retail; **Description** (AI) = Turning first-party data into relevant experiences in every channel; **Tags** (AJ) = Add the tags tcs-corp:industry/retail; **Date** (AK) = 2026-07-30; **Content type** (AL) = Article; **Reading time** (AM) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker “Insight”, “Retail” and “4m”, the title “Personalisation in retail” and the description, then the meta row “Article” and “30 Jul 26”.

Step 15 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AN) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title “Personalisation in retail” becomes the card’s only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 16 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 17 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AO) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AP) = Perspective; **Title** (AQ) = The energy transition; **Description** (AR) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AS) = Add the tags tcs-corp:industry/energy; **Date** (AT) = 2026-07-16; **Content type** (AU) = Article; **Reading time** (AV) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker “Perspective”, “Energy” and “7m”, the title “The energy transition” and the description, then the meta row “Article” and “16 Jul 26”.

Step 18 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AW) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title “The energy transition” becomes the card’s only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 19 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 20 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AX) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (AY) = Research; **Title** (AZ) = Quantum readiness; **Description** (BA) = Preparing security and research teams for the first useful quantum computers; **Tags** (BB) = Add the tags tcs-corp:topic/security; **Date** (BC) = 2026-07-02; **Content type** (BD) = Article; **Reading time** (BE) = 9.

Expected Result: Card 6 renders as an image card: photo-6.svg in a 16:9 frame, the kicker “Research”, “Security” and “9m”, the title “Quantum readiness” and the description, then the meta row “Article” and “02 Jul 26”.

Step 21 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BF) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title “Quantum readiness” becomes the card’s only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 22 — Preview

Action: Screen width: 1024 px (tablet).

Expected Result: At 1024 px 3.3 cards are visible with the two buttons below; desktop shows 4.2 cards with buttons.

Step 23 — Preview

Action: Note: Desktop scrolls too (4.2 visible, buttons); mobile: one column.

Expected Result: At 1024 px 3.3 cards are visible with the two buttons below; desktop shows 4.2 cards with buttons.

Step 24 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1024 px a scrolling row with 3.3 cards visible and the previous / next buttons at the bottom right; desktop scrolls with 4.2 visible and buttons; mobile shows one column.

Step 25 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Step 26 — Verify

Action: On the live page check: At 1024 px Next moves the row one card and Previous becomes enabled.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 31 — Scroll on Desktop and Mobile, Grid on Tablet

Reproduces the screenshot `screenshots/cards-scroll-desktop-mobile.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint “Add a Card to the block and give it a title, a description or an image.”

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (A) = Horizontal scroll; **Previous / next buttons on desktop** (B) = On; **Tablet columns** (C) = 2; **Mobile display** (D) = Horizontal scroll.

Expected Result: Desktop and mobile become scrolling rows (desktop with buttons) and tablet a 2-column grid.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (E) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (F) = Insight; **Title** (G) = The agentic bank; **Description** (H) = How AI agents take over routine operations and free teams for advice; **Tags** (I) = Add the tags tcs-corp:industry/banking; **Date** (J) = 2026-09-04; **Content type** (K) = Article; **Reading time** (L) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker “Insight”, “Banking” and “6m”, the title “The agentic bank” and the description, then the meta row “Article” and “04 Sep 26”.

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (M) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title “The agentic bank” becomes the card’s only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (N) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (O) = Perspective; **Title** (P) = Cloud at scale; **Description** (Q) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (R) = Add the tags tcs-corp:topic/cloud; **Date** (S) = 2026-08-21; **Content type** (T) = Article; **Reading time** (U) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker “Perspective”, “Cloud” and “8m”, the title “Cloud at scale” and the description, then the meta row “Article” and “21 Aug 26”.

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (V) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title “Cloud at scale” becomes the card’s only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (W) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (X) = Research; **Title** (Y) = Supply chain resilience; **Description** (Z) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (AA) = Add the tags tcs-corp:industry/manufacturing; **Date** (AB) = 2026-08-07; **Content type** (AC) = Article; **Reading time** (AD) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker "Research", "Manufacturing" and "5m", the title "Supply chain resilience" and the description, then the meta row "Article" and "07 Aug 26".

Step 12 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AE) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title "Supply chain resilience" becomes the card's only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 13 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 14 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AF) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AG) = Insight; **Title** (AH) = Personalisation in retail; **Description** (AI) = Turning first-party data into relevant experiences in every channel; **Tags** (AJ) = Add the tags tcs-corp:industry/retail; **Date** (AK) = 2026-07-30; **Content type** (AL) = Article; **Reading time** (AM) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker "Insight", "Retail" and "4m", the title "Personalisation in retail" and the description, then the meta row "Article" and "30 Jul 26".

Step 15 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AN) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title "Personalisation in retail" becomes the card's only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 16 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 17 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AO) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AP) = Perspective; **Title** (AQ) = The energy transition; **Description** (AR) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AS) = Add the tags tcs-corp:industry/energy; **Date** (AT) = 2026-07-16; **Content type** (AU) = Article; **Reading time** (AV) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker "Perspective", "Energy" and "7m", the title "The energy transition" and the description, then the meta row "Article" and "16 Jul 26".

Step 18 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AW) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title "The energy transition" becomes the card's only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 19 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 20 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AX) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (AY) = Research; **Title** (AZ) = Quantum readiness; **Description** (BA) = Preparing security and research teams for the first useful quantum computers; **Tags** (BB) = Add the tags tcs-corp:topic/security; **Date** (BC) = 2026-07-02; **Content type** (BD) = Article; **Reading time** (BE) = 9.

Expected Result: Card 6 renders as an image card: photo-6.svg in a 16:9 frame, the kicker "Research", "Security" and "9m", the title "Quantum readiness" and the description, then the meta row "Article" and "02 Jul 26".

Step 21 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BF) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title "Quantum readiness" becomes the card's only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 22 — Preview

Action: Screen width: 402 px (mobile).

Expected Result: At 402 px 1.2 cards show with the indicator; desktop scrolls with buttons and tablet shows two columns.

Step 23 — Preview

Action: Note: Desktop scrolls too (4.2 visible, buttons); tablet: a 2-column grid.

Expected Result: At 402 px 1.2 cards show with the indicator; desktop scrolls with buttons and tablet shows two columns.

Step 24 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 402 px a rail with 1.2 cards visible and the grey scroll indicator; desktop scrolls with 4.2 cards and buttons; tablet shows a 2-column grid of the six cards.

Step 25 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Step 26 — Verify

Action: On the live page check: At 402 px the grey track and thumb show under the cards and move while swiping.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 32 — Grid on Desktop, Scroll on Tablet and Mobile

Reproduces the screenshot `screenshots/cards-scroll-tablet-mobile.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Tablet display** (A) = Horizontal scroll; **Scroll indicator on tablet** (B) = On; **Mobile display** (C) = Horizontal scroll.

Expected Result: Tablet and mobile become scrolling rows with indicators; desktop keeps the 4-column grid.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (E) = Insight; **Title** (F) = The agentic bank; **Description** (G) = How AI agents take over routine operations and free teams for advice; **Tags** (H) = Add the tags tcs-corp:industry/banking; **Date** (I) = 2026-09-04; **Content type** (J) = Article; **Reading time** (K) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (L) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title "The agentic bank" becomes the card's only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (M) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (N) = Perspective; **Title** (O) = Cloud at scale; **Description** (P) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (Q) = Add the tags tcs-corp:topic/cloud; **Date** (R) = 2026-08-21; **Content type** (S) = Article; **Reading time** (T) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker “Perspective”, “Cloud” and “8m”, the title “Cloud at scale” and the description, then the meta row “Article” and “21 Aug 26”.

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (U) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title “Cloud at scale” becomes the card’s only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (V) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (W) = Research; **Title** (X) = Supply chain resilience; **Description** (Y) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (Z) = Add the tags tcs-corp:industry/manufacturing; **Date** (AA) = 2026-08-07; **Content type** (AB) = Article; **Reading time** (AC) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker “Research”, “Manufacturing” and “5m”, the title “Supply chain resilience” and the description, then the meta row “Article” and “07 Aug 26”.

Step 12 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AD) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title “Supply chain resilience” becomes the card’s only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 13 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 14 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AE) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AF) = Insight; **Title** (AG) = Personalisation in retail; **Description** (AH) = Turning first-party data into relevant experiences in every channel; **Tags** (AI) = Add the tags tcs-corp:industry/retail; **Date** (AJ) = 2026-07-30; **Content type** (AK) = Article; **Reading time** (AL) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker “Insight”, “Retail” and “4m”, the title “Personalisation in retail” and the description, then the meta row “Article” and “30 Jul 26”.

Step 15 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AM) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title “Personalisation in retail” becomes the card’s only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 16 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 17 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AN) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AO) = Perspective; **Title** (AP) = The energy transition; **Description** (AQ) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AR) = Add the tags tcs-corp:industry/energy; **Date** (AS) = 2026-07-16; **Content type** (AT) = Article; **Reading time** (AU) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker "Perspective", "Energy" and "7m", the title "The energy transition" and the description, then the meta row "Article" and "16 Jul 26".

Step 18 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AV) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title "The energy transition" becomes the card's only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 19 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 20 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AW) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (AX) = Research; **Title** (AY) = Quantum readiness; **Description** (AZ) = Preparing security and research teams for the first useful quantum computers; **Tags** (BA) = Add the tags tcs-corp:topic/security; **Date** (BB) = 2026-07-02; **Content type** (BC) = Article; **Reading time** (BD) = 9.

Expected Result: Card 6 renders as an image card: photo-6.svg in a 16:9 frame, the kicker "Research", "Security" and "9m", the title "Quantum readiness" and the description, then the meta row "Article" and "02 Jul 26".

Step 21 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BE) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title "Quantum readiness" becomes the card's only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 22 — Preview

Action: Screen width: 1024 px (tablet).

Expected Result: At 1024 px 3.3 cards are visible with the grey indicator below; mobile scrolls with 1.2 visible.

Step 23 — Preview

Action: Note: Desktop: a 4-column grid; mobile scrolls too (1.2 visible, indicator).

Expected Result: At 1024 px 3.3 cards are visible with the grey indicator below; mobile scrolls with 1.2 visible.

Step 24 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1024 px a scrolling row with 3.3 cards visible and a thin grey indicator below; desktop shows a 4-column grid; mobile scrolls with 1.2 visible and its indicator.

Step 25 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Step 26 — Verify

Action: On the live page check: The block has the class tablet-indicator and the grey track shows at 1024 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 33 — Previous / Next Buttons

Reproduces the screenshot `screenshots/cards-previous-next.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (A) = Horizontal scroll; **Previous / next buttons on desktop** (B) = On.

Expected Result: Desktop becomes a scrolling row and the round previous / next buttons appear below it at the right.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (C) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (D) = Insight; **Title** (E) = The agentic bank; **Description** (F) = How AI agents take over routine operations and free teams for advice; **Tags** (G) = Add the tags tcs-corp:industry/banking; **Date** (H) = 2026-09-04; **Content type** (I) = Article; **Reading time** (J) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (K) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title "The agentic bank" becomes the card's only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (L) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (M) = Perspective; **Title** (N) = Cloud at scale; **Description** (O) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (P) = Add the tags tcs-corp:topic/cloud; **Date** (Q) = 2026-08-21; **Content type** (R) = Article; **Reading time** (S) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker "Perspective", "Cloud" and "8m", the title "Cloud at scale" and the description, then the meta row "Article" and "21 Aug 26".

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (T) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title "Cloud at scale" becomes the card's only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (U) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (V) = Research; **Title** (W) = Supply chain resilience; **Description** (X) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (Y) = Add the tags tcs-corp:industry/manufacturing; **Date** (Z) = 2026-08-07; **Content type** (AA) = Article; **Reading time** (AB) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker "Research", "Manufacturing" and "5m", the title "Supply chain resilience" and the description, then the meta row "Article" and "07 Aug 26".

Step 12 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AC) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title "Supply chain resilience" becomes the card's only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 13 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 14 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AD) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AE) = Insight; **Title** (AF) = Personalisation in retail; **Description** (AG) = Turning first-party data into relevant experiences in every channel; **Tags** (AH) = Add the tags tcs-corp:industry/retail; **Date** (AI) = 2026-07-30; **Content type** (AJ) = Article; **Reading time** (AK) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker "Insight", "Retail" and "4m", the title "Personalisation in retail" and the description, then the meta row "Article" and "30 Jul 26".

Step 15 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AL) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title "Personalisation in retail" becomes the card's only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 16 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 17 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AM) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AN) = Perspective; **Title** (AO) = The energy transition; **Description** (AP) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AQ) = Add the tags tcs-corp:industry/energy; **Date** (AR) = 2026-07-16; **Content type** (AS) = Article; **Reading time** (AT) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker "Perspective", "Energy" and "7m", the title "The energy transition" and the description, then the meta row "Article" and "16 Jul 26".

Step 18 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AU) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title "The energy transition" becomes the card's only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 19 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 20 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AV) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (AW) = Research; **Title** (AX) = Quantum readiness; **Description** (AY) = Preparing security and research teams for the first useful quantum computers; **Tags** (AZ) = Add the tags tcs-corp:topic/security; **Date** (BA) = 2026-07-02; **Content type** (BB) = Article; **Reading time** (BC) = 9.

Expected Result: Card 6 renders as an image card: photo-6.svg in a 16:9 frame, the kicker "Research", "Security" and "9m", the title "Quantum readiness" and the description, then the meta row "Article" and "02 Jul 26".

Step 21 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BD) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title "Quantum readiness" becomes the card's only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 22 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two round chevron icon buttons at the bottom right under the scrolling row of 4.2 cards; the Previous button is disabled at the start.

Step 23 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Step 24 — Verify

Action: On the live page check: At 1440 px the two buttons show; Next moves one card and enables Previous.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 34 — Scroll Indicator

Reproduces the screenshot `screenshots/cards-scroll-indicator.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (A) = Horizontal scroll; **Scroll indicator on desktop** (B) = On.

Expected Result: Desktop becomes a scrolling row with a thin grey track and thumb below the cards.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (C) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (D) = Insight; **Title** (E) = The agentic bank; **Description** (F)

= How AI agents take over routine operations and free teams for advice; **Tags** (G) = Add the tags tcs-corp:industry/banking; **Date** (H) = 2026-09-04; **Content type** (I) = Article; **Reading time** (J) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (K) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title "The agentic bank" becomes the card's only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (L) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (M) = Perspective; **Title** (N) = Cloud at scale; **Description** (O) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (P) = Add the tags tcs-corp:topic/cloud; **Date** (Q) = 2026-08-21; **Content type** (R) = Article; **Reading time** (S) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker "Perspective", "Cloud" and "8m", the title "Cloud at scale" and the description, then the meta row "Article" and "21 Aug 26".

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (T) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title "Cloud at scale" becomes the card's only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (U) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (V) = Research; **Title** (W) = Supply chain resilience; **Description** (X) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (Y) = Add the tags tcs-corp:industry/manufacturing; **Date** (Z) = 2026-08-07; **Content type** (AA) = Article; **Reading time** (AB) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker "Research", "Manufacturing" and "5m", the title "Supply chain resilience" and the description, then the meta row "Article" and "07 Aug 26".

Step 12 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AC) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title "Supply chain resilience" becomes the card's only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 13 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 14 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AD) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AE) = Insight; **Title** (AF) = Personalisation in retail; **Description** (AG) = Turning first-party data into relevant experiences in every channel; **Tags** (AH) = Add the tags tcs-corp:industry/retail; **Date** (AI) = 2026-07-30; **Content type** (AJ) = Article; **Reading time** (AK) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker “Insight”, “Retail” and “4m”, the title “Personalisation in retail” and the description, then the meta row “Article” and “30 Jul 26”.

Step 15 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AL) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title “Personalisation in retail” becomes the card’s only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 16 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 17 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AM) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AN) = Perspective; **Title** (AO) = The energy transition; **Description** (AP) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AQ) = Add the tags tcs-corp:industry/energy; **Date** (AR) = 2026-07-16; **Content type** (AS) = Article; **Reading time** (AT) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker “Perspective”, “Energy” and “7m”, the title “The energy transition” and the description, then the meta row “Article” and “16 Jul 26”.

Step 18 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AU) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title “The energy transition” becomes the card’s only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 19 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 20 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AV) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (AW) = Research; **Title** (AX) = Quantum readiness; **Description** (AY) = Preparing security and research teams for the first useful quantum computers; **Tags**

(AZ) = Add the tags tcs-corp:topic/security; **Date** (BA) = 2026-07-02; **Content type** (BB) = Article; **Reading time** (BC) = 9.

Expected Result: Card 6 renders as an image card: photo-6.svg in a 16:9 frame, the kicker "Research", "Security" and "9m", the title "Quantum readiness" and the description, then the meta row "Article" and "02 Jul 26".

Step 21 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BD) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title "Quantum readiness" becomes the card's only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 22 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 4-pixel light grey track under the scrolling cards with a darker grey thumb whose width shows the visible share of the row.

Step 23 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Step 24 — Verify

Action: On the live page check: At 1440 px the thumb is shorter than the track and moves while scrolling.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 35 — Fixed Card Width

Reproduces the screenshot `screenshots/cards-fixed-card-width.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (A) = Horizontal scroll; **Desktop card width (px)** (B) = 320; **Previous / next buttons on desktop** (C) = On.

Expected Result: Desktop becomes a scrolling row of fixed 320 px cards with the previous / next buttons below.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (E) = Insight; **Title** (F) = The agentic bank; **Description** (G) = How AI agents take over routine operations and free teams for advice; **Tags** (H) = Add the tags tcs-corp:industry/banking; **Date** (I) = 2026-09-04; **Content type** (J) = Article; **Reading time** (K) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (L) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title "The agentic bank" becomes the card's only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (M) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (N) = Perspective; **Title** (O) = Cloud at scale; **Description** (P) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (Q) = Add the tags tcs-corp:topic/cloud; **Date** (R) = 2026-08-21; **Content type** (S) = Article; **Reading time** (T) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker "Perspective", "Cloud" and "8m", the title "Cloud at scale" and the description, then the meta row "Article" and "21 Aug 26".

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (U) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title "Cloud at scale" becomes the card's only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (V) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (W) = Research; **Title** (X) = Supply chain resilience; **Description** (Y) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (Z) = Add the tags tcs-corp:industry/manufacturing; **Date** (AA) = 2026-08-07; **Content type** (AB) = Article; **Reading time** (AC) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker "Research", "Manufacturing" and "5m", the title "Supply chain resilience" and the description, then the meta row "Article" and "07 Aug 26".

Step 12 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AD) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title “Supply chain resilience” becomes the card’s only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 13 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 14 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AE) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AF) = Insight; **Title** (AG) = Personalisation in retail; **Description** (AH) = Turning first-party data into relevant experiences in every channel; **Tags** (AI) = Add the tags tcs-corp:industry/retail; **Date** (AJ) = 2026-07-30; **Content type** (AK) = Article; **Reading time** (AL) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker “Insight”, “Retail” and “4m”, the title “Personalisation in retail” and the description, then the meta row “Article” and “30 Jul 26”.

Step 15 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AM) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title “Personalisation in retail” becomes the card’s only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 16 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 17 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AN) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AO) = Perspective; **Title** (AP) = The energy transition; **Description** (AQ) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AR) = Add the tags tcs-corp:industry/energy; **Date** (AS) = 2026-07-16; **Content type** (AT) = Article; **Reading time** (AU) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker “Perspective”, “Energy” and “7m”, the title “The energy transition” and the description, then the meta row “Article” and “16 Jul 26”.

Step 18 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AV) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title “The energy transition” becomes the card’s only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 19 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 20 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AW) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (AX) = Research; **Title** (AY) = Quantum readiness; **Description** (AZ) = Preparing security and research teams for the first useful quantum computers; **Tags** (BA) = Add the tags tcs-corp:topic/security; **Date** (BB) = 2026-07-02; **Content type** (BC) = Article; **Reading time** (BD) = 9.

Expected Result: Card 6 renders as an image card: photo-6.svg in a 16:9 frame, the kicker "Research", "Security" and "9m", the title "Quantum readiness" and the description, then the meta row "Article" and "02 Jul 26".

Step 21 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BE) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title "Quantum readiness" becomes the card's only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 22 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A scrolling row of 320 px (20rem) wide cards on desktop; the number of visible cards depends on the screen width, with the buttons below.

Step 23 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-1.svg to photo-6.svg and the six linked insight pages to preview (aem.page) and live (aem.live); the layout settings are stored in the block, so a change needs a page republish.

Step 24 — Verify

Action: On the live page check: Inspect the block style: –list-card-width-desktop: 20rem; each card is 320 px wide.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 36 — Edge "Inside the content width"

Reproduces the screenshot `screenshots/cards-edge-none.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block with the editor hint is inserted; the step is repeated for the second block.

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (A) = Horizontal scroll; **Previous / next buttons on desktop** (B) = On.

Expected Result: Each block becomes a desktop rail with previous / next buttons; by default the rail runs to the screen edge.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (C) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (D) = Insight; **Title** (E) = The agentic bank; **Description** (F) = How AI agents take over routine operations and free teams for advice; **Tags** (G) = Add the tags tcs-corp:industry/banking; **Date** (H) = 2026-09-04; **Content type** (I) = Article; **Reading time** (J) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker “Insight”, “Banking” and “6m”, the title “The agentic bank” and the description, then the meta row “Article” and “04 Sep 26”.

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (K) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title “The agentic bank” becomes the card’s only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (L) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (M) = Perspective; **Title** (N) = Cloud at scale; **Description** (O) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (P) = Add the tags tcs-corp:topic/cloud; **Date** (Q) = 2026-08-21; **Content type** (R) = Article; **Reading time** (S) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker “Perspective”, “Cloud” and “8m”, the title “Cloud at scale” and the description, then the meta row “Article” and “21 Aug 26”.

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (T) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title “Cloud at scale” becomes the card’s only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (U) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (V) = Research; **Title** (W) = Supply chain

resilience; **Description** (X) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (Y) = Add the tags tcs-corp:industry/manufacturing; **Date** (Z) = 2026-08-07; **Content type** (AA) = Article; **Reading time** (AB) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker "Research", "Manufacturing" and "5m", the title "Supply chain resilience" and the description, then the meta row "Article" and "07 Aug 26".

Step 12 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AC) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title "Supply chain resilience" becomes the card's only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 13 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 14 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AD) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AE) = Insight; **Title** (AF) = Personalisation in retail; **Description** (AG) = Turning first-party data into relevant experiences in every channel; **Tags** (AH) = Add the tags tcs-corp:industry/retail; **Date** (AI) = 2026-07-30; **Content type** (AJ) = Article; **Reading time** (AK) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker "Insight", "Retail" and "4m", the title "Personalisation in retail" and the description, then the meta row "Article" and "30 Jul 26".

Step 15 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AL) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title "Personalisation in retail" becomes the card's only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 16 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 17 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AM) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AN) = Perspective; **Title** (AO) = The energy transition; **Description** (AP) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AQ) = Add the tags tcs-corp:industry/energy; **Date** (AR) = 2026-07-16; **Content type** (AS) = Article; **Reading time** (AT) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker "Perspective", "Energy" and "7m", the title "The energy transition" and the description, then the meta row "Article" and "16 Jul 26".

Step 18 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AU) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title "The energy transition" becomes the card's only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 19 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block with the editor hint is inserted; the step is repeated for the second block.

Step 20 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (AV) = Horizontal scroll; **Previous / next buttons on desktop** (AW) = On.

Expected Result: Each block becomes a desktop rail with previous / next buttons; by default the rail runs to the screen edge.

Step 21 — Fill in Cards › Scroll

Action: Select **Cards** in the content tree and open the **Scroll** tab of the properties panel. Enter: **Edge** (AX) = Inside the content width.

Expected Result: Edge Inside the content width pulls the second rail back to the section's right padding.

Step 22 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 23 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AY) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (AZ) = Insight; **Title** (BA) = The agentic bank; **Description** (BB) = How AI agents take over routine operations and free teams for advice; **Tags** (BC) = Add the tags tcs-corp:industry/banking; **Date** (BD) = 2026-09-04; **Content type** (BE) = Article; **Reading time** (BF) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 24 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BG) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title "The agentic bank" becomes the card's only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 25 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 26 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (BH) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (BI) = Perspective; **Title** (BJ) = Cloud at scale; **Description** (BK) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (BL) = Add the tags tcs-corp:topic/cloud; **Date** (BM) = 2026-08-21; **Content type** (BN) = Article; **Reading time** (BO) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker "Perspective", "Cloud" and "8m", the title "Cloud at scale" and the description, then the meta row "Article" and "21 Aug 26".

Step 27 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BP) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title "Cloud at scale" becomes the card's only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 28 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 29 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (BQ) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (BR) = Research; **Title** (BS) = Supply chain resilience; **Description** (BT) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (BU) = Add the tags tcs-corp:industry/manufacturing; **Date** (BV) = 2026-08-07; **Content type** (BW) = Article; **Reading time** (BX) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker "Research", "Manufacturing" and "5m", the title "Supply chain resilience" and the description, then the meta row "Article" and "07 Aug 26".

Step 30 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BY) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title "Supply chain resilience" becomes the card's only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 31 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 32 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (BZ) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (CA) = Insight; **Title** (CB) = Personalisation in retail; **Description** (CC) = Turning first-party data into relevant experiences in every channel; **Tags** (CD) = Add the tags tcs-corp:industry/retail; **Date** (CE) = 2026-07-30; **Content type** (CF) = Article; **Reading time** (CG) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker "Insight", "Retail" and "4m", the title "Personalisation in retail" and the description, then the meta row "Article" and "30 Jul 26".

Step 33 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (CH) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title "Personalisation in retail" becomes the card's only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 34 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 35 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (CI) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (CJ) = Perspective; **Title** (CK) = The energy transition; **Description** (CL) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (CM) = Add the tags tcs-corp:industry/energy; **Date** (CN) = 2026-07-16; **Content type** (CO) = Article; **Reading time** (CP) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker "Perspective", "Energy" and "7m", the title "The energy transition" and the description, then the meta row "Article" and "16 Jul 26".

Step 36 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (CQ) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title "The energy transition" becomes the card's only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 37 — Preview

Action: Note: Two Cards blocks in one section: the first with Edge "Cards run to the edge" (default), the second with "Inside the content width".

Expected Result: The two rails are shown one above the other: the first bleeds to the screen edge, the second stops at the content width.

Step 38 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The first rail's last visible card is cut by the screen edge (bleed); the second rail stops at the section's right padding, so its last card is cut at the content width.

Step 39 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-1.svg to photo-5.svg and the five linked insight pages to preview and live; both blocks are on the same page.

Step 40 — Verify

Action: On the live page check: Only the first block has the class edge-bleed; the second stops at the content width.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 37 — Snap Alignment "Center"

Reproduces the screenshot `screenshots/cards-snap-center.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Mobile display** (A) = Horizontal scroll.

Expected Result: Below 600 px the cards switch to a swipeable row with the scroll indicator.

Step 4 — Fill in Cards › Scroll

Action: Select **Cards** in the content tree and open the **Scroll** tab of the properties panel. Enter: **Snap alignment** (B) = Center; **Initial item index** (C) = 1.

Expected Result: With Snap alignment Center and Initial item index 1 the mobile row opens with the second card centred.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (E) = Consulting; **Title** (F) = Business and technology consulting; **Description** (G) = Strategy, design and change management for transformation.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Consulting", the title "Business and technology consulting" and the description.

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (H) = Select the page or enter /en/services/consulting.

Expected Result: The title "Business and technology consulting" becomes the card's only link, to /en/services/consulting; the clickable area covers the whole card.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (I) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (J) = Cloud; **Title** (K) = Cloud migration and operations; **Description** (L) = Move, modernise and run workloads on any cloud.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker "Cloud", the title "Cloud migration and operations" and the description.

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (M) = Select the page or enter /en/services/cloud.

Expected Result: The title "Cloud migration and operations" becomes the card's only link, to /en/services/cloud; the clickable area covers the whole card.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (N) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (O) = Security; **Title** (P) = Cyber defence and resilience; **Description** (Q) = Protect identities, data and operations around the clock.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker "Security", the title "Cyber defence and resilience" and the description.

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (R) = Select the page or enter /en/services/cybersecurity.

Expected Result: The title "Cyber defence and resilience" becomes the card's only link, to /en/services/cybersecurity; the clickable area covers the whole card.

Step 14 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 15 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (S) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (T) = AI and data; **Title** (U) = AI and data platforms; **Description** (V) = Build trusted data foundations and put AI into production.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker "AI and data", the title "AI and data platforms" and the description.

Step 16 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (W) = Select the page or enter /en/services/ai.

Expected Result: The title "AI and data platforms" becomes the card's only link, to /en/services/ai; the clickable area covers the whole card.

Step 17 — Preview

Action: Screen width: 402 px (mobile).

Expected Result: At 402 px the second card is centred with the first and third peeking at the sides.

Step 18 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 402 px the second card ("Cloud migration and operations") is centred with parts of the first and third cards visible on both sides.

Step 19 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, the four images and the linked service pages (/en/services/consulting, /en/services/cloud, …) to preview and live; check the swipe on a phone.

Step 20 — Verify

Action: On the live page check: At 402 px the second card opens centred.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 38 — Scroll Step "Viewport"

Reproduces the screenshot `screenshots/cards-step-viewport.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (A) = Horizontal scroll; **Previous / next buttons on desktop** (B) = On.

Expected Result: Desktop becomes a scrolling row with the previous / next buttons below it.

Step 4 — Fill in Cards › Scroll

Action: Select **Cards** in the content tree and open the **Scroll** tab of the properties panel. Enter: **Scroll step** (C) = Viewport.

Expected Result: With Scroll step Viewport each button press will move the row by one screen width.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (E) = Insight; **Title** (F) = The agentic bank; **Description** (G) = How AI agents take over routine operations and free teams for advice; **Tags** (H) = Add the tags tcs-corp:industry/banking; **Date** (I) = 2026-09-04; **Content type** (J) = Article; **Reading time** (K) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (L) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title "The agentic bank" becomes the card's only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (M) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (N) = Perspective; **Title** (O) = Cloud at scale; **Description** (P) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (Q) = Add the tags tcs-corp:topic/cloud; **Date** (R) = 2026-08-21; **Content type** (S) = Article; **Reading time** (T) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker "Perspective", "Cloud" and "8m", the title "Cloud at scale" and the description, then the meta row "Article" and "21 Aug 26".

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (U) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title "Cloud at scale" becomes the card's only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (V) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (W) = Research; **Title** (X) = Supply chain resilience; **Description** (Y) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (Z) = Add the tags tcs-corp:industry/manufacturing; **Date** (AA) = 2026-08-07; **Content type** (AB) = Article; **Reading time** (AC) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker "Research", "Manufacturing" and "5m", the title "Supply chain resilience" and the description, then the meta row "Article" and "07 Aug 26".

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AD) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title "Supply chain resilience" becomes the card's only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 14 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 15 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AE) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AF) = Insight; **Title** (AG) = Personalisation in retail; **Description** (AH) = Turning first-party data into relevant experiences in every channel; **Tags** (AI) = Add the tags tcs-corp:industry/retail; **Date** (AJ) = 2026-07-30; **Content type** (AK) = Article; **Reading time** (AL) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker "Insight", "Retail" and "4m", the title "Personalisation in retail" and the description, then the meta row "Article" and "30 Jul 26".

Step 16 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AM) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title "Personalisation in retail" becomes the card's only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 17 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 18 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AN) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AO) = Perspective; **Title** (AP) = The energy transition; **Description** (AQ) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AR) = Add the tags tcs-corp:industry/energy; **Date** (AS) = 2026-07-16; **Content type** (AT) = Article; **Reading time** (AU) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker "Perspective", "Energy" and "7m", the title "The energy transition" and the description, then the meta row "Article" and "16 Jul 26".

Step 19 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AV) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title "The energy transition" becomes the card's only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 20 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 21 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AW) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (AX) = Research; **Title** (AY) = Quantum readiness; **Description** (AZ) = Preparing security and research teams for the first useful quantum computers; **Tags** (BA) = Add the tags tcs-corp:topic/security; **Date** (BB) = 2026-07-02; **Content type** (BC) = Article; **Reading time** (BD) = 9.

Expected Result: Card 6 renders as an image card: photo-6.svg in a 16:9 frame, the kicker "Research", "Security" and "9m", the title "Quantum readiness" and the description, then the meta row "Article" and "02 Jul 26".

Step 22 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BE) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title "Quantum readiness" becomes the card's only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 23 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 24 — Fill in Card 7 › Content

Action: Select **Card 7** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (BF) = Select the asset photo-7.svg (/en/media/photo-7.svg); **Eyebrow** (BG) = Insight; **Title** (BH) = The future of work; **Description** (BI) = Skills, tools and workplaces for teams that collaborate with AI every day; **Tags** (BJ) = Add the tags tcs-corp:topic/ai; **Date** (BK) = 2026-06-18; **Content type** (BL) = Article; **Reading time** (BM) = 6.

Expected Result: Card 7 renders as an image card: photo-7.svg in a 16:9 frame, the kicker "Insight", "Ai" and "6m", the title "The future of work" and the description, then the meta row "Article" and "18 Jun 26".

Step 25 — Fill in Card 7 › Link

Action: Select **Card 7** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BN) = Select the page or enter /en/insights/future-of-work.

Expected Result: The title "The future of work" becomes the card's only link, to /en/insights/future-of-work; the clickable area covers the whole card.

Step 26 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 27 — Fill in Card 8 › Content

Action: Select **Card 8** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (BO) = Select the asset photo-8.svg (/en/media/photo-8.svg); **Eyebrow** (BP) = Case study; **Title** (BQ) = Touchless insurance claims; **Description** (BR) = How an insurer settles most motor claims within a day, end to end; **Tags** (BS) = Add the tags tcs-corp:industry/insurance; **Date** (BT) = 2026-06-04; **Content type** (BU) = Case study; **Reading time** (BV) = 5.

Expected Result: Card 8 renders as an image card: photo-8.svg in a 16:9 frame, the kicker "Case study", "Insurance" and "5m", the title "Touchless insurance claims" and the description, then the meta row "Case study" and "04 Jun 26".

Step 28 — Fill in Card 8 › Link

Action: Select **Card 8** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BW) = Select the page or enter /en/insights/insurance-claims.

Expected Result: The title "Touchless insurance claims" becomes the card's only link, to /en/insights/insurance-claims; the clickable area covers the whole card.

Step 29 — Preview

Action: Action: Click Next once (the next set of cards replaces the visible set).

Expected Result: Clicking Next once replaces the visible cards with the next set and enables Previous.

Step 30 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Before and after pressing Next: the visible set of about four cards is replaced by the next set, so the fifth card moves to the left edge.

Step 31 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-1.svg to photo-8.svg and the eight linked insight pages to preview and live.

Step 32 — Verify

Action: On the live page check: At 1440 px one click on Next replaces the visible set of cards.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 39 — Loop

Reproduces the screenshot `screenshots/cards-loop.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (A) = Horizontal scroll; **Previous / next buttons on desktop** (B) = On.

Expected Result: Desktop becomes a scrolling row with the previous / next buttons below it.

Step 4 — Fill in Cards › Scroll

Action: Select **Cards** in the content tree and open the **Scroll** tab of the properties panel. Enter: **Loop** (C) = On.

Expected Result: With Loop on, the buttons stay enabled at both ends of the row.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (E) = Insight; **Title** (F) = The agentic bank; **Description** (G) = How AI agents take over routine operations and free teams for advice; **Tags** (H) = Add the tags tcs-corp:industry/banking; **Date** (I) = 2026-09-04; **Content type** (J) = Article; **Reading time** (K) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (L) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title “The agentic bank” becomes the card’s only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (M) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (N) = Perspective; **Title** (O) = Cloud at scale; **Description** (P) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (Q) = Add the tags tcs-corp:topic/cloud; **Date** (R) = 2026-08-21; **Content type** (S) = Article; **Reading time** (T) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker “Perspective”, “Cloud” and “8m”, the title “Cloud at scale” and the description, then the meta row “Article” and “21 Aug 26”.

