(D)	Title (List Item 1 › Content)	150,000+	No	Overrides the card title	Only when the page's card title doesn't fit	None
E	Description (List Item 1 › Content)	Experts in consulting, engineering and operations.	No	Overrides the description	Plain text, 1–2 sentences	None
F	Label (List Item 1 › Content)	Colleagues	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
G	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/about/locations	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(H)	Title (List Item 2 › Content)	46	No	Overrides the card title	Only when the page's card title doesn't fit	None
I	Description (List Item 2 › Content)	Delivery centres and offices worldwide.	No	Overrides the description	Plain text, 1–2 sentences	None
J	Label (List Item 2 › Content)	Countries	No	Statistic label	Statistic cards	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
K	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/about/clients	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(L)	Title (List Item 3 › Content)	1,200+	No	Overrides the card title	Only when the page's card title doesn't fit	None
M	Description (List Item 3 › Content)	Enterprises we partner with on transformation.	No	Overrides the description	Plain text, 1–2 sentences	None
N	Label (List Item 3 › Content)	Clients	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
O	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/about/sustainability	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(P)	Title (List Item 4 › Content)	100%	No	Overrides the card title	Only when the page's card title doesn't fit	None
Q	Description (List Item 4 › Content)	Our target for offices and delivery centres.	No	Overrides the description	Plain text, 1–2 sentences	None
R	Label (List Item 4 › Content)	Renewable power	No	Statistic label	Statistic cards	None
(S)	Card colour (List Item 4 › Display)	Grey gradient	No	This item's colour	Overrides the list	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image
(T)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "At a glance" above four statistic cards: three on light grey and 100% Renewable power on the diagonal grey gradient with dark text.
- **Rendering behaviour:** Item 4's Card colour adds theme-gradient: linear-gradient(135deg, #cfd9e3, #e2e1dd) with text #303030 and muted text at 70 % black.
- **Publishing behaviour:** Publish the page; the linked about pages should be published so the card links work.

Business Rules

- Grey gradient is the report card default and can be used on any coloured card kind.
- An item's Card colour wins over the list's colour.
- Dark text on the gradient meets WCAG 1.4.3.
- Image cards ignore the colour.

Common Authoring Mistakes

Error	Root Cause	Resolution
The gradient appears on the wrong card	Card colour set on another List Item	Set it on List Item 4
No gradient visible	Card colour left As the list	Choose Grey gradient on List Item 4's Display tab

Troubleshooting

- **Symptoms:** The fourth card is light grey on aem.page but gradient in the editor.
- **Cause:** The change wasn't published.
- **Resolution:** Publish the page again.
- **Verification Steps:** The 100% card shows the gradient on aem.page.

Use Cases: Matching statistics to report cards.

Authoring Guidelines: Card colour = Grey gradient.

Business Rules: As Variation 17.

Rendering Rules: `theme-gradient`: `linear-gradient(135deg, #cfd9e3, #e2e1dd)`, text #303030.

Responsive Behaviour: Same on every breakpoint.

SEO Impact: None.

Accessibility Compliance: Meets WCAG 1.4.3.

Variation 24 — Card Colour "Image background"

Variation Name: Card colour = Image background (`image`).

Business Purpose: Panels with the page's (or item's) image behind the text (Figma 1).

Visual Example:

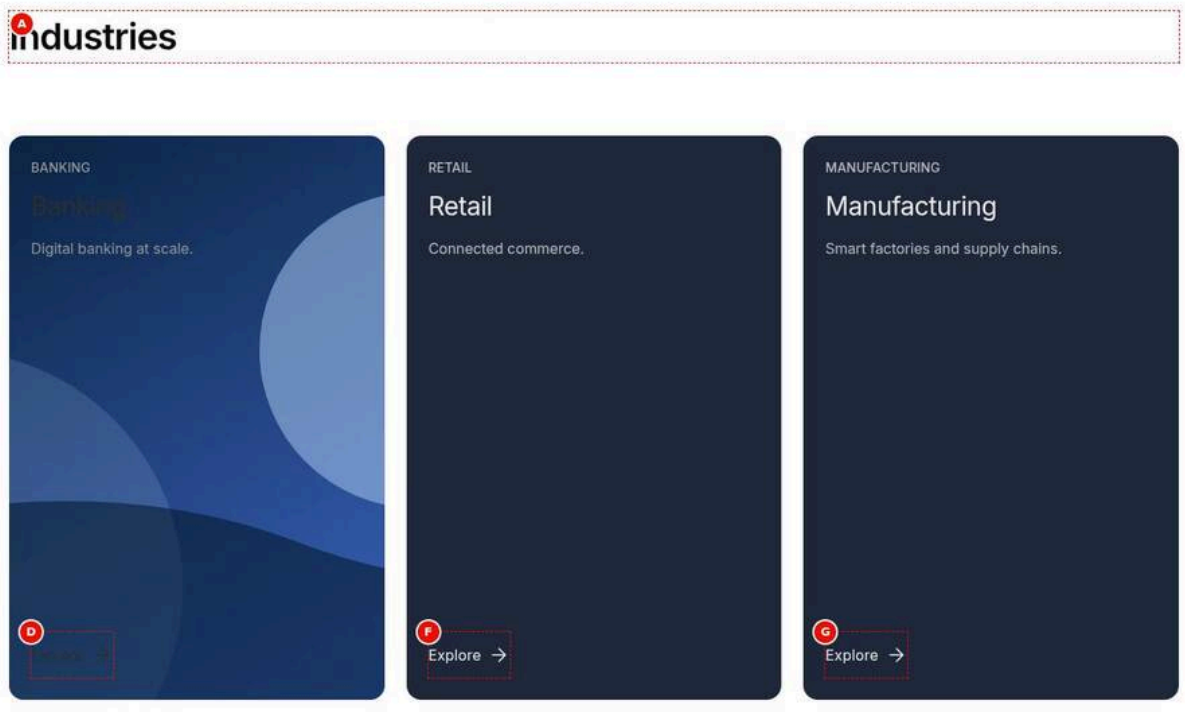

Figure 27: Image background card colour — At 1440 px the title Industries above three tall panels in one row: Banking filled with its photograph behind the tag, title, description and Explore, then Retail and Manufacturing as dark #20293c panels. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-colour-image.jpg)

Screenshot Details — Image background card colour

Item	Detail
Screenshot Name	`screenshots/list-colour-image.jpg`
Screenshot Purpose	Image background card colour
Screen Description	At 1440 px the title Industries above three tall panels in one row: Banking filled with its photograph behind the tag, title, description and Explore, then Retail and Manufacturing as dark #20293c panels.
Business Context	An industries row in which the Banking tile carries photography behind its text, as in the Themes design (Figma 1).
Author Objective	Build a Fixed list of three industry panels and give the first the Image background Card colour.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Industries	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Card style (List › Cards)	Panel	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed;

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
						shown when teaser on
(C)	Desktop columns (List › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
D	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/industries/banking	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(E)	Card colour (List Item 1 › Display)	Image background	No	This item's colour	Overrides the list	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
F	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/industries/retail	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
G	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/industries/manufacturing	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(H)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Industries" above three tall panels: Banking filled with its photograph behind the tag kicker, title, description and Explore; Retail and Manufacturing as dark #20293c panels.
- **Rendering behaviour:** theme-image positions the card image absolutely to cover the panel (requested at 1600 px from 900 px, else 750 px) with no overlay; only panels render it. Desktop columns 3 gives one row on desktop; tablet keeps 4 columns.
- **Publishing behaviour:** Publish the page; the three industry pages and their images must be published and indexed, because the background image comes from Banking's metadata.

Business Rules

- Image background needs an image: the page's card image or the item's Image override.
- Report and statistic cards ignore Image background.

- There is no overlay: choose calm images so the text stays readable.
- Items without overrides show on aem.page, not in the editor (index).

Common Authoring Mistakes

Error	Root Cause	Resolution
The Banking panel shows no picture	The page has no card-image or thumbnail-image	Add an Image override on List Item 1
Text is unreadable on the photo	A busy or dark image without overlay	Pick a calmer image with an Image override
All panels have photos	Card colour Image background set on the List	Set it on List Item 1 only

Troubleshooting

- **Symptoms:** The Banking panel is plain grey on aem.page.
- **Cause:** The Banking page's image isn't in the index or the asset isn't published.
- **Resolution:** Publish the image and the Banking page, or set an Image override with alt text on List Item 1.
- **Verification Steps:** The panel shows the photograph behind the text on aem.page.

Use Cases: Theme tiles with photography.

Authoring Guidelines: Card style Panel; Card colour Image background (usually on one List Item); the page or item needs an image.

Business Rules: As 6.15.3 Variation 15: only panels render the image; report and statistic cards ignore it.

Rendering Rules: `theme-image`; the media absolute and cover; 1600 / 750 px images.

Responsive Behaviour: Cropped to the panel shape.

SEO Impact: Real `<img>` with alt.

Accessibility Compliance: No overlay: pick calm images for text contrast.

Variation 25 — Image Ratio 1:1

Variation Name: Image ratio = 1:1.

Business Purpose: Square card images (Figma 2, 4, 11).

Visual Example:

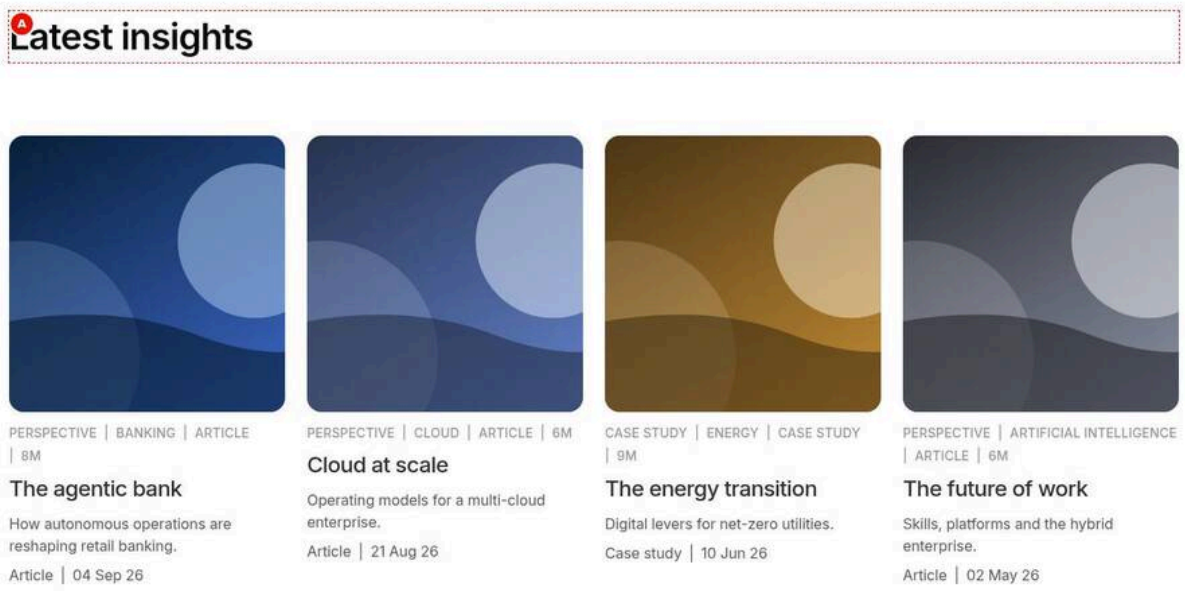

Figure 28: Square image ratio — At 1440 px the title Latest insights above four image cards with square images: The agentic bank, Cloud at scale, The energy transition and The future of work. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-ratio-1-1.jpg)

Screenshot Details — Square image ratio

Item	Detail
Screenshot Name	`screenshots/list-ratio-1-1.jpg`
Screenshot Purpose	Square image ratio
Screen Description	At 1440 px the title Latest insights above four image cards with square images: The agentic bank, Cloud at scale, The energy transition and The future of work.
Business Context	An insights grid with square images, as in the Insight & Opinion and 2-up designs (Figma 2, 4 and 11).
Author Objective	Show four child pages of Insights as image cards with square images.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(D)	Maximum items (List › Source)	4	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(E)	Image ratio (List › Cards)	1:1	No	Image shape of image cards	Match the photography	16-9, 1-1, 4-3, 3-2; teaser on

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest insights" above four image cards (The agentic bank, Cloud at scale, The energy transition, The future of work) whose images are square and cropped to cover.
- **Rendering behaviour:** Image ratio 1:1 adds ratio-1-1 and sets aspect-ratio 1 on the card media with object-fit cover, on every breakpoint. Order by Manual gives path order; Maximum items 4.
- **Publishing behaviour:** Publish the page; the insights and their images must be published and indexed.

Business Rules

- Image ratio affects image cards only.
- Cropping is centred: keep the subject in the middle of the image.
- Recommended source for square images: 1200 × 1200 px.
- Other ratios: 16:9 (default), 4:3, 3:2.

Common Authoring Mistakes

Error	Root Cause	Resolution
Heads or text are cut off	Wide photography cropped to a square	Set a dedicated square card-image on the page
No change visible	Card style Panel, Report or Statistic	Use Image card or Mixed

Troubleshooting

- **Symptoms:** The images still look 16:9 on aem.page.
- **Cause:** The page wasn't republished after changing Image ratio.
- **Resolution:** Publish the page again.
- **Verification Steps:** The block has the class ratio-1-1 and the images are square.

Use Cases: Insight grids.

Authoring Guidelines: Cards tab: Image ratio = 1:1.

Business Rules: Image cards only.

Rendering Rules: `ratio-1-1`; `aspect-ratio: 1`, cover.

Responsive Behaviour: Square on every breakpoint.

SEO Impact: None.

Accessibility Compliance: Cropping must keep the described content.

Variation 26 — Image Ratio 4:3

Variation Name: Image ratio = 4:3.

Business Purpose: Taller landscape images.

Visual Example:

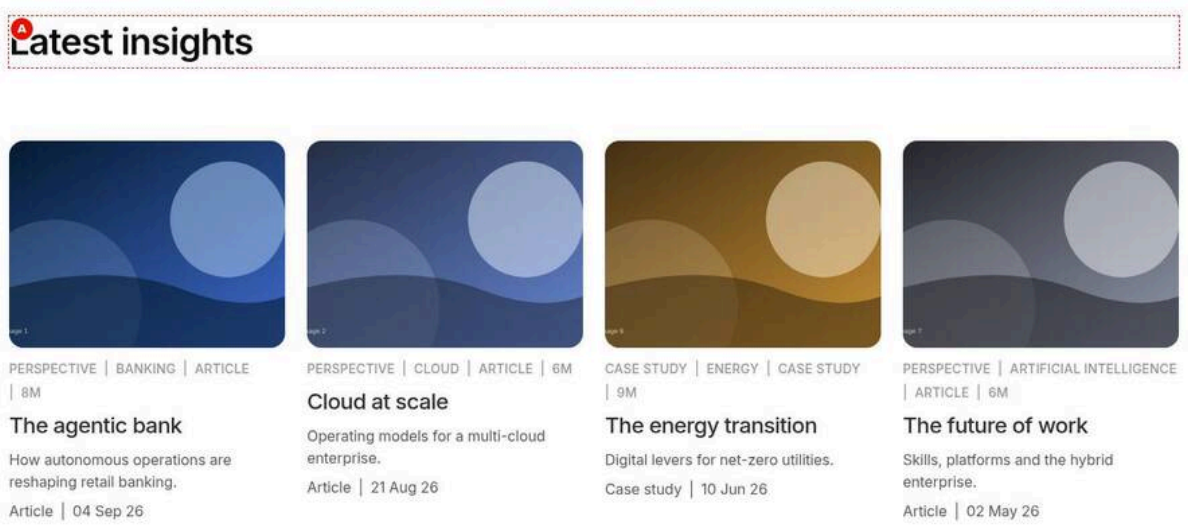

Figure 29: 4:3 image ratio — At 1440 px the title Latest insights above four image cards with 4:3 images: The agentic bank, Cloud at scale, The energy transition and The future of work. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-ratio-4-3.jpg)

Screenshot Details — 4:3 image ratio

Item	Detail
Screenshot Name	`screenshots/list-ratio-4-3.jpg`
Screenshot Purpose	4:3 image ratio
Screen Description	At 1440 px the title Latest insights above four image cards with 4:3 images: The agentic bank, Cloud at scale, The energy transition and The future of work.
Business Context	An insights grid with taller landscape images for people and product photography.
Author Objective	Show four child pages of Insights as image cards with 4:3 images.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Maximum items (List › Source)	4	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(E)	Image ratio (List › Cards)	4:3	No	Image shape of image cards	Match the photography	16-9, 1-1, 4-3, 3-2; teaser on

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest insights" above four image cards (The agentic bank, Cloud at scale, The energy transition, The future of work) with 4:3 images, taller than the default.
- **Rendering behaviour:** Image ratio 4:3 adds ratio-4-3 and sets aspect-ratio 4 / 3 on the card media with object-fit cover on every breakpoint.
- **Publishing behaviour:** Publish the page; the insights and their images must be published and indexed.

Business Rules

- Image ratio affects image cards only.
- Recommended source: 1600 × 1200 px.
- All cards of the list share the ratio.
- Cropping must keep the described content visible.

Common Authoring Mistakes

Error	Root Cause	Resolution
Images look stretched	Not possible: images are cropped, never stretched; the source itself is distorted	Replace the card-image
Different ratios wanted per card	Image ratio is a list setting	Use separate Lists or prepared card images

Troubleshooting

- **Symptoms:** One card's subject is cropped away at the sides.
- **Cause:** The page's image is much wider than 4:3.
- **Resolution:** Set a 4:3 card-image on the page and republish it.
- **Verification Steps:** The card shows the full subject on aem.page.

Use Cases: People and product photography.

Authoring Guidelines: Image ratio = 4:3.

Business Rules: Image cards only.

Rendering Rules: `ratio-4-3`.

Responsive Behaviour: 4:3 on every breakpoint.

SEO Impact: None.

Accessibility Compliance: As Variation 25.

Variation 27 — Image Ratio 3:2

Variation Name: Image ratio = 3:2.

Business Purpose: Classic photo ratio (16:9 is the default, Variation 10).

Visual Example:

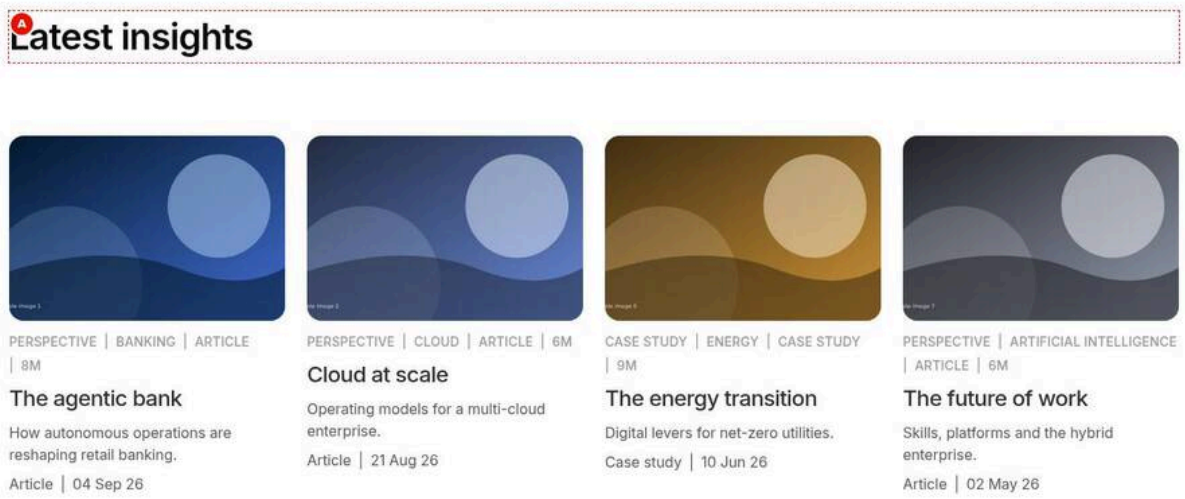

Figure 30: 3:2 image ratio — At 1440 px the title Latest insights above four image cards with 3:2 images: The agentic bank, Cloud at scale, The energy transition and The future of work. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-ratio-3-2.jpg)

Screenshot Details — 3:2 image ratio

Item	Detail
Screenshot Name	`screenshots/list-ratio-3-2.jpg`
Screenshot Purpose	3:2 image ratio
Screen Description	At 1440 px the title Latest insights above four image cards with 3:2 images: The agentic bank, Cloud at scale, The energy transition and The future of work.
Business Context	An insights grid with the classic camera ratio, between the default 16:9 and 4:3.
Author Objective	Show four child pages of Insights as image cards with 3:2 images.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Maximum items (List › Source)	4	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(E)	Image ratio (List › Cards)	3:2	No	Image shape of image cards	Match the photography	16-9, 1-1, 4-3, 3-2; teaser on

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest insights" above four image cards (The agentic bank, Cloud at scale, The energy transition, The future of work) with 3:2 images.
- **Rendering behaviour:** Image ratio 3:2 adds ratio-3-2 and sets aspect-ratio 3 / 2 on the card media with object-fit cover on every breakpoint.
- **Publishing behaviour:** Publish the page; the insights and their images must be published and indexed.

Business Rules

- Image ratio affects image cards only.
- Recommended source: 1500 × 1000 px.
- 16:9 is the default; 3:2 shows slightly more height.
- Pages without an image get no image area, whatever the ratio.

Common Authoring Mistakes

Error	Root Cause	Resolution
The ratio doesn't change the feature card	The feature fills its own area	Expected; the ratio applies to the image cards
Cards of a row have different heights	Different description lengths	Keep Stretch cards on or shorten the descriptions

Troubleshooting

- **Symptoms:** The editor shows no cards to check the ratio.
- **Cause:** Child pages come from the query index, which isn't available in Universal Editor.
- **Resolution:** Publish to Preview and check the ratio on aem.page.
- **Verification Steps:** The images on aem.page are 3:2.

Use Cases: Camera photography.

Authoring Guidelines: Image ratio = 3:2.

Business Rules: Image cards only.

Rendering Rules: `ratio-3-2`.

Responsive Behaviour: 3:2 on every breakpoint.

SEO Impact: None.

Accessibility Compliance: As Variation 25.

Variation 28 — Panel Height "Compact"

Variation Name: Panel height = Compact (9:10).

Business Purpose: Shorter coloured cards.

Visual Example:

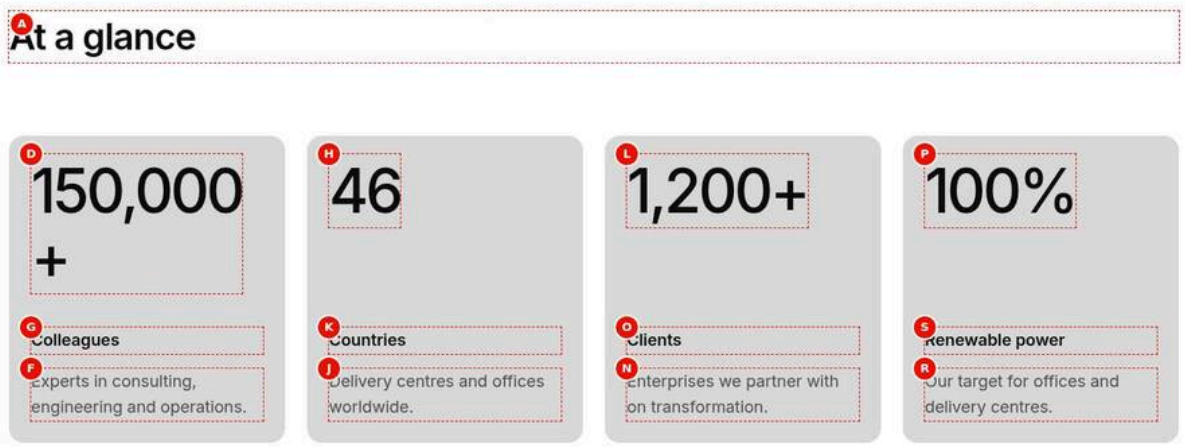

Figure 31: Compact panel height — At 1440 px the title At a glance above four nearly square (9:10) light grey statistic cards: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-panel-compact.jpg)

Screenshot Details — Compact panel height

Item	Detail
Screenshot Name	`screenshots/list-panel-compact.jpg`
Screenshot Purpose	Compact panel height
Screen Description	At 1440 px the title At a glance above four nearly square (9:10) light grey statistic cards: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power.
Business Context	A compact At a glance band where tall statistic tiles would take too much space on the page.
Author Objective	Show the four statistic cards with Panel height Compact.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	At a glance	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Card style (List › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(C)	Panel height (List › Cards)	Compact	No	Shape of coloured cards	Content for long texts	portrait, compact, auto; teaser on
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/about/our-people	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(E)	Title (List Item 1 › Content)	150,000+	No	Overrides the card title	Only when the page's card title doesn't fit	None
F	Description (List Item 1 › Content)	Experts in consulting, engineering and operations.	No	Overrides the description	Plain text, 1–2 sentences	None
G	Label (List Item 1 › Content)	Colleagues	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
H	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/about/locations	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(I)	Title (List Item 2 › Content)	46	No	Overrides the card title	Only when the page's card title doesn't fit	None
J	Description (List Item 2 › Content)	Delivery centres and offices worldwide.	No	Overrides the description	Plain text, 1–2 sentences	None
K	Label (List Item 2 › Content)	Countries	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
L	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/about/clients	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(M)	Title (List Item 3 › Content)	1,200+	No	Overrides the card title	Only when the page's card title doesn't fit	None
N	Description (List Item 3 › Content)	Enterprises we partner with on transformation.	No	Overrides the description	Plain text, 1–2 sentences	None
O	Label (List Item 3 › Content)	Clients	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
P	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/about/sustainability	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(Q)	Title (List Item 4 › Content)	100%	No	Overrides the card title	Only when the page's card title doesn't fit	None
R	Description (List Item 4 › Content)	Our target for offices and delivery centres.	No	Overrides the description	Plain text, 1–2 sentences	None
S	Label (List Item 4 › Content)	Renewable power	No	Statistic label	Statistic cards	None
(T)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "At a glance" above four nearly square light grey statistic cards: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power.
- **Rendering behaviour:** Panel height Compact adds panel-compact and sets aspect-ratio 9 / 10 on panel, report and statistic cards; text that doesn't fit is clipped.
- **Publishing behaviour:** Publish the page; the linked about pages should be published so the card links work.

Business Rules

- Panel height applies to panel, report and statistic cards, not image cards.
- Portrait (2:3) is the default; Content sizes the cards by their text.
- Keep descriptions short in compact cards.
- Statistic cards keep the number at the top and the label at the bottom.

Common Authoring Mistakes

Error	Root Cause	Resolution
Descriptions are cut off	Long descriptions in the 9:10 shape	Shorten them or use Panel height Content
No change visible	Card style Image card	Use Statistic, Panel or Report

Troubleshooting

- **Symptoms:** The bottom line of a description is missing on mobile.
- **Cause:** Compact cards clip text that doesn't fit the 9:10 shape.
- **Resolution:** Shorten the item's Description or switch Panel height to Content.
- **Verification Steps:** The full description shows at 402 px on aem.page.

Use Cases: Statistic rows, short panels.

Authoring Guidelines: Panel height = Compact.

Business Rules: Panel, report, statistic cards; text that doesn't fit is clipped.

Rendering Rules: `panel-compact`; `aspect-ratio: 9 / 10`.

Responsive Behaviour: Same ratio everywhere.

SEO Impact: None.

Accessibility Compliance: Avoid clipped text (keep page descriptions short).

Variation 29 — Panel Height "Content"

Variation Name: Panel height = Content (`auto`).

Business Purpose: Coloured cards as tall as the text.

Visual Example:

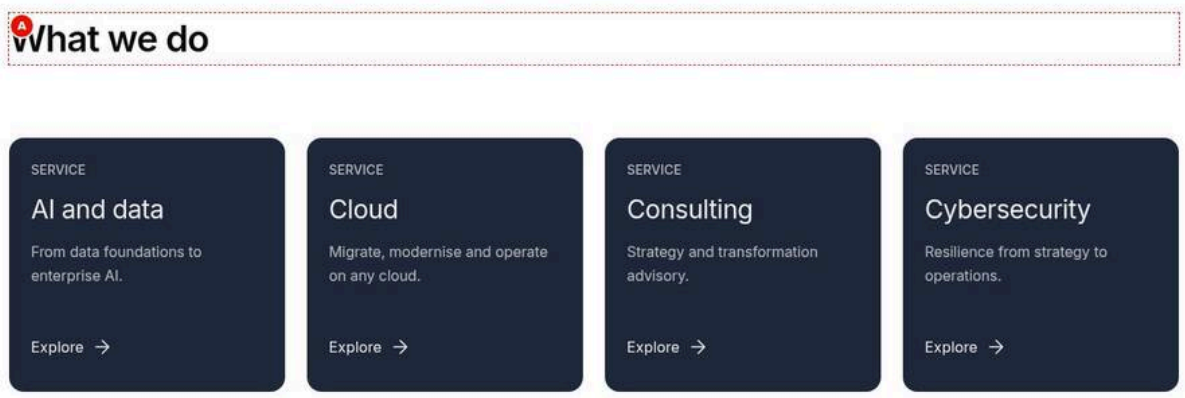

Figure 32: Content panel height — At 1440 px the title What we do above four dark panels (AI and data, Cloud, Consulting, Cybersecurity) only as tall as their eyebrow, title, description and Explore, equal within the row. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-panel-content.jpg)

Screenshot Details — Content panel height

Item	Detail
Screenshot Name	`screenshots/list-panel-content.jpg`
Screenshot Purpose	Content panel height
Screen Description	At 1440 px the title What we do above four dark panels (AI and data, Cloud, Consulting, Cybersecurity) only as tall as their eyebrow, title, description and Explore, equal within the row.
Business Context	A What we do section whose service descriptions vary in length, so fixed panel shapes would clip some of them.
Author Objective	List the child pages of Services as panels sized by their content (Panel height Content).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	What we do	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/services	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(D)	Card style (List › Cards)	Panel	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(E)	Panel height (List › Cards)	Content	No	Shape of coloured cards	Content for long texts	portrait, compact, auto; teaser on

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "What we do" above four dark panels (AI and data, Cloud, Consulting, Cybersecurity) only as tall as their eyebrow, title, description and Explore, equal within the row.
- **Rendering behaviour:** Panel height Content adds panel-auto: no fixed aspect ratio, so nothing is clipped; with Stretch cards on (default) the panels of a row take the height of the tallest.
- **Publishing behaviour:** Publish the page; the service pages must be published and indexed.

Business Rules

- Content height never clips text.
- Stretch cards keeps the row even; turn it off for natural heights.
- Panels default to Dark when Card colour is empty.
- Explore is the default call to action of panels.

Common Authoring Mistakes

Error	Root Cause	Resolution
Panels look short and wide	Content height with short descriptions	Use Portrait for the Figma tile shape
Rows have uneven panels	Stretch cards switched off	Switch Stretch cards to row height on

Troubleshooting

- **Symptoms:** The panels are still tall 2:3 tiles on aem.page.
- **Cause:** Panel height is still Portrait or the page wasn't republished.
- **Resolution:** Set Panel height to Content and publish the page.
- **Verification Steps:** The block has the class panel-auto on aem.page.

Use Cases: Pages with long card descriptions.

Authoring Guidelines: Panel height = Content.

Business Rules: No fixed shape.

Rendering Rules: `panel-auto`.

Responsive Behaviour: Heights follow the text.

SEO Impact: None.

Accessibility Compliance: Nothing clipped.

Variation 30 — Style Option "Compact statistic title"

Variation Name: Style options: Compact statistic title (`stat-compact`).

Business Purpose: Statements in statistic cards (Figma 7, 12).

Visual Example:

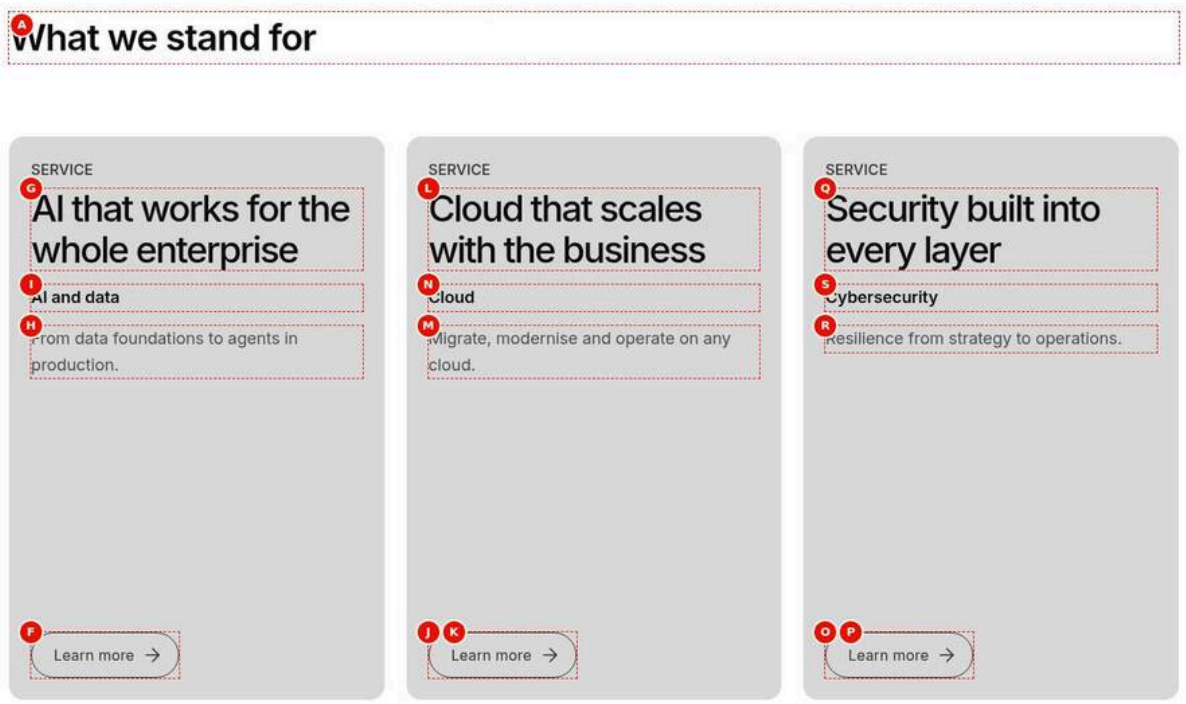

Figure 33: Compact statistic title — At 1440 px the title What we stand for above three grey statistic cards with medium statement titles (AI that works for the whole enterprise, Cloud that scales with the business, Security built into every layer), the kicker Service, labels, descriptions and outlined Learn more buttons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-stat-compact.jpg)

Screenshot Details — Compact statistic title

Item	Detail
Screenshot Name	`screenshots/list-stat-compact.jpg`
Screenshot Purpose	Compact statistic title
Screen Description	At 1440 px the title What we stand for above three grey statistic cards with medium statement titles (AI that works for the whole enterprise, Cloud that scales with the business, Security built into every layer), the kicker Service, labels, descriptions and outlined Learn more buttons.
Business Context	A What we stand for section with short statements instead of numbers, each leading to the service behind it (Figma 7 and 12).
Author Objective	Build three statistic cards with statement titles, labels, descriptions and Learn more buttons using the Compact statistic title style option.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	What we stand for	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Card style (List › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(C)	Desktop columns (List › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
(D)	Tablet columns (List › Layout)	3	No	Grid columns on tablet	2–3 often fit better	Enforced 1–6; grid only
(E)	Style options (List › Advanced)	Compact statistic title	No	Extra styles	Only as designed	stat-compact, dividers, header-center
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
F	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/services/ai	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
G	Title (List Item 1 › Content)	AI that works for the whole enterprise	No	Overrides the card title	Only when the page's card title doesn't fit	None
H	Description (List Item 1 › Content)	From data foundations to agents in production.	No	Overrides the description	Plain text, 1–2 sentences	None
I	Label (List Item 1 › Content)	AI and data	No	Statistic label	Statistic cards	None
J	Call to action label (List Item 1 › Content)	Learn more	No	Shows a button	1–3 words	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
K	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/services/cloud	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
L	Title (List Item 2 › Content)	Cloud that scales with the business	No	Overrides the card title	Only when the page's card title doesn't fit	None
M	Description (List Item 2 › Content)	Migrate, modernise and operate on any cloud.	No	Overrides the description	Plain text, 1–2 sentences	None
N	Label (List Item 2 › Content)	Cloud	No	Statistic label	Statistic cards	None
O	Call to action label (List Item 2 › Content)	Learn more	No	Shows a button	1–3 words	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
P	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/services/cybersecurity	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
Q	Title (List Item 3 › Content)	Security built into every layer	No	Overrides the card title	Only when the page's card title doesn't fit	None
R	Description (List Item 3 › Content)	Resilience from strategy to operations.	No	Overrides the description	Plain text, 1–2 sentences	None
S	Label (List Item 3 › Content)	Cybersecurity	No	Statistic label	Statistic cards	None
(T)	Call to action label (List Item 3 › Content)	Learn more	No	Shows a button	1–3 words	None
(U)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "What we stand for" above three grey cards in a row: "AI that works for the whole enterprise", "Cloud that scales with the business" and "Security built into every layer" in medium-size type, with the labels AI and data, Cloud and Cybersecurity, descriptions and an outlined "Learn more" button.
- **Rendering behaviour:** stat-compact sets the statistic title to 0.42 times the number size (about 2.52 / 1.68 / 2.1rem); the Call to action label renders a secondary button as the card's one link, named "Learn more: {title}". Desktop and Tablet columns 3.
- **Publishing behaviour:** Publish the page; the three service pages are indexed, so their eyebrow (Service) shows as the kicker and the links point to their redirect targets if any.

Business Rules

- Compact statistic title affects statistic cards only.
- Each item's Call to action label shows a secondary button; without it the title is the link.
- Overrides replace title and description; page values such as the eyebrow still apply.
- The generated button name hides the new-tab hint (F-29, open).

Common Authoring Mistakes

Error	Root Cause	Resolution
The statements are huge and break mid-word	Style option Compact statistic title not set	Add it on the Advanced tab
No Learn more button	Call to action label empty or Show call to action off	Enter "Learn more" on each item

Error	Root Cause	Resolution
A SERVICE kicker appears unexpectedly	The linked pages' eyebrow metadata	Expected; override the Eyebrow on the item if needed

Troubleshooting

- **Symptoms:** On aem.page the statements render at full statistic size and break mid-word.
- **Cause:** Style options lacks Compact statistic title, so the 6rem number size applies to long titles.
- **Resolution:** Select Compact statistic title on the Advanced tab and publish the page.
- **Verification Steps:** The block has the class stat-compact and the statements fit on two or three lines.

Use Cases: Commitments and claims.

Authoring Guidelines: Card style Statistic; Advanced tab: Style options = Compact statistic title.

Business Rules: Statistic cards only.

Rendering Rules: Title size 0.42 × the number size.

Responsive Behaviour: About 2.52 / 1.68 / 2.1rem.

SEO Impact: None.

Accessibility Compliance: As Variation 13.

Variation 31 — Style Option "Dividers between rows"

Variation Name: Style options: Dividers between rows (`dividers`).

Business Purpose: Lines between rows of links on tablet and desktop (Figma 5).

Visual Example:

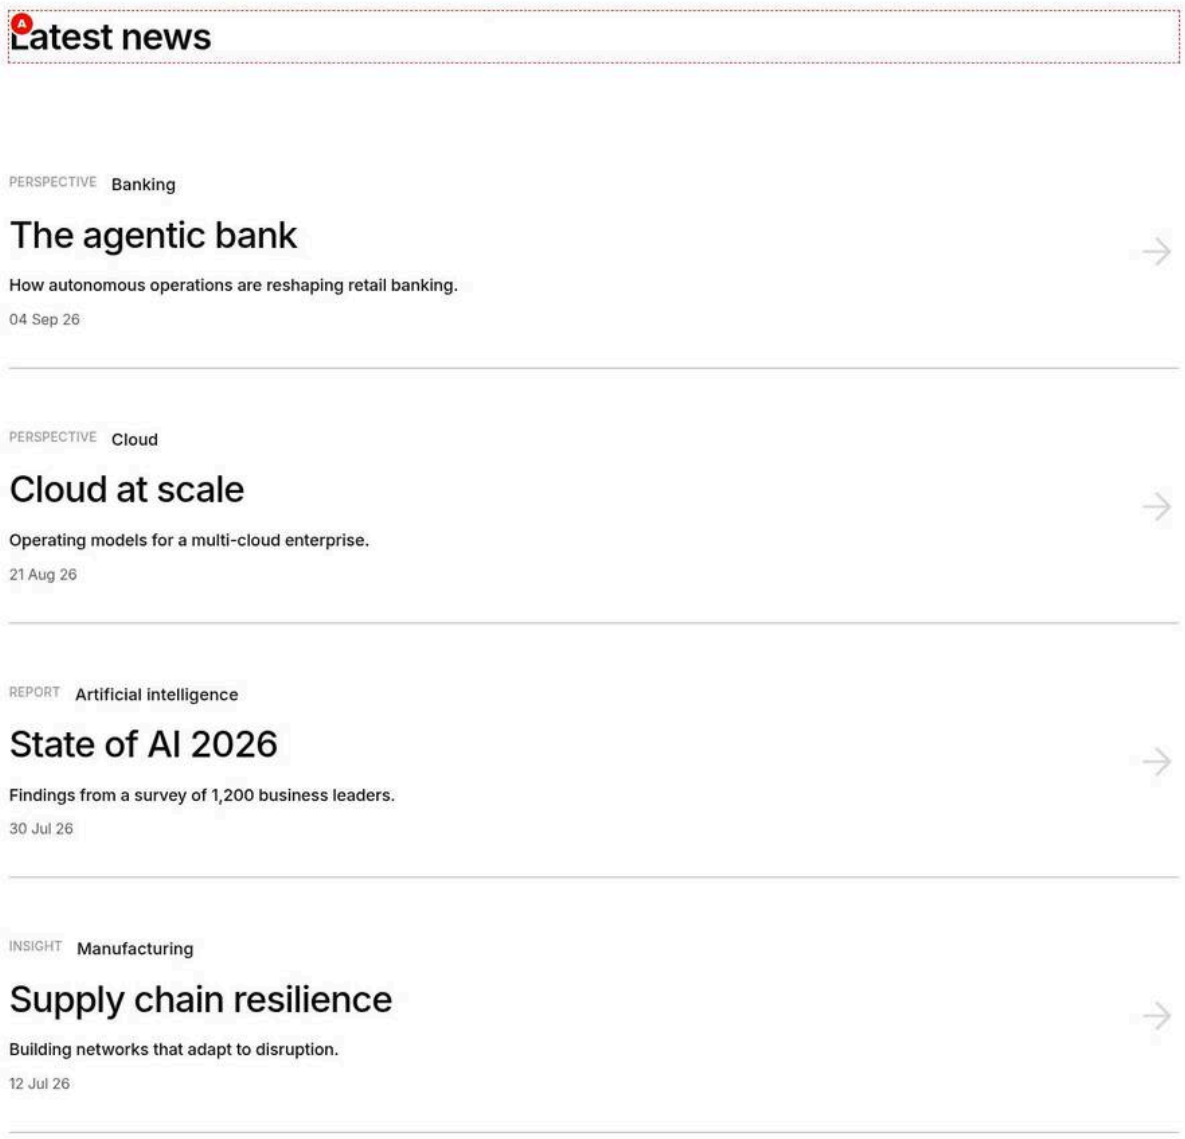

Figure 34: Dividers between rows — At 1440 px the title Latest news above four rows (The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience) separated by thin grey lines, each with eyebrow and tag, a large title, description, date and an arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-dividers.jpg)

Screenshot Details — Dividers between rows

Item	Detail
Screenshot Name	`screenshots/list-dividers.jpg`
Screenshot Purpose	Dividers between rows
Screen Description	At 1440 px the title Latest news above four rows (The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience) separated by thin grey lines, each with eyebrow and tag, a large title, description, date and an arrow.
Business Context	A Latest news list in which thin lines separate the rows, as in the News design (Figma 5).
Author Objective	Show the four newest insights as rows of links with the Dividers between rows style option.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest news	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	4	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Display as teaser (List › Cards)	Off	No	Cards (on) or rows of links (off)	Off for news-style link lists	Boolean
(H)	Style options (List › Advanced)	Dividers between rows	No	Extra styles	Only as designed	stat-compact, dividers, header-center

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest news" above four rows (The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience), each with eyebrow and tag, a large title, description and date, separated by thin grey lines.
- **Rendering behaviour:** dividers sets a #b2b2b2 bottom border on the rows from 600 px; below 600 px rows always have lines. The rows keep their arrows and 2.5rem titles on desktop.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed. The style option is part of the page, nothing else to publish.

Business Rules

- Dividers between rows applies only with Display as teaser off.
- The lines are decorative.
- Last modified Descending with Maximum items 4 keeps the newest four.
- Style options can be combined (e.g. with Header centred).

Common Authoring Mistakes

Error	Root Cause	Resolution
No lines on desktop	Style option not selected	Add Dividers between rows on the Advanced tab
Lines don't appear on cards	Dividers only style rows	Switch Display as teaser off

Troubleshooting

- **Symptoms:** The lines show on mobile but not on desktop.
- **Cause:** The Dividers between rows option isn't saved; mobile rows have lines by default.
- **Resolution:** Select the option in Style options and publish the page.
- **Verification Steps:** The block has the class dividers and lines show at 1440 px.

Use Cases: News lists.

Authoring Guidelines: Display as teaser off; Style options = Dividers between rows.

Business Rules: Rows only; mobile rows always have lines.

Rendering Rules: `dividers`: `border-bottom` in #b2b2b2 from 600 px.

Responsive Behaviour: Lines on every breakpoint with the option.

SEO Impact: None.

Accessibility Compliance: Decorative.

Variation 32 — Style Option "Header centred"

Variation Name: Style options: Header centred (`header-center`).

Business Purpose: Centred title, description and CTA.

Visual Example:

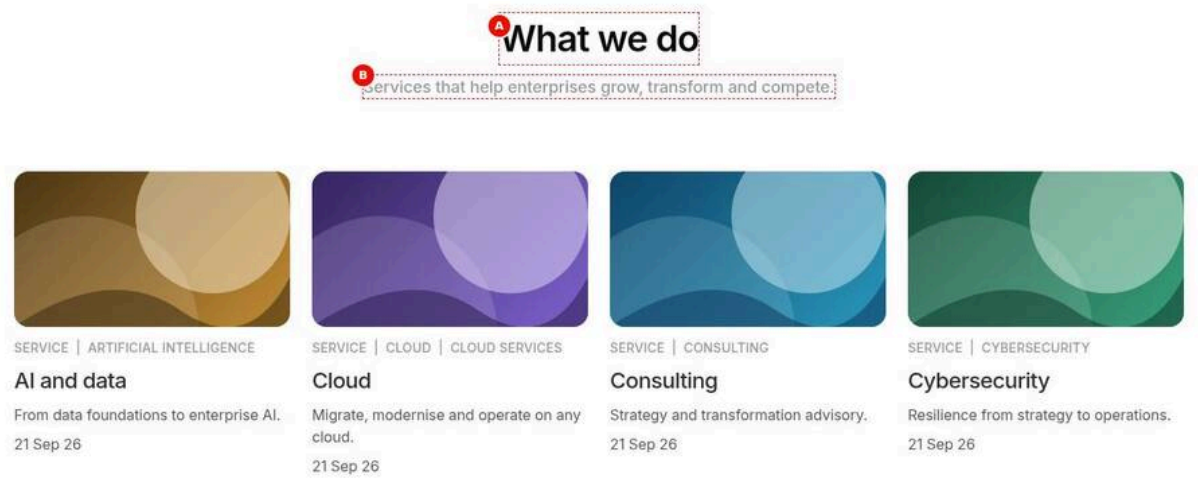

Figure 35: Centred header — At 1440 px the centred title What we do and the description Services that help enterprises grow, transform and compete, above four image cards: AI and data, Cloud, Consulting and Cybersecurity. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-header-centred.jpg)

Screenshot Details — Centred header

Item	Detail
Screenshot Name	`screenshots/list-header-centred.jpg`
Screenshot Purpose	Centred header

Item	Detail
Screen Description	At 1440 px the centred title What we do and the description Services that help enterprises grow, transform and compete, above four image cards: AI and data, Cloud, Consulting and Cybersecurity.
Business Context	A campaign-style What we do section where the heading and intro are centred above the service cards.
Author Objective	List the child pages of Services with a centred header (Style options Header centred).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	What we do	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
B	Description (List › Content)	Services that help enterprises grow, transform and compete.	No	Intro under the title	One or two sentences	None
(C)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(D)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/services	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(E)	Style options (List › Advanced)	Header centred	No	Extra styles	Only as designed	stat-compact, dividers, header-center

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The centred title "What we do" and the description "Services that help enterprises grow, transform and compete." above four image cards: AI and data, Cloud, Consulting and Cybersecurity.
- **Rendering behaviour:** header-center turns .list-header into a centred column (title, description, CTA) on every breakpoint; the cards are unchanged in the default 4 / 4 / 1 grid.
- **Publishing behaviour:** Publish the page; the service pages must be published and indexed.

Business Rules

- Header centred affects the header only.
- Keep centred descriptions short (one or two lines).
- A CTA would sit centred below the description.
- The title remains the region name of the cards.

Common Authoring Mistakes

Error	Root Cause	Resolution
Only the title is centred	Not possible: the whole header is centred; check the option is saved	Select Header centred and publish
A long centred paragraph is hard to read	Long description	Shorten it to up to 200 characters

Troubleshooting

- **Symptoms:** The header is left-aligned on aem.page.
- **Cause:** Style options doesn't include Header centred, or the page wasn't republished.
- **Resolution:** Select Header centred on the Advanced tab and publish.
- **Verification Steps:** The block has the class header-center.

Use Cases: Campaign and statistic sections.

Authoring Guidelines: Style options = Header centred.

Business Rules: Header only.

Rendering Rules: `.list-header` as a centred column.

Responsive Behaviour: Centred everywhere.

SEO Impact: None.

Accessibility Compliance: Keep centred text short.

Variation 33 — Header Call to Action

Variation Name: CTA link with CTA text and CTA style (Text link, Primary button, Secondary button).

Business Purpose: "View all" link to the full listing (Figma 2: text link; Figma 5: primary button).

Visual Example:

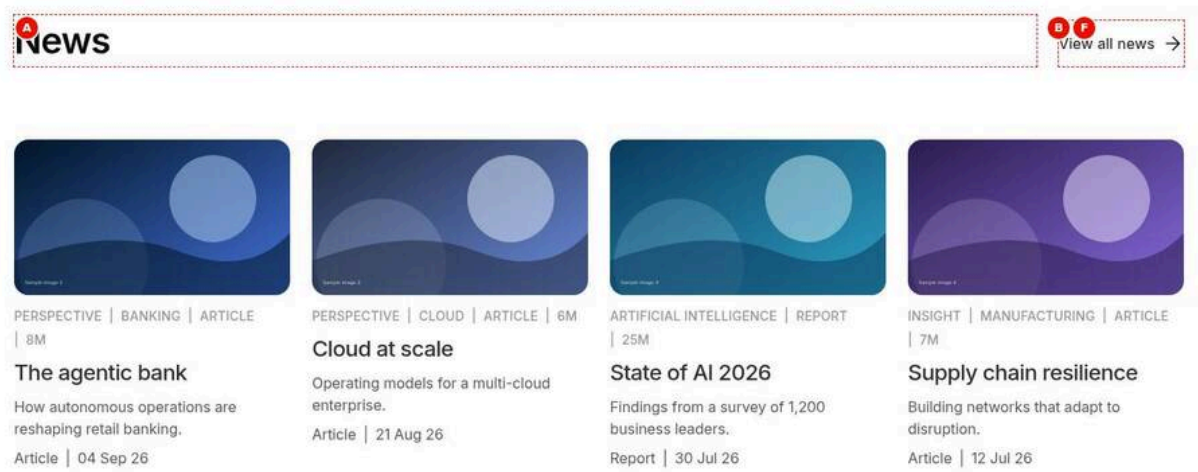

Figure 36: Header call to action — At 1440 px the title News with the primary button View all news on the right, above four image cards of the newest insights: The agentic bank, Cloud at scale, State of AI 2026 and Supply chain resilience. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-header-cta.jpg)

Screenshot Details — Header call to action

Item	Detail
Screenshot Name	`screenshots/list-header-cta.jpg`

Item	Detail
Screenshot Purpose	Header call to action
Screen Description	At 1440 px the title News with the primary button View all news on the right, above four image cards of the newest insights: The agentic bank, Cloud at scale, State of AI 2026 and Supply chain resilience.
Business Context	A News teaser on a landing page whose header button leads to the full news archive (Figma 5).
Author Objective	Add a header call to action “View all news” as a Primary button above the four newest insights.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	News	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
B	CTA link (List › Content)	Select the page or enter /content/tcs-corp/us/en/insights	No	Header call to action	Overview / archive page	None
(C)	CTA text (List › Content)	View all news	No	CTA label	2–4 words	None
(D)	CTA style (List › Content)	Primary button	No	CTA look	Text link or a button	'', primary, secondary
(E)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
F	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(G)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(H)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(I)	Maximum items (List › Source)	4	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all

All other fields keep their default values. Each callout letter marks the field’s output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title “News” on the left and a filled primary button “View all news” on the right, above four image cards of the newest insights.
- **Rendering behaviour:** The CTA link becomes a button in div.list-cta-slot via the button decorator with data-cmp-interaction=“cta”; on narrow screens it wraps below the title. CTA text replaces the link text.

- **Publishing behaviour:** Publish the page; the CTA target /en/insights must be published. The four cards come from the index after the insights are published.

Business Rules

- Without a CTA link no CTA is rendered, even with CTA text.
- CTA style: Text link (empty), Primary button or Secondary button.
- Write a descriptive CTA text: “View all news”, not “Click here”.
- The header CTA click is reported with interaction “cta”.

Common Authoring Mistakes

Error	Root Cause	Resolution
The CTA shows the path as text	CTA text left empty	Enter “View all news”
No button appears	CTA link empty	Pick the archive page in CTA link
Two filled buttons compete	Primary button CTA next to primary card buttons	Use Text link or Secondary button

Troubleshooting

- **Symptoms:** The View all news button leads to a 404 page.
- **Cause:** The CTA link points to an unpublished or moved page.
- **Resolution:** Pick the published archive page in CTA link and republish.
- **Verification Steps:** The button opens /en/insights on aem.page.

Use Cases: Linking to an overview or archive page.

Authoring Guidelines: Content tab: CTA link, CTA text, CTA style.

Business Rules: As 6.15.3 Variation 24. Lists made before this version keep their authored CTA style (bold / italic).

Rendering Rules: `div.list-cta-slot`, button decorator, `data-cmp-interaction="cta"`.

Responsive Behaviour: Right of the title, below it on narrow screens.

SEO Impact: Descriptive CTA texts.

Accessibility Compliance: Named link with focus styles.

Variation 34 — Grid on Every Breakpoint

Variation Name: Desktop / Tablet / Mobile display = Grid (default).

Business Purpose: All cards visible in columns (Figma 2, 11).

Visual Example:

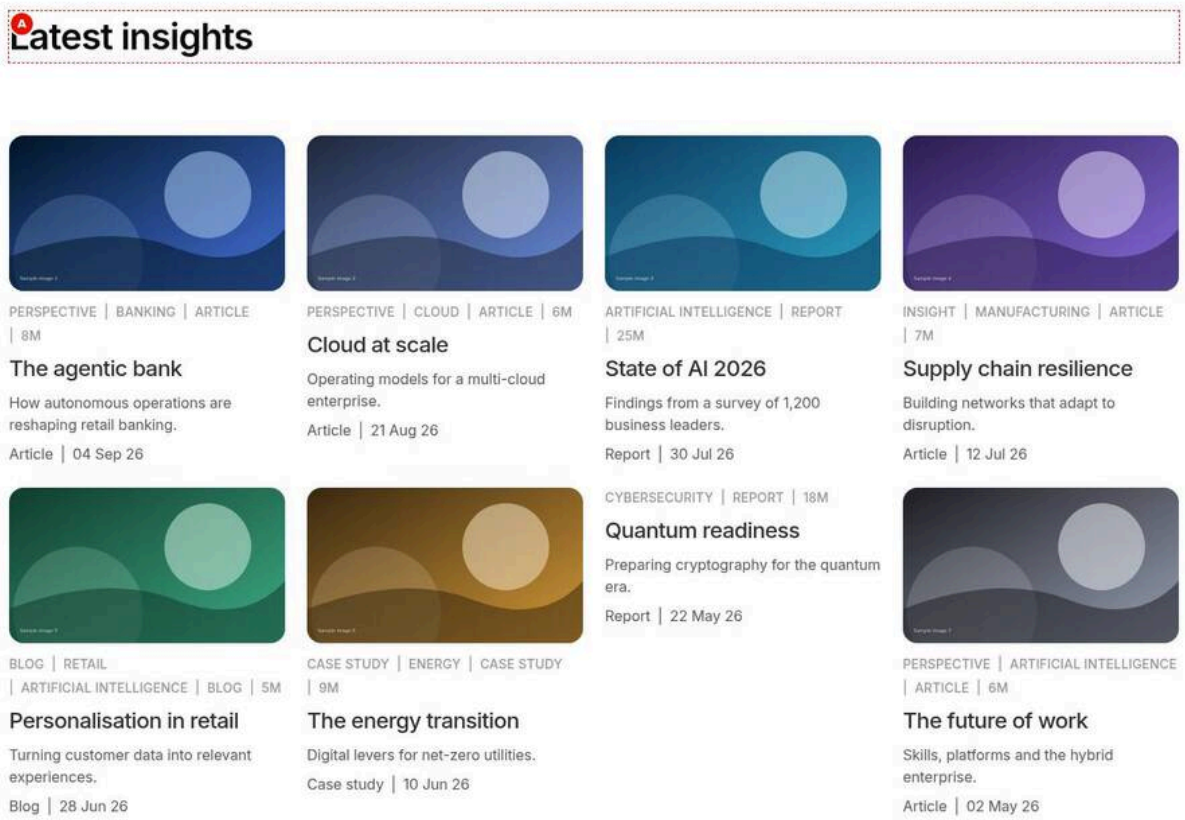

Figure 37: Grid on every breakpoint — At 1440 px only: the title Latest insights above the eight newest insights in a 4-column grid of two rows, from The agentic bank to The future of work. The mobile one-column layout isn't part of this screenshot. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-grid-all.jpg)

Screenshot Details — Grid on every breakpoint

Item	Detail
Screenshot Name	`screenshots/list-grid-all.jpg`
Screenshot Purpose	Grid on every breakpoint
Screen Description	At 1440 px only: the title Latest insights above the eight newest insights in a 4-column grid of two rows, from The agentic bank to The future of work. The mobile one-column layout isn't part of this screenshot.
Business Context	An insights overview where every card should be visible at once, without horizontal scrolling on any device.
Author Objective	Show the eight newest insights in the default grid on every breakpoint (4 / 4 / 1 columns).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, last-Modified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Desktop / Tablet / Mobile display (List › Layout)	Grid (the defaults; keep them)	No	—	—	None
(H)	Desktop / Tablet / Mobile columns (List › Layout)	4 / 4 / 1 (the defaults)	No	—	—	None
—	Screen width (Preview)	1440 px (desktop; one column below 600 px)	—	Check on the preview (not stored in the content)	1440 px (desktop; one column below 600 px)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the title "Latest insights" above two rows of four image cards: The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience, then Personalisation in retail, The energy transition, Quantum readiness and The future of work.
- **Rendering behaviour:** The block has desktop-grid tablet-grid mobile-grid; each breakpoint uses its columns and gap (24 / 24 / 16 px, in rem). Below 600 px the same eight cards stack in one column; no previous / next buttons or indicator are rendered visible.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed. All eight card links are in the DOM after the page script runs.

Business Rules

- Grid is the default display on every breakpoint.
- Columns are 1–6 per breakpoint, rounded and clamped.
- Choose Maximum items as a multiple of the desktop columns for full rows.
- Equal card height makes all grid rows the same height.

Common Authoring Mistakes

Error	Root Cause	Resolution
A lone card in the last row	Maximum items not a multiple of the columns	Use 4 or 8 with 4 columns

Error	Root Cause	Resolution
A rail appears on mobile	Mobile display set to Horizontal scroll	Set Mobile display back to Grid

Troubleshooting

- **Symptoms:** The mobile page shows two narrow columns.
- **Cause:** Mobile columns was set to 2.
- **Resolution:** Set Mobile columns to 1 on the Layout tab and publish.
- **Verification Steps:** At 402 px each card fills the width on aem.page.

Use Cases: Overviews.

Authoring Guidelines: Layout tab: each display Grid; columns 1–6 (4 / 4 / 1); gaps.

Business Rules: As 6.15.3 Variation 25; lists start as grids unless authored otherwise.

Rendering Rules: `desktop-grid tablet-grid mobile-grid`.

Responsive Behaviour: Each breakpoint's columns and gap.

SEO Impact: All cards visible.

Accessibility Compliance: No horizontal scrolling.

Variation 35 — Horizontal Scroll on Every Breakpoint

Variation Name: Every display = Horizontal scroll.

Business Purpose: Rails on all devices (Figma 3, 8, 9).

Visual Example:

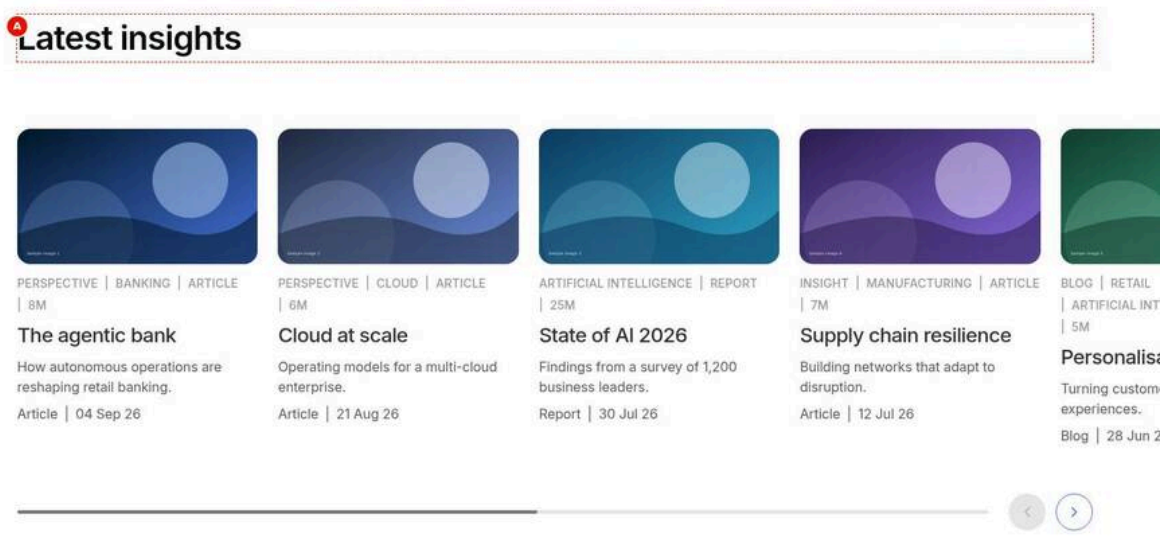

Figure 38: Horizontal scroll on every breakpoint — At 1440 px only: the title Latest insights above a rail of about 4.2 image cards of the eight newest insights, cut at the right screen edge, with the scroll indicator and the Previous (disabled) and Next buttons below. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-scroll-all.jpg)

Screenshot Details — Horizontal scroll on every breakpoint

Item	Detail
Screenshot Name	`screenshots/list-scroll-all.jpg`
Screenshot Purpose	Horizontal scroll on every breakpoint

Item	Detail
Screen Description	At 1440 px only: the title Latest insights above a rail of about 4.2 image cards of the eight newest insights, cut at the right screen edge, with the scroll indicator and the Previous (disabled) and Next buttons below.
Business Context	A Latest insights rail used on every device, with visible controls on desktop where visitors don't swipe.
Author Objective	Turn the eight newest insights into a horizontal rail on every breakpoint, with previous / next buttons and the scroll indicator on desktop.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(H)	Previous / next buttons on desktop (List › Layout)	On	No	Show the buttons	On for desktop rails	Boolean; scroll only
(I)	Scroll indicator on desktop (List › Layout)	On	No	Show the progress bar	—	Boolean; scroll only
(J)	Tablet display (List › Layout)	Horizontal scroll	No	Grid or scroll at 600–1199 px	—	grid, horizontal-scroll
(K)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll
—	Screen width (Preview)	1440 px (desktop)	—	Check on the preview (not stored in the content)	1440 px (desktop)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the title "Latest insights" above a rail of about 4.2 image cards running to the right screen edge; below it a thin grey track with a darker thumb on the left and two chevron buttons on the right, Previous disabled at the start.
- **Rendering behaviour:** desktop-scroll tablet-scroll mobile-scroll; card widths come from Items visible 4.2 / 3.3 / 1.2 and the scroller bleeds into the section padding (Edge Bleed). Buttons and the indicator appear only because the cards overflow; scroll snap aligns cards to the start.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed. All eight cards are in the HTML of the rail after the script runs.

Business Rules

- Buttons and the indicator are set per breakpoint; mobile has the indicator on by default.
- Previous is disabled at the start and Next at the end, unless Loop is on.
- The focused rail scrolls with the arrow keys, Home and End.
- A mouse drag scrolls the rail without following a card link (6 px threshold).

Common Authoring Mistakes

Error	Root Cause	Resolution
No buttons on desktop	Previous / next buttons on desktop left off	Switch them on on the Layout tab
Buttons on tablet missing	Buttons are set per breakpoint	Switch on Previous / next buttons on tablet too
No buttons although switched on	The cards fit the width, nothing to scroll	Expected; add items or lower Items visible

Troubleshooting

- **Symptoms:** The rail ends at the content edge instead of the screen edge.
- **Cause:** Edge is set to Inside the content width.
- **Resolution:** Set Edge to Bleed on the Scroll tab and publish.
- **Verification Steps:** The block has edge-bleed and the last visible card is cut at the screen edge.

Use Cases: Related content, media coverage.

Authoring Guidelines: Each display Horizontal scroll; Items visible or Card width; buttons; indicator; Scroll tab.

Business Rules: As 6.15.3 Variation 26.

Rendering Rules: `desktop-scroll tablet-scroll mobile-scroll`; CSS scrolling with snap.

Responsive Behaviour: Per breakpoint settings.

SEO Impact: All cards in the HTML.

Accessibility Compliance: Focusable region while scrolling; keys; named buttons.

Variation 36 — Scroll on Desktop Only

Variation Name: Desktop scroll; Tablet grid; Mobile grid.

Business Purpose: A rail only on wide screens.

Visual Example:

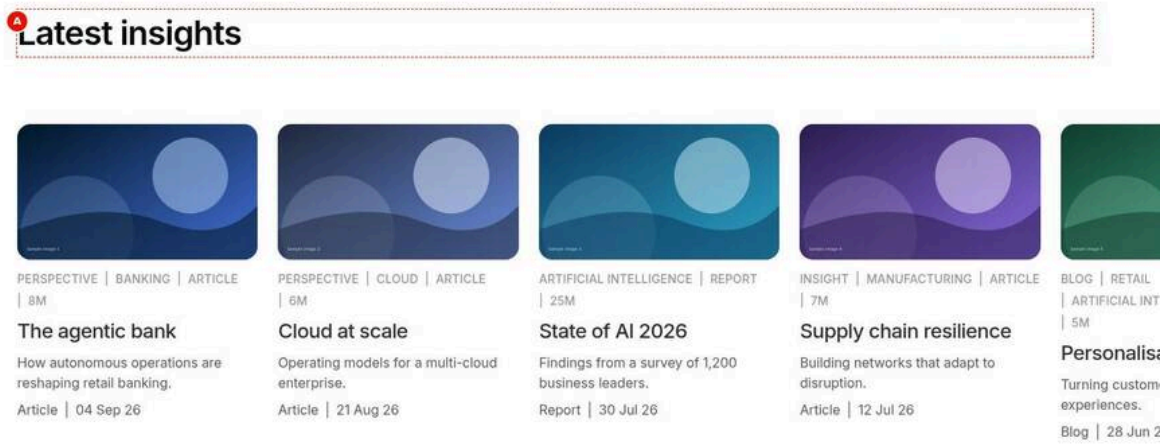

Figure 39: Desktop-only scroll — At 1440 px only: the title Latest insights above a rail of about 4.2 image cards cut at the right screen edge, without buttons or indicator. The tablet and mobile grids aren't part of this screenshot. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-scroll-desktop-only.jpg)

Screenshot Details — Desktop-only scroll

Item	Detail
Screenshot Name	`screenshots/list-scroll-desktop-only.jpg`
Screenshot Purpose	Desktop-only scroll
Screen Description	At 1440 px only: the title Latest insights above a rail of about 4.2 image cards cut at the right screen edge, without buttons or indicator. The tablet and mobile grids aren't part of this screenshot.
Business Context	A long insights list shown as a rail on wide screens, while tablets and phones keep a plain grid.
Author Objective	Use Horizontal scroll on desktop only, keeping the Grid on tablet and mobile.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
						when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
—	Screen width (Pre-view)	1440 px (desktop; tablet and mobile show grids)	—	Check on the pre-view (not stored in the content)	1440 px (desktop; tablet and mobile show grids)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the title "Latest insights" above a rail of about 4.2 image cards cut at the right screen edge, without buttons or indicator.
- **Rendering behaviour:** desktop-scroll tablet-grid mobile-grid: only 1200 px and wider scrolls; desktop buttons and indicator are off by default, so the rail is scrolled by swipe, drag or keys. Tablet shows a 4-column grid, mobile one column.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed. Nothing else changes between breakpoints but the CSS classes.

Business Rules

- Each breakpoint's display is independent (8 combinations).
- Desktop has no indicator by default; switch it on if visitors need a cue.
- The scroller becomes a focusable region only when its cards overflow.
- Snap and drag apply only where the list scrolls.

Common Authoring Mistakes

Error	Root Cause	Resolution
Visitors don't notice the rail	No buttons or indicator on desktop	Switch on Previous / next buttons on desktop
Tablet scrolls as well	Tablet display set to Horizontal scroll	Set Tablet display to Grid

Troubleshooting

- **Symptoms:** On a 1024 px laptop window the list is a grid, not a rail.
- **Cause:** Below 1200 px the tablet settings apply.
- **Resolution:** Expected; set Tablet display to Horizontal scroll if the rail is wanted there too.
- **Verification Steps:** Resize the browser across 1200 px on aem.page and watch the layout change.

Use Cases: Long lists on desktop.

Authoring Guidelines: Desktop display Horizontal scroll; others Grid.

Business Rules: Breakpoints are independent.

Rendering Rules: `desktop-scroll tablet-grid mobile-grid`.

Responsive Behaviour: Only 1200 px+ scrolls.

SEO Impact: None.

Accessibility Compliance: As Variations 34 and 35.

Variation 37 — Scroll on Tablet Only

Variation Name: Desktop grid; Tablet scroll; Mobile grid.

Business Purpose: Avoid cramped tablet grids.

Visual Example:

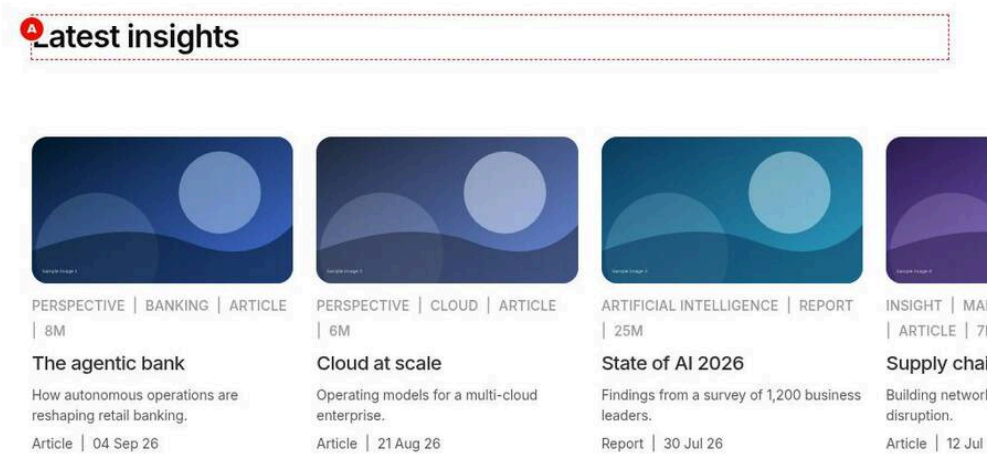

Figure 40: Tablet-only scroll — At 1024 px only: the title Latest insights above a tablet rail of about 3.3 image cards cut at the right edge, without buttons or indicator. The desktop and mobile grids aren't part of this screenshot. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-scroll-tablet-only.jpg)

Screenshot Details — Tablet-only scroll

Item	Detail
Screenshot Name	`screenshots/list-scroll-tablet-only.jpg`
Screenshot Purpose	Tablet-only scroll
Screen Description	At 1024 px only: the title Latest insights above a tablet rail of about 3.3 image cards cut at the right edge, without buttons or indicator. The desktop and mobile grids aren't part of this screenshot.
Business Context	An insights list where a 4-column tablet grid would be cramped, so tablets get a rail and desktop and phones keep grids.
Author Objective	Use Horizontal scroll on tablet only and check it at 1024 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, last-Modified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Tablet display (List › Layout)	Horizontal scroll	No	Grid or scroll at 600–1199 px	—	grid, horizontal-scroll
—	Screen width (Preview)	1024 px (tablet; desktop and mobile show grids)	—	Check on the preview (not stored in the content)	1024 px (tablet; desktop and mobile show grids)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1024 px the title "Latest insights" above a rail of about 3.3 image cards running to the right edge, without buttons or indicator.
- **Rendering behaviour:** desktop-grid tablet-scroll mobile-grid: only 600–1199 px scrolls, with Tablet items visible 3.3 by default; desktop shows a 4-column grid, mobile one column.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed.

Business Rules

- Tablet settings cover 600–1199 px.
- Tablet buttons and indicator are off by default.
- Tablet items visible accepts 1–8 with decimals; a fraction shows part of the next card.
- Desktop and mobile layouts are unaffected.

Common Authoring Mistakes

Error	Root Cause	Resolution
Cards too wide on tablet	Tablet items visible set to 1	Use 2.5 to 3.3
The rail shows on desktop too	Desktop display set to Horizontal scroll	Set Desktop display to Grid

Troubleshooting

- **Symptoms:** The tablet rail shows a native scrollbar.
- **Cause:** Hide native scrollbar was switched off.
- **Resolution:** Switch Hide native scrollbar on (Scroll tab), or switch on the Scroll indicator on tablet instead.
- **Verification Steps:** At 1024 px no browser scrollbar shows under the rail.

Use Cases: Many desktop columns.

Authoring Guidelines: Tablet display Horizontal scroll; others Grid.

Business Rules: As Variation 36.

Rendering Rules: `desktop-grid tablet-scroll mobile-grid`.

Responsive Behaviour: Only 600–1199 px scrolls.

SEO Impact: None.

Accessibility Compliance: As Variations 34 and 35.

Variation 38 — Scroll on Mobile Only

Variation Name: Desktop grid; Tablet grid; Mobile scroll.

Business Purpose: The most common Figma pattern (1, 4, 6, 10).

Visual Example:

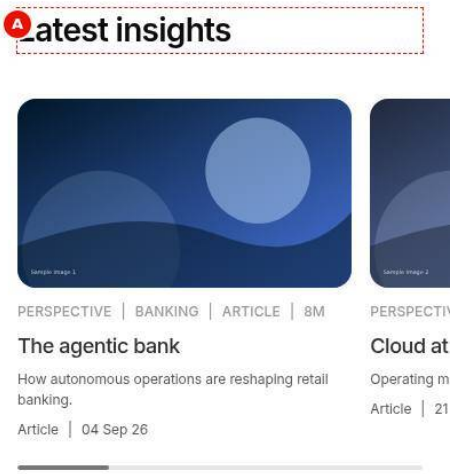

Figure 41: Mobile-only scroll — At 402 px only: the title Latest insights above a mobile rail with one full card and part of the next, and the scroll indicator below. The desktop and tablet grids aren't part of this screenshot. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-scroll-mobile-only.jpg)

Screenshot Details — Mobile-only scroll

Item	Detail
Screenshot Name	`screenshots/list-scroll-mobile-only.jpg`
Screenshot Purpose	Mobile-only scroll
Screen Description	At 402 px only: the title Latest insights above a mobile rail with one full card and part of the next, and the scroll indicator below. The desktop and tablet grids aren't part of this screenshot.
Business Context	The most common Figma pattern: a grid on desktop and tablet, and a swipeable rail on phones to keep the page short.
Author Objective	Use Horizontal scroll on mobile only and check it at 402 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree,	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick List	
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll
—	Screen width (Preview)	402 px (mobile; desktop and tablet show grids)	—	Check on the preview (not stored in the content)	402 px (mobile; desktop and tablet show grids)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 402 px the title "Latest insights" above a rail with one full card and a fifth of the next, and a thin grey indicator track with a darker thumb below.
- **Rendering behaviour:** desktop-grid tablet-grid mobile-scroll mobile-indicator: below 600 px Mobile items visible 1.2 and the indicator (on by default) apply; the rail bleeds to the right screen edge (1.5rem section padding).
- **Publishing behaviour:** Publish the page; the insights must be published and indexed.

Business Rules

- The mobile scroll indicator is on by default.
- Swipe is on by default; buttons are off on mobile.
- The indicator is decorative (aria-hidden).
- Snap aligns cards to the start by default.

Common Authoring Mistakes

Error	Root Cause	Resolution
No indicator under the mobile rail	Scroll indicator on mobile switched off	Switch it back on
Two cards squeezed side by side	Mobile items visible set to 2	Use 1.2 to 1.5

Troubleshooting

- **Symptoms:** On a phone the cards can't be swiped.
- **Cause:** Allow touch swipe is off (touch-action pan-y) and no buttons are shown.
- **Resolution:** Switch Allow touch swipe on, or switch on Previous / next buttons on mobile.
- **Verification Steps:** The rail swipes on a phone on aem.page.

Use Cases: Themes, statistics, insight grids on phones.

Authoring Guidelines: Mobile display Horizontal scroll (indicator on by default); others Grid.

Business Rules: As Variation 36.

Rendering Rules: `desktop-grid tablet-grid mobile-scroll mobile-indicator`.

Responsive Behaviour: Below 600 px scrolls.

SEO Impact: None.

Accessibility Compliance: As Variations 34 and 35.

Variation 39 — Scroll on Desktop and Tablet

Variation Name: Desktop scroll; Tablet scroll; Mobile grid.

Business Purpose: Rails on large screens, stacked on phones.

Visual Example:

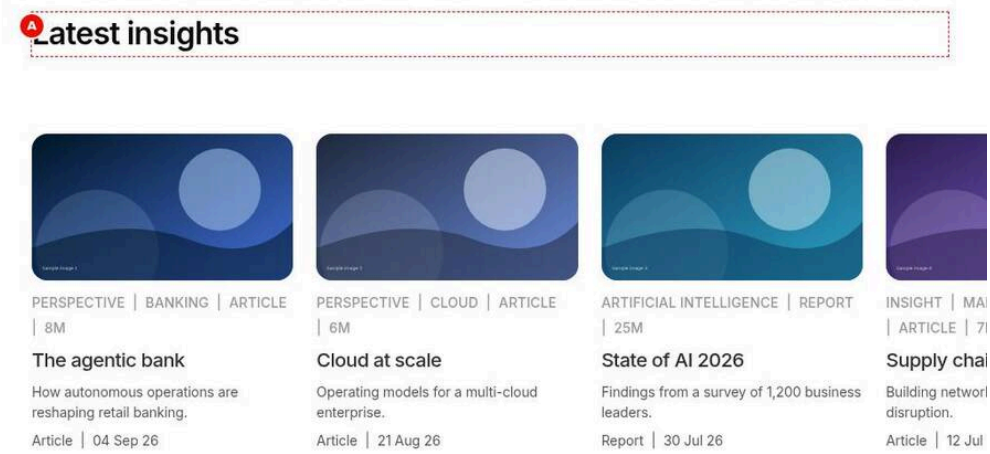

Figure 42: Desktop and tablet scroll — At 1024 px only: the title Latest insights above a tablet rail of about 3.3 image cards cut at the right edge. The desktop rail and the mobile column aren't part of this screenshot. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-scroll-desktop-tablet.jpg)

Screenshot Details — Desktop and tablet scroll

Item	Detail
Screenshot Name	`screenshots/list-scroll-desktop-tablet.jpg`
Screenshot Purpose	Desktop and tablet scroll
Screen Description	At 1024 px only: the title Latest insights above a tablet rail of about 3.3 image cards cut at the right edge. The desktop rail and the mobile column aren't part of this screenshot.
Business Context	Rails on large screens where cards would otherwise be small, with a stacked column on phones where swiping isn't wanted.
Author Objective	Use Horizontal scroll on desktop and tablet, Grid on mobile, and check the tablet view at 1024 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(H)	Tablet display (List › Layout)	Horizontal scroll	No	Grid or scroll at 600–1199 px	—	grid, horizontal-scroll
—	Screen width (Preview)	1024 px (tablet; desktop scrolls too, mobile is a column)	—	Check on the preview (not stored in the content)	1024 px (tablet; desktop scrolls too, mobile is a column)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1024 px the title "Latest insights" above a rail of about 3.3 image cards running to the right edge.
- **Rendering behaviour:** desktop-scroll tablet-scroll mobile-grid: 600 px and wider scrolls (4.2 cards on desktop, 3.3 on tablet); below 600 px the eight cards stack in one column.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed.

Business Rules

- Desktop and tablet scroll independently of mobile.
- No buttons or indicator unless switched on per breakpoint.
- Mobile shows all eight cards stacked; consider Maximum items.
- Keyboard scrolling works on the focused rail.

Common Authoring Mistakes

Error	Root Cause	Resolution
The phone page is very long	Eight stacked cards on mobile	Lower Maximum items or use a mobile rail
The tablet view shows a grid	Tablet display left on Grid	Set Tablet display to Horizontal scroll

Troubleshooting

- **Symptoms:** Keyboard users can't scroll the rail at 1024 px.
- **Cause:** Keyboard scrolling is off, or the cards fit so the region isn't focusable.
- **Resolution:** Switch Keyboard scrolling on (Scroll tab); check there are more cards than visible.
- **Verification Steps:** Tab to the rail on aem.page and use the arrow keys.

Use Cases: Content where swiping isn't wanted on phones.

Authoring Guidelines: Desktop and Tablet Horizontal scroll; Mobile Grid.

Business Rules: As Variation 36.

Rendering Rules: `desktop-scroll tablet-scroll mobile-grid`.

Responsive Behaviour: 600 px+ scrolls.

SEO Impact: None.

Accessibility Compliance: As Variations 34 and 35.

Variation 40 — Scroll on Desktop and Mobile

Variation Name: Desktop scroll; Tablet grid; Mobile scroll.

Business Purpose: Rails where a tablet grid fits better.

Visual Example:

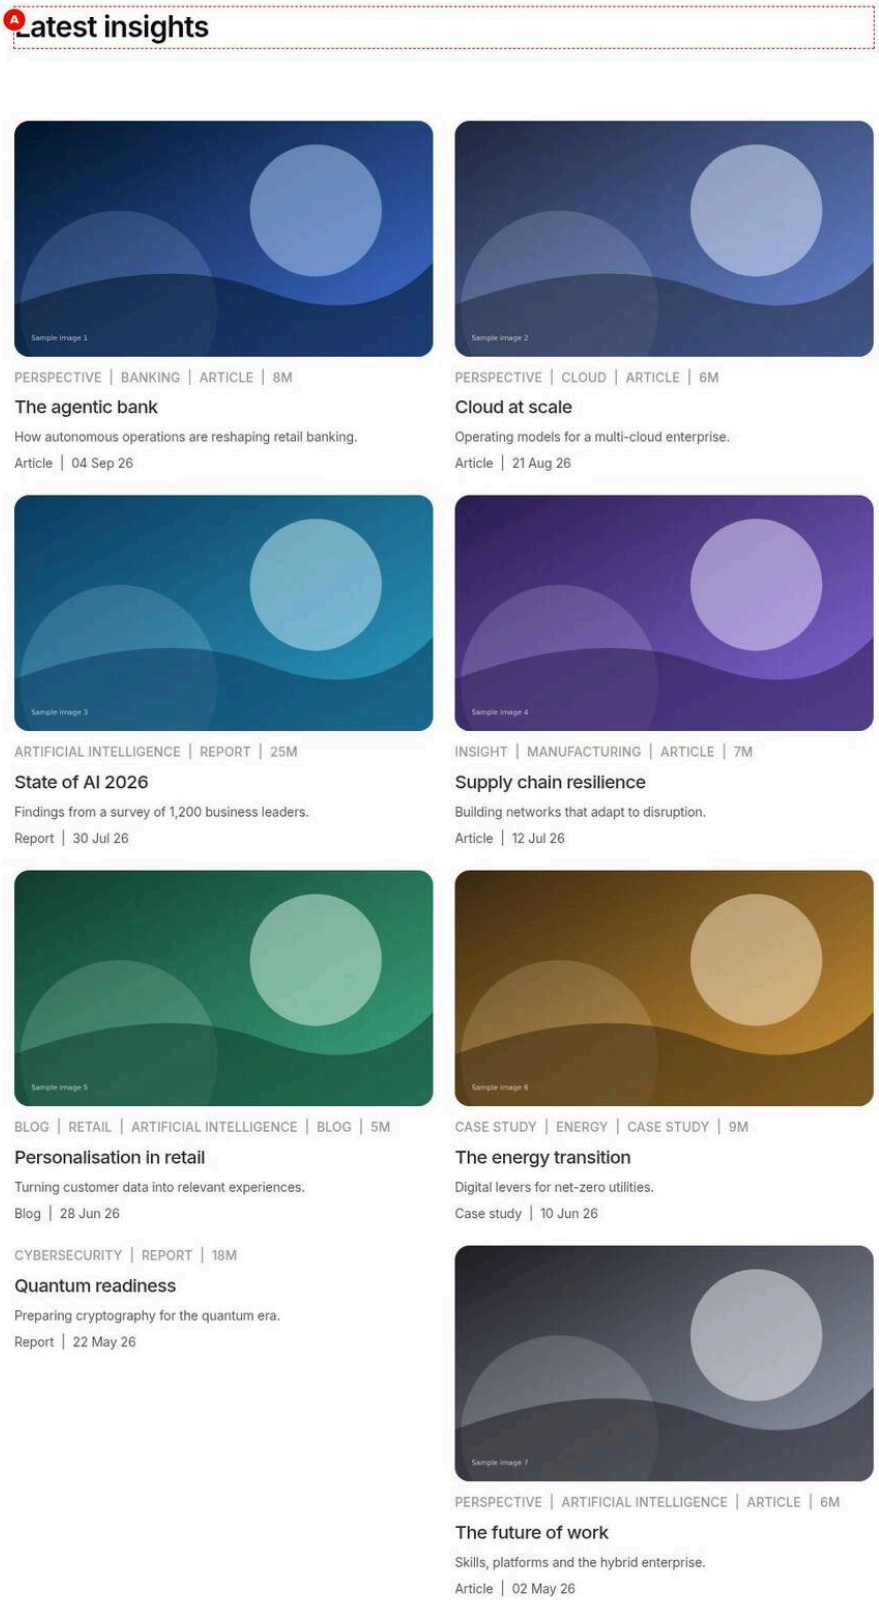

Figure 43: Desktop and mobile scroll — At 1024 px only: the title Latest insights above the eight newest insights in a 2-column grid of four rows (Tablet columns 2). The desktop and mobile rails aren't part of this screenshot. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-scroll-desktop-mobile.jpg)

Screenshot Details — Desktop and mobile scroll

Item	Detail
Screenshot Name	`screenshots/list-scroll-desktop-mobile.jpg`
Screenshot Purpose	Desktop and mobile scroll
Screen Description	At 1024 px only: the title Latest insights above the eight newest insights in a 2-column grid of four rows (Tablet columns 2). The desktop and mobile rails aren't part of this screenshot.
Business Context	Rails on desktop and phones, with a tidy 2-column grid on tablets where an even card count fits better.
Author Objective	Use Horizontal scroll on desktop and mobile with a 2-column tablet grid, and check the tablet view at 1024 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(H)	Tablet columns (List › Layout)	2	No	Grid columns on tablet	2–3 often fit better	Enforced 1–6; grid only
(I)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll
—	Screen width (Preview)	1024 px (tablet: the 2-column grid; desktop and mobile scroll)	—	Check on the preview (not stored in the content)	1024 px (tablet: the 2-column grid; desktop and mobile scroll)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1024 px the title “Latest insights” above a 2-column grid of the eight insights in four rows.
- **Rendering behaviour:** desktop-scroll tablet-grid mobile-scroll mobile-indicator: 1200 px and wider and below 600 px scroll; Tablet columns 2 gives the 2-column grid at 600–1199 px.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed.

Business Rules

- Tablet columns applies only while Tablet display is Grid.
- Mobile keeps its indicator default.
- Eight cards make four full tablet rows.
- Each breakpoint’s gap stays at its default unless changed.

Common Authoring Mistakes

Error	Root Cause	Resolution
Tablet shows four narrow columns	Tablet columns left at 4	Enter 2
Tablet scrolls too	Tablet display set to Horizontal scroll	Set it to Grid

Troubleshooting

- **Symptoms:** The tablet grid has an empty slot in the last row.
- **Cause:** An odd number of cards with 2 tablet columns.
- **Resolution:** Set Maximum items to an even number.
- **Verification Steps:** The last tablet row is full at 1024 px.

Use Cases: Even card counts on tablets.

Authoring Guidelines: Desktop and Mobile Horizontal scroll; Tablet Grid.

Business Rules: As Variation 36.

Rendering Rules: `desktop-scroll tablet-grid mobile-scroll`.

Responsive Behaviour: 1200 px+ and below 600 px scroll.

SEO Impact: None.

Accessibility Compliance: As Variations 34 and 35.

Variation 41 — Grid on Desktop, Scroll on Tablet and Mobile

Variation Name: Desktop grid; Tablet scroll; Mobile scroll.

Business Purpose: One desktop row, rails on touch devices.

Visual Example:

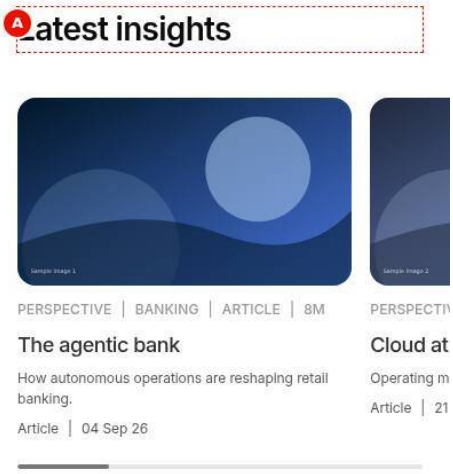

Figure 44: Tablet and mobile scroll — At 402 px only: the title Latest insights above a mobile rail of 1.2 image cards with the scroll indicator below. The tablet rail and the 4-column desktop grid aren't part of this screenshot. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-scroll-tablet-mobile.jpg)

Screenshot Details — Tablet and mobile scroll

Item	Detail
Screenshot Name	`screenshots/list-scroll-tablet-mobile.jpg`
Screenshot Purpose	Tablet and mobile scroll
Screen Description	At 402 px only: the title Latest insights above a mobile rail of 1.2 image cards with the scroll indicator below. The tablet rail and the 4-column desktop grid aren't part of this screenshot.
Business Context	One desktop row of cards, and rails on touch devices where swiping is natural.
Author Objective	Use Grid on desktop and Horizontal scroll on tablet and mobile, and check the mobile view at 402 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
						when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Tablet display (List › Layout)	Horizontal scroll	No	Grid or scroll at 600–1199 px	—	grid, horizontal-scroll
(H)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll
—	Screen width (Preview)	402 px (mobile; tablet scrolls too, desktop is a 4-column grid)	—	Check on the preview (not stored in the content)	402 px (mobile; tablet scrolls too, desktop is a 4-column grid)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 402 px the title "Latest insights" above a rail of 1.2 image cards with the scroll indicator below.
- **Rendering behaviour:** desktop-grid tablet-scroll mobile-scroll mobile-indicator: below 1200 px the list scrolls (3.3 cards on tablet, 1.2 on mobile); desktop shows a 4-column grid of two rows.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed.

Business Rules

- Below 1200 px the rail applies; the tablet has no indicator by default.
- The rail bleeds to the right screen edge by default.
- Desktop shows all eight cards in two rows.
- Swipe and drag are on by default.

Common Authoring Mistakes

Error	Root Cause	Resolution
No cue that the tablet rail scrolls	Tablet indicator off by default	Switch on Scroll indicator on tablet
Desktop is a rail too	Desktop display set to Horizontal scroll	Set it to Grid

Troubleshooting

- **Symptoms:** The indicator thumb doesn't move when swiping.
- **Cause:** The page script failed, so the scroller wasn't enhanced (the CSS rail still scrolls).
- **Resolution:** Check the browser console for "failed to load block list" and escalate to development (L3).
- **Verification Steps:** The thumb follows the swipe on aem.page.

Use Cases: Four-item rows.

Authoring Guidelines: Desktop Grid; Tablet and Mobile Horizontal scroll.

Business Rules: As Variation 36.

Rendering Rules: `desktop-grid tablet-scroll mobile-scroll`.

Responsive Behaviour: Below 1200 px scrolls.

SEO Impact: None.

Accessibility Compliance: As Variations 34 and 35.

Variation 42 — Previous / Next Buttons

Variation Name: Previous / next buttons on {desktop, tablet, mobile}.

Business Purpose: Visible rail controls.

Visual Example:

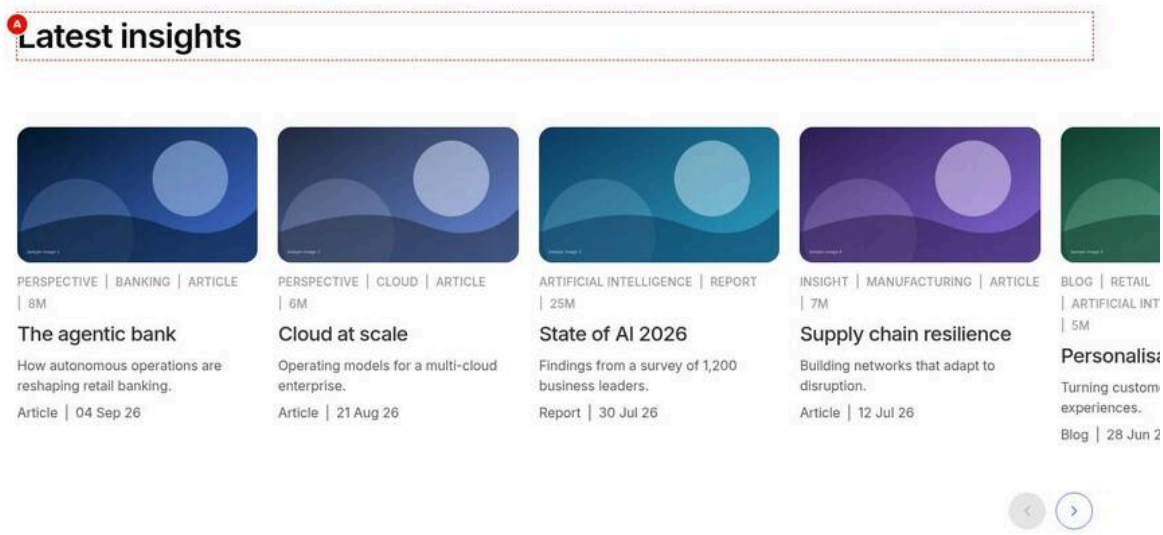

Figure 45: Previous and next buttons — At 1440 px the title Latest insights above a desktop rail of about 4.2 cards at its start, with two round chevron buttons below on the right: Previous disabled, Next enabled. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-previous-next.jpg)

Screenshot Details — Previous and next buttons

Item	Detail
Screenshot Name	`screenshots/list-previous-next.jpg`
Screenshot Purpose	Previous and next buttons
Screen Description	At 1440 px the title Latest insights above a desktop rail of about 4.2 cards at its start, with two round chevron buttons below on the right: Previous disabled, Next enabled.
Business Context	A desktop insights rail with visible controls for mouse users who don't drag or use the keyboard.
Author Objective	Switch on Previous / next buttons on desktop for a horizontally scrolling list of eight insights.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, last-Modified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, de-scending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(H)	Previous / next buttons on desktop (List › Layout)	On	No	Show the buttons	On for desktop rails	Boolean; scroll only

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest insights" above a rail of about 4.2 cards; below on the right two round chevron buttons, Previous disabled at the start and Next active.
- **Rendering behaviour:** button.list-previous and button.list-next (labels from placeholders listPrevious / list-Next, aria-controls the scroller) appear only while the cards overflow; Scroll step One card moves one card per click.
- **Publishing behaviour:** Publish the page; new labels for the buttons are placeholder sheet entries, published separately.

Business Rules

- Buttons are disabled at the ends unless Loop is on.
- Clicks are pushed to the data layer with interaction previous / next.
- Buttons are set per breakpoint; tablet and mobile stay without them.
- Reduced motion support scrolls instantly for prefers-reduced-motion.

Common Authoring Mistakes

Error	Root Cause	Resolution
Buttons are missing	Desktop display left on Grid	Set Desktop display to Horizontal scroll first
Buttons in English on a German page	listPrevious / listNext not translated	Add them to the locale placeholders sheet and publish it

Troubleshooting

- **Symptoms:** The buttons don't appear on a wide screen.

- **Cause:** All cards fit the width, so there is nothing to scroll.
- **Resolution:** Lower Desktop items visible or add items.
- **Verification Steps:** The scroller has data-overflow="true" and the buttons show.

Use Cases: Desktop rails.

Authoring Guidelines: Layout tab (breakpoint in Horizontal scroll): Previous / next buttons on; Scroll tab: Scroll step, Loop.

Business Rules: As 6.15.3 Variation 33: only when the cards overflow; disabled at the ends unless Loop.

Rendering Rules: `button.list-previous` / `button.list-next` (placeholders `listPrevious`, `listNext`), `aria-controls`; data layer `interaction: previous / next` with the list's path.

Responsive Behaviour: Per breakpoint.

SEO Impact: None.

Accessibility Compliance: Named buttons with `disabled` states (WCAG 4.1.2).

Variation 43 — Scroll Indicator

Variation Name: Scroll indicator on {desktop, tablet, mobile} (mobile on by default).

Business Purpose: Progress bar of the rail.

Visual Example:

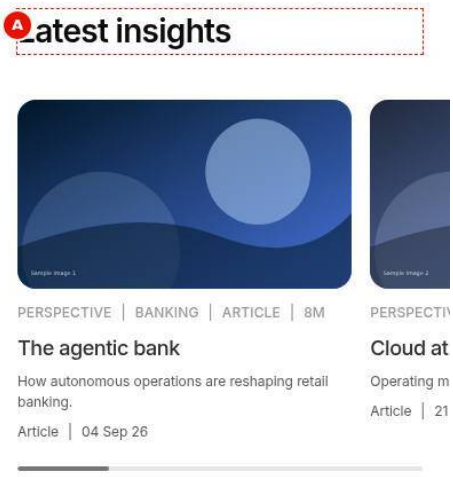

Figure 46: Scroll indicator — At 402 px the title Latest insights above a mobile rail with one full card and part of the next, and below it the thin grey indicator track with a darker thumb at the left. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-scroll-indicator.jpg)

Screenshot Details — Scroll indicator

Item	Detail
Screenshot Name	`screenshots/list-scroll-indicator.jpg`
Screenshot Purpose	Scroll indicator
Screen Description	At 402 px the title Latest insights above a mobile rail with one full card and part of the next, and below it the thin grey indicator track with a darker thumb at the left.
Business Context	A mobile insights rail whose progress bar shows visitors that more cards follow.
Author Objective	Check the mobile scroll indicator (on by default) of an insights rail at 402 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll
(H)	Scroll indicator on mobile (List › Layout)	On (the default)	No	—	—	None
—	Screen width (Preview)	402 px (mobile)	—	Check on the preview (not stored in the content)	402 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 402 px a rail with 1.2 cards and below it a thin 0.25rem grey track with a darker thumb at the left.
- **Rendering behaviour:** div.list-indicator (aria-hidden) is shown with mobile-scroll mobile-indicator; the thumb width is the visible share of the rail (at least 5rem) and moves as the rail scrolls.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed.

Business Rules

- Scroll indicator on mobile is on by default; desktop and tablet default off.
- The indicator shows only when the cards overflow.
- It is decorative; the rail itself is the focusable region.
- It works together with or without buttons.

Common Authoring Mistakes

Error	Root Cause	Resolution
No indicator	Mobile display left on Grid	Set Mobile display to Horizontal scroll
Indicator missing with two cards	The cards fit, nothing scrolls	Expected; the indicator appears once the cards overflow

Troubleshooting

- **Symptoms:** The indicator track is shown but the thumb fills it completely.
- **Cause:** The rail barely overflows (few cards).
- **Resolution:** Add items or lower Mobile items visible.
- **Verification Steps:** The thumb is shorter than the track on aem.page.

Use Cases: Mobile rails.

Authoring Guidelines: Layout tab: Scroll indicator on {breakpoint}.

Business Rules: Only when the breakpoint scrolls and the cards overflow.

Rendering Rules: `div.list-indicator` (`aria-hidden`), thumb sized by the visible share.

Responsive Behaviour: Per breakpoint.

SEO Impact: None.

Accessibility Compliance: Decorative.

Variation 44 — Fixed Card Width

Variation Name: {Breakpoint} card width (px) 120–1200.

Business Purpose: Fixed card widths in rails.

Visual Example:

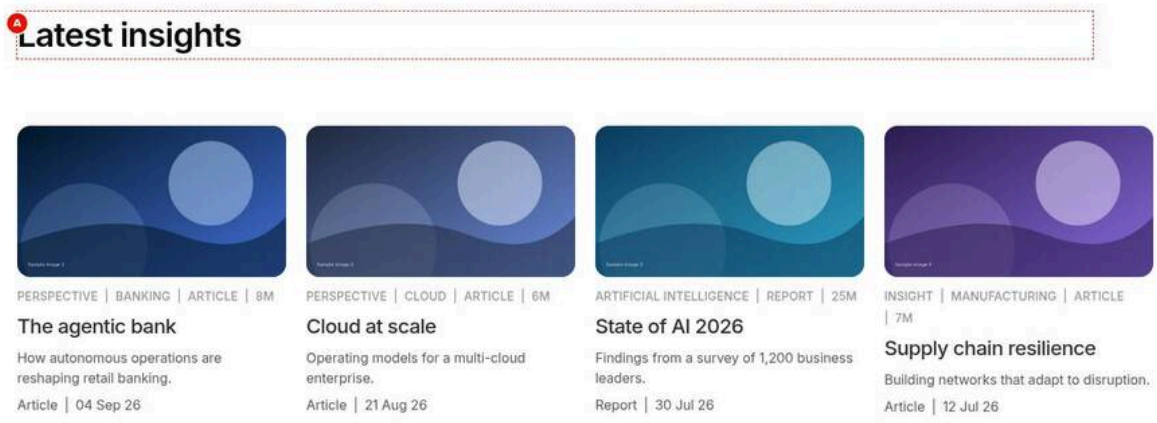

Figure 47: Fixed card width — At 1440 px the title Latest insights above a desktop rail of 20rem (320 px) wide image cards running to the right screen edge, more cards visible than with the default 4.2. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-fixed-card-width.jpg)

Screenshot Details — Fixed card width

Item	Detail
Screenshot Name	`screenshots/list-fixed-card-width.jpg`
Screenshot Purpose	Fixed card width

Item	Detail
Screen Description	At 1440 px the title Latest insights above a desktop rail of 20rem (320 px) wide image cards running to the right screen edge, more cards visible than with the default 4.2.
Business Context	A desktop insights rail with uniform card widths, independent of the screen size.
Author Objective	Set Desktop card width (px) 320 on a desktop rail of eight insights.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(H)	Desktop card width (px) (List › Layout)	320	No	Fixed card width instead	0 uses Items visible	Enforced 0–1200; below 120 treated as 0; scroll only

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest insights" above a rail of 20rem-wide image cards (320 px), more of them visible than with 4.2 cards, running to the right screen edge.
- **Rendering behaviour:** –list-card-width-desktop is set to 20rem and replaces Items visible; values below 120 count as 0 (Items visible) and 1200 is the maximum. Only the desktop breakpoint is affected.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed.

Business Rules

- Card width applies only in Horizontal scroll mode.
- 0 (default) uses Items visible.

- The width is set per breakpoint.
- The px value is converted to rem.

Common Authoring Mistakes

Error	Root Cause	Resolution
The width has no effect	A value below 120, or Grid display	Enter 120–1200 with Horizontal scroll
Cards too narrow for long titles	A small card width	Use 300 px or more

Troubleshooting

- **Symptoms:** Tablet cards keep their old width.
- **Cause:** Only Desktop card width was set.
- **Resolution:** Set Tablet card width (px) as well if tablets scroll.
- **Verification Steps:** At 1024 px the cards have the tablet width on aem.page.

Use Cases: Uniform report or statistic rails.

Authoring Guidelines: Layout tab: Card width (scroll mode); 0 = Items visible.

Business Rules: Below 120 = 0; capped at 1200.

Rendering Rules: `--list-card-width-{bp}` in rem.

Responsive Behaviour: Per breakpoint.

SEO Impact: None.

Accessibility Compliance: As Variation 35.

Variation 45 — Edge "Inside the content width"

Variation Name: Scroll tab: Edge = Inside the content width (`none`).

Business Purpose: Rails that stop at the content width instead of the screen edge (default bleed, as in Figma).

Visual Example:

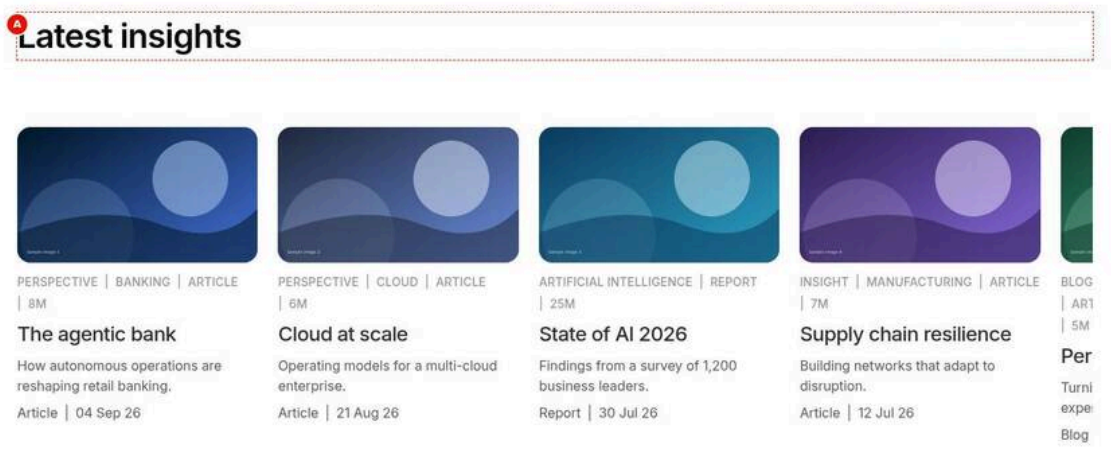

Figure 48: Scroller inside the content width — At 1440 px the title Latest insights above a desktop rail of about 4.2 image cards whose last visible card is cut at the section padding, not at the screen edge. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-edge-none.jpg)

Screenshot Details — Scroller inside the content width

Item	Detail
Screenshot Name	`screenshots/list-edge-none.jpg`
Screenshot Purpose	Scroller inside the content width
Screen Description	At 1440 px the title Latest insights above a desktop rail of about 4.2 image cards whose last visible card is cut at the section padding, not at the screen edge.
Business Context	A desktop rail inside a boxed layout, where cards must not run past the content width into the screen margin.
Author Objective	Set Edge Inside the content width on a desktop rail of eight insights.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(H)	Edge (List › Scroll)	Inside the content width	No	Scroller to the screen edge or not	Bleed as in Figma	bleed, none

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest insights" above a rail whose last visible card is cut at the section padding instead of the screen edge.
- **Rendering behaviour:** Without edge-bleed the scroller has no negative right margin (bleed would be 1.5 / 2.5 / 5rem); Items visible is measured within the content width.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed.

Business Rules

- Bleed is the default, as in Figma.
- Edge applies only to breakpoints that scroll.
- Use Inside the content width in sections with backgrounds or boxed layouts.
- The setting is on the Scroll tab, for all breakpoints.

Common Authoring Mistakes

Error	Root Cause	Resolution
The rail still reaches the screen edge	Edge left on Bleed	Choose Inside the content width
Nothing changes	The list is a grid on that breakpoint	Expected: Edge affects rails only

Troubleshooting

- **Symptoms:** The rail overlaps the coloured section's right padding.
- **Cause:** Edge Bleed pulls the scroller into the section padding.
- **Resolution:** Set Edge to Inside the content width and publish.
- **Verification Steps:** The block lacks the class edge-bleed and the cards stop at the padding.

Use Cases: Sections with backgrounds or boxed layouts.

Authoring Guidelines: Edge = Inside the content width.

Business Rules: Scroll modes only.

Rendering Rules: Without `edge-bleed` no negative right margin (bleed: 1.5 / 2.5 / 5rem).

Responsive Behaviour: Per scrolling breakpoint.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 46 — Snap Alignment "Center"

Variation Name: Scroll snap on, Snap alignment = Center.

Business Purpose: Centre the snapped card.

Visual Example:

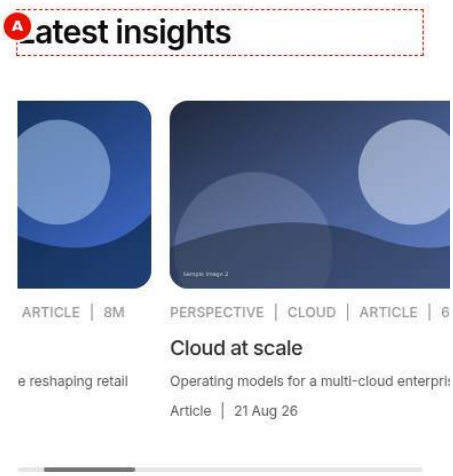

Figure 49: Centre snap alignment — At 402 px the mobile rail after a short swipe: the second card, Cloud at scale, snapped to the centre with slivers of The agentic bank and State of AI 2026 on both sides, and the indicator below. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-snap-center.jpg)

Screenshot Details — Centre snap alignment

Item	Detail
Screenshot Name	`screenshots/list-snap-center.jpg`
Screenshot Purpose	Centre snap alignment
Screen Description	At 402 px the mobile rail after a short swipe: the second card, Cloud at scale, snapped to the centre with slivers of The agentic bank and State of AI 2026 on both sides, and the indicator below.
Business Context	A mobile insights rail where the current card is centred with both neighbours peeking in.
Author Objective	Set Snap alignment Center on a mobile rail and check the snap after a short swipe at 402 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll
(H)	Snap alignment (List › Scroll)	Center	No	Where cards snap	Center for mobile peeking rails	start, center; shown when snap on
—	Screen width (Preview)	402 px (mobile)	—	Check on the preview (not stored in the content)	402 px (mobile)	—
—	Action (Preview)	Swipe the rail a little: the nearest card snaps to the centre	—	Check on the preview (not stored in the content)	Swipe the rail a little: the nearest card snaps to the centre	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 402 px the rail after a short swipe: the second card centred, with slivers of the first and third cards on both sides, and the indicator below.
- **Rendering behaviour:** snap snap-center sets scroll-snap-align center on the items; snapping is suspended while dragging and resumes after release. Snap alignment is shown only with Scroll snap on.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed.

Business Rules

- Scroll snap is on by default; Snap alignment defaults to Start.
- Center suits mobile rails with peeking neighbours.
- Snap applies only where the list scrolls.
- Mobile items visible 1.2 leaves room for the neighbours.

Common Authoring Mistakes

Error	Root Cause	Resolution
Snap alignment isn't in the dialog	Scroll snap switched off	Switch Scroll snap on
Cards stop anywhere	Scroll snap off	Switch it on

Troubleshooting

- **Symptoms:** After a swipe the card snaps to the left edge, not the centre.
- **Cause:** Snap alignment is still Start.
- **Resolution:** Set Snap alignment to Center on the Scroll tab and publish.
- **Verification Steps:** The block has snap-center and the card centres at 402 px.

Use Cases: Mobile rails with peeking neighbours.

Authoring Guidelines: Scroll tab: Snap alignment = Center.

Business Rules: Shown only with snap on; snap is suspended while dragging.

Rendering Rules: `snap snap-center`.

Responsive Behaviour: Scrolling breakpoints.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 47 — Scroll Step "Viewport"

Variation Name: Scroll step = Viewport.

Business Purpose: Page by screen width.

Visual Example:

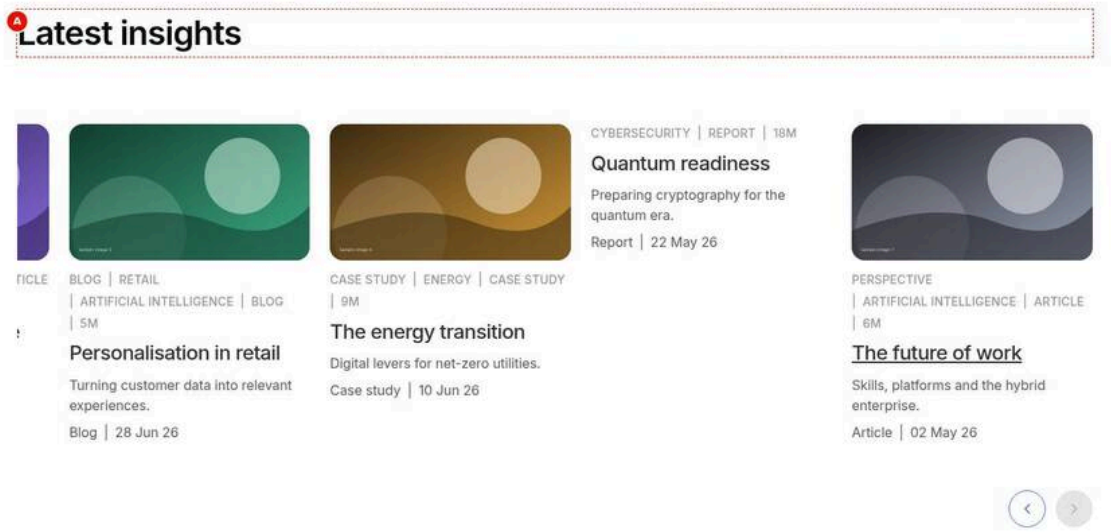

Figure 50: Viewport scroll step — At 1440 px the desktop rail after one click on Next: scrolled by a screenful to its end, showing the last cards up to The future of work, with Previous now enabled. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-step-viewport.jpg)

Screenshot Details — Viewport scroll step

Item	Detail
Screenshot Name	`screenshots/list-step-viewport.jpg`
Screenshot Purpose	Viewport scroll step
Screen Description	At 1440 px the desktop rail after one click on Next: scrolled by a screenful to its end, showing the last cards up to The future of work, with Previous now enabled.
Business Context	A long desktop insights rail that pages a whole screen of cards per click, so visitors reach the end in few steps.
Author Objective	Set Scroll step Viewport on a desktop rail with previous / next buttons and check the result after one Next click.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(H)	Previous / next buttons on desktop (List › Layout)	On	No	Show the buttons	On for desktop rails	Boolean; scroll only
(I)	Scroll step (List › Scroll)	Viewport	No	Step of buttons and keys	—	one-card, viewport
—	Action (Preview)	Click Next items once	—	Check on the preview (not stored in the content)	Click Next items once	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest insights" above the rail after one click on Next: the next set of cards fills the rail, Previous is now enabled.
- **Rendering behaviour:** With Scroll step Viewport, Next and Previous (and the arrow keys) scroll by the visible width of the rail instead of one card; scrolling is smooth unless the visitor prefers reduced motion.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed. The button labels come from the placeholders sheet.

Business Rules

- One card (default) moves one card per click; Viewport moves a screenful.
- The step applies to the buttons and the arrow keys.
- Buttons are disabled at the ends unless Loop is on.
- Reduced motion support scrolls instantly for prefers-reduced-motion.

Common Authoring Mistakes

Error	Root Cause	Resolution
Next moves only one card	Scroll step left on One card	Choose Viewport on the Scroll tab
No buttons to click	Previous / next buttons on desktop off	Switch them on on the Layout tab

Troubleshooting

- **Symptoms:** After one click on Next the rail is already at the end.
- **Cause:** With eight cards and 4.2 visible, one viewport step covers most of the rail.
- **Resolution:** Expected; use One card for finer steps or add items.
- **Verification Steps:** Next is disabled at the end and Previous goes back one screenful.

Use Cases: Long desktop rails.

Authoring Guidelines: Scroll step = Viewport.

Business Rules: Buttons and arrow keys.

Rendering Rules: `scrollBy` the visible width.

Responsive Behaviour: Scrolling breakpoints.

SEO Impact: None.

Accessibility Compliance: Reduced motion respected.

Variation 48 — Loop

Variation Name: Loop on.

Business Purpose: Wrap from the end to the start.

Visual Example:

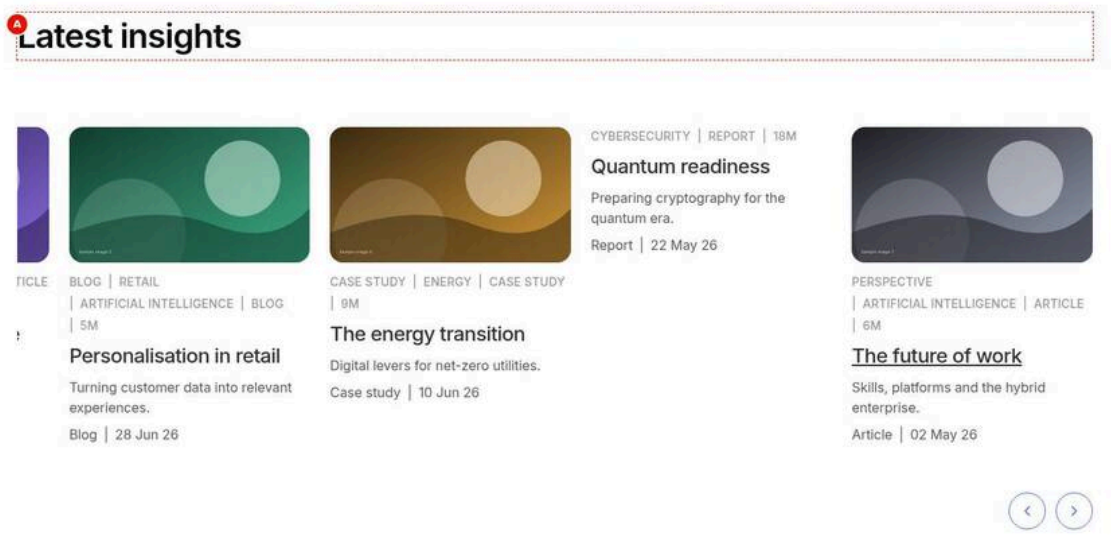

Figure 51: Loop — At 1440 px the desktop rail after four clicks on Next: scrolled to its end with The future of work as the last card, and Next still enabled because Loop is on (the next click would return to the first card). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-loop.jpg)

Screenshot Details — Loop

Item	Detail
Screenshot Name	`screenshots/list-loop.jpg`
Screenshot Purpose	Loop
Screen Description	At 1440 px the desktop rail after four clicks on Next: scrolled to its end with The future of work as the last card, and Next still enabled because Loop is on (the next click would return to the first card).
Business Context	A short desktop insights rail that wraps from the last card back to the first, so Next is never a dead end.
Author Objective	Switch Loop on for a desktop rail with previous / next buttons and check the wrap at the end.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(H)	Previous / next buttons on desktop (List › Layout)	On	No	Show the buttons	On for desktop rails	Boolean; scroll only
(I)	Loop (List › Scroll)	On	No	Next at the end goes to the start	—	Boolean
—	Action (Preview)	Click Next items until the last card shows: Next stays enabled, one more click returns to the first card	—	Check on the preview (not stored in the content)	Click Next items until the last card shows: Next stays enabled, one more click returns to the first card	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest insights" above the rail after four clicks on Next: scrolled to its end with The future of work as the last card, and Next still enabled because Loop is on.
- **Rendering behaviour:** With Loop on the buttons are never disabled; Next at the end scrolls to the start and Previous at the start scrolls to the end. There is no automatic rotation.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed.

Business Rules

- Loop is off by default.
- Loop never moves the rail by itself (no auto-rotation).
- Each click is pushed to the data layer as previous / next.

- Loop works with both scroll steps.

Common Authoring Mistakes

Error	Root Cause	Resolution
Next is disabled at the end	Loop left off	Switch Loop on on the Scroll tab
Visitors lose their place	Loop on a long rail	Use Loop only on short rails

Troubleshooting

- **Symptoms:** Next is still disabled at the last card on aem.page.
- **Cause:** The page wasn't republished after switching Loop on.
- **Resolution:** Publish the page again.
- **Verification Steps:** At the last card Next stays enabled and returns to the first card.

Use Cases: Short rails.

Authoring Guidelines: Scroll tab: Loop.

Business Rules: Buttons never disabled; no auto-rotation.

Rendering Rules: Scroll to 0 / the end.

Responsive Behaviour: Scrolling breakpoints.

SEO Impact: None.

Accessibility Compliance: No automatic movement.

Variation 49 — Initial Item

Variation Name: Initial item index > 0.

Business Purpose: Open the rail at a given card.

Visual Example:

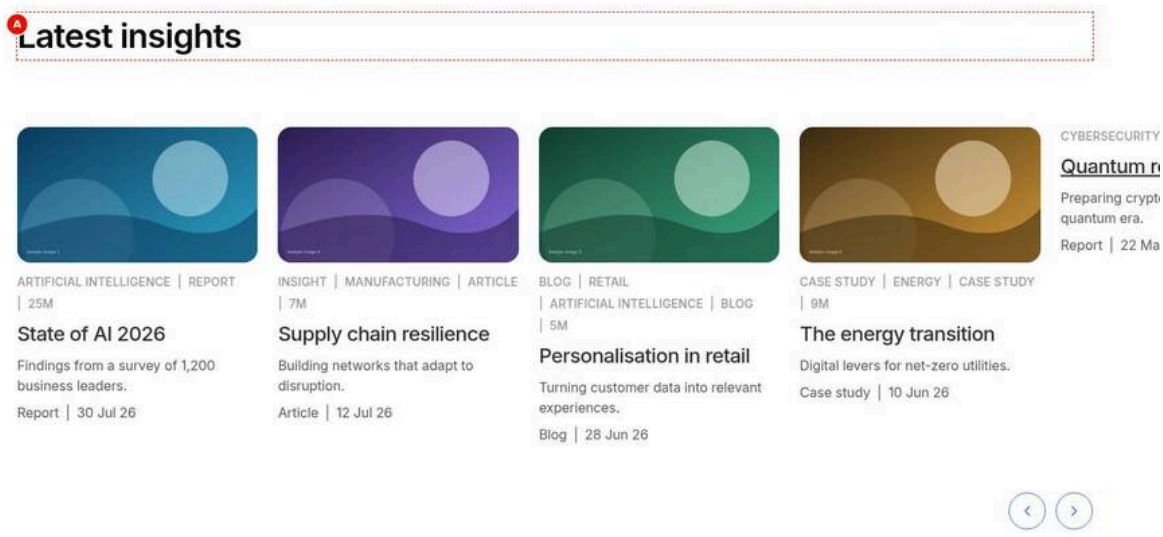

Figure 52: Initial item — At 1440 px the title Latest insights above a desktop rail opened at its third card, State of AI 2026, as the first visible card, with Previous and Next enabled below. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-initial-item.jpg)

Screenshot Details — Initial item

Item	Detail
Screenshot Name	`screenshots/list-initial-item.jpg`
Screenshot Purpose	Initial item
Screen Description	At 1440 px the title Latest insights above a desktop rail opened at its third card, State of AI 2026, as the first visible card, with Previous and Next enabled below.
Business Context	A desktop rail that should open at a given card, for example the current item of an ordered series.
Author Objective	Set Initial item index 2 so the desktop rail opens at its third card.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(H)	Previous / next buttons on desktop (List › Layout)	On	No	Show the buttons	On for desktop rails	Boolean; scroll only
(I)	Initial item index (List › Scroll)	2	No	Card shown first	0 = first	Enforced 0–200

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest insights" above a rail already scrolled so that State of AI 2026, the third card, is the first visible; Previous is enabled.

- **Rendering behaviour:** The rail scrolls instantly to item index 2 (0 is the first card) once, without moving focus; the index refers to the sorted, limited list after any feature card is taken out.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed. A new page can shift which card is at index 2.

Business Rules

- 0 (default) starts at the first card; allowed 0–200.
- The reading order is unchanged; only the scroll position differs.
- The index applies only where the list scrolls.
- With Last modified sorting the card at index 2 changes as pages are published.

Common Authoring Mistakes

Error	Root Cause	Resolution
The rail opens at the second card	Index counted from 1	Enter 2 for the third card (counted from 0)
No effect on tablet	Tablet display is Grid	Expected; set tablet to Horizontal scroll if needed

Troubleshooting

- **Symptoms:** The rail opens at a different card than planned.
- **Cause:** The list order changed after a newer page was published.
- **Resolution:** Use a Fixed list for a stable order, or adjust the index.
- **Verification Steps:** On aem.page the planned card is the first visible one.

Use Cases: Timelines, ordered rails.

Authoring Guidelines: Initial item index (0–200).

Business Rules: Applied once, without moving focus; the index refers to the sorted, limited list (after the feature card is taken out).

Rendering Rules: Instant scroll to the item.

Responsive Behaviour: Scrolling breakpoints only.

SEO Impact: None.

Accessibility Compliance: Reading order unchanged.

Variation 50 — Equal Card Height

Variation Name: Equal card height on.

Business Purpose: Equal row heights in multi-row grids.

Visual Example:

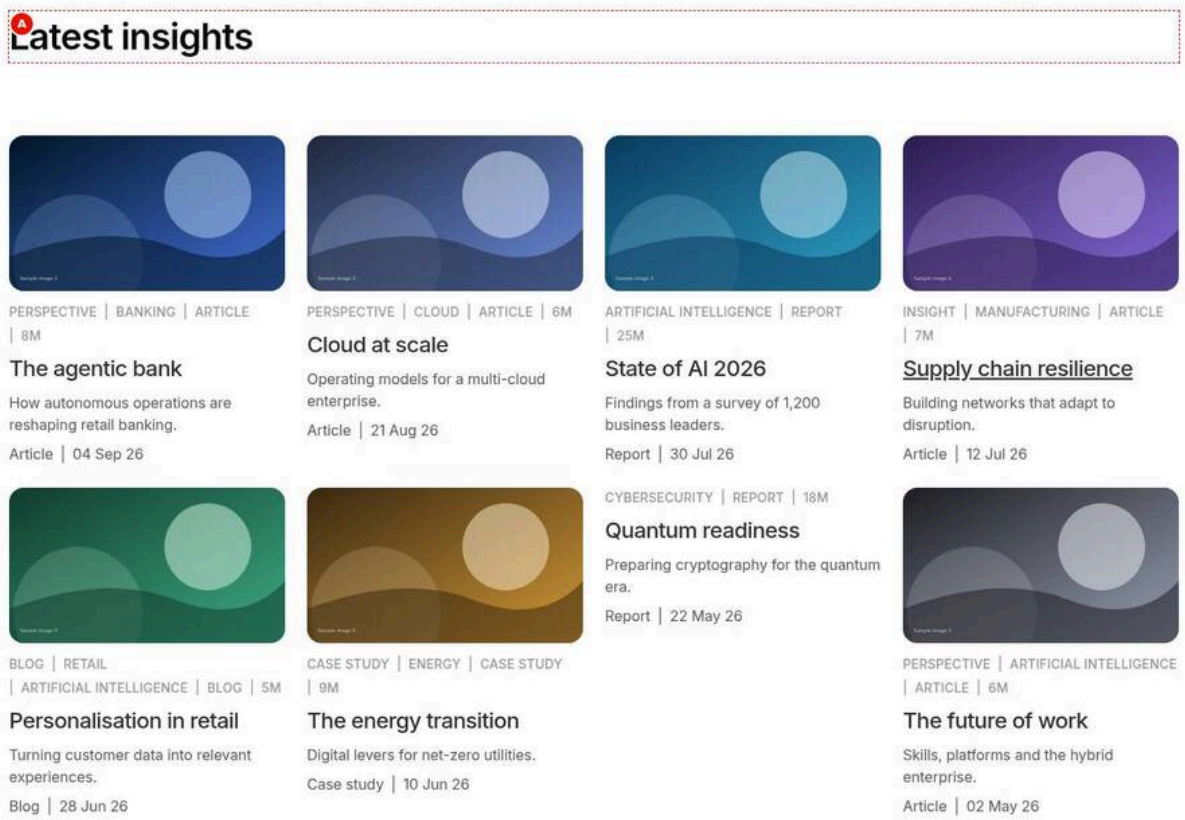

Figure 53: Equal card height — At 1440 px the title Latest insights above the eight newest insights in a 4-column grid of two rows of exactly the same height. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-equal-height.jpg)

Screenshot Details — Equal card height

Item	Detail
Screenshot Name	`screenshots/list-equal-height.jpg`
Screenshot Purpose	Equal card height
Screen Description	At 1440 px the title Latest insights above the eight newest insights in a 4-column grid of two rows of exactly the same height.
Business Context	A two-row insights grid where uneven row heights would look untidy.
Author Objective	Switch Equal card height on for a grid of eight insights.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, last-Modified
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, de-scending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Equal card height (List › Layout)	On	No	All rows equally tall	For multi-row grids	Boolean

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Latest insights" above two grid rows of four image cards, both rows exactly the same height.
- **Rendering behaviour:** equal-height sets grid-auto-rows 1fr, so every row takes the height of the tallest row; within a row Stretch cards (default on) makes the cards fill it.
- **Publishing behaviour:** Publish the page; the insights must be published and indexed.

Business Rules

- Equal card height is off by default.
- It matters in grids with more than one row.
- Short cards get empty space at the bottom.
- Stretch cards on keeps cards filling their rows.

Common Authoring Mistakes

Error	Root Cause	Resolution
Rows still differ	Equal card height off	Switch it on on the Layout tab
Large gaps in short cards	One very long description	Shorten the card-description

Troubleshooting

- **Symptoms:** The second row is much taller than needed.
- **Cause:** A long description in one card sets the height of every row.
- **Resolution:** Shorten that page's card-description, or switch Equal card height off.
- **Verification Steps:** The rows are compact on aem.page.

Use Cases: Grids of panels.

Authoring Guidelines: Layout tab: Equal card height.

Business Rules: Default off.

Rendering Rules: `equal-height; grid-auto-rows: 1fr.`

Responsive Behaviour: Grid modes.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 51 — Cards Not Stretched

Variation Name: Stretch cards to row height off.

Business Purpose: Natural card heights.

Visual Example:

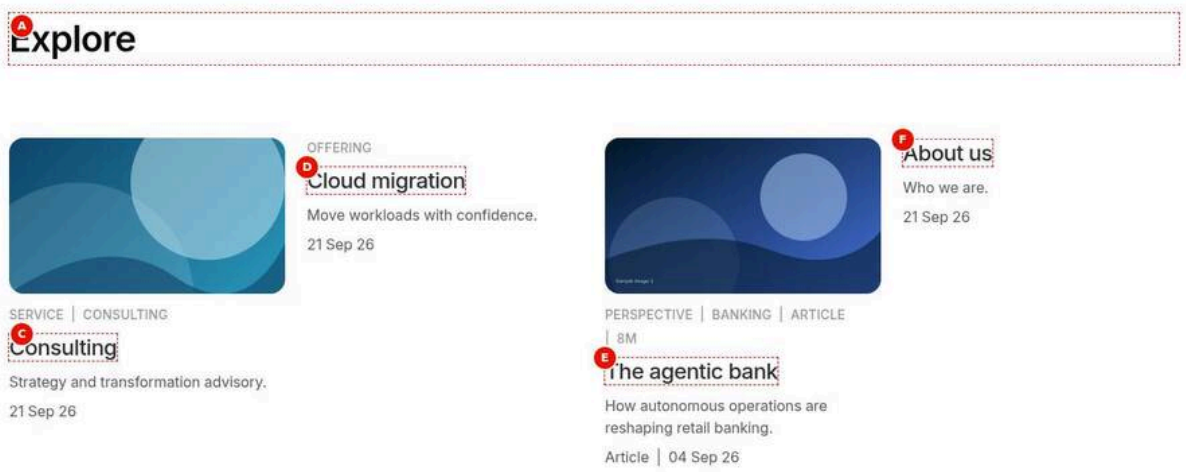

Figure 54: Cards not stretched — At 1440 px the title Explore above four image cards of different heights aligned to the top: Consulting with its image, Cloud migration and About us without image areas, and The agentic bank with image and meta. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-no-stretch.jpg)

Screenshot Details — Cards not stretched

Item	Detail
Screenshot Name	`screenshots/list-no-stretch.jpg`
Screenshot Purpose	Cards not stretched
Screen Description	At 1440 px the title Explore above four image cards of different heights aligned to the top: Consulting with its image, Cloud migration and About us without image areas, and The agentic bank with image and meta.
Business Context	An Explore row of pages with very different content, where cards should keep their natural heights.
Author Objective	Build a Fixed list of four pages with Stretch cards to row height off.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Explore	No	Heading of the list	Short and descriptive; up to 60 char-	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					acters (Recommended)	
(B)	Stretch cards to row height (List › Layout)	Off	No	Cards fill the row height	Keep on	Boolean
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
C	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/services/consulting	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
D	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/services/cloud/migration	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
E	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
F	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/about	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(G)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Explore" above four image cards of different heights aligned to the top: Consulting with its image, Cloud migration and About us without images, and The agentic bank with image, kicker and meta.
- **Rendering behaviour:** Without the stretch class the grid uses align-items start, so each card is as tall as its content; pages without an image get no image area.

- **Publishing behaviour:** Publish the page; the four linked pages must be published and indexed, since no item has overrides.

Business Rules

- Stretch cards to row height is on by default.
- Items without overrides take everything from the page metadata.
- In the editor these items don't show (no index, no Title override).
- The cards keep the content tree order.

Common Authoring Mistakes

Error	Root Cause	Resolution
Cards fill the row height	Stretch cards left on	Switch Stretch cards to row height off
The editor shows no cards	Items without Title overrides need the index	Check on aem.page

Troubleshooting

- **Symptoms:** The About us card is missing on aem.page.
- **Cause:** The About us page isn't published or indexed, and the item has no Title or Link text.
- **Resolution:** Publish the page, or add a Title override on List Item 4.
- **Verification Steps:** Four cards show on aem.page.

Use Cases: Varying description lengths.

Authoring Guidelines: Layout tab: Stretch cards off.

Business Rules: Default on.

Rendering Rules: `align-items: start`.

Responsive Behaviour: All modes.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 52 — Unlinked Cards (Link items off)

Variation Name: Cards tab: Link items off.

Business Purpose: Show pages' cards without links (e.g. a visual overview).

Visual Example:

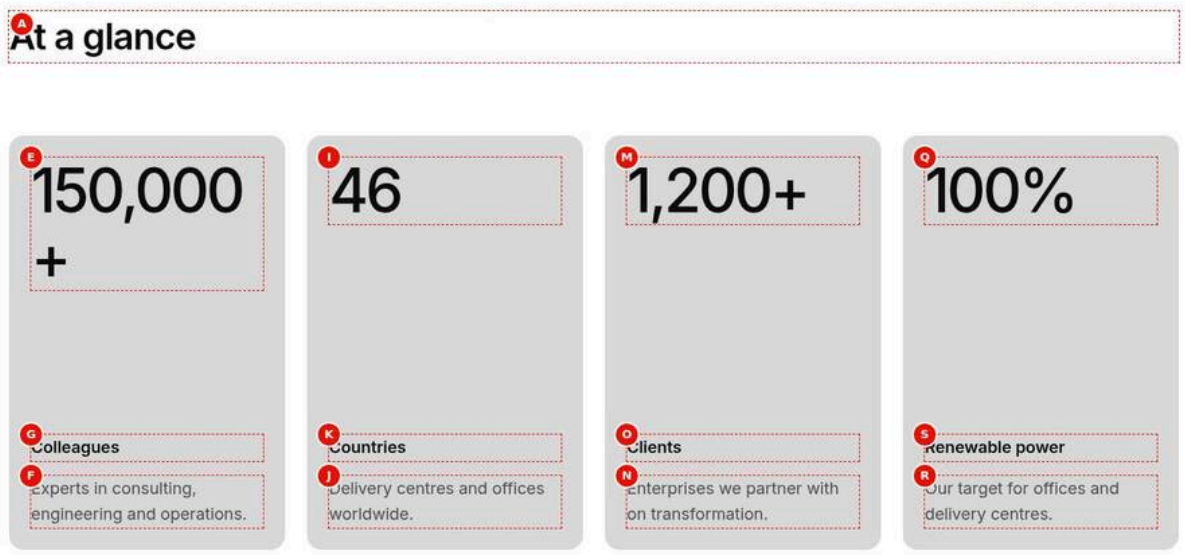

Figure 55: Unlinked cards — At 1440 px the title At a glance above four light grey statistic cards (150,000+ Colleagues, 46 Countries, 1,200+ Clients, 100% Renewable power) without links or buttons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-unlinked.jpg)

Screenshot Details — Unlinked cards

Item	Detail
Screenshot Name	`screenshots/list-unlinked.jpg`
Screenshot Purpose	Unlinked cards
Screen Description	At 1440 px the title At a glance above four light grey statistic cards (150,000+ Colleagues, 46 Countries, 1,200+ Clients, 100% Renewable power) without links or buttons.
Business Context	An informational At a glance band where the figures should not look clickable.
Author Objective	Show the four statistic cards without links (Link items off).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	At a glance	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Card style (List › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(C)	Link items (List › Cards)	Off	No	Link the cards	Off for informational cards	Boolean
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree,	Only the item types the List allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick List Item	
(D)	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/about/our-people	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
E	Title (List Item 1 › Content)	150,000+	No	Overrides the card title	Only when the page's card title doesn't fit	None
F	Description (List Item 1 › Content)	Experts in consulting, engineering and operations.	No	Overrides the description	Plain text, 1–2 sentences	None
G	Label (List Item 1 › Content)	Colleagues	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
(H)	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/about/locations	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
I	Title (List Item 2 › Content)	46	No	Overrides the card title	Only when the page's card title doesn't fit	None
J	Description (List Item 2 › Content)	Delivery centres and offices worldwide.	No	Overrides the description	Plain text, 1–2 sentences	None
K	Label (List Item 2 › Content)	Countries	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
(L)	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/about/clients	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
M	Title (List Item 3 › Content)	1,200+	No	Overrides the card title	Only when the page's card title doesn't fit	None
N	Description (List Item 3 › Content)	Enterprises we partner with on transformation.	No	Overrides the description	Plain text, 1–2 sentences	None
O	Label (List Item 3 › Content)	Clients	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(P)	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/about/sustainability	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
Q	Title (List Item 4 › Content)	100%	No	Overrides the card title	Only when the page's card title doesn't fit	None
R	Description (List Item 4 › Content)	Our target for offices and delivery centres.	No	Overrides the description	Plain text, 1–2 sentences	None
S	Label (List Item 4 › Content)	Renewable power	No	Statistic label	Statistic cards	None
(T)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "At a glance" above four grey statistic cards (150,000+ Colleagues, 46 Countries, 1,200+ Clients, 100% Renewable power) without links, hover effects or buttons.
- **Rendering behaviour:** Link items off renders no a.list-card-link, no call to action buttons and no row arrows; the titles are plain headings. The data layer still lists each item with its URL.
- **Publishing behaviour:** Publish the page; the linked pages needn't be published, since nothing links to them.

Business Rules

- List Items still require Page or link, even when unlinked.
- Link items off applies to every card of the list.
- Unlinked lists add no internal links (SEO).
- For figures without detail pages Cards is the better block.

Common Authoring Mistakes

Error	Root Cause	Resolution
Cards remain clickable	Link items left on	Switch Link items off on the Cards tab
An item disappears	Page or link removed to unlink it	Keep the link; use Link items off

Troubleshooting

- **Symptoms:** A statistic card still shows a button.
- **Cause:** The page wasn't republished after switching Link items off.
- **Resolution:** Publish the page again.
- **Verification Steps:** No a.list-card-link remains in the block on aem.page.

Use Cases: Statistics from a Fixed list (items require a link).

Authoring Guidelines: Link items off.

Business Rules: No card links, no call to action buttons, no row arrows; the data layer still lists the items with their URLs.

Rendering Rules: No `a.list-card-link`.

Responsive Behaviour: Unchanged.

SEO Impact: No internal links from the list.

Accessibility Compliance: No empty links.

Variation 53 — Open Links in a New Tab

Variation Name: Open links in a new tab (block) and Open in a new tab (List Item: As the list, Yes, No).

Business Purpose: External destinations in a new tab.

Visual Example:

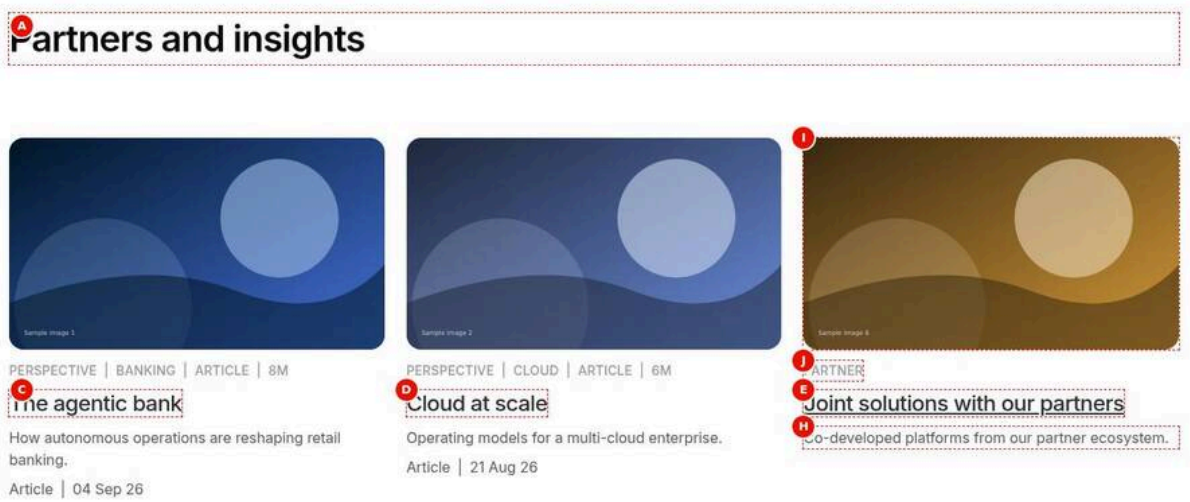

Figure 56: New-tab links — At 1440 px the title Partners and insights above three image cards: The agentic bank, Cloud at scale and Joint solutions with our partners with photo-6 and eyebrow Partner, whose title is underlined under the mouse pointer. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-new-tab.jpg)

Screenshot Details — New-tab links

Item	Detail
Screenshot Name	`screenshots/list-new-tab.jpg`
Screenshot Purpose	New-tab links
Screen Description	At 1440 px the title Partners and insights above three image cards: The agentic bank, Cloud at scale and Joint solutions with our partners with photo-6 and eyebrow Partner, whose title is underlined under the mouse pointer.
Business Context	A Partners and insights row in which the external partner page opens in a new tab while the site's own insights open in place.
Author Objective	Build a Fixed list of two insights and an external partner link set to Open in a new tab Yes.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Title (List › Content)	Partners and insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Desktop columns (List › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
C	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
D	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/cloud-at-scale	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
E	Page or link (List Item 3 › Link)	Select the page or enter https://partner.example.com/joint-solutions	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(F)	Open in a new tab (List Item 3 › Link)	Yes	No	Per-item target	Yes for external sites	'', true, false
(G)	Title (List Item 3 › Content)	Joint solutions with our partners	No	Overrides the card title	Only when the page's card title doesn't fit	None
H	Description (List Item 3 › Content)	Co-developed platforms from our partner ecosystem.	No	Overrides the description	Plain text, 1–2 sentences	None
I	Image (List Item 3 › Content)	Select the asset photo-6.svg (/en/media/photo-6.svg)	No	Overrides the image	From AEM Assets	None
J	Eyebrow (List Item 3 › Content)	Partner	No	Overrides the eyebrow	1–3 words	None
(K)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None
(L)	Partner card (Result)	Opens in a new tab (target="_blank", rel="noopener noreferrer"); screen readers hear	No	—	—	None

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
		"(opens in a new tab)"				

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Partners and insights" above three image cards: The agentic bank, Cloud at scale and the partner card "Joint solutions with our partners" with photo-6 and eyebrow PARTNER, its title underlined under the mouse pointer.
- **Rendering behaviour:** The partner card link gets target="_blank" rel="noopener noreferrer", a hidden "(opens in a new tab)" text (placeholder opensInNewTab) and data-external="true"; its click is an exit link in the data layer. Desktop columns 3.
- **Publishing behaviour:** Publish the page and photo-6.svg; the two insights must be published and indexed. The partner URL is external and needs nothing from the site.

Business Rules

- The item's Yes / No wins over the list's Open links in a new tab.
- Use new tabs for external destinations only.
- The hint is announced on title links; on call to action buttons the generated label hides it (F-29, open).
- The partner image has no Image alt text, so it is decorative.

Common Authoring Mistakes

Error	Root Cause	Resolution
Every card opens in a new tab	Open links in a new tab switched on for the List	Switch it off and set Yes on the partner item only
The partner image has no text alternative	Image alt text left empty	Describe the image if it carries meaning
The partner card is missing	No Title on the external item	Enter the Title

Troubleshooting

- **Symptoms:** The partner card opens in the same tab on aem.page.
- **Cause:** Open in a new tab left As the list while the list default is off.
- **Resolution:** Set Open in a new tab to Yes on List Item 3 and publish.
- **Verification Steps:** The link has target="_blank" and the hidden new-tab text.

Use Cases: External links in Fixed lists.

Authoring Guidelines: Block default on the Cards tab; per List Item on the Link tab.

Business Rules: The item's Yes / No wins; pages from Child / Tagged sources use the block setting.

Rendering Rules: `target="_blank" rel="noopener noreferrer"`, hidden "(opens in a new tab)"; `xdm:linkType: exit` for external URLs.

Responsive Behaviour: Unchanged.

SEO Impact: None.

Accessibility Compliance: Same call-to-action gap as 6.15.3 Variation 44 (the generated `aria-label` hides the new-tab hint).

Variation 54 — Lists Made Before (legacy)

Variation Name: A List created before this version (a title and a CTA, positional rows, no key-value settings).

Business Purpose: Old pages keep rendering.

Visual Example:

Figure 57: Legacy list — At 1440 px a List made before this version: the large heading Our latest thinking and below it the primary button Explore all insights, without any cards. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-legacy.jpg)

Screenshot Details — Legacy list

Item	Detail
Screenshot Name	`screenshots/list-legacy.jpg`
Screenshot Purpose	Legacy list
Screen Description	At 1440 px a List made before this version: the large heading Our latest thinking and below it the primary button Explore all insights, without any cards.
Business Context	An existing page whose List was authored before the key-value List: it must keep rendering until an author replaces it.
Author Objective	Recognise a List made before this version (title and CTA only) and know that it must be replaced to list pages.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	List, row 1 (Existing page (List created before this version))	Title "Our latest thinking" (Heading 2)	No	—	—	None
B	List, row 2 (Existing page (List created before this version))	CTA "Explore all insights" (link to /content/tcs-corp/us/en/insights, bold = primary button)	No	—	—	None
—	Note (Universal Editor)	Such a List has no setting rows and renders its title and CTA only; a List added today is the key-value List — replace the old one to list pages	—	Check on the preview (not stored in the content)	Such a List has no setting rows and renders its title and CTA only; a List added today is the key-value List — replace the old one to list pages	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** The large heading "Our latest thinking" and the primary button "Explore all insights" below it, without any cards.
- **Rendering behaviour:** A List without setting rows whose rows have at most one cell gets card-list list-legacy: only the authored heading (at –heading-font-size-xxl) and link render, the CTA style read from bold (primary). The data layer has only the generic block entry, no item state.

- **Publishing behaviour:** Republishing the page keeps the legacy rendering; nothing changes until the List is replaced by a new one and the page is published.

Business Rules

- Legacy Lists show no items, whatever their content.
- Bold makes the CTA a primary button, italic a secondary one.
- A new List added today is always key-value and isn't detected as legacy.
- Inventory legacy Lists before go-live.

Common Authoring Mistakes

Error	Root Cause	Resolution
Expecting cards from the old List	Lists made before render header only by design	Replace it with a new List and set the source
Editing the old List's fields has no effect	It has no setting rows	Delete it and add a new List

Troubleshooting

- **Symptoms:** An older page's List shows a large title and a button without cards.
- **Cause:** The List was authored before the key-value List and renders as list-legacy.
- **Resolution:** Add a new List with the same title and CTA, configure its source and delete the old one.
- **Verification Steps:** The new List shows cards on aem.page and has no list-legacy class.

Use Cases: Pages authored with the earlier List.

Authoring Guidelines: Replace with a new List to list pages.

Business Rules: Detected when there are no setting rows and every row has at most one cell; it renders the authored heading and link (CTA style from bold / italic) and no items.

Rendering Rules: Classes `card-list list-legacy`; the title uses `--heading-font-size-xxl`; only the generic block entry of the data layer decorator (no item state).

Responsive Behaviour: Header only.

SEO Impact: As before.

Accessibility Compliance: As before.

Variation 55 — Empty State and Editor Hints

Variation Name: When there are no items = Show a message (default) or Hide the list.

Business Purpose: Control the result when nothing is found and guide authors in the editor.

Visual Example:

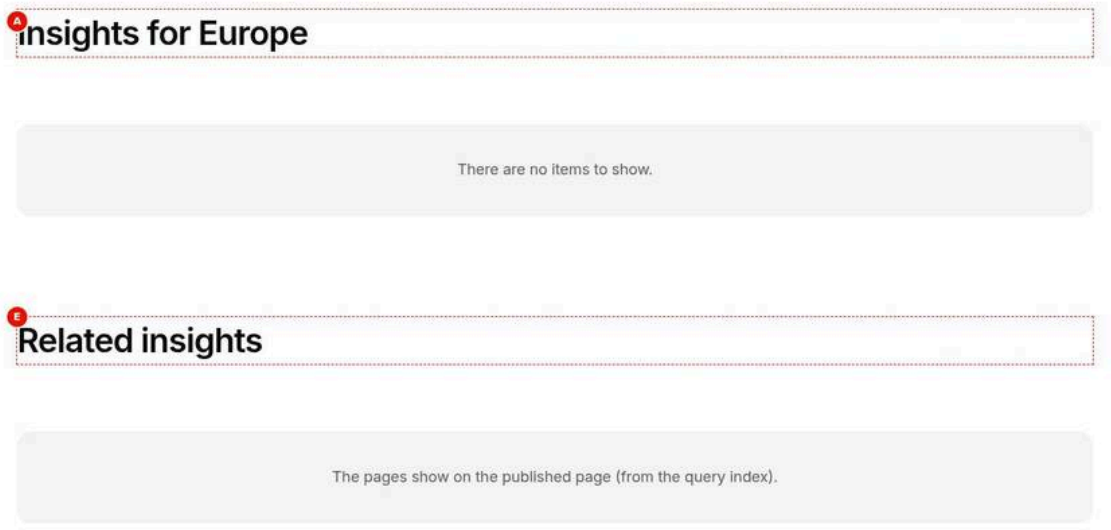

Figure 58: Empty state — The page at 1440 px with two Lists: below Insights for Europe a grey rounded box with There are no items to show., and below Related insights, rendered as in Universal Editor, the hint The pages show on the published page (from the query index). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-empty-state.jpg)

Screenshot Details — Empty state

Item	Detail
Screenshot Name	`screenshots/list-empty-state.jpg`
Screenshot Purpose	Empty state
Screen Description	The page at 1440 px with two Lists: below Insights for Europe a grey rounded box with There are no items to show., and below Related insights, rendered as in Universal Editor, the hint The pages show on the published page (from the query index).
Business Context	Two Lists that find nothing: on the published page visitors see a neutral message, and in Universal Editor authors get a hint instead of an empty box.
Author Objective	Understand the default empty state (Show a message) on the page and the editor hint for Tagged pages lists.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Insights for Europe	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Tagged pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Search root (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Root of the tagged pages	The locale or a section	Shown when source = tags

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(D)	Tags (List › Source)	Add the tags tcs-corp:region/europe	No (needed)	Tags to match	1–3 tags	Tag IDs; child tags match; source = tags
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
E	Title (List › Content)	Related insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(F)	List source (List › Source)	Tagged pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(G)	Search root (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Root of the tagged pages	The locale or a section	Shown when source = tags
(H)	Tags (List › Source)	Add the tags tcs-corp:topic/ai	No (needed)	Tags to match	1–3 tags	Tag IDs; child tags match; source = tags
(I)	When there are no items (Advanced tab (both lists))	Show a message (the default; Empty message left empty)	No	—	—	None
—	Insights for Europe (Preview (published page))	No page has the Europe tag: the grey box “There are no items to show.” (placeholder listEmpty)	—	Check on the preview (not stored in the content)	No page has the Europe tag: the grey box “There are no items to show.” (placeholder listEmpty)	—
(J)	Related insights (Universal Editor)	No query index on author: “The pages show on the published page (from the query index).” (placeholder listEditorPages); the cards show in preview	No	—	—	None

All other fields keep their default values. Each callout letter marks the field’s output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** On the page, below “Insights for Europe”, a grey rounded box with the centred text “There are no items to show.”; below “Related insights” the editor hint “The pages show on the published page (from the query index).”
- **Rendering behaviour:** With no cards p.list-empty follows the header: the Empty message, else placeholder listEmpty. In edit mode, for Child or Tagged pages without index data, placeholder listEditorPages is shown; configuration problems would show listEditorHint.
- **Publishing behaviour:** The empty message is part of the published page; changing its text in placeholders needs the placeholders sheet published. The Related insights list fills once its tagged pages are indexed.

Business Rules

- Show a message is the default for When there are no items.
- Hide the list removes the block and its wrapper on the page (not in the editor).
- Editor hints never show on the published page.
- Empty message is shown only for Show a message.

Common Authoring Mistakes

Error	Root Cause	Resolution
A grey box appears on a live page	Nothing matches the tags	Fix the tags, use Show the fallback items or Hide the list
Authors think the List is broken in the editor	The query index isn't available there	Check the List on aem.page

Troubleshooting

- **Symptoms:** "There are no items to show." on the live page.
- **Cause:** No indexed page has the Europe tag, or the index request failed.
- **Resolution:** Check /query-index.json in the network tab and with ?debug=list; tag the pages or change the empty behaviour.
- **Verification Steps:** The cards, the fallback items or nothing (Hide the list) show.

Use Cases: New sections, new tags, misconfigured lists.

Authoring Guidelines: Advanced tab: When there are no items; Empty message.

Business Rules: On the page: Hide the list empties and hides the block and its wrapper; Show a message shows the Empty message, else `listEmpty`; Show the fallback items: Variation 9. In edit mode a problem hint is shown instead ("Set up the list in its properties: tags-missing, …", placeholder `listEditorHint`), or, for Child / Tagged pages without index data, "The pages show on the published page (from the query index)." (`listEditorPages`).

Rendering Rules: `p.list-empty` after the header.

Responsive Behaviour: Same everywhere.

SEO Impact: A hidden list outputs nothing.

Accessibility Compliance: Plain text message.

Figma variations 1–14

The following variations reproduce the TCS DS Figma List frames (1440 / 1024 / 402 px). Each lists the settings to set; settings not listed keep their defaults. The source is the author's choice (any source works with every presentation); a typical source is suggested. In Cards (6.15) the same presentation settings apply, without the Source tab.

Variation 56 — Figma 1 "Themes"

Variation Name: Figma variation 1, Themes.

Business Purpose: Topic or theme tiles in brand colours and imagery.

Visual Example:

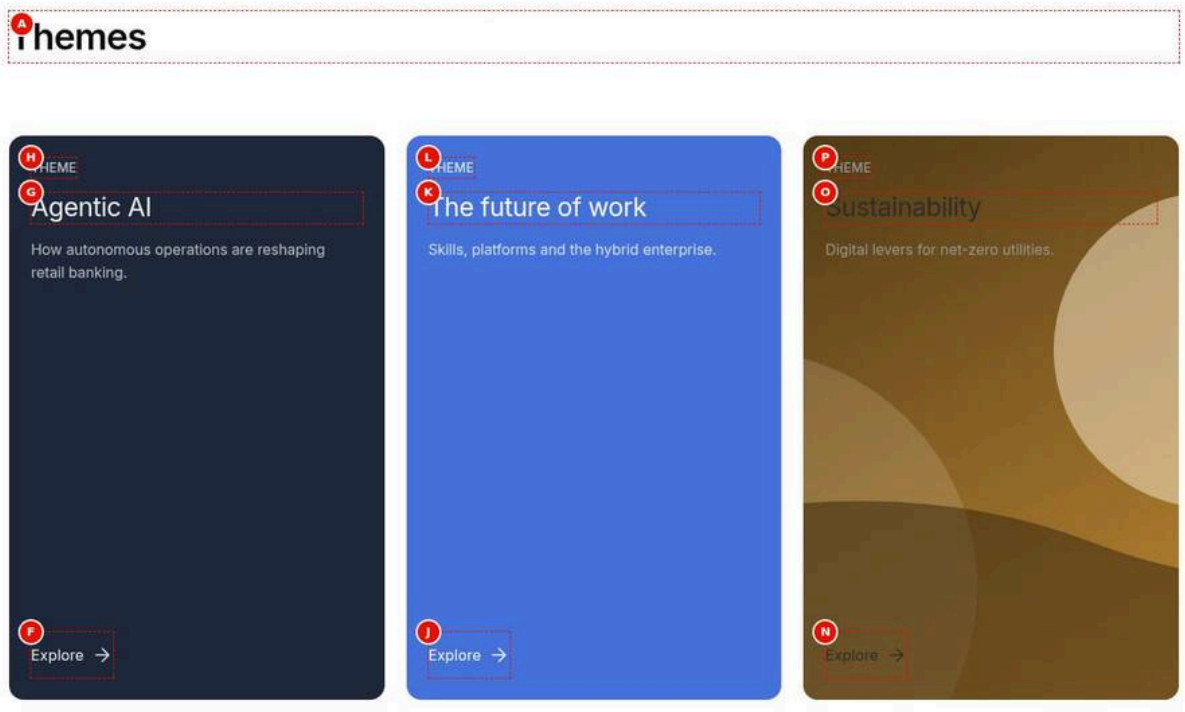

Figure 59: Figma variation 1 — At 1440 px the title Themes above three tall panels in one row: Agentic AI on dark #20293c, The future of work on brand blue and Sustainability with the energy transition image behind it, each with the eyebrow Theme, the page description and Explore. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-01-themes.jpg)

Screenshot Details — Figma variation 1

Item	Detail
Screenshot Name	`screenshots/list-figma-01-themes.jpg`
Screenshot Purpose	Figma variation 1
Screen Description	At 1440 px the title Themes above three tall panels in one row: Agentic AI on dark #20293c, The future of work on brand blue and Sustainability with the energy transition image behind it, each with the eyebrow Theme, the page description and Explore.
Business Context	The home page Themes row of Figma variation 1: three topic tiles in dark, brand blue and photography leading to the theme pages.
Author Objective	Reproduce Figma 1 with three panel List Items, each with its own title, eyebrow Theme and Card colour.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Themes	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Card style (List › Cards)	Panel	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(C)	Desktop columns (List › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
(D)	Tablet columns (List › Layout)	3	No	Grid columns on tablet	2–3 often fit better	Enforced 1–6; grid only
(E)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
F	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
G	Title (List Item 1 › Content)	Agentic AI	No	Overrides the card title	Only when the page's card title doesn't fit	None
H	Eyebrow (List Item 1 › Content)	Theme	No	Overrides the eyebrow	1–3 words	None
(I)	Card colour (List Item 1 › Display)	Dark	No	This item's colour	Overrides the list	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
J	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/future-of-work	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
K	Title (List Item 2 › Content)	The future of work	No	Overrides the card title	Only when the page's card title doesn't fit	None
L	Eyebrow (List Item 2 › Content)	Theme	No	Overrides the eyebrow	1–3 words	None
(M)	Card colour (List Item 2 › Display)	Brand blue	No	This item's colour	Overrides the list	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
N	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/energy-transition	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
O	Title (List Item 3 › Content)	Sustainability	No	Overrides the card title	Only when the page's card title doesn't fit	None
P	Eyebrow (List Item 3 › Content)	Theme	No	Overrides the eyebrow	1–3 words	None
(Q)	Card colour (List Item 3 › Display)	Image background	No	This item's colour	Overrides the list	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image
(R)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None
—	Screen width (Preview)	1440 px (desktop grid; the mobile display scrolls)	—	Check on the preview (not stored in the content)	1440 px (desktop grid; the mobile display scrolls)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the title "Themes" above three tall panels: "Agentic AI" on dark #20293c, "The future of work" on brand blue and "Sustainability" with the Energy transition image behind the text; each with THEME, the page description and Explore.
- **Rendering behaviour:** style-panel desktop-grid tablet-grid mobile-scroll mobile-indicator with Desktop and Tablet columns 3; items get theme-dark, theme-brand and theme-image. On mobile the panels form a rail of 1.2 with the indicator.
- **Publishing behaviour:** Publish the page; the three linked insights must be published and indexed for their descriptions and the background image.

Business Rules

- Item colours win over the list's colour.
- Image background uses the page's image; only panels render it.
- Descriptions come from the pages; the Title and Eyebrow overrides replace the rest.
- Check text contrast on brand blue and on the image (no overlay).

Common Authoring Mistakes

Error	Root Cause	Resolution
The Sustainability panel has no image	The page has no image in the index	Add an Image override on List Item 3
The panels show page titles	Title overrides left empty	Enter Agentic AI, The future of work, Sustainability
Mobile shows a column	Mobile display left on Grid	Set Mobile display to Horizontal scroll

Troubleshooting

- **Symptoms:** In the editor the panels show only titles and eyebrows.
- **Cause:** Descriptions and the image come from the index, which isn't available in Universal Editor.
- **Resolution:** Expected; check the full panels on aem.page.
- **Verification Steps:** On aem.page the three panels show descriptions and the image background.

Use Cases: Home page themes; industry entry points.

Authoring Guidelines:

Setting	Value
List source	Fixed list (typical)
Card style	Panel
List Items: Card colour	Dark; Brand blue; Image background (with an image) — per item
Desktop / Tablet display	Grid (columns e.g. 3 or 4)
Mobile display	Horizontal scroll; Scroll indicator on mobile on (default)

Business Rules: Panel defaults: "Explore" call to action, eyebrow (or first tag) in the kicker; image only on the Image background item.

Rendering Rules: `style-panel desktop-grid tablet-grid mobile-scroll mobile-indicator`; items `theme-dark`, `theme-brand`, `theme-image`.

Responsive Behaviour: Desktop / tablet grid of 2:3 panels; mobile rail with 1.2 visible.

SEO Impact: Links to theme pages.

Accessibility Compliance: Check text on brand blue and on the image (no overlay).

Variation 57 — Figma 2 "Insight & Opinion"

Variation Name: Figma variation 2, Insight & Opinion.

Business Purpose: Lead insight with author plus a grid of insights and opinions.

Visual Example:

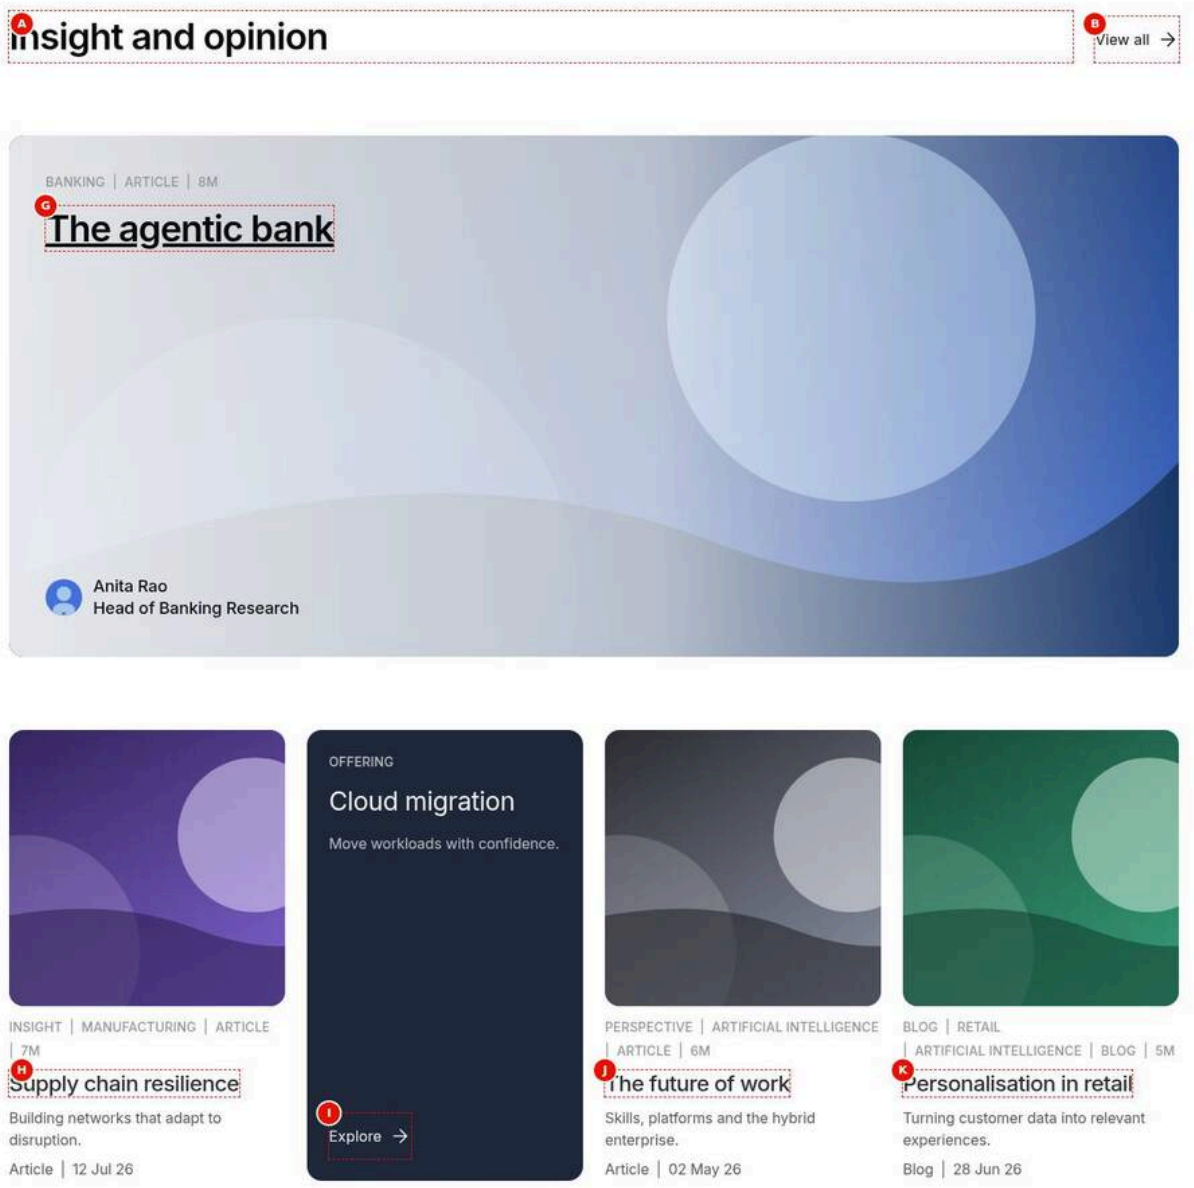

Figure 60: Figma variation 2 — At 1440 px the title Insight and opinion with View all on the right, a feature for The agentic bank with Anita Rao, then Supply chain resilience, a dark Cloud migration panel, The future of work and Personalisation in retail with square images. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-02-insight-opinion.jpg)

Screenshot Details — Figma variation 2

Item	Detail
Screenshot Name	`screenshots/list-figma-02-insight-opinion.jpg`
Screenshot Purpose	Figma variation 2
Screen Description	At 1440 px the title Insight and opinion with View all on the right, a feature for The agentic bank with Anita Rao, then Supply chain resilience, a dark Cloud migration panel, The future of work and Personalisation in retail with square images.
Business Context	The Insight & Opinion section of Figma variation 2: a lead insight with its author, followed by a mixed grid and a View all link.

Item	Detail
Author Objective	Reproduce Figma 2 with five List Items, Mixed cards, square images, the first card as feature and a View all text link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Insight and opinion	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
B	CTA link (List › Content)	Select the page or enter /content/tcs-corp/us/en/insights	No	Header call to action	Overview / archive page	None
(C)	CTA text (List › Content)	View all	No	CTA label	2–4 words	None
(D)	Card style (List › Cards)	Mixed (by page)	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(E)	Image ratio (List › Cards)	1:1	No	Image shape of image cards	Match the photography	16-9, 1-1, 4-3, 3-2; teaser on
(F)	First card as feature (List › Cards)	On	No	First card as a large spotlight with the author	The first page needs an image and author-id	Boolean; teaser on
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
G	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
H	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/supply-chain-resilience	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
I	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/ser-	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		vices/cloud/migration				item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
J	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/future-of-work	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
K	Page or link (List Item 5 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/retail-personalisation	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(L)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Insight and opinion" with "View all" on the right; a full-width feature for The agentic bank with tags, reading time, title and Anita Rao; below, Supply chain resilience, a dark Cloud migration panel, The future of work and Personalisation in retail with square images.
- **Rendering behaviour:** feature-first style-mixed ratio-1-1: the first item becomes article.list-feature with the author from the Authors sheet; the other four follow Mixed rules (Cloud migration has no image, so a panel) in the default 4-column grid.
- **Publishing behaviour:** Publish the page and the Authors sheet; the five linked pages must be published and indexed. The View all target /en/insights must be published.

Business Rules

- The first item in the content tree is the feature (Order by Manual).
- The author lockup needs the page's author-id in the Authors sheet.
- Image ratio 1:1 applies to the image cards, not the feature.
- CTA style empty renders View all as a text link.

Common Authoring Mistakes

Error	Root Cause	Resolution
The wrong page is the feature	Items in a different order	Drag The agentic bank to the first position
No author on the feature	author-id not in the Authors sheet	Fix author-id or the sheet and publish

Troubleshooting

- **Symptoms:** The feature card is missing its image.
- **Cause:** The first page has no card-image, thumbnail-image or featured-image in the index.
- **Resolution:** Set a card-image on the page (2400 × 1200 px, subject on the right) and republish it.
- **Verification Steps:** The feature shows the image behind the text on aem.page.

Use Cases: Insights hubs; thought-leadership sections.

Authoring Guidelines:

Setting	Value
List source	Tagged pages or Child pages; Order by Last modified, Descending (typical)
Card style	Mixed
First card as feature	On
Image ratio	1:1
CTA link / CTA text / CTA style	Overview page / "View all" / Text link
Display	Grid 4 / 4 / 1 (default)

Business Rules: The first page becomes the feature (with its author from the Authors sheet); the others follow Mixed rules.

Rendering Rules: `feature-first style-mixed ratio-1-1`.

Responsive Behaviour: Feature full width at every breakpoint; grid 4 / 4 / 1.

SEO Impact: Fresh internal links to insights.

Accessibility Compliance: As Variations 14 and 15.

Variation 58 — Figma 3 "Related"

Variation Name: Figma variation 3, Related.

Business Purpose: "Related to …" rail at the end of articles.

Visual Example:

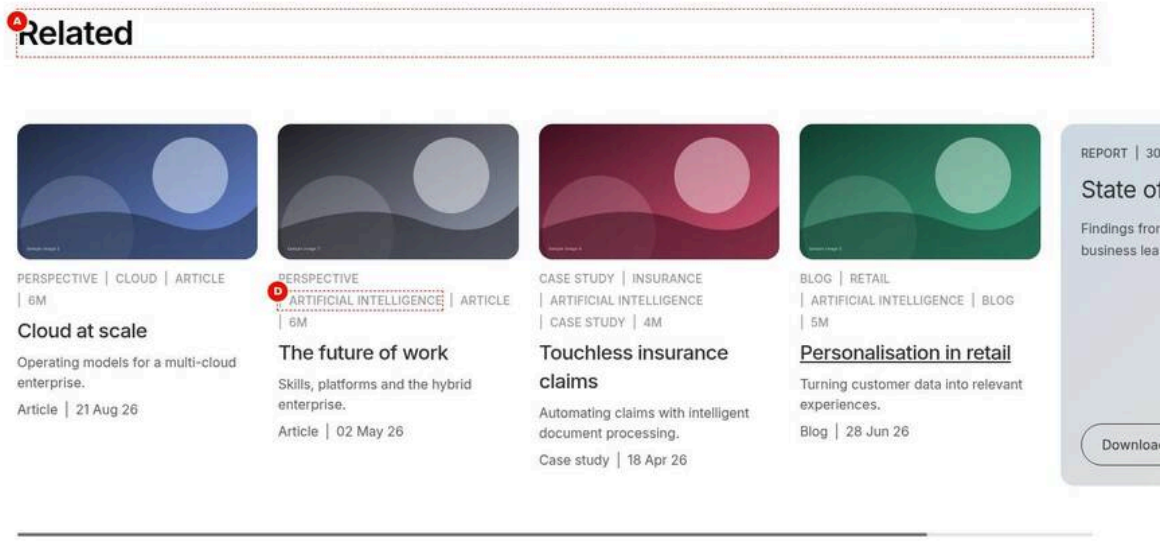

Figure 61: Figma variation 3 — At 1440 px the title Related above a rail of Mixed cards bleeding to the right edge: image cards Cloud at scale, The future of work, Touchless insurance claims and Personalisation in retail, and the gradient report card State of AI 2026. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-03-related.jpg)

Screenshot Details — Figma variation 3

Item	Detail
Screenshot Name	`screenshots/list-figma-03-related.jpg`
Screenshot Purpose	Figma variation 3
Screen Description	At 1440 px the title Related above a rail of Mixed cards bleeding to the right edge: image cards Cloud at scale, The future of work, Touchless insurance claims and Personalisation in retail, and the gradient report card State of AI 2026.
Business Context	The Related rail of Figma variation 3 at the end of an article: insights on AI or cloud, without curation.
Author Objective	Reproduce Figma 3 with a Tagged pages list (AI or cloud topics), Mixed cards and horizontal scroll on every breakpoint.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Related	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Tagged pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Search root (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Root of the tagged pages	The locale or a section	Shown when source = tags

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
D	Tags (List › Source)	Add the tags tcs-corp:topic/ai, tcs-corp:topic/cloud	No (needed)	Tags to match	1–3 tags	Tag IDs; child tags match; source = tags
(E)	Maximum items (List › Source)	8	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(F)	Card style (List › Cards)	Mixed (by page)	No	Kind of every card	Image, Panel, Re-port, Statistic or Mixed	image, panel, re-port, stat, mixed; shown when teaser on
(G)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(H)	Tablet display (List › Layout)	Horizontal scroll	No	Grid or scroll at 600–1199 px	—	grid, horizontal-scroll
(I)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Related" above a rail running to the right screen edge: image cards Cloud at scale, The future of work, Touchless insurance claims and Personalisation in retail, and the gradient report card State of AI 2026.
- **Rendering behaviour:** style-mixed desktop-scroll tablet-scroll mobile-scroll edge-bleed with 4.2 / 3.3 / 1.2 cards visible; Match Any lists pages with either tag, in path order.
- **Publishing behaviour:** Publish the page; the tagged insights must be published and indexed. Newly tagged insights join the rail after the index update.