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (U) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title “Cloud at scale” becomes the card’s only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (V) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (W) = Research; **Title** (X) = Supply chain resilience; **Description** (Y) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (Z) = Add the tags tcs-corp:industry/manufacturing; **Date** (AA) = 2026-08-07; **Content type** (AB) = Article; **Reading time** (AC) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker “Research”, “Manufacturing” and “5m”, the title “Supply chain resilience” and the description, then the meta row “Article” and “07 Aug 26”.

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AD) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title “Supply chain resilience” becomes the card’s only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 14 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 15 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AE) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AF) = Insight; **Title** (AG) = Personalisation in retail; **Description** (AH) = Turning first-party data into relevant experiences in every channel; **Tags** (AI) = Add the tags tcs-corp:industry/retail; **Date** (AJ) = 2026-07-30; **Content type** (AK) = Article; **Reading time** (AL) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker "Insight", "Retail" and "4m", the title "Personalisation in retail" and the description, then the meta row "Article" and "30 Jul 26".

Step 16 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AM) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title "Personalisation in retail" becomes the card's only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 17 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 18 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AN) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AO) = Perspective; **Title** (AP) = The energy transition; **Description** (AQ) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AR) = Add the tags tcs-corp:industry/energy; **Date** (AS) = 2026-07-16; **Content type** (AT) = Article; **Reading time** (AU) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker "Perspective", "Energy" and "7m", the title "The energy transition" and the description, then the meta row "Article" and "16 Jul 26".

Step 19 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AV) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title "The energy transition" becomes the card's only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 20 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 21 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AW) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (AX) = Research; **Title** (AY) = Quantum readiness; **Description** (AZ) = Preparing security and research teams for the first useful quantum computers; **Tags** (BA) = Add the tags tcs-corp:topic/security; **Date** (BB) = 2026-07-02; **Content type** (BC) = Article; **Reading time** (BD) = 9.

Expected Result: Card 6 renders as an image card: photo-6.svg in a 16:9 frame, the kicker "Research", "Security" and "9m", the title "Quantum readiness" and the description, then the meta row "Article" and "02 Jul 26".

Step 22 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BE) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title "Quantum readiness" becomes the card's only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 23 — Preview

Action: Action: Scroll to the last card: Next stays enabled and returns to the first card.

Expected Result: Scrolled to the last card, Next stays enabled and takes the row back to the first card.

Step 24 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At the last card the Next button is still enabled; pressing it scrolls the row back to the first card ("The agentic bank").

Step 25 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, the card images and the linked insight pages to preview (aem.page) and live (aem.live); the scroll behaviour is block configuration and needs no extra publish step.

Step 26 — Verify

Action: On the live page check: At the last card Next is enabled and returns to the first card.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 40 — Initial Item

Reproduces the screenshot `screenshots/cards-initial-item.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (A) = Horizontal scroll; **Previous / next buttons on desktop** (B) = On.

Expected Result: Desktop becomes a scrolling row with the previous / next buttons below it.

Step 4 — Fill in Cards › Scroll

Action: Select **Cards** in the content tree and open the **Scroll** tab of the properties panel. Enter: **Initial item index** (C) = 2.

Expected Result: With Initial item index 2 the row will open scrolled to the third card.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (E) = Insight; **Title** (F) = The agentic bank; **Description** (G) = How AI agents take over routine operations and free teams for advice; **Tags** (H) = Add the tags tcs-corp:industry/banking; **Date** (I) = 2026-09-04; **Content type** (J) = Article; **Reading time** (K) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (L) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title "The agentic bank" becomes the card's only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (M) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (N) = Perspective; **Title** (O) = Cloud at scale; **Description** (P) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (Q) = Add the tags tcs-corp:topic/cloud; **Date** (R) = 2026-08-21; **Content type** (S) = Article; **Reading time** (T) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker "Perspective", "Cloud" and "8m", the title "Cloud at scale" and the description, then the meta row "Article" and "21 Aug 26".

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (U) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title "Cloud at scale" becomes the card's only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (V) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (W) = Research; **Title** (X) = Supply chain resilience; **Description** (Y) = What manufacturers learned from five years of disruption, and what comes next; **Tags** (Z) = Add the tags tcs-corp:industry/manufacturing; **Date** (AA) = 2026-08-07; **Content type** (AB) = Article; **Reading time** (AC) = 5.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker “Research”, “Manufacturing” and “5m”, the title “Supply chain resilience” and the description, then the meta row “Article” and “07 Aug 26”.

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AD) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: The title “Supply chain resilience” becomes the card’s only link, to /en/insights/supply-chain-resilience; the clickable area covers the whole card.

Step 14 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 15 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AE) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Eyebrow** (AF) = Insight; **Title** (AG) = Personalisation in retail; **Description** (AH) = Turning first-party data into relevant experiences in every channel; **Tags** (AI) = Add the tags tcs-corp:industry/retail; **Date** (AJ) = 2026-07-30; **Content type** (AK) = Article; **Reading time** (AL) = 4.

Expected Result: Card 4 renders as an image card: photo-4.svg in a 16:9 frame, the kicker “Insight”, “Retail” and “4m”, the title “Personalisation in retail” and the description, then the meta row “Article” and “30 Jul 26”.

Step 16 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AM) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: The title “Personalisation in retail” becomes the card’s only link, to /en/insights/retail-personalisation; the clickable area covers the whole card.

Step 17 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 18 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AN) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Eyebrow** (AO) = Perspective; **Title** (AP) = The energy transition; **Description** (AQ) = Digital twins and analytics that help utilities reach their climate targets; **Tags** (AR) = Add the tags tcs-corp:industry/energy; **Date** (AS) = 2026-07-16; **Content type** (AT) = Article; **Reading time** (AU) = 7.

Expected Result: Card 5 renders as an image card: photo-5.svg in a 16:9 frame, the kicker “Perspective”, “Energy” and “7m”, the title “The energy transition” and the description, then the meta row “Article” and “16 Jul 26”.

Step 19 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AV) = Select the page or enter /en/insights/energy-transition.

Expected Result: The title “The energy transition” becomes the card’s only link, to /en/insights/energy-transition; the clickable area covers the whole card.

Step 20 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 21 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (AW) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (AX) = Research; **Title** (AY) = Quantum readiness; **Description** (AZ) = Preparing security and research teams for the first useful quantum computers; **Tags** (BA) = Add the tags tcs-corp:topic/security; **Date** (BB) = 2026-07-02; **Content type** (BC) = Article; **Reading time** (BD) = 9.

Expected Result: Card 6 renders as an image card: photo-6.svg in a 16:9 frame, the kicker “Research”, “Security” and “9m”, the title “Quantum readiness” and the description, then the meta row “Article” and “02 Jul 26”.

Step 22 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (BE) = Select the page or enter /en/insights/quantum-readiness.

Expected Result: The title “Quantum readiness” becomes the card’s only link, to /en/insights/quantum-readiness; the clickable area covers the whole card.

Step 23 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The rail opens scrolled to its third card (“Supply chain resilience”) with the Previous button enabled.

Step 24 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, the card images and the linked insight pages to preview (aem.page) and live (aem.live); the scroll behaviour is block configuration and needs no extra publish step.

Step 25 — Verify

Action: On the live page check: At 1440 px the rail opens with the third card at the left edge and Previous enabled.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 41 — Equal Card Height

Reproduces the screenshot `screenshots/cards-equal-height.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint “Add a Card to the block and give it a title, a description or an image.”

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Panel; **Panel height** (B) = Content.

Expected Result: With Card style Panel and Panel height Content the cards become dark panels that fit their text.

Step 4 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (C) = 3; **Equal card height** (D) = On.

Expected Result: With Desktop columns 3 and Equal card height on, the six panels form two rows of equal height.

Step 5 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 6 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (E) = Theme; **Title** (F) = Responsible AI; **Description** (G) = Governance, transparency and trust built into every model. Our teams combine consulting, engineering and managed services, with industry platforms and partners, to deliver measurable outcomes.

Expected Result: Card 1 renders as a content-height panel on dark navy-grey (#20293c) with the kicker “Theme”, the title “Responsible AI” and the description in muted text.

Step 7 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (H) = Select the page or enter /en/services/ai.

Expected Result: An “Explore” text link appears at the bottom of the panel and becomes the card’s only link, to /en/services/ai.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (I) = Theme; **Title** (J) = Sustainable operations; **Description** (K) = Data-driven decisions that cut energy use and emissions. Our teams combine consulting, engineering and managed services, with industry platforms and partners, to deliver measurable outcomes.

Expected Result: Card 2 renders as a content-height panel on dark navy-grey (#20293c) with the kicker “Theme”, the title “Sustainable operations” and the description in muted text.

Step 10 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (L) = Select the page or enter /en/industries/manufacturing.

Expected Result: An “Explore” text link appears at the bottom of the panel and becomes the card’s only link, to /en/industries/manufacturing.

Step 11 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 12 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (M) = Theme; **Title** (N) = Resilient enterprises; **Description** (O) = Security and continuity for a world of constant change. Our teams combine consulting, engineering and managed services, with industry platforms and partners, to deliver measurable outcomes.

Expected Result: Card 3 renders as a content-height panel on dark navy-grey (#20293c) with the kicker "Theme", the title "Resilient enterprises" and the description in muted text.

Step 13 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (P) = Select the page or enter /en/services/cybersecurity.

Expected Result: An "Explore" text link appears at the bottom of the panel and becomes the card's only link, to /en/services/cybersecurity.

Step 14 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 15 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (Q) = Industry; **Title** (R) = Banking; **Description** (S) = Digital banks.

Expected Result: Card 4 renders as a content-height panel on dark navy-grey (#20293c) with the kicker "Industry", the title "Banking" and the description in muted text.

Step 16 — Fill in Card 4 › Link

Action: Select **Card 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (T) = Select the page or enter /en/industries/banking.

Expected Result: An "Explore" text link appears at the bottom of the panel and becomes the card's only link, to /en/industries/banking.

Step 17 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 18 — Fill in Card 5 › Content

Action: Select **Card 5** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (U) = Industry; **Title** (V) = Retail; **Description** (W) = Unified commerce.

Expected Result: Card 5 renders as a content-height panel on dark navy-grey (#20293c) with the kicker "Industry", the title "Retail" and the description in muted text.

Step 19 — Fill in Card 5 › Link

Action: Select **Card 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (X) = Select the page or enter /en/industries/retail.

Expected Result: An “Explore” text link appears at the bottom of the panel and becomes the card’s only link, to /en/industries/retail.

Step 20 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 21 — Fill in Card 6 › Content

Action: Select **Card 6** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (Y) = Industry; **Title** (Z) = Manufacturing; **Description** (AA) = Smart factories.

Expected Result: Card 6 renders as a content-height panel on dark navy-grey (#20293c) with the kicker “Industry”, the title “Manufacturing” and the description in muted text.

Step 22 — Fill in Card 6 › Link

Action: Select **Card 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (AB) = Select the page or enter /en/industries/manufacturing.

Expected Result: An “Explore” text link appears at the bottom of the panel and becomes the card’s only link, to /en/industries/manufacturing.

Step 23 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two grid rows of three dark panels of the same height, although the second row (Banking, Retail, Manufacturing) has much shorter descriptions.

Step 24 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and the six linked pages (/en/services/ai, /en/industries/banking, /en/industries/retail, …) to preview and live.

Step 25 — Verify

Action: On the live page check: At 1440 px both rows of three panels have the same height.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 42 — Cards Not Stretched

Reproduces the screenshot `screenshots/cards-no-stretch.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint “Add a Card to the block and give it a title, a description or an image.”

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (A) = 3; **Stretch cards to row height** (B) = Off.

Expected Result: With Desktop columns 3 and Stretch cards to row height off, each card keeps its own height at the top of the row.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (C) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (D) = Consulting; **Title** (E) = Business and technology consulting; **Description** (F) = Strategy, design and change management for transformation, from the first business case to adoption across the enterprise. Our consultants work with your teams on site.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker “Consulting”, the title “Business and technology consulting” and the description.

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (G) = Select the page or enter /en/services/consulting.

Expected Result: The title “Business and technology consulting” becomes the card’s only link, to /en/services/consulting; the clickable area covers the whole card.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (H) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (I) = Cloud; **Title** (J) = Cloud migration and operations; **Description** (K) = Move and run workloads on any cloud.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker “Cloud”, the title “Cloud migration and operations” and the description.

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (L) = Select the page or enter /en/services/cloud.

Expected Result: The title “Cloud migration and operations” becomes the card’s only link, to /en/services/cloud; the clickable area covers the whole card.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (M) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Eyebrow** (N) = Security; **Title** (O) = Cyber defence and resilience; **Description** (P) = Protect identities, data and operations around the clock.

Expected Result: Card 3 renders as an image card: photo-3.svg in a 16:9 frame, the kicker "Security", the title "Cyber defence and resilience" and the description.

Step 12 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (Q) = Select the page or enter /en/services/cybersecurity.

Expected Result: The title "Cyber defence and resilience" becomes the card's only link, to /en/services/cybersecurity; the clickable area covers the whole card.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three image cards of different heights aligned to the top of the row; the shorter cards end after their description.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, photo-1.svg to photo-3.svg and the three linked service pages to preview and live.

Step 15 — Verify

Action: On the live page check: Inspect the block: no stretch class; cards end after their text.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 43 — Unlinked Cards

Reproduces the screenshot `screenshots/cards-unlinked.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Cards

Action: Select **Cards** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (A) = Statistic; **Panel height** (B) = Compact.

Expected Result: With Card style Statistic and Panel height Compact the cards become nearly square grey statistic tiles.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = At a glance; **Title** (D) = 4bn; **Description** (E) = Annual revenue in US dollars, growing for the tenth year; **Label** (F) = Revenue.

Expected Result: Card 1 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "4bn" in large type, and the label "Revenue" with the description at the bottom.

Step 6 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 7 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (G) = At a glance; **Title** (H) = 600,000+; **Description** (I) = Consultants and engineers in 55 countries; **Label** (J) = Colleagues.

Expected Result: Card 2 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "600,000+" in large type, and the label "Colleagues" with the description at the bottom.

Step 8 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 9 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (K) = At a glance; **Title** (L) = 150; **Description** (M) = Serving clients around the world, around the clock; **Label** (N) = Delivery centres.

Expected Result: Card 3 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "150" in large type, and the label "Delivery centres" with the description at the bottom.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 4 › Content

Action: Select **Card 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (O) = At a glance; **Title** (P) = 98%; **Description** (Q) = Of our top clients have worked with us for more than five years; **Label** (R) = Client retention.

Expected Result: Card 4 renders as a statistic card on light grey (#d9d9d9): "At a glance" at the top, the number "98%" in large type, and the label "Client retention" with the description at the bottom.

Step 12 — Preview

Action: Action: Point at the second card (no pointer, no link).

Expected Result: Pointing at the second card ("600,000+") shows no pointer; the card isn't a link.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four compact light grey statistic cards (4bn, 600,000+, 150, 98%) without any link or button; pointing at the second card shows no pointer.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page to preview and live; nothing else is referenced. The data layer still lists the cards (without xdm:linkURL) when Analytics is on.

Step 15 — Verify

Action: On the live page check: Pointing at each card in preview shows no pointer and no link.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 44 — Open Links in a New Tab

Reproduces the screenshot `screenshots/cards-new-tab.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Layout

Action: Select **Cards** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (A) = 3.

Expected Result: With Desktop columns 3 the three cards fill one desktop row.

Step 4 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 5 — Fill in Card 1 › Content

Action: Select **Card 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (B) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Eyebrow** (C) = Insight; **Title** (D) = The agentic bank; **Description** (E) = How AI agents take over routine operations and free teams for advice; **Tags** (F) = Add the tags tcs-corp:industry/banking; **Date** (G) = 2026-09-04; **Content type** (H) = Article; **Reading time** (I) = 6.

Expected Result: Card 1 renders as an image card: photo-1.svg in a 16:9 frame, the kicker "Insight", "Banking" and "6m", the title "The agentic bank" and the description, then the meta row "Article" and "04 Sep 26".

Step 6 — Fill in Card 1 › Link

Action: Select **Card 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (J) = Select the page or enter /en/insights/agentic-bank.

Expected Result: The title “The agentic bank” becomes the card’s only link, to /en/insights/agentic-bank; the clickable area covers the whole card.

Step 7 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 8 — Fill in Card 2 › Content

Action: Select **Card 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (K) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Eyebrow** (L) = Perspective; **Title** (M) = Cloud at scale; **Description** (N) = Operating models that keep a multi-cloud estate fast, secure and affordable; **Tags** (O) = Add the tags tcs-corp:topic/cloud; **Date** (P) = 2026-08-21; **Content type** (Q) = Article; **Reading time** (R) = 8.

Expected Result: Card 2 renders as an image card: photo-2.svg in a 16:9 frame, the kicker “Perspective”, “Cloud” and “8m”, the title “Cloud at scale” and the description, then the meta row “Article” and “21 Aug 26”.

Step 9 — Fill in Card 2 › Link

Action: Select **Card 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (S) = Select the page or enter /en/insights/cloud-at-scale.

Expected Result: The title “Cloud at scale” becomes the card’s only link, to /en/insights/cloud-at-scale; the clickable area covers the whole card.

Step 10 — Add a Card

Action: Select the Cards in the content tree, choose **Add (+)** and pick **Card**.

Expected Result: A new Card item appears under Cards in the content tree; it stays off the canvas until it has a title, a description or an image.

Step 11 — Fill in Card 3 › Content

Action: Select **Card 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Image** (T) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (U) = Event; **Title** (V) = Partner summit 2026; **Description** (W) = Join our partners and clients for two days of talks and demos; **Date** (X) = 2026-10-20; **Content type** (Y) = Event.

Expected Result: Card 3 renders as an image card: photo-6.svg, the kicker “Event”, the title “Partner summit 2026”, the description and the meta row “Event” and “20 Oct 26”.

Step 12 — Fill in Card 3 › Link

Action: Select **Card 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Link** (Z) = Select the page or enter https://www.example.com/partner-summit; **Open in a new tab** (AA) = Yes.

Expected Result: The title links to https://www.example.com/partner-summit in a new tab, with the hidden “(opens in a new tab)” text.

Step 13 — Preview

Action: Action: Point at the third card: the browser status bar shows https://www.example.com/partner-summit; a click opens a new tab.

Expected Result: Pointing at the third card shows https://www.example.com/partner-summit in the status bar; a click opens a new tab.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three image cards; the third, "Partner summit 2026" (Event, 20 Oct 26), links to https://www.example.com/partner-summit, shown in the browser status bar, and opens a new tab.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page, the three images and the two internal insight pages to preview and live; the external site needs no publish but should be checked for availability.

Step 16 — Verify

Action: On the live page check: Inspect the title link: target="_blank" and rel="noopener noreferrer"; a click opens a new tab.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 45 — Cards Made Before (backward compatible)

Reproduces the screenshot `screenshots/cards-legacy.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Existing page (Cards block made before the redesign)

Action: Select **Existing page (Cards block made before the redesign)** in the content tree and enter in the properties panel: **Cards** (A) = No block settings (the default settings apply: image cards, 4 / 4 / 1 columns).

Expected Result: The existing block opens without block settings; the default settings render it as four image cards in the new design.

Step 3 — Fill in Card 1 (image | text)

Action: Select **Card 1 (image | text)** in the content tree and enter in the properties panel: **Image** (B) = photo-1.svg (/en/media/photo-1.svg), alt text "Consultants in a client workshop".

Expected Result: Card 1 renders as an image card: the heading "Business and technology consulting" becomes the H3 card title, the sentence the description and "Learn more" a text link to /en/services/consulting.

Step 4 — Card 1 (image | text)

Action: Text: Heading 3: Business and technology consulting; Strategy, design and change management for transformation. Learn more (link /en/services/consulting, alone in the last paragraph).

Expected Result: Card 1 renders as an image card: the heading "Business and technology consulting" becomes the H3 card title, the sentence the description and "Learn more" a text link to /en/services/consulting.

Step 5 — Fill in Card 2 (image | text)

Action: Select **Card 2 (image | text)** in the content tree and enter in the properties panel: **Image** (C) = photo-2.svg (/en/media/photo-2.svg), alt text "Data centre corridor"; **Text** (D) = Heading 3: Cloud migration and operations; Move, modernise and run workloads on any cloud. Learn more (link /en/services/cloud, alone in the last paragraph).

Expected Result: Card 2 renders as an image card: the heading “Cloud migration and operations” becomes the H3 card title, the sentence the description and “Learn more” a text link to /en/services/cloud.

Step 6 — Fill in Card 3 (image | text)

Action: Select **Card 3 (image | text)** in the content tree and enter in the properties panel: **Image** (E) = photo-3.svg (/en/media/photo-3.svg), alt text “Security operations centre”.

Expected Result: Card 3 renders as an image card: the heading “Cyber defence and resilience” becomes the H3 card title, the sentence the description and “Learn more” a text link to /en/services/cybersecurity.

Step 7 — Card 3 (image | text)

Action: Text: Heading 3: Cyber defence and resilience; Protect identities, data and operations around the clock. Learn more (link /en/services/cybersecurity, alone in the last paragraph).

Expected Result: Card 3 renders as an image card: the heading “Cyber defence and resilience” becomes the H3 card title, the sentence the description and “Learn more” a text link to /en/services/cybersecurity.

Step 8 — Fill in Card 4 (image | text)

Action: Select **Card 4 (image | text)** in the content tree and enter in the properties panel: **Image** (F) = photo-4.svg (/en/media/photo-4.svg), alt text “Data scientists at a screen”; **Text** (G) = Heading 3: AI and data platforms; Build trusted data foundations and put AI into production. Learn more (link /en/services/ai, alone in the last paragraph).

Expected Result: Card 4 renders as an image card: the heading “AI and data platforms” becomes the H3 card title, the sentence the description and “Learn more” a text link to /en/services/ai.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four image cards with photo-1.svg to photo-4.svg; each heading (“Business and technology consulting”, …) is the card title, the sentence the description and “Learn more” the call to action text link.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: No author action is needed; the page renders with the new design once the code is live. Republishing the page doesn’t restore the original bordered grid (findings F-34 and F-41).

Step 11 — Verify

Action: On the live page check: The new block shows all tabs and responds to Card style and Layout changes.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 46 — Empty State

Reproduces the screenshot `screenshots/cards-empty-state.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Cards

Action: Select the section in the content tree, choose **Add (+)** and pick **Cards**.

Expected Result: An empty Cards block is inserted in the section; in edit mode it shows the hint "Add a Card to the block and give it a title, a description or an image."

Step 3 — Fill in Cards › Content

Action: Select **Cards** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Our services; **Description** (B) = Capabilities that help enterprises grow, transform and compete.

Expected Result: The header "Our services" and its description appear above the grey editor hint.

Step 4 — Fill in Universal Editor

Action: Select **Universal Editor** in the content tree and enter in the properties panel: **Mode** (C) = Edit (the block has no Card yet: the editor hint shows).

Expected Result: In Edit mode the grey box "Add a Card to the block and give it a title, a description or an image." stays visible under the header.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: In Universal Editor: the header "Our services" with its description and below it a grey box with the text "Add a Card to the block and give it a title, a description or an image."

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: If published like this with the default Hide the block, preview and live show nothing for the block. Add Cards before publishing, or choose Show a message during content build-up.

Step 7 — Verify

Action: On the live page check: Republish to preview: the cards, or the empty message, appear under "Our services".

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.15.6 Authorable Field Specification

The Cards model `cards` has 72 fields in six tabs; the Card model `card` has 18 fields in three tabs. The block definition sets `key-value: true` (new blocks store their settings as key | value rows). The Content, Cards, Layout, Scroll and Advanced groups (except the Cards-only "When there are no cards") are the shared groups of `models/_card-list.json`, spread into `blocks/cards/_cards.json`. No field is marked required. Enforced validation: Component ID and Anchor ID patterns, number ranges (`min` / `max` in the model, clamped again in code) and the Card's Analytics label (120 characters). Every value is validated again in `utils/card-list-config.js` `normalizePresentation()`: an invalid value falls back to its default.

Block model `cards` — Content tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Title (`title`)	text	No	No	Empty	Heading of the block	Short, descriptive; up to 60 characters (Recommended)	None	Our services

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Heading type (`titleType`)	select	No	No	h2	Heading level of the title	H2 for a section heading; card titles are one level below	h2–h6 (h1 still read for older blocks)	h2
Description (`description`)	richtext	No	No	Empty	Intro text under the title	One or two sentences	None	What we do for our clients.
CTA link (`link`)	aem-content	No	No	Empty	Header call to action destination	A page or URL; leave empty for no CTA	None	/content/tcs-corp/us/en/services
CTA text (`linkText`)	text	No	No	Empty	Header CTA label	Action wording, 2–4 words	None	View all services
CTA style (`linkType`)	select	No	No	Text link (empty)	Look of the header CTA	Text link for secondary links; buttons sparingly	'', primary, secondary	primary
Accessible list label (`listLabel`)	text	No	No	Empty	Names the cards region for screen readers	Needed when there is no Title	None	Our services
Component ID (`componentId`)	text	No	No	Generated (`cards-1` …)	Stable id for deep links and analytics	Leave empty unless needed; don't change after go-live	Enforced regExp `^[A-Za-z][A-Za-z0-9_-]*$`; duplicates suffixed in code	our-services

Block model `cards` — Cards tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Display as teaser (`displayAsTeaser`)	boolean	No	No	true	Cards (on) or rows of links (off)	Off for news-style link lists	Boolean	true
Card style (`cardStyle`)	select	No	No	image	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on	stat
Card colour (`cardTheme`)	select	No	No	Default for the style (empty)	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on	grey
Image ratio (`imageRatio`)	select	No	No	16-9	Image shape of image cards	Match the photography	16-9, 1-1, 4-3, 3-2; teaser on	1-1
Panel height (`panelHeight`)	select	No	No	portrait	Shape of coloured cards	Content for long texts	portrait, compact, auto; teaser on	compact
First card as feature (`featureFirst`)	boolean	No	No	false	First card as a large spotlight	The first card needs an image	Boolean; teaser on	true
Link items (`linkItems`)	boolean	No	No	true	Link the cards	Off for informational cards	Boolean	true
Open links in a new tab (`openInNewTab`)	boolean	No	No	false	Default target of the card links	Only for external destinations	Boolean	false

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Show image (showImage)	boolean	No	No	true	Show card images	Off for text-only cards	Boolean	true
Show eyebrow (showEyebrow)	boolean	No	No	true	Show the eyebrow	—	Boolean	true
Show tags (showTags)	boolean	No	No	true	Show tags and reading time	—	Boolean	true
Show description (showDescription)	boolean	No	No	true	Show the description	—	Boolean	true
Show date (showDate)	boolean	No	No	true	Show the date	—	Boolean	true
Date format (dateFormat)	select	No	No	dd-mmm-yy (04 Sep 26)	Format of the dates	Use the locale's convention	dd-mmm-yy, dd-mm-yyyy, mm-dd-yyyy, mmm-d-yyyy, dd/mm/yy; shown when Show date on	dd-mm-yyyy
Show call to action (showCta)	boolean	No	No	true	Show call to action buttons	Off: the titles are the links	Boolean	true
Image loading (imageLoading)	select	No	No	lazy	Lazy or eager image loading	Eager only on the first screen	lazy, eager	lazy

Block model `cards` — Layout tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Desktop display (desktopMode)	select	No	No	grid	Grid or scroll at 1200 px+	—	grid, horizontal-scroll	grid
Desktop columns (desktopColumns)	number	No	No	4	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only	3
Desktop gap (px) (desktopGap)	number	No	No	24	Space between cards	Keep the default	Enforced 0–120	24
Desktop items visible (desktopVisible)	number	No	No	4.2	Cards in view when scrolling	A fraction shows part of the next	Enforced 1–8; scroll only	3.3
Desktop card width (px) (desktopCardWidth)	number	No	No	0	Fixed card width instead	0 uses Items visible	Enforced 0–1200; below 120 treated as 0; scroll only	320
Previous / next buttons on desktop (desktopControls)	boolean	No	No	false	Show the buttons	On for desktop rails	Boolean; scroll only	true
Scroll indicator on desktop (desktopIndicator)	boolean	No	No	false	Show the progress bar	—	Boolean; scroll only	false
Tablet display (tabletMode)	select	No	No	grid	Grid or scroll at 600–1199 px	—	grid, horizontal-scroll	horizontal-scroll

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Tablet columns (`tabletColumns`)	number	No	No	4	Grid columns on tablet	2–3 often fit better	Enforced 1–6; grid only	2
Tablet gap (px) (`tabletGap`)	number	No	No	24	Space between cards	—	Enforced 0–120	24
Tablet items visible (`tabletVisible`)	number	No	No	3.3	Cards in view when scrolling	—	Enforced 1–8; scroll only	2.5
Tablet card width (px) (`tabletCardWidth`)	number	No	No	0	Fixed card width	—	Enforced 0–1200; below 120 = 0; scroll only	0
Previous / next buttons on tablet (`tabletControls`)	boolean	No	No	false	Show the buttons	—	Boolean; scroll only	false
Scroll indicator on tablet (`tabletIndicator`)	boolean	No	No	false	Show the progress bar	—	Boolean; scroll only	true
Mobile display (`mobileMode`)	select	No	No	grid	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll	horizontal-scroll
Mobile columns (`mobileColumns`)	number	No	No	1	Grid columns on mobile	1 (2 for small statistic tiles)	Enforced 1–6; grid only	1
Mobile gap (px) (`mobileGap`)	number	No	No	16	Space between cards	—	Enforced 0–120	16
Mobile items visible (`mobileVisible`)	number	No	No	1.2	Cards in view when scrolling	1.2–1.5	Enforced 1–8; scroll only	1.2
Mobile card width (px) (`mobileCardWidth`)	number	No	No	0	Fixed card width	—	Enforced 0–1200; below 120 = 0; scroll only	0
Previous / next buttons on mobile (`mobileControls`)	boolean	No	No	false	Show the buttons	Swipe is usually enough	Boolean; scroll only	false
Scroll indicator on mobile (`mobileIndicator`)	boolean	No	No	true	Show the progress bar	Keep on	Boolean; scroll only	true
Equal card height (`equalHeight`)	boolean	No	No	false	All rows equally tall	For multi-row grids	Boolean	false
Stretch cards to row height (`stretchCards`)	boolean	No	No	true	Cards fill the row height	Keep on	Boolean	true

Block model `cards` — Scroll tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Scroll snap (`scrollSnap`)	boolean	No	No	true	Cards snap into place	Keep on	Boolean	true
Snap alignment (`snapAlign`)	select	No	No	start	Where cards snap	Center for mobile peeking rails	start, center; shown when snap on	start

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Hide native scrollbar (`hideScrollbar`)	boolean	No	No	true	Hide the browser scrollbar	Use the indicator instead	Boolean	true
Allow mouse drag (`mouseDrag`)	boolean	No	No	true	Drag with the mouse	Keep on	Boolean	true
Allow touch swipe (`touchSwipe`)	boolean	No	No	true	Swipe on touch screens	Off only with buttons	Boolean	true
Keyboard scrolling (`keyboardScrolling`)	boolean	No	No	true	Arrow keys, Home, End	Keep on	Boolean	true
Scroll step (`scrollStep`)	select	No	No	one-card	Step of buttons and keys	—	one-card, viewport	one-card
Loop (`loop`)	boolean	No	No	false	Next at the end goes to the start	—	Boolean	false
Initial item index (`initialIndex`)	number	No	No	0	Card shown first	0 = first	Enforced 0–200	0
Edge (`edgePadding`)	select	No	No	bleed	Scroller to the screen edge or not	Bleed as in Figma	bleed, none	bleed
Reduced motion support (`reducedMotion`)	boolean	No	No	true	No smooth scrolling for reduced motion	Keep on	Boolean	true

Block model `cards` — Advanced tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
When there are no cards (`emptyBehavior`)	select	No	No	hide	What the page shows without cards	Hide in most cases	hide, message (code falls back to hide)	hide
Empty message (`emptyMessage`)	text	No	No	Empty (placeholder `listEmpty`)	Text of the empty state	Short sentence	Shown when behaviour = message	No services to show yet.
Analytics (`analyticsEnabled`)	boolean	No	No	true	Data layer state and events	Keep on	Boolean	true
Style options (`classes`)	multiselect	No	Yes	None	Extra styles	Only as designed	stat-compact, dividers, header-center	header-center

Block model `cards` — Additional tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Anchor ID (`classes_anchor`)	text	No	No	Empty	In-page link target (`#anchor-…`)	Unique on the page	Enforced regExp `^anchor-[a-z0-9][a-z0-9-]*$`; duplicates get –2, -3	anchor-our-services

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Hide block (`classes_hideblock`)	boolean	No	No	false	Hide the block on the page	Temporary use only	Boolean	false
Padding left (`classes_paddingleft`)	select	No	No	None	Inner spacing left	Spacing scale	pl-0, pl-100 … pl-3000	pl-0
Padding right (`classes_paddingright`)	select	No	No	None	Inner spacing right	Spacing scale	pr-0 … pr-3000	pr-0
Padding top (`classes_paddingtop`)	select	No	No	None	Inner spacing top	Spacing scale	pt-0 … pt-3000	pt-600
Padding bottom (`classes_paddingbottom`)	select	No	No	None	Inner spacing bottom	Spacing scale	pb-0 … pb-3000	pb-600
Margin left (`classes_marginleft`)	select	No	No	None	Outer spacing left	Spacing scale	ml-0 … ml-3000	ml-0
Margin right (`classes_marginright`)	select	No	No	None	Outer spacing right	Spacing scale	mr-0 … mr-3000	mr-0
Margin top (`classes_margintop`)	select	No	No	None	Outer spacing top	Spacing scale	mt-0 … mt-3000	mt-1000
Margin bottom (`classes_marginbottom`)	select	No	No	None	Outer spacing bottom	Spacing scale	mb-0 … mb-3000	mb-1000

The padding and margin options are the spacing tokens 0, 100, 200, 300, 400, 500, 600, 800, 1000, 1200, 1600, 2000, 2400 and 3000 (`--space-*`, 0 to 7.5rem).

Item model `card` — Content, Link and Display tabs

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Image (`image`)	reference	No	No	Empty	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None	/content/dam/tcs/services/consulting.jpg
Image alt text (`imageAlt`)	text	No	No	Empty (decorative)	Text alternative	Describe meaning; empty if decorative	None	Consultants in a workshop
Eyebrow (`eyebrow`)	text	No	No	Empty	Label above the title	1–3 words	None	Perspective
Title (`title`)	text	No	No	Empty	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None	4bn
Description (`text`)	richtext	No	No	Empty	Card text	1–3 sentences; lists and links allowed	None	Revenue in fiscal 2026.
Label (`subtitle`)	text	No	No	Empty	Statistic label above the description	1–3 words	None	Revenue
Tags (`tags`)	aem-tag	No	Yes	None	Labels in the kicker	Up to 3 shown	Tag IDs from the taxonomy	tcs-corp:topic/ai

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Date (`date`)	date-time	No	No	Empty	Card date	—	Read as YYYY-MM-DD	2026-09-04
Content type (`contentLabel`)	text	No	No	Empty	Meta label; Report in Mixed	Article, Report, …	None	Report
Reading time (`readingTime`)	text	No	No	Empty	Minutes after the tags	Digits only (6 shows `6m`)	None	6
Link (`link`)	aem-content	No	No	Empty (not linked)	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card	/content/tcs-corp/us/en/services/consulting
Link text (`linkText`)	text	No	No	Empty	Title when the card has none	—	None	Consulting
Call to action label (`ctaLabel`)	text	No	No	Empty (panel: Explore; report: Download)	Shows a button as the card's link	1–3 words, a verb	None	Learn more
Open in a new tab (`newTab`)	select	No	No	As the block (empty)	New tab for this card	Yes for external sites	'', true, false	true
Card style (`kind`)	select	No	No	As the block (empty)	This card's kind	Overrides the block	'', image, panel, report, stat	panel
Card colour (`theme`)	select	No	No	As the block (empty)	This card's colour	Overrides the block	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image	brand
Analytics label (`analyticsLabel`)	text	No	No	Empty	`dc:title` of the card in the data layer	Stable, language-neutral name	Enforced maxLength 120	consulting-card
Accessibility label (`ariaLabel`)	text	No	No	Empty	Accessible name of the card link	When title / CTA isn't enough	None	Read about our consulting services

Field details

Format of each entry: Purpose; Allowed Values; Character Limits; Business Rules; Dependency Rules; Visibility Rules (model `condition`); Sample Content. Fields that differ only by breakpoint are described together.

Block — Content tab

- **Title (`title`)** — Purpose: the block heading and the name of the cards region (`aria-labelledby`). Allowed: plain text. Limits: none enforced; Recommended up to 60 characters (one line on desktop). Rules: an empty title gives no heading; the region is then named by the Accessible list label, else "Cards" (placeholder `cards`). Dependency: card titles use the next heading level. Visibility: always. Sample: "Our services".
- **Heading type (`titleType`)** — Purpose: the title's level. Allowed: h2–h6. Limits: n/a. Rules: card titles are one level lower (h3 under h2; at most h6). Dependency: Title. Visibility: always. Sample: h2.

- **Description (`description`)** — Purpose: intro under the title. Allowed: rich text (paragraphs, bold, links). Limits: Recommended up to 200 characters. Rules: empty text isn't rendered. Visibility: always. Sample: "From strategy to operations."
- **CTA link (`link`)** — Purpose: header call to action. Allowed: AEM page or URL. Rules: no link, no CTA. Dependency: CTA text, CTA style. Visibility: always. Sample: a services overview page.
- **CTA text (`linkText`)** — Purpose: the CTA label. Allowed: text. Limits: Recommended up to 25 characters. Rules: replaces the link's text. Dependency: CTA link. Visibility: always. Sample: "View all services".
- **CTA style (`linkType`)** — Purpose: CTA look. Allowed: Text link (empty), Primary button, Secondary button. Rules: anything else gives the text link (tertiary). Dependency: CTA link. Visibility: always. Sample: Primary button.
- **Accessible list label (`listLabel`)** — Purpose: names the region for screen readers. Allowed: text. Limits: Recommended up to 60 characters. Rules: when set it is the region's `aria-label` (also with a title); also the data layer `dc:title` when there is no title. Visibility: always. Sample: "Key facts".
- **Component ID (`componentId`)** — Purpose: the block id, the analytics id and the prefix of card ids (`{id}-item-{n}`). Allowed: letters, digits, `-`, `_`, starting with a letter (Enforced). Rules: empty: the Anchor ID, else `cards-1`, `cards-2`, … in page order; a duplicate gets a numeric suffix; values are lower-cased. Changing it breaks deep links and starts new analytics series. Visibility: always. Sample: "our-services".

Block — Cards tab

- **Display as teaser (`displayAsTeaser`)** — Purpose: cards or rows of links. Allowed: on / off. Rules: off ignores card style, colour, ratio, panel height and feature; data layer variant `links`. Visibility: always. Sample: on.
- **Card style (`cardStyle`)** — Purpose: card kind for all cards. Allowed: image, panel, report, stat, mixed. Rules: a Card's own style wins; Mixed picks per card (6.15.3 Variation 5); invalid values: image. Visibility: Display as teaser on. Sample: stat.
- **Card colour (`cardTheme`)** — Purpose: colour of coloured cards. Allowed: empty (default for the style: panel dark, report gradient, statistic grey) or one of 8 colours. Rules: a Card's colour wins; Image background renders the image only on panels. Visibility: teaser on. Sample: brand.
- **Image ratio (`imageRatio`)** — Purpose: image card image shape. Allowed: 16-9, 1-1, 4-3, 3-2. Rules: invalid: 16-9. Visibility: teaser on. Sample: 1-1.
- **Panel height (`panelHeight`)** — Purpose: shape of panel, report and statistic cards. Allowed: portrait (2:3), compact (9:10), auto (content). Rules: fixed shapes clip overflowing text. Visibility: teaser on. Sample: compact.
- **First card as feature (`featureFirst`)** — Purpose: spotlight the first card. Allowed: on / off. Rules: feature shows image, tags, reading time and title only. Visibility: teaser on. Sample: on.
- **Link items (`linkItems`)** — Purpose: make cards clickable. Allowed: on / off. Rules: off: no card links, no call to action buttons, no row arrows. Visibility: always. Sample: on.
- **Open links in a new tab (`openInNewTab`)** — Purpose: default target. Allowed: on / off. Rules: a Card's Yes / No wins. Visibility: always. Sample: off.
- **Show image / Show eyebrow / Show tags / Show description / Show date / Show call to action (`showImage`, `showEyebrow`, `showTags`, `showDescription`, `showDate`, `showCta`)** — Purpose: hide parts of all cards. Allowed: on / off (default on). Rules: Show tags also hides the reading time; Show call to action off makes titles the links; the feature card always shows its image. Visibility: always. Sample: Show date off.
- **Date format (`dateFormat`)** — Purpose: date display. Allowed: dd-mmm-yy (04 Sep 26), dd-mm-yyyy (04-09-2026), mm-dd-yyyy (09-04-2026), mmm-d-yyyy (Sep 4, 2026), dd/mm/yy (04/09/26). Rules: month names are English abbreviations in every locale; the machine date is in `<time datetime="YYYY-MM-DD">`. Visibility: Show date on. Sample: dd-mm-yyyy.
- **Image loading (`imageLoading`)** — Purpose: loading priority. Allowed: lazy, eager. Rules: eager also sets `fetchpriority="high"`. Visibility: always. Sample: lazy.

Block — Layout tab

- **Desktop / Tablet / Mobile display (`desktopMode`, `tabletMode`, `mobileMode`)** — Purpose: grid or horizontal scroll per breakpoint (desktop ≥ 1200 px, tablet 600–1199 px, mobile < 600 px). Allowed: grid, horizontal-scroll. Rules: independent per breakpoint (8 combinations); invalid: grid. Visibility: always. Sample: Mobile = horizontal-scroll.
- **Columns (`desktopColumns`, `tabletColumns`, `mobileColumns`)** — Purpose: grid columns. Allowed: 1–6 (Enforced; rounded). Defaults 4 / 4 / 1. Visibility: that breakpoint's display = grid. Sample: 3 / 2 / 1.
- **Gap (px) (`desktopGap`, `tabletGap`, `mobileGap`)** — Purpose: space between cards. Allowed: 0–120 (Enforced). Defaults 24 / 24 / 16; converted to rem. Visibility: always. Sample: 24.
- **Items visible (`desktopVisible`, `tabletVisible`, `mobileVisible`)** — Purpose: card width in a scroller as the number of visible cards. Allowed: 1–8, decimals (Enforced). Defaults 4.2 / 3.3 / 1.2. Dependency: ignored when Card width is set. Visibility: display = horizontal-scroll. Sample: 1.2.
- **Card width (px) (`desktopCardWidth`, `tabletCardWidth`, `mobileCardWidth`)** — Purpose: fixed card width. Allowed: 0 or 120–1200 (model 0–1200; values below 120 count as 0). Visibility: horizontal-scroll. Sample: 320.
- **Previous / next buttons on … (`desktopControls`, `tabletControls`, `mobileControls`)** — Purpose: buttons below the scroller. Default off. Rules: shown only when the cards overflow. Visibility: horizontal-scroll. Sample: on (desktop).
- **Scroll indicator on … (`desktopIndicator`, `tabletIndicator`, `mobileIndicator`)** — Purpose: progress bar. Defaults off / off / on. Rules: shown only when the cards overflow. Visibility: horizontal-scroll. Sample: on (mobile).
- **Equal card height (`equalHeight`)** — Purpose: equal grid rows. Default off. Visibility: always. Sample: off.
- **Stretch cards to row height (`stretchCards`)** — Purpose: cards fill their row. Default on. Visibility: always. Sample: on.

Block — Scroll tab (all: Visibility always, except Snap alignment)

- **Scroll snap (`scrollSnap`)** — Purpose: snapping. Default on. Rules: suspended while dragging. Sample: on.
- **Snap alignment (`snapAlign`)** — Purpose: snap position. Allowed: start, center. Visibility: Scroll snap on. Sample: center.
- **Hide native scrollbar (`hideScrollbar`)** — Purpose: hide the browser scrollbar. Default on. Sample: on.
- **Allow mouse drag (`mouseDrag`)** — Purpose: drag scrolling with a mouse (a drag doesn't follow the link under the pointer; 6 px threshold). Default on. Sample: on.
- **Allow touch swipe (`touchSwipe`)** — Purpose: swipe. Default on. Rules: off sets `touch-action: pan-y` (buttons still work). Sample: on.
- **Keyboard scrolling (`keyboardScrolling`)** — Purpose: arrow keys, Home, End on the focused scroller. Default on. Sample: on.
- **Scroll step (`scrollStep`)** — Purpose: step of buttons / keys. Allowed: one-card, viewport. Sample: one-card.
- **Loop (`loop`)** — Purpose: wrap around at the ends. Default off. Sample: off.
- **Initial item index (`initialIndex`)** — Purpose: card shown first. Allowed: 0–200 (Enforced). Sample: 0.
- **Edge (`edgePadding`)** — Purpose: bleed to the screen edge. Allowed: bleed, none. Sample: bleed.
- **Reduced motion support (`reducedMotion`)** — Purpose: instant instead of smooth scrolling for `prefers-reduced-motion`. Default on. Sample: on.

Block — Advanced tab

- **When there are no cards (`emptyBehavior`)** — Purpose: empty state. Allowed: hide, message (anything else: hide). Rules: in edit mode the editor hint is always shown. Visibility: always. Sample: hide.
- **Empty message (`emptyMessage`)** — Purpose: empty state text. Limits: Recommended up to 80 characters. Rules: empty: placeholder `listEmpty`. Visibility: behaviour = message. Sample: "No services to show yet."
- **Analytics (`analyticsEnabled`)** — Purpose: data layer. Default on. Rules: off sets `data-analytics="off"`: no state, no click events. Visibility: always. Sample: on.

- **Style options (`classes`)** — Purpose: block classes. Allowed: stat-compact, dividers, header-center (multi). Visibility: always. Sample: dividers.

Block — Additional tab

- **Anchor ID (`classes_anchor`)** — Purpose: in-page anchor. Allowed: `anchor-` + lower-case letters, digits, hyphens (Enforced). Rules: becomes the block id when there is no Component ID; duplicates get `-2`, `-3`. Visibility: always. Sample: anchor-key-facts.
- **Hide block (`classes_hideblock`)** — Purpose: temporarily hide. Rules: hidden on the page and in preview; shown faded in edit mode. Visibility: always. Sample: off.
- **Padding left / right / top / bottom (`classes_paddingleft`, `classes_paddingright`, `classes_paddingtop`, `classes_paddingbottom`)** and **Margin left / right / top / bottom (`classes_marginleft`, `classes_marginright`, `classes_margintop`, `classes_marginbottom`)** — Purpose: spacing around / inside the block. Allowed: empty or a token class (`pl-0` … `pl-3000`, etc.). Rules: styled in `styles/styles.css`. Visibility: always. Sample: mt-1000.

Card item

- **Image (`image`) and Image alt text (`imageAlt`)** — Purpose: the card picture. Allowed: an AEM Assets image; alt text. Limits: alt Recommended up to 125 characters. Rules: shown on image cards, image-background panels and the feature; empty alt = decorative (`alt=""`). Dependency: Show image. Visibility: always. Sample: a workshop photo, "Consultants in a workshop".
- **Eyebrow (`eyebrow`)** — Purpose: kicker label. Limits: Recommended up to 30 characters. Rules: panels show it, else the first tag; report cards show the content type first. Dependency: Show eyebrow. Sample: "Perspective".
- **Title (`title`)** — Purpose: card heading / statistic number. Limits: Recommended up to 60 characters (statistics: up to 8 characters). Rules: a card needs a title, a description or an image; a card without a title has no heading and is linked only through a call to action. Sample: "Consulting" / "4bn".
- **Description (`text`)** — Purpose: card text. Allowed: rich text (paragraphs, bold, lists, inline links). Limits: Recommended up to 160 characters. Rules: inline links stay clickable above the card link; also the data layer title of a card without a title (first 100 characters). Dependency: Show description. Sample: "We help you shape strategy."
- **Label (`subtitle`)** — Purpose: statistic label. Limits: Recommended up to 30 characters. Rules: only statistic cards show it. Sample: "Revenue".
- **Tags (`tags`)** — Purpose: kicker labels. Allowed: taxonomy tags (multi). Rules: up to 3 shown (image cards, feature), 1 on panels and rows; labels from the locale taxonomy, else derived from the ID. Dependency: Show tags. Sample: `tcs-corp:topic/ai`.
- **Date (`date`)** — Purpose: card date. Rules: read as the first 10 characters (YYYY-MM-DD); other values show no date. Dependency: Show date, Date format. Sample: 2026-09-04.
- **Content type (`contentLabel`)** — Purpose: meta label; Report detection in Mixed. Limits: Recommended 1–2 words. Sample: "Report".
- **Reading time (`readingTime`)** — Purpose: minutes. Rules: digits show as `{n}m` (placeholder `minutesShort`); other text is shown as typed; hidden with Show tags off. Sample: "6".
- **Link (`link`)** — Purpose: destination. Allowed: http(s), mailto, tel, paths; never `javascript:` / `data:` (the card is dropped). Rules: empty: unlinked card. Internal links aren't resolved through the redirects sheet. Sample: a page.
- **Link text (`linkText`)** — Purpose: the title when the card has none. Rules: ignored when it equals the URL. Sample: "Consulting".
- **Call to action label (`ctaLabel`)** — Purpose: a button as the card's one link. Limits: Recommended up to 20 characters. Rules: needs a link, Link items on and Show call to action on; panels default "Explore", reports "Download". Sample: "Learn more".
- **Open in a new tab (`newTab`)** — Purpose: per-card target. Allowed: As the block, Yes, No. Sample: Yes.

- **Card style (`kind`)** — Purpose: per-card kind. Allowed: As the block, image, panel, report, stat. Rules: wins over the block's style and over Mixed. Visibility: always (applies with Display as teaser on). Sample: panel.
- **Card colour (`theme`)** — Purpose: per-card colour. Allowed: As the block or one of 8 colours. Sample: brand.
- **Analytics label (`analyticsLabel`)** — Purpose: data layer `dc:title` of the card and `data-analytics-label`. Limits: Enforced maxLength 120. Sample: "consulting-card".
- **Accessibility label (`ariaLabel`)** — Purpose: the link's accessible name. Limits: Recommended up to 100 characters. Rules: replaces the generated "{CTA}: {title}" name. Sample: "Read about our consulting services".

6.15.7 Field Annotation Mapping

Marker	Field	Purpose
A	Title (`title`), Heading type (`titleType`)	Block heading; names the cards region
B	Description (`description`)	Intro text under the title
C	CTA link (`link`), CTA text (`linkText`), CTA style (`linkType`)	Header call to action
D	Card item (model `card`); Card style (`kind`), Card colour (`theme`)	One card; its own kind and colour
E	Image (`image`), Image alt text (`imageAlt`)	Card image and its text alternative
F	Eyebrow (`eyebrow`), Tags (`tags`), Reading time (`readingTime`)	Kicker above the title
G	Title (`title`), Link (`link`), Link text (`linkText`)	Card heading and its link
H	Description (`text`)	Card text (rich text, editable in place)
I	Content type (`contentLabel`), Date (`date`)	Meta row of image cards (kicker of report cards)
J	Call to action label (`ctaLabel`), Link (`link`), Open in a new tab (`newTab`)	Card button
K	`{bp}Controls`, `{bp}Indicator` (Layout tab)	Previous / next buttons and scroll indicator
L	Content tree: Card items	Add, duplicate, delete, reorder cards

6.15.8 Component Specification

Attribute	Value
Component Name	Cards (`cards`), item Card (`card`)
Version	1.0
Owner	[To be confirmed: product owner — owner: TCS digital marketing]; technical owner: development team
Dependencies	`decorators/card-list-decorator.js`, `decorators/scroller-decorator.js`, `utils/card-list-config.js`, `blocks/cards/cards-data.js`, `utils/cells.js`, `utils/taxonomy.js`, `utils/placeholders.js`, `utils/analytics.js`, `styles/card-list.css`; placeholders and taxonomy sheets of the locale
Component Type	Container block (key-value settings) with item components (Card)
Supported Variants	Card styles image, panel, report, stat, mixed; feature card; rows of links; 8 card colours; 4 image ratios; 3 panel heights; style options stat-compact, dividers, header-center; grid / horizontal scroll per breakpoint (8 combinations) with buttons, indicator, card width, edge, snap, step, loop, initial item; Figma variations 1–14 by configuration
Supported Templates	Any page (home, article, blog, press-release and pages without a template)
Supported Metadata	None read from the page; the page's language comes from the page for the placeholders and taxonomy

Attribute	Value
Supported Tags	Card Tags (AEM tags of the locale taxonomy), labels from `/{locale}/taxonomy.json`
Supported Personalization	None. The data layer state and click events allow future Adobe Target / Journey Optimizer activities once Adobe Tags is added (not implemented as of this handover)
Caching Considerations	The page HTML (with the cards) is cached by the Edge Delivery CDN and refreshed on publish; the placeholders and taxonomy sheets are fetched once per page view and cached in memory; no query index is used
Performance Considerations	Loaded with the section (lazy phase unless the block is in the first section); no extra data requests except placeholders and taxonomy; images lazy by default (eager + high priority option for the first screen); image ratios reserve space (no layout shift); scrolling by CSS, the scroller script only adds controls; no carousel library
Accessibility Compliance	WCAG 2.1 AA target: `<ul>/<li>` in a named region; headings one level below the block title; one link per card; named buttons with `disabled` states and `aria-controls`; focusable scroller only while it scrolls; `<time datetime>`; decorative images `alt=""`; reduced motion; known gaps: #999 secondary text contrast, brand blue small-text contrast, new-tab hint on call to action buttons
SEO Compliance	Server-delivered card content in HTML (no client data fetch for the text); semantic headings and descriptive links; image alt text; no hidden duplicate links

6.15.9 Input Model

Content Inputs: the block settings (key | value rows) and one row per Card with its cells: image (picture with alt), eyebrow, title, description (rich text), label, tags, date, content type, reading time, link (anchor with the link text), call to action label, new tab, card style, card colour, analytics label, accessibility label.

Metadata Inputs: none from the page metadata.

Tags Inputs: the Card Tags (tag IDs such as `tcs-corp:topic/ai`), resolved to labels with the locale's taxonomy (`utils/taxonomy.js resolveTags`).

Page Context Inputs: the page origin (to tell external links), the edit mode of Universal Editor (`html.adobe-ue-edit`, for the hint), the locale (placeholders and taxonomy), the viewport (layout by CSS media queries; breakpoint in click events).

Query Inputs: none (Cards doesn't read the query index or the redirects sheet).

Manual Inputs: everything above is typed by the author; the order is the content tree order.

Authored HTML received from AEM (simplified; in the editor the rows also carry `data-aue-*` instrumentation, e.g. `data-aue-model="card"`):

```
<div class="cards">
  <div><div><p>title</p></div><div><p>Our services</p></div></div>
  <div><div><p>cardStyle</p></div><div><p>image</p></div></div>
  <div><div><p>mobileMode</p></div><div><p>horizontal-scroll</p></div></div>
  <div>
    <div><picture><img src="./media_1a2b.jpg" alt="Consultants in a workshop"></picture></
div>
    <div><p>Perspective</p></div>
    <div><p>Consulting</p></div>
    <div><p>We help you shape <strong>strategy</strong>.</p></div>
    <div></div>
    <div><p>tcs-corp:topic/consulting</p></div>
    <div><p>2026-09-04</p></div>
    <div><p>Article</p></div>
    <div><p>6</p></div>
    <div><p><a href="/en/services/consulting">Consulting</a></p></div>
```

```
    <div><p>Learn more</p></div>
  </div>
</div>
```

A row with exactly two cells whose first cell is a setting name is a setting; other rows are Cards (cells matched to fields by position and content when AEM leaves out unset fields); a row of at most two cells that isn't a setting is a card made before (image + rich text).

6.15.10 Output Model

Rendered Output: the block gets the classes `card-list`, `{desktop,tablet,mobile}-{grid, scroll}`, `{bp}-controls`, `{bp}-indicator`, `snap`, `snap-{start,center}`, `hide-scrollbar`, `no-swipe`, `edge-bleed`, `equal-height`, `stretch`, `feature-first`, `teaser` or `links`, `style-{cardStyle}`, `ratio-{ratio}`, `panel-{height}`, the style options and `source-manual`; the custom properties `--list-{columns,gap,visible,card-width}-{bp}`; the id (Component ID, Anchor ID or `cards-{n}`). Children: `div.list-header`, optional `article.list-feature`, `div.list-scroller[role=region]` with `ul.list-items > li.list-item > article.list-card.list-card-{kind}` (or `article.list-row`), and `div.list-nav` (indicator and buttons).

Generated HTML (one image card, shortened):

```
<div class="cards block card-list desktop-grid tablet-grid mobile-scroll mobile-indicator
  snap hide-scrollbar edge-bleed stretch snap-start teaser style-image ratio-16-9
  panel-portrait source-manual" id="cards-1" data-analytics="custom">
  <div class="list-header">
    <div class="list-title-slot">
      <h2 id="cards-1-title" class="list-title">Our services</h2>
    </div>
  </div>
  <div class="list-scroller" id="cards-1-items" role="region"
    aria-labelledby="cards-1-title" data-overflow="true" tabindex="0">
    <ul class="list-items">
      <li class="list-item" data-card-id="cards-1-item-1" data-cmp-id="cards-1-item-1"
        data-cmp-position="1">
        <article class="list-card list-card-image">
          <div class="list-card-media"><picture>…</picture></div>
          <p class="list-card-kicker"><span>Perspective</span><span>Consulting</span>
            <span>6m</span></p>
          <h3 class="list-card-title">Consulting</h3>
          <div class="list-card-description list-card-body"><p>We help you …</p></div>
          <p class="list-card-meta"><span>Article</span>
            <time datetime="2026-09-04">04 Sep 26</time></p>
          <p class="list-card-action"><a class="list-card-link button tertiary"
            href="/en/services/consulting" aria-label="Learn more: Consulting"
            data-cmp-interaction="card">Learn more</a></p>
        </article>
      </li>
    </ul>
  </div>
  <div class="list-nav">
    <div class="list-indicator" aria-hidden="true">
      <span class="list-indicator-thumb"></span>
    </div>
    <div class="list-controls">
      <button class="list-previous button secondary icon-button" aria-label="Previous
items"
        aria-controls="cards-1-items" data-cmp-interaction="previous"></button>
      <button class="list-next button secondary icon-button" aria-label="Next items"
```

```
        aria-controls="cards-1-items" data-cmp-interaction="next"></button>
    </div>
  </div>
</div>
```

Generated JSON: none (no files or API responses are produced).

Generated Metadata: none (no `<meta>` tags; the cards don't change the page metadata).

Analytics Tracking: with Analytics on, the block pushes its state to `window.adobeDataLayer` (Adobe Client Data Layer, AEM Core Components schema) and marks itself `data-analytics="custom"`:

```
{ component: {
  'cards-1': { '@type': 'tcs-corp/components/cards', parentId: 'page-1x2y3z',
    'dc:title': 'Our services', 'xdm:variant': 'image' },
  'cards-1-item-1': { '@type': 'tcs-corp/components/cards/item', parentId: 'cards-1',
    'dc:title': 'Consulting', 'xdm:linkURL': '/en/services/consulting',
    'xdm:position': 1, 'repo:modifyDate': '2026-09-04' },
} }
```

Clicks are pushed by the site-wide data layer decorator:

```
{ event: 'cmp:click', eventInfo: { path: 'component.cards-1-item-1', interaction: 'card',
  'dc:title': 'Learn more: Consulting',
  'xdm:linkURL': 'https://main--tcs-corp--sradha-tcs.aem.live/en/services/consulting',
  'xdm:linkType': 'other', breakpoint: 'desktop' } }
{ event: 'cmp:click', eventInfo: { path: 'component.cards-1', interaction: 'next',
  'dc:title': 'Next items', 'xdm:linkType': 'other', breakpoint: 'mobile' } }
```

`xdm:variant` is the card style, or `links` with Display as teaser off. `dc:title` of a card is the Analytics label, else the title, else the first 100 characters of the description. The header CTA reports `interaction: 'cta'`; external links `xdm:linkType: 'exit'`, file links `'download'`. The card's position is in the component state (`xdm:position`); the click event doesn't carry a `position` for card links (the position attribute is on the `<li>`, the event reads it from the clicked link), and clicks on the feature card are reported with the block's path. With Analytics off: `data-analytics="off"`, no state, no events.

Personalization Output: none.

Search Index Output: none of its own. The cards are part of the page HTML; the query index (`helix-query.yaml`) indexes page metadata, not block content.

Target Personalization Output: None in the block today: Supported Personalization is None. With Analytics on, the block (tcs-corp/components/cards) and its cards (tcs-corp/components/cards/item, with dc:title, xdm:linkURL, xdm:position) are in window.adobeDataLayer and clicks are pushed as cmp:click, which future Adobe Target or Journey Optimizer activities could use once Adobe Tags is added (not implemented as of this handover).

6.15.11 Business Rules

1. The block is decorated once (`data-cards-decorated`); a second decoration call does nothing.
2. Rows with two cells whose first cell (normalized: lower case, no dashes or spaces) is a setting name are settings; rows instrumented as `card`, and other rows, are Cards.
3. A Card row with two cells or fewer is read as a card made before: the cell with an image is the image, the other the rich text; the first heading (or a bold-only first paragraph) is the title; a link alone in the last paragraph is the call to action and its link; the rest is the description.

4. Card cells are matched to the 16 model fields in order; when AEM leaves out unset fields, cells are matched by content (an image, a `YYYY-MM-DD` date, a link, `true` / `false`, a known style or colour value, single-line text).
5. When a Card has no Title, the Link text becomes the title (unless it equals the URL).
6. A card is dropped when its link is unsafe (any scheme except `http`, `https`, `mailto`, `tel`; e.g. `javascript:`, `data:`) or when it has no title, no description text and no image.
7. Cards keep the authored order: no sorting, no deduplication, no maximum.
8. Card ids are `{component id}-item-{n}`, numbered in the shown order (after dropped cards).
9. The component id is the Component ID (lower-cased, unsafe characters replaced; an id not starting with a letter gets the prefix `cards-`), else the block's id from the Anchor ID, else `cards-1`, `cards-2`, …; an authored id already used on the page gets a numeric suffix.
10. Every setting is validated: unknown select values, out-of-range numbers and non-numbers fall back to the defaults (image cards, 16:9, portrait, grid 4 / 4 / 1, gaps 24 / 24 / 16, visible 4.2 / 3.3 / 1.2, mobile indicator on, snap start, bleed, …). Booleans accept yes, true, 1, on, y; empty uses the default.
11. Columns are rounded and clamped to 1–6; gaps 0–120; items visible 1–8; card width 0–1200 with values below 120 treated as 0; initial index 0–200.
12. The card kind: the Card's own style; else the block's style; for Mixed: a content type containing "report" gives a report card, an image gives an image card, otherwise a panel.
13. The card colour: the Card's colour, else the block's; empty uses the style's default (panel dark, report gradient, statistic grey).
14. Tags: labels from the locale taxonomy; unknown IDs get a label derived from the ID; at most 3 tags on image cards and the feature card; the first tag only on panels (when there is no eyebrow) and rows.
15. Reading time made of digits shows as `{n}m` (placeholder `minutesShort`); it is part of the tags and hidden with Show tags off.
16. Dates: only `YYYY-MM-DD` values (or ISO date-times) are shown, in the Date format, with English month abbreviations, inside `<time datetime>`.
17. A card is linked only with a link and Link items on. Its one link is the call to action when shown (Show call to action on and a label: the Card's, or "Explore" for panels, "Download" for reports), else the title. A card without a title and without a call to action isn't linked.
18. The call to action's accessible name is "{label}: {title}" unless an Accessibility label is set; the Accessibility label is the `aria-label` of the card link.
19. Call to action types: secondary buttons on report and statistic cards; tertiary (text link) on image cards and panels.
20. Links open in a new tab when the Card says Yes, or the Card says As the block and the block's Open links in a new tab is on; they get `rel="noopener noreferrer"` and the hidden text "(opens in a new tab)".
21. Links to another origin are marked `data-external="true"`.
22. Images: the authored `<picture>` is cloned; the alt is the Image alt text (empty = decorative); `loading` is the Image loading value; eager images get `fetchpriority="high"`. Show image off hides images except on the feature card.
23. First card as feature (with Display as teaser on and at least one card): the first card is shown as the feature (image, tags, reading time, title) and removed from the list.
24. Display as teaser off: rows of links (kicker, title, description, date, arrow); no images, calls to action, styles, colours or feature.
25. The rich text description keeps its Universal Editor instrumentation (editable in place); links inside it stay clickable above the card link.
26. Card headings are one level below the block heading (h3 for an h2 title; h3 without a title; at most h6).
27. The cards region is named by the title (`aria-labelledby`), else the Accessible list label, else "Cards" (placeholder `cards`); an Accessible list label always wins as `aria-label`.

28. No cards: in Universal Editor edit mode the header and the hint (placeholder `cardsEditorHint`) are shown; on the page, Hide the block (default) empties and hides the block and its wrapper; Show a message shows the Empty message, else `listEmpty`.
29. Scrolling breakpoints: the scroller is enhanced only while the cards overflow (`data-overflow="true"`, focusable, buttons enabled); otherwise buttons and indicator are hidden. The state is recalculated on scroll and resize (ResizeObserver).
30. Buttons step one card or one viewport; with Loop they wrap; otherwise they are disabled at the start / end. Keys: Arrow Left / Right, Home, End on the focused scroller.
31. Mouse drag scrolls after 6 px of movement and cancels the click on the link under the pointer; touch scrolling is native (`touch-action: pan-y` with swipe off).
32. Smooth scrolling is replaced by instant scrolling for `prefers-reduced-motion` (with Reduced motion support on).
33. Analytics on: block and card state in the data layer (see 6.15.10); off: `data-analytics="off"` and no events. Analytics errors never break rendering.
34. Hide block (Additional tab) hides the block on the page and in preview, faded in edit mode; the Anchor ID becomes the block id (duplicates suffixed).

6.15.12 Author Best Practices

Recommended Content Length (Recommended, not enforced)

Element	Recommended length
Block title	Up to 60 characters, one line on desktop
Block description	Up to 200 characters
Eyebrow	1–3 words, up to 30 characters
Card title	Up to 60 characters (2 lines on a 4-column desktop grid)
Statistic title (number)	Up to 8 characters (e.g. `4bn`, `600k+`); longer phrases: Compact statistic title
Label	1–3 words
Description	Up to 160 characters; panels with Portrait / Compact height: up to 120
Call to action label	1–3 words, up to 20 characters
Cards per block	Grid: a multiple of the columns (e.g. 3, 4, 6, 8); scroller: 5–12

Image Dimensions

Use	Ratio (CSS)	Recommended source size
Image card 16:9 (default)	16 / 9	1600 × 900 px
Image card 1:1	1 / 1	1200 × 1200 px
Image card 4:3	4 / 3	1600 × 1200 px
Image card 3:2	3 / 2	1500 × 1000 px
Image background panel	2 / 3 (portrait), 9 / 10 (compact), content height	1200 × 1800 px, subject centred
Feature card	Full width, min. height 35.625rem desktop / 27.1875rem tablet / 32.5rem mobile	2400 × 1200 px, subject on the right (text sits on the left gradient)

Images are cropped with `object-fit: cover`; keep the subject in the centre. Use JPEG or WebP photography from AEM Assets; Edge Delivery delivers optimized renditions.

CTA Writing Guidelines

- Start with a verb ("Explore services", "Download the report", "Read the story").
- Keep labels short and specific; the screen reader name adds the title ("Learn more: Consulting"), but the visible label should still make sense alone where possible.
- Use the header CTA for "View all" links to an overview page.
- Don't put the same destination in the card link and in a description link.

Accessibility Guidelines

- Give every card a title; cards without a title have no heading and no link unless they have a call to action.
- Write alt text for informative images; leave it empty for decorative images next to a title.
- Use an Accessible list label when the block has no title.
- Choose the heading type that fits the page outline (H2 under the page H1).
- Check text contrast on Brand blue and Image background cards; prefer Dark or Navy for long text.
- For new-tab links on call to action buttons, mention the new tab in the Accessibility label.
- Don't rely on colour alone to distinguish cards (add an eyebrow or label).

SEO Guidelines

- Use descriptive card titles; they are the link text of title-linked cards.
- Link to canonical published pages (not to redirecting URLs: Cards doesn't resolve the redirects sheet).
- Avoid duplicate cards linking to the same page in one block.

Metadata Guidelines

Cards doesn't read page metadata. If the cards represent pages that have card metadata (`card-title`, `card-description`, `card-image`), use the List block instead so the cards stay in sync with the pages.

Taxonomy Guidelines

- Use tags from the locale's taxonomy (`/{locale}/taxonomy`); the labels are translated per locale sheet.
- Add at most 3 tags per card (only 3 are shown; 1 on panels and rows).
- Prefer the eyebrow for a fixed label and tags for taxonomy-driven labels.

Localization Guidelines

- Each locale site has its own pages: translate every card's texts, alt texts and labels in the locale copy; links should point to the same locale.
- UI texts (Explore, Download, Previous items, Next items, "(opens in a new tab)", empty message, `{n}m`) come from the locale's placeholders sheet; keep the keys translated.
- Date formats: choose the format customary for the locale; month abbreviations are English in every locale (dd-mmm-yy and mmm-d-yyyy) — use a numeric format for non-English locales.
- Statistic numbers: use the locale's number style (e.g. `4 Mrd.` in German) and check that long values fit.

6.15.13 Troubleshooting Guide

Issue 1 — A card is missing on the page

Symptoms: A Card exists in the content tree but no card is rendered for it; the other cards show.

Root Cause: The card has no Title, no Description text and no Image, or its Link uses an unsafe scheme (`javascript:`, `data:` or another non-web scheme); such cards are dropped by `itemToCard()`.

Diagnosis Steps: Select the Card in the content tree and check Title, Description, Image and Link; check whether the link starts with `http`, `https`, `mailto:`, `tel:` or `/`.

Resolution Steps: Add a title (or description / image); replace the link with a page or an `https://` URL.

Validation Steps: Reload the editor; the card shows; publish and check the live page.

Preventive Measures: Fill the Title of every card; use the page picker for internal links.

Issue 2 — The whole Cards block is missing on the published page

Symptoms: The block shows in Universal Editor (edit mode) but not in preview or on the live page; the section may be empty.

Root Cause: No card has content and When there are no cards = Hide the block (default), so the block and its wrapper are hidden; or Hide block is on (Additional tab); or the block's JavaScript failed to load.

Diagnosis Steps: In edit mode check for the hint "Add a Card to the block …"; check the Additional tab's Hide block; open the browser console on the page and look for `failed to load block cards` or `failed to load module for cards`.

Resolution Steps: Add content to the cards; turn Hide block off; for a load error, escalate to L3 with the console message.

Validation Steps: The block is visible in preview and live.

Preventive Measures: Use Show a message during content build-up; review Hide block before publishing.

Issue 3 — Tags show technical IDs or wrong labels

Symptoms: The kicker shows labels such as "Genai" or "Cloud migration" (derived from the tag ID) instead of the business wording, or English labels on a translated locale.