Business Rules

- The current article is listed too if it carries a tag (it isn't excluded).
- Set Maximum items, e.g. 8, so the rail doesn't grow without limit.
- Report pages become report cards in Mixed.
- Pages hidden from navigation are left out.

Common Authoring Mistakes

Error	Root Cause	Resolution
The article lists itself	The current page matches the tags	Use a Search root that doesn't contain it, or accept it
The rail grows very long	No Maximum items	Enter 8

Troubleshooting

- **Symptoms:** The rail is empty in Universal Editor.
- **Cause:** Tagged pages come from the query index, which isn't available in the editor.
- **Resolution:** Expected; check the rail on aem.page.
- **Verification Steps:** The rail shows the tagged insights on aem.page.

Use Cases: Related insights on article and blog pages.

Authoring Guidelines:

Setting	Value
List source	Tagged pages (Search root: the locale's insights; Tags: the article's topics)
Card style	Mixed
Desktop / Tablet / Mobile display	Horizontal scroll (Items visible 4.2 / 3.3 / 1.2 defaults)
Edge	Cards run to the edge (default)
Maximum items	e.g. 8

Business Rules: The current page is listed too if it matches (it isn't excluded automatically) — use a Search root that doesn't contain it, or accept it.

Rendering Rules: `style-mixed desktop-scroll tablet-scroll mobile-scroll edge-bleed`.

Responsive Behaviour: Rail everywhere.

SEO Impact: Topic cluster links.

Accessibility Compliance: As Variation 35.

Variation 59 — Figma 4 "Intelligence in Action"

Variation Name: Figma variation 4, Intelligence in Action.

Business Purpose: Case studies with square images and descriptions.

Visual Example:

Figure 62: Figma variation 4 — At 1440 px the title Intelligence in action above three service pages as image cards in one row (Consulting, AI and data, Cloud) with square images, the eyebrow Service and tag, titles and descriptions. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-04-intelligence-in-action.jpg)

Screenshot Details — Figma variation 4

Item	Detail
Screenshot Name	`screenshots/list-figma-04-intelligence-in-action.jpg`
Screenshot Purpose	Figma variation 4
Screen Description	At 1440 px the title Intelligence in action above three service pages as image cards in one row (Consulting, AI and data, Cloud) with square images, the eyebrow Service and tag, titles and descriptions.
Business Context	The Intelligence in action section of Figma variation 4: three pages with square images and descriptions, as a rail on phones.
Author Objective	Reproduce Figma 4 with three service pages as image cards, square images, three columns and a mobile rail.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Intelligence in action	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Image ratio (List › Cards)	1:1	No	Image shape of image cards	Match the photography	16-9, 1-1, 4-3, 3-2; teaser on
(C)	Desktop columns (List › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
(D)	Tablet columns (List › Layout)	3	No	Grid columns on tablet	2–3 often fit better	Enforced 1–6; grid only
(E)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
F	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/services/consulting	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
G	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/services/ai	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
H	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/services/cloud	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(I)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None
—	Screen width (Preview)	1440 px (desktop grid; the mobile display scrolls)	—	Check on the preview (not stored in the content)	1440 px (desktop grid; the mobile display scrolls)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the title "Intelligence in action" above three image cards in one row: Consulting, AI and data and Cloud, each with a square image, the eyebrow SERVICE and tag in the kicker, the title and the description.
- **Rendering behaviour:** style-image ratio-1-1 desktop-grid tablet-grid mobile-scroll with –list-columns-desktop 3 and Tablet columns 3; below 600 px the three cards form a rail of 1.2 with the indicator.
- **Publishing behaviour:** Publish the page; the three service pages and their images must be published and indexed, since the items have no overrides.

Business Rules

- Show description stays on (default), as in Figma.
- Images are cropped square; keep the subject centred.
- Items without overrides take all content from the pages.
- In the editor the cards don't show (no index).

Common Authoring Mistakes

Error	Root Cause	Resolution
Four columns with an empty slot	Desktop columns left at 4	Enter 3 for desktop and tablet
16:9 images	Image ratio left on 16:9	Choose 1:1

Troubleshooting

- **Symptoms:** On mobile the cards stack instead of forming a rail.
- **Cause:** Mobile display is still Grid.
- **Resolution:** Set Mobile display to Horizontal scroll and publish.
- **Verification Steps:** At 402 px the cards scroll sideways with the indicator.

Use Cases: Case studies, client stories.

Authoring Guidelines:

Setting	Value
List source	Fixed list or Tagged pages
Card style	Image card

Setting	Value
Image ratio	1:1
Show description	On (default)
Desktop / Tablet columns	3 / 3
Mobile display	Horizontal scroll

Business Rules: As Variation 10.

Rendering Rules: `style-image ratio-1-1 desktop-grid tablet-grid mobile-scroll`; `--list-columns-desktop: 3`.

Responsive Behaviour: 3 columns on desktop and tablet; mobile rail.

SEO Impact: As Variation 10.

Accessibility Compliance: As Variation 10.

Variation 60 — Figma 5 “News”

Variation Name: Figma variation 5, News.

Business Purpose: News list with large titles, dates and arrows.

Visual Example:

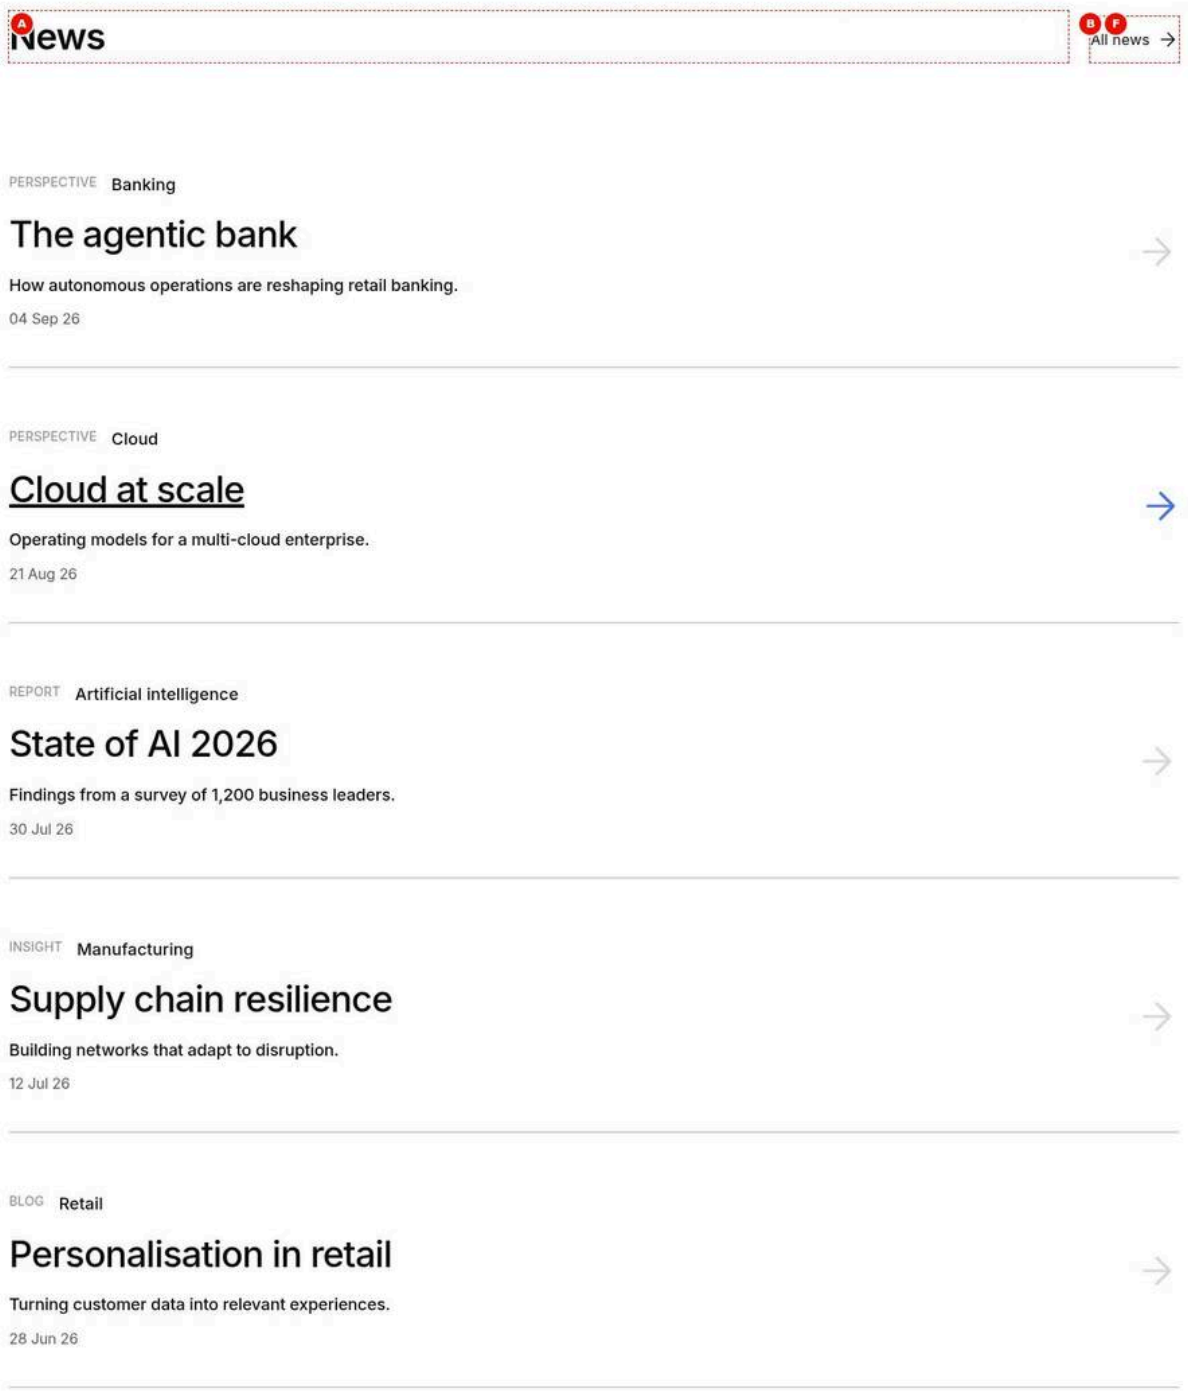

Figure 63: Figma variation 5 — At 1440 px the title News with the primary button All news on the right, above five rows separated by grey lines: The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience and Personalisation in retail. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-05-news.jpg)

Screenshot Details — Figma variation 5

Item	Detail
Screenshot Name	`screenshots/list-figma-05-news.jpg`
Screenshot Purpose	Figma variation 5

Item	Detail
Screen Description	At 1440 px the title News with the primary button All news on the right, above five rows separated by grey lines: The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience and Personalisation in retail.
Business Context	The News section of Figma variation 5: the newest insights as rows with dividers and an All news button to the archive.
Author Objective	Reproduce Figma 5 with the five newest child pages of Insights as rows, Dividers between rows and a primary All news button.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	News	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
B	CTA link (List › Content)	Select the page or enter /content/tcs-corp/us/en/insights	No	Header call to action	Overview / archive page	None
(C)	CTA text (List › Content)	All news	No	CTA label	2–4 words	None
(D)	CTA style (List › Content)	Primary button	No	CTA look	Text link or a button	'', primary, secondary
(E)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
F	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(G)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified
(H)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(I)	Maximum items (List › Source)	5	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(J)	Display as teaser (List › Cards)	Off	No	Cards (on) or rows of links (off)	Off for news-style link lists	Boolean
(K)	Style options (List › Advanced)	Dividers between rows	No	Extra styles	Only as designed	stat-compact, dividers, header-center

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title “News” with a filled “All news” button on the right, above five rows (The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience, Personalisation in retail) separated by grey lines, each with eyebrow and tag, large title, description, date and arrow.
- **Rendering behaviour:** links dividers: rows of links with #b2b2b2 lines on every breakpoint; the CTA is a primary button in div.list-cta-slot. Last modified Descending and Maximum items 5.
- **Publishing behaviour:** Publish the page; the insights and the /en/insights archive page must be published and indexed.

Business Rules

- Display as teaser off renders rows; card settings are ignored.
- Dividers between rows adds lines from 600 px; mobile has them anyway.
- Maximum items 5 keeps the newest five.
- The CTA style Primary button makes All news a filled button.

Common Authoring Mistakes

Error	Root Cause	Resolution
No button in the header	CTA link empty	Pick the insights page in CTA link
Rows without lines on desktop	Dividers between rows not selected	Add it in Style options

Troubleshooting

- **Symptoms:** An old article shows as the first row.
- **Cause:** Its modified-date metadata is newer than intended.
- **Resolution:** Correct modified-date on the page or bulk sheet and republish it.
- **Verification Steps:** The newest page is the first row on aem.page.

Use Cases: Newsroom, press releases, announcements.

Authoring Guidelines:

Setting	Value
List source	Child pages of the news folder; Order by Last modified, Descending; Maximum items e.g. 5
Display as teaser	Off
CTA style	Primary button
Style options	Dividers between rows

Business Rules: As Variation 16.

Rendering Rules: `links dividers`.

Responsive Behaviour: Rows at every breakpoint; lines everywhere.

SEO Impact: Text-rich internal links to news.

Accessibility Compliance: As Variation 16.

Variation 61 — Figma 6 “At a glance”

Variation Name: Figma variation 6, At a glance.

Business Purpose: Key company figures in grey tiles.

Visual Example:

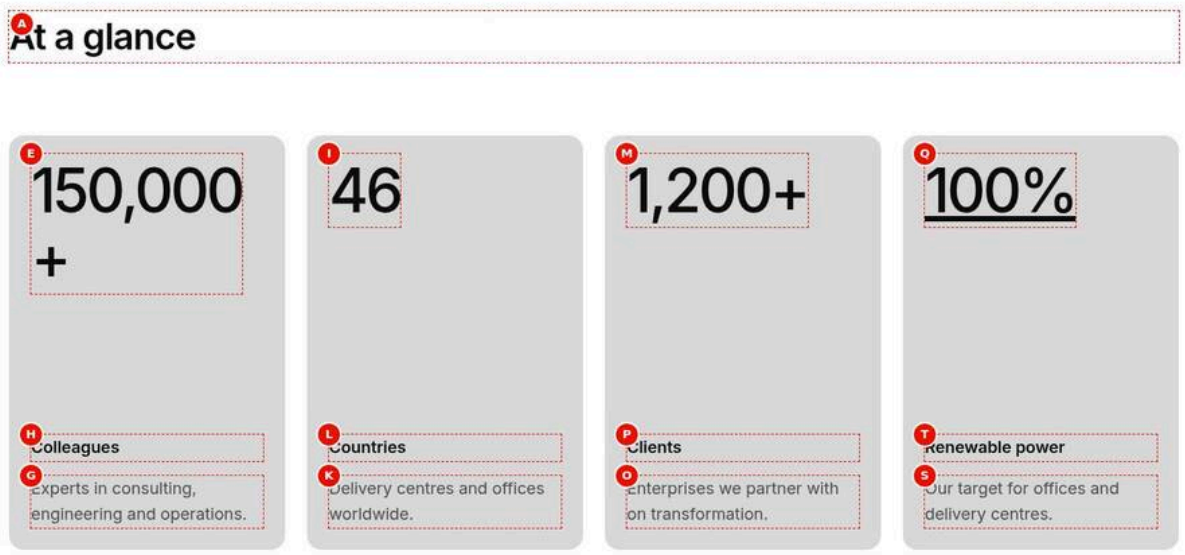

Figure 64: Figma variation 6 — At 1440 px the title At a glance above four light grey statistic cards in one row: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power. The mobile rail isn't part of this screenshot. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-06-at-a-glance.jpg)

Screenshot Details — Figma variation 6

Item	Detail
Screenshot Name	`screenshots/list-figma-06-at-a-glance.jpg`
Screenshot Purpose	Figma variation 6
Screen Description	At 1440 px the title At a glance above four light grey statistic cards in one row: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power. The mobile rail isn't part of this screenshot.
Business Context	The At a glance band of Figma variation 6: four key company figures in light grey tiles for About and investor pages.
Author Objective	Reproduce Figma 6 with four statistic List Items on Light grey and a mobile rail.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	At a glance	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Card style (List › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(C)	Card colour (List › Cards)	Light grey	No	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey,

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
						mid-grey, gradient, image; teaser on
(D)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
E	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/about/our-people	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(F)	Title (List Item 1 › Content)	150,000+	No	Overrides the card title	Only when the page's card title doesn't fit	None
G	Description (List Item 1 › Content)	Experts in consulting, engineering and operations.	No	Overrides the description	Plain text, 1–2 sentences	None
H	Label (List Item 1 › Content)	Colleagues	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
I	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/about/locations	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(J)	Title (List Item 2 › Content)	46	No	Overrides the card title	Only when the page's card title doesn't fit	None
K	Description (List Item 2 › Content)	Delivery centres and offices worldwide.	No	Overrides the description	Plain text, 1–2 sentences	None
L	Label (List Item 2 › Content)	Countries	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
M	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/about/clients	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(N)	Title (List Item 3 › Content)	1,200+	No	Overrides the card title	Only when the page's card title doesn't fit	None
O	Description (List Item 3 › Content)	Enterprises we partner with on transformation.	No	Overrides the description	Plain text, 1–2 sentences	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
P	Label (List Item 3 › Content)	Clients	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
Q	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/about/sustainability	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(R)	Title (List Item 4 › Content)	100%	No	Overrides the card title	Only when the page's card title doesn't fit	None
S	Description (List Item 4 › Content)	Our target for offices and delivery centres.	No	Overrides the description	Plain text, 1–2 sentences	None
T	Label (List Item 4 › Content)	Renewable power	No	Statistic label	Statistic cards	None
(U)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None
—	Screen width (Preview)	1440 px (desktop grid; the mobile display scrolls)	—	Check on the preview (not stored in the content)	1440 px (desktop grid; the mobile display scrolls)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the title "At a glance" above four light grey statistic cards: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power, numbers large at the top, label and description at the bottom.
- **Rendering behaviour:** style-stat with theme-grey on the cards and mobile-scroll mobile-indicator; grid 4 / 4 on desktop and tablet, a 1.2-card rail below 600 px.
- **Publishing behaviour:** Publish the page; the linked about pages should be published so the card links work.

Business Rules

- Light grey is also the statistic default; setting it keeps the colour if defaults change.
- Figma's two-tone number isn't an option (one colour).
- Statistic cards are always linked in a List.
- Titles hold the numbers; keep them short.

Common Authoring Mistakes

Error	Root Cause	Resolution
The two-tone title of the design is missing	Not supported by the List	Accept the one-colour number
The figures stack on mobile	Mobile display left on Grid	Set it to Horizontal scroll

Troubleshooting

- **Symptoms:** At 1024 px the number 150,000+ breaks onto two lines.
- **Cause:** On tablet the number is up to 4rem, scaled to the card width, and long numbers may wrap in four narrow columns.
- **Resolution:** Shorten the Title (150k+) or set Tablet columns to 2.
- **Verification Steps:** At 1024 px every number fits on one line on aem.page.

Use Cases: About us, investor pages.

Authoring Guidelines:

Setting	Value
List source	Fixed list; per item: Page or link, Title (the number), Label, Description
Card style	Statistic
Card colour	Light grey (or default)
Mobile display	Horizontal scroll

Business Rules: As Variation 13; Figma's two-tone title isn't an option (one colour).

Rendering Rules: `style-stat`, `theme-grey` on the cards, `mobile-scroll`.

Responsive Behaviour: Grid 4 / 4 on desktop / tablet; mobile rail.

SEO Impact: As Variation 13.

Accessibility Compliance: As Variation 13.

Variation 62 — Figma 7 "Statements"

Variation Name: Figma variation 7, Statements.

Business Purpose: Short commitments with a call to action each.

Visual Example:

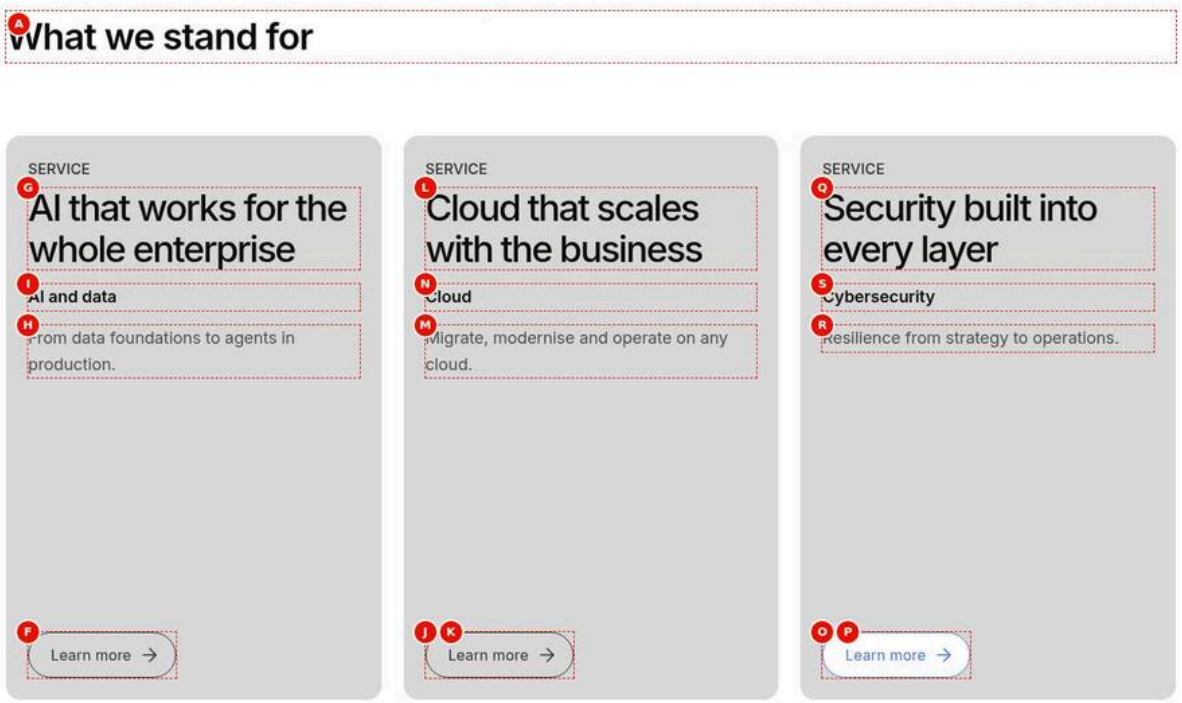

Figure 65: Figma variation 7 — At 1440 px the title What we stand for above three grey statistic cards with medium statement titles, the kicker Service, the labels AI and data, Cloud and Cybersecurity, descriptions and outlined Learn more buttons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-07-statements.jpg)

Screenshot Details — Figma variation 7

Item	Detail
Screenshot Name	`screenshots/list-figma-07-statements.jpg`
Screenshot Purpose	Figma variation 7
Screen Description	At 1440 px the title What we stand for above three grey statistic cards with medium statement titles, the kicker Service, the labels AI and data, Cloud and Cybersecurity, descriptions and outlined Learn more buttons.
Business Context	The Statements section of Figma variation 7: three short commitments, each leading to the service behind it.
Author Objective	Reproduce Figma 7 with three statistic items holding statements, labels, descriptions and Learn more, with Compact statistic title.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	What we stand for	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Card style (List › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(C)	Desktop columns (List › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
(D)	Tablet columns (List › Layout)	3	No	Grid columns on tablet	2–3 often fit better	Enforced 1–6; grid only
(E)	Style options (List › Advanced)	Compact statistic title	No	Extra styles	Only as designed	stat-compact, dividers, header-center
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
F	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/services/ai	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
G	Title (List Item 1 › Content)	AI that works for the whole enterprise	No	Overrides the card title	Only when the page's card title doesn't fit	None
H	Description (List Item 1 › Content)	From data foundations to agents in production.	No	Overrides the description	Plain text, 1–2 sentences	None
I	Label (List Item 1 › Content)	AI and data	No	Statistic label	Statistic cards	None
J	Call to action label (List Item 1 › Content)	Learn more	No	Shows a button	1–3 words	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
K	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/services/cloud	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
L	Title (List Item 2 › Content)	Cloud that scales with the business	No	Overrides the card title	Only when the page's card title doesn't fit	None
M	Description (List Item 2 › Content)	Migrate, modernise and operate on any cloud.	No	Overrides the description	Plain text, 1–2 sentences	None
N	Label (List Item 2 › Content)	Cloud	No	Statistic label	Statistic cards	None
O	Call to action label (List Item 2 › Content)	Learn more	No	Shows a button	1–3 words	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
P	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/services/cybersecurity	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
Q	Title (List Item 3 › Content)	Security built into every layer	No	Overrides the card title	Only when the page's card title doesn't fit	None
R	Description (List Item 3 › Content)	Resilience from strategy to operations.	No	Overrides the description	Plain text, 1–2 sentences	None
S	Label (List Item 3 › Content)	Cybersecurity	No	Statistic label	Statistic cards	None
(T)	Call to action label (List Item 3 › Content)	Learn more	No	Shows a button	1–3 words	None
(U)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "What we stand for" above three grey cards in one row with medium statement titles (AI that works for the whole enterprise, Cloud that scales with the business, Security built into every layer), labels, descriptions and outlined Learn more buttons.
- **Rendering behaviour:** style-stat stat-compact: titles at 0.42 times the number size (about 2.52rem on desktop); each Call to action label renders a secondary button named "Learn more: {statement}". Desktop and Tablet columns 3.
- **Publishing behaviour:** Publish the page; the three service pages are indexed, so their eyebrow Service shows as kicker on aem.page.

Business Rules

- Compact statistic title affects statistic cards only.
- The Call to action label makes the button the card's one link.
- Overrides win over the page metadata.
- On mobile the cards stack in one column (or set a rail).

Common Authoring Mistakes

Error	Root Cause	Resolution
Huge statement text	Compact statistic title not selected	Add it in Style options
No buttons	Call to action label empty	Enter Learn more per item

Troubleshooting

- **Symptoms:** On aem.page the cards show a SERVICE kicker not in the design.
- **Cause:** The linked service pages have eyebrow metadata, which the statistic kicker shows.
- **Resolution:** Accept it, or override the Eyebrow on the items if supported by the design.
- **Verification Steps:** The kicker matches the design on aem.page.

Use Cases: Sustainability and purpose statements.

Authoring Guidelines:

Setting	Value
List source	Fixed list; per item Title (statement), Label, Description, Call to action label
Card style	Statistic
Style options	Compact statistic title
Desktop / Tablet columns	3 / 3

Business Rules: The item's Call to action label shows a secondary button.

Rendering Rules: `style-stat stat-compact`.

Responsive Behaviour: 3 columns; mobile 1 column (or a rail).

SEO Impact: Descriptive statements.

Accessibility Compliance: Button names "{label}: {title}".

Variation 63 — Figma 8 "Media coverage"

Variation Name: Figma variation 8, Media coverage.

Business Purpose: Coverage and report items in a rail.

Visual Example:

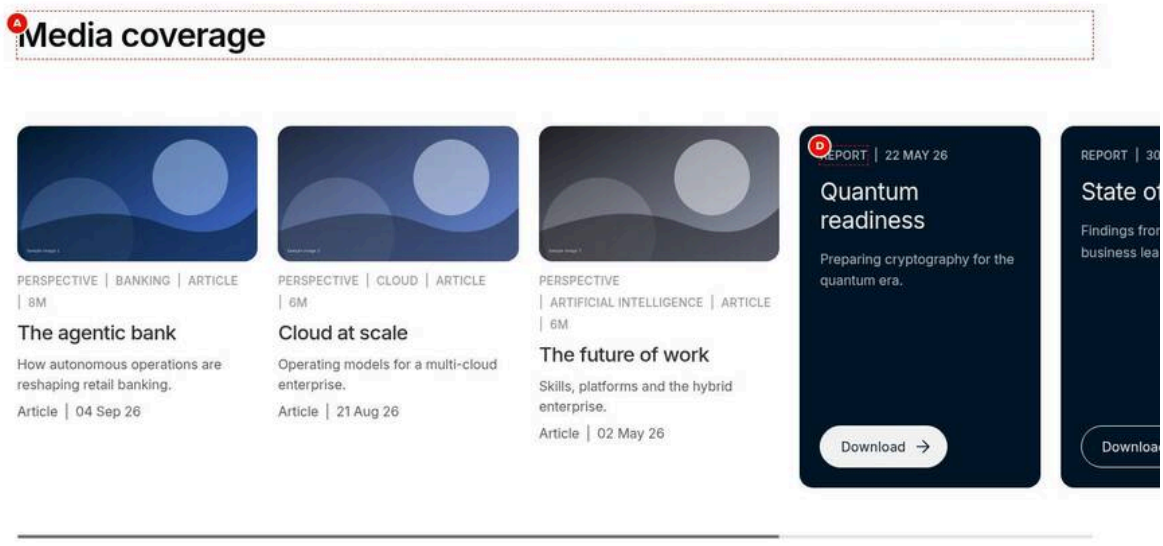

Figure 66: Figma variation 8 — At 1440 px the title Media coverage above a rail: image cards The agentic bank, Cloud at scale and The future of work, navy report cards Quantum readiness and State of AI 2026, and Supply chain resilience at the right edge. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-08-media-coverage.jpg)

Screenshot Details — Figma variation 8

Item	Detail
Screenshot Name	`screenshots/list-figma-08-media-coverage.jpg`
Screenshot Purpose	Figma variation 8
Screen Description	At 1440 px the title Media coverage above a rail: image cards The agentic bank, Cloud at scale and The future of work, navy report cards Quantum readiness and State of AI 2026, and Supply chain resilience at the right edge.
Business Context	The Media coverage rail of Figma variation 8 in the newsroom: articles with images and navy report cards side by side.
Author Objective	Reproduce Figma 8 with tagged reports and articles as Mixed cards on Navy, scrolling on every breakpoint.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Media coverage	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Tagged pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Search root (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Root of the tagged pages	The locale or a section	Shown when source = tags
D	Tags (List › Source)	Add the tags tcs-corp:content-type/report, tcs-corp:content-type/article	No (needed)	Tags to match	1–3 tags	Tag IDs; child tags match; source = tags
(E)	Card style (List › Cards)	Mixed (by page)	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(F)	Card colour (List › Cards)	Navy	No	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on
(G)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(H)	Tablet display (List › Layout)	Horizontal scroll	No	Grid or scroll at 600–1199 px	—	grid, horizontal-scroll
(I)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Media coverage" above a rail running to the right edge: image cards (The agentic bank, Cloud at scale, The future of work, Supply chain resilience) and #011627 report cards (Quantum readiness, State of AI 2026) with light text and outlined buttons.
- **Rendering behaviour:** style-mixed with theme-navy on every card and scroll on all breakpoints; report pages become navy report cards, pages with images image cards, which the colour doesn't affect.
- **Publishing behaviour:** Publish the page; the tagged insights must be published and indexed with their content-type tags.

Business Rules

- Navy also colours panels (pages without image), never image cards.
- Report pages are recognised by content-type containing "report".
- Match Any: report or article tag.
- Path order applies with Order by Manual.

Common Authoring Mistakes

Error	Root Cause	Resolution
Reports render as image cards	content-type metadata isn't Report	Set content-type Report on the pages and republish
Grey report cards	Card colour left empty	Choose Navy

Troubleshooting

- **Symptoms:** The rail shows no report cards at all.
- **Cause:** The report pages' contentType is empty in the index (old index, F-10 open).
- **Resolution:** Ask the site admin to re-index (L2) and check the contentType column.
- **Verification Steps:** Report pages show as navy report cards on aem.page.

Use Cases: Newsroom media coverage.

Authoring Guidelines:

Setting	Value
List source	Tagged pages (e.g. a media coverage tag)
Card style	Mixed
Card colour	Navy (report cards)
Desktop / Tablet / Mobile display	Horizontal scroll

Business Rules: Report pages (`content-type` Report) become navy report cards; the block's Navy colour also applies to panels (pages without an image), while image cards are unaffected.

Rendering Rules: `style-mixed`, `theme-navy`, scroll on all breakpoints.

Responsive Behaviour: Rail everywhere.

SEO Impact: As Variation 14.

Accessibility Compliance: As Variations 14 and 18.

Variation 64 — Figma 9 "Investor relations"

Variation Name: Figma variation 9, Investor relations.

Business Purpose: Investor documents and pages in a rail.

Visual Example:

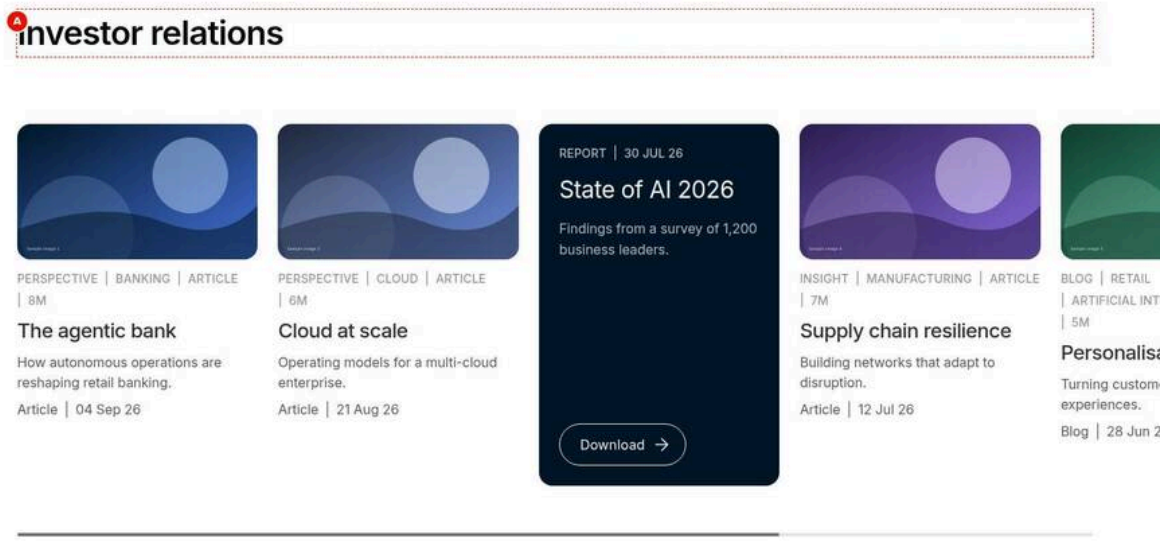

Figure 67: Figma variation 9 — At 1440 px the title Investor relations above a rail of the six newest Insights child pages: image cards The agentic bank and Cloud at scale, the navy report card State of AI 2026, then image cards Supply chain resilience, Personalisation in retail and The energy transition. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-09-investor-relations.jpg)

Screenshot Details — Figma variation 9

Item	Detail
Screenshot Name	`screenshots/list-figma-09-investor-relations.jpg`
Screenshot Purpose	Figma variation 9
Screen Description	At 1440 px the title Investor relations above a rail of the six newest Insights child pages: image cards The agentic bank and Cloud at scale, the navy report card State of AI 2026, then image cards Supply chain resilience, Personalisation in retail and The energy transition.
Business Context	The Investor relations rail of Figma variation 9: the latest documents and pages of a section, reports in navy.
Author Objective	Reproduce Figma 9 with the six newest child pages as Mixed cards on Navy, scrolling on every breakpoint.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Investor relations	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	List source (List › Source)	Child pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(C)	Parent page (List › Source)	Select the page or enter /content/tcs-corp/us/en/insights	No	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent
(D)	Order by (List › Source)	Last modified	No	Sorting	Last modified for news	manual, title, lastModified

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(E)	Sort order (List › Source)	Descending	No	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual
(F)	Maximum items (List › Source)	6	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(G)	Card style (List › Cards)	Mixed (by page)	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(H)	Card colour (List › Cards)	Navy	No	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on
(I)	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
(J)	Tablet display (List › Layout)	Horizontal scroll	No	Grid or scroll at 600–1199 px	—	grid, horizontal-scroll
(K)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Investor relations" above a rail: image cards The agentic bank, Cloud at scale, Supply chain resilience, Personalisation in retail and The energy transition, and the navy report card State of AI 2026.
- **Rendering behaviour:** style-mixed theme-navy desktop-scroll tablet-scroll mobile-scroll; Last modified Descending with Maximum items 6; the report page becomes a navy report card.
- **Publishing behaviour:** Publish the page; the section's child pages must be published and indexed. A new quarterly page appears first after the index update.

Business Rules

- Typical source: child pages of the investors section, newest first.
- Only Report pages become report cards; case studies with images stay image cards.
- Navy doesn't affect image cards.
- Download opens the report page, not a file.

Common Authoring Mistakes

Error	Root Cause	Resolution
Download suggests a PDF but opens a page	Default report button label	Use a Fixed list with Call to action label "Read the results"
An old result is first	Order by Manual	Set Last modified, Descending

Troubleshooting

- **Symptoms:** A new results page is missing from the rail.
- **Cause:** It isn't published or indexed yet, or Maximum items 6 cut it off.

- **Resolution:** Publish the page, wait for the index and check the sort settings.
- **Verification Steps:** The page is the first card on aem.page.

Use Cases: Investor relations hub.

Authoring Guidelines: As Variation 63 (Mixed, Navy, scroll everywhere), typically Child pages of the investors section ordered by Last modified, Descending.

Business Rules: As Variation 63.

Rendering Rules: As Variation 63.

Responsive Behaviour: Rail everywhere.

SEO Impact: As Variation 14.

Accessibility Compliance: As Variation 63.

Variation 65 — Figma 10 "Banking today"

Variation Name: Figma variation 10, Banking today.

Business Purpose: Industry figures in brand blue.

Visual Example:

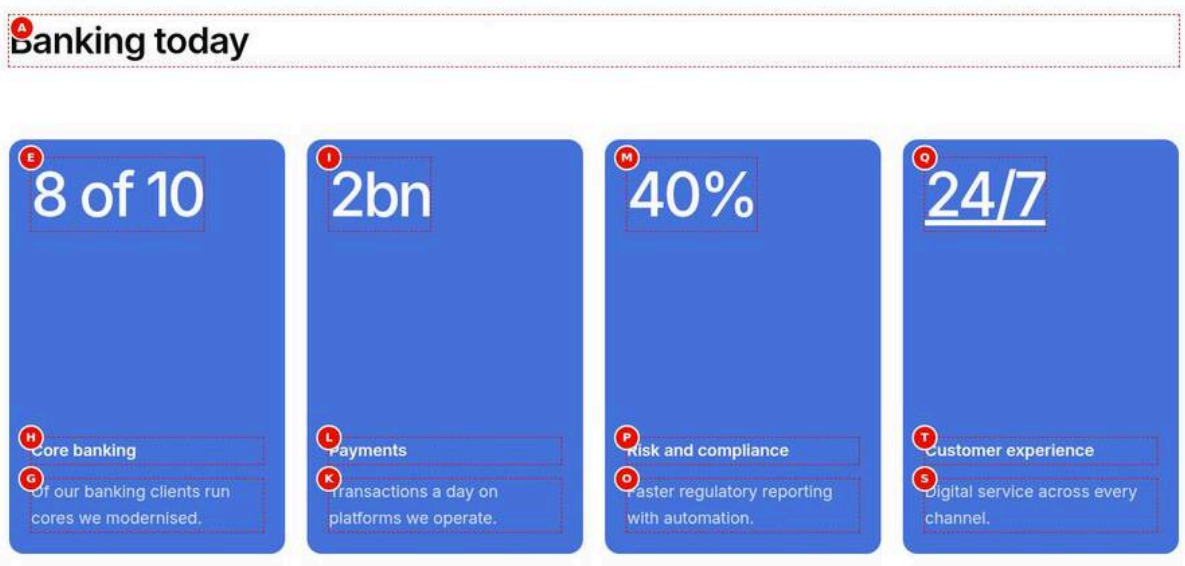

Figure 68: Figma variation 10 — At 1440 px the title Banking today above four brand blue statistic cards with white text: 8 of 10 Core banking, 2bn Payments, 40% Risk and compliance and 24/7 Customer experience. The mobile rail isn't part of this screenshot. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-10-banking-today.jpg)

Screenshot Details — Figma variation 10

Item	Detail
Screenshot Name	`screenshots/list-figma-10-banking-today.jpg`
Screenshot Purpose	Figma variation 10
Screen Description	At 1440 px the title Banking today above four brand blue statistic cards with white text: 8 of 10 Core banking, 2bn Payments, 40% Risk and compliance and 24/7 Customer experience. The mobile rail isn't part of this screenshot.
Business Context	The Banking today band of Figma variation 10 on the banking industry page: four industry figures in brand blue.

Item	Detail
Author Objective	Reproduce Figma 10 with four statistic List Items on Brand blue and a mobile rail.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Banking today	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Card style (List › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(C)	Card colour (List › Cards)	Brand blue	No	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on
(D)	Mobile display (List › Layout)	Horizontal scroll	No	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
E	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/industries/banking/core-banking	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(F)	Title (List Item 1 › Content)	8 of 10	No	Overrides the card title	Only when the page's card title doesn't fit	None
G	Description (List Item 1 › Content)	Of our banking clients run cores we modernised.	No	Overrides the description	Plain text, 1–2 sentences	None
H	Label (List Item 1 › Content)	Core banking	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
I	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/industries/banking/payments	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(J)	Title (List Item 2 › Content)	2bn	No	Overrides the card title	Only when the page's card title doesn't fit	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
K	Description (List Item 2 › Content)	Transactions a day on platforms we operate.	No	Overrides the description	Plain text, 1–2 sentences	None
L	Label (List Item 2 › Content)	Payments	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
M	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/industries/banking/risk	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(N)	Title (List Item 3 › Content)	40%	No	Overrides the card title	Only when the page's card title doesn't fit	None
O	Description (List Item 3 › Content)	Faster regulatory reporting with automation.	No	Overrides the description	Plain text, 1–2 sentences	None
P	Label (List Item 3 › Content)	Risk and compliance	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
Q	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/industries/banking/customer-experience	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(R)	Title (List Item 4 › Content)	24/7	No	Overrides the card title	Only when the page's card title doesn't fit	None
S	Description (List Item 4 › Content)	Digital service across every channel.	No	Overrides the description	Plain text, 1–2 sentences	None
T	Label (List Item 4 › Content)	Customer experience	No	Statistic label	Statistic cards	None
(U)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None
—	Screen width (Preview)	1440 px (desktop grid; the mobile display scrolls)	—	Check on the preview (not stored in the content)	1440 px (desktop grid; the mobile display scrolls)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the title "Banking today" above four brand blue #4673db statistic cards with white text: 8 of 10 Core banking, 2bn Payments, 40% Risk and compliance, 24/7 Customer experience.

- **Rendering behaviour:** style-stat theme-brand mobile-scroll mobile-indicator: white text and 60 % white muted text; the numbers scale to the card width; grid 4 / 4 on desktop and tablet, a rail below 600 px.
- **Publishing behaviour:** Publish the page; the four banking sub-pages should be published so the links work. They needn't be indexed (all values are overrides).

Business Rules

- White on brand blue is AA for large text only (F-28, open): keep descriptions short.
- Units such as bn aren't styled separately.
- Each item links to its detail page.
- The List's colour applies to all four cards.

Common Authoring Mistakes

Error	Root Cause	Resolution
Descriptions are hard to read	Small white text on #4673db	Keep descriptions to one short line
Cards link to 404 pages	Detail pages not published	Publish the banking sub-pages

Troubleshooting

- **Symptoms:** "8 of 10" wraps onto two lines.
- **Cause:** Long statistic titles wrap in narrow cards.
- **Resolution:** Shorten the title (80%) or use the Compact statistic title option.
- **Verification Steps:** The number fits one line at 1440 px.

Use Cases: Industry pages.

Authoring Guidelines:

Setting	Value
List source	Fixed list (statistics as item overrides)
Card style	Statistic
Card colour	Brand blue
Mobile display	Horizontal scroll

Business Rules: As Variation 13.

Rendering Rules: `style-stat`, `theme-brand`, `mobile-scroll`.

Responsive Behaviour: Grid on desktop / tablet; mobile rail.

SEO Impact: As Variation 13.

Accessibility Compliance: Large numbers pass; keep descriptions short (Variation 19).

Variation 66 — Figma 11 "2-up"

Variation Name: Figma variation 11, 2-up.

Business Purpose: Two large image cards side by side.

Visual Example:

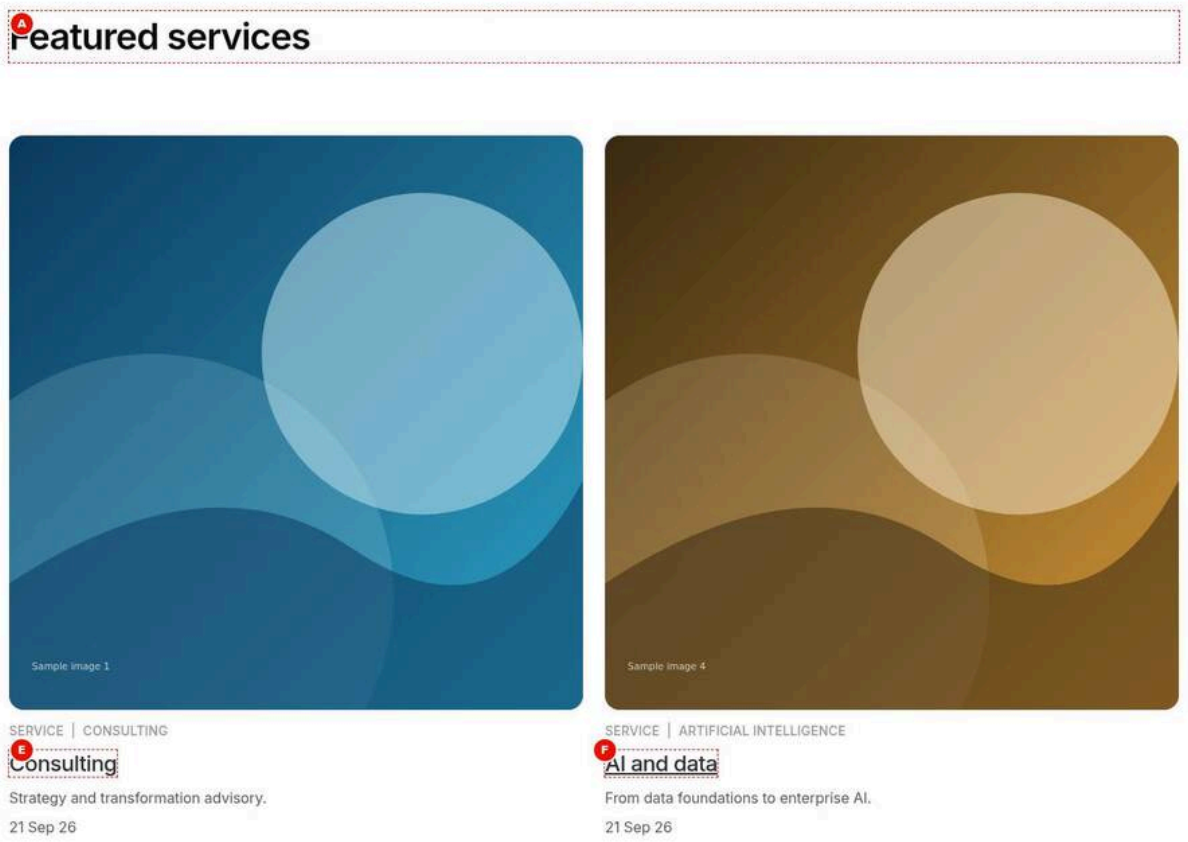

Figure 69: Figma variation 11 — At 1440 px the title Featured services above two large image cards side by side, Consulting and AI and data, with square images, kicker, title and description. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-11-2-up.jpg)

Screenshot Details — Figma variation 11

Item	Detail
Screenshot Name	`screenshots/list-figma-11-2-up.jpg`
Screenshot Purpose	Figma variation 11
Screen Description	At 1440 px the title Featured services above two large image cards side by side, Consulting and AI and data, with square images, kicker, title and description.
Business Context	The 2-up section of Figma variation 11: two featured services side by side with large square images.
Author Objective	Reproduce Figma 11 with two service pages as image cards, square images and two columns on desktop and tablet.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Featured services	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Image ratio (List › Cards)	1:1	No	Image shape of image cards	Match the photography	16-9, 1-1, 4-3, 3-2; teaser on
(C)	Desktop columns (List › Layout)	2	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
(D)	Tablet columns (List › Layout)	2	No	Grid columns on tablet	2–3 often fit better	Enforced 1–6; grid only
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
E	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/services/consulting	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
F	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/services/ai	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(G)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Featured services" above two large image cards side by side: Consulting and AI and data, each with a square image, kicker, title and description.
- **Rendering behaviour:** ratio-1-1 with –list-columns-desktop 2 and Tablet columns 2; mobile keeps one column (2 / 2 / 1).
- **Publishing behaviour:** Publish the page; the two service pages and their images must be published and indexed.

Business Rules

- Use exactly two items for the 2-up design.
- Square images: 1200 × 1200 px recommended.
- Items take their content from the pages.
- Mobile stacks the two cards.

Common Authoring Mistakes

Error	Root Cause	Resolution
Cards are small with empty columns	Desktop columns left at 4	Enter 2 for desktop and tablet
A third card appears	A third List Item added	Remove it

Troubleshooting

- **Symptoms:** The two images look blurred on desktop.
- **Cause:** The source images are smaller than the card width.
- **Resolution:** Set larger card images (at least 1200 px) on the pages and republish.
- **Verification Steps:** The images are sharp at 1440 px.

Use Cases: Two featured pages.

Authoring Guidelines:

Setting	Value
List source	Fixed list (2 items)
Card style	Image card
Image ratio	1:1
Desktop / Tablet / Mobile columns	2 / 2 / 1

Business Rules: As Variation 10.

Rendering Rules: `ratio-1-1`, `--list-columns-desktop: 2`.

Responsive Behaviour: 2 / 2 / 1 grid.

SEO Impact: As Variation 10.

Accessibility Compliance: As Variation 10.

Variation 67 — Figma 12 "Statements"

Variation Name: Figma variation 12, Statements (second layout).

Business Purpose: As Figma 7 in a second page context.

Visual Example:

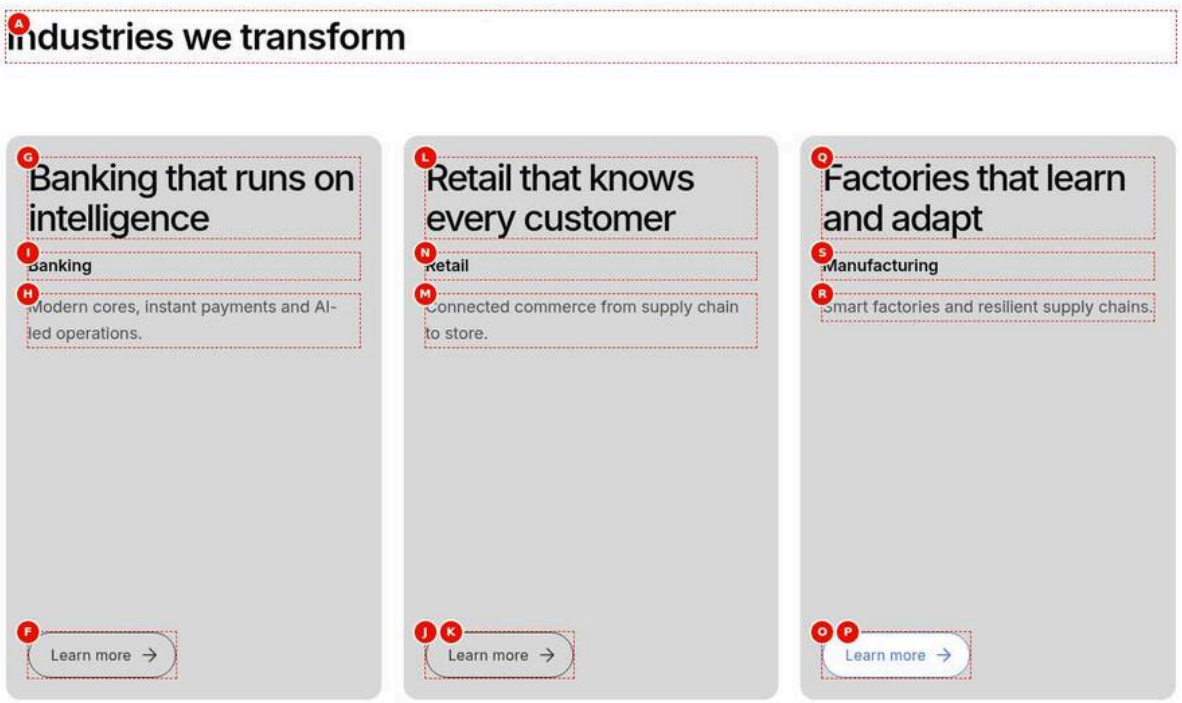

Figure 70: Figma variation 12 — At 1440 px the title Industries we transform above three grey statistic cards with the statements Banking that runs on intelligence, Retail that knows every customer and Factories that learn and adapt, their labels, descriptions and Learn more buttons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-12-statements.jpg)

Screenshot Details — Figma variation 12

Item	Detail
Screenshot Name	`screenshots/list-figma-12-statements.jpg`
Screenshot Purpose	Figma variation 12
Screen Description	At 1440 px the title Industries we transform above three grey statistic cards with the statements Banking that runs on intelligence, Retail that knows every customer and Factories that learn and adapt, their labels, descriptions and Learn more buttons.
Business Context	The second Statements layout of Figma variation 12 on the industries hub: one commitment per industry with a call to action.
Author Objective	Reproduce Figma 12 with three industry statements as compact statistic cards with Learn more buttons.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Industries we transform	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Card style (List › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
(C)	Desktop columns (List › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
(D)	Tablet columns (List › Layout)	3	No	Grid columns on tablet	2–3 often fit better	Enforced 1–6; grid only
(E)	Style options (List › Advanced)	Compact statistic title	No	Extra styles	Only as designed	stat-compact, dividers, header-center
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
F	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/industries/banking	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
G	Title (List Item 1 › Content)	Banking that runs on intelligence	No	Overrides the card title	Only when the page's card title doesn't fit	None
H	Description (List Item 1 › Content)	Modern cores, instant payments and AI-led operations.	No	Overrides the description	Plain text, 1–2 sentences	None
I	Label (List Item 1 › Content)	Banking	No	Statistic label	Statistic cards	None
J	Call to action label (List Item 1 › Content)	Learn more	No	Shows a button	1–3 words	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
K	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/industries/retail	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
L	Title (List Item 2 › Content)	Retail that knows every customer	No	Overrides the card title	Only when the page's card title doesn't fit	None
M	Description (List Item 2 › Content)	Connected commerce from supply chain to store.	No	Overrides the description	Plain text, 1–2 sentences	None
N	Label (List Item 2 › Content)	Retail	No	Statistic label	Statistic cards	None
O	Call to action label (List Item 2 › Content)	Learn more	No	Shows a button	1–3 words	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
P	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/industries/manufacturing	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
Q	Title (List Item 3 › Content)	Factories that learn and adapt	No	Overrides the card title	Only when the page's card title doesn't fit	None
R	Description (List Item 3 › Content)	Smart factories and resilient supply chains.	No	Overrides the description	Plain text, 1–2 sentences	None
S	Label (List Item 3 › Content)	Manufacturing	No	Statistic label	Statistic cards	None
(T)	Call to action label (List Item 3 › Content)	Learn more	No	Shows a button	1–3 words	None
(U)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Industries we transform" above three grey cards: "Banking that runs on intelligence", "Retail that knows every customer" and "Factories that learn and adapt", with the labels Banking, Retail and Manufacturing, descriptions and outlined Learn more buttons.
- **Rendering behaviour:** style-stat stat-compact with Desktop and Tablet columns 3; each button is named "Learn more: {statement}". The industry pages have no eyebrow, so no kicker shows.
- **Publishing behaviour:** Publish the page; the three industry pages should be published so the buttons work.

Business Rules

- Compact statistic title suits statements up to about 40 characters.
- Each Call to action label shows a secondary button.
- Overrides replace the page title and description.
- Use the same layout as Figma 7 (Variation 62).

Common Authoring Mistakes

Error	Root Cause	Resolution
Statements break mid-word	Compact statistic title not selected	Add it in Style options
Identical button names for screen readers	Accessibility label set to Learn more on every item	Leave it empty so the title is added

Troubleshooting

- **Symptoms:** A Learn more button leads to the wrong industry.
- **Cause:** Page or link of the item points to another page, or a redirect applies.

- **Resolution:** Check the item's Page or link and /en/redirects.json.
- **Verification Steps:** Each button opens its industry page on aem.page.

Use Cases: Purpose and values sections.

Authoring Guidelines: As Variation 62 (Statistic, Compact statistic title, 3 columns, items' Call to action label).

Business Rules: As Variation 62.

Rendering Rules: As Variation 62.

Responsive Behaviour: As Variation 62.

SEO Impact: As Variation 62.

Accessibility Compliance: As Variation 62.

Variation 68 — Figma 13 "4-up colours"

Variation Name: Figma variation 13, 4-up colours.

Business Purpose: Four statistics in four different colours.

Visual Example:

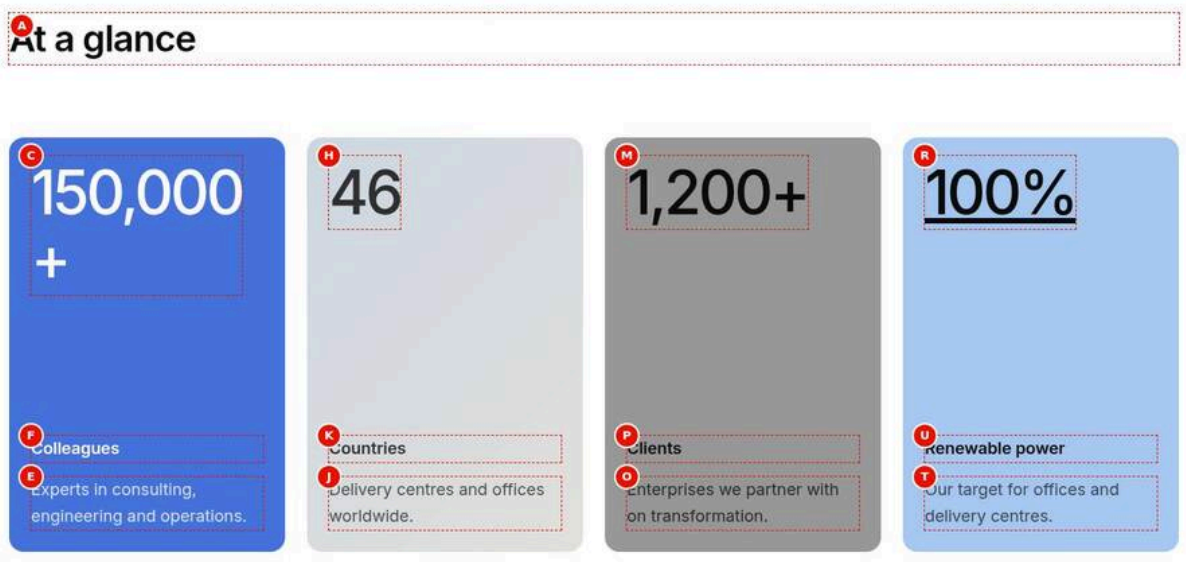

Figure 71: Figma variation 13 — At 1440 px the title At a glance above four statistic cards: 150,000+ on brand blue, 46 on the grey gradient, 1,200+ on mid grey and 100% on light blue, each with label and description. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-13-4-up-colours.jpg)

Screenshot Details — Figma variation 13

Item	Detail
Screenshot Name	`screenshots/list-figma-13-4-up-colours.jpg`
Screenshot Purpose	Figma variation 13
Screen Description	At 1440 px the title At a glance above four statistic cards: 150,000+ on brand blue, 46 on the grey gradient, 1,200+ on mid grey and 100% on light blue, each with label and description.
Business Context	The 4-up colours band of Figma variation 13 on campaign pages: four figures, each in its own colour.
Author Objective	Reproduce Figma 13 with four statistic items in Brand blue, Grey gradient, Mid grey and Light blue.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	At a glance	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Card style (List › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
C	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/about/our-people	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(D)	Title (List Item 1 › Content)	150,000+	No	Overrides the card title	Only when the page's card title doesn't fit	None
E	Description (List Item 1 › Content)	Experts in consulting, engineering and operations.	No	Overrides the description	Plain text, 1–2 sentences	None
F	Label (List Item 1 › Content)	Colleagues	No	Statistic label	Statistic cards	None
(G)	Card colour (List Item 1 › Display)	Brand blue	No	This item's colour	Overrides the list	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
H	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/about/locations	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(I)	Title (List Item 2 › Content)	46	No	Overrides the card title	Only when the page's card title doesn't fit	None
J	Description (List Item 2 › Content)	Delivery centres and offices worldwide.	No	Overrides the description	Plain text, 1–2 sentences	None
K	Label (List Item 2 › Content)	Countries	No	Statistic label	Statistic cards	None
(L)	Card colour (List Item 2 › Display)	Grey gradient	No	This item's colour	Overrides the list	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
M	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/about/clients	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(N)	Title (List Item 3 › Content)	1,200+	No	Overrides the card title	Only when the page's card title doesn't fit	None
O	Description (List Item 3 › Content)	Enterprises we partner with on transformation.	No	Overrides the description	Plain text, 1–2 sentences	None
P	Label (List Item 3 › Content)	Clients	No	Statistic label	Statistic cards	None
(Q)	Card colour (List Item 3 › Display)	Mid grey	No	This item's colour	Overrides the list	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
R	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/about/sustainability	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(S)	Title (List Item 4 › Content)	100%	No	Overrides the card title	Only when the page's card title doesn't fit	None
T	Description (List Item 4 › Content)	Our target for offices and delivery centres.	No	Overrides the description	Plain text, 1–2 sentences	None
U	Label (List Item 4 › Content)	Renewable power	No	Statistic label	Statistic cards	None
(V)	Card colour (List Item 4 › Display)	Light blue	No	This item's colour	Overrides the list	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image
(W)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "At a glance" above four statistic cards: 150,000+ on brand blue with white text, 46 on the grey gradient, 1,200+ on mid grey and 100% on light blue, all with labels and descriptions.

- **Rendering behaviour:** Each item adds its theme class (theme-brand, theme-gradient, theme-mid-grey, theme-brand-light); the default 4 / 4 / 1 grid applies.
- **Publishing behaviour:** Publish the page; the linked about pages should be published so the card links work.

Business Rules

- Item colours win over the block colour.
- Check contrast of the brand blue card (F-28, open).
- Colours apply only to statistic, panel and report cards.
- Mobile stacks the four cards unless a rail is set.

Common Authoring Mistakes

Error	Root Cause	Resolution
All four cards share one colour	Card colour set on the List	Set the colours on each List Item
Two cards look alike	Mid grey and light grey confused	Use Mid grey on item 3, Light blue on item 4

Troubleshooting

- **Symptoms:** The gradient card shows plain grey.
- **Cause:** Card colour Light grey selected instead of Grey gradient on item 2.
- **Resolution:** Choose Grey gradient on List Item 2's Display tab and publish.
- **Verification Steps:** The 46 card shows the diagonal gradient on aem.page.

Use Cases: Highlight figures on campaign pages.

Authoring Guidelines:

Setting	Value
List source	Fixed list (4 items)
Card style	Statistic
List Items: Card colour	Brand blue; Grey gradient; Mid grey; Light blue
Desktop / Tablet columns	4 / 4 (default)

Business Rules: Item colours win over the block colour.

Rendering Rules: `theme-brand`, `theme-gradient`, `theme-mid-grey`, `theme-brand-light`.

Responsive Behaviour: 4 columns; mobile 1 column or a rail.

SEO Impact: As Variation 13.

Accessibility Compliance: See Variations 19–23.

Variation 69 — Figma 14 "Statistics row"

Variation Name: Figma variation 14, statistics row.

Business Purpose: A plain statistics row.

Visual Example:

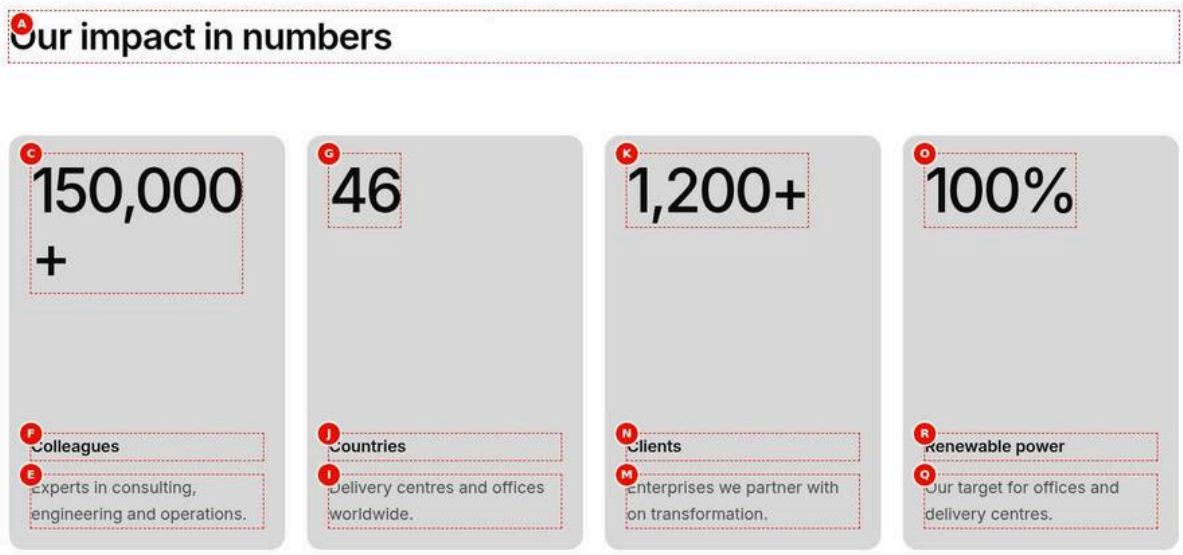

Figure 72: Figma variation 14 — At 1440 px the title Our impact in numbers above four light grey statistic cards within the content width: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/list-figma-14-statistics.jpg)

Screenshot Details — Figma variation 14

Item	Detail
Screenshot Name	`screenshots/list-figma-14-statistics.jpg`
Screenshot Purpose	Figma variation 14
Screen Description	At 1440 px the title Our impact in numbers above four light grey statistic cards within the content width: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power.
Business Context	The statistics row of Figma variation 14: the company's impact in four figures within the content width.
Author Objective	Reproduce Figma 14 with four statistic List Items in the default colours.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
A	Title (List › Content)	Our impact in numbers	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(B)	Card style (List › Cards)	Statistic	No	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/about/our-people	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(D)	Title (List Item 1 › Content)	150,000+	No	Overrides the card title	Only when the page's card title doesn't fit	None
E	Description (List Item 1 › Content)	Experts in consulting, engineering and operations.	No	Overrides the description	Plain text, 1–2 sentences	None
F	Label (List Item 1 › Content)	Colleagues	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
G	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/about/locations	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(H)	Title (List Item 2 › Content)	46	No	Overrides the card title	Only when the page's card title doesn't fit	None
I	Description (List Item 2 › Content)	Delivery centres and offices worldwide.	No	Overrides the description	Plain text, 1–2 sentences	None
J	Label (List Item 2 › Content)	Countries	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
K	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/about/clients	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
(L)	Title (List Item 3 › Content)	1,200+	No	Overrides the card title	Only when the page's card title doesn't fit	None
M	Description (List Item 3 › Content)	Enterprises we partner with on transformation.	No	Overrides the description	Plain text, 1–2 sentences	None
N	Label (List Item 3 › Content)	Clients	No	Statistic label	Statistic cards	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
O	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/about/sustainability	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(P)	Title (List Item 4 › Content)	100%	No	Overrides the card title	Only when the page's card title doesn't fit	None
Q	Description (List Item 4 › Content)	Our target for offices and delivery centres.	No	Overrides the description	Plain text, 1–2 sentences	None
R	Label (List Item 4 › Content)	Renewable power	No	Statistic label	Statistic cards	None
(S)	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title "Our impact in numbers" above four light grey statistic cards within the content width: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power.
- **Rendering behaviour:** style-stat in the default 4 / 4 / 1 grid with the statistic default colour #d9d9d9 and the 2:3 shape; the design's edge-to-edge row isn't reproduced.
- **Publishing behaviour:** Publish the page; the linked about pages should be published so the card links work.

Business Rules

- The row stays within the content width (by design).
- Colours as designed can be set per item.
- Titles hold the numbers.
- Statistic cards are always linked in a List.

Common Authoring Mistakes

Error	Root Cause	Resolution
Expecting a full-bleed row	Figma 14's edge-to-edge row isn't supported	Accept the content width
Unlinked figures wanted	List Items require links	Use Link items off or the Cards block

Troubleshooting

- **Symptoms:** On mobile the four tall cards make the page long.
- **Cause:** The default mobile grid stacks 2:3 cards.
- **Resolution:** Set Mobile display to Horizontal scroll or Panel height to Compact.
- **Verification Steps:** At 402 px the figures form a rail or shorter cards.

Use Cases: Facts sections.

Authoring Guidelines: Fixed list; Card style Statistic; colours as designed.

Business Rules: The old design's edge-to-edge row isn't reproduced: the row stays within the content width.

Rendering Rules: `style-stat`.

Responsive Behaviour: Grid 4 / 4 / 1 by default.

SEO Impact: As Variation 13.

Accessibility Compliance: As Variation 13.

6.16.4 Authoring Experience

List is a container block with key-value settings and, for the Fixed list source (and for fallback items), **List Item** children added, duplicated, deleted and reordered in the content tree. Fields that don't apply to the chosen source or option are hidden in the dialog (model conditions). Child pages and Tagged pages are discovered from the published query index, which isn't available in the editor: in Universal Editor such lists show the hint "The pages show on the published page (from the query index)." — check them in preview on `aem.page`.

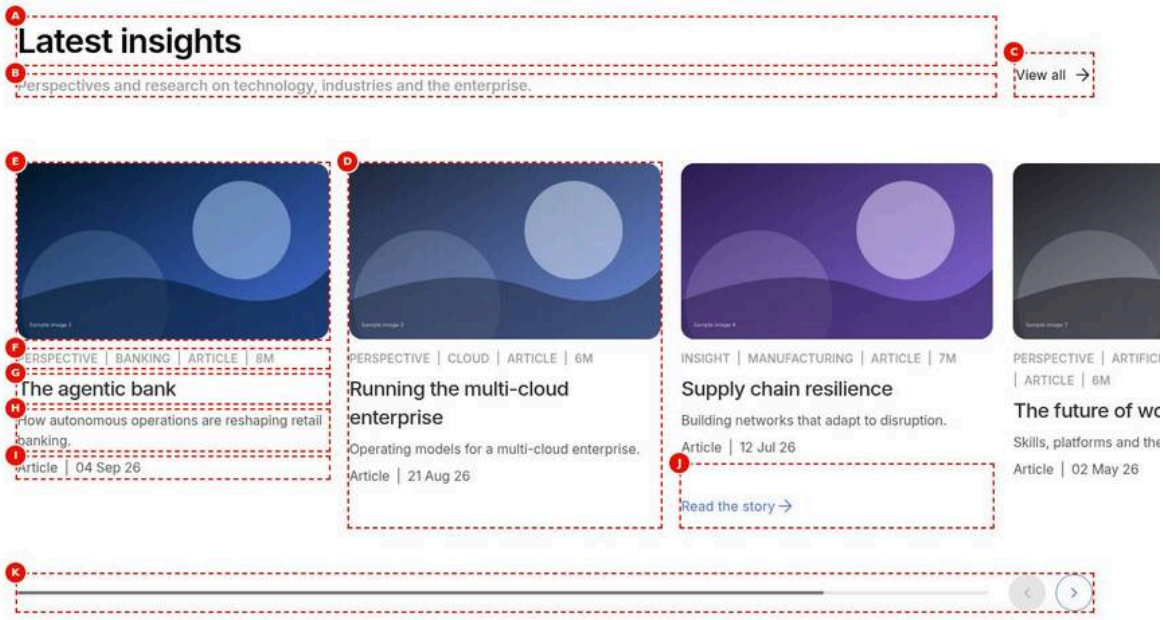

Figure 73: Universal Editor canvas — At 1440 px the List Latest insights with description and View all, a desktop rail of 3.3 cards (The agentic bank, Running the multi-cloud enterprise, Supply chain resilience with Read the story, The future of work) and indicator and buttons, lettered A to K. The content tree (L) isn't in this capture. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/list-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/list-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	At 1440 px the List Latest insights with description and View all, a desktop rail of 3.3 cards (The agentic bank, Running the multi-cloud enterprise, Supply chain resilience with Read the story, The future of work) and indicator and buttons, lettered A to K. The content tree (L) isn't in this capture.
Business Context	A Latest insights rail on the insights hub as authors see it while editing: header, cards and the List Items in the content tree.
Author Objective	Understand the parts of a Fixed list List on the canvas (annotations A to L) and which field controls each.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
—	Title (List › Content)	Latest insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
—	Description (List › Content)	Perspectives and research on technology, industries and the enterprise.	No	Intro under the title	One or two sentences	None
—	CTA link (List › Content)	Select the page or enter /content/tcs-corp/us/en/insights	No	Header call to action	Overview / archive page	None
—	CTA text (List › Content)	View all	No	CTA label	2–4 words	None
—	Desktop display (List › Layout)	Horizontal scroll	No	Grid or scroll at 1200 px+	—	grid, horizontal-scroll
—	Desktop items visible (List › Layout)	3.3	No	Cards in view when scrolling	A fraction shows part of the next	Enforced 1–8; scroll only
—	Previous / next buttons on desktop (List › Layout)	On	No	Show the buttons	On for desktop rails	Boolean; scroll only
—	Scroll indicator on desktop (List › Layout)	On	No	Show the progress bar	—	Boolean; scroll only
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
—	Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
—	Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/cloud-at-scale	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Title (List Item 2 › Content)	Running the multicloud enterprise	No	Overrides the card title	Only when the page's card title doesn't fit	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/supply-chain-resilience	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	Call to action label (List Item 3 › Content)	Read the story	No	Shows a button	1–3 words	None
—	Item (Content tree › List › Add (+))	List Item	Yes	Adds a List Item to the List	Select the List in the content tree, choose Add (+) and pick List Item	Only the item types the List allows
—	Page or link (List Item 4 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/future-of-work	Yes	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored
—	List source (List › Source)	Fixed list (the default; keep it)	No	—	—	None
—	Content tree (L) (Universal Editor)	List › List Item 1–4 (not part of this canvas capture)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The header "Latest insights" with its description and View all, a desktop rail of 3.3 cards (The agentic bank, "Running the multi-cloud enterprise", Supply chain resilience with a "Read the story" button, The future of work) and the indicator and buttons below; letters mark each part.
- **Rendering behaviour:** Desktop items visible 3.3 with buttons and indicator on; item 2's Title override replaces the page title, item 3's Call to action label adds a tertiary button named "Read the story: Supply chain resilience". Selecting a card selects its List Item.
- **Publishing behaviour:** Publish the page; the four insights must be published and indexed. In Universal Editor items 1, 3 and 4 have no Title override, so they show only on aem.page.

Business Rules

- Selecting a card on the canvas selects its List Item in the content tree.
- A Call to action label makes the button the card's one link.
- Overrides apply only to the item that sets them.
- The content tree order is the card order (Order by Manual).

Common Authoring Mistakes

Error	Root Cause	Resolution
Editing the List's Title changes no card	Card titles belong to the List Items or the pages	Use the List Item's Title
Only one card in the editor	Items without Title override need the index	Check the full rail on aem.page

Troubleshooting

- **Symptoms:** Clicking a card on the canvas opens the List's properties, not the item's.

- **Cause:** The click hit the header or the scroller area outside a card.
- **Resolution:** Select the List Item in the content tree (L) instead.
- **Verification Steps:** The properties panel shows the Link, Content and Display tabs.

Annotations

- A = List title (Content tab: Title, Heading type)
- B = List description (Content tab: Description)
- C = Header call to action (Content tab: CTA link, CTA text, CTA style)
- D = A card of a List Item (selecting it selects the List Item; Card style and Card colour)
- E = Card image (page metadata, or the List Item's Image / Image alt text)
- F = Card kicker: eyebrow and tags (page metadata or List Item Eyebrow / Tags) and reading time
- G = Card title and link (page title / card title, or List Item Title; Page or link)
- H = Card description (page description, or List Item Description)
- I = Card meta row: content type and date (page metadata)
- J = Call to action (List Item Call to action label; panel / report defaults)
- K = Previous / next buttons and scroll indicator (Layout tab)
- L = Content tree: List with its List Items (Fixed list and fallback items)

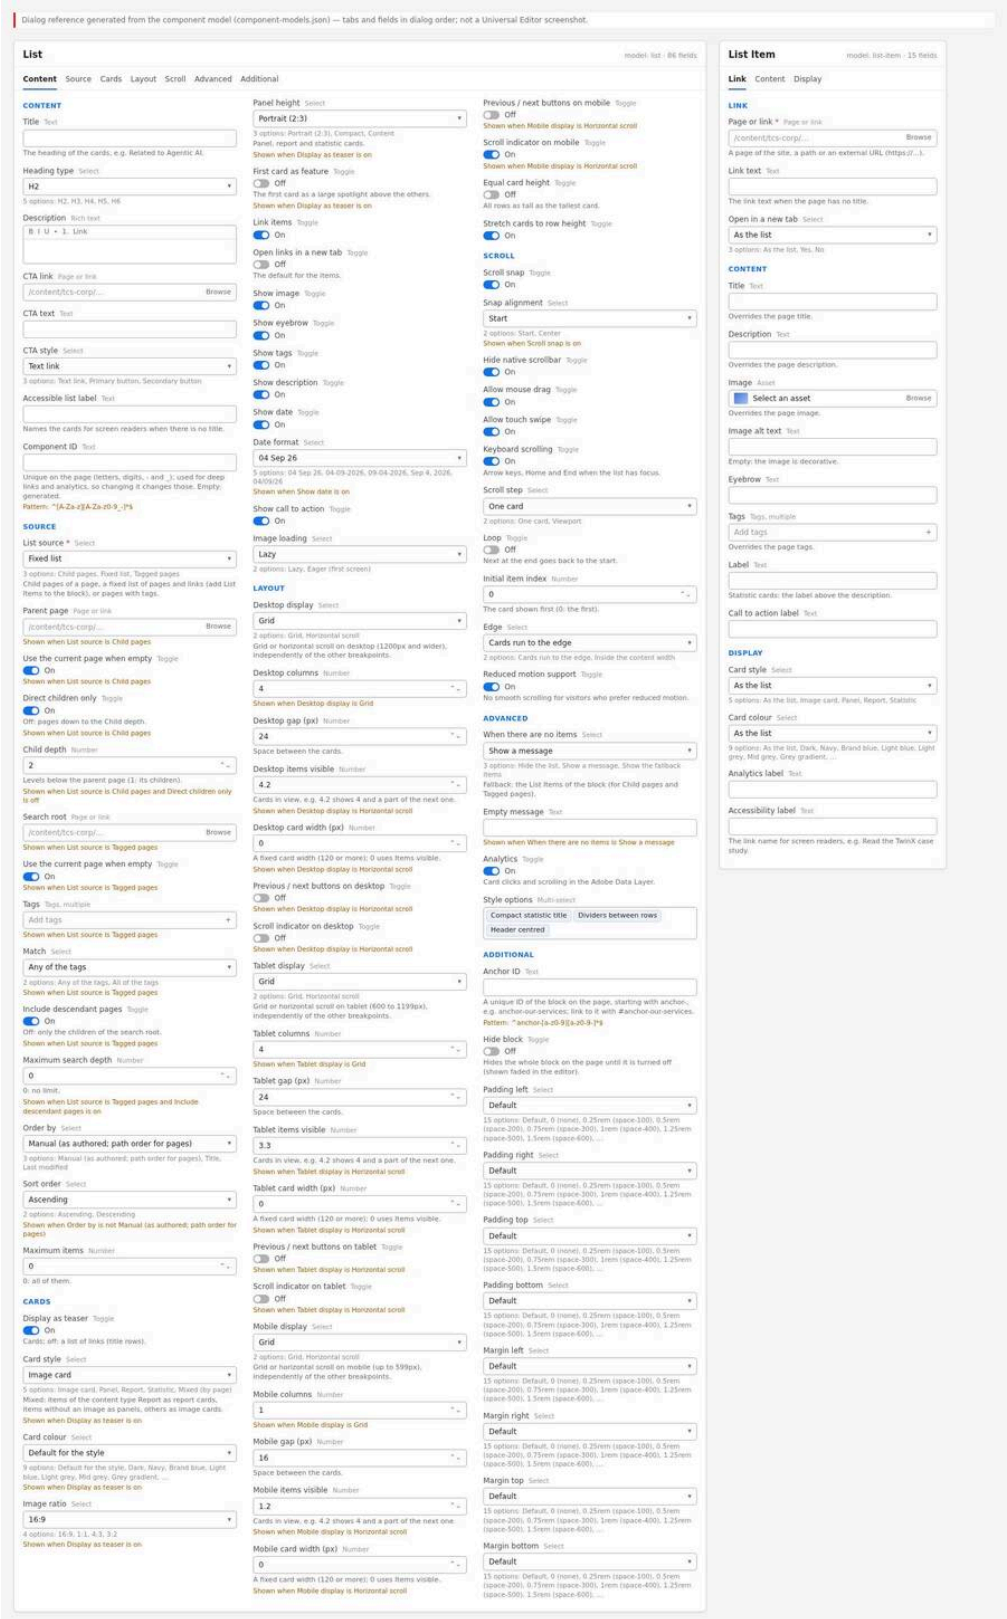

Figure 74: Properties panel — The properties panel of a selected List with the tabs Content, Source, Cards, Layout, Scroll, Advanced and Additional; the Source tab open with List source = Tagged pages and the Search root, Use the current page when empty, Tags, Match, Include descendant pages and Maximum search depth fields, followed by Order by, Sort order and Maximum items. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/list-properties-panel.jpg)

Block tabs (List)

- **Content:** Title; Heading type (H2–H6); Description; CTA link; CTA text; CTA style (Text link, Primary button, Secondary button); Accessible list label; Component ID.
- **Source:** List source (Child pages, Fixed list, Tagged pages; required). Child pages: Parent page, Use the current page when empty, Direct children only, Child depth (when Direct children only is off). Tagged pages: Search root, Use the current page when empty, Tags, Match (Any of the tags, All of the tags), Include descendant pages, Maximum search depth (when descendants are included). Always: Order by (Manual, Title, Last modified), Sort order (when Order by isn't Manual), Maximum items.
- **Cards, Layout, Scroll:** as the Cards block (6.15.4): Display as teaser, Card style, Card colour, Image ratio, Panel height, First card as feature, Link items, Open links in a new tab, Show image / eyebrow / tags / description / date / call to action, Date format, Image loading; per breakpoint display, columns, gap, items visible, card width, buttons, indicator; Equal card height, Stretch cards; Scroll snap, Snap alignment, Hide native scrollbar, Allow mouse drag, Allow touch swipe, Keyboard scrolling, Scroll step, Loop, Initial item index, Edge, Reduced motion support.
- **Advanced:** When there are no items (Hide the list, Show a message, Show the fallback items); Empty message (when Show a message); Analytics; Style options.
- **Additional:** Anchor ID; Hide block; Padding and Margin left / right / top / bottom.

Item tabs (List Item)

- **Link:** Page or link (required); Link text; Open in a new tab (As the list, Yes, No).
- **Content:** Title; Description; Image; Image alt text; Eyebrow; Tags; Label; Call to action label.
- **Display:** Card style (As the list, Image card, Panel, Report, Statistic); Card colour (As the list or a colour); Analytics label; Accessibility label.

6.16.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites select the page and choose Edit.

Expected Result: The page opens in Universal Editor.

Steps — Open the page: The Sites console with the page selected and Edit highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › en › Insights
2	AEM Sites console	Select	The page (check box)
3	AEM Sites console toolbar	Edit	Opens the page in Universal Editor

Step 2 — Add the List block

Action: Select a section, choose Add (+) and pick **List**.

Expected Result: A List with the default settings (Fixed list, image cards, grid 4 / 4 / 1) is inserted; the editor shows "Set up the list in its properties: items-missing."

Steps — Add the block: The add menu with List highlighted and the new List showing the set-up hint.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section
2	Universal Editor › Section	Add (+)	List

Step	Where	Field / control	Value / action
3	Universal Editor › Canvas	New List	Shows “Set up the list in its properties: items-missing.” (Fixed list without items)

Step 3 — Fill the Content tab

Action: Enter Title, Heading type, Description and optionally CTA link, CTA text, CTA style; an Accessible list label if there is no title; Component ID only when needed.

Expected Result: The header renders.

Steps — Content tab: Content tab with title “Latest insights” and a “View all” CTA.

Step	Where	Field / control	Value / action
1	List › Content	Title	Latest insights
2	List › Content	Heading type	H2
3	List › Content	Description	Perspectives and research on technology, industries and the enterprise.
4	List › Content	CTA link	Select the page /content/tcs-corp/us/en/insights
5	List › Content	CTA text	View all
6	List › Content	CTA style	Text link

Step 4 — Choose the source (Source tab)

Action: Choose List source. Child pages: pick the Parent page (or leave it empty for the current page), Direct children only or a Child depth. Tagged pages: pick the Search root (or the current page), the Tags, Match, Include descendant pages and Maximum search depth. Fixed list: continue with Step 9. Then Order by, Sort order and Maximum items.

Expected Result: Fields of other sources are hidden. In the editor, Child / Tagged lists show the published-page hint; the cards appear in preview.

Steps — Source tab: Source tab with Tagged pages, two tags selected, Match Any, Order by Last modified, Descending, Maximum items 8.

Step	Where	Field / control	Value / action
1	List › Source	List source	Tagged pages
2	List › Source	Search root	Select the page /content/tcs-corp/us/en/insights
3	List › Source	Tags	Add the tags tcs-corp:topic/ai, tcs-corp:topic/cloud
4	List › Source	Match	Any of the tags
5	List › Source	Order by	Last modified
6	List › Source	Sort order	Descending
7	List › Source	Maximum items	8

Step 5 — Set the Cards tab

Action: Choose Display as teaser, Card style, Card colour, Image ratio, Panel height, First card as feature, Link items, Open links in a new tab, the Show switches, Date format and Image loading.

Expected Result: The presentation changes (visible for Fixed lists in the editor).

Steps — Cards tab: Cards tab with Card style Mixed and First card as feature on.

Step	Where	Field / control	Value / action
1	List › Cards	Display as teaser	On (the default)
2	List › Cards	Card style	Mixed (by page)
3	List › Cards	First card as feature	On

Step 6 — Set the Layout tab

Action: Per breakpoint choose Grid (columns) or Horizontal scroll (items visible or card width, buttons, indicator) and the gaps; Equal card height; Stretch cards.

Expected Result: The layout follows the breakpoint of the editor preview width.

Steps — Layout tab: Layout tab with scroll on all breakpoints and desktop buttons on.

Step	Where	Field / control	Value / action
1	List › Layout	Desktop display	Horizontal scroll
2	List › Layout	Previous / next buttons on desktop	On
3	List › Layout	Tablet display	Horizontal scroll
4	List › Layout	Mobile display	Horizontal scroll

Step 7 — Set the Scroll and Advanced tabs

Action: Adjust the Scroll options if needed; Advanced: When there are no items, Empty message, Analytics, Style options.

Expected Result: Scroll behaviour and empty state as chosen.

Steps — Scroll and Advanced tabs: Advanced tab with “Show the fallback items” selected.

Step	Where	Field / control	Value / action
1	List › Scroll	Scroll options	Keep the defaults (snap, drag, swipe, keyboard, one-card step, edge bleed)
2	List › Advanced	When there are no items	Show the fallback items
3	List › Advanced	Analytics	On (the default)

Step 8 — Set the Additional tab

Action: Optionally an Anchor ID, padding and margin; keep Hide block off.

Expected Result: Spacing and anchor applied.

Steps — Additional tab: Additional tab with Anchor ID “anchor-latest-insights”.

Step	Where	Field / control	Value / action
1	List › Additional	Anchor ID	anchor-latest-insights
2	List › Additional	Hide block	Off (the default)

Step 9 — Add List Items (Fixed list or fallback)

Action: In the content tree select the List, Add (+) → **List Item**; on the Link tab pick the Page or link (a page of the site, a path or `https://…`), optionally Link text and Open in a new tab.

Expected Result: The item renders when it has a title (from an override or the Link text in the editor; the page's metadata on the published page).

Steps — Add a List Item: The content tree add menu offering List Item, and the Link tab with a page selected.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	List	Select the List
2	Universal Editor › Content tree › List	Add (+)	List Item
3	List Item 1 › Link	Page or link	Select the page /content/tcs-corp/us/en/insights/agentic-bank
4	List Item 1 › Link	Open in a new tab	As the list (the default)

Step 10 — Override the item content (optional)

Action: Content tab: Title, Description, Image and Image alt text, Eyebrow, Tags, Label, Call to action label — only where the page's metadata shouldn't be used.

Expected Result: The overrides replace the page values on the card.

Steps — Item overrides: A List Item with an overridden title and image and the card updated.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	List Item 1	Select it
2	List Item 1 › Content	Title	Banking on autonomous operations
3	List Item 1 › Content	Image	Select the asset photo-3.svg (/en/media/photo-3.svg)
4	List Item 1 › Content	Image alt text	Operations team at a bank
5	Universal Editor › Canvas	Card	Shows the new title and image instead of the page's

Step 11 — Set the item display (optional)

Action: Display tab: Card style, Card colour, Analytics label, Accessibility label.

Expected Result: The card uses its own style / colour.

Steps — Item display: A List Item with Card colour Image background in a panel list.

Step	Where	Field / control	Value / action
1	List › Cards	Card style	Panel
2	Universal Editor › Content tree	List Item 3	Select it
3	List Item 3 › Display	Card colour	Image background
4	Universal Editor › Canvas	Card 3	A panel filled with the page's image

Step 12 — Reorder and duplicate items

Action: Drag List Items in the content tree; duplicate to create similar items.

Expected Result: With Order by Manual the cards follow the tree order.

Steps — Reorder items: A List Item dragged to the first position.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree › List	List Item 3	Drag it above List Item 1
2	Universal Editor › Content tree › List	List Item (… menu)	Duplicate (for a similar item)
3	Universal Editor › Canvas	Cards	Follow the new order (Order by: Manual)

Step 13 — Check the listed pages' metadata

Action: For Child / Tagged lists (and page items without overrides), make sure the listed pages have Card title, Card description, Card image (or thumbnail / featured image), Eyebrow, Content type, dates and tags in their page metadata or the bulk metadata sheet, and that they are published.

Expected Result: The cards on the preview page show the intended content.

Steps — Page metadata: The bulk metadata sheet row of a listed page with card-title, card-description and card-image filled.

Step	Where	Field / control	Value / action
1	en › metadata (bulk metadata sheet)	url	/en/insights/agentic-bank
2	en › metadata, same row	card-title	The agentic bank
3	en › metadata, same row	card-description	How autonomous operations are reshaping retail banking.
4	en › metadata, same row	card-image	/en/media/photo-1.svg
5	AEM Sites console	Publish	The sheet and the listed page

Step 14 — Preview

Action: Publish to Preview and open the page on `aem.page`; check every breakpoint.

Expected Result: The discovered (published and indexed) pages show, in the right order and number.

Steps — Preview: The preview page with the tagged pages rendered as mixed cards.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Publish to Preview
2	Browser	Open	https://main–tcs-corp–sradha-tcs.aem.page/en/insights
3	Preview	Check	The tagged pages as mixed cards at 1440, 1024 and 402 px

Step 15 — Validate

Action: Run the Validation Process checklist (optionally with `?debug=list` to log the configuration and cards in the browser console).

Expected Result: All checks pass.

Steps — Validate: The browser console with the `(list) config` and `(list) cards` debug output.

Step	Where	Field / control	Value / action
1	Browser	Open	The preview URL with ?debug=list
2	Browser developer tools	Console (Verbose level)	[list] config … and [list] cards … entries

Step	Where	Field / control	Value / action
3	Validation Process	Checklist	Run every check

Step 16 — Publish

Action: Publish the page (and new assets; and the listed pages if not yet live) to Live.

Expected Result: The List shows on the live page.

Steps — Publish: The publish dialog with the page selected.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Publish to Live
2	Publish dialog	Pages	The page (and new assets; listed pages not yet live)
3	Publish dialog	Publish	Confirm

Preview Process

1. Universal Editor saves automatically; Fixed lists render in the editor with overrides and link texts (the index isn't available there).
2. Publish to Preview; on `https://main--tcs-corp--sradha-tcs.aem.page/{path}` the List reads `/query-index.json` of that host and shows Child / Tagged pages. Pages are listed once they are published and indexed (README: "a page shows once it is published") — [To be confirmed: whether pages that are only previewed appear in the preview index — owner: site admin].
3. Append `?debug=list` to log the normalized configuration, warnings and cards.
4. Check desktop (1440 px), tablet (1024 / 768 px) and mobile (402 / 375 px).

Publishing Process

1. Confirm the Validation checklist.
2. Make sure the listed pages are published (only published, indexed pages are listed; the index updates after publication).
3. Publish the page to Live, with new assets.
4. Open the live URL; if a new page is missing, wait for the index update and reload.

Validation Process

- ☐ The list shows the expected pages (count, order, Maximum items).
- ☐ No unwanted pages: pages hidden from navigation (`hide-in-nav`) and pages outside the Search root / Parent are not listed; duplicates appear once.
- ☐ Card titles, descriptions, images and alt texts come from the right metadata or overrides.
- ☐ Tags show their labels; dates in the chosen format.
- ☐ Links go to the right pages (redirect targets are used for redirected pages).
- ☐ Card style, colours, feature card (with author) as designed.
- ☐ Grid / scroll per breakpoint; buttons and indicator only where the cards overflow.
- ☐ Headings: the list title level fits the page; card titles one level below.
- ☐ Fixed list: every item has a link; external links open as intended.
- ☐ Empty behaviour configured (message, hide or fallback).
- ☐ With Analytics on, `window.adobeDataLayer` contains the list and its items.

Rollback Process

1. Restore the previous page version (Versions / Timeline) or undo in Universal Editor.

2. Republish the page; if listed pages' metadata changed, restore and republish those pages (or the bulk metadata sheet).
3. Emergency: Hide block on, publish.
4. Code regressions: the development team reverts the commit on `main` (`blocks/list/*` or the shared card list files, which also affect Cards).

The walkthroughs below repeat the steps above for each variation of chapter 6.16.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Source "Child pages"

Reproduces the screenshot `screenshots/list-source-child-pages.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Our industries; **Description** (B) = Deep domain knowledge for the industries we serve.

Expected Result: The header shows "Our industries" and the description under it.

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (C) = Child pages; **Parent page** (D) = Select the page or enter /content/tcs-corp/us/en/industries.

Expected Result: With Child pages and the Industries parent the canvas shows "The pages show on the published page (from the query index)."

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (E) = 3; **Tablet columns** (F) = 3.

Expected Result: Desktop and Tablet columns 3 are stored; in preview the three industry cards fill one row.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Our industries" with the description "Deep domain knowledge for the industries we serve."; three image cards (Banking, Manufacturing, Retail) with their photographs, the industry tag in the kicker, title, description and the publication date.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the industry pages must be published and indexed to appear. A new child of /en/industries appears on aem.live after the index update, without editing or republishing this List.

Step 8 — Verify

Action: On the live page check: The page's path is in /query-index.json and the List shows a fourth card.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Child Pages with Depth

Reproduces the screenshot `screenshots/list-source-child-depth.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Services and offerings.

Expected Result: The header shows the H2 "Services and offerings".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/services; **Direct children only** (D) = Off; **Order by** (E) = Title; **Child depth** (F) = 2 (pre-filled in the dialog; keep it).

Expected Result: Child pages of Services with Direct children only off, Child depth 2 and Order by Title; the canvas shows the published-page hint.

Step 5 — Fill in Result

Action: Select **Result** in the content tree and enter in the properties panel: **Listed pages** (G) = The children of Services and the grandchild Cloud migration, by title.

Expected Result: In preview the children of Services and the grandchild Cloud migration appear sorted by title.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Services and offerings"; five image cards A to Z: AI and data, Cloud, Cloud migration, Consulting and Cybersecurity, four in the first row and one in the second; Cloud migration has no image area and shows its eyebrow "Offering".

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the services and offerings must be published and indexed. A new grandchild page joins the list after the index update.

Step 8 — Verify

Action: On the live page check: On aem.page Cloud migration appears between Cloud and Consulting.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Source "Fixed list"

Reproduces the screenshot `screenshots/list-source-fixed.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Editor's picks.

Expected Result: The header shows "Editor's picks" above the set-up hint.

Step 4 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added below the List in the content tree; it renders once it has a link and a title.

Step 5 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (B) = Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank.

Expected Result: The agentic bank is linked; the card shows on aem.page with the page's metadata.

Step 6 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added below the List in the content tree; it renders once it has a link and a title.

Step 7 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (C) = Select the page or enter /content/tcs-corp/us/en/services/cloud.

Expected Result: The Cloud services page is linked as the second item.

Step 8 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (D) = Cloud services for the enterprise.

Expected Result: The second card shows the title "Cloud services for the enterprise" instead of the page title.

Step 9 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added below the List in the content tree; it renders once it has a link and a title.

Step 10 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (E) = Select the page or enter /content/tcs-corp/us/en/insights/supply-chain-resilience.

Expected Result: Supply chain resilience is linked as the third item; its card comes from the index on aem.page.

Step 11 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added below the List in the content tree; it renders once it has a link and a title.

Step 12 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (F) = Select the page or enter https://partner.example.com/joint-solutions.

Expected Result: The external URL https://partner.example.com/joint-solutions is set as the fourth destination.

Step 13 — Fill in List Item 4 › Content

Action: Select **List Item 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (G) = Joint solutions with our partners; **Description** (H) = Co-developed platforms from our partner ecosystem; **Image** (I) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Image alt text** (J) = Partner team in a workshop; **Eyebrow** (K) = Partner.

Expected Result: The fourth card shows photo-6, the eyebrow PARTNER, the title and the description.

Step 14 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (L) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list (the default); the cards follow the content tree order.

Step 15 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Editor's picks" above four image cards in one row: The agentic bank, "Cloud services for the enterprise" (overridden title with the Cloud page's image), Supply chain resilience and "Joint solutions with our partners" with photo-6, the eyebrow PARTNER and no date.

Step 16 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and photo-6.svg; the three site pages must be published and indexed for their metadata. The partner card needs nothing else; it is always shown from its own values.

Step 17 — Verify

Action: On the live page check: The card shows the page's title, image and date on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Source "Tagged pages" (any tag)

Reproduces the screenshot `screenshots/list-source-tagged-any.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Related to Agentic AI.

Expected Result: The header shows "Related to Agentic AI".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Tagged pages; **Search root** (C) = Select the page or enter /content/tcs-corp/us/en; **Tags** (D) = Add the tags tcs-corp:topic/ai.

Expected Result: Tagged pages below /en with the AI tag; the canvas shows "The pages show on the published page (from the query index)."

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (E) = Mixed (by page).

Expected Result: Card style Mixed (by page) is stored; each page gets its card kind in preview.

Step 6 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (F) = Horizontal scroll; **Tablet display** (G) = Horizontal scroll; **Mobile display** (H) = Horizontal scroll.

Expected Result: Desktop, tablet and mobile display Horizontal scroll: in preview the cards form a rail on every breakpoint.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Related to Agentic AI" above a rail bleeding to the right edge: image cards for The future of work, Touchless insurance claims, Personalisation in retail and AI and data, and a gradient report card "State of AI 2026" with REPORT and its date and a Download button.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; tagged pages appear once they are published and indexed with their tags. Retagging a page changes the rail after the page is republished and the index updated.

Step 9 — Verify

Action: On the live page check: The page's tags column contains tcs-corp:topic/ai and the card shows in the rail.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Tagged Pages with All Tags

Reproduces the screenshot `screenshots/list-source-tagged-all.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = AI in industry; **Description** (B) = Insights tagged with Artificial intelligence and an industry.

Expected Result: The header shows "AI in industry" and its description.

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (C) = Tagged pages; **Search root** (D) = Select the page or enter /content/tcs-corp/us/en/insights; **Tags** (E) = Add the tags tcs-corp:topic/ai, tcs-corp:industry; **Match** (F) = All of the tags.

Expected Result: Tagged pages below Insights with the AI and Industry tags and Match All; the canvas shows the published-page hint.

Step 5 — Fill in Result

Action: Select **Result** in the content tree and enter in the properties panel: **Listed pages** (G) = Only pages with the AI tag and an industry tag (a child tag of Industry).

Expected Result: In preview only Touchless insurance claims and Personalisation in retail appear.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "AI in industry" with its description above two image cards: Touchless insurance claims and Personalisation in retail, with their images, kickers, titles and descriptions; the rest of the 4-column row stays empty.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed with both tags. A page gaining an industry tag joins the list once republished and indexed.

Step 8 — Verify

Action: On the live page check: /query-index.json lists the pages with both tags and the List shows them.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Order by Title

Reproduces the screenshot `screenshots/list-order-title.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insights A to Z.

Expected Result: The header shows "Insights A to Z".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Title; **Maximum items** (E) = 4.

Expected Result: Child pages of Insights, Order by Title and Maximum items 4; the canvas shows the published-page hint until preview.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Insights A to Z" above four image cards: Cloud at scale, Personalisation in retail, Quantum readiness (no image area, it has no image) and State of AI 2026.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the order is computed in the browser from the indexed titles, so a renamed page moves after it is republished and indexed.

Step 7 — Verify

Action: On the live page check: Reload aem.page; the card sits at its alphabetical position.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Order by Last Modified

Reproduces the screenshot `screenshots/list-order-last-modified.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest news.

Expected Result: The header shows "Latest news".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 5.

Expected Result: Child pages of Insights, Last modified, Descending, Maximum items 5; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Display as teaser** (G) = Off.

Expected Result: Display as teaser off: in preview the pages render as rows of links with arrows.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Latest news" above five rows: The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience and Personalisation in retail, each with eyebrow and tag, a 2.5rem title, the description, the date and an arrow on the right.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; republishing a listed page updates its last publication time, which moves it up a Last modified list without modified-date metadata.

Step 8 — Verify

Action: On the live page check: The index row shows the new date and the page is the first row.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — Maximum Items

Reproduces the screenshot `screenshots/list-max-items.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Tagged pages; **Search root** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Tags** (D) = Add the tags tcs-corp:content-type/article, tcs-corp:content-type/report, tcs-corp:content-type/blog, tcs-corp:content-type/case-study; **Order by** (E) = Last modified; **Sort order** (F) = Descending; **Maximum items** (G) = 4.

Expected Result: Tagged pages below Insights with four content type tags, Last modified Descending, Maximum items 4; the canvas shows the published-page hint.

Step 5 — Fill in Result

Action: Select **Result** in the content tree and enter in the properties panel: **Listed pages** (H) = The 4 most recently modified of the 9 insights with a content type tag.

Expected Result: In preview the four most recently modified of the nine tagged insights appear.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Latest insights" above four image cards in one row: The agentic bank, Cloud at scale, State of AI 2026 and Supply chain resilience.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; when a newer tagged insight is published and indexed it pushes the fourth card out, without editing the List.

Step 8 — Verify

Action: On the live page check: The new page is the first card and the previous fourth card disappears.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — Fallback Items

Reproduces the screenshot `screenshots/list-fallback-items.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insights for Europe.

Expected Result: The header shows "Insights for Europe".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Tagged pages; **Search root** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Tags** (D) = Add the tags tcs-corp:region/europe.

Expected Result: Tagged pages below Insights with the Europe tag; the canvas shows the published-page hint.

Step 5 — Fill in List › Advanced

Action: Select **List** in the content tree and open the **Advanced** tab of the properties panel. Enter: **When there are no items** (E) = Show the fallback items.

Expected Result: When there are no items is set to Show the fallback items; the Empty message field is hidden.

Step 6 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added below the List in the content tree as a fallback item.

Step 7 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (F) = Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank.

Expected Result: The agentic bank is set as the first fallback page.

Step 8 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added below the List in the content tree as a fallback item.

Step 9 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (G) = Select the page or enter /content/tcs-corp/us/en/insights/state-of-ai-2026.

Expected Result: State of AI 2026 is set as the second fallback page.

Step 10 — Fill in Result

Action: Select **Result** in the content tree and enter in the properties panel: **Listed pages** (H) = No page has the Europe tag: the two List Items show instead.

Expected Result: In preview no page has the Europe tag, so the two List Items show as cards.

Step 11 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Insights for Europe" above two image cards built from page metadata: The agentic bank and State of AI 2026, in the first two columns of the 4-column grid.

Step 12 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the two linked insights must be published and indexed. Once a page tagged tcs-corp:region/europe is indexed it replaces the fallback items automatically.

Step 13 — Verify

Action: On the live page check: The two cards appear on aem.page while no page has the Europe tag.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 10 — Image Card (default)

Reproduces the screenshot `screenshots/list-image-card.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 4.

Expected Result: Child pages of Insights, Last modified, Descending, Maximum items 4; the canvas shows the published-page hint, the image cards appear in preview.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Latest insights" above four image cards: The agentic bank, Cloud at scale, State of AI 2026 and Supply chain resilience; each with a rounded 16:9 image, an uppercase kicker (for The agentic bank: Perspective, Banking, Article and 8m, separated by bars), the title, the description and a meta row with the content type and the date, such as Article and 04 Sep 26.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; each card's image path comes from the page metadata, so the images and the insights must be published. Changed card metadata shows after the page is republished and indexed.

Step 7 — Verify

Action: On the live page check: The index row has cardImage and the card shows the image with its alt text.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 11 — Panel Card

Reproduces the screenshot `screenshots/list-panel-card.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = What we do.

Expected Result: The header shows "What we do".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/services.

Expected Result: Child pages of Services; the canvas shows "The pages show on the published page (from the query index)."

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (D) = Panel.

Expected Result: Card style Panel is stored; in preview the services render as dark panels with Explore.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "What we do" above four tall #20293c panels: AI and data, Cloud, Consulting and Cybersecurity, each with the eyebrow SERVICE, a large light title, the description and an "Explore" text button at the bottom.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the service pages must be published and indexed. A panel's text changes when the page's card-title, card-description or eyebrow is republished.

Step 8 — Verify

Action: On the live page check: The panel shows the eyebrow on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 12 — Report Card

Reproduces the screenshot `screenshots/list-report-card.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Research and case studies.

Expected Result: The header shows "Research and case studies".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Tagged pages; **Search root** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Tags** (D) = Add the tags tcs-corp:content-type/report, tcs-corp:content-type/case-study.

Expected Result: Tagged pages below Insights with the report and case-study tags; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (E) = Report.

Expected Result: Card style Report is stored; in preview the pages render as gradient cards with Download.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Research and case studies" above four gradient cards (The energy transition, Touchless insurance claims, Quantum readiness, State of AI 2026), each with a kicker of content type and date (for example CASE STUDY and 10 Jun 26), a large title, the description and an outlined "Download" button.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the report pages must be published and indexed with their content-type tags. The button links to the page, not to a file.

Step 8 — Verify

Action: On the live page check: The tags column of the page in /query-index.json contains the tag and the card appears.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 13 — Statistic Card

Reproduces the screenshot `screenshots/list-statistic-card.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = At a glance.

Expected Result: The header shows "At a glance".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic.

Expected Result: Card style Statistic is stored; the hint stays until items are added.

Step 5 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 6 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (C) = Select the page or enter /content/tcs-corp/us/en/about/our-people.

Expected Result: The first item links to the Our people page.

Step 7 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (D) = 150,000+; **Description** (E) = Experts in consulting, engineering and operations; **Label** (F) = Colleagues.

Expected Result: The first grey card shows 150,000+, Colleagues and its description.

Step 8 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 9 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (G) = Select the page or enter /content/tcs-corp/us/en/about/locations.

Expected Result: The second item links to the Locations page.

Step 10 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (H) = 46; **Description** (I) = Delivery centres and offices worldwide; **Label** (J) = Countries.

Expected Result: The second card shows 46, Countries and its description.

Step 11 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 12 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (K) = Select the page or enter /content/tcs-corp/us/en/about/clients.

Expected Result: The third item links to the Clients page.

Step 13 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (L) = 1,200+; **Description** (M) = Enterprises we partner with on transformation; **Label** (N) = Clients.

Expected Result: The third card shows 1,200+, Clients and its description.

Step 14 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 15 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (O) = Select the page or enter /content/tcs-corp/us/en/about/sustainability.

Expected Result: The fourth item links to the Sustainability page.

Step 16 — Fill in List Item 4 › Content

Action: Select **List Item 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (P) = 100%; **Description** (Q) = Our target for offices and delivery centres; **Label** (R) = Renewable power.

Expected Result: The fourth card shows 100%, Renewable power and its description.

Step 17 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (S) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the four cards follow the content tree order.

Step 18 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "At a glance" above four light grey cards: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power; each with the large number at the top and the label and description at the bottom.

Step 19 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the four about pages should exist and be published so the links work. They needn't be indexed: every value on the cards is an item override.

Step 20 — Verify

Action: On the live page check: Clicking the card on aem.page opens the detail page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 14 — Mixed Card Style

Reproduces the screenshot `screenshots/list-mixed.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Explore our thinking.

Expected Result: The header shows "Explore our thinking".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Mixed (by page).

Expected Result: Card style Mixed (by page) is stored for every card.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (C) = Horizontal scroll; **Tablet display** (D) = Horizontal scroll; **Mobile display** (E) = Horizontal scroll.

Expected Result: Desktop, tablet and mobile display Horizontal scroll turn the list into a rail.

Step 6 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 7 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (F) = Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank.

Expected Result: The agentic bank is the first item; it renders as an image card in preview.

Step 8 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 9 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (G) = Select the page or enter /content/tcs-corp/us/en/insights/state-of-ai-2026.

Expected Result: State of AI 2026 is the second item; a report card in preview.

Step 10 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 11 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (H) = Select the page or enter /content/tcs-corp/us/en/services/cloud/migration.

Expected Result: Cloud migration is the third item; a dark panel in preview.

Step 12 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 13 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (I) = Select the page or enter /content/tcs-corp/us/en/insights/cloud-at-scale.

Expected Result: Cloud at scale is the fourth item; an image card in preview.

Step 14 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 15 — Fill in List Item 5 › Link

Action: Select **List Item 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (J) = Select the page or enter /content/tcs-corp/us/en/insights/quantum-readiness.

Expected Result: Quantum readiness is the fifth item; a report card in preview.

Step 16 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 17 — Fill in List Item 6 › Link

Action: Select **List Item 6** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (K) = Select the page or enter /content/tcs-corp/us/en/insights/future-of-work.

Expected Result: The future of work is the sixth item; an image card in preview.

Step 18 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (L) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the rail follows the content tree order.

Step 19 — Fill in Result

Action: Select **Result** in the content tree and enter in the properties panel: **Card per page** (M) = Pages with an image: image cards; Report pages: report cards; Cloud migration (no image): a panel.

Expected Result: In preview image pages get image cards, Report pages report cards and Cloud migration a panel.

Step 20 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title “Explore our thinking” above a rail: an image card The agentic bank, a gradient report card State of AI 2026, a dark panel Cloud migration with Explore, an image card Cloud at scale, a report card Quantum readiness and an image card The future of work.

Step 21 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the six linked pages must be published and indexed, since their content type and images decide the card kinds.

Step 22 — Verify

Action: On the live page check: The card shows its image or report style after a reload.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 15 — Feature Card with Author

Reproduces the screenshot `screenshots/list-feature-card.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint “Set up the list in its properties: items-missing.”

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insight and opinion.

Expected Result: The header shows “Insight and opinion”.

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 4.

Expected Result: Child pages of Insights, Last modified, Descending, Maximum items 4; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **First card as feature** (G) = On.

Expected Result: First card as feature on is stored; in preview the newest page becomes the feature card.

Step 6 — Fill in Result

Action: Select **Result** in the content tree and enter in the properties panel: **Feature card** (H) = The newest page (The agentic bank, author-id arao: Anita Rao from the Authors sheet).

Expected Result: In preview The agentic bank is the feature with Anita Rao from the Authors sheet, above three cards.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A full-width feature for The agentic bank: the image behind a white gradient on the left, the kicker with the tags Banking and Article and the reading time 8m, a large title and the round photo of Anita Rao with "Head of Banking Research"; below, Cloud at scale, State of AI 2026 and Supply chain resilience as image cards.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the Authors sheet must be published, and the listed insights published and indexed with their author-id. A new newest insight takes over the feature after the index update.

Step 9 — Verify

Action: On the live page check: The feature shows Anita Rao and her designation on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 16 — Rows of Links (Display as teaser off)

Reproduces the screenshot `screenshots/list-rows-of-links.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = AI in the news.

Expected Result: The header shows "AI in the news".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Tagged pages; **Search root** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Tags** (D) = Add the tags tcs-corp:topic/ai; **Order by** (E) = Last modified; **Sort order** (F) = Descending.

Expected Result: Tagged pages below Insights with the AI tag, Last modified Descending; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Display as teaser** (G) = Off.

Expected Result: Display as teaser off: in preview the pages render as rows with arrows.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "AI in the news" above four rows: State of AI 2026, Personalisation in retail, The future of work and Touchless insurance claims; each with the eyebrow or content type and a tag, a 2.5rem title, the description, the date and an arrow on the right.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; newly tagged insights join the list after they are published and indexed. Without Maximum items every matching page is listed.

Step 8 — Verify

Action: On the live page check: The first row is the most recently modified page on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 17 — Card Colour "Dark"

Reproduces the screenshot `screenshots/list-colour-dark.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Industries and facts.

Expected Result: The header shows "Industries and facts".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Panel; **Card colour** (C) = Dark.

Expected Result: Card style Panel and Card colour Dark are stored for all cards.

Step 5 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 6 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (D) = Select the page or enter /content/tcs-corp/us/en/industries/banking.

Expected Result: Banking is the first item; its dark panel appears on aem.page.

Step 7 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 8 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (E) = Select the page or enter /content/tcs-corp/us/en/industries/retail.

Expected Result: Retail is the second item; its dark panel appears on aem.page.

Step 9 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 10 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (F) = Select the page or enter /content/tcs-corp/us/en/about/our-people.

Expected Result: The third item links to the Our people page.

Step 11 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (G) = 150,000+; **Description** (H) = Experts in consulting, engineering and operations; **Label** (I) = Colleagues.

Expected Result: The third card shows 150,000+, Colleagues and its description.

Step 12 — Fill in List Item 3 › Display

Action: Select **List Item 3** in the content tree and open the **Display** tab of the properties panel. Enter: **Card style** (J) = Statistic.

Expected Result: Card style Statistic turns the third card into a dark statistic card.

Step 13 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 14 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (K) = Select the page or enter /content/tcs-corp/us/en/about/locations.

Expected Result: The fourth item links to the Locations page.

Step 15 — Fill in List Item 4 › Content

Action: Select **List Item 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (L) = 46; **Description** (M) = Delivery centres and offices worldwide; **Label** (N) = Countries.

Expected Result: The fourth card shows 46, Countries and its description.

Step 16 — Fill in List Item 4 › Display

Action: Select **List Item 4** in the content tree and open the **Display** tab of the properties panel. Enter: **Card style** (O) = Statistic.

Expected Result: Card style Statistic turns the fourth card into a dark statistic card.

Step 17 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (P) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 18 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Industries and facts" above four #20293c cards with light text: Banking and Retail panels with the tag kicker, description and Explore, then 150,000+ Colleagues and 46 Countries as statistic cards.

Step 19 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the Banking and Retail pages must be published and indexed for their panels, the statistic items need only their linked pages published.

Step 20 — Verify

Action: On the live page check: All four cards are #20293c on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 18 — Card Colour "Navy"

Reproduces the screenshot `screenshots/list-colour-navy.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Research and case studies.

Expected Result: The header shows "Research and case studies".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Tagged pages; **Search root** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Tags** (D) = Add the tags tcs-corp:content-type/report, tcs-corp:content-type/case-study.

Expected Result: Tagged pages below Insights with the report and case-study tags; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (E) = Report; **Card colour** (F) = Navy.

Expected Result: Card style Report and Card colour Navy are stored; in preview the reports render on #011627.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Research and case studies" above four #011627 report cards with light text: the content type and date, the title, the description and a light outlined "Download" button.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the report and case-study pages must be published and indexed with their tags.

Step 8 — Verify

Action: On the live page check: Four navy report cards show on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 19 — Card Colour "Brand blue"

Reproduces the screenshot `screenshots/list-colour-brand.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = At a glance.

Expected Result: The header shows "At a glance".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic.

Expected Result: Card style Statistic is stored; grey statistic cards appear once items exist.

Step 5 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 6 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (C) = Select the page or enter /content/tcs-corp/us/en/about/our-people.

Expected Result: The first item links to the Our people page.

Step 7 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (D) = 150,000+; **Description** (E) = Experts in consulting, engineering and operations; **Label** (F) = Colleagues.

Expected Result: The first grey card shows 150,000+ and Colleagues.

Step 8 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 9 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (G) = Select the page or enter /content/tcs-corp/us/en/about/locations.

Expected Result: The second item links to the Locations page.

Step 10 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (H) = 46; **Description** (I) = Delivery centres and offices worldwide; **Label** (J) = Countries.

Expected Result: The second card shows 46 and Countries.

Step 11 — Fill in List Item 2 › Display

Action: Select **List Item 2** in the content tree and open the **Display** tab of the properties panel. Enter: **Card colour** (K) = Brand blue.

Expected Result: Card colour Brand blue turns the second card #4673db with white text.

Step 12 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 13 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (L) = Select the page or enter /content/tcs-corp/us/en/about/clients.

Expected Result: The third item links to the Clients page.

Step 14 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (M) = 1,200+; **Description** (N) = Enterprises we partner with on transformation; **Label** (O) = Clients.

Expected Result: The third grey card shows 1,200+ and Clients.

Step 15 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 16 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (P) = Select the page or enter /content/tcs-corp/us/en/about/sustainability.

Expected Result: The fourth item links to the Sustainability page.

Step 17 — Fill in List Item 4 › Content

Action: Select **List Item 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (Q) = 100%; **Description** (R) = Our target for offices and delivery centres; **Label** (S) = Renewable power.

Expected Result: The fourth grey card shows 100% and Renewable power.

Step 18 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (T) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 19 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "At a glance" above four statistic cards: 150,000+, 1,200+ and 100% on light grey, and 46 Countries on brand blue #4673db with white text.

Step 20 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the linked about pages should be published so the card links work.

Step 21 — Verify

Action: On the live page check: The 46 Countries card is brand blue in the editor and on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 20 — Card Colour "Light blue"

Reproduces the screenshot `screenshots/list-colour-brand-light.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = At a glance.

Expected Result: The header shows "At a glance".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic.

Expected Result: Card style Statistic is stored; grey statistic cards appear once items exist.

Step 5 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 6 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (C) = Select the page or enter /content/tcs-corp/us/en/about/our-people.

Expected Result: The first item links to the Our people page.

Step 7 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (D) = 150,000+; **Description** (E) = Experts in consulting, engineering and operations; **Label** (F) = Colleagues.

Expected Result: The first grey card shows 150,000+ and Colleagues.

Step 8 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 9 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (G) = Select the page or enter /content/tcs-corp/us/en/about/locations.

Expected Result: The second item links to the Locations page.

Step 10 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (H) = 46; **Description** (I) = Delivery centres and offices worldwide; **Label** (J) = Countries.

Expected Result: The second grey card shows 46 and Countries.

Step 11 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 12 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (K) = Select the page or enter /content/tcs-corp/us/en/about/clients.

Expected Result: The third item links to the Clients page.

Step 13 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (L) = 1,200+; **Description** (M) = Enterprises we partner with on transformation; **Label** (N) = Clients.

Expected Result: The third card shows 1,200+ and Clients.

Step 14 — Fill in List Item 3 › Display

Action: Select **List Item 3** in the content tree and open the **Display** tab of the properties panel. Enter: **Card colour** (O) = Light blue.

Expected Result: Card colour Light blue turns the third card #a7c8f1 with black text.

Step 15 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 16 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (P) = Select the page or enter /content/tcs-corp/us/en/about/sustainability.

Expected Result: The fourth item links to the Sustainability page.

Step 17 — Fill in List Item 4 › Content

Action: Select **List Item 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (Q) = 100%; **Description** (R) = Our target for offices and delivery centres; **Label** (S) = Renewable power.

Expected Result: The fourth grey card shows 100% and Renewable power.

Step 18 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (T) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 19 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "At a glance" above four statistic cards: three on light grey and 1,200+ Clients on light blue #a7c8f1 with black text.

Step 20 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the linked about pages should be published so the card links work.

Step 21 — Verify

Action: On the live page check: The 1,200+ card shows #a7c8f1 on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 21 — Card Colour "Light grey"

Reproduces the screenshot `screenshots/list-colour-grey.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Industries.

Expected Result: The header shows "Industries".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/industries.

Expected Result: Child pages of Industries; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (D) = Panel; **Card colour** (E) = Light grey.

Expected Result: Card style Panel and Card colour Light grey are stored for all cards.

Step 6 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (F) = 3.

Expected Result: Desktop columns 3: in preview the three grey panels fill one desktop row.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Industries" above three tall #d9d9d9 panels (Banking, Manufacturing, Retail) with black titles, the industry tag as kicker, the description and an Explore text button.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the industry pages must be published and indexed. New industry pages appear after the index update.

Step 9 — Verify

Action: On the live page check: The whole description shows inside the grey panel on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 22 — Card Colour "Mid grey"

Reproduces the screenshot `screenshots/list-colour-mid-grey.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = At a glance.

Expected Result: The header shows "At a glance".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic.

Expected Result: Card style Statistic is stored; grey statistic cards appear once items exist.

Step 5 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 6 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (C) = Select the page or enter /content/tcs-corp/us/en/about/our-people.

Expected Result: The first item links to the Our people page.

Step 7 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (D) = 150,000+; **Description** (E) = Experts in consulting, engineering and operations; **Label** (F) = Colleagues.

Expected Result: The first card shows 150,000+ and Colleagues.

Step 8 — Fill in List Item 1 › Display

Action: Select **List Item 1** in the content tree and open the **Display** tab of the properties panel. Enter: **Card colour** (G) = Mid grey.

Expected Result: Card colour Mid grey turns the first card #999.

Step 9 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 10 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (H) = Select the page or enter /content/tcs-corp/us/en/about/locations.

Expected Result: The second item links to the Locations page.

Step 11 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (I) = 46; **Description** (J) = Delivery centres and offices worldwide; **Label** (K) = Countries.

Expected Result: The second grey card shows 46 and Countries.

Step 12 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 13 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (L) = Select the page or enter /content/tcs-corp/us/en/about/clients.

Expected Result: The third item links to the Clients page.

Step 14 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (M) = 1,200+; **Description** (N) = Enterprises we partner with on transformation; **Label** (O) = Clients.

Expected Result: The third grey card shows 1,200+ and Clients.

Step 15 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 16 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (P) = Select the page or enter /content/tcs-corp/us/en/about/sustainability.

Expected Result: The fourth item links to the Sustainability page.

Step 17 — Fill in List Item 4 › Content

Action: Select **List Item 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (Q) = 100%; **Description** (R) = Our target for offices and delivery centres; **Label** (S) = Renewable power.

Expected Result: The fourth grey card shows 100% and Renewable power.

Step 18 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (T) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 19 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "At a glance" above four statistic cards: 150,000+ Colleagues on mid grey #999 with black text, then 46, 1,200+ and 100% on the light grey default.

Step 20 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the linked about pages should be published so the card links work.

Step 21 — Verify

Action: On the live page check: The 150,000+ card is #999 in the editor and on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 23 — Card Colour "Grey gradient"

Reproduces the screenshot `screenshots/list-colour-gradient.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = At a glance.

Expected Result: The header shows "At a glance".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic.

Expected Result: Card style Statistic is stored; grey statistic cards appear once items exist.

Step 5 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 6 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (C) = Select the page or enter /content/tcs-corp/us/en/about/our-people.

Expected Result: The first item links to the Our people page.

Step 7 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (D) = 150,000+; **Description** (E) = Experts in consulting, engineering and operations; **Label** (F) = Colleagues.

Expected Result: The first grey card shows 150,000+ and Colleagues.

Step 8 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 9 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (G) = Select the page or enter /content/tcs-corp/us/en/about/locations.

Expected Result: The second item links to the Locations page.

Step 10 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (H) = 46; **Description** (I) = Delivery centres and offices worldwide; **Label** (J) = Countries.

Expected Result: The second grey card shows 46 and Countries.

Step 11 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 12 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (K) = Select the page or enter /content/tcs-corp/us/en/about/clients.

Expected Result: The third item links to the Clients page.

Step 13 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (L) = 1,200+; **Description** (M) = Enterprises we partner with on transformation; **Label** (N) = Clients.

Expected Result: The third grey card shows 1,200+ and Clients.

Step 14 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 15 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (O) = Select the page or enter /content/tcs-corp/us/en/about/sustainability.

Expected Result: The fourth item links to the Sustainability page.

Step 16 — Fill in List Item 4 › Content

Action: Select **List Item 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (P) = 100%; **Description** (Q) = Our target for offices and delivery centres; **Label** (R) = Renewable power.

Expected Result: The fourth card shows 100% and Renewable power.

Step 17 — Fill in List Item 4 › Display

Action: Select **List Item 4** in the content tree and open the **Display** tab of the properties panel. Enter: **Card colour** (S) = Grey gradient.

Expected Result: Card colour Grey gradient gives the fourth card the diagonal gradient.

Step 18 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (T) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 19 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "At a glance" above four statistic cards: three on light grey and 100% Renewable power on the diagonal grey gradient with dark text.

Step 20 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the linked about pages should be published so the card links work.

Step 21 — Verify

Action: On the live page check: The 100% card shows the gradient on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 24 — Card Colour "Image background"

Reproduces the screenshot `screenshots/list-colour-image.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Industries.

Expected Result: The header shows "Industries".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Panel.

Expected Result: Card style Panel is stored for every card.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (C) = 3.

Expected Result: Desktop columns 3 is stored; on aem.page the three panels fill one desktop row.

Step 6 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 7 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (D) = Select the page or enter /content/tcs-corp/us/en/industries/banking.

Expected Result: Banking is the first item; its panel shows on aem.page with the page's metadata.

Step 8 — Fill in List Item 1 › Display

Action: Select **List Item 1** in the content tree and open the **Display** tab of the properties panel. Enter: **Card colour** (E) = Image background.

Expected Result: Card colour Image background makes the Banking panel show its photograph behind the text.

Step 9 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 10 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (F) = Select the page or enter /content/tcs-corp/us/en/industries/retail.

Expected Result: Retail is the second item; a dark panel on aem.page.

Step 11 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 12 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (G) = Select the page or enter /content/tcs-corp/us/en/industries/manufacturing.

Expected Result: Manufacturing is the third item; a dark panel on aem.page.

Step 13 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (H) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the panels follow the content tree order.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Industries" above three tall panels: Banking filled with its photograph behind the tag kicker, title, description and Explore; Retail and Manufacturing as dark #20293c panels.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the three industry pages and their images must be published and indexed, because the background image comes from Banking's metadata.

Step 16 — Verify

Action: On the live page check: The panel shows the photograph behind the text on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 25 — Image Ratio 1:1

Reproduces the screenshot `screenshots/list-ratio-1-1.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Maximum items** (D) = 4.

Expected Result: Child pages of Insights with Maximum items 4; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Image ratio** (E) = 1:1.

Expected Result: Image ratio 1:1 is stored; in preview the card images are square.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Latest insights" above four image cards (The agentic bank, Cloud at scale, The energy transition, The future of work) whose images are square and cropped to cover.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights and their images must be published and indexed.

Step 8 — Verify

Action: On the live page check: The block has the class ratio-1-1 and the images are square.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 26 — Image Ratio 4:3

Reproduces the screenshot `screenshots/list-ratio-4-3.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Maximum items** (D) = 4.

Expected Result: Child pages of Insights with Maximum items 4; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Image ratio** (E) = 4:3.

Expected Result: Image ratio 4:3 is stored; in preview the card images are 4:3.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title “Latest insights” above four image cards (The agentic bank, Cloud at scale, The energy transition, The future of work) with 4:3 images, taller than the default.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights and their images must be published and indexed.

Step 8 — Verify

Action: On the live page check: The card shows the full subject on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 27 — Image Ratio 3:2

Reproduces the screenshot `screenshots/list-ratio-3-2.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint “Set up the list in its properties: items-missing.”

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows “Latest insights”.

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Maximum items** (D) = 4.

Expected Result: Child pages of Insights with Maximum items 4; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Image ratio** (E) = 3:2.

Expected Result: Image ratio 3:2 is stored; in preview the card images are 3:2.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title “Latest insights” above four image cards (The agentic bank, Cloud at scale, The energy transition, The future of work) with 3:2 images.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights and their images must be published and indexed.

Step 8 — Verify

Action: On the live page check: The images on aem.page are 3:2.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 28 — Panel Height "Compact"

Reproduces the screenshot `screenshots/list-panel-compact.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = At a glance.

Expected Result: The header shows "At a glance".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic; **Panel height** (C) = Compact.

Expected Result: Card style Statistic and Panel height Compact are stored; the cards render nearly square.

Step 5 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 6 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (D) = Select the page or enter /content/tcs-corp/us/en/about/our-people.

Expected Result: The first item links to the Our people page.

Step 7 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (E) = 150,000+; **Description** (F) = Experts in consulting, engineering and operations; **Label** (G) = Colleagues.

Expected Result: The first compact card shows 150,000+ and Colleagues.

Step 8 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 9 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (H) = Select the page or enter /content/tcs-corp/us/en/about/locations.

Expected Result: The second item links to the Locations page.

Step 10 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (I) = 46; **Description** (J) = Delivery centres and offices worldwide; **Label** (K) = Countries.

Expected Result: The second compact card shows 46 and Countries.

Step 11 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 12 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (L) = Select the page or enter /content/tcs-corp/us/en/about/clients.

Expected Result: The third item links to the Clients page.

Step 13 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (M) = 1,200+; **Description** (N) = Enterprises we partner with on transformation; **Label** (O) = Clients.

Expected Result: The third compact card shows 1,200+ and Clients.

Step 14 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 15 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (P) = Select the page or enter /content/tcs-corp/us/en/about/sustainability.

Expected Result: The fourth item links to the Sustainability page.

Step 16 — Fill in List Item 4 › Content

Action: Select **List Item 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (Q) = 100%; **Description** (R) = Our target for offices and delivery centres; **Label** (S) = Renewable power.

Expected Result: The fourth compact card shows 100% and Renewable power.

Step 17 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (T) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 18 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "At a glance" above four nearly square light grey statistic cards: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power.

Step 19 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the linked about pages should be published so the card links work.

Step 20 — Verify

Action: On the live page check: The full description shows at 402 px on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 29 — Panel Height "Content"

Reproduces the screenshot `screenshots/list-panel-content.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = What we do.

Expected Result: The header shows "What we do".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/services.

Expected Result: Child pages of Services; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (D) = Panel; **Panel height** (E) = Content.

Expected Result: Card style Panel with Panel height Content: in preview the panels are as tall as their text.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "What we do" above four dark panels (AI and data, Cloud, Consulting, Cybersecurity) only as tall as their eyebrow, title, description and Explore, equal within the row.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the service pages must be published and indexed.

Step 8 — Verify

Action: On the live page check: The block has the class panel-auto on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 30 — Style Option "Compact statistic title"

Reproduces the screenshot `screenshots/list-stat-compact.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = What we stand for.

Expected Result: The header shows "What we stand for".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic.

Expected Result: Card style Statistic is stored for every card.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (C) = 3; **Tablet columns** (D) = 3.

Expected Result: Desktop and Tablet columns 3 are stored for one row of three cards.

Step 6 — Fill in List › Advanced

Action: Select **List** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Style options** (E) = Compact statistic title.

Expected Result: Style options Compact statistic title shrinks the card titles to statement size.

Step 7 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 8 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (F) = Select the page or enter /content/tcs-corp/us/en/services/ai.

Expected Result: The first item links to the AI and data service page.

Step 9 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (G) = AI that works for the whole enterprise; **Description** (H) = From data foundations to agents in production; **Label** (I) = AI and data; **Call to action label** (J) = Learn more.

Expected Result: The first card shows the AI statement, label AI and data, description and Learn more.

Step 10 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 11 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (K) = Select the page or enter /content/tcs-corp/us/en/services/cloud.

Expected Result: The second item links to the Cloud service page.

Step 12 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (L) = Cloud that scales with the business; **Description** (M) = Migrate, modernise and operate on any cloud; **Label** (N) = Cloud; **Call to action label** (O) = Learn more.

Expected Result: The second card shows the cloud statement, label Cloud, description and Learn more.

Step 13 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 14 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (P) = Select the page or enter /content/tcs-corp/us/en/services/cybersecurity.

Expected Result: The third item links to the Cybersecurity service page.

Step 15 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (Q) = Security built into every layer; **Description** (R) = Resilience from strategy to operations; **Label** (S) = Cybersecurity; **Call to action label** (T) = Learn more.

Expected Result: The third card shows the security statement, label Cybersecurity, description and Learn more.

Step 16 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (U) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 17 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title “What we stand for” above three grey cards in a row: “AI that works for the whole enterprise”, “Cloud that scales with the business” and “Security built into every layer” in medium-size type, with the labels AI and data, Cloud and Cybersecurity, descriptions and an outlined “Learn more” button.

Step 18 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the three service pages are indexed, so their eyebrow (Service) shows as the kicker and the links point to their redirect targets if any.

Step 19 — Verify

Action: On the live page check: The block has the class stat-compact and the statements fit on two or three lines.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 31 — Style Option "Dividers between rows"

Reproduces the screenshot `screenshots/list-dividers.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest news.

Expected Result: The header shows "Latest news".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 4.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 4; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Display as teaser** (G) = Off.

Expected Result: Display as teaser off: in preview the pages render as rows of links.

Step 6 — Fill in List › Advanced

Action: Select **List** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Style options** (H) = Dividers between rows.

Expected Result: Style options Dividers between rows adds grey lines between the rows from 600 px.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Latest news" above four rows (The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience), each with eyebrow and tag, a large title, description and date, separated by thin grey lines.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed. The style option is part of the page, nothing else to publish.

Step 9 — Verify

Action: On the live page check: The block has the class dividers and lines show at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 32 — Style Option "Header centred"

Reproduces the screenshot `screenshots/list-header-centred.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = What we do; **Description** (B) = Services that help enterprises grow, transform and compete.

Expected Result: The header shows "What we do" and the description, still left-aligned.

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (C) = Child pages; **Parent page** (D) = Select the page or enter /content/tcs-corp/us/en/services.

Expected Result: Child pages of Services; the canvas shows the published-page hint.

Step 5 — Fill in List › Advanced

Action: Select **List** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Style options** (E) = Header centred.

Expected Result: Style options Header centred centres the title and description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The centred title "What we do" and the description "Services that help enterprises grow, transform and compete." above four image cards: AI and data, Cloud, Consulting and Cybersecurity.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the service pages must be published and indexed.

Step 8 — Verify

Action: On the live page check: The block has the class header-center.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 33 — Header Call to Action

Reproduces the screenshot `screenshots/list-header-cta.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = News; **CTA link** (B) = Select the page or enter /content/tcs-corp/us/en/insights; **CTA text** (C) = View all news; **CTA style** (D) = Primary button.

Expected Result: The header shows "News" with the primary "View all news" button on the right.

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (E) = Child pages; **Parent page** (F) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (G) = Last modified; **Sort order** (H) = Descending; **Maximum items** (I) = 4.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 4; the canvas shows the published-page hint.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "News" on the left and a filled primary button "View all news" on the right, above four image cards of the newest insights.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the CTA target /en/insights must be published. The four cards come from the index after the insights are published.

Step 7 — Verify

Action: On the live page check: The button opens /en/insights on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 34 — Grid on Every Breakpoint

Reproduces the screenshot `screenshots/list-grid-all.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop / Tablet / Mobile display** (G) = Grid (the defaults; keep them); **Desktop / Tablet / Mobile columns** (H) = 4 / 4 / 1 (the defaults).

Expected Result: The displays stay Grid and the columns 4 / 4 / 1, the defaults.

Step 6 — Preview

Action: Screen width: 1440 px (desktop; one column below 600 px).

Expected Result: At 1440 px the eight cards form two rows of four; below 600 px one column.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1440 px the title "Latest insights" above two rows of four image cards: The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience, then Personalisation in retail, The energy transition, Quantum readiness and The future of work.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed. All eight card links are in the DOM after the page script runs.

Step 9 — Verify

Action: On the live page check: At 402 px each card fills the width on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 35 — Horizontal Scroll on Every Breakpoint

Reproduces the screenshot `screenshots/list-scroll-all.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (G) = Horizontal scroll; **Previous / next buttons on desktop** (H) = On; **Scroll indicator on desktop** (I) = On; **Tablet display** (J) = Horizontal scroll; **Mobile display** (K) = Horizontal scroll.

Expected Result: Horizontal scroll on all breakpoints with desktop buttons and indicator on; in preview the cards form a rail.

Step 6 — Preview

Action: Screen width: 1440 px (desktop).

Expected Result: At 1440 px about 4.2 cards are visible, with the indicator and the two buttons below.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1440 px the title “Latest insights” above a rail of about 4.2 image cards running to the right screen edge; below it a thin grey track with a darker thumb on the left and two chevron buttons on the right, Previous disabled at the start.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed. All eight cards are in the HTML of the rail after the script runs.

Step 9 — Verify

Action: On the live page check: The block has edge-bleed and the last visible card is cut at the screen edge.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 36 — Scroll on Desktop Only

Reproduces the screenshot `screenshots/list-scroll-desktop-only.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint “Set up the list in its properties: items-missing.”

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows “Latest insights”.

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (G) = Horizontal scroll.

Expected Result: Desktop display Horizontal scroll is stored; tablet and mobile stay Grid.

Step 6 — Preview

Action: Screen width: 1440 px (desktop; tablet and mobile show grids).

Expected Result: At 1440 px the cards form a rail; tablet and mobile widths show grids.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1440 px the title “Latest insights” above a rail of about 4.2 image cards cut at the right screen edge, without buttons or indicator.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed. Nothing else changes between breakpoints but the CSS classes.

Step 9 — Verify

Action: On the live page check: Resize the browser across 1200 px on aem.page and watch the layout change.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 37 — Scroll on Tablet Only

Reproduces the screenshot `screenshots/list-scroll-tablet-only.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint “Set up the list in its properties: items-missing.”

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows “Latest insights”.

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Tablet display** (G) = Horizontal scroll.

Expected Result: Tablet display Horizontal scroll is stored; desktop and mobile stay Grid.

Step 6 — Preview

Action: Screen width: 1024 px (tablet; desktop and mobile show grids).

Expected Result: At 1024 px about 3.3 cards show in a rail; desktop and mobile show grids.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1024 px the title "Latest insights" above a rail of about 3.3 image cards running to the right edge, without buttons or indicator.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed.

Step 9 — Verify

Action: On the live page check: At 1024 px no browser scrollbar shows under the rail.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 38 — Scroll on Mobile Only

Reproduces the screenshot `screenshots/list-scroll-mobile-only.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Mobile display** (G) = Horizontal scroll.

Expected Result: Mobile display Horizontal scroll is stored; desktop and tablet stay Grid.

Step 6 — Preview

Action: Screen width: 402 px (mobile; desktop and tablet show grids).

Expected Result: At 402 px 1.2 cards show in a rail with the indicator below.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 402 px the title “Latest insights” above a rail with one full card and a fifth of the next, and a thin grey indicator track with a darker thumb below.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed.

Step 9 — Verify

Action: On the live page check: The rail swipes on a phone on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 39 — Scroll on Desktop and Tablet

Reproduces the screenshot `screenshots/list-scroll-desktop-tablet.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint “Set up the list in its properties: items-missing.”

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows “Latest insights”.

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (G) = Horizontal scroll; **Tablet display** (H) = Horizontal scroll.

Expected Result: Desktop and Tablet display Horizontal scroll are stored; mobile stays Grid.

Step 6 — Preview

Action: Screen width: 1024 px (tablet; desktop scrolls too, mobile is a column).

Expected Result: At 1024 px about 3.3 cards show in a rail; desktop scrolls too, mobile is a column.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1024 px the title "Latest insights" above a rail of about 3.3 image cards running to the right edge.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed.

Step 9 — Verify

Action: On the live page check: Tab to the rail on aem.page and use the arrow keys.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 40 — Scroll on Desktop and Mobile

Reproduces the screenshot `screenshots/list-scroll-desktop-mobile.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (G) = Horizontal scroll; **Tablet columns** (H) = 2; **Mobile display** (I) = Horizontal scroll.

Expected Result: Desktop and Mobile display Horizontal scroll and Tablet columns 2 are stored.

Step 6 — Preview

Action: Screen width: 1024 px (tablet: the 2-column grid; desktop and mobile scroll).

Expected Result: At 1024 px the cards form a 2-column grid; desktop and mobile scroll.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1024 px the title “Latest insights” above a 2-column grid of the eight insights in four rows.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed.

Step 9 — Verify

Action: On the live page check: The last tablet row is full at 1024 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 41 — Grid on Desktop, Scroll on Tablet and Mobile

Reproduces the screenshot `screenshots/list-scroll-tablet-mobile.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint “Set up the list in its properties: items-missing.”

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows “Latest insights”.

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Tablet display** (G) = Horizontal scroll; **Mobile display** (H) = Horizontal scroll.

Expected Result: Tablet and Mobile display Horizontal scroll are stored; desktop stays Grid.

Step 6 — Preview

Action: Screen width: 402 px (mobile; tablet scrolls too, desktop is a 4-column grid).

Expected Result: At 402 px the rail shows 1.2 cards and the indicator; tablet scrolls too, desktop is a grid.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 402 px the title "Latest insights" above a rail of 1.2 image cards with the scroll indicator below.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed.

Step 9 — Verify

Action: On the live page check: The thumb follows the swipe on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 42 — Previous / Next Buttons

Reproduces the screenshot `screenshots/list-previous-next.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (G) = Horizontal scroll; **Previous / next buttons on desktop** (H) = On.

Expected Result: Desktop Horizontal scroll with buttons on: in preview two chevron buttons appear below the rail.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title “Latest insights” above a rail of about 4.2 cards; below on the right two round chevron buttons, Previous disabled at the start and Next active.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; new labels for the buttons are placeholder sheet entries, published separately.

Step 8 — Verify

Action: On the live page check: The scroller has data-overflow=“true” and the buttons show.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 43 — Scroll Indicator

Reproduces the screenshot `screenshots/list-scroll-indicator.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint “Set up the list in its properties: items-missing.”

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows “Latest insights”.

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Mobile display** (G) = Horizontal scroll; **Scroll indicator on mobile** (H) = On (the default).

Expected Result: Mobile display Horizontal scroll with Scroll indicator on mobile on (the default).

Step 6 — Preview

Action: Screen width: 402 px (mobile).

Expected Result: At 402 px the indicator track and thumb show below the rail.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 402 px a rail with 1.2 cards and below it a thin 0.25rem grey track with a darker thumb at the left.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed.

Step 9 — Verify

Action: On the live page check: The thumb is shorter than the track on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 44 — Fixed Card Width

Reproduces the screenshot `screenshots/list-fixed-card-width.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (G) = Horizontal scroll; **Desktop card width (px)** (H) = 320.

Expected Result: Desktop Horizontal scroll with a 320 px card width: in preview every card is 20rem wide.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Latest insights" above a rail of 20rem-wide image cards (320 px), more of them visible than with 4.2 cards, running to the right screen edge.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed.

Step 8 — Verify

Action: On the live page check: At 1024 px the cards have the tablet width on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 45 — Edge "Inside the content width"

Reproduces the screenshot `screenshots/list-edge-none.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (G) = Horizontal scroll.

Expected Result: Desktop display Horizontal scroll is stored; in preview the cards form a rail.

Step 6 — Fill in List › Scroll

Action: Select **List** in the content tree and open the **Scroll** tab of the properties panel. Enter: **Edge** (H) = Inside the content width.

Expected Result: Edge Inside the content width: the rail stops at the section padding.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Latest insights" above a rail whose last visible card is cut at the section padding instead of the screen edge.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed.

Step 9 — Verify

Action: On the live page check: The block lacks the class edge-bleed and the cards stop at the padding.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 46 — Snap Alignment "Center"

Reproduces the screenshot `screenshots/list-snap-center.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Mobile display** (G) = Horizontal scroll.

Expected Result: Mobile display Horizontal scroll is stored; desktop and tablet stay Grid.

Step 6 — Fill in List › Scroll

Action: Select **List** in the content tree and open the **Scroll** tab of the properties panel. Enter: **Snap alignment** (H) = Center.

Expected Result: Snap alignment Center is stored; cards snap to the middle of the rail.

Step 7 — Preview

Action: Screen width: 402 px (mobile).

Expected Result: At 402 px a short swipe snaps the nearest card to the centre.

Step 8 — Preview

Action: Action: Swipe the rail a little: the nearest card snaps to the centre.

Expected Result: At 402 px a short swipe snaps the nearest card to the centre.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 402 px the rail after a short swipe: the second card centred, with slivers of the first and third cards on both sides, and the indicator below.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed.

Step 11 — Verify

Action: On the live page check: The block has snap-center and the card centres at 402 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 47 — Scroll Step "Viewport"

Reproduces the screenshot `screenshots/list-step-viewport.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (G) = Horizontal scroll; **Previous / next buttons on desktop** (H) = On.

Expected Result: Desktop Horizontal scroll with buttons on: in preview the rail shows Previous and Next.

Step 6 — Fill in List › Scroll

Action: Select **List** in the content tree and open the **Scroll** tab of the properties panel. Enter: **Scroll step** (I) = Viewport.

Expected Result: Scroll step Viewport is stored for buttons and keys.

Step 7 — Preview

Action: Action: Click Next items once.

Expected Result: After one click on Next the next screenful of cards fills the rail.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Latest insights" above the rail after one click on Next: the next set of cards fills the rail, Previous is now enabled.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed. The button labels come from the placeholders sheet.

Step 10 — Verify

Action: On the live page check: Next is disabled at the end and Previous goes back one screenful.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 48 — Loop

Reproduces the screenshot `screenshots/list-loop.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (G) = Horizontal scroll; **Previous / next buttons on desktop** (H) = On.

Expected Result: Desktop Horizontal scroll with buttons on: in preview the rail shows Previous and Next.

Step 6 — Fill in List › Scroll

Action: Select **List** in the content tree and open the **Scroll** tab of the properties panel. Enter: **Loop** (I) = On.

Expected Result: Loop on is stored; the buttons are never disabled.

Step 7 — Preview

Action: Action: Click Next items until the last card shows: Next stays enabled, one more click returns to the first card.

Expected Result: At the last card Next stays enabled and one more click returns to the first card.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Latest insights" above the rail after four clicks on Next: scrolled to its end with The future of work as the last card, and Next still enabled because Loop is on.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed.

Step 10 — Verify

Action: On the live page check: At the last card Next stays enabled and returns to the first card.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 49 — Initial Item

Reproduces the screenshot `screenshots/list-initial-item.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows “Latest insights”.

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (G) = Horizontal scroll; **Previous / next buttons on desktop** (H) = On.

Expected Result: Desktop Horizontal scroll with buttons on: in preview the rail shows Previous and Next.

Step 6 — Fill in List › Scroll

Action: Select **List** in the content tree and open the **Scroll** tab of the properties panel. Enter: **Initial item index** (I) = 2.

Expected Result: Initial item index 2: in preview the rail opens at its third card.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title “Latest insights” above a rail already scrolled so that State of AI 2026, the third card, is the first visible; Previous is enabled.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed. A new page can shift which card is at index 2.

Step 9 — Verify

Action: On the live page check: On aem.page the planned card is the first visible one.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 50 — Equal Card Height

Reproduces the screenshot `screenshots/list-equal-height.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint “Set up the list in its properties: items-missing.”

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights.

Expected Result: The header shows "Latest insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 8.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 8; the canvas shows the published-page hint.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Equal card height** (G) = On.

Expected Result: Equal card height on: in preview both grid rows are equally tall.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Latest insights" above two grid rows of four image cards, both rows exactly the same height.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights must be published and indexed.

Step 8 — Verify

Action: On the live page check: The rows are compact on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 51 — Cards Not Stretched

Reproduces the screenshot `screenshots/list-no-stretch.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Explore.

Expected Result: The header shows "Explore".

Step 4 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Stretch cards to row height** (B) = Off.

Expected Result: Stretch cards to row height off is stored; on aem.page cards keep their natural heights.

Step 5 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 6 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (C) = Select the page or enter /content/tcs-corp/us/en/services/consulting.

Expected Result: Consulting is the first item; its card shows on aem.page.

Step 7 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 8 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (D) = Select the page or enter /content/tcs-corp/us/en/services/cloud/migration.

Expected Result: Cloud migration is the second item; a card without image area on aem.page.

Step 9 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 10 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (E) = Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank.

Expected Result: The agentic bank is the third item; its card shows on aem.page.

Step 11 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 12 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (F) = Select the page or enter /content/tcs-corp/us/en/about.

Expected Result: About us is the fourth item; a short card on aem.page.

Step 13 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (G) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Explore" above four image cards of different heights aligned to the top: Consulting with its image, Cloud migration and About us without images, and The agentic bank with image, kicker and meta.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the four linked pages must be published and indexed, since no item has overrides.

Step 16 — Verify

Action: On the live page check: Four cards show on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 52 — Unlinked Cards (Link items off)

Reproduces the screenshot `screenshots/list-unlinked.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = At a glance.

Expected Result: The header shows "At a glance".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic; **Link items** (C) = Off.

Expected Result: Card style Statistic and Link items off are stored; the cards render without links.

Step 5 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 6 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (D) = Select the page or enter /content/tcs-corp/us/en/about/our-people.

Expected Result: The first item keeps its required link to the Our people page.

Step 7 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (E) = 150,000+; **Description** (F) = Experts in consulting, engineering and operations; **Label** (G) = Colleagues.

Expected Result: The first card shows 150,000+ and Colleagues, unlinked.

Step 8 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 9 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (H) = Select the page or enter /content/tcs-corp/us/en/about/locations.

Expected Result: The second item keeps its link to the Locations page.

Step 10 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (I) = 46; **Description** (J) = Delivery centres and offices worldwide; **Label** (K) = Countries.

Expected Result: The second card shows 46 and Countries, unlinked.

Step 11 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 12 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (L) = Select the page or enter /content/tcs-corp/us/en/about/clients.

Expected Result: The third item keeps its link to the Clients page.

Step 13 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (M) = 1,200+; **Description** (N) = Enterprises we partner with on transformation; **Label** (O) = Clients.

Expected Result: The third card shows 1,200+ and Clients, unlinked.

Step 14 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 15 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (P) = Select the page or enter /content/tcs-corp/us/en/about/sustainability.

Expected Result: The fourth item keeps its link to the Sustainability page.

Step 16 — Fill in List Item 4 › Content

Action: Select **List Item 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (Q) = 100%; **Description** (R) = Our target for offices and delivery centres; **Label** (S) = Renewable power.

Expected Result: The fourth card shows 100% and Renewable power, unlinked.

Step 17 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (T) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 18 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "At a glance" above four grey statistic cards (150,000+ Colleagues, 46 Countries, 1,200+ Clients, 100% Renewable power) without links, hover effects or buttons.

Step 19 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the linked pages needn't be published, since nothing links to them.

Step 20 — Verify

Action: On the live page check: No a.list-card-link remains in the block on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 53 — Open Links in a New Tab

Reproduces the screenshot `screenshots/list-new-tab.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Partners and insights.

Expected Result: The header shows "Partners and insights".

Step 4 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (B) = 3.

Expected Result: Desktop columns 3 is stored for one row of three cards.

Step 5 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 6 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (C) = Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank.

Expected Result: The agentic bank is the first item; its card shows on aem.page.

Step 7 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 8 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (D) = Select the page or enter /content/tcs-corp/us/en/insights/cloud-at-scale.

Expected Result: Cloud at scale is the second item; its card shows on aem.page.

Step 9 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 10 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (E) = Select the page or enter https://partner.example.com/joint-solutions; **Open in a new tab** (F) = Yes.

Expected Result: The partner URL with Open in a new tab Yes is set on the third item.

Step 11 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (G) = Joint solutions with our partners; **Description** (H) = Co-developed platforms from our partner ecosystem; **Image** (I) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Eyebrow** (J) = Partner.

Expected Result: The third card shows photo-6, PARTNER, the title and description.

Step 12 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (K) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 13 — Fill in Result

Action: Select **Result** in the content tree and enter in the properties panel: **Partner card** (L) = Opens in a new tab (target="_blank", rel="noopener noreferrer"); screen readers hear "(opens in a new tab)".

Expected Result: The partner card opens in a new tab and screen readers hear "(opens in a new tab)".

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Partners and insights" above three image cards: The agentic bank, Cloud at scale and the partner card "Joint solutions with our partners" with photo-6 and eyebrow PARTNER, its title underlined under the mouse pointer.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and photo-6.svg; the two insights must be published and indexed. The partner URL is external and needs nothing from the site.

Step 16 — Verify

Action: On the live page check: The link has target="_blank" and the hidden new-tab text.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 54 — Lists Made Before (legacy)

Reproduces the screenshot `screenshots/list-legacy.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Existing page (List created before this version)

Action: Select **Existing page (List created before this version)** in the content tree and enter in the properties panel: **List, row 1** (A) = Title "Our latest thinking" (Heading 2); **List, row 2** (B) = CTA "Explore all insights" (link to /content/tcs-corp/us/en/insights, bold = primary button).

Expected Result: The old List has a heading row "Our latest thinking" and a bold CTA row linking to the insights page.

Step 3 — Universal Editor

Action: Note: Such a List has no setting rows and renders its title and CTA only; a List added today is the key-value List — replace the old one to list pages.

Expected Result: The List renders only its title and the primary button; replace it with a new List to list pages.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The large heading "Our latest thinking" and the primary button "Explore all insights" below it, without any cards.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Republishing the page keeps the legacy rendering; nothing changes until the List is replaced by a new one and the page is published.

Step 6 — Verify

Action: On the live page check: The new List shows cards on aem.page and has no list-legacy class.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 55 — Empty State and Editor Hints

Reproduces the screenshot `screenshots/list-empty-state.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insights for Europe.

Expected Result: Each header shows its title: "Insights for Europe" and "Related insights".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Tagged pages; **Search root** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Tags** (D) = Add the tags tcs-corp:region/europe.

Expected Result: Tagged pages below Insights, one with the Europe tag and one with the AI tag; both show the published-page hint in the editor.

Step 5 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 6 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (E) = Related insights.

Expected Result: Each header shows its title: "Insights for Europe" and "Related insights".

Step 7 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (F) = Tagged pages; **Search root** (G) = Select the page or enter /content/tcs-corp/us/en/insights; **Tags** (H) = Add the tags tcs-corp:topic/ai.

Expected Result: Tagged pages below Insights, one with the Europe tag and one with the AI tag; both show the published-page hint in the editor.

Step 8 — Fill in Advanced tab (both lists)

Action: Select **Advanced tab (both lists)** in the content tree and enter in the properties panel: **When there are no items** (I) = Show a message (the default; Empty message left empty).

Expected Result: When there are no items stays Show a message with an empty Empty message, so listEmpty applies.

Step 9 — Preview (published page)

Action: Insights for Europe: No page has the Europe tag: the grey box "There are no items to show." (placeholder listEmpty).

Expected Result: Insights for Europe shows the grey box "There are no items to show."

Step 10 — Fill in Universal Editor

Action: Select **Universal Editor** in the content tree and enter in the properties panel: **Related insights** (J) = No query index on author: "The pages show on the published page (from the query index)." (placeholder listEditor-Pages); the cards show in preview.

Expected Result: Related insights shows "The pages show on the published page (from the query index)."

Step 11 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: On the page, below "Insights for Europe", a grey rounded box with the centred text "There are no items to show."; below "Related insights" the editor hint "The pages show on the published page (from the query index)."

Step 12 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The empty message is part of the published page; changing its text in placeholders needs the placeholders sheet published. The Related insights list fills once its tagged pages are indexed.

Step 13 — Verify

Action: On the live page check: The cards, the fallback items or nothing (Hide the list) show.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 56 — Figma 1 "Themes"

Reproduces the screenshot `screenshots/list-figma-01-themes.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Themes.

Expected Result: The header shows "Themes".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Panel.

Expected Result: Card style Panel is stored for every card.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (C) = 3; **Tablet columns** (D) = 3; **Mobile display** (E) = Horizontal scroll.

Expected Result: Desktop and Tablet columns 3 and Mobile display Horizontal scroll are stored.

Step 6 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 7 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (F) = Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank.

Expected Result: The first item links to The agentic bank.

Step 8 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (G) = Agentic AI; **Eyebrow** (H) = Theme.

Expected Result: The first panel shows THEME and the title "Agentic AI".

Step 9 — Fill in List Item 1 › Display

Action: Select **List Item 1** in the content tree and open the **Display** tab of the properties panel. Enter: **Card colour** (I) = Dark.

Expected Result: Card colour Dark keeps the first panel #20293c.

Step 10 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 11 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (J) = Select the page or enter /content/tcs-corp/us/en/insights/future-of-work.

Expected Result: The second item links to The future of work.

Step 12 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (K) = The future of work; **Eyebrow** (L) = Theme.

Expected Result: The second panel shows THEME and the title "The future of work".

Step 13 — Fill in List Item 2 › Display

Action: Select **List Item 2** in the content tree and open the **Display** tab of the properties panel. Enter: **Card colour** (M) = Brand blue.

Expected Result: Card colour Brand blue turns the second panel #4673db.

Step 14 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 15 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (N) = Select the page or enter /content/tcs-corp/us/en/insights/energy-transition.

Expected Result: The third item links to The energy transition.

Step 16 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (O) = Sustainability; **Eyebrow** (P) = Theme.

Expected Result: The third panel shows THEME and the title "Sustainability".

Step 17 — Fill in List Item 3 › Display

Action: Select **List Item 3** in the content tree and open the **Display** tab of the properties panel. Enter: **Card colour** (Q) = Image background.

Expected Result: Card colour Image background puts the page's image behind the third panel.

Step 18 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (R) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the panels follow the content tree order.

Step 19 — Preview

Action: Screen width: 1440 px (desktop grid; the mobile display scrolls).

Expected Result: At 1440 px three panels in one row; the mobile display scrolls.

Step 20 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1440 px the title "Themes" above three tall panels: "Agentic AI" on dark #20293c, "The future of work" on brand blue and "Sustainability" with the Energy transition image behind the text; each with THEME, the page description and Explore.

Step 21 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the three linked insights must be published and indexed for their descriptions and the background image.

Step 22 — Verify

Action: On the live page check: On aem.page the three panels show descriptions and the image background.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 57 — Figma 2 "Insight & Opinion"

Reproduces the screenshot `screenshots/list-figma-02-insight-opinion.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insight and opinion; **CTA link** (B) = Select the page or enter /content/tcs-corp/us/en/insights; **CTA text** (C) = View all.

Expected Result: The header shows "Insight and opinion" with the "View all" text link.

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (D) = Mixed (by page); **Image ratio** (E) = 1:1; **First card as feature** (F) = On.

Expected Result: Mixed (by page), Image ratio 1:1 and First card as feature on are stored.

Step 5 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 6 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (G) = Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank.

Expected Result: The agentic bank is the first item and becomes the feature on aem.page.

Step 7 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 8 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (H) = Select the page or enter /content/tcs-corp/us/en/insights/supply-chain-resilience.

Expected Result: Supply chain resilience is the second item; an image card on aem.page.

Step 9 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 10 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (I) = Select the page or enter /content/tcs-corp/us/en/services/cloud/migration.

Expected Result: Cloud migration is the third item; a panel on aem.page.

Step 11 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 12 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (J) = Select the page or enter /content/tcs-corp/us/en/insights/future-of-work.

Expected Result: The future of work is the fourth item; an image card on aem.page.

Step 13 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 14 — Fill in List Item 5 › Link

Action: Select **List Item 5** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (K) = Select the page or enter /content/tcs-corp/us/en/insights/retail-personalisation.

Expected Result: Personalisation in retail is the fifth item; an image card on aem.page.

Step 15 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (L) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the feature and cards follow the content tree order.

Step 16 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Insight and opinion" with "View all" on the right; a full-width feature for The agentic bank with tags, reading time, title and Anita Rao; below, Supply chain resilience, a dark Cloud migration panel, The future of work and Personalisation in retail with square images.

Step 17 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and the Authors sheet; the five linked pages must be published and indexed. The View all target /en/insights must be published.

Step 18 — Verify

Action: On the live page check: The feature shows the image behind the text on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 58 — Figma 3 "Related"

Reproduces the screenshot `screenshots/list-figma-03-related.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Related.

Expected Result: The header shows "Related".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Tagged pages; **Search root** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Tags** (D) = Add the tags tcs-corp:topic/ai, tcs-corp:topic/cloud; **Maximum items** (E) = 8.

Expected Result: Tagged pages below Insights with the AI and cloud tags; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (F) = Mixed (by page).

Expected Result: Card style Mixed (by page) is stored.

Step 6 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (G) = Horizontal scroll; **Tablet display** (H) = Horizontal scroll; **Mobile display** (I) = Horizontal scroll.

Expected Result: Horizontal scroll on all breakpoints: in preview the cards form a rail.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Related" above a rail running to the right screen edge: image cards Cloud at scale, The future of work, Touchless insurance claims and Personalisation in retail, and the gradient report card State of AI 2026.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the tagged insights must be published and indexed. Newly tagged insights join the rail after the index update.

Step 9 — Verify

Action: On the live page check: The rail shows the tagged insights on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 59 — Figma 4 "Intelligence in Action"

Reproduces the screenshot `screenshots/list-figma-04-intelligence-in-action.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Intelligence in action.

Expected Result: The header shows "Intelligence in action".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Image ratio** (B) = 1:1.

Expected Result: Image ratio 1:1 is stored for the image cards.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (C) = 3; **Tablet columns** (D) = 3; **Mobile display** (E) = Horizontal scroll.

Expected Result: Desktop and Tablet columns 3 and Mobile display Horizontal scroll are stored.

Step 6 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 7 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (F) = Select the page or enter /content/tcs-corp/us/en/services/consulting.

Expected Result: Consulting is the first item; its card shows on aem.page.

Step 8 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 9 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (G) = Select the page or enter /content/tcs-corp/us/en/services/ai.

Expected Result: AI and data is the second item; its card shows on aem.page.

Step 10 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 11 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (H) = Select the page or enter /content/tcs-corp/us/en/services/cloud.

Expected Result: Cloud is the third item; its card shows on aem.page.

Step 12 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (I) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 13 — Preview

Action: Screen width: 1440 px (desktop grid; the mobile display scrolls).

Expected Result: At 1440 px three square-image cards in one row; the mobile display scrolls.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1440 px the title “Intelligence in action” above three image cards in one row: Consulting, AI and data and Cloud, each with a square image, the eyebrow SERVICE and tag in the kicker, the title and the description.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the three service pages and their images must be published and indexed, since the items have no overrides.

Step 16 — Verify

Action: On the live page check: At 402 px the cards scroll sideways with the indicator.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 60 — Figma 5 "News"

Reproduces the screenshot `screenshots/list-figma-05-news.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = News; **CTA link** (B) = Select the page or enter /content/tcs-corp/us/en/insights; **CTA text** (C) = All news; **CTA style** (D) = Primary button.

Expected Result: The header shows "News" with the primary "All news" button.

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (E) = Child pages; **Parent page** (F) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (G) = Last modified; **Sort order** (H) = Descending; **Maximum items** (I) = 5.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 5; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Display as teaser** (J) = Off.

Expected Result: Display as teaser off: in preview the pages render as rows.

Step 6 — Fill in List › Advanced

Action: Select **List** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Style options** (K) = Dividers between rows.

Expected Result: Dividers between rows adds grey lines between the rows.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title “News” with a filled “All news” button on the right, above five rows (The agentic bank, Cloud at scale, State of AI 2026, Supply chain resilience, Personalisation in retail) separated by grey lines, each with eyebrow and tag, large title, description, date and arrow.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the insights and the /en/insights archive page must be published and indexed.

Step 9 — Verify

Action: On the live page check: The newest page is the first row on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 61 — Figma 6 “At a glance”

Reproduces the screenshot `screenshots/list-figma-06-at-a-glance.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint “Set up the list in its properties: items-missing.”

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = At a glance.

Expected Result: The header shows “At a glance”.

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic; **Card colour** (C) = Light grey.

Expected Result: Card style Statistic and Card colour Light grey are stored.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Mobile display** (D) = Horizontal scroll.

Expected Result: Mobile display Horizontal scroll is stored; desktop and tablet stay Grid.

Step 6 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 7 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (E) = Select the page or enter /content/tcs-corp/us/en/about/our-people.

Expected Result: The first item links to the Our people page.

Step 8 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (F) = 150,000+; **Description** (G) = Experts in consulting, engineering and operations; **Label** (H) = Colleagues.

Expected Result: The first card shows 150,000+ and Colleagues.

Step 9 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 10 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (I) = Select the page or enter /content/tcs-corp/us/en/about/locations.

Expected Result: The second item links to the Locations page.

Step 11 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (J) = 46; **Description** (K) = Delivery centres and offices worldwide; **Label** (L) = Countries.

Expected Result: The second card shows 46 and Countries.

Step 12 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 13 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (M) = Select the page or enter /content/tcs-corp/us/en/about/clients.

Expected Result: The third item links to the Clients page.

Step 14 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (N) = 1,200+; **Description** (O) = Enterprises we partner with on transformation; **Label** (P) = Clients.

Expected Result: The third card shows 1,200+ and Clients.

Step 15 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 16 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (Q) = Select the page or enter /content/tcs-corp/us/en/about/sustainability.

Expected Result: The fourth item links to the Sustainability page.

Step 17 — Fill in List Item 4 › Content

Action: Select **List Item 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (R) = 100%; **Description** (S) = Our target for offices and delivery centres; **Label** (T) = Renewable power.

Expected Result: The fourth card shows 100% and Renewable power.

Step 18 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (U) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 19 — Preview

Action: Screen width: 1440 px (desktop grid; the mobile display scrolls).

Expected Result: At 1440 px four grey statistic cards in one row; the mobile display scrolls.

Step 20 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1440 px the title "At a glance" above four light grey statistic cards: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power, numbers large at the top, label and description at the bottom.

Step 21 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the linked about pages should be published so the card links work.

Step 22 — Verify

Action: On the live page check: At 1024 px every number fits on one line on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 62 — Figma 7 "Statements"

Reproduces the screenshot `screenshots/list-figma-07-statements.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = What we stand for.

Expected Result: The header shows "What we stand for".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic.

Expected Result: Card style Statistic is stored for every card.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (C) = 3; **Tablet columns** (D) = 3.

Expected Result: Desktop and Tablet columns 3 are stored.

Step 6 — Fill in List › Advanced

Action: Select **List** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Style options** (E) = Compact statistic title.

Expected Result: Compact statistic title shrinks the titles to statement size.

Step 7 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 8 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (F) = Select the page or enter /content/tcs-corp/us/en/services/ai.

Expected Result: The first item links to the AI and data page.

Step 9 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (G) = AI that works for the whole enterprise; **Description** (H) = From data foundations to agents in production; **Label** (I) = AI and data; **Call to action label** (J) = Learn more.

Expected Result: The first card shows the AI statement, its label, description and Learn more.

Step 10 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 11 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (K) = Select the page or enter /content/tcs-corp/us/en/services/cloud.

Expected Result: The second item links to the Cloud page.

Step 12 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (L) = Cloud that scales with the business; **Description** (M) = Migrate, modernise and operate on any cloud; **Label** (N) = Cloud; **Call to action label** (O) = Learn more.

Expected Result: The second card shows the cloud statement, its label, description and Learn more.

Step 13 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 14 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (P) = Select the page or enter /content/tcs-corp/us/en/services/cybersecurity.

Expected Result: The third item links to the Cybersecurity page.

Step 15 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (Q) = Security built into every layer; **Description** (R) = Resilience from strategy to operations; **Label** (S) = Cybersecurity; **Call to action label** (T) = Learn more.

Expected Result: The third card shows the security statement, its label, description and Learn more.

Step 16 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (U) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 17 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "What we stand for" above three grey cards in one row with medium statement titles (AI that works for the whole enterprise, Cloud that scales with the business, Security built into every layer), labels, descriptions and outlined Learn more buttons.

Step 18 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the three service pages are indexed, so their eyebrow Service shows as kicker on aem.page.

Step 19 — Verify

Action: On the live page check: The kicker matches the design on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 63 — Figma 8 "Media coverage"

Reproduces the screenshot `screenshots/list-figma-08-media-coverage.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Media coverage.

Expected Result: The header shows "Media coverage".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Tagged pages; **Search root** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Tags** (D) = Add the tags tcs-corp:content-type/report, tcs-corp:content-type/article.

Expected Result: Tagged pages below Insights with the report and article tags; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (E) = Mixed (by page); **Card colour** (F) = Navy.

Expected Result: Mixed (by page) and Card colour Navy are stored.

Step 6 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (G) = Horizontal scroll; **Tablet display** (H) = Horizontal scroll; **Mobile display** (I) = Horizontal scroll.

Expected Result: Horizontal scroll on all breakpoints: in preview the cards form a rail.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Media coverage" above a rail running to the right edge: image cards (The agentic bank, Cloud at scale, The future of work, Supply chain resilience) and #011627 report cards (Quantum readiness, State of AI 2026) with light text and outlined buttons.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the tagged insights must be published and indexed with their content-type tags.

Step 9 — Verify

Action: On the live page check: Report pages show as navy report cards on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 64 — Figma 9 "Investor relations"

Reproduces the screenshot `screenshots/list-figma-09-investor-relations.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Investor relations.

Expected Result: The header shows "Investor relations".

Step 4 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (B) = Child pages; **Parent page** (C) = Select the page or enter /content/tcs-corp/us/en/insights; **Order by** (D) = Last modified; **Sort order** (E) = Descending; **Maximum items** (F) = 6.

Expected Result: Child pages of Insights, Last modified Descending, Maximum items 6; the canvas shows the published-page hint.

Step 5 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (G) = Mixed (by page); **Card colour** (H) = Navy.

Expected Result: Mixed (by page) and Card colour Navy are stored.

Step 6 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop display** (I) = Horizontal scroll; **Tablet display** (J) = Horizontal scroll; **Mobile display** (K) = Horizontal scroll.

Expected Result: Horizontal scroll on all breakpoints: in preview the cards form a rail.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Investor relations" above a rail: image cards The agentic bank, Cloud at scale, Supply chain resilience, Personalisation in retail and The energy transition, and the navy report card State of AI 2026.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the section's child pages must be published and indexed. A new quarterly page appears first after the index update.

Step 9 — Verify

Action: On the live page check: The page is the first card on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 65 — Figma 10 "Banking today"

Reproduces the screenshot `screenshots/list-figma-10-banking-today.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Banking today.

Expected Result: The header shows "Banking today".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic; **Card colour** (C) = Brand blue.

Expected Result: Card style Statistic and Card colour Brand blue are stored.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Mobile display** (D) = Horizontal scroll.

Expected Result: Mobile display Horizontal scroll is stored; desktop and tablet stay Grid.

Step 6 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 7 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (E) = Select the page or enter /content/tcs-corp/us/en/industries/banking/core-banking.

Expected Result: The first item links to the Core banking page.

Step 8 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (F) = 8 of 10; **Description** (G) = Of our banking clients run cores we modernised; **Label** (H) = Core banking.

Expected Result: The first blue card shows 8 of 10 and Core banking.

Step 9 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 10 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (I) = Select the page or enter /content/tcs-corp/us/en/industries/banking/payments.

Expected Result: The second item links to the Payments page.

Step 11 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (J) = 2bn; **Description** (K) = Transactions a day on platforms we operate; **Label** (L) = Payments.

Expected Result: The second blue card shows 2bn and Payments.

Step 12 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 13 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (M) = Select the page or enter /content/tcs-corp/us/en/industries/banking/risk.

Expected Result: The third item links to the Risk page.

Step 14 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (N) = 40%; **Description** (O) = Faster regulatory reporting with automation; **Label** (P) = Risk and compliance.

Expected Result: The third blue card shows 40% and Risk and compliance.

Step 15 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 16 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (Q) = Select the page or enter /content/tcs-corp/us/en/industries/banking/customer-experience.

Expected Result: The fourth item links to the Customer experience page.

Step 17 — Fill in List Item 4 › Content

Action: Select **List Item 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (R) = 24/7; **Description** (S) = Digital service across every channel; **Label** (T) = Customer experience.

Expected Result: The fourth blue card shows 24/7 and Customer experience.

Step 18 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (U) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 19 — Preview

Action: Screen width: 1440 px (desktop grid; the mobile display scrolls).

Expected Result: At 1440 px four brand blue cards in one row; the mobile display scrolls.

Step 20 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1440 px the title “Banking today” above four brand blue #4673db statistic cards with white text: 8 of 10 Core banking, 2bn Payments, 40% Risk and compliance, 24/7 Customer experience.

Step 21 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the four banking sub-pages should be published so the links work. They needn’t be indexed (all values are overrides).

Step 22 — Verify

Action: On the live page check: The number fits one line at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 66 — Figma 11 "2-up"

Reproduces the screenshot `screenshots/list-figma-11-2-up.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Featured services.

Expected Result: The header shows "Featured services".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Image ratio** (B) = 1:1.

Expected Result: Image ratio 1:1 is stored.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (C) = 2; **Tablet columns** (D) = 2.

Expected Result: Desktop and Tablet columns 2 are stored.

Step 6 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 7 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (E) = Select the page or enter /content/tcs-corp/us/en/services/consulting.

Expected Result: Consulting is the first item; its card shows on aem.page.