Root Cause: The tag isn't in the locale's taxonomy (`/{locale}/taxonomy.json`), its translation sheet is missing, or the taxonomy page isn't published; the code then derives a label from the last part of the tag ID (hyphens become spaces, first letter upper case).

Diagnosis Steps: Open `https://main--tcs-corp--sradha-tcs.aem.live/{locale}/taxonomy.json` and search for the tag ID; check the locale's language sheet.

Resolution Steps: Add or translate the tag in the locale taxonomy page and publish it.

Validation Steps: Reload the page (new session); the label is correct.

Preventive Measures: Pick tags only from the governed taxonomy (Part 7); publish taxonomy changes before pages that use new tags.

Issue 4 — Text is cut off in panel, report or statistic cards

Symptoms: The end of a description or the call to action is not visible in coloured cards, especially on tablet or mobile.

Root Cause: Panel height Portrait (2:3) or Compact (9:10) gives the card a fixed shape and `overflow: hidden` clips longer content.

Diagnosis Steps: Check the Panel height and the text length; resize the preview to the narrowest column width.

Resolution Steps: Shorten the texts, reduce the number of columns, or set Panel height = Content.

Validation Steps: All text and the call to action are visible at 1440, 1024, 768 and 375 px.

Preventive Measures: Respect the recommended lengths (6.15.12).

Issue 5 — Previous / next buttons or the scroll indicator don't appear

Symptoms: A scrolling row has no buttons or no indicator, or they appear on one device only.

Root Cause: Buttons and indicators are per breakpoint and only for breakpoints in Horizontal scroll mode; they are hidden when all cards fit (no overflow); the defaults are off (desktop, tablet) and indicator on (mobile).

Diagnosis Steps: Check the Layout tab for the breakpoint in question (display, buttons, indicator); count the cards against Items visible; inspect `.list-scroller[data-overflow]`.

Resolution Steps: Turn on Previous / next buttons on {breakpoint} / Scroll indicator on {breakpoint}; reduce Items visible or add cards if the row doesn't overflow.

Validation Steps: The controls show and work at the breakpoint.

Preventive Measures: Configure each breakpoint explicitly; test at all three widths.

Issue 6 — An older Cards block ignores the new settings, or a title shows as text

Symptoms: Changing Card style or layout has no effect on an existing block; or a card's title appears as plain description text.

Root Cause: Blocks created before this version were created without a block model (the original template had none) and aren't key-value blocks, so their properties panel has no settings and new settings aren't read; card rows with two cells or fewer are read as cards made before (image + rich text), where only the first heading or a bold-only first paragraph becomes the title (in the Card dialog the title stays inside Description).

Diagnosis Steps: Check the page's HTML (`.plain.html` of the page) for setting rows (key | value) and count the cells of the card rows.

Resolution Steps: Short term: add a new Cards block, set it up and move (or recreate) the cards; in an old card, format the title as a heading. Planned: AMS migration of the old instances (set `model = cards` and `key-value = true`, keep the original look as Classic) — see the migration approach (section 7) of `docs/proposals/cards-card-refactoring.md`.

Validation Steps: The block responds to the settings; titles render as headings.

Preventive Measures: Migrate legacy Cards blocks page by page; fill more than one field of each new Card.

Issue 7 — The date or reading time doesn't show

Symptoms: A card has a Date or Reading time, but nothing is shown.

Root Cause: Show date or Show tags (which also controls the reading time) is off; the card kind doesn't show it (panels and statistic cards show no date; report cards show the date in the kicker); the date value isn't a valid date.

Diagnosis Steps: Check the Cards tab switches, the card kind and the Date field.

Resolution Steps: Turn the switches on, choose an image or report card, re-enter the date.

Validation Steps: The date shows in the chosen Date format.

Preventive Measures: Use image or report cards for dated content.

Issue 8 — The call to action button is missing

Symptoms: A Call to action label is set but no button shows; or panels show "Explore" unexpectedly.

Root Cause: The card has no Link, Link items is off or Show call to action is off; panels and reports have default labels ("Explore", "Download").

Diagnosis Steps: Check the Card's Link and the block's Link items / Show call to action.

Resolution Steps: Add a link and turn the switches on; to remove the default label on panels turn Show call to action off (the title becomes the link).

Validation Steps: The button shows with the right label and destination.

Preventive Measures: Decide per block whether cards use buttons or title links.

Issue 9 — Card clicks are missing in analytics

Symptoms: No `cmp:click` events or no `cards` component in `window.adobeDataLayer`.

Root Cause: Analytics is off for the block (`data-analytics="off"`); no tag manager is loaded yet (Adobe Tags isn't implemented, so nothing is sent to a reporting tool); the click was a mouse drag (cancelled).

Diagnosis Steps: In the browser console run `window.adobeDataLayer` and look for the block id; check the block's `data-analytics` attribute.

Resolution Steps: Turn Analytics on; for reporting, the Adobe Tags implementation is needed (Part 11).

Validation Steps: The state and a `cmp:click` entry appear after a click.

Preventive Measures: Keep Analytics on; set stable Component IDs for reported blocks.

Issue 10 — A card links to an old URL

Symptoms: Clicking a card goes through a redirect or to a 404 page.

Root Cause: Cards uses the authored link as is; it doesn't resolve the locale redirects sheet (the List does for pages); the target page was moved or unpublished.

Diagnosis Steps: Check the Card's Link and the locale's `/{locale}/redirects.json`.

Resolution Steps: Update the Link to the new page and republish.

Validation Steps: The card opens the target directly.

Preventive Measures: Check card links after page moves (AEM shows references of a moved page).

Issue 11 — Card items can't be added to a Cards block

Symptoms: In Universal Editor, the + of a Cards block doesn't offer **Card**, or a new Card doesn't open its dialog; authors can't build a manual set of cards.

Root Cause: [To be confirmed in this program's Universal Editor: open item O-20.] The code defines Cards as a key-value container whose filter allows only Card (`component-filters.json`: `cards` → `card`), the pattern the List block uses. Possible causes: the block is an older Cards block (Issue 6); the Universal Editor uses outdated component definitions; the author selected a Card (items can't hold items) instead of the Cards block.

Diagnosis Steps: Select the Cards block itself in the content tree and use +; check that `component-definition.json`, `component-models.json` and `component-filters.json` on `main` contain `cards` and `card`; compare with a new Cards block on a test page.

Resolution Steps: Use a new Cards block; if a new block doesn't offer Card either, escalate to L3 with the page path (definitions and filters) and to Adobe Support if they are correct.

Validation Steps: + on the Cards block offers Card; the new card renders on the canvas.

Preventive Measures: After model changes, run `npm run build:json` and check a new block in Universal Editor before releasing.

6.15.14 Support Runbook

Monitoring Requirements

- Real User Monitoring of Edge Delivery (Core Web Vitals) for pages with Cards above the fold (LCP when Image loading is eager).
- Periodic checks of key pages at desktop, tablet and mobile widths after code releases that touch `decorators/card-list-decorator.js`, `utils/card-list-config.js` or `styles/card-list.css` (shared with List).
- Data layer checks (block and card entries present) once Adobe Tags is implemented — [To be confirmed: analytics monitoring owner — owner: analytics team].

Logs

- Browser console: `failed to load block cards` / `failed to load module for cards` (from `scripts/aem.js`) when the block code can't load. The Cards block itself writes no console messages (there is no debug flag, unlike the List's `?debug=list`).

- Admin API status of a page: `https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}` (preview / live state and last modification).
- Author side: AEM as a Cloud Service logs in Cloud Manager (publish / replication errors); Universal Editor shows save errors in the editor.

Common Errors

Error	Likely cause	Action
Card not shown	No title / description / image, or unsafe link	Fill the card; fix the link
Block hidden on the page	No card content with Hide the block; Hide block on	Add content; turn Hide block off
Editor hint "Add a Card …"	No card with content	Add a Card and fill it
Tag labels look technical	Tag missing in the locale taxonomy	Add / translate the tag, publish the taxonomy
Text clipped	Portrait / Compact panel height	Shorter text or Panel height Content
No scroll controls	Breakpoint in grid mode, setting off, or no overflow	Configure the breakpoint
Settings have no effect	Block made before (no block model, not key-value)	Replace with a new Cards block; planned migration (`docs/proposals/cards-card-refactoring.md`)
Card can't be added	See Issue 11 (to be confirmed in Universal Editor)	Use a new Cards block; escalate to L3
`failed to load block cards`	Code deployment or network problem	Escalate to L3

Escalation Matrix

Level	Who	Checks	Escalate when
L1	Author support / content team	Card fields, Show switches, Layout per breakpoint, Hide block, publish state of the page and assets	The configuration is right but the rendering is wrong
L2	AMS / site admin	Preview vs live, Admin API status, CDN cache (republish), placeholders and taxonomy sheets published, console errors	Code errors, or the same issue on several pages
L3	Development team	`blocks/cards/*`, `decorators/card-list-decorator.js`, `utils/card-list-config.js`, `styles/card-list.css`, unit tests (`npm test`), Code Sync	Platform problems (Edge Delivery, Universal Editor, AEM author)
L4	Adobe Support	Edge Delivery Services delivery, Universal Editor, AEM as a Cloud Service	—

[To be confirmed: names, contact channels and response times per level — owner: service manager].

Recovery Procedures

1. Content error: restore the previous page version and republish (6.15.5 Rollback Process).
2. Visual regression after a code release: revert the commit on `main`; Code Sync redeploys; both Cards and List are affected by shared files.
3. Temporary mitigation: Hide block on the affected block and publish.
4. Missing labels: republish the locale's placeholders or taxonomy sheet.

Health Checks

- The Cards blocks of the block library page (`/{locale}/block-library/…`, author only) render every style, colour and layout.
- `npm test` passes `test/cards/cards-data.test.mjs`; `npm run lint` passes.

- On a live page: `document.querySelectorAll('.cards.card-list .list-item').length` equals the number of filled cards; `window.adobeDataLayer` contains the `cards-…` component.

Operational Procedures

- Releases of the shared card list code are tested with both blocks (Cards and List) and all Figma variations.
- New placeholders keys must be added to all 13 locale placeholders sheets.
- Changes to the models (`_cards.json`, `models/_card-list.json`) require `npm run build:json` and a lint run.

Known Limitations

- No author lockup on the feature card (List only).
- Internal links aren't resolved through the redirects sheets.
- The card text fields are edited in the properties panel; only the rich text description can be edited in place.
- Blocks made before this version have no block model: they must be replaced (or migrated) to use the new settings, and they render with the new design instead of the original bordered grid.
- Planned changes (carousel with autoplay and dots, masonry, vertical list, featured layout, dynamic sources, filtering, more Card fields) are described in `docs/proposals/cards-card-refactoring.md`.
- Card click events carry no `position` (it's in the component state), and feature card clicks are reported with the block's path.
- The new-tab hint isn't announced on call to action buttons without an Accessibility label.
- Month abbreviations in dates are English in every locale.
- No auto-rotation, no filtering or sorting (use Filter List).

6.15.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
A Card in the content tree doesn't show on the page	No Title, Description or Image, or a javascript: / data: link	Fill the Title and pick the link with the page picker
The whole block is missing on aem.page	No card has content and When there are no cards = Hide the block, or Hide block is on	Add card content or choose Show a message; turn Hide block off
Text is cut off in panel, report or statistic cards	Panel height Portrait or Compact with overflow hidden	Shorten the text or set Panel height to Content
Settings have no effect on an existing block	Block made before the redesign without block model (F-34)	Replace it with a new Cards block
Panels show "Explore" or reports "Download" unexpectedly	Default call to action labels of panel and report cards	Enter a Call to action label, or turn Show call to action off
A Call to action label shows no button	The Card has no Link, or Link items / Show call to action is off	Add the Link and turn the switches on
Tags show labels derived from IDs	The tag is missing from the locale taxonomy or the taxonomy isn't published	Add or translate the tag and publish the taxonomy page
Previous / next buttons or the indicator don't appear	Set for another breakpoint, the breakpoint is a grid, or the cards don't overflow	Configure the buttons per breakpoint and check Items visible
A card links to an old URL or a redirect	Cards uses the authored link as is and doesn't resolve the redirects sheet	Update the Card's Link to the new page and republish
Reading time or date doesn't show	Show tags or Show date off, a card kind without date, or a date not in YYYY-MM-DD	Turn the switches on and pick the date with the date picker

6.15.16 Author Quick Reference Guide

Mandatory Fields

- Card: Title, Description or Image - at least one is needed, otherwise the card is dropped (no field is required in the model)
- At least one Card with content - without it the block is hidden on the page (When there are no cards = Hide the block)
- Card Label and Description for statistic cards - needed to explain the number (Title holds the number)

Recommended Fields

- Title and Heading type - the block heading and the region name (H2 under the page H1)
- Accessible list label - when the block has no Title
- Image alt text - for informative images; empty only for decorative ones
- Link - a page or https URL, picked with the page picker
- Call to action label - a verb of 1 to 3 words when a button is wanted
- Card style and Card colour on the Cards tab - one decision for the whole block
- Desktop / Tablet / Mobile display and columns - set every breakpoint explicitly

Optional Fields

- Description, CTA link, CTA text, CTA style - the header introduction and link
- Eyebrow, Tags, Date, Content type, Reading time - the kicker and meta row
- Card style and Card colour on the Card Display tab - override for one card
- Image ratio, Panel height, First card as feature - shape and spotlight
- Previous / next buttons, Scroll indicator, Items visible, Card width - scroll breakpoints only
- Scroll tab: Scroll snap, Snap alignment, Scroll step, Loop, Initial item index, Edge
- Style options - Compact statistic title, Dividers between rows, Header centred
- Open in a new tab, Analytics label, Accessibility label, Component ID
- Additional tab - Anchor ID, Hide block, padding and margin tokens

Authoring Checklist

1. Select the Cards block (not a Card) before using + in the content tree to add a Card
2. Fill the Title of every Card; for statistic cards the Title is the number (up to about 8 characters)
3. Choose Card style on the Cards tab; use a Card's Display tab only for exceptions
4. Set Content type Report on report cards when Card style is Mixed
5. Give the first Card an image, tags and reading time when First card as feature is on
6. Keep panel descriptions under about 120 characters with Portrait or Compact height, or use Panel height Content
7. Use Display as teaser off for news-style rows of links; images and buttons are then ignored
8. Enter Reading time as digits only (6 shows as 6m)
9. Set Open in a new tab Yes only on external Cards; mention it in the Accessibility label for buttons

Pre-Publish Checklist

1. Preview at 1440, 1024, 768 and 402 px: grid or scroller as intended on each breakpoint
2. Check no Card is missing (no content or an unsafe link drops it)
3. Check panel, report and statistic texts aren't clipped
4. Check text contrast on Brand blue and Image background cards
5. Check tags show taxonomy labels, not labels derived from IDs
6. Check buttons and indicator appear on scrolling breakpoints and hover states are readable on Dark, Navy and Brand cards
7. Check Hide block is off and the Anchor ID is unique

Post-Publish Validation Checklist

1. Open the page on aem.live and reload without cache
2. Click every card and call to action: no 404 or redirect
3. Confirm the images, linked pages and PDF assets are published
4. Confirm new-tab cards open a new tab and external links work
5. Check window.adobeDataLayer contains the cards-… component and its items (Analytics on)
6. Check translated placeholders (Explore, Download, Previous items, Next items) on non-English locales

6.15.17 Component Execution Example

Business example: Services rail of a corporate landing page.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Cards
Title (Cards › Content)	Our services
Description (Cards › Content)	Capabilities that help enterprises grow, transform and compete.
CTA link (Cards › Content)	Select the page or enter /en/services
CTA text (Cards › Content)	View all services
Desktop display (Cards › Layout)	Horizontal scroll
Desktop items visible (Cards › Layout)	3.2
Previous / next buttons on desktop (Cards › Layout)	On
Scroll indicator on desktop (Cards › Layout)	On
Item (Content tree › Cards › Add (+))	Card
Image (Card 1 › Content)	Select the asset photo-1.svg (/en/media/photo-1.svg)
Image alt text (Card 1 › Content)	Consultants in a client workshop
Eyebrow (Card 1 › Content)	Consulting
Title (Card 1 › Content)	Business and technology consulting
Description (Card 1 › Content)	Strategy, design and change management for transformation.
Tags (Card 1 › Content)	Add the tags tcs-corp:service/consulting
Date (Card 1 › Content)	2026-09-04
Content type (Card 1 › Content)	Service
Reading time (Card 1 › Content)	6
Link (Card 1 › Link)	Select the page or enter /en/services/consulting
Call to action label (Card 1 › Link)	Learn more
Item (Content tree › Cards › Add (+))	Card
Image (Card 2 › Content)	Select the asset photo-2.svg (/en/media/photo-2.svg)
Eyebrow (Card 2 › Content)	Cloud
Title (Card 2 › Content)	Cloud migration and operations
Description (Card 2 › Content)	Move, modernise and run workloads on any cloud.

Field	Value
Date (Card 2 › Content)	2026-08-21
Content type (Card 2 › Content)	Service
Link (Card 2 › Link)	Select the page or enter /en/services/cloud
Item (Content tree › Cards › Add (+))	Card
Image (Card 3 › Content)	Select the asset photo-3.svg (/en/media/photo-3.svg)
Eyebrow (Card 3 › Content)	Security
Title (Card 3 › Content)	Cyber defence and resilience
Description (Card 3 › Content)	Protect identities, data and operations around the clock.
Date (Card 3 › Content)	2026-08-07
Content type (Card 3 › Content)	Service
Link (Card 3 › Link)	Select the page or enter /en/services/cybersecurity
Item (Content tree › Cards › Add (+))	Card
Image (Card 4 › Content)	Select the asset photo-4.svg (/en/media/photo-4.svg)
Eyebrow (Card 4 › Content)	AI and data
Title (Card 4 › Content)	AI and data platforms
Description (Card 4 › Content)	Build trusted data foundations and put AI into production.
Date (Card 4 › Content)	2026-07-30
Content type (Card 4 › Content)	Service
Link (Card 4 › Link)	Select the page or enter /en/services/ai
Cards (Universal Editor › Content tree (L))	The block with its four Card items (add, duplicate, delete, drag to reorder); not part of this capture

All other fields keep their default values.

Rendered Result:

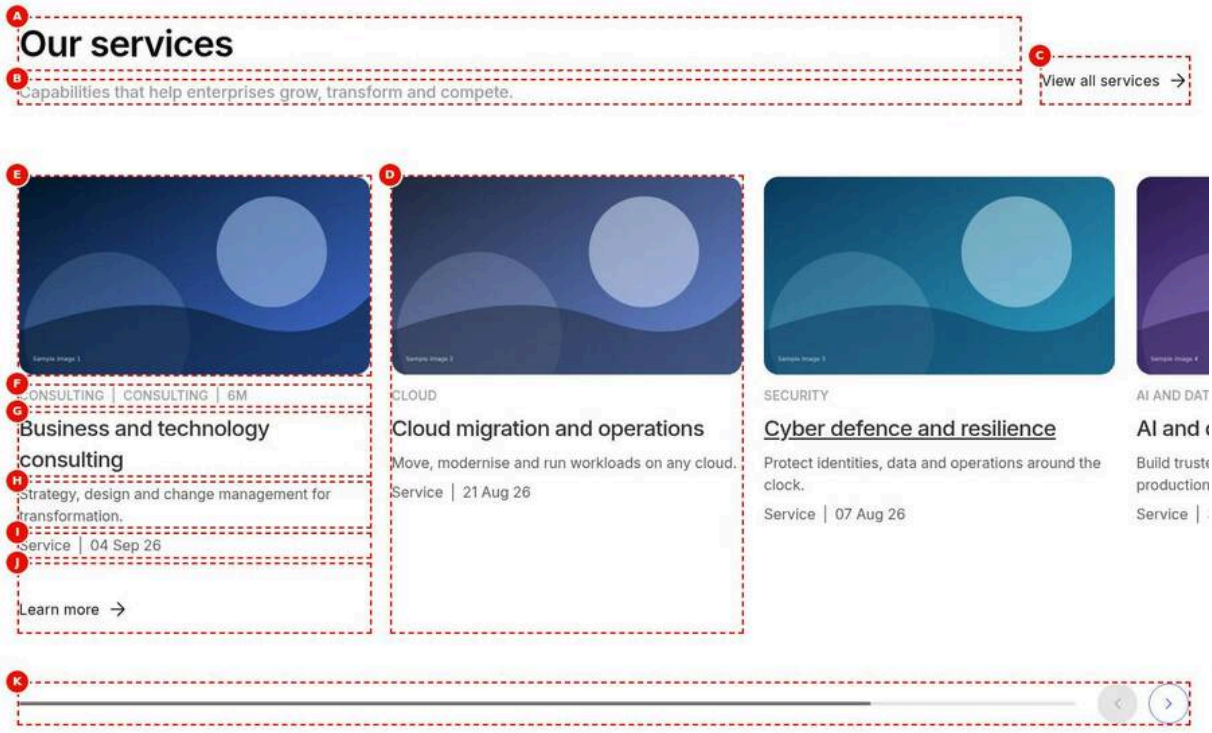

Figure 52: Execution example — An annotated preview in editor mode at 1440 px (not a Universal Editor screenshot): the header "Our services" with description and "View all services" (A to C) and a rail of four service image cards with 3.2 visible (D to J), with buttons and indicator (K). The content tree with its four Card items (L) isn't part of the capture. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/cards-authoring-view.jpg)

Author Notes

- The header uses Title "Our services", a Description and CTA link /en/services with CTA text "View all services" (text link).
- Layout tab: Desktop display Horizontal scroll, Desktop items visible 3.2, Previous / next buttons and Scroll indicator on desktop.
- Four Cards each with Image, Eyebrow, Title, Description, Date, Content type Service and a Link; Card 1 adds Image alt text, a tag, Reading time 6 and the Call to action label "Learn more".
- Cards are added, duplicated and reordered in the content tree under the Cards block (annotation L).

Business Notes

- The rail presents four core services in little vertical space and routes visitors to each service page.
- The header CTA "View all services" leads to the services overview for visitors who want the full list.
- Card texts are written for this placement and don't depend on page metadata, so campaign wording can differ from the service pages.

Technical Notes

- The block renders through decorators/card-list-decorator.js with the shared styles/card-list.css (same markup as List); classes desktop-scroll tablet-grid mobile-grid desktop-controls desktop-indicator.
- Card titles are H3 under the H2 block title; Card 1's link is the "Learn more" tertiary button named "Learn more: Business and technology consulting".
- The scroller is enhanced only while the cards overflow (data-overflow="true"); buttons are disabled at the ends (Loop off).
- With Analytics on, cards-1 and cards-1-item-1 to –4 are pushed to window.adobeDataLayer; clicks are cmp:click with interaction card, cta, previous or next.

TCS Corporate Website — Project Handover

Volume 7 of 13 — Component 6.16: List

Date: October 14, 2026

Adobe

Table of Contents

Part 6 — Component Library (continued) 3
6.16 List Block 3

Part 6 — Component Library (continued)

> **Note:** This is volume 7 of 13 of the TCS Corporate Website project handover (version 2.0). Volume 1 holds the document control, the audience guide and the conventions.

6.16 List Block

The List block is the AEM Core Components **List** for Edge Delivery Services: a list of pages or links taken from **child pages** of a page, a **fixed list** authored in the block, or **tagged pages**, shown as cards or as rows of links, in a grid or a horizontal scroller chosen separately for desktop, tablet and mobile. Its cards are built from the listed pages' metadata (card title, card description, card image, eyebrow, tags, dates, content type, reading time, author), read from the published query index; a Fixed list item can override each value. The presentation follows the TCS DS Figma List variations 1–14 and is shared with the Cards block (6.15): the same settings, markup and styles.

Source files: `blocks/list/list.js`, `blocks/list/list-data.js`, `blocks/list/list.css` (imports `styles/card-list.css`), `blocks/list/_list.json`, `blocks/list/README.md`; shared: `decorators/card-list-decorator.js`, `decorators/scroller-decorator.js`, `utils/card-list-config.js`, `styles/card-list.css`, `models/_card-list.json`; data: `utils/query-index.js`, `utils/redirects.js`, `utils/data.js`, `helix-query.yaml`; unit tests: `test/list/list-data.test.mjs` (with `test/list/fixtures.mjs`).

6.16.1 Component Purpose

Business Objective

Keep listings of site content up to date without manual work: when an author publishes a new child page or tags a page, every List that selects it shows the new card, with the title, text and image the page defines in its metadata. Authors decide what is listed (source, tags, order, maximum) and how it looks; the page owners maintain the card content once, on the page.

Business Use Cases

- Section landing pages listing their child pages (services, industries, insights hubs).
- "Related insights" rows of pages tagged with the same topic (Tagged pages).
- News and press release lists ordered by last modified date (rows of links or cards).
- Media coverage and investor relations rails of report pages (Mixed, report cards).
- Curated editorial selections of specific pages (Fixed list) with per-item overrides of the title, description, image, eyebrow and style.
- Statistic rows (Fixed list with overrides: the number as Title, Label, Description).
- A featured spotlight with the author's photo, name and designation (First card as feature).
- External links mixed with site pages in one fixed list.

When To Use

- The cards represent pages of the same locale site that are published and indexed.
- The list should update itself (Child pages, Tagged pages).
- The cards should reuse the pages' own metadata (one source of truth).
- Ordering by title or last modified date, or a maximum number of items, is needed.

When Not To Use

- Content that isn't a page (statistics without detail pages, capabilities with their own wording, rich text descriptions, unlinked cards): use **Cards** (6.15).

- Visitors must filter or search: use **Filter List** (6.17).
- Content Fragment lists: not supported (by decision).
- Full-text search results: the Core List search source is not available.
- Pages of another locale: the List only reads the current locale's pages from the index.

Dependencies

Type	Dependency	Used for
Decorator	`decorators/card-list-decorator.js`	Header, cards, feature card (with author lockup), rows, grid / scroll classes, empty state, data layer state (shared with Cards)
Decorator	`decorators/scroller-decorator.js`	Previous / next, scroll indicator, drag, keyboard, loop, initial item
Decorator	`decorators/article-meta-decorator.js` `buildAuthorLockup`	Author lockup on the feature card
Decorator	`decorators/button-decorator.js`, `icon-button-decorator.js`, `link-decorator.js`, `heading-decorator.js`, `responsive-image-decorator.js`, `data-layer-decorator.js`	Buttons, links and new tab, title heading, images, page entry and clicks
Util	`blocks/list/list-data.js`	Sources, discovery, page metadata mapping (`PAGE_MAPPING`), overrides, deduplication, sorting, limits, validation (no DOM; unit tested)
Util	`utils/card-list-config.js`	Presentation settings, defaults, card kinds (shared with Cards)
Util	`utils/query-index.js` `getPages`, `columnOf`, `listOf`	The locale's pages from `/query-index.json` (500 rows per request, loaded once, cached in memory)
Util	`utils/redirects.js` `loadRedirects`, `resolveRedirect`	Card links to the redirect targets of `/{locale}/redirects.json` (up to 5 hops)
Util	`utils/data.js` `getAuthors`	Authors sheet for the feature card's author
Util	`utils/site.js` `toPublishedPath`	AEM paths (`/content/tcs-corp/us/en/…`) to published paths (`/en/…`)
Util	`utils/cells.js`, `utils/properties.js`, `utils/tags.js`, `utils/taxonomy.js`, `utils/dates.js`, `utils/placeholders.js`, `utils/environment.js`, `utils/analytics.js`	Item cells, settings, tags and labels, dates, UI text, editor detection, data layer
Styles	`styles/card-list.css` (imported by `blocks/list/list.css`)	The presentation
Index	`/query-index.json` (`helix-query.yaml`)	Pages and their card metadata columns
Sheets	`/{locale}/redirects.json`, `/{locale}/data/authors.json`, `/{locale}/taxonomy.json`, `/{locale}/placeholders.json`	Redirects, authors, tag labels, UI text
Placeholders	`listPrevious`, `listNext`, `opensInNewTab`, `explore`, `download`, `listEmpty`, `listEditorHint`, `listEditorPages`, `minutesShort`, `list`	UI text with English fallbacks
Page metadata	`card-title`, `card-description`, `card-image`, `card-image-alt`, `image-alt`, `eyebrow`, `category`, `thumbnail-image`, `featured-image`, `modified-date`, `publish-date`, `content-type`, `reading-time`, `author-id`, `hide-in-nav`, page tags	Card content of each listed page

Related Components

- **Cards** (6.15): the same presentation, content typed in the block.

- **Filter List** (6.17): query-index lists with filter pills, sorting and advanced filters.
- **Table List** (6.18): tabular listings.
- **Page Header** (6.4): uses the same page metadata (title, description, tags, dates, author).
- Page metadata and the bulk metadata sheet (Part 8) and the taxonomy (Part 7) supply the card content.

Applicable Templates

Any page; the section filter allows List in every section. Typical: home and landing pages (child pages, curated selections), article and blog pages (related tagged pages), press-release and news overview pages (rows of links ordered by date).

Supported Content Types

Pages of the current locale site that are published and in the query index (any page type: article, blog, press release, landing page, report pages, …), and for Fixed lists also paths that aren't indexed and external URLs (`https://…`). Card content: page metadata (text, image paths, tags, dates, numbers as text) with optional overrides (text, image from AEM Assets, tags, style, colour).

Business Problem Solved

Listings of site content (section children, related insights, news, reports, key figures) had to be maintained by hand on every landing page and went out of date when pages were added, renamed or moved. The List builds its cards from the published query index and the pages' own card metadata, follows the redirects sheet for moved pages and leaves out pages hidden from navigation, so a newly published or retagged page appears in every matching List without editing it. Where editors need control, a Fixed list keeps an authored order with per-item overrides, and fallback items keep important sections from appearing empty.

Supported Taxonomy

The Tagged pages source matches the pages' tags against the selected Tags (Any or All of the tags); a selected tag also matches its child tags, so tcs-corp:industry includes tcs-corp:industry/banking. Card tags come from the page tags or a List Item's Tags override, at most three shown, with labels from the locale's /{locale}/taxonomy.json (else derived from the tag ID). F-07 (page tags possibly published as cq-tags) and F-10 (live index missing columns) are still open.

6.16.2 Visual Overview

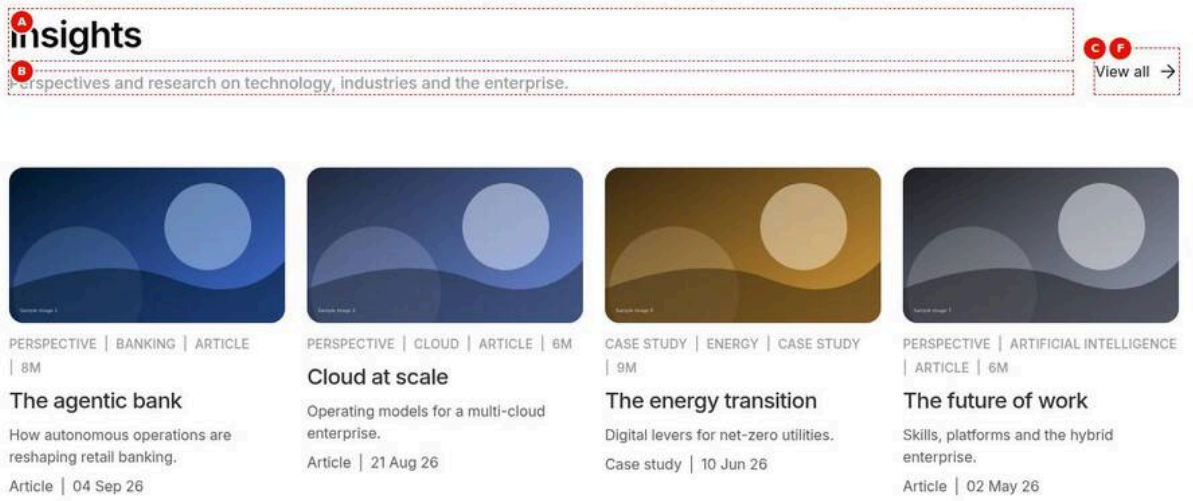

Figure 1: Desktop rendering — The List at 1440 px: the title Insights and its description on the left, the View all text link on the right, and four image cards in one row (The agentic bank, Cloud at scale, The energy transition, The future of work) with thumbnail images, kickers, titles, descriptions, content types and dates, the first four child pages in path order. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/list-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The List at 1440 px: the title Insights and its description on the left, the View all text link on the right, and four image cards in one row (The agentic bank, Cloud at scale, The energy transition, The future of work) with thumbnail images, kickers, titles, descriptions, content types and dates, the first four child pages in path order.
Business Context	The Insights teaser on an English landing page: the first child pages of /en/insights appear as cards and View all leads to the full hub, so the section stays current without manual edits.
Author Objective	Add a List with the header Insights, a description and a View all link that shows four child pages of the Insights page as image cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
B	Description (List › Content)	Perspectives and research on technology, industries and the enterprise.	No	Intro under the title	One or two sentences	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	CTA link (List › Content)	Select the page or enter /content/tcs-corp/us/en/insights	No	Header call to action	Overview / archive page	None
(D)	CTA text (List › Content)	View all	No	CTA label	2–4 words	None
(E)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
F	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(G)	Maximum items (List › Source)	4	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the 2.5rem semibold title "Insights" and the grey description sit on the left with the "View all" text link on the right; below, four image cards in one row (The agentic bank, Cloud at scale, The energy transition, The future of work), each with a 16:9 image, an uppercase kicker, the title, the description and the content type and date.
- **Rendering behaviour:** Desktop (1200 px and wider) uses the default 4-column grid with a 1.5rem gap; Order by Manual lists the pages in path order and Maximum items 4 stops after the fourth. The images come from each page's thumbnail-image because their og:image is the site's default-meta-image, which is never used as a card image.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the cards are built in the browser from /query-index.json, so the insights appear only once they are published and indexed. A new child page shows after the index update without republishing the List page.

Business Rules

- Order by Manual sorts child pages by path, not by the AEM tree order.
- Maximum items 4 is applied after sorting; the other five insights are left out.
- Pages with hide-in-nav = yes (the hidden draft below Insights) are never listed.
- CTA style left empty renders View all as a text link; the CTA link /content/tcs-corp/us/en/insights is delivered as /en/insights.
- Card titles are H3, one level below the H2 list title.

Common Authoring Mistakes

Error	Root Cause	Resolution
The canvas shows a hint instead of cards	Child pages are read from the query index, which isn't available in Universal Editor	Expected: check the cards on aem.page
More than four cards appear	Maximum items left at 0 (all)	Enter 4 in Maximum items on the Source tab
View all renders as a filled button	CTA style set to Primary button	Set CTA style back to Text link

Troubleshooting

- **Symptoms:** On aem.page the List shows "There are no items to show." below the header instead of four cards.
- **Cause:** The insights child pages aren't published or indexed yet, or Parent page points to another path.
- **Resolution:** Publish the child pages, check that Parent page is /content/tcs-corp/us/en/insights and wait for the index update.
- **Verification Steps:** Open /query-index.json on aem.page, find /en/insights/agentic-bank, reload the page and count four cards.

Desktop (1200 px and wider). Identical to the Cards block (6.15.2): a vertical stack with a 5rem gap; header with a 2.5rem semibold title, a 1.125rem grey description and the CTA on the right; a 4-column grid by default (Desktop columns 1–6, gap 1.5rem) or a horizontal scroller with 4.2 cards visible; image cards with 16:9 rounded images, uppercase kicker, 1.5rem titles, 1rem description and meta; panel, report and statistic cards as 2:3 coloured panels with a 1.5rem padding; the feature card at least 35.625rem high. Card images from page metadata are requested at 750 px width (from 600 px) and 600 px below; feature images at 1600 px (from 900 px) and 750 px.

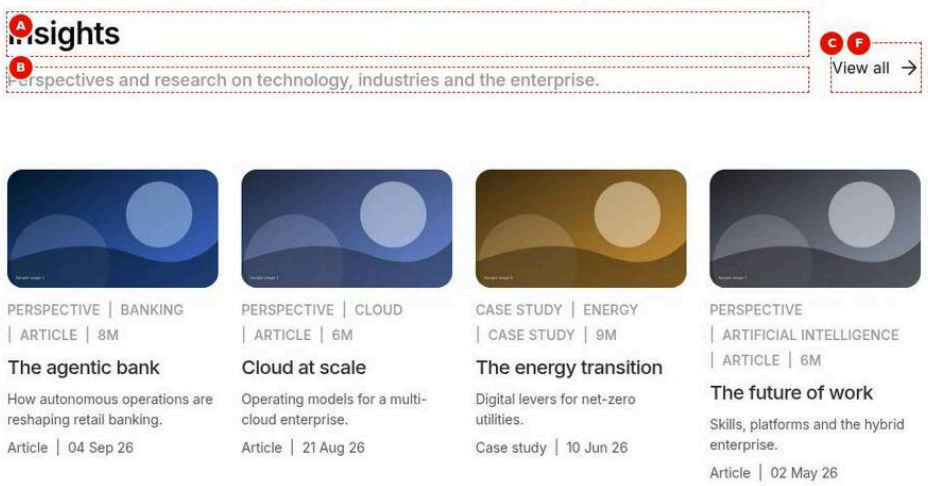

Figure 2: Tablet rendering — The same Insights List at 1024 px: a 2rem title with the description and View all on the right, and the four image cards (The agentic bank, Cloud at scale, The energy transition, The future of work) in one row of four narrower columns with 1.25rem titles. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/list-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same Insights List at 1024 px: a 2rem title with the description and View all on the right, and the four image cards (The agentic bank, Cloud at scale, The energy transition, The future of work) in one row of four narrower columns with 1.25rem titles.
Business Context	The same Insights teaser checked on a tablet: visitors on 1024 px screens must still see four readable cards and the View all link.
Author Objective	Check the Insights List of four child pages at the tablet width of 1024 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
B	Description (List › Content)	Perspectives and research on technology, industries and the enterprise.	No	Intro under the title	One or two sentences	None
C	CTA link (List › Content)	Select the page or enter /content/tcs-corp/us/en/insights	No	Header call to action	Overview / archive page	None
(D)	CTA text (List › Content)	View all	No	CTA label	2–4 words	None
(E)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
F	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(G)	Maximum items (List › Source)	4	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
—	Screen width (Preview)	1024 px (tablet)	—	Check on the preview (not stored in the content)	1024 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The 2rem title "Insights" with its description on the left and "View all" on the right; four narrower image cards in one row with 1.25rem titles and 0.875rem kicker and meta text.
- **Rendering behaviour:** From 600 to 1199 px the tablet settings apply: Tablet columns 4 (default), 1.5rem gap and a 5rem gap between header and cards; card images keep 16:9 and are requested at 750 px width.
- **Publishing behaviour:** Nothing extra to publish for the tablet layout: the same page and index give the tablet view, chosen by CSS at the screen width. Check it on aem.page before publishing to aem.live.

Business Rules

- Tablet columns default to 4; set 2 or 3 on the Layout tab if four cards are too narrow.
- Tablet settings cover 600–1199 px, so a 1024 px tablet doesn't use the desktop settings.
- Long card titles wrap; keep card-title metadata up to 60 characters.
- The header CTA stays on the right as long as the title area keeps 20rem.

Common Authoring Mistakes

Error	Root Cause	Resolution
The tablet still shows the desktop look	Desktop settings changed but the Tablet fields left at their defaults	Set Tablet display and Tablet columns separately on the Layout tab
Card titles break into many lines	Long page titles without a shorter card-title	Add a card-title to the pages' metadata and republish them

Troubleshooting

- **Symptoms:** At 1024 px the cards are cramped and the descriptions are hard to read.
- **Cause:** Four columns on tablet (the default) with long card titles and descriptions.
- **Resolution:** Set Tablet columns to 2 or 3, or Tablet display to Horizontal scroll, and shorten card-description metadata.
- **Verification Steps:** Reload aem.page at 1024 px; the cards follow the new column count.

Tablet (600–1199 px). The tablet settings apply: grid with 4 columns by default or a scroller with 3.3 cards visible; block title 2rem, card titles 1.25rem, kicker / meta 0.875rem, panel titles 1.5rem, statistic numbers up to 4rem; coloured card padding 1rem below 900 px and 1.5rem from 900 px; feature card at least 27.1875rem; rows of links without borders unless Dividers is set.

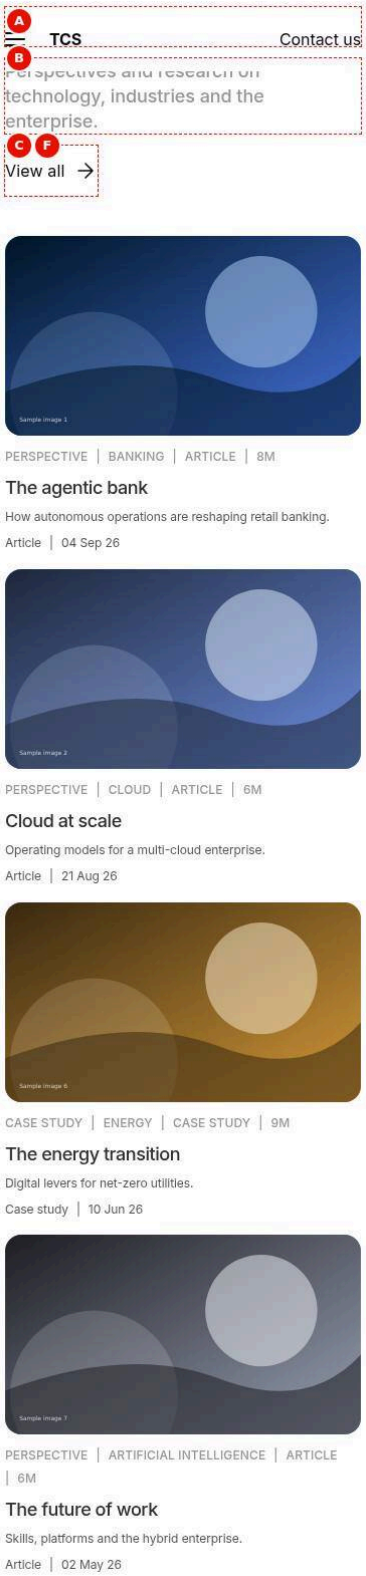

Figure 3: Mobile rendering — The Insights List at 402 px: the title, the description and the View all link stacked, then the four image cards (The agentic bank, Cloud at scale, The energy transition, The future of work) in one column with a 1rem gap. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/list-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The Insights List at 402 px: the title, the description and the View all link stacked, then the four image cards (The agentic bank, Cloud at scale, The energy transition, The future of work) in one column with a 1rem gap.
Business Context	The Insights teaser on a phone: the cards must stack in reading order and View all must stay reachable below the title.
Author Objective	Check the Insights List of four child pages at the mobile width of 402 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
B	Description (List › Content)	Perspectives and research on technology, industries and the enterprise.	No	Intro under the title	One or two sentences	None
C	CTA link (List › Content)	Select the page or enter /content/tcs-corp/us/en/insights	No	Header call to action	Overview / archive page	None
(D)	CTA text (List › Content)	View all	No	CTA label	2–4 words	None
(E)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
F	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(G)	Maximum items (List › Source)	4	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
—	Screen width (Preview)	402 px (mobile)	—	Check on the preview (not stored in the content)	402 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The 1.75rem title "Insights", the description and the "View all" link stacked; the four image cards in one column with a 1rem gap, 1.125rem titles and 0.75rem kicker, description and meta.
- **Rendering behaviour:** Below 600 px Mobile columns 1 (default) and a 1rem gap apply; the block gap is 2.5rem and the header wraps so the CTA moves under the title. Card images are requested at 600 px width.

- **Publishing behaviour:** The mobile view needs no extra publication: the same page and query index are served and CSS picks the mobile layout. Check it on aem.page at 402 px before publishing to aem.live.

Business Rules

- Mobile display Grid with one column is the default; Horizontal scroll turns the list into a rail with the indicator on.
- The four cards stack in the order of the list (path order with Order by Manual).
- Maximum items 4 also applies on mobile; there is no separate mobile limit.
- Images stay 16:9 and are cropped to cover.

Common Authoring Mistakes

Error	Root Cause	Resolution
The page gets very long on phones	Many cards in one column on mobile	Lower Maximum items or set Mobile display to Horizontal scroll
The View all link seems missing	It wraps below the title and description on narrow screens	Expected; scroll to the end of the header

Troubleshooting

- **Symptoms:** On a phone the cards show side by side and are too small to read.
- **Cause:** Mobile columns was set to 2 or more.
- **Resolution:** Set Mobile columns back to 1 on the Layout tab and publish the page again.
- **Verification Steps:** Open the page on aem.page at 402 px; one card per row.

Mobile (below 600 px). One column by default with a 1rem gap and a 2.5rem block gap; the header wraps with the CTA below the title; block title 1.75rem, card titles 1.125rem, kicker, meta and description 0.75rem, statistic numbers up to 5rem (scaled to the card width); in scroll mode 1.2 cards visible, the scroll indicator on by default and the scroller bleeding to the right screen edge (1.5rem section padding).

6.16.3 Component Variations

The List's variations are its three **sources** (with their discovery and ordering modes), the shared **presentation** modes (card styles, feature card, rows of links, colours, ratios, panel heights, style options, grid or scroll per breakpoint and the scroll options — the same CSS and rules as the Cards block, 6.15.3) and the **TCS DS Figma variations 1–14**, each documented with the settings that reproduce it (Variations 56–69).

Variation 1 — Source "Child pages"

Variation Name: List source = Child pages (`parent`), direct children (default).

Business Purpose: List the pages below a section page automatically, like the AEM Core List "child pages" source.

Visual Example:

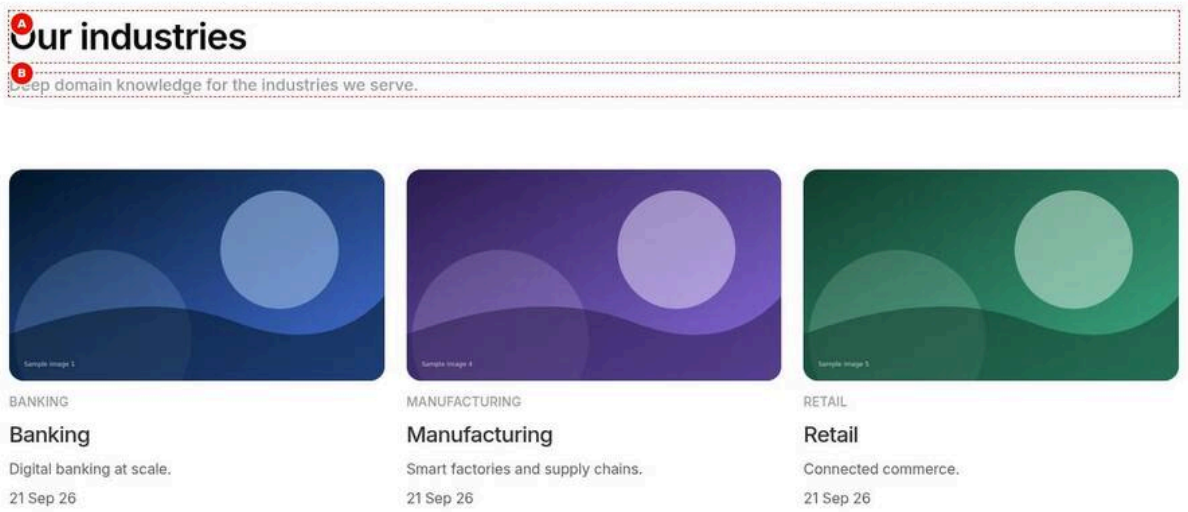

Figure 4: Child pages source — At 1440 px the title Our industries with the description Deep domain knowledge for the industries we serve, above three image cards in one row (Banking, Manufacturing, Retail), the child pages of /en/industries in path order, each with its image, industry tag, title, description and date. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-source-child-pages.jpg)

Screenshot Details — Child pages source

Item	Detail
Screenshot Name	`screenshots/list-source-child-pages.jpg`
Screenshot Purpose	Child pages source
Screen Description	At 1440 px the title Our industries with the description Deep domain knowledge for the industries we serve, above three image cards in one row (Banking, Manufacturing, Retail), the child pages of /en/industries in path order, each with its image, industry tag, title, description and date.
Business Context	The Industries section page lists its own sub-pages, so a new industry page appears on the landing page as soon as it is published.
Author Objective	List the child pages of the Industries page as image cards in three columns on desktop and tablet.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Our industries	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
B	Description (List › Content)	Deep domain knowledge for the industries we serve.	No	Intro under the title	One or two sentences	None
(C)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(D)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/industries	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(E)	Desktop columns (List › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
(F)	Tablet columns (List › Layout)	3	No	Grid columns on tablet	2–3 often fit better	Enforced 1–6; grid only

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Our industries" with the description "Deep domain knowledge for the industries we serve."; three image cards (Banking, Manufacturing, Retail) with their photographs, the industry tag in the kicker, title, description and the publication date.
- **Rendering behaviour:** Desktop columns 3 and Tablet columns 3 give one row of three cards from 600 px; mobile keeps one column. The block gets the class source-parent and the data layer reports xdm:listSource "parent".
- **Publishing behaviour:** Publish the page; the industry pages must be published and indexed to appear. A new child of /en/industries appears on aem.live after the index update, without editing or republishing this List.

Business Rules

- Only direct children of /content/tcs-corp/us/en/industries are listed (Direct children only on by default).
- The parent page itself is never a card.
- Without a publish-date or modified-date the card shows the date of the last publication.
- Card text comes from each page's card-title / card-description, else its title and description.

Common Authoring Mistakes

Error	Root Cause	Resolution
Pages of another locale are missing	The List reads only the current locale's index rows	Configure the same List in each locale copy
The parent Industries page shows as a card	Not possible: the parent is excluded; a card means the page is a child	Check the Parent page path
Only one card per row on desktop	Desktop columns set to 1	Enter 3 in Desktop columns

Troubleshooting

- **Symptoms:** A newly created industry page doesn't appear in the list on aem.live.
- **Cause:** The page isn't published yet or hasn't reached the query index.
- **Resolution:** Publish the industry page and wait for the index update; re-index it via the Admin API if needed (L2).
- **Verification Steps:** The page's path is in /query-index.json and the List shows a fourth card.

Use Cases: Section landing pages; sub-navigation teasers; hub pages.

Authoring Guidelines: Source tab: List source = Child pages; Parent page (pick a page) or leave it empty with Use the current page when empty on (default); Direct children only on (default).

Business Rules: Lists published, indexed pages of the current locale directly below the parent (depth 1); pages with `hide-in-nav` = yes / true are left out; with an empty Parent page and Use the current page off, nothing is listed (editor hint "parent-missing"). Order by Manual = path order (the repository order isn't in the index).

Rendering Rules: Cards from `normalizePageToCard()` (6.16.9 metadata mapping); block class `source-parent`; data layer `xdm:listSource: "parent"`. Links go to the page path or its redirect target.

Responsive Behaviour: As the chosen presentation (default: grid 4 / 4 / 1).

SEO Impact: Automatic internal links from the parent to all its children (good for crawl depth); the card texts come from the pages' metadata, consistent with their titles.

Accessibility Compliance: As the presentation; card names come from the page titles, so write meaningful card titles in the page metadata.

Variation 2 — Child Pages with Depth

Variation Name: Child pages with Direct children only off and a Child depth (1–10, model default 2).

Business Purpose: Include grandchildren (and deeper pages) of a section.

Visual Example:

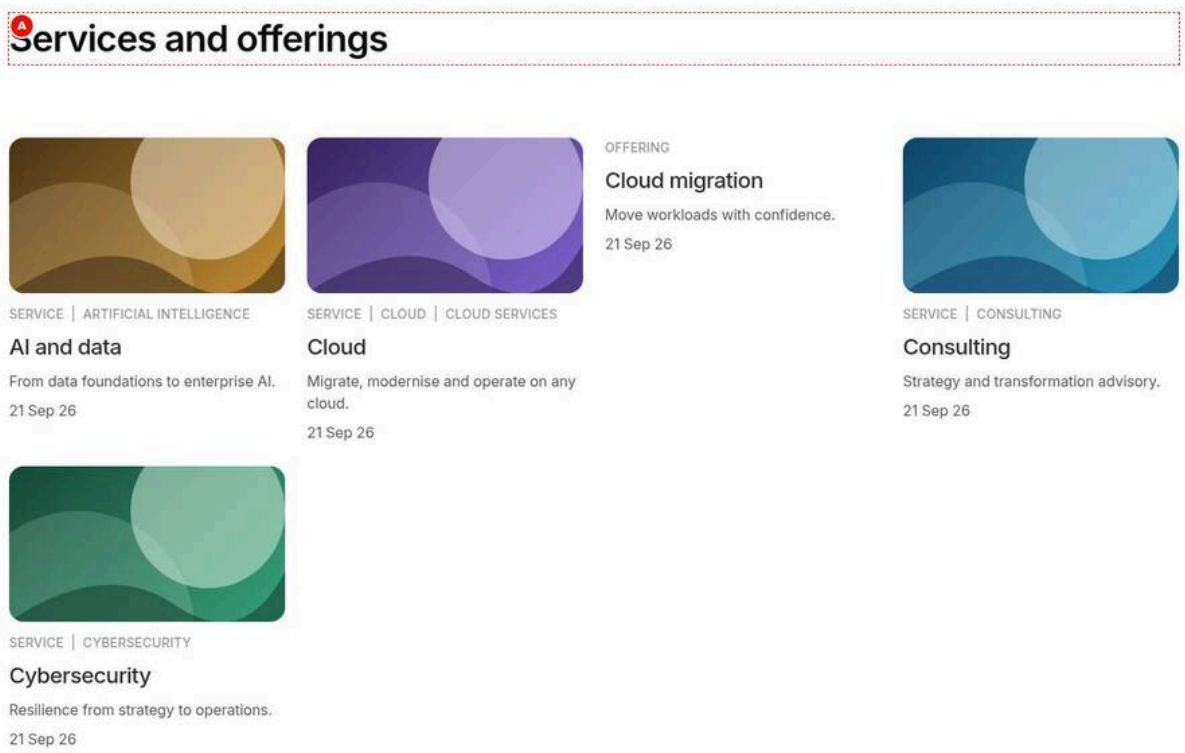

Figure 5: Child pages with depth — At 1440 px the title Services and offerings above five image cards of the child and grandchild pages of /en/services, sorted by title: AI and data, Cloud, Cloud migration (no image area, eyebrow Offering), Consulting and Cybersecurity, four in the first row and one in the second. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-source-child-depth.jpg)

Screenshot Details — Child pages with depth

Item	Detail
Screenshot Name	`screenshots/list-source-child-depth.jpg`
Screenshot Purpose	Child pages with depth

Item	Detail
Screen Description	At 1440 px the title Services and offerings above five image cards of the child and grandchild pages of /en/services, sorted by title: AI and data, Cloud, Cloud migration (no image area, eyebrow Offering), Consulting and Cybersecurity, four in the first row and one in the second.
Business Context	The Services hub lists its services and the offerings below them (such as Cloud migration under Cloud) in one alphabetical overview.
Author Objective	List the child and grandchild pages of Services, ordered by title, with Direct children only off and Child depth 2.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Services and offerings	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/services	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Direct children only (List › Source)	Off	No	Depth 1	Off to include deeper pages	Boolean; source = parent
(E)	Order by (List › Source)	Title	No	Sorting	Last modified for news	manual, title, lastModified
(F)	Child depth (List › Source)	2 (pre-filled in the dialog; keep it)	No	—	—	None
(G)	Listed pages (Result)	The children of Services and the grandchild Cloud migration, by title	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Services and offerings"; five image cards A to Z: AI and data, Cloud, Cloud migration, Consulting and Cybersecurity, four in the first row and one in the second; Cloud migration has no image area and shows its eyebrow "Offering".
- **Rendering behaviour:** Pages at most two levels below /en/services are listed and sorted by title with a locale-aware, case-insensitive collator; the default 4-column grid wraps the fifth card. A page without any image gets no media area.
- **Publishing behaviour:** Publish the page; the services and offerings must be published and indexed. A new grandchild page joins the list after the index update.

Business Rules

- Child depth is shown only when Direct children only is off; the dialog pre-fills 2.
- An empty Child depth counts as 1 in code although the dialog shows 2 (F-29, open).
- Depth values outside 1–10 are clamped.
- Order by Title sorts by the card title; ties are broken by path.
- Deep lists grow quickly; set Maximum items when the section is large.

Common Authoring Mistakes

Error	Root Cause	Resolution
Cloud migration is missing	Direct children only left on (depth 1)	Switch Direct children only off and keep Child depth 2
The order looks random	Order by left on Manual (path order)	Set Order by to Title
A card has an empty grey frame	Not possible here: pages without an image get no media area; a frame means the image is broken	Check the page's card-image or thumbnail-image path

Troubleshooting

- **Symptoms:** Only the four direct services appear, without Cloud migration.
- **Cause:** Direct children only is still on, so Child depth is ignored.
- **Resolution:** Open the Source tab, switch Direct children only off, keep Child depth 2 and publish.
- **Verification Steps:** On aem.page Cloud migration appears between Cloud and Consulting.

Use Cases: Hubs whose content sits in sub-folders (e.g. insights by year).

Authoring Guidelines: Source tab: Child pages; Direct children only off; Child depth (e.g. 2); usually Order by Title or Last modified and a Maximum items.

Business Rules: Pages at most Child depth levels below the parent; a depth outside 1–10 is clamped; an empty depth in code means 1 (the dialog pre-fills 2).

Rendering Rules: As Variation 1.

Responsive Behaviour: As the presentation.

SEO Impact: As Variation 1; deep lists can become long — set Maximum items.

Accessibility Compliance: As Variation 1.

Variation 3 — Source "Fixed list"

Variation Name: List source = Fixed list (`fixed`, the default) with List Items.

Business Purpose: A curated selection of pages and links in a chosen order, with per-item overrides of the card content.

Visual Example:

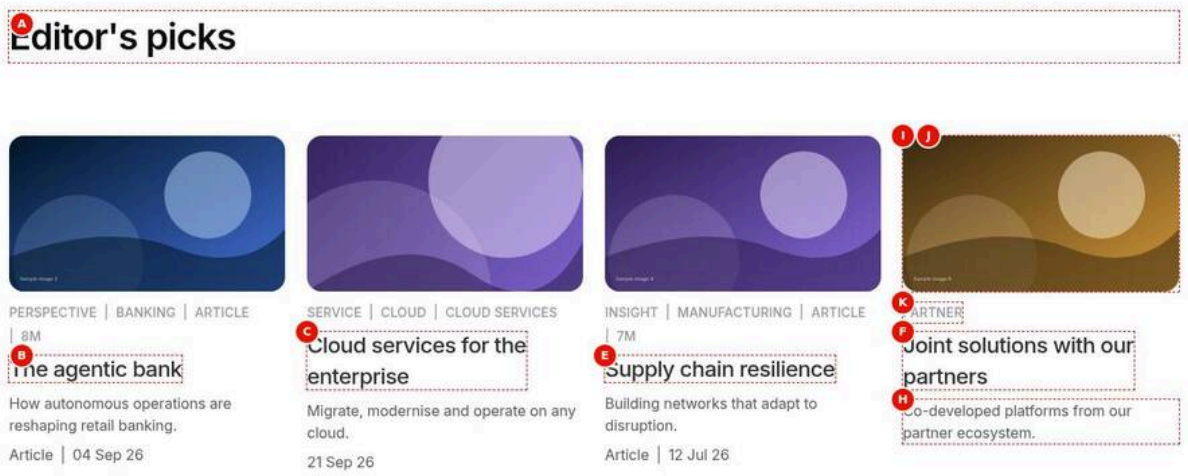

Figure 6: Fixed list source — At 1440 px the title Editor's picks above four image cards in authored order: The agentic bank, Cloud services for the enterprise (title override on the Cloud page), Supply chain resilience, and the external Joint solutions with our partners with photo-6, the eyebrow Partner and its description. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-source-fixed.jpg)

Screenshot Details — Fixed list source

Item	Detail
Screenshot Name	`screenshots/list-source-fixed.jpg`
Screenshot Purpose	Fixed list source
Screen Description	At 1440 px the title Editor's picks above four image cards in authored order: The agentic bank, Cloud services for the enterprise (title override on the Cloud page), Supply chain resilience, and the external Joint solutions with our partners with photo-6, the eyebrow Partner and its description.
Business Context	An editorial selection on the insights hub: editors pick three site pages and a partner page in a fixed order, overriding the card text where the page metadata doesn't fit.
Author Objective	Build a Fixed list of four List Items: three site pages (one with a title override) and an external partner link with its own title, description, image and eyebrow.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Editor's picks	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
B	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
C	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/services/cloud	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(D)	Title (List Item 2 › Content)	Cloud services for the enterprise	No	Overrides the card title	Only when the page's card title doesn't fit	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
E	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/supply-chain-resilience	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
F	Page or link (List Item 4 › Link)	Select the page or enter https://partner.example.com/joint-solutions	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(G)	Title (List Item 4 › Content)	Joint solutions with our partners	No	Overrides the card title	Only when the page's card title doesn't fit	None
H	Description (List Item 4 › Content)	Co-developed platforms from our partner ecosystem.	No	Overrides the description	Plain text, 1–2 sentences	None
I	Image (List Item 4 › Content)	Select the asset photo-6.svg (/en/media/photo-6.svg)	No	Overrides the image	From AEM Assets	None
J	Image alt text (List Item 4 › Content)	Partner team in a workshop	No	Text alternative	Describe meaningful images	None
K	Eyebrow (List Item 4 › Content)	Partner	No	Overrides the eyebrow	1–3 words	None
(L)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title “Editor’s picks” above four image cards in one row: The agentic bank, “Cloud services for the enterprise” (overridden title with the Cloud page’s image), Supply chain resilience and “Joint solutions with our partners” with photo-6, the eyebrow PARTNER and no date.
- **Rendering behaviour:** Cards follow the content tree order (Order by Manual); site pages take their metadata from the query index, which is loaded because items link paths. The external item becomes a card with only its own values and gets data-external=“true”.
- **Publishing behaviour:** Publish the page and photo-6.svg; the three site pages must be published and indexed for their metadata. The partner card needs nothing else; it is always shown from its own values.

Business Rules

- Page or link is required on every List Item; an item without a link is ignored.
- An item override (Title on item 2) wins over the page’s card-title and title.
- An external link needs a Title or Link text, or it is skipped.
- Duplicate destinations are kept once (the first wins).
- The override image replaces the page image together with its alt text.

Common Authoring Mistakes

Error	Root Cause	Resolution
Items 1 and 3 don’t show in the editor	Their content comes from the index, which isn’t available in Universal Editor	Expected; check on aem.page, or add Title overrides
The partner card is missing	No Title or Link text on the external item	Enter “Joint solutions with our partners” in Title
The partner image has no description for screen readers	Image alt text left empty	Enter “Partner team in a workshop”

Troubleshooting

- **Symptoms:** On aem.page a site page card shows the path segment as its title and no image.
- **Cause:** The linked page isn’t in the query index (unpublished, or a path typed differently from the published page).
- **Resolution:** Pick the page with the page picker, publish it and wait for the index update.
- **Verification Steps:** The card shows the page’s title, image and date on aem.page.

Use Cases: Editor’s picks; campaign selections; mixed internal and external links; statistic rows (overrides).

Authoring Guidelines: Source tab: List source = Fixed list. Add List Items to the block: Page or link (required), optionally Link text, Open in a new tab, Title, Description, Image, Image alt text, Eyebrow, Tags, Label, Call to action label, Card style, Card colour, Analytics label, Accessibility label.

Business Rules: Authored order (Order by Manual), or sorted by Title / Last modified. Precedence: item override → the page’s metadata → defaults. An item without a link, with an unsafe link (`javascript:`, `data:`) or without any title (no override, no page title, no link text) is skipped. A link to an indexed page uses its metadata; another path or an external URL becomes a card with only the item’s values. Duplicate destinations are kept once. A Fixed list without items shows the editor hint “items-missing”.

Rendering Rules: Block class `source-fixed`; `xdm:listSource: "fixed"`; same-site absolute URLs are read as paths; external links get `data-external="true"`.

Responsive Behaviour: As the presentation.

SEO Impact: Curated internal links; external links are marked as exits in analytics.

Accessibility Compliance: Use the Accessibility label when several items have similar titles.

Variation 4 — Source "Tagged pages" (any tag)

Variation Name: List source = Tagged pages (`tags`) with Match = Any of the tags (default).

Business Purpose: List all pages below a root that carry at least one of the selected tags.

Visual Example:

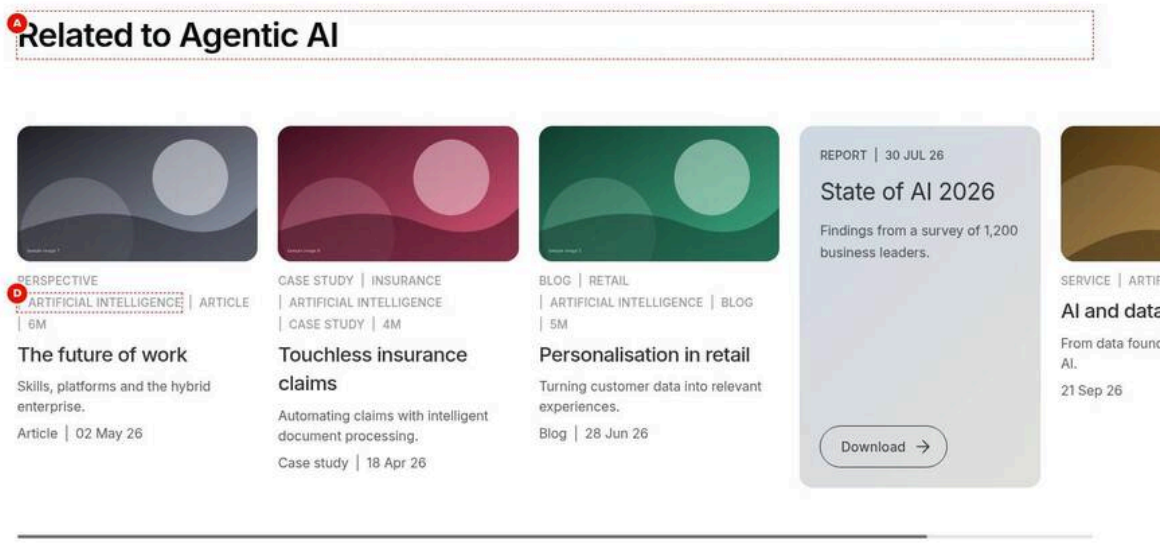

Figure 7: Tagged pages source (any) — At 1440 px the title Related to Agentic AI above a rail of Mixed cards bleeding to the right edge, the AI-tagged pages below /en in path order: image cards The future of work, Touchless insurance claims, Personalisation in retail, the gradient report card State of AI 2026 with Download, and AI and data. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-source-tagged-any.jpg)

Screenshot Details — Tagged pages source (any)

Item	Detail
Screenshot Name	`screenshots/list-source-tagged-any.jpg`
Screenshot Purpose	Tagged pages source (any)
Screen Description	At 1440 px the title Related to Agentic AI above a rail of Mixed cards bleeding to the right edge, the AI-tagged pages below /en in path order: image cards The future of work, Touchless insurance claims, Personalisation in retail, the gradient report card State of AI 2026 with Download, and AI and data.
Business Context	A related-content rail on an AI topic page: every page of the English site tagged with Artificial intelligence (or a child tag) is offered, without curating the list.
Author Objective	List all pages below the English site that carry the AI topic tag as mixed cards in a horizontal rail on every breakpoint.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Related to Agentic AI	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	List source (List › Source)	Tagged pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Search root (List › Source)	Select the page or enter /content/tcs-corp/us/en	No	Root of the tagged pages	The locale or a section	Shown when source = tags
D	Tags (List › Source)	Add the tags tcs-corp:topic/ai	No (needed)	Tags to match	1–3 tags	Tag IDs; child tags match; source = tags
(E)	Card style (List › Cards)	Mixed (by page)	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(F)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(G)	Tablet display (List › Layout)	Horizontal scroll	No	Grid or scroll at 600–1199 px	—	grid, horizontal-scroll
(H)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Related to Agentic AI" above a rail bleeding to the right edge: image cards for The future of work, Touchless insurance claims, Personalisation in retail and AI and data, and a gradient report card "State of AI 2026" with REPORT and its date and a Download button.
- **Rendering behaviour:** Mixed picks a report card for content-type Report, else an image card when the page has an image, else a panel. Desktop shows 4.2 cards, tablet 3.3, mobile 1.2 with the scroll indicator (mobile default); the block gets source-tags.
- **Publishing behaviour:** Publish the page; tagged pages appear once they are published and indexed with their tags. Retagging a page changes the rail after the page is republished and the index updated.

Business Rules

- Match Any (default): a page needs one of the selected tags or a child tag of it.
- Search root /content/tcs-corp/us/en covers the whole English site; the root page itself isn't listed.
- The current page is listed too if it carries the tag (it isn't excluded).
- Order by Manual gives path order, so /en/insights pages come before /en/services/ai.
- Previous / next buttons stay off unless switched on per breakpoint.

Common Authoring Mistakes

Error	Root Cause	Resolution
The editor shows "tags-missing"	No tag selected in Tags	Add the tag tcs-corp:topic/ai
Unrelated pages appear	Search root too broad or a parent tag selected	Narrow Search root or pick the child tag
The rail stops at the content edge	Edge set to Inside the content width	Set Edge back to Bleed on the Scroll tab

Troubleshooting

- **Symptoms:** A page tagged with AI in AEM doesn't appear in the rail.
- **Cause:** Its tags aren't in the query index (not republished, or tags published under another name, F-07 open).
- **Resolution:** Republish the page and check its tags column in /query-index.json; escalate to L2 if tags are missing for all pages.
- **Verification Steps:** The page's tags column contains tcs-corp:topic/ai and the card shows in the rail.

Use Cases: Related content; topic and industry pages; campaign pages pulling tagged insights.

Authoring Guidelines: Source tab: Tagged pages; Search root (a page) or Use the current page when empty (default on); Tags (one or more); Match = Any; Include descendant pages (default on) and Maximum search depth (0 = no limit).

Business Rules: A page matches when one of its tags equals a selected tag or is a child tag of it (`tcs-corp:topic/ai` matches `tcs-corp:topic/ai/genai`). Without tags nothing is listed (hint "tags-missing"); with an empty root and Use the current page off, hint "root-missing". Pages hidden from navigation are left out. Include descendant pages off: children of the root only.

Rendering Rules: Block class `source-tags`; `xdm:listSource: "tags"`.

Responsive Behaviour: As the presentation.

SEO Impact: Topic clusters link related pages (good internal linking).

Accessibility Compliance: As Variation 1.

Variation 5 — Tagged Pages with All Tags

Variation Name: Tagged pages with Match = All of the tags (`all`).

Business Purpose: Narrow lists to pages that carry every selected tag (e.g. industry Banking and topic AI).