Step 8 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 9 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (F) = Select the page or enter /content/tcs-corp/us/en/services/ai.

Expected Result: AI and data is the second item; its card shows on aem.page.

Step 10 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (G) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the two cards follow the content tree order.

Step 11 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Featured services" above two large image cards side by side: Consulting and AI and data, each with a square image, kicker, title and description.

Step 12 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the two service pages and their images must be published and indexed.

Step 13 — Verify

Action: On the live page check: The images are sharp at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 67 — Figma 12 "Statements"

Reproduces the screenshot `screenshots/list-figma-12-statements.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Industries we transform.

Expected Result: The header shows "Industries we transform".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic.

Expected Result: Card style Statistic is stored for every card.

Step 5 — Fill in List › Layout

Action: Select **List** in the content tree and open the **Layout** tab of the properties panel. Enter: **Desktop columns** (C) = 3; **Tablet columns** (D) = 3.

Expected Result: Desktop and Tablet columns 3 are stored.

Step 6 — Fill in List › Advanced

Action: Select **List** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Style options** (E) = Compact statistic title.

Expected Result: Compact statistic title shrinks the titles to statement size.

Step 7 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 8 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (F) = Select the page or enter /content/tcs-corp/us/en/industries/banking.

Expected Result: The first item links to the Banking page.

Step 9 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (G) = Banking that runs on intelligence; **Description** (H) = Modern cores, instant payments and AI-led operations; **Label** (I) = Banking; **Call to action label** (J) = Learn more.

Expected Result: The first card shows the banking statement, label Banking and Learn more.

Step 10 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 11 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (K) = Select the page or enter /content/tcs-corp/us/en/industries/retail.

Expected Result: The second item links to the Retail page.

Step 12 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (L) = Retail that knows every customer; **Description** (M) = Connected commerce from supply chain to store; **Label** (N) = Retail; **Call to action label** (O) = Learn more.

Expected Result: The second card shows the retail statement, label Retail and Learn more.

Step 13 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 14 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (P) = Select the page or enter /content/tcs-corp/us/en/industries/manufacturing.

Expected Result: The third item links to the Manufacturing page.

Step 15 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (Q) = Factories that learn and adapt; **Description** (R) = Smart factories and resilient supply chains; **Label** (S) = Manufacturing; **Call to action label** (T) = Learn more.

Expected Result: The third card shows the factories statement, label Manufacturing and Learn more.

Step 16 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (U) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 17 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Industries we transform" above three grey cards: "Banking that runs on intelligence", "Retail that knows every customer" and "Factories that learn and adapt", with the labels Banking, Retail and Manufacturing, descriptions and outlined Learn more buttons.

Step 18 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the three industry pages should be published so the buttons work.

Step 19 — Verify

Action: On the live page check: Each button opens its industry page on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 68 — Figma 13 "4-up colours"

Reproduces the screenshot `screenshots/list-figma-13-4-up-colours.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = At a glance.

Expected Result: The header shows "At a glance".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic.

Expected Result: Card style Statistic is stored for every card.

Step 5 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 6 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (C) = Select the page or enter /content/tcs-corp/us/en/about/our-people.

Expected Result: The first item links to the Our people page.

Step 7 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (D) = 150,000+; **Description** (E) = Experts in consulting, engineering and operations; **Label** (F) = Colleagues.

Expected Result: The first card shows 150,000+ and Colleagues.

Step 8 — Fill in List Item 1 › Display

Action: Select **List Item 1** in the content tree and open the **Display** tab of the properties panel. Enter: **Card colour** (G) = Brand blue.

Expected Result: Brand blue turns the first card #4673db.

Step 9 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 10 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (H) = Select the page or enter /content/tcs-corp/us/en/about/locations.

Expected Result: The second item links to the Locations page.

Step 11 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (I) = 46; **Description** (J) = Delivery centres and offices worldwide; **Label** (K) = Countries.

Expected Result: The second card shows 46 and Countries.

Step 12 — Fill in List Item 2 › Display

Action: Select **List Item 2** in the content tree and open the **Display** tab of the properties panel. Enter: **Card colour** (L) = Grey gradient.

Expected Result: Grey gradient gives the second card the diagonal gradient.

Step 13 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 14 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (M) = Select the page or enter /content/tcs-corp/us/en/about/clients.

Expected Result: The third item links to the Clients page.

Step 15 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (N) = 1,200+; **Description** (O) = Enterprises we partner with on transformation; **Label** (P) = Clients.

Expected Result: The third card shows 1,200+ and Clients.

Step 16 — Fill in List Item 3 › Display

Action: Select **List Item 3** in the content tree and open the **Display** tab of the properties panel. Enter: **Card colour** (Q) = Mid grey.

Expected Result: Mid grey turns the third card #999.

Step 17 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 18 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (R) = Select the page or enter /content/tcs-corp/us/en/about/sustainability.

Expected Result: The fourth item links to the Sustainability page.

Step 19 — Fill in List Item 4 › Content

Action: Select **List Item 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (S) = 100%; **Description** (T) = Our target for offices and delivery centres; **Label** (U) = Renewable power.

Expected Result: The fourth card shows 100% and Renewable power.

Step 20 — Fill in List Item 4 › Display

Action: Select **List Item 4** in the content tree and open the **Display** tab of the properties panel. Enter: **Card colour** (V) = Light blue.

Expected Result: Light blue turns the fourth card #a7c8f1.

Step 21 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (W) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 22 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "At a glance" above four statistic cards: 150,000+ on brand blue with white text, 46 on the grey gradient, 1,200+ on mid grey and 100% on light blue, all with labels and descriptions.

Step 23 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the linked about pages should be published so the card links work.

Step 24 — Verify

Action: On the live page check: The 46 card shows the diagonal gradient on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 69 — Figma 14 "Statistics row"

Reproduces the screenshot `screenshots/list-figma-14-statistics.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the List

Action: Select the section in the content tree, choose **Add (+)** and pick **List**.

Expected Result: A List is inserted with its defaults (Fixed list, image cards, grid 4 / 4 / 1) and the hint "Set up the list in its properties: items-missing."

Step 3 — Fill in List › Content

Action: Select **List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Our impact in numbers.

Expected Result: The header shows "Our impact in numbers".

Step 4 — Fill in List › Cards

Action: Select **List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (B) = Statistic.

Expected Result: Card style Statistic is stored for every card.

Step 5 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 6 — Fill in List Item 1 › Link

Action: Select **List Item 1** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (C) = Select the page or enter /content/tcs-corp/us/en/about/our-people.

Expected Result: The first item links to the Our people page.

Step 7 — Fill in List Item 1 › Content

Action: Select **List Item 1** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (D) = 150,000+; **Description** (E) = Experts in consulting, engineering and operations; **Label** (F) = Colleagues.

Expected Result: The first card shows 150,000+ and Colleagues.

Step 8 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 9 — Fill in List Item 2 › Link

Action: Select **List Item 2** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (G) = Select the page or enter /content/tcs-corp/us/en/about/locations.

Expected Result: The second item links to the Locations page.

Step 10 — Fill in List Item 2 › Content

Action: Select **List Item 2** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (H) = 46; **Description** (I) = Delivery centres and offices worldwide; **Label** (J) = Countries.

Expected Result: The second card shows 46 and Countries.

Step 11 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 12 — Fill in List Item 3 › Link

Action: Select **List Item 3** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (K) = Select the page or enter /content/tcs-corp/us/en/about/clients.

Expected Result: The third item links to the Clients page.

Step 13 — Fill in List Item 3 › Content

Action: Select **List Item 3** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (L) = 1,200+; **Description** (M) = Enterprises we partner with on transformation; **Label** (N) = Clients.

Expected Result: The third card shows 1,200+ and Clients.

Step 14 — Add a List Item

Action: Select the List in the content tree, choose **Add (+)** and pick **List Item**.

Expected Result: A List Item is added under the List in the content tree.

Step 15 — Fill in List Item 4 › Link

Action: Select **List Item 4** in the content tree and open the **Link** tab of the properties panel. Enter: **Page or link** (O) = Select the page or enter /content/tcs-corp/us/en/about/sustainability.

Expected Result: The fourth item links to the Sustainability page.

Step 16 — Fill in List Item 4 › Content

Action: Select **List Item 4** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (P) = 100%; **Description** (Q) = Our target for offices and delivery centres; **Label** (R) = Renewable power.

Expected Result: The fourth card shows 100% and Renewable power.

Step 17 — Fill in List › Source

Action: Select **List** in the content tree and open the **Source** tab of the properties panel. Enter: **List source** (S) = Fixed list (the default; keep it).

Expected Result: List source stays Fixed list; the cards follow the content tree order.

Step 18 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title "Our impact in numbers" above four light grey statistic cards within the content width: 150,000+ Colleagues, 46 Countries, 1,200+ Clients and 100% Renewable power.

Step 19 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page; the linked about pages should be published so the card links work.

Step 20 — Verify

Action: On the live page check: At 402 px the figures form a rail or shorter cards.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.16.6 Authorable Field Specification

The List model `list` has 86 fields in seven tabs; the List Item model `list-item` has 15 fields in three tabs. The block definition sets `key-value: true`. The Content, Cards, Layout, Scroll and Advanced groups (except the List's "When there are no items") are the shared groups of `models/_card-list.json`, spread into `blocks/list/_list.json`; the Source tab is List-only. Mandatory: List source (`required` in the model; the default Fixed list is pre-filled) and the List Item's Page or link. Enforced validation: Component ID and Anchor ID patterns and the number ranges (`min` / `max`, clamped again in `list-data.js` / `card-list-config.js`); every value is re-validated in code and invalid values fall back to the defaults.

Block model `list` — Content tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Title (`title`)	text	No	No	Empty	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None	Latest insights
Heading type (`titleType`)	select	No	No	h2	Heading level of the title	Card titles are one level below	h2–h6 (h1 kept for lists made before)	h2
Description (`description`)	richtext	No	No	Empty	Intro under the title	One or two sentences	None	Our latest thinking on AI.
CTA link (`link`)	aem-content	No	No	Empty	Header call to action	Overview / archive page	None	/content/tcs-corp/us/en/insights
CTA text (`linkText`)	text	No	No	Empty	CTA label	2–4 words	None	View all insights
CTA style (`linkType`)	select	No	No	Text link (empty)	CTA look	Text link or a button	'', primary, secondary	''
Accessible list label (`listLabel`)	text	No	No	Empty	Region name without a title	Needed without Title	None	Latest insights
Component ID (`componentId`)	text	No	No	Generated (`list-1`, …)	Deep links and analytics id	Don't change after go-live	Enforced regExp `^[A-Za-z][A-Za-z0-9_-]*$`; duplicates suffixed	latest-insights

Block model `list` — Source tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
List source (`source`)	select	Yes	No	fixed	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)	tags
Parent page (`parentPath`)	aem-content	No	No	Empty	Parent of the child pages	A section page of the same locale	AEM or published path; shown when source = parent	/content/tcs-corp/us/en/industries
Use the current page when empty (`parentUseCurrentPage`)	boolean	No	No	true	Current page as parent	Keep on for section pages	Boolean; source = parent	true
Direct children only (`directChildrenOnly`)	boolean	No	No	true	Depth 1	Off to include deeper pages	Boolean; source = parent	true
Child depth (`childDepth`)	number	No	No	2 (code: 1 when empty)	Levels below the parent	2–3 typical	Enforced 1–10; source = parent and Direct children only off	2
Search root (`rootPath`)	aem-content	No	No	Empty	Root of the	The locale or a section	Shown when source = tags	/content/tcs-corp/us/en/insights

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
					tagged pages			
Use the current page when empty (`tagsUseCurrentPage`)	boolean	No	No	true	Current page as root	Off with an explicit root	Boolean; source = tags	true
Tags (`tags`)	aem-tag	No (needed)	Yes	None	Tags to match	1–3 tags	Tag IDs; child tags match; source = tags	tcs-corp:topic/ai
Match (`tagMatch`)	select	No	No	any	Any or all tags	All for intersections	any, all; source = tags	any
Include descendant pages (`includeDescendants`)	boolean	No	No	true	All levels below the root	Off: children only	Boolean; source = tags	true
Maximum search depth (`maxDepth`)	number	No	No	0 (no limit)	Levels below the root	0 for all	Enforced 0–10; tags and descendants on	0
Order by (`orderBy`)	select	No	No	manual	Sorting	Last modified for news	manual, title, lastModified	lastModified
Sort order (`sortOrder`)	select	No	No	ascending	Direction	Descending for newest first	ascending, descending; shown when Order by isn't manual	descending
Maximum items (`maxItems`)	number	No	No	0 (all)	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all	8

Block model `list` — Cards tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Display as teaser (`displayAsTeaser`)	boolean	No	No	true	Cards (on) or rows of links (off)	Off for news-style link lists	Boolean	true
Card style (`cardStyle`)	select	No	No	image	Kind of every card	Image, Panel, Report, Statistic or Mixed	image, panel, report, stat, mixed; shown when teaser on	stat
Card colour (`cardTheme`)	select	No	No	Default for the style (empty)	Colour of panel / report / statistic cards	A Card's own colour wins	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image; teaser on	grey
Image ratio (`imageRatio`)	select	No	No	16-9	Image shape of image cards	Match the photography	16-9, 1-1, 4-3, 3-2; teaser on	1-1
Panel height (`panelHeight`)	select	No	No	portrait	Shape of coloured cards	Content for long texts	portrait, compact, auto; teaser on	compact
First card as feature (`featureFirst`)	boolean	No	No	false	First card as a large spotlight with the author	The first page needs an image and author-id	Boolean; teaser on	true
Link items (`linkItems`)	boolean	No	No	true	Link the cards	Off for informational cards	Boolean	true

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Open links in a new tab (`openInNewTab`)	boolean	No	No	false	Default target of the card links (a List Item's setting wins)	Only for external destinations	Boolean	false
Show image (`showImage`)	boolean	No	No	true	Show card images	Off for text-only cards	Boolean	true
Show eyebrow (`showEyebrow`)	boolean	No	No	true	Show the eyebrow	—	Boolean	true
Show tags (`showTags`)	boolean	No	No	true	Show tags and reading time	—	Boolean	true
Show description (`showDescription`)	boolean	No	No	true	Show the description	—	Boolean	true
Show date (`showDate`)	boolean	No	No	true	Show the date	—	Boolean	true
Date format (`dateFormat`)	select	No	No	dd-mmm-yy (04 Sep 26)	Format of the dates	Use the locale's convention	dd-mmm-yy, dd-mm-yyyy, mm-dd-yyyy, mmm-d-yyyy, dd/mm/yy; shown when Show date on	dd-mm-yyyy
Show call to action (`showCta`)	boolean	No	No	true	Show call to action buttons	Off: the titles are the links	Boolean	true
Image loading (`imageLoading`)	select	No	No	lazy	Lazy or eager image loading	Eager only on the first screen	lazy, eager	lazy

Block model `list` — Layout tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Desktop display (`desktopMode`)	select	No	No	grid	Grid or scroll at 1200 px+	—	grid, horizontal-scroll	grid
Desktop columns (`desktopColumns`)	number	No	No	4	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only	3
Desktop gap (px) (`desktopGap`)	number	No	No	24	Space between cards	Keep the default	Enforced 0–120	24
Desktop items visible (`desktopVisible`)	number	No	No	4.2	Cards in view when scrolling	A fraction shows part of the next	Enforced 1–8; scroll only	3.3
Desktop card width (px) (`desktopCardWidth`)	number	No	No	0	Fixed card width instead	0 uses Items visible	Enforced 0–1200; below 120 treated as 0; scroll only	320
Previous / next buttons on desktop (`desktopControls`)	boolean	No	No	false	Show the buttons	On for desktop rails	Boolean; scroll only	true
Scroll indicator on desktop (`desktopIndicator`)	boolean	No	No	false	Show the progress bar	—	Boolean; scroll only	false

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Tablet display (`tabletMode`)	select	No	No	grid	Grid or scroll at 600–1199 px	—	grid, horizontal-scroll	horizontal-scroll
Tablet columns (`tabletColumns`)	number	No	No	4	Grid columns on tablet	2–3 often fit better	Enforced 1–6; grid only	2
Tablet gap (px) (`tabletGap`)	number	No	No	24	Space between cards	—	Enforced 0–120	24
Tablet items visible (`tabletVisible`)	number	No	No	3.3	Cards in view when scrolling	—	Enforced 1–8; scroll only	2.5
Tablet card width (px) (`tabletCardWidth`)	number	No	No	0	Fixed card width	—	Enforced 0–1200; below 120 = 0; scroll only	0
Previous / next buttons on tablet (`tabletControls`)	boolean	No	No	false	Show the buttons	—	Boolean; scroll only	false
Scroll indicator on tablet (`tabletIndicator`)	boolean	No	No	false	Show the progress bar	—	Boolean; scroll only	true
Mobile display (`mobileMode`)	select	No	No	grid	Grid or scroll below 600 px	Scroll for long sets	grid, horizontal-scroll	horizontal-scroll
Mobile columns (`mobileColumns`)	number	No	No	1	Grid columns on mobile	1 (2 for small statistic tiles)	Enforced 1–6; grid only	1
Mobile gap (px) (`mobileGap`)	number	No	No	16	Space between cards	—	Enforced 0–120	16
Mobile items visible (`mobileVisible`)	number	No	No	1.2	Cards in view when scrolling	1.2–1.5	Enforced 1–8; scroll only	1.2
Mobile card width (px) (`mobileCardWidth`)	number	No	No	0	Fixed card width	—	Enforced 0–1200; below 120 = 0; scroll only	0
Previous / next buttons on mobile (`mobileControls`)	boolean	No	No	false	Show the buttons	Swipe is usually enough	Boolean; scroll only	false
Scroll indicator on mobile (`mobileIndicator`)	boolean	No	No	true	Show the progress bar	Keep on	Boolean; scroll only	true
Equal card height (`equalHeight`)	boolean	No	No	false	All rows equally tall	For multi-row grids	Boolean	false
Stretch cards to row height (`stretchCards`)	boolean	No	No	true	Cards fill the row height	Keep on	Boolean	true

Block model `list` — Scroll tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Scroll snap (`scrollSnap`)	boolean	No	No	true	Cards snap into place	Keep on	Boolean	true

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Snap alignment (`snapAlign`)	select	No	No	start	Where cards snap	Center for mobile peeking rails	start, center; shown when snap on	start
Hide native scrollbar (`hideScrollbar`)	boolean	No	No	true	Hide the browser scrollbar	Use the indicator instead	Boolean	true
Allow mouse drag (`mouseDrag`)	boolean	No	No	true	Drag with the mouse	Keep on	Boolean	true
Allow touch swipe (`touchSwipe`)	boolean	No	No	true	Swipe on touch screens	Off only with buttons	Boolean	true
Keyboard scrolling (`keyboardScrolling`)	boolean	No	No	true	Arrow keys, Home, End	Keep on	Boolean	true
Scroll step (`scrollStep`)	select	No	No	one-card	Step of buttons and keys	—	one-card, viewport	one-card
Loop (`loop`)	boolean	No	No	false	Next at the end goes to the start	—	Boolean	false
Initial item index (`initialIndex`)	number	No	No	0	Card shown first	0 = first	Enforced 0–200	0
Edge (`edgePadding`)	select	No	No	bleed	Scroller to the screen edge or not	Bleed as in Figma	bleed, none	bleed
Reduced motion support (`reducedMotion`)	boolean	No	No	true	No smooth scrolling for reduced motion	Keep on	Boolean	true

Block model `list` — Advanced tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
When there are no items (`emptyBehavior`)	select	No	No	message	Empty state	Fallback for important sections	hide, message, fallback (invalid: message)	fallback
Empty message (`emptyMessage`)	text	No	No	Empty (placeholder `listEmpty`)	Empty state text	Short sentence	Shown when behaviour = message	No insights on this topic yet.
Analytics (`analyticsEnabled`)	boolean	No	No	true	Data layer	Keep on	Boolean	true
Style options (`classes`)	multiselect	No	Yes	None	Extra styles	Only as designed	stat-compact, dividers, header-center	dividers

Block model `list` — Additional tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Anchor ID (`classes_anchor`)	text	No	No	Empty	In-page link target (`#anchor-…`)	Unique on the page	Enforced regExp `^anchor-[a-z0-9][a-z0-9-]*$`; duplicates get –2, -3	anchor-our-services
Hide block (`classes_hideblock`)	boolean	No	No	false	Hide the block on the page	Temporary use only	Boolean	false
Padding left (`classes_paddingleft`)	select	No	No	None	Inner spacing left	Spacing scale	pl-0, pl-100 … pl-3000	pl-0
Padding right (`classes_paddingright`)	select	No	No	None	Inner spacing right	Spacing scale	pr-0 … pr-3000	pr-0
Padding top (`classes_paddingtop`)	select	No	No	None	Inner spacing top	Spacing scale	pt-0 … pt-3000	pt-600
Padding bottom (`classes_paddingbottom`)	select	No	No	None	Inner spacing bottom	Spacing scale	pb-0 … pb-3000	pb-600
Margin left (`classes_marginleft`)	select	No	No	None	Outer spacing left	Spacing scale	ml-0 … ml-3000	ml-0
Margin right (`classes_marginright`)	select	No	No	None	Outer spacing right	Spacing scale	mr-0 … mr-3000	mr-0
Margin top (`classes_margintop`)	select	No	No	None	Outer spacing top	Spacing scale	mt-0 … mt-3000	mt-1000
Margin bottom (`classes_marginbottom`)	select	No	No	None	Outer spacing bottom	Spacing scale	mb-0 … mb-3000	mb-1000

The padding and margin options are the spacing tokens 0, 100, 200, 300, 400, 500, 600, 800, 1000, 1200, 1600, 2000, 2400 and 3000 (`--space-*`, 0 to 7.5rem).

Item model `list-item` — Link, Content and Display tabs

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Page or link (`link`)	aem-content	Yes	No	Empty	The page (its metadata) or the URL	A page of the locale, a path or `https://…`	Required; unsafe schemes skip the item; items without a link are ignored	/content/tcs-corp/us/en/insights/agentic-bank
Link text (`linkText`)	text	No	No	Empty	Title when the page has none	For external links without a Title	Ignored when equal to the URL	Partner portal
Open in a new tab (`newTab`)	select	No	No	As the list (empty)	Per-item target	Yes for external sites	'', true, false	true
Title (`headline`)	text	No	No	Page title	Overrides the card title	Only when the page's card title doesn't fit	None	The agentic bank
Description (`summary`)	text	No	No	Page description	Overrides the description	Plain text, 1–2 sentences	None	How AI is changing banking.

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Image (`image`)	reference	No	No	Page image	Overrides the image	From AEM Assets	None	/content/dam/tcs/insights/agentic.jpg
Image alt text (`imageAlt`)	text	No	No	Page alt (empty = decorative)	Text alternative	Describe meaningful images	None	Bank customer using an AI assistant
Eyebrow (`eyebrow`)	text	No	No	Page eyebrow / category	Overrides the eyebrow	1–3 words	None	Perspective
Tags (`tags`)	aem-tag	No	Yes	Page tags	Overrides the tags	Up to 3 shown	Tag IDs	tcs-corp:industry/banking
Label (`subtitle`)	text	No	No	Empty	Statistic label	Statistic cards	None	Revenue
Call to action label (`ctaLabel`)	text	No	No	Empty (panel Explore, report Download)	Shows a button	1–3 words	None	Read the report
Card style (`kind`)	select	No	No	As the list (empty)	This item's kind	Overrides the list	'', image, panel, report, stat	report
Card colour (`theme`)	select	No	No	As the list (empty)	This item's colour	Overrides the list	'', dark, navy, brand, brand-light, grey, mid-grey, gradient, image	navy
Analytics label (`analyticsLabel`)	text	No	No	Empty	Data layer `dc:title`	Stable name	None (no maxLength in this model)	agentic-bank-card
Accessibility label (`ariaLabel`)	text	No	No	Empty	Link's accessible name	When the title isn't enough	None	Read the agentic bank insight

Field details

Format: Purpose; Allowed Values; Character Limits; Business Rules; Dependency Rules; Visibility Rules (model `condition`); Sample Content. Fields that differ only by breakpoint are described together. The Cards, Layout, Scroll and Additional fields are the same shared fields as in the Cards block; they are repeated here with the List's differences.

Block — Content tab

- **Title (`title`)** — Purpose: list heading, region name and data layer `dc:title`. Allowed: text. Limits: Recommended up to 60 characters. Rules: empty: no heading; the region is named by the Accessible list label, else "List" (placeholder `list`). Dependency: card heading levels. Visibility: always. Sample: "Latest insights".
- **Heading type (`titleType`)** — Purpose: title level. Allowed: h2–h6 (h1 kept in lists made before). Rules: card titles one level lower. Visibility: always. Sample: h2.
- **Description (`description`)** — Purpose: intro. Allowed: rich text. Limits: Recommended up to 200 characters. Visibility: always. Sample: "Our latest thinking."
- **CTA link (`link`)** — Purpose: header call to action destination. Allowed: page or URL. Rules: no link, no CTA (field name unchanged from lists made before). Dependency: CTA text, CTA style. Visibility: always. Sample: the insights overview page.

- **CTA text (`linkText`)** — Purpose: CTA label. Limits: Recommended up to 25 characters. Rules: replaces the link text. Visibility: always. Sample: "View all insights".
- **CTA style (`linkType`)** — Purpose: CTA look. Allowed: Text link (empty), Primary button, Secondary button. Rules: other values: text link; lists made before keep their bold / italic style. Visibility: always. Sample: Text link.
- **Accessible list label (`listLabel`)** — Purpose: region name. Limits: Recommended up to 60 characters. Rules: when set it is the region's `aria-label`; data layer title without a Title. Visibility: always. Sample: "Latest insights".
- **Component ID (`componentId`)** — Purpose: block id, analytics id, card id prefix. Allowed: Enforced pattern (letter first; letters, digits, `-`, `_`), lower-cased in code. Rules: empty: Anchor ID, else `list-1`, `list-2` in page order; duplicates suffixed (logged with `?debug=list`); card ids are `{id}-item-{hash of the destination}`, stable while the destination stays the same. Visibility: always. Sample: "latest-insights".

Block — Source tab

- **List source (`source`)** — Purpose: discovery. Allowed: parent, fixed, tags (Mandatory; invalid: fixed). Rules: decides which fields show and whether the index is loaded (always for Child / Tagged pages; for a Fixed list only when an item links a path). Visibility: always. Sample: tags.
- **Parent page (`parentPath`)** — Purpose: parent of the child pages. Allowed: an AEM path (`/content/tcs-corp/us/en/…`, converted to the published path) or a published path. Rules: only the current locale's pages are in the index. Dependency: Use the current page when empty. Visibility: source = parent. Sample: the industries page.
- **Use the current page when empty (`parentUseCurrentPage`)** — Purpose: current page as the parent. Rules: off without a Parent page: hint `parent-missing`, no items. Visibility: source = parent. Sample: on.
- **Direct children only (`directChildrenOnly`)** — Purpose: depth 1. Rules: on ignores Child depth. Visibility: source = parent. Sample: on.
- **Child depth (`childDepth`)** — Purpose: levels below the parent. Allowed: 1–10 (Enforced). Rules: empty in code = 1 (the dialog pre-fills 2). Visibility: source = parent and Direct children only off. Sample: 2.
- **Search root (`rootPath`)** — Purpose: root of the tagged pages. Allowed: AEM or published path. Rules: the root itself isn't listed. Dependency: Use the current page when empty. Visibility: source = tags. Sample: the insights page.
- **Use the current page when empty (`tagsUseCurrentPage`)** — Purpose: current page as the root. Rules: off without a root: hint `root-missing`. Visibility: source = tags. Sample: on.
- **Tags (`tags`)** — Purpose: tags to match. Allowed: taxonomy tags (multi). Rules: none selected: hint `tags-missing`, no items; child tags match. Visibility: source = tags. Sample: `tcs-corp:topic/ai`.
- **Match (`tagMatch`)** — Purpose: any or all tags. Allowed: any, all. Visibility: source = tags. Sample: any.
- **Include descendant pages (`includeDescendants`)** — Purpose: all levels or children of the root only. Visibility: source = tags. Sample: on.
- **Maximum search depth (`maxDepth`)** — Purpose: depth limit. Allowed: 0–10 (Enforced; 0 = no limit). Visibility: source = tags and Include descendant pages on. Sample: 0.
- **Order by (`orderBy`)** — Purpose: sorting. Allowed: manual (authored order for Fixed, path order for pages), title, lastModified. Rules: ties by path. Visibility: always. Sample: lastModified.
- **Sort order (`sortOrder`)** — Purpose: direction. Allowed: ascending, descending. Visibility: Order by isn't manual. Sample: descending.
- **Maximum items (`maxItems`)** — Purpose: limit. Allowed: 0–200 in the dialog. Rules: applied after deduplication and sorting; 0, empty, negative or invalid = all (no upper limit in code). Visibility: always. Sample: 8.

Block — Cards tab

- **Display as teaser (`displayAsTeaser`)** — Purpose: cards or rows of links. Allowed: on / off. Rules: off ignores card style, colour, ratio, panel height and feature; data layer variant `links`. Visibility: always. Sample: on.

- **Card style (`cardStyle`)** — Purpose: card kind for all items. Allowed: image, panel, report, stat, mixed. Rules: a List Item's own style wins; Mixed picks per card (6.15.3 Variation 5); invalid values: image. Visibility: Display as teaser on. Sample: stat.
- **Card colour (`cardTheme`)** — Purpose: colour of coloured cards. Allowed: empty (default for the style: panel dark, report gradient, statistic grey) or one of 8 colours. Rules: a List Item's colour wins; Image background renders the image only on panels. Visibility: teaser on. Sample: brand.
- **Image ratio (`imageRatio`)** — Purpose: image card image shape. Allowed: 16-9, 1-1, 4-3, 3-2. Rules: invalid: 16-9. Visibility: teaser on. Sample: 1-1.
- **Panel height (`panelHeight`)** — Purpose: shape of panel, report and statistic cards. Allowed: portrait (2:3), compact (9:10), auto (content). Rules: fixed shapes clip overflowing text. Visibility: teaser on. Sample: compact.
- **First card as feature (`featureFirst`)** — Purpose: spotlight the first card. Allowed: on / off. Rules: the feature shows image, tags, reading time, title and the author lockup (Authors sheet, by the page's `author-id`). Visibility: teaser on. Sample: on.
- **Link items (`linkItems`)** — Purpose: make cards clickable. Allowed: on / off. Rules: off: no card links, no call to action buttons, no row arrows. Visibility: always. Sample: on.
- **Open links in a new tab (`openInNewTab`)** — Purpose: default target. Allowed: on / off. Rules: a List Item's Yes / No wins. Visibility: always. Sample: off.
- **Show image / Show eyebrow / Show tags / Show description / Show date / Show call to action (`showImage`, `showEyebrow`, `showTags`, `showDescription`, `showDate`, `showCta`)** — Purpose: hide parts of all cards. Allowed: on / off (default on). Rules: Show tags also hides the reading time; Show call to action off makes titles the links; the feature card always shows its image. Visibility: always. Sample: Show date off.
- **Date format (`dateFormat`)** — Purpose: date display. Allowed: dd-mmm-yy (04 Sep 26), dd-mm-yyyy (04-09-2026), mm-dd-yyyy (09-04-2026), mmm-d-yyyy (Sep 4, 2026), dd/mm/yy (04/09/26). Rules: month names are English abbreviations in every locale; the machine date is in `<time datetime="YYYY-MM-DD">`. Visibility: Show date on. Sample: dd-mm-yyyy.
- **Image loading (`imageLoading`)** — Purpose: loading priority. Allowed: lazy, eager. Rules: eager also sets `fetchpriority="high"`. Visibility: always. Sample: lazy.

Block — Layout tab

- **Desktop / Tablet / Mobile display (`desktopMode`, `tabletMode`, `mobileMode`)** — Purpose: grid or horizontal scroll per breakpoint (desktop ≥ 1200 px, tablet 600–1199 px, mobile < 600 px). Allowed: grid, horizontal-scroll. Rules: independent per breakpoint (8 combinations); invalid: grid. Visibility: always. Sample: Mobile = horizontal-scroll.
- **Columns (`desktopColumns`, `tabletColumns`, `mobileColumns`)** — Purpose: grid columns. Allowed: 1–6 (Enforced; rounded). Defaults 4 / 4 / 1. Visibility: that breakpoint's display = grid. Sample: 3 / 2 / 1.
- **Gap (px) (`desktopGap`, `tabletGap`, `mobileGap`)** — Purpose: space between cards. Allowed: 0–120 (Enforced). Defaults 24 / 24 / 16; converted to rem. Visibility: always. Sample: 24.
- **Items visible (`desktopVisible`, `tabletVisible`, `mobileVisible`)** — Purpose: card width in a scroller as the number of visible cards. Allowed: 1–8, decimals (Enforced). Defaults 4.2 / 3.3 / 1.2. Dependency: ignored when Card width is set. Visibility: display = horizontal-scroll. Sample: 1.2.
- **Card width (px) (`desktopCardWidth`, `tabletCardWidth`, `mobileCardWidth`)** — Purpose: fixed card width. Allowed: 0 or 120–1200 (model 0–1200; values below 120 count as 0). Visibility: horizontal-scroll. Sample: 320.
- **Previous / next buttons on … (`desktopControls`, `tabletControls`, `mobileControls`)** — Purpose: buttons below the scroller. Default off. Rules: shown only when the cards overflow. Visibility: horizontal-scroll. Sample: on (desktop).
- **Scroll indicator on … (`desktopIndicator`, `tabletIndicator`, `mobileIndicator`)** — Purpose: progress bar. Defaults off / off / on. Rules: shown only when the cards overflow. Visibility: horizontal-scroll. Sample: on (mobile).
- **Equal card height (`equalHeight`)** — Purpose: equal grid rows. Default off. Visibility: always. Sample: off.

- **Stretch cards to row height (`stretchCards`)** — Purpose: cards fill their row. Default on. Visibility: always. Sample: on.

Block — Scroll tab (all: Visibility always, except Snap alignment)

- **Scroll snap (`scrollSnap`)** — Purpose: snapping. Default on. Rules: suspended while dragging. Sample: on.
- **Snap alignment (`snapAlign`)** — Purpose: snap position. Allowed: start, center. Visibility: Scroll snap on. Sample: center.
- **Hide native scrollbar (`hideScrollbar`)** — Purpose: hide the browser scrollbar. Default on. Sample: on.
- **Allow mouse drag (`mouseDrag`)** — Purpose: drag scrolling with a mouse (a drag doesn't follow the link under the pointer; 6 px threshold). Default on. Sample: on.
- **Allow touch swipe (`touchSwipe`)** — Purpose: swipe. Default on. Rules: off sets `touch-action: pan-y` (buttons still work). Sample: on.
- **Keyboard scrolling (`keyboardScrolling`)** — Purpose: arrow keys, Home, End on the focused scroller. Default on. Sample: on.
- **Scroll step (`scrollStep`)** — Purpose: step of buttons / keys. Allowed: one-card, viewport. Sample: one-card.
- **Loop (`loop`)** — Purpose: wrap around at the ends. Default off. Sample: off.
- **Initial item index (`initialIndex`)** — Purpose: card shown first. Allowed: 0–200 (Enforced). Sample: 0.
- **Edge (`edgePadding`)** — Purpose: bleed to the screen edge. Allowed: bleed, none. Sample: bleed.
- **Reduced motion support (`reducedMotion`)** — Purpose: instant instead of smooth scrolling for `prefers-reduced-motion`. Default on. Sample: on.

Block — Advanced tab

- **When there are no items (`emptyBehavior`)** — Purpose: empty state. Allowed: hide, message, fallback (invalid: message). Rules: fallback renders the List Items (Child / Tagged pages only); in edit mode problem hints replace the message. Visibility: always. Sample: message.
- **Empty message (`emptyMessage`)** — Purpose: empty state text. Limits: Recommended up to 80 characters. Rules: empty: placeholder `listEmpty`. Visibility: behaviour = message. Sample: "No insights yet."
- **Analytics (`analyticsEnabled`)** — Purpose: data layer. Rules: off: `data-analytics="off"`, no state, no events. Visibility: always. Sample: on.
- **Style options (`classes`)** — Purpose: block classes. Allowed: stat-compact, dividers, header-center (multi). Visibility: always. Sample: dividers.

Block — Additional tab

- **Anchor ID (`classes_anchor`)** — Purpose: in-page anchor. Allowed: `anchor-` + lower-case letters, digits, hyphens (Enforced). Rules: becomes the block id when there is no Component ID; duplicates get `-2`, `-3`. Visibility: always. Sample: anchor-key-facts.
- **Hide block (`classes_hideblock`)** — Purpose: temporarily hide. Rules: hidden on the page and in preview; shown faded in edit mode. Visibility: always. Sample: off.
- **Padding left / right / top / bottom (`classes_paddingleft`, `classes_paddingright`, `classes_paddingtop`, `classes_paddingbottom`)** and **Margin left / right / top / bottom (`classes_marginleft`, `classes_marginright`, `classes_margintop`, `classes_marginbottom`)** — Purpose: spacing around / inside the block. Allowed: empty or a token class (`pl-0` … `pl-3000`, etc.). Rules: styled in `styles/styles.css`. Visibility: always. Sample: mt-1000.

List Item

- **Page or link (`link`)** — Purpose: the item's page (its metadata) or destination. Allowed: a page, a path, `https://`, `mailto:`, `tel:` (Mandatory). Rules: unsafe schemes and empty links skip the item; same-site absolute URLs are read as paths; a path that isn't an indexed page becomes a link card with only the item's values; internal links are replaced by their redirect targets from `/{locale}/redirects.json`. Visibility: always. Sample: an insight page.

- **Link text (`linkText`)** — Purpose: title fallback. Rules: used when there is no Title override and no page title (e.g. external links); ignored when it equals the URL. Sample: “Partner portal”.
- **Open in a new tab (`newTab`)** — Purpose: per-item target. Allowed: As the list, Yes, No. Sample: Yes.
- **Title (`headline`)** — Purpose: overrides the card title (`card-title`, else the page title). Limits: Recommended up to 60 characters (statistics: the number). Rules: an item without any title is skipped. Sample: “The agentic bank”.
- **Description (`summary`)** — Purpose: overrides the description (plain text). Limits: Recommended up to 160 characters. Sample: “How AI is changing banking.”
- **Image (`image`) and Image alt text (`imageAlt`)** — Purpose: override the card image and its alt. Rules: an override image uses its own alt (empty = decorative); without an override image an alt override replaces the page’s alt. Limits: alt Recommended up to 125 characters. Sample: an AEM Assets image.
- **Eyebrow (`eyebrow`)** — Purpose: overrides `eyebrow` / `category`. Limits: Recommended up to 30 characters. Sample: “Perspective”.
- **Tags (`tags`)** — Purpose: replaces all the page tags. Rules: up to 3 shown. Sample: `tcs-corp:industry/banking`.
- **Label (`subtitle`)** — Purpose: statistic label above the description. Sample: “Revenue”.
- **Call to action label (`ctaLabel`)** — Purpose: a button as the card’s one link. Limits: Recommended up to 20 characters. Rules: panels default “Explore”, reports “Download”. Sample: “Read the report”.
- **Card style (`kind`)** — Purpose: per-item kind. Allowed: As the list, image, panel, report, stat. Rules: wins over the list’s style and Mixed. Sample: report.
- **Card colour (`theme`)** — Purpose: per-item colour. Allowed: As the list or one of 8 colours. Sample: navy.
- **Analytics label (`analyticsLabel`)** — Purpose: data layer `dc:title` and `data-analytics-label`. Limits: not enforced in the List Item model (the Card model enforces 120); Recommended up to 120 characters. Sample: “agentic-bank-card”.
- **Accessibility label (`ariaLabel`)** — Purpose: accessible name of the card link. Limits: Recommended up to 100 characters. Sample: “Read the agentic bank insight”.

6.16.7 Field Annotation Mapping

Marker	Field	Purpose
A	Title (`title`), Heading type (`titleType`)	List heading; names the region
B	Description (`description`)	Intro text
C	CTA link (`link`), CTA text (`linkText`), CTA style (`linkType`)	Header call to action
D	List Item (model `list-item`); Card style (`kind`), Card colour (`theme`)	One card; its own kind and colour
E	Page metadata `card-image` (…); List Item Image (`image`), Image alt text (`imageAlt`)	Card image and alt
F	Page `eyebrow` / `category`, tags, `reading-time`; List Item Eyebrow (`eyebrow`), Tags (`tags`)	Kicker
G	Page `card-title` / title; List Item Page or link (`link`), Title (`headline`), Link text (`linkText`)	Card title and link
H	Page `card-description` / description; List Item Description (`summary`)	Card text
I	Page `content-type`, `modified-date` / `publish-date`	Meta row
J	List Item Call to action label (`ctaLabel`), Open in a new tab (`newTab`)	Card button
K	`{bp}Controls`, `{bp}Indicator` (Layout tab)	Previous / next and indicator

Marker	Field	Purpose
L	Content tree: List Items	Fixed list and fallback items

6.16.8 Component Specification

Attribute	Value
Component Name	List (`list`), item List Item (`list-item`)
Version	1.0
Owner	[To be confirmed: product owner — owner: TCS digital marketing]; technical owner: development team
Dependencies	`blocks/list/list-data.js`, `decorators/card-list-decorator.js`, `decorators/scroller-decorator.js`, `utils/card-list-config.js`, `utils/query-index.js`, `utils/redirects.js`, `utils/data.js`, `utils/site.js`, `utils/taxonomy.js`, `utils/placeholders.js`, `utils/analytics.js`, `styles/card-list.css`; `/query-index.json`, redirects, authors, taxonomy and placeholders sheets
Component Type	Container block (key-value settings) with item components (List Item)
Supported Variants	Sources Child pages (with depth), Fixed list, Tagged pages (any / all); order manual / title / last modified; maximum items; fallback items; the shared presentation (card styles, feature with author, rows of links, 8 colours, 4 ratios, 3 panel heights, 3 style options, grid / scroll per breakpoint with its options); Figma variations 1–14
Supported Templates	Any page
Supported Metadata	Of the listed pages: `card-title`, `title`, `card-description`, `description`, `card-image`, `og:image`, `thumbnail-image`, `featured-image`, `card-image-alt`, `image-alt`, `eyebrow`, `category`, tags, `modified-date`, `publish-date`, `content-type`, `reading-time`, `author-id`, `hide-in-nav` (from the query index)
Supported Tags	Tagged pages source (any / all, child tags included); card tags from page tags or item overrides; labels from the locale taxonomy
Supported Personalization	None. Data layer state and events are ready for Adobe Target / Journey Optimizer through Adobe Tags (not implemented as of this handover)
Caching Considerations	Page HTML cached by the Edge Delivery CDN; `/query-index.json` (500 rows per request) loaded once per page view and cached in memory (shared with other blocks); redirects, authors, taxonomy and placeholders sheets loaded once and cached; index updates after publication, so new pages appear after indexing
Performance Considerations	Index, redirects and authors (feature only) are fetched in parallel; the index is fetched only when needed (not for Fixed lists of external links only); images lazy by default, optimized `/media_` renditions (750 / 600 px; feature 1600 / 750 px); CSS-only layout and scrolling; the list renders after the data arrives (avoid a List as the LCP element)
Accessibility Compliance	WCAG 2.1 AA target, as Cards (6.15.8): named region, list semantics, heading levels, one link per card, named buttons, focus management, `<time>`, reduced motion; same known contrast and new-tab gaps
SEO Compliance	Cards are rendered in the browser from the index (the links are in the DOM after JavaScript); descriptive titles from the pages' metadata; links point to redirect targets (no redirect chains)

6.16.9 Input Model

Content Inputs: the block settings (key | value rows) and List Item rows (Page or link with link text, Title, Description, Image with alt, Eyebrow, Tags, Label, Call to action label, Open in a new tab, Card style, Card colour, Analytics label, Accessibility label).

Metadata Inputs (of the listed pages, in order of preference — `PAGE_MAPPING` in `list-data.js`):

Card part	Metadata (query index column)
Title	`card-title` (`cardTitle`), else the page title (`title`), else the last path segment
Description	`card-description`, else `description`
Image	`card-image`, else `og:image` (`image`, unless it's the site's `default-meta-image`), `thumbnail-image`, `featured-image`
Image alt	`card-image-alt`, else `image-alt`; else decorative
Eyebrow	`eyebrow`, else `category`
Tags	page tags (`tags`)
Date	`modified-date`, else `publish-date`, else the last publication (`lastModified`)
Content type / reading time / author	`content-type`, `reading-time`, `author-id`
Hidden	`hide-in-nav` = yes / true / 1 / on / y: not listed

Tags Inputs: the Tags of the Tagged pages source (IDs), the pages' tags, List Item tag overrides; labels from `/{locale}/taxonomy.json`.

Page Context Inputs: the current page's published path (the default parent / root), the locale (index rows of the locale only, locale sheets), the page language (`<html lang>`, for title sorting), the origin (external links), the editor mode.

Query Inputs: `/query-index.json?offset={n}&limit=500` (all rows, filtered in the browser by path, depth, tags and `hide-in-nav`); `/{locale}/redirects.json` (Source, Destination; up to 5 hops, loops stopped); `/{locale}/data/authors.json` when First card as feature is on. No repository (JCR) queries run in the browser. A query index row:

```
{
  "path": "/en/insights/agentic-bank",
  "title": "The agentic bank",
  "description": "Banking is entering a new era.",
  "image": "/default-meta-image.png",
  "tags": "[\"tcs-corp:industry/banking\",\"tcs-corp:topic/ai\"]",
  "contentType": "Article",
  "publishDate": "2026-09-04",
  "readingTime": "16",
  "thumbnailImage": "/en/media/agentic.jpg",
  "cardTitle": "", "cardDescription": "", "cardImage": "", "eyebrow": "",
  "hideInNav": "",
  "lastModified": "1790000300"
}
```

Manual Inputs: the Fixed list items and their overrides; the settings.

Authored HTML received from AEM (simplified; settings as key | value rows, then List Item rows):

```
<div class="list">
  <div><div><p>title</p></div><div><p>Latest insights</p></div></div>
  <div><div><p>source</p></div><div><p>fixed</p></div></div>
  <div><div><p>cardStyle</p></div><div><p>mixed</p></div></div>
  <div>
    <div><p><a href="/en/insights/agentic-bank">/en/insights/agentic-bank</a></p></div>
    <div><p>The agentic bank</p></div>
```

```
    <div><p>How AI is changing banking.</p></div>
    <div></div>
    <div><p>Perspective</p></div>
  </div>
</div>
```

A two-cell row whose first cell is a List setting is a setting; other rows are List Items (cells matched to the 13 item fields, also when AEM leaves out unset ones). A list with no setting rows and only single-cell rows is a list made before (title and CTA).

6.16.10 Output Model

Rendered Output: as Cards (6.15.10): `card-list` with the layout classes and custom properties, `source-{parent,fixed,tags}` instead of `source-manual`; `div.list-header`, optional `article.list-feature` (with `div.list-author`), `div.list-scroller[role=region] > ul.list-items > li.list-item > article.list-card`… or `article.list-row`, and `div.list-nav`. Lists made before: `card-list list-legacy` with the header only.

Generated HTML (one card of a Tagged pages list, shortened):

```
<div class="list block card-list desktop-scroll tablet-scroll mobile-scroll
  mobile-indicator snap hide-scrollbar edge-bleed stretch snap-start teaser style-mixed
  ratio-16-9 panel-portrait source-tags" id="list-1" data-analytics="custom">
  <div class="list-header">…</div>
  <div class="list-scroller" id="list-1-items" role="region" aria-labelledby="list-1-
title">
    <ul class="list-items">
      <li class="list-item" data-card-id="list-1-item-hxobwp" data-cmp-id="list-1-item-
hxobwp"
        data-cmp-position="1">
        <article class="list-card list-card-image">
          <div class="list-card-media"><picture>…</picture></div>
          <p class="list-card-kicker"><span>Banking</span><span>AI</span><span>16m</
span></p>
          <h3 class="list-card-title"><a class="list-card-link"
            href="/en/insights/agentic-bank" data-card-id="list-1-item-hxobwp"
            data-cmp-interaction="card">The agentic bank</a></h3>
          <p class="list-card-description">Banking is entering a new era.</p>
          <p class="list-card-meta"><span>Article</span>
            <time datetime="2026-09-04">04 Sep 26</time></p>
        </article>
      </li>
    </ul>
  </div>
  <div class="list-nav">…</div>
</div>
```

Generated JSON: none.

Generated Metadata: none.

Analytics Tracking: with Analytics on (Adobe Client Data Layer, Core Components schema):

```
{ component: {
  'list-1': { '@type': 'tcs-corp/components/list', parentId: 'page-1x2y3z',
    'dc:title': 'Latest insights', 'xdm:listSource': 'tags', 'xdm:variant': 'mixed' },
  'list-1-item-hxobwp': { '@type': 'tcs-corp/components/list/item', parentId: 'list-1',
    'dc:title': 'The agentic bank', 'xdm:linkURL': '/en/insights/agentic-bank',
```

```
    'xdm:position': 1, 'repo:modifyDate': '2026-09-04' },
} }
{ event: 'cmp:click', eventInfo: { path: 'component.list-1-item-hxobwp', interaction:
'card',
  'dc:title': 'The agentic bank',
  'xdm:linkURL': 'https://main--tcs-corp--sradha-tcs.aem.live/en/insights/agentic-bank',
  'xdm:linkType': 'other', breakpoint: 'desktop' } }
{ event: 'cmp:click', eventInfo: { path: 'component.list-1', interaction: 'next',
  'dc:title': 'Next items', 'xdm:linkType': 'other', breakpoint: 'desktop' } }
```

`xdm:variant` is the card style or `links`; `xdm:position` is the shown order (including the feature card as position 1); card ids are stable hashes of the destination. As for Cards, the click events carry no `position` for card links, feature card clicks use the list's path, the header CTA reports `interaction: 'cta'`, external links `exit`, files `download`. Analytics off: `data-analytics="off"`. A `?debug=list` URL parameter logs `[list] config` (with warnings) and `[list] cards` with `console.debug`.

Personalization Output: none.

Search Index Output: the List consumes the query index; it adds nothing to it. The page containing the List is indexed with its own metadata. Because the cards are rendered in the browser, crawlers that don't run JavaScript don't see the card links.

Target Personalization Output: None. The List has no personalisation option; its data layer state (tcs-corp/components/list with xdm:listSource and xdm:variant, each item with dc:title, xdm:linkURL and xdm:position) and its click events are ready for Adobe Target / Journey Optimizer through Adobe Tags: Not implemented (as of this handover).

6.16.11 Business Rules

1. The block is decorated once (`data-list-decorated`).
2. Rows: two-cell rows whose normalized first cell is a List setting (the shared presentation settings plus source, parentpath, parentusecurrentpage, directchildrenonly, childdepth, rootpath, tagsusecurrentpage, tags, tag-match, includedescendants, maxdepth, orderby, sortorder, maxitems) are settings; rows instrumented as `list-item`, and other rows, are List Items.
3. A list without setting rows whose rows all have at most one cell is a list made before: only its heading and link are rendered (`list-legacy`), with the CTA style read from bold / italic formatting.
4. Paths (Parent page, Search root) are converted from AEM paths to published paths (`toPublishedPath`) and normalized (no `.html`, query, hash or trailing slash).
5. Defaults when missing or invalid: source fixed; parent / root = the current page (Use the current page on); direct children only; child depth 1 when empty (dialog 2), clamped 1–10; match any; descendants included; maximum depth 0 (no limit), clamped 0–10; order manual, ascending; maximum items all; empty behaviour message; presentation defaults as Cards (6.15.11 rule 10).
6. Editor warnings (shown only in edit mode when the list is empty): `tags-missing` (Tagged pages without tags), `parent-missing` (no parent and Use the current page off), `root-missing` (no root and Use the current page off), `items-missing` (Fixed list without items).
7. The query index is loaded only when needed: for Child / Tagged pages, and for a Fixed list with at least one item linking a path (an item written as an absolute URL of the site alone doesn't trigger it, so such items get no page metadata unless another item links a path). It is read in pages of 500 rows, once per page view, cached, and filtered to the current locale (rows below the locale root). A missing or failing index gives no pages (no error), and the empty behaviour applies.
8. The redirects sheet is loaded for every List; the Authors sheet only with First card as feature (a failure gives no author).
9. Listable pages: a path, and `hide-in-nav` not yes / true / 1 / on / y.

10. Child pages: pages below the parent (not the parent itself) at most Child depth levels down.
11. Tagged pages: pages below the root (not the root itself), all levels (or Maximum search depth levels) with Include descendant pages on, else children only; then tag matching — any or all selected tags; a page tag matches a selected tag when it equals it or is a child tag (`{tag}/…`). No tags: no pages.
12. Fixed list: items without a link, or with an unsafe link (not http(s), mailto, tel or a path), are skipped; a same-site absolute URL is read as its path; an indexed page gives its metadata card; another path or external URL gives a card with only the item's values; after overrides, an item without a title is skipped.
13. Overrides (Fixed): Title, Description, Eyebrow, Label, Call to action label, Analytics label, Accessibility label, Card style and Card colour replace the page values when set; the Link text is the title when there is still none; an override image replaces the page image and its alt; Tags replace all page tags; Open in a new tab Yes / No replaces the list default.
14. Card mapping from the index: see 6.16.9 (title fallback: the last path segment with hyphens as spaces; the site's default social image is never a card image).
15. Links of pages (and internal Fixed links) use the redirect target from `/{locale}/redirects.json`, followed up to 5 hops and stopped on loops; external targets end the chain.
16. Deduplication: by destination (path without `.html`, query, hash and trailing slash, or the full external URL, lower case); the first card with a key is kept; cards without a key are dropped.
17. Sorting: Manual keeps the authored order for Fixed lists and uses path order for pages; Title uses a locale-aware, case-insensitive, numeric collator; Last modified uses `modified-date`, else the last publication time (external links 0); Descending reverses; ties by path.
18. Maximum items is applied after deduplication and sorting; 0, empty, negative or invalid values list all.
19. Card ids: `{component id}-item-{hash}` (djb2 hash of the deduplication key).
20. Fallback: with Show the fallback items and no cards from Child / Tagged pages, the List Items are processed as a Fixed list (same rules 12–18).
21. Tag labels from the locale taxonomy (unknown IDs: derived labels).
22. Feature card: the first card after sorting and limiting; the author from the Authors sheet where `id` equals the page's `author-id` (exact match), with photo (decorative), name and designation.
23. Presentation rules 12–32 of Cards (6.15.11) apply unchanged (card kind, colours, tags limits, reading time, dates, linking, call to action defaults and types, new tab, images, feature, rows, heading levels, region name, scrolling, buttons, keys, drag, reduced motion). The region's fallback name is "List" (placeholder `list`).
24. Empty list: on the page, Hide the list empties and hides the block and its wrapper; Show a message shows the Empty message, else `listEmpty`. In edit mode: the warnings (rule 6) as "Set up the list in its properties: {problems}." (`listEditorHint`); for Child / Tagged pages without index data "The pages show on the published page (from the query index)." (`listEditorPages`); else the message.
25. Duplicate Component IDs are suffixed; `?debug=list` logs the duplicate, the configuration, warnings and the cards with `console.debug`.
26. Analytics on: state with `xdm:listSource` and `xdm:variant`; off: `data-analytics="off"`. Analytics errors never break rendering.
27. All texts are set with `textContent` (no HTML injection from metadata); one invalid item never breaks the others.

6.16.12 Author Best Practices

Recommended Content Length (Recommended; set on the listed pages as metadata or as item overrides)

Element	Recommended length
List title	Up to 60 characters
List description	Up to 200 characters

Element	Recommended length
`card-title` / Title override	Up to 60 characters
`card-description` / Description override	Up to 160 characters (panels: 120)
`eyebrow` / `category`	1–3 words
Statistic Title override	Up to 8 characters (or Compact statistic title)
Call to action label	1–3 words
Items	Grid: a multiple of the columns; rails 5–12; set Maximum items for Child / Tagged lists

Image Dimensions

Use	Ratio (CSS)	Recommended source
`card-image` / item image, 16:9	16 / 9	1600 × 900 px
1:1, 4:3, 3:2 ratios	1 / 1, 4 / 3, 3 / 2	1200 × 1200, 1600 × 1200, 1500 × 1000 px
Image background panels	2 / 3, 9 / 10 or content	1200 × 1800 px
Feature card	Full width, min. 35.625rem high (desktop)	2400 × 1200 px, subject on the right
Author photo (Authors sheet)	Round, 2.5rem	Square, at least 160 × 160 px

Give pages a dedicated `card-image` when the page's social image doesn't crop well; the site's default social image (`default-meta-image`) is never used as a card image.

CTA Writing Guidelines

- Header CTA: "View all {topic}" to the overview or archive page.
- Item Call to action labels: verbs ("Read the report", "Explore banking").
- Report lists linking to pages: replace "Download" with a label that matches the destination.

Accessibility Guidelines

- Write meaningful `card-title` and `card-image-alt` metadata on the pages.
- Give lists without a title an Accessible list label.
- Choose the heading type that fits the page outline.
- Use Accessibility labels for items with similar titles; mention new tabs on call to action buttons.
- Check contrast on Brand blue and Image background cards.

SEO Guidelines

- Keep `card-title` close to the page title (consistent anchor texts).
- Use the List for internal linking of hubs (Child pages) and topic clusters (Tagged pages).
- Maintain the redirects sheet when pages move; the List links to the redirect target.
- The cards are rendered with JavaScript; important links should also exist in the page's navigation or text.

Metadata Guidelines

- Maintain per page (page metadata or the locale's bulk metadata sheet): `card-title`, `card-description`, `card-image`, `card-image-alt`, `eyebrow` or `category`, `content-type` (Article, Report, …), `publish-date` / `modified-date` (YYYY-MM-DD), `reading-time` (minutes), `author-id` (matching the Authors sheet), `hide-in-nav` (yes to keep a page out of lists).
- Use `content-type` = Report for pages that should become report cards in Mixed lists.
- After changing metadata, republish the page so the index updates.

Taxonomy Guidelines

- Tag pages with governed tags of the locale taxonomy (Part 7); Tagged pages lists match child tags automatically — select the parent tag to include its children.
- Use Match All only for intentional intersections; it narrows lists quickly.
- Keep tags consistent across locales so equivalent lists work in every locale.

Localization Guidelines

- A List only lists pages of its own locale (index rows below the locale root): configure the same List in each locale copy (Parent page / Search root of that locale).
- Card texts come from each locale's page metadata; translate `card-title` and `card-description` with the pages.
- UI texts come from the locale placeholders sheet (`listPrevious`, `listNext`, `opensInNewTab`, `explore`, `download`, `listEmpty`, `listEditorHint`, `listEditorPages`, `minutesShort`, `list`).
- Title sorting uses the page language (`<html lang>`); month abbreviations in dates are English — prefer numeric date formats in non-English locales.

6.16.13 Troubleshooting Guide

Issue 1 — In Universal Editor the List shows no cards

Symptoms: A Child pages or Tagged pages List shows "The pages show on the published page (from the query index)." in the editor; a Fixed list shows fewer items than authored.

Root Cause: The query index isn't available in the editor, so pages can't be discovered; Fixed list items linking pages are shown only when they have a Title override or a Link text (their metadata comes from the index).

Diagnosis Steps: Check the source; open the page on `aem.page` / `aem.live` to see the real result.

Resolution Steps: None needed for Child / Tagged lists (expected). For Fixed lists, add Title overrides if the editor view must show the items, or validate on preview.

Validation Steps: The preview / live page shows the cards.

Preventive Measures: Always validate Lists on the preview page, not only in the editor.

Issue 2 — A new or changed page doesn't appear in the List

Symptoms: A page that should be listed is missing, or old card content is shown.

Root Cause: The page isn't published or not yet indexed; it has `hide-in-nav` = yes; it is outside the Parent page / Search root or deeper than Child depth / Maximum search depth; it doesn't have the tags (or Match = All); it belongs to another locale; Maximum items cut it off; it is in a path excluded by `helix-query.yaml` (references, error pages, data, block library, templates).

Diagnosis Steps: Open `/query-index.json` on the live host and search for the path; check its columns (`tags`, `hideInNav`, `cardTitle`, …); open the page with `?debug=list` and read `[list] config` and `[list] cards` in the console.

Resolution Steps: Publish the page; fix its metadata or tags; adjust the List's root, depth, tags, match or maximum; re-index the page via the Admin API if needed (L2).

Validation Steps: The page is in the index and the List shows it.

Preventive Measures: Publish pages before linking them; maintain metadata with the bulk metadata sheet.

Issue 3 — Wrong, missing or generic card image

Symptoms: Cards without images, or with an unexpected image.

Root Cause: The page has no `card-image`, its social image is the site's default (skipped), and it has no `thumbnail-image` / `featured-image`; or `card-image` points to an unpublished asset; or Show image is off.

Diagnosis Steps: Check the index row (`cardImage`, `image`, `thumbnailImage`, `featuredImage`) and the page metadata.

Resolution Steps: Set `card-image` (and `card-image-alt`) on the page or bulk sheet and republish; or add an Image override on the List Item.

Validation Steps: The card shows the right image with alt text.

Preventive Measures: Define card images for every listable page type.

Issue 4 — A Tagged pages List is empty or lists too much

Symptoms: No cards (or the message), or unrelated pages.

Root Cause: No tags selected (`tags-missing`); Match = All with tags that no page has together; a too narrow or too broad Search root; parent tags include all child tags.

Diagnosis Steps: Check the Source tab; compare the pages' `tags` in the index; use `?debug=list`.

Resolution Steps: Select the right tags, change Match, set the Search root or Maximum search depth.

Validation Steps: The expected pages are listed.

Preventive Measures: Agree list tag strategies with the taxonomy owner (Part 7).

Issue 5 — A Fixed list item is missing

Symptoms: An authored List Item has no card.

Root Cause: No link or an unsafe link; no title (no override, no page title — e.g. an external link without Link text); a duplicate destination (kept once); Maximum items; a same-site absolute URL while no other item links a path (the index isn't loaded, so there is no page metadata).

Diagnosis Steps: Check the item's Page or link, Title, Link text; look for duplicates; `?debug=list`.

Resolution Steps: Pick the page with the page picker (a path), add a Title or Link text, remove duplicates.

Validation Steps: The item shows.

Preventive Measures: Use the page picker for internal pages; give external links a Title.

Issue 6 — The order of the cards is unexpected

Symptoms: Child or tagged pages aren't in the AEM tree order; "newest first" isn't right.

Root Cause: Order by Manual uses the path order for pages (the repository order isn't in the index); Last modified uses `modified-date` if set, else the last publication time (a republish moves a page up).

Diagnosis Steps: Check Order by / Sort order and the pages' `modified-date` values.

Resolution Steps: Use Title or Last modified with consistent `modified-date` metadata, or use a Fixed list for an editorial order.

Validation Steps: The order matches the expectation.

Preventive Measures: Maintain `modified-date` / `publish-date` for news and insights.

Issue 7 — A card links to a different URL than the page

Symptoms: The card goes to another page than the listed one.

Root Cause: The locale's redirects sheet has an entry for the page path; the List links to the final target (up to 5 hops).

Diagnosis Steps: Check `/{locale}/redirects.json` for the path.

Resolution Steps: Correct or remove the redirect; or hide the old page (`hide-in-nav`).

Validation Steps: The card links where expected.

Preventive Measures: Review redirects when moving pages.

Issue 8 — The feature card has no author
Symptoms: The feature card shows tags and title but no author photo / name.

Root Cause: The page has no `author-id`, or it doesn't match an `id` in `/{locale}/data/authors.json` exactly, or the Authors sheet isn't published.

Diagnosis Steps: Compare the index `authorId` with the Authors sheet ids.

Resolution Steps: Fix the `author-id` metadata or the Authors sheet and publish.

Validation Steps: The lockup shows name, designation and photo.

Preventive Measures: Use the Authors sheet ids consistently (Part 9).

Issue 9 — "There are no items to show." on the live page
Symptoms: The live List shows the empty message.

Root Cause: Nothing matches the source settings; the index request failed (network, CDN); the fallback items are empty.

Diagnosis Steps: Browser network tab: `/query-index.json` responses; `?debug=list`.

Resolution Steps: Fix the settings or content; if the index fails, escalate to L2 / L3.

Validation Steps: Cards show.

Preventive Measures: Use Show the fallback items for critical lists.

Issue 10 — An older List shows only a title and a link
Symptoms: A List created before this version renders a large title and a CTA without cards.

Root Cause: Lists made before (positional rows, no key-value settings) render as `list-legacy` (header only), by design.

Diagnosis Steps: The block has the class `list-legacy`.

Resolution Steps: Replace it with a new List and configure the source.

Validation Steps: The new List shows cards.

Preventive Measures: Inventory legacy Lists before go-live.

6.16.14 Support Runbook
Monitoring Requirements

- Availability and size of `/query-index.json` (the List and Filter List depend on it); watch for index growth (all rows are loaded in 500-row pages).
- Core Web Vitals of pages with Lists in the first screen (the cards appear after the index loads).
- After code releases touching the shared card list files, check Lists and Cards on key pages.
- Data layer checks once Adobe Tags is implemented — [To be confirmed: analytics monitoring owner — owner: analytics team].

Logs

- `?debug=list`: `[list] config` (normalized settings and warnings), `[list] cards`, and `component id "…" is used twice` (`console.debug`, visible with verbose console levels).
- `failed to load block list` / `failed to load module for list` from `scripts/aem.js`.

- Network: `/query-index.json?offset=…&limit=500`, `/{locale}/redirects.json`, `/{locale}/data/authors.json`, `/{locale}/taxonomy.json`, `/{locale}/placeholders.json`.
- Admin API: page status `https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`; indexing via the Admin API index endpoint (`/index/sradha-tcs/tcs-corp/main/{path}`).
- AEM author: publication / replication logs in Cloud Manager.

Common Errors

Error	Likely cause	Action
Editor: "The pages show on the published page"	No index in the editor	Validate on preview
Editor: "Set up the list in its properties: tags-missing"	Tagged pages without tags	Select tags
Editor: "… parent-missing" / "… root-missing"	No parent / root, current page off	Set the path or turn the option on
Editor: "… items-missing"	Fixed list without items	Add List Items
Page missing from the list	Not published / indexed, hidden, outside root, tags	See Issue 2
Empty message on live	No matches or index failure	See Issue 9
Wrong link target	Redirects sheet	Check redirects
No author on the feature	`author-id` mismatch	Fix metadata / Authors sheet

Escalation Matrix

Level	Who	Checks	Escalate when
L1	Author support / content team	Source settings, tags, page metadata, publish state, List Items, ? `debug=list` output	Settings and content are right but the list is wrong
L2	AMS / site admin	Query index content and freshness, `helix-query.yaml` exclusions, redirects / authors / taxonomy sheets, Admin API status and re-indexing, CDN cache	Code or index configuration problems
L3	Development team	`blocks/list/*`, `list-data.js` unit tests (`npm test`), shared card list code, `helix-query.yaml`	Platform problems
L4	Adobe Support	Edge Delivery indexing and delivery, Universal Editor, AEM as a Cloud Service	—

[To be confirmed: names, contact channels and response times per level — owner: service manager].

Recovery Procedures

1. Content: restore and republish the page (and the listed pages' metadata if changed).
2. Index: republish affected pages or re-index them via the Admin API (L2).
3. Code: revert the commit on `main` (affects Cards too when shared files change).
4. Mitigation: Hide block, or switch the List temporarily to a Fixed list.

Health Checks

- `npm test` passes `test/list/list-data.test.mjs` (sources, metadata, redirects, deduplication, sorting, maximum items, ids, card kinds, the eight responsive combinations).
- `/query-index.json` returns rows for each locale with the card columns.
- Block library pages render every source and Figma variation.
- On a live page `?debug=list` shows no warnings for configured lists.

Operational Procedures

- New card metadata columns need `helix-query.yaml` and `PAGE_MAPPING` changes (development) and a re-index.
- New placeholders keys must be added to all 13 locale placeholders sheets.
- Model changes (`_list.json`, `models/_card-list.json`) require `npm run build:json` and lint.

Known Limitations

- Content Fragment lists aren't supported (by decision); no full-text search source.
- Child and tagged pages come from the query index: unpublished, excluded or not yet indexed pages aren't listed; Manual order for pages is the path order.
- Tag matching includes child tags (by design).
- In Universal Editor the index isn't available; pages show on the published page.
- Statistic cards don't style "bn"-style units separately; Figma's two-tone title (variation 6) isn't an option; Figma 14's edge-to-edge row isn't reproduced.
- Cards are rendered with JavaScript from the index (not in the delivered HTML).
- The current page isn't excluded from its own Tagged pages list.
- Card click events carry no `position`; feature card clicks use the list's path; the new-tab hint isn't announced on call to action buttons; English month abbreviations in dates.
- The List Item's Analytics label has no length limit in the model (the Card's has 120).

6.16.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
The List shows only a hint in Universal Editor	Child and Tagged pages come from the query index, which isn't available in the editor	Validate the List on aem.page
A published page is missing from the list	Not indexed yet, hide-in-nav = yes, outside the root or depth, missing tags, or cut by Maximum items	Check /query-index.json and ?debug=list, then fix the page or the settings
Tagged pages list empty	No Tags selected or Match All with tags no page has together	Select the tags and check Match
A Fixed list item doesn't show	No link, an unsafe link, a duplicate destination, or no title for an external link	Pick the page with the picker and add a Title or Link text
Cards show the wrong or no image	No card-image on the page; the default social image is skipped	Set card-image and card-image-alt on the page or bulk sheet and republish
The feature card has no author	The page's author-id doesn't match the Authors sheet exactly or the sheet isn't published	Fix author-id or the sheet and publish both
The order is unexpected	Order by Manual uses the path order for pages; Last modified uses modified-date, else the publication time	Choose Title or Last modified with consistent metadata, or use a Fixed list
A card links to another page	The locale's redirects sheet redirects the page	Correct or remove the redirect
An older List shows only a title and a button	A List made before the key-value List renders as list-legacy	Replace it with a new List
Report lists say Download but open a page	Download is the report default label	Use a Fixed list with a Call to action label such as Read the report

6.16.16 Author Quick Reference Guide

Mandatory Fields

- List source — required in the model; Fixed list is pre-filled
- Page or link (List Item) — required; an item without a link is ignored
- Tags — needed for Tagged pages, else nothing is listed (hint tags-missing)
- Parent page or Use the current page when empty — needed for Child pages (hint parent-missing)
- Search root or Use the current page when empty — needed for Tagged pages (hint root-missing)
- Title or Link text (List Item) — needed for external links and unindexed paths, else the item is skipped

Recommended Fields

- Title and Heading type — the list heading names the card region
- Accessible list label — when the List has no Title
- Maximum items — for Child pages and Tagged pages lists
- Order by and Sort order — Last modified, Descending for news
- CTA link and CTA text — link to the full listing when the list is cut
- Image alt text (List Item) — for override images that carry meaning
- card-title, card-description, card-image, card-image-alt on the listed pages

Optional Fields

- Description, CTA style and Component ID (Content tab)
- Direct children only, Child depth, Match, Include descendant pages, Maximum search depth
- Card style, Card colour, Image ratio, Panel height, First card as feature
- Link items, Open links in a new tab, the Show switches, Date format, Image loading
- Layout and Scroll tabs (display, columns, items visible, buttons, indicator, snap, loop)
- When there are no items, Empty message, Analytics, Style options
- List Item overrides: Title, Description, Image, Eyebrow, Tags, Label, Call to action label, Card style, Card colour, Analytics label, Accessibility label

Authoring Checklist

1. Choose the source first: Child pages for sections, Tagged pages for topics, Fixed list for curated picks
2. Pick pages and roots with the page picker; AEM paths are delivered as published paths (/en/…)
3. Set Maximum items and a header CTA to the full listing for automatic sources
4. Maintain card metadata on the listed pages, not overrides, so every List shows the same text
5. Use List Item overrides only where a page's card-title or image doesn't fit
6. Set Card style Mixed for rails mixing articles and Report pages
7. Use Show the fallback items for important Child or Tagged lists
8. Use Cards (6.15) for content that isn't a page or must be unlinked

Pre-Publish Checklist

1. Preview on aem.page: Child and Tagged lists show only there, not in Universal Editor
2. Check the count, order and Maximum items against the expectation
3. Check pages that must not appear: hide-in-nav pages, pages outside the root
4. Check the layout at 1440, 1024 and 402 px
5. Open the page with ?debug=list and read the [list] config warnings and [list] cards
6. Check the feature card's author and the tag labels
7. Make sure the listed pages, new assets and the Authors sheet are published

Post-Publish Validation Checklist

1. Open the page on aem.live and check the cards load
2. Click a card and the header CTA and check the destinations (redirect targets)

3. Check that new pages appear after the index update; reload if a page is missing
4. With Analytics on, check window.adobeDataLayer for the list and its items
5. Check the empty behaviour: message, fallback items or hidden list
6. Republish listed pages after metadata changes so the index updates

6.16.17 Component Execution Example

Business example: Editor's picks on the English insights hub.

Example Values Entered:

Field	Value
Component (Section › Add (+))	List
Title (List › Content)	Editor's picks
Item (Content tree › List › Add (+))	List Item
Page or link (List Item 1 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/agentic-bank
Item (Content tree › List › Add (+))	List Item
Page or link (List Item 2 › Link)	Select the page or enter /content/tcs-corp/us/en/services/cloud
Title (List Item 2 › Content)	Cloud services for the enterprise
Item (Content tree › List › Add (+))	List Item
Page or link (List Item 3 › Link)	Select the page or enter /content/tcs-corp/us/en/insights/supply-chain-resilience
Item (Content tree › List › Add (+))	List Item
Page or link (List Item 4 › Link)	Select the page or enter https://partner.example.com/joint-solutions
Title (List Item 4 › Content)	Joint solutions with our partners
Description (List Item 4 › Content)	Co-developed platforms from our partner ecosystem.
Image (List Item 4 › Content)	Select the asset photo-6.svg (/en/media/photo-6.svg)
Image alt text (List Item 4 › Content)	Partner team in a workshop
Eyebrow (List Item 4 › Content)	Partner
List source (List › Source)	Fixed list (the default; keep it)

All other fields keep their default values.

Rendered Result:

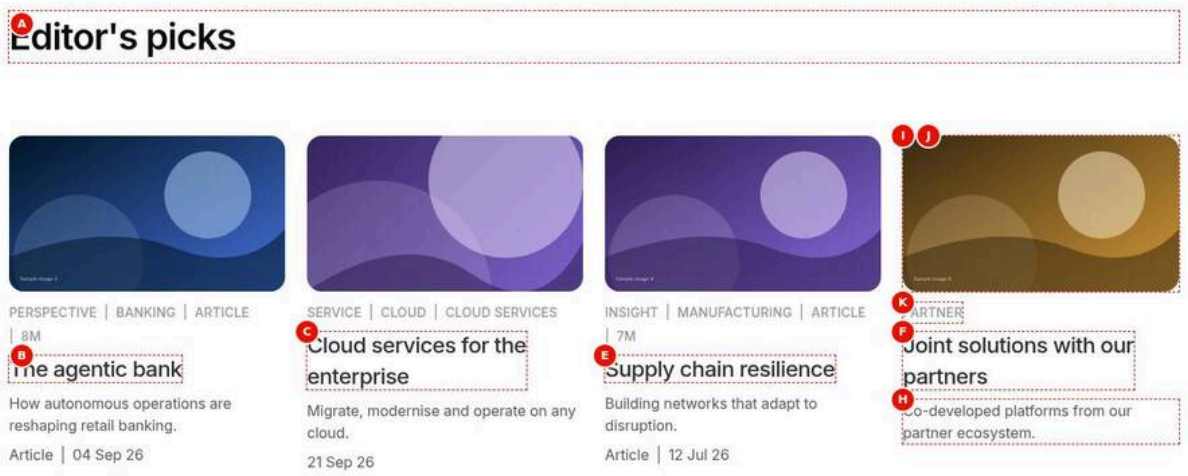

Figure 75: Execution example — At 1440 px the title Editor's picks above four image cards in authored order: The agentic bank, Cloud services for the enterprise (title override on the Cloud page), Supply chain resilience, and the external Joint solutions with our partners with photo-6, the eyebrow Partner and its description. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/list-source-fixed.jpg)

Author Notes

- Add List Items in the content tree; their order is the card order.
- Pick site pages with the page picker so their metadata is used; give the external partner link a Title, Description, Image and Image alt text.
- Override only what doesn't fit: item 2 replaces the Cloud page's title with "Cloud services for the enterprise".
- Items 1 and 3 have no overrides and show only on aem.page; validate there.

Business Notes

- Editors control the selection and order while the page owners keep the card text up to date.
- Mixing site pages and a partner page supports joint campaigns without a separate block.
- Duplicate destinations are shown once, so the same page can't be promoted twice.
- Renamed or moved pages follow the redirects sheet, so curated lists don't break.

Technical Notes

- Items are read in model order (ITEM_FIELDS, F-43 fixed in 1.4) and filtered to those with a link.
- The query index is loaded because items link paths; indexed pages give metadata cards, the external URL a link card with data-external="true".
- Overrides are applied in applyOverrides(); an item without any title after overrides is skipped.
- The block gets source-fixed and the data layer xdm:listSource "fixed"; card ids are {list id}-item-{hash of the destination}.

TCS Corporate Website — Project Handover

Volume 8 of 13 — Components 6.17–6.19: Filter List, Table List, Anchor List

Date: October 14, 2026

Adobe

Table of Contents

Part 6 — Component Library (continued) 3
6.17 Filter List Block 3
6.18 Table List Block 144
6.19 Anchor List Block 257

Part 6 — Component Library (continued)

> **Note:** This is volume 8 of 13 of the TCS Corporate Website project handover (version 2.0). Volume 1 holds the document control, the audience guide and the conventions.

6.17 Filter List Block

The Filter List is the site's content discovery block. It lists the current locale's published pages from the query index (or a manual list of pages), builds a card for each page from the page's metadata, and lets visitors narrow the list with filter pills and an advanced filter panel. It implements the TCS DS Figma designs "Explore the Agentic bank" and "Explore insights & opinions".

Source files: `blocks/filter-list/filter-list.js` (595 lines), `blocks/filter-list/filter-list.css` (623 lines), `blocks/filter-list/_filter-list.json` (the Universal Editor definition and model). The dialog has 52 model entries: 7 tab separators and 45 fields in the tabs Content, Source, Filters, Advanced, Cards, Mapping and Additional, plus 3 fields inside the two composite multifields (Primary filter tags › Tag Id; Advanced filter categories › Category label, Taxonomy root).

6.17.1 Component Purpose

Business Objective

Give visitors one place to explore a collection of content (insights, articles, blogs, reports, case studies, news, events, whitepapers, podcasts, videos) and to narrow it by topic, industry or any other taxonomy, without authors maintaining the list by hand. New pages appear automatically once they are published with the right metadata, which keeps listing pages current and reduces authoring effort.

Business Use Cases

- An "Insights" hub page that lists every insight below `/en/insights`, newest first, with a large hero card for the most important piece.
- An industry landing page ("Explore the Agentic bank") that lists articles and reports tagged with banking topics, with pills for each sub-topic.
- A campaign page that shows a hand-picked, ordered set of pages (Manual List) with the same card design.
- A resource library with an advanced filter panel (for example Industry, Service, Content format categories) combined with AND or OR logic.

When To Use

- The list should be built from page metadata and stay up to date automatically.
- Visitors need to filter a large set of pages by tags.
- The page needs hero and featured spotlight cards chosen by rules (featured flag, priority, latest) rather than by hand.

When Not To Use

- For a short, fixed set of cards with authored text and images that are not pages of the site: use the Cards block (manual authoring) instead.
- For child pages of a page, a fixed list with overrides, or tagged pages without visitor filtering, in the List block's Figma presentations (grid or horizontal scroll per breakpoint): use the List block.
- For a numbered or divided list of services, solutions or products with arrows: use the Table List block (6.18).
- For in-page chapter navigation: use the Anchor List block (6.19).

- When the listed content is not published to Edge Delivery Services (the block only reads `/query-index.json`), or must be listed in Universal Editor itself (the editor shows a hint instead of the results, see 6.17.11).

Dependencies

Kind	Dependency	Used for
Block code	`blocks/filter-list/filter-list.js`, `filter-list.css`, `_filter-list.json`	Decoration, styles, dialog
Decorator	`decorators/masonry-decorator.js` (`layoutMasonry`)	Masonry layout of the card grid
Decorator	`decorators/button-decorator.js` (`decorateButton`)	Load more, Reset filters, Clear all and the card call-to-action buttons
Decorator	`decorators/icon-button-decorator.js` (`createIconButton`)	The advanced filter toggle (filter icon)
Decorator	`decorators/responsive-image-decorator.js` (`buildImage`)	Card, spotlight and author images (optimized when they are site media)
Decorator	`decorators/date-decorator.js` (`buildTime`)	The publish date as a `<time>` element (format `dd-mmm-yy`, e.g. 04 Sep 26)
Decorator	`decorators/article-meta-decorator.js` (`buildAuthorLockup`)	The author lockup on hero and featured spotlight cards
Utility	`utils/query-index.js` (`getPages`, `columnOf`, `listOf`)	The locale's pages and their metadata columns, loaded once per page
Utility	`utils/taxonomy.js` (`loadTaxonomy`, `resolveTags`)	Tag labels for pills, options and card tags
Utility	`utils/tags.js` (`readTagValues`)	Reading tag and multiselect values from the dialog
Utility	`utils/data.js` (`getAuthors`)	The Authors data sheet for spotlight cards
Utility	`utils/placeholders.js` (`getPlaceholders`)	Every user-facing label
Utility	`utils/properties.js` (`readProperties`, `textOf`, `isOn`)	Reading the key-value block properties
Utility	`utils/multifield.js` (`readMultifieldItems`)	Reading Primary filter tags and Advanced filter categories
Utility	`utils/site.js` (`toPublishedPath`)	Converting AEM paths (`/content/tcs-corp/us/en/...`) to published paths (`/en/...`)
Utility	`utils/environment.js` (`isEditing`), `utils/ids.js` (`uniqueId`)	Editor hint; unique ids for ARIA relationships
Core	`scripts/aem.js` (`toClassName`, `createOptimizedPicture` via buildImage)	Value normalization, responsive images
Icon	`icons/filter.svg`	Advanced filter toggle
Data	`/query-index.json` (defined in `helix-query.yaml`)	The pages and their metadata (all locales; the block keeps the current locale's rows)
Data	`/{locale}/taxonomy.json`	Tag titles in the locale's language
Data	`/{locale}/data/authors.json`	Author name, designation and image for spotlight cards
Data	`/{locale}/placeholders.json`	UI text (keys listed below)
Page metadata	`title`, `description`, `tags` (article:tag), `page-type`, `content-type`, `publish-date`, `reading-time`, `featured-`	Card content, filtering, sorting, hero and featured rules

Kind	Dependency	Used for
	`image`, `thumbnail-image`, `author`, `author-id`, `featured`, `priority` (fallbacks `feature-card`, `featured-priority`)	

Placeholder keys used by the block (Key, English fallback):

Key	English fallback	Where it appears
`filters`	Filters	Label before the pills; accessible name of the pill group
`all`	All	The All pill
`advancedFilters`	Advanced filters	Toggle button name and tooltip; panel title and region name
`selectedCount`	{n} selected	Added to the toggle's accessible name when options are selected
`clearAll`	Clear all	Panel button that clears the selected options
`resultCountOne`	1 result	Result count for one result
`resultCount`	{n} results	Result count
`showingCount`	Showing {n} of {total}	Result count after Load more, while more remain
`loadMore`	Load more	Load more button
`noResources`	No resources found.	Empty state title
`noResourcesHint`	Try selecting another filter.	Empty state hint
`resetFilters`	Reset filters	Empty state button (only when a filter is selected)
`filterListEditor`	The results show on the published page, from the pages' metadata.	Editor hint when the index is not available
`minutesShort`	{n}m	Reading time on cards (a number, e.g. 5 becomes 5m)
`readMore`	Read more	Call to action of Featured style cards
`download`	Download	Call to action of report cards (Mixed style)
`explore`	Explore	Call to action of dark cards (Mixed style)

Related Components

- List block (`blocks/list`): child pages, fixed list or tagged pages from the same query index, without visitor filters; applies redirects and leaves out `hide-in-nav` pages (the Filter List does neither).
- Cards block (`blocks/cards`): manual cards in the List's presentation.
- Page Header block: reads the same page metadata (title, description, tags, content type, publish date, reading time, author) on the listed pages.
- Teaser block: a single promoted page.
- Table List (6.18) and Anchor List (6.19): other list-like blocks with authored content.

Applicable Templates

Any page. The block is allowed in every section (`models/_section.json` section filter). It is typically used on landing and listing pages (Page Type `landing` / `listing`) and on the home page; it is not intended for article, blog or press-release detail pages, although nothing prevents it.

Supported Content Types

The pages listed can be of any Page Type and Content Type. The dialog offers these filter values: Page types Article, Blog, Report, Case Study, News, Event; Content types Article, Blog, Report, Case Study, News, Event, Whitepaper, Podcast, Video. Content whose eyebrow (Content type by default) contains “report” gets the report card in the Mixed card style.

Business Problem Solved

Listing and hub pages (insights, articles, reports, case studies) were maintained by hand and went stale as new pages were published. The Filter List builds its cards from the locale’s query index and the pages’ metadata, so new pages appear once published with the right page-type, content-type, tags and images; visitors narrow the list with taxonomy pills and an advanced panel, and hero and featured spotlights follow featured, priority or date rules instead of manual curation.

Supported Taxonomy

Primary filter tags, Primary filter category and each Advanced category’s Taxonomy root are AEM tag IDs (e.g. tcs-corp:industry/banking). Labels come from /{locale}/taxonomy.json in the locale’s language, else are derived from the ID; a tag matches its descendants. Card tags are the first two tags of the page’s tags column. Tags must be published with the taxonomy for every locale.

6.17.2 Visual Overview

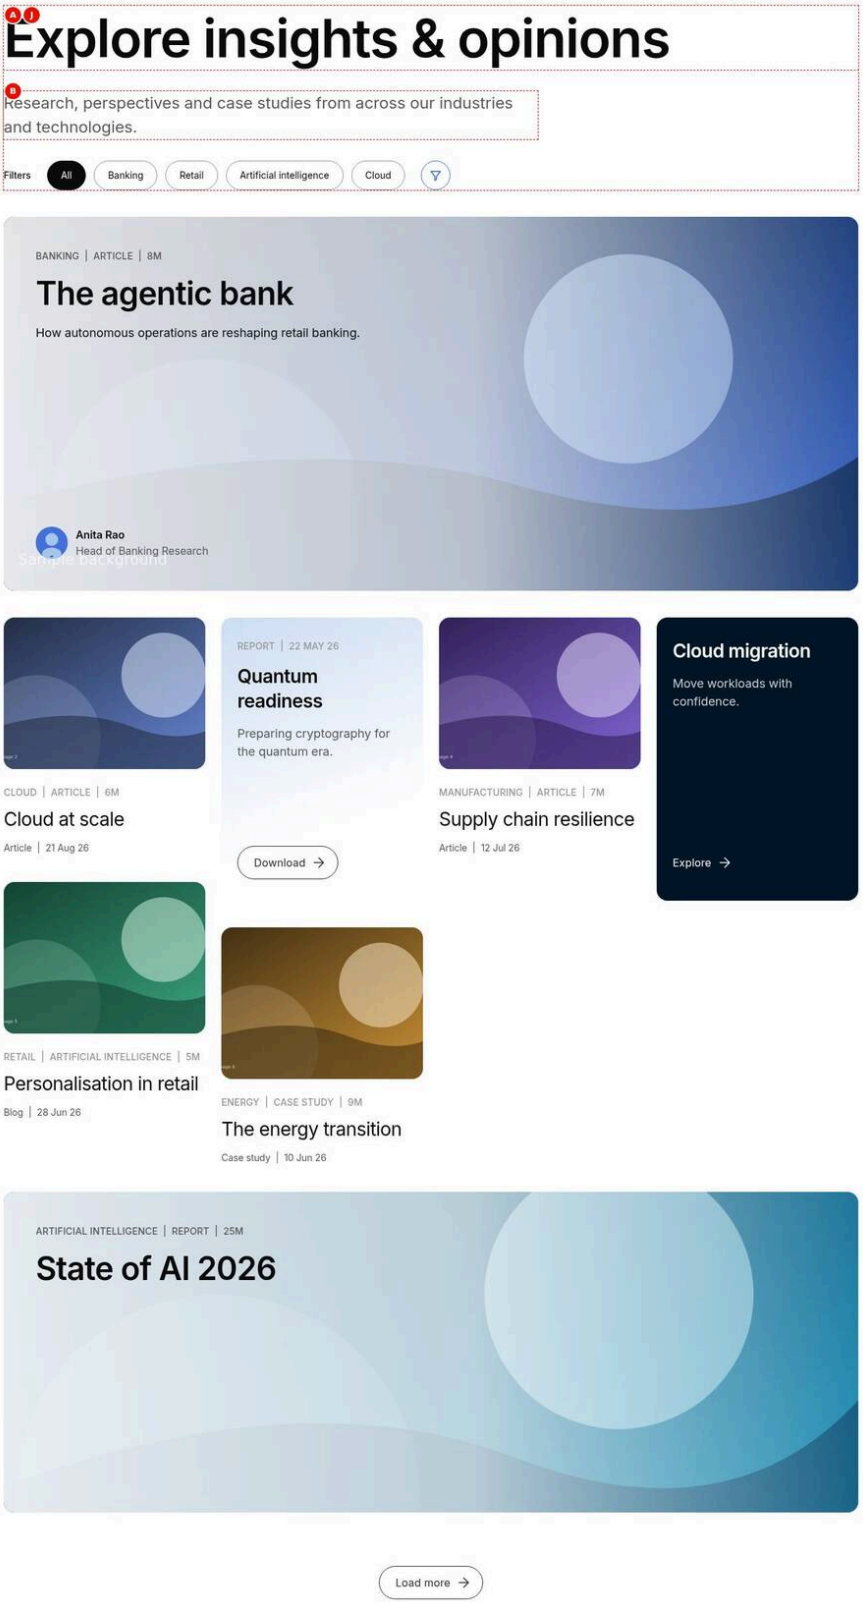

Figure 1: Desktop rendering — The Filter List at 1440 px: the title Explore insights & opinions, the description, the Filters label with All, Banking, Retail, Artificial intelligence and Cloud and the round filter button; The agentic bank as hero with Anita Rao's lockup; four masonry columns of six Mixed cards including the Quantum readiness report card and the dark Cloud migration card; a State of AI 2026 spotlight and Load more. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/filter-list-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Filter List at 1440 px: the title Explore insights & opinions, the description, the Filters label with All, Banking, Retail, Artificial intelligence and Cloud and the round filter button; The agentic bank as hero with Anita Rao's lockup; four masonry columns of six Mixed cards including the Quantum readiness report card and the dark Cloud migration card; a State of AI 2026 spotlight and Load more.
Business Context	The "Explore insights & opinions" discovery section of the English insights hub, where visitors browse research, perspectives and case studies and narrow them by industry or topic instead of navigating page by page.
Author Objective	Add a Filter List with a title, a description, a hand-picked Manual List of ten pages, four pills, two advanced categories and a hero spotlight, showing six cards first.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Explore insights & opinions	No	Heading of the block	Short, descriptive heading	None
B	Description (Filter List › Content)	Research, perspectives and case studies from across our industries and technologies.	No	Introduction below the title	One or two sentences	None
(C)	Cards per page (Filter List › Content)	6	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(D)	Datasource (Filter List › Source)	Manual List	No	Where the pages come from	Query Index for automatic lists, Manual List for curated ones	Options query-index, manual
(E)	Pages (Filter List › Source)	Select the page or enter /en/insights/agentic-bank,/en/insights/state-of-ai-2026,/en/insights/cloud-at-scale,/en/insights/quantum-readiness,/en/insights/supply-chain-resilience,/en/services/cloud/migration,/en/insights/retail-personalisation,/en/insights/energy-transition,/en/insights/future-of-work,/en/in-	No	Curated pages, in order	Add published pages of the same locale	Shown when Datasource = Manual List

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		sights/insurance-claims				
(F)	Tag Id (Filter List › Filters › Primary filter tags › Item 1)	Add the tags tcs-corp:industry/banking	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(G)	Tag Id (Filter List › Filters › Primary filter tags › Item 2)	Add the tags tcs-corp:industry/retail	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(H)	Tag Id (Filter List › Filters › Primary filter tags › Item 3)	Add the tags tcs-corp:topic/ai	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(I)	Tag Id (Filter List › Filters › Primary filter tags › Item 4)	Add the tags tcs-corp:topic/cloud	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
J	Category label (Filter List › Advanced › Advanced filter categories › Item 1)	Industry	No	The category heading (legend) in the panel	Short noun, e.g. Industry	Empty: the taxonomy title of the root is used
(K)	Taxonomy root (Filter List › Advanced › Advanced filter categories › Item 1)	Add the tags tcs-corp:industry	No	Options are the tags below it	A tag below the namespace	Without a root the item is ignored
(L)	Category label (Filter List › Advanced › Advanced filter categories › Item 2)	Topic	No	The category heading (legend) in the panel	Short noun, e.g. Industry	Empty: the taxonomy title of the root is used
(M)	Taxonomy root (Filter List › Advanced › Advanced filter categories › Item 2)	Add the tags tcs-corp:topic	No	Options are the tags below it	A tag below the namespace	Without a root the item is ignored
(N)	Enable hero card (Filter List › Cards)	On	No	A large spotlight above the grid	One hero per page	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Title and description, the Filters label with All, Banking, Retail, Artificial intelligence and Cloud pills and the round filter button; a hero spotlight for The agentic bank; four columns of Mixed masonry cards including a Quantum readiness report card and a dark Cloud migration card; a State of AI 2026 featured spotlight and Load more.
- **Rendering behaviour:** At 1440 px the grid has 4 columns (Mixed style) in masonry; the hero is the featured page with the lowest priority (agentic-bank, priority 1) and loads its image eagerly; after the 6 cards the next featured page (state-of-ai-2026) follows as a spotlight, and Load more adds 6 more (default) cards.

- **Publishing behaviour:** The ten listed pages must be previewed / published first so they are in the query index; then publish the hub page. Changes to the taxonomy (pill labels), placeholders or the Authors sheet (hero lockup) are separate publish steps.

Business Rules

- Manual List keeps the authored order of Pages; Sort by, Page types and Content types are not applied.
- Pages not in the locale's query index are silently left out of the list.
- With Hero rule Featured (default) the hero is the featured page with the lowest priority; it is not repeated in the grid.
- Enable featured cards stays on by default (featured=true, count 2), so the next featured page appears after the first 6 cards.
- In the Mixed style a page whose content-type contains "report" becomes a report card and a page without image a dark card.

Common Authoring Mistakes

Error	Root Cause	Resolution
The hero card shows a page the author did not expect	Hero rule left on Featured and another listed page has featured = yes with a lower priority	Set Hero rule to Manual and pick the Hero page, or correct the featured / priority metadata
One of the ten pages is missing	The page is not previewed / published, so it is not in the query index	Publish the page, wait for the index update and reload the hub
Pills read the wrong label	The tag has no title in /en/taxonomy.json	Add the tag title to the taxonomy and publish it

Troubleshooting

- **Symptoms:** On aem.page only eight or nine cards plus the hero appear although ten pages are listed.
- **Cause:** A listed page (for example /en/services/cloud/migration) is not yet in the preview query index or was entered with a different path.
- **Resolution:** Preview or publish the missing page, check its path in Pages and reload the page with the cache disabled.
- **Verification Steps:** /query-index.json lists the path and the result count reads 10 results with all ten pages shown as hero, spotlight or cards.

Desktop (1200px and wider). The block is a vertical stack (gap 2.5rem, `--space-1000`): header, results, Load more. The title is a semibold display heading (`--display-font-size-1` from 900px) with a letter-spacing of –0.02 of its size; the description is limited to 50rem wide in the secondary text colour at `--body-font-size-l`. The toolbar shows the "Filters" label, the pills (outline pills with a full radius; the selected pill is filled with the neutral background and light text) and the advanced filter toggle on the same line. The advanced filter panel, when open, is a light grey box (`--color-bg-secondary`, radius l) with a header (title and Clear all) and one column per category (auto-fit, at least 12rem each). The grid has 4 columns for the Default, Compact and Mixed card styles and 3 columns for the Featured card style; the List layout always has one column. Column gap is 1.5rem and row gap 2.5rem. Hero and featured spotlights span the full width: the image covers the card behind a white gradient (from 80% white at the left to transparent at the right), the content has 3rem padding, the spotlight title is 3rem semibold (letter-spacing –0.06rem). The hero is at least 35rem high, a featured spotlight at least 30rem. Card images zoom to 104% on hover and the card title is underlined.

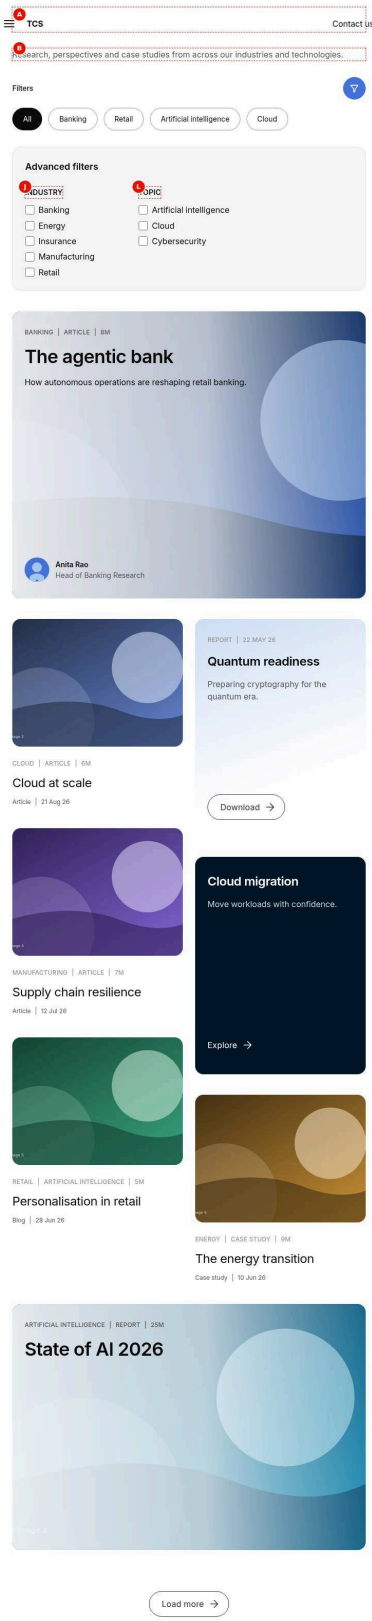

Figure 2: Tablet rendering — The same Filter List at 768 px only: the Filters label with the filter button at the right, the five pills on a full row below, the open Advanced filters panel with Industry (Banking, Energy, Insurance, Manufacturing, Retail) and Topic (Artificial intelligence, Cloud, Cybersecurity) side by side, The agentic bank hero and a two-column card grid. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/filter-list-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same Filter List at 768 px only: the Filters label with the filter button at the right, the five pills on a full row below, the open Advanced filters panel with Industry (Banking, Energy, Insurance, Manufacturing, Retail) and Topic (Artificial intelligence, Cloud, Cybersecurity) side by side, The agentic bank hero and a two-column card grid.
Business Context	The same insights discovery section checked at tablet width, where visitors on tablets in portrait open the advanced filter panel to narrow the list.
Author Objective	Check the Filter List at 768 px with the Advanced filters panel open, showing two columns of cards and both categories side by side.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Explore insights & opinions	No	Heading of the block	Short, descriptive heading	None
B	Description (Filter List › Content)	Research, perspectives and case studies from across our industries and technologies.	No	Introduction below the title	One or two sentences	None
(C)	Cards per page (Filter List › Content)	6	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(D)	Datasource (Filter List › Source)	Manual List	No	Where the pages come from	Query Index for automatic lists, Manual List for curated ones	Options query-index, manual
(E)	Pages (Filter List › Source)	Select the page or enter /en/insights/agentic-bank,/en/insights/state-of-ai-2026,/en/insights/cloud-at-scale,/en/insights/quantum-readiness,/en/insights/supply-chain-resilience,/en/services/cloud/migration,/en/insights/retail-personalisation,/en/insights/energy-transition,/en/insights/future-of-work,/en/insights/insurance-claims	No	Curated pages, in order	Add published pages of the same locale	Shown when Datasource = Manual List

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(F)	Tag Id (Filter List › Filters › Primary filter tags › Item 1)	Add the tags tcs-corp:industry/banking	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(G)	Tag Id (Filter List › Filters › Primary filter tags › Item 2)	Add the tags tcs-corp:industry/retail	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(H)	Tag Id (Filter List › Filters › Primary filter tags › Item 3)	Add the tags tcs-corp:topic/ai	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(I)	Tag Id (Filter List › Filters › Primary filter tags › Item 4)	Add the tags tcs-corp:topic/cloud	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
J	Category label (Filter List › Advanced › Advanced filter categories › Item 1)	Industry	No	The category heading (legend) in the panel	Short noun, e.g. Industry	Empty: the taxonomy title of the root is used
(K)	Taxonomy root (Filter List › Advanced › Advanced filter categories › Item 1)	Add the tags tcs-corp:industry	No	Options are the tags below it	A tag below the namespace	Without a root the item is ignored
L	Category label (Filter List › Advanced › Advanced filter categories › Item 2)	Topic	No	The category heading (legend) in the panel	Short noun, e.g. Industry	Empty: the taxonomy title of the root is used
(M)	Taxonomy root (Filter List › Advanced › Advanced filter categories › Item 2)	Add the tags tcs-corp:topic	No	Options are the tags below it	A tag below the namespace	Without a root the item is ignored
(N)	Enable hero card (Filter List › Cards)	On	No	A large spotlight above the grid	One hero per page	None
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—
—	Action (Preview)	Select the round filter button to open the Advanced filters panel	—	Check on the preview (not stored in the content)	Select the round filter button to open the Advanced filters panel	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The Filters label and the round filter button on one line with the five pills on a full row below; the open light grey Advanced filters panel with Industry (Banking, Energy, Insurance, Manufacturing, Retail) and Topic (Artificial intelligence, Cloud, Cybersecurity) columns; the hero spotlight and a two-column grid.

- **Rendering behaviour:** Between 600 and 899 px the grid has 2 columns, the pills take their own row and the toggle sits at the right edge; the panel uses auto-fit columns of at least 12rem. From 900 px the grid becomes 3 columns and the pills join the label line.
- **Publishing behaviour:** Nothing extra is published for tablet; the same hub page, query index and taxonomy serve every width. Check the aem.page URL in responsive mode at 768 px before publishing to aem.live.

Business Rules

- Category options are the tags below each Taxonomy root that the listed pages use, sorted by label.
- Clear all stays hidden until an option is checked.
- The panel toggle has aria-expanded and Escape closes the panel and returns focus to the button.
- The open panel does not filter anything until an option is checked.

Common Authoring Mistakes

Error	Root Cause	Resolution
The filter button is missing at tablet width	No listed page uses a tag below tcs-corp:industry or tcs-corp:topic, so both categories are empty	Tag the listed pages or choose Taxonomy roots the pages use
A category is missing from the panel	Its Taxonomy root was left empty, so the item is ignored	Pick a Taxonomy root with the tag picker for every category

Troubleshooting

- **Symptoms:** At 768 px the cards show in three columns instead of two.
- **Cause:** The responsive preview is actually 900 px or wider (device preset or zoom), where the 3-column rule applies.
- **Resolution:** Set the width to exactly 768 px at 100 % zoom and reload the aem.page URL.
- **Verification Steps:** Two columns of cards appear and the pills take a full row below the Filters label.

Tablet (600px to 1199px). From 600px the grid has 2 columns (all layouts except List). From 900px it has 3 columns (2 for the Featured card style), the title grows to `--display-font-size-1`, the pills sit on the same line as the label (they no longer take a full row) and the toggle follows them; the spotlight content padding grows to 3rem and the spotlight title to 3rem. Between 600px and 899px the pills take a full row below the label and the toggle, and the toggle is pushed to the right edge. The panel shows its categories side by side (auto-fit columns of at least 12rem). In the List layout each card with an image becomes a two-column row: the image in the first third (spanning the rows of the text) and the text in the remaining two thirds, with a divider below each card.

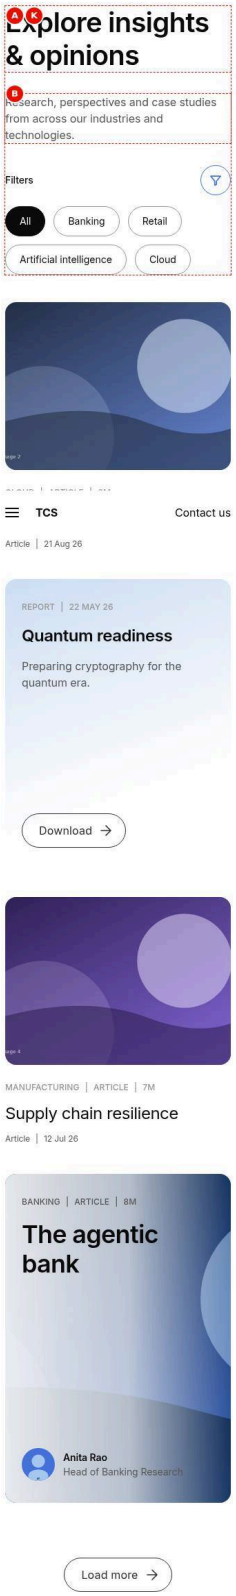

Figure 3: Mobile rendering — The Filter List at 375 px: title, description, the Filters label with the filter button at the right and the five pills wrapping below, one column of three cards (The agentic bank and State of AI 2026 are spotlights, so the cards start with Cloud at scale), The agentic bank featured spotlight and the centred Load more button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-mobile-view.jpg)

—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 375 px the title, description, the Filters label with the filter button at the right and the five pills wrapping below; one column of three cards, The agentic bank as a featured spotlight with the image behind its text, and the centred Load more button.

- **Rendering behaviour:** Below 600 px one column in every layout; the title uses –display-font-size-2; spotlight padding is 2rem by 1.5rem. With Cards per page 3 the first featured spotlight follows the third card; each Load more adds 3 cards and then the next spotlight.
- **Publishing behaviour:** The listed pages and the hub page are published as for desktop; there is no mobile-specific content. Check the aem.page URL at 375 px before Publish to aem.live.

Business Rules

- Without Enable hero card the featured pages agentic-bank and state-of-ai-2026 become the two featured spotlights (count 2).
- One featured spotlight is inserted after each page of cards; the rest follow once every card is shown.
- After Load more the focus moves to the first new card and the count reads “Showing n of 10”.
- Load more disappears when every standard and featured card is shown.

Common Authoring Mistakes

Error	Root Cause	Resolution
Load more adds six cards instead of three	Load more count left empty, so the default 6 applies	Enter 3 in Load more count
The list starts with a spotlight the author did not want	Featured pages exist and Enable featured cards is on by default	Turn Enable featured cards off in the Cards tab

Troubleshooting

- **Symptoms:** On a phone the Load more button never appears.
- **Cause:** All listed pages fit into Cards per page plus spotlights, or several listed pages are missing from the index.
- **Resolution:** Check that all ten pages are published and in /query-index.json; keep Cards per page at 3.
- **Verification Steps:** Three cards and a spotlight show first and Load more adds three more cards.

Mobile (below 600px). One column of cards in every layout. The title uses `--display-font-size-2`. The Filters label and the toggle share the first line (the toggle at the right), the pills wrap on the next lines (gap 0.75rem). Spotlight content padding is 2rem by 1.5rem and the spotlight title uses `--display-font-size-3`. List layout cards are stacked (image above the text). The Load more button is centred below the results. Report and dark cards keep a minimum height of 22.5rem.

6.17.3 Component Variations

The Filter List has no “variant” class field; its presentation and behaviour come from select and toggle fields. Each mode the author can choose is described separately below. Layout (3 modes) and Card style (4 styles, of which Mixed produces 2 additional card kinds) are presentation variations; Hero rule, Featured rule, Datasource, pill selection, Filter logic and Sort by are behaviour variations.

Variation 1 — Layout: Masonry

Variation Name: Masonry (Content tab › Default layout = Masonry; the default).

Business Purpose: A magazine-style wall of cards of different heights with no gaps, so mixed content (image cards, report and dark panels) reads as an editorial collection.

Visual Example:

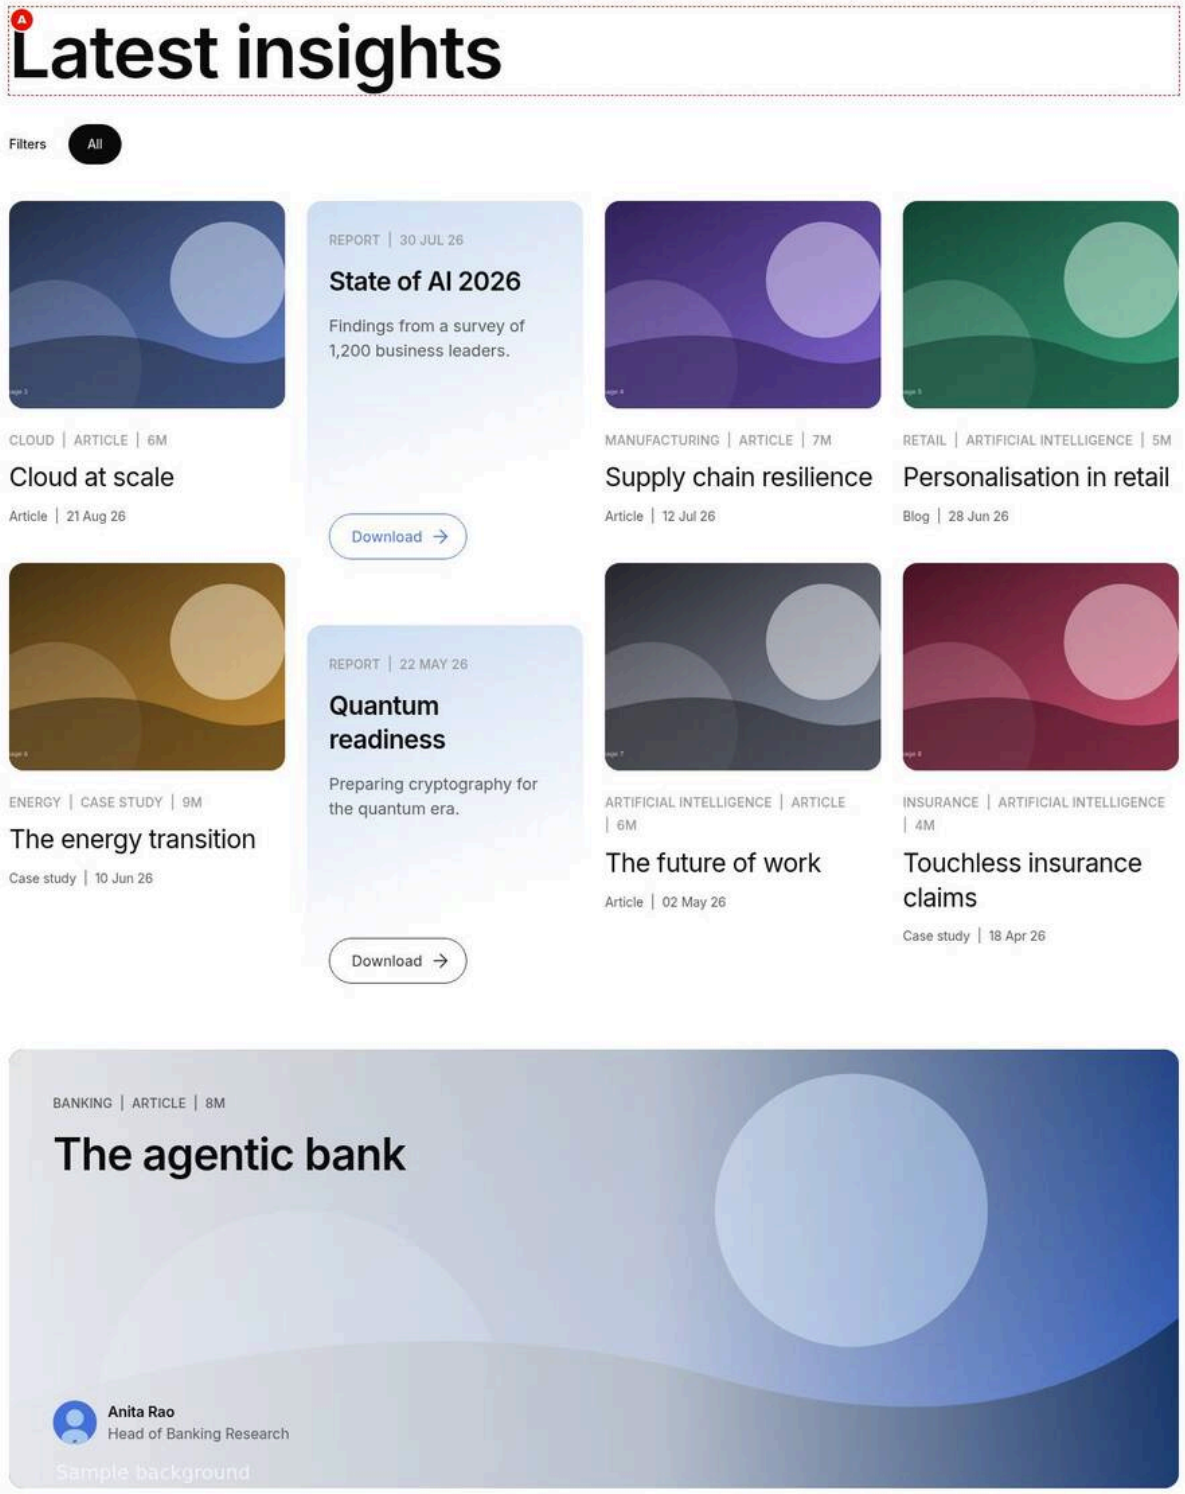

Figure 4: Masonry layout — Latest insights at 1440 px in the Masonry layout: four columns of eight Mixed cards of different heights packed without row gaps, newest first from Cloud at scale, with State of AI 2026 and Quantum readiness as report panels, and a full-width spotlight for The agentic bank below all columns; no Load more. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-layout-masonry.jpg)

Screenshot Details — Masonry layout

Item	Detail
Screenshot Name	`screenshots/filter-list-layout-masonry.jpg`
Screenshot Purpose	Masonry layout
Screen Description	Latest insights at 1440 px in the Masonry layout: four columns of eight Mixed cards of different heights packed without row gaps, newest first from Cloud at scale, with State of AI 2026 and Quantum readiness as report panels, and a full-width spotlight for The agentic bank below all columns; no Load more.
Business Context	A "Latest insights" section of the insights hub that lists every article, blog, report and case study below /en/insights automatically as they are published.
Author Objective	Add a Filter List on the Query Index source with Root path /en/insights, four Page types, eight cards per page and one featured spotlight.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Latest insights	No	Heading of the block	Short, descriptive heading	None
(B)	Cards per page (Filter List › Content)	8	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(C)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(D)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(E)	Featured card count (Filter List › Cards)	1	No	Maximum spotlight cards	1 to 3	Model min 1, max 12; shown when featured cards are on; code: empty or 0 gives 2

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four columns of Mixed cards of different heights packed without row gaps (State of AI 2026 and Quantum readiness as report panels), newest first, followed by a full-width spotlight for The agentic bank below all columns.
- **Rendering behaviour:** Masonry is the default layout: native CSS masonry where supported, else JavaScript placement in 0.25rem rows; 4 columns from 1200 px, 3 from 900 px, 2 from 600 px, 1 below. With 8 standard cards all shown, the featured spotlight follows at the end and Load more is hidden.
- **Publishing behaviour:** New pages below /en/insights appear after they are previewed (aem.page) or published (aem.live) and the index is updated; the hub page itself only needs publishing once.

Business Rules

- Only pages strictly below /en/insights are listed; the /en/insights page itself and the current page are excluded.
- Page types filter by page-type after normalisation, so Case Study matches case-study.
- Sort by Latest First (default) orders by publish-date descending, then last modified.
- Featured card count 1 takes only the first featured page (agentic-bank, priority 1).

Common Authoring Mistakes

Error	Root Cause	Resolution
Reports appear as image cards	Card style changed from Mixed, or the pages' content-type does not contain report	Keep Card style Mixed and set content-type Report on the pages
Hub page itself appears in its own list	Root path set to the parent of the hub	Set Root path to the folder page /en/insights
Cards seem out of reading order	Masonry packs by height while keeping DOM order across the row	Use the Grid layout if aligned rows are needed

Troubleshooting

- **Symptoms:** The grid shows "No resources found." on the preview page.
- **Cause:** Root path points to another locale or the Page types do not match the pages' page-type values.
- **Resolution:** Pick /en/insights with the page picker and check the pageType column of the pages in /query-index.json.
- **Verification Steps:** Eight cards and The agentic bank spotlight render in four masonry columns.

Use Cases: Insights hubs, resource libraries with mixed card heights, Mixed card style pages.

Authoring Guidelines: Content tab › Default layout: Masonry. Works with every card style; best with Mixed or Default.

Business Rules: The block class is `layout-masonry` and the grid class `filter-list-grid layout-masonry`. Cards keep their DOM (reading) order across the columns; a full-width item (spotlight) starts below the longest column and the next card starts in the first column again.

Rendering Rules: `layoutMasonry(grid)` adds `masonry-native` in browsers that support `grid-template-rows: masonry` (the browser lays out the grid) and `masonry-spans` elsewhere. With `masonry-spans` the grid uses 0.25rem rows without a row gap; each card spans as many rows as its height plus its 2.5rem bottom margin need, placed by inline `grid-column` / `grid-row` styles. A `ResizeObserver` and `MutationObserver` re-run the layout on content, size and column changes and when Load more adds cards; it is skipped while the block is not rendered and re-runs when it shows. Without `ResizeObserver` the grid falls back to a normal grid.

Responsive Behaviour: Desktop: 4 columns (3 for the Featured card style). Tablet: 2 columns from 600px, 3 from 900px (2 for Featured). Mobile: 1 column (masonry placement is then a simple stack).

SEO Impact: None beyond the block's general impact (cards are rendered in the browser from the index, see 6.17.8). Reading order in the DOM equals the visual order per row.

Accessibility Compliance: DOM order is preserved, so keyboard and screen reader order follows the visual reading order (WCAG 1.3.2 Meaningful Sequence, 2.4.3 Focus Order).

Variation 2 — Layout: Grid

Variation Name: Grid (Content tab › Default layout = Grid).

Business Purpose: A regular, aligned grid where every row starts at the same line, for a tidy catalogue look.

Visual Example:

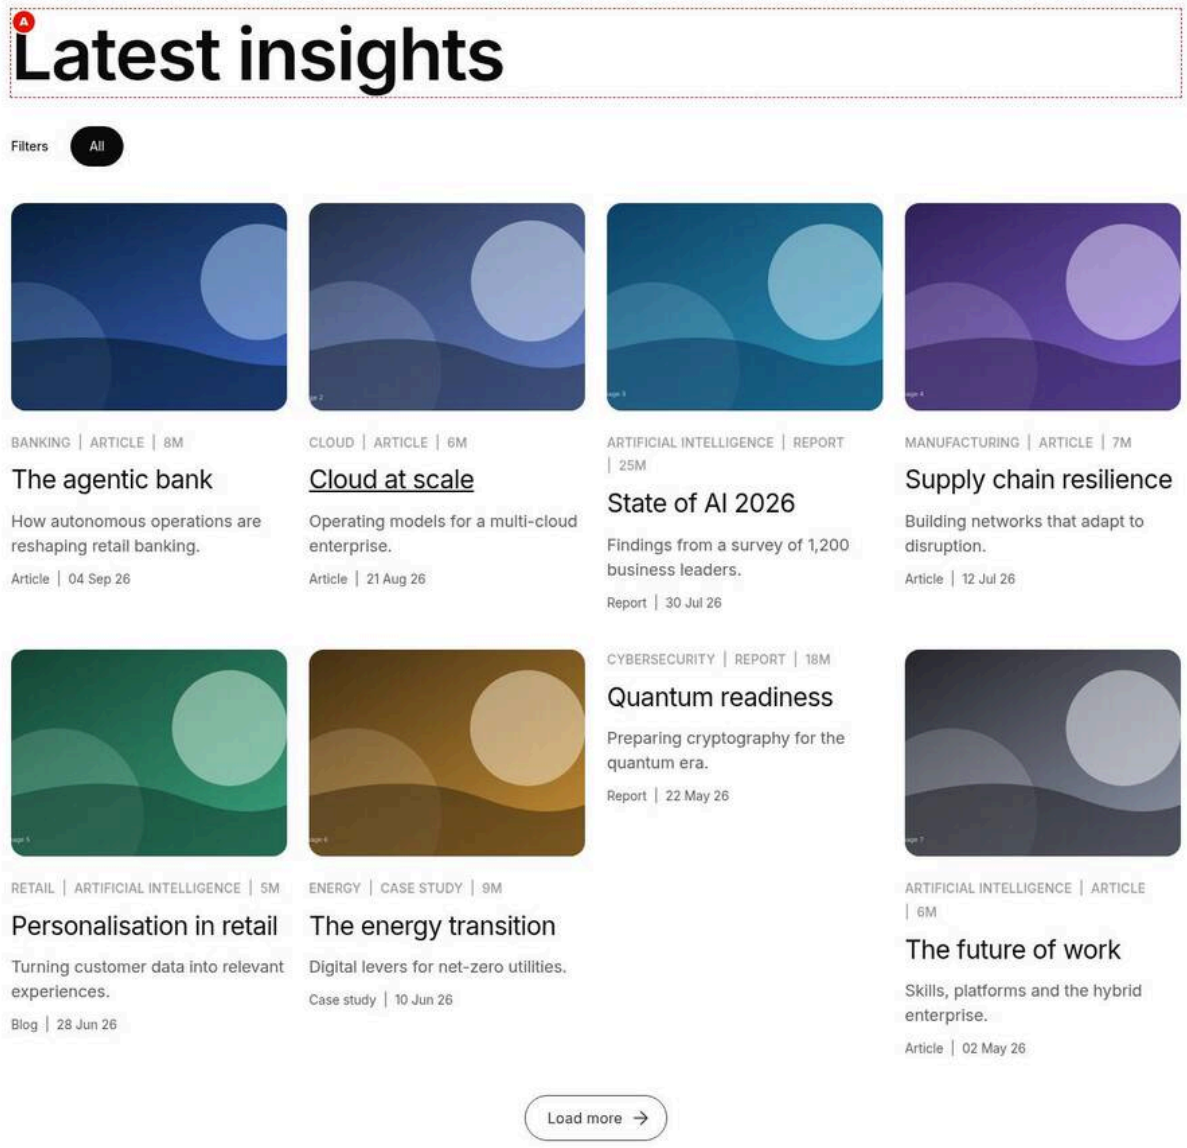

Figure 5: Grid layout — Latest insights at 1440 px in the Grid layout: two aligned rows of four Default cards (image, tag line, title, three-line description, meta line), from The agentic bank to The future of work, with space below shorter cards, and a Load more button for the ninth page. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-layout-grid.jpg)

Screenshot Details — Grid layout

Item	Detail
Screenshot Name	`screenshots/filter-list-layout-grid.jpg`
Screenshot Purpose	Grid layout
Screen Description	Latest insights at 1440 px in the Grid layout: two aligned rows of four Default cards (image, tag line, title, three-line description, meta line), from The agentic bank to The future of work, with space below shorter cards, and a Load more button for the ninth page.
Business Context	A tidy catalogue of the latest insights where every card shows a summary, so visitors can compare articles and reports at a glance.
Author Objective	Set Default layout to Grid with Card style Default and Enable featured cards off, showing eight cards per page.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Latest insights	No	Heading of the block	Short, descriptive heading	None
(B)	Default layout (Filter List › Content)	Grid	No	Arrangement of the cards	Masonry for mixed heights, Grid for uniform cards, List for text-led lists	Options masonry, grid, list; other values fall back to masonry
(C)	Cards per page (Filter List › Content)	8	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(D)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(E)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(F)	Card style (Filter List › Cards)	Default	No	Card presentation	Mixed for insight hubs	Options default, compact, featured, mixed
(G)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two rows of four aligned Default cards, each with a 4:3 image, tag line with reading time, title, three-line description and a meta line such as "Article" and "04 Sep 26" separated by a bar; shorter cards leave space below and a Load more button follows.
- **Rendering behaviour:** A CSS grid of 4 columns at 1200 px and wider (3 from 900 px, 2 from 600 px, 1 below), row gap 2.5rem, column gap 1.5rem; no masonry placement runs. Nine pages match, so eight show and Load more adds the ninth.
- **Publishing behaviour:** Publish the listed insights first so they are in the live index, then the hub page; the layout change is a dialog setting saved with the hub page only.

Business Rules

- Grid keeps every row aligned; cards of different heights leave space below.
- Card style Default is the only style that shows the description on standard cards.
- With Enable featured cards off, featured pages appear as ordinary cards in date order.
- The whole card is clickable through the title link.

Common Authoring Mistakes

Error	Root Cause	Resolution
Descriptions are missing on the cards	Card style left on Mixed (default), which hides descriptions	Set Card style to Default
A spotlight still interrupts the grid	Enable featured cards left on	Switch Enable featured cards off

Troubleshooting

- **Symptoms:** Cards show no image, only text.
- **Cause:** The listed pages have neither featured-image nor thumbnail-image metadata.
- **Resolution:** Fill featured-image or thumbnail-image on the pages and publish them.
- **Verification Steps:** Each card shows a 4:3 picture served from /media_ URLs.

Use Cases: Catalogues of similar content (all with images and descriptions), event lists, Compact style lists.

Authoring Guidelines: Content tab › Default layout: Grid.

Business Rules: The block and grid get the class `layout-grid`; no masonry placement runs.

Rendering Rules: A CSS grid with `repeat(var(--filter-list-columns), minmax(0, 1fr))` columns, row gap 2.5rem, column gap 1.5rem. Spotlights span all columns (`grid-column: 1 / -1`).

Responsive Behaviour: Desktop: 4 columns (3 for Featured style). Tablet: 2 (600px+) then 3 (900px+; 2 for Featured). Mobile: 1.

SEO Impact: None specific.

Accessibility Compliance: Reading order follows rows left to right; cards are `<article>` elements with an `<h3>` title.

Variation 3 — Layout: List

Variation Name: List (Content tab › Default layout = List).

Business Purpose: A single-column list for scanning titles, such as news or press listings.

Visual Example:

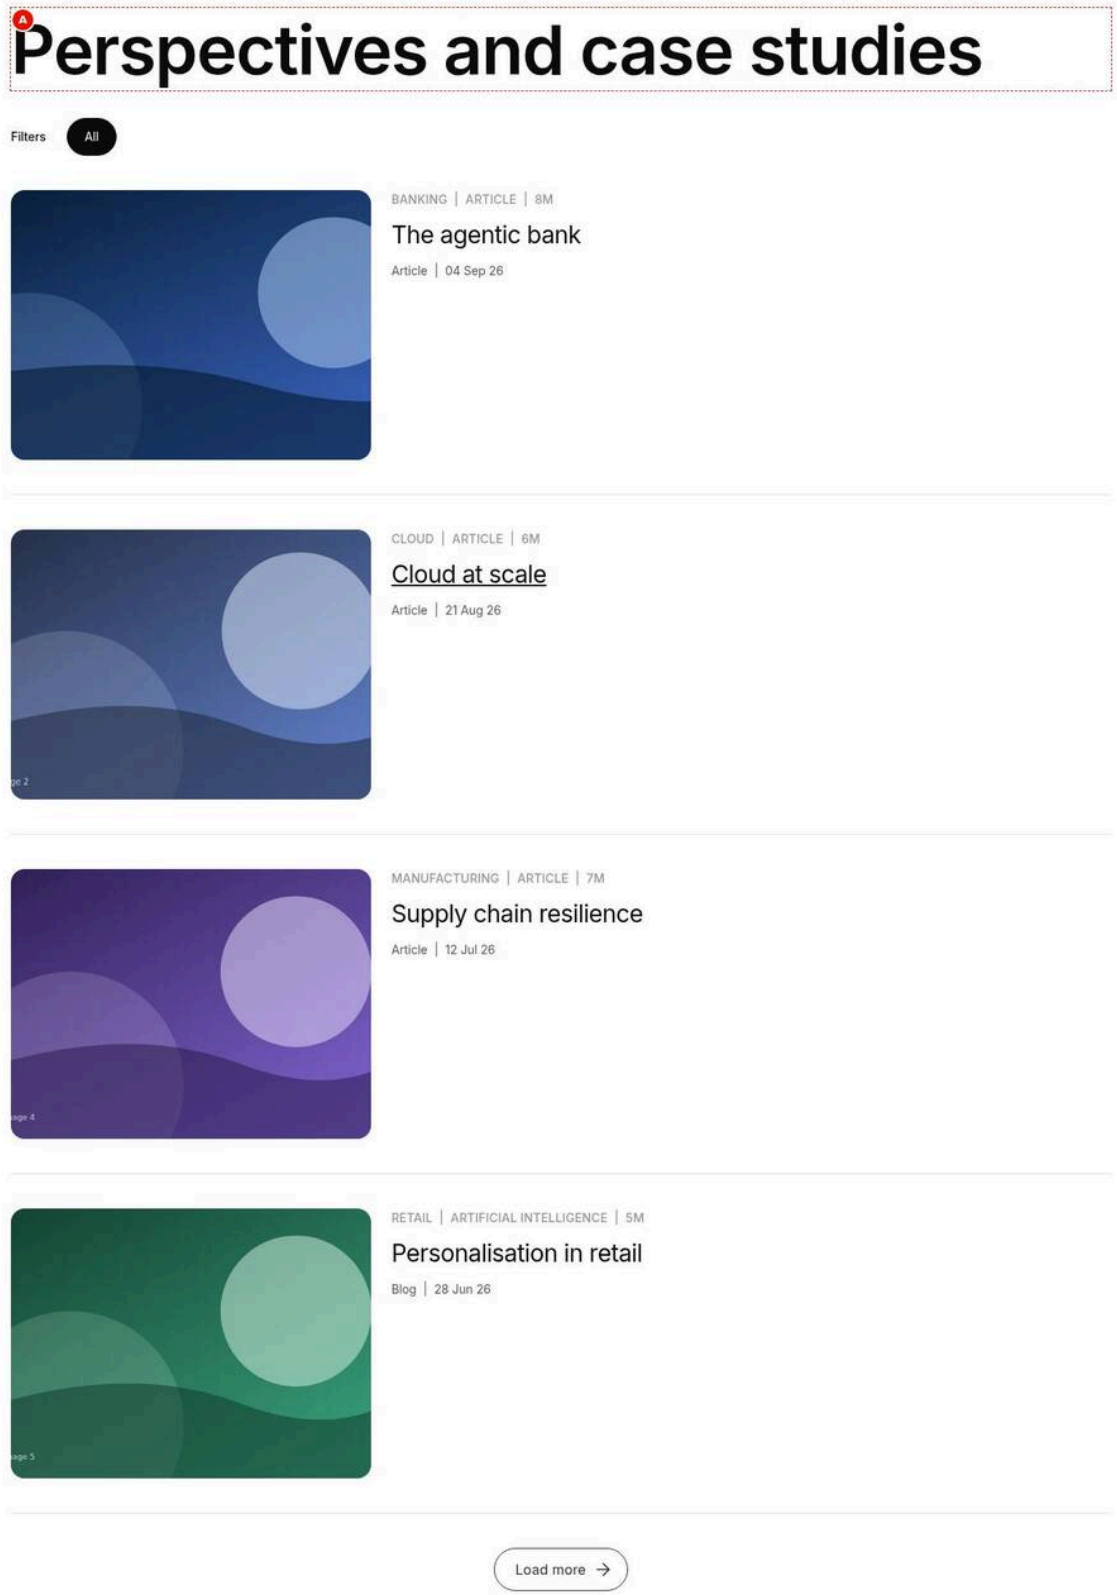

Figure 6: List layout — Perspectives and case studies at 1440 px in the List layout: four cards one per row (The agentic bank, Cloud at scale, Supply chain resilience, Personalisation in retail), each with the 4:3 image in the left third and the tags, title and meta line in the right two thirds, a divider below each, then Load more. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-layout-list.jpg)

Screenshot Details — List layout

Item	Detail
Screenshot Name	`screenshots/filter-list-layout-list.jpg`
Screenshot Purpose	List layout
Screen Description	Perspectives and case studies at 1440 px in the List layout: four cards one per row (The agentic bank, Cloud at scale, Supply chain resilience, Personalisation in retail), each with the 4:3 image in the left third and the tags, title and meta line in the right two thirds, a divider below each, then Load more.
Business Context	A text-led "Perspectives and case studies" list where visitors scan titles one per row, as in news or press listings.
Author Objective	Set Default layout to List with Page types Article, Blog and Case Study, four cards per page and no featured spotlights.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Perspectives and case studies	No	Heading of the block	Short, descriptive heading	None
(B)	Default layout (Filter List › Content)	List	No	Arrangement of the cards	Masonry for mixed heights, Grid for uniform cards, List for text-led lists	Options masonry, grid, list; other values fall back to masonry
(C)	Cards per page (Filter List › Content)	4	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(D)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(E)	Page types (Filter List › Source)	Article; Blog; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(F)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** One card per row: the 4:3 image in the left third and the tags, title and meta line in the right two thirds, with a divider below each card; Load more below the four rows.
- **Rendering behaviour:** The List layout keeps one column at every width; from 600 px each card with an image becomes a 1fr 2fr grid with the image beside the text, below 600 px the image sits above. Seven pages match, so four show and Load more adds the rest.
- **Publishing behaviour:** Publish the listed articles, blogs and case studies so they are in the index, then publish the page; reports are not listed because Report is not among the Page types.

Business Rules

- The column count stays 1 in the List layout at every breakpoint.
- Cards without an image (Compact, dark, report) stay single column.
- The Mixed style (default) shows no description on standard cards.
- Each non-spotlight card gets a 2.5rem bottom padding and a divider.

Common Authoring Mistakes

Error	Root Cause	Resolution
Reports appear in the list	Report left in Page types	Select only Article, Blog and Case Study
Rows have no description	Card style Mixed hides the description	Choose Card style Default for a summary under each title

Troubleshooting

- **Symptoms:** The cards appear in a multi-column grid instead of one per row.
- **Cause:** Default layout is still Masonry or Grid.
- **Resolution:** Set Content tab › Default layout to List and preview again.
- **Verification Steps:** Each card fills a row with the image in the left third and a divider below.

Use Cases: News, press releases, events, long text-led lists.

Authoring Guidelines: Content tab › Default layout: List. Combine with Default (shows descriptions) or Compact (no images).

Business Rules: The block gets `layout-list`; the column count stays 1 at every width (the column rules exclude `.layout-list`).

Rendering Rules: Each non-spotlight card has a bottom padding of 2.5rem and a 1px divider. From 600px, cards that have an image become a grid of `1fr 2fr`: the media in column 1 spanning 6 rows, every other part in column 2, column gap 1.5rem. Cards without an image (Compact, dark, report) stay single column.

Responsive Behaviour: Desktop and tablet: image beside the text. Mobile: image above the text.

SEO Impact: None specific.

Accessibility Compliance: Same structure as the other layouts; dividers are decorative borders.

Variation 4 — Card style: Default

Variation Name: Default (Cards tab › Card style = Default).

Business Purpose: The complete card: image, tags, title, description and meta line, for content where the summary helps visitors choose.

Visual Example:

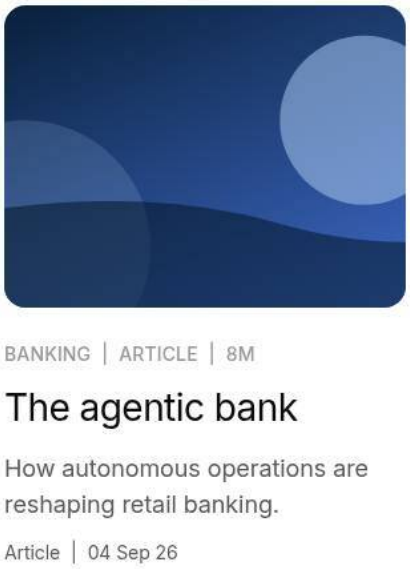

Figure 7: Default card style — Close-up of the first Default card at 1440 px: the 4:3 rounded image, the uppercase tag line Banking, Article and 8m separated by bars, the title The agentic bank, the description How autonomous operations are reshaping retail banking. and the meta line Article and 04 Sep 26. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-card-default.jpg)

Screenshot Details — Default card style

Item	Detail
Screenshot Name	`screenshots/filter-list-card-default.jpg`
Screenshot Purpose	Default card style
Screen Description	Close-up of the first Default card at 1440 px: the 4:3 rounded image, the uppercase tag line Banking, Article and 8m separated by bars, the title The agentic bank, the description How autonomous operations are reshaping retail banking. and the meta line Article and 04 Sep 26.
Business Context	A close-up of one Default style card in the latest insights grid, the complete card used where the page summary helps visitors choose.
Author Objective	Show the parts of a Default card, built from the metadata of /en/insights/agentic-bank.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
(A)	Title (Filter List › Content)	Latest insights	No	Heading of the block	Short, descriptive heading	None
(B)	Default layout (Filter List › Content)	Grid	No	Arrangement of the cards	Masonry for mixed heights, Grid for uniform cards, List for text-led lists	Options masonry, grid, list; other values fall back to masonry

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Cards per page (Filter List › Content)	8	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(D)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(E)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(F)	Card style (Filter List › Cards)	Default	No	Card presentation	Mixed for insight hubs	Options default, compact, featured, mixed
(G)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The first card: the wide image at 4:3 with rounded corners, the uppercase tag line with Banking, Article and 8m separated by bars, the title “The agentic bank”, the description clamped to three lines and the meta line with Article and 04 Sep 26.
- **Rendering behaviour:** The image comes from featured-image (else thumbnail-image), requested 600 px wide from 900 px and 750 px below; it zooms to 104 % on hover and the title is underlined. The title link’s ::before covers the whole card.
- **Publishing behaviour:** The card content changes only when the listed page’s metadata changes and the page is republished (and re-indexed); editing the Filter List does not change card texts.

Business Rules

- At most two tag labels are shown, followed by the reading time; a whole number becomes “{n}m”.
- The meta line is the eyebrow (content-type by default) and the publish date as dd Mmm yy.
- Tag labels come from the taxonomy, never the raw tag IDs.
- Card images have empty alt text because the title carries the meaning.

Common Authoring Mistakes

Error	Root Cause	Resolution
The card shows the page title instead of a shorter card title	Mapping tab › Title source left on title	Set Title source to card-title only if every listed page has it
The date is shown unformatted	publish-date is not in YYYY-MM-DD	Enter the publish date as an ISO date on the page

Troubleshooting

- **Symptoms:** The reading time shows “8” instead of “8m” or is missing.
- **Cause:** reading-time is empty or contains text, which is shown as typed.
- **Resolution:** Enter a whole number of minutes in reading-time on the page and republish it.
- **Verification Steps:** The tag line ends with “8m” after the index updates.

Use Cases: Insights and article listings where descriptions are well written.

Authoring Guidelines: Cards tab › Card style: Default. Make sure the listed pages have a Description and a featured or thumbnail image.

Business Rules: Block class `card-default`. Every standard card is the `standard` kind.

Rendering Rules: `<article class="filter-list-card filter-list-card-standard">` with: media (if the page has an image; 4:3, radius l, `object-fit: cover`), tag row (up to 2 tag labels and the reading time), `<h3>` title with the card link, description (clamped to 3 lines), meta row (eyebrow and publish date). The title link's `::before` covers the whole card, so the whole card is clickable.

Responsive Behaviour: Desktop 4 columns; tablet 2 / 3; mobile 1.

SEO Impact: Title and description text are present in the rendered DOM.

Accessibility Compliance: One link per card (the title), so screen readers announce the title once; images have empty alt (decorative, the title names the link); focus ring drawn around the whole card (`:focus-visible::before` outline).

Variation 5 — Card style: Compact

Variation Name: Compact (Cards tab › Card style = Compact).

Business Purpose: A text-only, outlined card for dense lists where images add no value.

Visual Example:

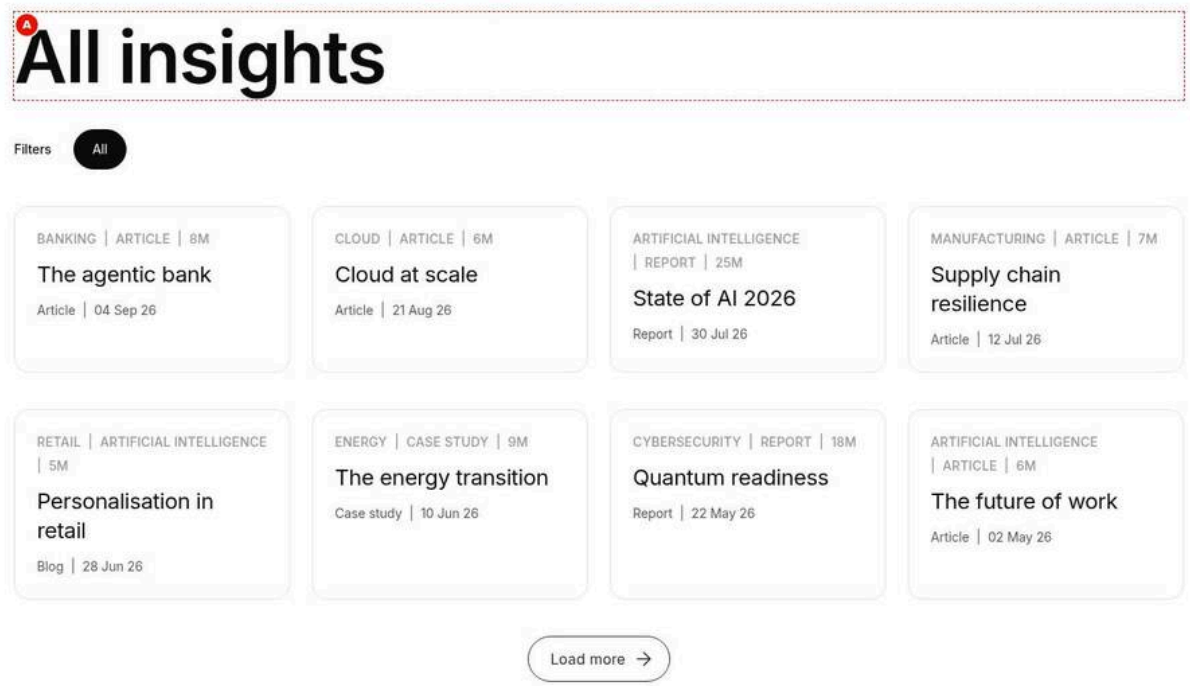

Figure 8: Compact card style — All insights at 1440 px with Card style Compact: two rows of four outlined text cards (tag line with reading time, medium title link, eyebrow and date), no images and no descriptions, from The agentic bank to The future of work, and a Load more button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-card-compact.jpg)

Screenshot Details — Compact card style

Item	Detail
Screenshot Name	`screenshots/filter-list-card-compact.jpg`

Item	Detail
Screenshot Purpose	Compact card style
Screen Description	All insights at 1440 px with Card style Compact: two rows of four outlined text cards (tag line with reading time, medium title link, eyebrow and date), no images and no descriptions, from The agentic bank to The future of work, and a Load more button.
Business Context	An “All insights” index for visitors who scan many titles quickly, where images would add no value.
Author Objective	Set Card style Compact in a grid of eight cards without featured spotlights.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	All insights	No	Heading of the block	Short, descriptive heading	None
(B)	Default layout (Filter List › Content)	Grid	No	Arrangement of the cards	Masonry for mixed heights, Grid for uniform cards, List for text-led lists	Options masonry, grid, list; other values fall back to masonry
(C)	Cards per page (Filter List › Content)	8	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(D)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(E)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(F)	Card style (Filter List › Cards)	Compact	No	Card presentation	Mixed for insight hubs	Options default, compact, featured, mixed
(G)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None

All other fields keep their default values. Each callout letter marks the field’s output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four columns of outlined text cards with radius l: a tag line with reading time, a medium-size title link and the meta line with eyebrow and date; no image and no description; Load more below.
- **Rendering behaviour:** Compact cards have 1.5rem padding and a 1px border; the title uses –heading-font-size-m. The grid has 4 columns from 1200 px, 3 from 900 px, 2 from 600 px and 1 below; nine pages match, so eight show.
- **Publishing behaviour:** Only the hub page’s dialog changes; the listed pages need no republishing. Preview, then Publish to aem.live.

Business Rules

- Compact cards never show an image or description, even when the page has them.
- The whole card is clickable through the title link.
- Report and dark card kinds apply only in the Mixed style, not in Compact.
- Tags, reading time, eyebrow and date still come from the page metadata.

Common Authoring Mistakes

Error	Root Cause	Resolution
Author expects thumbnails on compact cards	Compact is text-only by design	Use Card style Default or Mixed for images
Cards look crowded	Long titles in four narrow columns	Keep listed page titles short or use the List layout

Troubleshooting

- **Symptoms:** The cards still show images after choosing Compact.
- **Cause:** The dialog change was not saved or the preview shows a cached version.
- **Resolution:** Re-select Card style Compact, preview the page again and reload with the cache disabled.
- **Verification Steps:** All cards are outlined text cards without images.

Use Cases: News, events, press, document libraries.

Authoring Guidelines: Cards tab › Card style: Compact.

Business Rules: Block class `card-compact`; cards are the `compact` kind and never show an image or description, even when the page has them.

Rendering Rules: Tag row, `<h3>` title link (`--heading-font-size-m`, letter-spacing –0.015 of its size), meta row; 1.5rem padding, 1px border, radius l.

Responsive Behaviour: Desktop 4 columns; tablet 2 / 3; mobile 1.

SEO Impact: Titles only; descriptions are not rendered.

Accessibility Compliance: As Default; no images.

Variation 6 — Card style: Featured

Variation Name: Featured (Cards tab › Card style = Featured).

Business Purpose: Larger cards with an explicit call to action, for fewer, more important items.

Visual Example:

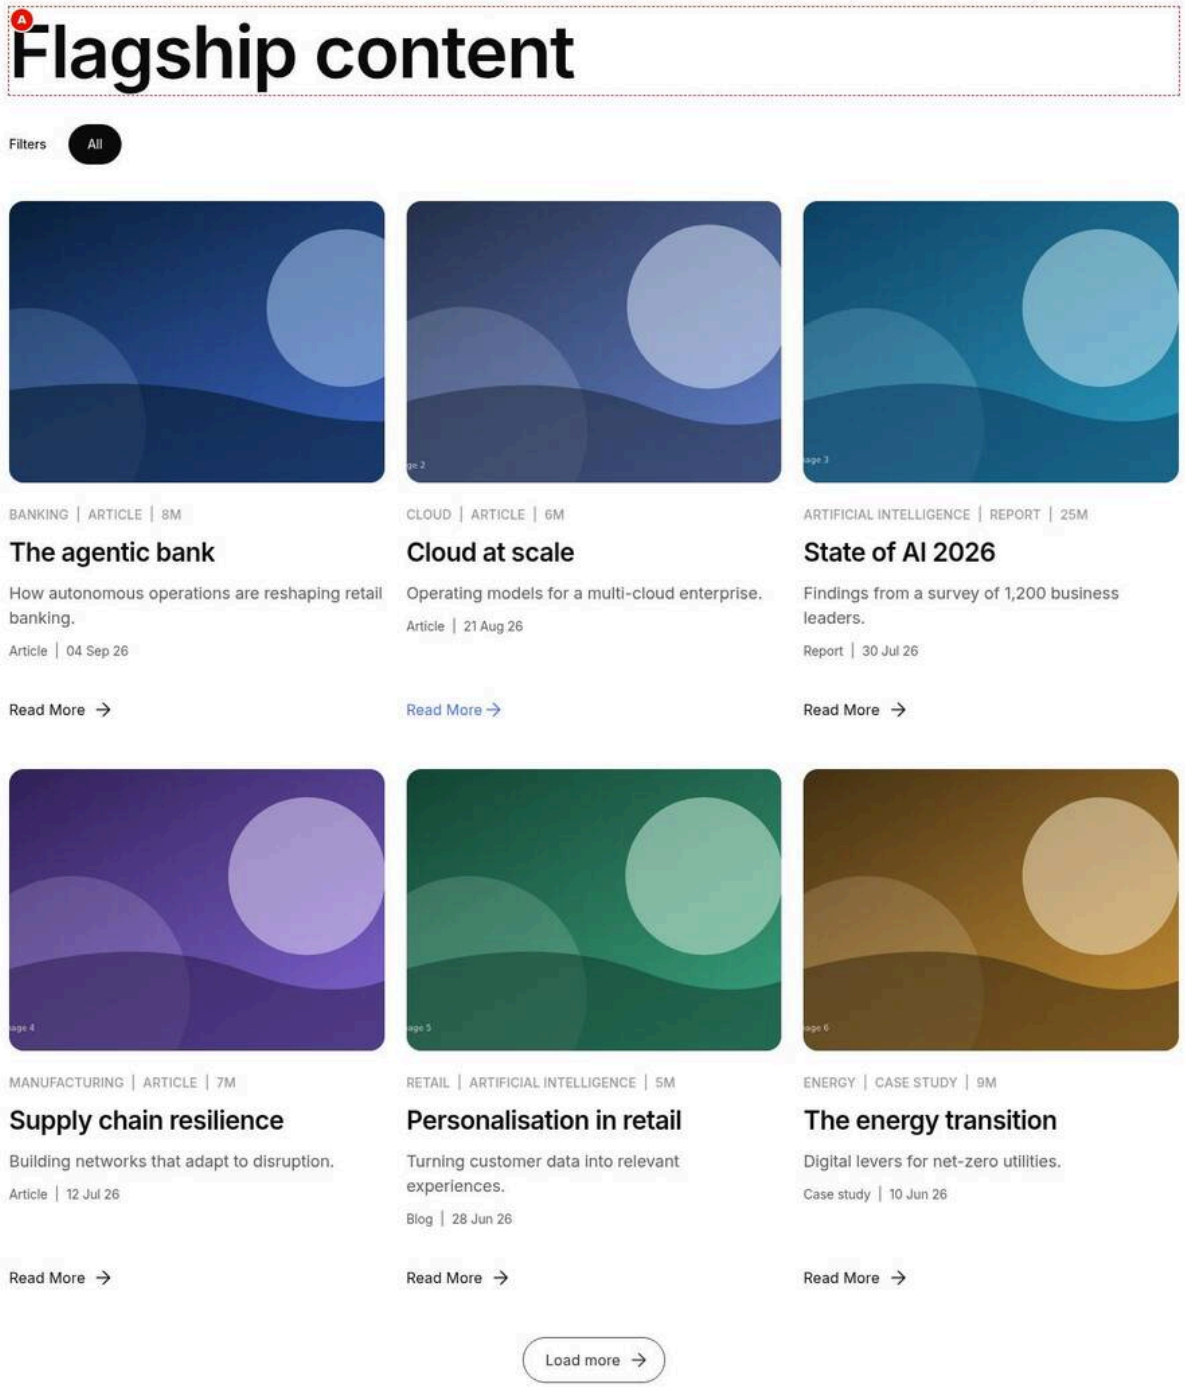

Figure 9: Featured card style — Flagship content at 1440 px with Card style Featured: two rows of three large cards from The agentic bank to The energy transition, each with image, tag line, semibold title, description, meta line and a Read more text button, then Load more. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-card-featured.jpg)

Screenshot Details — Featured card style

Item	Detail
Screenshot Name	`screenshots/filter-list-card-featured.jpg`
Screenshot Purpose	Featured card style

Item	Detail
Screen Description	Flagship content at 1440 px with Card style Featured: two rows of three large cards from The agentic bank to The energy transition, each with image, tag line, semibold title, description, meta line and a Read more text button, then Load more.
Business Context	A "Flagship content" section that presents fewer, more important insights with larger cards and an explicit call to action.
Author Objective	Set Card style Featured in a grid of six cards per page without featured spotlights.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Flagship content	No	Heading of the block	Short, descriptive heading	None
(B)	Default layout (Filter List › Content)	Grid	No	Arrangement of the cards	Masonry for mixed heights, Grid for uniform cards, List for text-led lists	Options masonry, grid, list; other values fall back to masonry
(C)	Cards per page (Filter List › Content)	6	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(D)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(E)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(F)	Card style (Filter List › Cards)	Featured	No	Card presentation	Mixed for insight hubs	Options default, compact, featured, mixed
(G)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three columns of large cards, each with the image, the tag line, a semibold title, the description, the meta line and a "Read more" text button; two rows and a Load more button.
- **Rendering behaviour:** The Featured style removes one column at large widths: 3 columns from 1200 px, 2 from 600 px, 1 below. The Read more button is the card's link, with the accessible name "Read more: {title}".
- **Publishing behaviour:** Publish the hub page; the Read more label comes from the placeholders sheet (readMore), which is published separately per locale.

Business Rules

- Card style Featured is unrelated to Enable featured cards (the spotlights).

- The title is not a link; the Read more button is the card's one link and covers the card.
- Six of the nine matching pages show first; Load more adds the default 6.
- The Read more label is the same on every card.

Common Authoring Mistakes

Error	Root Cause	Resolution
Spotlight cards appear instead of large cards	Enable featured cards confused with Card style Featured	Set Card style Featured and turn Enable featured cards off
Read more shows in English on another locale	The readMore key is missing in the locale's placeholders	Add readMore to /{locale}/placeholders and publish it

Troubleshooting

- **Symptoms:** The grid still shows four columns on desktop.
- **Cause:** Card style is not Featured, so the 4-column rule applies.
- **Resolution:** Select Card style Featured in the Cards tab and preview.
- **Verification Steps:** Three large cards per row with Read more buttons.

Use Cases: Flagship reports, campaign pages, small curated collections.

Authoring Guidelines: Cards tab › Card style: Featured. Use with Grid or Masonry. Do not confuse with the featured spotlight cards (Enable featured cards), which are a separate setting.

Business Rules: Block class `card-featured`; cards are the `large` kind. The grid has one column fewer at large widths (2 from 900px, 3 from 1200px).

Rendering Rules: Media, tag row, `<h3>` title (semibold, not a link), description, meta row and a `Read more` tertiary button (`placeholder readMore`) that is the card's link; its accessible name is "Read more: {title}". The link covers the card.

Responsive Behaviour: Desktop 3 columns; tablet 2 (600px to 1199px); mobile 1.

SEO Impact: The link text is generic ("Read more"); the title is in the heading and the `aria-label`, but search engines read the visible link text. Prefer Default for SEO-sensitive listings.

Accessibility Compliance: The button's `aria-label` includes the title (WCAG 2.4.4 Link Purpose in context, 2.5.3 Label in Name: the visible "Read more" starts the label).

Variation 7 — Card style: Mixed (standard image cards)

Variation Name: Mixed (Cards tab › Card style = Mixed; the default style).

Business Purpose: The Figma "Explore insights & opinions" mix: image cards, report panels and dark panels in one wall, chosen per page from its metadata.

Visual Example:

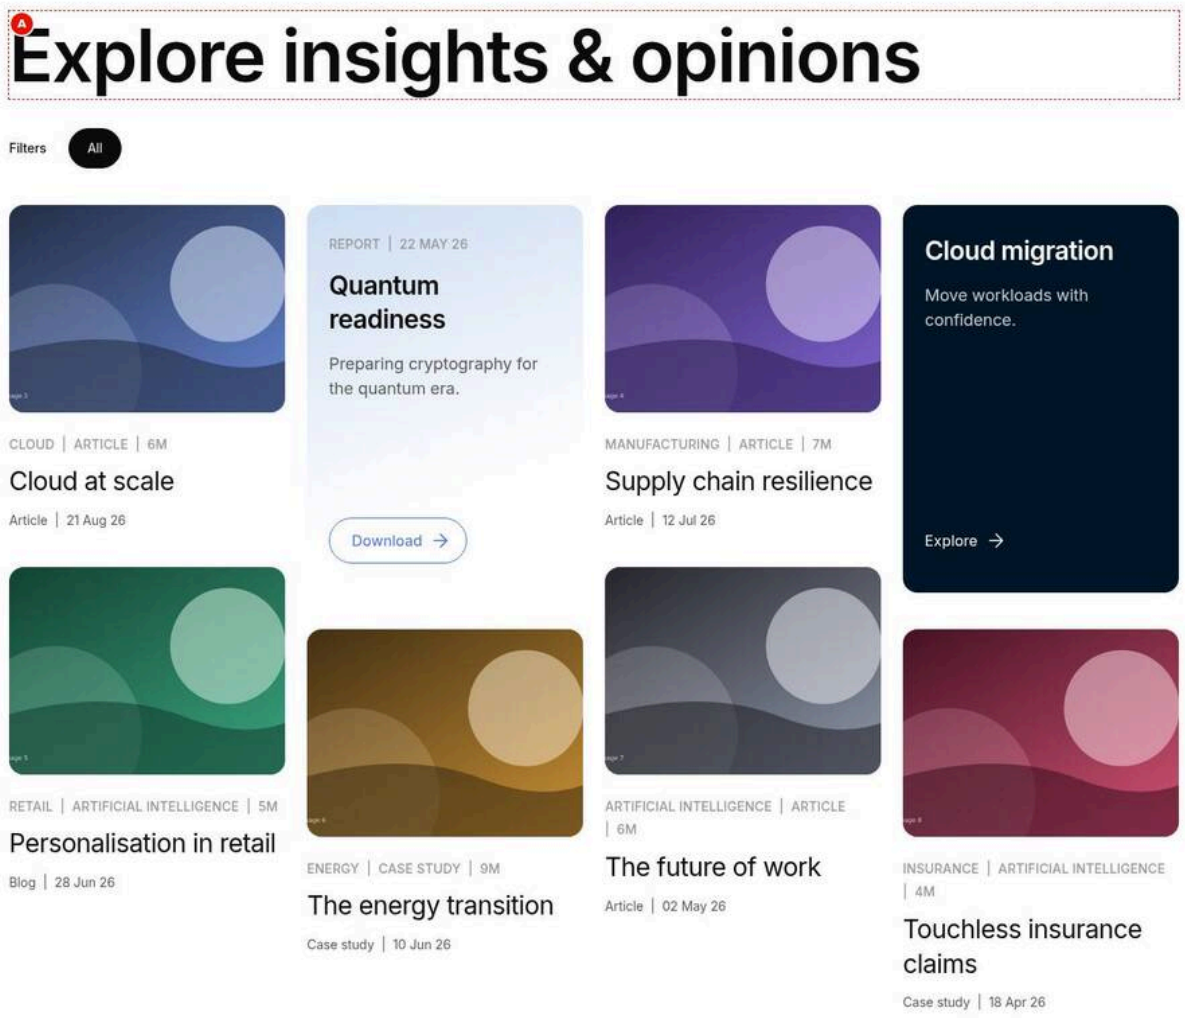

Figure 10: Mixed card style — Explore insights & opinions at 1440 px: a four-column masonry wall of eight cards in the authored order, image cards without description, Quantum readiness as a light gradient report panel with Download and Cloud migration as a dark blue panel with Explore; no spotlight and no Load more. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-card-mixed.jpg)

Screenshot Details — Mixed card style

Item	Detail
Screenshot Name	`screenshots/filter-list-card-mixed.jpg`
Screenshot Purpose	Mixed card style
Screen Description	Explore insights & opinions at 1440 px: a four-column masonry wall of eight cards in the authored order, image cards without description, Quantum readiness as a light gradient report panel with Download and Cloud migration as a dark blue panel with Explore; no spotlight and no Load more.
Business Context	The Figma "Explore insights & opinions" wall that mixes image cards, a report panel and a dark panel, chosen per page from its metadata.
Author Objective	List eight hand-picked pages in the default Mixed style and masonry layout, without featured spotlights.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Explore insights & opinions	No	Heading of the block	Short, descriptive heading	None
(B)	Cards per page (Filter List › Content)	8	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(C)	Datasource (Filter List › Source)	Manual List	No	Where the pages come from	Query Index for automatic lists, Manual List for curated ones	Options query-index, manual
(D)	Pages (Filter List › Source)	Select the page or enter /en/insights/cloud-at-scale,/en/insights/quantum-readiness,/en/insights/supply-chain-resilience,/en/services/cloud/migration,/en/insights/retail-personalisation,/en/insights/energy-transition,/en/insights/future-of-work,/en/insights/insurance-claims	No	Curated pages, in order	Add published pages of the same locale	Shown when Datasource = Manual List
(E)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A masonry wall of eight cards: image cards without description, Quantum readiness as a light gradient report panel with Download, and Cloud migration as a dark blue panel with Explore, in the authored order.
- **Rendering behaviour:** Each page is checked in order: report first (eyebrow contains report), then no image (dark card), else a standard image card. Four columns at 1440 px; all eight cards fit Cards per page 8, so Load more is hidden.
- **Publishing behaviour:** The card kind follows the listed pages' metadata; changing content-type or images on a page changes its card after that page is republished and re-indexed.

Business Rules

- Report detection is a case-insensitive test for "report" on the eyebrow column (content-type by default).
- A report page without an image is still a report card.
- Dark cards show only the first tag and no reading time.
- The Download button opens the page itself, not a file.

Common Authoring Mistakes

Error	Root Cause	Resolution
A whitepaper shows as an image card	Its content-type does not contain report	Set content-type to Report, or accept the standard card
Unexpected dark cards	featured-image and thumbnail-image are empty on those pages	Add an image to the page metadata
Download expected to start a PDF	The report card links to the page	Put the file link on the report page itself

Troubleshooting

- **Symptoms:** Every card is a dark panel.
- **Cause:** The Mapping tab Image source names a column that is not indexed, or the pages have no image metadata.
- **Resolution:** Restore Image source featured-image and Fallback image thumbnail-image and fill the pages' images.
- **Verification Steps:** Only Cloud migration remains a dark card.

Use Cases: Insights hubs with a mix of articles, reports and image-less pages.

Authoring Guidelines: Cards tab › Card style: Mixed. The card kind is chosen per page: pages whose eyebrow contains "report" become report cards (Variation 8), pages without an image become dark cards (Variation 9), all others are standard image cards without a description.

Business Rules: Block class `card-mixed`. Order of the checks: report first, then no image, then standard. A report page without an image is a report card.

Rendering Rules: Standard kind with media, tag row, `<h3>` title link and meta row; no description.

Responsive Behaviour: Desktop 4 columns; tablet 2 / 3; mobile 1.

SEO Impact: Descriptions only appear on report and dark cards.

Accessibility Compliance: As Default.

Variation 8 — Mixed card kind: Report card

Variation Name: Report card (Mixed style, automatic).

Business Purpose: Highlights research reports and whitepapers with a distinct panel and a Download call to action.

Visual Example:

Figure 11: Report card in the Mixed style — Close-up of the Quantum readiness report card at 1440 px: a light brand-to-white diagonal gradient, the line REPORT and 22 May 26 separated by a bar, the semibold title, the description Preparing cryptography for the quantum era. and a secondary Download button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-card-report.jpg)

Screenshot Details — Report card in the Mixed style

Item	Detail
Screenshot Name	`screenshots/filter-list-card-report.jpg`
Screenshot Purpose	Report card in the Mixed style
Screen Description	Close-up of the Quantum readiness report card at 1440 px: a light brand-to-white diagonal gradient, the line REPORT and 22 May 26 separated by a bar, the semibold title, the description Preparing cryptography for the quantum era. and a secondary Download button.
Business Context	The report card of the Mixed wall, which highlights research reports with a distinct panel and a Download call to action.
Author Objective	Show the report card that /en/insights/quantum-readiness (content-type Report) gets automatically in the Mixed style.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
(A)	Title (Filter List › Content)	Explore insights & opinions	No	Heading of the block	Short, descriptive heading	None
(B)	Cards per page (Filter List › Content)	8	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(C)	Datasource (Filter List › Source)	Manual List	No	Where the pages come from	Query Index for automatic lists, Man-	Options query-index, manual

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
					ual List for curated ones	
(D)	Pages (Filter List › Source)	Select the page or enter /en/insights/cloud-at-scale,/en/insights/quantum-readiness,/en/insights/supply-chain-resilience,/en/services/cloud/migration,/en/insights/retail-personalisation,/en/insights/energy-transition,/en/insights/future-of-work,/en/insights/insurance-claims	No	Curated pages, in order	Add published pages of the same locale	Shown when Data-source = Manual List
(E)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A card with a light brand-to-white diagonal gradient, the line REPORT and 22 May 26 separated by a bar, the semibold title “Quantum readiness”, the description “Preparing cryptography for the quantum era.” and a secondary Download button.
- **Rendering behaviour:** filter-list-card-report: padding 2rem by 1.5rem, minimum height 22.5rem, radius l, no image; the title is not a link and Download is the card’s link, with the accessible name “Download: Quantum readiness”.
- **Publishing behaviour:** The card follows the page’s content-type metadata; the Download label comes from the placeholders key download, published with the locale’s placeholders sheet.

Business Rules

- Applies only with Card style Mixed.
- The tag row shows the eyebrow and the publish date instead of tags.
- The test /report/i also matches “Annual Report” or “Reports”.
- Download links to the card URL (the page), not to a file.

Common Authoring Mistakes

Error	Root Cause	Resolution
The report shows as an image card	Card style set to Default, Compact or Featured	Keep Card style Mixed
The eyebrow reads the wrong label	Mapping tab › Eyebrow source changed from content-type	Restore Eyebrow source content-type

Troubleshooting

- **Symptoms:** A report page is shown as a dark card.
- **Cause:** Its content-type value does not contain report (for example Research) and it has no image.

- **Resolution:** Set content-type Report on the page and republish it.
- **Verification Steps:** The card shows the gradient panel with Download.

Use Cases: Reports, whitepapers and other downloadable content in an insights hub.

Authoring Guidelines: On the listed page, set the metadata used as the eyebrow (Mapping tab › Eyebrow source, `content-type` by default) to a value that contains "report" (case-insensitive), e.g. `Report`. Card style must be Mixed.

Business Rules: Applies only in the Mixed style. The test is `/report/i` on the eyebrow text, so "Annual Report" and "Reports" also match. The Download button links to the page itself (the card URL), not to a file.

Rendering Rules: `filter-list-card-report`: tag row (eyebrow and date), `<h3>` title (not a link), description, `Download` secondary button (link to the page, accessible name "Download: {title}"). Padding 2rem by 1.5rem, minimum height 22.5rem, radius l, background `linear-gradient(160deg, var(--brand-200) 0%, var(--color-bg-default) 70%)`. No image.

Responsive Behaviour: Same size rules as the other cards in the grid at every breakpoint.

SEO Impact: The visible link text is "Download"; search engines may not associate it with the title.

Accessibility Compliance: The button's accessible name includes the title. Because the button opens the page, the label "Download" may be unexpected; consider this when writing report pages (see 6.17.12).

Variation 9 — Mixed card kind: Dark card

Variation Name: Dark card (Mixed style, automatic).

Business Purpose: Gives image-less pages a strong visual presence instead of an empty image frame.

Visual Example:

Figure 12: Dark card in the Mixed style — Close-up of the Cloud migration dark card at 1440 px: a dark brand-blue panel without a tag line (the page has no tags), the white semibold title Cloud migration, the light description Move workloads with confidence. and a white Explore text button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-card-dark.jpg)

Screenshot Details — Dark card in the Mixed style

Item	Detail
Screenshot Name	`screenshots/filter-list-card-dark.jpg`

Item	Detail
Screenshot Purpose	Dark card in the Mixed style
Screen Description	Close-up of the Cloud migration dark card at 1440 px: a dark brand-blue panel without a tag line (the page has no tags), the white semibold title Cloud migration, the light description Move workloads with confidence. and a white Explore text button.
Business Context	The dark card of the Mixed wall, which gives an image-less page a strong presence instead of an empty image frame.
Author Objective	Show the dark card that /en/services/cloud/migration gets because it has no image metadata.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
(A)	Title (Filter List › Content)	Explore insights & opinions	No	Heading of the block	Short, descriptive heading	None
(B)	Cards per page (Filter List › Content)	8	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(C)	Datasource (Filter List › Source)	Manual List	No	Where the pages come from	Query Index for automatic lists, Manual List for curated ones	Options query-index, manual
(D)	Pages (Filter List › Source)	Select the page or enter /en/insights/cloud-at-scale,/en/insights/quantum-readiness,/en/insights/supply-chain-resilience,/en/services/cloud/migration,/en/insights/retail-personalisation,/en/insights/energy-transition,/en/insights/future-of-work,/en/insights/insurance-claims	No	Curated pages, in order	Add published pages of the same locale	Shown when Datasource = Manual List
(E)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A dark brand-blue panel with the white semibold title “Cloud migration”, the light description “Move workloads with confidence.” and a white Explore text button; no tag line because the page has no tags.

- **Rendering behaviour:** filter-list-card-dark: background –brand-600, padding 2rem by 1.5rem, minimum height 22.5rem; Explore is the tertiary button link with the accessible name "Explore: Cloud migration".
- **Publishing behaviour:** Adding an image to the page's metadata and republishing it turns the dark card into a standard image card after the index update.

Business Rules

- Applies in the Mixed style to non-report pages without featured-image or thumbnail-image.
- Only the first tag is shown; no reading time or date.
- The Explore label is the placeholder explore for every dark card.
- The page needs no content-type to be listed in a Manual List.

Common Authoring Mistakes

Error	Root Cause	Resolution
Author expects the page photo	No image column is filled on the page	Fill featured-image or thumbnail-image
The dark card has no label	The page has no tags	Tag the page if a label is wanted

Troubleshooting

- **Symptoms:** The dark card text is hard to read in a screenshot or test.
- **Cause:** A custom theme or CSS override changes –brand-600 or the light text colours.
- **Resolution:** Report it to the development team (L3) with the page URL.
- **Verification Steps:** White title and light description on the dark brand panel meet contrast.

Use Cases: Opinion pieces, podcasts or pages that have no featured or thumbnail image.

Authoring Guidelines: Leave both image columns (Image source and Fallback image, by default `featured-image` and `thumbnail-image`) empty on the listed page. Card style must be Mixed.

Business Rules: Applies in the Mixed style to non-report pages without an image. Shows only the first tag (no reading time).

Rendering Rules: `filter-list-card-dark`: tag row (one tag), `<h3>` title, description, `Explore` tertiary button (link to the page, accessible name "Explore: {title}"). Background `--brand-600`, light text (`--color-text-on-neutral`, `--color-text-light-overlay`), padding 2rem by 1.5rem, minimum height 22.5rem.

Responsive Behaviour: As other cards.

SEO Impact: Generic link text "Explore".

Accessibility Compliance: Light text on `--brand-600`; [To be confirmed: colour contrast of `--color-text-light-overlay` on `--brand-600` measured against WCAG 1.4.3 — owner: design system].

Variation 10 — Hero spotlight: Featured rule

Variation Name: Hero card, Hero rule = Featured (Cards tab › Enable hero card = on, Hero rule = Featured; Featured is the default rule).

Business Purpose: Opens the list with one large spotlight for the most important featured page.

Visual Example:

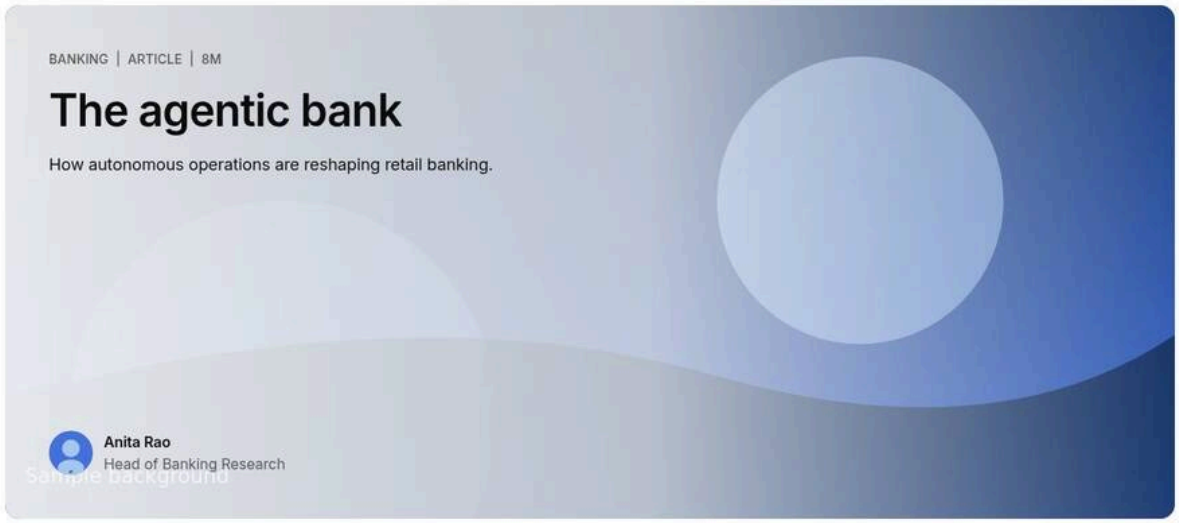

Figure 13: Hero spotlight (Featured rule) — Close-up of the hero spotlight at 1440 px: The agentic bank image under a white gradient, at the left the tag line Banking, Article and 8m, the 3rem title The agentic bank, its description and the lockup with Anita Rao's photo, name and Head of Banking Research. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-hero-featured.jpg)

Screenshot Details — Hero spotlight (Featured rule)

Item	Detail
Screenshot Name	`screenshots/filter-list-hero-featured.jpg`
Screenshot Purpose	Hero spotlight (Featured rule)
Screen Description	Close-up of the hero spotlight at 1440 px: The agentic bank image under a white gradient, at the left the tag line Banking, Article and 8m, the 3rem title The agentic bank, its description and the lockup with Anita Rao's photo, name and Head of Banking Research.
Business Context	The lead story of the Insights hub: the most important flagged insight opens the list as a large spotlight above the cards.
Author Objective	Turn on Enable hero card with the default Hero rule Featured on a Query Index list of /en/insights.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
(A)	Title (Filter List › Content)	Insights	No	Heading of the block	Short, descriptive heading	None
(B)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(C)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(D)	Enable hero card (Filter List › Cards)	On	No	A large spotlight above the grid	One hero per page	None

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A full-width card at least 35rem high: the agentic bank image behind a white gradient, at the left the tag line Banking, Article and 8m, the 3rem title "The agentic bank", its description and the author lockup with Anita Rao's photo, name and designation Head of Banking Research.
- **Rendering behaviour:** The hero sits above the grid inside the results area; its image is requested 1600 px wide from 900 px (750 px below) and loads eagerly. From 900 px the content padding is 3rem; below, 2rem by 1.5rem with the title at –display-font-size-3.
- **Publishing behaviour:** The hero, spotlight and card content come from the listed pages' metadata in the query index: republish a page after changing featured, priority or publish-date; publish the hub page for dialog changes and the Authors sheet for lockup changes.

Business Rules

- The hero is the matching featured page with the lowest priority (agentic-bank: featured yes, priority 1).
- If no matching page is featured, the latest page becomes the hero.
- The hero is chosen again from the matching pages whenever the visitor filters.
- The hero page is removed from the featured spotlights and standard cards.