Visual Example:

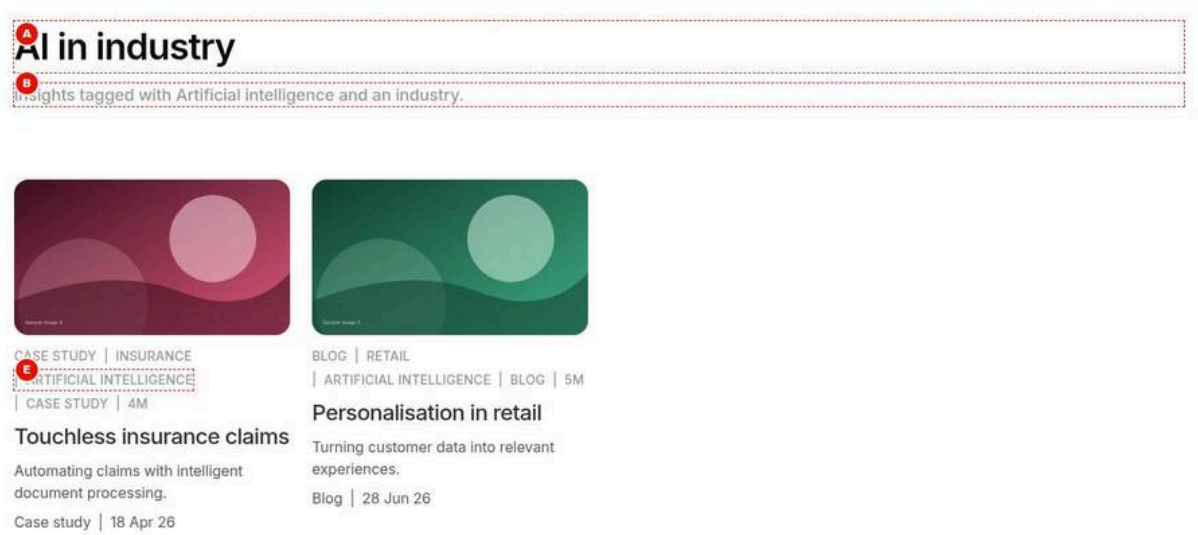

Figure 8: Tagged pages source (all) — At 1440 px the title AI in industry with its description above two image cards, Touchless insurance claims and Personalisation in retail, the only insights tagged with AI and an industry; the other two columns of the 4-column grid stay empty. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-source-tagged-all.jpg)

Screenshot Details — Tagged pages source (all)

Item	Detail
Screenshot Name	`screenshots/list-source-tagged-all.jpg`

Item	Detail
Screenshot Purpose	Tagged pages source (all)
Screen Description	At 1440 px the title AI in industry with its description above two image cards, Touchless insurance claims and Personalisation in retail, the only insights tagged with AI and an industry; the other two columns of the 4-column grid stay empty.
Business Context	An AI-in-industry section on the insights hub that shows only insights combining the AI topic with an industry, such as AI in retail or insurance.
Author Objective	List insights tagged with both the AI topic and any Industry tag using Match All of the tags.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	AI in industry	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
B	Description (List › Content)	Insights tagged with Artificial intelligence and an industry.	No	Intro under the title	One or two sentences	None
(C)	List source (List › Source)	Tagged pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(D)	Search root (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Root of the tagged pages	The locale or a section	Shown when source = tags
E	Tags (List › Source)	Add the tags tcs-corp:topic/ai, tcs-corp:industry	No (needed)	Tags to match	1–3 tags	Tag IDs; child tags match; source = tags
(F)	Match (List › Source)	All of the tags	No	Any or all tags	All for intersections	any, all; source = tags
(G)	Listed pages (Result)	Only pages with the AI tag and an industry tag (a child tag of Industry)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "AI in industry" with its description above two image cards: Touchless insurance claims and Personalisation in retail, with their images, kickers, titles and descriptions; the rest of the 4-column row stays empty.
- **Rendering behaviour:** Every selected tag (or one of its child tags) must be on the page: tcs-corp:industry matches industry/retail and industry/insurance. Pages below /en/insights at any depth are checked; the cards are in path order.

- **Publishing behaviour:** Publish the page; the insights must be published and indexed with both tags. A page gaining an industry tag joins the list once republished and indexed.

Business Rules

- Match All narrows quickly: The future of work (AI, no industry) is left out.
- Selecting the parent tag tcs-corp:industry matches all its child tags.
- Only pages below the Search root /content/tcs-corp/us/en/insights are checked.
- Include descendant pages is on by default, with no depth limit (Maximum search depth 0).

Common Authoring Mistakes

Error	Root Cause	Resolution
The list is empty	Match All with tags no page carries together	Check the pages' tags or use Any of the tags
Too many pages appear	Match left on Any of the tags	Set Match to All of the tags
AI and data from Services is missing	It is outside the Search root	Expected; widen the root to /content/tcs-corp/us/en if wanted

Troubleshooting

- **Symptoms:** On aem.page the List shows "There are no items to show."
- **Cause:** No indexed page carries both an AI tag and an industry tag below the insights root.
- **Resolution:** Tag the intended insights with an industry tag and republish them, or change Match to Any.
- **Verification Steps:** /query-index.json lists the pages with both tags and the List shows them.

Use Cases: Intersections of industry, topic and content type.

Authoring Guidelines: As Variation 4 with Match = All of the tags.

Business Rules: Every selected tag (or one of its child tags) must be on the page.

Rendering Rules: As Variation 4.

Responsive Behaviour: As the presentation.

SEO Impact: As Variation 4.

Accessibility Compliance: As Variation 1.

Variation 6 — Order by Title

Variation Name: Order by = Title, Sort order Ascending or Descending.

Business Purpose: Alphabetical lists.

Visual Example:

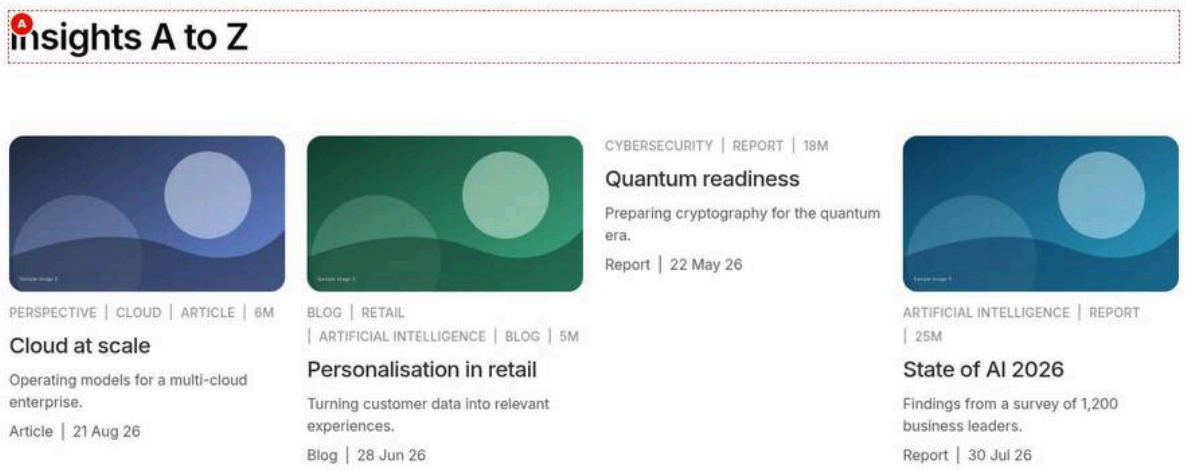

Figure 9: Order by title — At 1440 px the title Insights A to Z above four image cards, the Insights child pages sorted by title: Cloud at scale, Personalisation in retail, Quantum readiness (no image area) and State of AI 2026. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-order-title.jpg)

Screenshot Details — Order by title

Item	Detail
Screenshot Name	`screenshots/list-order-title.jpg`
Screenshot Purpose	Order by title
Screen Description	At 1440 px the title Insights A to Z above four image cards, the Insights child pages sorted by title: Cloud at scale, Personalisation in retail, Quantum readiness (no image area) and State of AI 2026.
Business Context	An A to Z overview of the insights hub, where visitors look for a title rather than the newest piece.
Author Objective	List the child pages of Insights sorted by title, limited to four cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Insights A to Z	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Title	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Maximum items (List › Source)	4	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Insights A to Z" above four image cards: Cloud at scale, Personalisation in retail, Quantum readiness (no image area, it has no image) and State of AI 2026.
- **Rendering behaviour:** Sorting uses Intl.Collator with the page language, case-insensitive and numeric, before Maximum items 4 is applied; titles starting with "The" sort under T. Sort order is Ascending by default.
- **Publishing behaviour:** Publish the page; the order is computed in the browser from the indexed titles, so a renamed page moves after it is republished and indexed.

Business Rules

- The sort key is the card title: card-title, else the page title.
- Sorting happens before Maximum items, so the first four in A to Z order are shown.
- "Item 2" sorts before "Item 10" (numeric comparison).
- Sort order appears only when Order by isn't Manual.

Common Authoring Mistakes

Error	Root Cause	Resolution
The agentic bank isn't near the top	Titles are sorted as written, "The" included	Give the page a card-title without the article if needed
Z to A order	Sort order set to Descending	Set Sort order to Ascending

Troubleshooting

- **Symptoms:** A page appears in an unexpected position in the A to Z list.
- **Cause:** Its card-title metadata differs from the visible page title.
- **Resolution:** Align card-title with the intended title in the page or bulk metadata and republish the page.
- **Verification Steps:** Reload aem.page; the card sits at its alphabetical position.

Use Cases: Industries, services, locations.

Authoring Guidelines: Source tab: Order by = Title; Sort order (shown when Order by isn't Manual).

Business Rules: Locale-aware, case-insensitive and numeric comparison (`Intl.Collator` with the page's language; "Item 2" before "Item 10"); ties by path. Applies to all sources.

Rendering Rules: Sorting happens before Maximum items.

Responsive Behaviour: Unchanged.

SEO Impact: None.

Accessibility Compliance: A predictable order helps users scan the list.

Variation 7 — Order by Last Modified

Variation Name: Order by = Last modified (`lastModified`), usually Descending.

Business Purpose: Newest first lists (news, press releases, insights).

Visual Example:

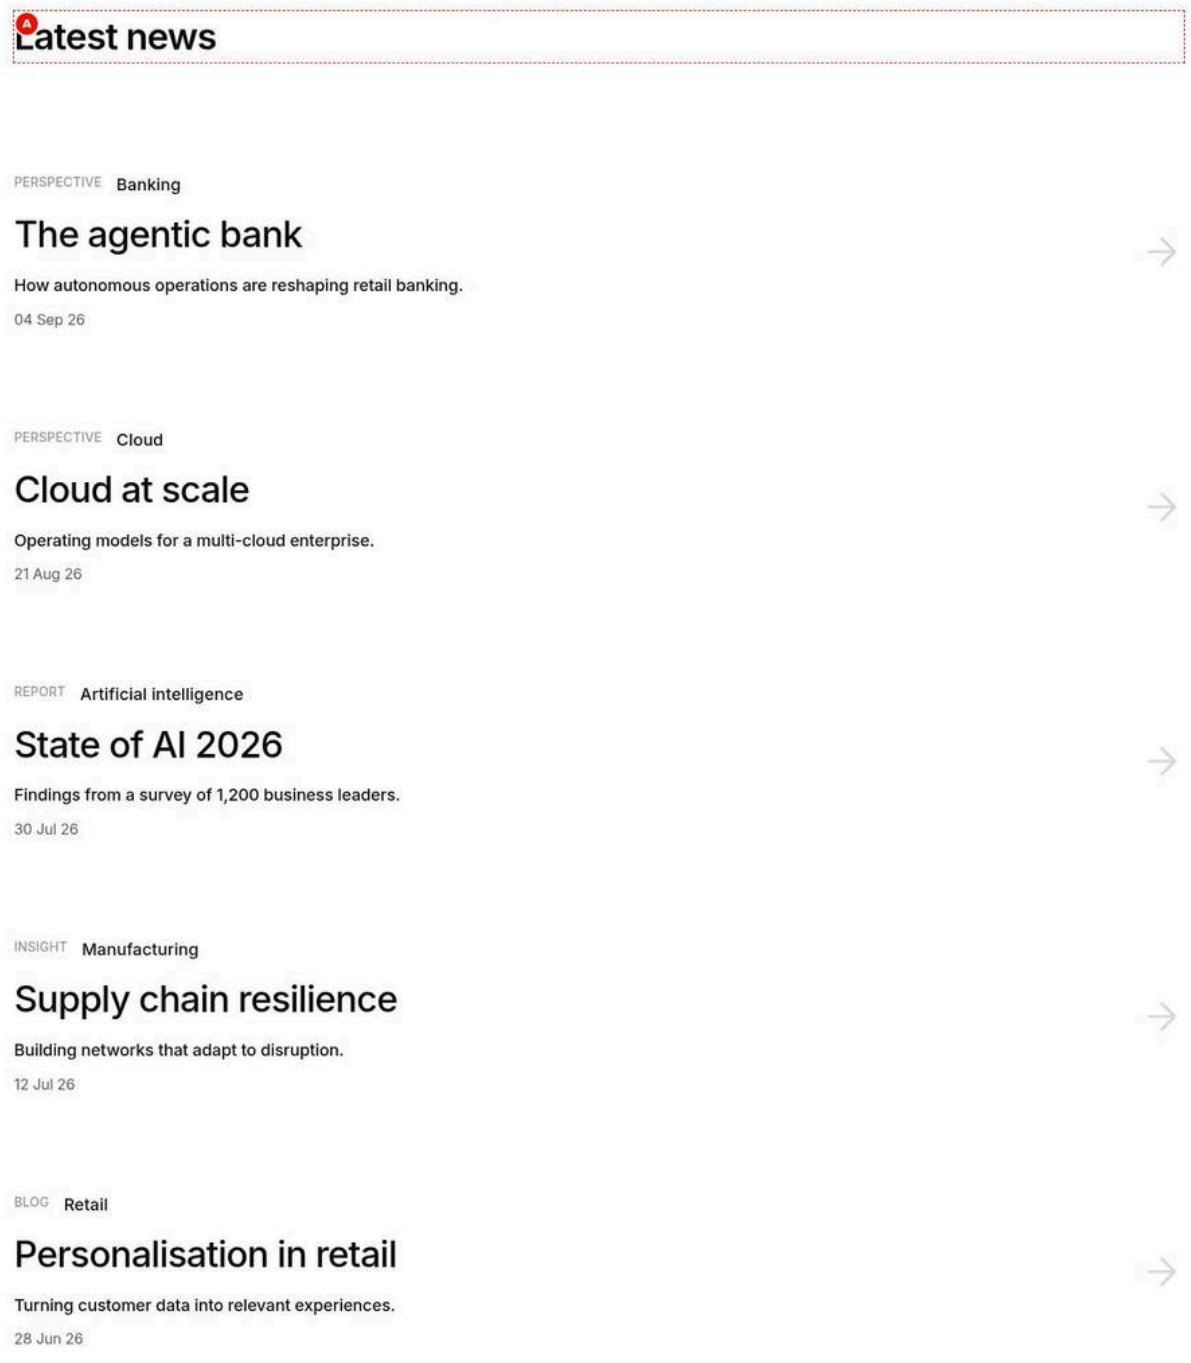

Figure 10: Order by last modified — At 1440 px the title Latest news above five rows of links, newest first: The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience and Personalisation in retail, each with eyebrow or content type and a tag, a large title, the description, the date and an arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-order-last-modified.jpg)

Screenshot Details — Order by last modified

Item	Detail
Screenshot Name	`screenshots/list-order-last-modified.jpg`
Screenshot Purpose	Order by last modified

Item	Detail
Screen Description	At 1440 px the title Latest news above five rows of links, newest first: The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience and Personalisation in retail, each with eyebrow or content type and a tag, a large title, the description, the date and an arrow.
Business Context	A Latest news section that always shows the most recently updated insights first, as text rows like a newsroom.
Author Objective	List the five most recently modified child pages of Insights as rows of links, newest first.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest news	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	5	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Display as teaser (List › Cards)	Off	No	Cards (on) or rows of links (off)	Off for news-style link lists	Boolean

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest news" above five rows: The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience and Personalisation in retail, each with eyebrow and tag, a 2.5rem title, the description, the date and an arrow on the right.
- **Rendering behaviour:** Last modified uses each page's modified-date, else the last publication time from the index; Descending puts the newest first and Maximum items 5 cuts the rest. Display as teaser off renders article.list-row elements; from 600 px the rows have no lines unless Dividers is set.
- **Publishing behaviour:** Publish the page; republishing a listed page updates its last publication time, which moves it up a Last modified list without modified-date metadata.

Business Rules

- The shown date is modified-date, else publish-date, else the last publication.
- Display as teaser off ignores Card style, colour, ratio and First card as feature.
- The data layer variant is "links".
- Ties are broken by path.

Common Authoring Mistakes

Error	Root Cause	Resolution
The order changes after a page is republished	No modified-date metadata, so the publication time counts	Maintain modified-date on news pages
Cards instead of rows	Display as teaser left on	Switch Display as teaser off on the Cards tab
Oldest first	Sort order left on Ascending	Set Sort order to Descending

Troubleshooting

- **Symptoms:** A page updated today isn't at the top of the list.
- **Cause:** It has an older modified-date in its metadata, which wins over the publication time.
- **Resolution:** Update modified-date (YYYY-MM-DD) on the page or the bulk sheet and republish.
- **Verification Steps:** The index row shows the new date and the page is the first row.

Use Cases: News, press releases, latest insights.

Authoring Guidelines: Order by = Last modified; Sort order = Descending; Maximum items.

Business Rules: The page's `modified-date` metadata, else when it was last published (index `lastModified`); external links count as 0 (last); ties by path. The shown date is `modified-date`, else `publish-date`, else the last publication.

Rendering Rules: As Variation 6.

Responsive Behaviour: Unchanged.

SEO Impact: Fresh content gets links from the list pages.

Accessibility Compliance: Dates are in `<time datetime>`.

Variation 8 — Maximum Items

Variation Name: Maximum items > 0.

Business Purpose: Limit long lists (e.g. "latest 4").

Visual Example:

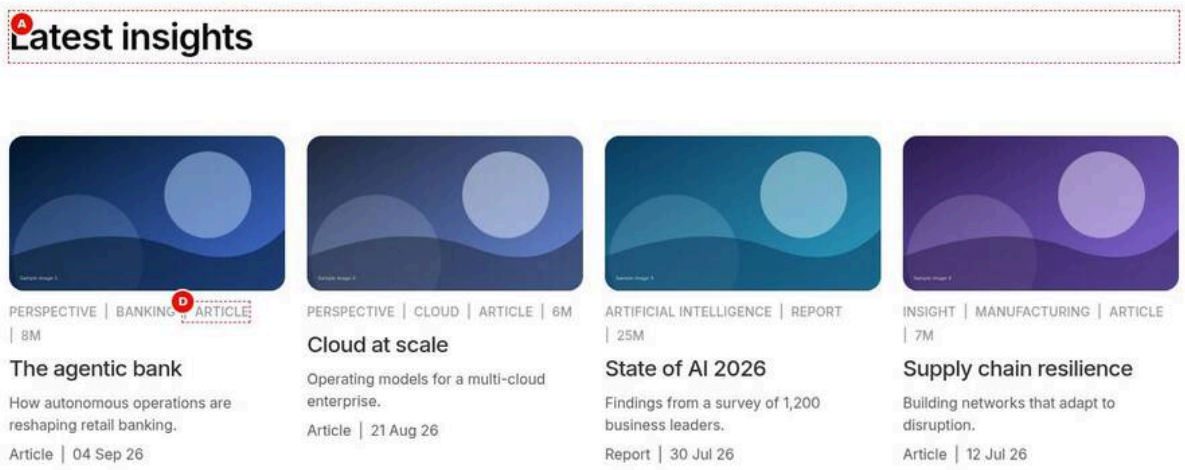

Figure 11: Maximum items — At 1440 px the title Latest insights above four image cards, the four most recently modified of the nine insights with a content type tag: The agentic bank, Cloud at scale, State of AI 2026 and Supply chain resilience. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-max-items.jpg)

Screenshot Details — Maximum items

Item	Detail
Screenshot Name	`screenshots/list-max-items.jpg`
Screenshot Purpose	Maximum items
Screen Description	At 1440 px the title Latest insights above four image cards, the four most recently modified of the nine insights with a content type tag: The agentic bank, Cloud at scale, State of AI 2026 and Supply chain resilience.
Business Context	A Latest insights teaser that shows only the four newest of all tagged insights, so the section stays short on a busy page.
Author Objective	Limit a Tagged pages list of insights with a content type tag to the four most recently modified.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Tagged pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Search root (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Root of the tagged pages	The locale or a section	Shown when source = tags
D	Tags (List › Source)	Add the tags tcs-corp:content-type/article, tcs-corp:content-type/	No (needed)	Tags to match	1–3 tags	Tag IDs; child tags match; source = tags

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		report, tcs-corp:content-type/blog, tcs-corp:content-type/case-study				
(E)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(F)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(G)	Maximum items (List › Source)	4	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(H)	Listed pages (Result)	The 4 most recently modified of the 9 insights with a content type tag	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest insights" above four image cards in one row: The agentic bank, Cloud at scale, State of AI 2026 and Supply chain resilience.
- **Rendering behaviour:** Discovery finds the nine insights with an article, report, blog or case-study tag; they are deduplicated, sorted by last modified descending, and then Maximum items 4 keeps the first four. Only these four are rendered and in the data layer.
- **Publishing behaviour:** Publish the page; when a newer tagged insight is published and indexed it pushes the fourth card out, without editing the List.

Business Rules

- Maximum items 0, empty, negative or invalid lists all pages.
- The dialog allows 0–200; the code has no upper limit (F-29, open).
- The limit applies after sorting, so it always keeps the newest four here.
- Link to the full list with a header CTA when the list is cut.

Common Authoring Mistakes

Error	Root Cause	Resolution
The four oldest pages show	Sort order left on Ascending	Set Sort order to Descending
All nine pages show	Maximum items left at 0	Enter 4
The limit picks random pages	Order by left on Manual (path order)	Set Order by to Last modified

Troubleshooting

- **Symptoms:** A newly published insight doesn't push out the oldest card.
- **Cause:** The new page lacks one of the four content type tags or isn't indexed yet.
- **Resolution:** Tag the page with its content type, republish it and wait for the index update.
- **Verification Steps:** The new page is the first card and the previous fourth card disappears.

Use Cases: Teaser rows of the latest content; home page sections.

Authoring Guidelines: Source tab: Maximum items (0–200; 0 = all).

Business Rules: Applied after discovery, filtering, deduplication and sorting; 0, empty, negative or invalid values list all.

Rendering Rules: Only the first N cards are rendered and tracked.

Responsive Behaviour: Unchanged.

SEO Impact: Fewer links per page; link to the full list with the header CTA.

Accessibility Compliance: None specific.

Variation 9 — Fallback Items

Variation Name: When there are no items = Show the fallback items (`fallback`).

Business Purpose: Show curated List Items when Child pages or Tagged pages find nothing.

Visual Example:

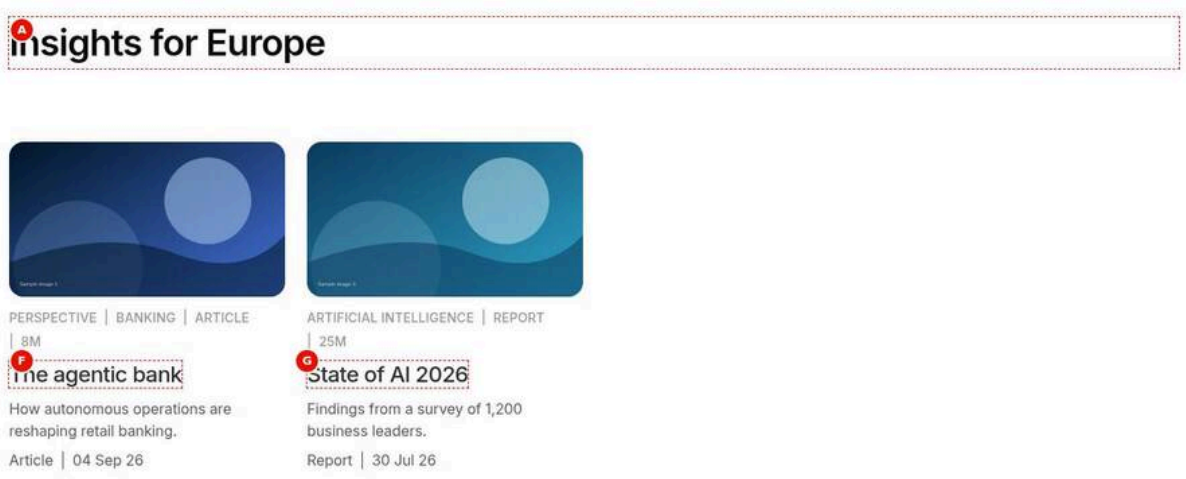

Figure 12: Fallback items — At 1440 px the title Insights for Europe above two image cards, The agentic bank and State of AI 2026: no page has the Europe tag, so the two fallback List Items show, built from the pages' metadata, in the first two columns. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-fallback-items.jpg)

Screenshot Details — Fallback items

Item	Detail
Screenshot Name	`screenshots/list-fallback-items.jpg`
Screenshot Purpose	Fallback items
Screen Description	At 1440 px the title Insights for Europe above two image cards, The agentic bank and State of AI 2026: no page has the Europe tag, so the two fallback List Items show, built from the pages' metadata, in the first two columns.
Business Context	An Insights for Europe section prepared before any page carries the Europe tag: two curated insights fill the gap so the section is never empty.
Author Objective	Set a Tagged pages list with the Europe tag to show two fallback List Items when no tagged page is found.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Insights for Europe	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Tagged pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Search root (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Root of the tagged pages	The locale or a section	Shown when source = tags
(D)	Tags (List › Source)	Add the tags tcs-corp:region/europe	No (needed)	Tags to match	1–3 tags	Tag IDs; child tags match; source = tags
(E)	When there are no items (List › Advanced)	Show the fallback items	No	Empty state	Fallback for important sections	hide, message, fallback (invalid: message)
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
F	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
G	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/state-of-ai-2026	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(H)	Listed pages (Result)	No page has the Europe tag: the two List Items show instead	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Insights for Europe" above two image cards built from page metadata: The agentic bank and State of AI 2026, in the first two columns of the 4-column grid.
- **Rendering behaviour:** The tag search returns no cards, so the List Items are processed as a Fixed list (overrides, order, maximum). The block keeps the class source-tags and the data layer xdm:listSource "tags".
- **Publishing behaviour:** Publish the page; the two linked insights must be published and indexed. Once a page tagged tcs-corp:region/europe is indexed it replaces the fallback items automatically.

Business Rules

- Fallback items are used only for Child pages and Tagged pages, when nothing is found.
- The fallback items follow the Fixed list rules: authored order, overrides, duplicates once.
- If the fallback finds nothing too, the empty message is shown.
- List Items of a Tagged or Child list are ignored while pages are found.

Common Authoring Mistakes

Error	Root Cause	Resolution
The empty message shows instead of the items	When there are no items left on Show a message	Choose Show the fallback items on the Advanced tab
The fallback items never show	Some page already carries the Europe tag	Expected: tagged pages win over the fallback
The editor shows a hint, not the two cards	No index in Universal Editor	Check the result on aem.page

Troubleshooting

- **Symptoms:** On aem.page the List shows "There are no items to show." although two List Items exist.
- **Cause:** When there are no items is still Show a message, or the linked pages aren't indexed.
- **Resolution:** Set Show the fallback items, publish the two insights and the page.
- **Verification Steps:** The two cards appear on aem.page while no page has the Europe tag.

Use Cases: New topics without tagged pages yet; protecting important sections from empty lists.

Authoring Guidelines: Advanced tab: When there are no items = Show the fallback items; add List Items to the block (as for a Fixed list).

Business Rules: Only for Child pages and Tagged pages; the List Items are processed as a Fixed list (overrides, order, maximum). If the fallback is empty too, the empty message is shown.

Rendering Rules: As Variation 3, but the block class and data layer keep the original source.

Responsive Behaviour: As the presentation.

SEO Impact: None.

Accessibility Compliance: As Variation 3.

Variation 10 — Image Card (default)

Variation Name: Card style = Image card (`image`).

Business Purpose: The standard page teaser card with the page's card image.

Visual Example:

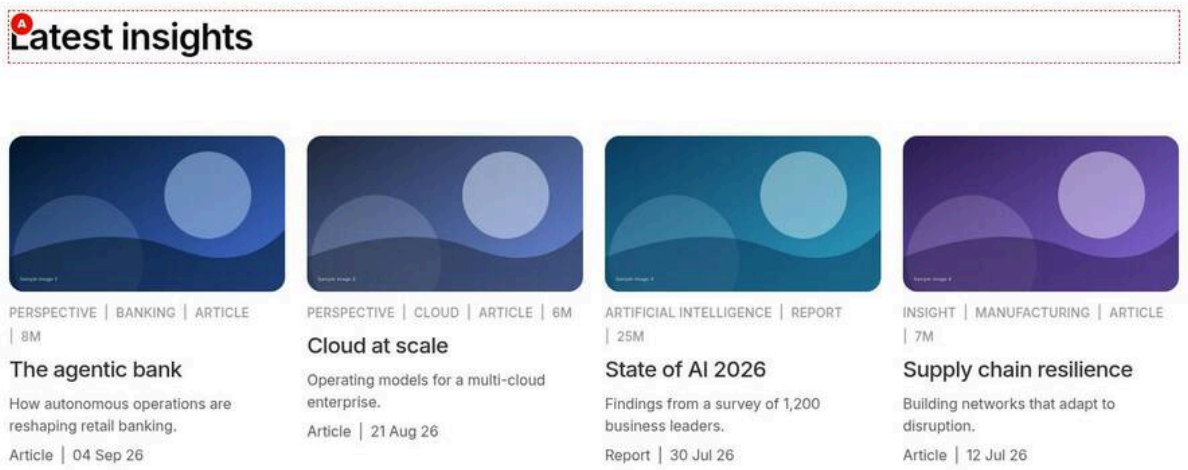

Figure 13: Image card style — At 1440 px the title Latest insights above four image cards, newest first: The agentic bank, Cloud at scale, State of AI 2026 and Supply chain resilience, each with a 16:9 image, an uppercase kicker of eyebrow, tags and reading time, the title, the description and content type with date. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-image-card.jpg)

Screenshot Details — Image card style

Item	Detail
Screenshot Name	`screenshots/list-image-card.jpg`
Screenshot Purpose	Image card style
Screen Description	At 1440 px the title Latest insights above four image cards, newest first: The agentic bank, Cloud at scale, State of AI 2026 and Supply chain resilience, each with a 16:9 image, an uppercase kicker of eyebrow, tags and reading time, the title, the description and content type with date.
Business Context	The standard insights teaser: the newest insights shown with their own images and labels, so visitors can judge each piece before clicking.
Author Objective	Show the four most recently modified insights as image cards (the default Card style).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	4	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest insights" above four image cards: The agentic bank, Cloud at scale, State of AI 2026 and Supply chain resilience; each with a rounded 16:9 image, an uppercase kicker (for The agentic bank: Perspective, Banking, Article and 8m, separated by bars), the title, the description and a meta row with the content type and the date, such as Article and 04 Sep 26.
- **Rendering behaviour:** Each card is article.list-card.list-card-image; the kicker joins eyebrow, up to three tag labels from the taxonomy and the reading time, the meta row the content type and the date (dd-mmm-yy by default). Images are lazy and requested at 750 px (from 600 px) or 600 px.
- **Publishing behaviour:** Publish the page; each card's image path comes from the page metadata, so the images and the insights must be published. Changed card metadata shows after the page is republished and indexed.

Business Rules

- Image order: card-image, else og:image unless it is default-meta-image, else thumbnail-image, else featured-image.
- At most three tags are shown; Show tags off also hides the reading time.
- Image alt comes from card-image-alt, else image-alt, else the image is decorative.
- The title is the card's one link unless a call to action label is set.
- A page without any image gets no image area.

Common Authoring Mistakes

Error	Root Cause	Resolution
Cards show the generic social image	Not possible: default-meta-image is skipped; a generic picture is the page's own thumbnail-image	Set a card-image on the page
A tag shows as "Ai" instead of "Artificial intelligence"	The locale taxonomy isn't published or lacks the tag, so the label is derived from the tag ID	Add the tag to /en/taxonomy and publish it
The kicker is very long	Eyebrow, three tags and reading time together	Shorten the eyebrow or switch Show tags off

Troubleshooting

- **Symptoms:** A card shows no image on aem.page.
- **Cause:** The page has no card-image, thumbnail-image or featured-image, or the referenced asset isn't published.
- **Resolution:** Set card-image and card-image-alt on the page or bulk metadata sheet, publish the asset and republish the page.
- **Verification Steps:** The index row has cardImage and the card shows the image with its alt text.

Use Cases: Insights, services, any page listing.

Authoring Guidelines: Cards tab: Card style = Image card. Content comes from page metadata (`card-image`, else `og:image` if it isn't the site's default social image, `thumbnail-image`, `featured-image`).

Business Rules: As Cards Variation 1 (6.15.3); pages without an image show no image area. Up to 3 tags; reading time from `reading-time`; content type from `content-type`.

Rendering Rules: `article.list-card.list-card-image`; images built with `createOptimizedPicture` for `/media_` images of the site (750 / 600 px), otherwise a plain `<img>`.

Responsive Behaviour: Title 1.5 / 1.25 / 1.125rem; grid 4 / 4 / 1 by default.

SEO Impact: Descriptive links with the page's card title.

Accessibility Compliance: Alt from `card-image-alt`, else `image-alt`, else decorative. Same contrast note as 6.15.3 Variation 1 (#999 kicker).

Variation 11 — Panel Card

Variation Name: Card style = Panel (`panel`).

Business Purpose: Dark coloured tiles with an "Explore" call to action (Figma 1).

Visual Example:

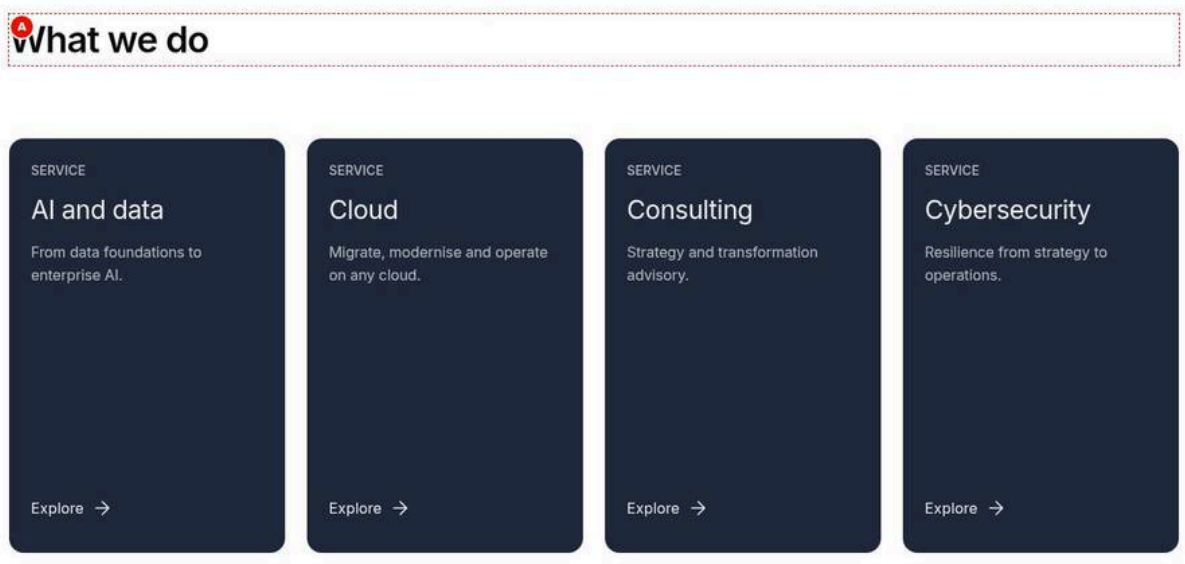

Figure 14: Panel card style — At 1440 px the title What we do above four tall dark #20293c panels, the Services child pages in path order: AI and data, Cloud, Consulting and Cybersecurity, each with the eyebrow Service, a large light title, the description and Explore. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-panel-card.jpg)

Screenshot Details — Panel card style

Item	Detail
Screenshot Name	`screenshots/list-panel-card.jpg`
Screenshot Purpose	Panel card style
Screen Description	At 1440 px the title What we do above four tall dark #20293c panels, the Services child pages in path order: AI and data, Cloud, Consulting and Cybersecurity, each with the eyebrow Service, a large light title, the description and Explore.