Common Authoring Mistakes

Error	Root Cause	Resolution
The wrong page is the hero	Another page has featured = yes and a lower priority	Correct the priority values on the featured pages
No author lockup	Author source value and author-id do not match an Authors sheet row exactly	Use the exact (case-sensitive) author-id from /en/data/authors

Troubleshooting

- **Symptoms:** The hero shows the newest page instead of the flagged one.
- **Cause:** The featured value on agentic-bank is not yes, true, 1, on or y, so no page counts as featured.
- **Resolution:** Set featured to yes on the page, republish it and wait for the index update.
- **Verification Steps:** The agentic bank appears as the hero with Anita Rao's lockup.

Use Cases: Insights hub with a lead story.

Authoring Guidelines: Turn on Enable hero card; keep Hero rule = Featured. Mark the lead page with `featured` = `yes` (or `true`, `1`, `on`, `y`) and give it the lowest `priority` among featured pages.

Business Rules: The hero is the matching featured page with the lowest priority (pages without a priority last; ties by latest publish date). If no matching page is featured, the latest page (publish date, then last modified) is the hero. The hero is chosen again whenever the filters change, from the pages that match them; it is removed from the featured and standard cards.

Rendering Rules: `<article class="filter-list-card filter-list-card-spotlight filter-list-card-hero">` placed above the grid (inside `filter-list-results`, before the grid). Media is absolutely positioned behind the content, the image requested at 1600px (900px+) or 750px wide and loaded eagerly (`loading="eager"`). Content: tag row, `<h3>` title link, description, author lockup (when an author is found).

Responsive Behaviour: Desktop and tablet from 900px: content padding 3rem, title 3rem. Below 900px: padding 2rem by 1.5rem, title `--display-font-size-3`. Always full width, minimum height 35rem.

SEO Impact: The hero title is an `<h3>` (below the block's `<h2>` title).

Accessibility Compliance: Image alt is empty (decorative); text sits on a white gradient over the image for contrast; the card link covers the card with a visible focus outline.

Variation 11 — Hero spotlight: Latest rule

Variation Name: Hero card, Hero rule = Latest.

Business Purpose: Always promotes the newest page, without editorial flags.

Visual Example:

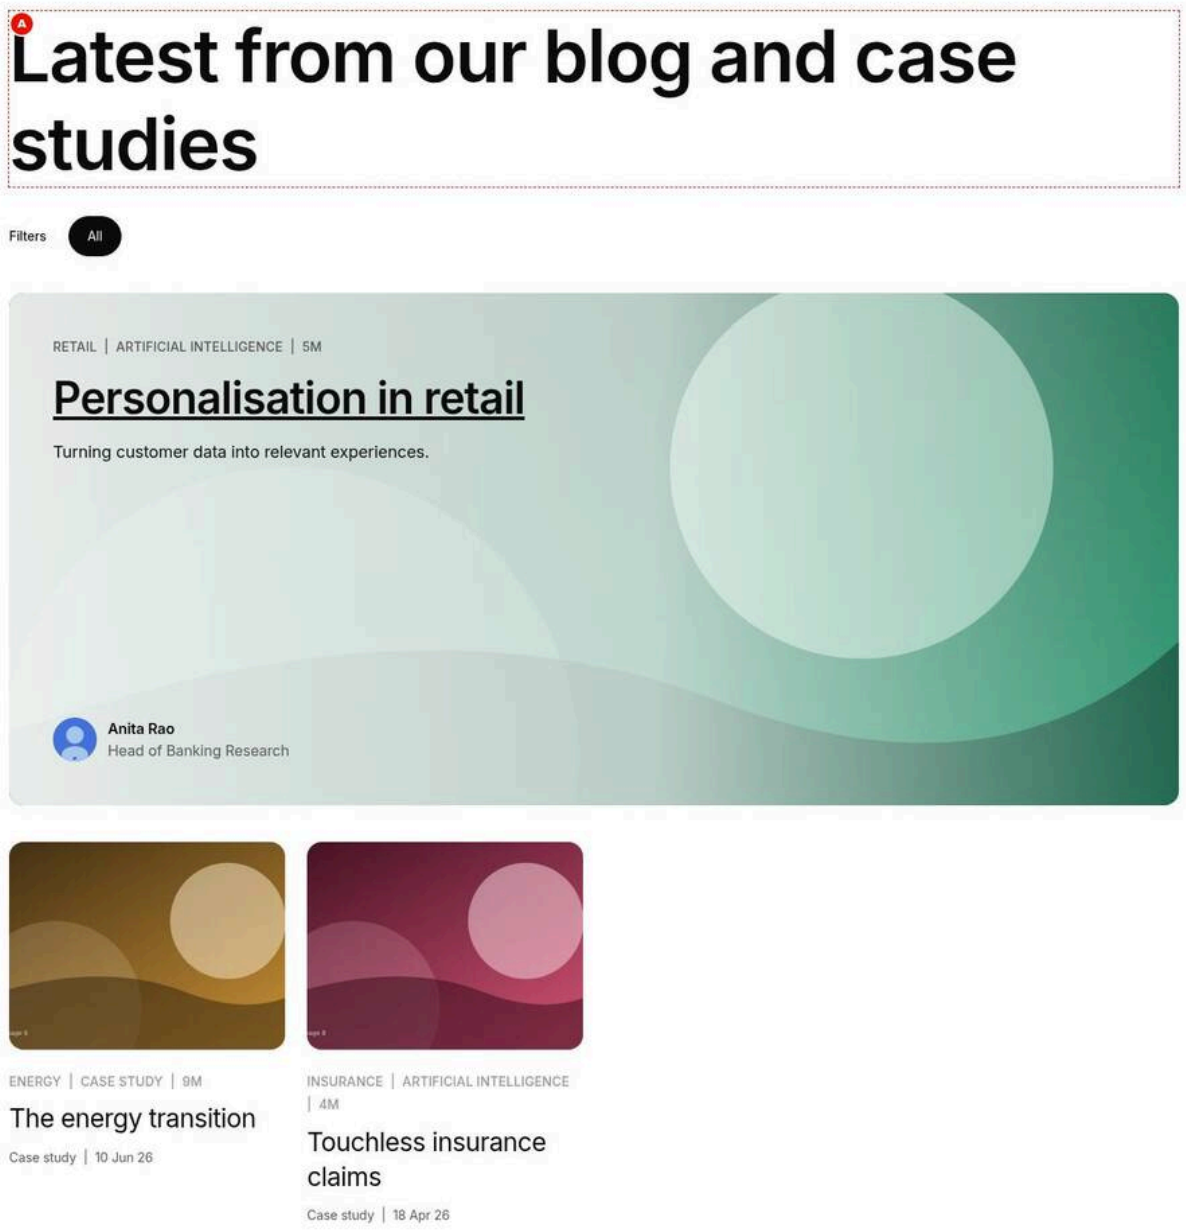

Figure 14: Hero spotlight (Latest rule) — Latest from our blog and case studies at 1440 px: the hero spotlight for Personalisation in retail (Retail, Artificial intelligence, 5m, Anita Rao) above two standard Mixed cards, The energy transition and Touchless insurance claims; no featured spotlight. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-hero-latest.jpg)

Screenshot Details — Hero spotlight (Latest rule)

Item	Detail
Screenshot Name	`screenshots/filter-list-hero-latest.jpg`
Screenshot Purpose	Hero spotlight (Latest rule)
Screen Description	Latest from our blog and case studies at 1440 px: the hero spotlight for Personalisation in retail (Retail, Artificial intelligence, 5m, Anita Rao) above two standard Mixed cards, The energy transition and Touchless insurance claims; no featured spotlight.
Business Context	A blog and case study hub that always opens with the newest piece, without editors flagging pages.
Author Objective	Set Hero rule Latest on a list of blogs and case studies below /en/insights.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Latest from our blog and case studies	No	Heading of the block	Short, descriptive heading	None
(B)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(C)	Page types (Filter List › Source)	Blog; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(D)	Enable hero card (Filter List › Cards)	On	No	A large spotlight above the grid	One hero per page	None
(E)	Hero rule (Filter List › Cards)	Latest	No	Which page is the hero	Featured, or Latest for news	Options latest, featured, manual; shown when Enable hero card = true

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The hero spotlight for "Personalisation in retail" (28 Jun 26) with the tags Retail, Artificial intelligence and 5m and Anita Rao's lockup, followed by standard cards for The energy transition and Touchless insurance claims.
- **Rendering behaviour:** Latest compares publish-date as text (YYYY-MM-DD), then last modified; undated pages sort last. Three pages match; no featured spotlight appears because none of them is featured or has a priority.
- **Publishing behaviour:** The hero, spotlight and card content come from the listed pages' metadata in the query index: republish a page after changing featured, priority or publish-date; publish the hub page for dialog changes and the Authors sheet for lockup changes.

Business Rules

- Hero rule Latest ignores the featured flag and the Sort by setting.

- Every listed page needs a publish-date in YYYY-MM-DD.
- Page types Blog and Case Study limit the list to three pages.
- The hero is excluded from the cards below it.

Common Authoring Mistakes

Error	Root Cause	Resolution
An old page stays the hero	Its publish-date is written as 28/06/2026, which sorts wrongly as text	Use the ISO format 2026-06-28
The featured page is not the hero	Hero rule Latest was chosen	Use Hero rule Featured to promote flagged pages

Troubleshooting

- **Symptoms:** A newly published blog does not become the hero.
- **Cause:** The new page is not in the index yet or has no publish-date.
- **Resolution:** Set publish-date, republish and check its row in /query-index.json.
- **Verification Steps:** The new page appears as the hero after reload.

Use Cases: News or blog hubs.

Authoring Guidelines: Enable hero card = on; Hero rule = Latest. Give every listed page a `publish-date` (YYYY-MM-DD).

Business Rules: The page with the latest `publish-date` (compared as text, so the ISO format is required); ties and pages without a date by last modified (newest first). Pages without a publish date sort after dated ones. Independent of Sort by.

Rendering Rules: As Variation 10.

Responsive Behaviour: As Variation 10.

SEO Impact: As Variation 10.

Accessibility Compliance: As Variation 10.

Variation 12 — Hero spotlight: Manual rule

Variation Name: Hero card, Hero rule = Manual.

Business Purpose: The author chooses the hero page explicitly.

Visual Example:

Figure 15: Hero spotlight (Manual rule) — Close-up of the hero spotlight at 1440 px (the card only, not the dialog): Supply chain resilience with the tag line Manufacturing, Article and 7m, its description Building networks that adapt to disruption. and the lockup of Sara Lee, Supply Chain Lead, over the page image. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-hero-manual.jpg)

Screenshot Details — Hero spotlight (Manual rule)

Item	Detail
Screenshot Name	`screenshots/filter-list-hero-manual.jpg`
Screenshot Purpose	Hero spotlight (Manual rule)
Screen Description	Close-up of the hero spotlight at 1440 px (the card only, not the dialog): Supply chain resilience with the tag line Manufacturing, Article and 7m, its description Building networks that adapt to disruption. and the lockup of Sara Lee, Supply Chain Lead, over the page image.
Business Context	A campaign moment on the Insights hub where the editor chooses the lead story explicitly, here the supply chain article.
Author Objective	Set Hero rule Manual and pick /en/insights/supply-chain-resilience as the Hero page.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
(A)	Title (Filter List › Content)	Insights	No	Heading of the block	Short, descriptive heading	None
(B)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(C)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(D)	Enable hero card (Filter List › Cards)	On	No	A large spotlight above the grid	One hero per page	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(E)	Hero rule (Filter List › Cards)	Manual	No	Which page is the hero	Featured, or Latest for news	Options latest, featured, manual; shown when Enable hero card = true
F	Hero page (Filter List › Cards)	Select the page or enter /en/insights/supply-chain-resilience	No	The hero page (Manual)	Must also match the source	Shown when the hero is on and rule = manual

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The hero spotlight for "Supply chain resilience" with the tags Manufacturing, Article and 7m, its description and the lockup of Sara Lee, Supply Chain Lead, over the page's image.
- **Rendering behaviour:** The Hero page is used only when it is among the matching pages; the featured spotlights (agentic-bank and state-of-ai-2026) still follow in the grid because Enable featured cards stays on.
- **Publishing behaviour:** The hero, spotlight and card content come from the listed pages' metadata in the query index: republish a page after changing featured, priority or publish-date; publish the hub page for dialog changes and the Authors sheet for lockup changes.

Business Rules

- Hero page is shown only for Hero rule Manual.
- The Hero page must lie below the Root path and match the Page types.
- There is no fallback: a Hero page that does not match gives no hero.
- When a visitor's filter excludes the page, the hero disappears until it matches again.

Common Authoring Mistakes

Error	Root Cause	Resolution
No hero appears	The Hero page is outside /en/insights or not published	Pick a published page below the Root path
The hero vanishes after a pill click	The pill's tag is not on the Hero page	Expected behaviour; tag the page if it should stay

Troubleshooting

- **Symptoms:** The Hero page is set but the preview shows no hero.
- **Cause:** The page is not in the index or its page-type is not one of the Page types.
- **Resolution:** Publish the Hero page and check its pageType in /query-index.json.
- **Verification Steps:** Supply chain resilience appears as the hero.

Use Cases: Campaign launches; a specific flagship report.

Authoring Guidelines: Enable hero card = on; Hero rule = Manual; pick the Hero page (shown only for this rule).

Business Rules: The Hero page is used only when it is among the pages that match the source settings and the current filters; otherwise there is no hero (no fallback). When the visitor filters it out, the hero disappears until the filters match it again.

Rendering Rules: As Variation 10.

Responsive Behaviour: As Variation 10.

SEO Impact: As Variation 10.

Accessibility Compliance: As Variation 10.

Variation 13 — Featured spotlights: featured=true rule

Variation Name: Featured cards, Featured rule = featured=true (Cards tab › Enable featured cards = on, the default; Featured rule = featured=true, the default).

Business Purpose: Breaks up long lists with large spotlight cards for flagged pages.

Visual Example:

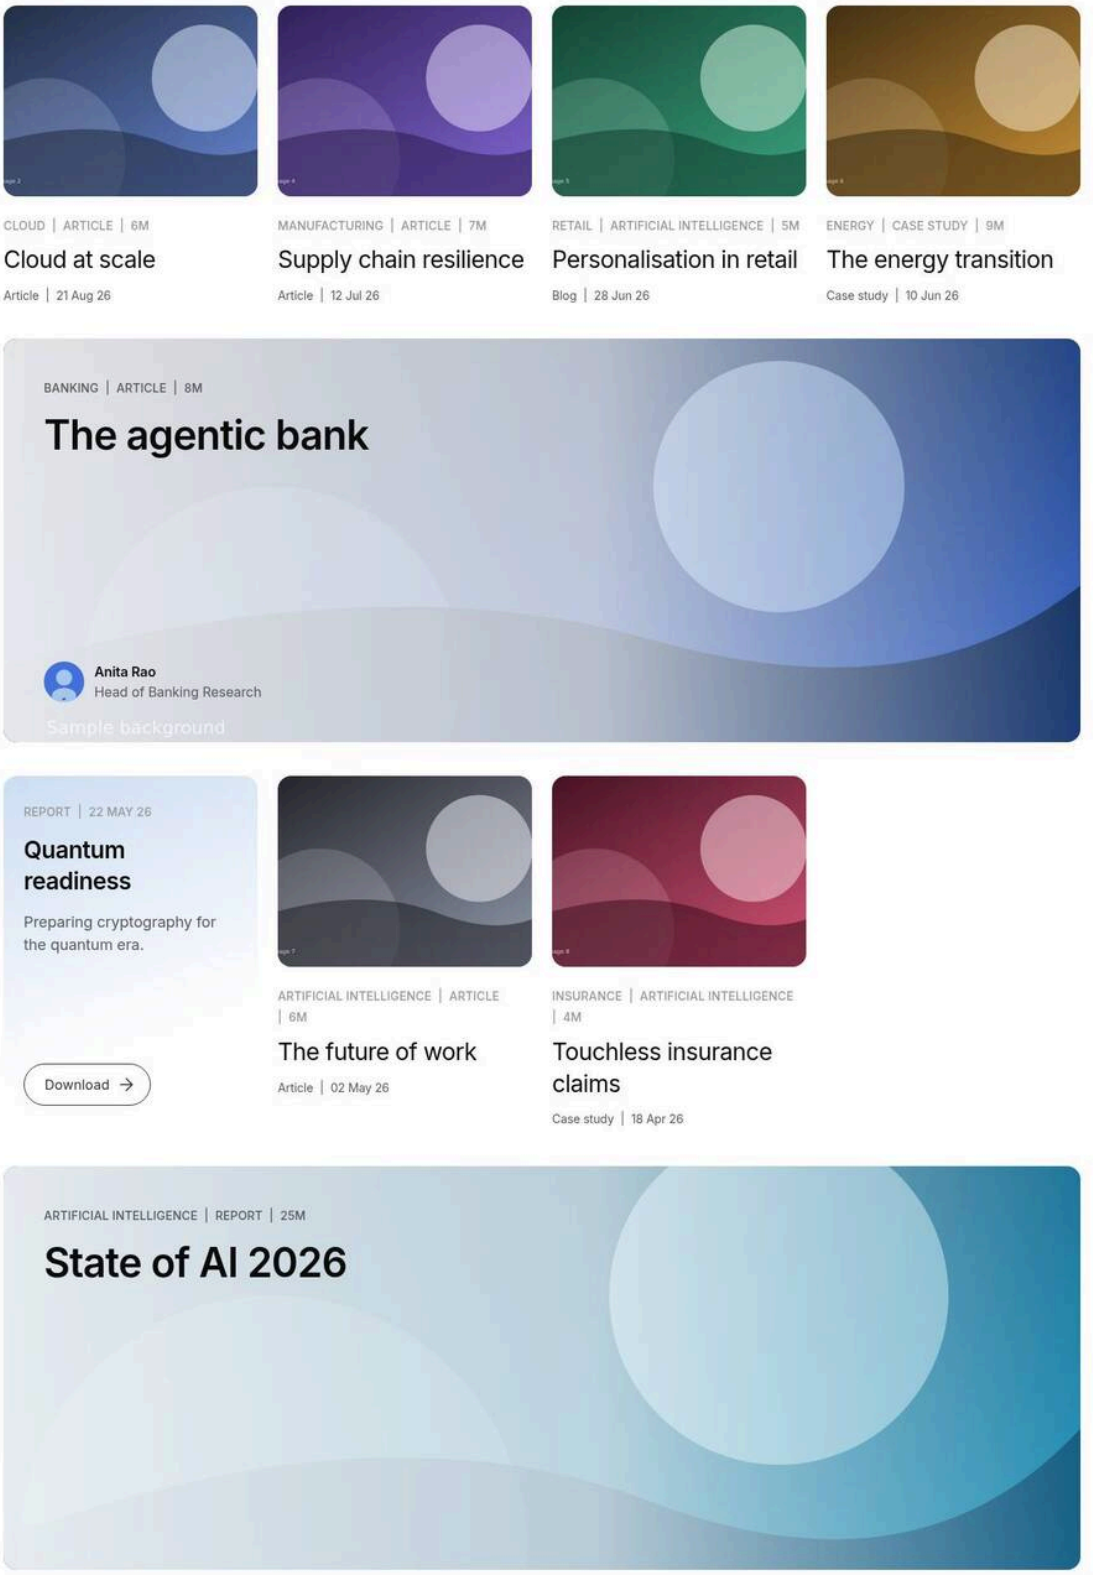

Figure 16: Featured spotlight (featured=true) — The results at 1440 px after one Load more: four cards (Cloud at scale, Supply chain resilience, Personalisation in retail, The energy transition), The agentic bank spotlight, three more cards (Quantum readiness as a report panel, The future of work, Touchless insurance claims) and the State of AI 2026 spotlight; Load more is gone. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-featured-flag.jpg)

Screenshot Details — Featured spotlight (featured=true)

Item	Detail
Screenshot Name	`screenshots/filter-list-featured-flag.jpg`
Screenshot Purpose	Featured spotlight (featured=true)
Screen Description	The results at 1440 px after one Load more: four cards (Cloud at scale, Supply chain resilience, Personalisation in retail, The energy transition), The agentic bank spotlight, three more cards (Quantum readiness as a report panel, The future of work, Touchless insurance claims) and the State of AI 2026 spotlight; Load more is gone.
Business Context	A long Insights list broken up with spotlights for editorially flagged pages, so key content stays visible as visitors load more.
Author Objective	Keep the default featured=true rule with four cards per page and three per Load more, and select Load more once.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
(A)	Title (Filter List › Content)	Insights	No	Heading of the block	Short, descriptive heading	None
(B)	Cards per page (Filter List › Content)	4	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(C)	Load more count (Filter List › Content)	3	No	Cards added per Load more	Same multiple as Cards per page	Model min 1, max 48; code: empty or 0 gives 6, negative gives 1
(D)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(E)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
—	Action (Preview)	Select Load more once	—	Check on the preview (not stored in the content)	Select Load more once	—

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four cards, then The agentic bank spotlight with Anita Rao's lockup, then Quantum readiness (report card), The future of work and Touchless insurance claims, then the State of AI 2026 spotlight; no Load more button remains.
- **Rendering behaviour:** One featured spotlight follows each page of cards; once every standard card is shown all remaining spotlights follow. Spotlights span all columns, are at least 30rem high and lazy-load their image; focus moves to the first new card after Load more.

- **Publishing behaviour:** The hero, spotlight and card content come from the listed pages' metadata in the query index: republish a page after changing featured, priority or publish-date; publish the hub page for dialog changes and the Authors sheet for lockup changes.

Business Rules

- featured=true takes pages with featured yes, ordered by priority then latest, up to Featured card count (default 2).
- If no page is flagged, pages with priority 3 or lower are used instead.
- Spotlight pages are removed from the standard cards.
- Spotlights show no description, unlike the hero.

Common Authoring Mistakes

Error	Root Cause	Resolution
Only one spotlight appears	Featured card count left at 1	Set Featured card count to 2 or more
A flagged page is not spotlighted	Its featured value is not yes, true, 1, on or y	Correct the featured metadata

Troubleshooting

- **Symptoms:** Both spotlights show together at the end of the grid.
- **Cause:** Cards per page is larger than the number of standard cards, so every card fits on the first page.
- **Resolution:** Lower Cards per page (here 4) so the first spotlight follows the first page.
- **Verification Steps:** The agentic bank spotlight appears after four cards and State of AI 2026 after Load more.

Use Cases: Editorially promoted pages inside a hub.

Authoring Guidelines: Mark pages with `featured` = `yes` (or `feature-card`, the earlier name); order them with `priority` (1 first). Set Featured card count (default 2).

Business Rules: Featured pages are the matching pages (after the hero) with the featured flag, ordered by priority then latest. If none is flagged, pages with `priority` 3 or lower are used instead. At most Featured card count are taken; they are removed from the standard cards. One featured card is inserted after each page of cards (after the first Cards per page, after each Load more); when all standard cards are shown, all remaining featured cards follow at the end.

Rendering Rules: `filter-list-card-spotlight` `filter-list-card-featured` inside the grid, spanning all columns, minimum height 30rem; no description; lazy-loaded image.

Responsive Behaviour: Full width at every breakpoint; content padding 3rem from 900px.

SEO Impact: As other cards.

Accessibility Compliance: As hero; the spotlight is a normal grid item in DOM order.

Variation 14 — Featured spotlights: priority<=3 rule

Variation Name: Featured cards, Featured rule = priority<=3.

Business Purpose: Spotlights the top-ranked pages by a numeric priority instead of a flag.

Visual Example:

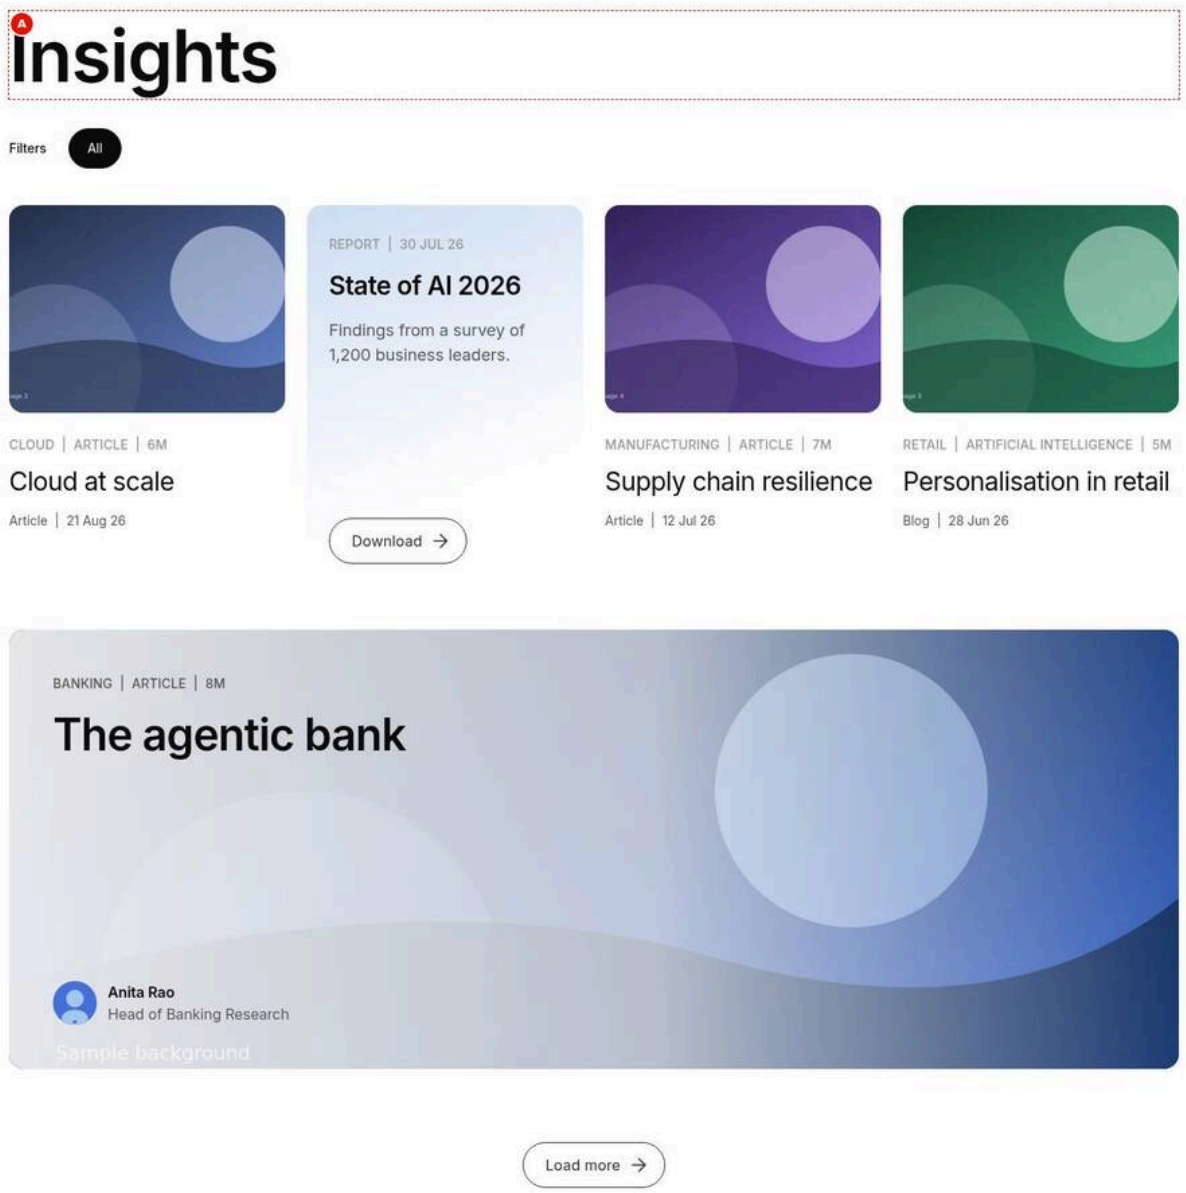

Figure 17: Featured spotlight (priority<=3) — Insights at 1440 px: four Mixed cards (Cloud at scale, State of AI 2026 as a report panel, Supply chain resilience, Personalisation in retail), then a full-width spotlight for The agentic bank (priority 1) and the Load more button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-featured-priority.jpg)

Screenshot Details — Featured spotlight (priority<=3)

Item	Detail
Screenshot Name	`screenshots/filter-list-featured-priority.jpg`
Screenshot Purpose	Featured spotlight (priority<=3)
Screen Description	Insights at 1440 px: four Mixed cards (Cloud at scale, State of AI 2026 as a report panel, Supply chain resilience, Personalisation in retail), then a full-width spotlight for The agentic bank (priority 1) and the Load more button.
Business Context	A ranked Insights programme where the spotlight follows a numeric priority instead of a featured flag.
Author Objective	Set Featured rule priority<=3 with Featured card count 1 on a list of four cards per page.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Insights	No	Heading of the block	Short, descriptive heading	None
(B)	Cards per page (Filter List › Content)	4	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(C)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(D)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(E)	Featured rule (Filter List › Cards)	priority<=3	No	Which pages are spotlighted	featured=true with priority ordering is the usual choice	Options featured, priority, manual; shown when Enable featured cards = true
(F)	Featured card count (Filter List › Cards)	1	No	Maximum spotlight cards	1 to 3	Model min 1, max 12; shown when featured cards are on; code: empty or 0 gives 2

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Cloud at scale, State of AI 2026 (report card), Supply chain resilience and Personalisation in retail, then a full-width spotlight for The agentic bank (priority 1) and Load more.
- **Rendering behaviour:** Pages with a numeric priority of 3 or less qualify, ascending, ties by latest; only the first (count 1) is spotlighted, so state-of-ai-2026 (priority 2) stays a report card in the grid.
- **Publishing behaviour:** The hero, spotlight and card content come from the listed pages' metadata in the query index: republish a page after changing featured, priority or publish-date; publish the hub page for dialog changes and the Authors sheet for lockup changes.

Business Rules

- Pages without a priority never qualify for this rule.
- priority is read from priority, else featured-priority.
- Featured card count limits the spotlights to one.
- The spotlight follows the first page of four cards.

Common Authoring Mistakes

Error	Root Cause	Resolution
No spotlight appears	No listed page has priority 1, 2 or 3	Set a numeric priority on the pages to promote
Priority 2 page missing from the spotlights	Featured card count is 1	Raise Featured card count

Troubleshooting

- **Symptoms:** The spotlight shows a page with priority 5.
- **Cause:** The priority column holds text such as "1st" on the expected page, so it is not read as a number.
- **Resolution:** Enter plain numbers in priority and republish the pages.
- **Verification Steps:** The agentic bank (priority 1) is the spotlight.

Use Cases: Ranked content programmes.

Authoring Guidelines: Set `priority` (a number; `featured-priority` is read as a fallback) on the pages; values 1, 2, 3 qualify.

Business Rules: Pages with a numeric priority of 3 or less, ascending, ties by latest; at most Featured card count. Pages without a priority never qualify. Placement as Variation 13.

Rendering Rules: As Variation 13.

Responsive Behaviour: As Variation 13.

SEO Impact: As Variation 13.

Accessibility Compliance: As Variation 13.

Variation 15 — Featured spotlights: Manual rule

Variation Name: Featured cards, Featured rule = Manual.

Business Purpose: The author picks the spotlight pages and their order.

Visual Example:

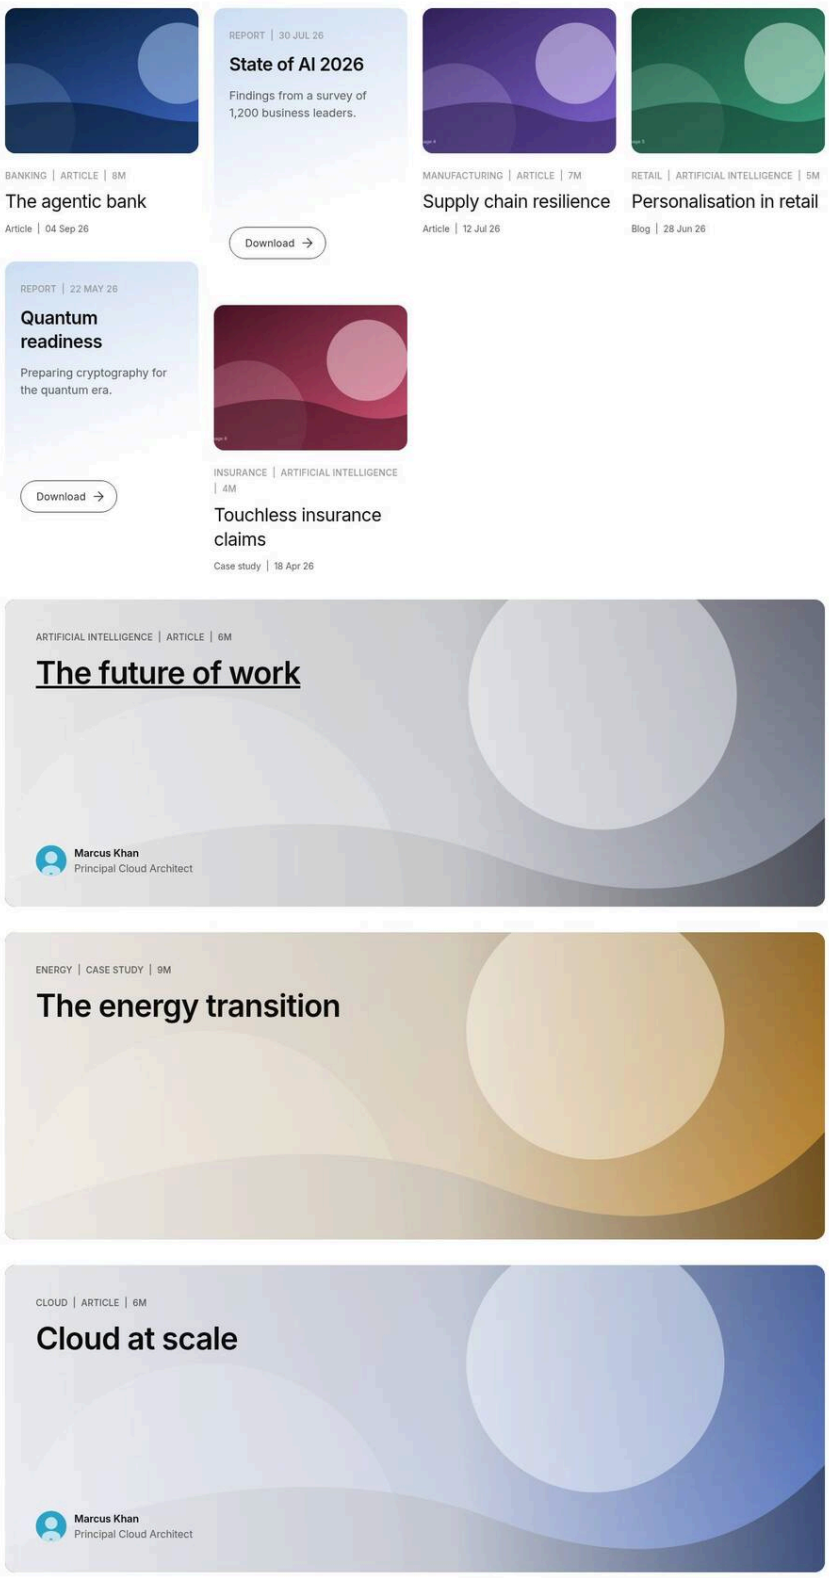

Figure 18: Featured spotlight (Manual) — The results at 1440 px (not the dialog): six cards (The agentic bank, State of AI 2026 report panel, Supply chain resilience, Personalisation in retail, Quantum readiness report panel, Touchless insurance claims) followed by spotlights for The future of work, The energy transition and Cloud at scale in the authored order. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-featured-manual.jpg)

Screenshot Details — Featured spotlight (Manual)

Item	Detail
Screenshot Name	`screenshots/filter-list-featured-manual.jpg`
Screenshot Purpose	Featured spotlight (Manual)
Screen Description	The results at 1440 px (not the dialog): six cards (The agentic bank, State of AI 2026 report panel, Supply chain resilience, Personalisation in retail, Quantum readiness report panel, Touchless insurance claims) followed by spotlights for The future of work, The energy transition and Cloud at scale in the authored order.
Business Context	A campaign on the Insights hub where the editor picks which pages are spotlighted and in which order.
Author Objective	Set Featured rule Manual with three Featured pages (future-of-work, energy-transition, cloud-at-scale) and Featured card count 3.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
(A)	Title (Filter List › Content)	Insights	No	Heading of the block	Short, descriptive heading	None
(B)	Cards per page (Filter List › Content)	6	No	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1
(C)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(D)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(E)	Featured rule (Filter List › Cards)	Manual	No	Which pages are spotlighted	featured=true with priority ordering is the usual choice	Options featured, priority, manual; shown when Enable featured cards = true
(F)	Featured pages (Filter List › Cards)	Select the page or enter /en/insights/future-of-work,/en/insights/energy-transition,/en/insights/cloud-at-scale	No	Hand-picked spotlight pages	In display order	Shown when featured cards are on and rule = manual
(G)	Featured card count (Filter List › Cards)	3	No	Maximum spotlight cards	1 to 3	Model min 1, max 12; shown when featured cards are on; code: empty or 0 gives 2

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Six cards (The agentic bank, State of AI 2026, Supply chain resilience, Personalisation in retail, Quantum readiness, Touchless insurance claims), then spotlights for The future of work, The energy transition and Cloud at scale in that order.
- **Rendering behaviour:** Only Featured pages that match the source and filters are used, in authored order, up to the count; because the six remaining cards fit Cards per page 6, all three spotlights follow at the end and Load more is hidden.
- **Publishing behaviour:** The hero, spotlight and card content come from the listed pages' metadata in the query index: republish a page after changing featured, priority or publish-date; publish the hub page for dialog changes and the Authors sheet for lockup changes.

Business Rules

- Featured pages is shown only for the Manual rule.
- Featured card count must be at least the number of Featured pages.
- Pages outside Root path or Page types are skipped.
- With the Manual rule, featured-flagged pages such as agentic-bank are ordinary cards.

Common Authoring Mistakes

Error	Root Cause	Resolution
Only two spotlights appear	Featured card count left at the default 2	Set Featured card count to 3
A picked page is missing	It is not below /en/insights or not published	Pick published pages inside the Root path

Troubleshooting

- **Symptoms:** The spotlights appear in date order instead of the authored order.
- **Cause:** Featured rule is still featured=true or priority<=3.
- **Resolution:** Select Featured rule Manual and save.
- **Verification Steps:** The future of work, The energy transition and Cloud at scale follow in that order.

Use Cases: Campaign-driven promotion.

Authoring Guidelines: Featured rule = Manual; add pages in Featured pages (shown only for this rule) in the order wanted; set Featured card count to at least the number of pages.

Business Rules: Only Featured pages that are among the matching pages (and not the hero) are used, in the authored order, up to Featured card count. Pages filtered out by the source or the visitor's filters are skipped.

Rendering Rules: As Variation 13.

Responsive Behaviour: As Variation 13.

SEO Impact: As Variation 13.

Accessibility Compliance: As Variation 13.

Variation 16 — Datasource: Query Index

Variation Name: Query Index (Source tab › Datasource = Query Index; the default).

Business Purpose: Automatic lists that grow as pages are published.

Visual Example:

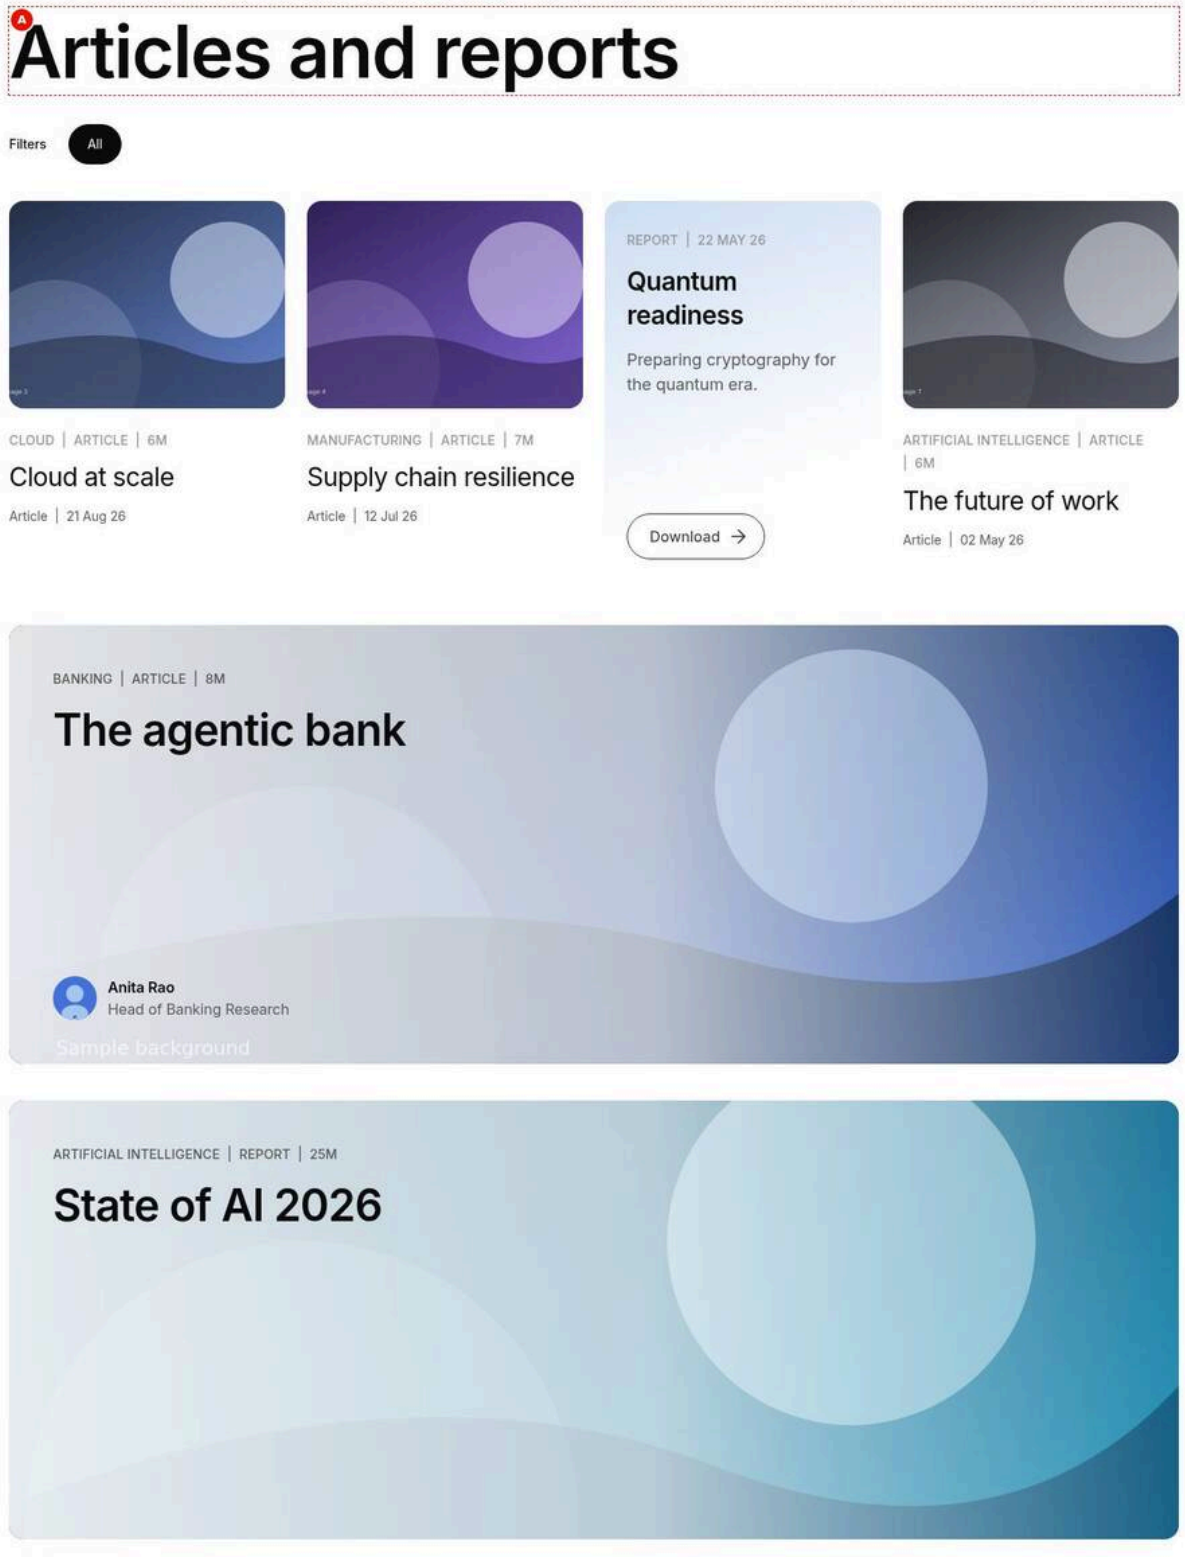

Figure 19: Query Index source settings — The rendered block at 1440 px (not the Source tab): Articles and reports with one masonry row of four Mixed cards (Cloud at scale, Supply chain resilience, Quantum readiness report panel, The future of work) followed by spotlights for The agentic bank and State of AI 2026. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-source-query-index.jpg)

Screenshot Details — Query Index source settings

Item	Detail
Screenshot Name	`screenshots/filter-list-source-query-index.jpg`
Screenshot Purpose	Query Index source settings
Screen Description	The rendered block at 1440 px (not the Source tab): Articles and reports with one masonry row of four Mixed cards (Cloud at scale, Supply chain resilience, Quantum readiness report panel, The future of work) followed by spotlights for The agentic bank and State of AI 2026.
Business Context	An "Articles and reports" section that grows automatically as new articles and reports are published below /en/insights.
Author Objective	Use the Query Index source with Root path /en/insights, Page types Article and Report and Sort by Latest First.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Articles and reports	No	Heading of the block	Short, descriptive heading	None
(B)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(C)	Page types (Filter List › Source)	Article; Report	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(D)	Sort by (Filter List › Source)	Latest First (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four Mixed cards in one masonry row (Cloud at scale, Supply chain resilience, Quantum readiness as a report panel, The future of work), followed by spotlights for The agentic bank and State of AI 2026.
- **Rendering behaviour:** Six pages match; the two featured pages become spotlights (default rule, count 2) and, because the four standard cards fit the default 9 per page, both follow at the end; Load more is hidden.
- **Publishing behaviour:** A new article or report below /en/insights appears on aem.page after it is previewed and on aem.live after it is published and the index updated; the hub page need not be republished.

Business Rules

- Query Index lists the locale's pages strictly below the Root path, excluding the current page.
- Page types Article and Report leave out blogs and case studies.
- Latest First is the default Sort by.
- The Pages field is hidden for this source.

Common Authoring Mistakes

Error	Root Cause	Resolution
Blogs appear in the list	Blog selected in Page types	Select only Article and Report
A new report is missing	It is previewed but the live index is checked	Publish the report and check aem.live

Troubleshooting

- **Symptoms:** No report appears although reports exist.
- **Cause:** The reports' page-type is empty or another value, so Page types do not match.
- **Resolution:** Set page-type report on the pages (Page Type property or metadata sheet) and republish.
- **Verification Steps:** Quantum readiness appears as a report card.

Use Cases: Hubs, listing pages, topic pages.

Authoring Guidelines: Set Root path (optional), Page types and Content types (optional) and Sort by. The Pages field is hidden.

Business Rules: Candidates are the current locale's index rows below Root path (strictly below: the root page itself is not listed; empty Root path means the whole locale), excluding the current page, whose `page-type` is one of Page types (none selected: all) and whose `content-type` is one of Content types (none: all), compared after normalization (e.g. "Case Study" = `case-study`), sorted by Sort by.

Rendering Rules: No difference in markup.

Responsive Behaviour: Not applicable (data selection).

SEO Impact: Pages excluded from the index (`helix-query.yaml`: references, error pages, data, nav, footer, block libraries, templates, fragments, modals) are never listed.

Accessibility Compliance: Not applicable.

Variation 17 — Datasource: Manual List

Variation Name: Manual List (Source tab › Datasource = Manual List).

Business Purpose: A curated, ordered list with the automatic card design and filters.

Visual Example:

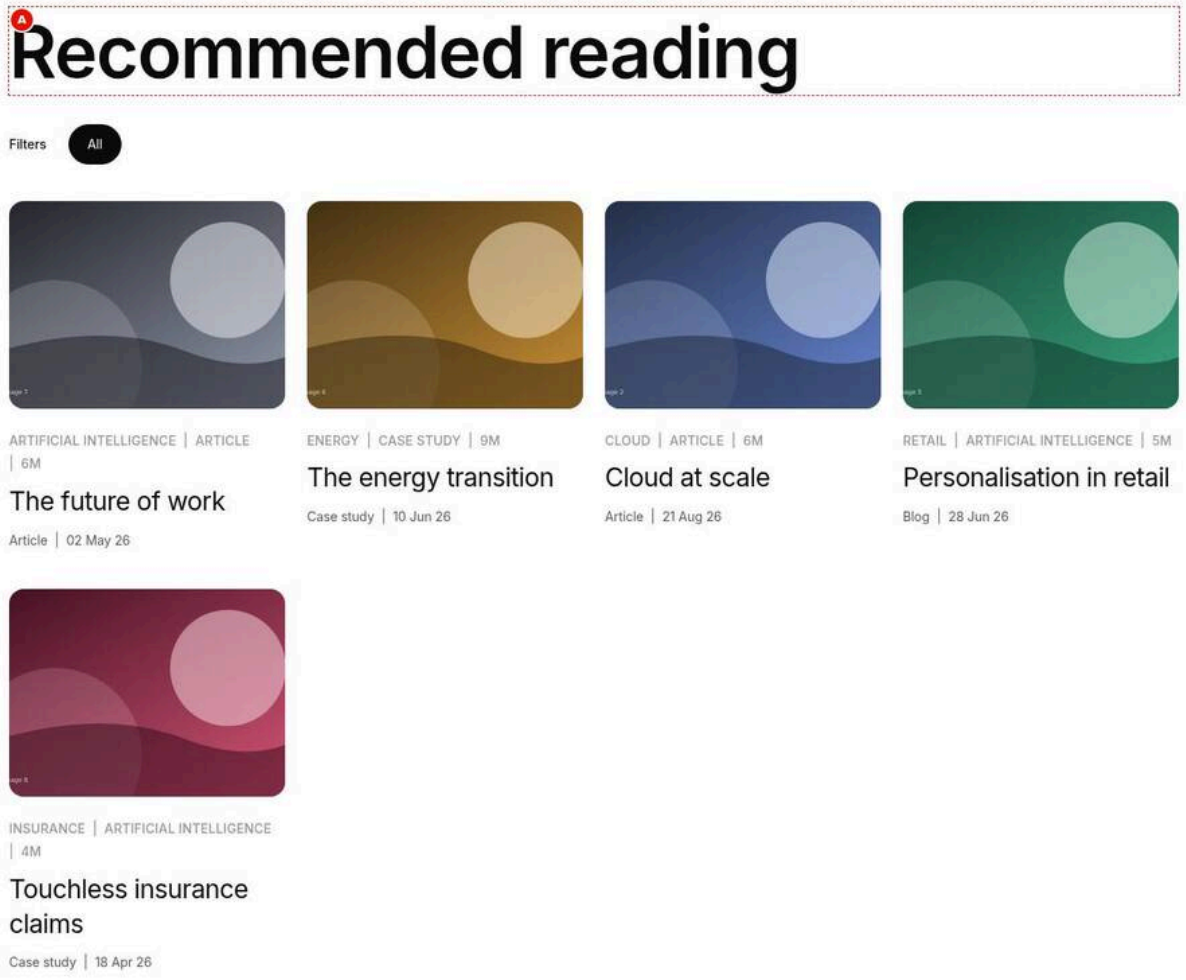

Figure 20: Manual List source settings — The rendered block at 1440 px (not the Source tab): Recommended reading with five Mixed image cards in the authored order, The future of work, The energy transition, Cloud at scale, Personalisation in retail and Touchless insurance claims; no spotlight and no Load more. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-source-manual.jpg)

Screenshot Details — Manual List source settings

Item	Detail
Screenshot Name	`screenshots/filter-list-source-manual.jpg`
Screenshot Purpose	Manual List source settings
Screen Description	The rendered block at 1440 px (not the Source tab): Recommended reading with five Mixed image cards in the authored order, The future of work, The energy transition, Cloud at scale, Personalisation in retail and Touchless insurance claims; no spotlight and no Load more.
Business Context	A “Recommended reading” set on a campaign page, hand-picked and ordered by the editor but with the automatic card design.
Author Objective	Use Datasource Manual List with five pages in the order to display.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Recommended reading	No	Heading of the block	Short, descriptive heading	None
(B)	Datasource (Filter List › Source)	Manual List	No	Where the pages come from	Query Index for automatic lists, Manual List for curated ones	Options query-index, manual
(C)	Pages (Filter List › Source)	Select the page or enter /en/insights/future-of-work,/en/insights/energy-transition,/en/insights/cloud-at-scale,/en/insights/retail-personalisation,/en/insights/insurance-claims	No	Curated pages, in order	Add published pages of the same locale	Shown when Datasource = Manual List

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Five Mixed image cards in the authored order: The future of work, The energy transition, Cloud at scale, Personalisation in retail and Touchless insurance claims; no spotlight and no Load more.
- **Rendering behaviour:** Manual List keeps the authored order (Sort by is not applied, so the 2 May article comes before the 21 Aug one). None of the five pages is featured or has a priority, so no spotlight appears.
- **Publishing behaviour:** Each picked page must be published so it is in the locale's index; publish the page holding the list after changing Pages.

Business Rules

- Root path is hidden and Pages is shown for Manual List.
- Page types, Content types and Sort by are not applied.
- Pages missing from the index or from another locale are left out silently.
- The current page is not excluded from a Manual List.

Common Authoring Mistakes

Error	Root Cause	Resolution
The order changes to newest first	Datasource left on Query Index	Select Manual List
A picked page does not show	It is unpublished or in another locale	Publish it or pick the page of the same locale

Troubleshooting

- **Symptoms:** Only four of the five cards appear.
- **Cause:** One picked path is not in /query-index.json (unpublished or excluded by helix-query.yaml).
- **Resolution:** Publish the page and re-check its index row.
- **Verification Steps:** Five cards in the authored order.

Use Cases: Campaign pages, "recommended reading" sets.

Authoring Guidelines: Add pages to Pages (shown only for Manual List) in the display order. Root path is hidden.

Business Rules: The cards are the Pages that exist in the query index of the current locale, in the authored order; pages not in the index (unpublished, excluded, another locale) are silently left out. Sort by, Page types and Content types are not applied in this mode, and the current page is not excluded. Card content still comes from each page's metadata.

Rendering Rules: As other modes.

Responsive Behaviour: Not applicable.

SEO Impact: As Variation 16.

Accessibility Compliance: Not applicable.

Variation 18 — Filter pills: single select

Variation Name: Single select pills (Filters tab › Allow multi select = off; the default).

Business Purpose: One topic at a time, the simplest filtering.

Visual Example:

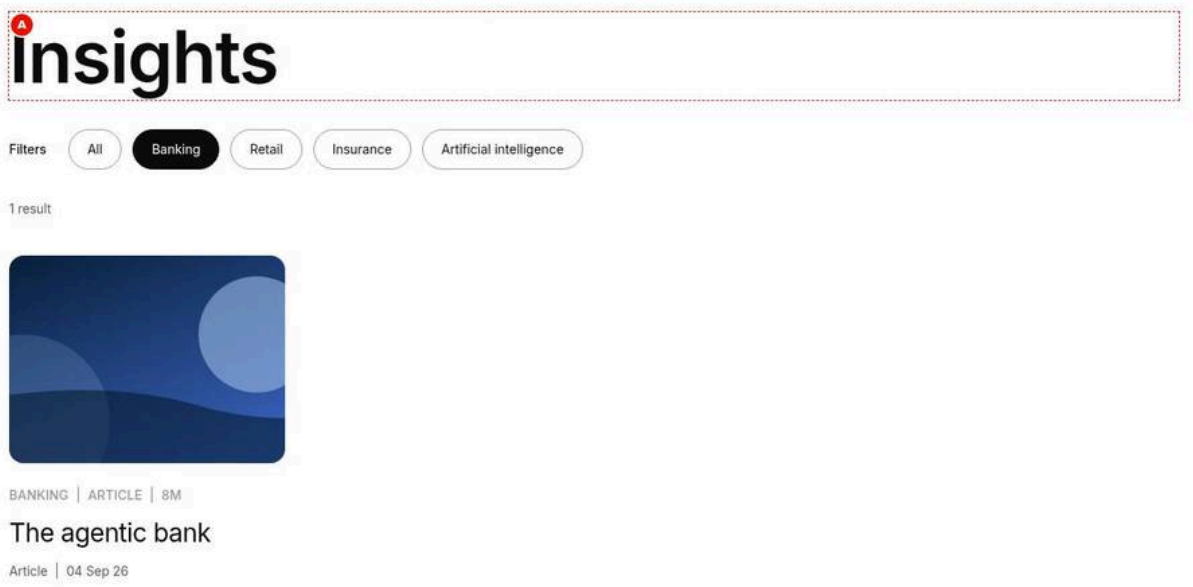

Figure 21: Single select pills — Insights at 1440 px after selecting Banking: the pills All (outlined), Banking (filled dark, pressed), Retail, Insurance and Artificial intelligence, the visible count 1 result and a single card for The agentic bank. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-pills-single.jpg)

Screenshot Details — Single select pills

Item	Detail
Screenshot Name	`screenshots/filter-list-pills-single.jpg`
Screenshot Purpose	Single select pills
Screen Description	Insights at 1440 px after selecting Banking: the pills All (outlined), Banking (filled dark, pressed), Retail, Insurance and Artificial intelligence, the visible count 1 result and a single card for The agentic bank.
Business Context	An Insights hub where visitors pick one industry or topic at a time to narrow the list, here Banking.

Item	Detail
Author Objective	Add four Primary filter tags with Show result count on, then select the Banking pill on the preview.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Insights	No	Heading of the block	Short, descriptive heading	None
(B)	Show result count (Filter List › Content)	On	No	Shows the result count visibly	Turn on for large libraries	None
(C)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(D)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(E)	Tag Id (Filter List › Filters › Primary filter tags › Item 1)	Add the tags tcs-corp:industry/banking	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(F)	Tag Id (Filter List › Filters › Primary filter tags › Item 2)	Add the tags tcs-corp:industry/retail	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(G)	Tag Id (Filter List › Filters › Primary filter tags › Item 3)	Add the tags tcs-corp:industry/insurance	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(H)	Tag Id (Filter List › Filters › Primary filter tags › Item 4)	Add the tags tcs-corp:topic/ai	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(I)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None
—	Action (Preview)	Select the Banking pill	—	Check on the preview (not stored in the content)	Select the Banking pill	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The Filters label with All outlined and Banking filled dark (pressed) among Retail, Insurance and Artificial intelligence, the visible count "1 result" and a single card for The agentic bank.

- **Rendering behaviour:** Pills are toggle buttons with aria-pressed in a labelled group; selecting Banking replaces any previous pill, selecting it again or All shows all nine pages. The count is a role="status" region.
- **Publishing behaviour:** Filtering runs in the browser on the index already loaded, so nothing is published for it; the pill and option labels come from /en/taxonomy.json, which must be published after tag changes, and the listed pages must be in the index.

Business Rules

- A pill matches pages that have its tag or any tag below it.
- Single select is the default (Allow multi select off).
- Show All filter is on by default and adds the All pill.
- Pill labels are taxonomy titles, never tag IDs.
- Without Show result count the count is visually hidden but still announced.

Common Authoring Mistakes

Error	Root Cause	Resolution
A pill shows a raw-looking label	The tag is missing from the locale taxonomy	Add the tag and its title to /en/taxonomy and publish it
Clicking a pill gives No resources found.	No listed page carries that tag	Tag the pages or remove the pill

Troubleshooting

- **Symptoms:** The Banking pill shows no cards.
- **Cause:** The banking pages are tagged with a different tag ID (for example tcs-corp:industry/banking) than the pill.
- **Resolution:** Pick the pill tag with the tag picker from the same tags the pages use.
- **Verification Steps:** Selecting Banking shows The agentic bank and "1 result".

Use Cases: Topic hubs with a handful of topics.

Authoring Guidelines: Set Primary filter tags (or a Primary filter category) and keep Allow multi select off. Show All filter adds the All pill (on by default).

Business Rules: Selecting a pill replaces the previous selection; selecting the pressed pill again clears it (all pages). All clears the selection. A pill matches pages that have its tag or any tag below it (e.g. `tcs-corp:industry/banking` matches `tcs-corp:industry/banking/retail`).

Rendering Rules: Pills are `<button class="filter-list-filter" aria-pressed>`; the All pill is pressed when nothing is selected.

Responsive Behaviour: Pills wrap; below 900px they take a full row.

SEO Impact: Filtering is client side; the URL does not change (no shareable filtered URL).

Accessibility Compliance: A `role="group"` labelled "Filters"; toggle buttons with `aria-pressed`; `aria-controls` points to the results; the result count is a `role="status"` live region announcing "{n} results" after each change.

Variation 19 — Filter pills: multi select

Variation Name: Multi select pills (Filters tab › Allow multi select = on).

Business Purpose: Narrow to pages that combine several topics.

Visual Example:

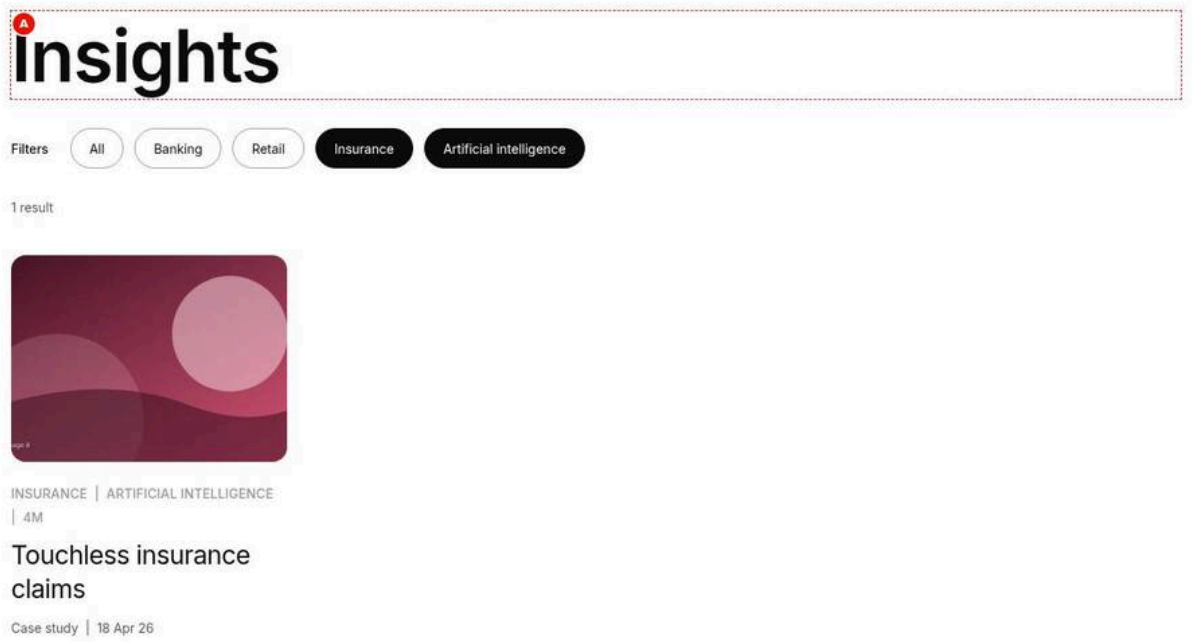

Figure 22: Multi select pills — Insights at 1440 px after selecting Insurance and Artificial intelligence: both pills pressed, All, Banking and Retail outlined, the count 1 result and one card for Touchless insurance claims, the only page tagged with both. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-pills-multi.jpg)

Screenshot Details — Multi select pills

Item	Detail
Screenshot Name	`screenshots/filter-list-pills-multi.jpg`
Screenshot Purpose	Multi select pills
Screen Description	Insights at 1440 px after selecting Insurance and Artificial intelligence: both pills pressed, All, Banking and Retail outlined, the count 1 result and one card for Touchless insurance claims, the only page tagged with both.
Business Context	A large insights library where visitors combine an industry and a topic, here insurance pages about artificial intelligence.
Author Objective	Turn on Allow multi select and select the Insurance and Artificial intelligence pills on the preview.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Insights	No	Heading of the block	Short, descriptive heading	None
(B)	Show result count (Filter List › Content)	On	No	Shows the result count visibly	Turn on for large libraries	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(D)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(E)	Tag Id (Filter List › Filters › Primary filter tags › Item 1)	Add the tags tcs-corp:industry/banking	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(F)	Tag Id (Filter List › Filters › Primary filter tags › Item 2)	Add the tags tcs-corp:industry/retail	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(G)	Tag Id (Filter List › Filters › Primary filter tags › Item 3)	Add the tags tcs-corp:industry/insurance	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(H)	Tag Id (Filter List › Filters › Primary filter tags › Item 4)	Add the tags tcs-corp:topic/ai	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(I)	Allow multi select (Filter List › Filters)	On	No	Several pills at once (AND)	Use only when tags combine meaningfully	None
(J)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None
—	Action (Preview)	Select the Insurance pill, then the Artificial intelligence pill	—	Check on the preview (not stored in the content)	Select the Insurance pill, then the Artificial intelligence pill	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Insurance and Artificial intelligence pressed together, All not pressed, the count "1 result" and one card for Touchless insurance claims.
- **Rendering behaviour:** Each pill toggles independently; a page must have every selected pill's tag (AND), so pages tagged only with AI are left out. All clears the selection.
- **Publishing behaviour:** Filtering runs in the browser on the index already loaded, so nothing is published for it; the pill and option labels come from /en/taxonomy.json, which must be published after tag changes, and the listed pages must be in the index.

Business Rules

- Multi select combines pills with AND, not OR.
- Selecting a pressed pill again removes it from the selection.
- Pills combine with advanced options by AND.
- Use multi select only when the tags combine meaningfully.

Common Authoring Mistakes

Error	Root Cause	Resolution
Selecting two pills shows fewer pages, not more	Multi select is AND by design	Use the advanced filter with Filter logic OR for broad results
Several pills cannot be pressed together	Allow multi select left off	Turn on Allow multi select

Troubleshooting

- **Symptoms:** Insurance plus Artificial intelligence shows No resources found.
- **Cause:** No listed page carries both tags.
- **Resolution:** Check the tags column of the pages in /query-index.json; tag the pages or select one pill.
- **Verification Steps:** Touchless insurance claims appears with “1 result”.

Use Cases: Large libraries where visitors combine dimensions.

Authoring Guidelines: Allow multi select = on.

Business Rules: Each pill toggles on and off independently; a page must match every selected pill (AND). All clears every selection.

Rendering Rules: As Variation 18, several pills may be pressed.

Responsive Behaviour: As Variation 18.

SEO Impact: As Variation 18.

Accessibility Compliance: As Variation 18.

Variation 20 — Advanced filter: AND logic

Variation Name: Advanced filter with Filter logic = AND (Filters tab › Enable advanced filter = on, the default; Advanced tab › Filter logic = AND, the default).

Business Purpose: A precise faceted search: pages must have every option chosen.

Visual Example:

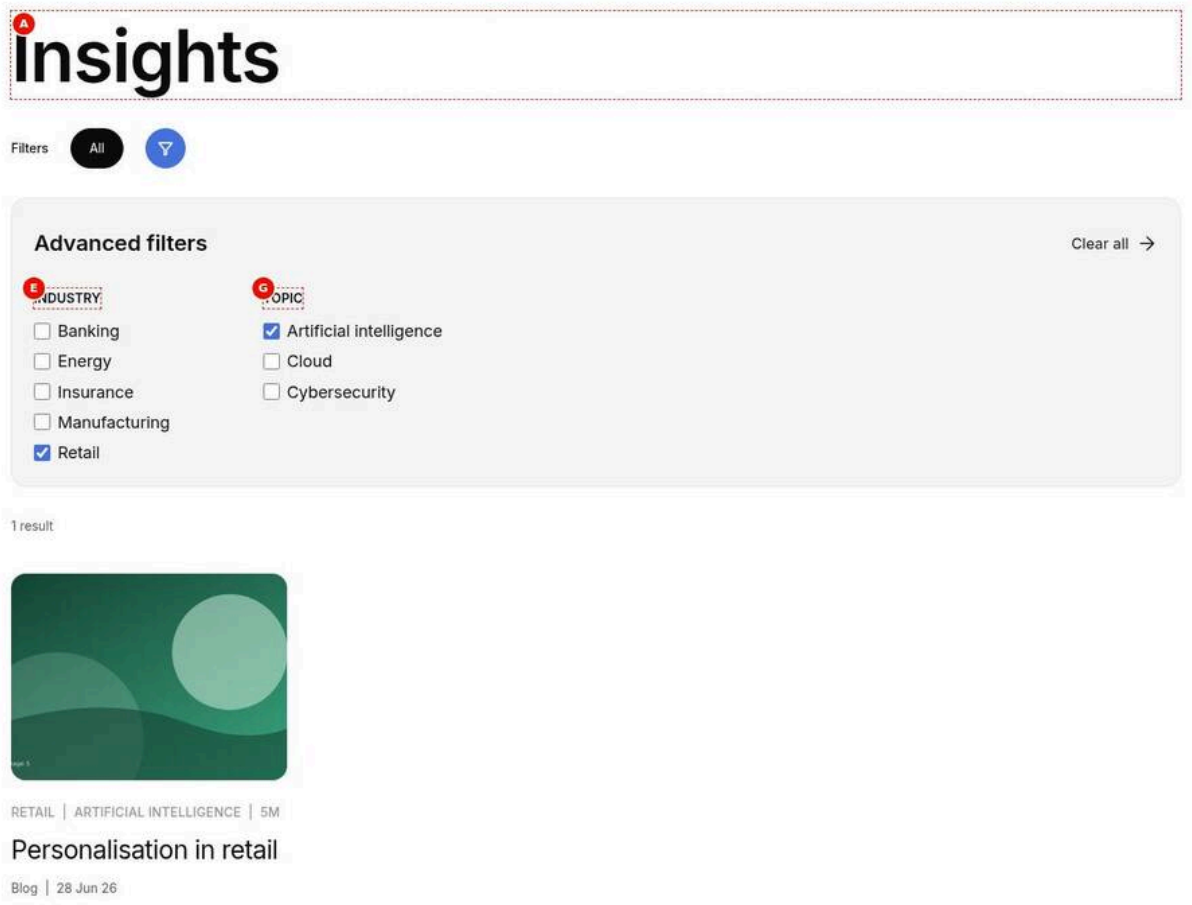

Figure 23: Advanced filter panel (AND) — Insights at 1440 px: the All pill, the filter button with a 2 badge and the open Advanced filters panel with Clear all and the fieldsets Industry (Banking, Energy, Insurance, Manufacturing, Retail) and Topic (Artificial intelligence, Cloud, Cybersecurity), Retail and Artificial intelligence checked; 1 result, Personalisation in retail. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-advanced-and.jpg)

Screenshot Details — Advanced filter panel (AND)

Item	Detail
Screenshot Name	`screenshots/filter-list-advanced-and.jpg`
Screenshot Purpose	Advanced filter panel (AND)
Screen Description	Insights at 1440 px: the All pill, the filter button with a 2 badge and the open Advanced filters panel with Clear all and the fieldsets Industry (Banking, Energy, Insurance, Manufacturing, Retail) and Topic (Artificial intelligence, Cloud, Cybersecurity), Retail and Artificial intelligence checked; 1 result, Personalisation in retail.
Business Context	A resource library where visitors combine facets precisely, here retail pages about artificial intelligence.
Author Objective	Add the Industry and Topic advanced categories with the default AND logic, then check Retail and Artificial intelligence.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Insights	No	Heading of the block	Short, descriptive heading	None
(B)	Show result count (Filter List › Content)	On	No	Shows the result count visibly	Turn on for large libraries	None
(C)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(D)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
E	Category label (Filter List › Advanced › Advanced filter categories › Item 1)	Industry	No	The category heading (legend) in the panel	Short noun, e.g. Industry	Empty: the taxonomy title of the root is used
(F)	Taxonomy root (Filter List › Advanced › Advanced filter categories › Item 1)	Add the tags tcs-corp:industry	No	Options are the tags below it	A tag below the namespace	Without a root the item is ignored
G	Category label (Filter List › Advanced › Advanced filter categories › Item 2)	Topic	No	The category heading (legend) in the panel	Short noun, e.g. Industry	Empty: the taxonomy title of the root is used
(H)	Taxonomy root (Filter List › Advanced › Advanced filter categories › Item 2)	Add the tags tcs-corp:topic	No	Options are the tags below it	A tag below the namespace	Without a root the item is ignored
(I)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None
—	Action (Preview)	Select the round filter button, then check Retail (Industry) and Artificial intelligence (Topic)	—	Check on the preview (not stored in the content)	Select the round filter button, then check Retail (Industry) and Artificial intelligence (Topic)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The round filter button with a 2 badge and the open Advanced filters panel with Clear all, the Industry (Banking, Energy, Insurance, Manufacturing, Retail) and Topic (Artificial intelligence, Cloud, Cybersecurity) fieldsets, two boxes checked, "1 result" and one card for Personalisation in retail.

- **Rendering behaviour:** Options are the tags below each Taxonomy root used by the listed pages, sorted by label; categories sit side by side from 600 px. AND requires every checked option.
- **Publishing behaviour:** Filtering runs in the browser on the index already loaded, so nothing is published for it; the pill and option labels come from /en/taxonomy.json, which must be published after tag changes, and the listed pages must be in the index.

Business Rules

- Filter logic AND is the default.
- Categories without options are not shown; with none there is no filter button.
- The badge shows the number of checked options and Clear all appears once one is checked.
- Escape closes the panel and returns focus to the filter button.

Common Authoring Mistakes

Error	Root Cause	Resolution
The filter button does not appear	Enable advanced filter turned off or no category has a Taxonomy root	Keep the toggle on and pick roots the pages use
Checking two options gives no results	AND requires both tags on one page	Use Filter logic OR for broad discovery

Troubleshooting

- **Symptoms:** A category shows options that no visitor needs.
- **Cause:** Options are every tag below the root that the listed pages use.
- **Resolution:** Choose a narrower Taxonomy root or retag the pages.
- **Verification Steps:** The panel lists only the intended options.

Use Cases: Resource libraries with several taxonomies.

Authoring Guidelines: Add Advanced filter categories (Category label and Taxonomy root, e.g. Industry / `tcs:industry`); keep Filter logic = AND.

Business Rules: Each category's options are the tags below its Taxonomy root that the candidate pages use, sorted by label; categories without options are not shown; with no category shown there is no filter button. A page must have every checked option (or a tag below it). The options combine with the pills by AND.

Rendering Rules: Toggle: an icon button (`filter` icon, brand outline; filled when open) with `aria-expanded`, `aria-controls` and a count badge. Panel: `<div role="region" aria-label="Advanced filters" hidden>` with a header (title, Clear all, hidden while nothing is checked) and one `<fieldset>` with a `<legend>` per category and a list of checkboxes with labels.

Responsive Behaviour: Categories side by side from 600px (auto-fit columns of at least 12rem), stacked on mobile.

SEO Impact: None.

Accessibility Compliance: Opening the panel moves focus to the first checkbox; Escape closes it and returns focus to the toggle; Clear all returns focus to the first checkbox; the toggle's accessible name includes "{n} selected"; fieldset and legend group the options (WCAG 1.3.1, 2.1.1, 2.4.3, 4.1.2).

Variation 21 — Advanced filter: OR logic

Variation Name: Advanced filter with Filter logic = OR.

Business Purpose: Broad discovery: pages with any of the chosen options.

Visual Example:

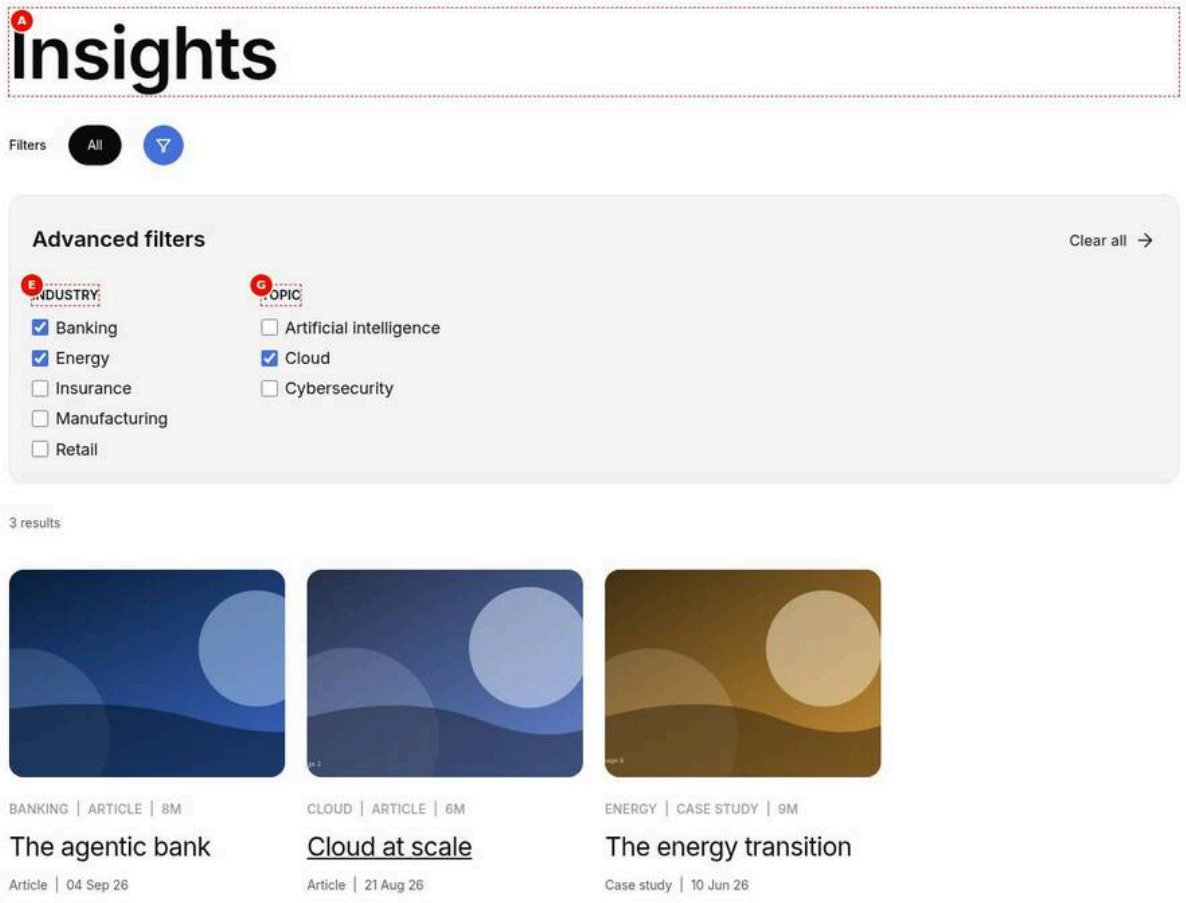

Figure 24: Advanced filter panel (OR) — Insights at 1440 px: the open Advanced filters panel with Banking and Energy (Industry) and Cloud (Topic) checked, a 3 badge, the count 3 results and cards for The agentic bank, Cloud at scale and The energy transition. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-advanced-or.jpg)

Screenshot Details — Advanced filter panel (OR)

Item	Detail
Screenshot Name	`screenshots/filter-list-advanced-or.jpg`
Screenshot Purpose	Advanced filter panel (OR)
Screen Description	Insights at 1440 px: the open Advanced filters panel with Banking and Energy (Industry) and Cloud (Topic) checked, a 3 badge, the count 3 results and cards for The agentic bank, Cloud at scale and The energy transition.
Business Context	Exploratory browsing of the Insights hub, where visitors collect pages that match any of several facets.
Author Objective	Set Filter logic OR, then check Banking and Energy (Industry) and Cloud (Topic).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree,	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Filter List	
A	Title (Filter List › Content)	Insights	No	Heading of the block	Short, descriptive heading	None
(B)	Show result count (Filter List › Content)	On	No	Shows the result count visibly	Turn on for large libraries	None
(C)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(D)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
E	Category label (Filter List › Advanced › Advanced filter categories › Item 1)	Industry	No	The category heading (legend) in the panel	Short noun, e.g. Industry	Empty: the taxonomy title of the root is used
(F)	Taxonomy root (Filter List › Advanced › Advanced filter categories › Item 1)	Add the tags tcs-corp:industry	No	Options are the tags below it	A tag below the namespace	Without a root the item is ignored
G	Category label (Filter List › Advanced › Advanced filter categories › Item 2)	Topic	No	The category heading (legend) in the panel	Short noun, e.g. Industry	Empty: the taxonomy title of the root is used
(H)	Taxonomy root (Filter List › Advanced › Advanced filter categories › Item 2)	Add the tags tcs-corp:topic	No	Options are the tags below it	A tag below the namespace	Without a root the item is ignored
(I)	Filter logic (Filter List › Advanced)	OR	No	How checked options combine	AND for precise, OR for broad	Options and, or
(J)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None
—	Action (Preview)	Select the round filter button, then check Banking and Energy (Industry) and Cloud (Topic)	—	Check on the preview (not stored in the content)	Select the round filter button, then check Banking and Energy (Industry) and Cloud (Topic)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The panel open with three boxes checked and a 3 badge, the count "3 results" and cards for The agentic bank, Cloud at scale and The energy transition.

- **Rendering behaviour:** OR keeps pages with at least one checked option across all categories (not per category); the results stay in the Sort by order (Latest First).
- **Publishing behaviour:** Filtering runs in the browser on the index already loaded, so nothing is published for it; the pill and option labels come from /en/taxonomy.json, which must be published after tag changes, and the listed pages must be in the index.

Business Rules

- OR applies across all categories together.
- Pills still combine with the advanced result by AND.
- Clear all removes every checked option and re-renders.
- Options are hierarchical: a tag also matches pages tagged below it.

Common Authoring Mistakes

Error	Root Cause	Resolution
Results do not narrow when adding options	OR widens the result with each option	Use AND for precise filtering
Author expects OR within a category and AND between them	OR is applied across all categories	Document the behaviour; per-category logic is not available

Troubleshooting

- **Symptoms:** Checking options narrows the list instead of widening it.
- **Cause:** Filter logic is still AND.
- **Resolution:** Set Advanced tab › Filter logic to OR and preview again.
- **Verification Steps:** Three checked options show three results.

Use Cases: Exploratory browsing.

Authoring Guidelines: Advanced tab › Filter logic = OR.

Business Rules: A page needs at least one of the checked options, across all categories (OR is not applied per category). Pills still combine by AND with the result.

Rendering Rules: As Variation 20.

Responsive Behaviour: As Variation 20.

SEO Impact: None.

Accessibility Compliance: As Variation 20.

Variation 22 — Sort by: Latest First

Variation Name: Latest First (Source tab › Sort by = Latest First; the default).

Business Purpose: Freshest content first.

Visual Example:

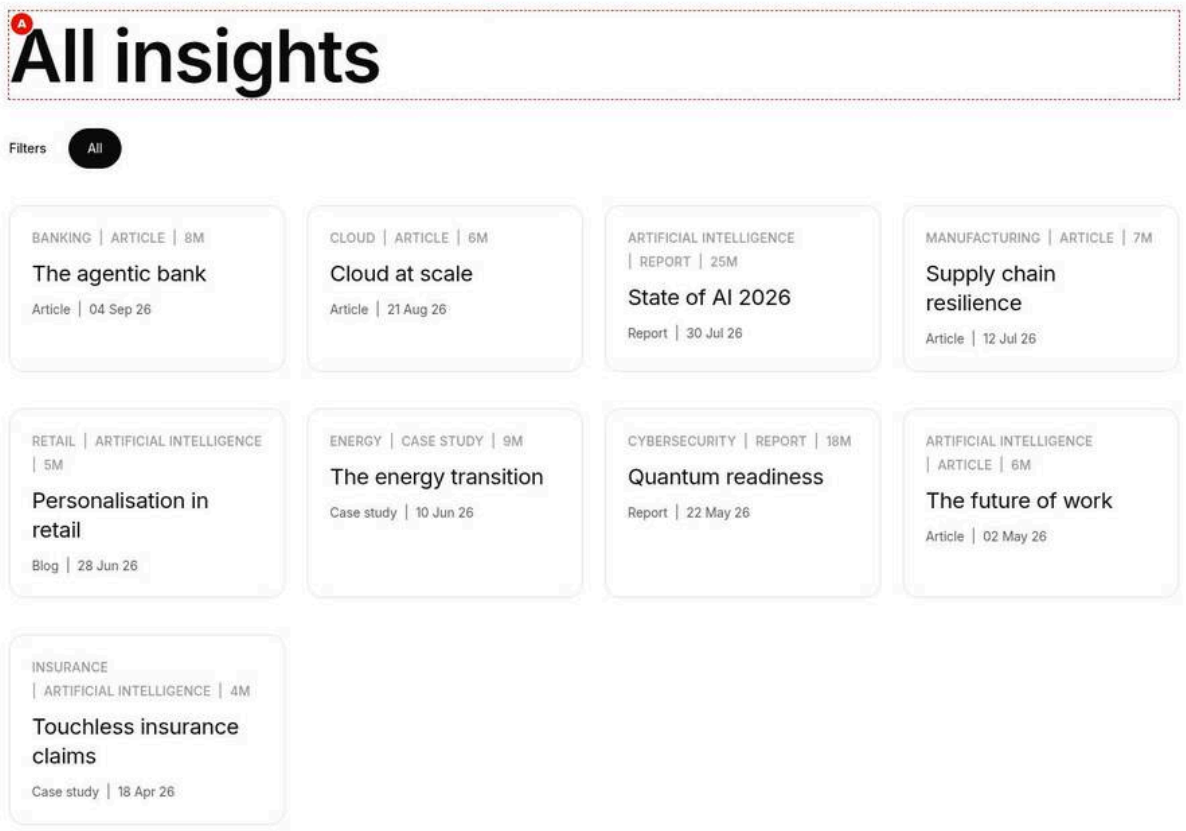

Figure 25: Latest First order — All insights at 1440 px: nine compact cards in four columns, dates descending from The agentic bank (04 Sep 26), Cloud at scale (21 Aug 26) and State of AI 2026 (30 Jul 26) to Touchless insurance claims (18 Apr 26). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-sort-latest.jpg)

Screenshot Details — Latest First order

Item	Detail
Screenshot Name	`screenshots/filter-list-sort-latest.jpg`
Screenshot Purpose	Latest First order
Screen Description	All insights at 1440 px: nine compact cards in four columns, dates descending from The agentic bank (04 Sep 26), Cloud at scale (21 Aug 26) and State of AI 2026 (30 Jul 26) to Touchless insurance claims (18 Apr 26).
Business Context	An “All insights” index ordered newest first, the usual order for news, blogs and insights.
Author Objective	Keep Sort by Latest First on a compact grid of all insights without spotlights.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	All insights	No	Heading of the block	Short, descriptive heading	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Default layout (Filter List › Content)	Grid	No	Arrangement of the cards	Masonry for mixed heights, Grid for uniform cards, List for text-led lists	Options masonry, grid, list; other values fall back to masonry
(C)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(D)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(E)	Card style (Filter List › Cards)	Compact	No	Card presentation	Mixed for insight hubs	Options default, compact, featured, mixed
(F)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None
(G)	Sort by (Filter List › Source)	Latest First (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Nine compact cards in four columns, dates descending from The agentic bank (04 Sep 26) and Cloud at scale (21 Aug 26) to The future of work (02 May 26) and Touchless insurance claims (18 Apr 26).
- **Rendering behaviour:** Publish-date descending as text, then index last modified; undated pages last. All nine cards fit the default 9 per page.
- **Publishing behaviour:** The order changes when a page's publish-date changes and it is republished; no change on the hub page is needed.

Business Rules

- Latest First is the default Sort by.
- publish-date must be YYYY-MM-DD to sort correctly.
- Sort by applies only to the Query Index source.
- Featured pages sort by date here because spotlights are off.

Common Authoring Mistakes

Error	Root Cause	Resolution
A page sorts out of date order	publish-date entered as 4 Sep 2026	Use 2026-09-04
Order ignored	Datasource is Manual List	Use Query Index or order the Pages by hand

Troubleshooting

- **Symptoms:** Two pages with the same date swap places between visits.
- **Cause:** Ties are ordered by index last modified, which changes when a page is republished.
- **Resolution:** Give the pages distinct publish dates if the order matters.
- **Verification Steps:** The order stays the same after reload.

Use Cases: News, blogs, insights.

Authoring Guidelines: Sort by = Latest First; give pages a `publish-date` in YYYY-MM-DD.

Business Rules: Descending `publish-date` (text comparison); ties and undated pages by index last modified (newest first); undated pages after dated ones. Query Index source only.

Rendering Rules: Order of cards in the DOM.

Responsive Behaviour: Not applicable.

SEO Impact: None.

Accessibility Compliance: Not applicable.

Variation 23 — Sort by: Featured First

Variation Name: Featured First.

Business Purpose: Promoted pages lead the standard list.

Visual Example:

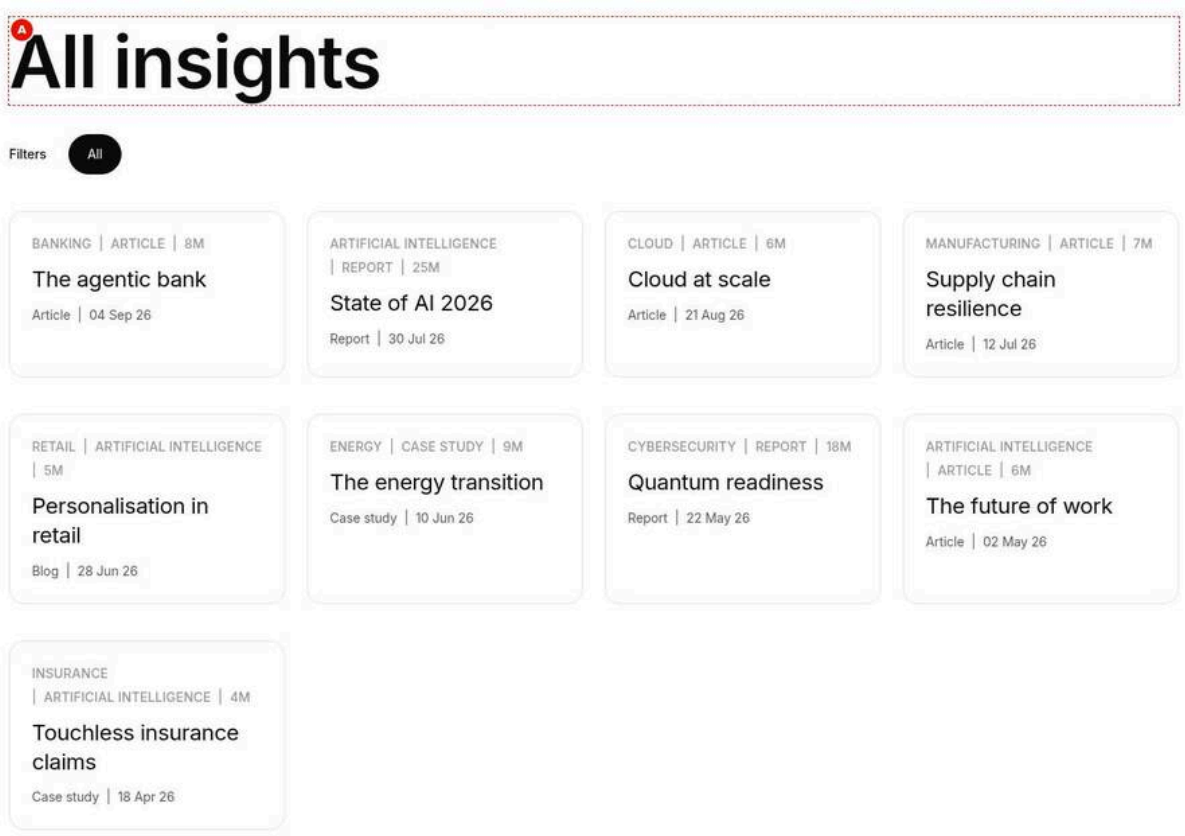

Figure 26: Featured First order — All insights at 1440 px: nine compact cards starting with the featured pages The agentic bank and State of AI 2026, then Cloud at scale to Touchless insurance claims newest first; with this sample data the order equals the Priority example. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-sort-featured.jpg)

Screenshot Details — Featured First order

Item	Detail
Screenshot Name	`screenshots/filter-list-sort-featured.jpg`
Screenshot Purpose	Featured First order

Item	Detail
Screen Description	All insights at 1440 px: nine compact cards starting with the featured pages The agentic bank and State of AI 2026, then Cloud at scale to Touchless insurance claims newest first; with this sample data the order equals the Priority example.
Business Context	An index where promoted insights lead the list even when spotlights are switched off.
Author Objective	Set Sort by Featured First on the compact grid of all insights.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	All insights	No	Heading of the block	Short, descriptive heading	None
(B)	Default layout (Filter List › Content)	Grid	No	Arrangement of the cards	Masonry for mixed heights, Grid for uniform cards, List for text-led lists	Options masonry, grid, list; other values fall back to masonry
(C)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(D)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(E)	Sort by (Filter List › Source)	Featured First	No	Order of the cards	Latest First for news and insights	Options latest, featured, priority, alphabetical; not applied to Manual List
(F)	Card style (Filter List › Cards)	Compact	No	Card presentation	Mixed for insight hubs	Options default, compact, featured, mixed
(G)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Nine compact cards starting with The agentic bank and State of AI 2026 (the two featured pages), followed by the others newest first from Cloud at scale to Touchless insurance claims.
- **Rendering behaviour:** Featured pages first, then priority ascending (none last), then latest. With this sample index the result equals the Priority order, because the only featured pages also hold priorities 1 and 2.
- **Publishing behaviour:** Changing featured or priority on a page takes effect after that page is republished and re-indexed.

Business Rules

- Featured means featured or feature-card is yes, true, 1, on or y.

- Pages taken by hero or featured spotlights are removed from the cards.
- Sort by applies only to the Query Index source.
- Spotlights are off here, so the featured pages appear as cards.

Common Authoring Mistakes

Error	Root Cause	Resolution
Featured pages are missing from the top	They became spotlights because Enable featured cards is on	Turn spotlights off or accept them as spotlights
A flagged page is not first	featured holds a value such as Featured	Use yes or true

Troubleshooting

- **Symptoms:** The order looks the same as Latest First.
- **Cause:** No listed page is flagged featured in the index.
- **Resolution:** Set featured yes on the pages to promote and republish them.
- **Verification Steps:** The flagged pages lead the grid.

Use Cases: Hubs where featured pages should come first even when spotlights are off.

Authoring Guidelines: Sort by = Featured First.

Business Rules: Featured pages first, then by priority ascending (no priority last), then latest. Pages taken for the hero or featured spotlights are removed from the standard cards.

Rendering Rules: Order only.

Responsive Behaviour: Not applicable.

SEO Impact: None.

Accessibility Compliance: Not applicable.

Variation 24 — Sort by: Priority

Variation Name: Priority.

Business Purpose: Editorially ranked lists.

Visual Example:

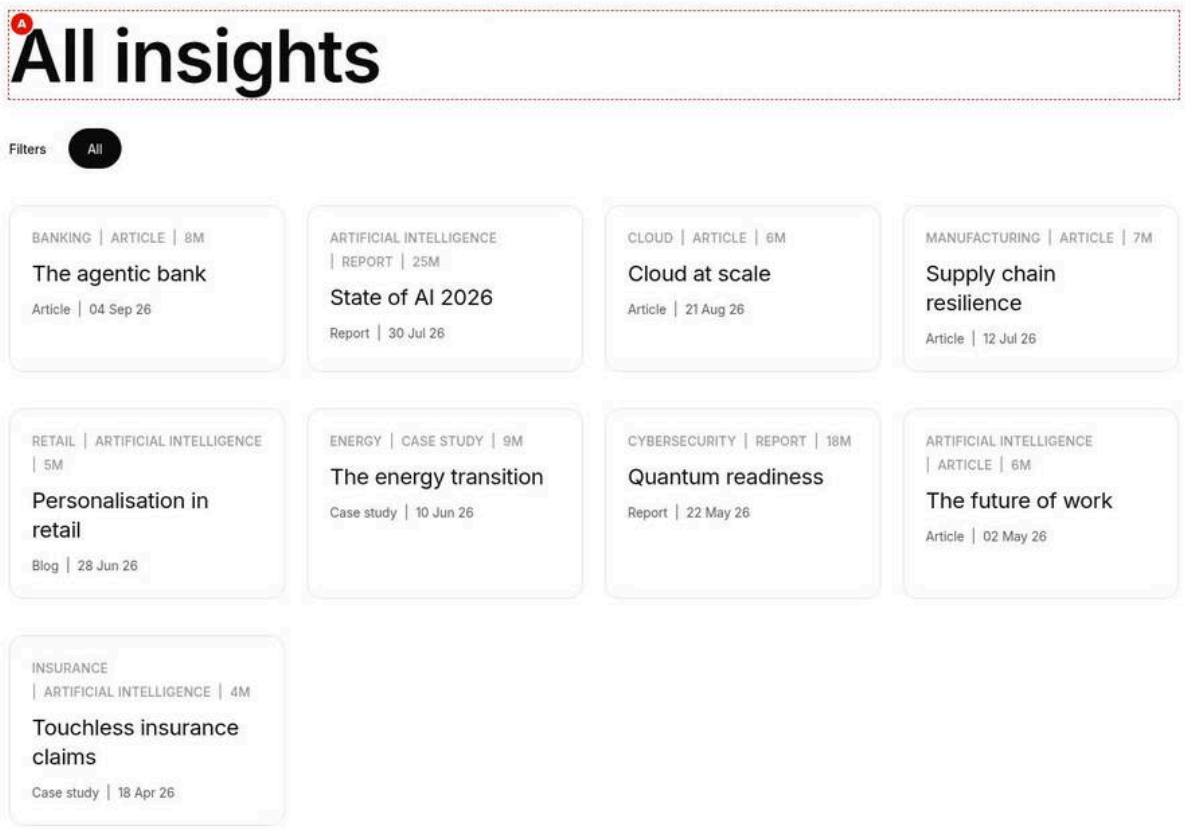

Figure 27: Priority order — All insights at 1440 px: nine compact cards starting with The agentic bank (priority 1) and State of AI 2026 (priority 2), then the pages without priority newest first, Cloud at scale to Touchless insurance claims; the sample data has no priority 3. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-sort-priority.jpg)

Screenshot Details — Priority order

Item	Detail
Screenshot Name	`screenshots/filter-list-sort-priority.jpg`
Screenshot Purpose	Priority order
Screen Description	All insights at 1440 px: nine compact cards starting with The agentic bank (priority 1) and State of AI 2026 (priority 2), then the pages without priority newest first, Cloud at scale to Touchless insurance claims; the sample data has no priority 3.
Business Context	An editorially ranked insights list where a numeric priority sets the order.
Author Objective	Set Sort by Priority on the compact grid of all insights.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	All insights	No	Heading of the block	Short, descriptive heading	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Default layout (Filter List › Content)	Grid	No	Arrangement of the cards	Masonry for mixed heights, Grid for uniform cards, List for text-led lists	Options masonry, grid, list; other values fall back to masonry
(C)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(D)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(E)	Sort by (Filter List › Source)	Priority	No	Order of the cards	Latest First for news and insights	Options latest, featured, priority, alphabetical; not applied to Manual List
(F)	Card style (Filter List › Cards)	Compact	No	Card presentation	Mixed for insight hubs	Options default, compact, featured, mixed
(G)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Nine compact cards: The agentic bank (priority 1), State of AI 2026 (priority 2), then the pages without a priority newest first, from Cloud at scale to Touchless insurance claims.
- **Rendering behaviour:** Priority ascending, pages without a numeric priority last, ties by latest. Only two sample pages carry a priority, so the order matches the Featured First example.
- **Publishing behaviour:** Republish a page after changing priority; the hub page needs no republishing.

Business Rules

- priority is read from priority, else featured-priority.
- Non-numeric priority values count as no priority.
- Sort by applies only to the Query Index source.
- Pages without priority keep their date order at the end.

Common Authoring Mistakes

Error	Root Cause	Resolution
A ranked page appears at the end	priority typed as text	Enter a plain number
Two pages with priority 1 swap	Ties sort by publish date	Give distinct priorities

Troubleshooting

- **Symptoms:** The priority order is ignored.
- **Cause:** The priority column is missing from the page metadata in the index.
- **Resolution:** Fill priority (page metadata or bulk sheet) and republish.
- **Verification Steps:** Pages with priority 1 and 2 lead.

Use Cases: Ranked programmes, "top 10" collections.

Authoring Guidelines: Sort by = Priority; set `priority` numbers on the pages.

Business Rules: Priority ascending; pages without a numeric priority last; ties by latest.

Rendering Rules: Order only.

Responsive Behaviour: Not applicable.

SEO Impact: None.

Accessibility Compliance: Not applicable.

Variation 25 — Sort by: Alphabetical

Variation Name: Alphabetical.

Business Purpose: A–Z directories.

Visual Example:

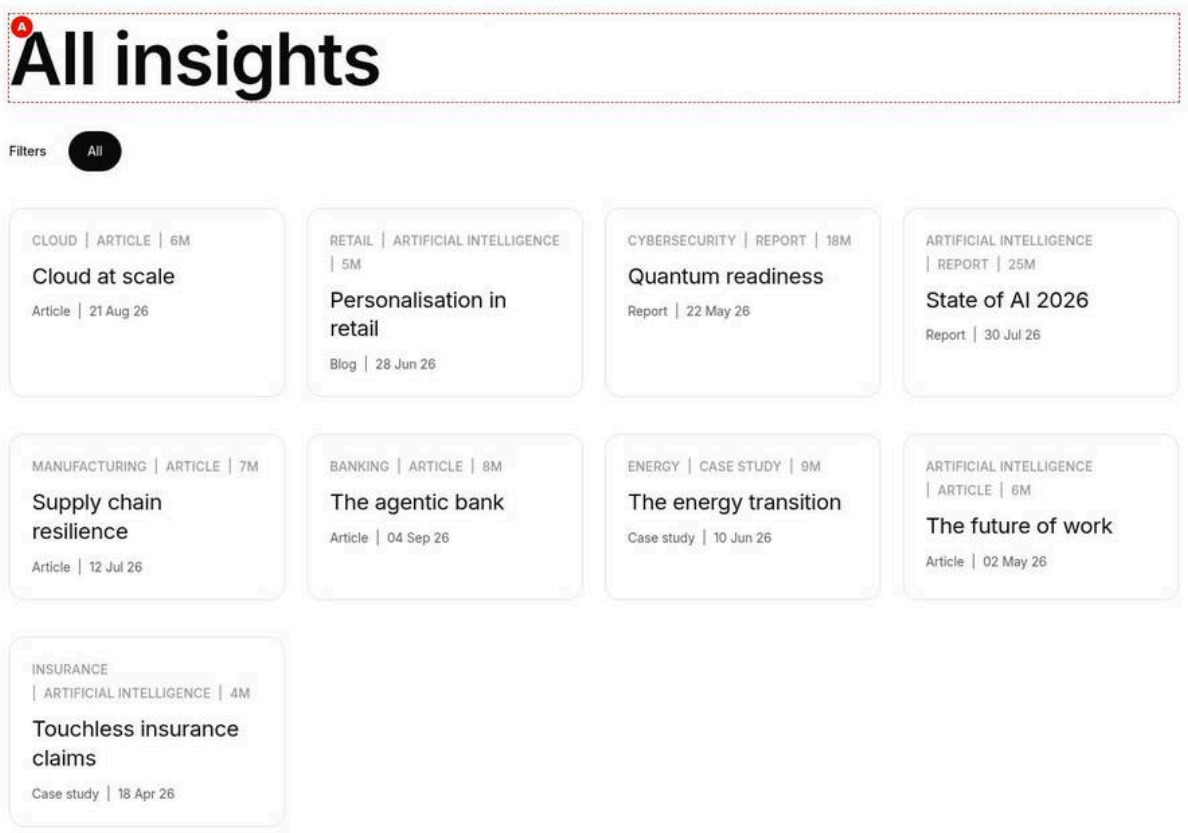

Figure 28: Alphabetical order — All insights at 1440 px: nine compact cards A to Z by title, Cloud at scale, Personalisation in retail, Quantum readiness, State of AI 2026, Supply chain resilience, The agentic bank, The energy transition, The future of work, Touchless insurance claims. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-sort-alphabetical.jpg)

Screenshot Details — Alphabetical order

Item	Detail
Screenshot Name	`screenshots/filter-list-sort-alphabetical.jpg`
Screenshot Purpose	Alphabetical order

Item	Detail
Screen Description	All insights at 1440 px: nine compact cards A to Z by title, Cloud at scale, Personalisation in retail, Quantum readiness, State of AI 2026, Supply chain resilience, The agentic bank, The energy transition, The future of work, Touchless insurance claims.
Business Context	An A to Z directory of all insights, as used for glossaries or case study directories.
Author Objective	Set Sort by Alphabetical on the compact grid of all insights.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	All insights	No	Heading of the block	Short, descriptive heading	None
(B)	Default layout (Filter List › Content)	Grid	No	Arrangement of the cards	Masonry for mixed heights, Grid for uniform cards, List for text-led lists	Options masonry, grid, list; other values fall back to masonry
(C)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
(D)	Page types (Filter List › Source)	Article; Blog; Report; Case Study	No	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event
(E)	Sort by (Filter List › Source)	Alphabetical	No	Order of the cards	Latest First for news and insights	Options latest, featured, priority, alphabetical; not applied to Manual List
(F)	Card style (Filter List › Cards)	Compact	No	Card presentation	Mixed for insight hubs	Options default, compact, featured, mixed
(G)	Enable featured cards (Filter List › Cards)	Off	No	Large spotlight cards between pages of cards	Turn off for plain lists	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Nine compact cards from Cloud at scale, Personalisation in retail, Quantum readiness, State of AI 2026 and Supply chain resilience to The agentic bank, The energy transition, The future of work and Touchless insurance claims.
- **Rendering behaviour:** Sorted by the index title with Intl.Collator for the page language (base sensitivity: case and accents ignored); leading words such as "The" are not skipped.
- **Publishing behaviour:** Retitling a page moves it after the page is republished and re-indexed; the hub needs no republishing.

Business Rules

- The sort key is the index title, not the Mapping tab Title source.
- Collation follows of the page.
- Articles like The are part of the sort key.
- Sort by applies only to the Query Index source.

Common Authoring Mistakes

Error	Root Cause	Resolution
"The agentic bank" sorts under T	The leading word is part of the title	Accept or retitle the page
Cards sort by card-title expectation	Title source changed in Mapping	The sort always uses the page title

Troubleshooting

- **Symptoms:** Accented titles sort in an unexpected place on a localized page.
- **Cause:** of the page is wrong, so the wrong collation is used.
- **Resolution:** Check the locale metadata (language) of the page.
- **Verification Steps:** Titles sort in the locale's alphabetical order.

Use Cases: Glossaries, case study directories, offices.

Authoring Guidelines: Sort by = Alphabetical.

Business Rules: By the page title from the index (`og:title`), using the page language's collation (`Intl.Collator` with `<html lang>`, base sensitivity: case and accents ignored). The Mapping tab's Title source does not change the sort key.

Rendering Rules: Order only.

Responsive Behaviour: Not applicable.

SEO Impact: None.

Accessibility Compliance: Not applicable.

6.17.4 Authoring Experience

Figure 29: Universal Editor canvas — The Filter List selected in Universal Editor at 1440 px, annotated: A the title Explore insights & opinions, B the description, C the Filters label, D the pills All, Banking, Artificial intelligence and Cloud, E the result count 0 results and F the grey hint The results show on the published page, from the pages' metadata. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/filter-list-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/filter-list-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	The Filter List selected in Universal Editor at 1440 px, annotated: A the title Explore insights & opinions, B the description, C the Filters label, D the pills All, Banking, Artificial intelligence and Cloud, E the result count 0 results and F the grey hint The results show on the published page, from the pages' metadata.
Business Context	What an author sees when editing a Filter List in Universal Editor, where the query index is not available.
Author Objective	Recognise the editable parts (title, description, label, pills, count) and the editor hint in place of the results.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
—	Title (Filter List › Content)	Explore insights & opinions	No	Heading of the block	Short, descriptive heading	None
—	Description (Filter List › Content)	Research, perspectives and case studies from across our industries and technologies.	No	Introduction below the title	One or two sentences	None
—	Show result count (Filter List › Content)	On	No	Shows the result count visibly	Turn on for large libraries	None
—	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Datasource is not Manual List
—	Tag Id (Filter List › Filters › Primary filter tags › Item 1)	Add the tags tcs-corp:industry/banking	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
—	Tag Id (Filter List › Filters › Primary filter tags › Item 2)	Add the tags tcs-corp:topic/ai	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
—	Tag Id (Filter List › Filters › Primary filter tags › Item 3)	Add the tags tcs-corp:topic/cloud	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
—	Canvas (Universal Editor)	Select the Filter List (blue outline); the results area shows the editor hint	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The selected block with a blue outline: A the title, B the description, C the Filters label, D the All, Banking, Artificial intelligence and Cloud pills, E the result count and F the grey hint box "The results show on the published page, from the pages' metadata."

- **Rendering behaviour:** In the editor getPages returns no pages, so the count reads 0 results and the empty state shows only the filterListEditor hint; the filter button, cards, spotlights and Load more do not render.
- **Publishing behaviour:** Review the cards on the aem.page preview after previewing the page and the listed pages; Publish sends the page to aem.live, where the cards build from the live index.

Business Rules

- The editor hint is expected and is not an error.
- Pills from Primary filter tags show in the editor; pills from a Primary filter category need the index.
- The result count is visible because Show result count is on.
- The advanced filter button never shows in the editor.

Common Authoring Mistakes

Error	Root Cause	Resolution
Author reports the block as broken	The editor cannot load the query index	Open the preview URL to review the cards
Pills missing in the editor	Pills come from a Primary filter category	Use Primary filter tags or check on the preview

Troubleshooting

- **Symptoms:** The preview page also shows the editor hint text.
- **Cause:** The page is viewed in Universal Editor edit mode, not on aem.page.
- **Resolution:** Open the aem.page URL of the page (https://main–tcs-corp–sradha-tcs.aem.page/{path}) outside the editor.
- **Verification Steps:** Cards appear in place of the hint.

Annotations

- A = Title (Content tab › Title), rendered as the block's `<h2>`.
- B = Description (Content tab › Description), rich text below the title.
- C = Filters label (placeholder `filters`), shown when there is at least one pill.
- D = Filter pills: All (Filters tab › Show All filter) and the Primary filter tags in their authored order (Filters tab › Primary filter tags). Pills from a Primary filter category only appear when the index is available, because they are the tags the listed pages use.
- E = Result count (Content tab › Show result count); visually hidden when the toggle is off but still announced to screen readers.
- F = Results area: in the editor the query index is normally not available (`utils/query-index.js` returns no pages there), so the empty-state box shows the editor hint (placeholder `filterListEditor`) instead of cards. On preview and live pages this area shows the hero spotlight, the cards, the featured spotlights and Load more.

> **Note:** The advanced filter button, cards, spotlights and Load more cannot be reviewed on the editor canvas. Review them on the preview URL (`https://main--tcs-corp--sradha-tcs.aem.page/...`) after previewing the page and the listed pages.

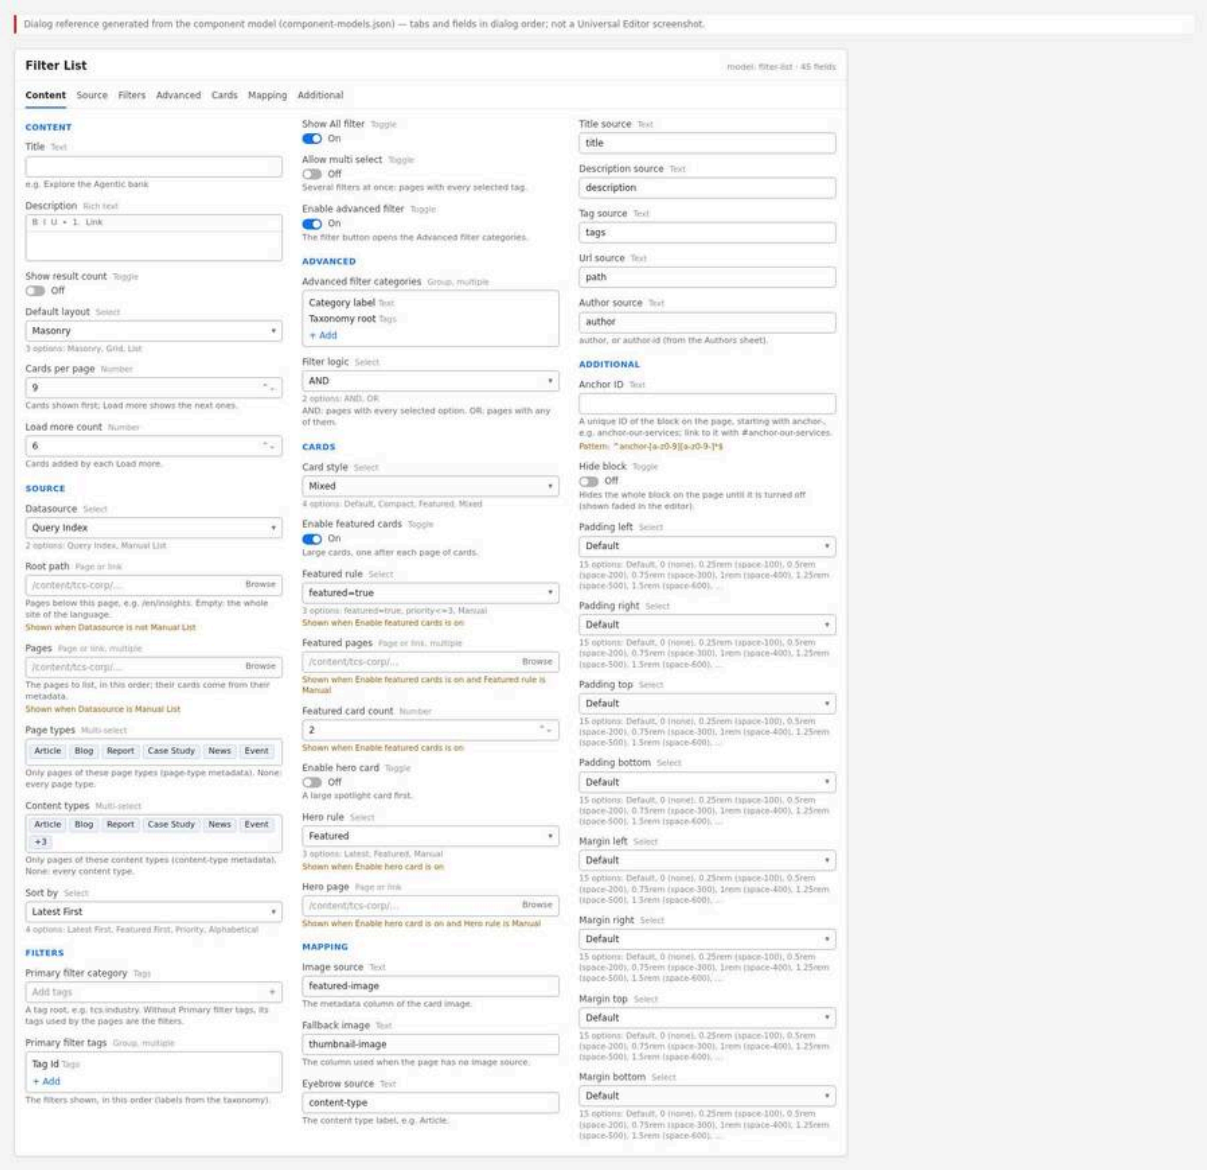

Figure 30: Properties panel — The Universal Editor properties panel of the Filter List with the seven tabs Content, Source, Filters, Advanced, Cards, Mapping and Additional, the Content tab open. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/filter-list-properties-panel.jpg)

The properties panel has seven tabs:

- **Content:** Title (text), Description (rich text), Show result count (toggle, off), Default layout (Masonry, Grid, List; Masonry), Cards per page (number, 9), Load more count (number, 6).
- **Source:** Datasource (Query Index, Manual List; Query Index), Root path (page picker; only for Query Index), Pages (page picker, multiple; only for Manual List), Page types (multiselect: Article, Blog, Report, Case Study, News, Event), Content types (multiselect: Article, Blog, Report, Case Study, News, Event, Whitepaper, Podcast, Video), Sort by (Latest First, Featured First, Priority, Alphabetical; Latest First).
- **Filters:** Primary filter category (tag picker), Primary filter tags (multifield of Tag Id tag pickers), Show All filter (toggle, on), Allow multi select (toggle, off), Enable advanced filter (toggle, on).
- **Advanced:** Advanced filter categories (multifield of Category label text and Taxonomy root tag picker), Filter logic (AND, OR; AND).
- **Cards:** Card style (Default, Compact, Featured, Mixed; Mixed), Enable featured cards (toggle, on), Featured rule (featured=true, priority<=3, Manual; only when featured cards are on), Featured pages (page picker, multiple; only for the Manual rule), Featured card count (number, 2; only when featured cards are on), Enable

hero card (toggle, off), Hero rule (Latest, Featured, Manual; Featured; only when the hero is on), Hero page (page picker; only for the Manual hero rule).

- **Mapping:** Image source (`featured-image`), Fallback image (`thumbnail-image`), Eyebrow source (`content-type`), Title source (`title`), Description source (`description`), Tag source (`tags`), Url source (`path`), Author source (`author`): the metadata column used for each card part.
- **Additional:** Anchor ID, Hide block, Padding left / right / top / bottom, Margin left / right / top / bottom (common to every block).

6.17.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites (`https://author-p220207-e2271469.adobeaemcloud.com`), go to `/content/tcs-corp/{country}/{language}/...`, select the listing page and choose **Edit** to open it in Universal Editor.

Expected Result: The page opens in the editor canvas in edit mode.

Steps — Open the page: The AEM Sites console with the listing page selected and the Edit action highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	/content/tcs-corp/us/en/insights
2	AEM Sites console	Select	The listing page (Insights)
3	AEM Sites console toolbar	Edit	Opens the page in Universal Editor

Step 2 — Add the Filter List to a section

Action: Select the section in the canvas or the content tree, choose **Add** (+) and select **Filter List**.

Expected Result: A Filter List with the default settings is added. The canvas shows the editor hint (no cards in the editor).

Steps — Add the block: The Add component menu of a section with Filter List highlighted, and the new block on the canvas with the editor hint.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section
2	Section › Add (+)	Component	Filter List
3	Canvas	Result	The new Filter List shows the editor hint "The results show on the published page, from the pages' metadata."

Step 3 — Fill the Content tab

Action: Open the properties panel. Enter the Title (e.g. "Explore insights & opinions") and the Description. Turn on Show result count if visitors should see the count. Choose the Default layout, Cards per page and Load more count.

Expected Result: Title and description appear on the canvas immediately.

Steps — Content tab: The Content tab filled with title, description, Show result count on, Default layout Masonry, Cards per page 9 and Load more count 6.

Step	Where	Field / control	Value / action
1	Filter List › Content	Title	Explore insights & opinions

Step	Where	Field / control	Value / action
2	Filter List › Content	Description	Research, perspectives and case studies from across our industries and technologies.
3	Filter List › Content	Show result count	On
4	Filter List › Content	Default layout	Masonry
5	Filter List › Content	Cards per page	9
6	Filter List › Content	Load more count	6

Step 4 — Choose the source

Action: In the Source tab choose Datasource. For Query Index, pick the Root path (the folder page whose children and descendants are listed; leave empty for the whole locale). For Manual List, add each page to Pages in the display order.

Expected Result: The field that does not apply is hidden (Root path for Manual List; Pages for Query Index).

Steps — Source tab: The Source tab with Datasource Query Index and the Root path picker showing /content/tcs-corp/us/en/insights.

Step	Where	Field / control	Value / action
1	Filter List › Source	Datasource	Query Index
2	Filter List › Source	Root path	Select the page /content/tcs-corp/us/en/insights

Step 5 — Limit by page and content type, and choose the order

Action: (Query Index only) Select Page types and Content types to include (none selected means all). Choose Sort by.

Expected Result: The selections are saved; they take effect on the preview page.

Steps — Types and sort: Page types with Article and Report checked, Content types empty and Sort by Latest First.

Step	Where	Field / control	Value / action
1	Filter List › Source	Page types	Article; Report
2	Filter List › Source	Content types	Leave empty (all content types)
3	Filter List › Source	Sort by	Latest First

Step 6 — Set up the filter pills

Action: In the Filters tab either add Primary filter tags (one tag per item, in the order the pills should appear) or pick a Primary filter category (a tag below the namespace, e.g. `tcs:industry`) so the tags below it that the listed pages use become the pills. Set Show All filter and Allow multi select.

Expected Result: Primary filter tags appear as pills on the canvas right away; category pills appear on the preview page.

Steps — Filters tab: The Filters tab with three Primary filter tags added, Show All filter on, Allow multi select off and Enable advanced filter on.

Step	Where	Field / control	Value / action
1	Filter List › Filters	Primary filter tags › Add	Tag Id: tcs-corp:industry/banking

Step	Where	Field / control	Value / action
2	Filter List › Filters	Primary filter tags › Add	Tag Id: tcs-corp:topic/ai
3	Filter List › Filters	Primary filter tags › Add	Tag Id: tcs-corp:topic/cloud
4	Filter List › Filters	Show All filter	On
5	Filter List › Filters	Allow multi select	Off
6	Filter List › Filters	Enable advanced filter	On

Step 7 — Set up the advanced filter

Action: Keep Enable advanced filter on. In the Advanced tab add one Advanced filter category per facet: Category label (e.g. "Industry") and Taxonomy root (e.g. `tcs:industry`). Choose Filter logic (AND or OR).

Expected Result: The categories are saved; the filter button and panel appear on the preview page when the listed pages use tags below the roots.

Steps — Advanced tab: Two Advanced filter categories (Industry / tcs:industry and Service / tcs:service) and Filter logic AND.

Step	Where	Field / control	Value / action
1	Filter List › Advanced	Advanced filter categories › Add	Category label: Industry; Taxonomy root: tcs-corp:industry
2	Filter List › Advanced	Advanced filter categories › Add	Category label: Service; Taxonomy root: tcs-corp:service
3	Filter List › Advanced	Filter logic	AND

Step 8 — Choose the card style and spotlights

Action: In the Cards tab choose Card style. Decide on featured spotlight cards (Enable featured cards, Featured rule, Featured pages for Manual, Featured card count) and on the hero card (Enable hero card, Hero rule, Hero page for Manual).

Expected Result: Dependent fields show or hide as the toggles and rules change.

Steps — Cards tab: Card style Mixed, featured cards on with rule featured=true and count 2, hero card on with rule Featured.

Step	Where	Field / control	Value / action
1	Filter List › Cards	Card style	Mixed
2	Filter List › Cards	Enable featured cards	On
3	Filter List › Cards	Featured rule	featured=true
4	Filter List › Cards	Featured card count	2
5	Filter List › Cards	Enable hero card	On
6	Filter List › Cards	Hero rule	Featured

Step 9 — Review the Mapping tab

Action: Keep the defaults unless the development team has agreed other metadata columns. Each field holds the name of a metadata column (e.g. `card-title` instead of `title`).

Expected Result: The column names are saved as typed.

Steps — Mapping tab: The Mapping tab with the eight default column names.

Step	Where	Field / control	Value / action
1	Filter List › Mapping	Image source / Fallback image	featured-image / thumbnail-image (defaults, keep)
2	Filter List › Mapping	Eyebrow source / Title source	content-type / title (defaults, keep)
3	Filter List › Mapping	Description source / Tag source	description / tags (defaults, keep)
4	Filter List › Mapping	Url source / Author source	path / author (defaults, keep)

Step 10 — Set the Additional options (optional)

Action: In the Additional tab set an Anchor ID (e.g. `anchor-insights`) to link to the block, and spacing if the design needs it. Leave Hide block off.

Expected Result: An invalid Anchor ID shows the message "Start with anchor-, then lower-case letters, digits and hyphens."

Steps — Additional tab: The Additional tab with Anchor ID anchor-insights and the padding and margin selects at Default.

Step	Where	Field / control	Value / action
1	Filter List › Additional	Anchor ID	anchor-insights
2	Filter List › Additional	Hide block	Off
3	Filter List › Additional	Padding left / right / top / bottom	Default
4	Filter List › Additional	Margin left / right / top / bottom	Default

Step 11 — Prepare the listed pages

Action: On each page that should appear, make sure the page properties (Title, Description, Tags, Page Type) and the bulk metadata sheet columns used by the cards are set: `content-type`, `publish-date` (YYYY-MM-DD), `reading-time`, `featured-image` or `thumbnail-image`, `author-id` or `author`, `featured`, `priority`. Publish (or preview) those pages so the query index contains them.

Expected Result: The pages appear in `/query-index.json` with their columns.

Steps — Listed page metadata: The locale's metadata sheet with rows for /en/insights/** showing content-type, publish-date, featured-image and featured columns.

Step	Where	Field / control	Value / action
1	Locale metadata sheet (/content/tcs-corp/us/en/metadata)	url	/en/insights/agentic-bank
2	Same row	content-type / publish-date	Article / 2026-09-04
3	Same row	featured-image / thumbnail-image	/en/media/wide.svg / /en/media/photo-1.svg
4	Same row	featured / priority / author-id	yes / 1 / arao
5	Next rows	url, content-type, publish-date, …	One row per listed page below /en/insights/

Step	Where	Field / control	Value / action
6	Sidekick	Preview / Publish	The sheet and the listed pages, so /query-index.json contains them

Step 12 — Preview

Action: Use the editor's Preview mode, then open the page preview (AEM Sidekick › Preview, or the `.aem.page` URL).

Expected Result: The preview page shows the cards, pills, panel and Load more.

Steps — Preview: The preview URL showing the rendered Filter List with the hero, the masonry grid and Load more.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	AEM Sidekick	Preview	Opens https://main–tcs-corp–sradha-tcs.aem.page/en/insights
3	Preview page	Check	The hero, the masonry grid of cards and Load more

Step 13 — Validate

Action: Work through the Validation Process checklist below at desktop, tablet and mobile widths.

Expected Result: Every checklist item passes.

Steps — Validate: The preview page at 375px with a pill selected and the result count updated.

Step	Where	Field / control	Value / action
1	Browser	Screen width	375 px (mobile)
2	Preview page	Action	Select the Banking pill
3	Preview page	Check	Only banking pages are listed and the result count is updated
4	Preview page	Check	Repeat at tablet and desktop widths (Validation Process checklist)

Step 14 — Publish

Action: In Universal Editor choose **Publish** (or use the AEM Sites console / AEM Sidekick › Publish) for the page. Make sure the listed pages are published too.

Expected Result: The live page (`.aem.live`) shows the Filter List with the published pages.

Steps — Publish: The Publish dialog in Universal Editor with the listing page selected.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Opens the Publish dialog
2	Publish dialog	Pages	The listing page (/content/tcs-corp/us/en/insights) selected
3	Publish dialog	Publish	Publish to Live

Preview Process

1. Save all dialog changes (Universal Editor saves automatically).

2. Preview the listing page and every page that should appear in it. The preview query index is updated when pages are previewed; the live index when they are published.
3. Open `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}` and check the result; reload with the browser cache disabled if a recently previewed page is missing.
4. If metadata comes from the bulk metadata sheet, preview the sheet as well (and see the metadata configuration note in AGENTS.md: the sheets apply only once listed in the site configuration).

Publishing Process

1. Publish the listed pages first (they must be in the live query index).
2. Publish the listing page.
3. Publish the locale's taxonomy, placeholders and Authors sheet if they changed.
4. Open the `.aem.live` URL and confirm the cards, labels and author lockups.

Validation Process

- ☐ Title is an `<h2>`, card titles are `<h3>`; no skipped heading level in the section.
- ☐ The listed pages are the expected ones (Root path, Page types, Content types; the current page is not listed).
- ☐ Sort order is as chosen.
- ☐ Pill labels are taxonomy titles in the locale's language (not tag IDs).
- ☐ Each pill filters as expected; All resets; multi select (if on) requires every selected tag.
- ☐ The filter button shows only when categories have options; Escape closes the panel; the badge shows the number of checked options; Clear all works.
- ☐ AND / OR logic behaves as configured.
- ☐ The empty state shows "No resources found." with Reset filters when a filter excludes everything.
- ☐ Hero and featured spotlights show the expected pages and are not repeated in the grid.
- ☐ Load more adds Load more count cards and disappears when everything is shown; the count reads "Showing n of total" then "n results".
- ☐ Images load (no broken images); report and dark cards appear where expected (Mixed style).
- ☐ Author lockups show name, designation and photo from the Authors sheet.
- ☐ Desktop 4 columns (3 for Featured style), tablet 2 / 3, mobile 1; List layout image beside text from 600px.
- ☐ Keyboard: Tab reaches every pill, the filter button, each card link and Load more, with a visible focus ring.

Rollback Process

1. To undo a dialog change, use Universal Editor undo, or restore the previous page version in AEM Sites (Timeline › Versions › Restore) and publish again.
2. To remove the block quickly from the live page without deleting it, turn on Additional › Hide block and publish (the block is hidden on the page, shown faded in the editor).
3. If a listed page is wrong, correct or unpublish that page; the index updates after (un)publishing.
4. If a code release broke the block, the development team reverts the commit on `main` (Code Sync deploys it); no content change is needed.

The walkthroughs below repeat the steps above for each variation of chapter 6.17.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Layout: Masonry

Reproduces the screenshot `screenshots/filter-list-layout-masonry.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint in the results area.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights; **Cards per page** (B) = 8.

Expected Result: The heading "Latest insights" appears; Cards per page 8 only affects the preview.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (C) = Select the page or enter /en/insights; **Page types** (D) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the Page types Article, Blog, Report and Case Study are set; the canvas keeps the editor hint.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Featured card count** (E) = 1.

Expected Result: Featured card count 1 is shown under Enable featured cards (on by default).

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four columns of Mixed cards of different heights packed without row gaps (State of AI 2026 and Quantum readiness as report panels), newest first, followed by a full-width spotlight for The agentic bank below all columns.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: New pages below /en/insights appear after they are previewed (aem.page) or published (aem.live) and the index is updated; the hub page itself only needs publishing once.

Step 8 — Verify

Action: On the live page check: Eight cards and The agentic bank spotlight render in four masonry columns.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Layout: Grid

Reproduces the screenshot `screenshots/filter-list-layout-grid.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights; **Default layout** (B) = Grid; **Cards per page** (C) = 8.

Expected Result: The heading "Latest insights" appears; Default layout Grid and Cards per page 8 are stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (D) = Select the page or enter /en/insights; **Page types** (E) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (F) = Default; **Enable featured cards** (G) = Off.

Expected Result: Card style Default is selected and Enable featured cards is off, which hides the Featured rule and count fields.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two rows of four aligned Default cards, each with a 4:3 image, tag line with reading time, title, three-line description and a meta line such as "Article" and "04 Sep 26" separated by a bar; shorter cards leave space below and a Load more button follows.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the listed insights first so they are in the live index, then the hub page; the layout change is a dialog setting saved with the hub page only.

Step 8 — Verify

Action: On the live page check: Each card shows a 4:3 picture served from /media_ URLs.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Layout: List

Reproduces the screenshot `screenshots/filter-list-layout-list.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Perspectives and case studies; **Default layout** (B) = List; **Cards per page** (C) = 4.

Expected Result: The heading "Perspectives and case studies" appears; Default layout List and Cards per page 4 are stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (D) = Select the page or enter /en/insights; **Page types** (E) = Article; Blog; Case Study.

Expected Result: Root path /en/insights and the Page types Article, Blog and Case Study are set.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Enable featured cards** (F) = Off.

Expected Result: Enable featured cards is off, so no spotlight will be inserted.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: One card per row: the 4:3 image in the left third and the tags, title and meta line in the right two thirds, with a divider below each card; Load more below the four rows.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the listed articles, blogs and case studies so they are in the index, then publish the page; reports are not listed because Report is not among the Page types.

Step 8 — Verify

Action: On the live page check: Each card fills a row with the image in the left third and a divider below.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Card style: Default

Reproduces the screenshot `screenshots/filter-list-card-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest insights; **Default layout** (B) = Grid; **Cards per page** (C) = 8.

Expected Result: The heading "Latest insights" appears; Grid and 8 cards per page are stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (D) = Select the page or enter /en/insights; **Page types** (E) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (F) = Default; **Enable featured cards** (G) = Off.

Expected Result: Card style Default with Enable featured cards off; the cards render only on the preview.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The first card: the wide image at 4:3 with rounded corners, the uppercase tag line with Banking, Article and 8m separated by bars, the title "The agentic bank", the description clamped to three lines and the meta line with Article and 04 Sep 26.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The card content changes only when the listed page's metadata changes and the page is republished (and re-indexed); editing the Filter List does not change card texts.

Step 8 — Verify

Action: On the live page check: The tag line ends with "8m" after the index updates.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Card style: Compact

Reproduces the screenshot `screenshots/filter-list-card-compact.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = All insights; **Default layout** (B) = Grid; **Cards per page** (C) = 8.

Expected Result: The heading "All insights" appears; Grid and 8 cards per page are stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (D) = Select the page or enter /en/insights; **Page types** (E) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (F) = Compact; **Enable featured cards** (G) = Off.

Expected Result: Card style Compact and Enable featured cards off are selected.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four columns of outlined text cards with radius l: a tag line with reading time, a medium-size title link and the meta line with eyebrow and date; no image and no description; Load more below.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Only the hub page's dialog changes; the listed pages need no republishing. Preview, then Publish to aem.live.

Step 8 — Verify

Action: On the live page check: All cards are outlined text cards without images.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Card style: Featured

Reproduces the screenshot `screenshots/filter-list-card-featured.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Flagship content; **Default layout** (B) = Grid; **Cards per page** (C) = 6.

Expected Result: The heading "Flagship content" appears; Grid and Cards per page 6 are stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (D) = Select the page or enter /en/insights; **Page types** (E) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (F) = Featured; **Enable featured cards** (G) = Off.

Expected Result: Card style Featured is selected and Enable featured cards is off.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three columns of large cards, each with the image, the tag line, a semibold title, the description, the meta line and a "Read more" text button; two rows and a Load more button.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the hub page; the Read more label comes from the placeholders sheet (readMore), which is published separately per locale.

Step 8 — Verify

Action: On the live page check: Three large cards per row with Read more buttons.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Card style: Mixed (standard image cards)

Reproduces the screenshot `screenshots/filter-list-card-mixed.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Explore insights & opinions; **Cards per page** (B) = 8.

Expected Result: The title "Explore insights & opinions" appears; Cards per page 8 is stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Datasource** (C) = Manual List; **Pages** (D) = Select the page or enter /en/insights/cloud-at-scale,/en/insights/quantum-readiness,/en/insights/supply-chain-resilience,/en/services/cloud/migration,/en/insights/retail-personalisation,/en/insights/energy-transition,/en/insights/future-of-work,/en/insights/insurance-claims.

Expected Result: Datasource Manual List with the eight pages in display order.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Enable featured cards** (E) = Off.

Expected Result: Enable featured cards is off; Card style stays Mixed (default).

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A masonry wall of eight cards: image cards without description, Quantum readiness as a light gradient report panel with Download, and Cloud migration as a dark blue panel with Explore, in the authored order.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The card kind follows the listed pages' metadata; changing content-type or images on a page changes its card after that page is republished and re-indexed.

Step 8 — Verify

Action: On the live page check: Only Cloud migration remains a dark card.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — Mixed card kind: Report card

Reproduces the screenshot `screenshots/filter-list-card-report.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Explore insights & opinions; **Cards per page** (B) = 8.

Expected Result: The title "Explore insights & opinions" appears; Cards per page 8 is stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Datasource** (C) = Manual List; **Pages** (D) = Select the page or enter /en/insights/cloud-at-scale,/en/insights/quantum-readiness,/en/insights/supply-chain-resilience,/en/services/cloud/migration,/en/insights/retail-personalisation,/en/insights/energy-transition,/en/insights/future-of-work,/en/insights/insurance-claims.

Expected Result: Manual List with quantum-readiness second of eight pages.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Enable featured cards** (E) = Off.

Expected Result: Enable featured cards is off, so the report page stays in the grid as a report card.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A card with a light brand-to-white diagonal gradient, the line REPORT and 22 May 26 separated by a bar, the semibold title "Quantum readiness", the description "Preparing cryptography for the quantum era." and a secondary Download button.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The card follows the page's content-type metadata; the Download label comes from the placeholders key download, published with the locale's placeholders sheet.

Step 8 — Verify

Action: On the live page check: The card shows the gradient panel with Download.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — Mixed card kind: Dark card

Reproduces the screenshot `screenshots/filter-list-card-dark.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Explore insights & opinions; **Cards per page** (B) = 8.

Expected Result: The title "Explore insights & opinions" appears; Cards per page 8 is stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Datasource** (C) = Manual List; **Pages** (D) = Select the page or enter /en/insights/cloud-at-scale,/en/insights/quantum-readiness,/en/insights/supply-chain-resilience,/en/services/cloud/migration,/en/insights/retail-personalisation,/en/insights/energy-transition,/en/insights/future-of-work,/en/insights/insurance-claims.

Expected Result: Manual List with /en/services/cloud/migration fourth of eight pages.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Enable featured cards** (E) = Off.

Expected Result: Enable featured cards is off; Mixed style decides the dark card on the preview.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A dark brand-blue panel with the white semibold title "Cloud migration", the light description "Move workloads with confidence." and a white Explore text button; no tag line because the page has no tags.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Adding an image to the page's metadata and republishing it turns the dark card into a standard image card after the index update.

Step 8 — Verify

Action: On the live page check: White title and light description on the dark brand panel meet contrast.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 10 — Hero spotlight: Featured rule

Reproduces the screenshot `screenshots/filter-list-hero-featured.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insights.

Expected Result: The heading "Insights" appears above the hint.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (B) = Select the page or enter /en/insights; **Page types** (C) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Enable hero card** (D) = On.

Expected Result: Enable hero card is on and Hero rule shows Featured; the hero renders on the preview only.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A full-width card at least 35rem high: the agentic bank image behind a white gradient, at the left the tag line Banking, Article and 8m, the 3rem title "The agentic bank", its description and the author lockup with Anita Rao's photo, name and designation Head of Banking Research.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The hero, spotlight and card content come from the listed pages' metadata in the query index: republish a page after changing featured, priority or publish-date; publish the hub page for dialog changes and the Authors sheet for lockup changes.

Step 8 — Verify

Action: On the live page check: The agentic bank appears as the hero with Anita Rao's lockup.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 11 — Hero spotlight: Latest rule

Reproduces the screenshot `screenshots/filter-list-hero-latest.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Latest from our blog and case studies.

Expected Result: The heading "Latest from our blog and case studies" appears.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (B) = Select the page or enter /en/insights; **Page types** (C) = Blog; Case Study.

Expected Result: Root path /en/insights and the Page types Blog and Case Study are set.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Enable hero card** (D) = On; **Hero rule** (E) = Latest.

Expected Result: Enable hero card is on and Hero rule Latest is selected.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The hero spotlight for "Personalisation in retail" (28 Jun 26) with the tags Retail, Artificial intelligence and 5m and Anita Rao's lockup, followed by standard cards for The energy transition and Touchless insurance claims.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The hero, spotlight and card content come from the listed pages' metadata in the query index: republish a page after changing featured, priority or publish-date; publish the hub page for dialog changes and the Authors sheet for lockup changes.

Step 8 — Verify

Action: On the live page check: The new page appears as the hero after reload.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 12 — Hero spotlight: Manual rule

Reproduces the screenshot `screenshots/filter-list-hero-manual.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insights.

Expected Result: The heading "Insights" appears.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (B) = Select the page or enter /en/insights; **Page types** (C) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Enable hero card** (D) = On; **Hero rule** (E) = Manual; **Hero page** (F) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: Enable hero card is on, Hero rule Manual shows the Hero page picker, filled with /en/insights/supply-chain-resilience.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The hero spotlight for "Supply chain resilience" with the tags Manufacturing, Article and 7m, its description and the lockup of Sara Lee, Supply Chain Lead, over the page's image.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The hero, spotlight and card content come from the listed pages' metadata in the query index: republish a page after changing featured, priority or publish-date; publish the hub page for dialog changes and the Authors sheet for lockup changes.

Step 8 — Verify

Action: On the live page check: Supply chain resilience appears as the hero.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 13 — Featured spotlights: featured=true rule

Reproduces the screenshot `screenshots/filter-list-featured-flag.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insights; **Cards per page** (B) = 4; **Load more count** (C) = 3.

Expected Result: The heading "Insights" appears; Cards per page 4 and Load more count 3 are stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (D) = Select the page or enter /en/insights; **Page types** (E) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set.

Step 5 — Preview

Action: Action: Select Load more once.

Expected Result: After one Load more, three more cards and the State of AI 2026 spotlight appear and Load more disappears.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four cards, then The agentic bank spotlight with Anita Rao's lockup, then Quantum readiness (report card), The future of work and Touchless insurance claims, then the State of AI 2026 spotlight; no Load more button remains.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The hero, spotlight and card content come from the listed pages' metadata in the query index: republish a page after changing featured, priority or publish-date; publish the hub page for dialog changes and the Authors sheet for lockup changes.

Step 8 — Verify

Action: On the live page check: The agentic bank spotlight appears after four cards and State of AI 2026 after Load more.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 14 — Featured spotlights: priority<=3 rule

Reproduces the screenshot `screenshots/filter-list-featured-priority.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insights; **Cards per page** (B) = 4.

Expected Result: The heading "Insights" appears; Cards per page 4 is stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (C) = Select the page or enter /en/insights; **Page types** (D) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Featured rule** (E) = priority<=3; **Featured card count** (F) = 1.

Expected Result: Featured rule priority<=3 and Featured card count 1 are set under Enable featured cards.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Cloud at scale, State of AI 2026 (report card), Supply chain resilience and Personalisation in retail, then a full-width spotlight for The agentic bank (priority 1) and Load more.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The hero, spotlight and card content come from the listed pages' metadata in the query index: republish a page after changing featured, priority or publish-date; publish the hub page for dialog changes and the Authors sheet for lockup changes.

Step 8 — Verify

Action: On the live page check: The agentic bank (priority 1) is the spotlight.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 15 — Featured spotlights: Manual rule

Reproduces the screenshot `screenshots/filter-list-featured-manual.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insights; **Cards per page** (B) = 6.

Expected Result: The heading "Insights" appears; Cards per page 6 is stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (C) = Select the page or enter /en/insights; **Page types** (D) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Featured rule** (E) = Manual; **Featured pages** (F) = Select the page or enter /en/insights/future-of-work,/en/insights/energy-transition,/en/insights/cloud-at-scale; **Featured card count** (G) = 3.

Expected Result: Featured rule Manual shows Featured pages with the three paths and Featured card count 3.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Six cards (The agentic bank, State of AI 2026, Supply chain resilience, Personalisation in retail, Quantum readiness, Touchless insurance claims), then spotlights for The future of work, The energy transition and Cloud at scale in that order.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The hero, spotlight and card content come from the listed pages' metadata in the query index: republish a page after changing featured, priority or publish-date; publish the hub page for dialog changes and the Authors sheet for lockup changes.

Step 8 — Verify

Action: On the live page check: The future of work, The energy transition and Cloud at scale follow in that order.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 16 — Datasource: Query Index

Reproduces the screenshot `screenshots/filter-list-source-query-index.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Articles and reports.

Expected Result: The heading "Articles and reports" appears.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (B) = Select the page or enter /en/insights; **Page types** (C) = Article; Report; **Sort by** (D) = Latest First (the default; keep it).

Expected Result: Datasource Query Index (default) with Root path /en/insights, Page types Article and Report and Sort by Latest First.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four Mixed cards in one masonry row (Cloud at scale, Supply chain resilience, Quantum readiness as a report panel, The future of work), followed by spotlights for The agentic bank and State of AI 2026.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: A new article or report below /en/insights appears on aem.page after it is previewed and on aem.live after it is published and the index updated; the hub page need not be republished.

Step 7 — Verify

Action: On the live page check: Quantum readiness appears as a report card.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 17 — Datasource: Manual List

Reproduces the screenshot `screenshots/filter-list-source-manual.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Recommended reading.

Expected Result: The heading "Recommended reading" appears.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Datasource** (B) = Manual List; **Pages** (C) = Select the page or enter /en/insights/future-of-work,/en/insights/energy-transition,/en/insights/cloud-at-scale,/en/insights/retail-personalisation,/en/insights/insurance-claims.

Expected Result: Datasource Manual List hides Root path; Pages holds the five paths in display order.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Five Mixed image cards in the authored order: The future of work, The energy transition, Cloud at scale, Personalisation in retail and Touchless insurance claims; no spotlight and no Load more.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Each picked page must be published so it is in the locale's index; publish the page holding the list after changing Pages.

Step 7 — Verify

Action: On the live page check: Five cards in the authored order.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 18 — Filter pills: single select

Reproduces the screenshot `screenshots/filter-list-pills-single.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insights; **Show result count** (B) = On.

Expected Result: The heading "Insights" appears and Show result count is on.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (C) = Select the page or enter /en/insights; **Page types** (D) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set.

Step 5 — Fill in Filter List › Filters

Action: Select **Filter List** in the content tree and open the **Filters** tab of the properties panel. Enter: **Primary filter tags** › Item 1: **Tag Id** (E) = Add the tags tcs-corp:industry/banking; **Primary filter tags** › Item 2: **Tag Id** (F) = Add the

tags tcs-corp:industry/retail; **Primary filter tags** › Item 3: **Tag Id** (G) = Add the tags tcs-corp:industry/insurance; **Primary filter tags** › Item 4: **Tag Id** (H) = Add the tags tcs-corp:topic/ai.

Expected Result: The pills All, Banking, Retail, Insurance and Artificial intelligence appear on the canvas.

Step 6 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Enable featured cards** (I) = Off.

Expected Result: Enable featured cards is off so the filtered result is plain cards.

Step 7 — Preview

Action: Action: Select the Banking pill.

Expected Result: Selecting Banking presses that pill and reduces the list to one card with "1 result".

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The Filters label with All outlined and Banking filled dark (pressed) among Retail, Insurance and Artificial intelligence, the visible count "1 result" and a single card for The agentic bank.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Filtering runs in the browser on the index already loaded, so nothing is published for it; the pill and option labels come from /en/taxonomy.json, which must be published after tag changes, and the listed pages must be in the index.

Step 10 — Verify

Action: On the live page check: Selecting Banking shows The agentic bank and "1 result".

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 19 — Filter pills: multi select

Reproduces the screenshot `screenshots/filter-list-pills-multi.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insights; **Show result count** (B) = On.

Expected Result: The heading "Insights" appears and Show result count is on.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (C) = Select the page or enter /en/insights; **Page types** (D) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set.

Step 5 — Fill in Filter List › Filters

Action: Select **Filter List** in the content tree and open the **Filters** tab of the properties panel. Enter: **Primary filter tags** › Item 1: **Tag Id** (E) = Add the tags tcs-corp:industry/banking; **Primary filter tags** › Item 2: **Tag Id** (F) = Add the tags tcs-corp:industry/retail; **Primary filter tags** › Item 3: **Tag Id** (G) = Add the tags tcs-corp:industry/insurance; **Primary filter tags** › Item 4: **Tag Id** (H) = Add the tags tcs-corp:topic/ai; **Allow multi select** (I) = On.

Expected Result: The four pills appear and Allow multi select is on.

Step 6 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Enable featured cards** (J) = Off.

Expected Result: Enable featured cards is off.

Step 7 — Preview

Action: Action: Select the Insurance pill, then the Artificial intelligence pill.

Expected Result: Selecting Insurance and then Artificial intelligence presses both and leaves one card.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Insurance and Artificial intelligence pressed together, All not pressed, the count "1 result" and one card for Touchless insurance claims.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Filtering runs in the browser on the index already loaded, so nothing is published for it; the pill and option labels come from /en/taxonomy.json, which must be published after tag changes, and the listed pages must be in the index.

Step 10 — Verify

Action: On the live page check: Touchless insurance claims appears with "1 result".

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 20 — Advanced filter: AND logic

Reproduces the screenshot `screenshots/filter-list-advanced-and.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insights; **Show result count** (B) = On.

Expected Result: The heading “Insights” appears and Show result count is on.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (C) = Select the page or enter /en/insights; **Page types** (D) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set.

Step 5 — Fill in Filter List › Advanced

Action: Select **Filter List** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Advanced filter categories** › Item 1: **Category label** (E) = Industry, **Taxonomy root** (F) = Add the tags tcs-corp:industry; **Advanced filter categories** › Item 2: **Category label** (G) = Topic, **Taxonomy root** (H) = Add the tags tcs-corp:topic.

Expected Result: Two categories, Industry (tcs-corp:industry) and Topic (tcs-corp:topic), are listed; Filter logic stays AND.

Step 6 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Enable featured cards** (I) = Off.

Expected Result: Enable featured cards is off.

Step 7 — Preview

Action: Action: Select the round filter button, then check Retail (Industry) and Artificial intelligence (Topic).

Expected Result: The panel opens, Retail and Artificial intelligence are checked, the badge shows 2 and one card remains.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The round filter button with a 2 badge and the open Advanced filters panel with Clear all, the Industry (Banking, Energy, Insurance, Manufacturing, Retail) and Topic (Artificial intelligence, Cloud, Cybersecurity) fieldsets, two boxes checked, “1 result” and one card for Personalisation in retail.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Filtering runs in the browser on the index already loaded, so nothing is published for it; the pill and option labels come from /en/taxonomy.json, which must be published after tag changes, and the listed pages must be in the index.

Step 10 — Verify

Action: On the live page check: The panel lists only the intended options.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 21 — Advanced filter: OR logic

Reproduces the screenshot `screenshots/filter-list-advanced-or.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Insights; **Show result count** (B) = On.

Expected Result: The heading "Insights" appears and Show result count is on.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (C) = Select the page or enter /en/insights; **Page types** (D) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set.

Step 5 — Fill in Filter List › Advanced

Action: Select **Filter List** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Advanced filter categories** › Item 1: **Category label** (E) = Industry, **Taxonomy root** (F) = Add the tags tcs-corp:industry; **Advanced filter categories** › Item 2: **Category label** (G) = Topic, **Taxonomy root** (H) = Add the tags tcs-corp:topic; **Filter logic** (I) = OR.

Expected Result: The Industry and Topic categories are listed and Filter logic is OR.

Step 6 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Enable featured cards** (J) = Off.

Expected Result: Enable featured cards is off.

Step 7 — Preview

Action: Action: Select the round filter button, then check Banking and Energy (Industry) and Cloud (Topic).

Expected Result: Banking, Energy and Cloud are checked; the badge shows 3 and three cards remain.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The panel open with three boxes checked and a 3 badge, the count "3 results" and cards for The agentic bank, Cloud at scale and The energy transition.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Filtering runs in the browser on the index already loaded, so nothing is published for it; the pill and option labels come from /en/taxonomy.json, which must be published after tag changes, and the listed pages must be in the index.

Step 10 — Verify

Action: On the live page check: Three checked options show three results.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 22 — Sort by: Latest First

Reproduces the screenshot `screenshots/filter-list-sort-latest.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = All insights; **Default layout** (B) = Grid.

Expected Result: The heading "All insights" appears; Default layout Grid is stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (C) = Select the page or enter /en/insights; **Page types** (D) = Article; Blog; Report; Case Study.

Expected Result: Root path /en/insights and the four Page types are set, and Sort by stays on Latest First (default).

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (E) = Compact; **Enable featured cards** (F) = Off.

Expected Result: Card style Compact with Enable featured cards off, so every page is an ordinary card.

Step 6 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Sort by** (G) = Latest First (the default; keep it).

Expected Result: Root path /en/insights and the four Page types are set, and Sort by stays on Latest First (default).

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Nine compact cards in four columns, dates descending from The agentic bank (04 Sep 26) and Cloud at scale (21 Aug 26) to The future of work (02 May 26) and Touchless insurance claims (18 Apr 26).

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The order changes when a page's publish-date changes and it is republished; no change on the hub page is needed.

Step 9 — Verify

Action: On the live page check: The order stays the same after reload.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 23 — Sort by: Featured First

Reproduces the screenshot `screenshots/filter-list-sort-featured.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = All insights; **Default layout** (B) = Grid.

Expected Result: The heading "All insights" appears; Default layout Grid is stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (C) = Select the page or enter /en/insights; **Page types** (D) = Article; Blog; Report; Case Study; **Sort by** (E) = Featured First.

Expected Result: Root path /en/insights, the four Page types and Sort by Featured First are set.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (F) = Compact; **Enable featured cards** (G) = Off.

Expected Result: Card style Compact with Enable featured cards off, so every page is an ordinary card.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Nine compact cards starting with The agentic bank and State of AI 2026 (the two featured pages), followed by the others newest first from Cloud at scale to Touchless insurance claims.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Changing featured or priority on a page takes effect after that page is republished and re-indexed.

Step 8 — Verify

Action: On the live page check: The flagged pages lead the grid.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 24 — Sort by: Priority

Reproduces the screenshot `screenshots/filter-list-sort-priority.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = All insights; **Default layout** (B) = Grid.

Expected Result: The heading "All insights" appears; Default layout Grid is stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (C) = Select the page or enter /en/insights; **Page types** (D) = Article; Blog; Report; Case Study; **Sort by** (E) = Priority.

Expected Result: Root path /en/insights, the four Page types and Sort by Priority are set.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (F) = Compact; **Enable featured cards** (G) = Off.

Expected Result: Card style Compact with Enable featured cards off, so every page is an ordinary card.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Nine compact cards: The agentic bank (priority 1), State of AI 2026 (priority 2), then the pages without a priority newest first, from Cloud at scale to Touchless insurance claims.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Republish a page after changing priority; the hub page needs no republishing.

Step 8 — Verify

Action: On the live page check: Pages with priority 1 and 2 lead.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 25 — Sort by: Alphabetical

Reproduces the screenshot `screenshots/filter-list-sort-alphabetical.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Filter List

Action: Select the section in the content tree, choose **Add (+)** and pick **Filter List**.

Expected Result: An empty Filter List is added with the editor hint.

Step 3 — Fill in Filter List › Content

Action: Select **Filter List** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = All insights; **Default layout** (B) = Grid.

Expected Result: The heading "All insights" appears; Default layout Grid is stored.

Step 4 — Fill in Filter List › Source

Action: Select **Filter List** in the content tree and open the **Source** tab of the properties panel. Enter: **Root path** (C) = Select the page or enter /en/insights; **Page types** (D) = Article; Blog; Report; Case Study; **Sort by** (E) = Alphabetical.

Expected Result: Root path /en/insights, the four Page types and Sort by Alphabetical are set.

Step 5 — Fill in Filter List › Cards

Action: Select **Filter List** in the content tree and open the **Cards** tab of the properties panel. Enter: **Card style** (F) = Compact; **Enable featured cards** (G) = Off.

Expected Result: Card style Compact with Enable featured cards off, so every page is an ordinary card.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Nine compact cards from Cloud at scale, Personalisation in retail, Quantum readiness, State of AI 2026 and Supply chain resilience to The agentic bank, The energy transition, The future of work and Touchless insurance claims.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Retitling a page moves it after the page is republished and re-indexed; the hub needs no republishing.

Step 8 — Verify

Action: On the live page check: Titles sort in the locale's alphabetical order.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.17.6 Authorable Field Specification

Filter List block model (`filter-list`)

Field Name	Field Type	Mandatory	Multi-Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Content tab › Title (`title`)	text	No	No	(empty)	Heading of the block	Short, descriptive heading	None	Explore the Agentic bank
Content tab › Description (`description`)	rich-text	No	No	(empty)	Introduction below the title	One or two sentences	None	Insights on AI in banking.

Field Name	Field Type	Mandatory	Multi-Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Content tab › Show result count (`showResultCount`)	boolean	No	No	false	Shows the result count visibly	Turn on for large libraries	None	true
Content tab › Default layout (`layout`)	select	No	No	masonry	Arrangement of the cards	Masonry for mixed heights, Grid for uniform cards, List for text-led lists	Options masonry, grid, list; other values fall back to masonry	masonry
Content tab › Cards per page (`cardsPerPage`)	number	No	No	9	Cards shown first	Multiple of the column count (4 or 3) looks best, e.g. 8 or 12	Model min 1, max 48; code: empty or 0 gives 9, negative gives 1	12
Content tab › Load more count (`loadMoreCount`)	number	No	No	6	Cards added per Load more	Same multiple as Cards per page	Model min 1, max 48; code: empty or 0 gives 6, negative gives 1	8
Source tab › Data-source (`source`)	select	No	No	query-index	Where the pages come from	Query Index for automatic lists, Manual List for curated ones	Options query-index, manual	query-index
Source tab › Root path (`rootPath`)	aem-content	No	No	(empty)	Lists the pages below this page	Pick the folder page, e.g. /en/insights	Shown when Data-source is not Manual List	/content/tcs-corp/us/en/insights
Source tab › Pages (`pages`)	aem-content	No	Yes	(empty)	Curated pages, in order	Add published pages of the same locale	Shown when Data-source = Manual List	/content/tcs-corp/us/en/insights/ai-banking
Source tab › Page types (`pageTypes`)	multi-select	No	Yes	(none)	Limits by page-type	Leave empty for all page types	Options article, blog, report, case-study, news, event	article, report
Source tab › Content types (`contentTypes`)	multi-select	No	Yes	(none)	Limits by content-type	Leave empty for all content types	Options article, blog, report, case-study, news, event, whitepaper, podcast, video	report, whitepaper
Source tab › Sort by (`sortBy`)	select	No	No	latest	Order of the cards	Latest First for news and insights	Options latest, featured, priority, alphabetical; not applied to Manual List	latest
Filters tab › Primary filter category (`primaryCategory`)	aem-tag	No	No	(empty)	Pills from the tags below this tag	Use when the pills should follow the content; ignored when Primary filter tags are set	A tag below a name-space	tcs:industry
Filters tab › Primary filter tags (`primaryTags`)	container (composite multi-field)	No	Yes	(none)	The pills, in order	Five to eight pills	Each item one Tag Id	see item table

Field Name	Field Type	Mandatory	Multi-Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Filters tab › Show All filter (`showAll`)	boolean	No	No	true	Adds the All pill	Keep on in most cases	None	true
Filters tab › Allow multi select (`multiSelect`)	boolean	No	No	false	Several pills at once (AND)	Use only when tags combine meaningfully	None	false
Filters tab › Enable advanced filter (`advancedFilter`)	boolean	No	No	true	Shows the filter button and panel	Needs Advanced filter categories	None	true
Advanced tab › Advanced filter categories (`advancedCategories`)	container (composite multifield)	No	Yes	(none)	Facets of the advanced panel	Two to four categories	Items without a Taxonomy root are ignored	see item table
Advanced tab › Filter logic (`filterLogic`)	select	No	No	and	How checked options combine	AND for precise, OR for broad	Options and, or	and
Cards tab › Card style (`cardStyle`)	select	No	No	mixed	Card presentation	Mixed for insight hubs	Options default, compact, featured, mixed	mixed
Cards tab › Enable featured cards (`enableFeatured`)	boolean	No	No	true	Large spotlight cards between pages of cards	Turn off for plain lists	None	true
Cards tab › Featured rule (`featuredRule`)	select	No	No	featured	Which pages are spotlighted	featured=true with priority ordering is the usual choice	Options featured, priority, manual; shown when Enable featured cards = true	featured
Cards tab › Featured pages (`featuredPages`)	aem-content	No	Yes	(empty)	Hand-picked spotlight pages	In display order	Shown when featured cards are on and rule = manual	/content/tcs-corp/us/en/insights/report-2026
Cards tab › Featured card count (`featuredCount`)	number	No	No	2	Maximum spotlight cards	1 to 3	Model min 1, max 12; shown when featured cards are on; code: empty or 0 gives 2	2
Cards tab › Enable hero card (`enableHero`)	boolean	No	No	false	A large spotlight above the grid	One hero per page	None	true
Cards tab › Hero rule (`heroRule`)	select	No	No	featured	Which page is the hero	Featured, or Latest for news	Options latest, featured, manual; shown when Enable hero card = true	featured
Cards tab › Hero page (`heroPage`)	aem-content	No	No	(empty)	The hero page (Manual)	Must also match the source	Shown when the hero is on and rule = manual	/content/tcs-corp/us/en/insights/agentic-bank

Field Name	Field Type	Mandatory	Multi-Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Mapping tab › Image source (`imageSource`)	text	No	No	featured-image	Column of the card image	Keep the default	Free text; empty falls back to featured-image	featured-image
Mapping tab › Fallback image (`fallbackImage`)	text	No	No	thumbnail-image	Column used when the image source is empty	Keep the default	Free text; empty falls back to thumbnail-image	thumbnail-image
Mapping tab › Eyebrow source (`eyebrowSource`)	text	No	No	content-type	Column of the meta-line label (and the report test)	Keep content-type	Free text; empty falls back to content-type	content-type
Mapping tab › Title source (`titleSource`)	text	No	No	title	Column of the card title	Use card-title only if every page has it (else the page title is used)	Free text; empty falls back to title	title
Mapping tab › Description source (`descriptionSource`)	text	No	No	description	Column of the card description	Keep the default	Free text; empty falls back to description	description
Mapping tab › Tag source (`tagSource`)	text	No	No	tags	Column of the card tags	Keep tags	Free text; empty falls back to tags	tags
Mapping tab › Url source (`urlSource`)	text	No	No	path	Column of the card link	Keep path	Free text; empty falls back to path	path
Mapping tab › Author source (`authorSource`)	text	No	No	author	Column of the spotlight author	author or author-id	Free text; empty falls back to author	author-id
Additional tab › Anchor ID (`classes_anchor`)	text	No	No	(empty)	Block id for #links	anchor- plus a short slug	Regex `^anchor-[a-z0-9][a-z0-9-]*$` (Enforced, message “Start with anchor-, then lowercase letters, digits and hyphens.”)	anchor-insights
Additional tab › Hide block (`classes_hideblock`)	boolean	No	No	false	Hides the block on the page	Use temporarily	None	false
Additional tab › Padding left (`classes_paddingleft`)	select	No	No	Default (“”)	Extra left padding	Only when the design needs it	15 options (see Spacing values)	pl-400
Additional tab › Padding right (`classes_paddingright`)	select	No	No	Default (“”)	Extra right padding	As above	15 options	pr-400
Additional tab › Padding top (`classes_paddingtop`)	select	No	No	Default (“”)	Extra top padding	As above	15 options	pt-800
Additional tab › Padding bottom (`classes_paddingbottom`)	select	No	No	Default (“”)	Extra bottom padding	As above	15 options	pb-800

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Additional tab › Margin left (`classes_marginleft`)	select	No	No	Default ("")	Left margin	As above	15 options	ml-0
Additional tab › Margin right (`classes_marginright`)	select	No	No	Default ("")	Right margin	As above	15 options	mr-0
Additional tab › Margin top (`classes_margintop`)	select	No	No	Default ("")	Top margin	As above	15 options	mt-1200
Additional tab › Margin bottom (`classes_marginbottom`)	select	No	No	Default ("")	Bottom margin	As above	15 options	mb-1200

Primary filter tags item (composite multifield `primaryTags`)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Tag Id (`tagId`)	aem-tag	No	No	(empty)	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored	tcs-corp:industry/banking

Advanced filter categories item (composite multifield `advancedCategories`)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Category label (`categoryLabel`)	text	No	No	(empty)	The category heading (legend) in the panel	Short noun, e.g. Industry	Empty: the taxonomy title of the root is used	Industry
Taxonomy root (`taxonomyRoot`)	aem-tag	No	No	(empty)	Options are the tags below it	A tag below the namespace	Without a root the item is ignored	tcs:industry

Spacing values (all eight padding and margin selects)

Option label	Value (padding left; the other selects use pr-, pt-, pb-, ml-, mr-, mt-, mb-)	Size
Default	(empty)	The block's own spacing
0 (none)	pl-0	0
0.25rem (space-100)	pl-100	0.25rem
0.5rem (space-200)	pl-200	0.5rem
0.75rem (space-300)	pl-300	0.75rem
1rem (space-400)	pl-400	1rem
1.25rem (space-500)	pl-500	1.25rem
1.5rem (space-600)	pl-600	1.5rem
2rem (space-800)	pl-800	2rem

Option label	Value (padding left; the other selects use pr-, pt-, pb-, ml-, mr-, mt-, mb-)	Size
2.5rem (space-1000)	pl-1000	2.5rem
3rem (space-1200)	pl-1200	3rem
4rem (space-1600)	pl-1600	4rem
5rem (space-2000)	pl-2000	5rem
6rem (space-2400)	pl-2400	6rem
7.5rem (space-3000)	pl-3000	7.5rem

Note: None of the Filter List fields is marked `required` in the model, so Universal Editor does not enforce any field as mandatory. The only enforced pattern is the Anchor ID regular expression. The number fields declare `min` / `max` in the model; the code itself only guarantees a minimum of 1 and has no maximum.

Field details

- **Title** — Purpose: block heading. Allowed Values: plain text. Character Limits: Recommended 60 characters; none enforced. Business Rules: rendered as `<h2 class="filter-list-title">` only when not empty. Dependency Rules: none. Visibility Rules: always shown. Sample Content: “Explore insights & opinions”.
- **Description** — Purpose: introduction. Allowed Values: rich text (paragraphs, links, lists). Character Limits: Recommended 200 characters; none enforced. Business Rules: the authored nodes are moved into `filter-list-description` (max width 50rem) only when it has text. Dependency Rules: none. Visibility Rules: always shown. Sample Content: “Perspectives from our experts on AI-led transformation.”
- **Show result count** — Purpose: visible count. Allowed Values: on / off. Character Limits: not applicable. Business Rules: off adds `visually-hidden` to the count, which stays a `role="status"` live region. Dependency Rules: none. Visibility Rules: always shown. Sample Content: on.
- **Default layout** — Purpose: arrangement. Allowed Values: Masonry (`masonry`), Grid (`grid`), List (`list`). Character Limits: not applicable. Business Rules: any other value gives masonry; adds `layout-{value}` to block and grid. Dependency Rules: Featured card style reduces the columns of Masonry and Grid. Visibility Rules: always shown. Sample Content: Masonry.
- **Cards per page** — Purpose: first page size of standard cards (hero and featured spotlights are not counted). Allowed Values: whole numbers; model min 1 / max 48. Character Limits: not applicable. Business Rules: `Math.max(1, parseInt(value) || 9)`. Dependency Rules: a featured spotlight follows each page of cards. Visibility Rules: always shown. Sample Content: 12.
- **Load more count** — Purpose: cards added per Load more. Allowed Values: whole numbers; model min 1 / max 48. Business Rules: `Math.max(1, parseInt(value) || 6)`; Load more is hidden when every standard and featured card is shown. Dependency Rules: as above. Visibility Rules: always shown. Sample Content: 8.
- **Datasource** — Purpose: source of the pages. Allowed Values: Query Index (`query-index`), Manual List (`manual`). Business Rules: only the exact value `manual` selects the manual mode; anything else is Query Index. Dependency Rules: switches the visibility of Root path and Pages; Manual List ignores Page types, Content types and Sort by. Visibility Rules: always shown. Sample Content: Query Index.
- **Root path** — Purpose: listing scope. Allowed Values: a page of the same locale (AEM path or published path). Business Rules: converted to the published path (`/content/tcs-corp/us/en/insights.html` to `/en/insights`); only pages strictly below it are listed; empty lists the whole locale. Dependency Rules: Datasource = Query Index. Visibility Rules: condition `source !== "manual"`. Sample Content: /content/tcs-corp/us/en/insights.

- **Pages** — Purpose: curated list. Allowed Values: pages of the same locale. Business Rules: listed in the authored order; pages missing from the locale's index are dropped. Dependency Rules: Datasource = Manual List. Visibility Rules: condition `source === "manual"`. Sample Content: three insight pages.
- **Page types** — Purpose: filter on `page-type`. Allowed Values: Article, Blog, Report, Case Study, News, Event. Business Rules: compared with the normalized `pageType` index column; none selected means every page type (including pages without one). Dependency Rules: Query Index only. Visibility Rules: always shown (no condition, although it has no effect for Manual List). Sample Content: Article.
- **Content types** — Purpose: filter on `content-type`. Allowed Values: Article, Blog, Report, Case Study, News, Event, Whitepaper, Podcast, Video. Business Rules: as Page types with the `contentType` column. Dependency Rules: Query Index only. Visibility Rules: always shown. Sample Content: Report, Whitepaper.
- **Sort by** — Purpose: order. Allowed Values: Latest First, Featured First, Priority, Alphabetical. Business Rules: see Variations 22 to 25. Dependency Rules: Query Index only. Visibility Rules: always shown. Sample Content: Latest First.
- **Primary filter category** — Purpose: automatic pills. Allowed Values: a tag ID. Business Rules: pills are the tags starting with `{category}/` that the candidate pages use, sorted by label; ignored when Primary filter tags has a valid tag. Dependency Rules: needs the index (no pills in the editor). Visibility Rules: always shown. Sample Content: tcs:topics.
- **Primary filter tags** — Purpose: curated pills. Allowed Values: items of one tag each. Character Limits: Recommended at most 8 items. Business Rules: only values that look like a tag ID (`namespace:path`) become pills; labels come from the locale's taxonomy, else from the tag ID. Dependency Rules: replaces Primary filter category. Visibility Rules: always shown. Sample Content: tcs-corp:industry/banking, tcs-corp:industry/insurance.
- **Tag Id** (item) — Purpose: one pill. Allowed Values: a tag ID. Business Rules: matches pages with the tag or a tag below it. Sample Content: tcs-corp:industry/banking.
- **Show All filter** — Purpose: All pill. Allowed Values: on / off. Business Rules: a missing value counts as on (the code default is true when the property row is absent; an authored "false" turns it off). Visibility Rules: always shown. Sample Content: on.
- **Allow multi select** — Purpose: several pills. Allowed Values: on / off. Business Rules: on: pills toggle independently and a page needs every selected tag. Visibility Rules: always shown. Sample Content: off.
- **Enable advanced filter** — Purpose: filter button and panel. Allowed Values: on / off. Business Rules: a missing value counts as on; the button only appears when at least one category has options. Dependency Rules: needs Advanced filter categories. Visibility Rules: always shown (the Advanced tab is not hidden when it is off). Sample Content: on.
- **Advanced filter categories** — Purpose: facets. Allowed Values: items of Category label and Taxonomy root. Character Limits: Recommended 4 categories. Business Rules: options are the tags below the root used by the candidate pages, sorted by label; empty categories are not shown. Visibility Rules: always shown. Sample Content: Industry / tcs:industry.
- **Category label** (item) — Purpose: legend. Allowed Values: text that is not a tag ID. Character Limits: Recommended 20 characters. Business Rules: empty uses the taxonomy title of the root; displayed in upper case by CSS. Sample Content: Industry.
- **Taxonomy root** (item) — Purpose: options source. Allowed Values: a tag ID. Business Rules: required for the item to be used. Sample Content: tcs:industry.
- **Filter logic** — Purpose: option combination. Allowed Values: AND (`and`), OR (`or`). Business Rules: applies across all checked options; other values give AND. Visibility Rules: always shown. Sample Content: AND.
- **Card style** — Purpose: presentation. Allowed Values: Default, Compact, Featured, Mixed. Business Rules: other values give Mixed; adds `card-{value}` to the block. Visibility Rules: always shown. Sample Content: Mixed.

- **Enable featured cards** — Purpose: spotlights in the grid. Allowed Values: on / off. Business Rules: a missing value counts as on. Dependency Rules: controls the visibility of Featured rule, Featured pages and Featured card count. Visibility Rules: always shown. Sample Content: on.
- **Featured rule** — Purpose: spotlight selection. Allowed Values: featured=true (`featured`), priority<=3 (`priority`), Manual (`manual`). Business Rules: see Variations 13 to 15. Visibility Rules: condition `enableFeatured === true`. Sample Content: featured=true.
- **Featured pages** — Purpose: manual spotlights. Allowed Values: pages. Business Rules: only pages among the matches are used. Visibility Rules: condition `enableFeatured === true AND featuredRule === "manual"`. Sample Content: two report pages.
- **Featured card count** — Purpose: maximum spotlights. Allowed Values: model min 1 / max 12. Business Rules: `Math.max(1, parseInt(value) || 2)`. Visibility Rules: condition `enableFeatured === true`. Sample Content: 2.
- **Enable hero card** — Purpose: hero spotlight. Allowed Values: on / off. Business Rules: a missing value counts as off. Dependency Rules: controls Hero rule and Hero page. Visibility Rules: always shown. Sample Content: on.
- **Hero rule** — Purpose: hero selection. Allowed Values: Latest, Featured, Manual. Business Rules: see Variations 10 to 12. Visibility Rules: condition `enableHero === true`. Sample Content: Featured.
- **Hero page** — Purpose: manual hero. Allowed Values: a page. Business Rules: used only when it matches the source and filters. Visibility Rules: condition `enableHero === true AND heroRule === "manual"`. Sample Content: /content/tcs-corp/us/en/insights/agentic-bank.
- **Image source / Fallback image / Eyebrow source / Title source / Description source / Tag source / Url source / Author source** — Purpose: the metadata column read for each card part. Allowed Values: a metadata column name in kebab case (`featured-image`) or the index name (`featuredImage`); the code converts kebab case to the index's camel case and also tries the name as typed. Character Limits: not applicable. Business Rules: an empty field uses its default; a column that is not in the index (`helix-query.yaml`) is always empty, and the card then falls back (title to the page title, then the path; URL to the page path; image to the fallback column; author to the `author-id` lookup). Dependency Rules: Eyebrow source drives the report card test in the Mixed style. Visibility Rules: always shown. Sample Content: `card-title` in Title source.
- **Anchor ID** — Purpose: a stable id for links and the data layer. Allowed Values: `anchor-` followed by lowercase letters, digits and hyphens. Character Limits: Recommended 40 characters. Business Rules: becomes the block's `id` (a duplicate on the page gets `-2`, `-3`); also the data layer component id. Visibility Rules: always shown. Sample Content: anchor-insights.
- **Hide block** — Purpose: temporarily hide. Allowed Values: on / off. Business Rules: hidden on preview and live pages and in the editor's preview mode; shown at 45% opacity with a dashed outline in edit mode. Sample Content: off.
- **Padding left / right / top / bottom** and **Margin left / right / top / bottom** — Purpose: spacing around or inside the block from the spacing tokens. Allowed Values: the 15 options of the Spacing values table. Business Rules: applied by `styles/styles.css` (`main .section .block.pl-400` etc.), overriding the block's own spacing. Visibility Rules: always shown. Sample Content: Margin top 3rem (space-1200).

> **Note:** Two properties are read by the code but are not in the current dialog: `filters` (a multifield of a tag title and tags, from Filter Lists created before Primary filter tags existed; used only when Primary filter tags is empty) and `filtersLabel` (the text before the pills; the placeholder `filters` is used when absent). They only exist on legacy content.

6.17.7 Field Annotation Mapping

Marker	Field	Purpose
A	Content tab › Title	Block heading (`<h2>`)
B	Content tab › Description	Introduction text
C	Placeholder `filters` (legacy `filtersLabel`)	Label before the pills
D	Filters tab › Show All filter; Primary filter tags; Primary filter category	The filter pills
E	Content tab › Show result count	Visible result count
F	Source, Cards and Mapping tabs (results; editor hint in the editor)	Cards, spotlights, Load more; the editor hint where the index is not available

6.17.8 Component Specification

Attribute	Value
Component Name	Filter List (`filter-list`; Universal Editor component "Filter List", resource type `core/franklin/components/block/v1/block`, model `filter-list`, key-value block)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`decorators/masonry-decorator.js`, `button-decorator.js`, `icon-button-decorator.js`, `responsive-image-decorator.js`, `date-decorator.js`, `article-meta-decorator.js`; `utils/query-index.js`, `taxonomy.js`, `tags.js`, `data.js`, `placeholders.js`, `properties.js`, `multifield.js`, `site.js`, `environment.js`, `ids.js`; `scripts/aem.js`; `icons/filter.svg`; `/query-index.json`, `/{locale}/taxonomy.json`, `/{locale}/data/authors.json`, `/{locale}/placeholders.json`
Component Type	Block (no child items; two composite multifields in the dialog)
Supported Variants	Layout: Masonry, Grid, List; Card style: Default, Compact, Featured, Mixed (with report and dark card kinds); Hero rule: Latest, Featured, Manual; Featured rule: featured=true, priority<=3, Manual; Datasource: Query Index, Manual List; Pills: single or multi select; Filter logic: AND, OR; Sort: Latest First, Featured First, Priority, Alphabetical
Supported Templates	Any page (allowed in every section); typically landing / listing pages and the home page
Supported Metadata	Read from the listed pages via the index: title (og:title), description, image (og:image, not used by default), tags (article:tag), page-type, content-type, publish-date, reading-time, featured-image, thumbnail-image, author, author-id, featured (feature-card), priority (featured-priority), lastModified; any other indexed column through the Mapping tab
Supported Tags	AEM tags (tag IDs `namespace:path`) of the listed pages; labels from `/{locale}/taxonomy.json` in the locale's language, else derived from the tag ID; hierarchical matching (a tag matches its descendants)
Supported Personalization	None. Visitor filter choices are not stored. The interactions are in the Adobe Client Data Layer, so Adobe Target could use them once Adobe Tags is installed (not implemented)
Caching Considerations	`/query-index.json`, taxonomy, Authors sheet and placeholders are served from the Edge Delivery CDN and fetched once per page view (module-level promises); the index is read in pages of 500 rows until `total` is reached; the whole index (all 13 locales) is fetched and filtered to the current locale in the browser. Index content updates when pages are previewed (preview index) or published (live index); the CDN cache is purged by Edge Delivery on publish
Performance Considerations	Loaded like other blocks (lazy unless in the first section). Decoration waits for four parallel fetches (placeholders, index, taxonomy, Authors) plus tag label resolution, so the block appears after them. Card images are lazy (`createOptimizedPicture`, 600px from 900px wide, 750px below); spotlight images 1600px / 750px; the hero image is eager. Only Cards per page cards are rendered initially. Avoid

Attribute	Value
	placing the block in the first section (it would delay LCP while the index loads). Large indexes increase the number of 500-row requests
Accessibility Compliance	WCAG 2.1 AA intent: pills are toggle buttons with `aria-pressed` in a labelled `role="group"`; `aria-controls` links pills and toggle to the results and panel; `aria-expanded` on the toggle; Escape closes the panel and returns focus; focus moves to the first new card after Load more; result count is a `role="status"` live region; fieldsets with legends; one link per card with a visible focus outline around the card; reduced motion removes the image zoom transition; decorative images have empty alt
SEO Compliance	Cards are rendered in the browser from JSON; they are not in the server-delivered HTML. Search engines that render JavaScript can see them; listed pages are discoverable through the sitemap (`helix-sitemap.yaml`). Headings: block `<h2>`, card `<h3>`. Links are real `<a href>` links to the listed pages. Filtered states have no URL

6.17.9 Input Model

Content Inputs: Title (text) and Description (rich text) from the dialog.

Metadata Inputs: The listed pages' metadata, through the query index columns defined in `helix-query.yaml`: `path`, `title`, `description`, `image`, `tags`, `pageType`, `contentType`, `publishDate`, `readingTime`, `thumbnailImage`, `featuredImage`, `author`, `authorId`, `featured`, `featureCard`, `priority`, `featuredPriority`, `lastModified` (and any other column named in the Mapping tab, e.g. `cardTitle`, `cardDescription`, `cardImage`, `eyebrow`, `category`). The Authors sheet (`author-id`, `name`, `designation`, `image`).

Tags Inputs: Primary filter tags, Primary filter category and Taxonomy roots (tag IDs from the dialog); the `tags` column of the pages; the taxonomy (`tag`, `title` per language sheet).

Page Context Inputs: The current path (to exclude the page itself and to find the locale via `utils/site.js getLocale`), `<html lang>` (alphabetical collation), the Universal Editor edit-mode class `adobe-ue-edit` (editor hint).

Query Inputs: Datasource, Root path, Page types, Content types, Sort by, Featured and Hero rules.

Manual Inputs: Pages (Manual List), Featured pages, Hero page.

Authored HTML received from AEM (simplified, key-value rows):

```
<div class="filter-list">
  <div><div>title</div><div>Explore insights &amp;amp; opinions</div></div>
  <div><div>description</div><div><p>Perspectives from our experts.</p></div></div>
  <div><div>layout</div><div>masonry</div></div>
  <div><div>cardsPerPage</div><div>9</div></div>
  <div><div>source</div><div>query-index</div></div>
  <div><div>rootPath</div><div><a href="/content/tcs-corp/us/en/insights.html">
    /content/tcs-corp/us/en/insights.html</a></div></div>
  <div><div>pageTypes</div><div>article,report</div></div>
  <div><div>primaryTags</div><div><ul><li>tcs-corp:industry/banking</li>
    <li>tcs-corp:industry/insurance</li></ul></div></div>
  <div><div>advancedCategories</div><div><p>Industry</p><p>tcs:industry</p><hr>
    <p>Service</p><p>tcs:service</p></div></div>
  <div><div>cardStyle</div><div>mixed</div></div>
  <div><div>enableHero</div><div>true</div></div>
</div>
```

Keys are matched without case and hyphens (`cardsPerPage` and `cardsperpage` are the same). Composite multi-field items arrive as list items (single-field items) or as runs of elements separated by `<hr>` (several fields). The Additional tab values arrive as block classes (e.g. `anchor-insights`, `mt-1200`), not as rows.

A query index row the block reads (excerpt of `/query-index.json`):

```
{
  "path": "/en/insights/agentic-bank",
  "title": "The agentic bank",
  "description": "How AI agents change retail banking.",
  "tags": "[\"tcs-corp:industry/banking\",\"tcs-corp:topic/ai\"]",
  "pageType": "article",
  "contentType": "Article",
  "publishDate": "2026-09-04",
  "readingTime": "8",
  "featuredImage": "/en/insights/media_1a2b3c.jpeg",
  "authorId": "jdoe",
  "featured": "yes",
  "priority": "1",
  "lastModified": "1788000000"
}
```

6.17.10 Output Model

Rendered Output

- `div.filter-list.block.card-{style}.layout-{layout}` (plus Additional tab classes) containing:
- `div.filter-list-header`: `h2.filter-list-title`, `div.filter-list-description`, `div.filter-list-toolbar` (`p.filter-list-label`, `div.filter-list-filters[role=group]` with `button.filter-list-filter` pills, `button.filter-list-toggle` with `span.filter-list-toggle-count`), `div.filter-list-panel[role=region]` (`div.filter-list-panel-header`, `fieldset.filter-list-category` with `ul.filter-list-options`), `p.filter-list-count[role=status]`.
- `div.filter-list-results#filter-list-{n}-results`: the hero `article.filter-list-card-spotlight.filter-list-card-hero`, then `div.filter-list-grid.layout-{layout}` (plus `masonry-spans` or `masonry-native`) with `article.filter-list-card-{standard|compact|large|report|dark}` and `article.filter-list-card-spotlight.filter-list-card-featured`; or `div.filter-list-empty` (`p.filter-list-empty-title`, `p.filter-list-empty-hint`, Reset filters button).
- `p.filter-list-more` with the Load more button (hidden when nothing more).

Generated HTML (simplified)

```
<div class="filter-list block card-mixed layout-masonry">
  <div class="filter-list-header">
    <h2 class="filter-list-title">Explore insights &amp;amp; opinions</h2>
    <div class="filter-list-toolbar">
      <p class="filter-list-label">Filters</p>
      <div class="filter-list-filters" role="group" aria-label="Filters">
        <button class="filter-list-filter" type="button" data-filter=""
          data-cmp-interaction="filter" data-cmp-value="all"
          aria-controls="filter-list-1-results" aria-pressed="true">All</button>
        <button class="filter-list-filter" type="button"
          data-filter="tcs-corp:industry/banking" data-cmp-interaction="filter"
          data-cmp-value="tcs-corp:industry/banking" aria-pressed="false">Banking</button>
      </div>
      <button class="filter-list-toggle button secondary icon-button" type="button"
        aria-label="Advanced filters" aria-controls="filter-list-1-panel"
        aria-expanded="false"><span class="filter-list-toggle-count"
        aria-hidden="true"></span></button>
    </div>
    <p class="filter-list-count visually-hidden" role="status">24 results</p>
  </div>
  <div class="filter-list-results" id="filter-list-1-results">
```

```
    <div class="filter-list-grid layout-masonry masonry-spans">
      <article class="filter-list-card filter-list-card-standard">
        <div class="filter-list-card-media"><picture>...</picture></div>
        <p class="filter-list-card-tags"><span>Banking</span><span>8m</span></p>
        <h3 class="filter-list-card-title">
          <a class="filter-list-card-link"
            href="/en/insights/agentic-bank">The agentic bank</a>
        </h3>
        <p class="filter-list-card-meta"><span>Article</span>
          <time datetime="2026-09-04">04 Sep 26</time></p>
      </article>
    </div>
  </div>
  <p class="filter-list-more"><button type="button" class="button secondary"
    data-cmp-interaction="load-more">Load more</button></p>
</div>
```

Generated JSON: None. The block reads JSON (index, taxonomy, Authors, placeholders) but produces none.

Generated Metadata: None. The block does not change page metadata.

Analytics Tracking

The block is registered in the Adobe Client Data Layer by `decorators/data-layer-decorator.js` after the lazy phase:

```
{
  "component": {
    "anchor-insights": {
      "@type": "tcs-corp/components/filter-list",
      "parentId": "page-1x2y3z",
      "dc:title": "Explore insights & opinions"
    }
  }
}
```

The component id is the Anchor ID (block id), else `filter-list-{n}` in page order. Interactions:

Interaction	Event	eventInfo (besides `path: "component.{id}"`)
Pill click	`cmp:click`	`interaction: "filter"`, `dc:title`: pill label, `value`: tag ID or `all`, `xdm:linkType: "other"`, `breakpoint`
Advanced option checked / unchecked	`cmp:change`	`interaction: "filter-option"`, `value`: tag ID, `checked`: true / false
Filter toggle, Clear all, Reset filters	`cmp:click`	`interaction: "button"`, `dc:title`: the accessible name
Load more	`cmp:click`	`interaction: "load-more"`, `dc:title: "Load more"`
Card link	`cmp:click`	`interaction: "link"`, `dc:title`: link text or `aria-label`, `xdm:linkURL`: page URL, `xdm:linkType: "other"` (or `exit` / `download`)

Example:

```
{
  "event": "cmp:click",
  "eventInfo": {
    "path": "component.filter-list-1",
```

```
    "interaction": "filter",
    "dc:title": "Banking",
    "xdm:linkType": "other",
    "value": "tcs-corp:industry/banking",
    "breakpoint": "desktop"
  }
}
```

Personalization Output: None.

Search Index Output: None. The Filter List page itself is indexed like any page (its own metadata); the cards are not part of its indexed content.

Target Personalization Output: None. Visitor filter choices are not stored. The block is in the Adobe Client Data Layer as tcs-corp/components/filter-list; pill, option and Load more clicks are described with data-cmp-interaction (filter, filter-option, load-more), so Adobe Target could use them once Adobe Tags is installed (not implemented).

6.17.11 Business Rules

1. The block reads its properties as key-value rows; unknown rows are ignored.
2. Defaults when a property is missing or invalid: layout masonry; cards per page 9; load more count 6; data-source Query Index; sort latest; Show All on; multi select off; advanced filter on; filter logic AND; card style mixed; featured cards on; featured rule featured; featured count 2; hero off; hero rule featured; mapping columns `featured-image`, `thumbnail-image`, `content-type`, `title`, `description`, `tags`, `path`, `author`.
3. Number fields: `Math.max(1, parseInt(value) || default)`; 0, empty or text gives the default, negatives give 1; there is no maximum in code.
4. Toggles: an absent property uses the default; a present property is on only when its text is `true`.
5. Paths (Root path, Pages, Featured pages, Hero page) are read from links or text, converted to published paths, `.html` removed and a trailing slash removed.
6. The index is the current locale's rows only (path equal to or below the locale root, e.g. `/de-de`).
7. Query Index source: pages strictly below Root path (not the root itself); the current page is excluded; Page types and Content types filter by normalized `page-type` / `content-type` (none selected: no filtering); sorted by Sort by.
8. Manual List source: the Pages in authored order, only those present in the locale's index; no sort, no type filters, the current page is not excluded.
9. Pages flagged `hide-in-nav` and redirect targets are not considered (unlike the List block).
10. Sorting: Latest = publish date descending (text comparison of YYYY-MM-DD), then last modified descending; Priority = numeric priority ascending (missing last), then latest; Featured First = featured first, then priority, then latest; Alphabetical = title with the page language's collator, ignoring case and accents.
11. `featured` is true when the `featured` or `feature-card` column is yes, true, 1, on or y (any case); `priority` is the number in `priority`, else `featured-priority`.
12. Pills: the Primary filter tags (valid tag IDs only, in order); else the tags below the Primary filter category used by the candidate pages, sorted by label; else no pills.
13. Pill labels and option labels come from the taxonomy titles of the locale's language; missing tags get a label derived from the ID (last segment, hyphens to spaces, first letter capitalised). Labels are never the raw IDs.
14. A pill or option matches a page that has the tag itself or any tag below it.
15. Single select: one pill at a time; clicking the pressed pill clears it. Multi select: pills toggle; a page must match every selected pill. All clears the selection and is pressed when nothing is selected.
16. The toolbar label and pill group appear only when there is at least one pill (including All).

17. Advanced categories need a Taxonomy root; options are the root's tags used by the candidate pages; categories without options are left out; with no categories (or Enable advanced filter off) there is no filter button or panel.
18. Advanced options combine by Filter logic across all categories; the result combines with the pills by AND.
19. Arrangement on every render: first the hero (if on), then the featured spotlights (if on), each removed from the remaining cards, so no page appears twice.
20. Hero: Manual = the Hero page if it matches, else none; Featured = the featured matching page with the lowest priority, else the latest page; Latest = the latest page.
21. Featured: Manual = the Featured pages that match, in authored order; featured=true = featured pages by priority, else (if none) pages with priority <= 3; priority<=3 = pages with priority <= 3 by priority. At most Featured card count.
22. Placement: the first render shows Cards per page standard cards, then one featured spotlight; each Load more adds Load more count cards, then the next featured spotlight; once every standard card is shown, all remaining featured spotlights follow.
23. Load more is hidden when every standard and featured card is shown; after a Load more the focus moves to the first new card's link and the count reads "Showing {n} of {total}" (or "{n} results" when everything is shown).
24. The result count counts the hero, all featured and all standard cards of the current filters ("1 result" / "{n} results").
25. Every filter change re-renders from the index already loaded (no new requests); the grid is rebuilt and the visible count resets to the first page.
26. Empty state: "No resources found." and "Try selecting another filter."; a Reset filters button appears when pills or options are selected; it clears both and moves focus to the first pill (or the first toolbar button).
27. Editor-only: when Universal Editor is in edit mode and the index returned no pages, the empty state shows only the editor hint ("The results show on the published page, from the pages' metadata.").
28. Card title: the Title source column, else the index title, else the path. Card URL: the Url source column, else the path. Image: the Image source column, else the Fallback image column; no image means no media (or a dark card in Mixed). Description: the Description source column.
29. Card tags: the first 2 tags of the Tag source column as labels, followed by the reading time; a whole number reading time is shown as "{n}m" (placeholder `minutesShort`), other text as typed.
30. Meta row: the eyebrow (Eyebrow source) and the publish date formatted `dd Mmm yy` (e.g. 04 Sep 26) in a `<time datetime>`; a non-ISO date is shown as typed without `datetime`.
31. Mixed style: report card when the eyebrow contains "report" (any case); else dark card when there is no image; else a standard image card without description.
32. Featured style: large cards with a Read more button; Compact: no image or description; Default: image, description and meta.
33. Spotlights: the image behind the content; tags, title link, description (hero only) and the author lockup.
34. Author lockup: the Author source value looked up as an Authors sheet `author-id` (exact match), else the page's `author-id`; if no sheet row matches, the Author source text is shown as the name (without designation or image); no value and no match means no lockup. A failing Authors sheet is treated as empty.
35. Images from site media (`/media_` on the same origin) are optimized responsive pictures; other URLs are plain lazy `<img>` elements. All card images have empty alt text.
36. The hero image loads eagerly; others lazily.
37. Fetch failures (index, taxonomy, placeholders, Authors) never throw: they give empty data, so the block shows the empty state or derived labels.
38. Masonry uses native CSS masonry when supported, else JavaScript placement that follows resizes and added cards.
39. Columns: 1 (mobile); 2 from 600px; 3 from 900px (Featured style 2); 4 from 1200px for Default, Compact and Mixed (Featured 3); List layout always 1.

40. Legacy content: the `filters` multifield (tag title and tags) is read when Primary filter tags is empty; `filtersLabel` replaces the "Filters" label.

6.17.12 Author Best Practices

Recommended Content Length

Element	Recommended	Enforced
Block title	Up to 60 characters	No
Block description	Up to 200 characters, 1 to 2 sentences	No
Card title (page title or card-title)	Up to 80 characters (titles wrap; long titles make masonry uneven)	No
Card description	Up to 160 characters (3 lines are shown, the rest is cut with an ellipsis)	3-line visual clamp (CSS)
Pills	3 to 8 pills, 1 to 3 words each	No
Categories	2 to 4 categories with 3 to 12 options each	No
Card tags	The first 2 tags of each page are shown; put the most relevant tags first	2 tags (code)

Image Dimensions

Image	CSS aspect / size	Requested width	Recommended source
Card media (Default, Mixed, Featured)	4:3, `object-fit: cover`	600px (900px+ viewports), 750px below	At least 1200 x 900px, subject centred
Hero spotlight	Covers a full-width card of at least 35rem (560px) height	1600px (900px+), 750px below	At least 2400 x 1200px landscape; keep the left half calm (text sits there on a white gradient)
Featured spotlight	Full-width card of at least 30rem (480px)	1600px / 750px	As hero
Author photo	3rem (48px) circle, `object-fit: cover`	750px	Square, at least 200 x 200px, face centred

Use images from AEM Assets published as site media, so they are optimized (`/media_` URLs); external image URLs are used as they are, without optimization.

CTA Writing Guidelines

The call-to-action texts come from placeholders (`readMore`, `download`, `explore`, `loadMore`, `resetFilters`) and are the same for all cards; they are maintained in the locale's placeholders sheet, not in the block. Because the report card's "Download" opens the report page, make sure the report page offers the download prominently. Write page titles that make sense out of context, because the title is the link text of most cards.

Accessibility Guidelines

- Always set a Title so the list has an `<h2>`; place the block in a section whose heading levels lead to it.
- Use meaningful taxonomy titles: they are the pill and option names.
- Keep pill counts small enough to scan by keyboard.
- Do not rely on the image to carry information (card images are decorative).
- Check the colour contrast of dark and report cards with real content.

SEO Guidelines

- The listing page's own Title and Description matter more than the cards for its ranking (cards are rendered in the browser).

- Keep listed pages in the sitemap and indexed; the Filter List does not replace internal linking from navigation.
- Prefer the Default style when descriptive link text matters (Featured, report and dark cards use generic button labels).

Metadata Guidelines

- Give every listed page: Title, Description, Tags, Page Type, `content-type`, `publish-date` (YYYY-MM-DD), `reading-time` (a number of minutes), `featured-image` or `thumbnail-image`, and `author-id` (Authors sheet) or `author`.
- Use `featured` = `yes` and `priority` = 1, 2, 3 consistently; avoid flagging many pages.
- Use the same Content type spelling everywhere (e.g. `Report`); it is the visible eyebrow and drives the report card.
- After changing metadata, preview and publish the page (and the metadata sheet) so the index updates.

Taxonomy Guidelines

- Use tags below a namespace (e.g. `tcs-corp:industry/banking`) so categories and hierarchical matching work.
- Publish the locale's taxonomy with translated titles; missing tags fall back to labels derived from the ID.
- Taxonomy roots for categories should be the parent tags (e.g. `tcs:industry`), not the namespace alone.

Localization Guidelines

- Each locale's Filter List lists only that locale's pages; set Root path and pages within the same locale.
- Translate the placeholder keys listed in 6.17.1 in each locale's placeholders sheet.
- Translate the tag titles in the taxonomy (one sheet per language) and the Authors sheet designations.
- Alphabetical sorting follows the page language (`<html lang>`).

6.17.13 Troubleshooting Guide

Issue 1 — No cards in Universal Editor

Symptoms: The editor canvas shows "The results show on the published page, from the pages' metadata." and no cards.

Root Cause: The query index is not available in the editor; this is expected behaviour.

Diagnosis Steps: Confirm the canvas is in edit mode; open the preview URL of the page.

Resolution Steps: Review the cards on the preview (`.aem.page`) or live (`.aem.live`) URL.

Validation Steps: The preview page shows cards.

Preventive Measures: Tell authors that results are only visible outside the editor.

Issue 2 — "No resources found." on the preview or live page

Symptoms: The empty state shows without any filter selected.

Root Cause: No index row matches: Root path wrong or in another locale, Page types / Content types too narrow (values not matching the pages' metadata), the listed pages are not previewed / published, the pages are excluded by `helix-query.yaml`, or `/query-index.json` failed.

Diagnosis Steps: Open `https://main--tcs-corp--sradha-tcs.aem.page/query-index.json?limit=500` and search for the expected paths; compare their `pageType` / `contentType` with the selections; check the Root path; check the browser network panel for the index request.

Resolution Steps: Correct the Root path or type selections; preview / publish the pages; fix the metadata values.

Validation Steps: Reload the page; cards appear and the count is correct.

Preventive Measures: Use the standard Content type values; publish pages before the listing page.

Issue 3 — A new page does not appear

Symptoms: A recently published page is missing from the list.

Root Cause: The page is not yet in the (live) index, it is the current page, it is the Root path page itself, it is in a different locale, or its types do not match.

Diagnosis Steps: Check the page's row in `/query-index.json` on `.aem.live`; check its `path` against Root path; check the AEM Sidekick / admin status of the page.

Resolution Steps: Publish the page again; if needed ask L2 to re-index it with the Admin API (`POST https://admin.hlx.page/index/sradha-tcs/tcs-corp/main/{path}`).

Validation Steps: The row appears in the index and the card on the page.

Preventive Measures: Publish listed pages before announcing the listing.

Issue 4 — Pills show raw-looking labels or are missing

Symptoms: Pills read "Banking" derived from the ID instead of the translated title, or no pills appear.

Root Cause: The tag is missing from `/{locale}/taxonomy.json` or the language sheet; or Primary filter tags contain values that are not tag IDs; or a Primary filter category is used and no listed page has tags below it.

Diagnosis Steps: Open `/{locale}/taxonomy.json` and look for the tag; check the dialog values; check the pages' `tags` column in the index.

Resolution Steps: Publish the taxonomy with the tags and translations; select tags with the tag picker; tag the pages.

Validation Steps: Pills show the taxonomy titles.

Preventive Measures: Publish the taxonomy after tag changes.

Issue 5 — The advanced filter button does not appear

Symptoms: No round filter button next to the pills.

Root Cause: Enable advanced filter is off, no Advanced filter category has a Taxonomy root, or no candidate page uses tags below the roots (categories without options are hidden).

Diagnosis Steps: Check the Filters and Advanced tabs; check the pages' tags in the index.

Resolution Steps: Turn the toggle on; add categories with roots that the pages use.

Validation Steps: The button appears and the panel lists the options.

Preventive Measures: Choose taxonomy roots that the content is tagged with.

Issue 6 — Images missing or not optimized

Symptoms: Cards without images, dark cards where image cards were expected, or slow large images.

Root Cause: `featured-image` and `thumbnail-image` are empty for the page, the Mapping tab names a column that is not indexed, or the image URL is external (not optimized).

Diagnosis Steps: Inspect the page's `featuredImage` / `thumbnailImage` in the index; check the Mapping tab.

Resolution Steps: Set the metadata to an AEM Assets image published as site media; restore the default mapping.

Validation Steps: The card shows a `<picture>` with `/media_` sources.

Preventive Measures: Include images in the metadata checklist for every page.

Issue 7 — Wrong hero or featured cards

Symptoms: An unexpected page is the hero, or no featured spotlights appear.

Root Cause: The rules: Featured hero falls back to the latest page when no matching page is featured; featured=true falls back to priority <= 3; Manual pages that do not match the source or current filters are skipped; Featured card count limits the number; featured flags use values other than yes / true / 1 / on / y.

Diagnosis Steps: Check the pages' `featured` and `priority` columns in the index; check the rules and Featured pages.

Resolution Steps: Correct the metadata or rules; make sure manual pages are inside the Root path and types.

Validation Steps: The expected pages show as hero and spotlights.

Preventive Measures: Document which pages are featured per hub.

Issue 8 — Author lockup missing or shows only a name

Symptoms: Spotlight cards show no author, or a name without photo and designation.

Root Cause: The `author-id` of the page does not exactly match an `author-id` in `/{locale}/data/authors.json` (the match is case-sensitive in this block), or the Authors sheet is not published; with only an `author` text the name is shown alone.

Diagnosis Steps: Compare the page's `authorId` / `author` in the index with the sheet.

Resolution Steps: Correct the ID (same case) or add the author row; publish the sheet.

Validation Steps: The lockup shows the photo, name and designation.

Preventive Measures: Use lower-case author IDs consistently.

6.17.14 Support Runbook

Monitoring Requirements

- Availability of `/query-index.json`, `/{locale}/taxonomy.json`, `/{locale}/data/authors.json` and `/{locale}/placeholders.json` on `.aem.live` (HTTP 200, JSON).
- Index freshness: newly published pages appear in the live index.
- Real User Monitoring (Edge Delivery RUM) for the listing pages' performance ([To be confirmed: monitoring tool and alerting — owner: AMS]).

Logs

- Browser console: the block emits no console messages; fetch failures are swallowed and lead to empty data. Use the network panel to see failing requests (index, taxonomy, Authors, placeholders).
- Admin API: page status `GET https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}` (preview, live and index state); re-index `POST https://admin.hlx.page/index/sradha-tcs/tcs-corp/main/{path}`.
- AEM author: replication / publish history of the listed pages (Sites console Timeline) and Universal Editor errors.

Common Errors

Error	Likely cause	First action
Editor hint instead of cards	Index not available in the editor (expected)	Check the preview URL
No resources found.	Source settings or unpublished pages	Check the index rows and dialog
Pills not translated	Taxonomy missing the tag or language sheet	Publish the taxonomy
No filter button	No category options	Check roots and page tags
Dark cards everywhere (Mixed)	Image metadata missing	Fill featured-image / thumbnail-image

Error	Likely cause	First action
English labels on a localized page	Placeholder keys missing in the locale sheet	Add the keys to the placeholders sheet
Duplicate-looking cards	Same content published at two paths	Unpublish one or exclude it
Very slow block	Large index (many 500-row requests) or block in the first section	Move the block below the fold; L3 to review index size

Escalation Matrix

Level	Who	What they check
L1	Author support	Dialog settings, metadata of listed pages, preview / publish state, taxonomy and placeholders sheets, the expected editor hint
L2	AMS / site admin	Index rows in `/query-index.json`, Admin API status and re-index, site configuration (metadata sources), CDN and cache
L3	Development team	`filter-list.js` rules, `utils/query-index.js`, `helix-query.yaml` columns, masonry and layout defects, code releases
L4	Adobe Support	Edge Delivery indexing or CDN incidents, Universal Editor platform defects

Recovery Procedures

1. Content problem: correct the dialog or page metadata, preview and publish.
2. Index problem: re-publish the affected pages or re-index them via the Admin API; if `helix-query.yaml` changed, the development team triggers a re-index of the site.
3. Block defect after a release: revert the code change on `main` (Code Sync deploys); clear nothing manually (Edge Delivery purges on deploy).
4. Emergency: turn on Hide block and publish the listing page.

Health Checks

- The listing page shows cards and the expected count on `.aem.live`.
- `/query-index.json?limit=1` returns `total` greater than 0.
- A pill click changes the count; the panel opens and closes with Escape.
- Load more adds cards.

Operational Procedures

- When adding a new metadata column for cards, the development team adds it to `helix-query.yaml` and re-indexes; authors then use it in the Mapping tab.
- When adding tags, publish the taxonomy for every locale.
- When adding a locale, translate the placeholder keys and publish the locale's Authors sheet.

Known Limitations

- Results are not visible in Universal Editor.
- Filters are not reflected in the URL (no deep links or back-button state for filters).
- The whole index (all locales) is downloaded in the browser; very large sites increase load time.
- `hide-in-nav` pages and redirect targets are not handled (unlike the List block).
- The Authors lookup is case-sensitive.
- Card call-to-action labels are global placeholders, not per card; the report "Download" opens the page, not a file.
- Number limits (`min` / `max`) are declared in the model but the code only enforces a minimum of 1.
- No personalization; no server-side rendering of cards.

6.17.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
No cards in Universal Editor	The query index is not available in the editor (expected)	Review the cards on the aem.page preview
"No resources found." without any filter	Root path in another locale, Page types too narrow, or pages not published	Fix Root path and types, publish the pages, check /query-index.json
A new page does not appear	It is not in the live index, is the Root path page itself or the current page	Publish it; ask L2 to re-index via the Admin API if needed
Pills show derived labels or are missing	Tag missing from /{locale}/taxonomy.json, or the values are not tag IDs	Publish the taxonomy and pick pills with the tag picker
No filter button	Enable advanced filter off, no Taxonomy root, or no page uses tags below the roots	Turn the toggle on and pick roots the content is tagged with
Dark cards everywhere in Mixed	featured-image and thumbnail-image empty, or Mapping names a column that is not indexed	Fill the image metadata and restore the default mapping
Wrong hero or no spotlights	Fallback rules (latest, priority <= 3) or featured values other than yes, true, 1, on, y	Correct featured / priority metadata or switch to the Manual rules
Author lockup shows only a name	author-id does not exactly match the Authors sheet (case-sensitive) or the sheet is unpublished	Correct the ID and publish /{locale}/data/authors
Sort by has no effect	Datasource is Manual List	Order the Pages by hand or use Query Index

6.17.16 Author Quick Reference Guide

Mandatory Fields

- No field is required in the model; with the defaults the block lists every indexed page of the locale
- Pages — needed when Datasource is Manual List, otherwise the list is empty (No resources found.)
- Taxonomy root — needed for each Advanced filter category; items without it are ignored
- Hero page — needed for Hero rule Manual, otherwise there is no hero
- Featured pages — needed for Featured rule Manual, otherwise there are no spotlights

Recommended Fields

- Title — the block's h2 above the pills and cards
- Root path — limits the Query Index list to the pages below a folder, e.g. /en/insights
- Page types — limits the list by page-type (Article, Blog, Report, Case Study, News, Event)
- Primary filter tags — the pills, in order (five to eight)
- Cards per page — a multiple of the column count, e.g. 8 or 12

Optional Fields

- Description — rich text intro under the title
- Show result count — makes the count visible
- Default layout — Masonry (default), Grid or List
- Load more count — cards added per click (default 6)
- Content types and Sort by
- Show All filter, Allow multi select, Enable advanced filter
- Advanced filter categories and Filter logic (AND / OR)
- Card style — Default, Compact, Featured or Mixed (default)

- Enable featured cards, Featured rule, Featured card count
- Enable hero card and Hero rule
- Mapping tab columns (keep the defaults)

Authoring Checklist

1. Pick Root path with the page picker in the same locale as the page
2. Choose Page types that match the pages' page-type values
3. Use Manual List only for hand-picked sets; Sort by and types are then ignored
4. Add pills with the tag picker from tags the listed pages use
5. Mark lead pages with featured = yes and order them with priority 1, 2, 3
6. Keep Card style Mixed for insight hubs and give report pages content-type Report
7. Expect the editor hint instead of cards in Universal Editor

Pre-Publish Checklist

1. Preview the listed pages and the listing page, then open the aem.page URL
2. Check /query-index.json for the expected paths, pageType and contentType
3. Check the cards, hero and spotlights are the expected pages and not repeated
4. Click each pill and option; All and Reset filters restore the full list
5. Check pill labels are taxonomy titles in the locale's language
6. Check 4 columns at 1440 px, 2 at 768 px and 1 at 375 px
7. Check Load more adds Load more count cards and disappears at the end

Post-Publish Validation Checklist

1. Open the .aem.live URL and confirm the cards come from the live index
2. Confirm newly published pages appear after the index update
3. Confirm author lockups show name, designation and photo from the Authors sheet
4. Publish taxonomy, placeholders and the Authors sheet if they changed
5. Spot-check the result count and the empty state on the live page

6.17.17 Component Execution Example

Business example: Explore insights & opinions on the English insights hub.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Filter List
Title (Filter List › Content)	Explore insights & opinions
Description (Filter List › Content)	Research, perspectives and case studies from across our industries and technologies.
Cards per page (Filter List › Content)	6
Datasource (Filter List › Source)	Manual List
Pages (Filter List › Source)	Select the page or enter /en/insights/agentic-bank,/en/insights/state-of-ai-2026,/en/insights/cloud-at-scale,/en/insights/quantum-readiness,/en/insights/supply-chain-resilience,/en/services/cloud/migration,/en/insights/retail-personalisation,/en/insights/energy-transition,/en/insights/future-of-work,/en/insights/insurance-claims
Tag Id (Filter List › Filters › Primary filter tags › Item 1)	Add the tags tcs-corp:industry/banking
Tag Id (Filter List › Filters › Primary filter tags › Item 2)	Add the tags tcs-corp:industry/retail

Field	Value
Tag Id (Filter List › Filters › Primary filter tags › Item 3)	Add the tags tcs-corp:topic/ai
Tag Id (Filter List › Filters › Primary filter tags › Item 4)	Add the tags tcs-corp:topic/cloud
Category label (Filter List › Advanced › Advanced filter categories › Item 1)	Industry
Taxonomy root (Filter List › Advanced › Advanced filter categories › Item 1)	Add the tags tcs-corp:industry
Category label (Filter List › Advanced › Advanced filter categories › Item 2)	Topic
Taxonomy root (Filter List › Advanced › Advanced filter categories › Item 2)	Add the tags tcs-corp:topic
Enable hero card (Filter List › Cards)	On

All other fields keep their default values.

Rendered Result:

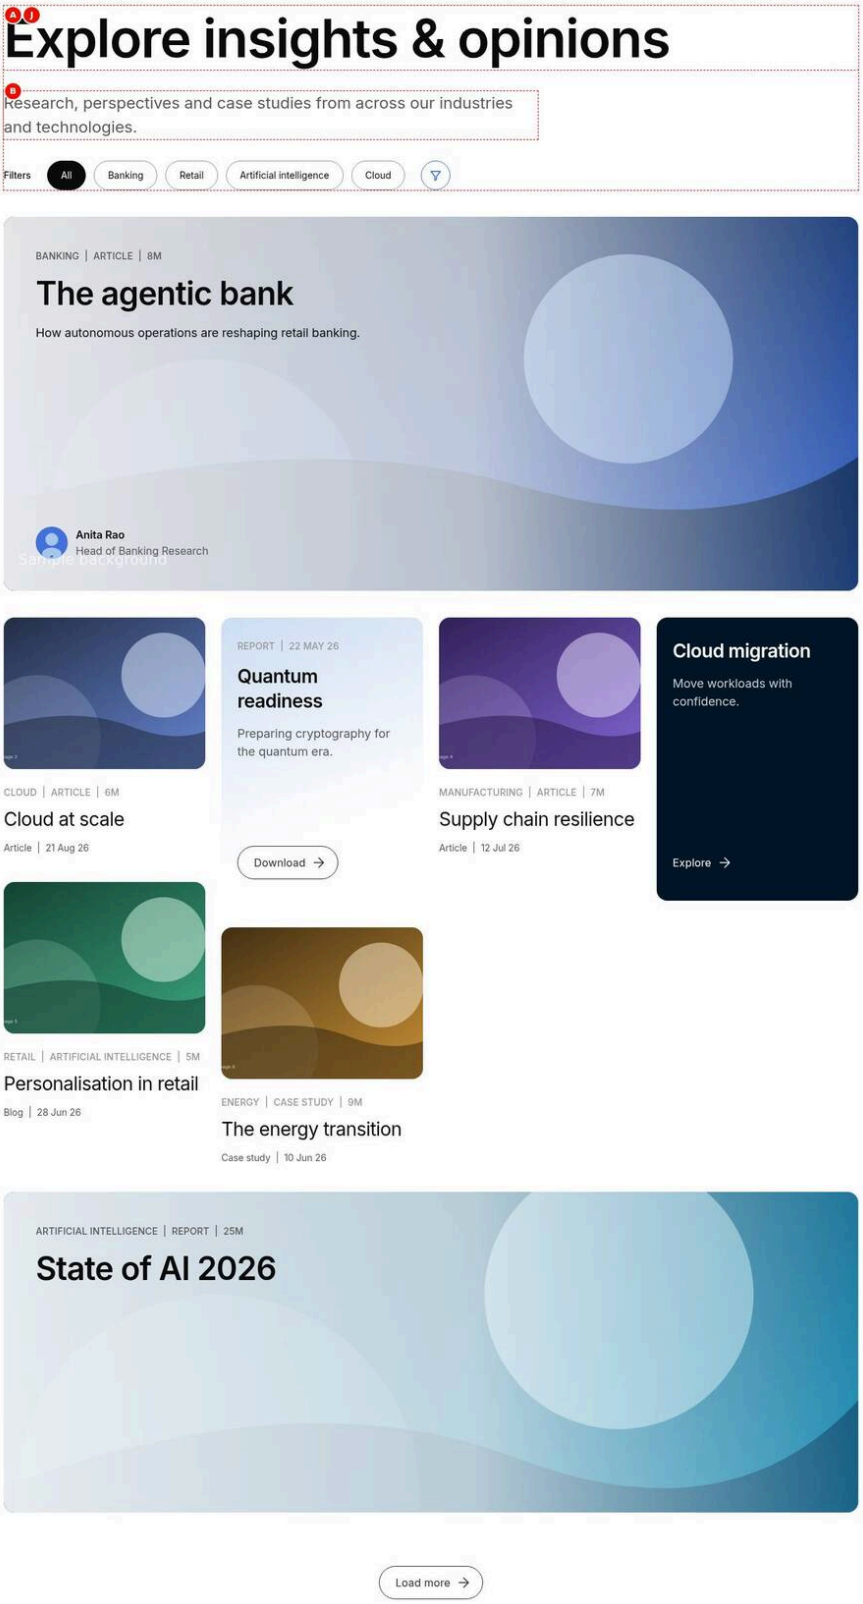

Figure 31: Execution example — The Filter List at 1440 px: the title Explore insights & opinions, the description, the Filters label with All, Banking, Retail, Artificial intelligence and Cloud and the round filter button; The agentic bank as hero with Anita Rao's lockup; four masonry columns of six Mixed cards including the Quantum readiness report card and the dark Cloud migration card; a State of AI 2026 spotlight and Load more. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/filter-list-desktop-view.jpg)

Author Notes

- Datasource Manual List lists the ten Pages in the authored order; Sort by and Page types are not applied
- Four Primary filter tags give the pills Banking, Retail, Artificial intelligence and Cloud after All
- Industry and Topic categories give the advanced panel its options from the pages' tags
- Enable hero card with the default Featured rule makes The agentic bank (priority 1) the hero

Business Notes

- Visitors narrow ten insights by industry or topic without leaving the page
- The lead story is set by page metadata (featured, priority), not by editing the hub
- Report and image-less pages get distinct cards automatically in the Mixed style

Technical Notes

- Cards are built in the browser from /query-index.json, loaded once and filtered to the locale
- The hero image loads eagerly; card images are lazy and optimised when they are site media
- Filtering re-renders from the loaded index without new requests
- In the editor getPages returns no pages, so only the editor hint shows

6.18 Table List Block

The Table List is a divided list of items (industries, solutions, products) under a heading with an optional call to action. Each item has a title, an optional number and trademark sign, a description and a link shown as an arrow, a diagonal arrow or a button. It implements the TCS DS Figma "List" variations 1 to 3.

Source files: `blocks/table-list/table-list.js` (333 lines), `blocks/table-list/table-list.css` (453 lines), `blocks/table-list/_table-list.json`. The dialog has a block model (`table-list`: 4 tabs, 10 fields plus the 10 Additional tab fields), an item model (`table-list-card`, "Table List Item": 6 fields) and a legacy header item model (`table-list-header`, "Table List Header": 2 fields, no longer addable).

6.18.1 Component Purpose

Business Objective

Present a short, scannable list of offerings (industries served, transformation solutions, products and platforms) with a strong typographic style and a clear path to each detail page, without images.

Business Use Cases

- Home page "Industries" list: title, short description and an arrow per industry, with a "View all industries" button.
- "Our transformation solutions": description on the left, a large solution name on the right and an outline "Explore" button.
- "Products & Platforms": description, a large product name with a number (01, 02 …) and a trademark sign (e.g. TwinX™), and a diagonal arrow.

When To Use

- Up to 10 items that each link to a page.
- Text-led lists where typography, not imagery, carries the design.

When Not To Use

- More than 10 items, or lists that should update automatically from page metadata: use the List or Filter List block.
- Image cards: use Cards or List.
- Tabular data with columns: use the Table block.

- Expandable question-and-answer content: use the Accordion block.

Dependencies

Kind	Dependency	Used for
Block code	`blocks/table-list/table-list.js`, `table-list.css`, `_table-list.json`	Decoration, styles, dialog
Decorator	`decorators/button-decorator.js` (`decorateButton`)	The heading call to action and item buttons
Utility	`utils/buttons.js` (`pick`)	Normalizing select values
Utility	`utils/cells.js` (`matchCells`)	Matching item cells (and unkeyed property rows) to fields when AEM leaves out unset fields
Utility	`utils/properties.js` (`normalizeKey`, `textOf`)	Reading property rows
Utility	`utils/urls.js` (`toSitePath`)	Converting AEM paths to published paths
Utility	`utils/environment.js` (`isEditing`, `prefersReducedMotion`)	Editor previews of unlinked buttons; motion off
Utility	`utils/viewport.js` (`onVisible`)	Motion when items scroll into view
Utility	`utils/placeholders.js` (`getPlaceholders`, `fillPlaceholder`)	UI text
Core	`scripts/scripts.js` (`moveInstrumentation`)	Keeps Universal Editor instrumentation on rebuilt elements
Icons	`icons/arrow-right.svg`, `icons/arrow-up-right.svg`	Arrow masks
Data	`/{locale}/placeholders.json`	UI text

Placeholder keys:

Key	English fallback	Where it appears
`viewAll`	View all	Heading call to action text when a Link is set without Text
`explore`	Explore	Item button text when neither the item nor the block sets one
`itemLinkLabel`	{text}: {title}	Accessible name of item buttons, e.g. “Explore: TwinX”
`exploreItem`	Explore {title}	Accessible name of item arrows, e.g. “Explore TwinX”

Related Components

Cards and List (image cards), Filter List (6.17, metadata-driven lists), Table (tabular data), Accordion, Anchor List (6.19).

Applicable Templates

Any page (allowed in every section); typically the home page and landing pages. Not specific to article, blog or press-release templates.

Supported Content Types

Authored text only: titles, rich-text descriptions, links to site pages, anchors or external URLs. No images or media.

Business Problem Solved

Home and landing pages need short, text-led lists of industries, solutions and products that link to their detail pages with a strong typographic style and no images. The Table List gives authors three Figma layouts (industries,

solutions, products) from one block, with per-variation defaults for the call-to-action style, numbering and item link, trademark signs for product names and optional entrance motion, all edited directly as items in Universal Editor.

Supported Taxonomy

None: the Table List has no tag field, reads no page tags or metadata and is not used by the List or Filter List blocks.

6.18.2 Visual Overview

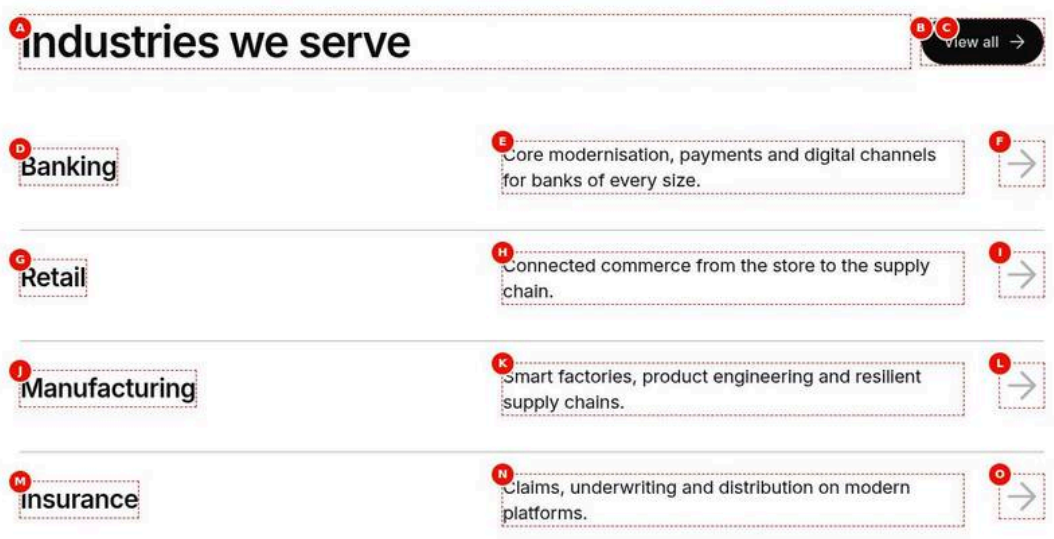

Figure 32: Desktop rendering — The Table List (Variation 1) at 1440 px, inset 5rem: the 3rem heading Industries we serve with a filled View all button at the right, then four rows Banking, Retail, Manufacturing and Insurance with the description in the middle column and a grey arrow, thin dividers between rows, no numbers. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/table-list-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Table List (Variation 1) at 1440 px, inset 5rem: the 3rem heading Industries we serve with a filled View all button at the right, then four rows Banking, Retail, Manufacturing and Insurance with the description in the middle column and a grey arrow, thin dividers between rows, no numbers.
Business Context	The "Industries we serve" list on the home page, a text-led overview that routes visitors to each industry page.
Author Objective	Add a Table List (Variation 1) with the heading, a View all call to action and four industry items, each with a title, description and link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Heading (Table List › Content)	Industries we serve	No	List heading	Short heading	None
B	Text (Table List › Call to action)	View all	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
C	Link (Table List › Call to action)	Select the page or enter /en/industries	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
D	Title (Table List Item 1)	Banking	No	Item name	Short name, no trademark sign	None
E	Description (Table List Item 1)	Core modernisation, payments and digital channels for banks of every size.	No	Item explanation	One sentence	None
F	Link (Table List Item 1)	Select the page or enter /en/industries/banking	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
G	Title (Table List Item 2)	Retail	No	Item name	Short name, no trademark sign	None
H	Description (Table List Item 2)	Connected commerce from the store to the supply chain.	No	Item explanation	One sentence	None
I	Link (Table List Item 2)	Select the page or enter /en/industries/retail	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
J	Title (Table List Item 3)	Manufacturing	No	Item name	Short name, no trademark sign	None
K	Description (Table List Item 3)	Smart factories, product engineering and resilient supply chains.	No	Item explanation	One sentence	None
L	Link (Table List Item 3)	Select the page or enter /en/industries/manufacturing	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
M	Title (Table List Item 4)	Insurance	No	Item name	Short name, no trademark sign	None
N	Description (Table List Item 4)	Claims, underwriting and distribution on modern platforms.	No	Item explanation	One sentence	None
O	Link (Table List Item 4)	Select the page or enter /en/industries/insurance	No	Item destination	Pick a page	Must start with /, #, http:// or https://

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** The 3rem semibold heading at the left and a filled "View all" button at the right, then four rows (Banking, Retail, Manufacturing, Insurance) with the title, the description in the middle column and a grey arrow, separated by thin dividers; the block is inset 5rem.
- **Rendering behaviour:** From 1200 px the items are grid rows main, description, action, vertically centred; titles 1.75rem semibold, descriptions regular. Numbers are hidden from 600 px (Variation 1 default). The arrow link covers the whole row.
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- Maximum items defaults to 4; a fifth item would be removed from the page.
- The call to action shows on the page only when its Link is set.
- Item titles are h3, one level below the h2 heading.
- Each arrow's accessible name is "Explore {title}", e.g. Explore Banking.
- An item without Link gets a decorative arrow and is not clickable.

Common Authoring Mistakes

Error	Root Cause	Resolution
A fifth industry does not appear	Maximum items left at 4	Raise Maximum items (up to 10)
New items show the title TwinX	TwinX is the model default title	Overwrite the Title of every new item
View all button missing on the page	Call to action Link empty	Pick /en/industries in Link

Troubleshooting

- **Symptoms:** The rows are not clickable on the published page.
- **Cause:** The items' Link fields are empty or hold unsupported values such as mailto:.
- **Resolution:** Pick the industry page in each item's Link and publish.
- **Verification Steps:** Hovering a row turns the arrow brand blue and a click opens the industry page.

Desktop (1200px and wider). The header is a flex row: the heading (3rem, semibold, letter-spacing –0.09rem, line-height 1.2) and the call to action (button font at `--button-font-size`) at the right; it wraps under the heading when there is not enough space. Header margin below: 5rem (`--space-2000`). Items are grid rows `main | description | action` with a column gap of 1.5rem and an item gap of 1.5rem (2.5rem for Variation 3), each with 2.5rem bottom padding and a divider (1px `--slate-400`; 2px `--grey-200` for Variation 3). Variation-specific sizes are listed per variation in 6.18.3.

Figure 33: Tablet rendering — The same Table List at 768 px: the 2.5rem heading with the View all button beside it, four rows in three columns (title, description, arrow) and no numbers. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/table-list-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same Table List at 768 px: the 2.5rem heading with the View all button beside it, four rows in three columns (title, description, arrow) and no numbers.
Business Context	The home page industries list on a tablet, where the rows stay in columns but the type is smaller.
Author Objective	Check the Variation 1 Table List at 768 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
—	Screen width (Pre-view)	768 px (tablet)	—	Check on the pre-view (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** The 2.5rem heading with the View all button beside it, then four rows in three columns (title, description, arrow) and no numbers.
- **Rendering behaviour:** From 600 px items use minmax(0, 1fr) minmax(0, 1fr) auto with a 1rem gap; the description is 1.25rem; mobile-only numbers are hidden; the 5rem inline padding starts only at 1200 px.
- **Publishing behaviour:** Nothing is published per width; the same page HTML serves all breakpoints. Check aem.page at 768 px before Publish to aem.live.

Business Rules

- Show on mobile only numbers are hidden from 600 px.
- The call to action wraps under the heading only when space is short.
- Item order and links are identical at every width.
- The call-to-action text uses –body-font-size-xs below 1200 px.

Common Authoring Mistakes

Error	Root Cause	Resolution
Numbers expected on tablet	Variation 1 default is Show on mobile only	Set Items › Numbers to Show
Long descriptions make tall rows	The description column is half the width	Keep descriptions to one sentence (about 120 characters)

Troubleshooting

- **Symptoms:** At 768 px the items appear stacked like on mobile.
- **Cause:** The preview width is below 600 px (device frame or zoom).
- **Resolution:** Set the responsive width to 768 px at 100 % zoom.
- **Verification Steps:** Rows show title, description and arrow side by side.

Tablet (600px to 1199px). The heading is 2.5rem (letter-spacing -0.075rem); header margin 5rem. Items switch to three columns: two equal text columns and the action (`minmax(0, 1fr) minmax(0, 1fr) auto`, column gap 1rem); Variation 2 and 3 put the description first and the title second, vertically centred, with the title right-aligned. The action has a start margin of 1.5rem. "Show on mobile only" numbers are hidden from 600px. The call-to-action button text uses `--body-font-size-xs`.

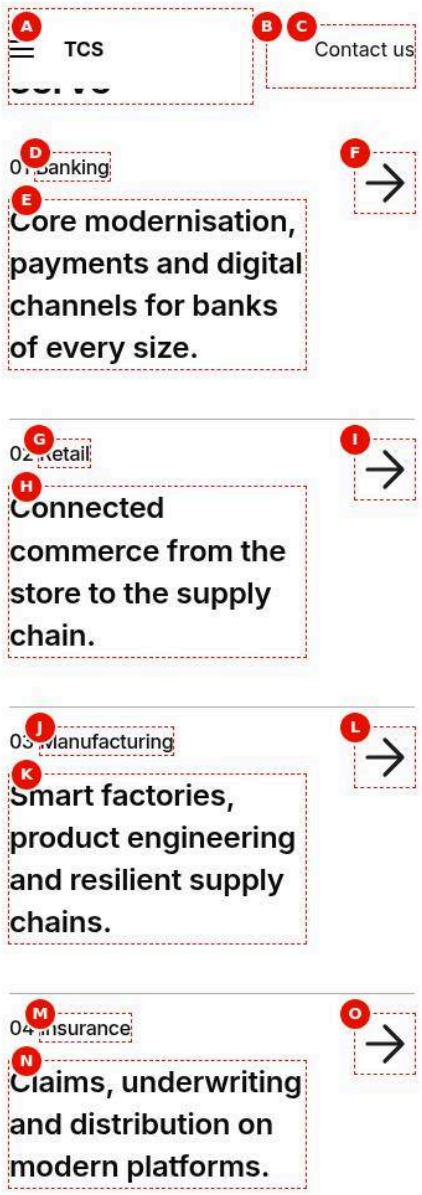

Figure 34: Mobile rendering — The Table List at 375 px: the 2rem heading with the View all button below it, then rows 01 Banking to 04 Insurance with the number and title on the first line, the description below and the arrow at the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/table-list-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The Table List at 375 px: the 2rem heading with the View all button below it, then rows 01 Banking to 04 Insurance with the number and title on the first line, the description below and the arrow at the right.
Business Context	The home page industries list on a phone, where the numbers help visitors scan the stacked rows.
Author Objective	Check the Variation 1 Table List at 375 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
A	Heading (Table List › Content)	Industries we serve	No	List heading	Short heading	None
B	Text (Table List › Call to action)	View all	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”

—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
J	Title (Table List Item 3)	Manufacturing	No	Item name	Short name, no trademark sign	None
K	Description (Table List Item 3)	Smart factories, product engineering and resilient supply chains.	No	Item explanation	One sentence	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
L	Link (Table List Item 3)	Select the page or enter /en/industries/manufacturing	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
M	Title (Table List Item 4)	Insurance	No	Item name	Short name, no trademark sign	None
N	Description (Table List Item 4)	Claims, underwriting and distribution on modern platforms.	No	Item explanation	One sentence	None
O	Link (Table List Item 4)	Select the page or enter /en/industries/insurance	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** A 2rem heading with the View all button below it, then rows with the number and title on the first line (01 Banking), the description below and the arrow at the right.
- **Rendering behaviour:** Below 600 px each item is a stacked grid: main over description with the 3rem arrow at the right; the description is 1.5rem semibold; item gap 1rem; header margin 2.5rem.
- **Publishing behaviour:** The same page HTML serves mobile; nothing extra is published. Check aem.page at 375 px before Publish to aem.live.

Business Rules

- Numbers are generated 01 to 04 from the position when Number is empty.
- Show on mobile only is the Variation 1 default.
- The whole row is the link through the arrow.
- The last row has no divider.

Common Authoring Mistakes

Error	Root Cause	Resolution
Numbers do not match the intended order	Items reordered in the content tree after typing custom numbers	Leave Number empty for automatic numbering
The button sits below the heading	Not enough width beside the heading	Expected; keep the call-to-action text short

Troubleshooting

- **Symptoms:** No numbers on the phone.
- **Cause:** Items › Numbers is set to Hide.
- **Resolution:** Set Numbers to Variation default or Show on mobile only.
- **Verification Steps:** 01 to 04 appear before the titles at 375 px.

Mobile (below 600px). Heading 2rem (letter-spacing –0.06rem, line-height 1.19), header margin 2.5rem, call to action below the heading when it does not fit. Items are stacked grids: Variation 1 `main` over `description` with the arrow at the right; Variation 2 description, title and button stacked; Variation 3 description over the number and title with the arrow at the right. Item gap 1rem (2.5rem in Variation 3).

6.18.3 Component Variations

The Variation select sets the layout and the defaults of the call-to-action style, numbers and item link; those three can be changed independently ("Variation default" keeps the variation's choice). Motion and the item Trademark are further options.

Variation 1 — Industries (Variation 1: title, description, arrow)

Variation Name: Variation 1 - Title, description, arrow (`industries`; the default).

Business Purpose: A list of industries or capabilities with a short explanation each.

Visual Example:

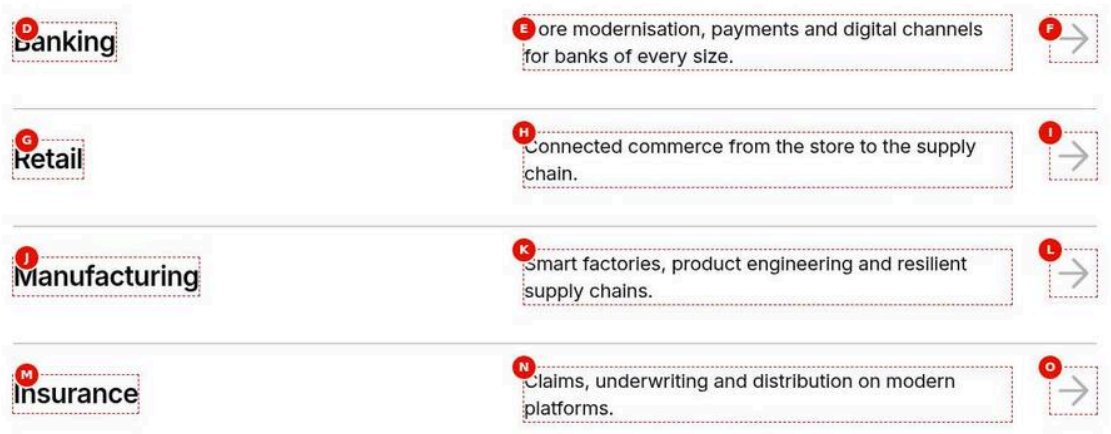

Figure 35: Variation 1 (industries) — Close-up of the Variation 1 items at 1440 px: four rows with the semibold titles Banking, Retail, Manufacturing and Insurance, the description in the middle column and a grey right arrow; no numbers and no divider under the last row. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-industries.jpg)

Screenshot Details — Variation 1 (industries)

Item	Detail
Screenshot Name	`screenshots/table-list-industries.jpg`
Screenshot Purpose	Variation 1 (industries)
Screen Description	Close-up of the Variation 1 items at 1440 px: four rows with the semibold titles Banking, Retail, Manufacturing and Insurance, the description in the middle column and a grey right arrow; no numbers and no divider under the last row.
Business Context	The item rows of Variation 1, the industries list that links each industry page from the home page.
Author Objective	Show the Variation 1 item layout: title, description and arrow.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
(A)	Heading (Table List › Content)	Industries we serve	No	List heading	Short heading	None
(B)	Text (Table List › Call to action)	View all	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
(C)	Link (Table List › Call to action)	Select the page or enter /en/industries	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
D	Title (Table List Item 1)	Banking	No	Item name	Short name, no trademark sign	None
E	Description (Table List Item 1)	Core modernisation, payments and digital channels for banks of every size.	No	Item explanation	One sentence	None
F	Link (Table List Item 1)	Select the page or enter /en/industries/banking	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
G	Title (Table List Item 2)	Retail	No	Item name	Short name, no trademark sign	None
H	Description (Table List Item 2)	Connected commerce from the store to the supply chain.	No	Item explanation	One sentence	None
I	Link (Table List Item 2)	Select the page or enter /en/industries/retail	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
J	Title (Table List Item 3)	Manufacturing	No	Item name	Short name, no trademark sign	None
K	Description (Table List Item 3)	Smart factories, product engineering and resilient supply chains.	No	Item explanation	One sentence	None
L	Link (Table List Item 3)	Select the page or enter /en/industries/manufacturing	No	Item destination	Pick a page	Must start with /, #, http:// or https://

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
M	Title (Table List Item 4)	Insurance	No	Item name	Short name, no trademark sign	None
N	Description (Table List Item 4)	Claims, underwriting and distribution on modern platforms.	No	Item explanation	One sentence	None
O	Link (Table List Item 4)	Select the page or enter /en/industries/insurance	No	Item destination	Pick a page	Must start with /, #, http:// or https://

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four rows with the semibold titles Banking, Retail, Manufacturing and Insurance, a description in the middle column and a grey right arrow; the last row has no divider.
- **Rendering behaviour:** At 1440 px titles are 1.75rem semibold, descriptions regular 1.25rem, the arrow 3rem in –slate-400; on hover the arrow turns brand blue and moves 0.25rem right.
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- Variation 1 defaults: Filled button, Show on mobile only, Arrow.
- The description keeps paragraphs and lists; links inside stay clickable above the row link.
- Titles are plain text; formatting is dropped.
- Do not type a trademark sign in the Title; use Trademark.

Common Authoring Mistakes

Error	Root Cause	Resolution
Bold or italic in the title is lost	Titles are read as plain text	Keep the title plain
A row link opens the wrong page	Link points to a draft path	Re-pick the published industry page

Troubleshooting

- **Symptoms:** An item visible in the editor is missing on the published page.
- **Cause:** The item row arrives with only two cells and is read as the legacy header.
- **Resolution:** Fill the item's Link (and other fields) so all cells are delivered; escalate to L3 if it persists.
- **Verification Steps:** All four rows render on aem.page.

Use Cases: Industries, capabilities, service lines.

Authoring Guidelines: Content tab › Variation: Variation 1. Give each item a Title, a one-line Description and a Link.

Business Rules: Defaults: call to action Filled button (`primary`), Numbers Show on mobile only, Item link Arrow. Block classes `industries numbers-{value} motion-{value}`.

Rendering Rules: Mobile title line: `--body-font-size-m`, medium weight, line-height 1.375; description 1.5rem semibold (line-height 1.42). Arrow 3rem. The last item has no divider and no bottom padding. From 600px the description is 1.25rem (line-height 1.4) and the arrow `--slate-400`. From 1200px the block has 5rem inline padding, items are vertically centred, the title line is 1.75rem semibold (letter-spacing –0.035rem, line-height 1.39) and the description regular weight.

Responsive Behaviour: Desktop: title | description | arrow, inset 5rem. Tablet: three columns, numbers hidden (default). Mobile: number and title over the description, arrow at the right.

SEO Impact: Item titles are headings one level below the block heading (e.g. `<h3>`); links point to the detail pages.

Accessibility Compliance: The arrow link has the accessible name "Explore {title}" and covers the whole row; focus outline on the arrow (2px brand, 0.25rem offset); links inside the description stay separately clickable.

Variation 2 — Solutions (Variation 2: description, large title, button)

Variation Name: Variation 2 - Description, large title, button (`solutions`).

Business Purpose: Emphasizes solution names in large type with an explicit button.

Visual Example:

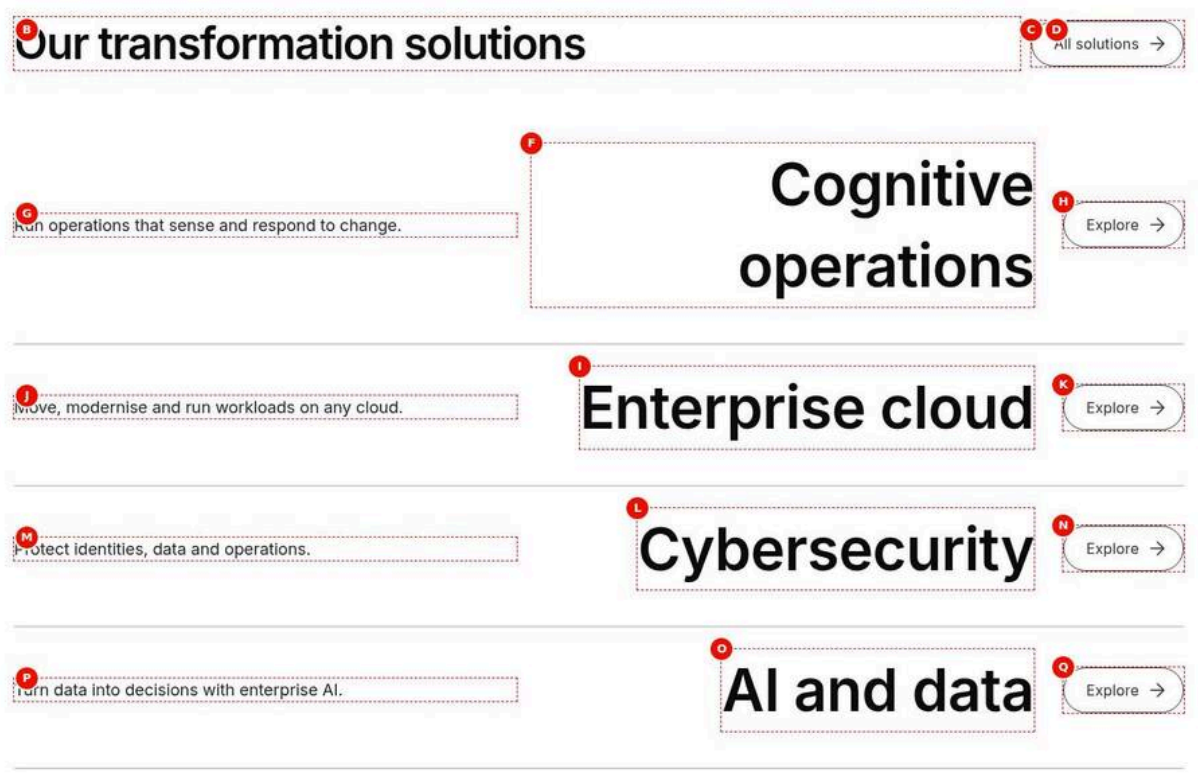

Figure 36: Variation 2 (solutions) — The Variation 2 Table List at 1440 px: the heading Our transformation solutions with an outline All solutions button, then four rows (Cognitive operations, Enterprise cloud, Cybersecurity, AI and data) with the description at the left, the 4rem title right-aligned and an outline Explore button; no numbers. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-solutions.jpg)

Screenshot Details — Variation 2 (solutions)

Item	Detail
Screenshot Name	`screenshots/table-list-solutions.jpg`
Screenshot Purpose	Variation 2 (solutions)

Item	Detail
Screen Description	The Variation 2 Table List at 1440 px: the heading Our transformation solutions with an outline All solutions button, then four rows (Cognitive operations, Enterprise cloud, Cybersecurity, AI and data) with the description at the left, the 4rem title right-aligned and an outline Explore button; no numbers.
Business Context	The “Our transformation solutions” list on a services landing page, where large solution names lead to each service.
Author Objective	Add a Table List with Variation 2, an outline All solutions call to action and four solution items.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
(A)	Variation (Table List › Content)	Variation 2 - Description, large title, button	No	Layout and defaults	Pick by content	Options industries, solutions, products; others give industries
B	Heading (Table List › Content)	Our transformation solutions	No	List heading	Short heading	None
C	Text (Table List › Call to action)	All solutions	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
D	Link (Table List › Call to action)	Select the page or enter /en/services	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(E)	Style (Table List › Call to action)	Outline button	No	Call to action style	Keep Variation default	Options “”, primary, secondary, tertiary
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
F	Title (Table List Item 1)	Cognitive operations	No	Item name	Short name, no trademark sign	None
G	Description (Table List Item 1)	Run operations that sense and respond to change.	No	Item explanation	One sentence	None
H	Link (Table List Item 1)	Select the page or enter /en/services/consulting	No	Item destination	Pick a page	Must start with /, #, http:// or https://

I	Title (Table List Item 2)	Enterprise cloud	No	Item name	Short name, no trademark sign	None
J	Description (Table List Item 2)	Move, modernise and run workloads on any cloud.	No	Item explanation	One sentence	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
K	Link (Table List Item 2)	Select the page or enter /en/services/cloud	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
L	Title (Table List Item 3)	Cybersecurity	No	Item name	Short name, no trademark sign	None
M	Description (Table List Item 3)	Protect identities, data and operations.	No	Item explanation	One sentence	None
N	Link (Table List Item 3)	Select the page or enter /en/services/cybersecurity	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
O	Title (Table List Item 4)	AI and data	No	Item name	Short name, no trademark sign	None
P	Description (Table List Item 4)	Turn data into decisions with enterprise AI.	No	Item explanation	One sentence	None
Q	Link (Table List Item 4)	Select the page or enter /en/services/ai	No	Item destination	Pick a page	Must start with /, #, http:// or https://

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Rows with a short description at the left, a 4rem semibold solution name right-aligned in the middle and an outline Explore button at the right; the heading with an outline All solutions button.
- **Rendering behaviour:** From 600 px the row is description, title, button, vertically centred; from 1200 px the title is 4rem. Below 600 px description, title and button stack. Numbers are hidden (Variation 2 default).
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- Variation 2 defaults: Outline button, Numbers Hide, Item link Button.
- Button text: the item's Button text, else the block Button text, else Explore.
- Each button's accessible name is "Explore: {title}".
- The row is not covered by the button link.

Common Authoring Mistakes

Error	Root Cause	Resolution
All buttons read Explore	No Button text set	Set the block Button text or each item's Button text
A row has no button on the page	The item's Link is empty	Set the item Link

Troubleshooting

- **Symptoms:** A button shows the URL as its text.
- **Cause:** The Link text equals the URL, which is ignored, and no Button text is set elsewhere.
- **Resolution:** Enter a Button text on the item or the block.
- **Verification Steps:** The button reads the intended text.

Use Cases: Transformation solutions, offerings, programmes.

Authoring Guidelines: Variation: Variation 2. Set the block Button text (Items tab, shown for this variation) or each item's Button text.

Business Rules: Defaults: call to action Outline button (`secondary`), Numbers Hide, Item link Button.

Rendering Rules: Mobile: description (body-m, `--grey-900`, line-height 1.39), then the title line (2.5rem semibold, line-height 1.2, letter-spacing –0.025rem), then the button. From 600px: description | title | button, centred, title right-aligned, description 1.125rem. From 1200px the title is 4rem (line-height 1.4, letter-spacing -0.04rem).

Responsive Behaviour: Desktop and tablet: three columns. Mobile: stacked.

SEO Impact: Visible button text is generic ("Explore"); the accessible name adds the title.

Accessibility Compliance: Buttons have the accessible name "{text}: {title}" (placeholder `itemLinkLabel`); the visible text starts the name (WCAG 2.5.3). The button does not cover the row.

Variation 3 — Products (Variation 3: description, number, large title, arrow)

Variation Name: Variation 3 - Description, number, large title, arrow (`products`).

Business Purpose: A numbered showcase of products and platforms with very large names.

Visual Example:

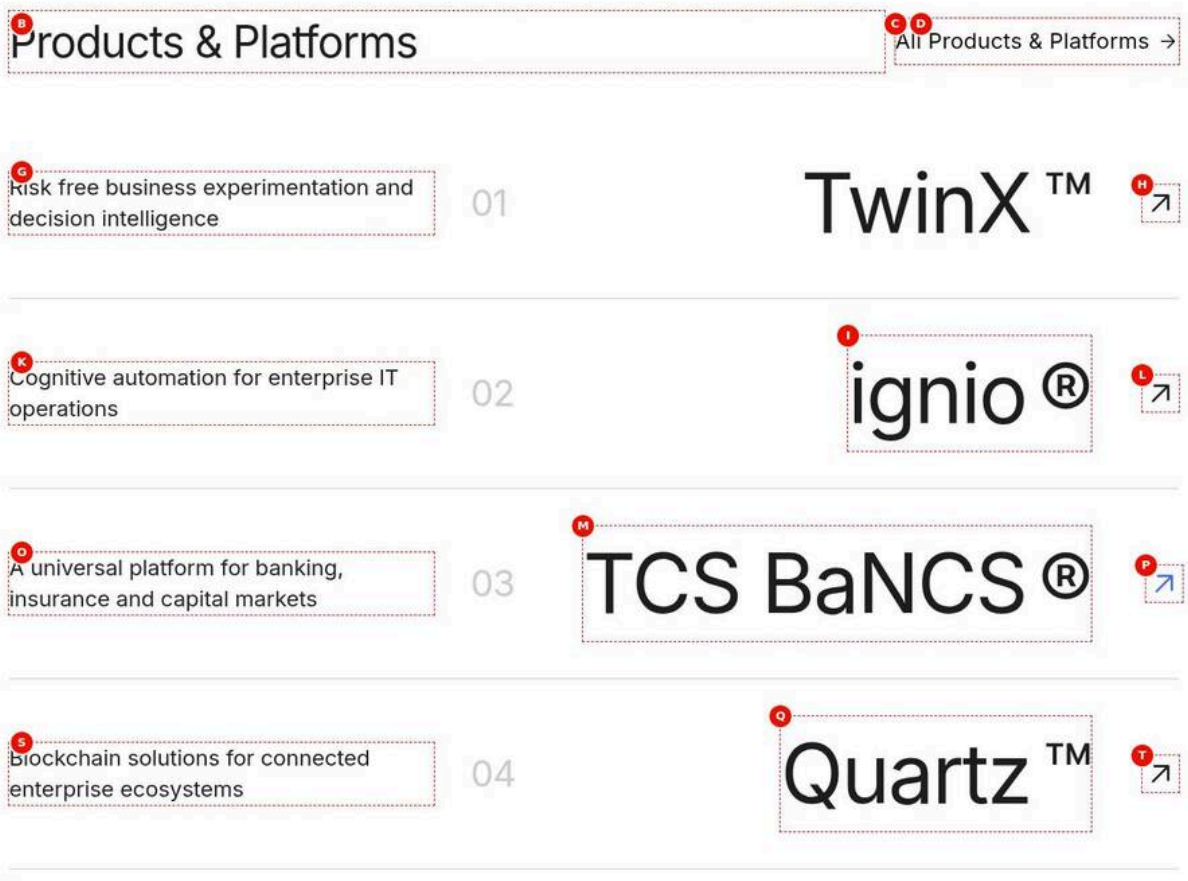

Figure 37: Variation 3 (products) — The Variation 3 Table List at 1440 px: the regular-weight heading Products & Platforms with the text link All Products & Platforms, then rows with the description at the left, a grey number and a 5.625rem name (01 TwinX™, 02 ignio®, 03 TCS BaNCS®, 04 Quartz™) and a diagonal arrow, with 2px light grey dividers. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-products.jpg)

Screenshot Details — Variation 3 (products)

Item	Detail
Screenshot Name	`screenshots/table-list-products.jpg`
Screenshot Purpose	Variation 3 (products)
Screen Description	The Variation 3 Table List at 1440 px: the regular-weight heading Products & Platforms with the text link All Products & Platforms, then rows with the description at the left, a grey number and a 5.625rem name (01 TwinX™, 02 ignio®, 03 TCS BaNCS®, 04 Quartz™) and a diagonal arrow, with 2px light grey dividers.
Business Context	The "Products & Platforms" showcase on a products landing page, presenting TCS product names in very large type with their legal marks.
Author Objective	Add a Table List with Variation 3, a text link call to action and four product items with trademark signs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Variation (Table List › Content)	Variation 3 - Description, number, large title, arrow	No	Layout and defaults	Pick by content	Options industries, solutions, products; others give industries
B	Heading (Table List › Content)	Products & Platforms	No	List heading	Short heading	None
C	Text (Table List › Call to action)	All Products & Platforms	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
D	Link (Table List › Call to action)	Select the page or enter /en/products	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(E)	Style (Table List › Call to action)	Text link	No	Call to action style	Keep Variation default	Options “”, primary, secondary, tertiary
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(F)	Trademark (Table List Item 1)	™ Trademark	No	Sign after the title	Use for registered names	Options “”, tm, r
G	Description (Table List Item 1)	Risk free business experimentation and decision intelligence	No	Item explanation	One sentence	None
H	Link (Table List Item 1)	Select the page or enter /en/products/twinx	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
I	Title (Table List Item 2)	ignio	No	Item name	Short name, no trademark sign	None
(J)	Trademark (Table List Item 2)	® Registered	No	Sign after the title	Use for registered names	Options “”, tm, r
K	Description (Table List Item 2)	Cognitive automation for enterprise IT operations	No	Item explanation	One sentence	None
L	Link (Table List Item 2)	Select the page or enter /en/products/ignio	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
M	Title (Table List Item 3)	TCS BaNCS	No	Item name	Short name, no trademark sign	None
(N)	Trademark (Table List Item 3)	® Registered	No	Sign after the title	Use for registered names	Options “”, tm, r

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
O	Description (Table List Item 3)	A universal platform for banking, insurance and capital markets	No	Item explanation	One sentence	None
P	Link (Table List Item 3)	Select the page or enter /en/products/bancs	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
Q	Title (Table List Item 4)	Quartz	No	Item name	Short name, no trademark sign	None
(R)	Trademark (Table List Item 4)	™ Trademark	No	Sign after the title	Use for registered names	Options "", tm, r
S	Description (Table List Item 4)	Blockchain solutions for connected enterprise ecosystems	No	Item explanation	One sentence	None
T	Link (Table List Item 4)	Select the page or enter /en/products/quartz	No	Item destination	Pick a page	Must start with /, #, http:// or https://

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Rows with the description at the left, a light grey number and a 5.625rem product name (01 TwinX™, 02 ignio®, 03 TCS BaNCS®, 04 Quartz™) and a diagonal arrow; 2px light grey dividers; the regular-weight heading with the All Products & Platforms text link.
- **Rendering behaviour:** From 1200 px columns 476fr 695fr auto with a 2.5rem gap, titles 5.625rem, numbers 2.4975rem, arrow –icon-size-l; from 600 px 2fr 3fr auto and 3.5rem titles; below 600 px the description sits above the title row.
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- Variation 3 defaults: Text link, Numbers Show, Diagonal arrow.
- Leave Number empty for automatic 01, 02, …
- Trademark ™ (tm) or ® (r) is appended as a raised sign; never type it in the Title.
- Item 1 keeps the model default title TwinX, so only its Trademark, Description and Link are entered.

Common Authoring Mistakes

Error	Root Cause	Resolution
The sign shows twice (TwinX™™)	™ typed in the Title and Trademark selected	Remove the sign from the Title
Long product names wrap badly	Titles are 5.625rem on desktop	Keep titles to about 30 characters

Troubleshooting

- **Symptoms:** The numbers do not appear.
- **Cause:** Items › Numbers is set to Hide.
- **Resolution:** Set Numbers to Variation default or Show.
- **Verification Steps:** 01 to 04 show before the product names.

Use Cases: Products and platforms, numbered programmes.

Authoring Guidelines: Variation: Variation 3. Leave Number empty for automatic numbering. Use Trademark for ™ / ®.

Business Rules: Defaults: call to action Text link (`tertiary`), Numbers Show, Item link Diagonal arrow. Item gap 2.5rem; divider 2px `--grey-200`; text colour `--grey-900`.

Rendering Rules: Heading regular weight (line-height 1.4); a tertiary call to action uses `--body-font-size-l`. Mobile: description over the number and title (3rem, line-height 1.17, letter-spacing -0.075rem; number `--slate-300` 1.5rem), arrow `--icon-size-m`, centred vertically. From 600px: columns `2fr 3fr auto`, title 3.5rem with the number at the left and the title at the right (`space-between`), description 1.125rem. From 1200px: columns `476fr 695fr auto` with a 2.5rem gap, title 5.625rem (letter-spacing –0.1406rem, line-height 1.4), number 2.4975rem, description 1.5rem, arrow `--icon-size-l`. The trademark gets a start margin (0.45rem, 0.525rem, 0.8438rem by breakpoint).

Responsive Behaviour: Desktop and tablet: description | number and title | arrow. Mobile: description above, title row below, arrow at the right.

SEO Impact: As Variation 1. Very long product names wrap anywhere (`overflow-wrap: anywhere`).

Accessibility Compliance: As Variation 1; the number is text, read before the title.

Variation 4 — Call to action style: Filled button

Variation Name: Call to action › Style = Filled button (`primary`; Variation 1 default).

Business Purpose: A prominent "View all" next to the heading.

Visual Example:

Figure 38: Filled button call to action — Close-up of the header at 1440 px: the heading Industries we serve with a filled brand button View all industries at the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-cta-filled.jpg)

Screenshot Details — Filled button call to action

Item	Detail
Screenshot Name	`screenshots/table-list-cta-filled.jpg`
Screenshot Purpose	Filled button call to action
Screen Description	Close-up of the header at 1440 px: the heading Industries we serve with a filled brand button View all industries at the right.
Business Context	The industries list header with a prominent filled call to action, used where the full industries page is a key next step.
Author Objective	Set the call to action Text "View all industries", its Link and Style Filled button.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
A	Heading (Table List › Content)	Industries we serve	No	List heading	Short heading	None
B	Text (Table List › Call to action)	View all industries	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
C	Link (Table List › Call to action)	Select the page or enter /en/industries	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(D)	Style (Table List › Call to action)	Filled button	No	Call to action style	Keep Variation default	Options “”, primary, secondary, tertiary
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(E)	Title (Table List Item 1)	Banking	No	Item name	Short name, no trademark sign	None
(F)	Description (Table List Item 1)	Core modernisation, payments and digital channels for banks of every size.	No	Item explanation	One sentence	None
(G)	Link (Table List Item 1)	Select the page or enter /en/industries/banking	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(H)	Title (Table List Item 2)	Retail	No	Item name	Short name, no trademark sign	None
(I)	Description (Table List Item 2)	Connected commerce from the store to the supply chain.	No	Item explanation	One sentence	None
(J)	Link (Table List Item 2)	Select the page or enter /en/industries/retail	No	Item destination	Pick a page	Must start with /, #, http:// or https://

All other fields keep their default values. Each callout letter marks the field’s output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The heading “Industries we serve” with a filled brand button “View all industries” at the right.
- **Rendering behaviour:** holding a.button.primary; font –body-font-size-xs below 1200 px and –button-font-size from 1200 px; it wraps below the heading when space is short.

- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- Filled button is also the Variation 1 default.
- The call to action shows on the page only with a Link; in the editor a Text without Link is a non-focusable preview.
- An empty Text gives the label View all.
- Links accept /paths, #anchors and http(s) URLs only.

Common Authoring Mistakes

Error	Root Cause	Resolution
Button missing on the published page	Link left empty	Pick /en/industries
Button reads View all	Text left empty	Enter View all industries

Troubleshooting

- **Symptoms:** The button shows in the editor but not on aem.page.
- **Cause:** The Link is empty or a mailto: value.
- **Resolution:** Pick a page or enter a full https URL in Link.
- **Verification Steps:** The filled button renders and opens /en/industries.

Use Cases: Home page sections leading to a hub.

Authoring Guidelines: Call to action tab: Text, Link, Style = Filled button (or Variation default with Variation 1).

Business Rules: Shown only when a Link is set (on the page); without Text the label is "View all" (placeholder `viewAll`). In the editor, a Text without a Link shows a non-focusable preview.

Rendering Rules: `<p class="table-list-cta"><a class="button primary">`; font `--body-font-size-xs` below 1200px, `--button-font-size` from 1200px.

Responsive Behaviour: Beside the heading; wraps below it when space is short.

SEO Impact: A crawlable link with descriptive text when Text is written well.

Accessibility Compliance: Standard button styles and focus states from `styles/styles.css`.

Variation 5 — Call to action style: Outline button

Variation Name: Style = Outline button (`secondary`; Variation 2 default).

Business Purpose: A quieter button, matching outline item buttons.

Visual Example:

Figure 39: Outline button call to action — Close-up of the header at 1440 px: the heading Our transformation solutions with an outline button All solutions at the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-cta-outline.jpg)

Screenshot Details — Outline button call to action

Item	Detail
Screenshot Name	`screenshots/table-list-cta-outline.jpg`
Screenshot Purpose	Outline button call to action
Screen Description	Close-up of the header at 1440 px: the heading Our transformation solutions with an outline button All solutions at the right.
Business Context	The solutions list header with a quieter outline call to action that matches the outline item buttons of Variation 2.
Author Objective	Set the call to action Text "All solutions", Link /en/services and Style Outline button on the Variation 2 list.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
(A)	Variation (Table List › Content)	Variation 2 - Description, large title, button	No	Layout and defaults	Pick by content	Options industries, solutions, products; others give industries
B	Heading (Table List › Content)	Our transformation solutions	No	List heading	Short heading	None
C	Text (Table List › Call to action)	All solutions	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives "View all"
D	Link (Table List › Call to action)	Select the page or enter /en/services	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(E)	Style (Table List › Call to action)	Outline button	No	Call to action style	Keep Variation default	Options "", primary, secondary, tertiary
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(F)	Title (Table List Item 1)	Cognitive operations	No	Item name	Short name, no trademark sign	None
(G)	Description (Table List Item 1)	Run operations that sense and respond to change.	No	Item explanation	One sentence	None
(H)	Link (Table List Item 1)	Select the page or enter /en/services/consulting	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(I)	Title (Table List Item 2)	Enterprise cloud	No	Item name	Short name, no trademark sign	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(J)	Description (Table List Item 2)	Move, modernise and run workloads on any cloud.	No	Item explanation	One sentence	None
(K)	Link (Table List Item 2)	Select the page or enter /en/services/cloud	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(L)	Title (Table List Item 3)	Cybersecurity	No	Item name	Short name, no trademark sign	None
(M)	Description (Table List Item 3)	Protect identities, data and operations.	No	Item explanation	One sentence	None
(N)	Link (Table List Item 3)	Select the page or enter /en/services/cybersecurity	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(O)	Title (Table List Item 4)	AI and data	No	Item name	Short name, no trademark sign	None
(P)	Description (Table List Item 4)	Turn data into decisions with enterprise AI.	No	Item explanation	One sentence	None
(Q)	Link (Table List Item 4)	Select the page or enter /en/services/ai	No	Item destination	Pick a page	Must start with /, #, http:// or https://

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The heading "Our transformation solutions" with an outline "All solutions" button at the right.
- **Rendering behaviour:** a.button.secondary in the header; font –body-font-size-xs below 1200 px and –button-font-size from 1200 px; it wraps under the heading on narrow screens.
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- Outline button is also the Variation 2 default, so Variation default gives the same result.
- The call to action needs a Link to render on the page.
- An empty Text gives View all.
- AEM paths in Link are converted to published paths (/en/services).

Common Authoring Mistakes

Error	Root Cause	Resolution
Button looks filled	Style set to Filled button	Choose Outline button or Variation default
Button missing on aem.page	Link empty	Pick /en/services

Troubleshooting

- **Symptoms:** The outline button opens a 404 page.
- **Cause:** The Link points to an unpublished page.
- **Resolution:** Publish /en/services first, then the page.
- **Verification Steps:** All solutions opens the services page on aem.live.

Use Cases: Solutions lists.

Authoring Guidelines: Style = Outline button.

Business Rules: As Variation 4.

Rendering Rules: `a.button.secondary`; same font sizes as Variation 4.

Responsive Behaviour: As Variation 4.

SEO Impact: As Variation 4.

Accessibility Compliance: As Variation 4.

Variation 6 — Call to action style: Text link

Variation Name: Style = Text link (`tertiary`; Variation 3 default).

Business Purpose: A lightweight link for editorial layouts.

Visual Example:

Figure 40: Text link call to action — Close-up of the header at 1440 px: the regular-weight heading Products & Platforms with the text link All Products & Platforms at the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-cta-text-link.jpg)

Screenshot Details — Text link call to action

Item	Detail
Screenshot Name	`screenshots/table-list-cta-text-link.jpg`
Screenshot Purpose	Text link call to action
Screen Description	Close-up of the header at 1440 px: the regular-weight heading Products & Platforms with the text link All Products & Platforms at the right.
Business Context	The products showcase header with a lightweight text link, suiting the editorial look of Variation 3.
Author Objective	Set the call to action Text “All Products & Platforms”, Link /en/products and Style Text link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
(A)	Variation (Table List › Content)	Variation 3 - Description, number, large title, arrow	No	Layout and defaults	Pick by content	Options industries, solutions, products; others give industries
B	Heading (Table List › Content)	Products & Platforms	No	List heading	Short heading	None
C	Text (Table List › Call to action)	All Products & Platforms	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
D	Link (Table List › Call to action)	Select the page or enter /en/products	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(E)	Style (Table List › Call to action)	Text link	No	Call to action style	Keep Variation default	Options “”, primary, secondary, tertiary
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(F)	Trademark (Table List Item 1)	™ Trademark	No	Sign after the title	Use for registered names	Options “”, tm, r
(G)	Description (Table List Item 1)	Risk free business experimentation and decision intelligence	No	Item explanation	One sentence	None
(H)	Link (Table List Item 1)	Select the page or enter /en/products/twinx	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(I)	Title (Table List Item 2)	ignio	No	Item name	Short name, no trademark sign	None
(J)	Trademark (Table List Item 2)	® Registered	No	Sign after the title	Use for registered names	Options “”, tm, r
(K)	Description (Table List Item 2)	Cognitive automation for enterprise IT operations	No	Item explanation	One sentence	None
(L)	Link (Table List Item 2)	Select the page or enter /en/products/ignio	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(M)	Title (Table List Item 3)	TCS BaNCS	No	Item name	Short name, no trademark sign	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(N)	Trademark (Table List Item 3)	® Registered	No	Sign after the title	Use for registered names	Options "", tm, r
(O)	Description (Table List Item 3)	A universal platform for banking, insurance and capital markets	No	Item explanation	One sentence	None
(P)	Link (Table List Item 3)	Select the page or enter /en/products/bancs	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(Q)	Title (Table List Item 4)	Quartz	No	Item name	Short name, no trademark sign	None
(R)	Trademark (Table List Item 4)	™ Trademark	No	Sign after the title	Use for registered names	Options "", tm, r
(S)	Description (Table List Item 4)	Blockchain solutions for connected enterprise ecosystems	No	Item explanation	One sentence	None
(T)	Link (Table List Item 4)	Select the page or enter /en/products/quartz	No	Item destination	Pick a page	Must start with /, #, http:// or https://

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The regular-weight heading "Products & Platforms" with the text link "All Products & Platforms" at the right.
- **Rendering behaviour:** a.button.tertiary; in Variation 3 a tertiary call to action uses –body-font-size-l; it wraps below the heading when space is short.
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- Text link is the Variation 3 default.
- The link renders on the page only with a Link value.
- The label is the Text field; empty gives View all.
- Supported links: /paths, #anchors, http(s) URLs.

Common Authoring Mistakes

Error	Root Cause	Resolution
The link reads View all	Text left empty	Enter All Products & Platforms
A mailto: link does not appear	Only /, # and http(s) links are supported	Link to a contact page instead

Troubleshooting

- **Symptoms:** The text link is not shown on the page.
- **Cause:** The Link holds text without / or http.
- **Resolution:** Pick /en/products with the page picker.
- **Verification Steps:** The text link renders next to the heading and opens /en/products.

Use Cases: Product lists.

Authoring Guidelines: Style = Text link.

Business Rules: As Variation 4.

Rendering Rules: `a.button.tertiary`; keeps the tertiary button size (in Variation 3 `--body-font-size-l`).

Responsive Behaviour: As Variation 4.

SEO Impact: As Variation 4.

Accessibility Compliance: As Variation 4.

Variation 7 — Numbers: Show

Variation Name: Items › Numbers = Show (`show`; Variation 3 default).

Business Purpose: Numbered items at every width.

Visual Example:

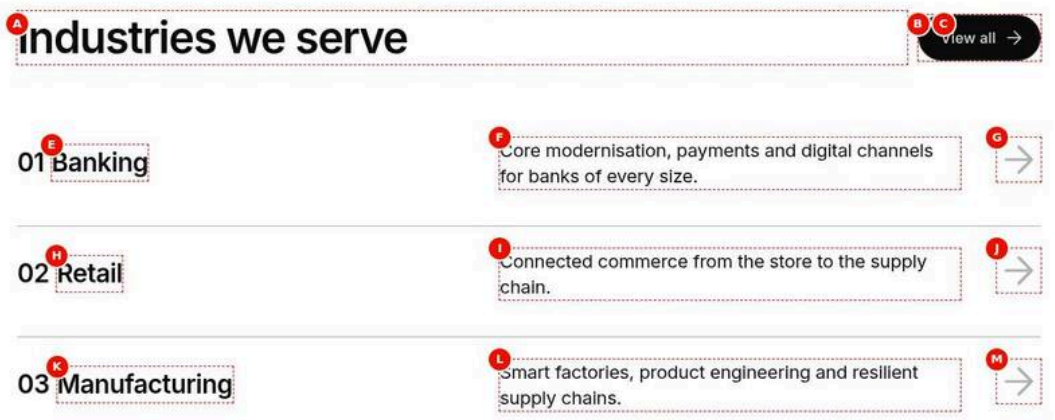

Figure 41: Numbers shown — The Variation 1 Table List at 1440 px with Numbers Show: the heading and View all button, then three rows 01 Banking, 02 Retail and 03 Manufacturing with descriptions and arrows. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-numbers-show.jpg)

Screenshot Details — Numbers shown

Item	Detail
Screenshot Name	`screenshots/table-list-numbers-show.jpg`
Screenshot Purpose	Numbers shown
Screen Description	The Variation 1 Table List at 1440 px with Numbers Show: the heading and View all button, then three rows 01 Banking, 02 Retail and 03 Manufacturing with descriptions and arrows.
Business Context	The industries list numbered at every width, for pages where the sequence itself matters.
Author Objective	Set Items › Numbers to Show on the Variation 1 list with three items.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
A	Heading (Table List › Content)	Industries we serve	No	List heading	Short heading	None
B	Text (Table List › Call to action)	View all	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
C	Link (Table List › Call to action)	Select the page or enter /en/industries	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(D)	Numbers (Table List › Items)	Show	No	Item numbering	Keep Variation default	Options “”, show, mobile, hide
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
E	Title (Table List Item 1)	Banking	No	Item name	Short name, no trademark sign	None
F	Description (Table List Item 1)	Core modernisation, payments and digital channels for banks of every size.	No	Item explanation	One sentence	None
G	Link (Table List Item 1)	Select the page or enter /en/industries/banking	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
H	Title (Table List Item 2)	Retail	No	Item name	Short name, no trademark sign	None
I	Description (Table List Item 2)	Connected commerce from the store to the supply chain.	No	Item explanation	One sentence	None
J	Link (Table List Item 2)	Select the page or enter /en/industries/retail	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
K	Title (Table List Item 3)	Manufacturing	No	Item name	Short name, no trademark sign	None
L	Description (Table List Item 3)	Smart factories, product engineering and resilient supply chains.	No	Item explanation	One sentence	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
M	Link (Table List Item 3)	Select the page or enter /en/industries/manufacturing	No	Item destination	Pick a page	Must start with /, #, http:// or https://

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three rows with 01, 02 and 03 before the titles Banking, Retail and Manufacturing at desktop width, descriptions in the middle and arrows at the right.
- **Rendering behaviour:** span.table-list-number is rendered before each title in div.table-list-main with class numbers-show, visible at every breakpoint; the number comes from the item's Number or the zero-padded position.
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- Show overrides the Variation 1 default (Show on mobile only).
- An item Number is used only when it is 1 to 3 digits, optionally followed by . or).
- Positions count the displayed items only.
- Three items fit within the default Maximum items 4.

Common Authoring Mistakes

Error	Root Cause	Resolution
A custom number is ignored	Number typed as No. 1	Enter 1 to 3 digits such as 01
Numbers out of order after reordering	Custom numbers were typed	Leave Number empty for automatic numbering

Troubleshooting

- **Symptoms:** Numbers show only on mobile.
- **Cause:** Numbers is still Variation default with Variation 1.
- **Resolution:** Select Numbers Show in the Items tab.
- **Verification Steps:** 01 to 03 appear at 1440 px.

Use Cases: Ordered steps, ranked products.

Authoring Guidelines: Numbers = Show; leave item Number empty for 01, 02, … or type a number.

Business Rules: The item's Number is used when it is 1 to 3 digits (optionally followed by "." or ")"); otherwise the position is used, zero-padded to two digits (01, 02 … 10). Positions count the displayed items.

Rendering Rules: `span.table-list-number` before the title in `div.table-list-main`; class `numbers-show`.

Responsive Behaviour: Visible at every breakpoint.

SEO Impact: Numbers are text in the item.

Accessibility Compliance: Read as part of the item content.

Variation 8 — Numbers: Show on mobile only

Variation Name: Numbers = Show on mobile only (`mobile`; Variation 1 default).

Business Purpose: Numbers help on stacked mobile layouts but are omitted on wider layouts.

Visual Example:

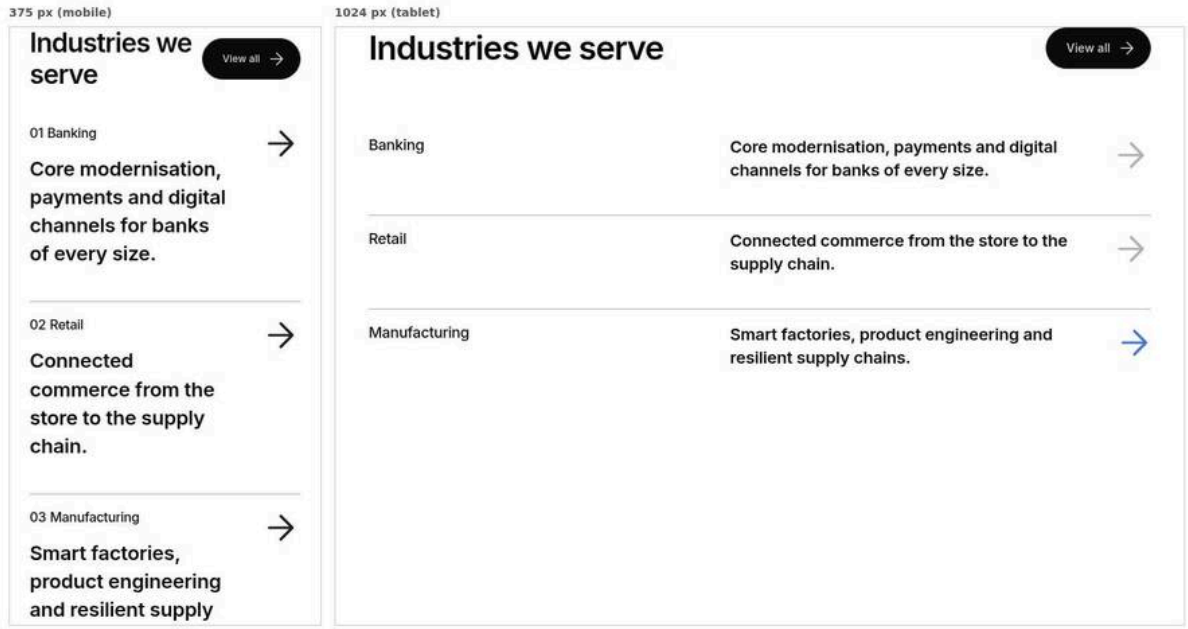

Figure 42: Numbers on mobile only — Two frames side by side: at 375 px the rows read 01 Banking, 02 Retail and 03 Manufacturing with the View all button under the heading; at 1024 px the same rows show Banking, Retail and Manufacturing without numbers. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-numbers-mobile.jpg)

Screenshot Details — Numbers on mobile only

Item	Detail
Screenshot Name	`screenshots/table-list-numbers-mobile.jpg`
Screenshot Purpose	Numbers on mobile only
Screen Description	Two frames side by side: at 375 px the rows read 01 Banking, 02 Retail and 03 Manufacturing with the View all button under the heading; at 1024 px the same rows show Banking, Retail and Manufacturing without numbers.
Business Context	The industries list numbered only on phones, where the numbers help scan stacked rows but would clutter the wide layout.
Author Objective	Set Items › Numbers to Show on mobile only and compare 375 px and 1024 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
(A)	Heading (Table List › Content)	Industries we serve	No	List heading	Short heading	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Text (Table List › Call to action)	View all	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
(C)	Link (Table List › Call to action)	Select the page or enter /en/industries	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(D)	Numbers (Table List › Items)	Show on mobile only	No	Item numbering	Keep Variation default	Options “”, show, mobile, hide
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(E)	Title (Table List Item 1)	Banking	No	Item name	Short name, no trademark sign	None
(F)	Description (Table List Item 1)	Core modernisation, payments and digital channels for banks of every size.	No	Item explanation	One sentence	None
(G)	Link (Table List Item 1)	Select the page or enter /en/industries/banking	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(H)	Title (Table List Item 2)	Retail	No	Item name	Short name, no trademark sign	None
(I)	Description (Table List Item 2)	Connected commerce from the store to the supply chain.	No	Item explanation	One sentence	None
(J)	Link (Table List Item 2)	Select the page or enter /en/industries/retail	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(K)	Title (Table List Item 3)	Manufacturing	No	Item name	Short name, no trademark sign	None
(L)	Description (Table List Item 3)	Smart factories, product engineering and resilient supply chains.	No	Item explanation	One sentence	None
(M)	Link (Table List Item 3)	Select the page or enter /en/industries/manufacturing	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Screen width (Preview)	375 px (left) and 1024 px (right)	—	Check on the preview (not stored in the content)	375 px (left) and 1024 px (right)	—

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Side by side: at 375 px the rows read 01 Banking, 02 Retail and 03 Manufacturing; at 1024 px the same rows show only Banking, Retail and Manufacturing.
- **Rendering behaviour:** Class numbers-mobile; the number elements are rendered but CSS hides .table-list-number from 600 px.
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- Show on mobile only is the Variation 1 default.
- Numbers are visible below 600 px only.
- Automatic numbers follow the content tree order.
- The number is part of the DOM at every width.

Common Authoring Mistakes

Error	Root Cause	Resolution
Numbers missing on desktop reported as a bug	Expected for Show on mobile only	Choose Show for every width
Numbers missing on mobile	Numbers set to Hide	Select Show on mobile only

Troubleshooting

- **Symptoms:** Numbers still show at 1024 px.
- **Cause:** Numbers is set to Show.
- **Resolution:** Select Show on mobile only.
- **Verification Steps:** Numbers appear at 375 px only.

Use Cases: Industries lists.

Authoring Guidelines: Numbers = Show on mobile only (or Variation default with Variation 1).

Business Rules: As Variation 7.

Rendering Rules: Class `numbers-mobile`; CSS hides `.table-list-number` from 600px.

Responsive Behaviour: Visible below 600px, hidden from 600px.

SEO Impact: The number stays in the DOM (hidden with `display: none` from 600px).

Accessibility Compliance: Hidden numbers are not announced at those widths.

Variation 9 — Numbers: Hide

Variation Name: Numbers = Hide (`hide`; Variation 2 default).

Business Purpose: Unordered lists.

Visual Example:

Figure 43: Numbers hidden — The Variation 3 Table List at 1440 px with Numbers Hide: the heading and text link, then three rows TwinX™, ignio® and TCS BaNCS® with descriptions and diagonal arrows and no numbers. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-numbers-hide.jpg)

Screenshot Details — Numbers hidden

Item	Detail
Screenshot Name	`screenshots/table-list-numbers-hide.jpg`
Screenshot Purpose	Numbers hidden
Screen Description	The Variation 3 Table List at 1440 px with Numbers Hide: the heading and text link, then three rows TwinX™, ignio® and TCS BaNCS® with descriptions and diagonal arrows and no numbers.
Business Context	The products showcase without numbers, for an unordered set of platforms.
Author Objective	Set Items › Numbers to Hide on the Variation 3 list with three items.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
(A)	Variation (Table List › Content)	Variation 3 - Description, number, large title, arrow	No	Layout and defaults	Pick by content	Options industries, solutions, products; others give industries
B	Heading (Table List › Content)	Products & Platforms	No	List heading	Short heading	None
C	Text (Table List › Call to action)	All Products & Platforms	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Link (Table List › Call to action)	Select the page or enter /en/products	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(E)	Numbers (Table List › Items)	Hide	No	Item numbering	Keep Variation default	Options "", show, mobile, hide
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(F)	Trademark (Table List Item 1)	™ Trademark	No	Sign after the title	Use for registered names	Options "", tm, r
G	Description (Table List Item 1)	Risk free business experimentation and decision intelligence	No	Item explanation	One sentence	None
H	Link (Table List Item 1)	Select the page or enter /en/products/twinx	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
I	Title (Table List Item 2)	ignio	No	Item name	Short name, no trademark sign	None
(J)	Trademark (Table List Item 2)	® Registered	No	Sign after the title	Use for registered names	Options "", tm, r
K	Description (Table List Item 2)	Cognitive automation for enterprise IT operations	No	Item explanation	One sentence	None
L	Link (Table List Item 2)	Select the page or enter /en/products/ignio	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
M	Title (Table List Item 3)	TCS BaNCS	No	Item name	Short name, no trademark sign	None
(N)	Trademark (Table List Item 3)	® Registered	No	Sign after the title	Use for registered names	Options "", tm, r
O	Description (Table List Item 3)	A universal platform for banking, insurance and capital markets	No	Item explanation	One sentence	None
P	Link (Table List Item 3)	Select the page or enter /en/products/bancs	No	Item destination	Pick a page	Must start with /, #, http:// or https://

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three product rows (TwinX™, ignio®, TCS BaNCS®) with the description at the left, the large title and the diagonal arrow, but no numbers.
- **Rendering behaviour:** With class numbers-hide no span.table-list-number is rendered at any width; the title keeps its place in the right column.
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- Hide renders no number element; authored item Numbers are ignored.
- Hide is the Variation 2 default; Variation 3 normally shows numbers.
- The call to action keeps the Variation 3 default Text link.
- Trademark signs are unaffected.

Common Authoring Mistakes

Error	Root Cause	Resolution
Numbers still appear	Numbers left on Variation default for Variation 3	Select Numbers Hide
Author types numbers into Title	Wants numbers back in one item	Use Numbers Show instead

Troubleshooting

- **Symptoms:** Numbers disappear only on tablet and desktop.
- **Cause:** Show on mobile only was selected instead of Hide.
- **Resolution:** Select Numbers Hide in the Items tab and publish.
- **Verification Steps:** No numbers at 375 px or 1440 px.

Use Cases: Solutions, unordered offerings.

Authoring Guidelines: Numbers = Hide.

Business Rules: No number element is rendered; authored item Numbers are ignored.

Rendering Rules: Class `numbers-hide`; no `span.table-list-number`.

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 10 — Item link: Arrow

Variation Name: Items › Item link = Arrow (`arrow`; Variation 1 default).

Business Purpose: The whole row is a link, signalled by a right arrow.

Visual Example:

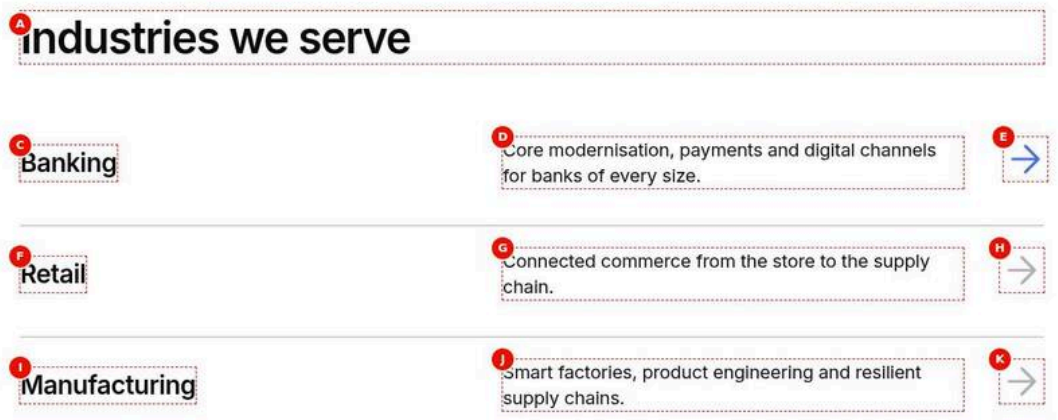

Figure 44: Arrow item link — The Variation 1 Table List at 1440 px with only the heading Industries we serve (no call to action) and three rows Banking, Retail and Manufacturing; the pointer is on Banking, whose arrow is brand blue and moved slightly right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-item-arrow.jpg)

Screenshot Details — Arrow item link

Item	Detail
Screenshot Name	`screenshots/table-list-item-arrow.jpg`
Screenshot Purpose	Arrow item link
Screen Description	The Variation 1 Table List at 1440 px with only the heading Industries we serve (no call to action) and three rows Banking, Retail and Manufacturing; the pointer is on Banking, whose arrow is brand blue and moved slightly right.
Business Context	An industries list where the whole row is the link, signalled by a right arrow that reacts when a visitor points at it.
Author Objective	Set Item link Arrow on a Variation 1 list of three industries without a call to action, and point at the Banking row.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
A	Heading (Table List › Content)	Industries we serve	No	List heading	Short heading	None
(B)	Item link (Table List › Items)	Arrow	No	Item link style	Keep Variation default	Options "", arrow, arrow-up-right, button
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
C	Title (Table List Item 1)	Banking	No	Item name	Short name, no trademark sign	None
D	Description (Table List Item 1)	Core modernisation, payments and	No	Item explanation	One sentence	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		digital channels for banks of every size.				
E	Link (Table List Item 1)	Select the page or enter /en/industries/banking	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
F	Title (Table List Item 2)	Retail	No	Item name	Short name, no trademark sign	None
G	Description (Table List Item 2)	Connected commerce from the store to the supply chain.	No	Item explanation	One sentence	None
H	Link (Table List Item 2)	Select the page or enter /en/industries/retail	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
I	Title (Table List Item 3)	Manufacturing	No	Item name	Short name, no trademark sign	None
J	Description (Table List Item 3)	Smart factories, product engineering and resilient supply chains.	No	Item explanation	One sentence	None
K	Link (Table List Item 3)	Select the page or enter /en/industries/manufacturing	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Action (Preview)	Point at the first item (Banking)	—	Check on the preview (not stored in the content)	Point at the first item (Banking)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The heading "Industries we serve" alone, then three rows; the hovered Banking row has its arrow in brand blue, moved slightly right.
- **Rendering behaviour:** The arrow is a 3rem CSS mask of arrow-right.svg; on hover or focus it turns –color-text-brand and moves translateX(0.25rem), without the transition under reduced motion. Its ::after covers the item.
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- Arrow is the Variation 1 default; selecting it explicitly gives the same result.
- The accessible name is "Explore Banking".

- Without call-to-action Text and Link the header shows only the heading.
- Without an item Link the arrow is decorative.

Common Authoring Mistakes

Error	Root Cause	Resolution
The arrow does not react	The item has no Link, so the arrow is a span	Set the item Link
Visitors miss the link	Arrow is subtle in grey	Consider Item link Button for explicit labels

Troubleshooting

- **Symptoms:** Keyboard users cannot reach the rows.
- **Cause:** The rows have no Link, so no anchor is rendered.
- **Resolution:** Fill every item's Link.
- **Verification Steps:** Tab moves from row to row with a visible focus ring.

Use Cases: Navigation lists.

Authoring Guidelines: Item link = Arrow; set each item's Link.

Business Rules: With a Link: `<a class="table-list-arrow arrow">` with the accessible name "Explore {title}" (placeholder `exploreItem`), covering the item (`::after`, inset 0). Without a Link: a decorative `<span aria-hidden="true">` arrow; the item is not clickable.

Rendering Rules: Arrow drawn with a CSS mask of `icons/arrow-right.svg`, 3rem, `--color-icon-default`; on hover of the item or focus: `--color-text-brand` and `translateX(0.25rem)` (no transition with reduced motion).

Responsive Behaviour: Always in the action column at the right.

SEO Impact: The link's text is its `aria-label` only (no visible text); search engines rely on the item title for context.

Accessibility Compliance: Accessible name from `aria-label`; visible focus outline; one link per item.

Variation 11 — Item link: Diagonal arrow

Variation Name: Item link = Diagonal arrow (`arrow-up-right`; Variation 3 default).

Business Purpose: Product-style link affordance.

Visual Example:

Figure 45: Diagonal arrow item link — Close-up of the first product row at 1440 px: the description Risk free business experimentation and decision intelligence at the left, 01 and the large title TwinX™, and an up-right arrow at the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-item-diagonal-arrow.jpg)

Screenshot Details — Diagonal arrow item link

Item	Detail
Screenshot Name	`screenshots/table-list-item-diagonal-arrow.jpg`
Screenshot Purpose	Diagonal arrow item link

Item	Detail
Screen Description	Close-up of the first product row at 1440 px: the description Risk free business experimentation and decision intelligence at the left, 01 and the large title TwinX™, and an up-right arrow at the right.
Business Context	A product row of the Products & Platforms showcase, using the up-right arrow as the product-style link affordance.
Author Objective	Show the Variation 3 default item link, the diagonal arrow, on the TwinX row.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
(A)	Variation (Table List › Content)	Variation 3 - Description, number, large title, arrow	No	Layout and defaults	Pick by content	Options industries, solutions, products; others give industries
(B)	Heading (Table List › Content)	Products & Platforms	No	List heading	Short heading	None
(C)	Text (Table List › Call to action)	All Products & Platforms	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
(D)	Link (Table List › Call to action)	Select the page or enter /en/products	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(E)	Style (Table List › Call to action)	Text link	No	Call to action style	Keep Variation default	Options “”, primary, secondary, tertiary
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(F)	Trademark (Table List Item 1)	™ Trademark	No	Sign after the title	Use for registered names	Options “”, tm, r
G	Description (Table List Item 1)	Risk free business experimentation and decision intelligence	No	Item explanation	One sentence	None
H	Link (Table List Item 1)	Select the page or enter /en/products/twinx	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(I)	Title (Table List Item 2)	ignio	No	Item name	Short name, no trademark sign	None
(J)	Trademark (Table List Item 2)	® Registered	No	Sign after the title	Use for registered names	Options “”, tm, r

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(K)	Description (Table List Item 2)	Cognitive automation for enterprise IT operations	No	Item explanation	One sentence	None
(L)	Link (Table List Item 2)	Select the page or enter /en/products/ignio	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(M)	Title (Table List Item 3)	TCS BaNCS	No	Item name	Short name, no trademark sign	None
(N)	Trademark (Table List Item 3)	® Registered	No	Sign after the title	Use for registered names	Options "", tm, r
(O)	Description (Table List Item 3)	A universal platform for banking, insurance and capital markets	No	Item explanation	One sentence	None
(P)	Link (Table List Item 3)	Select the page or enter /en/products/bancs	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(Q)	Title (Table List Item 4)	Quartz	No	Item name	Short name, no trademark sign	None
(R)	Trademark (Table List Item 4)	™ Trademark	No	Sign after the title	Use for registered names	Options "", tm, r
(S)	Description (Table List Item 4)	Blockchain solutions for connected enterprise ecosystems	No	Item explanation	One sentence	None
(T)	Link (Table List Item 4)	Select the page or enter /en/products/quartz	No	Item destination	Pick a page	Must start with /, #, http:// or https://

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The TwinX™ row: description at the left, 01 and the large product name, and an up-right arrow at the right.
- **Rendering behaviour:** drawn with the arrow-up-right.svg mask at –icon-size-m (–icon-size-l from 1200 px) covers the item; its accessible name is "Explore TwinX".
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- Diagonal arrow is the Variation 3 default.
- Without a Link the arrow is a decorative span and the row is not clickable.
- Description links stay clickable above the row link.
- The arrow turns brand blue on hover or focus.

Common Authoring Mistakes

Error	Root Cause	Resolution
The row does not open the product	Item Link empty	Pick /en/products/twinx
Screen readers announce Explore TwinX for a different page	Link copied from another item	Check each item's Link

Troubleshooting

- **Symptoms:** The arrow shows but clicking does nothing.
- **Cause:** The arrow is a decorative span because the Link is empty.
- **Resolution:** Set the item Link and publish.
- **Verification Steps:** The whole row navigates to /en/products/twinx.

Use Cases: Products and platforms.

Authoring Guidelines: Item link = Diagonal arrow.

Business Rules: As Variation 10, class `arrow-up-right`.

Rendering Rules: Mask `icons/arrow-up-right.svg`; size 3rem, or `--icon-size-m` / `--icon-size-l` (1200px+) in Variation 3.

Responsive Behaviour: As Variation 10.

SEO Impact: As Variation 10.

Accessibility Compliance: As Variation 10.

Variation 12 — Item link: Button

Variation Name: Item link = Button (`button`; Variation 2 default).

Business Purpose: An explicit, labelled action per item.

Visual Example:

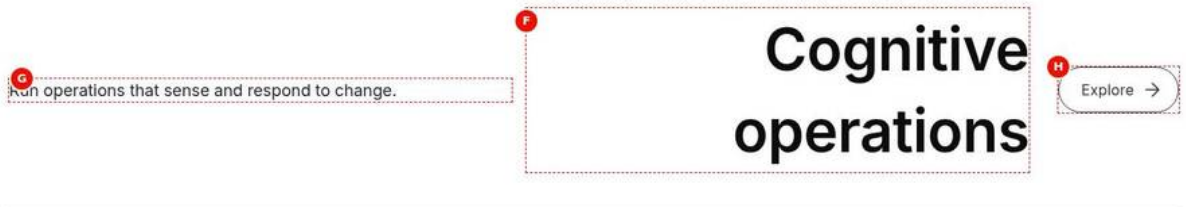

Figure 46: Button item link — Close-up of the first solution row at 1440 px: the description Run operations that sense and respond to change. at the left, the 4rem title Cognitive operations and an outline Explore button at the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-item-button.jpg)

Screenshot Details — Button item link

Item	Detail
Screenshot Name	`screenshots/table-list-item-button.jpg`

Item	Detail
Screenshot Purpose	Button item link
Screen Description	Close-up of the first solution row at 1440 px: the description Run operations that sense and respond to change. at the left, the 4rem title Cognitive operations and an outline Explore button at the right.
Business Context	A solution row with an explicit, labelled Explore button, the Variation 2 default item link.
Author Objective	Show the Button item link on the Cognitive operations row.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
(A)	Variation (Table List › Content)	Variation 2 - Description, large title, button	No	Layout and defaults	Pick by content	Options industries, solutions, products; others give industries
(B)	Heading (Table List › Content)	Our transformation solutions	No	List heading	Short heading	None
(C)	Text (Table List › Call to action)	All solutions	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
(D)	Link (Table List › Call to action)	Select the page or enter /en/services	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(E)	Style (Table List › Call to action)	Outline button	No	Call to action style	Keep Variation default	Options “”, primary, secondary, tertiary
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
F	Title (Table List Item 1)	Cognitive operations	No	Item name	Short name, no trademark sign	None
G	Description (Table List Item 1)	Run operations that sense and respond to change.	No	Item explanation	One sentence	None
H	Link (Table List Item 1)	Select the page or enter /en/services/consulting	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(I)	Title (Table List Item 2)	Enterprise cloud	No	Item name	Short name, no trademark sign	None
(J)	Description (Table List Item 2)	Move, modernise and run workloads on any cloud.	No	Item explanation	One sentence	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(K)	Link (Table List Item 2)	Select the page or enter /en/services/cloud	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(L)	Title (Table List Item 3)	Cybersecurity	No	Item name	Short name, no trademark sign	None
(M)	Description (Table List Item 3)	Protect identities, data and operations.	No	Item explanation	One sentence	None
(N)	Link (Table List Item 3)	Select the page or enter /en/services/cybersecurity	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(O)	Title (Table List Item 4)	AI and data	No	Item name	Short name, no trademark sign	None
(P)	Description (Table List Item 4)	Turn data into decisions with enterprise AI.	No	Item explanation	One sentence	None
(Q)	Link (Table List Item 4)	Select the page or enter /en/services/ai	No	Item destination	Pick a page	Must start with /, #, http:// or https://

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The Cognitive operations row with the description at the left, the 4rem title and an outline Explore button at the right.
- **Rendering behaviour:** div.table-list-action > a.button.secondary with the accessible name "Explore: Cognitive operations"; the row itself is not covered by the link.
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- Button text: item Button text, else block Button text, else Explore.
- Without a Link no button is rendered on the page (only a preview in the editor).
- Button is the Variation 2 default item link.
- A Button text equal to the URL is ignored.

Common Authoring Mistakes

Error	Root Cause	Resolution
The button is missing on the page	Item Link empty	Set the item Link
The button reads Explore instead of Discover	No Button text on the item or block	Enter the Button text

Troubleshooting

- **Symptoms:** The button shows in the editor but not on aem.page.
- **Cause:** The editor shows a non-focusable preview when Link is empty.
- **Resolution:** Pick /en/services/consulting in the item's Link.
- **Verification Steps:** The Explore button opens the consulting page.

Use Cases: Solutions, offerings needing a verb.

Authoring Guidelines: Item link = Button; set Button text on the block (Items tab) and optionally per item.

Business Rules: Text: the item's Button text, else the block's Button text, else "Explore" (placeholder `explore`). With a Link: an outline (`secondary`) button with the accessible name "{text}: {title}". Without a Link: nothing on the page; a non-focusable preview in the editor.

Rendering Rules: `div.table-list-action > a.button.secondary`; the row is not covered by the link.

Responsive Behaviour: At the right (tablet and desktop) or below the title (Variation 2 mobile).

SEO Impact: Generic visible text.

Accessibility Compliance: As Variation 2.

Variation 13 — Motion: None

Variation Name: Motion Type = None (`none`; the default).

Business Purpose: Static rendering.

Visual Example:

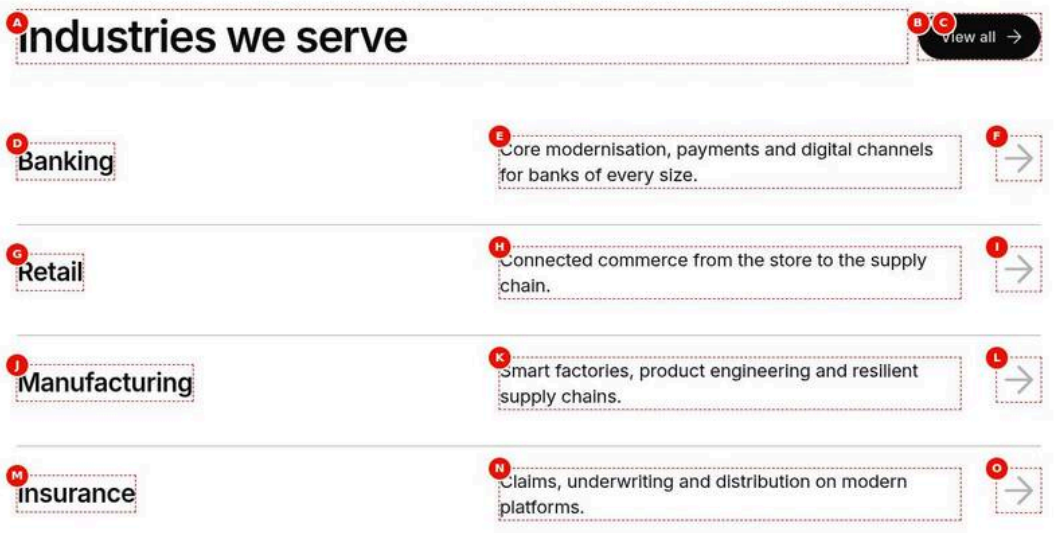

Figure 47: No motion — The Variation 1 Table List at 1440 px with Motion None: the heading with the filled View all button and the four rows Banking, Retail, Manufacturing and Insurance all fully visible. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-motion-none.jpg)

Screenshot Details — No motion

Item	Detail
Screenshot Name	`screenshots/table-list-motion-none.jpg`
Screenshot Purpose	No motion
Screen Description	The Variation 1 Table List at 1440 px with Motion None: the heading with the filled View all button and the four rows Banking, Retail, Manufacturing and Insurance all fully visible.
Business Context	The home page industries list without animation, the default and the right choice for most pages.
Author Objective	Keep Motion Type None on the Variation 1 list of four industries.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
A	Heading (Table List › Content)	Industries we serve	No	List heading	Short heading	None
B	Text (Table List › Call to action)	View all	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
C	Link (Table List › Call to action)	Select the page or enter /en/industries	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
D	Title (Table List Item 1)	Banking	No	Item name	Short name, no trademark sign	None
E	Description (Table List Item 1)	Core modernisation, payments and digital channels for banks of every size.	No	Item explanation	One sentence	None
F	Link (Table List Item 1)	Select the page or enter /en/industries/banking	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
G	Title (Table List Item 2)	Retail	No	Item name	Short name, no trademark sign	None
H	Description (Table List Item 2)	Connected commerce from the store to the supply chain.	No	Item explanation	One sentence	None
I	Link (Table List Item 2)	Select the page or enter /en/industries/retail	No	Item destination	Pick a page	Must start with /, #, http:// or https://

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
J	Title (Table List Item 3)	Manufacturing	No	Item name	Short name, no trademark sign	None
K	Description (Table List Item 3)	Smart factories, product engineering and resilient supply chains.	No	Item explanation	One sentence	None
L	Link (Table List Item 3)	Select the page or enter /en/industries/manufacturing	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
M	Title (Table List Item 4)	Insurance	No	Item name	Short name, no trademark sign	None
N	Description (Table List Item 4)	Claims, underwriting and distribution on modern platforms.	No	Item explanation	One sentence	None
O	Link (Table List Item 4)	Select the page or enter /en/industries/insurance	No	Item destination	Pick a page	Must start with /, #, http:// or https://
(P)	Motion Type (Table List › Items)	None (the default; keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (P), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The heading with the filled View all button and four industry rows, all visible immediately.
- **Rendering behaviour:** Class motion-none; no IntersectionObserver is created and items are never hidden, so screenshots and slow devices always show the full list.
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- None is the default Motion Type.
- Static rendering suits the first section and LCP.
- No observers run, so there is no delayed content.
- Fade, Slide and Reveal are the only alternatives.

Common Authoring Mistakes

Error	Root Cause	Resolution
Items appear late on the page	Motion Type set to Fade, Slide or Reveal	Keep None unless the design asks for motion
Author expects animation	None selected	Choose Fade, Slide or Reveal

Troubleshooting

- **Symptoms:** Rows still animate on the published page.
- **Cause:** The dialog change was not saved or the page was not republished.
- **Resolution:** Select None, preview and publish again.
- **Verification Steps:** The block has the class motion-none and all rows show at once.

Use Cases: Most pages.

Authoring Guidelines: Motion Type = None.

Business Rules: No observers are created.

Rendering Rules: Class `motion-none`.

Responsive Behaviour: Same everywhere.

SEO Impact: None.

Accessibility Compliance: No motion.

Variation 14 — Motion: Fade

Variation Name: Motion Type = Fade (`fade`).

Business Purpose: Items fade in as they scroll into view.

Visual Example:

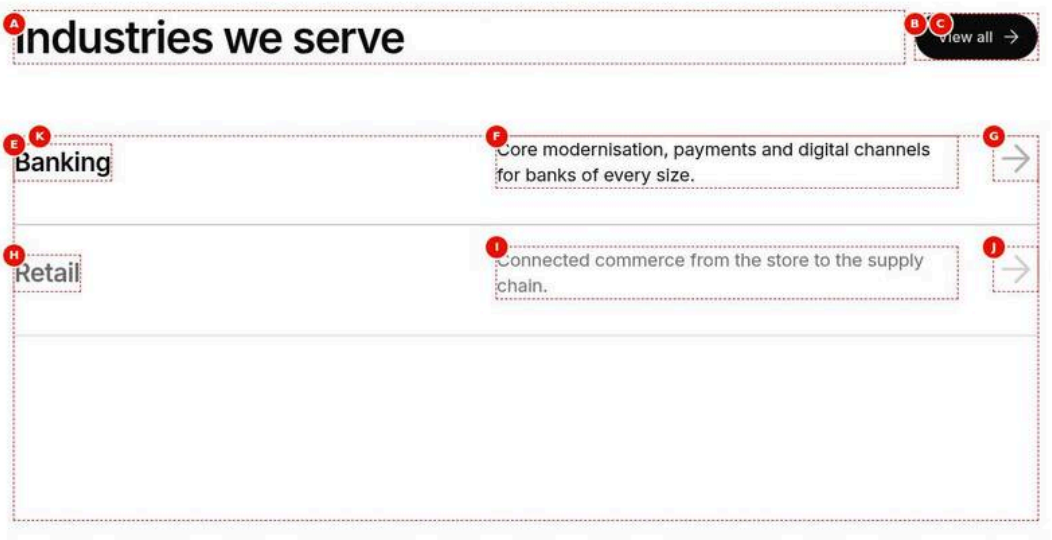

Figure 48: Fade motion — The Variation 1 Table List at 1440 px during Fade, captured slowed and staggered: Banking fully visible, Retail and Manufacturing partly faded in and Insurance still nearly transparent below the heading and View all button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-motion-fade.jpg)

Screenshot Details — Fade motion

Item	Detail
Screenshot Name	`screenshots/table-list-motion-fade.jpg`
Screenshot Purpose	Fade motion
Screen Description	The Variation 1 Table List at 1440 px during Fade, captured slowed and staggered: Banking fully visible, Retail and Manufacturing partly faded in and Insurance still nearly transparent below the heading and View all button.
Business Context	The home page industries list with a fade entrance animation as the rows scroll into view, where the page design asks for motion.
Author Objective	Set Items › Motion Type to Fade on the Variation 1 list of four industries.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
A	Heading (Table List › Content)	Industries we serve	No	List heading	Short heading	None
B	Text (Table List › Call to action)	View all	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
C	Link (Table List › Call to action)	Select the page or enter /en/industries	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(D)	Motion Type (Table List › Items)	Fade	No	Scroll animation	None unless the page design asks for it	Options none, fade, slide, reveal
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
E	Title (Table List Item 1)	Banking	No	Item name	Short name, no trademark sign	None
F	Description (Table List Item 1)	Core modernisation, payments and digital channels for banks of every size.	No	Item explanation	One sentence	None
G	Link (Table List Item 1)	Select the page or enter /en/industries/banking	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
H	Title (Table List Item 2)	Retail	No	Item name	Short name, no trademark sign	None
I	Description (Table List Item 2)	Connected commerce from the	No	Item explanation	One sentence	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		store to the supply chain.				
J	Link (Table List Item 2)	Select the page or enter /en/industries/retail	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
K	Title (Table List Item 3)	Manufacturing	No	Item name	Short name, no trademark sign	None
(L)	Description (Table List Item 3)	Smart factories, product engineering and resilient supply chains.	No	Item explanation	One sentence	None
(M)	Link (Table List Item 3)	Select the page or enter /en/industries/manufacturing	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(N)	Title (Table List Item 4)	Insurance	No	Item name	Short name, no trademark sign	None
(O)	Description (Table List Item 4)	Claims, underwriting and distribution on modern platforms.	No	Item explanation	One sentence	None
(P)	Link (Table List Item 4)	Select the page or enter /en/industries/insurance	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Action (Preview)	Scroll the list into view; the image is taken while the items animate one after the other	—	Check on the preview (not stored in the content)	Scroll the list into view; the image is taken while the items animate one after the other	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four industry rows in successive states: Banking fully visible, Retail and Manufacturing partly faded in and Insurance still nearly transparent.
- **Rendering behaviour:** The block gets motion-ready; each item stays hidden until 15 % is visible, then gets is-visible and the 500ms table-list-fade (opacity from 0) animation once. The screenshot slows it to 0.8s with a 0.5s stagger to show the steps; on the page items entering together animate together.
- **Publishing behaviour:** Motion is a dialog setting saved with the page; Publish sends it to aem.page or aem.live. It does not run in the editor's edit mode, so check it on the preview URL.

Business Rules

- Motion runs only with IntersectionObserver, outside edit mode and without reduced motion.
- Each item animates once.
- Visitors with reduced motion see all items at once.
- Use motion only where the design asks for it.

Common Authoring Mistakes

Error	Root Cause	Resolution
No animation in Universal Editor	Motion is off in edit mode	Check on the aem.page preview
Items invisible in a screenshot tool	The tool captures without scrolling	Scroll the list into view or use Motion None

Troubleshooting

- **Symptoms:** The items never appear on one device.
- **Cause:** The rows are hidden until 15 % enters the viewport and the page is captured without scrolling.
- **Resolution:** Scroll the list into view; set Motion Type None if needed.
- **Verification Steps:** All four rows are visible after scrolling.

Use Cases: Storytelling sections.

Authoring Guidelines: Motion Type = Fade.

Business Rules: Runs only when `IntersectionObserver` exists, not in Universal Editor edit mode, and not when the visitor prefers reduced motion. Each item animates once, when 15% of it is visible.

Rendering Rules: The block gets `motion-ready`; items without `is-visible` have opacity 0; on view they get `is-visible` and the 500ms `table-list-fade` animation (opacity from 0).

Responsive Behaviour: Same at every width.

SEO Impact: Content is in the DOM; hidden only visually until scrolled.

Accessibility Compliance: Respects `prefers-reduced-motion` (WCAG 2.3.3 intent).

Variation 15 — Motion: Slide

Variation Name: Motion Type = Slide (`slide`).

Business Purpose: Items rise slightly while fading in.

Visual Example:

Figure 49: Slide motion — The Variation 1 Table List at 1440 px during Slide, captured slowed and staggered: the upper rows in place, the lower rows up to 1.25rem lower and partly transparent while rising. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-motion-slide.jpg)

Screenshot Details — Slide motion

Item	Detail
Screenshot Name	`screenshots/table-list-motion-slide.jpg`
Screenshot Purpose	Slide motion
Screen Description	The Variation 1 Table List at 1440 px during Slide, captured slowed and staggered: the upper rows in place, the lower rows up to 1.25rem lower and partly transparent while rising.
Business Context	The home page industries list with a slide entrance animation as the rows scroll into view, where the page design asks for motion.
Author Objective	Set Items › Motion Type to Slide on the Variation 1 list of four industries.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
A	Heading (Table List › Content)	Industries we serve	No	List heading	Short heading	None
B	Text (Table List › Call to action)	View all	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
C	Link (Table List › Call to action)	Select the page or enter /en/industries	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(D)	Motion Type (Table List › Items)	Slide	No	Scroll animation	None unless the page design asks for it	Options none, fade, slide, reveal

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows

J	Link (Table List Item 2)	Select the page or enter /en/industries/retail	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
K	Title (Table List Item 3)	Manufacturing	No	Item name	Short name, no trademark sign	None
(L)	Description (Table List Item 3)	Smart factories, product engineering and resilient supply chains.	No	Item explanation	One sentence	None
(M)	Link (Table List Item 3)	Select the page or enter /en/industries/manufacturing	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(N)	Title (Table List Item 4)	Insurance	No	Item name	Short name, no trademark sign	None
(O)	Description (Table List Item 4)	Claims, underwriting and distribution on modern platforms.	No	Item explanation	One sentence	None
(P)	Link (Table List Item 4)	Select the page or enter /en/industries/insurance	No	Item destination	Pick a page	Must start with /, #, http:// or https://

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
—	Action (Preview)	Scroll the list into view; the image is taken while the items animate one after the other	—	Check on the pre-view (not stored in the content)	Scroll the list into view; the image is taken while the items animate one after the other	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four industry rows in successive states: the upper rows in place, the lower rows lower by up to 1.25rem and partly transparent while rising.
- **Rendering behaviour:** The block gets motion-ready; each item stays hidden until 15 % is visible, then gets is-visible and the 500ms table-list-slide (opacity from 0 and translateY 1.25rem) animation once. The screenshot slows it to 0.8s with a 0.5s stagger to show the steps; on the page items entering together animate together.
- **Publishing behaviour:** Motion is a dialog setting saved with the page; Publish sends it to aem.page or aem.live. It does not run in the editor's edit mode, so check it on the preview URL.

Business Rules

- Motion runs only with IntersectionObserver, outside edit mode and without reduced motion.
- Each item animates once.
- Visitors with reduced motion see all items at once.
- Use motion only where the design asks for it.

Common Authoring Mistakes

Error	Root Cause	Resolution
No animation in Universal Editor	Motion is off in edit mode	Check on the aem.page preview
Items invisible in a screenshot tool	The tool captures without scrolling	Scroll the list into view or use Motion None

Troubleshooting

- **Symptoms:** The items never appear on one device.
- **Cause:** The rows are hidden until 15 % enters the viewport and the page is captured without scrolling.
- **Resolution:** Scroll the list into view; set Motion Type None if needed.
- **Verification Steps:** All four rows are visible after scrolling.

Use Cases: Landing pages.

Authoring Guidelines: Motion Type = Slide.

Business Rules: As Variation 14.

Rendering Rules: `table-list-slide`: from opacity 0 and `translateY(var(--space-500))` (1.25rem), 500ms ease.

Responsive Behaviour: As Variation 14.

SEO Impact: As Variation 14.

Accessibility Compliance: As Variation 14.

Variation 16 — Motion: Reveal

Variation Name: Motion Type = Reveal (`reveal`).

Business Purpose: Items are revealed from the top down.

Visual Example:

Figure 50: Reveal motion — The Variation 1 Table List at 1440 px during Reveal, captured slowed and staggered: Banking fully revealed, the next rows partly uncovered from the top down and Insurance still clipped. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-motion-reveal.jpg)

Screenshot Details — Reveal motion

Item	Detail
Screenshot Name	`screenshots/table-list-motion-reveal.jpg`
Screenshot Purpose	Reveal motion
Screen Description	The Variation 1 Table List at 1440 px during Reveal, captured slowed and staggered: Banking fully revealed, the next rows partly uncovered from the top down and Insurance still clipped.
Business Context	The home page industries list with a reveal entrance animation as the rows scroll into view, where the page design asks for motion.
Author Objective	Set Items › Motion Type to Reveal on the Variation 1 list of four industries.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
A	Heading (Table List › Content)	Industries we serve	No	List heading	Short heading	None
B	Text (Table List › Call to action)	View all	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Link (Table List › Call to action)	Select the page or enter /en/industries	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(D)	Motion Type (Table List › Items)	Reveal	No	Scroll animation	None unless the page design asks for it	Options none, fade, slide, reveal
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
E	Title (Table List Item 1)	Banking	No	Item name	Short name, no trademark sign	None
F	Description (Table List Item 1)	Core modernisation, payments and digital channels for banks of every size.	No	Item explanation	One sentence	None
G	Link (Table List Item 1)	Select the page or enter /en/industries/banking	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
H	Title (Table List Item 2)	Retail	No	Item name	Short name, no trademark sign	None
I	Description (Table List Item 2)	Connected commerce from the store to the supply chain.	No	Item explanation	One sentence	None
J	Link (Table List Item 2)	Select the page or enter /en/industries/retail	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
K	Title (Table List Item 3)	Manufacturing	No	Item name	Short name, no trademark sign	None
(L)	Description (Table List Item 3)	Smart factories, product engineering and resilient supply chains.	No	Item explanation	One sentence	None
(M)	Link (Table List Item 3)	Select the page or enter /en/industries/manufacturing	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(O)	Description (Table List Item 4)	Claims, underwriting and distribution on modern platforms.	No	Item explanation	One sentence	None
(P)	Link (Table List Item 4)	Select the page or enter /en/industries/insurance	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Action (Preview)	Scroll the list into view; the image is taken while the items animate one after the other	—	Check on the preview (not stored in the content)	Scroll the list into view; the image is taken while the items animate one after the other	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four industry rows in successive states: Banking fully revealed, the next rows partly uncovered from the top down and Insurance still clipped.
- **Rendering behaviour:** The block gets motion-ready; each item stays hidden until 15 % is visible, then gets is-visible and the 500ms table-list-reveal (opacity from 0 and clip-path from the top) animation once. The screenshot slows it to 0.8s with a 0.5s stagger to show the steps; on the page items entering together animate together.
- **Publishing behaviour:** Motion is a dialog setting saved with the page; Publish sends it to aem.page or aem.live. It does not run in the editor's edit mode, so check it on the preview URL.

Business Rules

- Motion runs only with IntersectionObserver, outside edit mode and without reduced motion.
- Each item animates once.
- Visitors with reduced motion see all items at once.
- Use motion only where the design asks for it.

Common Authoring Mistakes

Error	Root Cause	Resolution
No animation in Universal Editor	Motion is off in edit mode	Check on the aem.page preview
Items invisible in a screenshot tool	The tool captures without scrolling	Scroll the list into view or use Motion None

Troubleshooting

- **Symptoms:** The items never appear on one device.
- **Cause:** The rows are hidden until 15 % enters the viewport and the page is captured without scrolling.
- **Resolution:** Scroll the list into view; set Motion Type None if needed.
- **Verification Steps:** All four rows are visible after scrolling.

Use Cases: Product showcases.

Authoring Guidelines: Motion Type = Reveal.

Business Rules: As Variation 14.

Rendering Rules: `table-list-reveal`: from opacity 0 and `clip-path: inset(0 0 100% 0)`, 500ms ease.

Responsive Behaviour: As Variation 14.

SEO Impact: As Variation 14.

Accessibility Compliance: As Variation 14.

Variation 17 — Item Trademark sign

Variation Name: Table List Item › Trademark = ™ Trademark (`tm`) or ® Registered (`r`).

Business Purpose: Correct legal marking of product names.

Visual Example:

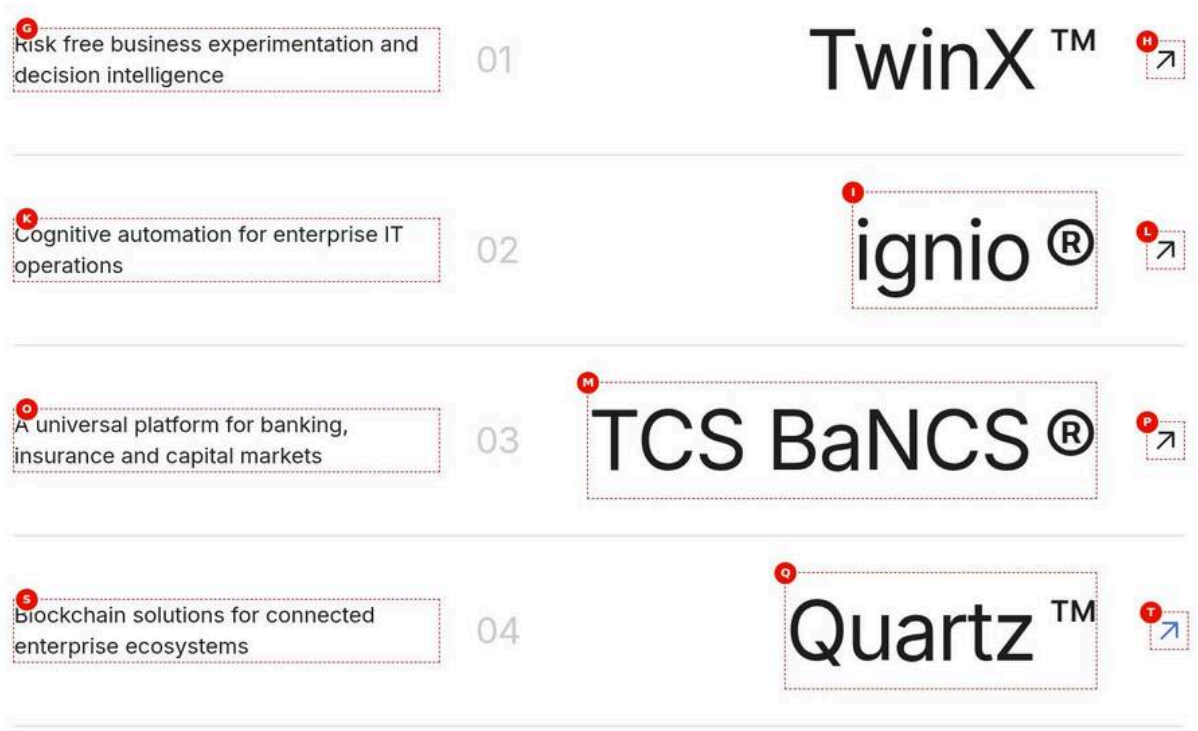

Figure 51: Trademark sign — Close-up of the product items at 1440 px: 01 TwinX™, 02 ignio®, 03 TCS BaNCS® and 04 Quartz™ with the signs raised at title size after each name, descriptions at the left and diagonal arrows. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-list-trademark.jpg)

Screenshot Details — Trademark sign

Item	Detail
Screenshot Name	`screenshots/table-list-trademark.jpg`
Screenshot Purpose	Trademark sign
Screen Description	Close-up of the product items at 1440 px: 01 TwinX™, 02 ignio®, 03 TCS BaNCS® and 04 Quartz™ with the signs raised at title size after each name, descriptions at the left and diagonal arrows.
Business Context	Legal marking of product names in the Products & Platforms showcase, reviewed with the legal team.
Author Objective	Select ™ Trademark or ® Registered per item instead of typing the sign into the title.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
(A)	Variation (Table List › Content)	Variation 3 - Description, number, large title, arrow	No	Layout and defaults	Pick by content	Options industries, solutions, products; others give industries
(B)	Heading (Table List › Content)	Products & Platforms	No	List heading	Short heading	None
(C)	Text (Table List › Call to action)	All Products & Platforms	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
(D)	Link (Table List › Call to action)	Select the page or enter /en/products	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
(E)	Style (Table List › Call to action)	Text link	No	Call to action style	Keep Variation default	Options “”, primary, secondary, tertiary
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
(F)	Trademark (Table List Item 1)	™ Trademark	No	Sign after the title	Use for registered names	Options “”, tm, r
G	Description (Table List Item 1)	Risk free business experimentation and decision intelligence	No	Item explanation	One sentence	None
H	Link (Table List Item 1)	Select the page or enter /en/products/twinx	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
I	Title (Table List Item 2)	ignio	No	Item name	Short name, no trademark sign	None
(J)	Trademark (Table List Item 2)	® Registered	No	Sign after the title	Use for registered names	Options “”, tm, r
K	Description (Table List Item 2)	Cognitive automation for enterprise IT operations	No	Item explanation	One sentence	None
L	Link (Table List Item 2)	Select the page or enter /en/products/ignio	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
M	Title (Table List Item 3)	TCS BaNCS	No	Item name	Short name, no trademark sign	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(N)	Trademark (Table List Item 3)	® Registered	No	Sign after the title	Use for registered names	Options "", tm, r
O	Description (Table List Item 3)	A universal platform for banking, insurance and capital markets	No	Item explanation	One sentence	None
P	Link (Table List Item 3)	Select the page or enter /en/products/bancs	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
Q	Title (Table List Item 4)	Quartz	No	Item name	Short name, no trademark sign	None
(R)	Trademark (Table List Item 4)	™ Trademark	No	Sign after the title	Use for registered names	Options "", tm, r
S	Description (Table List Item 4)	Blockchain solutions for connected enterprise ecosystems	No	Item explanation	One sentence	None
T	Link (Table List Item 4)	Select the page or enter /en/products/quartz	No	Item destination	Pick a page	Must start with /, #, http:// or https://

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The product titles TwinX™, ignio®, TCS BaNCS® and Quartz™ with the signs raised at title size after each name.
- **Rendering behaviour:** is appended to the title at its font size with line-height 0 and a start margin of 0.45rem, 0.525rem or 0.8438rem by breakpoint in Variation 3.
- **Publishing behaviour:** The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Business Rules

- tm gives ™, r gives ®, None adds nothing.
- The sign is part of the heading text.
- Do not type the sign in the Title.
- Trademark approval process: [To be confirmed: trademark approval process — owner: brand / legal].

Common Authoring Mistakes

Error	Root Cause	Resolution
TwinX shows ™ twice	Sign typed and selected	Remove it from the Title
Wrong sign for a registered name	™ chosen instead of ®	Select ® Registered after legal review

Troubleshooting

- **Symptoms:** The sign sits on the baseline at normal size.
- **Cause:** The sign was typed into the Title instead of selected.
- **Resolution:** Remove it from the Title and select Trademark.
- **Verification Steps:** The raised sign renders after the name.

Use Cases: Product and platform names.

Authoring Guidelines: Select Trademark on the item; do not type the sign in the Title.

Business Rules: `tm` adds ™, `r` adds ®; None adds nothing.

Rendering Rules: `<sup class="table-list-trademark">` appended to the title, at the title's font size with line-height 0 (the glyph is raised itself); extra start margin in Variation 3.

Responsive Behaviour: Scales with the title.

SEO Impact: The sign is part of the heading text.

Accessibility Compliance: Screen readers announce the sign as "trademark" or "registered" depending on the reader.

6.18.4 Authoring Experience

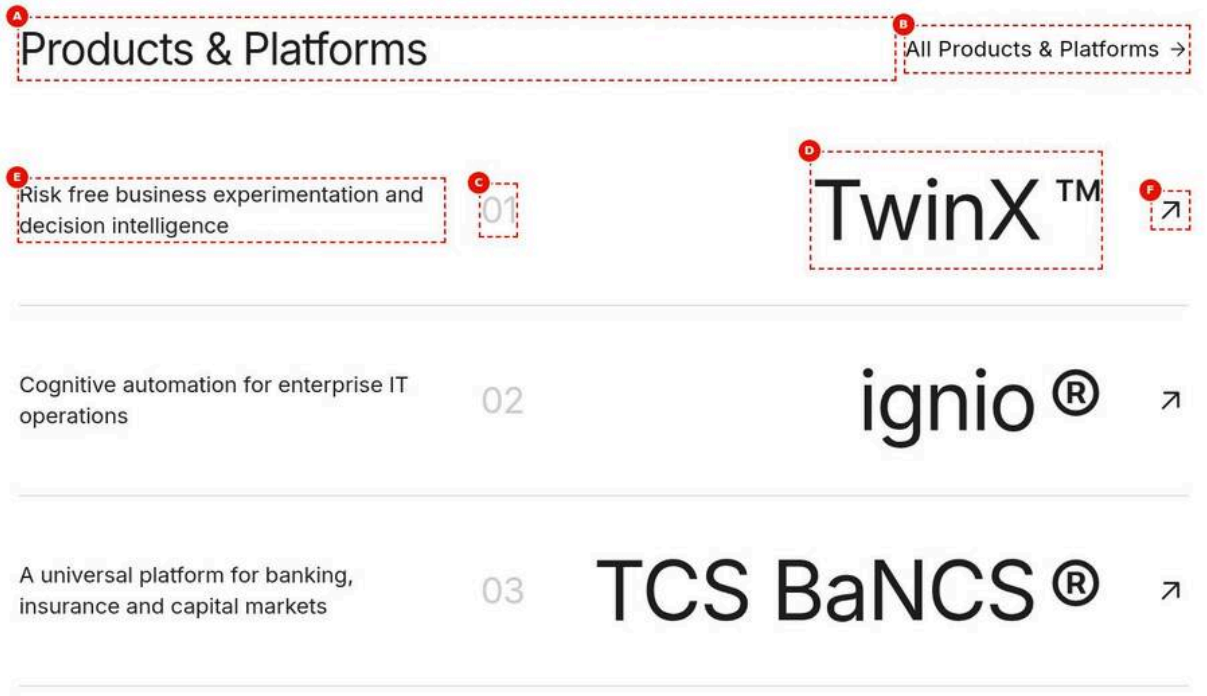

Figure 52: Universal Editor canvas — The Variation 3 Table List selected in Universal Editor at 1440 px, annotated: A the heading Products & Platforms, B the text link All Products & Platforms, C the number 01, D the title TwinX™, E its description, F the diagonal arrow, with three rows (TwinX, ignio, TCS BaNCS) and G the content tree with three Table List Item children. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/table-list-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/table-list-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas

Item	Detail
Screen Description	The Variation 3 Table List selected in Universal Editor at 1440 px, annotated: A the heading Products & Platforms, B the text link All Products & Platforms, C the number 01, D the title TwinX™, E its description, F the diagonal arrow, with three rows (TwinX, ignio, TCS BaNCS) and G the content tree with three Table List Item children.
Business Context	What an author sees when editing a Table List in Universal Editor: the canvas parts and the item children in the content tree.
Author Objective	Recognise the heading, call to action, item number, title, description, link and the content tree items of a Variation 3 list.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Table List	Yes	Adds the Table List to the page	Select the section in the content tree, choose Add (+) and pick Table List	Only components the section allows (section filter)
—	Variation (Table List › Content)	Variation 3 - Description, number, large title, arrow	No	Layout and defaults	Pick by content	Options industries, solutions, products; others give industries
—	Heading (Table List › Content)	Products & Platforms	No	List heading	Short heading	None
—	Text (Table List › Call to action)	All Products & Platforms	No	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”
—	Link (Table List › Call to action)	Select the page or enter /en/products	No	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
—	Trademark (Table List Item 1)	™ Trademark	No	Sign after the title	Use for registered names	Options “”, tm, r
—	Description (Table List Item 1)	Risk free business experimentation and decision intelligence	No	Item explanation	One sentence	None
—	Link (Table List Item 1)	Select the page or enter /en/products/twinx	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
—	Title (Table List Item 2)	ignio	No	Item name	Short name, no trademark sign	None
—	Trademark (Table List Item 2)	® Registered	No	Sign after the title	Use for registered names	Options “”, tm, r

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Description (Table List Item 2)	Cognitive automation for enterprise IT operations	No	Item explanation	One sentence	None
—	Link (Table List Item 2)	Select the page or enter /en/products/ignio	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Item (Content tree › Table List › Add (+))	Table List Item	Yes	Adds a Table List Item to the Table List	Select the Table List in the content tree, choose Add (+) and pick Table List Item	Only the item types the Table List allows
—	Title (Table List Item 3)	TCS BaNCS	No	Item name	Short name, no trademark sign	None
—	Trademark (Table List Item 3)	® Registered	No	Sign after the title	Use for registered names	Options "", tm, r
—	Description (Table List Item 3)	A universal platform for banking, insurance and capital markets	No	Item explanation	One sentence	None
—	Link (Table List Item 3)	Select the page or enter /en/products/bancs	No	Item destination	Pick a page	Must start with /, #, http:// or https://
—	Canvas (Universal Editor)	Select the Table List (blue outline)	No	—	—	None
—	Table List (Universal Editor › Content tree)	Shows the three Table List Item children (G: add, reorder and delete them there)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The selected Table List with a blue outline: A the heading Products & Platforms, B the All Products & Platforms text link, C the number 01, D the title TwinX™, E its description, F the diagonal arrow, and G the three Table List Item children in the content tree.
- **Rendering behaviour:** In edit mode motion is off, unlinked buttons are shown as non-focusable previews, and the rebuilt elements keep their instrumentation so each item stays selectable.
- **Publishing behaviour:** Edits save automatically; Publish sends the page to aem.page or aem.live. Product pages linked from items are published separately.

Business Rules

- Items are added, reordered and deleted in the content tree (G).
- Only Table List Item can be added; the legacy Table List Header can no longer be added.
- At most Maximum items (default 4) are shown.
- Item titles are one level below the block heading.

Common Authoring Mistakes

Error	Root Cause	Resolution
Cannot add a header item	The legacy Table List Header is no longer addable	Use the block Heading and Call to action fields

Error	Root Cause	Resolution
A new item shows TwinX	TwinX is the default title	Overwrite Title

Troubleshooting

- **Symptoms:** Selecting a row on the canvas does not open its item panel.
- **Cause:** The editor instrumentation was lost after a code change.
- **Resolution:** Select the item in the content tree and report the defect to L3.
- **Verification Steps:** Clicking a row selects its Table List Item.

Annotations

- A = Heading (Content tab › Heading, level from Heading Type).
- B = Call to action (Call to action tab › Text, Link, Style).
- C = Item number (Table List Item › Number, or the automatic 01, 02 …; shown per the Numbers setting).
- D = Item title (Table List Item › Title) with the Trademark sign.
- E = Item description (Table List Item › Description).
- F = Item link (Table List Item › Link and Button text; arrow, diagonal arrow or button per Item link).
- G = Items in the content tree (add, reorder and delete Table List Items; at most Maximum items are shown).

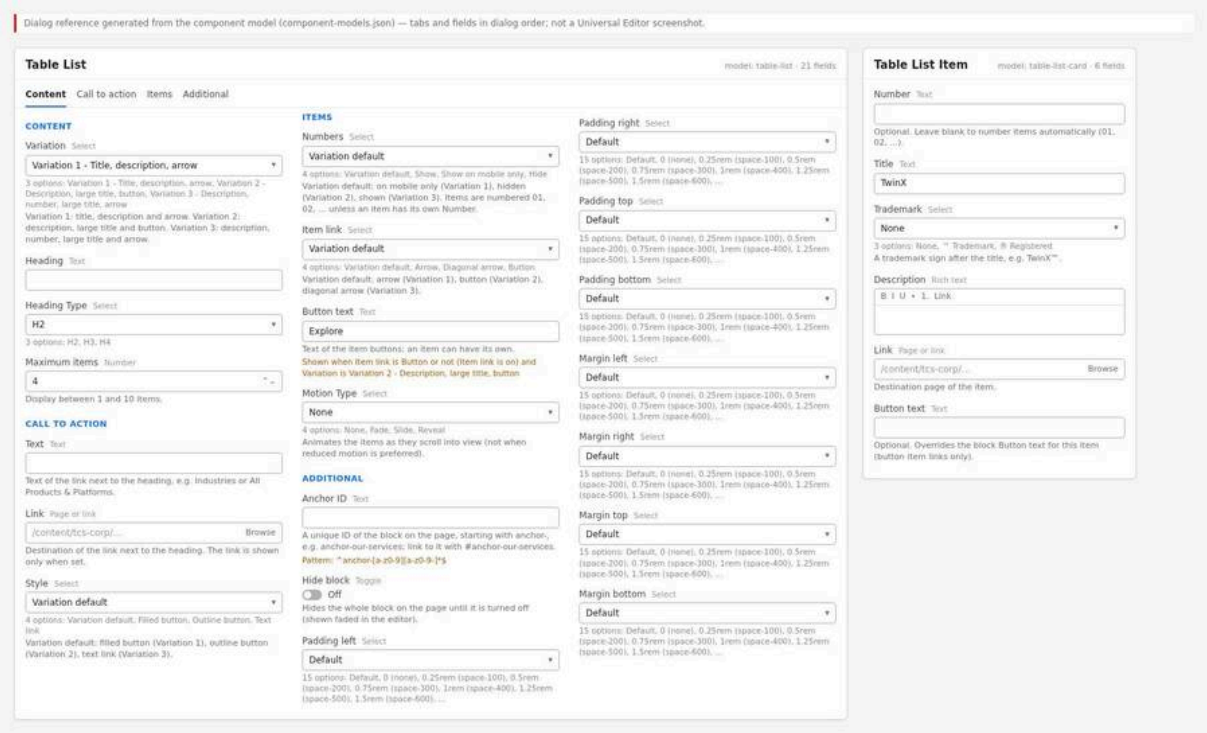

Figure 53: Properties panel — The properties panel of the Table List with the tabs Content, Call to action, Items and Additional, and, for a selected item, the Table List Item panel with Number, Title, Trademark, Description, Link and Button text. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/table-list-properties-panel.jpg)

Block tabs:

- **Content:** Variation (Variation 1 / 2 / 3), Heading (text), Heading Type (H2, H3, H4), Maximum items (number, 4; 1 to 10).
- **Call to action:** Text, Link (page picker or URL), Style (Variation default, Filled button, Outline button, Text link).

- **Items:** Numbers (Variation default, Show, Show on mobile only, Hide), Item link (Variation default, Arrow, Diagonal arrow, Button), Button text (shown for Button item links, including Variation 2 with Variation default), Motion Type (None, Fade, Slide, Reveal).
- **Additional:** Anchor ID, Hide block, the 4 padding and 4 margin selects.

Item panel (Table List Item): Number, Title, Trademark (None, ™ Trademark, ® Registered), Description (rich text), Link, Button text.

6.18.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites select the page under `/content/tcs-corp/{country}/{language}/` and choose **Edit**.

Expected Result: The page opens in Universal Editor.

Steps — Open the page: The Sites console with the page selected and Edit highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	/content/tcs-corp/us/en
2	AEM Sites console	Select	The page that gets the list
3	AEM Sites console toolbar	Edit	Opens the page in Universal Editor

Step 2 — Add the Table List

Action: Select a section, choose **Add** (+) and select **Table List**.

Expected Result: A Table List (Variation 1, Maximum items 4, Button text "Explore") appears, without items.

Steps — Add the block: The section's Add menu with Table List highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section
2	Section › Add (+)	Component	Table List

Step 3 — Choose the variation and heading

Action: In the Content tab choose Variation, type the Heading, choose Heading Type (H2 unless the section already has an H2 the list belongs under) and set Maximum items.

Expected Result: The canvas shows the heading at the chosen level and the variation's layout.

Steps — Content tab: Variation 3 selected, Heading "Products & Platforms", Heading Type H2, Maximum items 6.

Step	Where	Field / control	Value / action
1	Table List › Content	Variation	Variation 3 - Description, number, large title, arrow
2	Table List › Content	Heading	Products & Platforms
3	Table List › Content	Heading Type	H2
4	Table List › Content	Maximum items	6

Step 4 — Add the call to action

Action: In the Call to action tab enter Text, pick or type the Link and choose a Style (or keep Variation default).

Expected Result: The call to action appears next to the heading.

Steps — Call to action tab: Text "All Products & Platforms", Link /content/tcs-corp/us/en/products, Style Variation default.

Step	Where	Field / control	Value / action
1	Table List › Call to action	Text	All Products & Platforms
2	Table List › Call to action	Link	Select the page /content/tcs-corp/us/en/products
3	Table List › Call to action	Style	Variation default

Step 5 — Set the item options

Action: In the Items tab choose Numbers, Item link, Button text (if buttons) and Motion Type.

Expected Result: The canvas updates the numbers and links (motion is not played in the editor).

Steps — Items tab: Numbers Variation default, Item link Variation default, Motion Type Fade.

Step	Where	Field / control	Value / action
1	Table List › Items	Numbers	Variation default
2	Table List › Items	Item link	Variation default
3	Table List › Items	Motion Type	Fade

Step 6 — Add items

Action: Select the block in the content tree, choose **Add** and select **Table List Item**. Repeat for each item.

Expected Result: Each new item shows the sample title "TwinX" and description.

Steps — Add items: The content tree Add menu of the Table List with Table List Item.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Table List	Select the block
2	Content tree › Table List › Add (+)	Item	Table List Item
3	Content tree › Table List › Add (+)	Item	Table List Item (repeat for each item)

Step 7 — Fill each item

Action: Select the item and fill Number (optional), Title, Trademark, Description, Link and Button text (optional, button item links only).

Expected Result: The item renders with its number, title, sign, description and link.

Steps — Item fields: The item panel with Title "TwinX", Trademark ™, Description and Link filled.

Step	Where	Field / control	Value / action
1	Table List Item 1	Number	Leave empty (automatic 01)
2	Table List Item 1	Title	TwinX
3	Table List Item 1	Trademark	™ Trademark
4	Table List Item 1	Description	Risk free business experimentation and decision intelligence
5	Table List Item 1	Link	Select the page /content/tcs-corp/us/en/products/twinx

Step	Where	Field / control	Value / action
6	Table List Item 1	Button text	Leave empty (arrow item link)

Step 8 — Order the items

Action: Drag items in the content tree into the display order; delete unneeded ones.

Expected Result: The canvas follows the order; only the first Maximum items are shown.

Steps — Reorder items: An item being dragged in the content tree.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Table List Item	Drag the item to its position in the list
2	Universal Editor › Content tree	Table List Item › Delete	Remove items that are not needed

Step 9 — Set the Additional options (optional)

Action: Set an Anchor ID and spacing if needed.

Expected Result: Invalid Anchor IDs are rejected with the validation message.

Steps — Additional tab: Anchor ID anchor-products and Margin top 3rem.

Step	Where	Field / control	Value / action
1	Table List › Additional	Anchor ID	anchor-products
2	Table List › Additional	Margin top	3rem (space-1200)

Step 10 — Preview

Action: Switch to Preview mode, then preview the page (AEM Sidekick or the `.aem.page` URL).

Expected Result: The list renders with motion (if chosen) and working links.

Steps — Preview: The preview page with the Table List at desktop width.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	AEM Sidekick	Preview	Opens the page on https://main–tcs-corp–sradha-tcs.aem.page/
3	Preview page	Check	The Table List at desktop width

Step 11 — Validate

Action: Run the Validation Process checklist at the three breakpoints.

Expected Result: All checks pass.

Steps — Validate: The mobile view with numbers and stacked items.

Step	Where	Field / control	Value / action
1	Browser	Screen width	375 px (mobile)
2	Preview page	Check	Items stacked, with the numbers 01, 02, 03 before the titles

Step	Where	Field / control	Value / action
3	Preview page	Check	Repeat at tablet and desktop widths (Validation Process checklist)

Step 12 — Publish

Action: Publish the page from Universal Editor or the Sites console.

Expected Result: The live page shows the Table List.

Steps — Publish: The Publish dialog with the page selected.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Opens the Publish dialog
2	Publish dialog	Pages	The page selected
3	Publish dialog	Publish	Publish to Live

Preview Process

1. Changes save automatically in Universal Editor; Preview mode shows the page without the editor outlines (motion runs in Preview mode, not in edit mode).
2. Preview the page and open `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}`.
3. Check every link destination on the preview.

Publishing Process

1. Publish the target pages of the item links first (avoid links to unpublished pages).
2. Publish the page.
3. Check the live URL.

Validation Process

- ☐ The heading level fits the page outline; item titles are one level below it.
- ☐ The call to action shows only when a Link is set, with the right style and text.
- ☐ Every item has a Link; arrows are clickable across the whole row; buttons show the right text.
- ☐ Numbers follow the Numbers setting (mobile-only numbers disappear from 600px).
- ☐ Trademark signs are correct and not typed twice.
- ☐ No more than Maximum items are shown, and the right ones.
- ☐ Desktop / tablet / mobile layouts match the variation.
- ☐ Motion plays once on scroll and not with reduced motion turned on in the operating system.
- ☐ Keyboard: each item link or button reachable with a visible focus ring.

Rollback Process

1. Undo in Universal Editor, or restore a page version (Sites console › Timeline) and publish again.
2. Turn on Hide block and publish to remove the list temporarily.
3. Code defects: the development team reverts the change on `main`.

The walkthroughs below repeat the steps above for each variation of chapter 6.18.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Industries (Variation 1: title, description, arrow)

Reproduces the screenshot `screenshots/table-list-industries.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults (filled call to action, numbers on mobile only, arrows).

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Heading** (A) = Industries we serve.

Expected Result: The h2 heading "Industries we serve" appears at the left of the header.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (B) = View all; **Link** (C) = Select the page or enter /en/industries.

Expected Result: A filled "View all" button linking to /en/industries appears at the right of the heading.

Step 5 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 6 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Title** (D) = Banking; **Description** (E) = Core modernisation, payments and digital channels for banks of every size; **Link** (F) = Select the page or enter /en/industries/banking.

Expected Result: The first row shows Banking, its description and an arrow linking to /en/industries/banking.

Step 7 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 8 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (G) = Retail; **Description** (H) = Connected commerce from the store to the supply chain; **Link** (I) = Select the page or enter /en/industries/retail.

Expected Result: The second row shows Retail with its description and an arrow to /en/industries/retail.

Step 9 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 10 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (J) = Manufacturing; **Description** (K) = Smart factories, product engineering and resilient supply chains; **Link** (L) = Select the page or enter /en/industries/manufacturing.

Expected Result: The third row shows Manufacturing with its description and an arrow to /en/industries/manufacturing.

Step 11 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 12 — Fill in Table List Item 4

Action: Select **Table List Item 4** in the content tree and enter in the properties panel: **Title** (M) = Insurance; **Description** (N) = Claims, underwriting and distribution on modern platforms; **Link** (O) = Select the page or enter /en/industries/insurance.

Expected Result: The fourth row shows Insurance with its description and an arrow; it is the last row, without a divider.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four rows with the semibold titles Banking, Retail, Manufacturing and Insurance, a description in the middle column and a grey right arrow; the last row has no divider.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 15 — Verify

Action: On the live page check: All four rows render on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Solutions (Variation 2: description, large title, button)

Reproduces the screenshot `screenshots/table-list-solutions.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults.

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Variation** (A) = Variation 2 - Description, large title, button; **Heading** (B) = Our transformation solutions.

Expected Result: Variation 2 moves the description to the left and the title to large type; the heading "Our transformation solutions" appears.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (C) = All solutions; **Link** (D) = Select the page or enter /en/services; **Style** (E) = Outline button.

Expected Result: An outline "All solutions" button linking to /en/services appears beside the heading.

Step 5 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 6 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Title** (F) = Cognitive operations; **Description** (G) = Run operations that sense and respond to change; **Link** (H) = Select the page or enter /en/services/consulting.

Expected Result: Cognitive operations appears as a 4rem title with its description and an outline Explore button to /en/services/consulting.

Step 7 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 8 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (I) = Enterprise cloud; **Description** (J) = Move, modernise and run workloads on any cloud; **Link** (K) = Select the page or enter /en/services/cloud.

Expected Result: Enterprise cloud appears with its description and an Explore button to /en/services/cloud.

Step 9 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 10 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (L) = Cybersecurity; **Description** (M) = Protect identities, data and operations; **Link** (N) = Select the page or enter /en/services/cybersecurity.

Expected Result: Cybersecurity appears with its description and an Explore button to /en/services/cybersecurity.

Step 11 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 12 — Fill in Table List Item 4

Action: Select **Table List Item 4** in the content tree and enter in the properties panel: **Title** (O) = AI and data; **Description** (P) = Turn data into decisions with enterprise AI; **Link** (Q) = Select the page or enter /en/services/ai.

Expected Result: AI and data appears as the last row with an Explore button to /en/services/ai.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Rows with a short description at the left, a 4rem semibold solution name right-aligned in the middle and an outline Explore button at the right; the heading with an outline All solutions button.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 15 — Verify

Action: On the live page check: The button reads the intended text.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Products (Variation 3: description, number, large title, arrow)

Reproduces the screenshot `screenshots/table-list-products.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults.

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Variation** (A) = Variation 3 - Description, number, large title, arrow; **Heading** (B) = Products & Platforms.

Expected Result: Variation 3 switches to numbered large titles and the heading “Products & Platforms” appears in regular weight.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (C) = All Products & Platforms; **Link** (D) = Select the page or enter /en/products; **Style** (E) = Text link.

Expected Result: A text link “All Products & Platforms” to /en/products appears beside the heading.

Step 5 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 6 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Trademark** (F) = ™ Trademark; **Description** (G) = Risk free business experimentation and decision intelligence; **Link** (H) = Select the page or enter /en/products/twinx.

Expected Result: The row shows 01 TwinX with the ™ sign, the description and a diagonal arrow to /en/products/twinx.

Step 7 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 8 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (I) = ignio; **Trademark** (J) = ® Registered; **Description** (K) = Cognitive automation for enterprise IT operations; **Link** (L) = Select the page or enter /en/products/ignio.

Expected Result: The row shows 02 ignio® with its description and a diagonal arrow to /en/products/ignio.

Step 9 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 10 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (M) = TCS BaNCS; **Trademark** (N) = ® Registered; **Description** (O) = A universal platform for banking, insurance and capital markets; **Link** (P) = Select the page or enter /en/products/bancs.

Expected Result: The row shows 03 TCS BaNCS® with its description and a diagonal arrow to /en/products/bancs.

Step 11 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 12 — Fill in Table List Item 4

Action: Select **Table List Item 4** in the content tree and enter in the properties panel: **Title** (Q) = Quartz; **Trademark** (R) = ™ Trademark; **Description** (S) = Blockchain solutions for connected enterprise ecosystems; **Link** (T) = Select the page or enter /en/products/quartz.

Expected Result: The row shows 04 Quartz™ with its description and a diagonal arrow to /en/products/quartz.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Rows with the description at the left, a light grey number and a 5.625rem product name (01 TwinX™, 02 ignio®, 03 TCS BaNCS®, 04 Quartz™) and a diagonal arrow; 2px light grey dividers; the regular-weight heading with the All Products & Platforms text link.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 15 — Verify

Action: On the live page check: 01 to 04 show before the product names.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Call to action style: Filled button

Reproduces the screenshot `screenshots/table-list-cta-filled.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults.

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Heading** (A) = Industries we serve.

Expected Result: The heading "Industries we serve" appears.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (B) = View all industries; **Link** (C) = Select the page or enter /en/industries; **Style** (D) = Filled button.

Expected Result: A filled "View all industries" button appears at the right of the heading.

Step 5 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 6 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Title** (E) = Banking; **Description** (F) = Core modernisation, payments and digital channels for banks of every size; **Link** (G) = Select the page or enter /en/industries/banking.

Expected Result: The Banking row with its description and arrow appears below the header.

Step 7 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 8 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (H) = Retail; **Description** (I) = Connected commerce from the store to the supply chain; **Link** (J) = Select the page or enter /en/industries/retail.

Expected Result: The Retail row appears as the second and last row.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The heading "Industries we serve" with a filled brand button "View all industries" at the right.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 11 — Verify

Action: On the live page check: The filled button renders and opens /en/industries.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Call to action style: Outline button

Reproduces the screenshot `screenshots/table-list-cta-outline.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults.

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Variation** (A) = Variation 2 - Description, large title, button; **Heading** (B) = Our transformation solutions.

Expected Result: Variation 2 moves the description to the left and the title to large type; the heading "Our transformation solutions" appears.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (C) = All solutions; **Link** (D) = Select the page or enter /en/services; **Style** (E) = Outline button.

Expected Result: An outline "All solutions" button linking to /en/services appears beside the heading.

Step 5 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 6 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Title** (F) = Cognitive operations; **Description** (G) = Run operations that sense and respond to change; **Link** (H) = Select the page or enter /en/services/consulting.

Expected Result: Cognitive operations appears as a 4rem title with its description and an outline Explore button to /en/services/consulting.

Step 7 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 8 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (I) = Enterprise cloud; **Description** (J) = Move, modernise and run workloads on any cloud; **Link** (K) = Select the page or enter /en/services/cloud.

Expected Result: Enterprise cloud appears with its description and an Explore button to /en/services/cloud.

Step 9 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 10 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (L) = Cybersecurity; **Description** (M) = Protect identities, data and operations; **Link** (N) = Select the page or enter /en/services/cybersecurity.

Expected Result: Cybersecurity appears with its description and an Explore button to /en/services/cybersecurity.

Step 11 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 12 — Fill in Table List Item 4

Action: Select **Table List Item 4** in the content tree and enter in the properties panel: **Title** (O) = AI and data; **Description** (P) = Turn data into decisions with enterprise AI; **Link** (Q) = Select the page or enter /en/services/ai.