Item	Detail
Business Context	A What we do section on a services hub: each service is a tall dark tile with an Explore link, as in Figma variation 1.
Author Objective	List the child pages of Services as Panel cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	What we do	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/services	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Card style (List › Cards)	Panel	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "What we do" above four tall #20293c panels: AI and data, Cloud, Consulting and Cybersecurity, each with the eyebrow SERVICE, a large light title, the description and an "Explore" text button at the bottom.
- **Rendering behaviour:** Panels are article.list-card-panel in the 2:3 portrait shape (Panel height default) with 1.5rem padding from 900 px; titles are 1.75rem on desktop. Panels show no image unless Card colour is Image background; Explore is the card's one link.
- **Publishing behaviour:** Publish the page; the service pages must be published and indexed. A panel's text changes when the page's card-title, card-description or eyebrow is republished.

Business Rules

- Panels default to Dark (#20293c) when Card colour is empty.
- The call to action defaults to "Explore" (placeholder explore); its accessible name is "Explore: {title}".
- The kicker is the eyebrow (or category), else the first tag.
- Text that doesn't fit the 2:3 shape is clipped; keep descriptions short (about 120 characters).

Common Authoring Mistakes

Error	Root Cause	Resolution
Descriptions are cut off	Long card-description in a portrait panel	Shorten the description or set Panel height to Content

Error	Root Cause	Resolution
No Explore button	Show call to action switched off	Switch Show call to action on
Page images don't appear	Panels show no image by design	Use Image card, or Card colour Image background

Troubleshooting

- **Symptoms:** A panel shows the tag label instead of SERVICE as the kicker.
- **Cause:** The page has no eyebrow or category metadata, so the first tag is used.
- **Resolution:** Set eyebrow on the page or in the bulk metadata sheet and republish it.
- **Verification Steps:** The panel shows the eyebrow on aem.page.

Use Cases: Topic hubs, industries.

Authoring Guidelines: Card style = Panel (block or List Item).

Business Rules: As Cards Variation 2: "Explore" by default; kicker = eyebrow / category, else first tag; no image unless Card colour = Image background.

Rendering Rules: `list-card-panel`, colours as 6.15.3 Variation 2.

Responsive Behaviour: 2:3 portrait by default; titles 1.75 / 1.5 / 1.75rem.

SEO Impact: The link's name is "Explore: {title}".

Accessibility Compliance: As 6.15.3 Variation 2.

Variation 12 — Report Card

Variation Name: Card style = Report (`report`).

Business Purpose: Report teasers with the content type and date and a "Download" button.

Visual Example:

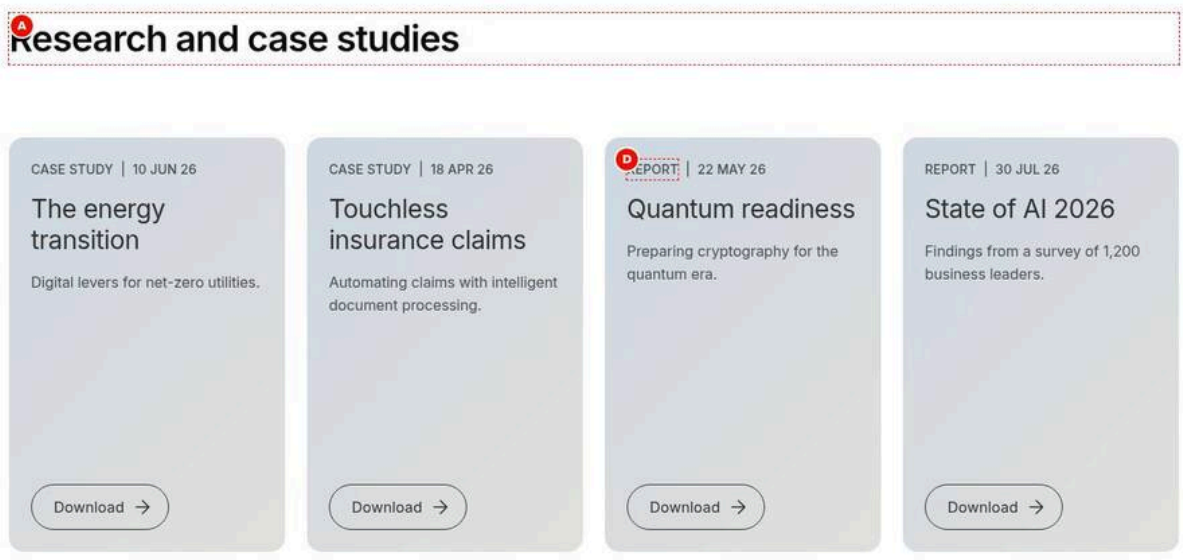

Figure 15: Report card style — At 1440 px the title Research and case studies above four gradient report cards in path order: The energy transition, Touchless insurance claims, Quantum readiness and State of AI 2026, each with content type and date, a large title, the description and an outlined Download button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-report-card.jpg)

Screenshot Details — Report card style

Item	Detail
Screenshot Name	`screenshots/list-report-card.jpg`
Screenshot Purpose	Report card style
Screen Description	At 1440 px the title Research and case studies above four gradient report cards in path order: The energy transition, Touchless insurance claims, Quantum readiness and State of AI 2026, each with content type and date, a large title, the description and an outlined Download button.
Business Context	A research section listing reports and case studies, each with its type, date and a prominent button, for visitors looking for in-depth material.
Author Objective	List insights tagged as reports or case studies as Report cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Research and case studies	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Tagged pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Search root (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Root of the tagged pages	The locale or a section	Shown when source = tags
D	Tags (List › Source)	Add the tags tcs-corp:content-type/report, tcs-corp:content-type/case-study	No (needed)	Tags to match	1–3 tags	Tag IDs; child tags match; source = tags
(E)	Card style (List › Cards)	Report	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Research and case studies" above four gradient cards (The energy transition, Touchless insurance claims, Quantum readiness, State of AI 2026), each with a kicker of content type and date (for example CASE STUDY and 10 Jun 26), a large title, the description and an outlined "Download" button.
- **Rendering behaviour:** Report cards are article.list-card-report with the grey gradient (135deg, #cfd9e3 to #e2e1dd) and a secondary button; the kicker is the content type (or eyebrow) and the date. Path order applies with Order by Manual.
- **Publishing behaviour:** Publish the page; the report pages must be published and indexed with their content-type tags. The button links to the page, not to a file.

Business Rules

- "Download" is the default label (placeholder download) though it opens the report page.
- Report cards show no image.
- The kicker uses content-type metadata, else the eyebrow.
- Match Any: a page needs the report or the case-study tag.

Common Authoring Mistakes

Error	Root Cause	Resolution
"Download" misleads visitors	The default label on a link to a page	Use a Fixed list with Call to action label "Read the report"
Articles appear as report cards	Card style Report applies to every card	Use Mixed so only Report pages get report cards

Troubleshooting

- **Symptoms:** A case study is missing from the list.
- **Cause:** The page has no tcs-corp:content-type/case-study tag in the index.
- **Resolution:** Tag the page, republish it and wait for the index update.
- **Verification Steps:** The tags column of the page in /query-index.json contains the tag and the card appears.

Use Cases: Media coverage, investor relations, research pages.

Authoring Guidelines: Card style = Report; pages with `content-type` = Report.

Business Rules: As Cards Variation 3; the link goes to the page (not a file) unless a Fixed item links a file.

Rendering Rules: `list-card-report`, gradient background, secondary button.

Responsive Behaviour: As panels.

SEO Impact: As Variation 10.

Accessibility Compliance: "Download" leads to a page in most cases — consider a Call to action label such as "Read the report" on List Items.

Variation 13 — Statistic Card

Variation Name: Card style = Statistic (`stat`).

Business Purpose: Key figures; in a List usually a Fixed list whose items override the title with the number.

Visual Example:

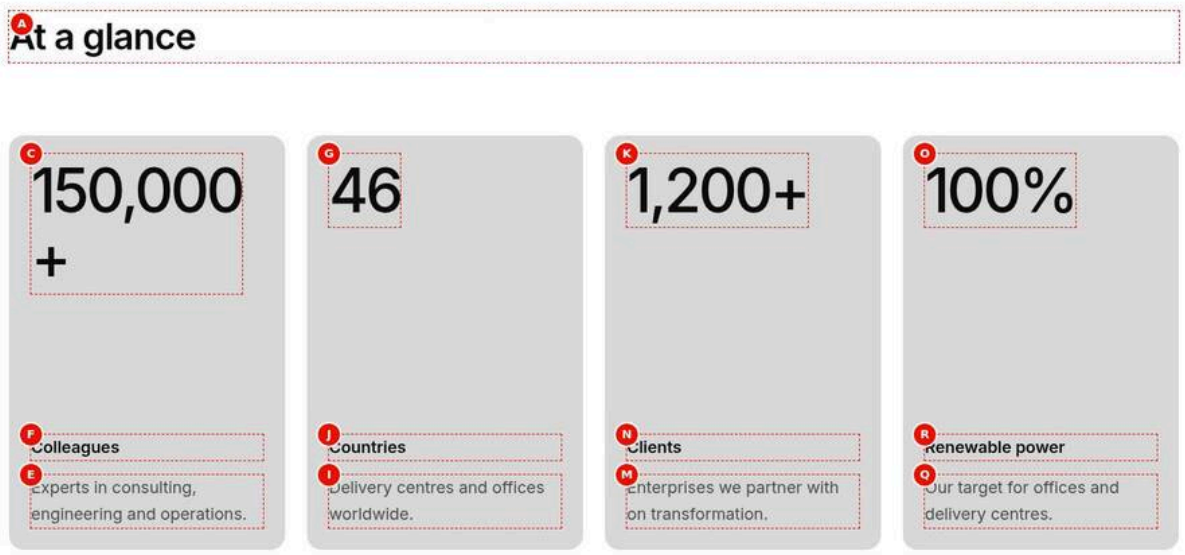

Figure 16: Statistic card style — At 1440 px the title At a glance above four light grey statistic cards: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power, each with the large number at the top and the label and description at the bottom. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-statistic-card.jpg)

Screenshot Details — Statistic card style

Item	Detail
Screenshot Name	`screenshots/list-statistic-card.jpg`
Screenshot Purpose	Statistic card style
Screen Description	At 1440 px the title At a glance above four light grey statistic cards: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power, each with the large number at the top and the label and description at the bottom.
Business Context	An At a glance band on the About page: four company figures, each linking to the page that explains it.
Author Objective	Build a Fixed list of four statistic cards whose Title overrides hold the numbers, with Label and Description.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	At a glance	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Card style (List › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree,	Only the item types the List allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick List Item	
C	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/about/our-people	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(D)	Title (List Item 1 › Content)	150,000+	No	Overrides the card title	Only when the page's card title doesn't fit	None
E	Description (List Item 1 › Content)	Experts in consulting, engineering and operations.	No	Overrides the description	Plain text, 1–2 sentences	None
F	Label (List Item 1 › Content)	Colleagues	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
G	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/about/locations	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(H)	Title (List Item 2 › Content)	46	No	Overrides the card title	Only when the page's card title doesn't fit	None
I	Description (List Item 2 › Content)	Delivery centres and offices worldwide.	No	Overrides the description	Plain text, 1–2 sentences	None
J	Label (List Item 2 › Content)	Countries	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
K	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/about/clients	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(L)	Title (List Item 3 › Content)	1,200+	No	Overrides the card title	Only when the page's card title doesn't fit	None
M	Description (List Item 3 › Content)	Enterprises we partner with on transformation.	No	Overrides the description	Plain text, 1–2 sentences	None
N	Label (List Item 3 › Content)	Clients	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
O	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/about/sustainability	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(P)	Title (List Item 4 › Content)	100%	No	Overrides the card title	Only when the page's card title doesn't fit	None
Q	Description (List Item 4 › Content)	Our target for offices and delivery centres.	No	Overrides the description	Plain text, 1–2 sentences	None
R	Label (List Item 4 › Content)	Renewable power	No	Statistic label	Statistic cards	None
(S)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "At a glance" above four light grey cards: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power; each with the large number at the top and the label and description at the bottom.
- **Rendering behaviour:** Statistic cards are article.list-card-stat on #d9d9d9 (the statistic default) in the 2:3 shape; the number is up to 6rem on desktop, scaled down to the card width. Without a call to action the number is the card's link.
- **Publishing behaviour:** Publish the page; the four about pages should exist and be published so the links work. They needn't be indexed: every value on the cards is an item override.

Business Rules

- A List Item requires Page or link, so List statistic cards are always linked; use Cards for unlinked figures.
- Title holds the number (up to about 8 characters).
- Label renders above the description in semibold.
- Cards follow the content tree order.

Common Authoring Mistakes

Error	Root Cause	Resolution
The number wraps or is tiny	Long text in Title	Keep the number short, or use the Compact statistic title style option
The label is missing	The label typed into Description	Move it to Label on the Content tab
An item doesn't render	Page or link left empty	Pick the detail page in Page or link

Troubleshooting

- **Symptoms:** A statistic card links to a 404 page.
- **Cause:** The linked about page isn't published or the path is mistyped.
- **Resolution:** Pick the page with the page picker and publish it.
- **Verification Steps:** Clicking the card on aem.page opens the detail page.

Use Cases: Facts linked to their detail pages.

Authoring Guidelines: Fixed list; per List Item: Page or link (required), Title = the number, Label, Description; Card style = Statistic.

Business Rules: As Cards Variation 4. Because a List Item requires a link, List statistic cards are always linked (Link items off removes the links); for unlinked statistics use Cards.

Rendering Rules: `list-card-stat` with top (kicker, number) and bottom (label, description).

Responsive Behaviour: Number up to 6 / 4 / 5rem, scaled to the card width.

SEO Impact: As 6.15.3 Variation 4.

Accessibility Compliance: As 6.15.3 Variation 4.

Variation 14 — Mixed Card Style

Variation Name: Card style = Mixed (by page) (`mixed`).

Business Purpose: Each page gets the card that suits it (Figma 2, 3, 8, 9).

Visual Example:

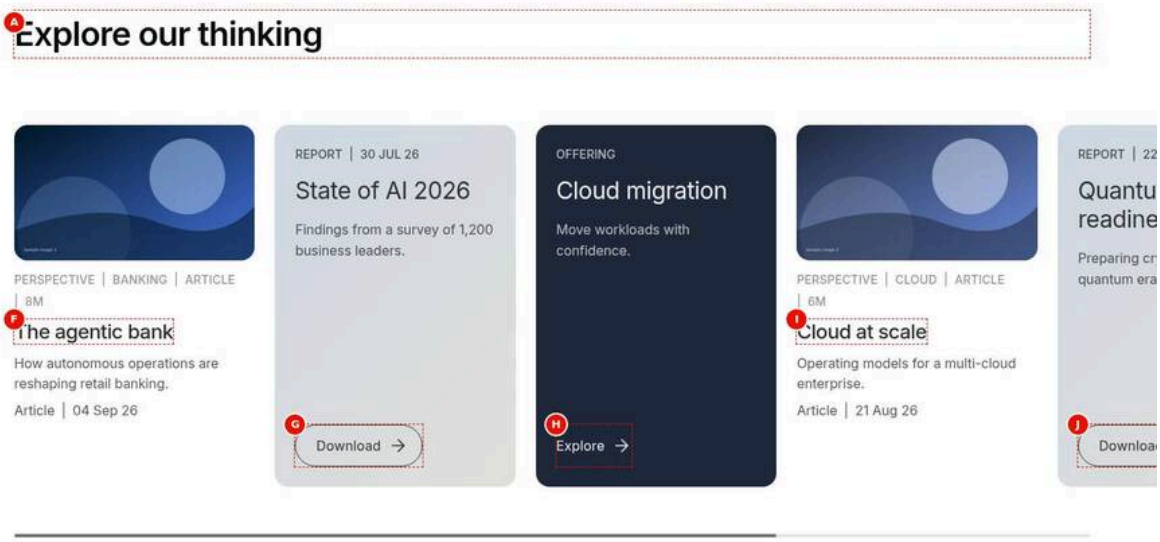

Figure 17: Mixed card style — At 1440 px the title Explore our thinking above a rail of six Mixed cards in authored order: image card The agentic bank, report card State of AI 2026, dark panel Cloud migration with Explore, image card Cloud at scale, report card Quantum readiness and image card The future of work. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-mixed.jpg)

Screenshot Details — Mixed card style

Item	Detail
Screenshot Name	`screenshots/list-mixed.jpg`
Screenshot Purpose	Mixed card style
Screen Description	At 1440 px the title Explore our thinking above a rail of six Mixed cards in authored order: image card The agentic bank, report card State of AI 2026, dark panel Cloud migration with Explore, image card Cloud at scale, report card Quantum readiness and image card The future of work.
Business Context	An Explore our thinking rail that mixes articles, reports and offerings, each shown in the card that suits it.
Author Objective	Show six selected pages in a horizontal rail with Card style Mixed (by page).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Explore our thinking	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Card style (List › Cards)	Mixed (by page)	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(C)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(D)	Tablet display (List › Layout)	Horizontal scroll	No	Grid or scroll at 600–1199 px	—	grid, horizontal-scroll
(E)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
F	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
G	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/state-of-ai-2026	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
H	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/services/cloud/migration	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
I	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/cloud-at-scale	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
J	Page or link (List Item 5 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/quantum-readiness	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
(K)	Page or link (List Item 6 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/future-of-work	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(L)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None
(M)	Card per page (Result)	Pages with an image: image cards; Report pages: report cards; Cloud migration (no image): a panel	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Explore our thinking" above a rail: an image card The agentic bank, a gradient report card State of AI 2026, a dark panel Cloud migration with Explore, an image card Cloud at scale, a report card Quantum readiness and an image card The future of work.
- **Rendering behaviour:** Mixed picks per card: content-type containing "report" gives a report card, else an image card when the page has an image, else a panel. The rail shows 4.2 / 3.3 / 1.2 cards and bleeds to the right edge; the block has style-mixed and the data layer xdm:variant "mixed".
- **Publishing behaviour:** Publish the page; the six linked pages must be published and indexed, since their content type and images decide the card kinds.

Business Rules

- An item's own Card style wins over Mixed.
- Cloud migration has no image, so it becomes a panel.
- Quantum readiness is a Report page, so it becomes a report card.
- Keep Stretch cards on so cards of different kinds line up.

Common Authoring Mistakes

Error	Root Cause	Resolution
A report shows as an image card	Its content-type isn't Report	Set content-type Report on the page and republish

Error	Root Cause	Resolution
All cards look the same	Card style left on Image card	Choose Mixed (by page)
The editor shows no cards	The items have no overrides and the index isn't available there	Check on aem.page

Troubleshooting

- **Symptoms:** On aem.page an item linking a page renders as a panel with only a title.
- **Cause:** The page isn't in the query index, so it has no image or content type.
- **Resolution:** Publish the page and wait for the index update.
- **Verification Steps:** The card shows its image or report style after a reload.

Use Cases: Insight rails mixing articles and reports.

Authoring Guidelines: Card style = Mixed; maintain `content-type` and card images on the pages.

Business Rules: An item's Card style wins; else `content-type` containing "report" → report; else image if the page has one; else panel.

Rendering Rules: `style-mixed`; data layer `xdm:variant: "mixed"`.

Responsive Behaviour: Keep Stretch cards on so rows line up.

SEO Impact: As the card kinds.

Accessibility Compliance: As the card kinds.

Variation 15 — Feature Card with Author

Variation Name: First card as feature on.

Business Purpose: Spotlight the first page with its image and author (Figma 2).

Visual Example:

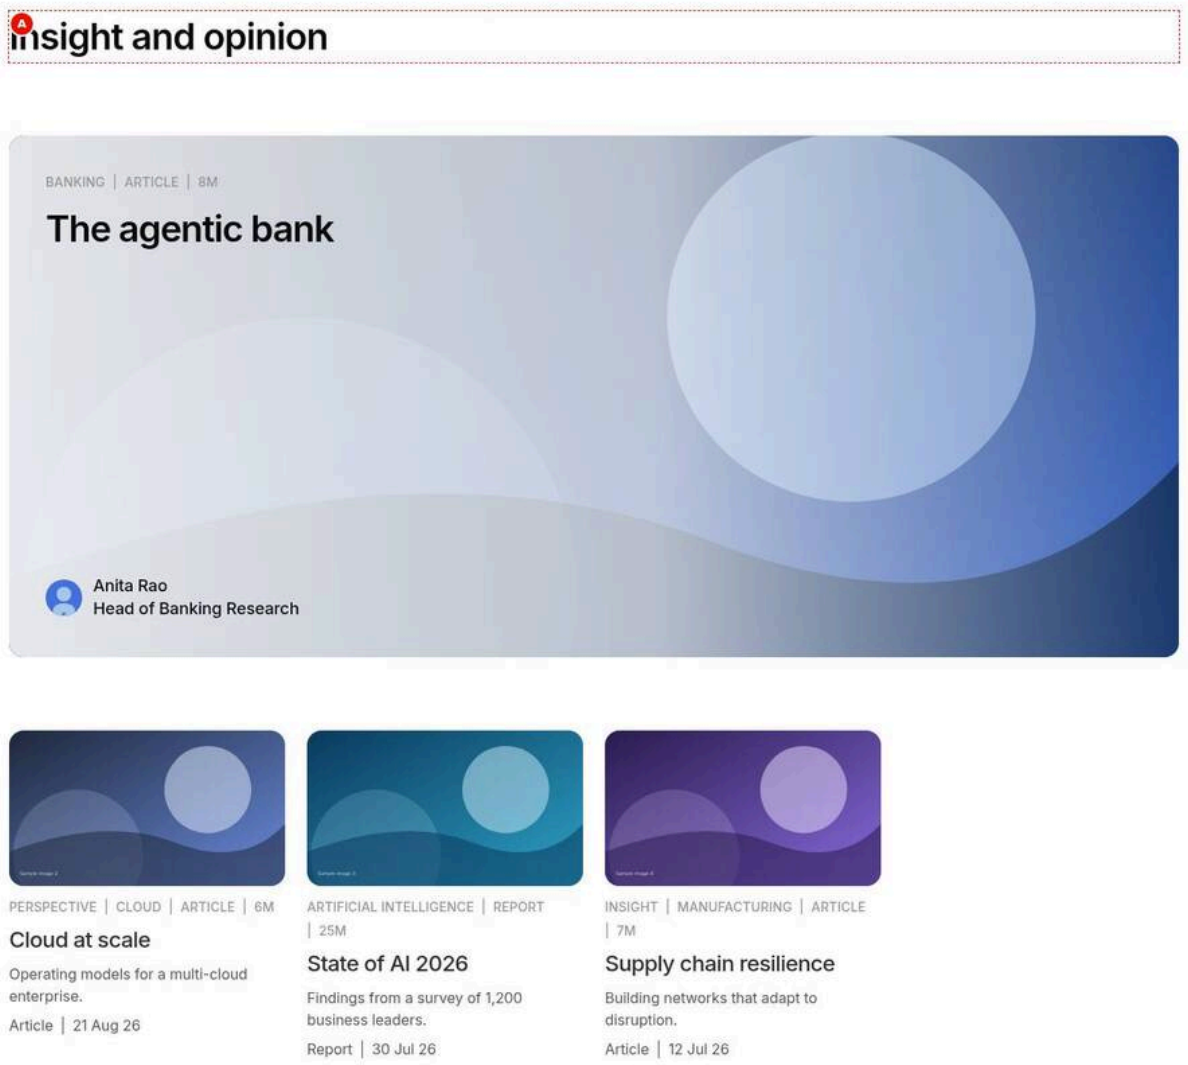

Figure 18: Feature card — At 1440 px the title Insight and opinion, a full-width feature for The agentic bank with its image, the tags Banking and Article, reading time 8m, the title and Anita Rao, Head of Banking Research, then three image cards: Cloud at scale, State of AI 2026 and Supply chain resilience. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-feature-card.jpg)

Screenshot Details — Feature card

Item	Detail
Screenshot Name	`screenshots/list-feature-card.jpg`
Screenshot Purpose	Feature card
Screen Description	At 1440 px the title Insight and opinion, a full-width feature for The agentic bank with its image, the tags Banking and Article, reading time 8m, the title and Anita Rao, Head of Banking Research, then three image cards: Cloud at scale, State of AI 2026 and Supply chain resilience.
Business Context	The lead story of an insights hub: the newest insight is spotlighted with its author, followed by three smaller cards.
Author Objective	Show the four newest insights with First card as feature on, so the newest becomes a feature card with its author.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Insight and opinion	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	4	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	First card as feature (List › Cards)	On	No	First card as a large spotlight with the author	The first page needs an image and author-id	Boolean; teaser on
(H)	Feature card (Result)	The newest page (The agentic bank, author-id arao: Anita Rao from the Authors sheet)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A full-width feature for The agentic bank: the image behind a white gradient on the left, the kicker with the tags Banking and Article and the reading time 8m, a large title and the round photo of Anita Rao with "Head of Banking Research"; below, Cloud at scale, State of AI 2026 and Supply chain resilience as image cards.
- **Rendering behaviour:** The first card after sorting and limiting becomes article.list-feature (min. height 35.625 / 27.1875 / 32.5rem); the author is looked up in /en/data/authors.json by the page's author-id. The feature always shows its image, chosen like other card images (card-image, og:image, thumbnail-image, featured-image).
- **Publishing behaviour:** Publish the page; the Authors sheet must be published, and the listed insights published and indexed with their author-id. A new newest insight takes over the feature after the index update.

Business Rules

- The author-id must match the Authors sheet exactly (arao); no match, no lockup.
- The Authors sheet is loaded only when First card as feature is on.
- Maximum items 4 includes the feature: one feature and three cards.
- The author photo is decorative; the name is text.

- The feature shows tags and reading time, not the description or date.

Common Authoring Mistakes

Error	Root Cause	Resolution
The feature has no author	author-id differs from the Authors sheet (case, spelling)	Use the sheet's author-id exactly and re-publish the page
The wrong page is the feature	Order by left on Manual (path order)	Set Order by Last modified, Descending
The feature image crops the subject	Image with the subject on the left under the text	Use a wide image with the subject on the right (2400 × 1200 px)

Troubleshooting

- **Symptoms:** The feature card shows the title and tags but no author photo or name.
- **Cause:** The Authors sheet isn't published, or the page's author-id isn't in it.
- **Resolution:** Publish /en/data/authors and check the page's authorId in the index against the sheet.
- **Verification Steps:** The feature shows Anita Rao and her designation on aem.page.

Use Cases: Lead insight of a hub.

Authoring Guidelines: Cards tab: First card as feature on; the first page (after sorting) needs an image and an `author-id` matching the Authors sheet.

Business Rules: As Cards Variation 6, plus the author lockup: the Authors sheet (`/{locale}/data/authors.json`) is loaded only when the feature is on; the page's `author-id` must equal the sheet's id exactly; no match, no lockup.

Rendering Rules: `article.list-feature` with `div.list-author` (`list-author-image` 2.5rem round photo, `list-author-name`, `list-author-designation`).

Responsive Behaviour: Min. height 35.625 / 27.1875 / 32.5rem.

SEO Impact: As 6.15.3 Variation 6.

Accessibility Compliance: The author photo is decorative (`alt=""`); the name is text.

Variation 16 — Rows of Links (Display as teaser off)

Variation Name: Display as teaser off.

Business Purpose: Text rows with large titles and arrows (Figma 5 "News").

Visual Example:

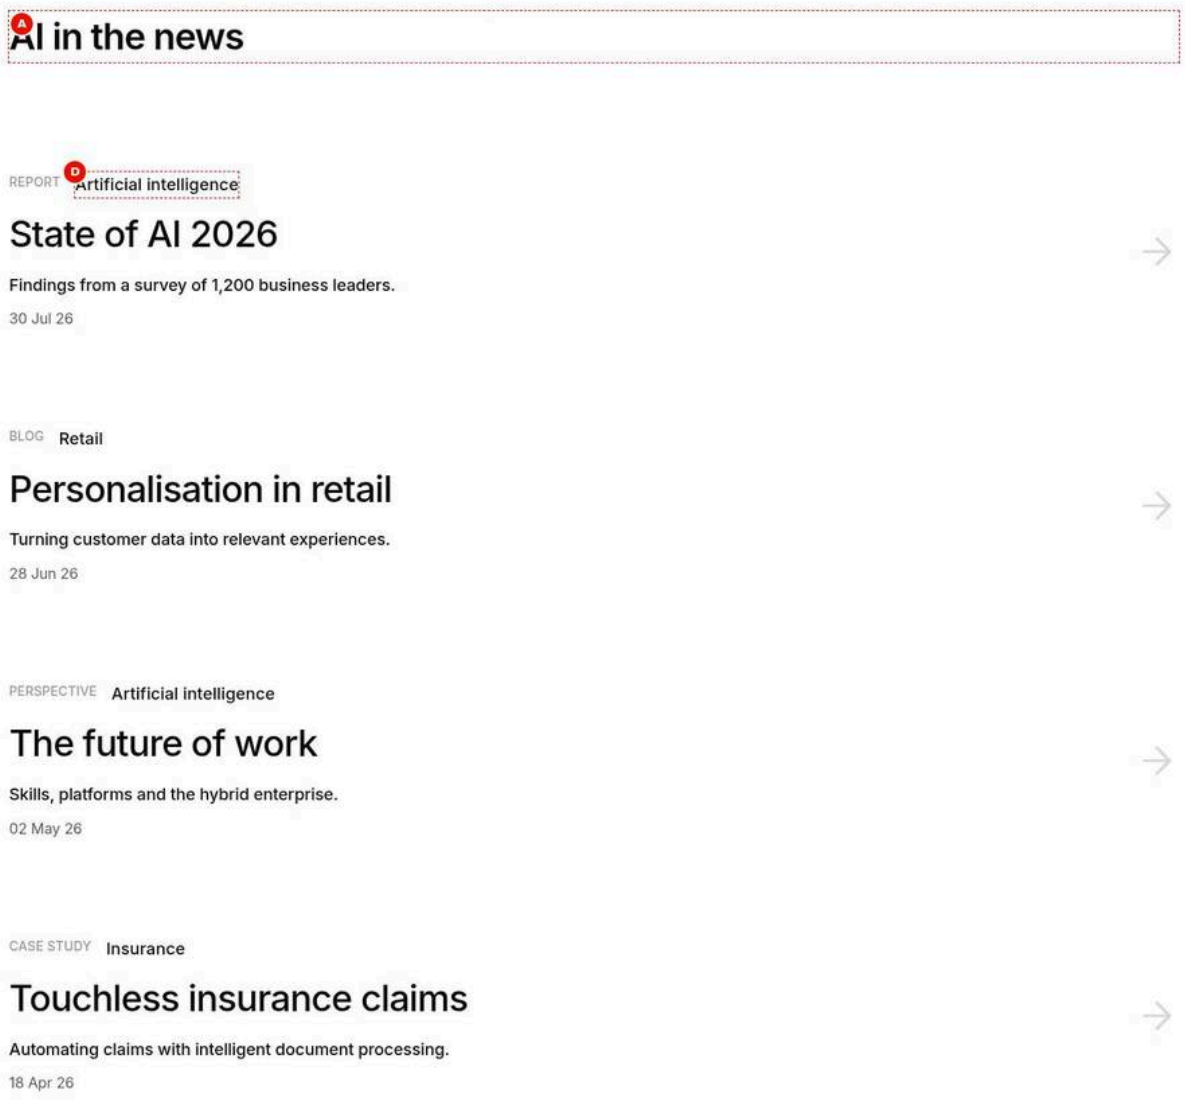

Figure 19: Rows of links — At 1440 px the title AI in the news above four rows of links, newest first: State of AI 2026, Personalisation in retail, The future of work and Touchless insurance claims, each with eyebrow or content type and a tag, a large title, description, date and an arrow, without lines. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-rows-of-links.jpg)

Screenshot Details — Rows of links

Item	Detail
Screenshot Name	`screenshots/list-rows-of-links.jpg`
Screenshot Purpose	Rows of links
Screen Description	At 1440 px the title AI in the news above four rows of links, newest first: State of AI 2026, Personalisation in retail, The future of work and Touchless insurance claims, each with eyebrow or content type and a tag, a large title, description, date and an arrow, without lines.
Business Context	A news-style list on an AI topic page: text rows with large titles suit announcements better than image cards.
Author Objective	List AI-tagged insights, newest first, as rows of links with Display as teaser off.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	AI in the news	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Tagged pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Search root (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Root of the tagged pages	The locale or a section	Shown when source = tags
D	Tags (List › Source)	Add the tags tcs-corp:topic/ai	No (needed)	Tags to match	1–3 tags	Tag IDs; child tags match; source = tags
(E)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(F)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(G)	Display as teaser (List › Cards)	Off	No	Cards (on) or rows of links (off)	Off for news-style link lists	Boolean

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "AI in the news" above four rows: State of AI 2026, Personalisation in retail, The future of work and Touchless insurance claims; each with the eyebrow or content type and a tag, a 2.5rem title, the description, the date and an arrow on the right.
- **Rendering behaviour:** Rows are article.list-row in one column; the kicker shows the eyebrow (or content type) and the first tag; the arrow is 3rem from 600 px and 2rem below. From 600 px rows have no lines unless Dividers between rows is set; on mobile they always do.
- **Publishing behaviour:** Publish the page; newly tagged insights join the list after they are published and indexed. Without Maximum items every matching page is listed.

Business Rules

- Display as teaser off ignores card style, colour, image ratio, panel height and the feature.
- Rows show no images.
- The title is the row's link; the arrow is decorative.
- The hidden draft with the AI tag (hide-in-nav = yes) is not listed.

Common Authoring Mistakes

Error	Root Cause	Resolution
The list grows very long	No Maximum items on a Tagged pages list	Set Maximum items, e.g. 5, and add a header CTA

Error	Root Cause	Resolution
Rows without lines on desktop	Dividers aren't the default from 600 px	Add Dividers between rows in Style options

Troubleshooting

- **Symptoms:** The newest AI insight isn't the first row.
- **Cause:** Order by is Manual or Sort order Ascending.
- **Resolution:** Set Order by to Last modified and Sort order to Descending.
- **Verification Steps:** The first row is the most recently modified page on aem.page.

Use Cases: News, press releases, announcement lists.

Authoring Guidelines: Cards tab: Display as teaser off; usually Order by Last modified, descending.

Business Rules: As Cards Variation 7 (kicker: eyebrow or content type, then the first tag).

Rendering Rules: Block class `links`; `article.list-row`; data layer variant `links`.

Responsive Behaviour: Title 2.5 / 2 / 1.75rem; arrow 3rem (tablet+) / 2rem.

SEO Impact: Text-rich internal links.

Accessibility Compliance: As 6.15.3 Variation 7.

Variation 17 — Card Colour "Dark"

Variation Name: Card colour = Dark (`dark`), on the block or a List Item.

Business Purpose: Dark navy-grey (#20293c) coloured cards.