Expected Result: AI and data appears as the last row with an Explore button to /en/services/ai.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The heading "Our transformation solutions" with an outline "All solutions" button at the right.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 15 — Verify

Action: On the live page check: All solutions opens the services page on aem.live.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Call to action style: Text link

Reproduces the screenshot `screenshots/table-list-cta-text-link.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults.

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Variation** (A) = Variation 3 - Description, number, large title, arrow; **Heading** (B) = Products & Platforms.

Expected Result: Variation 3 switches to numbered large titles and the heading "Products & Platforms" appears in regular weight.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (C) = All Products & Platforms; **Link** (D) = Select the page or enter /en/products; **Style** (E) = Text link.

Expected Result: A text link "All Products & Platforms" to /en/products appears beside the heading.

Step 5 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 6 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Trademark** (F) = ™ Trademark; **Description** (G) = Risk free business experimentation and decision intelligence; **Link** (H) = Select the page or enter /en/products/twinx.

Expected Result: The row shows 01 TwinX with the ™ sign, the description and a diagonal arrow to /en/products/twinx.

Step 7 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 8 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (I) = ignio; **Trademark** (J) = ® Registered; **Description** (K) = Cognitive automation for enterprise IT operations; **Link** (L) = Select the page or enter /en/products/ignio.

Expected Result: The row shows 02 ignio® with its description and a diagonal arrow to /en/products/ignio.

Step 9 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 10 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (M) = TCS BaNCS; **Trademark** (N) = ® Registered; **Description** (O) = A universal platform for banking, insurance and capital markets; **Link** (P) = Select the page or enter /en/products/bancs.

Expected Result: The row shows 03 TCS BaNCS® with its description and a diagonal arrow to /en/products/bancs.

Step 11 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 12 — Fill in Table List Item 4

Action: Select **Table List Item 4** in the content tree and enter in the properties panel: **Title** (Q) = Quartz; **Trademark** (R) = ™ Trademark; **Description** (S) = Blockchain solutions for connected enterprise ecosystems; **Link** (T) = Select the page or enter /en/products/quartz.

Expected Result: The row shows 04 Quartz™ with its description and a diagonal arrow to /en/products/quartz.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The regular-weight heading "Products & Platforms" with the text link "All Products & Platforms" at the right.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 15 — Verify

Action: On the live page check: The text link renders next to the heading and opens /en/products.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Numbers: Show

Reproduces the screenshot `screenshots/table-list-numbers-show.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults (filled call to action, numbers on mobile only, arrows).

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Heading** (A) = Industries we serve.

Expected Result: The h2 heading "Industries we serve" appears at the left of the header.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (B) = View all; **Link** (C) = Select the page or enter /en/industries.

Expected Result: A filled "View all" button linking to /en/industries appears at the right of the heading.

Step 5 — Fill in Table List › Items

Action: Select **Table List** in the content tree and open the **Items** tab of the properties panel. Enter: **Numbers** (D) = Show.

Expected Result: Numbers Show is selected; 01, 02 and 03 appear before the titles at every width.

Step 6 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 7 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Title** (E) = Banking; **Description** (F) = Core modernisation, payments and digital channels for banks of every size; **Link** (G) = Select the page or enter /en/industries/banking.

Expected Result: The first row shows Banking, its description and an arrow linking to /en/industries/banking.

Step 8 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 9 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (H) = Retail; **Description** (I) = Connected commerce from the store to the supply chain; **Link** (J) = Select the page or enter /en/industries/retail.

Expected Result: The second row shows Retail with its description and an arrow to /en/industries/retail.

Step 10 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 11 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (K) = Manufacturing; **Description** (L) = Smart factories, product engineering and resilient supply chains; **Link** (M) = Select the page or enter /en/industries/manufacturing.

Expected Result: The third row shows Manufacturing with its description and an arrow; it is the last row, without a divider.

Step 12 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three rows with 01, 02 and 03 before the titles Banking, Retail and Manufacturing at desktop width, descriptions in the middle and arrows at the right.

Step 13 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 14 — Verify

Action: On the live page check: 01 to 03 appear at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — Numbers: Show on mobile only

Reproduces the screenshot `screenshots/table-list-numbers-mobile.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults (filled call to action, numbers on mobile only, arrows).

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Heading** (A) = Industries we serve.

Expected Result: The h2 heading "Industries we serve" appears at the left of the header.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (B) = View all; **Link** (C) = Select the page or enter /en/industries.

Expected Result: A filled "View all" button linking to /en/industries appears at the right of the heading.

Step 5 — Fill in Table List › Items

Action: Select **Table List** in the content tree and open the **Items** tab of the properties panel. Enter: **Numbers** (D) = Show on mobile only.

Expected Result: Numbers Show on mobile only is selected; the canvas at desktop width shows no numbers.

Step 6 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 7 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Title** (E) = Banking; **Description** (F) = Core modernisation, payments and digital channels for banks of every size; **Link** (G) = Select the page or enter /en/industries/banking.

Expected Result: The first row shows Banking, its description and an arrow linking to /en/industries/banking.

Step 8 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 9 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (H) = Retail; **Description** (I) = Connected commerce from the store to the supply chain; **Link** (J) = Select the page or enter /en/industries/retail.

Expected Result: The second row shows Retail with its description and an arrow to /en/industries/retail.

Step 10 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 11 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (K) = Manufacturing; **Description** (L) = Smart factories, product engineering and resilient supply chains; **Link** (M) = Select the page or enter /en/industries/manufacturing.

Expected Result: The third row shows Manufacturing with its description and an arrow; it is the last row, without a divider.

Step 12 — Preview

Action: Screen width: 375 px (left) and 1024 px (right).

Expected Result: At 375 px the numbers 01 to 03 appear; at 1024 px they are hidden.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Side by side: at 375 px the rows read 01 Banking, 02 Retail and 03 Manufacturing; at 1024 px the same rows show only Banking, Retail and Manufacturing.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 15 — Verify

Action: On the live page check: Numbers appear at 375 px only.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — Numbers: Hide

Reproduces the screenshot `screenshots/table-list-numbers-hide.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults.

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Variation** (A) = Variation 3 - Description, number, large title, arrow; **Heading** (B) = Products & Platforms.

Expected Result: Variation 3 switches to numbered large titles and the heading "Products & Platforms" appears in regular weight.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (C) = All Products & Platforms; **Link** (D) = Select the page or enter /en/products.

Expected Result: A text link "All Products & Platforms" to /en/products appears beside the heading.

Step 5 — Fill in Table List › Items

Action: Select **Table List** in the content tree and open the **Items** tab of the properties panel. Enter: **Numbers** (E) = Hide.

Expected Result: Numbers Hide is selected; the numbers disappear from the rows.

Step 6 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 7 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Trademark** (F) = ™ Trademark; **Description** (G) = Risk free business experimentation and decision intelligence; **Link** (H) = Select the page or enter /en/products/twinx.

Expected Result: The row shows 01 TwinX with the ™ sign, the description and a diagonal arrow to /en/products/twinx.

Step 8 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 9 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (I) = ignio; **Trademark** (J) = ® Registered; **Description** (K) = Cognitive automation for enterprise IT operations; **Link** (L) = Select the page or enter /en/products/ignio.

Expected Result: The row shows 02 ignio® with its description and a diagonal arrow to /en/products/ignio.

Step 10 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 11 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (M) = TCS BaNCS; **Trademark** (N) = ® Registered; **Description** (O) = A universal platform for banking, insurance and capital markets; **Link** (P) = Select the page or enter /en/products/bancs.

Expected Result: The last row shows TCS BaNCS® with its description and a diagonal arrow to /en/products/bancs.

Step 12 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three product rows (TwinX™, ignio®, TCS BaNCS®) with the description at the left, the large title and the diagonal arrow, but no numbers.

Step 13 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 14 — Verify

Action: On the live page check: No numbers at 375 px or 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 10 — Item link: Arrow

Reproduces the screenshot `screenshots/table-list-item-arrow.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults.

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Heading** (A) = Industries we serve.

Expected Result: The heading “Industries we serve” appears without a call to action.

Step 4 — Fill in Table List › Items

Action: Select **Table List** in the content tree and open the **Items** tab of the properties panel. Enter: **Item link** (B) = Arrow.

Expected Result: Item link Arrow is selected; each row shows a grey right arrow.

Step 5 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 6 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Title** (C) = Banking; **Description** (D) = Core modernisation, payments and digital channels for banks of every size; **Link** (E) = Select the page or enter /en/industries/banking.

Expected Result: The Banking row with description and arrow to /en/industries/banking appears.

Step 7 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 8 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (F) = Retail; **Description** (G) = Connected commerce from the store to the supply chain; **Link** (H) = Select the page or enter /en/industries/retail.

Expected Result: The Retail row appears with its arrow to /en/industries/retail.

Step 9 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 10 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (I) = Manufacturing; **Description** (J) = Smart factories, product engineering and resilient supply chains; **Link** (K) = Select the page or enter /en/industries/manufacturing.

Expected Result: The Manufacturing row appears as the last row, without a divider.

Step 11 — Preview

Action: Action: Point at the first item (Banking).

Expected Result: Pointing at Banking turns its arrow brand blue and moves it slightly right.

Step 12 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The heading “Industries we serve” alone, then three rows; the hovered Banking row has its arrow in brand blue, moved slightly right.

Step 13 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 14 — Verify

Action: On the live page check: Tab moves from row to row with a visible focus ring.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 11 — Item link: Diagonal arrow

Reproduces the screenshot `screenshots/table-list-item-diagonal-arrow.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults.

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Variation** (A) = Variation 3 - Description, number, large title, arrow; **Heading** (B) = Products & Platforms.

Expected Result: Variation 3 switches to numbered large titles and the heading "Products & Platforms" appears in regular weight.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (C) = All Products & Platforms; **Link** (D) = Select the page or enter /en/products; **Style** (E) = Text link.

Expected Result: A text link "All Products & Platforms" to /en/products appears beside the heading.

Step 5 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 6 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Trademark** (F) = ™ Trademark; **Description** (G) = Risk free business experimentation and decision intelligence; **Link** (H) = Select the page or enter /en/products/twinx.

Expected Result: The row shows 01 TwinX with the ™ sign, the description and a diagonal arrow to /en/products/twinx.

Step 7 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 8 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (I) = ignio; **Trademark** (J) = ® Registered; **Description** (K) = Cognitive automation for enterprise IT operations; **Link** (L) = Select the page or enter /en/products/ignio.

Expected Result: The row shows 02 ignio® with its description and a diagonal arrow to /en/products/ignio.

Step 9 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 10 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (M) = TCS BaNCS; **Trademark** (N) = ® Registered; **Description** (O) = A universal platform for banking, insurance and capital markets; **Link** (P) = Select the page or enter /en/products/bancs.

Expected Result: The row shows 03 TCS BaNCS® with its description and a diagonal arrow to /en/products/bancs.

Step 11 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 12 — Fill in Table List Item 4

Action: Select **Table List Item 4** in the content tree and enter in the properties panel: **Title** (Q) = Quartz; **Trademark** (R) = ™ Trademark; **Description** (S) = Blockchain solutions for connected enterprise ecosystems; **Link** (T) = Select the page or enter /en/products/quartz.

Expected Result: The row shows 04 Quartz™ with its description and a diagonal arrow to /en/products/quartz.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The TwinX™ row: description at the left, 01 and the large product name, and an up-right arrow at the right.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 15 — Verify

Action: On the live page check: The whole row navigates to /en/products/twinx.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 12 — Item link: Button

Reproduces the screenshot `screenshots/table-list-item-button.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults.

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Variation** (A) = Variation 2 - Description, large title, button; **Heading** (B) = Our transformation solutions.

Expected Result: Variation 2 moves the description to the left and the title to large type; the heading “Our transformation solutions” appears.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (C) = All solutions; **Link** (D) = Select the page or enter /en/services; **Style** (E) = Outline button.

Expected Result: An outline "All solutions" button linking to /en/services appears beside the heading.

Step 5 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 6 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Title** (F) = Cognitive operations; **Description** (G) = Run operations that sense and respond to change; **Link** (H) = Select the page or enter /en/services/consulting.

Expected Result: Cognitive operations appears as a 4rem title with its description and an outline Explore button to /en/services/consulting.

Step 7 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 8 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (I) = Enterprise cloud; **Description** (J) = Move, modernise and run workloads on any cloud; **Link** (K) = Select the page or enter /en/services/cloud.

Expected Result: Enterprise cloud appears with its description and an Explore button to /en/services/cloud.

Step 9 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 10 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (L) = Cybersecurity; **Description** (M) = Protect identities, data and operations; **Link** (N) = Select the page or enter /en/services/cybersecurity.

Expected Result: Cybersecurity appears with its description and an Explore button to /en/services/cybersecurity.

Step 11 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree with the sample title TwinX.

Step 12 — Fill in Table List Item 4

Action: Select **Table List Item 4** in the content tree and enter in the properties panel: **Title** (O) = AI and data; **Description** (P) = Turn data into decisions with enterprise AI; **Link** (Q) = Select the page or enter /en/services/ai.

Expected Result: AI and data appears as the last row with an Explore button to /en/services/ai.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The Cognitive operations row with the description at the left, the 4rem title and an outline Explore button at the right.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 15 — Verify

Action: On the live page check: The Explore button opens the consulting page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 13 — Motion: None

Reproduces the screenshot `screenshots/table-list-motion-none.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults (filled call to action, numbers on mobile only, arrows).

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Heading** (A) = Industries we serve.

Expected Result: The h2 heading “Industries we serve” appears at the left of the header.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (B) = View all; **Link** (C) = Select the page or enter /en/industries.

Expected Result: A filled “View all” button linking to /en/industries appears at the right of the heading.

Step 5 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 6 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Title** (D) = Banking; **Description** (E) = Core modernisation, payments and digital channels for banks of every size; **Link** (F) = Select the page or enter /en/industries/banking.

Expected Result: The first row shows Banking, its description and an arrow linking to /en/industries/banking.

Step 7 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 8 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (G) = Retail; **Description** (H) = Connected commerce from the store to the supply chain; **Link** (I) = Select the page or enter /en/industries/retail.

Expected Result: The second row shows Retail with its description and an arrow to /en/industries/retail.

Step 9 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 10 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (J) = Manufacturing; **Description** (K) = Smart factories, product engineering and resilient supply chains; **Link** (L) = Select the page or enter /en/industries/manufacturing.

Expected Result: The third row shows Manufacturing with its description and an arrow to /en/industries/manufacturing.

Step 11 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 12 — Fill in Table List Item 4

Action: Select **Table List Item 4** in the content tree and enter in the properties panel: **Title** (M) = Insurance; **Description** (N) = Claims, underwriting and distribution on modern platforms; **Link** (O) = Select the page or enter /en/industries/insurance.

Expected Result: The fourth row shows Insurance with its description and an arrow; it is the last row, without a divider.

Step 13 — Fill in Table List › Items

Action: Select **Table List** in the content tree and open the **Items** tab of the properties panel. Enter: **Motion Type** (P) = None (the default; keep it).

Expected Result: Motion Type stays None (default); all rows show at once.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The heading with the filled View all button and four industry rows, all visible immediately.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 16 — Verify

Action: On the live page check: The block has the class motion-none and all rows show at once.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 14 — Motion: Fade

Reproduces the screenshot `screenshots/table-list-motion-fade.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults.

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Heading** (A) = Industries we serve.

Expected Result: The heading "Industries we serve" appears.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (B) = View all; **Link** (C) = Select the page or enter /en/industries.

Expected Result: A filled "View all" button to /en/industries appears beside the heading.

Step 5 — Fill in Table List › Items

Action: Select **Table List** in the content tree and open the **Items** tab of the properties panel. Enter: **Motion Type** (D) = Fade.

Expected Result: Motion Type Fade is selected; the canvas shows all rows because motion is off in edit mode.

Step 6 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 7 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Title** (E) = Banking; **Description** (F) = Core modernisation, payments and digital channels for banks of every size; **Link** (G) = Select the page or enter /en/industries/banking.

Expected Result: The first row shows Banking, its description and an arrow linking to /en/industries/banking.

Step 8 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 9 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (H) = Retail; **Description** (I) = Connected commerce from the store to the supply chain; **Link** (J) = Select the page or enter /en/industries/retail.

Expected Result: The second row shows Retail with its description and an arrow to /en/industries/retail.

Step 10 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 11 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (K) = Manufacturing; **Description** (L) = Smart factories, product engineering and resilient supply chains; **Link** (M) = Select the page or enter /en/industries/manufacturing.

Expected Result: The third row shows Manufacturing with its description and an arrow to /en/industries/manufacturing.

Step 12 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 13 — Fill in Table List Item 4

Action: Select **Table List Item 4** in the content tree and enter in the properties panel: **Title** (N) = Insurance; **Description** (O) = Claims, underwriting and distribution on modern platforms; **Link** (P) = Select the page or enter /en/industries/insurance.

Expected Result: The fourth row shows Insurance with its description and an arrow; it is the last row, without a divider.

Step 14 — Preview

Action: Action: Scroll the list into view; the image is taken while the items animate one after the other.

Expected Result: Scrolling the list into view animates the rows; the capture shows them in successive animation steps.

Step 15 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four industry rows in successive states: Banking fully visible, Retail and Manufacturing partly faded in and Insurance still nearly transparent.

Step 16 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Motion is a dialog setting saved with the page; Publish sends it to aem.page or aem.live. It does not run in the editor's edit mode, so check it on the preview URL.

Step 17 — Verify

Action: On the live page check: All four rows are visible after scrolling.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 15 — Motion: Slide

Reproduces the screenshot `screenshots/table-list-motion-slide.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults.

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Heading** (A) = Industries we serve.

Expected Result: The heading “Industries we serve” appears.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (B) = View all; **Link** (C) = Select the page or enter /en/industries.

Expected Result: A filled “View all” button to /en/industries appears beside the heading.

Step 5 — Fill in Table List › Items

Action: Select **Table List** in the content tree and open the **Items** tab of the properties panel. Enter: **Motion Type** (D) = Slide.

Expected Result: Motion Type Slide is selected; the canvas shows all rows because motion is off in edit mode.

Step 6 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 7 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Title** (E) = Banking; **Description** (F) = Core modernisation, payments and digital channels for banks of every size; **Link** (G) = Select the page or enter /en/industries/banking.

Expected Result: The first row shows Banking, its description and an arrow linking to /en/industries/banking.

Step 8 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 9 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (H) = Retail; **Description** (I) = Connected commerce from the store to the supply chain; **Link** (J) = Select the page or enter /en/industries/retail.

Expected Result: The second row shows Retail with its description and an arrow to /en/industries/retail.

Step 10 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 11 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (K) = Manufacturing; **Description** (L) = Smart factories, product engineering and resilient supply chains; **Link** (M) = Select the page or enter /en/industries/manufacturing.

Expected Result: The third row shows Manufacturing with its description and an arrow to /en/industries/manufacturing.

Step 12 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 13 — Fill in Table List Item 4

Action: Select **Table List Item 4** in the content tree and enter in the properties panel: **Title** (N) = Insurance; **Description** (O) = Claims, underwriting and distribution on modern platforms; **Link** (P) = Select the page or enter /en/industries/insurance.

Expected Result: The fourth row shows Insurance with its description and an arrow; it is the last row, without a divider.

Step 14 — Preview

Action: Action: Scroll the list into view; the image is taken while the items animate one after the other.

Expected Result: Scrolling the list into view animates the rows; the capture shows them in successive animation steps.

Step 15 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four industry rows in successive states: the upper rows in place, the lower rows lower by up to 1.25rem and partly transparent while rising.

Step 16 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Motion is a dialog setting saved with the page; Publish sends it to aem.page or aem.live. It does not run in the editor's edit mode, so check it on the preview URL.

Step 17 — Verify

Action: On the live page check: All four rows are visible after scrolling.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 16 — Motion: Reveal

Reproduces the screenshot `screenshots/table-list-motion-reveal.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults.

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Heading** (A) = Industries we serve.

Expected Result: The heading "Industries we serve" appears.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (B) = View all; **Link** (C) = Select the page or enter /en/industries.

Expected Result: A filled "View all" button to /en/industries appears beside the heading.

Step 5 — Fill in Table List › Items

Action: Select **Table List** in the content tree and open the **Items** tab of the properties panel. Enter: **Motion Type** (D) = Reveal.

Expected Result: Motion Type Reveal is selected; the canvas shows all rows because motion is off in edit mode.

Step 6 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 7 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Title** (E) = Banking; **Description** (F) = Core modernisation, payments and digital channels for banks of every size; **Link** (G) = Select the page or enter /en/industries/banking.

Expected Result: The first row shows Banking, its description and an arrow linking to /en/industries/banking.

Step 8 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 9 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (H) = Retail; **Description** (I) = Connected commerce from the store to the supply chain; **Link** (J) = Select the page or enter /en/industries/retail.

Expected Result: The second row shows Retail with its description and an arrow to /en/industries/retail.

Step 10 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 11 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (K) = Manufacturing; **Description** (L) = Smart factories, product engineering and resilient supply chains; **Link** (M) = Select the page or enter /en/industries/manufacturing.

Expected Result: The third row shows Manufacturing with its description and an arrow to /en/industries/manufacturing.

Step 12 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears in the content tree and on the canvas with the sample title TwinX until it is edited.

Step 13 — Fill in Table List Item 4

Action: Select **Table List Item 4** in the content tree and enter in the properties panel: **Title** (N) = Insurance; **Description** (O) = Claims, underwriting and distribution on modern platforms; **Link** (P) = Select the page or enter /en/industries/insurance.

Expected Result: The fourth row shows Insurance with its description and an arrow; it is the last row, without a divider.

Step 14 — Preview

Action: Action: Scroll the list into view; the image is taken while the items animate one after the other.

Expected Result: Scrolling the list into view animates the rows; the capture shows them in successive animation steps.

Step 15 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four industry rows in successive states: Banking fully revealed, the next rows partly uncovered from the top down and Insurance still clipped.

Step 16 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Motion is a dialog setting saved with the page; Publish sends it to aem.page or aem.live. It does not run in the editor's edit mode, so check it on the preview URL.

Step 17 — Verify

Action: On the live page check: All four rows are visible after scrolling.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 17 — Item Trademark sign

Reproduces the screenshot `screenshots/table-list-trademark.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Table List

Action: Select the section in the content tree, choose **Add (+)** and pick **Table List**.

Expected Result: An empty Table List is added with Variation 1 defaults.

Step 3 — Fill in Table List › Content

Action: Select **Table List** in the content tree and open the **Content** tab of the properties panel. Enter: **Variation** (A) = Variation 3 - Description, number, large title, arrow; **Heading** (B) = Products & Platforms.

Expected Result: Variation 3 switches to numbered large titles and the heading "Products & Platforms" appears in regular weight.

Step 4 — Fill in Table List › Call to action

Action: Select **Table List** in the content tree and open the **Call to action** tab of the properties panel. Enter: **Text** (C) = All Products & Platforms; **Link** (D) = Select the page or enter /en/products; **Style** (E) = Text link.

Expected Result: A text link "All Products & Platforms" to /en/products appears beside the heading.

Step 5 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 6 — Fill in Table List Item 1

Action: Select **Table List Item 1** in the content tree and enter in the properties panel: **Trademark** (F) = ™ Trademark; **Description** (G) = Risk free business experimentation and decision intelligence; **Link** (H) = Select the page or enter /en/products/twinx.

Expected Result: The row shows 01 TwinX with the ™ sign, the description and a diagonal arrow to /en/products/twinx.

Step 7 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 8 — Fill in Table List Item 2

Action: Select **Table List Item 2** in the content tree and enter in the properties panel: **Title** (I) = ignio; **Trademark** (J) = ® Registered; **Description** (K) = Cognitive automation for enterprise IT operations; **Link** (L) = Select the page or enter /en/products/ignio.

Expected Result: The row shows 02 ignio® with its description and a diagonal arrow to /en/products/ignio.

Step 9 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 10 — Fill in Table List Item 3

Action: Select **Table List Item 3** in the content tree and enter in the properties panel: **Title** (M) = TCS BaNCS; **Trademark** (N) = ® Registered; **Description** (O) = A universal platform for banking, insurance and capital markets; **Link** (P) = Select the page or enter /en/products/bancs.

Expected Result: The row shows 03 TCS BaNCS® with its description and a diagonal arrow to /en/products/bancs.

Step 11 — Add a Table List Item

Action: Select the Table List in the content tree, choose **Add (+)** and pick **Table List Item**.

Expected Result: A new Table List Item appears with the default title TwinX and the default description.

Step 12 — Fill in Table List Item 4

Action: Select **Table List Item 4** in the content tree and enter in the properties panel: **Title** (Q) = Quartz; **Trademark** (R) = ™ Trademark; **Description** (S) = Blockchain solutions for connected enterprise ecosystems; **Link** (T) = Select the page or enter /en/products/quartz.

Expected Result: The row shows 04 Quartz™ with its description and a diagonal arrow to /en/products/quartz.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The product titles TwinX™, ignio®, TCS BaNCS® and Quartz™ with the signs raised at title size after each name.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The list is authored content in the page HTML, so Publish sends it to aem.page or aem.live with the page; publish the item link targets first, and the placeholder texts (viewAll, explore, exploreItem) are a separate sheet publish.

Step 15 — Verify

Action: On the live page check: The raised sign renders after the name.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.18.6 Authorable Field Specification

Table List block model (`table-list`)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Content tab › Variation (`variations`)	select	No	No	industries	Layout and defaults	Pick by content	Options industries, solutions, products; others give industries	products
Content tab › Heading (`listHeading`)	text	No	No	(empty)	List heading	Short heading	None	Products & Platforms
Content tab › Heading Type (`listHeadingType`)	select	No	No	h2	Heading level	H2 normally	Options h2, h3, h4	h2
Content tab › Maximum items (`maxCards`)	number	No	No	4	Items shown	Match the number of items	validation numberMin 1, numberMax 10, message “Maximum items must be between 1 and 10.” (Enforced); code clamps to 1 to 10, empty gives 4	6
Call to action tab › Text (`viewAllLabel`)	text	No	No	(empty)	Call to action text	Descriptive, e.g. All Products & Platforms	None; empty gives “View all”	All Products & Platforms

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Call to action tab › Link (`viewAllLink`)	aem-content	No	No	(empty)	Call to action destination	Pick a page or type a URL	Must start with /, #, http:// or https:// to be used	/content/tcs-corp/us/en/products
Call to action tab › Style (`ctaStyle`)	select	No	No	"" (Variation default)	Call to action style	Keep Variation default	Options "", primary, secondary, tertiary	""
Items tab › Numbers (`numbers`)	select	No	No	"" (Variation default)	Item numbering	Keep Variation default	Options "", show, mobile, hide	show
Items tab › Item link (`itemAction`)	select	No	No	"" (Variation default)	Item link style	Keep Variation default	Options "", arrow, arrow-up-right, button	""
Items tab › Button text (`itemButtonLabel`)	text	No	No	Explore	Item button text	A verb, 1 to 2 words	Shown when itemAction = button, or itemAction empty and variation = solutions	Explore
Items tab › Motion Type (`motion`)	select	No	No	none	Scroll animation	None unless the page design asks for it	Options none, fade, slide, reveal	fade
Additional tab › Anchor ID (`classes_anchor`)	text	No	No	(empty)	Block id for links	anchor-slug	Regex `^anchor-[a-z0-9][a-z0-9-]*$` (Enforced)	anchor-products
Additional tab › Hide block (`classes_hideblock`)	boolean	No	No	false	Hide the block	Temporary use	None	false
Additional tab › Padding left (`classes_paddingleft`)	select	No	No	Default ("")	Left padding	Design needs only	15 options (see 6.17.6 Spacing values)	pl-0
Additional tab › Padding right (`classes_paddingright`)	select	No	No	Default ("")	Right padding	As above	15 options	pr-0
Additional tab › Padding top (`classes_paddingtop`)	select	No	No	Default ("")	Top padding	As above	15 options	pt-800
Additional tab › Padding bottom (`classes_paddingbottom`)	select	No	No	Default ("")	Bottom padding	As above	15 options	pb-800
Additional tab › Margin left (`classes_marginleft`)	select	No	No	Default ("")	Left margin	As above	15 options	ml-0
Additional tab › Margin right (`classes_marginright`)	select	No	No	Default ("")	Right margin	As above	15 options	mr-0

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Additional tab › Margin top (`classes_margintop`)	select	No	No	Default (“”)	Top margin	As above	15 options	mt-1200
Additional tab › Margin bottom (`classes_marginbottom`)	select	No	No	Default (“”)	Bottom margin	As above	15 options	mb-1200

Table List Item model (`table-list-card`)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Number (`number`)	text	No	No	(empty)	Own item number	Leave empty for automatic numbering	Used only when 1 to 3 digits, optionally with . or)	01
Title (`title`)	text	No	No	TwinX	Item name	Short name, no trademark sign	None	TwinX
Trademark (`trademark`)	select	No	No	“” (None)	Sign after the title	Use for registered names	Options “”, tm, r	tm
Description (`description`)	richtext	No	No	Risk free business experimentation and decision intelligence	Item explanation	One sentence	None	Risk free business experimentation and decision intelligence
Link (`link`)	aem-content	No	No	(empty)	Item destination	Pick a page	Must start with /, #, http:// or https://	/content/tcs-corp/us/en/products/twinx
Button text (`linkText`)	text	No	No	(empty)	Item button text override	Only for button item links	None	Discover TwinX

Table List Header model (`table-list-header`, legacy)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Heading (`heading`)	text	No	No	Our transformation solutions	Legacy heading	Move the text to the block’s Heading	None	Our transformation solutions
Explore All Link (`exploreLink`)	richtext	No	No	(empty)	Legacy heading link	The block’s Call to action takes precedence	None	a link “Explore all”

> **Note:** The Table List Header cannot be added any more (the block’s filter only allows Table List Item). Existing headers are still read: their heading is used when the block Heading is empty, their link when the Call to action Link is empty. Prefer the block fields.

Field details

- **Variation** — Purpose: layout and defaults. Allowed Values: Variation 1 - Title, description, arrow (`industries`); Variation 2 - Description, large title, button (`solutions`); Variation 3 - Description, number, large title, arrow (`products`). Character Limits: not applicable. Business Rules: sets the block class and the defaults of Style, Numbers and Item link. Dependency Rules: Button text visibility. Visibility Rules: always. Sample Content: Variation 1.
- **Heading** — Purpose: list heading. Allowed Values: plain text. Character Limits: Recommended 50 characters. Business Rules: rendered as `h2`, `h3` or `h4.table-list-heading` with the text only. Dependency Rules: when set, item titles are one level below it; without a heading (and no legacy header) item titles are `h2`. Visibility Rules: always. Sample Content: Industries.
- **Heading Type** — Purpose: heading level. Allowed Values: H2, H3, H4. Business Rules: the code reads the level from the heading element AEM renders for the Heading; anything other than h2 to h4 gives h2. Visibility Rules: always. Sample Content: H2.
- **Maximum items** — Purpose: limit. Allowed Values: 1 to 10 (Enforced by the model validation and clamped by code). Business Rules: only the first N items (in content tree order) are rendered; the others are removed from the page. Visibility Rules: always. Sample Content: 4.
- **Text** (call to action) — Purpose: link text. Character Limits: Recommended 30 characters. Business Rules: used with the Link; empty gives "View all". Without a Link nothing shows on the page (an editor preview only). Visibility Rules: always. Sample Content: View all industries.
- **Link** (call to action) — Purpose: destination. Allowed Values: site pages (AEM paths are converted to published paths), `#anchors`, `http(s)` URLs. Business Rules: other schemes (mailto:, tel:) and text without `/` or `http` are ignored. Visibility Rules: always. Sample Content: /content/tcs-corp/us/en/industries.
- **Style** — Purpose: call-to-action style. Allowed Values: Variation default, Filled button, Outline button, Text link. Business Rules: Variation default = primary / secondary / tertiary for Variation 1 / 2 / 3. Visibility Rules: always. Sample Content: Variation default.
- **Numbers** — Purpose: numbering. Allowed Values: Variation default, Show, Show on mobile only, Hide. Business Rules: Variation default = mobile / hide / show for Variation 1 / 2 / 3. Visibility Rules: always. Sample Content: Show.
- **Item link** — Purpose: link style. Allowed Values: Variation default, Arrow, Diagonal arrow, Button. Business Rules: Variation default = arrow / button / arrow-up-right. Dependency Rules: Button controls the Button text field. Visibility Rules: always. Sample Content: Variation default.
- **Button text** (block) — Purpose: default item button text. Character Limits: Recommended 15 characters. Business Rules: used when an item has no Button text; empty gives "Explore". Visibility Rules: condition `itemAction === "button" OR (itemAction empty AND variations === "solutions")`. Sample Content: Explore.
- **Motion Type** — Purpose: entrance animation. Allowed Values: None, Fade, Slide, Reveal. Business Rules: not in edit mode, not with reduced motion, only with IntersectionObserver. Visibility Rules: always. Sample Content: None.
- **Anchor ID, Hide block, Padding and Margin selects** — as in 6.17.6 (same model fields, same values and rules).
- **Number** (item) — Purpose: custom number. Allowed Values: 1 to 3 digits, optionally followed by "." or ")". Business Rules: other text is not recognised as a number (it may be read as another field); empty gives the position, zero-padded (01). Visibility Rules: always. Sample Content: 07.
- **Title** (item) — Purpose: item name. Character Limits: Recommended 30 characters for Variations 2 and 3 (very large type), 40 for Variation 1. Business Rules: text only (formatting is not kept); heading one level below the block heading. Sample Content: Banking.
- **Trademark** (item) — Purpose: legal sign. Allowed Values: None, ™ Trademark (`tm`), ® Registered (`r`). Business Rules: appended as `<sup>`. Sample Content: ™.
- **Description** (item) — Purpose: explanation. Allowed Values: rich text (paragraphs, lists, links). Character Limits: Recommended 120 characters. Business Rules: paragraphs and lists are kept; plain text is wrapped in a

paragraph; links inside stay clickable above the row link. Sample Content: "Risk free business experimentation and decision intelligence".

- **Link** (item) — Purpose: destination. Allowed Values: as the call-to-action Link. Business Rules: without a Link, an arrow is decorative and a button is not rendered on the page. Sample Content: /content/tcs-corp/us/en/industries/banking.
- **Button text** (item) — Purpose: per-item button text. Character Limits: Recommended 20 characters. Business Rules: only used for Button item links; AEM delivers it as the Link's text, and a text equal to the URL is ignored. Sample Content: Discover TwinX.

6.18.7 Field Annotation Mapping

Marker	Field	Purpose
A	Content tab › Heading, Heading Type	List heading
B	Call to action tab › Text, Link, Style	Link next to the heading
C	Table List Item › Number; Items tab › Numbers	Item number
D	Table List Item › Title, Trademark	Item name
E	Table List Item › Description	Item explanation
F	Table List Item › Link, Button text; Items tab › Item link, Button text	Item link
G	Content tree items; Content tab › Maximum items	Number and order of items

6.18.8 Component Specification

Attribute	Value
Component Name	Table List (`table-list`; Universal Editor components "Table List", "Table List Item" (`table-list-card`) and legacy "Table List Header" (`table-list-header`))
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`decorators/button-decorator.js`; `utils/buttons.js`, `cells.js`, `properties.js`, `urls.js`, `environment.js`, `viewport.js`, `placeholders.js`; `scripts/scripts.js` (`moveInstrumentation`); `icons/arrow-right.svg`, `icons/arrow-up-right.svg`; `/{locale}/placeholders.json`
Component Type	Container block (key-value properties plus Table List Item children; filter `table-list` allows only Table List Item)
Supported Variants	Variation 1 (industries), Variation 2 (solutions), Variation 3 (products); call-to-action style primary / secondary / tertiary; numbers show / mobile / hide; item link arrow / arrow-up-right / button; motion none / fade / slide / reveal; item trademark ™ / ®
Supported Templates	Any page (allowed in every section)
Supported Metadata	None (the block does not read page metadata)
Supported Tags	None
Supported Personalization	None; clicks are in the Adobe Client Data Layer for future use with Adobe Target (not implemented)
Caching Considerations	Authored content is part of the page HTML cached by the Edge Delivery CDN; the only fetch is the placeholders sheet (once per page, shared by all blocks)
Performance Considerations	No images; light DOM work. Decoration waits for the placeholders sheet. Motion uses one IntersectionObserver per item (disconnected after the first view). Items beyond Maximum items are removed. Suitable for the first section

Attribute	Value
Accessibility Compliance	`role="list"` / `role="listitem"`; item titles as headings one level below the list heading; arrows with `aria-label` "Explore {title}"; buttons with "{text}: {title}"; unlinked arrows `aria-hidden`; visible focus; description links remain operable; motion honours `prefers-reduced-motion` and is off in the editor
SEO Compliance	Server-delivered authored content (headings, text, links are in the HTML before decoration); heading hierarchy follows Heading Type; internal links converted to published paths

6.18.9 Input Model

Content Inputs: Heading, call-to-action text and link, and per item Number, Title, Trademark, Description, Link and Button text.

Metadata Inputs: None.

Tags Inputs: None.

Page Context Inputs: Universal Editor edit mode (unlinked button previews, no motion), the visitor's reduced-motion preference, the site's locale mapping for AEM paths (via `utils/urls.js toSitePath`).

Query Inputs: None.

Manual Inputs: All content is manual.

Authored HTML received from AEM (simplified):

```
<div class="table-list">
  <div><div>variations</div><div>products</div></div>
  <div><div>listHeading</div><div><h2>Products &amp;amp; Platforms</h2></div></div>
  <div><div>maxCards</div><div>4</div></div>
  <div><div>viewAllLabel</div><div>All Products &amp;amp; Platforms</div></div>
  <div><div>viewAllLink</div><div><a href="/content/tcs-corp/us/en/products.html">
    /content/tcs-corp/us/en/products.html</a></div></div>
  <div><div>itemButtonLabel</div><div>Explore</div></div>
  <div><div>motion</div><div>fade</div></div>
  <div>
    <div></div>
    <div>TwinX</div>
    <div>tm</div>
    <div><p>Risk free business experimentation and decision intelligence</p></div>
    <div><a href="/content/tcs-corp/us/en/products/twinx.html">Discover TwinX</a></div>
  </div>
</div>
```

How rows are read:

- In Universal Editor, rows carry `data-aue-model`: rows of the `table-list` model are properties, `table-list-header` rows the legacy header and `table-list-card` rows items.
- On the published page: a row with two cells whose first cell is a known property name (`variations`, `listheading`, `maxcards`, `viewalllabel`, `viewalllink`, `ctastyle`, `numbers`, `itemaction`, `itembuttonlabel`, `motion`, compared without case and hyphens) is a property; a row with more than two cells is an item; a row with exactly two cells that is not a property is read as a legacy header (heading | link).
- When no property row is keyed, single-cell rows are matched to the fields in model order by what their values look like (`utils/cells.js matchCells`).
- Item cells: number, title, trademark, description, link (the Button text is the link's text). When AEM leaves out never-set fields, cells are matched by content (a 1 to 3 digit number, a tm / r value, a link).

6.18.10 Output Model

Rendered Output

- `div.table-list.block.{variation}.numbers-{value}.motion-{value}` (plus `motion-ready` when animating and Additional tab classes) containing:
- `div.table-list-header`: `h2|h3|h4.table-list-heading` and `p.table-list-cta > a.button.{primary|secondary|tertiary}` (each only when present; the header is omitted when empty).
- `div.table-list-items[role=list]` with `div.table-list-item[role=listitem]` (the authored row element, kept for editor instrumentation; `is-visible` after the motion): `div.table-list-main` (`span.table-list-number`, `hN.table-list-title` with `sup.table-list-trademark`), `div.table-list-description`, `div.table-list-action` (`a.table-list-arrow.{arrow|arrow-up-right}`, `span.table-list-arrow` or `a.button.secondary`).

Generated HTML (simplified)

```
<div class="table-list block products numbers-show motion-fade motion-ready">
  <div class="table-list-header">
    <h2 class="table-list-heading">Products &amp;amp; Platforms</h2>
    <p class="table-list-cta"><a href="/en/products" class="button tertiary">
      All Products &amp;amp; Platforms</a></p>
  </div>
  <div class="table-list-items" role="list">
    <div class="table-list-item is-visible" role="listitem">
      <div class="table-list-main">
        <span class="table-list-number">01</span>
        <h3 class="table-list-title">TwinX<sup class="table-list-trademark">™</sup></h3>
      </div>
      <div class="table-list-description"><p>Risk free business experimentation ...</p></
div>
      <div class="table-list-action">
        <a class="table-list-arrow arrow-up-right" href="/en/products/twinx"
          aria-label="Explore TwinX"></a>
      </div>
    </div>
  </div>
</div>
```

Generated JSON: None.

Generated Metadata: None.

Analytics Tracking

Component state (after the lazy phase):

```
{
  "component": {
    "table-list-1": {
      "@type": "tcs-corp/components/table-list",
      "parentId": "page-1x2y3z",
      "dc:title": "Products & Platforms"
    }
  }
}
```

Interaction	Event	eventInfo
Item arrow	`cmp:click`	`interaction: "link"`, `dc:title`: "Explore {title}", `xdm:linkURL`, `xdm:linkType` (`other` for site pages, `exit` for other origins, `download` for files), `breakpoint`
Item button	`cmp:click`	`interaction: "link"`, `dc:title`: "{text}: {title}", `xdm:linkURL`, `xdm:linkType`, `breakpoint`
Call to action	`cmp:click`	`interaction: "link"`, `dc:title`: the link text, `xdm:linkURL`, `xdm:linkType`, `breakpoint`
Link inside a description	`cmp:click`	`interaction: "link"`, as above

Example:

```
{
  "event": "cmp:click",
  "eventInfo": {
    "path": "component.table-list-1",
    "interaction": "link",
    "dc:title": "Explore TwinX",
    "xdm:linkURL": "https://main--tcs-corp--sradha-tcs.aem.live/en/products/twinx",
    "xdm:linkType": "other",
    "breakpoint": "desktop"
  }
}
```

The component id is the Anchor ID if set, else `table-list-{n}`. Items have no component id of their own.

Personalization Output: None.

Search Index Output: None specific; the page's text (including the list) is part of the page, but `helix-query.yaml` indexes only head metadata.

Target Personalization Output: None in the block. The block is in the Adobe Client Data Layer as tcs-corp/components/table-list (id = Anchor ID, else table-list-{n}) and its link and button clicks are captured centrally for future use with Adobe Target (not implemented).

6.18.11 Business Rules

1. Variation: `industries`, `solutions` or `products`; any other value gives `industries`.
2. Variation defaults: industries = primary call to action, numbers on mobile only, arrow; solutions = secondary, hidden, button; products = tertiary, shown, diagonal arrow. An explicit Style, Numbers or Item link overrides them.
3. Maximum items: whole number clamped to 1 to 10; missing or not a number gives 4; only the first items in order are rendered, the rest are removed.
4. Heading: rendered with the level of the authored heading element if it is h2, h3 or h4, else h2; only its text is kept.
5. Item title level: one below the block heading when a heading (block or legacy header) exists; `h2` otherwise.
6. Legacy header: used for the heading when the block Heading is empty and for the call to action when the block Link (and Text) are empty.
7. Call to action: rendered when there is a Link or Text; on the page only when there is a Link; text defaults to "View all".
8. Link values: `#anchor` (not `#` alone), `/path` or `http(s)://...`; AEM content paths are converted to published paths (`/content/tcs-corp/us/en/x.html` to `/en/x`); other values are ignored.
9. Link text: a link's text is used only when it differs from its URL and does not look like a path or URL.

10. Without a Link, a button is shown only in the editor (non-focusable, `aria-hidden`, click prevented); an arrow becomes a decorative `span`.
11. Numbers: Hide renders none; Show and Show on mobile only render the item Number or the zero-padded position; mobile-only numbers are hidden from 600px by CSS.
12. Trademark: `tm` gives ™, `r` gives ®, appended to the title.
13. Description: rich text is kept when it has paragraphs or lists; plain text becomes one paragraph; missing description renders nothing.
14. Button item links: text = item Button text, else block Button text, else "Explore"; accessible name "{text}: {title}".
15. Arrow item links: accessible name "Explore {title}"; the arrow link covers the whole item; description links stay clickable above it.
16. Motion: only for fade / slide / reveal, with IntersectionObserver, outside the editor's edit mode and without reduced motion; items are hidden until 15% visible, then animate once for 500ms.
17. A row with two cells whose first cell is not a property name, without editor instrumentation, is read as the legacy header, not as an item (see 6.18.13 Issue 6).
18. The authored item rows are reused (classes and children replaced), so Universal Editor selection keeps working.
19. All texts in the UI come from placeholders with English fallbacks.

6.18.12 Author Best Practices

Recommended Content Length

Element	Variation 1	Variation 2	Variation 3	Enforced
Heading	50 characters	50 characters	50 characters	No
Item title	40 characters	25 characters (4rem type on desktop)	15 characters (5.625rem type on desktop)	No
Item description	120 characters	120 characters	160 characters	No
Button text	not used	15 characters	not used	No
Items	3 to 8	3 to 6	3 to 6	1 to 10 (Enforced)

Image Dimensions: Not applicable; the block has no images. Arrows are SVG icons from `icons/`.

CTA Writing Guidelines

- Make the heading call to action specific ("View all industries", "All Products & Platforms"), not just "View all".
- Item buttons: a short verb ("Explore", "Discover"); the title is added to the accessible name automatically.
- Link every item; unlinked arrows and buttons give no destination.

Accessibility Guidelines

- Choose Heading Type so the page outline has no skipped levels.
- Do not type ™ or ® into the title; use Trademark.
- Keep descriptions short and meaningful without the title.
- Use Motion sparingly; it is disabled automatically for visitors who prefer reduced motion.

SEO Guidelines

- Item titles are headings; use real product or industry names.
- Link to canonical published pages (pick pages with the page picker).

Metadata Guidelines: Not applicable (the block uses no page metadata).

Taxonomy Guidelines: Not applicable.

Localization Guidelines

- Translate the Heading, call-to-action Text, Button texts, titles and descriptions per locale.
- Link to pages of the same locale.
- The placeholder keys `viewAll`, `explore`, `itemLinkLabel` and `exploreItem` must be translated in each locale's placeholders sheet (they include the `{text}` / `{title}` variables).
- Expect longer titles in German, French and other languages; check Variation 2 and 3 sizes.

6.18.13 Troubleshooting Guide

Issue 1 — Some items are missing

Symptoms: Fewer items on the page than in the content tree.

Root Cause: Maximum items (default 4) is lower than the number of items.

Diagnosis Steps: Check Content tab › Maximum items.

Resolution Steps: Raise Maximum items (up to 10) or remove extra items.

Validation Steps: All items appear.

Preventive Measures: Set Maximum items when adding items.

Issue 2 — The call to action does not appear

Symptoms: The heading shows without its button or link on the page (it may show in the editor).

Root Cause: The Link is empty or not a supported value (e.g. `mailto:` or text without `/` or `http`).

Diagnosis Steps: Check Call to action › Link.

Resolution Steps: Pick a page or enter a full URL.

Validation Steps: The call to action renders and opens the destination.

Preventive Measures: Always set Link with Text.

Issue 3 — Item buttons or arrows do nothing

Symptoms: No button on an item (Button link) or an arrow that is not clickable.

Root Cause: The item's Link is empty or unsupported.

Diagnosis Steps: Select the item and check Link.

Resolution Steps: Set the Link.

Validation Steps: The arrow or button navigates.

Preventive Measures: Validation checklist: every item has a Link.

Issue 4 — Wrong button text

Symptoms: Buttons show "Explore" or the URL instead of the expected text.

Root Cause: Item Button text empty (block Button text or "Explore" used); a Button text equal to the URL is ignored; Item link is not Button.

Diagnosis Steps: Check the item Button text, block Button text and Item link.

Resolution Steps: Set the texts; set Item link to Button.

Validation Steps: The expected text appears.

Preventive Measures: Use the block Button text for a common label.

Issue 5 — Heading Type has no effect

Symptoms: The heading stays `h2` although H3 or H4 was chosen.

Root Cause: The level is read from the heading element AEM renders for the Heading field; if the Heading is delivered as plain text (no heading element), `h2` is used.

Diagnosis Steps: Inspect `https://main--tcs-corp--sradha-tcs.aem.page/{path}.plain.html` and check whether the listHeading cell contains `<h3>` / `<h4>`.

Resolution Steps: Re-select Heading Type and re-enter the Heading; if the markup still has no heading element, escalate to L3.

Validation Steps: The rendered heading has the chosen level and item titles are one level lower.

Preventive Measures: Check heading levels in the validation checklist.

Issue 6 — An item visible in the editor is missing on the published page

Symptoms: An item shows in Universal Editor but not on preview / live, and the heading or call to action may change.

Root Cause: On the published page, a row with exactly two cells that is not a property row is read as the legacy Table List Header (code rule). This can happen if an item's markup arrives with only two cells. [To be confirmed: whether AEM delivers item rows with fewer than five cells — owner: development team.]

Diagnosis Steps: Inspect the `.plain.html` of the page and count the cells of the item's row.

Resolution Steps: Fill the item's other fields (e.g. Number or Link) so all cells are delivered; escalate to L3 for a code fix.

Validation Steps: The item renders on the preview page.

Preventive Measures: Give every item a Link (needed anyway).

Issue 7 — Items invisible until scrolled, or never shown

Symptoms: Items appear late, or stay invisible in a screenshot tool.

Root Cause: Motion is on; items are hidden until 15% of them enters the viewport. Tools that capture without scrolling may not trigger it.

Diagnosis Steps: Check Motion Type; scroll the page.

Resolution Steps: Set Motion Type to None if needed.

Validation Steps: Items are visible without scrolling.

Preventive Measures: Use motion only where the design asks for it.

Issue 8 — Unexpected numbers

Symptoms: Numbers missing at tablet / desktop, or custom numbers ignored.

Root Cause: Numbers is Show on mobile only (Variation 1 default) or Hide (Variation 2 default); item Numbers that are not 1 to 3 digits are not used as numbers.

Diagnosis Steps: Check Items › Numbers and the item Number values.

Resolution Steps: Set Numbers to Show; use numeric values like `01`.

Validation Steps: Numbers appear as intended at each width.

Preventive Measures: Leave Number empty for automatic numbering.

6.18.14 Support Runbook

Monitoring Requirements: No block-specific monitoring; general page availability and Core Web Vitals (RUM). Link checks for the item destinations ([To be confirmed: link checking tool — owner: AMS]).

Logs

- Browser console: the block emits no console messages.
- Admin API: page status `GET https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`.
- AEM author: page versions and publish history.

Common Errors

Error	Likely cause	First action
Items missing	Maximum items	Raise the limit
No call to action	Empty or unsupported Link	Set Link
No item button	Empty Link	Set Link
Heading level wrong	Heading markup without heading element	Check `.plain.html`; L3
English text on a localized page	Placeholder keys missing	Add keys to the locale's placeholders
Item missing only on the published page	Two-cell row read as legacy header	Fill the item's fields; L3

Escalation Matrix

Level	Who	What they check
L1	Author support	Dialog settings, item fields, links, Maximum items, publish state
L2	AMS / site admin	Delivered markup (`.plain.html`), placeholders sheet, CDN cache, page status
L3	Development team	`table-list.js` row reading, CSS per variation, defects after releases
L4	Adobe Support	Universal Editor or Edge Delivery platform issues

Recovery Procedures: Restore a previous page version and publish; hide the block with Hide block; revert code on `main` for code defects.

Health Checks: The list renders with the expected number of items; arrows and buttons navigate; the call to action opens its destination; layouts at 375px, 768px and 1440px match the variation.

Operational Procedures: Maintain the placeholder keys in each locale; review product names and trademarks with the legal team ([To be confirmed: trademark approval process — owner: brand / legal]).

Known Limitations

- At most 10 items.
- Titles and headings are plain text (formatting is dropped).
- Only `/`, `#` and `http(s)` links are supported (no `mailto:` / `tel:`).
- No images.
- The legacy header item cannot be added any more but is still read.
- Motion is not previewed in the editor's edit mode.

6.18.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
Some items are missing	Maximum items (default 4) is lower than the number of items	Raise Maximum items up to 10
The call to action does not appear	Link empty or unsupported (mailto:, text without / or http)	Pick a page or enter a full URL
Item buttons or arrows do nothing	The item's Link is empty or unsupported	Set the item Link
Wrong button text	Item Button text empty, a text equal to the URL, or Item link not Button	Set the item or block Button text
Heading Type has no effect	The Heading is delivered without a heading element	Re-select Heading Type and re-enter the Heading; escalate to L3
Item missing only on the published page	A two-cell row is read as the legacy header	Fill the item's other fields; escalate to L3
Items invisible until scrolled	Motion is on and items wait until 15 % is visible	Scroll, or set Motion Type None
Unexpected numbers	Show on mobile only or Hide default, or Numbers not 1 to 3 digits	Set Numbers Show; use values like 01
New items all read TwinX	TwinX is the model default title	Overwrite the Title of each item

6.18.16 Author Quick Reference Guide

Mandatory Fields

- No field is required in the model
- Item Link — needed for an item's arrow to be clickable and for its button to render on the page
- Call to action Link — needed for the call to action to render on the page (Text alone shows only in the editor)
- Item Title — needed for the item heading; new items start with the default TwinX

Recommended Fields

- Variation — Variation 1 (industries), 2 (solutions) or 3 (products)
- Heading — the list heading (h2 by default)
- Call to action Text — e.g. View all industries
- Item Description — one sentence of about 120 characters
- Maximum items — set it when there are more than 4 items (up to 10)

Optional Fields

- Heading Type (H2, H3, H4)
- Call to action Style (Variation default, Filled button, Outline button, Text link)
- Numbers (Variation default, Show, Show on mobile only, Hide)
- Item link (Variation default, Arrow, Diagonal arrow, Button)
- Button text (block) and Button text (item)
- Motion Type (None, Fade, Slide, Reveal)
- Item Number and Trademark

Authoring Checklist

1. Choose the Variation first; it sets the Style, Numbers and Item link defaults
2. Add items in the content tree with Add (+) and overwrite the default title TwinX
3. Give every item a Link to a published page
4. Leave Number empty for automatic 01, 02 numbering
5. Select Trademark instead of typing ™ or ® in the Title
6. Raise Maximum items when adding a fifth item

7. Keep Motion Type None unless the design asks for motion

Pre-Publish Checklist

1. Preview the page and open the aem.page URL
2. Check the call to action renders and opens its destination
3. Check each row's arrow or button navigates to the right page
4. Check numbers at 375 px and 1024 px against the Numbers setting
5. Check no more than Maximum items are shown and all intended items appear
6. Check the layout at 375 px, 768 px and 1440 px
7. Check motion on the preview, not in edit mode

Post-Publish Validation Checklist

1. Open the .aem.live URL and click every item link
2. Confirm linked pages are published (no 404)
3. Confirm trademark signs are correct and not doubled
4. Confirm placeholder texts (View all, Explore) are translated on other locales
5. Confirm the heading level fits the page outline

6.18.17 Component Execution Example

Business example: Products & Platforms showcase (Variation 3).

Example Values Entered:

Field	Value
Component (Section › Add (+))	Table List
Variation (Table List › Content)	Variation 3 - Description, number, large title, arrow
Heading (Table List › Content)	Products & Platforms
Text (Table List › Call to action)	All Products & Platforms
Link (Table List › Call to action)	Select the page or enter /en/products
Style (Table List › Call to action)	Text link
Item (Content tree › Table List › Add (+))	Table List Item
Trademark (Table List Item 1)	™ Trademark
Description (Table List Item 1)	Risk free business experimentation and decision intelligence
Link (Table List Item 1)	Select the page or enter /en/products/twinx
Item (Content tree › Table List › Add (+))	Table List Item
Title (Table List Item 2)	ignio
Trademark (Table List Item 2)	® Registered
Description (Table List Item 2)	Cognitive automation for enterprise IT operations
Link (Table List Item 2)	Select the page or enter /en/products/ignio
Item (Content tree › Table List › Add (+))	Table List Item
Title (Table List Item 3)	TCS BaNCS
Trademark (Table List Item 3)	® Registered
Description (Table List Item 3)	A universal platform for banking, insurance and capital markets

Field	Value
Link (Table List Item 3)	Select the page or enter /en/products/bancs
Item (Content tree › Table List › Add (+))	Table List Item
Title (Table List Item 4)	Quartz
Trademark (Table List Item 4)	™ Trademark
Description (Table List Item 4)	Blockchain solutions for connected enterprise ecosystems
Link (Table List Item 4)	Select the page or enter /en/products/quartz

All other fields keep their default values.

Rendered Result:

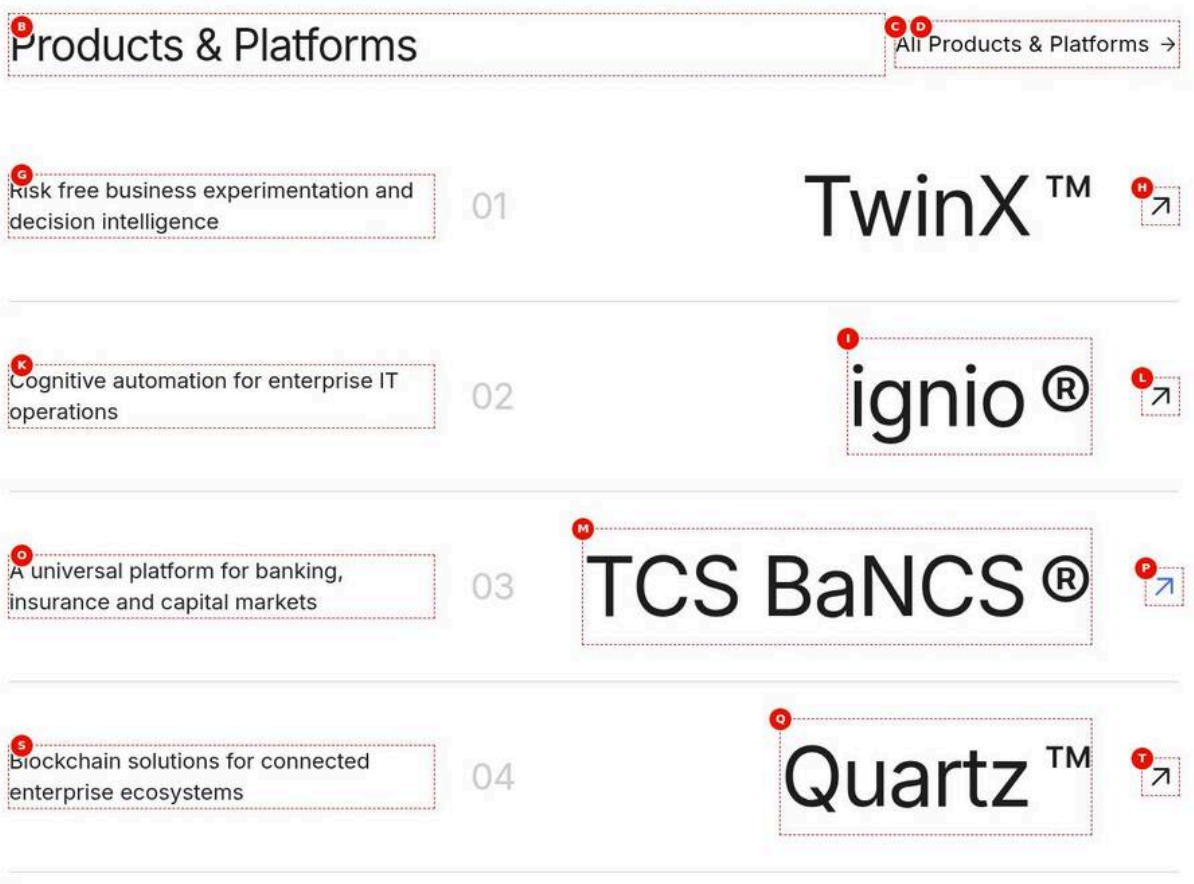

Figure 54: Execution example — The Variation 3 Table List at 1440 px: the regular-weight heading Products & Platforms with the text link All Products & Platforms, then rows with the description at the left, a grey number and a 5.625rem name (01 TwinX™, 02 ignio®, 03 TCS BaNCS®, 04 Quartz™) and a diagonal arrow, with 2px light grey dividers. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/table-list-products.jpg)

Author Notes

- Variation 3 gives the text link call to action, numbers and diagonal arrows by default
- Item 1 keeps the default title TwinX; only Trademark, Description and Link are entered
- Trademark ™ or ® is selected per item, never typed
- Four items fit the default Maximum items of 4

Business Notes

- Product names are shown in very large type with correct legal marks
- Each row leads to its product page; the text link leads to all products
- [To be confirmed: trademark approval process — owner: brand / legal]

Technical Notes

- Authored rows are reused, so Universal Editor selection keeps working
- Item titles are h3 below the h2 heading
- AEM paths in Link become published paths (/en/products/twinx)
- Arrow links carry the accessible name Explore {title} from the exploreItem placeholder

---

6.19 Anchor List Block

The Anchor List is an in-page chapter navigation ("Chapter Nav" in the TCS DS Figma, node 404-15450). It renders a horizontal row of links; each link scrolls to the section whose **Anchor name** (Section properties) matches, or to any element with that id (a block's Anchor ID, a heading id). The link of the chapter currently in view is marked as the current location, and with **Sticky** the row stays pinned to the top of the screen while the visitor scrolls through the page.

Source files: `blocks/anchor-list/anchor-list.js` (181 lines), `blocks/anchor-list/anchor-list.css` (80 lines), `blocks/anchor-list/_anchor-list.json`. The dialog has 2 tabs besides Additional: Content (the Links multifield with Link Title and Anchor Name, and the Sticky toggle) and the common Additional tab.

6.19.1 Component Purpose

Business Objective

Help visitors navigate long pages (reports, solution pages, case studies, annual-report style articles) by showing the page's chapters, jumping straight to one, and always showing where they are.

Business Use Cases

- A long report page with chapters "CH 1: Overview", "CH 2: Findings", "CH 3: Outlook" below the page header, pinned while reading.
- A service page with "Overview", "Capabilities", "Case studies", "Contact" links to its sections.
- A landing page that links to blocks by their Anchor IDs.

When To Use

- Pages with three or more substantial sections.
- When visitors benefit from knowing their position (current chapter highlight).

When Not To Use

- Navigation between pages: use the header navigation, the List or Teaser blocks or links.
- Switching content in place without scrolling: use the Tabs block.
- Short pages with one or two sections.
- More than about seven links (they overflow and scroll sideways, see 6.19.13).

Dependencies

Kind	Dependency	Used for
Block code	`blocks/anchor-list/anchor-list.js`, `anchor-list.css`, `_anchor-list.json`	Decoration, styles, dialog
Section model	`models/_section.json` › Anchor name (`anchorName`)	The ids the links jump to (applied in `scripts/scripts.js` `decorateSectionsWithOptions`)

Kind	Dependency	Used for
Decorator	`decorators/block-options-decorator.js`	Block Anchor IDs (`anchor-...`) that links can also target
Utility	`utils/multifield.js` (`readMultifieldItems`)	Reading the Links multifield
Utility	`utils/properties.js` (`readProperties`, `isOn`)	Reading the properties
Utility	`utils/environment.js` (`isEditing`, `scrollBehavior`)	No pinning while editing; smooth or instant scrolling (reduced motion)
Utility	`utils/placeholders.js` (`getPlaceholders`)	The navigation's accessible name
Core	`scripts/aem.js` (`toClassName`), `scripts/scripts.js` (`moveInstrumentation`)	Anchor normalization; editor instrumentation on the list
Header	`blocks/header` (`header .nav-wrapper`)	Offset below the fixed header (mobile and tablet below 900px)
Data	`/{locale}/placeholders.json`	Key `onThisPage` (fallback "On this page")

Related Components

Sections (Anchor name), the Additional tab Anchor ID of every block, Tabs (in-place switching), Page Header (usually directly above), Table List (6.18) and Filter List (6.17) as typical chapter targets.

Applicable Templates

Any page (allowed in every section); most useful on article, blog, press-release and long landing pages.

Supported Content Types

Links to sections, blocks or headings on the same page. Links to other pages are not supported (every link is `#anchor`).

Business Problem Solved

Long report and solution pages, such as the Global technology outlook 2026, gave readers no overview of their chapters, no quick way to jump to one and no sign of where they were; the Anchor List adds a labelled chapter row that scrolls to each section, marks the chapter in view and, with Sticky, stays pinned while reading.

Supported Taxonomy

None: the Anchor List has no tag field and reads no tags, taxonomy or metadata; its links point only to ids on the same page.

6.19.2 Visual Overview

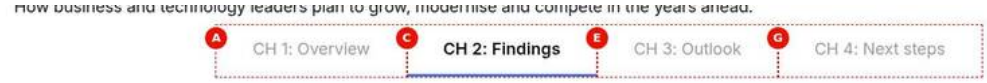

Figure 55: Desktop rendering — The Anchor List at 1440 px below the page title 'Global technology outlook 2026' and its intro: a centred row of four grey links 'CH 1: Overview', 'CH 2: Findings', 'CH 3: Outlook', 'CH 4: Next steps'; 'CH 2: Findings' (page at #findings) dark, semibold, with a 3px brand-blue underline. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/anchor-list-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/anchor-list-desktop-view.jpg`

Item	Detail
Screenshot Purpose	Desktop rendering
Screen Description	The Anchor List at 1440 px below the page title 'Global technology outlook 2026' and its intro: a centred row of four grey links 'CH 1: Overview', 'CH 2: Findings', 'CH 3: Outlook', 'CH 4: Next steps'; 'CH 2: Findings' (page at #findings) dark, semibold, with a 3px brand-blue underline.
Business Context	The Global technology outlook 2026 report page is long; its chapter row below the intro lets readers jump between the four chapters and shows where they are.
Author Objective	Add an Anchor List with four chapter links and give the four chapter sections matching Anchor names, then check the current-chapter highlight at 1440 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Anchor List	Yes	Adds the Anchor List to the page	Select the section in the content tree, choose Add (+) and pick Anchor List	Only components the section allows (section filter)
A	Link Title (Anchor List › Content › Links › Item 1)	CH 1: Overview	No	Visible link text	Short chapter name	None
(B)	Anchor Name (Anchor List › Content › Links › Item 1)	overview	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
C	Link Title (Anchor List › Content › Links › Item 2)	CH 2: Findings	No	Visible link text	Short chapter name	None
(D)	Anchor Name (Anchor List › Content › Links › Item 2)	findings	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
E	Link Title (Anchor List › Content › Links › Item 3)	CH 3: Outlook	No	Visible link text	Short chapter name	None
(F)	Anchor Name (Anchor List › Content › Links › Item 3)	outlook	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
G	Link Title (Anchor List › Content › Links › Item 4)	CH 4: Next steps	No	Visible link text	Short chapter name	None
(H)	Anchor Name (Anchor List › Content › Links › Item 4)	next-steps	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
(I)	Anchor name (Chapter sections (CH 1 to CH 4) › Section properties)	overview, findings, outlook, next-steps (one per section, in this order)	No	—	—	None
—	Action (Preview)	Open the page at #findings (or scroll	—	Check on the preview (not stored in the content)	Open the page at #findings (or scroll	—

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
		to chapter 2); CH 2: Findings is current			to chapter 2); CH 2: Findings is current	

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A centred row of four grey links; the current chapter 'CH 2: Findings' is dark, semibold and underlined with a 3px brand-blue line.
- **Rendering behaviour:** From 900 px each link has 0.75rem vertical and 2.5rem horizontal padding and the 1.125rem body size; the row is as wide as its links. Opening the page at #findings marks CH 2 current with aria-current="location".
- **Publishing behaviour:** Publish to Preview shows the page on main–tcs-corp–sradha-tcs.aem.page, Publish to Live on aem.live. The links and the section Anchor names are part of the same page, so one publish covers both; a translated onThisPage label is a separate publish of the locale placeholders sheet.

Business Rules

- Each Anchor Name must match the Anchor name of a section on the same page (or a block Anchor ID); case and spaces do not matter after normalisation.
- Keep the links in page order: overview, findings, outlook, next-steps.
- Sticky is off here, so the row stays in its place and scrolls away with the page.
- The current link follows the scroll position and the URL hash, also when Sticky is off.
- The nav is labelled 'On this page' from the placeholder onThisPage.

Common Authoring Mistakes

Error	Root Cause	Resolution
Clicking 'CH 2: Findings' only underlines it	The Findings section has no Anchor name, a different one, or a duplicate	Enter findings as the Anchor name of the Findings section
A link reads 'findings' instead of 'CH 2: Findings'	Link Title left empty, so the Anchor Name is shown as text	Fill Link Title
The highlight jumps to the wrong chapter	Links not in the same order as the sections	Reorder the Links items to match the page

Troubleshooting

- **Symptoms:** Opening the page at #findings scrolls nowhere, although 'CH 2: Findings' is underlined.
- **Cause:** The link is marked current from the hash even when no element on the page has the id findings.
- **Resolution:** Set findings as the Anchor name of the Key findings section (Section properties) and publish.
- **Verification Steps:** `document.getElementById('findings')` returns the section and the link scrolls to it.

Desktop (1200px and wider). A centred row of links (the list is as wide as its links, at most the full width). Each link has 0.75rem vertical and 2.5rem horizontal padding (from 900px), `--body-font-size-m` text, line-height 1.61, in `--color-text-secondary`, with a transparent 3px (0.1875rem) bottom border. The current link (`aria-current="location"`) is `--color-text-default`, semibold, with a `--color-border-brand` underline. Hover and keyboard focus turn the text dark; focus also shows a 2px brand outline inset by 3px. Colour and border changes transition over 0.2s (none with reduced motion). With Sticky the row has the default background colour and, once scrolled to, is fixed at the top of the screen (the site header is not fixed from 900px, so the row pins at the very top).

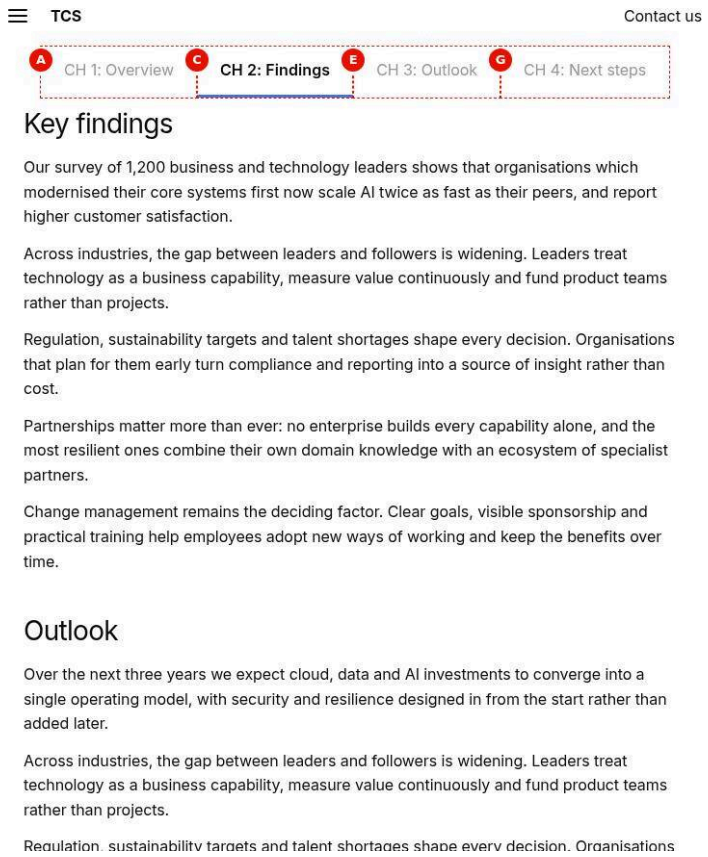

Figure 56: Tablet rendering — The viewport at 768 px scrolled into chapter 2 (Key findings): the sticky Anchor List pinned directly below the fixed site header, the four links with 'CH 2: Findings' underlined, the Key findings text below it. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/anchor-list-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/anchor-list-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The viewport at 768 px scrolled into chapter 2 (Key findings): the sticky Anchor List pinned directly below the fixed site header, the four links with 'CH 2: Findings' underlined, the Key findings text below it.
Business Context	On tablets the site header stays fixed, so the pinned chapter row of the outlook report must sit directly below it.
Author Objective	Check the sticky four-link Anchor List at 768 px while scrolled into chapter 2 (Key findings).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Anchor List	Yes	Adds the Anchor List to the page	Select the section in the content tree, choose Add (+) and pick Anchor List	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Link Title (Anchor List › Content › Links › Item 1)	CH 1: Overview	No	Visible link text	Short chapter name	None
(B)	Anchor Name (Anchor List › Content › Links › Item 1)	overview	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
C	Link Title (Anchor List › Content › Links › Item 2)	CH 2: Findings	No	Visible link text	Short chapter name	None
(D)	Anchor Name (Anchor List › Content › Links › Item 2)	findings	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
E	Link Title (Anchor List › Content › Links › Item 3)	CH 3: Outlook	No	Visible link text	Short chapter name	None
(F)	Anchor Name (Anchor List › Content › Links › Item 3)	outlook	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
G	Link Title (Anchor List › Content › Links › Item 4)	CH 4: Next steps	No	Visible link text	Short chapter name	None
(H)	Anchor Name (Anchor List › Content › Links › Item 4)	next-steps	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
(I)	Sticky (Anchor List › Content)	On	No	Pins the list while scrolling	On for long pages	None
(J)	Anchor name (Chapter sections (CH 1 to CH 4) › Section properties)	overview, findings, outlook, next-steps (one per section, in this order)	No	—	—	None
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—
—	Action (Preview)	Scroll down into chapter 2 (Key findings)	—	Check on the preview (not stored in the content)	Scroll down into chapter 2 (Key findings)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The Anchor List pinned directly below the fixed site header, 'CH 2: Findings' underlined, the row scrolled sideways to keep the current link centred.
- **Rendering behaviour:** Below 900 px the header `.nav-wrapper` is fixed, so the pinned list gets an inline `top` equal to the header height; links use 1.5rem horizontal padding and the 1rem size. From 900 px the desktop padding of 2.5rem applies.

- **Publishing behaviour:** Publish to Preview shows the page on main–tcs-corp–sradha-tcs.aem.page, Publish to Live on aem.live. The links and the section Anchor names are part of the same page, so one publish covers both; a translated onThisPage label is a separate publish of the locale placeholders sheet.

Business Rules

- Below 900 px the list pins below the fixed header; from 900 px at the top of the screen.
- The scroll offset includes the header height, the list height and 16px.
- Fixed elements other than the header and the list are not part of the offset.
- The row keeps the current link centred when it is wider than the screen.

Common Authoring Mistakes

Error	Root Cause	Resolution
On a 1024 px tablet the list pins at the very top, not below the header	From 900 px the site header is not fixed and scrolls away	Expected; the list pins below the header only below 900 px
'CH 2: Findings' is not centred in the row	All four links fit, so the row does not need to scroll	Expected; centring applies only when the row overflows

Troubleshooting

- **Symptoms:** After clicking 'CH 2: Findings' the Key findings heading is covered at 768 px.
- **Cause:** An extra fixed element besides the header and the pinned list covers the top of the content.
- **Resolution:** Remove the extra fixed element from the page, or report it to the development team.
- **Verification Steps:** After a click the Key findings heading is visible just below the pinned list.

Tablet (600px to 1199px). Same design. From 900px the horizontal link padding is 2.5rem; below 900px it is 1.5rem. Below 900px the site header is fixed, so a sticky Anchor List pins directly below the header and clicked chapters scroll to just below both.

Figure 57: Mobile rendering — The Anchor List at 375 px with the page at #outlook: the four chapter links in one line wider than the screen, scrolled sideways without a visible scrollbar so that 'CH 3: Outlook', underlined in brand blue, is in view. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/anchor-list-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/anchor-list-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The Anchor List at 375 px with the page at #outlook: the four chapter links in one line wider than the screen, scrolled sideways without a visible scrollbar so that 'CH 3: Outlook', underlined in brand blue, is in view.
Business Context	Readers of the Global technology outlook 2026 report on phones need the same chapter row, although the four links do not fit the screen.
Author Objective	Check the four-link Anchor List at 375 px with the page at #outlook: the row scrolls sideways to the current chapter.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Anchor List	Yes	Adds the Anchor List to the page	Select the section in the content tree, choose Add (+) and pick Anchor List	Only components the section allows (section filter)
A	Link Title (Anchor List › Content › Links › Item 1)	CH 1: Overview	No	Visible link text	Short chapter name	None
(B)	Anchor Name (Anchor List › Content › Links › Item 1)	overview	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
C	Link Title (Anchor List › Content › Links › Item 2)	CH 2: Findings	No	Visible link text	Short chapter name	None
(D)	Anchor Name (Anchor List › Content › Links › Item 2)	findings	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
E	Link Title (Anchor List › Content › Links › Item 3)	CH 3: Outlook	No	Visible link text	Short chapter name	None
(F)	Anchor Name (Anchor List › Content › Links › Item 3)	outlook	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
G	Link Title (Anchor List › Content › Links › Item 4)	CH 4: Next steps	No	Visible link text	Short chapter name	None
(H)	Anchor Name (Anchor List › Content › Links › Item 4)	next-steps	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
(I)	Anchor name (Chapter sections (CH 1 to CH 4) › Section properties)	overview, findings, outlook, next-steps (one per section, in this order)	No	—	—	None
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—
—	Action (Preview)	Open the page at #outlook (or scroll to chapter 3); the row scrolls sideways to CH 3: Outlook	—	Check on the preview (not stored in the content)	Open the page at #outlook (or scroll to chapter 3); the row scrolls sideways to CH 3: Outlook	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The links in one line overflowing to the right without a visible scrollbar; the row is scrolled so that 'CH 3: Outlook', underlined in brand blue, is in view.

- **Rendering behaviour:** Below 900 px links have 0.75rem by 1.5rem padding and the 1rem body size; they never wrap (`white-space: nowrap`). When the current link changes, the row scrolls to centre it, smoothly or instantly with reduced motion.
- **Publishing behaviour:** Publish to Preview shows the page on main–tcs-corp–sradha-tcs.aem.page, Publish to Live on aem.live. The links and the section Anchor names are part of the same page, so one publish covers both; a translated onThisPage label is a separate publish of the locale placeholders sheet.

Business Rules

- Links never wrap; with too many or long titles the row scrolls sideways and the scrollbar is hidden.
- Keep Link Titles short (about 25 characters) so more links fit, as 'CH 3: Outlook'.
- Recommended 3 to 7 links; four is the case shown here.
- Below 900 px the site header is fixed, so clicked chapters scroll to just below the header.

Common Authoring Mistakes

Error	Root Cause	Resolution
Visitors do not notice the links off screen	Too many or too long Link Titles; there is no visible scrollbar	Shorten the titles or reduce the number of links
The chapter heading is hidden under the header after a click	Another fixed element besides the site header covers the top	Remove the extra fixed element or escalate to L3

Troubleshooting

- **Symptoms:** At 375 px readers do not see 'CH 4: Next steps' unless they swipe the row.
- **Cause:** The row is wider than the screen and scrolls sideways only to the current link, with the scrollbar hidden.
- **Resolution:** Shorten the Link Titles (for example 'CH 4: Next steps' to 'CH 4: Next') or reduce the number of links.
- **Verification Steps:** Swipe the row at 375 px on the preview and scroll to the end of the page: the last link becomes current and visible.

Mobile (below 600px). Links never wrap (`white-space: nowrap`); when they do not fit, the row scrolls horizontally (scrollbar hidden) and the current link is scrolled to the centre of the row automatically (smoothly, or instantly with reduced motion).

6.19.3 Component Variations

Variation 1 — Default (in place)

Variation Name: Default (Content tab › Sticky = off; the default).

Business Purpose: A chapter index at its place in the page, typically below the page header.

Visual Example:

Figure 58: Default Anchor List — The first section at 1440 px: the H1 'Global technology outlook 2026', the intro 'How business and technology leaders plan to grow, modernise and compete in the years ahead.' and below them the in-flow row of four chapter links, 'CH 1: Overview' underlined as current (Sticky off). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/anchor-list-default.jpg)

Screenshot Details — Default Anchor List

Item	Detail
Screenshot Name	`screenshots/anchor-list-default.jpg`
Screenshot Purpose	Default Anchor List
Screen Description	The first section at 1440 px: the H1 'Global technology outlook 2026', the intro 'How business and technology leaders plan to grow, modernise and compete in the years ahead.' and below them the in-flow row of four chapter links, 'CH 1: Overview' underlined as current (Sticky off).
Business Context	The top of the Global technology outlook 2026 report: the H1, an intro sentence and the chapter index, in the page flow.
Author Objective	Add a Title, a Text and an Anchor List with Sticky off above the four chapter sections, whose Anchor names match the links.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Global technology outlook 2026	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h1	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	How business and technology leaders plan to grow, modernise and compete in the years ahead.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Anchor List	Yes	Adds the Anchor List to the page	Select the section in the content tree, choose Add (+) and pick Anchor List	Only components the section allows (section filter)
D	Link Title (Anchor List › Content › Links › Item 1)	CH 1: Overview	No	Visible link text	Short chapter name	None
(E)	Anchor Name (Anchor List › Content › Links › Item 1)	overview	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
F	Link Title (Anchor List › Content › Links › Item 2)	CH 2: Findings	No	Visible link text	Short chapter name	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(G)	Anchor Name (Anchor List › Content › Links › Item 2)	findings	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
H	Link Title (Anchor List › Content › Links › Item 3)	CH 3: Outlook	No	Visible link text	Short chapter name	None
(I)	Anchor Name (Anchor List › Content › Links › Item 3)	outlook	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
J	Link Title (Anchor List › Content › Links › Item 4)	CH 4: Next steps	No	Visible link text	Short chapter name	None
(K)	Anchor Name (Anchor List › Content › Links › Item 4)	next-steps	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
(L)	Anchor name (Chapter sections (CH 1 to CH 4) › Section properties)	overview, findings, outlook, next-steps (one per section, in this order)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The H1 'Global technology outlook 2026', the intro sentence and below them the row of four chapter links with 'CH 1: Overview' underlined as current.
- **Rendering behaviour:** Without Sticky the block has no `sticky` class and stays in its place; it renders `nav.anchor-list-nav` with `ul.anchor-list-items` and one `a.anchor-list-link` per item. After scrolling down it is no longer visible.
- **Publishing behaviour:** Publish to Preview shows the page on main–tcs-corp–sradha-tcs.aem.page, Publish to Live on aem.live. The links and the section Anchor names are part of the same page, so one publish covers both; a translated onThisPage label is a separate publish of the locale placeholders sheet.

Business Rules

- Place the Anchor List above the first chapter section, here after the Title and Text of the first section.
- Set the Anchor names (overview, findings, outlook, next-steps) before adding the links.
- A click scrolls to the target with 16px space above it, plus the fixed header height below 900 px.
- The Title is the page's single H1; the chapter sections use H2 headings that match the link text.

Common Authoring Mistakes

Error	Root Cause	Resolution
The list disappears while reading	Sticky is off (the default)	Turn Sticky on if the list should stay visible
'CH 1: Overview' never becomes current	The Overview section has no Anchor name overview	Enter overview in its Section properties

Troubleshooting

- **Symptoms:** Two sections claim the same chapter and one link never scrolls.
- **Cause:** Two sections use the same Anchor name; only the first gets the id.
- **Resolution:** Give each chapter section a unique Anchor name and update the matching Anchor Name.
- **Verification Steps:** Each link scrolls to its own chapter on the preview.

Use Cases: Medium-length pages, a table of contents at the top of an article.

Authoring Guidelines: Add the links (Link Title and Anchor Name) and leave Sticky off. Set the Anchor name of each target section in its Section properties.

Business Rules: Clicking a link scrolls to its target with 16px space above it (plus the fixed header height below 900px); the current-chapter highlight still follows the scroll position (useful when the list is visible, e.g. at the top).

Rendering Rules: `div.anchor-list` (no `sticky` class) containing `nav.anchor-list-nav > ul.anchor-list-items > li > a.anchor-list-link`.

Responsive Behaviour: Desktop and tablet (900px+): links padded 2.5rem; below 900px 1.5rem; on narrow screens the row scrolls sideways.

SEO Impact: Same-page fragment links (`#overview`); they do not add crawlable pages but expose the page structure.

Accessibility Compliance: A `<nav>` landmark labelled "On this page" (placeholder `onThisPage`); `aria-current="location"` on the current link; after a click keyboard focus moves to the target section (made focusable with `tabindex="-1"`); smooth scrolling is replaced by instant scrolling with reduced motion (WCAG 2.4.1, 2.4.3, 2.4.8 intent, 2.3.3 intent).

Variation 2 — Sticky

Variation Name: Sticky (Content tab › Sticky = on).

Business Purpose: Keeps the chapters available and the reading position visible throughout a long page.

Visual Example:

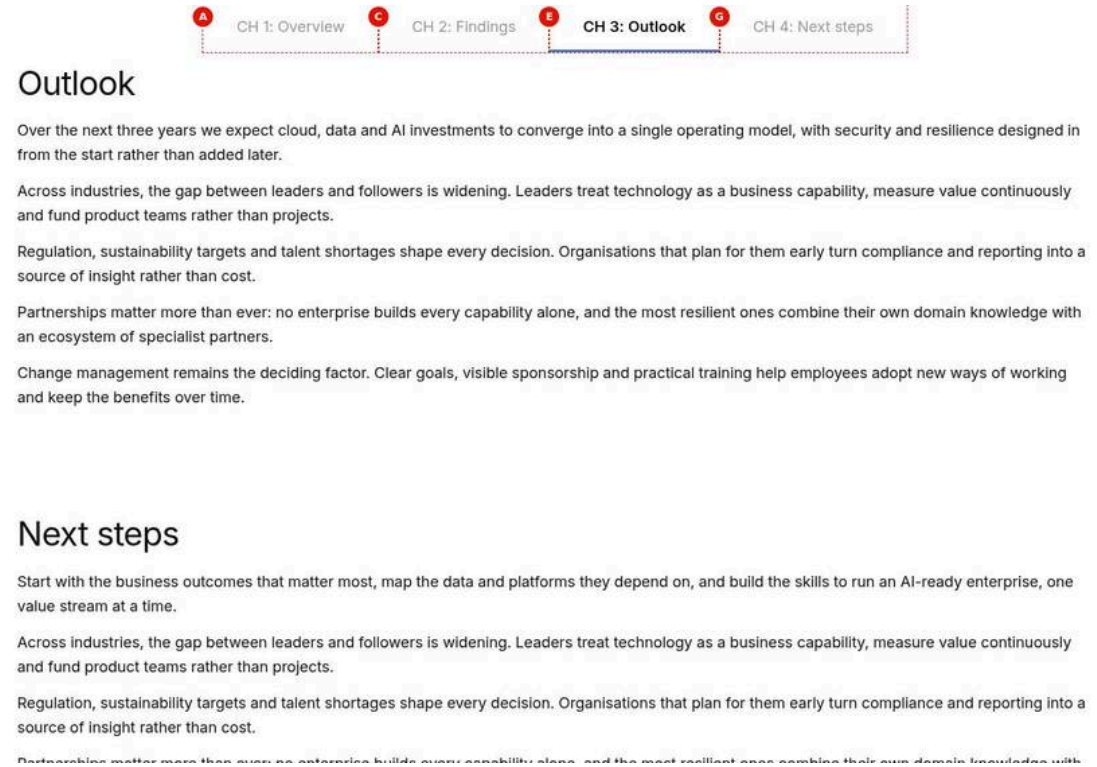

Figure 59: Sticky Anchor List — The viewport at 1440 px scrolled into chapter 3 (Outlook): the sticky Anchor List pinned at the top of the screen across the full width on a white background, 'CH 3: Outlook' underlined, the Outlook text below it. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/anchor-list-sticky.jpg)

Screenshot Details — Sticky Anchor List

Item	Detail
Screenshot Name	`screenshots/anchor-list-sticky.jpg`
Screenshot Purpose	Sticky Anchor List
Screen Description	The viewport at 1440 px scrolled into chapter 3 (Outlook): the sticky Anchor List pinned at the top of the screen across the full width on a white background, 'CH 3: Outlook' underlined, the Outlook text below it.
Business Context	Readers deep inside the long outlook report keep the chapters and their position in view, so the chapter row is pinned at the top.
Author Objective	Add the four-link Anchor List with Sticky on and check it while scrolled into chapter 3 (Outlook).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Sec-tion › Add (+))	Anchor List	Yes	Adds the Anchor List to the page	Select the section in the content tree, choose Add (+) and pick Anchor List	Only components the section allows (section filter)
A	Link Title (Anchor List › Content › Links › Item 1)	CH 1: Overview	No	Visible link text	Short chapter name	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Anchor Name (Anchor List › Content › Links › Item 1)	overview	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
C	Link Title (Anchor List › Content › Links › Item 2)	CH 2: Findings	No	Visible link text	Short chapter name	None
(D)	Anchor Name (Anchor List › Content › Links › Item 2)	findings	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
E	Link Title (Anchor List › Content › Links › Item 3)	CH 3: Outlook	No	Visible link text	Short chapter name	None
(F)	Anchor Name (Anchor List › Content › Links › Item 3)	outlook	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
G	Link Title (Anchor List › Content › Links › Item 4)	CH 4: Next steps	No	Visible link text	Short chapter name	None
(H)	Anchor Name (Anchor List › Content › Links › Item 4)	next-steps	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
(I)	Sticky (Anchor List › Content)	On	No	Pins the list while scrolling	On for long pages	None
(J)	Anchor name (Chapter sections (CH 1 to CH 4) › Section properties)	overview, findings, outlook, next-steps (one per section, in this order)	No	—	—	None
—	Action (Preview)	Scroll down into chapter 3 (Outlook)	—	Check on the preview (not stored in the content)	Scroll down into chapter 3 (Outlook)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The Anchor List fixed at the top of the screen across the full width on a white background, 'CH 3: Outlook' underlined, with the Outlook text scrolling beneath.
- **Rendering behaviour:** Once its place scrolls to the top, the block gets `anchor-list-pinned` (`position: fixed`, `z-index: 10`) and its wrapper keeps the height, so the page does not jump. From 900 px the header scrolls away, so the row pins at the very top.
- **Publishing behaviour:** Publish to Preview shows the page on main–tcs-corp–sradha-tcs.aem.page, Publish to Live on aem.live. The links and the section Anchor names are part of the same page, so one publish covers both; a translated onThisPage label is a separate publish of the locale placeholders sheet.

Business Rules

- Sticky pins the list for the rest of the page and releases it when the reader scrolls back above its place.

- Pinning is off in Universal Editor edit mode; check it in Preview mode or on aem.page.
- Clicked chapters scroll to just below the pinned list (header height plus list height plus 16px).
- Keep the Additional tab margins at Default on a sticky list; margins are outside the kept height.

Common Authoring Mistakes

Error	Root Cause	Resolution
The list does not stay at the top in the editor	Pinning is disabled in edit mode by design	Switch to Preview mode
The page jumps when the list pins	Margin top or bottom set on the block	Use padding or the default spacing
The chapter heading hides under the pinned list after a click	Another fixed element on the page is not included in the offset	Remove the extra fixed element or escalate to L3

Troubleshooting

- **Symptoms:** On preview the list scrolls away instead of pinning.
- **Cause:** Sticky is off, or the Links have no item, in which case the block adds no listeners.
- **Resolution:** Turn Sticky on and check that every Links item has a Link Title and an Anchor Name.
- **Verification Steps:** Scroll into chapter 3 on the preview: the block has the classes sticky and anchor-list-pinned.

Use Cases: Reports, long solution pages, case studies.

Authoring Guidelines: Turn Sticky on. Place the block above the first chapter section.

Business Rules: Once the block's place scrolls up to the top of the screen (or to the bottom of the fixed header below 900px), the block is pinned for the rest of the page and released when the visitor scrolls back above its place. The block's wrapper keeps the block's height while it is pinned, so the page does not jump. Pinning is disabled while editing in Universal Editor (it follows the edit / preview switch). Clicked chapters scroll to just below the pinned list (header height + list height + 16px).

Rendering Rules: Class `sticky` (background `--color-bg-default`); when pinned the class `anchor-list-pinned` adds `position: fixed`, `left: 0`, `right: 0`, `z-index: 10`, the section's inline padding (`--section-padding-inline`) and an inline `top` equal to the header height; the wrapper gets an inline `min-height`. A `position: sticky` element is deliberately not used, because it would only stay within its own section.

Responsive Behaviour: Desktop (900px+): pinned at the top of the screen (the header scrolls away). Tablet below 900px and mobile: pinned below the fixed header.

SEO Impact: None beyond Variation 1.

Accessibility Compliance: As Variation 1. The pinned list covers the top of the content, which is compensated by the scroll margin on targets; [To be confirmed: WCAG 2.2 "Focus Not Obscured" behaviour when tabbing through content under the pinned list — owner: development team].

6.19.4 Authoring Experience

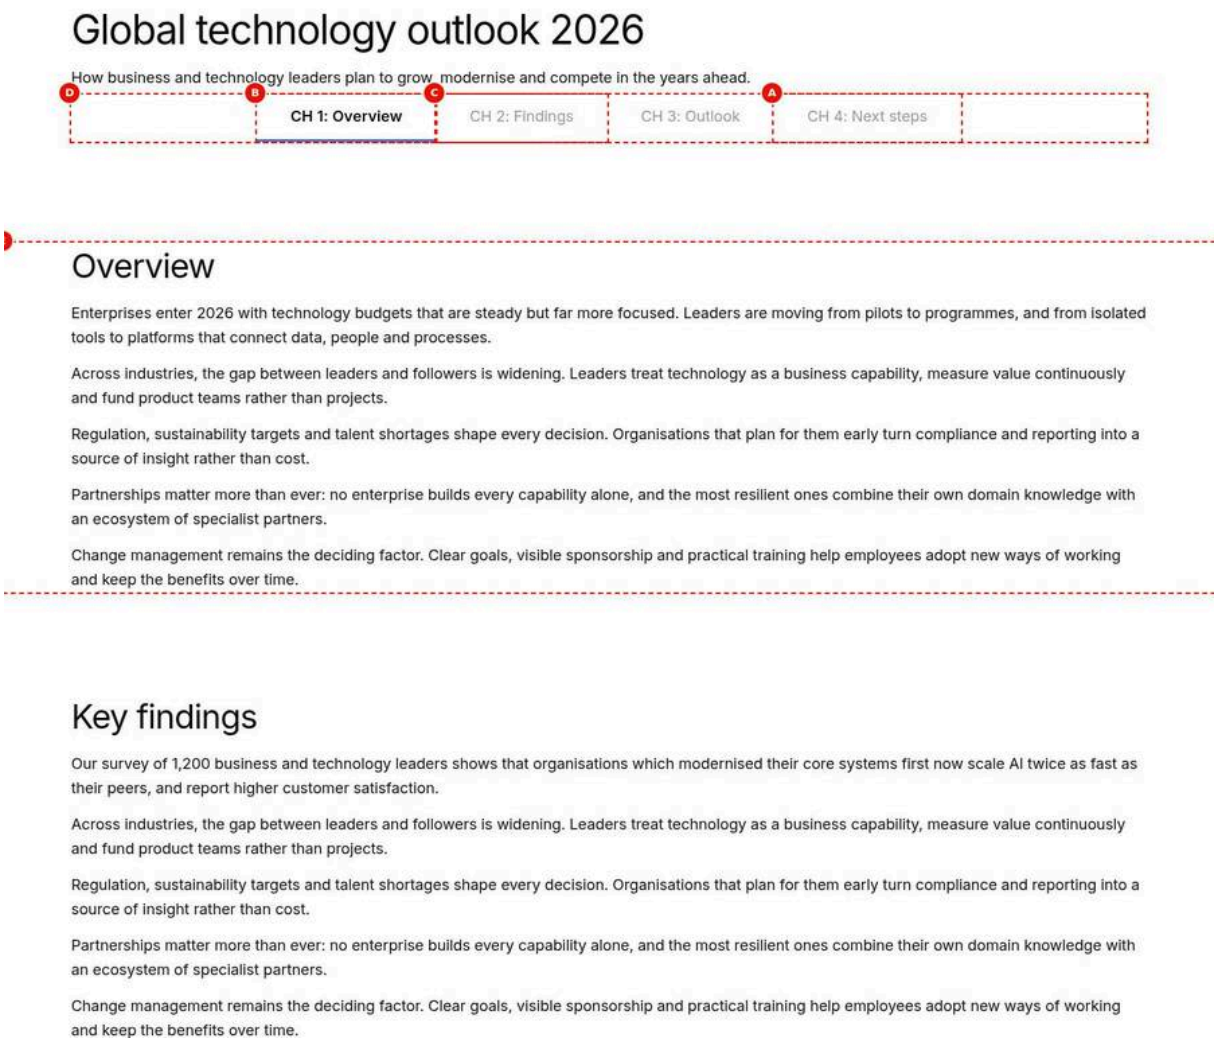

Figure 60: Universal Editor canvas — The page at 1440 px in Universal Editor Edit mode (annotated preview, not a Universal Editor screenshot): the H1, the intro and the four-link Anchor List, with A on 'CH 4: Next steps', B on the current link, C on 'CH 2: Findings', D on the block and E on the Overview section below. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/anchor-list-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/anchor-list-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	The page at 1440 px in Universal Editor Edit mode (annotated preview, not a Universal Editor screenshot): the H1, the intro and the four-link Anchor List, with A on 'CH 4: Next steps', B on the current link, C on 'CH 2: Findings', D on the block and E on the Overview section below.
Business Context	An author setting up the outlook report sees how the link fields in the Anchor List relate to the Anchor name of each chapter section.
Author Objective	Select the Anchor List and the CH 1 section in Universal Editor and identify markers A to E: link title, current link, anchor name, Sticky and section Anchor name.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
—	Title (Title)	Global technology outlook 2026	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
—	Title Type (Title)	h1	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	How business and technology leaders plan to grow, modernise and compete in the years ahead.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Anchor List	Yes	Adds the Anchor List to the page	Select the section in the content tree, choose Add (+) and pick Anchor List	Only components the section allows (section filter)
—	Link Title (Anchor List › Content › Links › Item 1)	CH 1: Overview	No	Visible link text	Short chapter name	None
—	Anchor Name (Anchor List › Content › Links › Item 1)	overview	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
—	Link Title (Anchor List › Content › Links › Item 2)	CH 2: Findings	No	Visible link text	Short chapter name	None
—	Anchor Name (Anchor List › Content › Links › Item 2)	findings	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
—	Link Title (Anchor List › Content › Links › Item 3)	CH 3: Outlook	No	Visible link text	Short chapter name	None
—	Anchor Name (Anchor List › Content › Links › Item 3)	outlook	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
—	Link Title (Anchor List › Content › Links › Item 4)	CH 4: Next steps	No	Visible link text	Short chapter name	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Anchor Name (Anchor List › Content › Links › Item 4)	next-steps	No	Target id	The section's Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)
—	Sticky (Anchor List › Content)	On	No	Pins the list while scrolling	On for long pages	None
—	Anchor name (Section CH 1 (below) › Section properties)	overview	No	—	—	None
—	Anchor name (Next chapter sections › Section properties)	findings, outlook, next-steps	No	—	—	None
—	Mode (Universal Editor)	Edit (the Anchor List and the CH 1 section selected)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The canvas shows the H1, the intro and the four-link row with letters on 'CH 4: Next steps' (A), the current link (B), 'CH 2: Findings' (C), the block (D) and the Overview section below (E).
- **Rendering behaviour:** In edit mode the list is not pinned even with Sticky on, so it never covers the content being edited; the current link is the first link or the chapter in view. Anchor Names are not visible on the canvas.
- **Publishing behaviour:** Changes are saved automatically in Universal Editor but are public only after Publish: to Preview on main–tcs-corp–sradha-tcs.aem.page, to Live on aem.live. The section Anchor names are saved with the same page.

Business Rules

- A (Link Title) is the visible text; C (Anchor Name) is the #anchor and must match E (Section properties Anchor name).
- B is set automatically; authors cannot choose the current link.
- D (Sticky) has an effect only in Preview mode and on published pages.
- Anchor names are normalised (lower case, hyphens), so Overview and overview match.

Common Authoring Mistakes

Error	Root Cause	Resolution
The author looks for the anchor on the canvas	Anchor Name is not displayed, only stored in the Links item	Open the Links item in the properties panel
The section Anchor name is set on the Anchor List instead	Confusing the block Additional Anchor ID with the section Anchor name	Select the target section and set Anchor name in its Section properties

Troubleshooting

- **Symptoms:** A Links item with only overview filled shows the text overview on the canvas.
- **Cause:** Link Title is empty; an item with one value uses it as both text and anchor.
- **Resolution:** Fill Link Title with 'CH 1: Overview'.
- **Verification Steps:** The canvas shows 'CH 1: Overview' and the link still points to #overview.

Annotations

- A = Link Title of each link (Links multifield › Link Title), the visible text.

- B = Current-location underline (automatic; on the canvas the first link, or the chapter in view).
- C = Anchor Name (Links multifield › Anchor Name), not visible on the canvas; it is the `#anchor` of the link.
- D = Sticky (Content tab), visible only on preview and live pages (not pinned in edit mode).
- E = The target section's Anchor name (Section properties), which must match C.

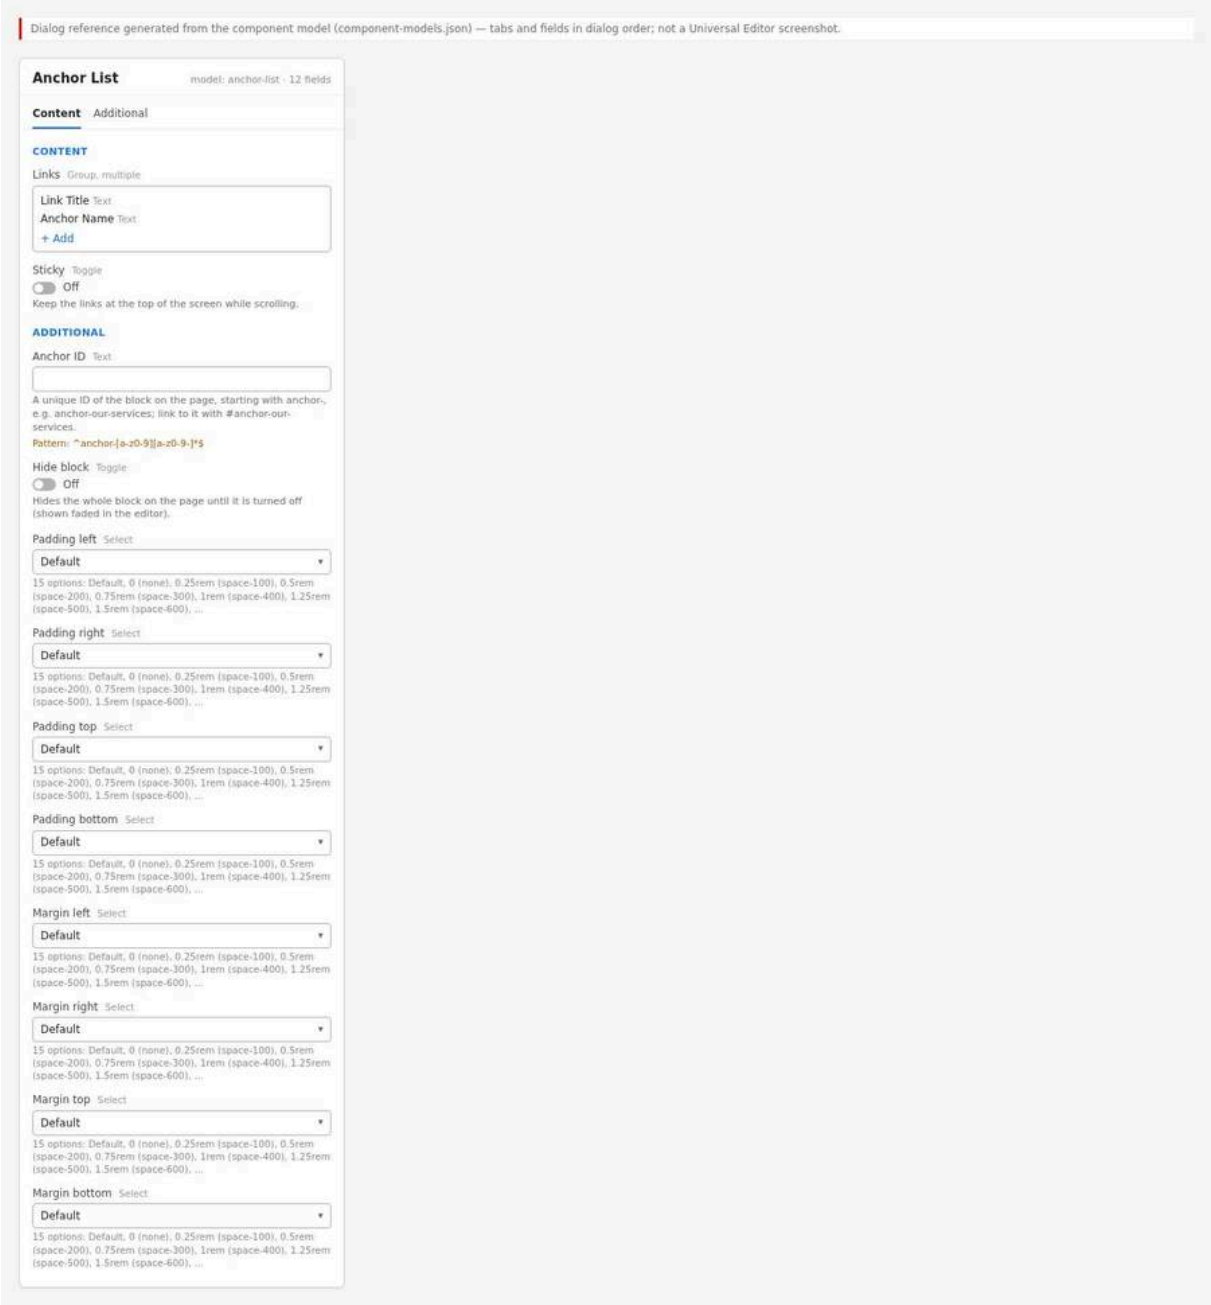

Figure 61: Properties panel — The Anchor List properties panel: the Content tab with the Links multifield (two items with Link Title and Anchor Name) and the Sticky toggle, and the Additional tab. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/anchor-list-properties-panel.jpg)

Tabs:

- **Content:** Links (composite multifield; each item: Link Title, Anchor Name), Sticky (toggle, off).
- **Additional:** Anchor ID, Hide block, Padding left / right / top / bottom, Margin left / right / top / bottom.

6.19.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites select the page and choose **Edit**.

Expected Result: The page opens in Universal Editor.

Steps — Open the page: The Sites console with the page selected and Edit highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites console	Sites › tcs-corp › us › en › insights › Global technology outlook 2026	Select the page
2	AEM Sites console toolbar	Edit	Open the page in Universal Editor

Step 2 — Name the target sections

Action: Select each chapter section, open its properties and enter an **Anchor name** (lower case, no spaces, e.g. `overview`). To target a block instead, set the block's Additional › Anchor ID (e.g. `anchor-findings`).

Expected Result: Each section has a unique anchor name.

Steps — Section Anchor name: The section properties panel with Anchor name "overview".

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section (CH 1: Overview)	Select
2	Section properties	Anchor name	overview
3	Section properties (the next chapter sections)	Anchor name	findings, outlook, next-steps

Step 3 — Add the Anchor List

Action: Select the section above the chapters (e.g. the one with the page header), choose **Add** (+) and select **Anchor List**.

Expected Result: An empty Anchor List is added (no links yet).

Steps — Add the block: The Add menu with Anchor List highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section (with the page title, above the chapters)	Select
2	Section › Add (+)	Component	Anchor List

Step 4 — Add the links

Action: In the Content tab, add an item to Links for each chapter: Link Title (e.g. "CH 1: Overview") and Anchor Name (e.g. `overview`, with or without `#`). Order the items as the chapters appear.

Expected Result: The links appear on the canvas in order.

Steps — Links multifield: Three Links items filled with titles and anchor names.

Step	Where	Field / control	Value / action
1	Anchor List › Content	Links › Add	Item 1, Item 2, Item 3
2	Links › Item 1	Link Title	CH 1: Overview
3	Links › Item 1	Anchor Name	overview

Step	Where	Field / control	Value / action
4	Links › Item 2	Link Title	CH 2: Findings
5	Links › Item 2	Anchor Name	findings
6	Links › Item 3	Link Title	CH 3: Outlook
7	Links › Item 3	Anchor Name	outlook

Step 5 — Choose Sticky

Action: Turn on Sticky if the list should stay at the top while scrolling.

Expected Result: No change on the edit canvas (pinning is off while editing).

Steps — Sticky toggle: The Sticky toggle switched on.

Step	Where	Field / control	Value / action
1	Anchor List › Content	Sticky	On

Step 6 — Set the Additional options (optional)

Action: Set spacing if needed; an Anchor ID is rarely needed for this block.

Expected Result: Saved options.

Steps — Additional tab: The Additional tab with Margin bottom 2rem.

Step	Where	Field / control	Value / action
1	Anchor List › Additional	Margin bottom	2rem (space-800)

Step 7 — Preview and test

Action: Switch to Preview mode (or open the `.aem.page` URL), click each link, scroll the page.

Expected Result: Each link scrolls to its chapter; the current link follows the scroll position; Sticky pins the list.

Steps — Preview: The preview page scrolled to chapter 2 with the pinned list and "CH 2" underlined.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	Preview	Anchor List	Click CH 2: Findings
3	Preview	Action	Scroll within chapter 2; the list stays pinned with CH 2 underlined

Step 8 — Validate

Action: Run the Validation Process checklist.

Expected Result: All checks pass.

Steps — Validate: The mobile view with the list below the fixed header.

Step	Where	Field / control	Value / action
1	Browser developer tools	Responsive mode	375 px (mobile)
2	Preview page	Action	Scroll down; the list pins below the fixed header
3	Preview page	Validation checklist	Click every link and check the current-link highlight

Step 9 — Publish

Action: Publish the page.

Expected Result: The live page shows the working chapter navigation.

Steps — Publish: The Publish dialog with the page selected.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Open the Publish dialog
2	Publish dialog	Destination	Live
3	Publish dialog	Page	Selected (with its referenced assets)
4	Publish dialog	Publish	Confirm

Preview Process

1. Use Preview mode in Universal Editor to test clicks and the current-link highlight (Sticky pins in Preview mode too).
2. Preview the page and test on `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}`, including opening the URL with `#anchor` appended.

Publishing Process

1. Publish the page (the anchors are part of the same page).
2. Test the live URL with a hash, e.g. `/en/insights/report#findings`.

Validation Process

- ☐ Every link scrolls to the right chapter, with the chapter heading visible (not hidden under the header or the pinned list).
- ☐ The current link changes while scrolling and the last link is current at the end of the page.
- ☐ Opening the page with `#anchor` marks that link as current.
- ☐ Sticky pins below the header on mobile and at the top on desktop, without the page jumping.
- ☐ On mobile the row scrolls sideways and keeps the current link in view.
- ☐ Keyboard: Tab reaches each link; Enter moves focus to the chapter.
- ☐ Anchor names are unique on the page.

Rollback Process

1. Undo in Universal Editor or restore a page version, then publish.
2. Turn on Hide block to remove the list temporarily.
3. Code defects: revert on `main`.

The walkthroughs below repeat the steps above for each variation of chapter 6.19.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Default (in place)

Reproduces the screenshot `screenshots/anchor-list-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: The Title, the Text and the Anchor List are added in this order to the first section, above the four chapter sections.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Global technology outlook 2026; **Title Type** (B) = h1.

Expected Result: The heading 'Global technology outlook 2026' appears as the page's H1.

Step 4 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: The Title, the Text and the Anchor List are added in this order to the first section, above the four chapter sections.

Step 5 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = How business and technology leaders plan to grow, modernise and compete in the years ahead.

Expected Result: The intro sentence 'How business and technology leaders plan to grow, modernise and compete in the years ahead.' appears below the title.

Step 6 — Add the Anchor List

Action: Select the section in the content tree, choose **Add (+)** and pick **Anchor List**.

Expected Result: The Title, the Text and the Anchor List are added in this order to the first section, above the four chapter sections.

Step 7 — Fill in Anchor List › Content

Action: Select **Anchor List** in the content tree and open the **Content** tab of the properties panel. Enter: **Links** › Item 1: **Link Title** (D) = CH 1: Overview, **Anchor Name** (E) = overview; **Links** › Item 2: **Link Title** (F) = CH 2: Findings, **Anchor Name** (G) = findings; **Links** › Item 3: **Link Title** (H) = CH 3: Outlook, **Anchor Name** (I) = outlook; **Links** › Item 4: **Link Title** (J) = CH 4: Next steps, **Anchor Name** (K) = next-steps.

Expected Result: Four links 'CH 1: Overview', 'CH 2: Findings', 'CH 3: Outlook' and 'CH 4: Next steps' appear in one centred row; the first is underlined as current.

Step 8 — Fill in Chapter sections (CH 1 to CH 4) › Section properties

Action: Select **Chapter sections (CH 1 to CH 4)** in the content tree and open the **Section properties** tab of the properties panel. Enter: **Anchor name** (L) = overview, findings, outlook, next-steps (one per section, in this order).

Expected Result: The four chapter sections get the ids overview, findings, outlook and next-steps; nothing changes visibly on the canvas.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The H1 'Global technology outlook 2026', the intro sentence and below them the row of four chapter links with 'CH 1: Overview' underlined as current.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the page on main–tcs-corp–sradha-tcs.aem.page, Publish to Live on aem.live. The links and the section Anchor names are part of the same page, so one publish covers both; a translated onThisPage label is a separate publish of the locale placeholders sheet.

Step 11 — Verify

Action: On the live page check: Each link scrolls to its own chapter on the preview.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Sticky

Reproduces the screenshot `screenshots/anchor-list-sticky.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Anchor List

Action: Select the section in the content tree, choose **Add (+)** and pick **Anchor List**.

Expected Result: An empty Anchor List is added below the page title and intro; it shows no links until items are added.

Step 3 — Fill in Anchor List › Content

Action: Select **Anchor List** in the content tree and open the **Content** tab of the properties panel. Enter: **Links** › Item 1: **Link Title** (A) = CH 1: Overview, **Anchor Name** (B) = overview; **Links** › Item 2: **Link Title** (C) = CH 2: Findings, **Anchor Name** (D) = findings; **Links** › Item 3: **Link Title** (E) = CH 3: Outlook, **Anchor Name** (F) = outlook; **Links** › Item 4: **Link Title** (G) = CH 4: Next steps, **Anchor Name** (H) = next-steps; **Sticky** (I) = On.

Expected Result: Four links 'CH 1: Overview', 'CH 2: Findings', 'CH 3: Outlook' and 'CH 4: Next steps' appear in one centred row; turning Sticky on changes nothing on the edit canvas.

Step 4 — Fill in Chapter sections (CH 1 to CH 4) › Section properties

Action: Select **Chapter sections (CH 1 to CH 4)** in the content tree and open the **Section properties** tab of the properties panel. Enter: **Anchor name** (J) = overview, findings, outlook, next-steps (one per section, in this order).

Expected Result: The four chapter sections get the ids overview, findings, outlook and next-steps; nothing changes visibly on the canvas.

Step 5 — Preview

Action: Action: Scroll down into chapter 3 (Outlook).

Expected Result: Scrolled into chapter 3, the list is pinned at the top of the screen and 'CH 3: Outlook' is underlined.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The Anchor List fixed at the top of the screen across the full width on a white background, 'CH 3: Outlook' underlined, with the Outlook text scrolling beneath.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the page on main–tcs-corp–sradha-tcs.aem.page, Publish to Live on aem.live. The links and the section Anchor names are part of the same page, so one publish covers both; a translated onThisPage label is a separate publish of the locale placeholders sheet.

Step 8 — Verify

Action: On the live page check: Scroll into chapter 3 on the preview: the block has the classes sticky and anchor-list-pinned.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.19.6 Authorable Field Specification

Anchor List block model (`anchor-list`)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Content tab › Links (`anchors`)	container (composite multi-field)	No	Yes	(none)	The chapter links	One item per chapter, in page order	Items without Link Title and Anchor Name are ignored	see item table
Content tab › Sticky (`sticky`)	boolean	No	No	false	Pins the list while scrolling	On for long pages	None	true
Additional tab › Anchor ID (`classes_anchor`)	text	No	No	(empty)	Block id	Rarely needed	Regex `^anchor-[a-z0-9][a-z0-9-]*$` (Enforced)	anchor-chapters
Additional tab › Hide block (`classes_hideblock`)	boolean	No	No	false	Hide the block	Temporary use	None	false
Additional tab › Padding left (`classes_paddingleft`)	select	No	No	Default ("")	Left padding	Design needs only	15 options (see 6.17.6 Spacing values)	pl-0
Additional tab › Padding right (`classes_paddingright`)	select	No	No	Default ("")	Right padding	As above	15 options	pr-0
Additional tab › Padding top (`classes_paddingtop`)	select	No	No	Default ("")	Top padding	As above	15 options	pt-400
Additional tab › Padding bottom (`classes_paddingbottom`)	select	No	No	Default ("")	Bottom padding	As above	15 options	pb-400
Additional tab › Margin left (`classes_marginleft`)	select	No	No	Default ("")	Left margin	As above	15 options	ml-0
Additional tab › Margin right (`classes_marginright`)	select	No	No	Default ("")	Right margin	As above	15 options	mr-0
Additional tab › Margin top (`classes_margintop`)	select	No	No	Default ("")	Top margin	As above	15 options	mt-800

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Additional tab › Margin bottom (`classes_marginbottom`)	select	No	No	Default (“”)	Bottom margin	As above	15 options	mb-800

Links item (composite multifield `anchors`)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Link Title (`label`)	text	No	No	(empty)	Visible link text	Short chapter name	None	CH 1: Overview
Anchor Name (`anchorName`)	text	No	No	(empty)	Target id	The section’s Anchor name, a block Anchor ID or a heading id	Normalized (lower case, other characters to hyphens, leading # removed)	overview

Field details

- **Links** — Purpose: the chapters. Allowed Values: items of Link Title and Anchor Name. Character Limits: Recommended at most 7 items. Business Rules: items keep their order; an item is used when it has at least one non-empty value; if only one value is filled, it is used as both the text and the anchor. Dependency Rules: each Anchor Name must match an id on the page. Visibility Rules: always shown. Sample Content: three chapters.
- **Link Title** — Purpose: link text. Allowed Values: plain text. Character Limits: Recommended 25 characters (links do not wrap). Business Rules: empty Link Title with an Anchor Name shows the Anchor Name as the text. Sample Content: CH 2: Findings.
- **Anchor Name** — Purpose: the target. Allowed Values: text; normalized with `toClassName` (e.g. “Our Findings” becomes `our-findings`, `#overview` becomes `overview`). Character Limits: Recommended 30 characters. Business Rules: empty Anchor Name uses the normalized Link Title (e.g. “CH 1: Overview” becomes `ch-1-overview`). Dependency Rules: the section Anchor name is normalized the same way, so case and spaces do not matter as long as the words match. Sample Content: findings.
- **Sticky** — Purpose: pinning. Allowed Values: on / off. Business Rules: on only when the property text is `true`; adds the `sticky` class; pinning needs at least one link and is off in edit mode. Visibility Rules: always shown. Sample Content: on.
- **Anchor ID, Hide block, Padding and Margin selects** — as in 6.17.6. A block Anchor ID of another block is a valid Anchor Name target.

6.19.7 Field Annotation Mapping

Marker	Field	Purpose
A	Links › Link Title	Visible chapter link text
B	(automatic) current location	Shows the chapter in view
C	Links › Anchor Name	The `#anchor` the link jumps to
D	Content tab › Sticky	Pins the list while scrolling
E	Section properties › Anchor name (or a block’s Anchor ID)	The id of the target

6.19.8 Component Specification

Attribute	Value
Component Name	Anchor List (`anchor-list`; resource type `core/franklin/components/block/v1/block`, model `anchor-list`, key-value block)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`utils/multifield.js`, `properties.js`, `environment.js`, `placeholders.js`; `scripts/aem.js`, `scripts/scripts.js`; section Anchor name (`models/_section.json`, `scripts/scripts.js`); block Anchor IDs (`decorators/block-options-decorator.js`); header `.nav-wrapper`
Component Type	Block (no child items; one composite multifield)
Supported Variants	Default; Sticky
Supported Templates	Any page
Supported Metadata	None
Supported Tags	None
Supported Personalization	None
Caching Considerations	Authored content in the page HTML (CDN cached); only the placeholders sheet is fetched (once per page)
Performance Considerations	Small DOM; scroll, resize and `ResizeObserver` (on `document.body`) handlers are throttled with `requestAnimationFrame`; passive scroll listeners. Two independent update loops (pinning and current link) when Sticky is on
Accessibility Compliance	`<nav>` with `aria-label` "On this page"; `aria-current="location"`; focus moved to the target after a click; visible focus outline; reduced motion gives instant scrolling and no transitions; links are real `#anchor` links
SEO Compliance	Fragment links within the page; no impact on indexing; section ids give stable deep links

6.19.9 Input Model

Content Inputs: The Links (Link Title, Anchor Name) and Sticky.

Metadata Inputs: None.

Tags Inputs: None.

Page Context Inputs: The ids on the page (section Anchor names, block Anchor IDs, heading ids), the site header's `.nav-wrapper` position and height, the URL hash, the scroll position and viewport height, the editor's edit-mode class on `<html>`, the reduced-motion preference.

Query Inputs: None.

Manual Inputs: All links are manual.

Authored HTML received from AEM (simplified):

```
<div class="anchor-list">
  <div><div>anchors</div><div>
    <p>CH 1: Overview</p><p>overview</p><hr>
    <p>CH 2: Findings</p><p>findings</p><hr>
    <p>CH 3: Outlook</p><p>outlook</p>
  </div></div>
```

```
  <div><div>sticky</div><div>true</div></div>
</div>
```

The target section (AEM delivers section properties as data attributes; `scripts.js` turns the Anchor name into the section id):

```
<div class="section" data-anchorname="overview">...</div>
<!-- after decoration -->
<div class="section" id="overview">...</div>
```

6.19.10 Output Model

Rendered Output

- `div.anchor-list.block` (plus `sticky`, `anchor-list-pinned` while pinned, Additional tab classes) containing `nav.anchor-list-nav[aria-label] > ul.anchor-list-items > li > a.anchor-list-link[href="#anchor"]` (one has `aria-current="location"`).

Generated HTML

```
<div class="anchor-list block sticky anchor-list-pinned" style="top: 64px;">
  <nav class="anchor-list-nav" aria-label="On this page">
    <ul class="anchor-list-items">
      <li><a class="anchor-list-link" href="#overview">CH 1: Overview</a></li>
      <li><a class="anchor-list-link" href="#findings"
        aria-current="location">CH 2: Findings</a></li>
      <li><a class="anchor-list-link" href="#outlook">CH 3: Outlook</a></li>
    </ul>
  </nav>
</div>
```

While pinned, the block's wrapper (`div.anchor-list-wrapper`) has an inline `min-height` equal to the block's height. After a click the target gets an inline `scroll-margin-top` and, if it had none, `tabindex="-1"`; the URL hash is replaced (`history.replaceState`, no new history entry).

Generated JSON: None.

Generated Metadata: None.

Analytics Tracking

Component state: `{ "component": { "anchor-list-1": { "@type": "tcs-corp/components/anchor-list", "parentId": "page-..." } } }` (no `dc:title`, the block has no heading). Each link click:

```
{
  "event": "cmp:click",
  "eventInfo": {
    "path": "component.anchor-list-1",
    "interaction": "link",
    "dc:title": "CH 2: Findings",
    "xdm:linkURL": "https://main--tcs-corp--sradha-tcs.aem.live/en/insights/report#
findings",
    "xdm:linkType": "other",
    "breakpoint": "mobile"
  }
}
```

Scroll-driven changes of the current link are not tracked.

Personalization Output: None.

Search Index Output: None.

Target Personalization Output: None: the block has no personalisation output. It is in the data layer as tcs-corp/components/anchor-list with a cmp:click per link (dc:title = Link Title); scroll-driven changes of the current link are not tracked. Adobe Target use is Not implemented (as of this handover).

6.19.11 Business Rules

1. Links are read from the composite multifield in order; each item's non-empty texts are [Link Title, Anchor Name].
2. An item with neither value is dropped; with one value, that value is the text and (normalized) the anchor.
3. Anchor names are normalized with `toClassName` after removing a leading `#`; section Anchor names are normalized the same way.
4. A section gets its Anchor name as id only if no element on the page has that id yet (the first one wins).
5. Any element id on the page is a valid target, including block Anchor IDs (`anchor-...`) and heading ids.
6. Click: the default jump is prevented; the link becomes current immediately; the target is scrolled into view (smooth, instant with reduced motion) with a top margin of header height (when the header is fixed or sticky, i.e. below 900px) + list height (when Sticky) + 16px; the URL hash is replaced; focus moves to the target without a second scroll.
7. A link whose target is not on the page (e.g. on the block library page) only becomes current.
8. While a clicked chapter scrolls into view, scroll updates do not change the current link, until the `scrollend` event or 3 seconds.
9. Current link on scroll: the last target whose top is at or above the offset; at the very end of the page (after scrolling) the last link; before any target the first link; hidden targets (still loading) are skipped.
10. Without any visible target on the page, the clicked link, else the first link, stays current.
11. Opening the page with a hash that matches a link, or a hash change, marks that link current (and locks for 3 seconds), even when the chapter is not on the page.
12. When the current link changes, the row scrolls sideways to centre it.
13. Sticky: on only for the text `true`; the block is pinned (fixed) once its wrapper's top reaches the header bottom (0 from 900px), with the wrapper keeping its height; unpinned above that; never pinned in Universal Editor edit mode; re-evaluated on scroll, resize, body size changes and editor mode switches.
14. With no links the block renders an empty navigation and adds no listeners (Sticky has no effect).
15. The navigation's accessible name comes from the placeholder `onThisPage` ("On this page").

6.19.12 Author Best Practices

Recommended Content Length

Element	Recommended	Enforced
Number of links	3 to 7	No
Link Title	Up to 25 characters	No
Anchor Name	1 to 3 words, lower case, hyphens	No (normalized by code)

Image Dimensions: Not applicable (no images).

CTA Writing Guidelines: Use the chapter names exactly as the section headings read (or a consistent "CH n: Name" pattern), so visitors recognise where they land.

Accessibility Guidelines

- Give each target section a visible heading that matches the link text.
- Keep the number of links small so they fit without sideways scrolling on most screens.
- Do not use the Anchor List as the only navigation to important content.

SEO Guidelines

- Stable, meaningful anchor names (`findings`, not `section-2`) make shareable deep links.
- Do not change anchor names after publishing pages that others link to.

Metadata Guidelines: Not applicable.

Taxonomy Guidelines: Not applicable.

Localization Guidelines

- Translate Link Titles per locale.
- Anchor names may stay in English across locales (they are not visible), or be translated consistently with the section Anchor names of that locale; they must match on each page.
- Translate the placeholder `onThisPage` in each locale.

6.19.13 Troubleshooting Guide

Issue 1 — A link does not scroll

Symptoms: Clicking a link only underlines it; the page does not move.

Root Cause: No element on the page has the link's (normalized) anchor: the section's Anchor name is missing, different, or used twice (the second section gets no id).

Diagnosis Steps: In the browser, run `document.getElementById('findings')` in the console; check the section's Anchor name and the link's Anchor Name.

Resolution Steps: Make the names match (case and spaces do not matter, the words do); make section Anchor names unique.

Validation Steps: The link scrolls to the section.

Preventive Measures: Set section Anchor names before adding the Anchor List.

Issue 2 — The chapter heading is hidden under the header or the list

Symptoms: After a click the start of the chapter is covered.

Root Cause: The offset is computed from the header `.nav-wrapper` (fixed below 900px) and the list height (Sticky); other fixed elements (e.g. a banner) are not included.

Diagnosis Steps: Check for other fixed elements; compare at 375px and 1440px.

Resolution Steps: Remove the extra fixed element or escalate to L3.

Validation Steps: The heading is visible below the list after a click.

Preventive Measures: Avoid additional fixed elements on pages with a sticky Anchor List.

Issue 3 — Sticky does not pin in the editor

Symptoms: The list scrolls away in Universal Editor.

Root Cause: Pinning is disabled in edit mode by design (so it does not cover the content being edited).

Diagnosis Steps: Switch to Preview mode.

Resolution Steps: Test in Preview mode or on the preview URL.

Validation Steps: The list pins in Preview mode.

Preventive Measures: Inform authors.

Issue 4 — The wrong link is highlighted
Symptoms: The current link lags or jumps to a later chapter.

Root Cause: Short final chapters never reach the top (the last link becomes current only at the page end); after a click the highlight is locked until the scroll ends (or 3 seconds); links not in page order.

Diagnosis Steps: Check the order of the links against the section order; scroll slowly.

Resolution Steps: Order links as the sections; make the last chapter long enough or accept the end-of-page rule.

Validation Steps: The highlight follows the scroll.

Preventive Measures: Keep links in page order.

Issue 5 — Links overflow on mobile
Symptoms: Some links are off screen on mobile; no scrollbar is visible.

Root Cause: Links never wrap; the row scrolls sideways with a hidden scrollbar.

Diagnosis Steps: Check at 375px.

Resolution Steps: Shorten Link Titles or reduce the number of links.

Validation Steps: All links fit, or the current one is scrolled into view.

Preventive Measures: Recommended limits in 6.19.12.

Issue 6 — Link text shows the anchor name
Symptoms: A link reads “overview” instead of “CH 1: Overview”.

Root Cause: The item’s Link Title is empty, so its only value (the Anchor Name) is used as text.

Diagnosis Steps: Check the Links item.

Resolution Steps: Fill Link Title.

Validation Steps: The link shows the title.

Preventive Measures: Fill both fields for every item.

Issue 7 — The page jumps when the list pins
Symptoms: Content shifts when the list becomes fixed.

Root Cause: The wrapper’s height is kept with an inline `min-height`; additional custom spacing on the block (Additional tab margins) is outside the measured height.

Diagnosis Steps: Check the block’s Additional margins.

Resolution Steps: Use padding instead of margin, or no extra spacing.

Validation Steps: No visible jump.

Preventive Measures: Keep spacing defaults on sticky Anchor Lists.

6.19.14 Support Runbook
Monitoring Requirements: No block-specific monitoring; page availability and Core Web Vitals (layout shift when pinning should be zero).

Logs

- Browser console: the block emits no messages.

- Use `document.getElementById('<anchor>')` and the Elements panel (`aria-current`, `anchor-list-pinned`) to diagnose.
- Admin API page status: `GET https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`.

Common Errors

Error	Likely cause	First action
Link does not scroll	Missing or duplicate section Anchor name	Match and de-duplicate names
Heading covered after click	Extra fixed element	Remove it; L3
No pinning in editor	Edit mode (by design)	Use Preview mode
Link shows anchor name	Empty Link Title	Fill Link Title
English "On this page" read by screen readers on a localized page	Placeholder `onThisPage` missing	Add it to the locale's placeholders

Escalation Matrix

Level	Who	What they check
L1	Author support	Links items, section Anchor names, Sticky, preview vs edit mode
L2	AMS / site admin	Delivered markup (`data-anchorname`, section ids), placeholders, CDN cache
L3	Development team	`anchor-list.js` offsets and pinning, header interplay, `scripts.js` section anchors
L4	Adobe Support	Universal Editor or Edge Delivery platform issues

Recovery Procedures: Correct names and publish; restore a page version; hide the block; revert code on `main`.

Health Checks: Each link scrolls to its chapter; the highlight follows scrolling; Sticky pins at 375px (below the header) and 1440px (top); a URL with `#anchor` highlights the right link.

Operational Procedures: When restructuring a page, update the section Anchor names and the Anchor List together; avoid renaming anchors that external links use.

Known Limitations

- Same-page links only.
- No visible scrollbar or scroll buttons when links overflow.
- Scroll offset does not account for fixed elements other than the site header and the list itself.
- The highlight at the end of the page jumps to the last link.
- Scroll-based highlight changes are not tracked in the data layer.
- An empty Anchor List renders an empty, labelled navigation landmark.

6.19.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
A link only underlines itself	The target section has no Anchor name or a different one	Make the section Anchor name match the Anchor Name
One of two links never scrolls	Two sections use the same Anchor name; only the first gets the id	Make Anchor names unique
A link shows its anchor name as text	Link Title left empty	Fill Link Title

Error	Root Cause	Resolution
The highlight jumps to the wrong chapter	Links not in page order	Reorder the Links items
The list does not pin in the editor	Pinning is off in edit mode by design	Check in Preview mode
The page jumps when the list pins	Margins set in the Additional tab	Keep margins at Default; use padding
Links are off screen on mobile	Too many or long Link Titles; no visible scrollbar	Shorten titles or reduce the number of links
Screen readers announce On this page in English on a localised page	Placeholder onThisPage missing in the locale	Add and publish it in the locale placeholders sheet

6.19.16 Author Quick Reference Guide

Mandatory Fields

- Links: not required in the model, but without an item with Link Title or Anchor Name the block renders an empty navigation
- Section properties Anchor name of each target section (outside the block): without a matching id a link only marks itself current

Recommended Fields

- Link Title: the chapter name as visitors read it, about 25 characters, e.g. 'CH 2: Findings'
- Anchor Name: the Anchor name of the target section (or a block Anchor ID), lower case with hyphens
- Sticky: on for long pages so the row stays at the top while reading

Optional Fields

- Anchor ID: rarely needed for this block
- Hide block: temporary hiding
- Padding and Margin: keep the margins at Default on a sticky list

Authoring Checklist

1. Set the Anchor name of every chapter section before adding the links
2. Place the Anchor List above the first chapter section, below the page title
3. Add one Links item per chapter, in page order
4. Fill both Link Title and Anchor Name in every item
5. Use 3 to 7 links with short titles so the row fits on most screens
6. Give each target section a visible heading that matches its link
7. Keep Anchor names unique on the page; the first section with a name wins

Pre-Publish Checklist

1. In Preview mode click every link and check that the chapter heading is visible below the header and list
2. Scroll the page and check that the current link follows; the last link is current at the end
3. Open the preview URL with #findings appended and check that CH 2 is current
4. With Sticky, check pinning at 375 px (below the header) and 1440 px (at the top) without a jump
5. At 375 px swipe the row and check that the current link stays in view
6. Tab to each link and press Enter: focus moves to the chapter

Post-Publish Validation Checklist

1. Open the live URL with a hash, e.g. #outlook, and check the highlight
2. Click every link on aem.live and check the scroll target
3. Check the translated On this page label if the locale placeholders sheet was published
4. Check that link clicks appear as cmp:click in window.adobeDataLayer

5. After restructuring the page, check that external links to the anchors still work

6.19.17 Component Execution Example

Business example: Chapter navigation of the Global technology outlook 2026.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Title
Title (Title)	Global technology outlook 2026
Title Type (Title)	h1
Component (Section › Add (+))	Text
Text (Text)	How business and technology leaders plan to grow, modernise and compete in the years ahead.
Component (Section › Add (+))	Anchor List
Link Title (Anchor List › Content › Links › Item 1)	CH 1: Overview
Anchor Name (Anchor List › Content › Links › Item 1)	overview
Link Title (Anchor List › Content › Links › Item 2)	CH 2: Findings
Anchor Name (Anchor List › Content › Links › Item 2)	findings
Link Title (Anchor List › Content › Links › Item 3)	CH 3: Outlook
Anchor Name (Anchor List › Content › Links › Item 3)	outlook
Link Title (Anchor List › Content › Links › Item 4)	CH 4: Next steps
Anchor Name (Anchor List › Content › Links › Item 4)	next-steps
Sticky (Anchor List › Content)	On
Anchor name (Section CH 1 (below) › Section properties)	overview
Anchor name (Next chapter sections › Section properties)	findings, outlook, next-steps
Mode (Universal Editor)	Edit (the Anchor List and the CH 1 section selected)

All other fields keep their default values.

Rendered Result:

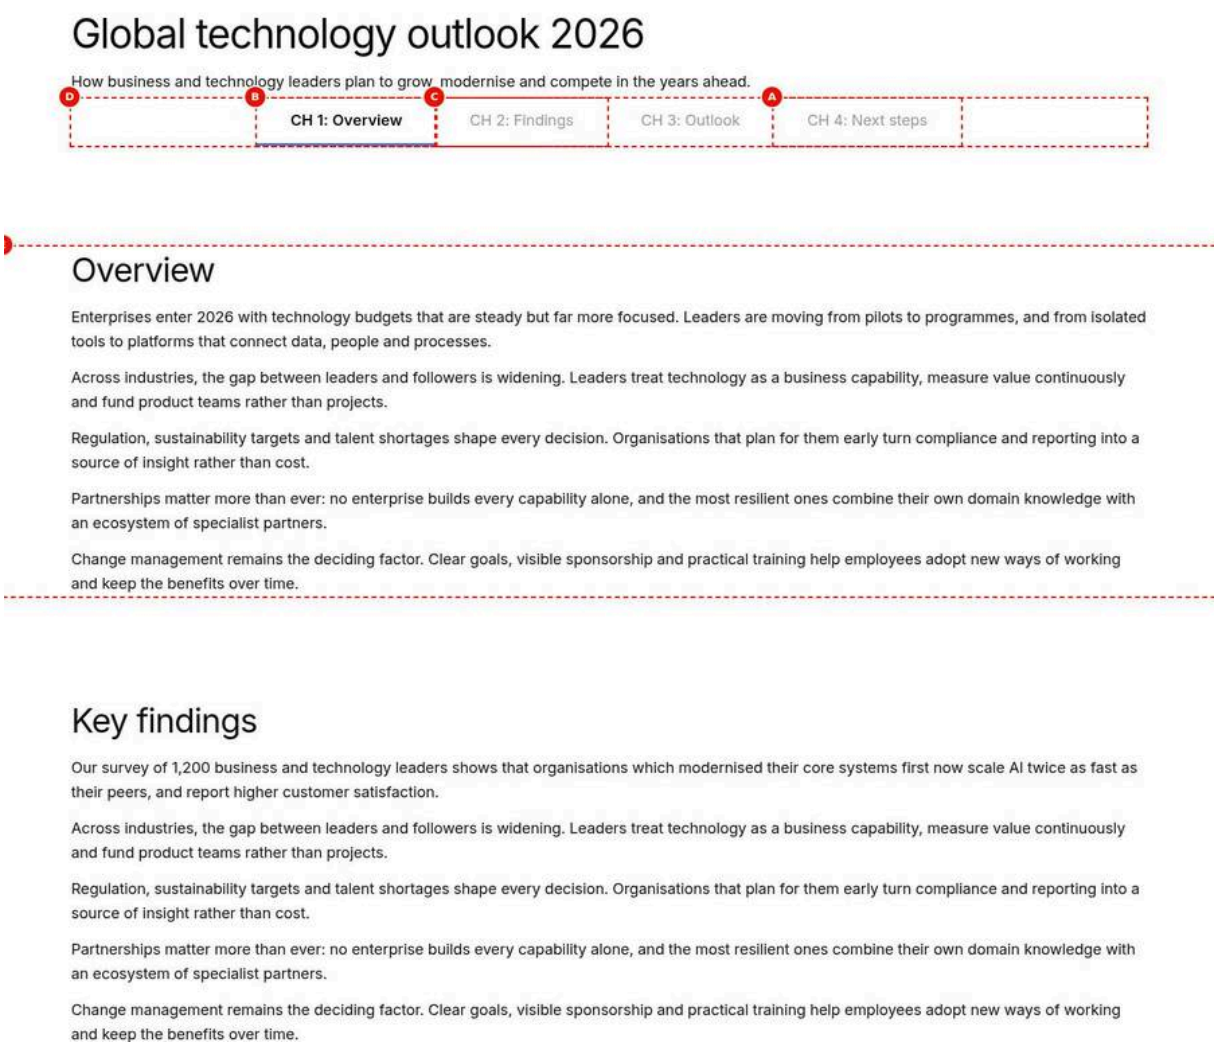

Figure 62: Execution example — The page at 1440 px in Universal Editor Edit mode (annotated preview, not a Universal Editor screenshot): the H1, the intro and the four-link Anchor List, with A on 'CH 4: Next steps', B on the current link, C on 'CH 2: Findings', D on the block and E on the Overview section below. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/anchor-list-authoring-view.jpg)

Author Notes

- The first section holds the H1 'Global technology outlook 2026', the intro Text and the Anchor List.
- Four Links items: CH 1: Overview (overview), CH 2: Findings (findings), CH 3: Outlook (outlook), CH 4: Next steps (next-steps).
- Sticky is on; it shows no effect in Edit mode.
- Each chapter section below gets its Anchor name in Section properties, CH 1 first.

Business Notes

- Readers of the long report see its four chapters at once and can jump to the one they need.
- The pinned row shows the reading position throughout the report.
- Stable anchor names (findings, outlook) give shareable deep links to chapters.

Technical Notes

- `scripts.js` turns each section Anchor name into the section id after normalising it with toClassName.
- Links are a#anchor elements in nav[aria-label] with aria-current="location" on the current one.
- Pinning adds anchor-list-pinned (position fixed, z-index 10) and keeps the wrapper height; never in edit mode.

- Scroll and resize handlers are throttled with requestAnimationFrame and listeners are passive.

TCS Corporate Website — Project Handover

Volume 9 of 13 — Components 6.20–6.24: Accordion, Tabs, Tab, Modal, Gen Carousel

Date: October 14, 2026

Adobe

Table of Contents

Part 6 — Component Library (continued) 3
6.20 Accordion Block 3
6.21 Tabs Block 37
6.22 Tab Block 149
6.23 Modal Block 196
6.24 Gen Carousel Block 232

Part 6 — Component Library (continued)

> **Note:** This is volume 9 of 13 of the TCS Corporate Website project handover (version 2.0). Volume 1 holds the document control, the audience guide and the conventions.

6.20 Accordion Block

The Accordion block (`blocks/accordion`) shows a list of collapsible items. Each item has a summary line (the visible question or label) and a body (rich text) that opens and closes when the visitor selects the summary. It is the Block Collection accordion of Edge Delivery Services, built on the native HTML `<details>` / `<summary>` elements and styled for the TCS Corporate website.

6.20.1 Component Purpose

Business Objective

Present secondary or reference information (answers, specifications, terms, process details) in a compact way, so that visitors scan the summaries and open only the items they need, while the full text remains part of the page for search engines and assistive technology.

Business Use Cases

- Frequently asked questions (FAQ) on service, careers, investor or contact pages.
- Eligibility criteria, process steps or programme details on careers and education pages.
- Legal, compliance or policy clarifications that most visitors do not need to read.
- Long lists of capabilities or offerings that would otherwise make the page very long.

When To Use

- The content is a list of independent items, each with a short label and a longer answer.
- Visitors are expected to read one or a few items, not all of them.
- The page would otherwise be too long to scan.

When Not To Use

- The content is essential for every visitor (key messages, calls to action, prices, legal notices that must be seen): put it in default content (Text) instead, because collapsed content is easily overlooked.
- The items are alternative views of one topic that should be compared side by side: use the Tabs block (6.21) instead.
- There is only one item: use a Title and Text instead.
- The content needs images, videos or other blocks inside each item: the Accordion Item body is a rich text field only (no nested blocks).

Dependencies

Dependency	Type	Use
`blocks/accordion/accordion.js`	Block code	Turns each item row into `<details>` / `<summary>`
`blocks/accordion/accordion.css`	Block styles	Dividers, chevron, typography, focus styles
`blocks/accordion/_accordion.json`	Universal Editor models	Accordion and Accordion Item definitions, models and filter

Dependency	Type	Use
`scripts/scripts.js` `moveInstrumentation`	Shared code	Keeps the Universal Editor instrumentation on the rendered item
`decorators/data-layer-decorator.js`	Shared code	Pushes `cmp:show` / `cmp:hide` when an item is opened or closed
`decorators/block-options-decorator.js` and `styles/styles.css`	Shared code	Additional tab (Anchor ID, Hide block, padding, margin)
`icons/chevron-down.svg`	Icon	The open / close indicator (CSS mask)
Placeholders sheet	Data	Not used: the block has no UI text of its own
Data sheets, query index, taxonomy	Data	Not used

Related Components

- Tabs Block (6.21): alternative for content that should be compared or switched between.
- Text (default content): for content that must always be visible.
- Fragment block: to reuse the same Accordion on several pages, author it on a fragment page.

Applicable Templates

Any page. The Accordion is allowed in every standard section (`section` filter), so it can be used on home, article, blog and press-release pages and on any page without a template.

Supported Content Types

Plain-text summaries and rich-text bodies (paragraphs, bold, italic, links, lists and other formatting offered by the rich text editor).

Business Problem Solved

Careers, service, investor and contact pages carried long FAQ, eligibility and policy texts that made pages hard to scan; the Accordion collapses each answer under a one-line summary on native details and summary elements, so visitors open only what they need while the full text stays in the page HTML for search engines and assistive technology.

Supported Taxonomy

None: the Accordion and the Accordion Item have no tag field and read no tags, taxonomy or metadata.

6.20.2 Visual Overview

Figure 1: Desktop rendering — The Accordion at 1440 px: four items 'How do I apply for a role at TCS?', the selection-process question, 'Can I apply for more than one position at the same time?' and 'Do you offer internships and graduate programmes?' between 1px dividers, chevrons on the right; the second item open with its chevron turned up and its answer about the online assessment and interviews below. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/accordion-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/accordion-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Accordion at 1440 px: four items 'How do I apply for a role at TCS?', the selection-process question, 'Can I apply for more than one position at the same time?' and 'Do you offer internships and graduate programmes?' between 1px dividers, chevrons on the right; the second item open with its chevron turned up and its answer about the online assessment and interviews below.
Business Context	The careers FAQ answers the questions applicants ask most; collapsed answers keep the page short while the text stays indexable.
Author Objective	Add an Accordion with four Accordion Items (summary and rich text answer each) and check it at 1440 px with the second item open.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Accordion	Yes	Adds the Accordion to the page	Select the section in the content tree, choose Add (+) and pick Accordion	Only components the section allows (section filter)
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
A	Summary (Accordion Item 1)	How do I apply for a role at TCS?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
(B)	Text (Accordion Item 1)	Search the open roles on our careers pages, choose a role and select Ap-	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		ply. You can save your application and complete it later. • Create a candidate profile • Upload your CV • Track the status of your application				
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
C	Summary (Accordion Item 2)	What does the selection process look like, and how long does it usually take from application to offer?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
D	Text (Accordion Item 2)	Most roles have an online assessment, a technical interview and a final interview with the hiring team. The process usually takes three to six weeks, and we keep you informed at every stage.	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
E	Summary (Accordion Item 3)	Can I apply for more than one position at the same time?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
(F)	Text (Accordion Item 3)	Yes. You can apply for up to three roles at once; each application is reviewed by the team that is hiring for it.	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
G	Summary (Accordion Item 4)	Do you offer internships and graduate programmes?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
(H)	Text (Accordion Item 4)	We run paid internships and a two-year graduate programme in most of	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		our regions. Applications open every autumn; see Graduate careers (link / en/careers/graduates) for the dates.				
—	Action (Preview)	Open the second item	—	Check on the preview (not stored in the content)	Open the second item	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four rows between 1px dividers, each summary on the left with a chevron on the right; the second item is open, its chevron rotated upwards and its answer in grey below the long question.
- **Rendering behaviour:** From 900 px summaries use 1.5rem medium text with 1.5rem padding above and below, bodies 1.125rem with line height 1.6 and 1.5rem below. Each item is a native details element with summary.accordion-item-label and div.accordion-item-body.
- **Publishing behaviour:** Publish to Preview shows the careers page on main–tcs-corp–sradha-tcs.aem.page, Publish to Live on aem.live. The Accordion and its items are part of the page HTML, so no sheet, index or asset step is needed; if the Accordion sits on a fragment page, publish that fragment too.

Business Rules

- All items are closed on page load; there is no open-by-default option.
- Several items can be open at once; opening the second does not close another.
- The summary is not a heading; introduce the FAQ with a Title above the Accordion.
- Opening and closing push cmp:show and cmp:hide to the data layer with the summary as dc:title.

Common Authoring Mistakes

Error	Root Cause	Resolution
The default 'Lorem Ipsum' summary is published	A new Accordion Item was added and not edited	Replace Summary and Text of every item
The answer is in the summary row	The whole answer typed into Summary	Keep the question in Summary and the answer in Text
The FAQ has no heading in the outline	Only the Accordion was added	Add a Title above the Accordion

Troubleshooting

- **Symptoms:** The items show as plain text rows without chevrons and cannot be opened.
- **Cause:** The block JavaScript did not run, so the rows were never turned into details elements.
- **Resolution:** Reload the page; check the console and the Network tab for blocks/accordion/accordion.js and escalate to development if it fails.
- **Verification Steps:** `document.querySelectorAll('.accordion details').length` returns 4 and the items open.

Desktop (1200px and wider). The block spans the width of its section content area. A 1px (0.0625rem) divider in the default border colour runs above the first item and below every item. Each summary is a full-width row with the label on the left and a 1.5rem chevron on the right, separated by at least 1.5rem; the row has 1.5rem padding

above and below. Summary text uses the medium heading size (1.5rem from 900px), medium font weight, line height 1.417 and slightly negative letter-spacing. The open item's body appears below its summary in the secondary neutral text colour, body size (1.125rem from 900px), line height 1.6, with 1.5rem padding below. Hovering or keyboard-focusing a summary changes its text (and chevron) to the brand colour; keyboard focus also shows a 2px brand outline.

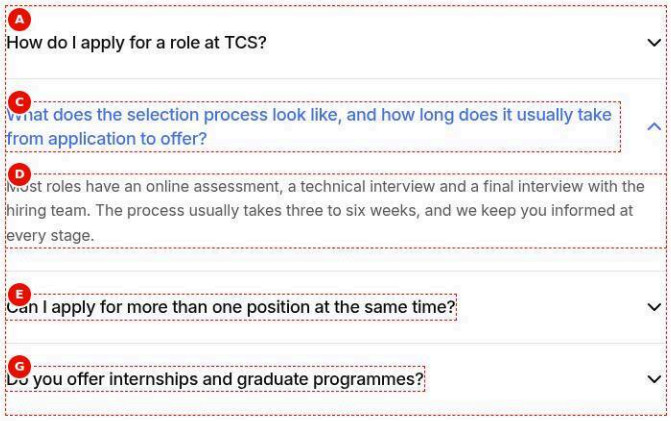

Figure 2: Tablet rendering — The Accordion at 768 px with the same layout as on desktop but smaller type (summary 1.125rem, body 1rem): the four items 'How do I apply for a role at TCS?', the selection-process question, 'Can I apply for more than one position at the same time?' and 'Do you offer internships and graduate programmes?'; the second, two-line question open with its answer below. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/accordion-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/accordion-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The Accordion at 768 px with the same layout as on desktop but smaller type (summary 1.125rem, body 1rem): the four items 'How do I apply for a role at TCS?', the selection-process question, 'Can I apply for more than one position at the same time?' and 'Do you offer internships and graduate programmes?'; the second, two-line question open with its answer below.
Business Context	The careers FAQ checked at tablet width, where the long selection-process question wraps.
Author Objective	Check the four-item Accordion at 768 px with the second item open.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Accordion	Yes	Adds the Accordion to the page	Select the section in the content tree, choose Add (+) and pick Accordion	Only components the section allows (section filter)
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Summary (Accordion Item 1)	How do I apply for a role at TCS?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
(B)	Text (Accordion Item 1)	Search the open roles on our careers pages, choose a role and select Apply. You can save your application and complete it later. • Create a candidate profile • Upload your CV • Track the status of your application	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
C	Summary (Accordion Item 2)	What does the selection process look like, and how long does it usually take from application to offer?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
D	Text (Accordion Item 2)	Most roles have an online assessment, a technical interview and a final interview with the hiring team. The process usually takes three to six weeks, and we keep you informed at every stage.	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
E	Summary (Accordion Item 3)	Can I apply for more than one position at the same time?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
(F)	Text (Accordion Item 3)	Yes. You can apply for up to three roles at once; each application is reviewed by the team that is hiring for it.	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
G	Summary (Accordion Item 4)	Do you offer internships and graduate programmes?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
(H)	Text (Accordion Item 4)	We run paid internships and a two-year graduate programme in most of our regions. Applications open every autumn; see Graduate careers (link / en/careers/graduates) for the dates.	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—
—	Action (Preview)	Open the second item	—	Check on the preview (not stored in the content)	Open the second item	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The same rows and dividers as on desktop at a smaller size; the second question wraps onto two lines with the rotated chevron vertically centred on the right, its answer below.
- **Rendering behaviour:** The block has no breakpoints of its own; below 900 px the type tokens give summaries 1.125rem and bodies 1rem, from 900 px 1.5rem and 1.125rem. The section padding frames the block.
- **Publishing behaviour:** Publish to Preview shows the careers page on main–tcs-corp–sradha-tcs.aem.page, Publish to Live on aem.live. The Accordion and its items are part of the page HTML, so no sheet, index or asset step is needed; if the Accordion sits on a fragment page, publish that fragment too.

Business Rules

- The layout is the same at every width; only the type sizes step at 900 px.
- Keep summaries to about 100 characters so they fit on one or two lines.
- The chevron stays on the right and is decorative.

Common Authoring Mistakes

Error	Root Cause	Resolution
A summary wraps over three lines on tablet	A question far over 100 characters	Shorten the Summary and move details into Text
Two items have the same summary	Copied item not edited	Make every Summary unique within the Accordion

Troubleshooting

- **Symptoms:** At 768 px an item opens but shows nothing.
- **Cause:** The Text of that item is empty, so the body is empty.
- **Resolution:** Enter the answer in Text, or delete the item.
- **Verification Steps:** The answer appears when the item is opened on the preview.

Tablet (600px to 1199px). The block has no breakpoints of its own; the layout is the same as on desktop. The type tokens step at 900px: below 900px summaries use 1.125rem and bodies 1rem; from 900px they use 1.5rem and 1.125rem. Long summaries wrap; the chevron stays on the right, vertically centred.

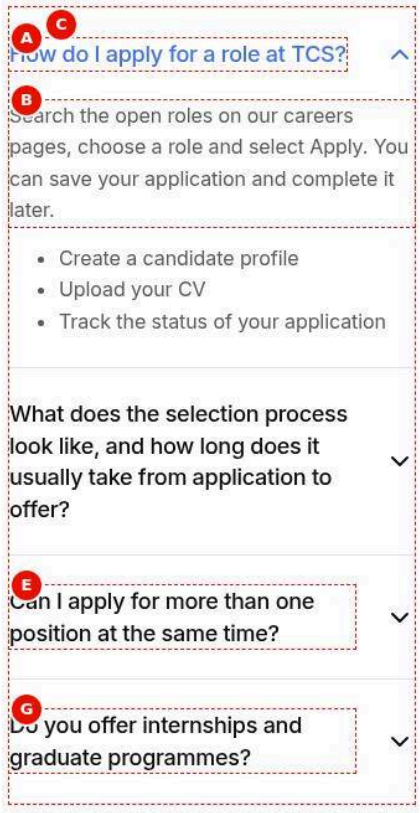

Figure 3: Mobile rendering — The Accordion at 375 px: the first item 'How do I apply for a role at TCS?' open with its 1rem paragraph and three bullets (create a candidate profile, upload your CV, track the status of your application); the three closed summaries below wrap at 1.125rem with chevrons on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/accordion-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/accordion-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The Accordion at 375 px: the first item 'How do I apply for a role at TCS?' open with its 1rem paragraph and three bullets (create a candidate profile, upload your CV, track the status of your application); the three closed summaries below wrap at 1.125rem with chevrons on the right.
Business Context	Applicants often read the careers FAQ on their phones, so the first answer, with its bulleted steps, must read well at 375 px.
Author Objective	Check the four-item Accordion at 375 px with the first item open.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Accordion	Yes	Adds the Accordion to the page	Select the section in the content tree, choose Add (+) and pick Accordion	Only components the section allows (section filter)
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
A	Summary (Accordion Item 1)	How do I apply for a role at TCS?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
B	Text (Accordion Item 1)	Search the open roles on our careers pages, choose a role and select Apply. You can save your application and complete it later. • Create a candidate profile • Upload your CV • Track the status of your application	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
C	Summary (Accordion Item 2)	What does the selection process look like, and how long does it usually take from application to offer?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
(D)	Text (Accordion Item 2)	Most roles have an online assessment, a technical interview and a final interview with the hiring team. The process usually takes three to six weeks, and we keep you informed at every stage.	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
E	Summary (Accordion Item 3)	Can I apply for more than one position at the same time?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(F)	Text (Accordion Item 3)	Yes. You can apply for up to three roles at once; each application is reviewed by the team that is hiring for it.	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
G	Summary (Accordion Item 4)	Do you offer internships and graduate programmes?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
(H)	Text (Accordion Item 4)	We run paid internships and a two-year graduate programme in most of our regions. Applications open every autumn; see Graduate careers (link / en/careers/graduates) for the dates.	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—
—	Action (Preview)	Open the first item	—	Check on the preview (not stored in the content)	Open the first item	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The first item open: the 1.125rem question, the 1rem answer paragraph and the three bullets (candidate profile, CV, application status); the other three summaries wrap with their chevrons on the right.
- **Rendering behaviour:** Below 600 px the section padding is 1.5rem on each side; summaries 1.125rem and bodies 1rem; the first and last child of the body lose their outer margins. The whole summary row is the touch target.
- **Publishing behaviour:** Publish to Preview shows the careers page on main–tcs-corp–sradha-tcs.aem.page, Publish to Live on aem.live. The Accordion and its items are part of the page HTML, so no sheet, index or asset step is needed; if the Accordion sits on a fragment page, publish that fragment too.

Business Rules

- Lists in the Text field render as normal bulleted lists inside the body.
- The whole summary row opens and closes the item on touch.
- Avoid images in Text; the block has no image styles.

Common Authoring Mistakes

Error	Root Cause	Resolution
The bullets appear as one run-on paragraph	Bullet characters typed instead of using the Bulleted list button	Format the steps with the rich text Bulleted list
The answer has an extra blank line on top	An empty paragraph at the start of Text	Delete the empty paragraph

Troubleshooting

- **Symptoms:** Long summaries wrap over three or more lines on the phone.
- **Cause:** The Summary is too long for the 1.125rem size on a 375 px screen.
- **Resolution:** Shorten the Summary to about 100 characters and move details into Text.
- **Verification Steps:** At 375 px every summary fits on one or two lines.

Mobile (below 600px). Same single-column structure at the smaller type sizes (summary 1.125rem, body 1rem). The section's own horizontal padding (1.5rem on mobile, 2.5rem from 600px) frames the block. The whole summary row is the touch target.

6.20.3 Component Variations

The Accordion has no Style, Layout or Variant field: its model contains only the Additional tab. There is therefore exactly one presentation. Spacing and visibility options of the Additional tab are block options, not variations (see 6.20.6).

Variation 1 — Default Accordion

Variation Name

Default Accordion (the only variation).

Business Purpose

Show several question / answer or label / detail pairs compactly, with every item closed when the page loads.

Visual Example

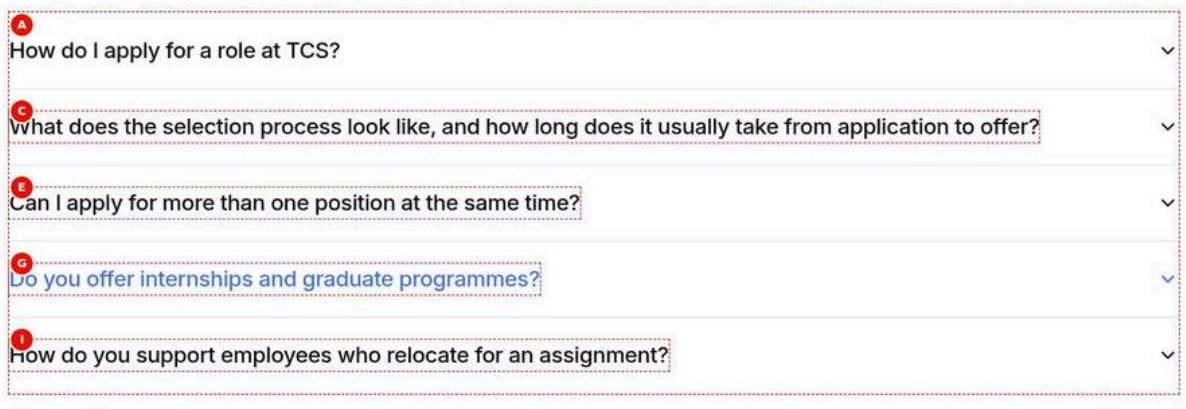

Figure 4: Default Accordion variation — The Accordion at 1440 px with five closed items between 1px dividers, each with a downward chevron: the four careers questions and 'How do you support employees who relocate for an assignment?'; the third summary, under the pointer, in brand blue. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/accordion-default.jpg)

Screenshot Details — Default Accordion variation

Item	Detail
Screenshot Name	`screenshots/accordion-default.jpg`

Item	Detail
Screenshot Purpose	Default Accordion variation
Screen Description	The Accordion at 1440 px with five closed items between 1px dividers, each with a downward chevron: the four careers questions and 'How do you support employees who relocate for an assignment?'; the third summary, under the pointer, in brand blue.
Business Context	The full careers FAQ with five questions, as it looks when the page loads, all answers collapsed.
Author Objective	Add an Accordion with five Accordion Items and check the closed state and the hover colour of a summary.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Accordion	Yes	Adds the Accordion to the page	Select the section in the content tree, choose Add (+) and pick Accordion	Only components the section allows (section filter)
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
A	Summary (Accordion Item 1)	How do I apply for a role at TCS?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
(B)	Text (Accordion Item 1)	Search the open roles on our careers pages, choose a role and select Apply. You can save your application and complete it later. • Create a candidate profile • Upload your CV • Track the status of your application	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
C	Summary (Accordion Item 2)	What does the selection process look like, and how long does it usually take from application to offer?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
(D)	Text (Accordion Item 2)	Most roles have an online assessment, a technical interview and a final interview with the hiring team. The process usually takes three to six weeks, and we	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		keep you informed at every stage.				
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
E	Summary (Accordion Item 3)	Can I apply for more than one position at the same time?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
(F)	Text (Accordion Item 3)	Yes. You can apply for up to three roles at once; each application is reviewed by the team that is hiring for it.	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
G	Summary (Accordion Item 4)	Do you offer internships and graduate programmes?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
(H)	Text (Accordion Item 4)	We run paid internships and a two-year graduate programme in most of our regions. Applications open every autumn; see Graduate careers (link / en/careers/graduates) for the dates.	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
I	Summary (Accordion Item 5)	How do you support employees who relocate for an assignment?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
(J)	Text (Accordion Item 5)	Our mobility team helps with visas, travel, temporary housing and settling in, and a local buddy introduces you to the team and the city.	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Action (Preview)	Hover the third summary (all items closed)	—	Check on the preview (not stored in the content)	Hover the third summary (all items closed)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Five closed rows between 1px dividers, each with a downward chevron on the right; the third summary, under the pointer, is shown in the brand colour.
- **Rendering behaviour:** Every item renders closed (details without open); hover and keyboard focus turn the summary text and chevron `--color-text-brand`, focus also shows a 2px brand outline. Colour transitions take 0.2s, none with reduced motion.
- **Publishing behaviour:** Publish to Preview shows the careers page on main–tcs-corp–sradha-tcs.aem.page, Publish to Live on aem.live. The Accordion and its items are part of the page HTML, so no sheet, index or asset step is needed; if the Accordion sits on a fragment page, publish that fragment too.

Business Rules

- The Accordion has a single presentation: no style, layout or variant field, only the Additional tab.
- Recommended 3 to 10 items; five are shown here.
- Items appear in the content tree order; drag items there to reorder them.
- Only Accordion Items can be added inside an Accordion (filter accordion).

Common Authoring Mistakes

Error	Root Cause	Resolution
Important information is overlooked	Key content placed inside a closed item	Keep essential messages and CTAs outside the Accordion
Items appear in the wrong order	Items added in a different order than intended	Drag the items in the content tree
A row has no visible question	The Summary of that item was left empty	Fill the Summary or delete the item

Troubleshooting

- **Symptoms:** The Accordion shows in edit mode (faded) but not on the live careers page.
- **Cause:** Hide block is on in the Additional tab, or the page was not published after the change.
- **Resolution:** Switch Hide block off and publish the page.
- **Verification Steps:** The five items appear on the aem.page and aem.live URLs.

Use Cases

FAQs; programme details; policy clarifications; feature lists with explanations.

Authoring Guidelines

Add an Accordion block to a section, then add one Accordion Item per entry. In each item fill **Summary** (the always-visible label) and **Text** (the body that opens).

Business Rules

- All items are closed on page load; there is no "open by default" option.
- Several items can be open at the same time; opening one does not close the others.
- An item row without a summary cell is not converted (it is left as it is).
- An item without a body gets an empty body: opening it shows nothing.

Rendering Rules

- Each item row becomes `<details class="accordion-item">` with `<summary class="accordion-item-label">` (the Summary content) and `<div class="accordion-item-body">` (the Text content).

- The native disclosure marker is hidden; the chevron is drawn with `::after` and rotates 180 degrees when the item is open.
- The first and last child of the body lose their top and bottom margins.

Responsive Behaviour

- Desktop: full-width rows, summary 1.5rem, body 1.125rem.
- Tablet: same layout; sizes switch at 900px (below: 1.125rem / 1rem).
- Mobile: same layout at 1.125rem / 1rem; long summaries wrap.

SEO Impact

The body text is in the HTML of the page even when closed, so it is indexed. The summary is not a heading (it is a `<summary>` element), so it does not contribute to the heading outline; add a heading (Title) above the Accordion to introduce the topic. No structured data (for example FAQPage JSON-LD) is generated: Not implemented (as of this handover).

Accessibility Compliance

- Native `<details>` / `<summary>`: keyboard operable (Tab to the summary, Enter or Space to toggle) and announced as expandable / collapsed by screen readers without extra ARIA.
- Visible focus indicator: 2px brand outline with 0.125rem offset (`:focus-visible`).
- The chevron is decorative (a CSS mask on a pseudo-element), so it is not announced.
- Transitions (colour, chevron rotation) are disabled when the visitor prefers reduced motion.

6.20.4 Authoring Experience

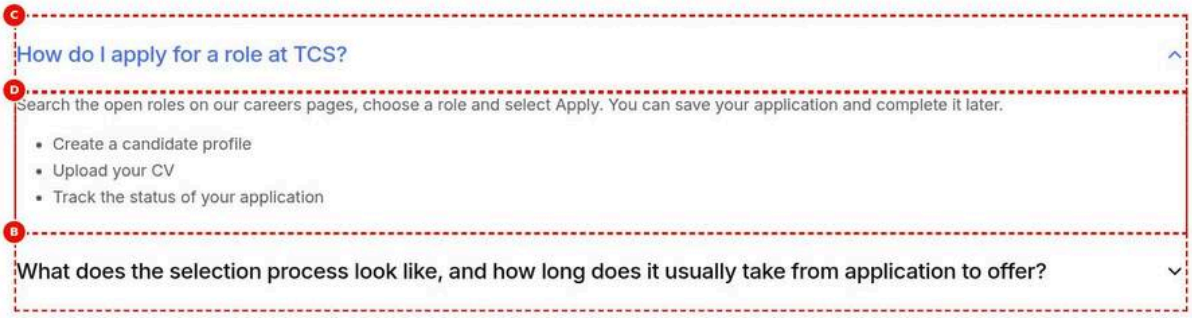

Figure 5: Universal Editor canvas — The Accordion at 1440 px in Universal Editor Edit mode (annotated preview, not a Universal Editor screenshot) with two items: A on the block, B on the second item, C on the first summary 'How do I apply for a role at TCS?' and D on its open text with the bulleted list. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/accordion-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/accordion-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	The Accordion at 1440 px in Universal Editor Edit mode (annotated preview, not a Universal Editor screenshot) with two items: A on the block, B on the second item, C on the first summary 'How do I apply for a role at TCS?' and D on its open text with the bulleted list.
Business Context	A careers editor learns how the Accordion block, its items and their Summary and Text fields appear on the Universal Editor canvas.
Author Objective	Select Accordion Item 1 on the canvas and identify markers A to D: block, item, summary and text.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Accordion	Yes	Adds the Accordion to the page	Select the section in the content tree, choose Add (+) and pick Accordion	Only components the section allows (section filter)
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
—	Summary (Accordion Item 1)	How do I apply for a role at TCS?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
—	Text (Accordion Item 1)	Search the open roles on our careers pages, choose a role and select Apply. You can save your application and complete it later. • Create a candidate profile • Upload your CV • Track the status of your application	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Item (Content tree › Accordion › Add (+))	Accordion Item	Yes	Adds a Accordion Item to the Accordion	Select the Accordion in the content tree, choose Add (+) and pick Accordion Item	Only the item types the Accordion allows
—	Summary (Accordion Item 2)	What does the selection process look like, and how long does it usually take from application to offer?	No (not enforced)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code
—	Text (Accordion Item 2)	Most roles have an online assessment, a technical interview and a final interview with the hiring team. The process usually takes three to six weeks, and we keep you informed at every stage.	No (not enforced)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code
—	Mode (Universal Editor)	Edit (Accordion Item 1 open and selected)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The Accordion outlined in its section (A) with two items; the second item (B), the first summary (C) and its open body text (D) marked with letters.

- **Rendering behaviour:** The instrumentation of each row moves to its details element, so items stay selectable after decoration; Text is editable in place while the item is open, Summary through the properties panel.
- **Publishing behaviour:** Edits are saved automatically in Universal Editor but are public only after Publish: Preview updates main–tcs-corp–sradha-tcs.aem.page, Live updates aem.live. Items are part of the page and publish with it.

Business Rules

- Select A for the block options (Additional tab only); select an item for Summary and Text.
- New items get the default Summary Lorem Ipsum and a placeholder paragraph; replace both.
- Open an item on the canvas (select its summary) before editing its Text in place.
- Add items with + on the Accordion in the content tree; only Accordion Items are offered.

Common Authoring Mistakes

Error	Root Cause	Resolution
Summary and Text fields cannot be found	The Accordion block is selected, which has only the Additional tab	Select the Accordion Item in the content tree
The body cannot be edited on the canvas	The item is closed	Select its summary to open it first

Troubleshooting

- **Symptoms:** The Summary typed in the properties panel does not show on the canvas at once.
- **Cause:** The canvas updates the summary after the item is re-rendered.
- **Resolution:** Wait for the re-render or reload the editor view.
- **Verification Steps:** The canvas shows ‘How do I apply for a role at TCS?’ in the first row.

Annotations

- A = Accordion block (select it to see the block properties: Additional tab).
- B = Accordion Item (one per row; select it to edit Summary and Text).
- C = Summary of the item (plain text, the visible label).
- D = Text of the item (rich text body, editable in place when the item is open).

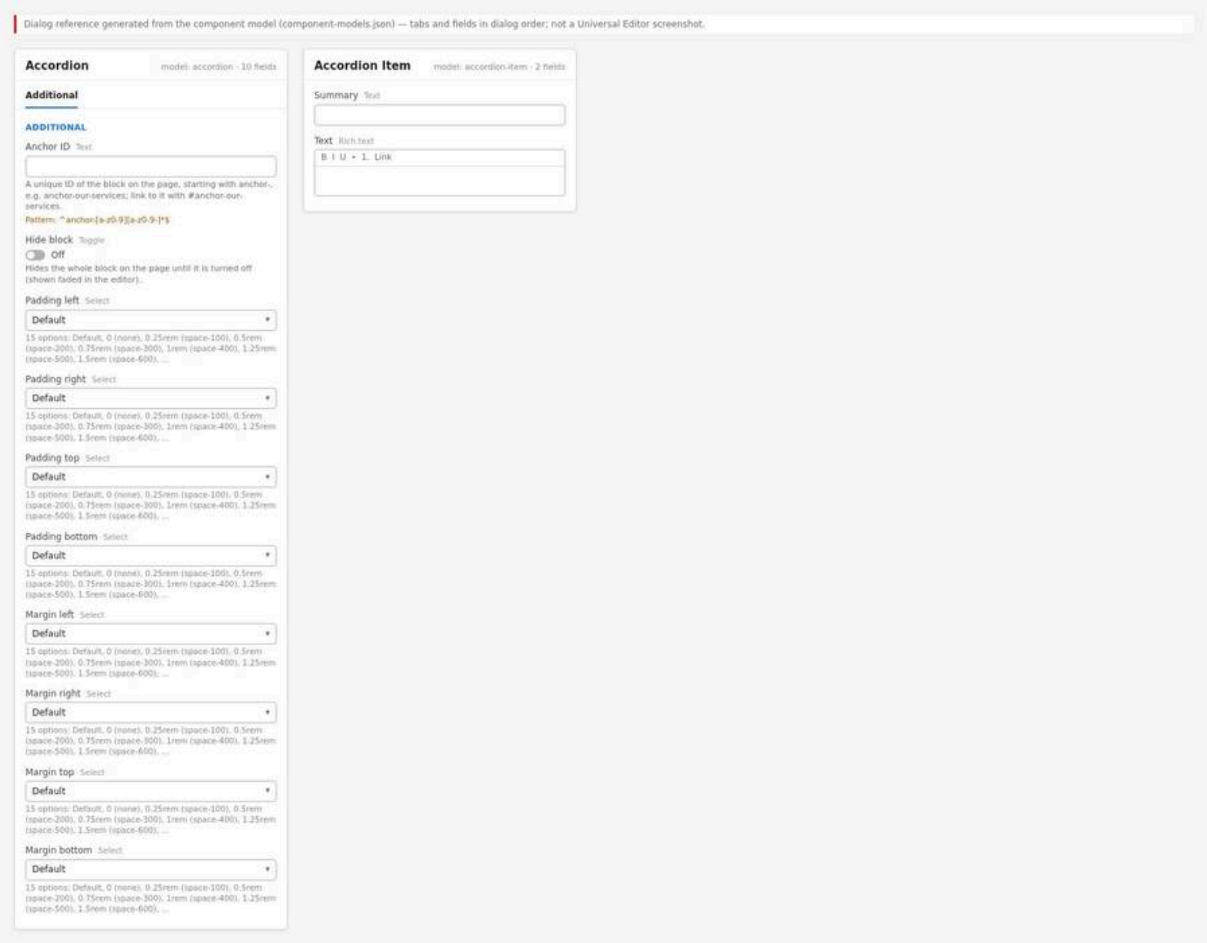

Figure 6: Properties panel — The Universal Editor properties panel for the Accordion block (Additional tab with Anchor ID, Hide block and the eight spacing selects) and, side by side, for an Accordion Item (Summary and Text). (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/accordion-properties-panel.jpg)

Properties panel, Accordion block

- **Additional** tab (the only tab): Anchor ID; Hide block; Padding left, Padding right, Padding top, Padding bottom; Margin left, Margin right, Margin top, Margin bottom.

Properties panel, Accordion Item

- No tabs; two fields: **Summary** (text) and **Text** (rich text).

> **Note:** The Accordion block itself has no content fields. Its content is the list of Accordion Items, which you add with the + (Add) button of the block in the content tree or on the canvas. Only Accordion Items can be added inside an Accordion (filter `accordion`).

6.20.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites, select the page and choose **Edit** (or open it from the Universal Editor start screen).

Expected Result: The page opens in the Universal Editor canvas in edit mode.

Steps — Step 1: The page open in Universal Editor with the content tree on the left and the canvas in edit mode.

Step	Where	Field / control	Value / action
1	AEM Sites console	Sites › tcs-corp › us › en › careers	Select the page
2	AEM Sites console toolbar	Edit	Open the page in Universal Editor

Step 2 — Select the target section

Action: In the content tree or on the canvas, select the section where the Accordion should appear.

Expected Result: The section is outlined and its + (Add) button is available.

Steps — Step 2: A section selected in the content tree, with the Add button highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section for the Accordion
2	Section	Add (+)	Shown in the content tree and on the canvas

Step 3 — Add the Accordion block

Action: Select + (Add) and choose **Accordion** from the component list.

Expected Result: An Accordion block is added to the section. In edit mode it is empty until items are added.

Steps — Step 3: The component picker with Accordion selected and the new empty Accordion in the content tree.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Accordion

Step 4 — Add the first Accordion Item

Action: Select the Accordion, select + (Add) and choose **Accordion Item**.

Expected Result: An item appears with the default content “Lorem Ipsum” (Summary) and a placeholder paragraph (Text).

Steps — Step 4: The new Accordion Item with the default Lorem Ipsum summary on the canvas.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Accordion	Select
2	Content tree › Accordion › Add (+)	Item	Accordion Item

Step 5 — Fill in the Summary

Action: With the item selected, type the label or question in **Summary** in the properties panel, e.g. “How do I apply for a role at TCS?”.

Expected Result: The summary on the canvas updates after the item is re-rendered.

Steps — Step 5: The Summary field filled in the properties panel and the updated summary on the canvas.

Step	Where	Field / control	Value / action
1	Accordion Item 1	Summary	How do I apply for a role at TCS?

Step 6 — Fill in the Text

Action: Open the item on the canvas (select its summary) and edit **Text** in place or in the properties panel. Use paragraphs, lists and links as needed.

Expected Result: The body text is shown below the summary while the item is open.

Steps — Step 6: The rich text editor of the Text field with a paragraph and a bulleted list.

Step	Where	Field / control	Value / action
1	Canvas	Accordion Item 1	Select the summary to open the item
2	Accordion Item 1	Text	Search the open roles on our careers pages, choose a role and select Apply. You can save your application and complete it later.
3	Accordion Item 1 › Text (rich text toolbar)	Bulleted list	• Create a candidate profile • Upload your CV • Track the status of your application

Step 7 — Add, reorder and remove items

Action: Repeat Steps 4 to 6 for each entry. Drag items in the content tree to reorder them; use the delete action to remove an item.

Expected Result: The canvas shows the items in the content tree order.

Steps — Step 7: The content tree with five Accordion Items under the Accordion, one being dragged to a new position.

Step	Where	Field / control	Value / action
1	Content tree › Accordion › Add (+)	Item	Accordion Item (repeat until there are five items)
2	Accordion Items 2 to 5	Summary, Text	The questions and answers, as in Steps 5 and 6
3	Content tree	Accordion Item 5	Drag above Accordion Item 2
4	Content tree	An item no longer needed	Delete

Step 8 — Set the Additional options (optional)

Action: Select the Accordion block, open the **Additional** tab and, if needed, enter an **Anchor ID** (e.g. `anchor-careers-faq`), switch **Hide block** on or off, and choose padding or margin tokens.

Expected Result: The options are applied as block classes; a hidden block is shown faded and outlined in edit mode.

Steps — Step 8: The Additional tab with an Anchor ID entered and Margin bottom set to 2.5rem (space-1000).

Step	Where	Field / control	Value / action
1	Content tree	Accordion	Select
2	Accordion › Additional	Anchor ID	anchor-careers-faq
3	Accordion › Additional	Margin bottom	2.5rem (space-1000)

Step 9 — Preview the page

Action: Switch Universal Editor to **Preview** mode and open and close each item.

Expected Result: Items open and close; the chevron rotates; links in the body work.

Steps — Step 9: Preview mode with one item open and the rotated chevron.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	Preview	Accordion	Click the summary of the second item (opens; the chevron turns up)
3	Preview	Accordion	Click it again (closes)

Step 10 — Validate

Action: Run the validation checklist below (keyboard, text, links, mobile width).

Expected Result: All checks pass.

Steps — Step 10: Keyboard focus on a summary showing the brand focus outline.

Step	Where	Field / control	Value / action
1	Preview	Keyboard	Press Tab until a summary shows the focus outline
2	Preview	Keyboard	Press Enter (or Space) to open and close the item
3	Browser developer tools	Responsive mode	375 px (mobile): check the text and links

Step 11 — Publish

Action: Select **Publish** in Universal Editor (or use Manage Publication in AEM Sites) and publish the page.

Expected Result: The page is published to Edge Delivery Services and the Accordion appears on the live site.

Steps — Step 11: The Publish dialog of Universal Editor with the page selected.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Open the Publish dialog
2	Publish dialog	Destination	Live
3	Publish dialog	Page	Selected (with its referenced assets)
4	Publish dialog	Publish	Confirm

Preview Process

1. Use Universal Editor **Preview** mode to interact with the items as a visitor would.
2. For the Edge Delivery preview, open the page on `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}` (for example with AEM Sidekick **Preview**). Feature branches use `https://{branch}--tcs-corp--sradha-tcs.aem.page/`.
3. Check the page at mobile, tablet and desktop widths.

Publishing Process

1. Publish the page from Universal Editor or AEM Sites.
2. The live page is served from `https://main--tcs-corp--sradha-tcs.aem.live/{locale}/{path}` ([To be confirmed: production domain and CDN]).
3. If the Accordion is on a fragment page, publish the fragment page as well.

Validation Process

- ☐ Every item has a Summary and a Text.
- ☐ Summaries are short and unique within the Accordion.
- ☐ All items are closed on load and open / close with mouse, touch, Enter and Space.

- ☐ The focus outline is visible on each summary when tabbing.
- ☐ Links in bodies work and have meaningful link text.
- ☐ A heading (Title) introduces the Accordion.
- ☐ The Anchor ID (if set) starts with `anchor-` and `#anchor-…` links reach the block.
- ☐ Hide block is off (unless intentionally hidden).
- ☐ The layout is correct at below 600px, 600 to 1199px and 1200px and wider.
- ☐ In the browser console, `window.adobeDataLayer` shows `cmp:show` / `cmp:hide` events when items are opened / closed.

Rollback Process

1. In AEM Sites, open the page's version history (**Timeline** / **Versions**) and restore the previous version, or edit the Accordion back to its previous content.
2. Publish the page again.
3. If the block must disappear immediately, switch **Hide block** on and publish, or unpublish the page.
4. For a code regression, the development team reverts the change in GitHub (`main` branch); AEM Code Sync deploys the revert automatically.

The walkthroughs below repeat the steps above for each variation of chapter 6.20.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Default Accordion

Reproduces the screenshot `screenshots/accordion-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Accordion

Action: Select the section in the content tree, choose **Add (+)** and pick **Accordion**.

Expected Result: An empty Accordion is added to the section; it has no content of its own until Accordion Items are added.

Step 3 — Add a Accordion Item

Action: Select the Accordion in the content tree, choose **Add (+)** and pick **Accordion Item**.

Expected Result: A new Accordion Item appears under the Accordion in the content tree, with the default summary 'Lorem Ipsum' and a placeholder paragraph.

Step 4 — Fill in Accordion Item 1

Action: Select **Accordion Item 1** in the content tree and enter in the properties panel: **Summary** (A) = How do I apply for a role at TCS?; **Text** (B) = Search the open roles on our careers pages, choose a role and select Apply. You can save your application and complete it later. • Create a candidate profile • Upload your CV • Track the status of your application.

Expected Result: The first row reads 'How do I apply for a role at TCS?'; its body holds the paragraph and the three-point bulleted list.

Step 5 — Add a Accordion Item

Action: Select the Accordion in the content tree, choose **Add (+)** and pick **Accordion Item**.

Expected Result: A new Accordion Item appears under the Accordion in the content tree, with the default summary 'Lorem Ipsum' and a placeholder paragraph.

Step 6 — Fill in Accordion Item 2

Action: Select **Accordion Item 2** in the content tree and enter in the properties panel: **Summary** (C) = What does the selection process look like, and how long does it usually take from application to offer?; **Text** (D) = Most roles have an online assessment, a technical interview and a final interview with the hiring team. The process usually takes three to six weeks, and we keep you informed at every stage.

Expected Result: The second row shows the long selection-process question, which wraps onto two lines on narrower screens.

Step 7 — Add a Accordion Item

Action: Select the Accordion in the content tree, choose **Add (+)** and pick **Accordion Item**.

Expected Result: A new Accordion Item appears under the Accordion in the content tree, with the default summary 'Lorem Ipsum' and a placeholder paragraph.

Step 8 — Fill in Accordion Item 3

Action: Select **Accordion Item 3** in the content tree and enter in the properties panel: **Summary** (E) = Can I apply for more than one position at the same time?; **Text** (F) = Yes. You can apply for up to three roles at once; each application is reviewed by the team that is hiring for it.

Expected Result: The third row asks 'Can I apply for more than one position at the same time?'; its answer mentions up to three roles.

Step 9 — Add a Accordion Item

Action: Select the Accordion in the content tree, choose **Add (+)** and pick **Accordion Item**.

Expected Result: A new Accordion Item appears under the Accordion in the content tree, with the default summary 'Lorem Ipsum' and a placeholder paragraph.

Step 10 — Fill in Accordion Item 4

Action: Select **Accordion Item 4** in the content tree and enter in the properties panel: **Summary** (G) = Do you offer internships and graduate programmes?; **Text** (H) = We run paid internships and a two-year graduate programme in most of our regions. Applications open every autumn; see Graduate careers (link /en/careers/graduates) for the dates.

Expected Result: The fourth row asks about internships and graduate programmes; its body links 'Graduate careers' to /en/careers/graduates.

Step 11 — Add a Accordion Item

Action: Select the Accordion in the content tree, choose **Add (+)** and pick **Accordion Item**.

Expected Result: A new Accordion Item appears under the Accordion in the content tree, with the default summary 'Lorem Ipsum' and a placeholder paragraph.

Step 12 — Fill in Accordion Item 5

Action: Select **Accordion Item 5** in the content tree and enter in the properties panel: **Summary** (I) = How do you support employees who relocate for an assignment?; **Text** (J) = Our mobility team helps with visas, travel, temporary housing and settling in, and a local buddy introduces you to the team and the city.

Expected Result: The fifth row asks how TCS supports employees who relocate for an assignment; its answer describes the mobility team.

Step 13 — Preview

Action: Action: Hover the third summary (all items closed).

Expected Result: With all items closed, hovering the third summary turns its text and chevron brand blue.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Five closed rows between 1px dividers, each with a downward chevron on the right; the third summary, under the pointer, is shown in the brand colour.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the careers page on main–tcs-corp–sradha-tcs.aem.page, Publish to Live on aem.live. The Accordion and its items are part of the page HTML, so no sheet, index or asset step is needed; if the Accordion sits on a fragment page, publish that fragment too.

Step 16 — Verify

Action: On the live page check: The five items appear on the aem.page and aem.live URLs.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.20.6 Authorable Field Specification

Model `accordion` (Accordion block)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Tab: Additional	tab	—	—	—	Groups the block options	—	—	—
Anchor ID (`classes_anchor`)	text	No	No	empty	Gives the block an id for # links	Start with `anchor-`, lower-case letters, digits, hyphens	Enforced: regExp `^anchor-[a-z0-9][a-z0-9-]*$`	anchor-careers-faq
Hide block (`classes_hideblock`)	boolean	No	No	false	Hides the block on the page	Use to prepare content before release	None	false
Padding left (`classes_paddingleft`)	select	No	No	Default (empty)	Inner spacing on the left	Choose a spacing token only if the design needs it	One of 15 options	pl-400
Padding right (`classes_paddingright`)	select	No	No	Default (empty)	Inner spacing on the right	As above	One of 15 options	pr-400
Padding top (`classes_paddingtop`)	select	No	No	Default (empty)	Inner spacing above	As above	One of 15 options	pt-600
Padding bottom (`classes_paddingbottom`)	select	No	No	Default (empty)	Inner spacing below	As above	One of 15 options	pb-600
Margin left (`classes_marginleft`)	select	No	No	Default (empty)	Outer spacing on the left	As above	One of 15 options	ml-0
Margin right (`classes_marginright`)	select	No	No	Default (empty)	Outer spacing on the right	As above	One of 15 options	mr-0

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Margin top (`classes_margintop`)	select	No	No	Default (empty)	Outer spacing above	As above	One of 15 options	mt-800
Margin bottom (`classes_marginbottom`)	select	No	No	Default (empty)	Outer spacing below	As above	One of 15 options	mb-1000

Model `accordion-item` (Accordion Item)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Summary (`summary`)	text	No (not enforced)	No	"Lorem Ipsum" (new item template)	The visible label / question	Short, specific, unique; a question for FAQs	None in model or code	How do I apply for a role at TCS?
Text (`text`)	richtext	No (not enforced)	No	Lorem ipsum paragraph (new item template)	The body shown when the item is open	Short paragraphs, lists, descriptive links	None in model or code	Visit the Careers portal, choose a role and submit your profile.

Field details

- **Anchor ID**
  - Purpose: makes the block addressable by `#anchor-…` links (for example from an Anchor List or a CTA). `decorators/block-options-decorator.js` sets the class as the block's `id`.
  - Allowed Values: `anchor-` followed by lower-case letters, digits and hyphens.
  - Character Limits: none enforced; Recommended: under 40 characters.
  - Business Rules: if another element already has the id, a suffix `-2`, `-3`, … is added.
  - Dependency Rules: none. Visibility Rules: always visible (no `condition`).
  - Sample Content: `anchor-careers-faq`.
- **Hide block**
  - Purpose: hides the block on the page and in the editor's preview; in edit mode it is shown at 45% opacity with a dashed outline so it can still be selected.
  - Allowed Values: on / off. Character Limits: not applicable.
  - Business Rules: the block's HTML is still delivered (hidden with CSS), so hidden text is in the page source. Do not use it to hide confidential content.
  - Dependency Rules: none. Visibility Rules: always visible. Sample Content: off.
- **Padding left / right / top / bottom** and **Margin left / right / top / bottom**
  - Purpose: adjust the spacing around or inside the block with the design system's spacing tokens.
  - Allowed Values (each select, 15 options): Default (no class); 0 (none); 0.25rem (space-100); 0.5rem (space-200); 0.75rem (space-300); 1rem (space-400); 1.25rem (space-500); 1.5rem (space-600); 2rem (space-800); 2.5rem (space-1000); 3rem (space-1200); 4rem (space-1600); 5rem (space-2000); 6rem (space-2400); 7.5rem (space-3000). Values are classes with the prefixes `pl-`, `pr-`, `pt-`, `pb-`, `ml-`, `mr-`, `mt-`, `mb-` (e.g. `pt-600`).
  - Character Limits: not applicable. Business Rules: the section selector in `styles/styles.css` outranks the block's own spacing. Dependency Rules: none.
  - Visibility Rules: always visible. Sample Content: Margin bottom = 2.5rem (space-1000).
- **Summary**
  - Purpose: the always-visible label of the item; moved into the `<summary>` element.
  - Allowed Values: plain text.
  - Character Limits: none enforced; Recommended: up to 100 characters (one or two lines on mobile).

- Business Rules: an item row with no summary cell is not converted into an accordion item.
- Dependency Rules: none. Visibility Rules: always visible.
- Sample Content: "What industries does TCS serve?"

- **Text**
  - Purpose: the content revealed when the item is opened.
  - Allowed Values: rich text (paragraphs, headings, lists, bold, italic, links).
  - Character Limits: none enforced; Recommended: up to about 150 words per item.
  - Business Rules: without Text the item opens to an empty body. Headings inside the body are allowed but should follow the page's heading hierarchy.
  - Dependency Rules: none. Visibility Rules: always visible.
  - Sample Content: "TCS serves banking, insurance, retail, manufacturing, life sciences and more."

6.20.7 Field Annotation Mapping

Marker	Field	Purpose
A	Accordion block (Additional tab: Anchor ID, Hide block, padding, margin)	Selects the block and its options
B	Accordion Item	One collapsible entry; added with + (Add)
C	Summary	The visible label of the item
D	Text	The body revealed when the item is open

6.20.8 Component Specification

Attribute	Value
Component Name	Accordion (`accordion`), item: Accordion Item (`accordion-item`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`scripts/scripts.js` (`moveInstrumentation`); `decorators/data-layer-decorator.js`; `decorators/block-options-decorator.js`; `styles/styles.css`; `icons/chevron-down.svg`
Component Type	Block (container block with items)
Supported Variants	One (Default); Additional tab options
Supported Templates	Any page (home, article, blog, press-release, no template)
Supported Metadata	None read by the block
Supported Tags	None
Supported Personalization	None in the block; open / close events are in the Adobe Client Data Layer for future use by Adobe Target / Adobe Journey Optimizer (not implemented)
Caching Considerations	Delivered in the page HTML, cached by the Edge Delivery CDN; republish the page to update; no sheet or query index is read
Performance Considerations	Loaded with its section (eager if in the first section, else lazy); no images, no network requests; about 30 lines of JS; CSS-only animation
Accessibility Compliance	WCAG 2.1 AA: native disclosure semantics (4.1.2); keyboard operable (2.1.1); visible focus (2.4.7); decorative chevron; reduced-motion support (2.3.3 good practice); colour contrast from design tokens
SEO Compliance	Closed content is in the HTML and indexable; no FAQ structured data (not implemented); summaries are not headings

6.20.9 Input Model

- **Content Inputs:** one row per Accordion Item, each with a Summary cell and a Text cell.
- **Metadata Inputs:** none.
- **Tags Inputs:** none.
- **Page Context Inputs:** none (the block does not read the locale, page type or URL).
- **Query Inputs:** none.
- **Manual Inputs:** all content is entered manually per item.

Authored HTML received from AEM (illustrative; instrumentation attributes shortened):

```
<div class="accordion anchor-careers-faq mb-1000" data-aue-resource="urn:...">
  <div data-aue-resource="urn:.../item0" data-aue-model="accordion-item">
    <div><p>How do I apply for a role at TCS?</p></div>
    <div><p>Visit the Careers portal and submit your profile.</p></div>
  </div>
  <div data-aue-resource="urn:.../item1" data-aue-model="accordion-item">
    <div><p>Can I apply for several roles?</p></div>
    <div><p>Yes, apply separately for each role.</p></div>
  </div>
</div>
```

6.20.10 Output Model

Rendered Output

- `div.accordion.block` (with Additional classes and, if set, the Anchor ID as `id`)
  - `details.accordion-item` (one per item; carries the item's Universal Editor instrumentation)
    - `summary.accordion-item-label` (the Summary content)
    - `div.accordion-item-body` (the Text content)

Generated HTML

```
<div class="accordion anchor-careers-faq mb-1000 block" id="anchor-careers-faq"
  data-block-name="accordion" data-block-status="loaded">
  <details class="accordion-item">
    <summary class="accordion-item-label"><p>How do I apply for a role at TCS?</p></
summary>
    <div class="accordion-item-body"><p>Visit the Careers portal ...</p></div>
  </details>
</div>
```

Generated JSON: none.

Generated Metadata: none.

Analytics Tracking

- Component state (pushed by `trackBlocks` after the sections load):

```
{
  "component": {
    "anchor-careers-faq": {
      "@type": "tcs-corp/components/accordion",
      "parentId": "page-1x2y3z"
    }
  }
}
```

The id is the block's id (Anchor ID), else `accordion-{n}` in page order. `dc:title` (the first heading inside the block) is omitted when the block has no heading, which is the normal case for an Accordion. - Events: opening an item pushes `cmp:show`, closing it pushes `cmp:hide` (captured from the `toggle` event of `<details>`):

```
{
  "event": "cmp:show",
  "eventInfo": {
    "path": "component.anchor-careers-faq",
    "dc:title": "How do I apply for a role at TCS?"
  }
}
```

- Clicks on the summary are deliberately not tracked as `cmp:click` (the toggle event is the interaction). Clicks on links inside the body push `cmp:click` with `xdm:linkURL`, `xdm:linkType` (`other`, `exit` or `download`) and `breakpoint`.

Personalization Output: none.

Search Index Output: the block does not write to the query index; the page text (including closed bodies) is available to external search engines.

Target Personalization Output: None in the block. Opening and closing an item pushes cmp:show / cmp:hide to window.adobeDataLayer (path component.{id}, dc:title = the summary), usable by Adobe Target or Journey Optimizer once Adobe Tags is embedded (Not implemented (as of this handover)).

6.20.11 Business Rules

1. Every direct child row of the block is treated as one item.
2. The first cell of a row is the summary, the second the body.
3. A row with no first cell is skipped and left unchanged.
4. A row with no second cell gets an empty body element.
5. All items render closed; no item is open by default.
6. Items open and close independently; several can be open at once.
7. The Universal Editor instrumentation of each row moves to its `<details>` element, so items stay selectable and editable on the canvas.
8. Only Accordion Items can be added inside an Accordion (filter `accordion`).
9. The Summary and Text fields have no `required` flag and no validation; empty values are accepted.
10. Opening / closing an item pushes `cmp:show` / `cmp:hide` to `window.adobeDataLayer`, unless the block is inside an element with `data-analytics="off"`.
11. Summary clicks are excluded from `cmp:click`.
12. Hide block hides the block on the page and in Preview; in edit mode it is faded and outlined.
13. The Anchor ID becomes the block's id only if it matches `^anchor-[a-z0-9][a-z0-9-]*$`; duplicates get `-2`, `-3`, ….
14. Reduced motion: colour and chevron transitions are disabled.
15. The block emits no console messages and has no error state; a failure leaves the authored rows visible as plain text.

6.20.12 Author Best Practices

- **Recommended Content Length:** 3 to 10 items per Accordion; Summary up to 100 characters; Text up to about 150 words per item (Recommended, not enforced).
- **Image Dimensions:** not applicable (the Text field can hold images only if the rich text editor offers them; the block CSS has no image rules, so avoid images in items).

- **CTA Writing Guidelines:** put calls to action outside the Accordion so they are always visible; inside bodies use descriptive link text (“Read the Careers FAQ”) rather than “Click here”.
- **Accessibility Guidelines:** make each Summary self-explanatory out of context; do not start all summaries with the same words; keep heading levels inside bodies consistent with the page.
- **SEO Guidelines:** introduce the Accordion with a heading containing the topic; write full answers (they are indexed); avoid duplicating the same FAQ on many pages (use a fragment).
- **Metadata Guidelines:** not applicable; the block reads no metadata.
- **Taxonomy Guidelines:** not applicable; the block reads no tags.
- **Localization Guidelines:** translate summaries and texts per locale site; keep the same Anchor ID across locales so links and analytics stay comparable; check that longer translations (for example German) still read well on mobile.

6.20.13 Troubleshooting Guide

Issue 1 — Items do not open or close

Symptoms: Selecting a summary does nothing; no chevron is shown; items show as plain rows.

Root Cause: The block JavaScript did not run (script error, block not decorated) or the block is not an Accordion (wrong component added).

Diagnosis Steps: Inspect the block in the browser developer tools: decorated items are `<details class="accordion-item">`. Check the console for errors and the Network tab for `blocks/accordion/accordion.js`.

Resolution Steps: Reload the page; if the files fail to load, escalate to development. If the wrong block was used, replace it with an Accordion and re-enter the items.

Validation Steps: Items open and close and the chevron rotates.

Preventive Measures: Validate in Preview before publishing; keep code changes tested on a feature branch.

Issue 2 — An item appears as plain text above the Accordion items

Symptoms: One row shows its text without a summary row and chevron.

Root Cause: The row has no first cell (an empty or malformed item), so the code skips it.

Diagnosis Steps: In the content tree, look for an Accordion Item with an empty Summary; inspect the row in the developer tools (it is a plain `div`, not `details`).

Resolution Steps: Fill the Summary of the item or delete the item.

Validation Steps: All rows render as accordion items.

Preventive Measures: Always fill Summary and Text when adding an item.

Issue 3 — An item opens but shows nothing

Symptoms: The chevron rotates but no text appears.

Root Cause: The item’s Text is empty.

Diagnosis Steps: Select the item and check the Text field.

Resolution Steps: Enter the body text, or remove the item.

Validation Steps: The body shows when the item is open.

Preventive Measures: Use the validation checklist before publishing.

Issue 4 — The Accordion is missing on the live page
Symptoms: The block is visible in edit mode (faded) but not in Preview or on the live page.

Root Cause: Hide block is on, or the page (or the fragment that contains it) was not published.

Diagnosis Steps: Check the Additional tab; check the publication status of the page and any fragment.

Resolution Steps: Switch Hide block off and publish; publish the fragment page.

Validation Steps: The block appears on the `.aem.page` / `.aem.live` URL.

Preventive Measures: Record intentionally hidden blocks in the editorial plan.

Issue 5 — A link to the Accordion does not scroll to it
Symptoms: `#anchor-…` links do not jump to the block.

Root Cause: The Anchor ID was not saved (validation error), differs from the link, or was de-duplicated to `-2` because another element already uses it.

Diagnosis Steps: Inspect the block's `id` in the developer tools; compare with the link's `#` value.

Resolution Steps: Correct the Anchor ID or the link; make the id unique on the page.

Validation Steps: Selecting the link scrolls to the Accordion.

Preventive Measures: Keep a list of anchors per page; never reuse an Anchor ID on one page.

Issue 6 — No cmp:show / cmp:hide events in the data layer
Symptoms: Analytics shows no accordion interactions.

Root Cause: The block is inside an element with `data-analytics="off"`; the events are pushed but no tag manager reads them (Adobe Tags is not loaded yet); or the toggle happened before the data layer listeners were attached.

Diagnosis Steps: In the console, open an item and run `window.adobeDataLayer.slice(-3)`.

Resolution Steps: If events are present, configure the Adobe Tags rule (once Adobe Tags is embedded in `scripts/delayed.js`). If missing, escalate to development.

Validation Steps: `cmp:show` with `eventInfo.path` `component.{id}` appears on open.

Preventive Measures: Include data layer checks in release testing.

Issue 7 — Summary text is too large or wraps badly on mobile
Symptoms: Long summaries wrap over three or more lines on phones.

Root Cause: Summary text is too long for the 1.125rem heading size on small screens.

Diagnosis Steps: Check the page at 375px width.

Resolution Steps: Shorten the Summary; move details into the Text.

Validation Steps: Summaries fit on one or two lines on mobile.

Preventive Measures: Follow the Recommended 100-character limit.

6.20.14 Support Runbook
Monitoring Requirements

- Real User Monitoring (RUM) of Edge Delivery Services for page performance and errors of pages that contain the Accordion.
- Once Adobe Tags is embedded, monitor `cmp:show` / `cmp:hide` volumes per page.
- [To be confirmed: monitoring tool and alerting thresholds — owner: AMS lead].

Logs

- Browser console: the block emits no messages of its own; errors would come from block loading in `scripts/aem.js`: `failed to load module for accordion` or `failed to load block accordion`.
- Admin API: check the preview / live status of the page (`https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`).
- Author logs: AEM as a Cloud Service author logs (Cloud Manager) for publishing errors.

Common Errors

Error	Likely cause	First action
Items show as plain text	JS not loaded or failed	Reload; check console and Network
One row not converted	Empty Summary cell	Fill or delete the item
Empty body	Text not filled	Fill Text
Block missing on live	Hide block on, page not published	Check Additional tab; publish
Anchor link fails	Anchor ID mismatch or duplicate	Inspect the block id
No analytics	Adobe Tags not embedded; `data-analytics="off"`	Inspect `window.adobeDataLayer`

Escalation Matrix

Level	Who	What they check
L1	Author support	Item content, Hide block, Anchor ID, publication status, browser cache
L2	AMS / site admin	Preview / live status in the Admin API, CDN cache, code sync status, RUM
L3	Development team	`accordion.js` / `.css` regressions, console errors, data layer events
L4	Adobe Support	Platform issues (Edge Delivery delivery, Universal Editor, AEM author)

Recovery Procedures

- Content problem: restore the previous page version and republish.
- Code problem: revert the commit on `main`; Code Sync redeploys; purge is automatic on code sync.
- Urgent removal: Hide block on, publish.

Health Checks

- Open a page with an Accordion: items open with mouse and keyboard; the chevron rotates.
- `document.querySelectorAll('.accordion details').length` equals the number of items.
- Opening an item adds a `cmp:show` entry to `window.adobeDataLayer`.

Operational Procedures

- Changes to content: author, preview, validate, publish (6.20.5).
- Changes to code: feature branch, PR with a preview link, lint (`npm run lint`), review, merge.

Known Limitations

- No “open by default” or “only one open at a time” option.
- No FAQ structured data (JSON-LD).
- Summaries are not headings; no heading level option.
- Bodies are rich text only; no nested blocks or images styling.
- No expand-all / collapse-all control.

6.20.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
'Lorem Ipsum' appears on the live page	A new item was added and not edited	Replace Summary and Text of every item
An item opens to an empty body	Text left empty	Enter the answer or delete the item
A row has no visible question	Summary left empty	Fill the Summary or delete the item
The FAQ has no heading in the page outline	Summaries are not headings and no Title was added	Add a Title above the Accordion
Important information is overlooked	Key content placed inside a closed item	Move it to default content outside the Accordion
The Accordion is missing on the live page	Hide block on, or the page or fragment not published	Switch Hide block off and publish the page and fragment
A #anchor link does not reach the FAQ	Anchor ID missing, misspelt or de-duplicated with –2	Correct the Anchor ID and make it unique
Summary and Text fields cannot be found	The Accordion block, not the item, is selected	Select the Accordion Item in the content tree

6.20.16 Author Quick Reference Guide

Mandatory Fields

- Accordion Item: at least one, added with + on the Accordion in the content tree; the block has no content fields of its own
- Summary: not required in the model, but it is the only visible label of the item

Recommended Fields

- Text: the answer, short paragraphs, lists and descriptive links, about 150 words
- A Title (default content) above the Accordion to introduce the topic

Optional Fields

- Anchor ID: e.g. anchor-careers-faq, for #links to the FAQ
- Hide block: prepare the FAQ before release
- Padding and Margin: spacing tokens, e.g. Margin bottom 2.5rem (space-1000)

Authoring Checklist

1. Add the Accordion to a section, then one Accordion Item per question
2. Replace the default 'Lorem Ipsum' summary and placeholder text of every new item
3. Keep each Summary short (about 100 characters), specific and unique
4. Use the rich text toolbar for lists and links in Text; avoid images
5. Reorder items by dragging them in the content tree
6. Keep essential messages and CTAs outside the Accordion
7. Use 3 to 10 items per Accordion

Pre-Publish Checklist

1. In Preview mode open and close every item; the chevron rotates
2. Tab to each summary, check the focus outline and toggle with Enter and Space
3. Check every link inside the answers
4. Check the layout at 375, 768 and 1440 px
5. Check that Hide block is off and the Anchor ID, if any, starts with anchor- and is unique

6. Open an item and check window.adobeDataLayer for cmp:show

Post-Publish Validation Checklist

1. Open the live page and check that all items are closed on load
2. Open each item on aem.live and check the answers
3. If the Accordion is on a fragment, check that the fragment page was published
4. Check that #anchor links to the Accordion scroll to it
5. Check that cmp:show and cmp:hide events reach the data layer on the live page

6.20.17 Component Execution Example

Business example: Careers FAQ with five questions.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Accordion
Item (Content tree › Accordion › Add (+))	Accordion Item
Summary (Accordion Item 1)	How do I apply for a role at TCS?
Text (Accordion Item 1)	Search the open roles on our careers pages, choose a role and select Apply. You can save your application and complete it later. • Create a candidate profile • Upload your CV • Track the status of your application
Item (Content tree › Accordion › Add (+))	Accordion Item
Summary (Accordion Item 2)	What does the selection process look like, and how long does it usually take from application to offer?
Text (Accordion Item 2)	Most roles have an online assessment, a technical interview and a final interview with the hiring team. The process usually takes three to six weeks, and we keep you informed at every stage.
Item (Content tree › Accordion › Add (+))	Accordion Item
Summary (Accordion Item 3)	Can I apply for more than one position at the same time?
Text (Accordion Item 3)	Yes. You can apply for up to three roles at once; each application is reviewed by the team that is hiring for it.
Item (Content tree › Accordion › Add (+))	Accordion Item
Summary (Accordion Item 4)	Do you offer internships and graduate programmes?
Text (Accordion Item 4)	We run paid internships and a two-year graduate programme in most of our regions. Applications open every autumn; see Graduate careers (link /en/careers/graduates) for the dates.
Item (Content tree › Accordion › Add (+))	Accordion Item
Summary (Accordion Item 5)	How do you support employees who relocate for an assignment?
Text (Accordion Item 5)	Our mobility team helps with visas, travel, temporary housing and settling in, and a local buddy introduces you to the team and the city.

All other fields keep their default values.

Rendered Result:

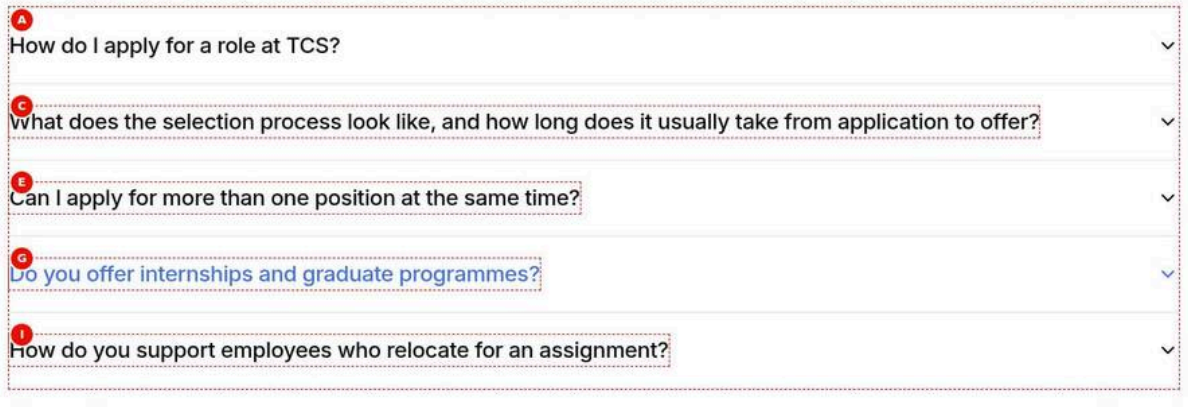

Figure 7: Execution example — The Accordion at 1440 px with five closed items between 1px dividers, each with a downward chevron: the four careers questions and 'How do you support employees who relocate for an assignment?'; the third summary, under the pointer, in brand blue. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/accordion-default.jpg)

Author Notes

- Add the Accordion, then five Accordion Items with + in the content tree.
- Item 1 'How do I apply for a role at TCS?' has a paragraph and a three-point bulleted list.
- Item 4 links 'Graduate careers' to /en/careers/graduates inside its Text.
- All other fields keep their defaults; the Accordion has only the Additional tab.

Business Notes

- The five questions applicants ask most are answered without lengthening the careers page.
- Collapsed answers stay in the page HTML, so they are indexed by search engines.
- Open and close events can show which questions interest applicants once Adobe Tags reads the data layer.

Technical Notes

- Each item row becomes details.accordion-item with summary.accordion-item-label and div.accordion-item-body.
- All items render closed and open independently; there is no exclusive mode.
- The chevron is a CSS mask (chevron-down.svg) in summary::after, rotated 180 degrees when open.
- The data layer decorator captures the details toggle event as cmp:show / cmp:hide.

6.21 Tabs Block

The Tabs component (`blocks/tabs`) shows content in tabbed panels: a tab list (one button per tab) and one panel per tab, of which one is shown at a time. It behaves like the Tabs core component of AEM and is available in two authoring modes that render the same way:

- **Tabs Container** (model `tabs`): a special section. Inside it, **Tab** items (6.22) start the tabs, and the components placed after a Tab (Columns, Title, Text, Image, Button), up to the next Tab, are that tab's content. `scripts/scripts.js` (`buildTabsSections`) wraps the section content in a synthetic `tabs` block.
- **Tabs** block (model `tabs-block`): a block placed in a normal section, with one **Tab** item (model `tabs-item`) per tab. Each Tab item has a Title, ID, Active tab and a **Fragment**: a page whose content is loaded into the panel.

Both modes support the Style (Underline, Boxed, Pills), Alignment (Left, Center, Full width), Orientation (Horizontal, Vertical), an accessible Label, deep links to a tab (`#id`) and the `cmp:show` data layer event.

6.21.1 Component Purpose

Business Objective

Let visitors switch between related views of one topic (for example services, industries, regions or product editions) without leaving the page, keeping the page short while every view stays one selection away and linkable.

Business Use Cases

- Services or offerings grouped by category (“Consulting”, “Cloud”, “Cybersecurity”).
- Industry or region views of the same content (“Americas”, “Europe”, “Asia Pacific”).
- Investor information by period (“Quarterly results”, “Annual reports”, “Presentations”).
- Careers content by audience (“Graduates”, “Experienced professionals”, “Interns”).
- Reusing the same tab content on several pages (Tabs block with fragment pages).

When To Use

- Two to about seven parallel, mutually exclusive views with short, clear labels.
- Visitors usually need only one view at a time.
- Each view needs rich layout (Columns, images, buttons): use the Tabs Container; when the views are shared between pages, use the Tabs block with fragments.

When Not To Use

- Content that visitors must compare side by side or read in sequence: use default content or Columns.
- Many short question / answer items: use the Accordion (6.20).
- Only one tab: use a normal section.
- Primary navigation between pages: use the header navigation or an Anchor List.
- Critical content (legal notices, main CTAs) that must be visible without interaction.

Dependencies

Dependency	Type	Use
`blocks/tabs/tabs.js`, `tabs.css`, `_tabs.json`	Block	Tab list, panels, keyboard, deep links, data layer; models `tabs`, `tabs-block`, `tabs-item`
`blocks/tab/tab.js` (`readTab`)	Block	Reads the Tab items of a Tabs Container (6.22)
`blocks/fragment/fragment.js` (`loadFragment`)	Block	Loads a Tab item’s Fragment page (Tabs block mode)
`scripts/scripts.js` (`buildTabsSections`, `wrapSectionContent`, `moveInstrumentation`)	Shared code	Builds the synthetic block for Tabs Container sections; keeps editor instrumentation
`scripts/aem.js` (`toClassName`)	Core library	Normalises IDs and option values
`utils/analytics.js` (`pushComponentEvent`)	Util	`cmp:show` when another tab is shown
`utils/buttons.js` (`pick`)	Util	Accepts only the allowed Style, Alignment and Orientation values (block mode)
`utils/environment.js` (`isEditing`)	Util	Empty-state hint in Universal Editor edit mode
`utils/ids.js` (`availableId`, `uniqueId`)	Util	Unique panel / button ids
`utils/placeholders.js` (`getPlaceholders`)	Util	UI text: `tabs`, `tabNumber`, `tabsEmpty`, `tabsBlockEmpty`
`utils/properties.js` (`isOn`, `normalizeKey`, `textOf`)	Util	Reads the block property rows

Dependency	Type	Use
`decorators/data-layer-decorator.js`	Decorator	Component state and `cmp:click` on tab buttons
`decorators/block-options-decorator.js`, `styles/styles.css`	Shared code	Additional tab (Tabs block mode)
Placeholders sheet `/{locale}/placeholders.json`	Data	Keys `tabs` (default "Tabs"), `tabNumber` ("Tab {n}"), `tabsEmpty`, `tabsBlockEmpty`
Fragment pages	Content	Tabs block mode: one page per tab, e.g. under the locale's `references/`

Related Components

- Tab Block (6.22): the tab marker inside a Tabs Container.
- Accordion Block (6.20): collapsible alternative for many short items.
- Columns, Title, Text, Image, Button: the components allowed inside a Tabs Container.
- Fragment block: the mechanism behind the Tabs block's Fragment field.
- Anchor List: in-page navigation; links to a tab's ID open that tab.

Applicable Templates

Any page (home, article, blog, press-release, no template). The Tabs Container is added at the page level (the `main` filter allows `section`, `gen-carousel` and `tabs`); the Tabs block is added inside any standard section (`section` filter, as `tabs-block`).

Supported Content Types

- Tabs Container: Columns, Title, Text, Image and Button components (filter `tabs`), plus the Tab markers.
- Tabs block: any content of the referenced fragment pages (any sections and blocks the fragment page contains).

Business Problem Solved

Related views of one topic (service lines, industries, regions, reporting periods) were laid out one after another, which made pages long and buried the view a visitor wanted. The Tabs show one view at a time, keep every view one selection or one #id link away, and let authors either build the panels on the page (Tabs Container) or reuse fragment pages maintained once (Tabs block).

Supported Taxonomy

None: neither the Tabs Container nor the Tabs block has a tag field, and the block reads no page tags or taxonomy (Supported Tags: None in 6.21.8).

6.21.2 Visual Overview

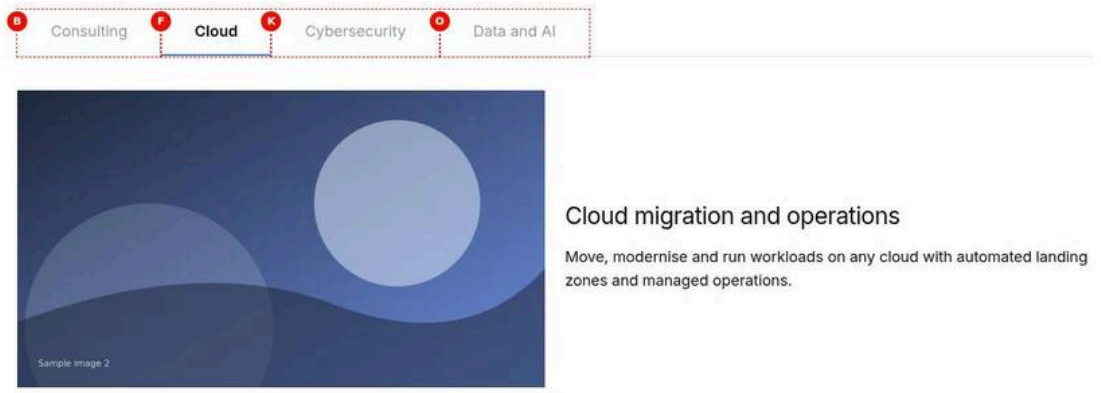

Figure 8: Desktop rendering — The Tabs Container at 1440 px: an Underline tab list Consulting, Cloud, Cybersecurity, Data and AI with Cloud selected (semibold, brand underline) above a grey divider; below it the Cloud panel, a Columns with photo-2.svg on the left and the H3 Cloud migration and operations with its text on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/tabs-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Tabs Container at 1440 px: an Underline tab list Consulting, Cloud, Cybersecurity, Data and AI with Cloud selected (semibold, brand underline) above a grey divider; below it the Cloud panel, a Columns with photo-2.svg on the left and the H3 Cloud migration and operations with its text on the right.
Business Context	A services overview on an English page: four service lines share one area, so visitors switch between Consulting, Cloud, Cybersecurity and Data and AI without scrolling past the others.
Author Objective	Build a four-tab Tabs Container whose panels each hold an image-and-text Columns, opening on the Cloud tab.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
(A)	Label (Tabs Container › Accessibility)	Our services	No	aria-label of the tab list	Describe the group	None (trimmed)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
B	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to “Tab {n}” if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree,	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Columns	
(C)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(D)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(E)	Note (Columns)	Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Title "Business and technology consulting" (Title Type h3), Text "Strategy, operating model design and change management that turn transformation goals into measurable results."	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
F	Title (Tab › Content)	Cloud	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
(G)	Active tab (Tab › Content)	On	No	Tab shown on load	One tab at most	Only the value "true" counts
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(H)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(I)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(J)	Note (Columns)	Column 1: Image photo-2.svg (Alt Text "Cloud operations dashboard"); Column 2: Title "Cloud migration and operations" (Title Type h3), Text "Move, modernise and run workloads on any cloud with automated landing zones and managed operations."	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
K	Title (Tab › Content)	Cybersecurity	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(L)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(M)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(N)	Note (Columns)	Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Title "Cyber defence and resilience" (Title Type h3), Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning."	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
O	Title (Tab › Content)	Data and AI	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(P)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(Q)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(R)	Note (Columns)	Column 1: Image photo-4.svg (Alt Text "Data scientists reviewing a model"); Column 2: Title "Enterprise	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		data and AI" (Title Type h3), Text "Build trusted data platforms and put responsible AI to work across the value chain."				

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** One row of four plain text tabs on a 1px grey divider, Cloud semibold in the default text colour with a 3px brand underline, the others in the secondary text colour; the Cloud Columns 2.5rem below, image left and H3 plus text right.
- **Rendering behaviour:** At 1440 px the desktop rules apply: tab padding 0.75rem by 2.5rem, 1.125rem labels that never wrap, Columns side by side from 900 px. The three other panels are in the page HTML with the hidden attribute.
- **Publishing behaviour:** The Tabs Container, its Tabs and Columns are part of the page, so one Publish sends them to aem.page (preview) or aem.live (live). The four photos are AEM assets that must be published; placeholder changes (tabs, tabNumber) are a separate publish.

Business Rules

- Cloud is shown first because its Tab has Active tab on; without it the first tab, Consulting, would be shown.
- Every Columns must sit after its Tab in the content tree; a component before the first Tab creates an extra tab labelled Tab 1.
- Only Tab, Columns, Title, Text, Image and Button can be added inside the Tabs Container (filter tabs).
- The Label Our services names the tab list for screen readers; when it is empty the placeholder tabs (Tabs) is used.
- Keep Active tab on for one Tab only; when several are on, the first one wins.

Common Authoring Mistakes

Error	Root Cause	Resolution
Consulting is shown on load instead of Cloud	Active tab not switched on for the Cloud Tab, or also on for Consulting (the first Active tab wins)	Switch Active tab on for Cloud only, then reload the page
An extra first tab labelled Tab 1 holds a Columns	The Columns was added before the Consulting Tab	Drag the Columns below the Consulting Tab in the content tree
A panel image is announced without a description	Alt Text of the Columns image left empty	Enter the Alt Text, e.g. Cloud operations dashboard

Troubleshooting

- **Symptoms:** All four Columns appear one under another and no tab list is shown.
- **Cause:** The Tabs and Columns were added to a normal Section, not a Tabs Container, so the section has no tabs-section class.
- **Resolution:** Add a Tabs Container at page level and move the four Tabs and their Columns into it in order.
- **Verification Steps:** Preview the page: the list Consulting, Cloud, Cybersecurity, Data and AI appears with Cloud selected.

Desktop (1200px and wider). The tab list is a single row of buttons above the panels, with a 1px divider under the whole list. Each tab button has 0.75rem vertical and 2.5rem horizontal padding (from 900px), body text size (1.125rem from 900px), line height 1.61, labels on one line (`white-space: nowrap`). Unselected tabs use the secondary text colour and turn to the default text colour on hover; the selected tab is semibold in the default text colour with a 3px (0.1875rem) brand-coloured bottom border that overlaps the divider. The visible panel starts 2.5rem below the list; the other panels are hidden. With **Orientation: Vertical**, from 900px the block becomes a two-column grid: the tab list on the left (at least 12.5rem, one quarter of the width), the panel on the right (three quarters), 3rem apart; the list has a 1px left border and the selected tab a 3px brand left border; labels may wrap.

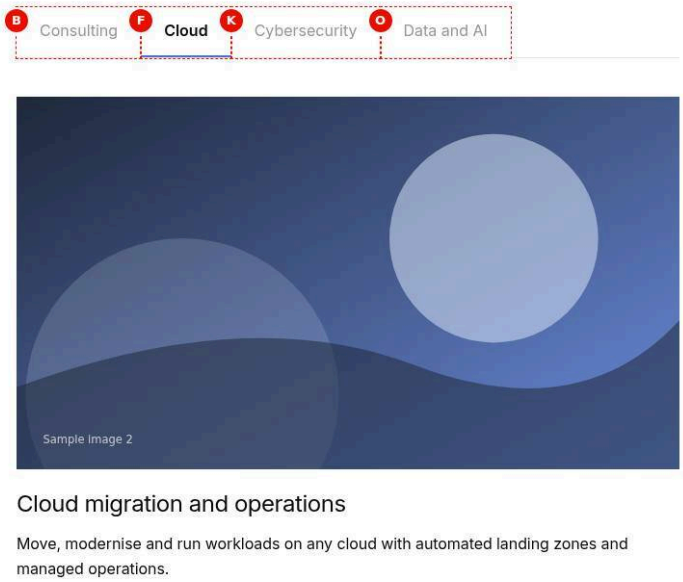

Figure 9: Tablet rendering — The same Tabs at 768 px: the four labels Consulting, Cloud, Cybersecurity, Data and AI fit in one row with Cloud underlined, so the list does not scroll here; the Cloud Columns is stacked, photo-2.svg above the H3 Cloud migration and operations and its text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/tabs-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same Tabs at 768 px: the four labels Consulting, Cloud, Cybersecurity, Data and AI fit in one row with Cloud underlined, so the list does not scroll here; the Cloud Columns is stacked, photo-2.svg above the H3 Cloud migration and operations and its text.
Business Context	The services tabs checked at tablet width, where most visitors on tablets in portrait see the page.
Author Objective	Check that the four tab labels still fit and the panel content stacks cleanly at 768 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Label (Tabs Container › Accessibility)	Our services	No	aria-label of the tab list	Describe the group	None (trimmed)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Columns	
(P)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(Q)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(R)	Note (Columns)	Column 1: Image photo-4.svg (Alt Text "Data scientists reviewing a model"); Column 2: Title "Enterprise data and AI" (Title Type h3), Text "Build trusted data platforms and put responsible AI to work across the value chain."	No	—	—	None
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A narrower tab row with smaller padding, Cloud semibold with the brand underline; the image full panel width with the H3 and text below it.
- **Rendering behaviour:** Between 600 and 899 px tabs use 0.75rem by 1.5rem padding and 1rem labels; the Columns stack below 900 px. Had the labels been wider than the screen, the list would scroll sideways with a hidden scrollbar.
- **Publishing behaviour:** Nothing extra to publish for tablet: the same page publish (aem.page, then aem.live) covers every width. Layout differences come from the CSS, not from separate content.

Business Rules

- Tab labels never wrap in the horizontal list; long or translated labels make the list scroll sideways instead.
- The Columns inside the panels stack below 900 px; the Tabs add no padding or width limit of their own to the panel content.
- Orientation Vertical would still show the tabs above the panel at 768 px; the vertical layout starts at 900 px.
- Keep Titles to one to three words (up to about 25 characters) so the tabs fit at tablet width.

Common Authoring Mistakes

Error	Root Cause	Resolution
Data and AI is cut off on tablets	Titles too long, e.g. a full sentence as the Title	Shorten the Titles, or use Orientation Vertical for long labels on desktop
The image is very tall in the stacked panel	A portrait image used in the Columns	Use a landscape image of at least 1200px width

Troubleshooting

- **Symptoms:** At 768 px the last tab is hidden and visitors do not notice it.
- **Cause:** The labels are wider than the screen, so the list scrolls sideways and the scrollbar is hidden by design.
- **Resolution:** Shorten the Titles (e.g. Data and AI instead of Data, analytics and artificial intelligence) and republish.
- **Verification Steps:** Preview at 768 px: all four tabs are visible in one row.

Tablet (600px to 1199px). Between 900px and 1199px the layout is the desktop layout. Between 600px and 899px tabs use the mobile padding (0.75rem by 1.5rem) and 1rem text, and Vertical tabs are shown horizontally above the panel (the vertical layout starts at 900px). If the tabs do not fit, the tab list scrolls horizontally (the scrollbar is hidden; swipe or use the arrow keys).

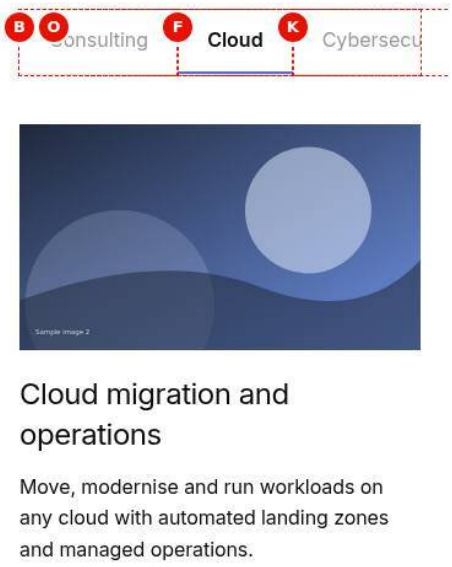

Figure 10: Mobile rendering — The Tabs at 375 px: the tab list shows Consulting, Cloud (selected, underlined) and a cut-off Cybersecu…, with Data and AI off-screen to the right; below it the Cloud panel stacked: photo-2.svg, the H3 Cloud migration and operations on two lines and its text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/tabs-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The Tabs at 375 px: the tab list shows Consulting, Cloud (selected, underlined) and a cut-off Cybersecu…, with Data and AI off-screen to the right; below it the Cloud panel stacked: photo-2.svg, the H3 Cloud migration and operations on two lines and its text.
Business Context	The services tabs on a phone, where the four labels do not fit and visitors swipe the tab list.
Author Objective	Check the tab list scrolls sideways and the Cloud panel stacks at 375 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)

(H)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(I)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(J)	Note (Columns)	Column 1: Image photo-2.svg (Alt Text "Cloud operations dashboard"); Column 2: Title "Cloud migration and operations" (Title Type h3), Text "Move, modernise and run workloads on any cloud with automated landing zones and managed operations."	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
K	Title (Tab › Content)	Cybersecurity	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(L)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(M)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(N)	Note (Columns)	Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Title "Cyber defence and resilience" (Title Type h3), Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning."	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
O	Title (Tab › Content)	Data and AI	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(P)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(Q)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(R)	Note (Columns)	Column 1: Image photo-4.svg (Alt Text "Data scientists reviewing a model"); Column 2: Title "Enterprise data and AI" (Title Type h3), Text "Build trusted data platforms and put responsible AI to work across the value chain."	No	—	—	None
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A single row of tabs cut off at the right edge, signalling that it scrolls; the Cloud panel below with the image, heading and text in one column.
- **Rendering behaviour:** Below 600 px the list stays one row that scrolls sideways (scrollbar hidden), labels never wrap and tabs use 0.75rem by 1.5rem padding. The list is not scrolled to the selected tab on load.
- **Publishing behaviour:** The mobile layout needs no separate content or publish step; the page Publish covers it. Check it on aem.page before publishing to aem.live.

Business Rules

- Four tabs do not fit at 375 px; the cut-off label shows visitors the list can be swiped.
- The tab list is not scrolled to the selected tab, so keep the Active tab among the first tabs (here Cloud, the second).
- Arrow keys, Home and End move between tabs; the selected tab gets focus.
- Vertical tabs are also shown horizontally on mobile.

Common Authoring Mistakes

Error	Root Cause	Resolution
Visitors never find Data and AI	Too many or too long labels for a phone	Keep two to seven short Titles, and put the most important tab first
The Active tab is invisible on load	Active tab set on the last tab, which is off-screen at 375 px	Make an early tab the Active tab, or order the tabs by importance

Troubleshooting

- **Symptoms:** On a phone the selected tab is not visible in the tab list after the page opens.
- **Cause:** Active tab is on for a tab that lies beyond the right edge; the code does not scroll the list to the selected tab.
- **Resolution:** Move the Active Tab and its components earlier in the content tree, or switch Active tab on for an earlier Tab.
- **Verification Steps:** Preview at 375 px: the selected tab is visible without swiping.

Mobile (below 600px). The tab list stays a single horizontal row that scrolls sideways; tab labels do not wrap. Panel content follows the responsive rules of the components inside it (for example Columns stack). Vertical tabs are horizontal on mobile. Pills tabs use 0.5rem by 1.5rem padding.

6.21.3 Component Variations

The variations below can be combined: one authoring mode (1 or 2), one Style (3 to 5), one Alignment (6 to 8), one Orientation (9 or 10) and, for the Tabs Container only, one Width Type (11 or 12). The definitions start new Tabs with Underline, Left and Horizontal.

Variation 1 — Tabs Container (section mode)

Variation Name

Tabs Container (component title "Tabs Container", model `tabs`, section style `tabs-section`).

Business Purpose

Author the tab content directly on the page, with full layout components, without creating separate fragment pages.

Visual Example

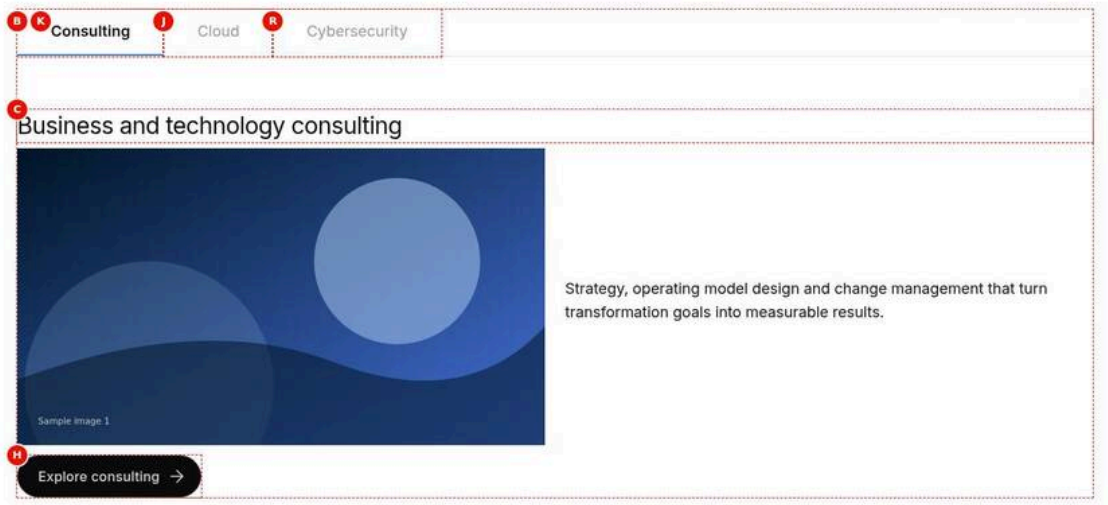

Figure 11: Tabs Container variation — A Tabs Container at 1440 px with the tabs Consulting (selected), Cloud and Cybersecurity; the Consulting panel shows the H3 Business and technology consulting, a Columns with photo-1.svg on the left and its text on the right, and the black primary button Explore consulting with an arrow below. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-container-mode.jpg)

Screenshot Details — Tabs Container variation

Item	Detail
Screenshot Name	`screenshots/tabs-container-mode.jpg`
Screenshot Purpose	Tabs Container variation
Screen Description	A Tabs Container at 1440 px with the tabs Consulting (selected), Cloud and Cybersecurity; the Consulting panel shows the H3 Business and technology consulting, a Columns with photo-1.svg on the left and its text on the right, and the black primary button Explore consulting with an arrow below.
Business Context	A services page where each tab is a small landing area of its own, with a heading, an image and text, and a call to action to the service page.
Author Objective	Author three tabs directly on the page, each with a Title, a Columns and a Button.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
(A)	Label (Tabs Container › Accessibility)	Our services	No	aria-label of the tab list	Describe the group	None (trimmed)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
B	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
C	Title (Title)	Business and technology consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
(D)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(E)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(F)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(G)	Note (Columns)	Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Text "Strategy, operating model design and change management that turn transformation goals into measurable results."	No	—	—	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
H	Link (Button)	Select the page or enter /en/services/consulting	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
(I)	Text (Button)	Explore consulting	Yes (Recommended)	Visible link text	Short, descriptive	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
J	Title (Tab › Content)	Cloud	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
K	Title (Title)	Cloud migration and operations	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
(L)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(M)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(N)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(O)	Note (Columns)	Column 1: Image photo-2.svg (Alt Text "Cloud operations dashboard"); Column 2: Text "Move, modernise and run workloads on any cloud with automated landing zones and managed operations."	No	—	—	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
(P)	Link (Button)	Select the page or enter /en/services/cloud	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
(Q)	Text (Button)	Explore cloud services	Yes (Recommended)	Visible link text	Short, descriptive	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
R	Title (Tab › Content)	Cybersecurity	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
(S)	Title (Title)	Cyber defence and resilience	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
(T)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(U)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(V)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(W)	Note (Columns)	Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning."	No	—	—	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
(X)	Link (Button)	Select the page or enter /en/services/cybersecurity	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
(Y)	Text (Button)	Explore cybersecurity	Yes (Recommended)	Visible link text	Short, descriptive	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Underline tabs with Consulting selected; the panel content in authored order: H3, image-and-text Columns, then the primary button.

- **Rendering behaviour:** Each component keeps its own markup and decoration inside the panel; the Tab markers' wrappers are hidden on the page. With no Active tab, the first tab, Consulting, is shown.
- **Publishing behaviour:** One page Publish sends the container and all its components to aem.page or aem.live. The target pages /en/services/consulting, /cloud and /cybersecurity must be published for the buttons to work.

Business Rules

- The components after a Tab, up to the next Tab, form its panel: here Title, Columns and Button.
- No Tab has Active tab on, so the first tab (Consulting) is shown on load.
- Use H3 for the panel Titles when the page has an H2 above the tabs, so the heading outline continues.
- Each panel should end with one Button; do not put the page's main CTA only in a non-default tab.
- All panel content is in the page HTML, so it is indexable even when hidden.

Common Authoring Mistakes

Error	Root Cause	Resolution
The Explore cloud services button shows under the Consulting tab	The Button was placed before the Cloud Tab in the content tree	Drag the Button below the Cloud Tab
Cards cannot be added to a panel	The Tabs Container only allows Tab, Columns, Title, Text, Image and Button	Use the Tabs block with fragment pages for richer blocks
Panel headings break the outline	Title Type set to h1 or h2 in every panel	Use h3 (or the next level below the section heading)

Troubleshooting

- **Symptoms:** A button in a panel leads to a 404 page.
- **Cause:** The linked page, e.g. /en/services/cloud, is not published or the path was typed incorrectly.
- **Resolution:** Pick the page with the link picker in the Button's Link field and publish the target page.
- **Verification Steps:** On aem.page, select Cloud and follow Explore cloud services: the service page opens.

Use Cases

Page-specific tabbed content: services overview, region views, programme details.

Authoring Guidelines

At the page level (content tree, `main`), add **Tabs Container**. Inside it, add a **Tab**, then the components for that tab (Columns, Title, Text, Image, Button), then the next **Tab** and its components, and so on. Set the Tabs Container's ID, Width Type, Label, Style, Alignment and Orientation in its properties.

Business Rules

- Each Tab starts a new tab; the components after it, up to the next Tab, are its content.
- Content placed before the first Tab forms a first, untitled tab labelled "Tab 1" (placeholder `tabNumber`).
- Allowed components: Tab, Columns, Title, Text, Image, Button (filter `tabs`).
- The Tabs Container's ID (field `anchorName`) becomes the section's id and the base for generated panel ids (`{id}-item-{n}`) when it is not already used on the page.
- The **Component** select has one option (Tabs = `tabs-section`); this class is what turns the section into tabs.

Rendering Rules

- `buildTabsSections` wraps the section content in `div.tabs` with `data-source="section"`; Style, Alignment and Orientation values become classes; the Label becomes `data-label`.
- Each component keeps its own markup, decoration and editor instrumentation inside the panel.
- The Tab markers' wrappers stay inside the panels but are hidden on the page (shown in edit mode as a dashed label chip).

Responsive Behaviour

- Desktop / tablet / mobile: as described in 6.21.2; components inside the panels follow their own responsive rules (panel inner wrappers have no extra padding or max width).

SEO Impact

All panel content is in the page HTML (hidden panels use the `hidden` attribute), so it is indexable. Headings inside panels should continue the page's heading outline.

Accessibility Compliance

WAI-ARIA tabs pattern: `role="tablist"` with `aria-label`, `role="tab"` buttons with `aria-selected`, `aria-controls` and a roving `tabindex`, `role="tabpanel"` panels with `aria-labelledby` and `tabindex="0"`; arrow keys, Home and End move between tabs.

Variation 2 — Tabs block with fragment items (block mode)

Variation Name

Tabs block (component title "Tabs", model `tabs-block`, items `tabs-item`).

Business Purpose

Reuse tab content maintained once on fragment pages across several pages and locales' pages, and keep complex panel content (any blocks) in its own page.

Visual Example

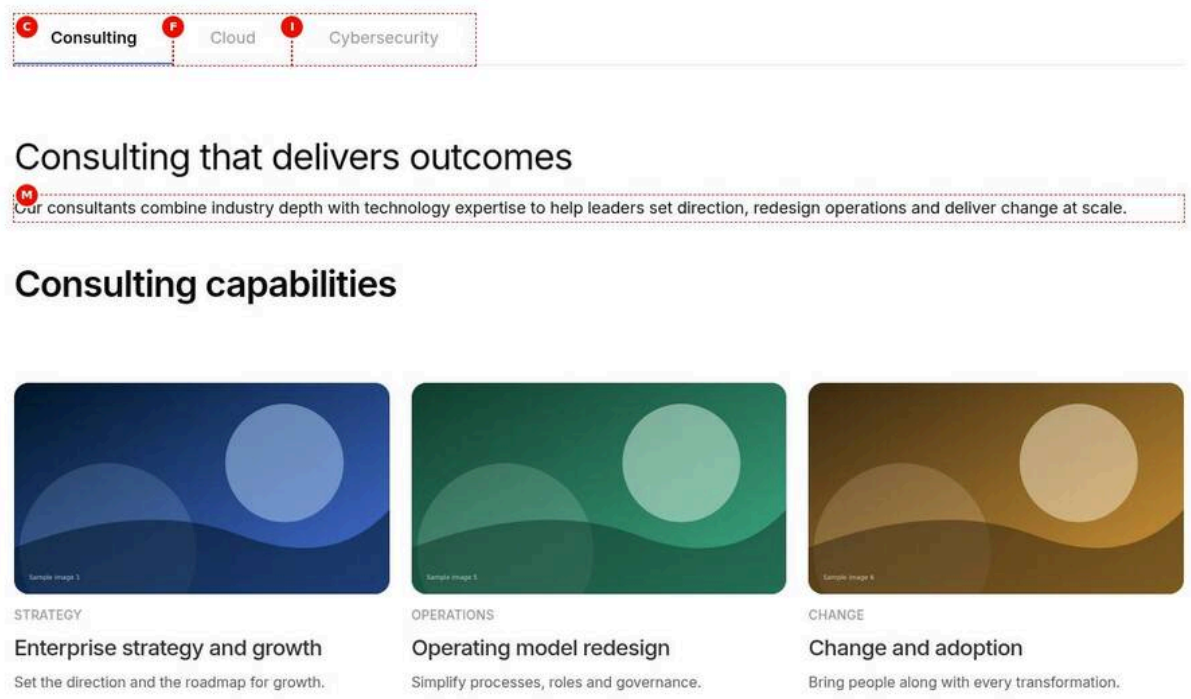

Figure 12: Tabs block variation — A Tabs block at 1440 px with the tabs Consulting (selected), Cloud and Cybersecurity; the panel shows the fragment page consulting-overview: the H2 Consulting that delivers outcomes and its text, then the Cards heading Consulting capabilities and three cards Strategy, Operations and Change with images, titles and descriptions. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-block-fragments.jpg)

Screenshot Details — Tabs block variation

Item	Detail
Screenshot Name	`screenshots/tabs-block-fragments.jpg`
Screenshot Purpose	Tabs block variation
Screen Description	A Tabs block at 1440 px with the tabs Consulting (selected), Cloud and Cybersecurity; the panel shows the fragment page consulting-overview: the H2 Consulting that delivers outcomes and its text, then the Cards heading Consulting capabilities and three cards Strategy, Operations and Change with images, titles and descriptions.
Business Context	Offering descriptions maintained once on fragment pages and reused in tabs on several pages, so a change to the Cloud offering is made in one place.
Author Objective	Add a Tabs block with three Tab items, each showing a fragment page with a heading, text and Cards.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Tabs	Yes	Adds the Tabs to the page	Select the section in the content tree, choose Add (+) and pick Tabs	Only components the section allows (section filter)
(A)	ID (Tabs › Properties)	our-offerings	No	Base of generated tab ids	Lower case, hyphens	None in model; normalised by `toClassName`
(B)	Label (Tabs › Accessibility)	Our offerings	No	aria-label of the tab list	Describe the group	None (trimmed)
—	Item (Content tree › Tabs › Add (+))	Tab	Yes	Adds a Tab to the Tabs	Select the Tabs in the content tree, choose Add (+) and pick Tab	Only the item types the Tabs allows
C	Title (Tab 1 › Tab)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to “Tab {n}” if empty
(D)	ID (Tab 1 › Tab)	consulting-offering	No	Panel id for deep links	Lower case, no spaces	Normalised by `toClassName`; de-duplicated with `-2`, `-3`
(E)	Fragment (Tab 1 › Fragment)	Select the page or enter /en/shots/g08a/consulting-overview	No (code tolerates empty)	Page whose content fills the panel	Pick a page under `references/`	Code: path must start with `/`; otherwise ignored
—	Item (Content tree › Tabs › Add (+))	Tab	Yes	Adds a Tab to the Tabs	Select the Tabs in the content tree, choose Add (+) and pick Tab	Only the item types the Tabs allows
F	Title (Tab 2 › Tab)	Cloud	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to “Tab {n}” if empty
(G)	ID (Tab 2 › Tab)	cloud-offering	No	Panel id for deep links	Lower case, no spaces	Normalised by `toClassName`; de-duplicated with `-2`, `-3`

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(H)	Fragment (Tab 2 › Fragment)	Select the page or enter /en/shots/g08a/cloud-overview	No (code tolerates empty)	Page whose content fills the panel	Pick a page under `references/`	Code: path must start with `/`; otherwise ignored
—	Item (Content tree › Tabs › Add (+))	Tab	Yes	Adds a Tab to the Tabs	Select the Tabs in the content tree, choose Add (+) and pick Tab	Only the item types the Tabs allows
I	Title (Tab 3 › Tab)	Cybersecurity	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
(J)	ID (Tab 3 › Tab)	cybersecurity-offering	No	Panel id for deep links	Lower case, no spaces	Normalised by `toClassName`; de-duplicated with `-2`, `-3`
(K)	Fragment (Tab 3 › Fragment)	Select the page or enter /en/shots/g08a/security-overview	No (code tolerates empty)	Page whose content fills the panel	Pick a page under `references/`	Code: path must start with `/`; otherwise ignored
(L)	Title / Title Type (Fragment page / en/shots/g08a/consulting-overview › Section 1 › Title)	Consulting that delivers outcomes / h2	No	—	—	None
M	Text (Fragment page /en/shots/g08a/consulting-overview › Section 1 › Text)	Our consultants combine industry depth with technology expertise to help leaders set direction, redesign operations and deliver change at scale.	No	—	—	None
(N)	Title / Heading type (Fragment page / en/shots/g08a/consulting-overview › Section 2 › Cards › Content)	Consulting capabilities / H3	No	—	—	None
(O)	Desktop columns / Tablet columns (Fragment page / en/shots/g08a/consulting-overview › Section 2 › Cards › Layout)	3 / 3	No	—	—	None
(P)	Image / Eyebrow / Title / Description (Fragment page / en/shots/g08a/consulting-overview › Section 2 › Card 1 › Content)	photo-1.svg / Strategy / Enterprise strategy and growth / Set the direction and the roadmap for growth.	No	—	—	None
(Q)	Link (Fragment page /en/shots/	/en/services/consulting	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
	g08a/consulting-overview › Section 2 › Card 1 › Link)					
(R)	Image / Eyebrow / Title / Description (Fragment page / en/shots/g08a/consulting-overview › Section 2 › Card 2 › Content)	photo-5.svg / Operations / Operating model redesign / Simplify processes, roles and governance.	No	—	—	None
(S)	Link (Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 2 › Link)	/en/services/consulting	No	—	—	None
(T)	Image / Eyebrow / Title / Description (Fragment page / en/shots/g08a/consulting-overview › Section 2 › Card 3 › Content)	photo-6.svg / Change / Change and adoption / Bring people along with every transformation.	No	—	—	None
(U)	Link (Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 3 › Link)	/en/services/consulting	No	—	—	None
—	Content (Fragment pages /en/shots/g08a/cloud-overview)	The same structure: Title “Cloud for the whole enterprise” (h2), Text, Cards “Cloud services” with the cards Cloud migration, Cloud-native platforms, Managed cloud operations	—	Check on the preview (not stored in the content)	The same structure: Title “Cloud for the whole enterprise” (h2), Text, Cards “Cloud services” with the cards Cloud migration, Cloud-native platforms, Managed cloud operations	—
—	Content (Fragment pages /en/shots/g08a/security-overview)	The same structure: Title “Security built into every layer” (h2), Text, Cards “Security services” with the cards Managed detection and response, Identity and access, Cyber resilience	—	Check on the preview (not stored in the content)	The same structure: Title “Security built into every layer” (h2), Text, Cards “Security services” with the cards Managed detection and response, Identity and access, Cyber resilience	—
(V)	Location (Sites console)	Real sites keep fragment pages under the locale’s references/ folder (e.g. /content/tcs-corp/us/en/references/tabs/cloud-overview)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field’s output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Underline tabs with Consulting selected; the panel holds the fragment's two sections 2.5rem apart: the H2 and intro text, then the Cards heading and three image cards in a row.
- **Rendering behaviour:** The three fragments (.plain.html) are fetched in parallel while the block is decorated and fully decorated inside div.tabs-fragment; panel ids are consulting-offering, cloud-offering and cybersecurity-offering. Fragment content is not in the page's delivered HTML.
- **Publishing behaviour:** The fragment pages are separate pages: preview and publish consulting-overview, cloud-overview and security-overview as well as the page, or the panels stay empty. A fragment change is live on every page using it once the fragment is republished.

Business Rules

- Each Tab item is one tab; its panel shows the page chosen in the Fragment tab.
- A missing, unpublished or non-site Fragment (not starting with /) leaves the panel empty without a message.
- Only Tab items can be added inside the Tabs block (filter tabs-block); the content itself lives on the fragment pages.
- The ID our-offerings is only the base for generated panel ids; here every Tab has its own ID, so the block id comes from the Anchor ID only.
- Keep fragment pages under the locale's references/ folder, which the query index excludes.

Common Authoring Mistakes

Error	Root Cause	Resolution
The Cloud tab is empty	cloud-overview not published, or no Fragment chosen in Tab 2	Pick the page in Tab 2 › Fragment and publish cloud-overview
The fragment appears in search and list results as its own page	Fragment pages kept outside references/	Move them to /content/tcs-corp/us/en/references/tabs/
#our-offerings does not scroll to the tabs	The Tabs block ID is not applied to the block itself	Set an Anchor ID such as anchor-our-offerings in the Additional tab and link to it

Troubleshooting

- **Symptoms:** The Cybersecurity tab shows an empty panel on aem.live but works on aem.page.
- **Cause:** security-overview was previewed but not published, so its .plain.html returns 404 on the live host.
- **Resolution:** Publish the fragment page security-overview (and any other fragment of the Tabs) to live.
- **Verification Steps:** Open /en/shots/g08a/security-overview.plain.html on aem.live (200), then select Cybersecurity on the live page.

Use Cases

Shared product or service descriptions; the same "Our locations" tabs on several pages; panels that need blocks not allowed in a Tabs Container (e.g. Cards, List, Video).

Authoring Guidelines

In a standard section add **Tabs**. Set ID, Label, Style, Alignment and Orientation. Add one **Tab** item per tab; in each, set Title (required), ID, Active tab, and in the **Fragment** tab pick the fragment page.

Business Rules

- Each Tab item is one tab; its panel shows the content of the Fragment page.
- Fragments are loaded in parallel when the block is decorated; a missing or unloadable fragment leaves the panel empty (no error message).
- The Fragment path must be a site path starting with `/` (external URLs are ignored).
- Only Tab items can be added inside the block (filter `tabs-block`).

- Without any Tab item the block renders nothing on the page; in edit mode it shows the hint "Add a Tab, then choose the Fragment it shows in the Tab properties." (`tabsBlockEmpty`).

Rendering Rules

- The block's property rows (ID, Label, Style, Alignment, Orientation) are read and removed; every other row is a Tab item.
- The fragment content is wrapped in `div.tabs-fragment`; consecutive sections inside it are 2.5rem apart.
- Each Tab item's editor instrumentation moves to its panel, so selecting a panel in Universal Editor selects the Tab item.
- Items authored with an earlier model that had more cells use the last cell as the Fragment.

Responsive Behaviour

As 6.21.2; the fragment content follows the responsive rules of its own blocks.

SEO Impact

Fragment content is fetched by JavaScript after the page loads; it is not in the page's delivered HTML. Search engines that render JavaScript may see it; the fragment pages are separate URLs. Keep fragments under the locale's `references/` folder, which is excluded from the query index.

Accessibility Compliance

Same tabs pattern as Variation 1. Fragment content must carry its own accessible headings and alternative texts.

Variation 3 — Style: Underline

Variation Name

Underline (`tabsStyle` = `underline`, default).

Business Purpose

The standard, light tab style, matching the Anchor List chapter navigation.

Visual Example

Figure 13: Underline style — Underline tabs at 1440 px: the plain labels Banking (selected, semibold, 3px brand underline), Retail and Manufacturing on a thin grey divider, and below it the Banking text Modern core banking, payments and risk platforms that help banks serve customers in real time. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-style-underline.jpg)

Screenshot Details — Underline style

Item	Detail
Screenshot Name	`screenshots/tabs-style-underline.jpg`
Screenshot Purpose	Underline style
Screen Description	Underline tabs at 1440 px: the plain labels Banking (selected, semibold, 3px brand underline), Retail and Manufacturing on a thin grey divider, and below it the Banking text Modern core banking, payments and risk platforms that help banks serve customers in real time.
Business Context	An industries area of a corporate page where light, unobtrusive tabs sit directly below a heading.
Author Objective	Create three industry tabs with the default Underline style.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
A	Title (Tab › Content)	Banking	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
B	Text (Text)	Modern core banking, payments and risk platforms that help banks serve customers in real time.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
C	Title (Tab › Content)	Retail	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	Unified commerce, supply chain and store operations for retailers that compete on experience.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
E	Title (Tab › Content)	Manufacturing	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
(F)	Text (Text)	Connected factories, digital twins and resilient supply	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		networks for industrial leaders.				
(G)	Style (Tabs Container › Styles)	Underline (the default, keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Text-only tab labels with no background, a 1px grey divider under the whole list and a 3px brand underline under Banking; the selected label is semibold in the default text colour, the others secondary.
- **Rendering behaviour:** Underline is the base style: the class underline has no CSS of its own. From 900 px tabs have 0.75rem by 2.5rem padding; colour and border changes are animated unless reduced motion is set.
- **Publishing behaviour:** Style is a field of the Tabs Container, saved with the page; publishing the page publishes the new look on aem.page or aem.live.

Business Rules

- Underline is the default Style of a new Tabs Container; keep it unless the design asks for Boxed or Pills.
- An empty or unknown Style value falls back to the underline look.
- The selected tab is shown by weight, colour and underline, not by colour alone.
- Each Tab here has one Text component; a Tab without a following component gives an empty panel.

Common Authoring Mistakes

Error	Root Cause	Resolution
The tabs look like boxes after copying the container	The copied Tabs Container kept Style Boxed	Set Styles › Style back to Underline
Retail shows an empty panel	Its Text was dropped above the Retail Tab	Move the Text below the Retail Tab

Troubleshooting

- **Symptoms:** No underline appears under Banking and the three texts show one under another.
- **Cause:** The tabs block failed to load (console: failed to load module for tabs or failed to load block tabs), so no tab list is built.
- **Resolution:** Reload the page; if the console error stays, escalate to the development team (L3) with the page URL.
- **Verification Steps:** Preview: Banking shows the 3px brand underline on the grey divider.

Use Cases

Most content tabs; tabs directly below a heading.

Authoring Guidelines

Styles tab, **Style** = Underline (the default).

Business Rules

Default for new Tabs; also applied when the value is empty or unknown (no extra class needed).

Rendering Rules

Class `underline` (no own CSS; the base styles are the underline style): transparent tab background, 3px transparent bottom border, brand bottom border on the selected tab.

Responsive Behaviour

Desktop / tablet from 900px: 0.75rem by 2.5rem padding; below 900px 0.75rem by 1.5rem; list scrolls sideways when it overflows.

SEO Impact

None (presentation only).

Accessibility Compliance

Selected state is shown by weight, colour and underline (not colour alone); focus outline 2px brand, inset 0.125rem.

Variation 4 — Style: Boxed

Variation Name

Boxed (`tabsStyle` = `boxed`).

Business Purpose

A stronger, folder-like look that ties the selected tab visually to its panel.

Visual Example

Figure 14: Boxed style — Boxed tabs at 1440 px: Banking (selected) is a white box with a thin border and brand-coloured text, open towards the panel; Retail and Manufacturing are light grey boxes with rounded top corners, 0.25rem apart; below, the Banking text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-style-boxed.jpg)

Screenshot Details — Boxed style

Item	Detail
Screenshot Name	`screenshots/tabs-style-boxed.jpg`
Screenshot Purpose	Boxed style
Screen Description	Boxed tabs at 1440 px: Banking (selected) is a white box with a thin border and brand-coloured text, open towards the panel; Retail and Manufacturing are light grey boxes with rounded top corners, 0.25rem apart; below, the Banking text.
Business Context	A folder-like tab look that ties the selected industry tab visually to its panel, for data-rich industry content.
Author Objective	Switch the industry tabs to the Boxed style.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
(A)	Style (Tabs Container › Styles)	Boxed	No	Tab look	—	Underline / Boxed / Pills

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
B	Title (Tab › Content)	Banking	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Modern core banking, payments and risk platforms that help banks serve customers in real time.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
D	Title (Tab › Content)	Retail	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	Unified commerce, supply chain and store operations for retailers that compete on experience.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
F	Title (Tab › Content)	Manufacturing	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
(G)	Text (Text)	Connected factories, digital twins and resilient supply networks for industrial leaders.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Grey tab boxes with 0.5rem rounded top corners on the divider; the selected Banking box white with a default border, no bottom border, and brand text.
- **Rendering behaviour:** The class boxed adds a 0.25rem gap, the secondary background (hover: secondary hover) and a 1px transparent border; the selected tab takes the page background and default border. In Vertical from 900 px all corners are rounded.
- **Publishing behaviour:** Changing the Style is a page change; Publish the page to update aem.page or aem.live, no other page is affected.

Business Rules

- Style Boxed applies to the whole Tabs Container; individual tabs cannot have their own style.
- The selected tab is distinguished by background, border and brand text colour.
- Use Boxed on light-background sections; the selected box uses the page background colour.
- In the Tabs Container the Style value is added as a class without checking, so only pick from the list.

Common Authoring Mistakes

Error	Root Cause	Resolution
The selected box looks detached from the panel on a coloured section	The selected tab uses the default background, not the section colour	Use Boxed only in sections with the default background, or choose Underline
Labels look cramped on mobile	Long Titles in boxes in a scrolling list	Keep Titles short, e.g. Retail instead of Retail and consumer packaged goods

Troubleshooting

- **Symptoms:** The tabs still show as underlined after choosing Boxed.
- **Cause:** The Style change was saved but the Tabs were not rendered again, or the page was not republished.
- **Resolution:** Reload the page in Universal Editor, check Styles › Style is Boxed, then publish.
- **Verification Steps:** Inspect the tabs element: it has the class boxed, and the tabs show grey boxes.

Use Cases

Data-rich panels (tables, figures); tabs in light-background sections.

Authoring Guidelines

Styles tab, **Style** = Boxed.

Business Rules

None beyond the style.

Rendering Rules

Class `boxed`: list gap 0.25rem; tabs with a 1px transparent border, 0.5rem top radius and the secondary background (hover: secondary hover background); selected tab: default border colour, bottom border in the page background colour, default background and brand text. Vertical (from 900px): all corners rounded, no list left border, selected tab fully bordered.

Responsive Behaviour

Same breakpoints as Underline; boxes keep their style in the horizontally scrolling list.

SEO Impact

None.

Accessibility Compliance

The selected tab is distinguished by background, border and text colour; focus outline as above.

Variation 5 — Style: Pills

Variation Name

Pills (`tabsStyle` = `pills`).

Business Purpose

A compact, button-like filter look for short labels.

Visual Example

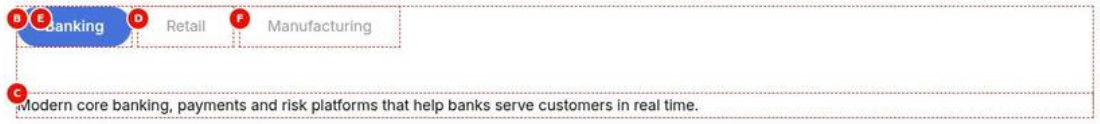

Figure 15: Pills style — Pill tabs at 1440 px: Banking (selected) is a pill filled with the brand blue and white text; Retail and Manufacturing are outlined pills 0.5rem apart, with no divider under the list; below, the Banking text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-style-pills.jpg)

Screenshot Details — Pills style

Item	Detail
Screenshot Name	`screenshots/tabs-style-pills.jpg`
Screenshot Purpose	Pills style
Screen Description	Pill tabs at 1440 px: Banking (selected) is a pill filled with the brand blue and white text; Retail and Manufacturing are outlined pills 0.5rem apart, with no divider under the list; below, the Banking text.
Business Context	A compact, button-like switcher for short industry labels, for example on a landing page.
Author Objective	Switch the industry tabs to the Pills style.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
(A)	Style (Tabs Container › Styles)	Pills	No	Tab look	—	Underline / Boxed / Pills
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
B	Title (Tab › Content)	Banking	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree,	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Text	
C	Text (Text)	Modern core banking, payments and risk platforms that help banks serve customers in real time.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
D	Title (Tab › Content)	Retail	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	Unified commerce, supply chain and store operations for retailers that compete on experience.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
F	Title (Tab › Content)	Manufacturing	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
(G)	Text (Text)	Connected factories, digital twins and resilient supply networks for industrial leaders.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Fully rounded pills with a 1px grey border; the selected pill brand-filled with on-brand text; no grey line under the list.
- **Rendering behaviour:** The class pills removes the divider, adds a 0.5rem gap and pads pills 0.5rem by 1.5rem (0.5rem by 2rem from 900 px); hover uses the default hover background. In Vertical from 900 px the pills stack in the left column.

- **Publishing behaviour:** The Style is saved with the page; one Publish updates aem.page or aem.live.

Business Rules

- Pills suit short labels (Banking, Retail, Manufacturing, or years such as 2025).
- The selected pill is shown by fill and text colour; the focus outline is 2px brand.
- Pills stay in one scrolling row on mobile and tablet.
- The Style applies to all tabs of the container.

Common Authoring Mistakes

Error	Root Cause	Resolution
Pills look like buttons that open other pages	Pills used as page navigation	Use the header navigation or an Anchor List for links to other pages
Long pill labels make the row scroll on desktop	Titles of several words	Shorten the Titles or use Underline with Vertical orientation

Troubleshooting

- **Symptoms:** The selected pill text is hard to read.
- **Cause:** The section background is close to the brand colour, so the filled pill blends in.
- **Resolution:** Place the Tabs Container in a section with the default background or choose Underline.
- **Verification Steps:** Preview: Banking is a clearly visible brand pill with white text.

Use Cases

Year or category switchers ("2024", "2025", "2026"); short audience labels.

Authoring Guidelines

Styles tab, **Style** = Pills.

Business Rules

None beyond the style.

Rendering Rules

Class `pills`: list gap 0.5rem and no bottom divider; tabs with a 1px default border, full radius, padding 0.5rem by 1.5rem (0.5rem by 2rem from 900px); hover: default hover background; selected: brand border and background, on-brand text. Vertical (from 900px): no list left border; each pill keeps its border.

Responsive Behaviour

Pills stay in one scrolling row on mobile and tablet; vertical stack from 900px if Vertical.

SEO Impact

None.

Accessibility Compliance

Selected pill uses fill and text colour; focus outline as above.

Variation 6 — Alignment: Left

Variation Name

Left (`tabsAlignment` = `left`, default).

Business Purpose

Aligns the tab list with left-aligned headings and text.

Visual Example

Figure 16: Left alignment — Left-aligned Underline tabs at 1440 px: Consulting (selected), Cloud and Cybersecurity start at the left edge of the content area with free space on the right of the divider; below, the Consulting text Strategy, operating model design and change management that turn transformation goals into measurable results. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-alignment-left.jpg)

Screenshot Details — Left alignment

Item	Detail
Screenshot Name	`screenshots/tabs-alignment-left.jpg`
Screenshot Purpose	Left alignment
Screen Description	Left-aligned Underline tabs at 1440 px: Consulting (selected), Cloud and Cybersecurity start at the left edge of the content area with free space on the right of the divider; below, the Consulting text Strategy, operating model design and change management that turn transformation goals into measurable results.
Business Context	A content page with left-aligned headings and text, where the tab list lines up with the text column.
Author Objective	Create three service tabs with the default Left alignment.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
A	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
B	Text (Text)	Strategy, operating model design and change management that turn transformation goals into measurable results.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
C	Title (Tab › Content)	Cloud	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
						falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	Move, modernise and run workloads on any cloud with automated landing zones and managed operations.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
E	Title (Tab › Content)	Cybersecurity	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
(F)	Text (Text)	Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.	No	Card text	1–3 sentences; lists and links allowed	None
(G)	Alignment (Tabs Container › Styles)	Left (the default, keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three tabs sized to their labels at the start of the row; the grey divider runs the full content width; the Consulting text starts at the same left edge.
- **Rendering behaviour:** Left is the default: the class left has no CSS of its own (flex start). The alignment is the same at every width; the list scrolls sideways if the tabs do not fit.
- **Publishing behaviour:** Alignment is saved on the Tabs Container with the page; publish the page to aem.page or aem.live.

Business Rules

- Left is the default Alignment of a new Tabs Container.
- Tabs size to their labels; the free space stays on the right.
- Alignment does not change the reading or keyboard order of the tabs.
- Each Tab has one Text after it; no Tab has Active tab on, so Consulting is shown first.

Common Authoring Mistakes

Error	Root Cause	Resolution
The tabs are centred although the text is left-aligned	Alignment set to Center when the container was copied	Set Styles › Alignment back to Left
An untitled Tab 1 appears before Consulting	A Text was added before the first Tab	Move the Text below the Consulting Tab

Troubleshooting

- **Symptoms:** The Consulting label starts further right than the panel text below it.
- **Cause:** By design: each tab has 2.5rem inline padding from 900 px (1.5rem below), while its underline starts at the content edge.
- **Resolution:** No change needed; do not add spaces to the Text or padding to compensate.
- **Verification Steps:** Preview: the brand underline under Consulting starts at the same left edge as the text.

Use Cases

Default for content pages.

Authoring Guidelines

Styles tab, **Alignment** = Left.

Business Rules

Default; no own CSS (flex start).

Rendering Rules

Class `left`; tabs size to their labels and start on the left.

Responsive Behaviour

Same on all breakpoints; the list scrolls when it overflows.

SEO Impact

None.

Accessibility Compliance

No effect on semantics or reading order.

Variation 7 — Alignment: Center

Variation Name

Center (`tabsAlignment` = `center`).

Business Purpose

Centres the tab list under a centred heading.

Visual Example

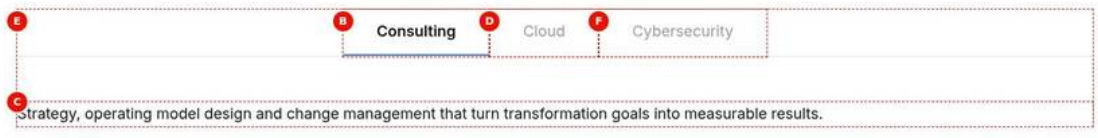

Figure 17: Center alignment — Centre-aligned Underline tabs at 1440 px: Consulting (selected), Cloud and Cybersecurity centred above the full-width grey divider; below, the left-aligned Consulting text. There is no centred Title above the tabs in this example (the chapter caption mentions one). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-alignment-center.jpg)

Screenshot Details — Center alignment

Item	Detail
Screenshot Name	`screenshots/tabs-alignment-center.jpg`
Screenshot Purpose	Center alignment
Screen Description	Centre-aligned Underline tabs at 1440 px: Consulting (selected), Cloud and Cybersecurity centred above the full-width grey divider; below, the left-aligned Consulting text. There is no centred Title above the tabs in this example (the chapter caption mentions one).
Business Context	A home or landing page section with a centred layout, where the tab list sits in the middle of the page.
Author Objective	Centre the service tabs with Alignment Center.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
(A)	Alignment (Tabs Container › Styles)	Center	No	Tab list alignment	—	Left / Center / Full width (stretch)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
B	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Strategy, operating model design and change management that turn transformation goals into measurable results.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
D	Title (Tab › Content)	Cloud	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	Move, modernise and run workloads	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		on any cloud with automated landing zones and managed operations.				
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
F	Title (Tab › Content)	Cybersecurity	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
(G)	Text (Text)	Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The three tabs grouped in the middle of the row; the divider still spans the full width; the panel text stays left-aligned.
- **Rendering behaviour:** The class center sets justify-content: safe center, so when the tabs are wider than the screen the list falls back to start alignment and scrolls, and the first tab is never cut off. In the Vertical layout from 900 px Center has no visible effect.
- **Publishing behaviour:** Saved with the page; Publish updates aem.page or aem.live.

Business Rules

- Center only moves the tab list; the panel content keeps its own alignment.
- On narrow screens a list that does not fit is start-aligned and scrollable.
- Combine Center with a centred heading or section for a consistent look.
- Center has no visible effect with Orientation Vertical from 900 px.

Common Authoring Mistakes

Error	Root Cause	Resolution
The panel text is expected to be centred too	Alignment only applies to the tab list	Use a centred section style or component setting for the panel content
Tabs appear left-aligned on a phone	The tabs are wider than the screen, so safe centring falls back to start	Accept it by design, or shorten the Titles

Troubleshooting

- **Symptoms:** The tabs stay on the left after choosing Center.
- **Cause:** The Tabs were not rendered again after the change, or Orientation is Vertical on a desktop width.

- **Resolution:** Reload the page in Universal Editor and check Orientation is Horizontal.
- **Verification Steps:** Inspect the tabs element: it has the class center and the tabs sit in the middle.

Use Cases

Landing and home page sections with centred layouts.

Authoring Guidelines

Styles tab, **Alignment** = Center.

Business Rules

None.

Rendering Rules

Class `center`: `justify-content: safe center`, so a list wider than the screen falls back to start alignment and stays scrollable (the first tab is never cut off).

Responsive Behaviour

Centred when the tabs fit; start-aligned and scrollable when they do not (typically mobile). With Vertical orientation from 900px the list is a column, so centring applies only below 900px.

SEO Impact

None.

Accessibility Compliance

No effect on semantics.

Variation 8 — Alignment: Full width (stretch)

Variation Name

Full width (stretch) (`tabsAlignment` = `stretch`).

Business Purpose

Makes the tabs share the full width of the content area, like a segmented control.

Visual Example

Figure 18: Full width alignment — Full width (stretch) Underline tabs at 1440 px: Consulting (selected, its underline a third of the width), Cloud and Cybersecurity share the full width of the content area with their labels centred in each third; below, the Consulting text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-alignment-stretch.jpg)

Screenshot Details — Full width alignment

Item	Detail
Screenshot Name	`screenshots/tabs-alignment-stretch.jpg`
Screenshot Purpose	Full width alignment
Screen Description	Full width (stretch) Underline tabs at 1440 px: Consulting (selected, its underline a third of the width), Cloud and Cybersecurity share the full width of the content area with their labels centred in each third; below, the Consulting text.

Item	Detail
Business Context	A segmented-control look for two to four service tabs of similar label length.
Author Objective	Make the three service tabs fill the full width with Alignment Full width (stretch).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
(A)	Alignment (Tabs Container › Styles)	Full width (stretch)	No	Tab list alignment	—	Left / Center / Full width (stretch)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
B	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to “Tab {n}” if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Strategy, operating model design and change management that turn transformation goals into measurable results.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
D	Title (Tab › Content)	Cloud	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to “Tab {n}” if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	Move, modernise and run workloads on any cloud with automated landing zones and managed operations.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
F	Title (Tab › Content)	Cybersecurity	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
(G)	Text (Text)	Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three equal-looking tabs across the whole row; the brand underline under Consulting spans its whole tab; the grey divider below.
- **Rendering behaviour:** The class stretch gives each tab flex: 1 0 auto, so tabs grow to share the free space and never shrink below their label; when they do not fit, the list scrolls. In the Vertical layout from 900 px the tabs are full-width rows of the left column.
- **Publishing behaviour:** Saved with the page; Publish updates aem.page or aem.live.

Business Rules

- Use stretch for two to four tabs of similar length; very different lengths give uneven tabs.
- Tabs never become narrower than their labels.
- The larger targets help touch use; the semantics do not change.
- Keep Active tab on one Tab at most; here none is on, so Consulting is shown.

Common Authoring Mistakes

Error	Root Cause	Resolution
Tabs look unbalanced	One Title much longer than the others, e.g. Cybersecurity and risk management	Shorten the Titles to similar lengths
Seven stretched tabs scroll on desktop	Too many tabs for stretch	Use Left alignment or Orientation Vertical for many tabs

Troubleshooting

- **Symptoms:** The tabs keep their label width instead of filling the row.
- **Cause:** Alignment was not saved as Full width (stretch), so the block has no stretch class.
- **Resolution:** Select the Tabs Container, choose Styles › Alignment Full width (stretch) and reload.
- **Verification Steps:** Inspect the tabs element for the class stretch; the three tabs fill the row.

Use Cases

Two to four tabs of similar label length.

Authoring Guidelines

Styles tab, **Alignment** = Full width (stretch).

Business Rules

None.

Rendering Rules

Class `stretch`: each tab `flex: 1 0 auto` (grows to share the free space, never shrinks below its label).

Responsive Behaviour

Fills the width when the tabs fit; scrolls when they do not. In the Vertical layout (from 900px) the tabs are full-width rows of the left column.

SEO Impact

None.

Accessibility Compliance

Larger targets (helps 2.5.5 Target Size, AAA); no semantic change.

Variation 9 — Orientation: Horizontal

Variation Name

Horizontal (`tabsOrientation` = `horizontal`, default).

Business Purpose

Standard layout: tab list above the panel.

Visual Example

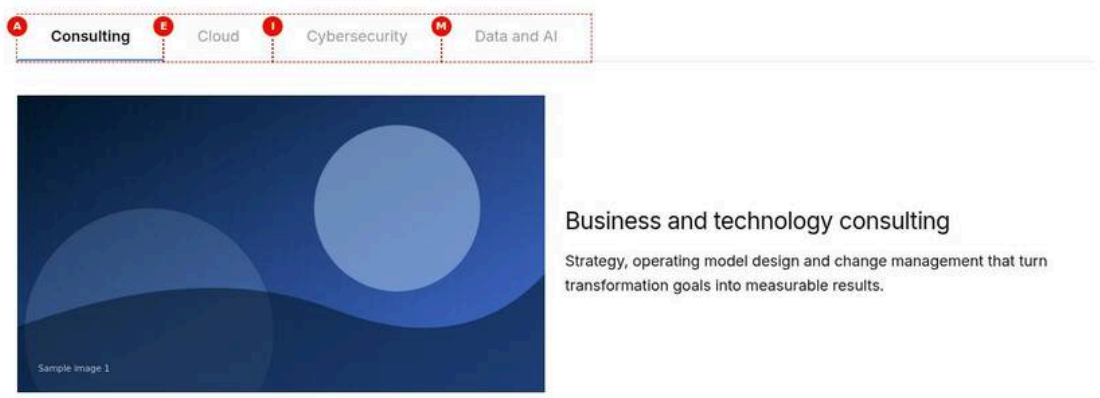

Figure 19: Horizontal orientation — Horizontal Underline tabs at 1440 px: Consulting (selected), Cloud, Cybersecurity and Data and AI in one row above the panel; the Consulting panel shows a Columns with photo-1.svg on the left and the H3 Business and technology consulting with its text on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-orientation-horizontal.jpg)

Screenshot Details — Horizontal orientation

Item	Detail
Screenshot Name	`screenshots/tabs-orientation-horizontal.jpg`
Screenshot Purpose	Horizontal orientation
Screen Description	Horizontal Underline tabs at 1440 px: Consulting (selected), Cloud, Cybersecurity and Data and AI in one row above the panel; the Consulting panel shows a Columns with photo-1.svg on the left and the H3 Business and technology consulting with its text on the right.

Item	Detail
Business Context	The standard tabs layout for a services overview, with the tab list in a row above the content.
Author Objective	Build four service tabs with the default Horizontal orientation.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
A	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(B)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(C)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(D)	Note (Columns)	Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Title "Business and technology consulting" (Title Type h3), Text "Strategy, operating model design and change management that turn transformation goals into measurable results."	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
E	Title (Tab › Content)	Cloud	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(F)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(G)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(H)	Note (Columns)	Column 1: Image photo-2.svg (Alt Text "Cloud operations dashboard"); Column 2: Title "Cloud migration and operations" (Title Type h3), Text "Move, modernise and run workloads on any cloud with automated landing zones and managed operations."	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
I	Title (Tab › Content)	Cybersecurity	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(J)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(K)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(L)	Note (Columns)	Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Title "Cyber defence and resilience" (Title Type h3), Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning."	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
M	Title (Tab › Content)	Data and AI	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(N)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(O)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(P)	Note (Columns)	Column 1: Image photo-4.svg (Alt Text "Data scientists reviewing a model"); Column 2: Title "Enterprise data and AI" (Title Type h3), Text "Build trusted data platforms and put responsible AI to work across the value chain."	No	—	—	None
(Q)	Orientation (Tabs Container › Styles)	Horizontal (the default, keep it)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A single row of four tabs on a grey divider, Consulting underlined; the panel 2.5rem below with the image-and-text Columns.
- **Rendering behaviour:** Horizontal is the default: the class horizontal has no CSS and aria-orientation is not set (horizontal is the ARIA default). Tab padding grows from 0.75rem by 1.5rem to 0.75rem by 2.5rem at 900 px.
- **Publishing behaviour:** Saved with the page; Publish updates aem.page or aem.live. The four photos must be published assets.

Business Rules

- Horizontal is the default Orientation of a new Tabs Container.
- All four arrow keys, Home and End move between tabs; selection follows focus.
- Labels never wrap; with many or long labels consider Vertical.
- No Tab is Active, so the first tab, Consulting, is shown on load.

Common Authoring Mistakes

Error	Root Cause	Resolution
Long translated labels push Data and AI off-screen	German or Dutch Titles are longer	Check each locale and switch to Vertical if needed

Error	Root Cause	Resolution
The panel content belongs to the wrong tab	A Columns dragged above its Tab	Reorder in the content tree so each Columns follows its Tab

Troubleshooting

- **Symptoms:** The tabs show as a vertical column on desktop although Horizontal is expected.
- **Cause:** Orientation was left on Vertical from a copied Tabs Container.
- **Resolution:** Set Styles › Orientation to Horizontal and reload the page.
- **Verification Steps:** From 900 px the tab list is a row above the panel.

Use Cases

Most tabs; short labels.

Authoring Guidelines

Styles tab, **Orientation** = Horizontal.

Business Rules

Default; `aria-orientation` is not set (horizontal is the ARIA default).

Rendering Rules

Class `horizontal`; no own CSS.

Responsive Behaviour

Same on all breakpoints; tab padding grows from 900px.

SEO Impact

None.

Accessibility Compliance

All four arrow keys, Home and End move between tabs; selection follows focus.

Variation 10 — Orientation: Vertical

Variation Name

Vertical (`tabsOrientation` = `vertical`).

Business Purpose

Long or many tab labels on the left of the content, like a side menu, on desktop.

Visual Example

Figure 20: Vertical orientation — Vertical Underline tabs at 1200 px: a left column with a thin left border listing Banking, Financial Services and Insurance (selected, semibold, 3px brand left border, wrapped on three lines), Retail and Consumer Goods, Manufacturing and Energy and Utilities; on the right the panel with the H3 Banking, Financial Services and Insurance and its text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-orientation-vertical.jpg)

Screenshot Details — Vertical orientation

Item	Detail
Screenshot Name	`screenshots/tabs-orientation-vertical.jpg`
Screenshot Purpose	Vertical orientation
Screen Description	Vertical Underline tabs at 1200 px: a left column with a thin left border listing Banking, Financial Services and Insurance (selected, semibold, 3px brand left border, wrapped on three lines), Retail and Consumer Goods, Manufacturing and Energy and Utilities; on the right the panel with the H3 Banking, Financial Services and Insurance and its text.
Business Context	An industries overview with long industry names, shown like a side menu next to the content on desktop.
Author Objective	Show four industry tabs with long labels as a vertical list beside the panel.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
(A)	Orientation (Tabs Container › Styles)	Vertical	No	List above or beside panels	Vertical for many / long labels	Horizontal / Vertical
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
B	Title (Tab › Content)	Banking, Financial Services and Insurance	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
C	Title (Title)	Banking, Financial Services and Insurance	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
						falls back to “Tab {n}” if empty
(D)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	Core modernisation, payments, risk and compliance platforms for financial institutions.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
F	Title (Tab › Content)	Retail and Consumer Goods	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to “Tab {n}” if empty
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
(G)	Title (Title)	Retail and Consumer Goods	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to “Tab {n}” if empty
(H)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
I	Text (Text)	Unified commerce, merchandising and customer analytics for retail and consumer brands.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
J	Title (Tab › Content)	Manufacturing	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to “Tab {n}” if empty
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(K)	Title (Title)	Manufacturing	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
(L)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
(M)	Text (Text)	Smart factories, product engineering and connected supply chains.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
N	Title (Tab › Content)	Energy and Utilities	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
(O)	Title (Title)	Energy and Utilities	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
(P)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
(Q)	Text (Text)	Grid modernisation, asset performance and the energy transition.	No	Card text	1–3 sentences; lists and links allowed	None
—	Screen width (Preview)	1200 px (desktop)	—	Check on the preview (not stored in the content)	1200 px (desktop)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A two-column layout: tab labels stacked on the left, wrapping where needed, the selected one marked by a brand left border; the panel heading and text on the right, 3rem away.

- **Rendering behaviour:** From 900 px the block is a grid minmax(12.5rem, 1fr) 3fr with a 3rem gap, tabs 0.75rem by 1.5rem with start-aligned, wrapping text, panel without top padding. Below 900 px the list is horizontal above the panel; aria-orientation is vertical at all widths.
- **Publishing behaviour:** Saved with the page; Publish updates aem.page or aem.live. Check the page at 900 px and wider on aem.page first.

Business Rules

- Vertical applies from 900 px only; on mobile and small tablets the tabs are a row above the panel.
- Long labels such as Banking, Financial Services and Insurance may wrap in the vertical list.
- Each panel starts with an H3 that repeats the tab label, followed by a Text.
- Arrow Up and Down (and Left and Right) move between tabs.

Common Authoring Mistakes

Error	Root Cause	Resolution
The tabs are above the panel on a laptop	The window is narrower than 900 px	Test at 900 px and wider; below that the horizontal layout is by design
On mobile the long labels make the row very wide	Labels never wrap in the horizontal list below 900 px	Keep labels as short as the content allows, e.g. Energy and Utilities

Troubleshooting

- **Symptoms:** At 1200 px the tab list is still a row above the panel.
- **Cause:** The Orientation change did not reach the block, so it has no vertical class.
- **Resolution:** Re-select Styles › Orientation Vertical, save and reload the page.
- **Verification Steps:** Inspect the tabs element for the class vertical; the list is a left column at 1200 px.

Use Cases

Five or more tabs; long labels (“Banking, Financial Services and Insurance”).

Authoring Guidelines

Styles tab, **Orientation** = Vertical. Combine with any Style and Alignment.

Business Rules

The tab list gets `aria-orientation="vertical"` at all widths (even where it is displayed horizontally below 900px).

Rendering Rules

From 900px: block grid `minmax(12.5rem, 1fr) 3fr` with a 3rem column gap; tab list as a column with a 1px left border; tabs with a 3px left border (brand when selected), 0.75rem by 1.5rem padding, start-aligned text that may wrap; panel without top padding. Boxed and Pills keep their boxes / pills without the list border.

Responsive Behaviour

Desktop and 900 to 1199px: two columns. Below 900px (mobile, small tablet): horizontal list above the panel, as Variation 9.

SEO Impact

None.

Accessibility Compliance

Arrow Up / Down (and Left / Right) move between tabs; reading order is tab list, then panel.

Variation 11 — Width Type: Full Width (Tabs Container only)
Variation Name

Full Width (`sectionWidth` = `full-width`, default).

Business Purpose

The Tabs Container section uses the page's maximum width (120rem).

Visual Example

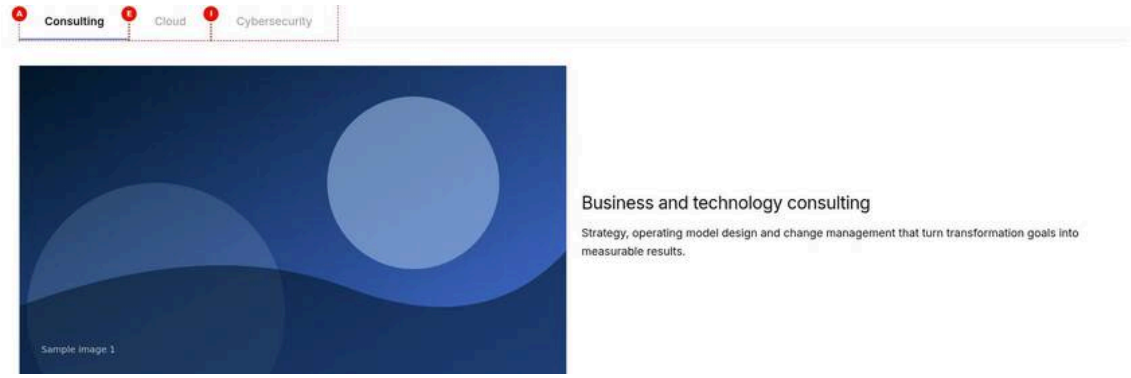

Figure 21: Full Width section — A Full Width Tabs Container on a 1920 px screen: the tabs Consulting (selected), Cloud and Cybersecurity and the divider span the page width inside the 5rem section padding; the Consulting Columns stretches across, a large photo-1.svg on the left and the H3 Business and technology consulting with its text on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-width-full.jpg)

Screenshot Details — Full Width section

Item	Detail
Screenshot Name	`screenshots/tabs-width-full.jpg`
Screenshot Purpose	Full Width section
Screen Description	A Full Width Tabs Container on a 1920 px screen: the tabs Consulting (selected), Cloud and Cybersecurity and the divider span the page width inside the 5rem section padding; the Consulting Columns stretches across, a large photo-1.svg on the left and the H3 Business and technology consulting with its text on the right.
Business Context	Services tabs on a wide screen, where wide Columns content should use the whole page width.
Author Objective	Keep the Tabs Container at the default Full Width and check it on a 1920 px screen.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
A	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(B)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(C)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(D)	Note (Columns)	Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Title "Business and technology consulting" (Title Type h3), Text "Strategy, operating model design and change management that turn transformation goals into measurable results."	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
E	Title (Tab › Content)	Cloud	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(F)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(G)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(H)	Note (Columns)	Column 1: Image photo-2.svg (Alt Text "Cloud operations dashboard"); Column 2: Title "Cloud migration and operations" (Title Type h3), Text "Move, modernise and run workloads on any cloud with automated landing zones and managed operations."	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
I	Title (Tab › Content)	Cybersecurity	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(J)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(K)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(L)	Note (Columns)	Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Title "Cyber defence and resilience" (Title Type h3), Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning."	No	—	—	None
—	Width Type (Tabs Container › Properties)	Full Width (the default, keep it)	—	Check on the preview (not stored in the content)	Full Width (the default, keep it)	—
—	Screen width (Preview)	1920 px (wide desktop)	—	Check on the preview (not stored in the content)	1920 px (wide desktop)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Tab list, divider and Columns running edge to edge apart from the section padding; the image and text columns are wide.
- **Rendering behaviour:** Full Width adds no class: the section content is capped at –page-max-width (120rem) with the section inline padding (1.5rem mobile, 2.5rem from 600 px, 5rem from 1200 px).
- **Publishing behaviour:** Width Type is a section property saved with the page; Publish updates aem.page or aem.live.

Business Rules

- Full Width is the default Width Type of the Tabs Container.
- Width Type applies to the whole Tabs Container; the Tabs block has no Width Type (it follows its section).

- Very long text lines are hard to read at this width; keep text in Columns.
- Use Fixed Width when the tabs should line up with other fixed-width sections.

Common Authoring Mistakes

Error	Root Cause	Resolution
Text lines are very long on wide screens	A single Text used as panel content at Full Width	Use Columns or set Width Type to Fixed Width
Margin set in the Additional tab does nothing	The Tabs Container is a section; Additional fields are not applied	Leave them at Default and use section spacing

Troubleshooting

- **Symptoms:** The tabs are narrower than expected on a 1920 px screen.
- **Cause:** Width Type was set to Fixed Width (or copied from another container), so the section is capped at 90rem.
- **Resolution:** Set Properties › Width Type to Full Width and publish.
- **Verification Steps:** At 1920 px the divider spans the page width inside the section padding.

Use Cases

Default; tabs with wide Columns content.

Authoring Guidelines

Tabs Container, Properties tab, **Width Type** = Full Width.

Business Rules

Default; no class is added.

Rendering Rules

Section content capped at `--page-max-width` (120rem) with the section inline padding (1.5rem mobile, 2.5rem from 600px).

Responsive Behaviour

Fluid at all widths up to 120rem.

SEO Impact

None.

Accessibility Compliance

Very long line lengths can reduce readability; keep text in Columns.

Variation 12 — Width Type: Fixed Width (Tabs Container only)

Variation Name

Fixed Width (`sectionWidth` = `fixed-width`).

Business Purpose

Limits the Tabs Container to the content width (90rem), centred.

Visual Example

Figure 22: Fixed Width section — A Fixed Width Tabs Container on a 1920 px screen: the tabs Consulting (selected), Cloud and Cybersecurity and the Consulting Columns are centred at the 90rem content width, with empty space on both sides; photo-1.svg on the left, the H3 Business and technology consulting with its text on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tabs-width-fixed.jpg)

Screenshot Details — Fixed Width section

Item	Detail
Screenshot Name	`screenshots/tabs-width-fixed.jpg`
Screenshot Purpose	Fixed Width section
Screen Description	A Fixed Width Tabs Container on a 1920 px screen: the tabs Consulting (selected), Cloud and Cybersecurity and the Consulting Columns are centred at the 90rem content width, with empty space on both sides; photo-1.svg on the left, the H3 Business and technology consulting with its text on the right.
Business Context	Services tabs that should line up with the other fixed-width sections of the page on wide screens.
Author Objective	Limit the Tabs Container to the content width with Width Type Fixed Width.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
(A)	Width Type (Tabs Container › Properties)	Fixed Width	No	Page or content width	Fixed Width for text-heavy tabs	Full Width / Fixed Width
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
B	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(C)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(D)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(E)	Note (Columns)	Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Title "Business and technology consulting" (Title Type h3), Text "Strategy, operating model design and change management that turn transformation goals into measurable results."	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
F	Title (Tab › Content)	Cloud	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(G)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(H)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(I)	Note (Columns)	Column 1: Image photo-2.svg (Alt Text "Cloud operations dashboard"); Column 2: Title "Cloud migration and operations" (Title Type h3), Text "Move, modernise and run workloads on any cloud with automated landing zones and managed operations."	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
J	Title (Tab › Content)	Cybersecurity	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree,	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Columns	
(K)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(L)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(M)	Note (Columns)	Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Title "Cyber defence and resilience" (Title Type h3), Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning."	No	—	—	None
—	Screen width (Preview)	1920 px (wide desktop)	—	Check on the preview (not stored in the content)	1920 px (wide desktop)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The tab list and panel start further in from the left than in Full Width, centred in the page, with white margins left and right.
- **Rendering behaviour:** Fixed Width adds the section class fixed-width: the section is capped at –content-max-width (90rem) and centred. Below 90rem it looks the same as Full Width.
- **Publishing behaviour:** Width Type is saved with the page; Publish updates aem.page or aem.live.

Business Rules

- Fixed Width only shows a difference on screens wider than 90rem (1440 px).
- Use the same Width Type as the neighbouring sections so the edges line up.
- Width Type is available on the Tabs Container only, not on the Tabs block.
- Shorter lines help text-heavy panels.

Common Authoring Mistakes

Error	Root Cause	Resolution
No difference is visible after choosing Fixed Width	Checked on a screen of 1440 px or less	Check on a wider screen, e.g. 1920 px
The tabs do not line up with the section above	Neighbouring sections use Full Width	Use the same Width Type for both

Troubleshooting

- **Symptoms:** On a 1920 px screen the tabs still span the full width.

- **Cause:** Width Type was not saved as Fixed Width, so the section has no fixed-width class.
- **Resolution:** Select the Tabs Container, set Properties › Width Type Fixed Width and republish.
- **Verification Steps:** Inspect the section for the class fixed-width; the content is centred with side margins.

Use Cases

Text-heavy tabs; alignment with other fixed-width sections.

Authoring Guidelines

Tabs Container, Properties tab, **Width Type** = Fixed Width.

Business Rules

Adds the `fixed-width` section class.

Rendering Rules

Section and its content capped at `--content-max-width` (90rem), centred.

Responsive Behaviour

Below 90rem identical to Full Width; wider screens show side margins.

SEO Impact

None.

Accessibility Compliance

Shorter line lengths support readability.

6.21.4 Authoring Experience

Figure 23: Universal Editor canvas — Edit mode preview at 1440 px with letters: D on the selected tab Consulting (A on the Tabs and B on the tab list sit under D at the same corner), C on the dashed Tab chip Consulting, E on the Columns with photo-1.svg and the H3, and G on a second, empty Tabs Container showing Add a Tab, then the components of the tab after it. No content tree is shown and F is not marked. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/tabs-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/tabs-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	Edit mode preview at 1440 px with letters: D on the selected tab Consulting (A on the Tabs and B on the tab list sit under D at the same corner), C on the dashed Tab chip Consulting, E on the Columns with photo-1.svg and the H3, and G on a second, empty Tabs Container showing Add a Tab, then the components of the tab after it. No content tree is shown and F is not marked.
Business Context	The authoring view an author sees while building a Tabs Container: the Tab chips and the empty-state hint guide where content goes.
Author Objective	Recognise the Tabs Container parts in edit mode: tabs, tab list, Tab chip, panel content and empty-state hint.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
—	Label (Tabs Container › Accessibility)	Our services	No	aria-label of the tab list	Describe the group	None (trimmed)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
—	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
—	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
—	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
—	Note (Columns)	Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Title "Business and technology consulting" (Title Type h3), Text "Strategy, operating model design and change management that turn transformation goals into measurable results."	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
—	Title (Tab › Content)	Cloud	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	Move, modernise and run workloads on any cloud with automated landing zones and managed operations.	No	Card text	1–3 sentences; lists and links allowed	None
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
—	Mode (Universal Editor)	Edit (the canvas shows the Tab chip and the empty-state hint)	No	—	—	None
—	Select (Universal Editor › Content tree)	Tabs Container (children: Tab, Columns, Tab, Text)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The tab list Consulting and Cloud, the dashed brand chip Consulting at the top of the panel, the Columns below it, and further down a dashed box with the grey hint text.
- **Rendering behaviour:** In edit mode (html.adobe-ue-edit) the Tab wrappers are shown as chips; an empty Tabs Container shows the tabsEmpty hint only in edit mode and nothing on the page.
- **Publishing behaviour:** Edit-mode chips and hints are never published; the page publishes only the tabs. An empty Tabs Container publishes as an empty section, so delete it before publishing.

Business Rules

- The Tab chip is visible only in edit mode; on the page the Tab shows only as its tab button.
- Selecting a component in a panel shows its tab on the canvas.
- Editing a Tab Title updates the tab button at once; ID and Active tab apply when the Tabs render again.
- An empty Tabs Container shows the hint in the editor and nothing on the page.
- The Label Our services is set on the first container only; the empty one would fall back to Tabs.

Common Authoring Mistakes

Error	Root Cause	Resolution
The empty Tabs Container is published	It shows a hint in the editor, so it looks like content	Delete the empty container or add a Tab and its components

Error	Root Cause	Resolution
The new Text lands in the Consulting tab	It was added while the Consulting Tab was selected, before the Cloud Tab	Drag it below the Cloud Tab in the content tree
A changed Active tab has no effect in the editor	Universal Editor keeps the tab shown before the re-render	Reload the page to check the initial tab

Troubleshooting

- **Symptoms:** In the editor the Columns cannot be found because another tab is shown.
- **Cause:** Only the selected tab's panel is visible; the Columns is in a hidden panel.
- **Resolution:** Select the Columns in the content tree (the Tabs switch to its tab) or select its tab button on the canvas.
- **Verification Steps:** The panel with the Columns is shown and the Columns can be edited.

Annotations

- A = Tabs Container (or Tabs block) — select it for ID, Width Type, Label, Style, Alignment, Orientation and Additional.
- B = Tab list (generated; shows the Tab titles; select a tab button to switch panels in the canvas).
- C = Tab marker (Tabs Container: the dashed label chip at the top of the panel, shown only in edit mode) / Tab item (Tabs block: the panel itself) — select it for Title, ID, Active tab (and Fragment).
- D = Tab Title (the label shown in the tab button).
- E = Panel content (Tabs Container: Columns, Title, Text, Image, Button components; Tabs block: the fragment page content, not editable in place).
- F = Add (+) button of the container / block, to add a Tab or a component.
- G = Empty-state hint (only when there is no tab yet, edit mode only).

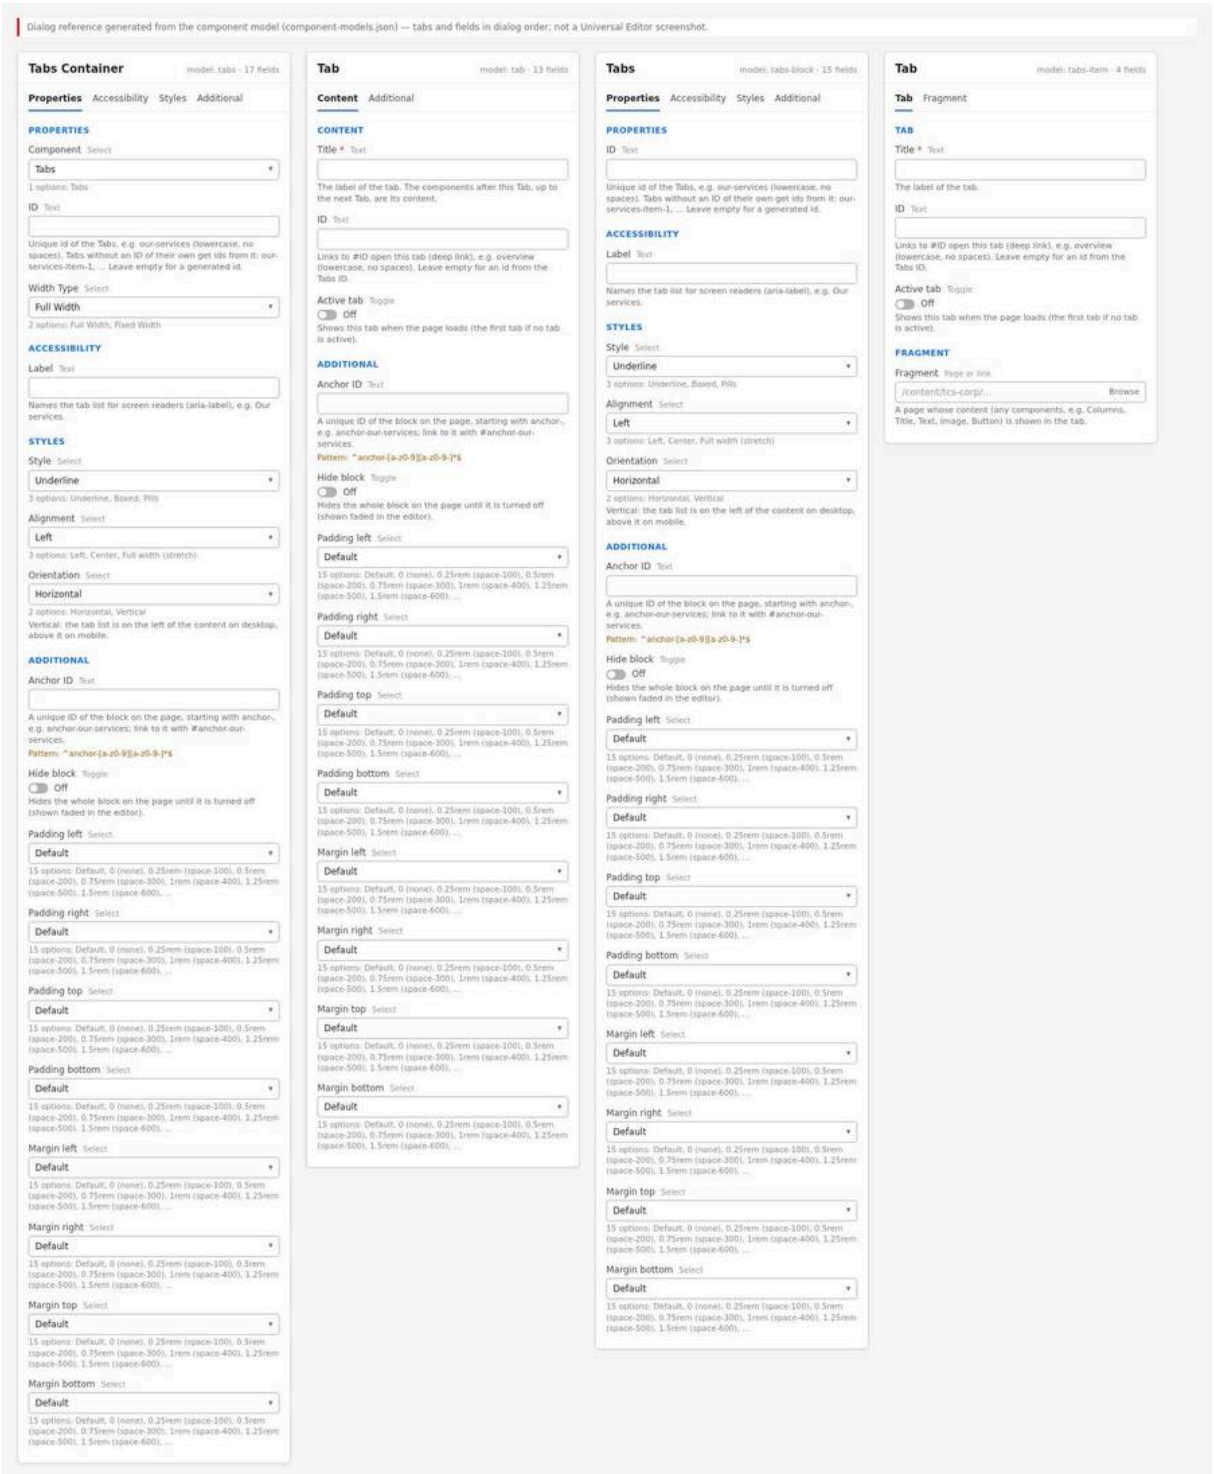

Figure 24: Properties panel — The properties panel of a Tabs Container with its four tabs (Properties, Accessibility, Styles, Additional), next to the properties of a Tabs block Tab item with its Tab and Fragment tabs. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/tabs-properties-panel.jpg)

Properties panel, Tabs Container (model `tabs`)

- **Properties:** Component (select, only "Tabs"); ID; Width Type (Full Width / Fixed Width).
- **Accessibility:** Label (aria-label of the tab list).
- **Styles:** Style (Underline / Boxed / Pills); Alignment (Left / Center / Full width (stretch)); Orientation (Horizontal / Vertical).

- **Additional:** Anchor ID; Hide block; Padding left / right / top / bottom; Margin left / right / top / bottom (see the note in 6.21.6: not applied to this section-based component).

Properties panel, Tabs block (model `tabs-block`)

- **Properties:** ID.
- **Accessibility:** Label.
- **Styles:** Style; Alignment; Orientation.
- **Additional:** Anchor ID; Hide block; 4 padding and 4 margin selects.

Properties panel, Tab item of the Tabs block (model `tabs-item`)

- **Tab:** Title (required); ID; Active tab.
- **Fragment:** Fragment (content picker for a page).

The Tab marker of the Tabs Container has its own model (`tab`), described in 6.22.

6.21.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites select the page and choose **Edit**.

Expected Result: The page opens in Universal Editor in edit mode.

Steps — Step 1: The page open in Universal Editor with the content tree visible.

Step	Where	Field / control	Value / action
1	AEM Sites console	Page	Select the page, e.g. /content/tcs-corp/us/en/services
2	AEM Sites console › Toolbar	Edit	Select Edit
3	Universal Editor	Mode	Edit (the page opens in Universal Editor)
4	Universal Editor › Left rail	Content tree	Open the content tree

Step 2 — Choose the mode

Action: Decide: Tabs Container (content authored on this page) or Tabs block (content from fragment pages). For the Tabs block, create and publish the fragment pages first (one per tab, e.g. `/content/tcs-corp/us/en/references/tabs/cloud-overview`).

Expected Result: You know which component to add; fragment pages exist if needed.

Steps — Step 2: The Sites console with three fragment pages under references/tabs.

Step	Where	Field / control	Value / action
1	Decision	Mode	Tabs Container (content authored on this page) or Tabs block (content from fragment pages)
2	AEM Sites console	Location	/content/tcs-corp/us/en/references/tabs (Tabs block only)
3	AEM Sites console › Create	Page	Create one fragment page per tab: consulting-overview, cloud-overview, security-overview
4	Fragment page	Content	Add the tab content (any components, e.g. Title, Text, Cards)
5	AEM Sites console › Toolbar	Quick Publish	Publish the three fragment pages

Step 3 — Add the component

Action: Tabs Container: select the page root (`main`) in the content tree, select **+** (Add) and choose **Tabs Container**. Tabs block: select a section, **+** (Add), **Tabs**.

Expected Result: The component is added with Style Underline, Alignment Left and Orientation Horizontal. With no tabs, edit mode shows the hint "Add a Tab, then the components of the tab after it." (container) or "Add a Tab, then choose the Fragment it shows in the Tab properties." (block).

Steps — Step 3: The new empty Tabs Container showing the dashed empty-state hint.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Select	The page root (main)
2	Universal Editor › Content tree › Add (+)	Component	Tabs Container
3	Universal Editor	Canvas	Shows the hint "Add a Tab, then the components of the tab after it."
4	Alternative (Tabs block)	Section › Add (+)	Tabs

Step 4 — Fill the Properties tab

Action: Enter the **ID** (e.g. `our-services`, lower case, no spaces). Tabs Container only: choose **Width Type**.

Expected Result: Generated tab ids will be `our-services-item-1`, `-2`, … for tabs without their own ID.

Steps — Step 4: Properties tab with ID our-services and Width Type Full Width.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Select	Tabs Container
2	Tabs Container › Properties	ID	our-services
3	Tabs Container › Properties	Width Type	Full Width

Step 5 — Fill the Accessibility tab

Action: Enter the **Label**, e.g. "Our services".

Expected Result: Screen readers announce the tab list as "Our services, tab list"; without a Label it is "Tabs" (placeholder `tabs`).

Steps — Step 5: Accessibility tab with the Label field filled.

Step	Where	Field / control	Value / action
1	Tabs Container › Accessibility	Label	Our services

Step 6 — Choose the Styles

Action: Choose **Style**, **Alignment** and **Orientation**.

Expected Result: The canvas re-renders with the chosen look.

Steps — Step 6: Styles tab with Pills, Center and Horizontal selected and the re-rendered tabs.

Step	Where	Field / control	Value / action
1	Tabs Container › Styles	Style	Pills
2	Tabs Container › Styles	Alignment	Center
3	Tabs Container › Styles	Orientation	Horizontal
4	Universal Editor	Canvas	The Tabs re-render as centred pills

Step 7 — Add the tabs

Action: Tabs Container: select the container, **+** (Add), **Tab**; enter its Title (and optionally ID and Active tab, see 6.22); then add the tab's components (Columns, Title, Text, Image, Button) after it; repeat for each tab. Tabs block: select the block, **+** (Add), **Tab**; enter Title, ID, Active tab; open the **Fragment** tab and pick the fragment page; repeat.

Expected Result: One tab button per Tab; selecting a component in the content tree shows its tab on the canvas.

Steps — Step 7: Content tree with Tab, Columns, Tab, Text, Tab, Image under the Tabs Container and three tab buttons on the canvas.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree › Tabs Container › Add (+)	Component	Tab
2	Tab › Content	Title	Consulting
3	Universal Editor › Content tree › Tabs Container › Add (+)	Component	Columns (after the Tab)
4	Universal Editor › Content tree › Tabs Container › Add (+)	Component	Tab, then set Title Cloud
5	Universal Editor › Content tree › Tabs Container › Add (+)	Component	Text (after the Cloud Tab)
6	Universal Editor › Content tree › Tabs Container › Add (+)	Component	Tab, then set Title Cybersecurity
7	Universal Editor › Content tree › Tabs Container › Add (+)	Component	Image (after the Cybersecurity Tab)
8	Alternative (Tabs block)	Tabs › Add (+) › Tab	Title, ID, Active tab; Fragment tab › Fragment: the fragment page

Step 8 — Order and check the tabs

Action: Drag Tabs and components in the content tree to reorder. Make sure every component is after the Tab it belongs to.

Expected Result: Tab order on the canvas follows the content tree; no "Tab 1" untitled tab appears (which would mean content is placed before the first Tab).

Steps — Step 8: A Tab being dragged in the content tree.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Drag	Drag the Tab "Cybersecurity" and its Image above the Tab "Cloud"
2	Universal Editor › Content tree	Check	Every component is after the Tab it belongs to (no untitled "Tab 1")
3	Universal Editor	Canvas	The tab buttons follow the content tree order

Step 9 — Additional options (Tabs block)

Action: On the Tabs block, set Anchor ID, Hide block, padding and margin if needed.

Expected Result: The options apply to the block.

Steps — Step 9: Additional tab of the Tabs block with Margin top 3rem (space-1200).

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Select	Tabs (the Tabs block)
2	Tabs › Additional	Margin top	mt-1200 (3rem, space-1200)
3	Tabs › Additional	Anchor ID / Hide block / Padding	Only if needed (Anchor ID starts with anchor-)

Step 10 — Preview and test deep links

Action: Switch to **Preview**, select each tab, use the arrow keys, and open the page with `#{tab-id}` appended (e.g. `.../services#cloud`).

Expected Result: The tab named in the address is shown and scrolled to (below the fixed header).

Steps — Step 10: Preview with the URL ending in #cloud and the Cloud tab selected.

Step	Where	Field / control	Value / action
1	Universal Editor › Toolbar	Preview	Switch to Preview
2	Preview	Action	Select each tab; use the arrow keys, Home and End
3	Browser	Address	Open the page with #cloud appended (…/services#cloud)
4	Preview	Check	The Cloud tab is selected and scrolled into view below the header

Step 11 — Validate

Action: Run the validation checklist below.

Expected Result: All checks pass.

Steps — Step 11: Keyboard focus outline on a tab button and the data layer console output.

Step	Where	Field / control	Value / action
1	Preview	Keyboard	Press Tab until a tab button has the focus outline, then the arrow keys
2	Browser developer tools › Console	Command	window.adobeDataLayer
3	Browser developer tools › Console	Check	A cmp:show event per tab selected, with the panel id and dc:title
4	Checklist	Check	Labels, initial tab, deep links, fragment content (Tabs block)

Step 12 — Publish

Action: Publish the page; for the Tabs block also publish every fragment page.

Expected Result: The tabs and their content appear on the live site.

Steps — Step 12: Publish dialog listing the page and its referenced fragment pages.

Step	Where	Field / control	Value / action
1	Universal Editor › Toolbar	Publish	Select Publish
2	Publish dialog	Items	The page and its referenced fragment pages (Tabs block)

Step	Where	Field / control	Value / action
3	Publish dialog	Destination	Publish to Live
4	Publish dialog	Publish	Confirm

Preview Process

1. Universal Editor Preview mode: switch tabs with mouse and keyboard.
2. Edge Delivery preview: `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}` (AEM Sidekick **Preview**); fragment pages must be previewed too for the Tabs block.
3. Test `#id` deep links and the Vertical layout at 900px and wider.

Publishing Process

1. Publish fragment pages (Tabs block) before or together with the page.
2. Publish the page; the live URL is `https://main--tcs-corp--sradha-tcs.aem.live/{locale}/{path}` ([To be confirmed: production domain and CDN]).

Validation Process

- ☐ Every tab has a meaningful, short Title; no “Tab 1” / “Tab 2” fallback labels appear.
- ☐ In a Tabs Container, no content sits before the first Tab.
- ☐ Exactly one tab (or none) has Active tab switched on.
- ☐ Tab IDs are lower case, unique on the page and deep links (`#id`) open the right tab.
- ☐ The Label (Accessibility) describes the tab group.
- ☐ Tabs block: every Tab item has a Fragment; every fragment page is published and shows content.
- ☐ Arrow keys, Home and End move between tabs; focus is visible.
- ☐ The layout is correct below 600px, 600 to 899px, 900 to 1199px and 1200px and wider (Vertical only from 900px).
- ☐ Switching tabs adds `cmp:show` entries to `window.adobeDataLayer`.

Rollback Process

1. Restore the previous page version in AEM Sites (Timeline / Versions) and republish.
2. Tabs block: if a fragment page caused the problem, restore and republish that fragment page (every page using it is affected).
3. Urgent removal of a Tabs block: Hide block on and publish. A Tabs Container cannot be hidden with Hide block (see 6.21.6); delete it or unpublish the page.
4. Code regressions: the development team reverts the commit on `main`; Code Sync redeploys.

The walkthroughs below repeat the steps above for each variation of chapter 6.21.3, from opening the page to publishing; the values are those of the variation’s screenshot.

Walkthrough — Variation 1 — Tabs Container (section mode)

Reproduces the screenshot `screenshots/tabs-container-mode.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: An empty Tabs Container is added at page level with the edit-mode hint Add a Tab, then the components of the tab after it.

Step 3 — Fill in Tabs Container › Accessibility

Action: Select **Tabs Container** in the content tree and open the **Accessibility** tab of the properties panel. Enter: **Label** (A) = Our services.

Expected Result: No visible change; the tab list is labelled Our services.

Step 4 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: The Tabs, Titles, Columns and Buttons are added in order and grouped into three panels.

Step 5 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (B) = Consulting.

Expected Result: Three tab buttons appear: Consulting, Cloud and Cybersecurity.

Step 6 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: The Tabs, Titles, Columns and Buttons are added in order and grouped into three panels.

Step 7 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (C) = Business and technology consulting; **Title Type** (D) = h3.

Expected Result: An H3 heading, e.g. Business and technology consulting, opens each panel.

Step 8 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: The Tabs, Titles, Columns and Buttons are added in order and grouped into three panels.

Step 9 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (E) = 2; **Rows** (F) = 1.

Expected Result: A two-column, one-row Columns appears below the heading.

Step 10 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (G) = Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Text "Strategy, operating model design and change management that turn transformation goals into measurable results.".

Expected Result: The Columns shows the photo on the left and the service description on the right.

Step 11 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: The Tabs, Titles, Columns and Buttons are added in order and grouped into three panels.

Step 12 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (H) = Select the page or enter /en/services/consulting; **Text** (I) = Explore consulting.

Expected Result: A primary button such as Explore consulting appears under the Columns, linking to the service page.

Step 13 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: The Tabs, Titles, Columns and Buttons are added in order and grouped into three panels.

Step 14 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (J) = Cloud.

Expected Result: Three tab buttons appear: Consulting, Cloud and Cybersecurity.

Step 15 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: The Tabs, Titles, Columns and Buttons are added in order and grouped into three panels.

Step 16 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (K) = Cloud migration and operations; **Title Type** (L) = h3.

Expected Result: An H3 heading, e.g. Business and technology consulting, opens each panel.

Step 17 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: The Tabs, Titles, Columns and Buttons are added in order and grouped into three panels.

Step 18 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (M) = 2; **Rows** (N) = 1.

Expected Result: A two-column, one-row Columns appears below the heading.

Step 19 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (O) = Column 1: Image photo-2.svg (Alt Text "Cloud operations dashboard"); Column 2: Text "Move, modernise and run workloads on any cloud with automated landing zones and managed operations.".

Expected Result: The Columns shows the photo on the left and the service description on the right.

Step 20 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: The Tabs, Titles, Columns and Buttons are added in order and grouped into three panels.

Step 21 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (P) = Select the page or enter /en/services/cloud; **Text** (Q) = Explore cloud services.

Expected Result: A primary button such as Explore consulting appears under the Columns, linking to the service page.

Step 22 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: The Tabs, Titles, Columns and Buttons are added in order and grouped into three panels.

Step 23 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (R) = Cybersecurity.

Expected Result: Three tab buttons appear: Consulting, Cloud and Cybersecurity.

Step 24 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: The Tabs, Titles, Columns and Buttons are added in order and grouped into three panels.

Step 25 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (S) = Cyber defence and resilience; **Title Type** (T) = h3.

Expected Result: An H3 heading, e.g. Business and technology consulting, opens each panel.

Step 26 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: The Tabs, Titles, Columns and Buttons are added in order and grouped into three panels.

Step 27 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (U) = 2; **Rows** (V) = 1.

Expected Result: A two-column, one-row Columns appears below the heading.

Step 28 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (W) = Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.".

Expected Result: The Columns shows the photo on the left and the service description on the right.

Step 29 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: The Tabs, Titles, Columns and Buttons are added in order and grouped into three panels.

Step 30 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (X) = Select the page or enter /en/services/cybersecurity; **Text** (Y) = Explore cybersecurity.

Expected Result: A primary button such as Explore consulting appears under the Columns, linking to the service page.

Step 31 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Underline tabs with Consulting selected; the panel content in authored order: H3, image-and-text Columns, then the primary button.

Step 32 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: One page Publish sends the container and all its components to aem.page or aem.live. The target pages /en/services/consulting, /cloud and /cybersecurity must be published for the buttons to work.

Step 33 — Verify

Action: On the live page check: On aem.page, select Cloud and follow Explore cloud services: the service page opens.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Tabs block with fragment items (block mode)

Reproduces the screenshot `screenshots/tabs-block-fragments.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs

Action: Select the section in the content tree, choose **Add (+)** and pick **Tabs**.

Expected Result: An empty Tabs block is added to the section; in edit mode it shows Add a Tab, then choose the Fragment it shows in the Tab properties.

Step 3 — Fill in Tabs › Properties

Action: Select **Tabs** in the content tree and open the **Properties** tab of the properties panel. Enter: **ID** (A) = our-offerings.

Expected Result: The ID our-offerings is stored as the base for generated panel ids; nothing changes on the canvas.

Step 4 — Fill in Tabs › Accessibility

Action: Select **Tabs** in the content tree and open the **Accessibility** tab of the properties panel. Enter: **Label** (B) = Our offerings.

Expected Result: No visible change; the tab list's aria-label becomes Our offerings.

Step 5 — Add a Tab

Action: Select the Tabs in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Each added Tab item appears under the Tabs in the content tree and as a new tab button.

Step 6 — Fill in Tab 1 › Tab

Action: Select **Tab 1** in the content tree and open the **Tab** tab of the properties panel. Enter: **Title** (C) = Consulting; **ID** (D) = consulting-offering.

Expected Result: The first tab button reads Consulting; its panel id is consulting-offering.

Step 7 — Fill in Tab 1 › Fragment

Action: Select **Tab 1** in the content tree and open the **Fragment** tab of the properties panel. Enter: **Fragment** (E) = Select the page or enter /en/shots/g08a/consulting-overview.

Expected Result: After the Tabs render again the Consulting panel shows the content of consulting-overview.

Step 8 — Add a Tab

Action: Select the Tabs in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Each added Tab item appears under the Tabs in the content tree and as a new tab button.

Step 9 — Fill in Tab 2 › Tab

Action: Select **Tab 2** in the content tree and open the **Tab** tab of the properties panel. Enter: **Title** (F) = Cloud; **ID** (G) = cloud-offering.

Expected Result: The second tab button reads Cloud; its panel id is cloud-offering.

Step 10 — Fill in Tab 2 › Fragment

Action: Select **Tab 2** in the content tree and open the **Fragment** tab of the properties panel. Enter: **Fragment** (H) = Select the page or enter /en/shots/g08a/cloud-overview.

Expected Result: The Cloud panel is filled with the content of cloud-overview.

Step 11 — Add a Tab

Action: Select the Tabs in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Each added Tab item appears under the Tabs in the content tree and as a new tab button.

Step 12 — Fill in Tab 3 › Tab

Action: Select **Tab 3** in the content tree and open the **Tab** tab of the properties panel. Enter: **Title** (I) = Cybersecurity; **ID** (J) = cybersecurity-offering.

Expected Result: The third tab button reads Cybersecurity; its panel id is cybersecurity-offering.

Step 13 — Fill in Tab 3 › Fragment

Action: Select **Tab 3** in the content tree and open the **Fragment** tab of the properties panel. Enter: **Fragment** (K) = Select the page or enter /en/shots/g08a/security-overview.

Expected Result: The Cybersecurity panel is filled with the content of security-overview.

Step 14 — Fill in Fragment page /en/shots/g08a/consulting-overview › Section 1 › Title

Action: Select **Fragment page /en/shots/g08a/consulting-overview** in the content tree and open the **Section 1 › Title** tab of the properties panel. Enter: **Title / Title Type** (L) = Consulting that delivers outcomes / h2.

Expected Result: On the fragment page the H2 Consulting that delivers outcomes heads the first section.

Step 15 — Fill in Fragment page /en/shots/g08a/consulting-overview › Section 1 › Text

Action: Select **Fragment page /en/shots/g08a/consulting-overview** in the content tree and open the **Section 1 › Text** tab of the properties panel. Enter: **Text** (M) = Our consultants combine industry depth with technology expertise to help leaders set direction, redesign operations and deliver change at scale.

Expected Result: The introduction text appears under the H2 on the fragment page.

Step 16 — Fill in Fragment page /en/shots/g08a/consulting-overview › Section 2 › Cards › Content

Action: Select **Fragment page /en/shots/g08a/consulting-overview** in the content tree and open the **Section 2 › Cards › Content** tab of the properties panel. Enter: **Title / Heading type** (N) = Consulting capabilities / H3.

Expected Result: The Cards heading Consulting capabilities (H3) opens the second section of the fragment.

Step 17 — Fill in Fragment page /en/shots/g08a/consulting-overview › Section 2 › Cards › Layout

Action: Select **Fragment page /en/shots/g08a/consulting-overview** in the content tree and open the **Section 2 › Cards › Layout** tab of the properties panel. Enter: **Desktop columns / Tablet columns** (O) = 3 / 3.

Expected Result: The cards are laid out three per row on desktop and tablet.

Step 18 — Fill in Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 1 › Content

Action: Select **Fragment page /en/shots/g08a/consulting-overview** in the content tree and open the **Section 2 › Card 1 › Content** tab of the properties panel. Enter: **Image / Eyebrow / Title / Description** (P) = photo-1.svg / Strategy / Enterprise strategy and growth / Set the direction and the roadmap for growth.

Expected Result: Card 1 shows photo-1.svg, the eyebrow Strategy, the title Enterprise strategy and growth and its description.

Step 19 — Fill in Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 1 › Link

Action: Select **Fragment page /en/shots/g08a/consulting-overview** in the content tree and open the **Section 2 › Card 1 › Link** tab of the properties panel. Enter: **Link** (Q) = /en/services/consulting.

Expected Result: Card 1 links to /en/services/consulting.

Step 20 — Fill in Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 2 › Content

Action: Select **Fragment page /en/shots/g08a/consulting-overview** in the content tree and open the **Section 2 › Card 2 › Content** tab of the properties panel. Enter: **Image / Eyebrow / Title / Description** (R) = photo-5.svg / Operations / Operating model redesign / Simplify processes, roles and governance.

Expected Result: Card 2 shows photo-5.svg, the eyebrow Operations, the title Operating model redesign and its description.

Step 21 — Fill in Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 2 › Link

Action: Select **Fragment page /en/shots/g08a/consulting-overview** in the content tree and open the **Section 2 › Card 2 › Link** tab of the properties panel. Enter: **Link** (S) = /en/services/consulting.

Expected Result: Card 2 links to /en/services/consulting.

Step 22 — Fill in Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 3 › Content

Action: Select **Fragment page /en/shots/g08a/consulting-overview** in the content tree and open the **Section 2 › Card 3 › Content** tab of the properties panel. Enter: **Image / Eyebrow / Title / Description** (T) = photo-6.svg / Change / Change and adoption / Bring people along with every transformation.

Expected Result: Card 3 shows photo-6.svg, the eyebrow Change, the title Change and adoption and its description.

Step 23 — Fill in Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 3 › Link

Action: Select **Fragment page /en/shots/g08a/consulting-overview** in the content tree and open the **Section 2 › Card 3 › Link** tab of the properties panel. Enter: **Link** (U) = /en/services/consulting.

Expected Result: Card 3 links to /en/services/consulting.

Step 24 — Fragment pages /en/shots/g08a/cloud-overview

Action: Content: The same structure: Title “Cloud for the whole enterprise” (h2), Text, Cards “Cloud services” with the cards Cloud migration, Cloud-native platforms, Managed cloud operations.

Expected Result: The Cloud fragment page gets the same structure: the H2 Cloud for the whole enterprise, a text and the Cards Cloud services.

Step 25 — Fragment pages /en/shots/g08a/security-overview

Action: Content: The same structure: Title “Security built into every layer” (h2), Text, Cards “Security services” with the cards Managed detection and response, Identity and access, Cyber resilience.

Expected Result: The security fragment page gets the H2 Security built into every layer, a text and the Cards Security services.

Step 26 — Fill in Sites console

Action: Select **Sites console** in the content tree and enter in the properties panel: **Location** (V) = Real sites keep fragment pages under the locale’s references/ folder (e.g. /content/tcs-corp/us/en/references/tabs/cloud-overview).

Expected Result: In a real site the three fragment pages are created under the locale's references/ folder, e.g. references/tabs/cloud-overview.

Step 27 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Underline tabs with Consulting selected; the panel holds the fragment's two sections 2.5rem apart: the H2 and intro text, then the Cards heading and three image cards in a row.

Step 28 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The fragment pages are separate pages: preview and publish consulting-overview, cloud-overview and security-overview as well as the page, or the panels stay empty. A fragment change is live on every page using it once the fragment is republished.

Step 29 — Verify

Action: On the live page check: Open /en/shots/g08a/security-overview.plain.html on aem.live (200), then select Cybersecurity on the live page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Style: Underline

Reproduces the screenshot `screenshots/tabs-style-underline.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: An empty Tabs Container is added with Style Underline, Alignment Left and Orientation Horizontal.

Step 3 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 4 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Banking.

Expected Result: The tab buttons read Banking, Retail and Manufacturing.

Step 5 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 6 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (B) = Modern core banking, payments and risk platforms that help banks serve customers in real time.

Expected Result: Each panel shows one sentence, e.g. Modern core banking, payments and risk platforms for Banking.

Step 7 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 8 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (C) = Retail.

Expected Result: The tab buttons read Banking, Retail and Manufacturing.

Step 9 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 10 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = Unified commerce, supply chain and store operations for retailers that compete on experience.

Expected Result: Each panel shows one sentence, e.g. Modern core banking, payments and risk platforms for Banking.

Step 11 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 12 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (E) = Manufacturing.

Expected Result: The tab buttons read Banking, Retail and Manufacturing.

Step 13 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 14 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (F) = Connected factories, digital twins and resilient supply networks for industrial leaders.

Expected Result: Each panel shows one sentence, e.g. Modern core banking, payments and risk platforms for Banking.

Step 15 — Fill in Tabs Container › Styles

Action: Select **Tabs Container** in the content tree and open the **Styles** tab of the properties panel. Enter: **Style** (G) = Underline (the default, keep it).

Expected Result: Style stays Underline: plain labels on a grey divider with a brand underline under the selected tab.

Step 16 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Text-only tab labels with no background, a 1px grey divider under the whole list and a 3px brand underline under Banking; the selected label is semibold in the default text colour, the others secondary.

Step 17 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Style is a field of the Tabs Container, saved with the page; publishing the page publishes the new look on aem.page or aem.live.

Step 18 — Verify

Action: On the live page check: Preview: Banking shows the 3px brand underline on the grey divider.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Style: Boxed

Reproduces the screenshot `screenshots/tabs-style-boxed.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: An empty Tabs Container is added with the default Underline style.

Step 3 — Fill in Tabs Container › Styles

Action: Select **Tabs Container** in the content tree and open the **Styles** tab of the properties panel. Enter: **Style** (A) = Boxed.

Expected Result: With Style Boxed the tab list re-renders as grey boxes with rounded top corners.

Step 4 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 5 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (B) = Banking.

Expected Result: The boxes read Banking, Retail and Manufacturing, Banking selected.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Modern core banking, payments and risk platforms that help banks serve customers in real time.

Expected Result: Each panel shows its industry sentence under the boxes.

Step 8 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 9 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (D) = Retail.

Expected Result: The boxes read Banking, Retail and Manufacturing, Banking selected.

Step 10 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 11 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = Unified commerce, supply chain and store operations for retailers that compete on experience.

Expected Result: Each panel shows its industry sentence under the boxes.

Step 12 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 13 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (F) = Manufacturing.

Expected Result: The boxes read Banking, Retail and Manufacturing, Banking selected.

Step 14 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 15 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (G) = Connected factories, digital twins and resilient supply networks for industrial leaders.

Expected Result: Each panel shows its industry sentence under the boxes.

Step 16 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Grey tab boxes with 0.5rem rounded top corners on the divider; the selected Banking box white with a default border, no bottom border, and brand text.

Step 17 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Changing the Style is a page change; Publish the page to update aem.page or aem.live, no other page is affected.

Step 18 — Verify

Action: On the live page check: Inspect the tabs element: it has the class boxed, and the tabs show grey boxes.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Style: Pills

Reproduces the screenshot `screenshots/tabs-style-pills.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: An empty Tabs Container is added with the default Underline style.

Step 3 — Fill in Tabs Container › Styles

Action: Select **Tabs Container** in the content tree and open the **Styles** tab of the properties panel. Enter: **Style** (A) = Pills.

Expected Result: With Style Pills the tabs re-render as outlined pills without the divider.

Step 4 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 5 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (B) = Banking.

Expected Result: The pills read Banking, Retail and Manufacturing, Banking filled.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Modern core banking, payments and risk platforms that help banks serve customers in real time.

Expected Result: Each panel shows its industry sentence under the pills.

Step 8 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 9 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (D) = Retail.

Expected Result: The pills read Banking, Retail and Manufacturing, Banking filled.

Step 10 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 11 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = Unified commerce, supply chain and store operations for retailers that compete on experience.

Expected Result: Each panel shows its industry sentence under the pills.

Step 12 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 13 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (F) = Manufacturing.

Expected Result: The pills read Banking, Retail and Manufacturing, Banking filled.

Step 14 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 15 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (G) = Connected factories, digital twins and resilient supply networks for industrial leaders.

Expected Result: Each panel shows its industry sentence under the pills.

Step 16 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Fully rounded pills with a 1px grey border; the selected pill brand-filled with on-brand text; no grey line under the list.

Step 17 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The Style is saved with the page; one Publish updates aem.page or aem.live.

Step 18 — Verify

Action: On the live page check: Preview: Banking is a clearly visible brand pill with white text.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Alignment: Left

Reproduces the screenshot `screenshots/tabs-alignment-left.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: An empty Tabs Container is added with Underline, Left and Horizontal.

Step 3 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 4 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Consulting.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity.

Step 5 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 6 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (B) = Strategy, operating model design and change management that turn transformation goals into measurable results.

Expected Result: Each panel shows one service sentence, e.g. Strategy, operating model design and change management for Consulting.

Step 7 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 8 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (C) = Cloud.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity.

Step 9 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 10 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = Move, modernise and run workloads on any cloud with automated landing zones and managed operations.

Expected Result: Each panel shows one service sentence, e.g. Strategy, operating model design and change management for Consulting.

Step 11 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 12 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (E) = Cybersecurity.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity.

Step 13 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 14 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (F) = Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.

Expected Result: Each panel shows one service sentence, e.g. Strategy, operating model design and change management for Consulting.

Step 15 — Fill in Tabs Container › Styles

Action: Select **Tabs Container** in the content tree and open the **Styles** tab of the properties panel. Enter: **Alignment** (G) = Left (the default, keep it).

Expected Result: Alignment stays Left: the tabs start at the left edge of the content area.

Step 16 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three tabs sized to their labels at the start of the row; the grey divider runs the full content width; the Consulting text starts at the same left edge.

Step 17 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Alignment is saved on the Tabs Container with the page; publish the page to aem.page or aem.live.

Step 18 — Verify

Action: On the live page check: Preview: the brand underline under Consulting starts at the same left edge as the text.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Alignment: Center

Reproduces the screenshot `screenshots/tabs-alignment-center.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: An empty Tabs Container is added with the default Left alignment.

Step 3 — Fill in Tabs Container › Styles

Action: Select **Tabs Container** in the content tree and open the **Styles** tab of the properties panel. Enter: **Alignment** (A) = Center.

Expected Result: With Alignment Center the tab list re-renders centred in the content area.

Step 4 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 5 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (B) = Consulting.

Expected Result: The centred tab buttons read Consulting, Cloud and Cybersecurity.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Strategy, operating model design and change management that turn transformation goals into measurable results.

Expected Result: Each panel shows its service sentence, left-aligned under the centred tabs.

Step 8 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 9 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (D) = Cloud.

Expected Result: The centred tab buttons read Consulting, Cloud and Cybersecurity.

Step 10 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 11 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = Move, modernise and run workloads on any cloud with automated landing zones and managed operations.

Expected Result: Each panel shows its service sentence, left-aligned under the centred tabs.

Step 12 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 13 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (F) = Cybersecurity.

Expected Result: The centred tab buttons read Consulting, Cloud and Cybersecurity.

Step 14 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 15 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (G) = Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.

Expected Result: Each panel shows its service sentence, left-aligned under the centred tabs.

Step 16 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The three tabs grouped in the middle of the row; the divider still spans the full width; the panel text stays left-aligned.

Step 17 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Saved with the page; Publish updates aem.page or aem.live.

Step 18 — Verify

Action: On the live page check: Inspect the tabs element: it has the class center and the tabs sit in the middle.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — Alignment: Full width (stretch)

Reproduces the screenshot `screenshots/tabs-alignment-stretch.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: An empty Tabs Container is added with the default Left alignment.

Step 3 — Fill in Tabs Container › Styles

Action: Select **Tabs Container** in the content tree and open the **Styles** tab of the properties panel. Enter: **Alignment** (A) = Full width (stretch).

Expected Result: With Alignment Full width (stretch) the tabs re-render to share the full width.

Step 4 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 5 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (B) = Consulting.

Expected Result: The stretched tab buttons read Consulting, Cloud and Cybersecurity.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Strategy, operating model design and change management that turn transformation goals into measurable results.

Expected Result: Each panel shows its service sentence below the full-width tab row.

Step 8 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 9 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (D) = Cloud.

Expected Result: The stretched tab buttons read Consulting, Cloud and Cybersecurity.

Step 10 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 11 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = Move, modernise and run workloads on any cloud with automated landing zones and managed operations.

Expected Result: Each panel shows its service sentence below the full-width tab row.

Step 12 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 13 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (F) = Cybersecurity.

Expected Result: The stretched tab buttons read Consulting, Cloud and Cybersecurity.

Step 14 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs and three Text components are added in alternating order.

Step 15 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (G) = Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.

Expected Result: Each panel shows its service sentence below the full-width tab row.

Step 16 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three equal-looking tabs across the whole row; the brand underline under Consulting spans its whole tab; the grey divider below.

Step 17 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Saved with the page; Publish updates aem.page or aem.live.

Step 18 — Verify

Action: On the live page check: Inspect the tabs element for the class stretch; the three tabs fill the row.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — Orientation: Horizontal

Reproduces the screenshot `screenshots/tabs-orientation-horizontal.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: An empty Tabs Container is added with Underline, Left and Horizontal.

Step 3 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Four Tabs and four Columns are added in alternating order.

Step 4 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Consulting.

Expected Result: The tab row reads Consulting, Cloud, Cybersecurity and Data and AI.

Step 5 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: Four Tabs and four Columns are added in alternating order.

Step 6 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (B) = 2; **Rows** (C) = 1.

Expected Result: A two-column, one-row Columns appears in the panel of the Tab above it.

Step 7 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (D) = Column 1: Image photo-1.svg (Alt Text “Consultants in a strategy workshop”); Column 2: Title “Business and technology consulting” (Title Type h3), Text “Strategy, operating model design and change management that turn transformation goals into measurable results.”.

Expected Result: Each panel shows a photo on the left and an H3 with text on the right.

Step 8 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Four Tabs and four Columns are added in alternating order.

Step 9 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (E) = Cloud.

Expected Result: The tab row reads Consulting, Cloud, Cybersecurity and Data and AI.

Step 10 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: Four Tabs and four Columns are added in alternating order.

Step 11 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (F) = 2; **Rows** (G) = 1.

Expected Result: A two-column, one-row Columns appears in the panel of the Tab above it.

Step 12 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (H) = Column 1: Image photo-2.svg (Alt Text "Cloud operations dashboard"); Column 2: Title "Cloud migration and operations" (Title Type h3), Text "Move, modernise and run workloads on any cloud with automated landing zones and managed operations.".

Expected Result: Each panel shows a photo on the left and an H3 with text on the right.

Step 13 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Four Tabs and four Columns are added in alternating order.

Step 14 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (I) = Cyber-security.

Expected Result: The tab row reads Consulting, Cloud, Cybersecurity and Data and AI.

Step 15 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: Four Tabs and four Columns are added in alternating order.

Step 16 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (J) = 2; **Rows** (K) = 1.

Expected Result: A two-column, one-row Columns appears in the panel of the Tab above it.

Step 17 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (L) = Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Title "Cyber defence and resilience" (Title Type h3), Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.".

Expected Result: Each panel shows a photo on the left and an H3 with text on the right.

Step 18 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Four Tabs and four Columns are added in alternating order.

Step 19 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (M) = Data and AI.

Expected Result: The tab row reads Consulting, Cloud, Cybersecurity and Data and AI.

Step 20 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: Four Tabs and four Columns are added in alternating order.

Step 21 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (N) = 2; **Rows** (O) = 1.

Expected Result: A two-column, one-row Columns appears in the panel of the Tab above it.

Step 22 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (P) = Column 1: Image photo-4.svg (Alt Text "Data scientists reviewing a model"); Column 2: Title "Enterprise data and AI" (Title Type h3), Text "Build trusted data platforms and put responsible AI to work across the value chain.".

Expected Result: Each panel shows a photo on the left and an H3 with text on the right.

Step 23 — Fill in Tabs Container › Styles

Action: Select **Tabs Container** in the content tree and open the **Styles** tab of the properties panel. Enter: **Orientation** (Q) = Horizontal (the default, keep it).

Expected Result: Orientation stays Horizontal: the tab list is a row above the panel.

Step 24 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A single row of four tabs on a grey divider, Consulting underlined; the panel 2.5rem below with the image-and-text Columns.

Step 25 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Saved with the page; Publish updates aem.page or aem.live. The four photos must be published assets.

Step 26 — Verify

Action: On the live page check: From 900 px the tab list is a row above the panel.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 10 — Orientation: Vertical

Reproduces the screenshot `screenshots/tabs-orientation-vertical.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: An empty Tabs Container is added with the default Horizontal orientation.

Step 3 — Fill in Tabs Container › Styles

Action: Select **Tabs Container** in the content tree and open the **Styles** tab of the properties panel. Enter: **Orientation** (A) = Vertical.

Expected Result: With Orientation Vertical the tab list moves to a left column (from 900 px).

Step 4 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Four Tabs, each followed by a Title and a Text, are added in order.

Step 5 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (B) = Banking, Financial Services and Insurance.

Expected Result: The vertical list shows Banking, Financial Services and Insurance, Retail and Consumer Goods, Manufacturing and Energy and Utilities.

Step 6 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: Four Tabs, each followed by a Title and a Text, are added in order.

Step 7 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (C) = Banking, Financial Services and Insurance; **Title Type** (D) = h3.

Expected Result: Each panel starts with an H3 repeating the tab label, e.g. Manufacturing.

Step 8 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Four Tabs, each followed by a Title and a Text, are added in order.

Step 9 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = Core modernisation, payments, risk and compliance platforms for financial institutions.

Expected Result: A one-sentence description appears under each panel heading.

Step 10 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Four Tabs, each followed by a Title and a Text, are added in order.

Step 11 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (F) = Retail and Consumer Goods.

Expected Result: The vertical list shows Banking, Financial Services and Insurance, Retail and Consumer Goods, Manufacturing and Energy and Utilities.

Step 12 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: Four Tabs, each followed by a Title and a Text, are added in order.

Step 13 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (G) = Retail and Consumer Goods; **Title Type** (H) = h3.

Expected Result: Each panel starts with an H3 repeating the tab label, e.g. Manufacturing.

Step 14 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Four Tabs, each followed by a Title and a Text, are added in order.

Step 15 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (I) = Unified commerce, merchandising and customer analytics for retail and consumer brands.

Expected Result: A one-sentence description appears under each panel heading.

Step 16 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Four Tabs, each followed by a Title and a Text, are added in order.

Step 17 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (J) = Manufacturing.

Expected Result: The vertical list shows Banking, Financial Services and Insurance, Retail and Consumer Goods, Manufacturing and Energy and Utilities.

Step 18 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: Four Tabs, each followed by a Title and a Text, are added in order.

Step 19 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (K) = Manufacturing; **Title Type** (L) = h3.

Expected Result: Each panel starts with an H3 repeating the tab label, e.g. Manufacturing.

Step 20 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Four Tabs, each followed by a Title and a Text, are added in order.

Step 21 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (M) = Smart factories, product engineering and connected supply chains.

Expected Result: A one-sentence description appears under each panel heading.

Step 22 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Four Tabs, each followed by a Title and a Text, are added in order.

Step 23 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (N) = Energy and Utilities.

Expected Result: The vertical list shows Banking, Financial Services and Insurance, Retail and Consumer Goods, Manufacturing and Energy and Utilities.

Step 24 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: Four Tabs, each followed by a Title and a Text, are added in order.

Step 25 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (O) = Energy and Utilities; **Title Type** (P) = h3.

Expected Result: Each panel starts with an H3 repeating the tab label, e.g. Manufacturing.

Step 26 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Four Tabs, each followed by a Title and a Text, are added in order.

Step 27 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (Q) = Grid modernisation, asset performance and the energy transition.

Expected Result: A one-sentence description appears under each panel heading.

Step 28 — Preview

Action: Screen width: 1200 px (desktop).

Expected Result: At 1200 px the list and the panel sit side by side, 3rem apart.

Step 29 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A two-column layout: tab labels stacked on the left, wrapping where needed, the selected one marked by a brand left border; the panel heading and text on the right, 3rem away.

Step 30 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Saved with the page; Publish updates aem.page or aem.live. Check the page at 900 px and wider on aem.page first.

Step 31 — Verify

Action: On the live page check: Inspect the tabs element for the class vertical; the list is a left column at 1200 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 11 — Width Type: Full Width (Tabs Container only)

Reproduces the screenshot `screenshots/tabs-width-full.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: An empty Tabs Container is added with Width Type Full Width.

Step 3 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 4 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Consulting.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity.

Step 5 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 6 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (B) = 2; **Rows** (C) = 1.

Expected Result: A two-column, one-row Columns appears in each panel.

Step 7 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (D) = Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Title "Business and technology consulting" (Title Type h3), Text "Strategy, operating model design and change management that turn transformation goals into measurable results.".

Expected Result: Each panel shows a photo and the H3 with text, stretched across the page width.

Step 8 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 9 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (E) = Cloud.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity.

Step 10 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 11 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (F) = 2; **Rows** (G) = 1.

Expected Result: A two-column, one-row Columns appears in each panel.

Step 12 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (H) = Column 1: Image photo-2.svg (Alt Text "Cloud operations dashboard"); Column 2: Title "Cloud migration and operations" (Title Type h3), Text "Move, modernise and run workloads on any cloud with automated landing zones and managed operations.".

Expected Result: Each panel shows a photo and the H3 with text, stretched across the page width.

Step 13 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 14 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (I) = Cyber-security.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity.

Step 15 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 16 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (J) = 2; **Rows** (K) = 1.

Expected Result: A two-column, one-row Columns appears in each panel.

Step 17 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (L) = Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Title "Cyber defence and resilience" (Title Type h3), Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.".

Expected Result: Each panel shows a photo and the H3 with text, stretched across the page width.

Step 18 — Tabs Container › Properties

Action: Width Type: Full Width (the default, keep it).

Expected Result: Width Type stays Full Width: no class is added and the section uses the page width.

Step 19 — Preview

Action: Screen width: 1920 px (wide desktop).

Expected Result: On a 1920 px screen the tabs and Columns span the full page width.

Step 20 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Tab list, divider and Columns running edge to edge apart from the section padding; the image and text columns are wide.

Step 21 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Width Type is a section property saved with the page; Publish updates aem.page or aem.live.

Step 22 — Verify

Action: On the live page check: At 1920 px the divider spans the page width inside the section padding.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 12 — Width Type: Fixed Width (Tabs Container only)

Reproduces the screenshot `screenshots/tabs-width-fixed.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: An empty Tabs Container is added with the default Full Width.

Step 3 — Fill in Tabs Container › Properties

Action: Select **Tabs Container** in the content tree and open the **Properties** tab of the properties panel. Enter: **Width Type** (A) = Fixed Width.

Expected Result: With Width Type Fixed Width the section is limited to 90rem and centred.

Step 4 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 5 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (B) = Consulting.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity.

Step 6 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 7 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (C) = 2; **Rows** (D) = 1.

Expected Result: A two-column, one-row Columns appears in each panel.

Step 8 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (E) = Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Title "Business and technology consulting" (Title Type h3), Text "Strategy, operating model design and change management that turn transformation goals into measurable results.".

Expected Result: Each panel shows a photo and the H3 with text within the content width.

Step 9 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 10 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (F) = Cloud.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity.

Step 11 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 12 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (G) = 2; **Rows** (H) = 1.

Expected Result: A two-column, one-row Columns appears in each panel.

Step 13 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (I) = Column 1: Image photo-2.svg (Alt Text "Cloud operations dashboard"); Column 2: Title "Cloud migration and operations" (Title Type h3), Text "Move, modernise and run workloads on any cloud with automated landing zones and managed operations.".

Expected Result: Each panel shows a photo and the H3 with text within the content width.

Step 14 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 15 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (J) = Cybersecurity.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity.

Step 16 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 17 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (K) = 2; **Rows** (L) = 1.

Expected Result: A two-column, one-row Columns appears in each panel.

Step 18 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (M) = Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Title "Cyber defence and resilience" (Title Type h3), Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.".

Expected Result: Each panel shows a photo and the H3 with text within the content width.

Step 19 — Preview

Action: Screen width: 1920 px (wide desktop).

Expected Result: On a 1920 px screen the tabs and Columns are centred with empty space on both sides.

Step 20 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The tab list and panel start further in from the left than in Full Width, centred in the page, with white margins left and right.

Step 21 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Width Type is saved with the page; Publish updates aem.page or aem.live.

Step 22 — Verify

Action: On the live page check: Inspect the section for the class fixed-width; the content is centred with side margins.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.21.6 Authorable Field Specification

Model `tabs` (Tabs Container, a section)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Tab: Properties	tab	—	—	—	Main properties	—	—	—
Component (`style`)	select	No (preset)	No	Tabs (`tabs-section`)	Marks the section as a Tabs Container	Leave on Tabs	One option: Tabs = `tabs-section`	tabs-section
ID (`anchorName`)	text	No	No	empty	Section id and base of generated tab ids	Lower case, hyphens, no spaces	None in model; normalised by code (`toClassName`, leading # removed)	our-services
Width Type (`sectionWidth`)	select	No	No	Full Width (`full-width`)	Page or content width	Fixed Width for text-heavy tabs	Full Width / Fixed Width	full-width
Tab: Accessibility	tab	—	—	—	Accessible name	—	—	—
Label (`tabsAriaLabel`)	text	No	No	empty (code fallback “Tabs”)	aria-label of the tab list	Describe the group	None (trimmed)	Our services
Tab: Styles	tab	—	—	—	Presentation	—	—	—
Style (`tabsStyle`)	select	No	No	Underline	Tab look	—	Underline / Boxed / Pills	underline
Alignment (`tabsAlignment`)	select	No	No	Left	Tab list alignment	—	Left / Center / Full width (stretch)	left
Orientation (`tabsOrientation`)	select	No	No	Horizontal	List above or beside panels	Vertical for many / long labels	Horizontal / Vertical	horizontal
Tab: Additional	tab	—	—	—	Block options	See note below	—	—
Anchor ID (`classes_anchor`)	text	No	No	empty	Block anchor (see note)	Use ID (Properties) instead	Enforced: regExp `^anchor-[a-z0-9][a-z0-9-]*$`	anchor-our-services

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Hide block (`classes_hideblock`)	boolean	No	No	false	Hide (see note)	Not effective here	None	false
Padding left (`classes_paddingleft`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	pl-400
Padding right (`classes_paddingright`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	pr-400
Padding top (`classes_paddingtop`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	pt-400
Padding bottom (`classes_paddingbottom`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	pb-400
Margin left (`classes_marginleft`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	ml-0
Margin right (`classes_marginright`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	mr-0
Margin top (`classes_margintop`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	mt-800
Margin bottom (`classes_marginbottom`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	mb-800

Important: The Tabs Container is a section, not a block. `decorators/block-options-decorator.js` and the spacing / Hide block rules in `styles/styles.css` apply only to `.block` elements, and `buildTabsSections` copies only Style, Alignment, Orientation and Label to the synthetic `tabs` block. The Additional tab fields of the Tabs Container therefore have no effect on the page (as of this handover) [To be confirmed: whether AEM delivers `classes_*` section fields at all — owner: development team]. Use the section **ID** for anchors.