Visual Example:

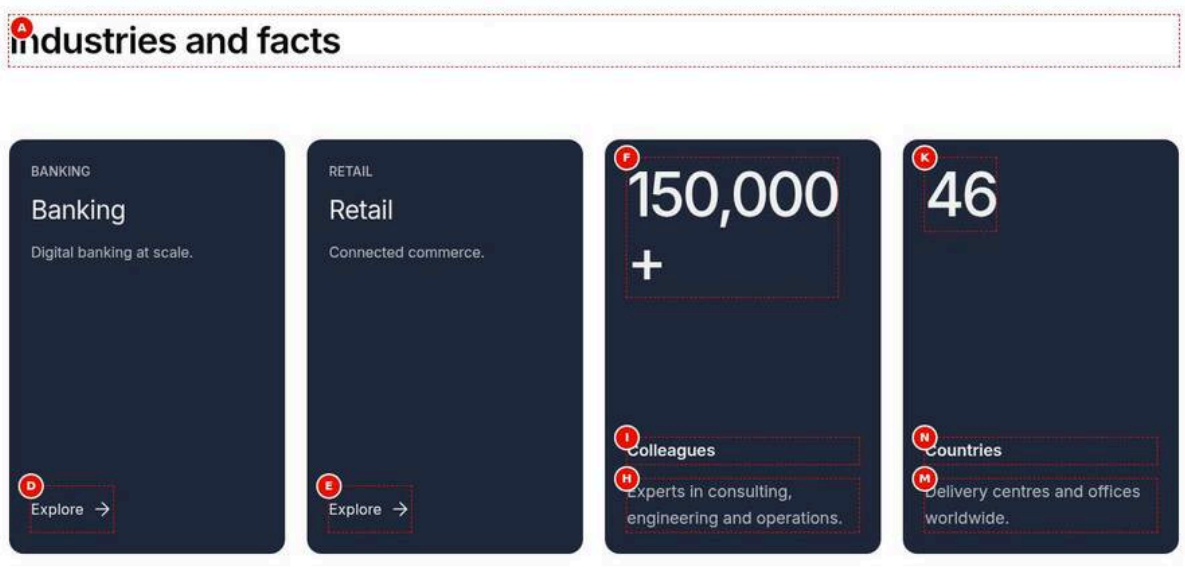

Figure 20: Dark card colour — At 1440 px the title Industries and facts above four #20293c cards with light text: the Banking and Retail panels with their tag, description and Explore, then the statistic cards 150,000+ Colleagues and 46 Countries. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-colour-dark.jpg)

Screenshot Details — Dark card colour

Item	Detail
Screenshot Name	`screenshots/list-colour-dark.jpg`

Item	Detail
Screenshot Purpose	Dark card colour
Screen Description	At 1440 px the title Industries and facts above four #20293c cards with light text: the Banking and Retail panels with their tag, description and Explore, then the statistic cards 150,000+ Colleagues and 46 Countries.
Business Context	An industries and facts band: two industry panels and two key figures share one dark colour scheme.
Author Objective	Show panels and statistic cards on the Dark card colour, with the figures set as Statistic per List Item.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Industries and facts	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Card style (List › Cards)	Panel	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(C)	Card colour (List › Cards)	Dark	No	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
D	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/industries/banking	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows

(O)	Card style (List Item 4 › Display)	Statistic	No	This item's kind	Overrides the list	'', image, panel, report, stat
(P)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Industries and facts" above four #20293c cards with light text: Banking and Retail panels with the tag kicker, description and Explore, then 150,000+ Colleagues and 46 Countries as statistic cards.
- **Rendering behaviour:** Card colour Dark gives theme-dark: background #20293c, text #f3f3f3 and muted text at 70 % white, light buttons. Items 3 and 4 use Card style Statistic from their Display tab; items 1 and 2 follow the list's Panel.
- **Publishing behaviour:** Publish the page; the Banking and Retail pages must be published and indexed for their panels, the statistic items need only their linked pages published.

Business Rules

- A List Item's Card style and Card colour win over the list's.
- Colours apply to panel, report and statistic cards, not image cards.
- Dark is also the panel default when Card colour is empty.

- Banking and Retail have no eyebrow, so their first tag is the kicker.

Common Authoring Mistakes

Error	Root Cause	Resolution
The figures render as panels	Card style Statistic not set on items 3 and 4	Set Card style Statistic on their Display tab
Banking and Retail don't show in the editor	They take their content from the index	Check on aem.page

Troubleshooting

- **Symptoms:** The statistic cards are grey while the panels are dark.
- **Cause:** Card colour was set on the panel items only, not on the List.
- **Resolution:** Set Card colour Dark on the List's Cards tab and clear the items' Card colour.
- **Verification Steps:** All four cards are #20293c on aem.page.

Use Cases: Themes, highlighted items.

Authoring Guidelines: Cards tab: Card colour = Dark, or a List Item's Display tab.

Business Rules: A List Item's colour wins; colours affect panel, report and statistic cards (not image cards); Dark is the panel default.

Rendering Rules: `theme-dark`: background #20293c, text #f3f3f3, muted 70 % white; light buttons.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: None.

Accessibility Compliance: High contrast (WCAG 1.4.3).

Variation 18 — Card Colour "Navy"

Variation Name: Card colour = Navy (`navy`).

Business Purpose: Darkest brand blue (#011627), the report colour of Figma 8 and 9.

Visual Example:

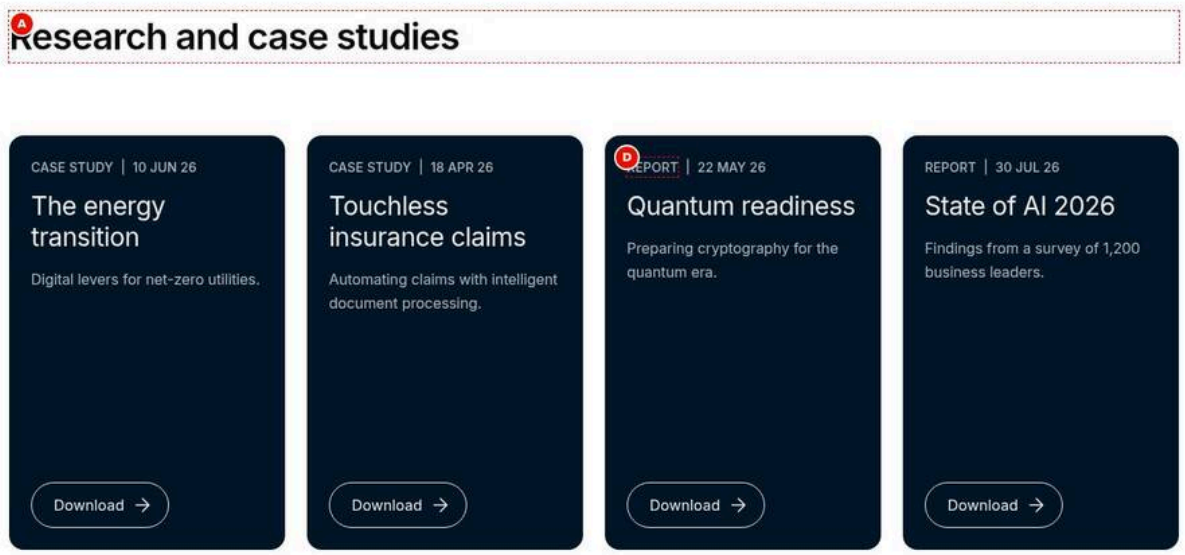

Figure 21: Navy card colour — At 1440 px the title Research and case studies above four #011627 navy report cards (The energy transition, Touchless insurance claims, Quantum readiness, State of AI 2026) with light text, content type and date, and light outlined Download buttons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-colour-navy.jpg)

Screenshot Details — Navy card colour

Item	Detail
Screenshot Name	`screenshots/list-colour-navy.jpg`
Screenshot Purpose	Navy card colour
Screen Description	At 1440 px the title Research and case studies above four #011627 navy report cards (The energy transition, Touchless insurance claims, Quantum readiness, State of AI 2026) with light text, content type and date, and light outlined Download buttons.
Business Context	The research section in the darkest brand blue used for reports in the newsroom and investor designs (Figma 8 and 9).
Author Objective	Show the tagged reports and case studies as Report cards on the Navy card colour.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Research and case studies	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Tagged pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Search root (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Root of the tagged pages	The locale or a section	Shown when source = tags

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Tags (List › Source)	Add the tags tcs-corp:content-type/report, tcs-corp:content-type/case-study	No (needed)	Tags to match	1–3 tags	Tag IDs; child tags match; source = tags
(E)	Card style (List › Cards)	Report	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(F)	Card colour (List › Cards)	Navy	No	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Research and case studies" above four #011627 report cards with light text: the content type and date, the title, the description and a light outlined "Download" button.
- **Rendering behaviour:** theme-navy sets background #011627, text #f3f3f3 and muted text at 70 % white; the secondary button takes the light text colour and inverts (light fill, navy text) on hover and keyboard focus (F-48, fixed in 1.4).
- **Publishing behaviour:** Publish the page; the report and case-study pages must be published and indexed with their tags.

Business Rules

- Navy replaces the report default gradient for every card of the list.
- A List Item's own Card colour would still win (Fixed lists).
- Download opens the page, not a file.
- Light text on navy has very high contrast.

Common Authoring Mistakes

Error	Root Cause	Resolution
The cards stay grey	Card colour left empty	Choose Navy on the Cards tab
Buttons are invisible on hover	An outdated card-list.css before 1.4	Clear the browser cache; escalate to development if it persists

Troubleshooting

- **Symptoms:** The cards are navy but the list is empty on aem.page.
- **Cause:** No indexed page below Insights carries the report or case-study tag.
- **Resolution:** Tag and republish the report pages and wait for the index update.
- **Verification Steps:** Four navy report cards show on aem.page.

Use Cases: Media coverage, investor relations.

Authoring Guidelines: Card colour = Navy.

Business Rules: As Variation 17.

Rendering Rules: `theme-navy`: #011627, text #f3f3f3, muted 70 % white.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: None.

Accessibility Compliance: Very high contrast.

Variation 19 — Card Colour "Brand blue"

Variation Name: Card colour = Brand blue (`brand`).

Business Purpose: TCS brand blue (#4673db) cards (Figma 1, 10, 13).

Visual Example:

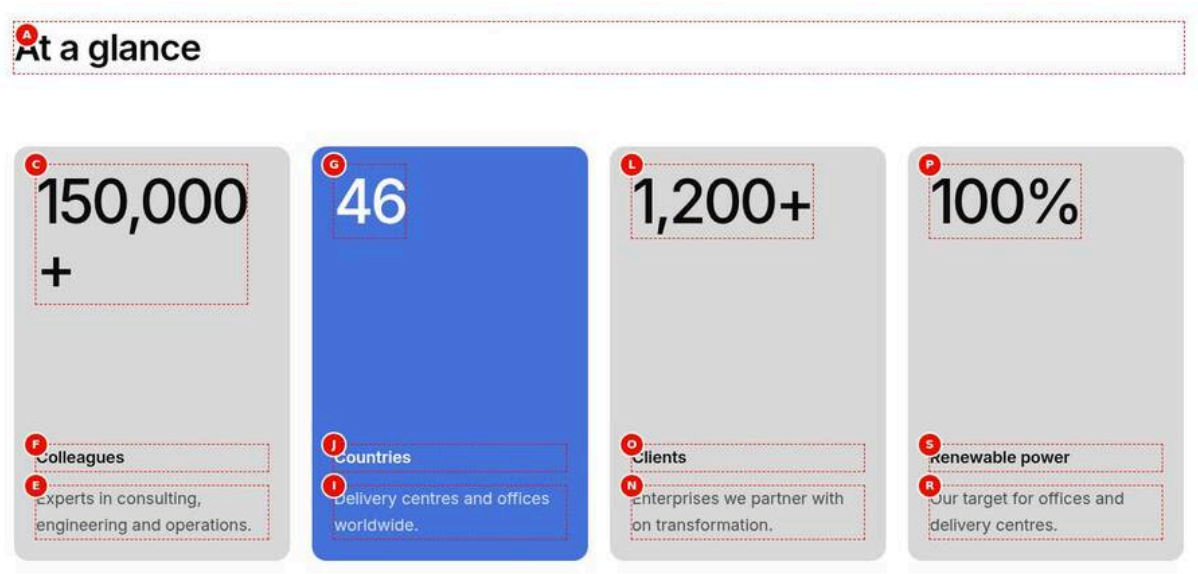

Figure 22: Brand blue card colour — At 1440 px the title At a glance above four statistic cards: 150,000+, 1,200+ and 100% on light grey, and 46 Countries on brand blue #4673db with white text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-colour-brand.jpg)

Screenshot Details — Brand blue card colour

Item	Detail
Screenshot Name	`screenshots/list-colour-brand.jpg`
Screenshot Purpose	Brand blue card colour
Screen Description	At 1440 px the title At a glance above four statistic cards: 150,000+, 1,200+ and 100% on light grey, and 46 Countries on brand blue #4673db with white text.
Business Context	An At a glance band where one figure, the number of countries, is highlighted in TCS brand blue.
Author Objective	Give the second statistic card the Brand blue Card colour while the others keep the grey default.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	At a glance	No	Heading of the list	Short and descriptive; up to 60 char-	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					acters (Recommended)	
(B)	Card style (List › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
C	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/about/our-people	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(D)	Title (List Item 1 › Content)	150,000+	No	Overrides the card title	Only when the page's card title doesn't fit	None
E	Description (List Item 1 › Content)	Experts in consulting, engineering and operations.	No	Overrides the description	Plain text, 1–2 sentences	None
F	Label (List Item 1 › Content)	Colleagues	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
G	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/about/locations	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(H)	Title (List Item 2 › Content)	46	No	Overrides the card title	Only when the page's card title doesn't fit	None
I	Description (List Item 2 › Content)	Delivery centres and offices worldwide.	No	Overrides the description	Plain text, 1–2 sentences	None
J	Label (List Item 2 › Content)	Countries	No	Statistic label	Statistic cards	None
(K)	Card colour (List Item 2 › Display)	Brand blue	No	This item's colour	Overrides the list	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
L	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/about/clients	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(M)	Title (List Item 3 › Content)	1,200+	No	Overrides the card title	Only when the page's card title doesn't fit	None
N	Description (List Item 3 › Content)	Enterprises we partner with on transformation.	No	Overrides the description	Plain text, 1–2 sentences	None
O	Label (List Item 3 › Content)	Clients	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
P	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/about/sustainability	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(Q)	Title (List Item 4 › Content)	100%	No	Overrides the card title	Only when the page's card title doesn't fit	None
R	Description (List Item 4 › Content)	Our target for offices and delivery centres.	No	Overrides the description	Plain text, 1–2 sentences	None
S	Label (List Item 4 › Content)	Renewable power	No	Statistic label	Statistic cards	None
(T)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "At a glance" above four statistic cards: 150,000+, 1,200+ and 100% on light grey, and 46 Countries on brand blue #4673db with white text.
- **Rendering behaviour:** Item 2's Card colour adds theme-brand: background #4673db, white text and muted text at 60 % white; the other cards use the statistic default #d9d9d9.
- **Publishing behaviour:** Publish the page; the linked about pages should be published so the card links work.

Business Rules

- An item's Card colour wins over the list's colour and the style default.
- White on #4673db is about 4.2:1, AA for large text only (F-28, open): keep descriptions short.
- Use one highlight colour per row for emphasis.
- The number stays large; only the colours change.

Common Authoring Mistakes

Error	Root Cause	Resolution
All four cards turn blue	Card colour set on the List instead of item 2	Clear the List's Card colour and set it on List Item 2
The description is hard to read	Small white text on brand blue	Shorten the description

Troubleshooting

- **Symptoms:** The second card stays grey.
- **Cause:** Card colour was set on another item, or left As the list.
- **Resolution:** Select List Item 2 in the content tree and choose Brand blue on its Display tab.
- **Verification Steps:** The 46 Countries card is brand blue in the editor and on aem.page.

Use Cases: Highlighting one item.

Authoring Guidelines: Card colour = Brand blue.

Business Rules: As Variation 17.

Rendering Rules: `theme-brand`: #4673db, text white, muted 60 % white.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: None.

Accessibility Compliance: White on #4673db ≈ 4.2:1 — AA for large text only (see 6.15.3 Variation 10).

Variation 20 — Card Colour "Light blue"

Variation Name: Card colour = Light blue (`brand-light`).

Business Purpose: Brand tint #a7c8f1 (Figma 13).

Visual Example:

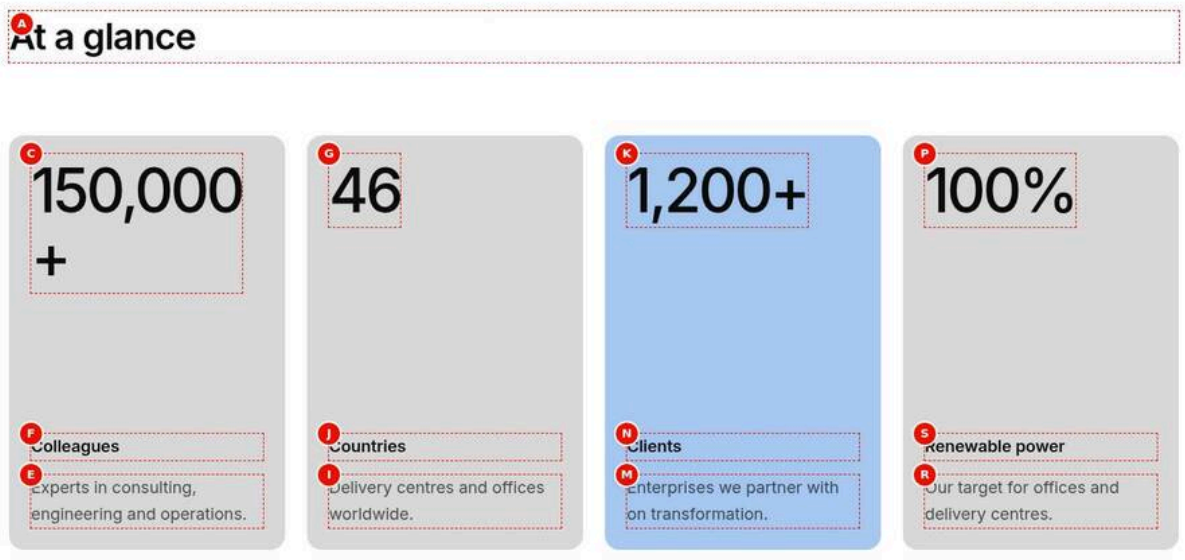

Figure 23: Light blue card colour — At 1440 px the title At a glance above four statistic cards: 150,000+, 46 and 100% on light grey, and 1,200+ Clients on light blue #a7c8f1 with black text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-colour-brand-light.jpg)

Screenshot Details — Light blue card colour

Item	Detail
Screenshot Name	`screenshots/list-colour-brand-light.jpg`
Screenshot Purpose	Light blue card colour
Screen Description	At 1440 px the title At a glance above four statistic cards: 150,000+, 46 and 100% on light grey, and 1,200+ Clients on light blue #a7c8f1 with black text.
Business Context	An At a glance band in which the clients figure is set off in the light brand tint used in Figma variation 13.

Item	Detail
Author Objective	Give the third statistic card the Light blue Card colour.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	At a glance	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Card style (List › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
C	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/about/our-people	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(D)	Title (List Item 1 › Content)	150,000+	No	Overrides the card title	Only when the page's card title doesn't fit	None
E	Description (List Item 1 › Content)	Experts in consulting, engineering and operations.	No	Overrides the description	Plain text, 1–2 sentences	None
F	Label (List Item 1 › Content)	Colleagues	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
G	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/about/locations	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(H)	Title (List Item 2 › Content)	46	No	Overrides the card title	Only when the page's card title doesn't fit	None
I	Description (List Item 2 › Content)	Delivery centres and offices worldwide.	No	Overrides the description	Plain text, 1–2 sentences	None
J	Label (List Item 2 › Content)	Countries	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree,	Only the item types the List allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick List Item	
K	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/about/clients	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(L)	Title (List Item 3 › Content)	1,200+	No	Overrides the card title	Only when the page's card title doesn't fit	None
M	Description (List Item 3 › Content)	Enterprises we partner with on transformation.	No	Overrides the description	Plain text, 1–2 sentences	None
N	Label (List Item 3 › Content)	Clients	No	Statistic label	Statistic cards	None
(O)	Card colour (List Item 3 › Display)	Light blue	No	This item's colour	Overrides the list	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
P	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/about/sustainability	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(Q)	Title (List Item 4 › Content)	100%	No	Overrides the card title	Only when the page's card title doesn't fit	None
R	Description (List Item 4 › Content)	Our target for offices and delivery centres.	No	Overrides the description	Plain text, 1–2 sentences	None
S	Label (List Item 4 › Content)	Renewable power	No	Statistic label	Statistic cards	None
(T)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "At a glance" above four statistic cards: three on light grey and 1,200+ Clients on light blue #a7c8f1 with black text.
- **Rendering behaviour:** Item 3's Card colour adds theme-brand-light: background #a7c8f1, text #0c0c0d and muted text at 70 % black; the others keep the statistic default.
- **Publishing behaviour:** Publish the page; the linked about pages should be published so the card links work.

Business Rules

- An item's Card colour wins over the list's colour.
- Black on #a7c8f1 meets WCAG 1.4.3.

- Light blue suits rows of several colours (Figma 13).
- The colour has no effect on image cards.

Common Authoring Mistakes

Error	Root Cause	Resolution
The wrong card is light blue	Card colour set on another List Item	Set it on List Item 3 and reset the other
No colour change	Card colour left As the list	Choose Light blue on the item's Display tab

Troubleshooting

- **Symptoms:** The light blue card looks identical to the grey ones on aem.page.
- **Cause:** The page wasn't republished after the item change.
- **Resolution:** Publish the page again.
- **Verification Steps:** The 1,200+ card shows #a7c8f1 on aem.page.

Use Cases: Colour rows of statistics.

Authoring Guidelines: Card colour = Light blue.

Business Rules: As Variation 17.

Rendering Rules: `theme-brand-light`: #a7c8f1, text #0c0c0d, muted 70 % black.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: None.

Accessibility Compliance: Meets WCAG 1.4.3.

Variation 21 — Card Colour "Light grey"

Variation Name: Card colour = Light grey (`grey`).

Business Purpose: Neutral #d9d9d9 (the statistic default; Figma 6).

Visual Example:

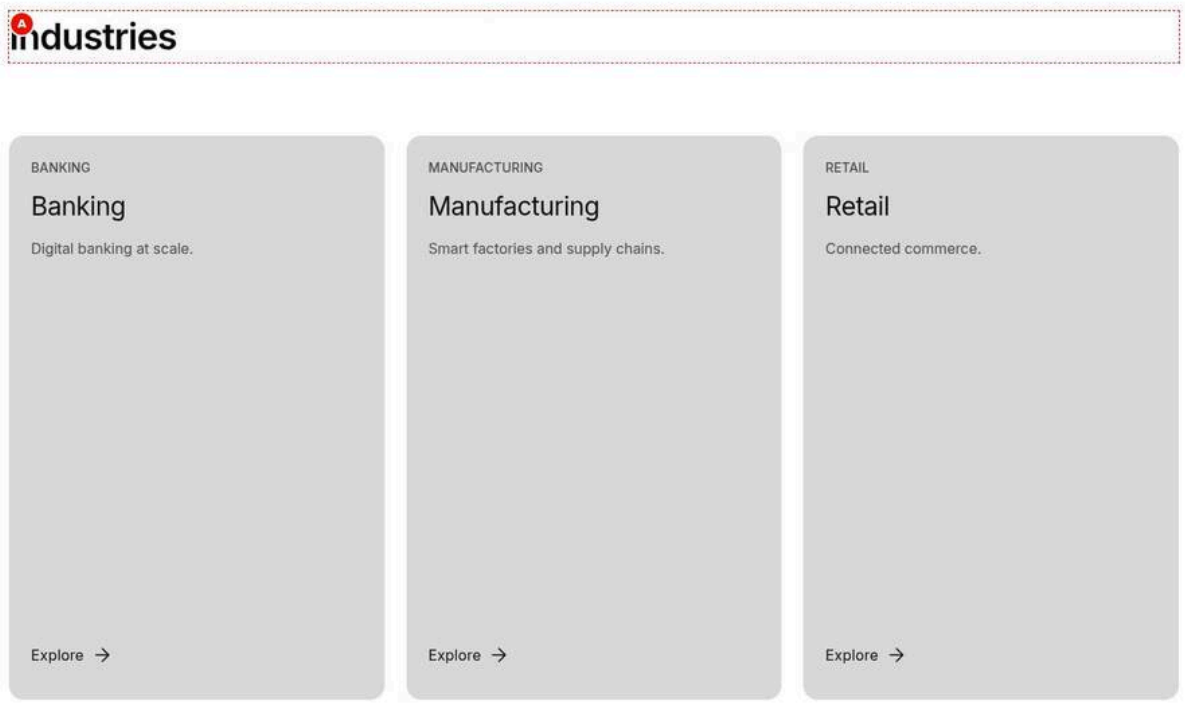

Figure 24: Light grey card colour — At 1440 px the title Industries above three tall light grey #d9d9d9 panels in one row (Banking, Manufacturing, Retail) with black titles, the industry tag as kicker, the description and Explore. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-colour-grey.jpg)

Screenshot Details — Light grey card colour

Item	Detail
Screenshot Name	`screenshots/list-colour-grey.jpg`
Screenshot Purpose	Light grey card colour
Screen Description	At 1440 px the title Industries above three tall light grey #d9d9d9 panels in one row (Banking, Manufacturing, Retail) with black titles, the industry tag as kicker, the description and Explore.
Business Context	A calm industries overview: the industry pages as neutral grey panels, for sections where dark tiles would dominate the page.
Author Objective	List the child pages of Industries as Panel cards on the Light grey colour in three desktop columns.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Industries	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/industries	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Card style (List › Cards)	Panel	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(E)	Card colour (List › Cards)	Light grey	No	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on
(F)	Desktop columns (List › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Industries" above three tall #d9d9d9 panels (Banking, Manufacturing, Retail) with black titles, the industry tag as kicker, the description and an Explore text button.
- **Rendering behaviour:** theme-grey sets background #d9d9d9, text #0c0c0d and muted text at 70 % black; the tertiary Explore button takes the dark text colour. Desktop columns 3 gives one row on desktop; tablet keeps its default 4 columns.
- **Publishing behaviour:** Publish the page; the industry pages must be published and indexed. New industry pages appear after the index update.

Business Rules

- Light grey is also the statistic default, so it suits rows that mix panels and figures.
- Panels keep the 2:3 shape; long descriptions are clipped.
- Desktop columns applies only at 1200 px and wider.
- Black on #d9d9d9 meets WCAG 1.4.3.

Common Authoring Mistakes

Error	Root Cause	Resolution
Four columns with an empty slot on tablet	Tablet columns left at 4	Set Tablet columns to 3
Panels are dark	Card colour left empty (panel default Dark)	Choose Light grey

Troubleshooting

- **Symptoms:** On aem.page the end of a panel description is cut off.
- **Cause:** Panel height Portrait (2:3) clips text that doesn't fit, here a long card-description.
- **Resolution:** Shorten the page's card-description (about 120 characters) or set Panel height to Content.
- **Verification Steps:** The whole description shows inside the grey panel on aem.page.

Use Cases: Calm panels and statistics.

Authoring Guidelines: Card colour = Light grey.

Business Rules: As Variation 17.

Rendering Rules: `theme-grey`: #d9d9d9, text #0c0c0d, muted 70 % black.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: None.

Accessibility Compliance: Meets WCAG 1.4.3.

Variation 22 — Card Colour "Mid grey"

Variation Name: Card colour = Mid grey (`mid-grey`).

Business Purpose: Darker neutral #999 (Figma 13).

Visual Example:

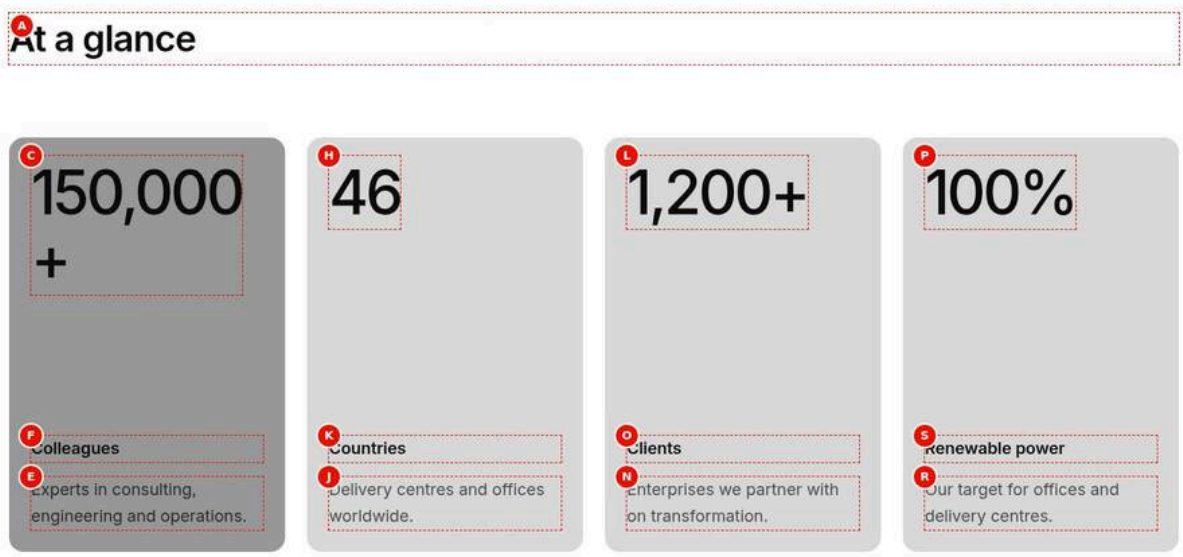

Figure 25: Mid grey card colour — At 1440 px the title At a glance above four statistic cards: 150,000+ Colleagues on mid grey #999 with black text, then 46, 1,200+ and 100% on light grey. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-colour-mid-grey.jpg)

Screenshot Details — Mid grey card colour

Item	Detail
Screenshot Name	`screenshots/list-colour-mid-grey.jpg`
Screenshot Purpose	Mid grey card colour
Screen Description	At 1440 px the title At a glance above four statistic cards: 150,000+ Colleagues on mid grey #999 with black text, then 46, 1,200+ and 100% on light grey.
Business Context	An At a glance band in which the headcount figure is set in the darker neutral of Figma variation 13.
Author Objective	Give the first statistic card the Mid grey Card colour.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Title (List › Content)	At a glance	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Card style (List › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
C	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/about/our-people	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(D)	Title (List Item 1 › Content)	150,000+	No	Overrides the card title	Only when the page's card title doesn't fit	None
E	Description (List Item 1 › Content)	Experts in consulting, engineering and operations.	No	Overrides the description	Plain text, 1–2 sentences	None
F	Label (List Item 1 › Content)	Colleagues	No	Statistic label	Statistic cards	None
(G)	Card colour (List Item 1 › Display)	Mid grey	No	This item's colour	Overrides the list	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
H	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/about/locations	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(I)	Title (List Item 2 › Content)	46	No	Overrides the card title	Only when the page's card title doesn't fit	None
J	Description (List Item 2 › Content)	Delivery centres and offices worldwide.	No	Overrides the description	Plain text, 1–2 sentences	None
K	Label (List Item 2 › Content)	Countries	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
L	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/about/clients	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(M)	Title (List Item 3 › Content)	1,200+	No	Overrides the card title	Only when the page's card title doesn't fit	None
N	Description (List Item 3 › Content)	Enterprises we partner with on transformation.	No	Overrides the description	Plain text, 1–2 sentences	None
O	Label (List Item 3 › Content)	Clients	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
P	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/about/sustainability	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(Q)	Title (List Item 4 › Content)	100%	No	Overrides the card title	Only when the page's card title doesn't fit	None
R	Description (List Item 4 › Content)	Our target for offices and delivery centres.	No	Overrides the description	Plain text, 1–2 sentences	None
S	Label (List Item 4 › Content)	Renewable power	No	Statistic label	Statistic cards	None
(T)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "At a glance" above four statistic cards: 150,000+ Colleagues on mid grey #999 with black text, then 46, 1,200+ and 100% on the light grey default.
- **Rendering behaviour:** Item 1's Card colour adds theme-mid-grey: background #999, text #0c0c0d and muted text in –black-600; the other three keep #d9d9d9.
- **Publishing behaviour:** Publish the page; the linked about pages should be published so the card links work.

Business Rules

- An item's Card colour wins over the list's colour.
- Black on #999 is about 6.9:1; check the muted description text.
- Mid grey and light grey side by side differ only slightly; use it in multi-colour rows.
- Colours don't affect image cards.

Common Authoring Mistakes

Error	Root Cause	Resolution
The difference to the other cards is barely visible	Mid grey next to light grey cards	Combine it with brand colours as in Figma 13
Every card is mid grey	Card colour set on the List	Set it on List Item 1 only

Troubleshooting

- **Symptoms:** The first card keeps the light grey colour.
- **Cause:** Card colour was set on another List Item.
- **Resolution:** Select List Item 1 in the content tree and choose Mid grey on its Display tab.
- **Verification Steps:** The 150,000+ card is #999 in the editor and on aem.page.

Use Cases: Four-up colour rows.

Authoring Guidelines: Card colour = Mid grey.

Business Rules: As Variation 17.

Rendering Rules: `theme-mid-grey`: #999, text #0c0c0d, muted `--black-600`.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: None.

Accessibility Compliance: Black on #999 ≈ 6.9:1; check the muted text.

Variation 23 — Card Colour "Grey gradient"

Variation Name: Card colour = Grey gradient (`gradient`).

Business Purpose: The report gradient on any card kind (Figma 13).

Visual Example:

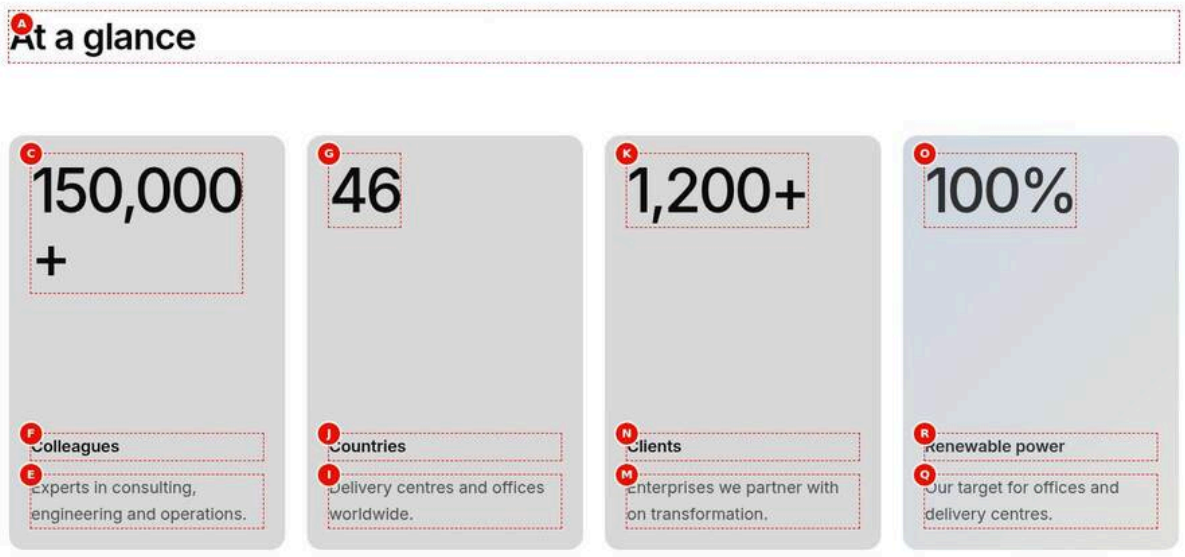

Figure 26: Grey gradient card colour — At 1440 px the title At a glance above four statistic cards: 150,000+, 46 and 1,200+ on light grey, and 100% Renewable power on the diagonal grey gradient. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-colour-gradient.jpg)

Screenshot Details — Grey gradient card colour

Item	Detail
Screenshot Name	`screenshots/list-colour-gradient.jpg`
Screenshot Purpose	Grey gradient card colour
Screen Description	At 1440 px the title At a glance above four statistic cards: 150,000+, 46 and 1,200+ on light grey, and 100% Renewable power on the diagonal grey gradient.

Item	Detail
Business Context	An At a glance band whose sustainability figure takes the report gradient, so it matches report cards elsewhere on the page.
Author Objective	Give the fourth statistic card the Grey gradient Card colour.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