Model `tabs-block` (Tabs block)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Tab: Properties	tab	—	—	—	Main properties	—	—	—
ID (`tabsId`)	text	No	No	empty (generated `tabs-{n}`)	Base of generated tab ids	Lower case, hyphens	None in model; normalised by `toClassName`	our-services
Tab: Accessibility	tab	—	—	—	Accessible name	—	—	—
Label (`tabsAriaLabel`)	text	No	No	empty (fallback “Tabs”)	aria-label of the tab list	Describe the group	None	Our services
Tab: Styles	tab	—	—	—	Presentation	—	—	—
Style (`tabsStyle`)	select	No	No	Underline	Tab look	—	Enforced in code: only underline / boxed / pills become classes	boxed

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Alignment (`tabsAlignment`)	select	No	No	Left	Alignment	—	Enforced in code: left / center / stretch	center
Orientation (`tabsOrientation`)	select	No	No	Horizontal	Orientation	—	Enforced in code: horizontal / vertical	vertical
Tab: Additional	tab	—	—	—	Block options	—	—	—
Anchor ID (`classes_anchor`)	text	No	No	empty	Block id for # links	Start with `anchor-`	Enforced: regExp `^anchor-[a-z0-9][a-z0-9-]*$`	anchor-our-services
Hide block (`classes_hideblock`)	boolean	No	No	false	Hides the block	Prepare before release	None	false
Padding left (`classes_paddingleft`)	select	No	No	Default	Inner spacing left	Only if the design needs it	One of 15 options	pl-0
Padding right (`classes_paddingright`)	select	No	No	Default	Inner spacing right	As above	One of 15 options	pr-0
Padding top (`classes_paddingtop`)	select	No	No	Default	Inner spacing top	As above	One of 15 options	pt-600
Padding bottom (`classes_paddingbottom`)	select	No	No	Default	Inner spacing bottom	As above	One of 15 options	pb-600
Margin left (`classes_marginleft`)	select	No	No	Default	Outer spacing left	As above	One of 15 options	ml-0
Margin right (`classes_marginright`)	select	No	No	Default	Outer spacing right	As above	One of 15 options	mr-0
Margin top (`classes_margintop`)	select	No	No	Default	Outer spacing top	As above	One of 15 options	mt-1200
Margin bottom (`classes_marginbottom`)	select	No	No	Default	Outer spacing bottom	As above	One of 15 options	mb-1200

Model `tabs-item` (Tab item of the Tabs block)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Tab: Tab	tab	—	—	—	Tab properties	—	—	—
Title (`title`)	text	Yes (`required`)	No	"Tab" (new item template)	Tab button label	1 to 3 words	Enforced: required in the model; code falls back to "Tab {n}" if empty	Cloud
ID (`tabId`)	text	No	No	empty (generated `{tabs-id}-item-{n}`)	Panel id for deep links	Lower case, no spaces	Normalised by `toClassName`; de-duplicated with `-2`, `-3`	cloud

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Active tab (`activeTab`)	boolean	No	No	off	Tab shown on load	One tab at most	Only the value "true" counts	off
Tab: Fragment	tab	—	—	—	Content source	—	—	—
Fragment (`fragment`)	aem-content	No (code tolerates empty)	No	empty	Page whose content fills the panel	Pick a page under `references/`	Code: path must start with `/`; otherwise ignored	/content/tcs-corp/us/en/references/tabs/cloud

Field details

- **Component (`style`, Tabs Container)**
  - Purpose: the section style class `tabs-section` that `buildTabsSections` looks for.
  - Allowed Values: Tabs (`tabs-section`). Character Limits: not applicable.
  - Business Rules: without this class the section renders as a normal section (no tabs).
  - Dependency Rules: required for every other Tabs Container field to take effect.
  - Visibility Rules: always visible. Sample Content: Tabs.
- **ID (`anchorName` / `tabsId`)**
  - Purpose: Tabs Container: the section's `id` (anchor) and the base for generated tab ids; Tabs block: the base for generated tab ids (`{id}-item-{n}`); the block itself does not get this id (use the Anchor ID).
  - Allowed Values: any text; normalised to lower case with hyphens (`toClassName`).
  - Character Limits: none enforced; Recommended: under 30 characters.
  - Business Rules: Tabs Container: applied only if no element on the page already has that id. Empty: ids are generated (`tabs-1`, `tabs-2`, … in page order, then `tabs-1-item-1`, …).
  - Dependency Rules: a Tab's own ID takes priority for its panel.
  - Visibility Rules: always visible. Sample Content: `our-services`.
- **Width Type (`sectionWidth`, Tabs Container)**
  - Purpose: section width; Allowed Values: Full Width (`full-width`), Fixed Width (`fixed-width`).
  - Character Limits: not applicable. Business Rules: only `fixed-width` adds a class.
  - Dependency Rules: none. Visibility Rules: always visible. Sample Content: Full Width.
- **Label (`tabsAriaLabel`)**
  - Purpose: the tab list's `aria-label`.
  - Allowed Values: plain text. Character Limits: none enforced; Recommended: under 40 characters.
  - Business Rules: empty → the placeholder `tabs` ("Tabs").
  - Dependency Rules: none. Visibility Rules: always visible. Sample Content: "Our services".
- **Style (`tabsStyle`)**
  - Purpose: tab look. Allowed Values: Underline (`underline`), Boxed (`boxed`), Pills (`pills`).
  - Character Limits: not applicable. Business Rules: Tabs block: unknown values are ignored (`pick`); Tabs Container: the value is added as a class without checking.
  - Dependency Rules: combines with Alignment and Orientation. Visibility Rules: always visible. Sample Content: Underline.
- **Alignment (`tabsAlignment`)**
  - Purpose: horizontal alignment of the tab list. Allowed Values: Left (`left`), Center (`center`), Full width (stretch) (`stretch`).
  - Character Limits / Business Rules: as Style. Dependency Rules: in the Vertical layout (from 900px) Center has no visible effect. Visibility Rules: always visible. Sample Content: Left.
- **Orientation (`tabsOrientation`)**

    - Purpose: tab list above (Horizontal) or left of the panel (Vertical, from 900px).
    - Allowed Values: Horizontal (`horizontal`), Vertical (`vertical`).
    - Business Rules: Vertical sets `aria-orientation="vertical"`. Dependency Rules: none.
    - Visibility Rules: always visible. Sample Content: Horizontal.
- **Additional tab fields** (Anchor ID, Hide block, 4 padding and 4 margin selects)
    - Purpose and Allowed Values: as for every block: Anchor ID `anchor-...`; Hide block on / off; spacing selects with 15 options each: Default; 0 (none); 0.25rem (space-100); 0.5rem (space-200); 0.75rem (space-300); 1rem (space-400); 1.25rem (space-500); 1.5rem (space-600); 2rem (space-800); 2.5rem (space-1000); 3rem (space-1200); 4rem (space-1600); 5rem (space-2000); 6rem (space-2400); 7.5rem (space-3000), as classes `pl-`, `pr-`, `pt-`, `pb-`, `ml-`, `mr-`, `mt-`, `mb-` + token number.
    - Character Limits: Anchor ID: none enforced; Recommended under 40 characters.
    - Business Rules: effective on the Tabs block; not effective on the Tabs Container (see the note above). Anchor ID duplicates get `-2`, `-3`, ….
    - Dependency Rules: none. Visibility Rules: always visible (no `condition`).
    - Sample Content: Margin top = 3rem (space-1200).
- **Title (`title`, Tab item)**
    - Purpose: the tab button text and the accessible name of the panel.
    - Allowed Values: plain text. Character Limits: none enforced; Recommended: up to 25 characters (labels never wrap in the horizontal list).
    - Business Rules: required in the model; empty in the content → "Tab {n}" (placeholder `tabNumber`). Also sent as `dc:title` in `cmp:show`.
    - Dependency Rules: none. Visibility Rules: always visible. Sample Content: "Cloud".
- **ID (`tabId`, Tab item)**
    - Purpose: the panel's id, so `#id` links open the tab.
    - Allowed Values: text normalised by `toClassName`. Character Limits: none enforced; Recommended: under 30 characters.
    - Business Rules: empty → `{Tabs ID}-item-{n}`; an id already used on the page gets `-2`, `-3`, …. The tab button's id is `{panel id}-tab`.
    - Dependency Rules: unique per page. Visibility Rules: always visible.
    - Sample Content: `cloud`.
- **Active tab (`activeTab`, Tab item)**
    - Purpose: the tab shown when the page loads.
    - Allowed Values: on / off. Business Rules: if several are on, the first wins; if none, the first tab is shown; a deep link (`#id`) overrides it.
    - Dependency Rules: none. Visibility Rules: always visible. Sample Content: on for "Cloud".
- **Fragment (`fragment`, Tab item)**
    - Purpose: the page whose content is shown in the panel.
    - Allowed Values: a site page path (picker). Character Limits: not applicable.
    - Business Rules: loaded with `loadFragment` (`{path}.plain.html`); paths not starting with `/` and failed requests leave the panel empty without a message; the fragment's sections are fully decorated (blocks, buttons, block options).
    - Dependency Rules: the fragment page must be published (and previewed for the preview site). Visibility Rules: always visible.
    - Sample Content: `/content/tcs-corp/us/en/references/tabs/cloud`.

6.21.7 Field Annotation Mapping

Marker	Field	Purpose
A	Tabs Container / Tabs block (ID, Width Type, Label, Style, Alignment, Orientation, Additional)	Component properties
B	Tab list (generated from Titles)	Switches panels
C	Tab marker (Tabs Container) / Tab item (Tabs block)	Starts a tab; holds Title, ID, Active tab (and Fragment)
D	Title	Tab button label
E	Panel content (components / Fragment)	Content of the tab
F	Add (+)	Adds Tabs or components
G	Empty-state hint	Edit-mode guidance when there are no tabs

6.21.8 Component Specification

Attribute	Value
Component Name	Tabs: Tabs Container (`tabs`, section), Tabs (`tabs-block`), Tab item (`tabs-item`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`blocks/tab`, `blocks/fragment`, `scripts/scripts.js`, `scripts/aem.js`, `utils/analytics.js`, `utils/buttons.js`, `utils/environment.js`, `utils/ids.js`, `utils/placeholders.js`, `utils/properties.js`, `decorators/data-layer-decorator.js`
Component Type	Container section (Tabs Container) and container block with items (Tabs block)
Supported Variants	Modes: Container, Block; Style: Underline, Boxed, Pills; Alignment: Left, Center, Stretch; Orientation: Horizontal, Vertical; Width Type (Container): Full, Fixed
Supported Templates	Any page
Supported Metadata	None
Supported Tags	None
Supported Personalization	None; `cmp:show` per tab and the `tabs:change` DOM event are available for future Adobe Target / Journey Optimizer use (not implemented)
Caching Considerations	Page HTML and fragment `.plain.html` are cached by the Edge Delivery CDN; a change in a fragment page needs that page republished; the shown tab is remembered only in memory during Universal Editor re-renders
Performance Considerations	Loaded with its section; Tabs block fetches all fragments in parallel during decoration (in the first section this delays LCP); images in hidden panels are not displayed, so lazy images load only when their tab is shown
Accessibility Compliance	WCAG 2.1 AA: WAI-ARIA tabs pattern (4.1.2), keyboard (2.1.1: arrows, Home, End, roving tabindex), visible focus (2.4.7), named tab list, focusable panels, reduced motion
SEO Compliance	Container content in HTML (indexable, hidden until selected); fragment content loaded client-side; deep-linkable tab ids

6.21.9 Input Model

- **Content Inputs:** Tabs Container: Tab markers and the components after them. Tabs block: property rows and Tab item rows (Title, ID, Active tab, Fragment).
- **Metadata Inputs:** none.

- **Tags Inputs:** none.
- **Page Context Inputs:** the URL hash (`#id`, deep link); Universal Editor edit mode (`html.adobe-ue-edit`); Universal Editor selection events (`aue:ui-select`); the locale (for placeholders).
- **Query Inputs:** none (no query index).
- **Manual Inputs:** all fields; fragment pages chosen per tab.

Authored HTML of a Tabs Container section (illustrative; the section properties arrive as data attributes):

```
<div data-aue-resource="urn:.../section_1" data-aue-model="tabs" data-style="tabs-section"
  data-anchorname="our-services" data-tabsstyle="pills" data-tabsalignment="center"
  data-tabsorientation="horizontal" data-tabsarialabel="Our services">
  <div class="tab">
    <div><div>title</div><div>Consulting</div></div>
    <div><div>tabId</div><div>consulting</div></div>
    <div><div>activeTab</div><div>true</div></div>
  </div>
  <div class="columns">...</div>
  <div class="tab">...</div>
  <p>Text of the second tab.</p>
</div>
```

Authored HTML of a Tabs block (key-value property rows, then item rows with four cells):

```
<div class="tabs mt-1200">
  <div><div>tabsId</div><div>our-services</div></div>
  <div><div>tabsAriaLabel</div><div>Our services</div></div>
  <div><div>tabsStyle</div><div>boxed</div></div>
  <div><div>tabsAlignment</div><div>left</div></div>
  <div><div>tabsOrientation</div><div>vertical</div></div>
  <div data-aue-model="tabs-item">
    <div>Cloud</div><div>cloud</div><div>true</div>
    <div><a href="/en/references/tabs/cloud">/en/references/tabs/cloud</a></div>
  </div>
</div>
```

6.21.10 Output Model

Rendered Output

- Tabs Container: `div.section.tabs-section.tabs-container` (with the section `id`) > `div.tabs-wrapper` > `div.tabs.block` (`data-source="section"`, style classes).
- Tabs block: `div.tabs-wrapper` > `div.tabs.block` (style and Additional classes).
- Inside the block, in both modes:
  - `div.tabs-list[role=tablist]` with `aria-label` (and `aria-orientation="vertical"` when Vertical), containing one `button.tabs-tab[role=tab]` per tab with `id="{panel}-tab"`, `aria-controls`, `aria-selected` and `tabindex` (0 on the selected tab, –1 on the others).
  - One `div.tabs-panel[role=tabpanel]` per tab with `id`, `aria-labelledby`, `tabindex="0"` and `hidden` on the panels not shown. Container panels contain the component wrappers (including the hidden Tab marker wrapper); block panels contain `div.tabs-fragment`.
  - Edit mode with no tabs: `p.tabs-empty` (hint text).

Generated HTML

```
<div class="tabs pills center horizontal block" data-source="section"
  data-label="Our services" data-block-name="tabs">
```

```
  <div class="tabs-list" role="tablist" aria-label="Our services">
    <button type="button" class="tabs-tab" id="consulting-tab" role="tab"
      aria-controls="consulting" aria-selected="true" tabindex="0">Consulting</button>
    <button type="button" class="tabs-tab" id="our-services-item-2-tab" role="tab"
      aria-controls="our-services-item-2" aria-selected="false" tabindex="-1">Cloud</
button>
  </div>
  <div class="tabs-panel" id="consulting" role="tabpanel" tabindex="0"
    aria-labelledby="consulting-tab">
    <div class="tab-wrapper"><div class="tab block">...</div></div>
    <div class="columns-wrapper">...</div>
  </div>
  <div class="tabs-panel" id="our-services-item-2" role="tabpanel" tabindex="0"
    aria-labelledby="our-services-item-2-tab" hidden>...</div>
</div>
```

Generated JSON: none.

Generated Metadata: none.

DOM events: `tabs:change` (bubbles) on the block when the visitor shows another tab, with `detail: { index, id, title }`; not fired for the tab shown on load.

Analytics Tracking

- Component state (`trackBlocks`): the tabs block as `tcs-corp/components/tabs`, id = block id (Anchor ID, Tabs block) else `tabs-{n}`. Blocks inside panels (Columns, Tab, fragment blocks) are registered with the tabs block as `parentId`.
- Showing another tab (click, keyboard, deep link change) pushes `cmp:show` with the panel id as the component path (panels are not registered as components themselves):

```
{
  "event": "cmp:show",
  "eventInfo": { "path": "component.cloud", "dc:title": "Cloud" }
}
```

- A click on a tab button also pushes `cmp:click` (from `data-layer-decorator.js`, `[role=tab]`):

```
{
  "event": "cmp:click",
  "eventInfo": {
    "path": "component.tabs-1",
    "interaction": "button",
    "dc:title": "Cloud",
    "xdm:linkType": "other",
    "breakpoint": "desktop"
  }
}
```

- Not pushed: the tab shown on load; selecting the already shown tab; re-renders in Universal Editor. Opening a tab through a deep link after load clicks its button (so `cmp:click` appears; `cmp:show` only if it differs from the tab already shown).

Personalization Output: none.

Search Index Output: none written by the block; Tabs Container text is part of the page HTML; fragment content belongs to the fragment pages.

Target Personalization Output: None: Supported Personalization is None (as of this handover). The block pushes cmp:show with the panel id and dc:title and fires the tabs:change DOM event, available for future Adobe Target or Journey Optimizer use (not implemented); it is in the data layer as tcs-corp/components/tabs.

6.21.11 Business Rules

1. Mode: a block with `data-source="section"` (built by `buildTabsSections`) is a Tabs Container; otherwise it is a Tabs block.
2. A section becomes a Tabs Container only with the style class `tabs-section` and only once (a section already containing `.tabs-wrapper` is skipped).
3. Tabs Container: each wrapper containing a `.tab` block starts a new tab; content before the first Tab starts an untitled tab.
4. Tabs block: rows with exactly two cells whose first cell (normalised) is `tabsid`, `tabsarialabel`, `tabsstyle`, `tabsalignment` or `tabsorientation` are properties; all other rows are Tab items.
5. Tabs block: Style, Alignment and Orientation are accepted only from their allowed lists; Tabs Container: the values are added as classes after `toClassName`.
6. Tab item cells: Title, ID, Active tab, then the Fragment as the last cell when the row has more than three cells; with three or fewer cells there is no fragment.
7. Fragment paths must start with `/` (not `//`); `.html` / `.plain.html` is removed and `{path}.plain.html` is fetched; failures give an empty panel without a message.
8. All fragments are requested in parallel; decoration waits for all of them.
9. Tab label: the Title, else "Tab {n}" (placeholder `tabNumber`).
10. Panel id: the Tab's ID (normalised), else `{base}-item-{n}`; base = Tabs Container section id / Tabs block ID, else `tabs-{n}`; ids already on the page get `-2`, `-3`, ….
11. Tab button id: `{panel id}-tab`.
12. Tab list name: the Label, else "Tabs" (placeholder `tabs`).
13. Tab shown first: the tab shown before a Universal Editor re-render, else the tab named by the page address `#id`, else the first Active tab, else the first tab.
14. Active tab counts only when its value is exactly "true".
15. No tabs: the block is emptied; in edit mode a hint is shown (`tabsEmpty` / `tabsBlockEmpty` placeholders); on the page nothing is shown.
16. Click selects a tab; ArrowLeft / ArrowUp select the previous tab, ArrowRight / ArrowDown the next (wrapping around), Home the first, End the last; the selected tab gets focus (automatic activation).
17. Deep links: on `hashchange`, and once after the page `load` event for the initial address, a hash naming a tab panel clicks its tab and scrolls the Tabs into view (`scroll-margin-top` = navigation height, 4rem).
18. Only panel ids open tabs; links to a tab button id (…`-tab`) or to the Tabs Container section id scroll but do not change the tab.
19. A tab change fires `tabs:change` and `cmp:show`; the initial selection does not.
20. Universal Editor: selecting a component inside a panel shows its tab (`aue:ui-select`); a Tab marker edited in the properties updates its tab label (`tabs:tab-update`); Tab markers are visible only in edit mode.
21. Tabs block items: each item's editor instrumentation moves to its panel.
22. Vertical layout applies from 900px; `aria-orientation="vertical"` is set at all widths.
23. Additional tab options apply to the Tabs block but not to the Tabs Container.
24. Reduced motion disables the tab colour / border transitions.

6.21.12 Author Best Practices

- **Recommended Content Length:** 2 to 7 tabs; Titles of 1 to 3 words (up to about 25 characters); keep panel content similar in length so the page does not jump (Recommended).

- **Image Dimensions:** images in panels follow their component (Image, Columns); they are limited to the panel width (`max-width: 100%`). Use at least 1200px wide images for full-width panels; 2000px for wide hero-like images.
- **CTA Writing Guidelines:** each panel may end with one clear Button ("Explore cloud services"); do not put the page's main CTA only in a non-default tab.
- **Accessibility Guidelines:** always fill the Label; use unique Titles; start each panel with a heading or text that matches the Title; avoid nesting Tabs inside Tabs.
- **SEO Guidelines:** put the most important content in the first (or Active) tab; for content that must rank on its own, prefer a separate page over a fragment-only tab.
- **Metadata Guidelines:** not applicable.
- **Taxonomy Guidelines:** not applicable.
- **Localization Guidelines:** translate Titles and Labels per locale; keep tab IDs identical across locales (they are used in links and in `cmp:show` paths); use locale-specific fragment pages (under each locale's `references/`); check that translated labels still fit (German and Dutch labels are longer; consider Vertical).

6.21.13 Troubleshooting Guide

Issue 1 — The section shows all content without tabs

Symptoms: Tab markers' content and components appear one below another; no tab list.

Root Cause: The section is a normal section, or its Component (style) is not `tabs-section`.

Diagnosis Steps: Inspect the section: it must have the class `tabs-section` and contain `div.tabs-wrapper`.

Resolution Steps: Add a Tabs Container (not a Section) and move the components into it; set Component = Tabs.

Validation Steps: The tab list appears.

Preventive Measures: Always start from the Tabs Container component.

Issue 2 — An extra tab "Tab 1" appears first

Symptoms: The first tab has a generic label and contains a stray component.

Root Cause: A component was placed before the first Tab in the Tabs Container.

Diagnosis Steps: Check the content tree order of the container.

Resolution Steps: Move the component after the right Tab, or add a Tab before it.

Validation Steps: Only titled tabs remain.

Preventive Measures: Add the Tab first, then its components.

Issue 3 — A Tabs block panel is empty

Symptoms: A tab shows nothing.

Root Cause: No Fragment chosen; the fragment page is not published / previewed; the path is not a site path; or the item was authored with fewer cells.

Diagnosis Steps: Check the Tab item's Fragment field; open `{fragment path}.plain.html` on the `.aem.page` / `.aem.live` host; check the Network tab for a 404.

Resolution Steps: Choose the fragment; publish it; re-add the item if its structure is outdated.

Validation Steps: The panel shows the fragment content.

Preventive Measures: Publish fragments with the page (publish references).

Issue 4 — A deep link does not open the tab
Symptoms: `page#cloud` opens the page on the first tab.

Root Cause: The tab's ID differs (normalised to lower case with hyphens), was de-duplicated (`cloud-2`), or the link targets the button id or the section id.

Diagnosis Steps: Inspect the panel `id`s in the developer tools.

Resolution Steps: Set the Tab's ID and use exactly that value after `#`.

Validation Steps: The tab opens and scrolls into view below the header.

Preventive Measures: Use unique, simple ids (`cloud`, `consulting`).

Issue 5 — The wrong tab is shown on load
Symptoms: A different tab than expected is selected.

Root Cause: Several tabs have Active tab on (the first wins); the URL contains a tab `#id`; in Universal Editor the tab shown before the re-render is kept.

Diagnosis Steps: Check Active tab on each Tab; check the address.

Resolution Steps: Keep at most one Active tab; reload without the hash.

Validation Steps: The intended tab shows on a fresh load.

Preventive Measures: Validation checklist.

Issue 6 — Vertical tabs show horizontally
Symptoms: Orientation is Vertical but the list is above the panel.

Root Cause: By design below 900px; or, on desktop, the value did not reach the block.

Diagnosis Steps: Check the viewport width; inspect the block for the `vertical` class.

Resolution Steps: Re-select Orientation = Vertical and save; reload.

Validation Steps: From 900px the list is in a left column.

Preventive Measures: Test at 900px and wider.

Issue 7 — Spacing or Hide block has no effect on a Tabs Container
Symptoms: Padding / margin / Hide block set in the Additional tab change nothing.

Root Cause: These options are applied only to blocks; the Tabs Container is a section.

Diagnosis Steps: Inspect the section and the `tabs` block for `pt-…` / `hideblock` classes.

Resolution Steps: Use a Tabs block (which supports them) or remove / unpublish the container; adjust spacing on the components inside.

Validation Steps: Expected spacing / visibility.

Preventive Measures: Follow 6.21.6.

Issue 8 — The tab label does not update after editing
Symptoms: Changing a Title in Universal Editor leaves the old label.

Root Cause: The re-render did not complete (editor event not applied) or ID / Active tab changes, which are only read when the Tabs are rendered again.

Diagnosis Steps: Check the console for errors; reload the editor.

Resolution Steps: Reload the page in Universal Editor.

Validation Steps: The label and behaviour match the properties.

Preventive Measures: Reload after structural changes.

6.21.14 Support Runbook

Monitoring Requirements

- RUM / Core Web Vitals for pages with Tabs blocks in the first section (fragment fetches can affect LCP).
- 404 monitoring of fragment `.plain.html` requests.
- Once Adobe Tags is embedded, `cmp:show` volumes per tab id.
- [To be confirmed: monitoring tool and thresholds — owner: AMS lead].

Logs

- Browser console: the block logs nothing itself; module errors appear as `failed to load module for tabs` / `failed to load block tabs` (`scripts/aem.js`). Failed fragments show only as failed requests in the Network tab.
- Admin API status of the page and fragment pages (`https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`).
- AEM author / Cloud Manager logs for publication errors.

Common Errors

Error	Likely cause	First action
No tab list	Not a Tabs Container / style missing	Check section class `tabs-section`
“Tab 1” untitled tab	Content before the first Tab	Reorder in the content tree
Empty panel	Fragment missing / unpublished / 404	Open the fragment `.plain.html`
Deep link ignored	Id mismatch or duplicate	Inspect panel ids
Wrong initial tab	Several Active tabs / hash in URL	Fix Active tab
Vertical not applied	Below 900px / class missing	Check width and class
Additional options ignored	Tabs Container is a section	Use Tabs block

Escalation Matrix

Level	Who	What they check
L1	Author support	Mode, tab order, Titles, IDs, Active tab, Fragments, publication of page and fragments
L2	AMS / site admin	Admin API preview / live status, fragment URLs (404), CDN cache, Code Sync, RUM
L3	Development team	`tabs.js` / `tab.js` / `buildTabsSections` regressions, console errors, data layer
L4	Adobe Support	Universal Editor rendering, Edge Delivery delivery, AEM author issues

Recovery Procedures

- Restore and republish the page or fragment version.
- Tabs block: Hide block and publish for an urgent removal.
- Code: revert on `main` (Code Sync deploys automatically).

Health Checks

- `document.querySelectorAll('.tabs [role=tab]').length` equals the number of tabs.
- Exactly one panel per Tabs has no `hidden` attribute.
- Arrow keys move the selection; `#id` links open tabs.
- Switching a tab adds `cmp:show` to `window.adobeDataLayer`.

Operational Procedures

- Fragment changes: edit, preview and publish the fragment page; every page using it shows the change after the CDN serves the new version.
- Code changes: feature branch, PR with preview link, `npm run lint`, review, merge.

Known Limitations

- Tabs Container allows only Tab, Columns, Title, Text, Image and Button.
- Additional tab options have no effect on the Tabs Container.
- No manual activation mode (selection follows focus).
- Fragment content is loaded client-side (not in the page HTML) and failures are silent.
- `aria-orientation="vertical"` is set even where the list is displayed horizontally (below 900px).
- Tab ID / Active tab changes in Universal Editor apply after the Tabs are rendered again.
- No URL update when a visitor changes tab (the hash is read, not written).

6.21.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
The section shows all content without a tab list	Components added to a normal Section, or Component not set to Tabs (tabs-section)	Add a Tabs Container and move the Tabs and components into it
An extra first tab labelled Tab 1 appears	A component was placed before the first Tab	Move it after the right Tab, or add a Tab before it
A Tabs block panel is empty	No Fragment chosen, the fragment page not published, or not a site path starting with /	Pick the fragment page in the Fragment tab and publish it
A #id link opens the first tab	The ID differs after normalisation or was de-duplicated (cloud-2)	Use the exact lower-case ID, unique on the page
The wrong tab is shown on load	Several Tabs have Active tab on (the first wins), or the address has a #id	Keep Active tab on one Tab and reload without the hash
Vertical tabs show above the panel	The screen is narrower than 900 px, which is by design	Test the Vertical layout at 900 px and wider
Padding, margin or Hide block on a Tabs Container change nothing	The Additional options apply only to blocks; the Tabs Container is a section	Use a Tabs block, or adjust the components inside
Cards or Video cannot be added to a Tabs Container	The tabs filter allows only Tab, Columns, Title, Text, Image and Button	Use the Tabs block with fragment pages
#our-offerings does not scroll to the Tabs block	The Tabs block ID is only the base for panel ids	Set an Anchor ID such as anchor-our-offerings in the Additional tab

6.21.16 Author Quick Reference Guide

Mandatory Fields

- Component (Tabs Container) — must stay Tabs (tabs-section), otherwise the section renders without tabs
- Tab markers or Tab items — at least one, otherwise nothing renders on the page
- Title (Tab item) — required in the model; empty content falls back to Tab {n}
- Fragment (Tab item of the Tabs block) — not required in the model, but without it the panel is empty

Recommended Fields

- Label — names the tab list for screen readers; empty falls back to Tabs

- ID — base of generated tab ids; on the Tabs Container also the section id
- ID of each Tab — stable panel id for #id links
- Active tab — on for one Tab only, when the first tab is not the right default

Optional Fields

- Style — Underline (default), Boxed or Pills
- Alignment — Left (default), Center or Full width (stretch)
- Orientation — Horizontal (default) or Vertical, applied from 900 px
- Width Type — Full Width (default) or Fixed Width, Tabs Container only
- Anchor ID, Hide block, Padding and Margin — effective on the Tabs block only, not on the Tabs Container

Authoring Checklist

1. Add the Tabs Container at page level; add the Tabs block inside a standard section
2. In a Tabs Container add the Tab first, then its Columns, Title, Text, Image or Button
3. Keep two to seven tabs with Titles of one to three words
4. Give a Tab a lower-case, unique ID when it will be linked
5. Switch Active tab on for one Tab at most
6. For the Tabs block, create the fragment pages under the locale's references/ folder first
7. Use Orientation Vertical for many or long labels and test it from 900 px

Pre-Publish Checklist

1. Preview on aem.page below 600 px, 600 to 899 px, 900 to 1199 px and 1200 px and wider
2. Check that no untitled Tab 1 or Tab {n} label appears
3. Check that the intended tab opens on a fresh load without a hash
4. Open the page with #id for every linked tab
5. Check that arrow keys, Home and End move between tabs with a visible focus
6. Tabs block: open each fragment's .plain.html on aem.page
7. Check that every panel image has alt text

Post-Publish Validation Checklist

1. Open the page on aem.live and select every tab
2. Tabs block: check every fragment page is published and no panel is empty
3. Test the #id deep links on the live URL
4. Switch tabs and check the cmp:show entries in window.adobeDataLayer
5. Check the other pages that use the same fragments

6.21.17 Component Execution Example

Business example: Reusable offering tabs from fragment pages.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Tabs
ID (Tabs › Properties)	our-offerings
Label (Tabs › Accessibility)	Our offerings
Item (Content tree › Tabs › Add (+))	Tab
Title (Tab 1 › Tab)	Consulting
ID (Tab 1 › Tab)	consulting-offering

Field	Value
Fragment (Tab 1 › Fragment)	Select the page or enter /en/shots/g08a/consulting-overview
Item (Content tree › Tabs › Add (+))	Tab
Title (Tab 2 › Tab)	Cloud
ID (Tab 2 › Tab)	cloud-offering
Fragment (Tab 2 › Fragment)	Select the page or enter /en/shots/g08a/cloud-overview
Item (Content tree › Tabs › Add (+))	Tab
Title (Tab 3 › Tab)	Cybersecurity
ID (Tab 3 › Tab)	cybersecurity-offering
Fragment (Tab 3 › Fragment)	Select the page or enter /en/shots/g08a/security-overview
Title / Title Type (Fragment page /en/shots/g08a/consulting-overview › Section 1 › Title)	Consulting that delivers outcomes / h2
Text (Fragment page /en/shots/g08a/consulting-overview › Section 1 › Text)	Our consultants combine industry depth with technology expertise to help leaders set direction, redesign operations and deliver change at scale.
Title / Heading type (Fragment page /en/shots/g08a/consulting-overview › Section 2 › Cards › Content)	Consulting capabilities / H3
Desktop columns / Tablet columns (Fragment page /en/shots/g08a/consulting-overview › Section 2 › Cards › Layout)	3 / 3
Image / Eyebrow / Title / Description (Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 1 › Content)	photo-1.svg / Strategy / Enterprise strategy and growth / Set the direction and the roadmap for growth.
Link (Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 1 › Link)	/en/services/consulting
Image / Eyebrow / Title / Description (Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 2 › Content)	photo-5.svg / Operations / Operating model redesign / Simplify processes, roles and governance.
Link (Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 2 › Link)	/en/services/consulting
Image / Eyebrow / Title / Description (Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 3 › Content)	photo-6.svg / Change / Change and adoption / Bring people along with every transformation.
Link (Fragment page /en/shots/g08a/consulting-overview › Section 2 › Card 3 › Link)	/en/services/consulting
Location (Sites console)	Real sites keep fragment pages under the locale's references/ folder (e.g. /content/tcs-corp/us/en/references/tabs/cloud-overview)

All other fields keep their default values.

Rendered Result:

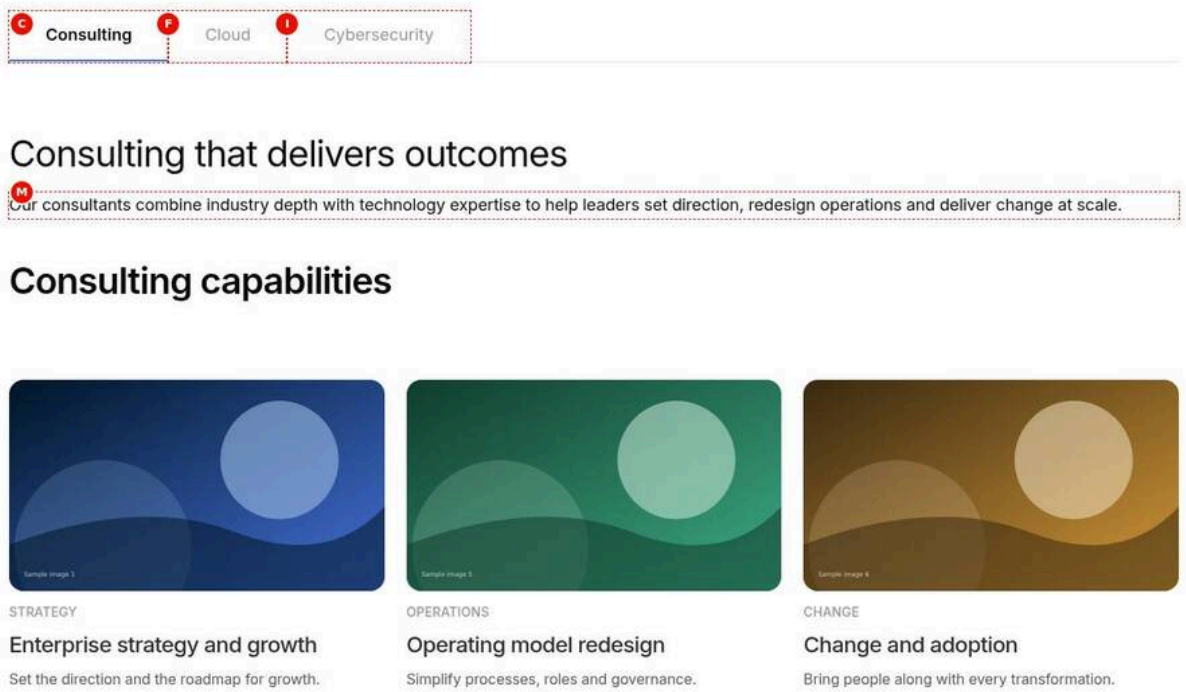

Figure 25: Execution example — A Tabs block at 1440 px with the tabs Consulting (selected), Cloud and Cybersecurity; the panel shows the fragment page consulting-overview: the H2 Consulting that delivers outcomes and its text, then the Cards heading Consulting capabilities and three cards Strategy, Operations and Change with images, titles and descriptions. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/tabs-block-fragments.jpg)

Author Notes

- Create and publish consulting-overview, cloud-overview and security-overview before adding the Tabs block (in a real site under references/).
- Add the Tabs block in a standard section and set ID our-offerings and Label Our offerings.
- Add three Tab items with Title, ID and Fragment; leave Active tab off so Consulting opens first.
- Edit the panel content on the fragment pages, not in the Tabs block.

Business Notes

- The offering texts are maintained once and reused wherever the tabs appear.
- A change to cloud-overview reaches every page that uses it once the fragment is republished.
- Stable IDs such as cloud-offering let campaigns link straight to a tab.

Technical Notes

- The fragments are fetched in parallel as {path}.plain.html during decoration and fully decorated inside div.tabs-fragment.
- Fragment content is not in the page's delivered HTML; a failed request leaves the panel empty without a message.
- Each Tab item's editor instrumentation moves to its panel; cmp:show is pushed with the panel id on every tab change.
- In the first section the fragment requests delay LCP, so place the Tabs block lower on the page.

6.22 Tab Block

The Tab block (`blocks/tab`, model `tab`) is the tab marker inside a **Tabs Container** (6.21, Variation 1). It marks where a tab starts and holds that tab's **Title**, **ID** and **Active tab** setting; the components placed after it, up to the next Tab, are the tab's content. The Tabs block builds the tab list from the Tab markers, so on the page a Tab shows nothing itself; in Universal Editor edit mode it shows its title as a dashed label chip so authors can select it and edit its properties.

> **Note:** The Tab items of the **Tabs block** (fragment mode) are a different model (`tabs-item`, with a Fragment field) and are described in 6.21.6. This chapter covers the Tab marker (`tab`) used in the Tabs Container.

6.22.1 Component Purpose

Business Objective

Give authors a simple, visible marker for "a new tab starts here" so that tabbed content can be built directly on the page with standard components.

Business Use Cases

- Starting each tab of a services, industries or region Tabs Container.
- Naming a tab for visitors (Title) and for links and analytics (ID).
- Choosing which tab is shown when the page opens (Active tab).

When To Use

- Inside a Tabs Container, once at the start of every tab.

When Not To Use

- Outside a Tabs Container (it is only allowed there by the `tabs` filter; elsewhere it would render as a visible label).
- In a Tabs block (fragment mode): use its Tab items instead.

Dependencies

Dependency	Type	Use
`blocks/tab/tab.js`	Block	`readTab` (read and cache Title, ID, Active tab) and `decorate` (label chip, `tabs:tab-update`)
`blocks/tab/tab.css`	Block styles	Dashed label chip (edit mode)
`blocks/tab/_tab.json`	Model	Definition `tab` (key-value), model `tab`
`blocks/tabs/tabs.js`, `tabs.css`	Block	Builds tabs from the markers; hides the marker on the page
`scripts/aem.js` (`toClassName`)	Core library	Normalises the ID
`utils/properties.js` (`readProperties`, `textOf`, `isOn`)	Util	Reads the key-value rows
`decorators/block-options-decorator.js`, `styles/styles.css`	Shared code	Additional tab
Placeholders	Data	None directly; an empty Title becomes "Tab {n}" in the Tabs block (`tabNumber`)

Related Components

Tabs Block (6.21); the components allowed after a Tab: Columns, Title, Text, Image, Button.

Applicable Templates

Any page that contains a Tabs Container.

Supported Content Types

Plain-text Title and ID, a boolean Active tab. The Tab has no content of its own.

Business Problem Solved

Authors building tabs directly on a page needed a simple, visible way to say where a tab starts and what it is called, without a separate dialog per panel. The Tab marker holds the tab's Title, ID and Active tab; everything after it up to the next Tab is the tab's content, and on the page it appears only as the tab button.

Supported Taxonomy

None: the Tab model has no tag field and the Tab reads no page tags or taxonomy (Supported Tags: None in 6.22.8).

6.22.2 Visual Overview

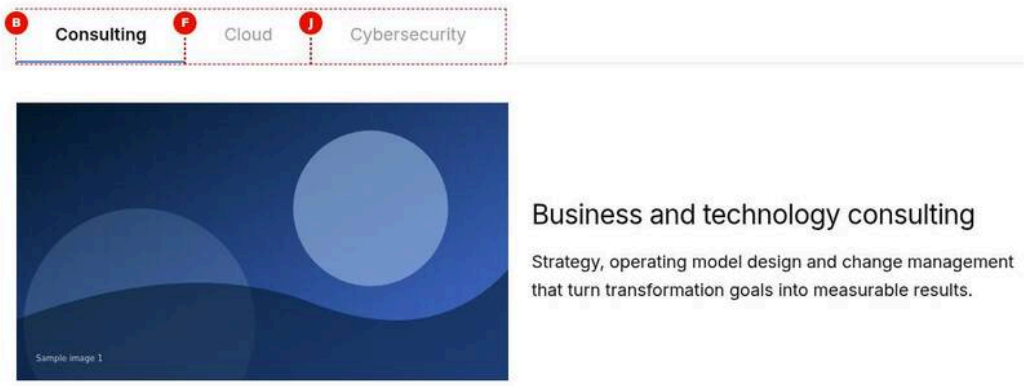

Figure 26: Desktop rendering — A Tabs Container at 1200 px on the page: the Tab markers' Titles appear only as the tab buttons Consulting (selected), Cloud and Cybersecurity; no marker is visible in the panel, which shows the Columns with photo-1.svg on the left and the H3 Business and technology consulting with its text on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tab-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/tab-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	A Tabs Container at 1200 px on the page: the Tab markers' Titles appear only as the tab buttons Consulting (selected), Cloud and Cybersecurity; no marker is visible in the panel, which shows the Columns with photo-1.svg on the left and the H3 Business and technology consulting with its text on the right.
Business Context	The published result of Tab markers in a services Tabs Container: visitors see only the tab buttons, never the markers.
Author Objective	Start three tabs with Tab markers titled Consulting, Cloud and Cybersecurity, each followed by a Columns.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Label (Tabs Container › Accessibility)	Our services	No	aria-label of the tab list	Describe the group	None (trimmed)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
B	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → "Tab {n}"
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(C)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(D)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(E)	Note (Columns)	Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Title "Business and technology consulting" (Title Type h3), Text "Strategy, operating model design and change management that turn transformation goals into measurable results."	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
F	Title (Tab › Content)	Cloud	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → "Tab {n}"
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(G)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(H)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(I)	Note (Columns)	Column 1: Image photo-2.svg (Alt	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		Text "Cloud operations dashboard"); Column 2: Title "Cloud migration and operations" (Title Type h3), Text "Move, modernise and run workloads on any cloud with automated landing zones and managed operations."				
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
J	Title (Tab › Content)	Cybersecurity	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → "Tab {n}"
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(K)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(L)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(M)	Note (Columns)	Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Title "Cyber defence and resilience" (Title Type h3), Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning."	No	—	—	None
—	Screen width (Preview)	1200 px (desktop)	—	Check on the preview (not stored in the content)	1200 px (desktop)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Underline tab list with the three Titles; directly below, the Consulting panel content without any label chip.

- **Rendering behaviour:** On the page the Tab wrapper inside the panel is hidden (display: none) and its Title is the tab button text; the button is also the accessible name of the panel through aria-labelledby.
- **Publishing behaviour:** The Tabs are part of the page; nothing else needs publishing for them. Publish the page to aem.page or aem.live; the photos are published as assets.

Business Rules

- Each Tab starts a tab; its Title is the label of the tab button.
- The Tab shows nothing on the page; only its Title appears, in the tab list.
- The Tab must be the first item in the Tabs Container, followed by its components.
- No Tab has Active tab on, so the first tab, Consulting, is shown.

Common Authoring Mistakes

Error	Root Cause	Resolution
A tab is labelled Tab 2	The Cloud Tab's Title was cleared	Enter the Title Cloud in the Tab's Content tab
The Cloud Columns appears under Consulting	The Columns was placed above the Cloud Tab	Drag it below the Cloud Tab in the content tree

Troubleshooting

- **Symptoms:** A dashed Consulting label is visible on the published page above the panel.
- **Cause:** The Tab was copied into a normal section, outside the Tabs Container, where the hiding rule does not apply.
- **Resolution:** Move the Tab back into the Tabs Container or delete it, then republish.
- **Verification Steps:** On aem.page no chip appears; the Title shows only as the tab button.

Desktop (1200px and wider). On the page the Tab marker is not visible: its wrapper inside the panel is hidden (`display: none`), and its Title appears as the label of its tab button in the tab list (see 6.21.2 for the tab list styling). In Universal Editor edit mode the marker is shown at the top of its panel as an inline chip: dashed 1px brand border, 0.25rem radius, 0.25rem by 0.75rem padding, brand-coloured semibold extra-small text (0.875rem from 900px), 1rem space below.

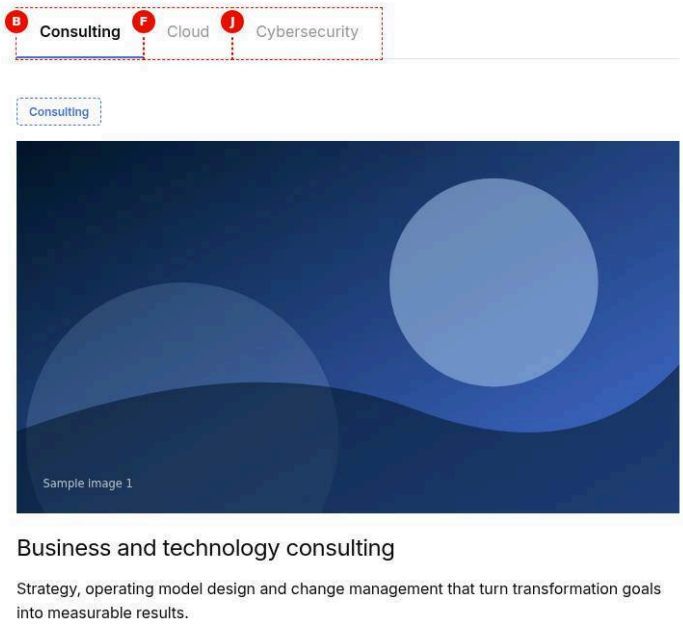

Figure 27: Tablet rendering — The same Tabs Container at 768 px in Universal Editor edit mode: the tab list Consulting (selected), Cloud and Cybersecurity, the dashed brand chip Consulting at the top of the panel, and below it the stacked Columns with photo-1.svg, the H3 Business and technology consulting and its text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tab-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/tab-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same Tabs Container at 768 px in Universal Editor edit mode: the tab list Consulting (selected), Cloud and Cybersecurity, the dashed brand chip Consulting at the top of the panel, and below it the stacked Columns with photo-1.svg, the H3 Business and technology consulting and its text.
Business Context	An author checking the Tab markers on a tablet-width canvas while editing the services tabs.
Author Objective	Find and select the Tab marker of the Consulting tab in edit mode at tablet width.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
(A)	Label (Tabs Container › Accessibility)	Our services	No	aria-label of the tab list	Describe the group	None (trimmed)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
B	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model;

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
						empty in content → "Tab {n}"
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(C)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(D)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(E)	Note (Columns)	Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Title "Business and technology consulting" (Title Type h3), Text "Strategy, operating model design and change management that turn transformation goals into measurable results."	No	—	—	None

(M)	Note (Columns)	Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Title "Cyber defence and resilience" (Title Type h3), Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning."	No	—	—	None
(N)	Mode (Universal Editor)	Edit	No	—	—	None
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A small dashed chip with the brand-coloured semibold Title Consulting above the panel content; the Columns stacked beneath it.
- **Rendering behaviour:** In edit mode the chip has a 1px dashed brand border, 0.25rem radius, 0.25rem by 0.75rem padding and 1rem space below; its text is 0.75rem below 900 px and 0.875rem from 900 px. On the page it is hidden.
- **Publishing behaviour:** The chip exists only in the editor; publishing the page sends the tabs without it to aem.page or aem.live.

Business Rules

- The chip appears only in Universal Editor edit mode, at every width.
- Select the chip to edit the Tab's Title, ID and Active tab.
- A Title change updates the chip and the tab button at once.
- Below 900 px the Columns in the panel stack.

Common Authoring Mistakes

Error	Root Cause	Resolution
The chip is taken for page content and deleted	Authors expect it to show on the page	Keep the Tab; it is the start of the tab and hidden on the page
The Tab cannot be found in the canvas	Its tab is not selected, so the panel and chip are hidden	Select the tab button first, or select the Tab in the content tree

Troubleshooting

- **Symptoms:** No chip appears above the panel in the editor.
- **Cause:** The editor is in Preview mode, where the chips are hidden like on the page.
- **Resolution:** Switch Universal Editor back to Edit mode.
- **Verification Steps:** The dashed Consulting chip is visible at the top of the panel.

Tablet (600px to 1199px). Same behaviour: hidden on the page, chip in edit mode. The chip text uses 0.75rem below 900px and 0.875rem from 900px.

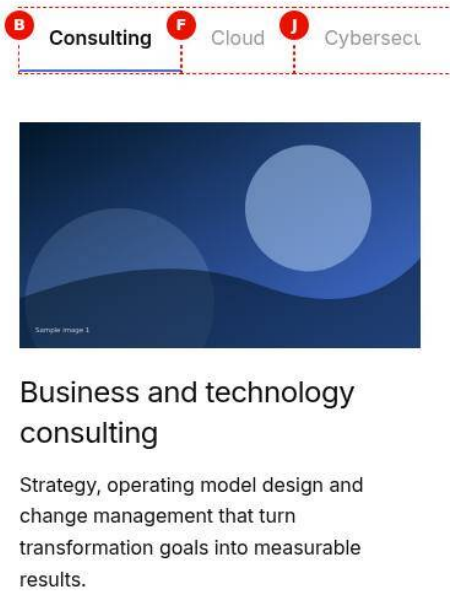

Figure 28: Mobile rendering — The Tabs Container at 375 px on the page: the tab list shows Consulting (selected), Cloud and a cut-off Cybersecu…, no marker in the panel; the Consulting panel is stacked: photo-1.svg, the H3 Business and technology consulting on two lines and its text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tab-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/tab-mobile-view.jpg`
Screenshot Purpose	Mobile rendering

Item	Detail
Screen Description	The Tabs Container at 375 px on the page: the tab list shows Consulting (selected), Cloud and a cut-off Cybersecu…, no marker in the panel; the Consulting panel is stacked: photo-1.svg, the H3 Business and technology consulting on two lines and its text.
Business Context	The Tab markers' Titles on a phone, where they appear only in the sideways-scrolling tab list.
Author Objective	Check the Tab Titles fit the mobile tab list and no marker shows.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)

(L)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(M)	Note (Columns)	Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Title "Cyber defence and resilience" (Title Type h3), Text "Protect identities, data and operations with managed detection, zero-trust architec-	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		ture and recovery planning."				
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A single row of tab labels cut off at the right edge, Consulting underlined; the panel content in one column without any chip.
- **Rendering behaviour:** Below 600 px the Titles never wrap and the list scrolls sideways with a hidden scrollbar; the Tab wrapper stays hidden in the panel.
- **Publishing behaviour:** No separate step for mobile: the page Publish covers it. Check on aem.page at 375 px before publishing to aem.live.

Business Rules

- Keep Titles to one to three words (up to about 25 characters); they never wrap in the tab list.
- The tab list scrolls sideways on mobile; the last tabs may be off-screen.
- Put the most important tab first, as it is shown by default.
- The Tab marker is hidden on the page at every width.

Common Authoring Mistakes

Error	Root Cause	Resolution
Cybersecurity is hard to find on phones	Three long labels do not fit at 375 px	Shorten the Titles where possible, e.g. Security
Tab labels differ between locales	Titles translated with longer words	Check each locale at 375 px and shorten the translations

Troubleshooting

- **Symptoms:** The tab list on a phone shows only one or two labels.
- **Cause:** The Titles are long, so most tabs are beyond the right edge of the scrolling list.
- **Resolution:** Shorten the Tab Titles and republish the page.
- **Verification Steps:** At 375 px at least two tab labels are fully visible and the rest can be swiped.

Mobile (below 600px). Same; the chip (edit mode) is 0.75rem text. The tab button labels (Titles) never wrap in the horizontal tab list.

6.22.3 Component Variations

The Tab has no style options. The behaviour modes an author can choose are the three below.

Variation 1 — Standard Tab

Variation Name

Standard Tab (Title only).

Business Purpose

Start a tab with a visible label; its id is generated.

Visual Example

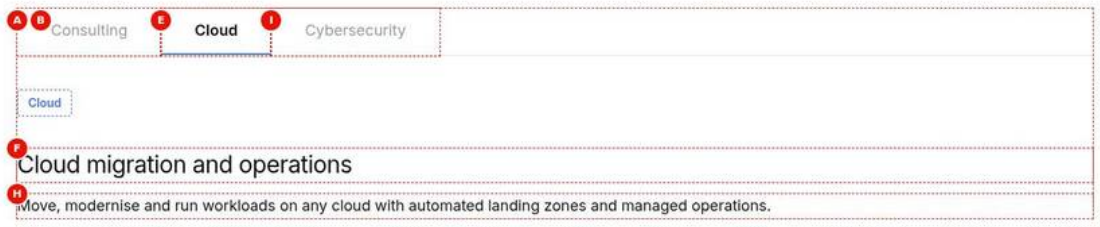

Figure 29: Standard Tab variation — Edit mode at 1440 px after selecting the Cloud tab button: Cloud is selected in the tab list Consulting, Cloud, Cybersecurity; the dashed chip Cloud sits at the top of the panel, followed by the H3 Cloud migration and operations and its text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tab-standard.jpg)

Screenshot Details — Standard Tab variation

Item	Detail
Screenshot Name	`screenshots/tab-standard.jpg`
Screenshot Purpose	Standard Tab variation
Screen Description	Edit mode at 1440 px after selecting the Cloud tab button: Cloud is selected in the tab list Consulting, Cloud, Cybersecurity; the dashed chip Cloud sits at the top of the panel, followed by the H3 Cloud migration and operations and its text.
Business Context	A standard tab that needs a label only: no stable link and no initial selection.
Author Objective	Add Tabs with a Title only, each followed by a Title and a Text, and inspect the Cloud Tab in edit mode.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
A	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → “Tab {n}”
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
B	Title (Title)	Business and technology consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → “Tab {n}”
(C)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
(D)	Text (Text)	Strategy, operating model design and change management that turn transformation goals into measurable results.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
E	Title (Tab › Content)	Cloud	Yes (required)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → "Tab {n}"
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
F	Title (Title)	Cloud migration and operations	Yes (required)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → "Tab {n}"
(G)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
H	Text (Text)	Move, modernise and run workloads on any cloud with automated landing zones and managed operations.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
I	Title (Tab › Content)	Cybersecurity	Yes (required)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → "Tab {n}"
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
(J)	Title (Title)	Cyber defence and resilience	Yes (required)	Tab button label	1 to 3 words	Enforced: required in the model;

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
						empty in content → "Tab {n}"
(K)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
(L)	Text (Text)	Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.	No	Card text	1–3 sentences; lists and links allowed	None
(M)	Mode (Universal Editor)	Edit	No	—	—	None
—	Action (Canvas)	Select the Cloud tab button	—	Check on the preview (not stored in the content)	Select the Cloud tab button	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The Cloud tab underlined; the dashed brand chip Cloud above the panel's H3 and text.
- **Rendering behaviour:** The Tab becomes p.tab-title with its Title; its panel id is generated as {Tabs Container ID}-item-2 (or tabs-{n}-item-2), and the tab button id is that id plus -tab.
- **Publishing behaviour:** The Tabs are saved with the page; one Publish sends them to aem.page or aem.live.

Business Rules

- With ID empty the panel id is generated from the Tabs Container ID and the tab position.
- A generated id changes when tabs are reordered, so do not link to it; set an ID for links.
- With Active tab off on every Tab, the first tab is shown on load.
- Selecting a tab button in the canvas switches the panel; it does not change Active tab.

Common Authoring Mistakes

Error	Root Cause	Resolution
A link to #tabs-1-item-2 opens the wrong tab after reordering	The link uses a generated panel id	Enter an ID such as cloud on the Tab and link to #cloud
The Cloud tab is expected on load after selecting it in the editor	Clicking a tab in the canvas only switches the view	Switch Active tab on for the Cloud Tab

Troubleshooting

- **Symptoms:** After reloading the editor the Cloud tab is still shown instead of Consulting.
- **Cause:** Universal Editor keeps the tab that was shown before the Tabs were re-rendered.
- **Resolution:** Open the page in Preview or on aem.page in a new tab to see the initial tab.
- **Verification Steps:** On a fresh load without a hash Consulting, the first tab, is shown.

Use Cases

Every tab that does not need a stable link or initial selection.

Authoring Guidelines

Add a Tab inside the Tabs Container; enter **Title**; leave ID empty and Active tab off.

Business Rules

Panel id generated as `{Tabs Container ID}-item-{n}` (or `tabs-{n}-item-{n}`); the tab is shown first only if it is the first tab and no other tab is Active or deep-linked.

Rendering Rules

The Tab block becomes `<p class="tab-title">Cloud</p>`; its wrapper is hidden on the page.

Responsive Behaviour

Desktop / tablet / mobile: not visible on the page; chip in edit mode at all widths.

SEO Impact

The Title is the text of a `<button>`; it is not a heading. The marker's own text is hidden on the page (`display: none`).

Accessibility Compliance

The Title is the accessible name of the tab and, through `aria-labelledby`, of its panel. The hidden marker is not exposed to assistive technology.

Variation 2 — Active Tab

Variation Name

Active Tab (Active tab = on).

Business Purpose

Show a specific tab, not the first one, when the page opens.

Visual Example

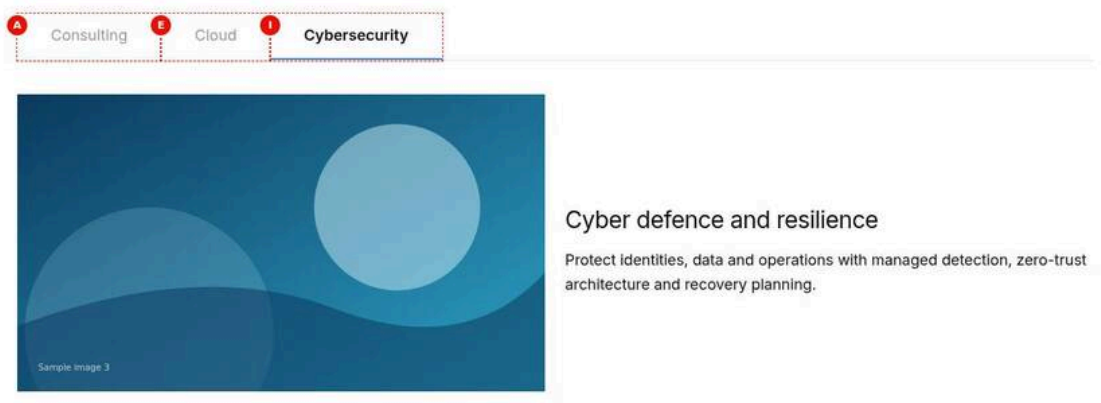

Figure 30: Active Tab variation — A Tabs Container at 1440 px loaded with its third tab, Cybersecurity, selected because that Tab has Active tab on; the panel shows the Columns with photo-3.svg on the left and the H3 Cyber defence and resilience with its text on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tab-active.jpg)

Screenshot Details — Active Tab variation

Item	Detail
Screenshot Name	`screenshots/tab-active.jpg`
Screenshot Purpose	Active Tab variation

Item	Detail
Screen Description	A Tabs Container at 1440 px loaded with its third tab, Cybersecurity, selected because that Tab has Active tab on; the panel shows the Columns with photo-3.svg on the left and the H3 Cyber defence and resilience with its text on the right.
Business Context	Services tabs that should open on the most relevant view, here Cybersecurity, rather than the first tab.
Author Objective	Switch Active tab on for the Cybersecurity Tab so it is shown when the page opens.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
A	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → "Tab {n}"
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(B)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(C)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(D)	Note (Columns)	Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Title "Business and technology consulting" (Title Type h3), Text "Strategy, operating model design and change management that turn transformation goals into measurable results."	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
E	Title (Tab › Content)	Cloud	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → "Tab {n}"

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(F)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(G)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(H)	Note (Columns)	Column 1: Image photo-2.svg (Alt Text “Cloud operations dashboard”); Column 2: Title “Cloud migration and operations” (Title Type h3), Text “Move, modernise and run workloads on any cloud with automated landing zones and managed operations.”	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
I	Title (Tab › Content)	Cybersecurity	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → “Tab {n}”
(J)	Active tab (Tab › Content)	On	No	Shown when the page loads	At most one per container	Only “true” counts
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(K)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(L)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(M)	Note (Columns)	Column 1: Image photo-3.svg (Alt Text “Security analysts in a cyber defence centre”); Column 2: Title “Cyber defence and resilience” (Title Type h3), Text “Protect identities, data and operations with managed detection, zero-trust architec-	No	—	—	None

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
		ture and recovery planning."				

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Cybersecurity semibold with the brand underline while Consulting and Cloud are grey; the Cybersecurity Columns below.
- **Rendering behaviour:** The Tab stores data-tab-active="true" and the Tabs select it on load, with aria-selected="true" and tabindex 0 on its button; no cmp:show is pushed for this initial selection.
- **Publishing behaviour:** Active tab is saved with the page; Publish to aem.page or aem.live. Visitors with a #id in the address still see the linked tab.

Business Rules

- Only the value true counts as on; switch Active tab on for one Tab only.
- If several Tabs are Active, the first one wins.
- A deep link (#id) in the address takes priority over Active tab.
- In Universal Editor the tab shown before a re-render is kept, so check the result with a reload or in Preview.
- Put the main content in the Active tab: it is the panel visible without interaction.

Common Authoring Mistakes

Error	Root Cause	Resolution
Cloud opens instead of Cybersecurity	Active tab is also on for the Cloud Tab	Switch Active tab off on all Tabs except Cybersecurity
The change has no effect in the editor	Universal Editor keeps the previously shown tab	Reload the page or check on aem.page

Troubleshooting

- **Symptoms:** The page opens on Consulting although Cybersecurity has Active tab on.
- **Cause:** The page was opened with a #id of another tab, or the change was not published.
- **Resolution:** Open the page without a hash and publish the page again.
- **Verification Steps:** On a fresh load of aem.page without a hash Cybersecurity is selected.

Use Cases

Promote the most relevant view (e.g. the current year's results).

Authoring Guidelines

Select the Tab; switch **Active tab** on. Keep it off on all other Tabs of the container.

Business Rules

If several Tabs are Active, the first one wins. A deep link `#id` and (in Universal Editor) the tab shown before a re-render take priority over Active tab.

Rendering Rules

Stored as `data-tab-active="true"`; the Tabs block selects it on load (no `cmp:show` for the initial selection).

Responsive Behaviour

Same at all widths.

SEO Impact

The active panel is the one visible without interaction.

Accessibility Compliance

Its tab button has `aria-selected="true"` and `tabindex="0"` on load.

Variation 3 — Tab with ID (deep link)

Variation Name

Tab with ID.

Business Purpose

Give a tab a stable id so links (`page#cloud`), Anchor Lists and analytics can address it.

Visual Example

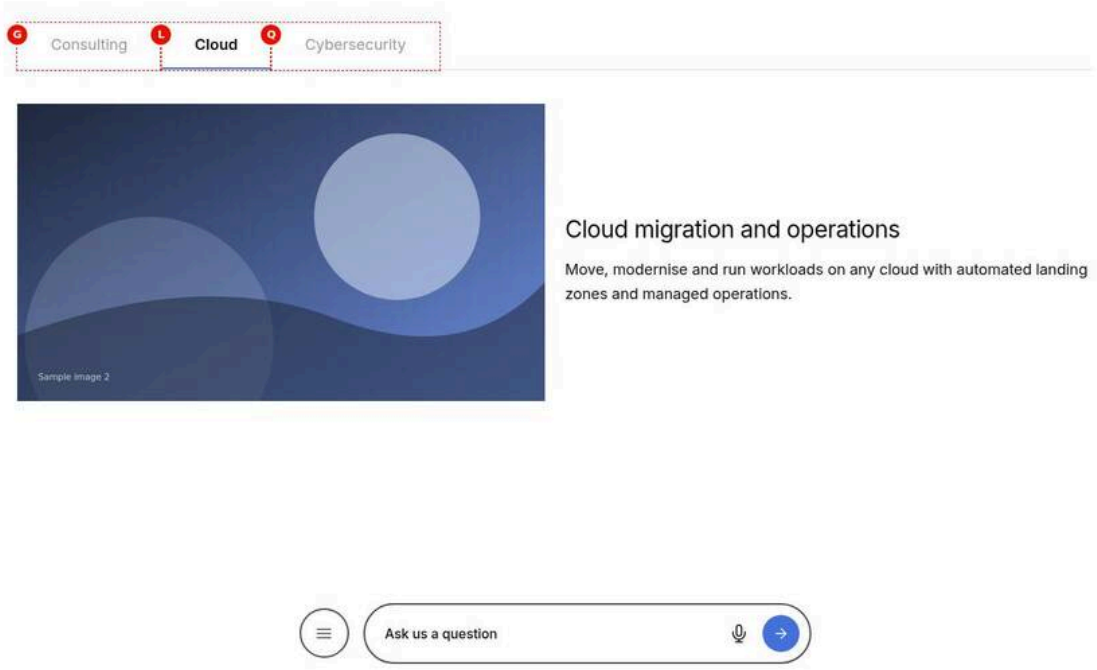

Figure 31: Tab with ID variation — The services page at 1440 px after #cloud is added to the address: the page has scrolled past the H1 and image so the Tabs sit just below the header area, with Cloud selected and its Columns (photo-2.svg, the H3 Cloud migration and operations and its text) shown; the footer's floating Ask us a question bar is at the bottom. The address bar itself is not in the screenshot. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tab-deep-link.jpg)

Screenshot Details — Tab with ID variation

Item	Detail
Screenshot Name	`screenshots/tab-deep-link.jpg`
Screenshot Purpose	Tab with ID variation
Screen Description	The services page at 1440 px after #cloud is added to the address: the page has scrolled past the H1 and image so the Tabs sit just below the header area, with Cloud selected and its Columns (photo-2.svg, the H3

Item	Detail
	Cloud migration and operations and its text) shown; the footer's floating Ask us a question bar is at the bottom. The address bar itself is not in the screenshot.
Business Context	Linking from navigation, a campaign or another page straight to the Cloud view of the services tabs.
Author Objective	Give each Tab a stable ID (consulting, cloud, cybersecurity) and open the Cloud tab with #cloud.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
(A)	Title (Title)	Technology services for every stage of transformation	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → "Tab {n}"
(B)	Title Type (Title)	h1	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
(C)	Text (Text)	From strategy to managed operations, our teams help enterprises modernise, grow and stay secure.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Image	Yes	Adds the Image to the page	Select the section in the content tree, choose Add (+) and pick Image	Only components the section allows (section filter)
(D)	Image (Image)	Select the asset wide.svg (/en/media/wide.svg)	Recommended (without an image the component renders nothing)	The image to show	High-quality original from `/content/dam/tcs-corp/`	None in the model
(E)	Alt Text (Image)	Abstract illustration of connected services	Recommended for informative images	Text alternative	Describe content and purpose; empty if decorative	None in the model
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
(F)	Label (Tabs Container › Accessibility)	Our services	No	aria-label of the tab list	Describe the group	None (trimmed)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
G	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → "Tab {n}"
(H)	ID (Tab › Content)	consulting	No	Panel id for deep links	Lower case, no spaces	Normalised with `toClassName`; de-duplicated `-2`, `-3`
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
(I)	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
(J)	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
(K)	Note (Columns)	Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Title "Business and technology consulting" (Title Type h3), Text "Strategy, operating model design and change management that turn transformation goals into measurable results."	No	—	—	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)

(V)	Address (Browser)	Open the page with #cloud appended (…/g08a-tab-deeplink#cloud)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The Tabs at the top of the viewport below the 4rem header space, Cloud underlined, the Cloud Columns below; the page content above is scrolled out of view.
- **Rendering behaviour:** The ID becomes the panel id (button id cloud-tab). On hashchange, or once after the page load event, a hash naming a panel clicks its tab and scrolls the Tabs into view with scroll-margin-top of the navigation height.
- **Publishing behaviour:** The IDs are saved with the page; publish it to aem.page or aem.live. Links to page#cloud need no extra publish; links in other pages must be published there.

Business Rules

- The ID is normalised with toClassName (lower case, other characters to hyphens), so link to exactly the normalised value.
- An ID already used on the page gets –2, –3, and the link must use that suffix.
- Only panel ids open tabs; #cloud-tab or the section id scroll but do not change the tab.
- A deep link overrides Active tab; the hash is read, not written when visitors change tab.
- Keep IDs identical across locales, as they are used in links and cmp:show paths.

Common Authoring Mistakes

Error	Root Cause	Resolution
#Cloud Services does not open the tab	The ID is normalised to cloud-services	Use lower-case hyphenated IDs and the same value in links
The link opens the first tab	Two Tabs on the page use the ID cloud, so the second became cloud-2	Give every Tab a unique ID on the page
The link scrolls but keeps Consulting	The link targets #cloud-tab, the button id	Link to the panel id #cloud

Troubleshooting

- **Symptoms:** Opening …/g08a-tab-deeplink#cloud shows the page top with Consulting selected.
- **Cause:** The Cloud Tab has no ID (its panel id is generated) or the ID differs from cloud after normalisation.
- **Resolution:** Select the Cloud Tab, enter the ID cloud, reload and republish the page.
- **Verification Steps:** Inspect the panel: id="cloud"; opening the address with #cloud selects Cloud and scrolls to the Tabs.

Use Cases

Linking from navigation, campaigns, emails or other pages directly to a tab.

Authoring Guidelines

Enter **ID**, e.g. `cloud` (lower case, no spaces).

Business Rules

The ID is normalised (`toClassName`: lower case, non-alphanumerics to hyphens); an id already used on the page gets `-2`, `-3`, …. The tab button id is `{id}-tab`.

Rendering Rules

Stored as `data-tab-id`; used as the panel `id`.

Responsive Behaviour

Same at all widths; the page scrolls the Tabs below the fixed header (4rem).

SEO Impact

Fragment links (`#cloud`) are not separate URLs for search engines.

Accessibility Compliance

Deep links move the view to the Tabs and select the tab; focus is not moved.

6.22.4 Authoring Experience

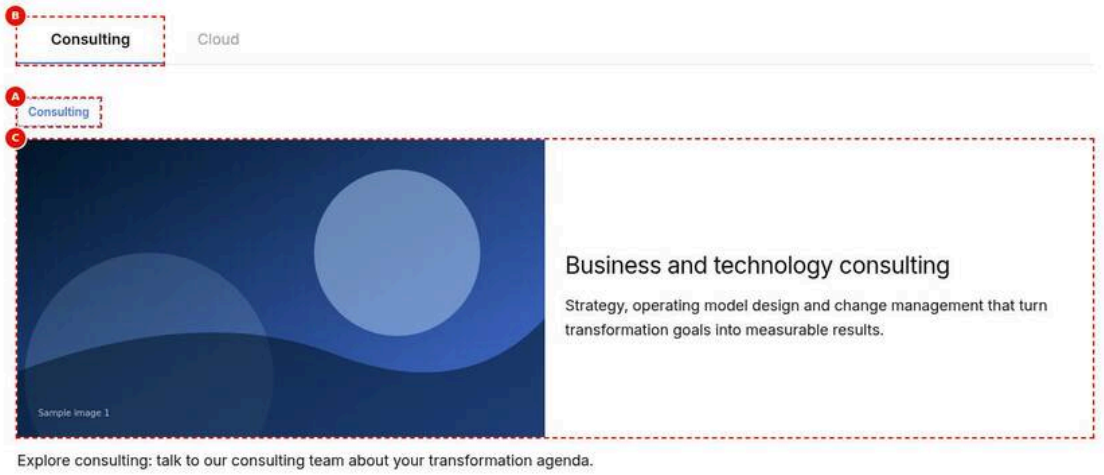

Figure 32: Universal Editor canvas — Edit mode preview at 1440 px with letters: A on the dashed Tab chip Consulting at the top of the panel, B on the selected tab button Consulting (Cloud next to it), C on the Columns with photo-1.svg and the H3; the Text Explore consulting: talk to our consulting team about your transformation agenda follows outside C. No content tree is shown. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/tab-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/tab-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	Edit mode preview at 1440 px with letters: A on the dashed Tab chip Consulting at the top of the panel, B on the selected tab button Consulting (Cloud next to it), C on the Columns with photo-1.svg and the H3; the Text Explore consulting: talk to our consulting team about your transformation agenda follows outside C. No content tree is shown.
Business Context	The authoring view of a Tab marker: the chip, its tab button and the components that form its content.
Author Objective	Select the first Tab, Consulting, and see which components belong to its tab.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Tabs Container	Yes	Adds the Tabs Container to the page	Choose Add (+) on the page and pick Tabs Container	Only components the section allows (section filter)
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Title (Tab › Content)	Consulting	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → "Tab {n}"
—	Component (Section › Add (+))	Columns	Yes	Adds the Columns to the page	Select the section in the content tree, choose Add (+) and pick Columns	Only components the section allows (section filter)
—	Columns (Columns › Content)	2	No	Number of columns of the grid	2 to 4	Number value type; no range enforced
—	Rows (Columns › Content)	1	No	Number of rows	As many as needed	Number value type; no range enforced
—	Note (Columns)	Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Title "Business and technology consulting" (Title Type h3), Text "Strategy, operating model design and change management that turn transformation goals into measurable results."	No	—	—	None
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	Explore consulting: talk to our consulting team about your transformation agenda.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Tab	Yes	Adds the Tab to the page	Select the section in the content tree, choose Add (+) and pick Tab	Only components the section allows (section filter)
—	Title (Tab › Content)	Cloud	Yes (`required`)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → "Tab {n}"
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	Move, modernise and run workloads on any cloud with automated landing zones and managed operations.	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
—	Mode (Universal Editor)	Edit	No	—	—	None
—	Select (Universal Editor › Content tree)	Tab “Consulting” (the first Tab of the Tabs Container)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter’s Annotations list.

Expected Page Output

- **Visual output:** The chip Consulting with a dashed brand border above the Columns and the Text; the Consulting tab button underlined in the list.
- **Rendering behaviour:** In edit mode the Tab wrapper is shown as the chip; selecting a component in a panel shows its tab (aue:ui-select), and the Tab’s instrumentation stays on the chip.
- **Publishing behaviour:** The chip is editor-only; publishing the page sends the tabs without it to aem.page or aem.live.

Business Rules

- The components after a Tab, up to the next Tab, are its content: here the Columns and the Text.
- The Tab has only Title, ID and Active tab; its content is in the components after it.
- Hide block on a Tab does not remove the tab from the tab list.
- The Additional tab fields of a Tab have no visible effect on the page.

Common Authoring Mistakes

Error	Root Cause	Resolution
Hide block on the Consulting Tab leaves the tab visible	Hide block hides only the Tab block, not the tab built from it	Delete the Tab and its components to re-move the tab
The Text Explore consulting ends up under Cloud	It was dropped below the Cloud Tab	Drag it above the Cloud Tab, after the Columns

Troubleshooting

- **Symptoms:** Selecting the Consulting Tab in the content tree does not show its properties.
- **Cause:** The chip of another tab was selected, or the Tabs were re-rendered and the selection was lost.
- **Resolution:** Select the Consulting tab button, then the chip, or select the Tab again in the content tree.
- **Verification Steps:** The properties panel shows Title Consulting in the Content tab.

Annotations

- A = Tab chip (the Tab block in edit mode; select it to edit its properties).
- B = Tab button in the tab list (shows the Title).
- C = The components after the Tab (its content, up to the next Tab).

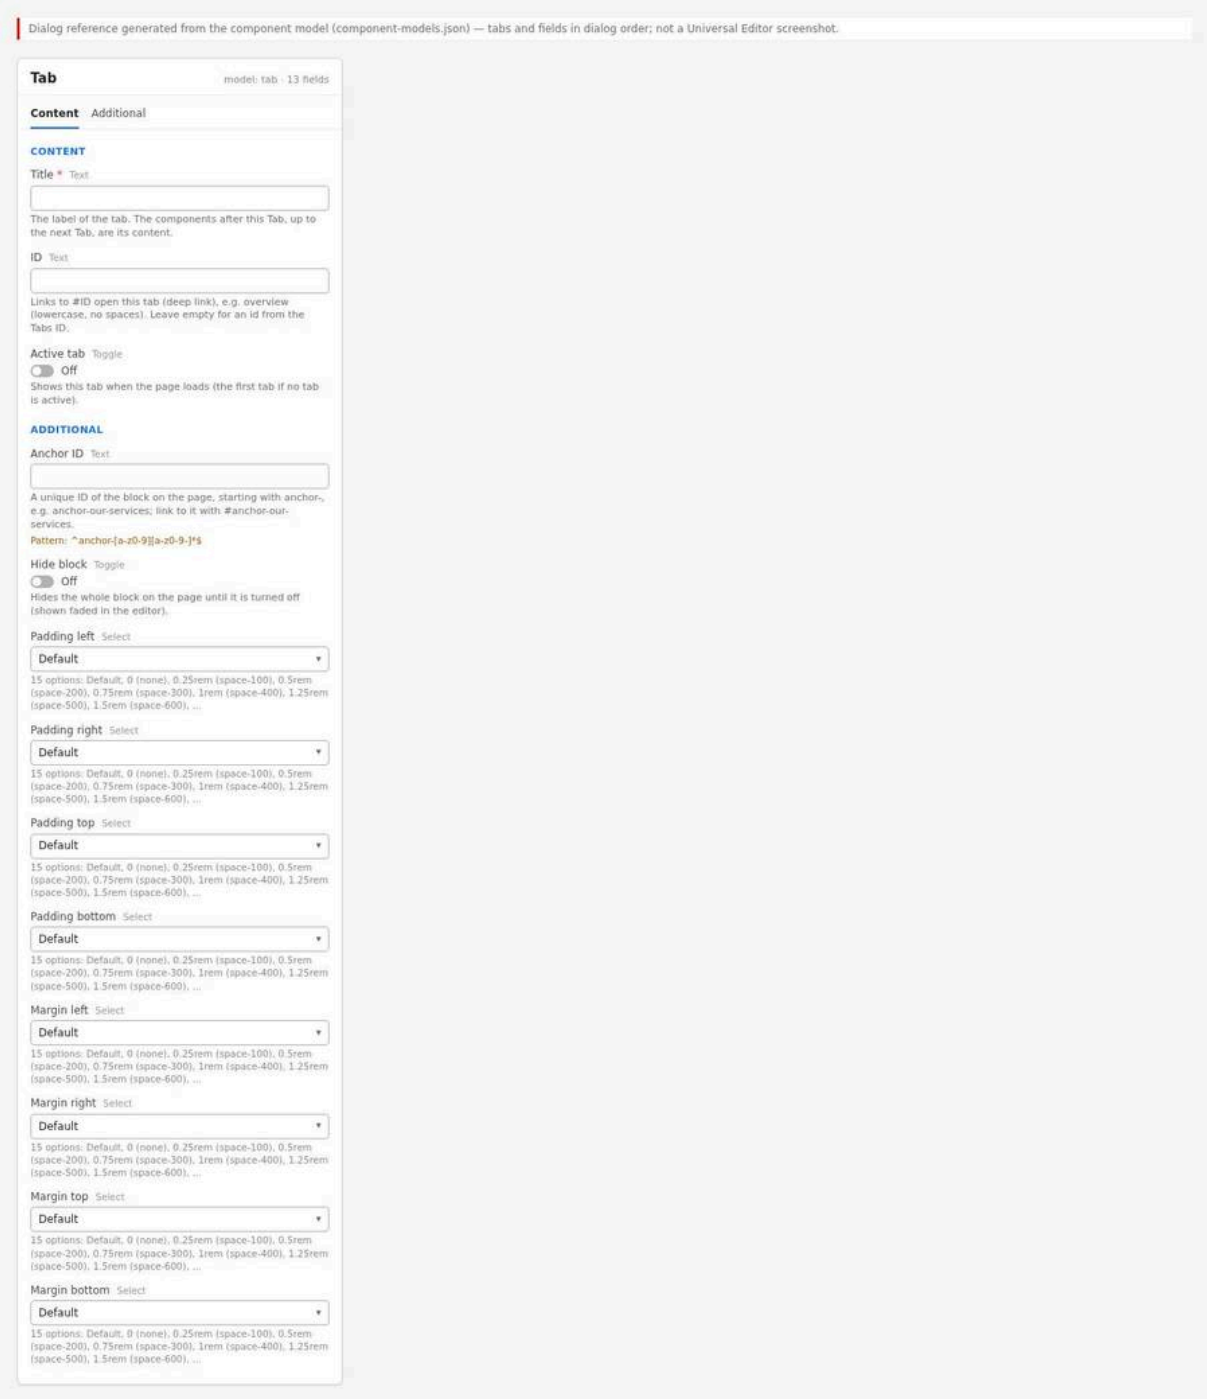

Figure 33: Properties panel — The properties panel of a Tab with the Content tab (Title, ID, Active tab) and the Additional tab. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/tab-properties-panel.jpg)

Properties panel, Tab (model `tab`)

- **Content:** Title (required); ID; Active tab.
- **Additional:** Anchor ID; Hide block; Padding left / right / top / bottom; Margin left / right / top / bottom (no visible effect on the page, see 6.22.6).

6.22.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: Open the page that has (or will have) a Tabs Container in Universal Editor.

Expected Result: Edit mode; the Tabs Container is visible.

Steps — Step 1: The page in Universal Editor with a Tabs Container.

Step	Where	Field / control	Value / action
1	AEM Sites console	Page	Select the page with the Tabs Container
2	AEM Sites console › Toolbar	Edit	Select Edit
3	Universal Editor	Mode	Edit (the Tabs Container is visible on the canvas)

Step 2 — Select the Tabs Container

Action: Select the Tabs Container in the content tree.

Expected Result: Its + (Add) button offers Tab, Columns, Title, Text, Image, Button.

Steps — Step 2: The Add menu of the Tabs Container listing Tab and the content components.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Select	Tabs Container
2	Universal Editor › Content tree › Tabs Container	Add (+)	Open the menu: Tab, Columns, Title, Text, Image, Button

Step 3 — Add a Tab

Action: Choose **Tab**.

Expected Result: A Tab with the default Title “Tab” is added; a new tab button appears.

Steps — Step 3: The new Tab chip “Tab” and its tab button.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree › Tabs Container › Add (+)	Component	Tab
2	Universal Editor	Canvas	A Tab chip “Tab” and a new tab button “Tab”

Step 4 — Enter the Title

Action: In the Content tab, replace the Title with the tab label, e.g. “Consulting”.

Expected Result: The chip and the tab button show the new Title.

Steps — Step 4: Title field “Consulting” and the updated tab button.

Step	Where	Field / control	Value / action
1	Tab › Content	Title	Consulting
2	Universal Editor	Canvas	The chip and the tab button show “Consulting”

Step 5 — Enter the ID (optional)

Action: Enter an ID, e.g. `consulting`.

Expected Result: After the Tabs are rendered again (e.g. reload), the panel id is `consulting`.

Steps — Step 5: ID field filled with consulting.

Step	Where	Field / control	Value / action
1	Tab › Content	ID	consulting

Step 6 — Set Active tab (optional)

Action: Switch **Active tab** on for the tab to show on load (one Tab only).

Expected Result: On the next load the tab is selected.

Steps — Step 6: Active tab switched on in the properties panel.

Step	Where	Field / control	Value / action
1	Tab › Content	Active tab	On (on one Tab of the container only)

Step 7 — Add the tab's content

Action: With the Tab (or the container) selected, add Columns, Title, Text, Image or Button components and make sure they are placed after this Tab and before the next one.

Expected Result: The components appear in this tab's panel.

Steps — Step 7: Content tree: Tab "Consulting", Columns, Text, then Tab "Cloud".

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree › Tabs Container › Add (+)	Component	Columns (placed after the Tab "Consulting")
2	Universal Editor › Content tree › Tabs Container › Add (+)	Component	Text (after the Columns)
3	Universal Editor › Content tree	Check	Order: Tab "Consulting", Columns, Text, then Tab "Cloud"

Step 8 — Repeat and reorder

Action: Add the next Tab and its components; drag Tabs (with their components) to reorder.

Expected Result: The tab order follows the content tree.

Steps — Step 8: A Tab dragged above another Tab in the content tree.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree › Tabs Container › Add (+)	Component	Tab, then set Title Cloud and add its components
2	Universal Editor › Content tree	Drag	Drag the Tab "Cloud" (and its components) above the Tab "Consulting"
3	Universal Editor	Canvas	The tab order follows the content tree

Step 9 — Preview

Action: Switch to **Preview**.

Expected Result: The chips disappear; the tabs work as on the live page.

Steps — Step 9: Preview mode without chips.

Step	Where	Field / control	Value / action
1	Universal Editor › Toolbar	Preview	Switch to Preview
2	Preview	Check	The Tab chips are hidden; the tabs switch as on the live page

Step 10 — Validate and publish

Action: Run the checklist below, then publish the page.

Expected Result: The live page shows the tabs with the right labels and initial tab.

Steps — Step 10: The Publish dialog for the page.

Step	Where	Field / control	Value / action
1	Checklist	Check	Titles, IDs, one Active tab at most
2	Universal Editor › Toolbar	Publish	Select Publish
3	Publish dialog	Destination	Publish to Live
4	Publish dialog	Publish	Confirm

Preview Process
Universal Editor Preview (no chips); Edge Delivery preview on `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}`; test `#id` links.

Publishing Process
Publish the page (the Tab is part of the page; nothing else to publish). Live: `https://main--tcs-corp--sradha-tcs.aem.live/{locale}/{path}` ([To be confirmed: production domain and CDN]).

Validation Process
- ☐ Every Tab has a Title (no "Tab {n}" fallback labels).
- ☐ The first item in the Tabs Container is a Tab.
- ☐ At most one Tab has Active tab on.
- ☐ IDs are unique on the page, lower case, and `#id` links open the tab.
- ☐ Each Tab is followed by at least one component (no empty panels).
- ☐ In Preview, no chips are visible.

Rollback Process
Restore the previous page version and republish; or correct / delete the Tab and republish.

The walkthroughs below repeat the steps above for each variation of chapter 6.22.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Standard Tab
Reproduces the screenshot `screenshots/tab-standard.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: An empty Tabs Container is added with the edit-mode hint.

Step 3 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs, each followed by a Title and a Text, are added in order.

Step 4 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Consulting.

Expected Result: Chips and tab buttons read Consulting, Cloud and Cybersecurity.

Step 5 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: Three Tabs, each followed by a Title and a Text, are added in order.

Step 6 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (B) = Business and technology consulting; **Title Type** (C) = h3.

Expected Result: Each panel starts with an H3, e.g. Cloud migration and operations.

Step 7 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs, each followed by a Title and a Text, are added in order.

Step 8 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = Strategy, operating model design and change management that turn transformation goals into measurable results.

Expected Result: A one-sentence description appears under each panel heading.

Step 9 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs, each followed by a Title and a Text, are added in order.

Step 10 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (E) = Cloud.

Expected Result: Chips and tab buttons read Consulting, Cloud and Cybersecurity.

Step 11 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: Three Tabs, each followed by a Title and a Text, are added in order.

Step 12 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (F) = Cloud migration and operations; **Title Type** (G) = h3.

Expected Result: Each panel starts with an H3, e.g. Cloud migration and operations.

Step 13 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs, each followed by a Title and a Text, are added in order.

Step 14 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (H) = Move, modernise and run workloads on any cloud with automated landing zones and managed operations.

Expected Result: A one-sentence description appears under each panel heading.

Step 15 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs, each followed by a Title and a Text, are added in order.

Step 16 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (I) = Cyber-security.

Expected Result: Chips and tab buttons read Consulting, Cloud and Cybersecurity.

Step 17 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: Three Tabs, each followed by a Title and a Text, are added in order.

Step 18 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (J) = Cyber defence and resilience; **Title Type** (K) = h3.

Expected Result: Each panel starts with an H3, e.g. Cloud migration and operations.

Step 19 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Tabs, each followed by a Title and a Text, are added in order.

Step 20 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (L) = Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.

Expected Result: A one-sentence description appears under each panel heading.

Step 21 — Fill in Universal Editor

Action: Select **Universal Editor** in the content tree and enter in the properties panel: **Mode** (M) = Edit.

Expected Result: In Edit mode each panel shows the dashed chip of its Tab.

Step 22 — Canvas

Action: Action: Select the Cloud tab button.

Expected Result: Selecting the Cloud tab button shows the Cloud panel with the chip Cloud at its top.

Step 23 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The Cloud tab underlined; the dashed brand chip Cloud above the panel's H3 and text.

Step 24 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The Tabs are saved with the page; one Publish sends them to aem.page or aem.live.

Step 25 — Verify

Action: On the live page check: On a fresh load without a hash Consulting, the first tab, is shown.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Active Tab

Reproduces the screenshot `screenshots/tab-active.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: An empty Tabs Container is added with the edit-mode hint.

Step 3 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 4 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Consulting.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity; with Active tab on, Cybersecurity is selected after the Tabs render again.

Step 5 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 6 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (B) = 2; **Rows** (C) = 1.

Expected Result: A two-column, one-row Columns appears in each panel.

Step 7 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (D) = Column 1: Image photo-1.svg (Alt Text “Consultants in a strategy workshop”); Column 2: Title “Business and technology consulting” (Title Type h3), Text “Strategy, operating model design and change management that turn transformation goals into measurable results.”.

Expected Result: The Cybersecurity panel shows photo-3.svg and the H3 Cyber defence and resilience.

Step 8 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 9 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (E) = Cloud.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity; with Active tab on, Cybersecurity is selected after the Tabs render again.

Step 10 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 11 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (F) = 2; **Rows** (G) = 1.

Expected Result: A two-column, one-row Columns appears in each panel.

Step 12 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (H) = Column 1: Image photo-2.svg (Alt Text "Cloud operations dashboard"); Column 2: Title "Cloud migration and operations" (Title Type h3), Text "Move, modernise and run workloads on any cloud with automated landing zones and managed operations.".

Expected Result: The Cybersecurity panel shows photo-3.svg and the H3 Cyber defence and resilience.

Step 13 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 14 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (I) = Cybersecurity; **Active tab** (J) = On.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity; with Active tab on, Cybersecurity is selected after the Tabs render again.

Step 15 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: Three Tabs and three Columns are added in alternating order.

Step 16 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (K) = 2; **Rows** (L) = 1.

Expected Result: A two-column, one-row Columns appears in each panel.

Step 17 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (M) = Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Title "Cyber defence and resilience" (Title Type h3), Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.".

Expected Result: The Cybersecurity panel shows photo-3.svg and the H3 Cyber defence and resilience.

Step 18 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Cybersecurity semibold with the brand underline while Consulting and Cloud are grey; the Cybersecurity Columns below.

Step 19 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Active tab is saved with the page; Publish to aem.page or aem.live. Visitors with a #id in the address still see the linked tab.

Step 20 — Verify

Action: On the live page check: On a fresh load of aem.page without a hash Cybersecurity is selected.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Tab with ID (deep link)

Reproduces the screenshot `screenshots/tab-deep-link.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title, a Text and an Image are added to the first section above the tabs.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Technology services for every stage of transformation; **Title Type** (B) = h1.

Expected Result: The H1 Technology services for every stage of transformation opens the page.

Step 4 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Title, a Text and an Image are added to the first section above the tabs.

Step 5 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = From strategy to managed operations, our teams help enterprises modernise, grow and stay secure.

Expected Result: The introduction text appears under the H1.

Step 6 — Add the Image

Action: Select the section in the content tree, choose **Add (+)** and pick **Image**.

Expected Result: A Title, a Text and an Image are added to the first section above the tabs.

Step 7 — Fill in Image

Action: Select **Image** in the content tree and enter in the properties panel: **Image** (D) = Select the asset wide.svg (/en/media/wide.svg); **Alt Text** (E) = Abstract illustration of connected services.

Expected Result: The wide illustration appears with the alt text Abstract illustration of connected services.

Step 8 — Add the Tabs Container

Action: Choose Add (+) on the page and pick **Tabs Container**.

Expected Result: A Tabs Container is added below the first section with the edit-mode hint.

Step 9 — Fill in Tabs Container › Accessibility

Action: Select **Tabs Container** in the content tree and open the **Accessibility** tab of the properties panel. Enter: **Label** (F) = Our services.

Expected Result: No visible change; the tab list is labelled Our services.

Step 10 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: A Title, a Text and an Image are added to the first section above the tabs.

Step 11 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (G) = Consulting; **ID** (H) = consulting.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity; their panels get the ids consulting, cloud and cybersecurity.

Step 12 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: A Title, a Text and an Image are added to the first section above the tabs.

Step 13 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (I) = 2; **Rows** (J) = 1.

Expected Result: A two-column, one-row Columns appears in each panel.

Step 14 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (K) = Column 1: Image photo-1.svg (Alt Text "Consultants in a strategy workshop"); Column 2: Title "Business and technology consulting" (Title Type h3), Text "Strategy, operating model design and change management that turn transformation goals into measurable results.".

Expected Result: Each panel shows a photo and the H3 with text, e.g. Cloud migration and operations.

Step 15 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: A Title, a Text and an Image are added to the first section above the tabs.

Step 16 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (L) = Cloud; **ID** (M) = cloud.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity; their panels get the ids consulting, cloud and cybersecurity.

Step 17 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: A Title, a Text and an Image are added to the first section above the tabs.

Step 18 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (N) = 2; **Rows** (O) = 1.

Expected Result: A two-column, one-row Columns appears in each panel.

Step 19 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (P) = Column 1: Image photo-2.svg (Alt Text "Cloud operations dashboard"); Column 2: Title "Cloud migration and operations" (Title Type h3), Text "Move, modernise and run workloads on any cloud with automated landing zones and managed operations.".

Expected Result: Each panel shows a photo and the H3 with text, e.g. Cloud migration and operations.

Step 20 — Add the Tab

Action: Select the section in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: A Title, a Text and an Image are added to the first section above the tabs.

Step 21 — Fill in Tab › Content

Action: Select **Tab** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (Q) = Cybersecurity; **ID** (R) = cybersecurity.

Expected Result: The tab buttons read Consulting, Cloud and Cybersecurity; their panels get the ids consulting, cloud and cybersecurity.

Step 22 — Add the Columns

Action: Select the section in the content tree, choose **Add (+)** and pick **Columns**.

Expected Result: A Title, a Text and an Image are added to the first section above the tabs.

Step 23 — Fill in Columns › Content

Action: Select **Columns** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (S) = 2; **Rows** (T) = 1.

Expected Result: A two-column, one-row Columns appears in each panel.

Step 24 — Fill in Columns

Action: Select **Columns** in the content tree and enter in the properties panel: **Note** (U) = Column 1: Image photo-3.svg (Alt Text "Security analysts in a cyber defence centre"); Column 2: Title "Cyber defence and resilience" (Title Type h3), Text "Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.".

Expected Result: Each panel shows a photo and the H3 with text, e.g. Cloud migration and operations.

Step 25 — Fill in Browser

Action: Select **Browser** in the content tree and enter in the properties panel: **Address** (V) = Open the page with #cloud appended (…/g08a-tab-deeplink#cloud).

Expected Result: With #cloud appended the page scrolls to the Tabs and the Cloud tab is selected.

Step 26 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The Tabs at the top of the viewport below the 4rem header space, Cloud underlined, the Cloud Columns below; the page content above is scrolled out of view.

Step 27 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The IDs are saved with the page; publish it to aem.page or aem.live. Links to page#cloud need no extra publish; links in other pages must be published there.

Step 28 — Verify

Action: On the live page check: Inspect the panel: id="cloud"; opening the address with #cloud selects Cloud and scrolls to the Tabs.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.22.6 Authorable Field Specification

Model `tab` (Tab marker)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Tab: Content	tab	—	—	—	Tab properties	—	—	—
Title (`title`)	text	Yes (`required`)	No	"Tab" (new component template)	Tab button label	1 to 3 words	Enforced: required in the model; empty in content → "Tab {n}"	Consulting
ID (`tabId`)	text	No	No	empty (generated)	Panel id for deep links	Lower case, no spaces	Normalised with `toClassName`; de-duplicated `-2`, `-3`	consulting
Active tab (`activeTab`)	boolean	No	No	off	Shown when the page loads	At most one per container	Only "true" counts	on
Tab: Additional	tab	—	—	—	Block options	Not needed on a Tab	—	—
Anchor ID (`classes_anchor`)	text	No	No	empty	Id of the (hidden) Tab block	Use ID (Content) for deep links	Enforced: regExp `^anchor-[a-z0-9][a-z0-9-]*$`	anchor-consulting
Hide block (`classes_hideblock`)	boolean	No	No	false	Hides the Tab block	Does not remove the tab	None	false
Padding left (`classes_paddingleft`)	select	No	No	Default	Spacing of the Tab block	No visible effect on the page	One of 15 options	pl-0
Padding right (`classes_paddingright`)	select	No	No	Default	As above	As above	One of 15 options	pr-0
Padding top (`classes_paddingtop`)	select	No	No	Default	As above	As above	One of 15 options	pt-0
Padding bottom (`classes_paddingbottom`)	select	No	No	Default	As above	As above	One of 15 options	pb-0
Margin left (`classes_marginleft`)	select	No	No	Default	As above	As above	One of 15 options	ml-0

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Margin right (`classes_marginright`)	select	No	No	Default	As above	As above	One of 15 options	mr-0
Margin top (`classes_margintop`)	select	No	No	Default	As above	As above	One of 15 options	mt-0
Margin bottom (`classes_marginbottom`)	select	No	No	Default	As above	As above	One of 15 options	mb-0

Field details

- **Title**
  - Purpose: the tab button text; also `dc:title` of `cmp:show` and the chip text in edit mode.
  - Allowed Values: plain text. Character Limits: none enforced; Recommended: up to 25 characters (tab labels do not wrap in the horizontal list).
  - Business Rules: required in the model; if the content is empty anyway, the Tabs block uses "Tab {n}" (placeholder `tabNumber`). Edits update the tab button immediately in Universal Editor (`tabs:tab-update`).
  - Dependency Rules: none. Visibility Rules: always visible. Sample Content: "Consulting".
- **ID**
  - Purpose: the panel `id`; `#id` links open the tab.
  - Allowed Values: any text, normalised to lower case with hyphens. Character Limits: none enforced; Recommended: under 30 characters.
  - Business Rules: empty → `{Tabs Container ID}-item-{n}`, else `tabs-{n}-item-{n}`; duplicates on the page get `-2`, `-3`. Changes apply when the Tabs are rendered again.
  - Dependency Rules: unique on the page. Visibility Rules: always visible.
  - Sample Content: `consulting`.
- **Active tab**
  - Purpose: initial tab. Allowed Values: on / off.
  - Business Rules: first Active Tab wins; overridden by a deep link and, in Universal Editor, by the tab shown before a re-render. Changes apply when the Tabs are rendered again.
  - Dependency Rules: none. Visibility Rules: always visible. Sample Content: on.
- **Additional tab fields**
  - Purpose: the common block options (Anchor ID, Hide block, 15-option padding / margin selects: Default; 0 (none); 0.25rem (space-100); 0.5rem (space-200); 0.75rem (space-300); 1rem (space-400); 1.25rem (space-500); 1.5rem (space-600); 2rem (space-800); 2.5rem (space-1000); 3rem (space-1200); 4rem (space-1600); 5rem (space-2000); 6rem (space-2400); 7.5rem (space-3000)).
  - Business Rules: they apply to the Tab block, which is hidden on the page, so they have no visible effect there. Hide block does not remove the tab from the tab list (the Tabs block still creates a tab for it). Anchor ID gives the hidden Tab block an id; links to it do not open the tab (only panel ids do). Padding / margin affect only the chip in edit mode.
  - Character Limits: Anchor ID: none enforced. Dependency Rules: none. Visibility Rules: always visible. Sample Content: leave all at their defaults.

No field of the Tab model has a `condition`.

6.22.7 Field Annotation Mapping

Marker	Field	Purpose
A	Tab chip (Title, ID, Active tab, Additional)	Selects the Tab and its properties

Marker	Field	Purpose
B	Title (shown on the tab button)	Tab label
C	Following components (not Tab fields)	The tab's content

6.22.8 Component Specification

Attribute	Value
Component Name	Tab (`tab`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`blocks/tabs`, `scripts/aem.js` (`toClassName`), `utils/properties.js`, block options
Component Type	Block used as an item marker inside the Tabs Container section (key-value block)
Supported Variants	Standard, Active, with ID (behaviour modes; no styles)
Supported Templates	Any page with a Tabs Container
Supported Metadata	None
Supported Tags	None
Supported Personalization	None
Caching Considerations	Part of the page HTML (Edge Delivery CDN)
Performance Considerations	Tiny script; no requests; loaded with its section after the Tabs block (which reads the Tab first)
Accessibility Compliance	Hidden on the page (not exposed); its Title names the tab and panel (WCAG 4.1.2, 2.4.6)
SEO Compliance	Marker text hidden; Title is button text, not a heading

6.22.9 Input Model

- **Content Inputs:** Title, ID, Active tab (key-value rows `title`, `tabId`, `activeTab`; positional rows, one per field in dialog order, are also accepted).
- **Metadata Inputs:** none. **Tags Inputs:** none.
- **Page Context Inputs:** its position in the Tabs Container (which components follow it).
- **Query Inputs:** none. **Manual Inputs:** all fields.

Authored HTML (illustrative):

```
<div class="tab" data-aue-resource="urn:.../tab_1" data-aue-model="tab">
  <div><div>title</div><div>Consulting</div></div>
  <div><div>tabId</div><div>consulting</div></div>
  <div><div>activeTab</div><div>true</div></div>
</div>
```

6.22.10 Output Model

Rendered Output: `div.tab.block` with data attributes `data-tab-title`, `data-tab-id`, `data-tab-active` (cached values) containing `p.tab-title`; inside the Tabs panel its wrapper `div.tab-wrapper` is hidden except in edit mode.

Generated HTML

```
<div class="tab-wrapper">
  <div class="tab block" data-block-name="tab" data-tab-title="Consulting"
    data-tab-id="consulting" data-tab-active="true">
    <p class="tab-title">Consulting</p>
  </div>
</div>
```

Generated JSON: none. **Generated Metadata:** none.

DOM events: `tabs:tab-update` (bubbles) after each decoration, `detail: { title, id, active }`; the enclosing Tabs updates the tab label.

Analytics Tracking: the Tab block is registered in the data layer component state as `tcs-corp/components/tab` (id `tab-{n}`, or its Anchor ID) with the Tabs block as `parentId`. It pushes no events; the Tabs block pushes `cmp:show` with the Tab's panel id and Title (see 6.21.10).

Personalization Output: none. **Search Index Output:** none.

Target Personalization Output: None: Supported Personalization is None (as of this handover). The Tab pushes no events; the Tabs block pushes cmp:show with the Tab's panel id and Title, which future Adobe Target use could read (not implemented).

6.22.11 Business Rules

1. Properties are read once and cached on the block as data attributes, so they can be read again after the block is decorated.
2. Key-value rows (`title`, `tabid`, `activetab` after normalisation) are used if present; otherwise the last cell of each row in dialog order (Title, ID, Active tab).
3. The ID is normalised with `toClassName`.
4. Active tab is on only for the text "true".
5. Decoration replaces the content with `p.tab-title` showing the Title.
6. After decoration a `tabs:tab-update` event tells the Tabs block to update the label.
7. The Tab's wrapper is hidden in Tabs panels except in Universal Editor edit mode.
8. The Tab is allowed only in the Tabs Container (`tabs` filter).
9. A Tab outside a Tabs Container would show its Title as a visible chip (the hiding rule is scoped to `.tabs .tabs-panel`).
10. Hide block on a Tab does not remove the tab from the tab list.
11. The Tab emits no console messages.

6.22.12 Author Best Practices

- **Recommended Content Length:** Title 1 to 3 words, up to 25 characters; ID under 30 characters (Recommended).
- **Image Dimensions:** not applicable.
- **CTA Writing Guidelines:** not applicable (no CTA on the Tab; put Buttons after it).
- **Accessibility Guidelines:** unique, descriptive Titles; avoid "Tab 1" style labels.
- **SEO Guidelines:** start the tab's content with a Title (heading) that repeats or extends the tab label.
- **Metadata Guidelines:** not applicable.
- **Taxonomy Guidelines:** not applicable.
- **Localization Guidelines:** translate Titles; keep IDs the same across locales.

6.22.13 Troubleshooting Guide

Issue 1 — The tab label shows "Tab 2" instead of the Title

Symptoms: A generic label in the tab list.

Root Cause: The Title is empty, or the content before the first Tab created an untitled tab.

Diagnosis Steps: Select the Tab; check Title; check the content tree order.

Resolution Steps: Enter the Title; move stray components after a Tab.

Validation Steps: All tab labels are the Titles.

Preventive Measures: Add the Tab before its components.

Issue 2 — The Tab chip is visible on the live page

Symptoms: A dashed label appears on the published page.

Root Cause: The Tab is not inside a Tabs Container (e.g. moved to a normal section by copy / paste), so the hiding rule does not apply.

Diagnosis Steps: Check whether the section has the class `tabs-section`.

Resolution Steps: Move the Tab into a Tabs Container or delete it.

Validation Steps: No chip on the page.

Preventive Measures: Only add Tabs inside Tabs Containers.

Issue 3 — The ID does not work in links

Symptoms: `#My Tab` or `#my_tab` links do not open the tab.

Root Cause: The ID is normalised (`my-tab`); or duplicated and suffixed (`my-tab-2`).

Diagnosis Steps: Inspect the panel id.

Resolution Steps: Use lower-case, hyphenated IDs and the same value in links.

Validation Steps: The link opens the tab.

Preventive Measures: Simple, unique IDs.

Issue 4 — Active tab is ignored

Symptoms: Another tab is shown on load.

Root Cause: An earlier Tab is also Active; a `#id` in the address; Universal Editor keeps the tab shown before a re-render; or the change was not yet re-rendered.

Diagnosis Steps: Check all Tabs; load the page without a hash.

Resolution Steps: Leave Active on one Tab only; reload.

Validation Steps: The Active tab shows on a fresh load.

Preventive Measures: Checklist.

Issue 5 — Hiding a Tab does not hide the tab

Symptoms: Hide block is on but the tab button and panel remain.

Root Cause: Hide block hides the Tab block only, not the tab created from it.

Diagnosis Steps: Check the Additional tab.

Resolution Steps: Delete the Tab and its components (or move them out) to remove a tab.

Validation Steps: The tab is gone.

Preventive Measures: Do not use Hide block on Tabs.

Issue 6 — A component appears in the wrong tab

Symptoms: Content shows under the previous or next tab.

Root Cause: The component's position in the content tree is before / after the wrong Tab.

Diagnosis Steps: Check the order in the content tree.

Resolution Steps: Drag the component after its Tab.

Validation Steps: Content in the correct panel.

Preventive Measures: Review the content tree before publishing.

6.22.14 Support Runbook

Monitoring Requirements: covered by the Tabs monitoring (6.21.14); no Tab-specific monitoring.

Logs: no console messages from the Tab; module errors `failed to load block tab` (`scripts/aem.js`); Admin API page status; AEM author logs.

Common Errors

Error	Likely cause	First action
Generic "Tab n" label	Empty Title / content before first Tab	Fill Title / reorder
Chip visible on page	Tab outside a Tabs Container	Move or delete
Deep link fails	Normalised / duplicated ID	Inspect panel id
Active ignored	Several Active / hash / no re-render	Fix and reload
Hide block ineffective	By design	Delete the Tab instead

Escalation Matrix

Level	Who	What they check
L1	Author support	Title, ID, Active tab, content tree order, publication
L2	AMS / site admin	Page preview / live status, CDN cache
L3	Development team	`tab.js` / `tabs.js` behaviour, console errors
L4	Adobe Support	Universal Editor and Edge Delivery platform issues

Recovery Procedures: restore the page version and republish; code fixes via revert on `main`.

Health Checks: on the page, `document.querySelectorAll('.tabs .tab')` exist but are not visible; each Title appears as a tab button.

Operational Procedures: as for the Tabs (6.21.14).

Known Limitations: ID and Active tab changes apply only after the Tabs are rendered again; Hide block does not hide a tab; Additional options have no visible effect; no icon or badge on tabs.

6.22.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
The tab label shows Tab 2 instead of the Title	Title empty, or content placed before the first Tab	Enter the Title and move stray components after a Tab
The dashed chip is visible on the live page	The Tab is outside a Tabs Container	Move it into a Tabs Container or delete it
#My Tab links do not open the tab	The ID is normalised to my-tab or suffixed with –2	Use lower-case, hyphenated, unique IDs and the same value in links
Active tab is ignored	An earlier Tab is also Active, the address has a #id, or the Tabs were not rendered again	Leave Active tab on one Tab only and reload without the hash
Hide block does not hide the tab	Hide block hides only the Tab block, not the tab built from it	Delete the Tab and its components to remove the tab
A component appears in the wrong tab	It sits before or after the wrong Tab in the content tree	Drag it after its Tab
An ID change has no effect in the editor	ID and Active tab apply only when the Tabs are rendered again	Reload the page in Universal Editor
A link to the Anchor ID does not open the tab	Anchor ID names the hidden Tab block, not the panel	Use the ID field in the Content tab for links

6.22.16 Author Quick Reference Guide

Mandatory Fields

- Title — required in the model; empty content falls back to Tab {n} (placeholder tabNumber)

Recommended Fields

- ID — stable panel id for #id links, lower case and unique on the page
- Active tab — on for the one Tab to show on load, when it is not the first

Optional Fields

- Anchor ID — gives the hidden Tab block an id; links to it do not open the tab
- Hide block — does not remove the tab from the tab list; avoid it
- Padding and Margin — affect only the chip in edit mode

Authoring Checklist

1. Add Tabs only inside a Tabs Container (filter tabs)
2. Make a Tab the first item of the Tabs Container
3. Add the Tab before its components; follow every Tab with at least one component
4. Enter a Title of one to three words, up to about 25 characters
5. Enter an ID only when the tab will be linked, and keep it the same in every locale
6. Switch Active tab on for one Tab at most
7. Reorder tabs by dragging the Tab together with its components in the content tree

Pre-Publish Checklist

1. Switch to Preview and check that no chip is visible
2. Check every tab button shows its Title, with no Tab {n} label
3. Reload and check the Active tab is shown first
4. Open the page with #id for every Tab with an ID
5. Check each panel holds the components of its Tab

Post-Publish Validation Checklist

1. Open the page on aem.live and check the tab labels

2. Test the #id links from other pages and campaigns on the live URL
3. Check the initial tab on a fresh load without a hash
4. Check no dashed chip appears on the live page
5. Check the cmp:show entries carry the expected panel ids

6.22.17 Component Execution Example

Business example: Deep-linkable Cloud tab on the services page.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Title
Title (Title)	Technology services for every stage of transformation
Title Type (Title)	h1
Component (Section › Add (+))	Text
Text (Text)	From strategy to managed operations, our teams help enterprises modernise, grow and stay secure.
Component (Section › Add (+))	Image
Image (Image)	Select the asset wide.svg (/en/media/wide.svg)
Alt Text (Image)	Abstract illustration of connected services
Component (Page › Add (+))	Tabs Container
Label (Tabs Container › Accessibility)	Our services
Component (Section › Add (+))	Tab
Title (Tab › Content)	Consulting
ID (Tab › Content)	consulting
Component (Section › Add (+))	Columns
Columns (Columns › Content)	2
Rows (Columns › Content)	1
Note (Columns)	Column 1: Image photo-1.svg (Alt Text “Consultants in a strategy workshop”); Column 2: Title “Business and technology consulting” (Title Type h3), Text “Strategy, operating model design and change management that turn transformation goals into measurable results.”
Component (Section › Add (+))	Tab
Title (Tab › Content)	Cloud
ID (Tab › Content)	cloud
Component (Section › Add (+))	Columns
Columns (Columns › Content)	2
Rows (Columns › Content)	1
Note (Columns)	Column 1: Image photo-2.svg (Alt Text “Cloud operations dashboard”); Column 2: Title “Cloud migration and operations” (Title Type h3), Text “Move, modernise and run workloads on any cloud with automated landing zones and managed operations.”

Field	Value
Component (Section › Add (+))	Tab
Title (Tab › Content)	Cybersecurity
ID (Tab › Content)	cybersecurity
Component (Section › Add (+))	Columns
Columns (Columns › Content)	2
Rows (Columns › Content)	1
Note (Columns)	Column 1: Image photo-3.svg (Alt Text “Security analysts in a cyber defence centre”); Column 2: Title “Cyber defence and resilience” (Title Type h3), Text “Protect identities, data and operations with managed detection, zero-trust architecture and recovery planning.”
Address (Browser)	Open the page with #cloud appended (…/g08a-tab-deeplink#cloud)

All other fields keep their default values.

Rendered Result:

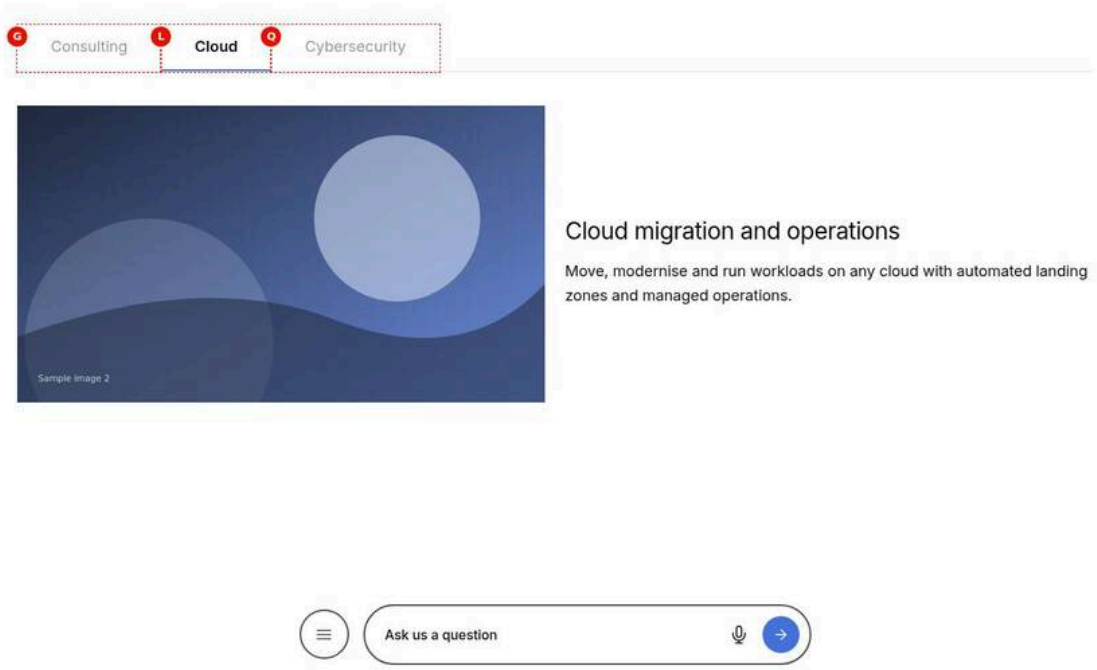

Figure 34: Execution example — The services page at 1440 px after #cloud is added to the address: the page has scrolled past the H1 and image so the Tabs sit just below the header area, with Cloud selected and its Columns (photo-2.svg, the H3 Cloud migration and operations and its text) shown; the footer’s floating Ask us a question bar is at the bottom. The address bar itself is not in the screenshot. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/tab-deep-link.jpg)

Author Notes

- Give the three Tabs the IDs consulting, cloud and cybersecurity.
- Leave Active tab off; for linked visitors the address #cloud decides the tab.
- Link to the page with #cloud from navigation or campaigns, exactly as the ID.

Business Notes

- Campaigns and emails can send visitors straight to the Cloud offering.
- Stable IDs keep the same links working in every locale.
- Analytics receive cmp:show with the path component.cloud when visitors switch to Cloud.

Technical Notes

- The ID is normalised with toClassName and de-duplicated with availableId (-2, –3).
- On hashchange, or once after the load event, a hash naming a panel clicks its tab and scrolls the Tabs into view with scroll-margin-top 4rem.
- The Tab caches Title, ID and Active tab in data-tab-* attributes and renders p.tab-title, hidden on the page.
- The hash is read but not written when visitors change tab.

6.23 Modal Block

The Modal block (`blocks/modal`) shows the content of a fragment page in a dialog over the page. It is the Block Collection modal of Edge Delivery Services, adapted for the TCS Corporate website: an authored **Modal** block renders a button that opens the dialog; in addition, any link to a page whose path contains `/modals/` opens as a modal, and other blocks (the Video block's **Play in a Pop-up**) use its `createModal()` / `openModal()` functions. The dialog is a native `<dialog>` opened with `showModal()`, named by its first heading, closable with the close button, the Escape key or a click on the backdrop, and tracked in the Adobe Client Data Layer (`cmp:show` / `cmp:hide`).

6.23.1 Component Purpose

Business Objective

Show supplementary content (details, forms, disclaimers, videos) without leaving the page, so visitors keep their context and return to the same place when they close the dialog.

Business Use Cases

- "Read more" details of a service, offer or award.
- Terms, disclaimers or privacy notices linked from a CTA.
- A short sign-up or contact form (Form Variations on the fragment page).
- A video played in a pop-up (Video block, Play in a Pop-up).
- Biographies of leaders opened from a profile listing.

When To Use

- The content is short, secondary and self-contained.
- The visitor should return to the same place on the page.

When Not To Use

- Primary content or content that must be indexed with the page (the dialog content is loaded from another page when opened).
- Long articles (use a page); multi-step processes; content that must be shared by URL.
- Automatic pop-ups on page load: Not implemented (as of this handover); the modal opens only on a visitor action.

Dependencies

Dependency	Type	Use
`blocks/modal/modal.js`	Block	`decorate` (opener button), `openModal(url)`, `createModal(nodes)`, visible-area tracking in frames
`blocks/modal/modal.css`	Block styles	Dialog, backdrop, sticky close button, page scroll lock

Dependency	Type	Use
`blocks/modal/_modal.json`	Model	Definition and model `modal`
`blocks/fragment/fragment.js` (`loadFragment`)	Block	Loads and decorates the fragment page
`scripts/aem.js` (`buildBlock`, `decorateBlock`, `loadBlock`, `loadCSS`)	Core library	Creates the dialog's block and loads its CSS
`scripts/scripts.js` (`moveInstrumentation`, `autolinkModals`)	Shared code	Editor instrumentation; links to `/modals/` pages open as a modal
`decorators/button-decorator.js` (`decorateButton`)	Decorator	Opener as a primary button
`decorators/icon-button-decorator.js` (`createIconButton`)	Decorator	Close icon button
`decorators/data-layer-decorator.js` (`componentIdOf`)	Decorator	Component id; `cmp:hide` on close
`utils/analytics.js` (`pushComponentEvent`)	Util	`cmp:show` on open
`utils/ids.js` (`uniqueId`)	Util	Id for the heading that names the dialog
`utils/placeholders.js`	Util	`open` ("Open"), `close` ("Close"), `dialog` ("Dialog")
`icons/close.svg`	Icon	Close button
Fragment pages	Content	The dialog content, e.g. under the locale's `modals/` or `references/` folder

Related Components

- Fragment block (same loading mechanism, inline instead of a dialog).
- Video block (Play in a Pop-up uses `createModal`).
- Button (default content): a Button linking to a `/modals/` page also opens a modal.
- Form Variations: a form can be placed on a modal fragment page.

Applicable Templates

Any page; the Modal block is allowed in every standard section (`section` filter). Links to `/modals/` pages work anywhere on the page (including header and footer links).

Supported Content Types

Any content of the fragment page (sections, default content and blocks), decorated like a page.

Business Problem Solved

Supplementary content such as award lists, programme terms and privacy notices either pushed the main message down the page or sent visitors to another page, losing their place. The Modal block and auto-linked /modals/ links show a fragment page in an accessible native dialog over the page, maintained once on its own page and reused by every opener.

Supported Taxonomy

None: the Modal block has no tag field and reads no page tags or taxonomy (Supported Tags: None); tags on the fragment page are not used.

6.23.2 Visual Overview

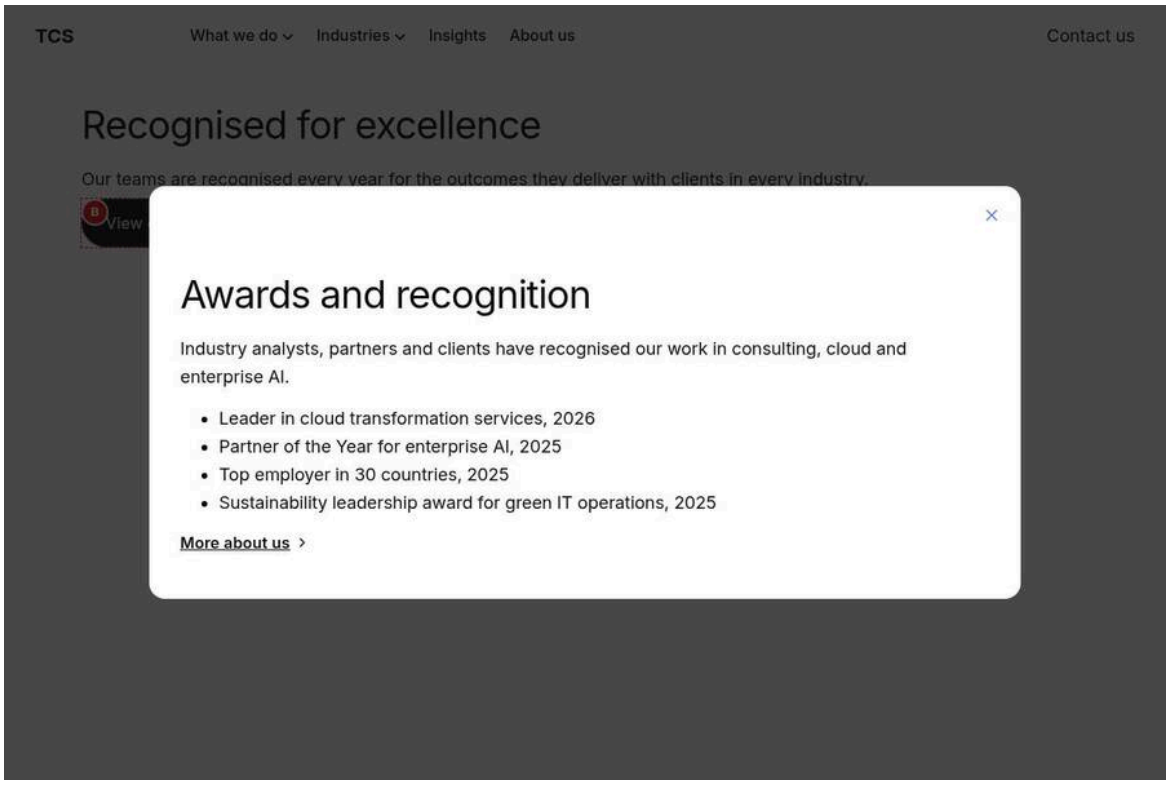

Figure 35: Desktop rendering — At 1200 px, after selecting View our awards: the page dimmed by the near-black 75 % backdrop and, centred over it, a white dialog 56.25rem wide with 1rem rounded corners, the close (X) button at the top right, the H2 Awards and recognition, the introduction, four bulleted awards and the link More about us, with 2rem padding. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/modal-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/modal-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	At 1200 px, after selecting View our awards: the page dimmed by the near-black 75 % backdrop and, centred over it, a white dialog 56.25rem wide with 1rem rounded corners, the close (X) button at the top right, the H2 Awards and recognition, the introduction, four bulleted awards and the link More about us, with 2rem padding.
Business Context	A corporate page mentions recognition briefly and keeps the full awards list in a dialog, so visitors read it without leaving the page.
Author Objective	Add a Modal block whose button View our awards opens the awards fragment page in a dialog.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Modal	Yes	Adds the Modal to the page	Select the section in the content tree, choose Add (+) and pick Modal	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Modal Content (Modal › Content)	Select the page or enter /en/shots/modals/awards	No (not enforced; required in practice)	The fragment page shown in the dialog	Pick a page, e.g. under `modals/`	None in model; code: must resolve to a site path starting with /
B	Button Text (Modal › Content)	View our awards	No	Label of the opener button	Verb + object	None in model; empty or equal to the URL → "Open"
(C)	Content (Fragment page /en/shots/modals/awards (in AEM a page in the modals folder: /content/tcs-corp/us/en/modals/awards))	Heading 2 "Awards and recognition", a paragraph, a bulleted list of four awards and the link "More about us"	No	—	—	None
—	Screen width (Preview)	1200 px (desktop)	—	Check on the preview (not stored in the content)	1200 px (desktop)	—
—	Action (Preview)	Select the button "View our awards"	—	Check on the preview (not stored in the content)	Select the button "View our awards"	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A primary button View our awards on the page; on selection a centred white dialog over a dark 75 % backdrop with the H2 Awards and recognition, a paragraph, four bulleted awards, the link More about us and the close icon at the top right.
- **Rendering behaviour:** From 900 px the dialog is calc(100vw - 4rem) wide up to 56.25rem, with 2rem content padding and at most the visible height minus 2 × 2.5rem; the short awards content needs no inner scrolling. The page behind is locked (body.modal-open) and the fragment loads only when the button is selected.
- **Publishing behaviour:** Publish the page and the fragment page /content/tcs-corp/us/en/modals/awards (offered as a referenced page in the Publish dialog); Publish to Preview updates aem.page, Publish to Live aem.live. The fragment is fetched again at every opening, so republishing it updates every opener.

Business Rules

- Modal Content must point to a published page; the block fetches its .plain.html at every click and opens nothing, without a message, if that fails.
- Button Text View our awards labels the button; an empty Button Text, or one equal to the URL, shows Open (placeholder open).
- The first heading of the fragment, Awards and recognition, names the dialog (aria-labelledby); without a heading the name is Dialog.
- The dialog closes with the close button, Escape or a click on the backdrop, and focus returns to View our awards.
- The Additional tab spacing applies to the opener block on the page, not to the dialog.

Common Authoring Mistakes

Error	Root Cause	Resolution
Selecting the button opens nothing	The fragment page awards is not published, or Modal Content points to a page that does not exist	Publish /content/tcs-corp/us/en/modals/awards and retest on aem.page
The button reads Open	Button Text left empty or set to the URL of the fragment	Enter View our awards in Button Text
Screen readers announce only Dialog	The fragment page starts with a paragraph instead of a heading	Start the fragment page with the H2 Awards and recognition

Troubleshooting

- **Symptoms:** Selecting View our awards on aem.page shows no dialog and no error message.
- **Cause:** The request /en/shots/modals/awards.plain.html returns 404 because the fragment page was never published to that environment.
- **Resolution:** Publish the fragment page from AEM Sites, or select it as a referenced page in the Publish dialog, then reload the page.
- **Verification Steps:** In the Network tab the .plain.html request returns 200 and the dialog opens with the heading Awards and recognition.

Desktop (1200px and wider). The opener is a primary button where the block is placed. When opened, the page behind is covered with a backdrop of near-black at 75% opacity and stops scrolling (`body.modal-open`). The dialog is centred vertically in the visible area, `calc(100vw - 4rem)` wide up to 56.25rem (900px), 1rem corner radius, default background and text colours, and never taller than the visible area minus 2 × 2.5rem; longer content scrolls inside the dialog. The close button (tertiary icon button) sticks to the top right (0.5rem from the top) while the content scrolls. Content padding is 2rem on the sides and bottom (from 900px).

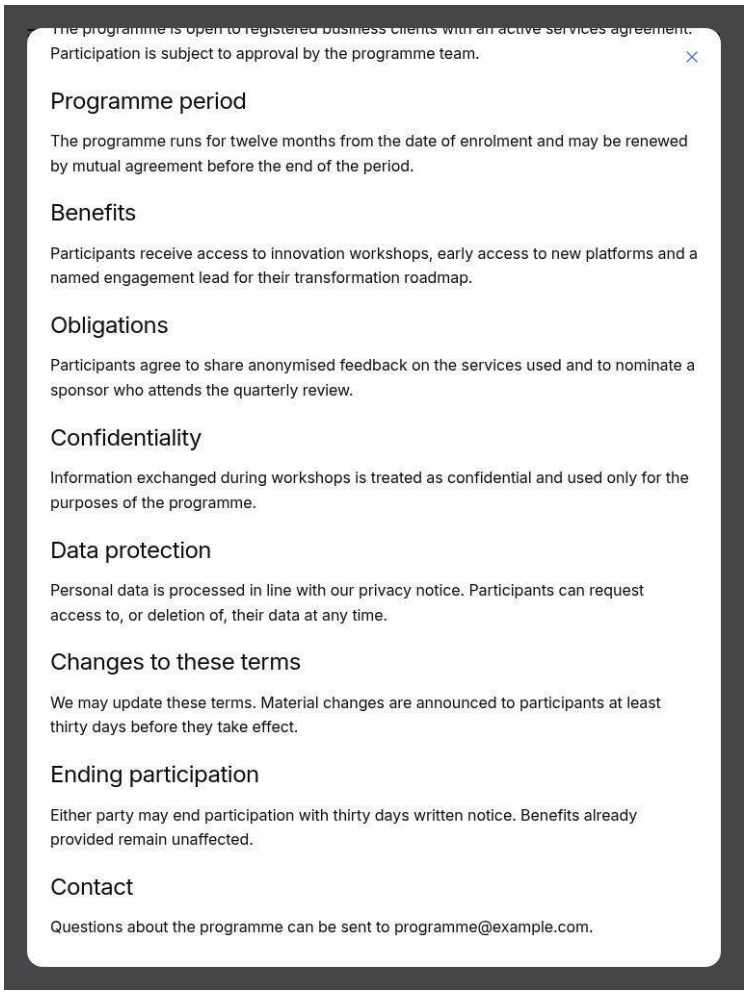

Figure 36: Tablet rendering — At 768 px, after selecting Read the programme terms and scrolling inside the dialog: a white dialog 1.5rem from each screen edge over the dark backdrop, showing the middle of the programme terms (Heading 3 sections with their paragraphs), with the close (X) button still at the top right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/modal-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/modal-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	At 768 px, after selecting Read the programme terms and scrolling inside the dialog: a white dialog 1.5rem from each screen edge over the dark backdrop, showing the middle of the programme terms (Heading 3 sections with their paragraphs), with the close (X) button still at the top right.
Business Context	A programme page offers its legal terms from a button, so prospective participants read the full conditions without leaving the enrolment page.
Author Objective	Add a Modal block that opens a long terms page in a dialog that scrolls inside.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Modal	Yes	Adds the Modal to the page	Select the section in the content tree, choose Add (+) and pick Modal	Only components the section allows (section filter)
(A)	Modal Content (Modal › Content)	Select the page or enter /en/shots/modals/terms	No (not enforced; required in practice)	The fragment page shown in the dialog	Pick a page, e.g. under `modals/`	None in model; code: must resolve to a site path starting with /
B	Button Text (Modal › Content)	Read the programme terms	No	Label of the opener button	Verb + object	None in model; empty or equal to the URL → "Open"
(C)	Content (Fragment page /en/shots/modals/terms (in AEM a page in the modals folder: /content/tcs-corp/us/en/modals/terms))	Heading 2 "Programme terms", an introduction and nine Heading 3 sections with a paragraph each	No	—	—	None
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—
—	Action (Preview)	Select the button "Read the programme terms", then scroll the dialog content down	—	Check on the preview (not stored in the content)	Select the button "Read the programme terms", then scroll the dialog content down	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A white dialog almost the full screen width, its long content (Programme terms, the introduction and nine Heading 3 sections) scrolled part way down, the sticky close icon at the top right on a white background.
- **Rendering behaviour:** Below 900 px the dialog is calc(100vw - 3rem) wide with 1.5rem content padding and at most 100dvh minus 3rem high; the longer terms scroll inside the dialog with overscroll contained, while the page behind stays locked.
- **Publishing behaviour:** Publish the page and the fragment page /content/tcs-corp/us/en/modals/terms; later edits to the terms only need the fragment republished, because every opening fetches /en/shots/modals/terms.plain.html again (cached by the Edge Delivery CDN).

Business Rules

- Content taller than the visible area scrolls inside the dialog; the page behind does not scroll (body.modal-open).
- The dialog opens scrolled to the top every time; the close button sticks 0.5rem from the top while the terms scroll.
- The H2 Programme terms names the dialog; the nine H3 headings structure it for screen reader navigation.
- Recommended content length is a heading and up to about 300 words; longer terms belong on a page of their own.

Common Authoring Mistakes

Error	Root Cause	Resolution
The dialog still shows the old terms	Only the page with the button was republished, not the terms fragment	Publish /content/tcs-corp/us/en/modals/terms
The dialog shows the terms in another language	Modal Content points to the terms page of another locale	Select the terms page in /content/tcs-corp/us/en/modals
Headings in the dialog skip a level	The nine sections were authored as H4 under the H2	Use H3 for the sections below Programme terms

Troubleshooting

- **Symptoms:** The dialog opens but shows wording that was changed on the terms page.
- **Cause:** The terms fragment was edited but not republished, so /en/shots/modals/terms.plain.html still delivers the previous version.
- **Resolution:** Publish the terms page to the environment being tested (preview or live); the button page itself need not be republished.
- **Verification Steps:** Open /en/shots/modals/terms.plain.html on the same host, check the new wording, then open the dialog again.

Tablet (600px to 1199px). From 900px as desktop. Between 600px and 899px the dialog is `calc(100vw - 3rem)` wide, the vertical gap is 1.5rem and the content padding 1.5rem.

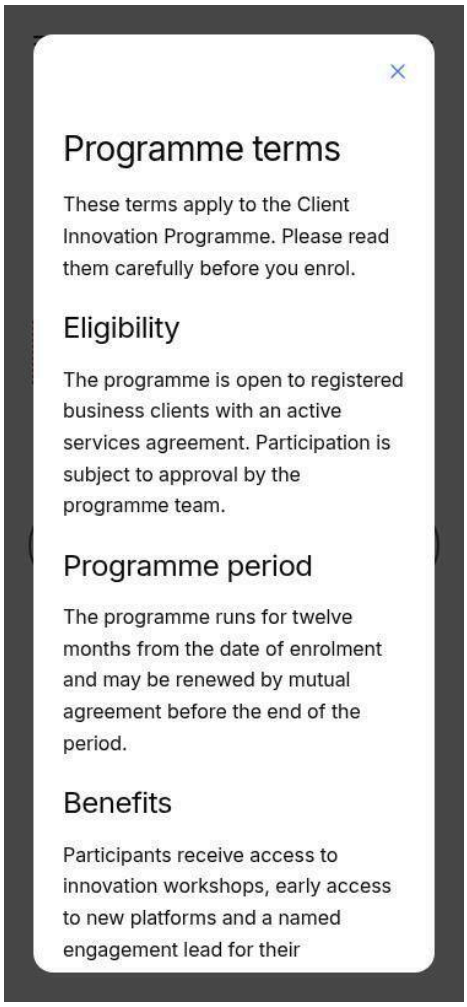

Figure 37: Mobile rendering — At 375 px, after selecting Read the programme terms: the dialog 1.5rem from each screen edge and as tall as the screen minus 3rem, showing the close (X) button at the top right, the H2 Programme terms, the introduction and the first Heading 3 sections; the rest scrolls inside. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/modal-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/modal-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	At 375 px, after selecting Read the programme terms: the dialog 1.5rem from each screen edge and as tall as the screen minus 3rem, showing the close (X) button at the top right, the H2 Programme terms, the introduction and the first Heading 3 sections; the rest scrolls inside.
Business Context	Visitors on phones read the programme terms in place from the enrolment page and return to the button with Close.
Author Objective	Check that the long terms dialog fits the phone screen and scrolls inside.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Modal	Yes	Adds the Modal to the page	Select the section in the content tree, choose Add (+) and pick Modal	Only components the section allows (section filter)
(A)	Modal Content (Modal › Content)	Select the page or enter /en/shots/modals/terms	No (not enforced; required in practice)	The fragment page shown in the dialog	Pick a page, e.g. under `modals/`	None in model; code: must resolve to a site path starting with /
B	Button Text (Modal › Content)	Read the programme terms	No	Label of the opener button	Verb + object	None in model; empty or equal to the URL → "Open"
(C)	Content (Fragment page /en/shots/modals/terms (in AEM a page in the modals folder: /content/tcs-corp/us/en/modals/terms))	Heading 2 "Programme terms", an introduction and nine Heading 3 sections with a paragraph each	No	—	—	None
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—
—	Action (Preview)	Select the button "Read the programme terms"	—	Check on the preview (not stored in the content)	Select the button "Read the programme terms"	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A white rounded dialog filling the phone screen except 1.5rem margins, opened at the top with the heading Programme terms, the close icon at the top right and the dark backdrop around it.
- **Rendering behaviour:** Below 600 px the dialog is as on small tablets: 100vw minus 3rem wide, 1.5rem padding, height capped at 100dvh minus 3rem so it adapts when the browser bars show or hide; overscroll does not move the page.
- **Publishing behaviour:** Publish the page and the fragment page /content/tcs-corp/us/en/modals/terms; later edits to the terms only need the fragment republished, because every opening fetches /en/shots/modals/terms.plain.html again (cached by the Edge Delivery CDN).

Business Rules

- The dialog always opens at the top of the content (the scroll position is reset).
- The close button is a tertiary icon button labelled Close (placeholder close) and stays visible while the terms scroll.
- Escape and a tap on the backdrop (the 1.5rem margins) also close the dialog.
- The dialog has no size or style options; width and height follow the screen.

Common Authoring Mistakes

Error	Root Cause	Resolution
Screen readers announce only Dialog	The terms page begins with the introduction paragraph instead of a heading	Put the H2 Programme terms first on the fragment page

Error	Root Cause	Resolution
The button opens nothing	Modal Content entered as a full URL of another site, whose path is not on this site	Pick the terms page with the content picker
Visitors cannot share the terms	The dialog content has no URL of its own	Also publish the terms as a regular page when they must be shared

Troubleshooting

- **Symptoms:** On the phone a screen reader announces the open terms only as Dialog.
- **Cause:** The fragment page starts with styled text instead of a heading, so the dialog falls back to aria-label Dialog.
- **Resolution:** Make the first element of the terms page a Title Programme terms with Title Type h2 and publish the fragment.
- **Verification Steps:** Open the dialog and check in developer tools that it has aria-labelledby pointing to the heading id modal-title-N.

Mobile (below 600px). Same as small tablet: full width minus 3rem, 1.5rem padding, height limited to the dynamic viewport height (`100dvh`) minus 3rem; the content scrolls inside the dialog; overscroll does not scroll the page.

6.23.3 Component Variations

Variation 1 — Modal block (button opener)

Variation Name

Modal block.

Business Purpose

Give authors an explicit button that opens a fragment page in a dialog.

Visual Example

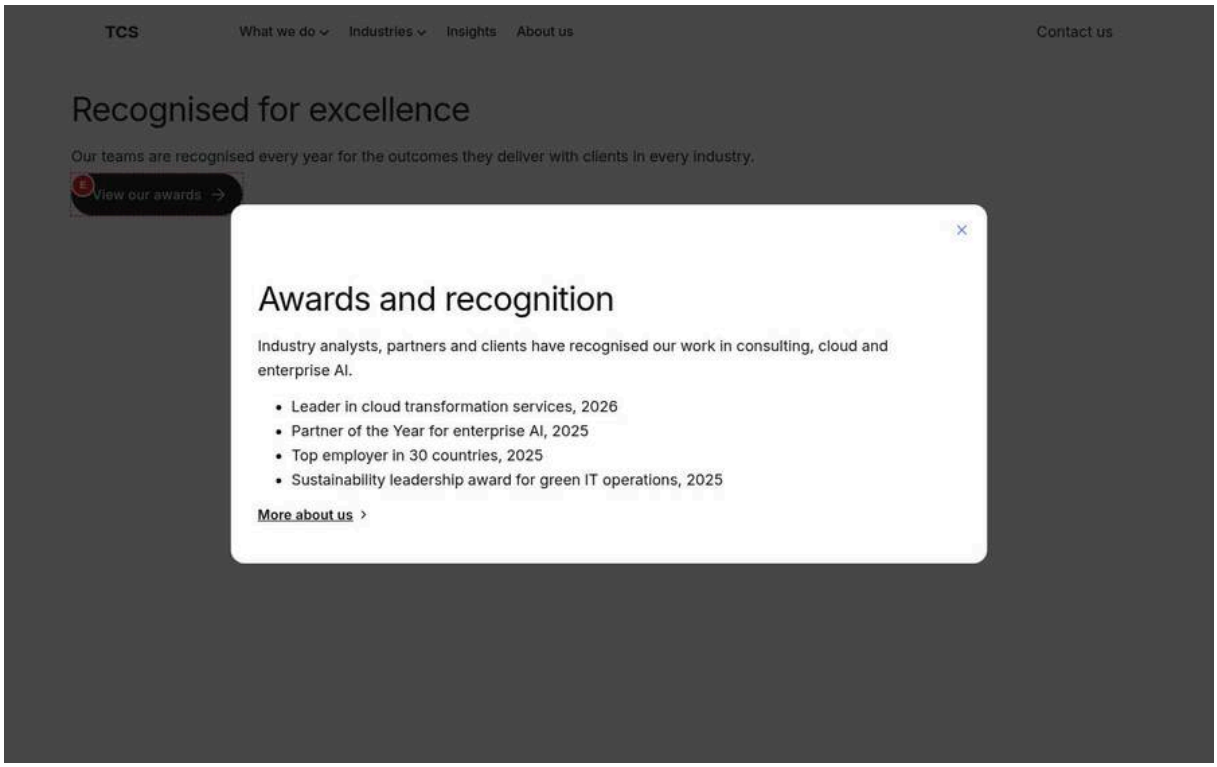

Figure 38: Modal block variation — At 1440 px: the section with the H2 Recognised for excellence, the paragraph and the primary button View our awards, dimmed under the dark backdrop, and the awards dialog (56.25rem wide, the H2 Awards and recognition, four bulleted awards and More about us) open over it rather than next to it. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/modal-block-button.jpg)

Screenshot Details — Modal block variation

Item	Detail
Screenshot Name	`screenshots/modal-block-button.jpg`
Screenshot Purpose	Modal block variation
Screen Description	At 1440 px: the section with the H2 Recognised for excellence, the paragraph and the primary button View our awards, dimmed under the dark backdrop, and the awards dialog (56.25rem wide, the H2 Awards and recognition, four bulleted awards and More about us) open over it rather than next to it.
Business Context	An awards section introduces recognition in one sentence and offers the full list behind an explicit button.
Author Objective	Place a Title, a Text and a Modal block so the button View our awards opens the awards dialog.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
(A)	Title (Title)	Recognised for excellence	Recommended (an empty Title renders an	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			empty heading or nothing)			
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
(C)	Text (Text)	Our teams are recognised every year for the outcomes they deliver with clients in every industry.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Modal	Yes	Adds the Modal to the page	Select the section in the content tree, choose Add (+) and pick Modal	Only components the section allows (section filter)
(D)	Modal Content (Modal › Content)	Select the page or enter /en/shots/modals/awards	No (not enforced; required in practice)	The fragment page shown in the dialog	Pick a page, e.g. under `modals/`	None in model; code: must resolve to a site path starting with `/`
E	Button Text (Modal › Content)	View our awards	No	Label of the opener button	Verb + object	None in model; empty or equal to the URL → "Open"
(F)	Content (Fragment page /en/shots/modals/awards (in AEM a page in the modals folder: /content/tcs-corp/us/en/modals/awards))	Heading 2 "Awards and recognition", a paragraph, a bulleted list of four awards and the link "More about us"	No	—	—	None
—	Action (Preview)	Select the button "View our awards"	—	Check on the preview (not stored in the content)	Select the button "View our awards"	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The H2 Recognised for excellence and the paragraph above a primary button View our awards; once selected, the centred awards dialog covers the dimmed section.
- **Rendering behaviour:** The opener is a button type=button with aria-haspopup=dialog, styled as a primary button at every width; at 1440 px the dialog is 56.25rem wide (its maximum) with 2rem padding, centred vertically in the viewport.
- **Publishing behaviour:** Publish the page and the fragment page /content/tcs-corp/us/en/modals/awards (offered as a referenced page in the Publish dialog); Publish to Preview updates aem.page, Publish to Live aem.live. The fragment is fetched again at every opening, so republishing it updates every opener.

Business Rules

- The block's first link becomes the button; the Title and Text above are default content and stay on the page.
- The opener is a button, not a link, so it also opens the dialog in Universal Editor Preview and crawlers do not follow it.
- A link title different from the text and the URL becomes the button's title attribute.
- The dialog content is not in the page HTML; keep the key message (Recognised for excellence) in the page text.

Common Authoring Mistakes

Error	Root Cause	Resolution
Nothing appears below the paragraph	Modal Content left empty, so the block has no link and stays empty	Select the awards page in Modal Content
Two openers for the same dialog	A Button linking to the awards page was added next to the Modal block	Keep one opener, the Modal block
The button is separated from its text	The Modal block was added to another section	Drag the Modal block directly below the Text in the same section

Troubleshooting

- **Symptoms:** The section shows the heading and paragraph, but no View our awards button.
- **Cause:** Modal Content is empty (the block has no link to convert) or Hide block is on in the Additional tab.
- **Resolution:** Select /content/tcs-corp/us/en/modals/awards in Modal Content and switch Hide block off, then publish.
- **Verification Steps:** The primary button View our awards shows below the paragraph and opens the awards dialog.

Use Cases

"Learn more", "View terms", "Register interest" buttons.

Authoring Guidelines

Add **Modal** to a section; in the Content tab choose **Modal Content** (the fragment page) and enter **Button Text**.

Business Rules

- The block's first link becomes the button; without a link the block is left unchanged.
- Button text: the Button Text; if it is empty or equals the URL, "Open" (placeholder `open`).
- The opener is a `<button>` (not a link), so it also opens the dialog in Universal Editor's preview (the editor navigates to the targets of clicked links).
- A failed fragment (missing, not published, path not starting with `/`) opens nothing.

Rendering Rules

- `<button type="button" aria-haspopup="dialog" class="button primary">` replaces the block content; the link's editor instrumentation moves to the button; a link title different from the text and URL becomes the button's `title`.
- On click: the fragment is loaded and decorated, a new dialog is created and shown.

Responsive Behaviour

The button follows the site button styles at all widths; the dialog as described in 6.23.2.

SEO Impact

The dialog content is not in the page HTML (fetched on click); the opener is a button, so crawlers do not follow it to the fragment page. Modal fragment pages under `modals/` or `references/` are excluded from the query index.

Accessibility Compliance

Native modal dialog (focus moves into it, the page behind is inert, Escape closes); `aria-haspopup="dialog"` on the opener; accessible name from the first heading (`aria-labelledby`) or “Dialog”; close button labelled “Close”; focus returns to the opener on close.

Variation 2 — Link to a /modals/ page (auto-linked modal)

Variation Name

Auto-linked modal.

Business Purpose

Open dialogs from ordinary links (text links, Buttons, navigation links) without adding a Modal block.

Visual Example

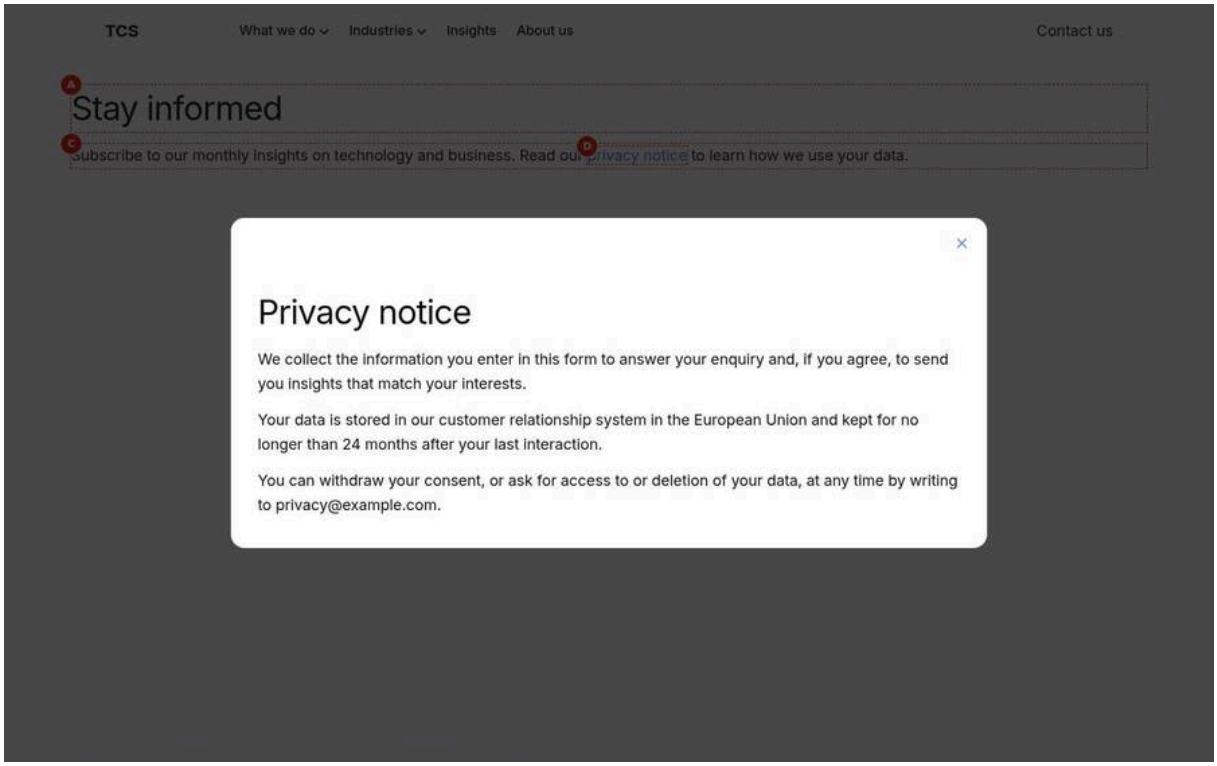

Figure 39: Auto-linked modal variation — At 1440 px: the H2 Stay informed and the paragraph with the inline link privacy notice, dimmed under the backdrop, and over them the dialog opened by that link with the close button, the H2 Privacy notice and three paragraphs. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/modal-auto-link.jpg)

Screenshot Details — Auto-linked modal variation

Item	Detail
Screenshot Name	`screenshots/modal-auto-link.jpg`
Screenshot Purpose	Auto-linked modal variation
Screen Description	At 1440 px: the H2 Stay informed and the paragraph with the inline link privacy notice, dimmed under the backdrop, and over them the dialog opened by that link with the close button, the H2 Privacy notice and three paragraphs.
Business Context	A newsletter sign-up text links its privacy notice inline, so visitors check how their data is used without losing the sign-up context.
Author Objective	Link to a page in a modals folder from rich text so it opens as a dialog without a Modal block.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Stay informed	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Subscribe to our monthly insights on technology and business. Read our privacy notice (link /en/shots/modals/privacy-notice) to learn how we use your data.	No	Card text	1–3 sentences; lists and links allowed	None
D	Content (Fragment page /en/shots/modals/privacy-notice (in AEM a page in the modals folder: /content/tcs-corp/us/en/modals/privacy-notice))	Heading 2 “Privacy notice” and three paragraphs	No	—	—	None
—	Action (Preview)	Select the link “privacy notice” in the paragraph	—	Check on the preview (not stored in the content)	Select the link “privacy notice” in the paragraph	—

All other fields keep their default values. Each callout letter marks the field’s output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A text link privacy notice inside the paragraph; selecting it dims the page and shows a white dialog with the H2 Privacy notice and three paragraphs on data use, storage and consent.
- **Rendering behaviour:** scripts.js (autolinkModals, started in the lazy phase) intercepts clicks on links whose path contains /modals/, imports modal.js on the first click and calls openModal; the dialog has the same sizes as with the Modal block.
- **Publishing behaviour:** Publish the page and the fragment /content/tcs-corp/us/en/modals/privacy-notice. The inline link stays a normal a href that crawlers can follow, while modals pages are excluded from the query index and sitemap.

Business Rules

- Any link whose URL path contains /modals/ opens as a dialog, unless another script already handled the click.
- The listener starts in the lazy phase; a click before that follows the link to the fragment page.
- In Universal Editor the editor may handle link clicks as navigation first; test the dialog on aem.page.
- The link has no aria-haspopup; write link text that says what opens, such as privacy notice.
- Keep only dialog content in modals folders: any page there opens as a dialog from every link to it.

Common Authoring Mistakes

Error	Root Cause	Resolution
The link navigates to the privacy page	The fragment is not in a folder named modals, e.g. /en/legal/privacy-notice	Move the page into the locale's modals folder and update the link
A normal content page opens as a dialog	The page was created inside a modals folder	Move content pages out of modals folders
Selecting the link in the editor opens the fragment page	Universal Editor handles link clicks as navigation	Test the dialog on the aem.page preview

Troubleshooting

- **Symptoms:** Selecting privacy notice opens the page /en/shots/modals/privacy-notice instead of a dialog.
- **Cause:** The click happened before the lazy phase attached the listener, or the test ran inside Universal Editor where the editor navigates.
- **Resolution:** Reload, wait until the page has loaded and retest on aem.page; for an opener that also works in the editor use a Modal block.
- **Verification Steps:** The link opens the Privacy notice dialog and the address bar stays on the sign-up page.

Use Cases

Inline links to terms or disclaimers; Buttons in Hero / Teaser CTAs; footer links.

Authoring Guidelines

Create the fragment page in a folder named `modals` (e.g. `/content/tcs-corp/us/en/modals/privacy-notice`, published as `/en/modals/privacy-notice`) and link to it from any text, Button or CTA.

Business Rules

- Any click on a link whose URL path contains `/modals/` opens it in a modal, unless another script already handled the click (`defaultPrevented`).
- The listener is attached in the lazy phase; clicks before that follow the link normally.
- In Universal Editor, link clicks may be handled by the editor (navigation) first.

Rendering Rules

`scripts/scripts.js` imports `blocks/modal/modal.js` on the first such click and calls `openModal(href)` (absolute URLs are reduced to their path).

Responsive Behaviour

As Variation 1.

SEO Impact

The link is a normal `<a href>`, so crawlers can follow it to the fragment page; `modals/` pages are excluded from the query index (`/**/modals/**`) and therefore from the sitemap.

Accessibility Compliance

As Variation 1, except the opener is a link: it has no `aria-haspopup`; write link text that says a dialog opens if that matters ("View the privacy notice").

Variation 3 — Dialog opened by another component (Video: Play in a Pop-up)

Variation Name

Component dialog (`createModal`).

Business Purpose

Reuse the same accessible dialog for component features, currently the Video block's **Play in a Pop-up** option.

Visual Example

Steps — Component dialog variation: A video playing in the modal dialog over the dimmed page after the visitor selected the play button of a Video block with Play in a Pop-up on.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	Select the MP4 video in AEM Assets, e.g. /content/dam/tcs-corp/videos/brand-film.mp4
3	Video › Video	Title	Our story in two minutes
4	Video › Video	Poster Image	Select the asset photo-4.svg (/en/media/photo-4.svg); Poster Image Alt Text: Teams collaborating in a modern office
5	Video › Playback	Playback	Play button (on the poster image)
6	Video › Playback	Play in a Pop-up	On
7	Preview	Action	Select the play button on the poster: the video plays in the modal dialog over the dimmed page

Use Cases

Videos in a pop-up.

Authoring Guidelines

Configured in the Video block (Play in a Pop-up = on); no Modal block needed.

Business Rules

The calling block supplies the content (no fragment); naming, close behaviour and data layer events are the same as for the other variations.

Rendering Rules

`createModal([content])` then `showModal()`; Video adds `.video-modal-player` styles inside `.modal`.

Responsive Behaviour

As 6.23.2; the video keeps its aspect ratio inside the dialog.

SEO Impact

None beyond the Video block.

Accessibility Compliance

Named "Dialog" (the content has no heading) unless the content provides a heading; focus returns to the play button on close.

6.23.4 Authoring Experience

Figure 40: Universal Editor canvas — Universal Editor edit mode at 1440 px: the section with the H2 Recognised for excellence, the paragraph and the primary button View our awards; letter A marks the Modal block and B its opener button. No dialog is open. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/modal-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/modal-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	Universal Editor edit mode at 1440 px: the section with the H2 Recognised for excellence, the paragraph and the primary button View our awards; letter A marks the Modal block and B its opener button. No dialog is open.
Business Context	Authors maintaining an awards section need to know which canvas element holds the dialog settings and which shows the Button Text.
Author Objective	Select the Modal block in the content tree to edit Modal Content and Button Text.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
—	Title (Title)	Recognised for excellence	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
—	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	Our teams are recognised every year for the outcomes they deliver with clients in every industry.	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Modal	Yes	Adds the Modal to the page	Select the section in the content tree, choose Add (+) and pick Modal	Only components the section allows (section filter)
—	Modal Content (Modal › Content)	Select the page or enter /en/shots/modals/awards	No (not enforced; required in practice)	The fragment page shown in the dialog	Pick a page, e.g. under `modals/`	None in model; code: must resolve to a site path starting with /
—	Button Text (Modal › Content)	View our awards	No	Label of the opener button	Verb + object	None in model; empty or equal to the URL → "Open"
—	Mode (Universal Editor)	Edit; select the Modal block in the content tree	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The section in the editor canvas with the Modal block outlined (A) and its primary button (B) showing View our awards; the dialog content is not on the canvas.
- **Rendering behaviour:** The button carries the link's editor instrumentation, so selecting it selects the Modal block; in Preview mode it opens the dialog, kept in the visible part of the editor frame (hidden until that area is measured).
- **Publishing behaviour:** Panel edits save to AEM at once; Publish sends the page to aem.page or aem.live. The dialog content is edited and published on the fragment page /content/tcs-corp/us/en/modals/awards, not in this block.

Business Rules

- A = the Modal block: Modal Content, Button Text and the Additional tab.
- B = the opener button; it shows the Button Text and opens the dialog in Preview mode.
- The dialog content cannot be edited here; open the awards fragment page to change it.
- Hide block on the Modal block dims and outlines it in edit mode and hides it on the published page.

Common Authoring Mistakes

Error	Root Cause	Resolution
Looking for the awards text in the block panel	The dialog content lives on the fragment page	Open /content/tcs-corp/us/en/modals/awards in Universal Editor and edit it there
The dialog does not open while editing	Edit mode selects components on click	Switch to Preview mode to test the button
The block is an empty outline	Modal Content not yet selected	Choose the fragment page in Modal Content

Troubleshooting

- **Symptoms:** The Modal block shows on the canvas as an empty outline without a button.
- **Cause:** Modal Content is empty, so the block has no link to turn into a button.
- **Resolution:** Select the block (A), open the Modal Content picker and choose /content/tcs-corp/us/en/modals/awards; enter Button Text.
- **Verification Steps:** The button View our awards (B) appears and opens the dialog in Preview mode.

Annotations

- A = Modal block (select it for Modal Content, Button Text and Additional).
- B = Opener button (shows the Button Text; in Preview mode it opens the dialog).

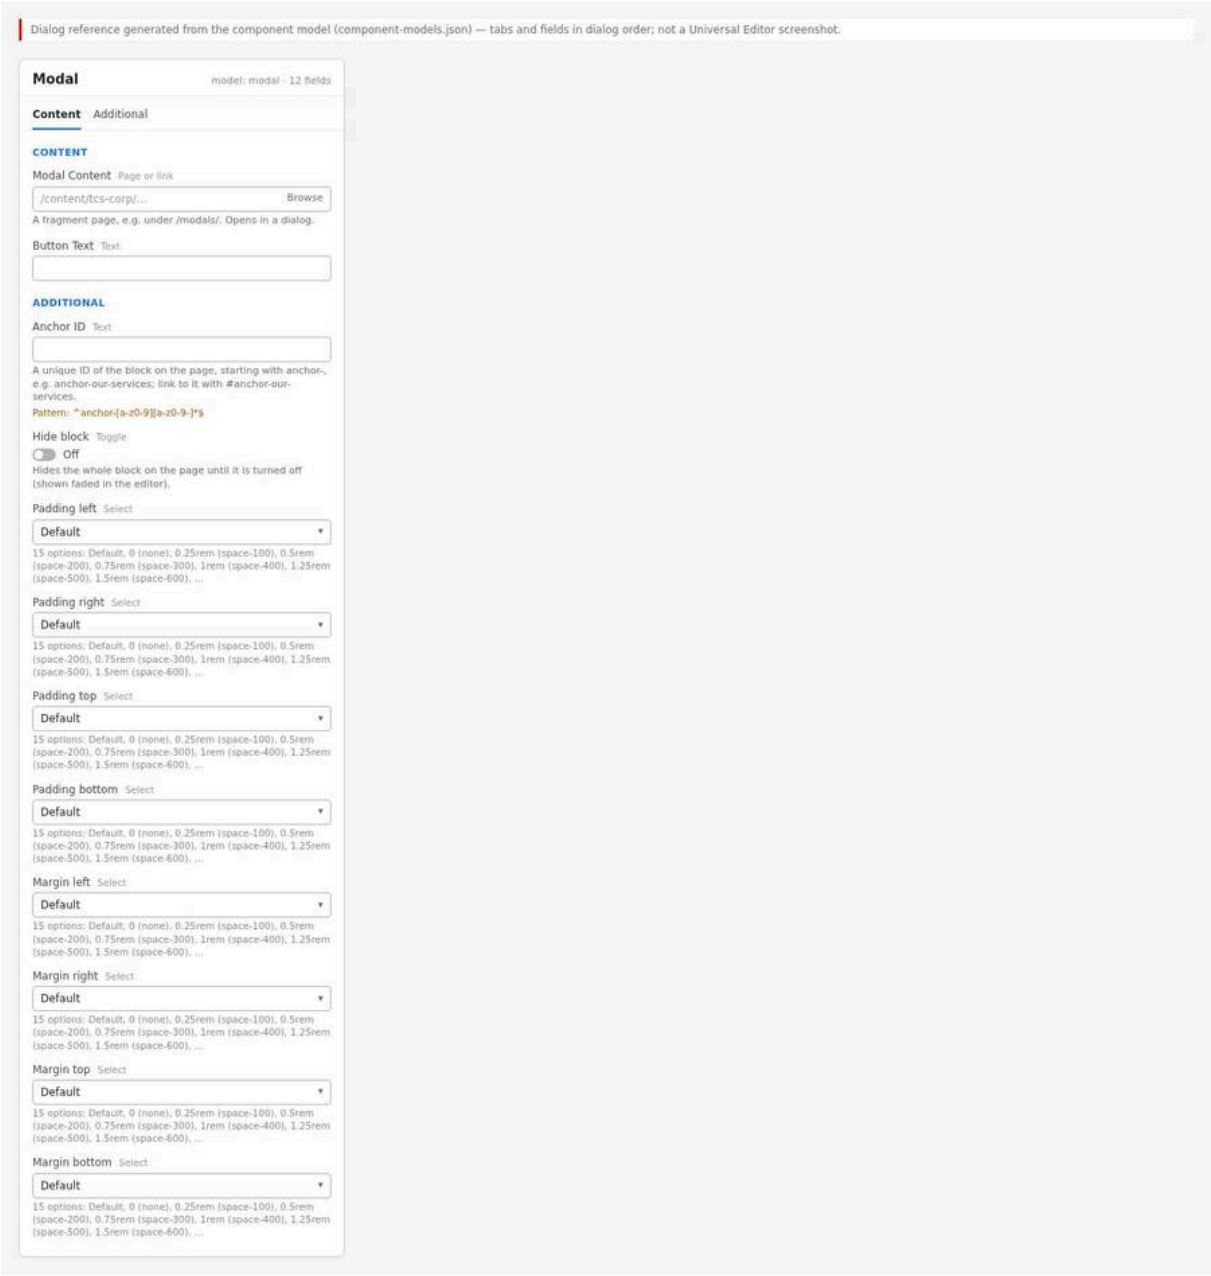

Figure 41: Properties panel — The Modal properties panel with the Content tab (Modal Content picker and Button Text) and the Additional tab. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/modal-properties-panel.jpg)

Properties panel, Modal (model `modal`)

- **Content:** Modal Content (content picker for the fragment page; description "A fragment page, e.g. under /modals/. Opens in a dialog."); Button Text.
- **Additional:** Anchor ID; Hide block; Padding left / right / top / bottom; Margin left / right / top / bottom.

> **Note:** The dialog content is edited on the fragment page itself, not in the Modal block.

6.23.5 Authoring Guide

Step 1 — Create the fragment page

Action: In AEM Sites, create a page for the dialog content in the locale, preferably in a `modals` folder (e.g. `/content/tcs-corp/us/en/modals/awards`). Start it with a heading (it names the dialog), add the content and publish it.

Expected Result: The fragment page exists and is published.

Steps — Step 1: The Sites console with the modals folder and the awards page.

Step	Where	Field / control	Value / action
1	AEM Sites › /content/tcs-corp/us/en	Create › Folder (or Page)	modals
2	AEM Sites › /content/tcs-corp/us/en/modals	Create › Page	Template: Page; Title: Awards; Name: awards
3	Universal Editor › awards › Section › Add (+)	Title	Awards and recognition (Title Type h2)
4	Universal Editor › awards › Section › Add (+)	Text	The introduction paragraph and the bulleted list of awards
5	Universal Editor toolbar	Publish	Publish the awards page

Step 2 — Open the target page in Universal Editor

Action: Open the page where the button should appear.

Expected Result: Edit mode.

Steps — Step 2: The page open in Universal Editor.

Step	Where	Field / control	Value / action
1	AEM Sites › /content/tcs-corp/us/en	Select the page	about (the page that gets the button)
2	AEM Sites toolbar	Edit	Opens the page in Universal Editor (edit mode)

Step 3 — Add the Modal block

Action: Select a section, **+** (Add), **Modal**.

Expected Result: An empty Modal block is added (nothing visible until a link is set).

Steps — Step 3: The component picker with Modal and the new block in the content tree.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section for the button
2	Universal Editor › Content tree	Section › Add (+)	Modal
3	Universal Editor › Content tree	Section	The new Modal block is listed (empty, nothing visible on the canvas)

Step 4 — Choose the Modal Content

Action: In the Content tab, use the **Modal Content** picker to select the fragment page.

Expected Result: A button appears (labelled with the Button Text, or “Open”).

Steps — Step 4: The content picker with the awards page selected.

Step	Where	Field / control	Value / action
1	Modal › Content	Modal Content (content picker)	Open the picker
2	Content picker	Path	/content/tcs-corp/us/en/modals/awards
3	Content picker	Select	awards

Step 5 — Enter the Button Text

Action: Enter an action-oriented label, e.g. “View our awards”.

Expected Result: The button shows the text.

Steps — Step 5: Button Text field and the updated button.

Step	Where	Field / control	Value / action
1	Modal › Content	Button Text	View our awards
2	Canvas	Opener button	Shows “View our awards”

Step 6 — Set the Additional options (optional)

Action: Set Anchor ID, Hide block, padding or margin.

Expected Result: Options applied to the opener block.

Steps — Step 6: Additional tab with Margin top set.

Step	Where	Field / control	Value / action
1	Modal › Additional	Margin top	2rem (space-800)
2	Modal › Additional	Anchor ID (optional)	anchor-awards

Step 7 — Preview and test the dialog

Action: Switch to **Preview**, select the button, scroll the content, close the dialog with the close button, Escape and a click on the backdrop.

Expected Result: The dialog opens with the fragment content, closes in all three ways, and focus returns to the button.

Steps — Step 7: The open dialog in Universal Editor preview, centred in the visible area of the editor frame.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	Canvas	Button “View our awards”	Select it: the dialog opens with the awards content
3	Dialog	Content	Scroll the content inside the dialog
4	Dialog	Close (X)	Select it; open again and press Escape; open again and click the backdrop
5	Canvas	Focus	Returns to the button after each close

Step 8 — Validate

Action: Run the checklist below.

Expected Result: All checks pass.

Steps — Step 8: Browser developer tools showing the dialog's aria-labelledby pointing to its heading.

Step	Where	Field / control	Value / action
1	Preview (aem.page)	Button "View our awards"	Select it to open the dialog
2	Browser developer tools › Elements	dialog	aria-labelledby = the id of the heading "Awards and recognition"
3	Browser developer tools › Console	window.adobeDataLayer	cmp:show on open, cmp:hide on close
4	Device emulation	Screen width	375 px, 768 px and 1440 px

Step 9 — Publish

Action: Publish the fragment page (if changed) and the page.

Expected Result: The button opens the dialog on the live site.

Steps — Step 9: The Publish dialog listing the page and the referenced fragment page.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Open the Publish dialog
2	Publish dialog	Pages	The page and the referenced page /content/tcs-corp/us/en/modals/awards (select both)
3	Publish dialog	Destination	Publish to Live
4	Publish dialog	Publish	Confirm

Preview Process

1. Universal Editor Preview: the button opens the dialog (the dialog is kept in the visible part of the editor frame).
2. Edge Delivery preview: `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}`; the fragment must be previewed as well (`/{locale}/modals/{name}.plain.html` must load).
3. Test at mobile, tablet and desktop widths with short and long content.

Publishing Process

1. Publish the fragment page first, then the page.
2. Live: `https://main--tcs-corp--sradha-tcs.aem.live/{locale}/{path}` ([To be confirmed: production domain and CDN]).

Validation Process

- ☐ Modal Content points to an existing, published page in the same locale.
- ☐ Button Text is set and describes the action.
- ☐ The fragment page starts with a heading (dialog name).
- ☐ The dialog opens, scrolls inside when long, and closes with the close button, Escape and a backdrop click; focus returns to the button.
- ☐ The page behind does not scroll while the dialog is open.
- ☐ Links in the dialog work.
- ☐ `window.adobeDataLayer` shows `cmp:show` on open and `cmp:hide` on close.
- ☐ Correct layout at below 600px, 600 to 899px and 900px and wider.

Rollback Process

1. Restore the previous version of the page and / or the fragment page and republish.

2. Urgent removal of the opener: Hide block on and publish; to stop auto-linked modals, change or remove the links, or unpublish the fragment (the dialog then no longer opens).
3. Code regressions: revert on `main`.

The walkthroughs below repeat the steps above for each variation of chapter 6.23.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Modal block (button opener)

Reproduces the screenshot `screenshots/modal-block-button.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: Title, Text and Modal are added to the section in that order and listed in the content tree.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Recognised for excellence; **Title Type** (B) = h2.

Expected Result: The H2 Recognised for excellence shows at the top of the section.

Step 4 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Title, Text and Modal are added to the section in that order and listed in the content tree.

Step 5 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Our teams are recognised every year for the outcomes they deliver with clients in every industry.

Expected Result: The paragraph about teams recognised every year appears below the heading.

Step 6 — Add the Modal

Action: Select the section in the content tree, choose **Add (+)** and pick **Modal**.

Expected Result: Title, Text and Modal are added to the section in that order and listed in the content tree.

Step 7 — Fill in Modal › Content

Action: Select **Modal** in the content tree and open the **Content** tab of the properties panel. Enter: **Modal Content** (D) = Select the page or enter /en/shots/modals/awards; **Button Text** (E) = View our awards.

Expected Result: The primary button View our awards appears below the paragraph.

Step 8 — Fill in Fragment page /en/shots/modals/awards (in AEM a page in the modals folder: /content/tcs-corp/us/en/modals/awards)

Action: Select **Fragment page /en/shots/modals/awards (in AEM a page in the modals folder: /content/tcs-corp/us/en/modals/awards)** in the content tree and enter in the properties panel: **Content** (F) = Heading 2 "Awards and recognition", a paragraph, a bulleted list of four awards and the link "More about us".

Expected Result: The fragment page holds the H2 Awards and recognition, the introduction, four bulleted awards and More about us.

Step 9 — Preview

Action: Action: Select the button "View our awards".

Expected Result: Selecting View our awards dims the section and opens the awards dialog over it.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The H2 Recognised for excellence and the paragraph above a primary button View our awards; once selected, the centred awards dialog covers the dimmed section.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and the fragment page /content/tcs-corp/us/en/modals/awards (offered as a referenced page in the Publish dialog); Publish to Preview updates aem.page, Publish to Live aem.live. The fragment is fetched again at every opening, so republishing it updates every opener.

Step 12 — Verify

Action: On the live page check: The primary button View our awards shows below the paragraph and opens the awards dialog.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Link to a /modals/ page (auto-linked modal)

Reproduces the screenshot `screenshots/modal-auto-link.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title and a Text component are added to the section, one below the other.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Stay informed; **Title Type** (B) = h2.

Expected Result: The H2 Stay informed shows at the top of the section.

Step 4 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Title and a Text component are added to the section, one below the other.

Step 5 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Subscribe to our monthly insights on technology and business. Read our privacy notice (link /en/shots/modals/privacy-notice) to learn how we use your data.

Expected Result: The paragraph with the inline link privacy notice appears below the heading.

Step 6 — Fill in Fragment page /en/shots/modals/privacy-notice (in AEM a page in the modals folder: /content/tcs-corp/us/en/modals/privacy-notice)

Action: Select **Fragment page /en/shots/modals/privacy-notice (in AEM a page in the modals folder: /content/tcs-corp/us/en/modals/privacy-notice)** in the content tree and enter in the properties panel: **Content** (D) = Heading 2 “Privacy notice” and three paragraphs.

Expected Result: The fragment page holds the H2 Privacy notice and three paragraphs that the dialog shows.

Step 7 — Preview

Action: Action: Select the link “privacy notice” in the paragraph.

Expected Result: Selecting the link privacy notice dims the page and opens the Privacy notice dialog.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A text link privacy notice inside the paragraph; selecting it dims the page and shows a white dialog with the H2 Privacy notice and three paragraphs on data use, storage and consent.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and the fragment /content/tcs-corp/us/en/modals/privacy-notice. The inline link stays a normal a href that crawlers can follow, while modals pages are excluded from the query index and sitemap.

Step 10 — Verify

Action: On the live page check: The link opens the Privacy notice dialog and the address bar stays on the sign-up page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.23.6 Authorable Field Specification

Model `modal` (Modal block)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Tab: Content	tab	—	—	—	Content	—	—	—
Modal Content (`link`)	aem-content	No (not enforced; required in practice)	No	empty	The fragment page shown in the dialog	Pick a page, e.g. under `modals/`	None in model; code: must resolve to a site path starting with `/`	/content/tcs-corp/us/en/modals/awards
Button Text (`linkText`)	text	No	No	empty (fallback “Open”)	Label of the opener button	Verb + object	None in model; empty or equal to the URL → “Open”	View our awards
Tab: Additional	tab	—	—	—	Block options	—	—	—
Anchor ID (`classes_anchor`)	text	No	No	empty	Block id for # links	Start with `anchor-`	Enforced: regExp `^anchor-[a-`	anchor-awards

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
							`z0-9][a-z0-9-]*$`	
Hide block (`classes_hideblock`)	boolean	No	No	false	Hides the opener	Prepare before release	None	false
Padding left (`classes_paddingleft`)	select	No	No	Default	Inner spacing left	Only if needed	One of 15 options	pl-0
Padding right (`classes_paddingright`)	select	No	No	Default	Inner spacing right	As above	One of 15 options	pr-0
Padding top (`classes_paddingtop`)	select	No	No	Default	Inner spacing top	As above	One of 15 options	pt-400
Padding bottom (`classes_paddingbottom`)	select	No	No	Default	Inner spacing bottom	As above	One of 15 options	pb-400
Margin left (`classes_marginleft`)	select	No	No	Default	Outer spacing left	As above	One of 15 options	ml-0
Margin right (`classes_marginright`)	select	No	No	Default	Outer spacing right	As above	One of 15 options	mr-0
Margin top (`classes_margintop`)	select	No	No	Default	Outer spacing top	As above	One of 15 options	mt-600
Margin bottom (`classes_marginbottom`)	select	No	No	Default	Outer spacing bottom	As above	One of 15 options	mb-600

Field details

- **Modal Content**
  - Purpose: the page whose content fills the dialog.
  - Allowed Values: a site page chosen with the content picker. The model description suggests a page under `/modals/`; any page path works for the Modal block.
  - Character Limits: not applicable.
  - Business Rules: the block's first link is used; absolute URLs are reduced to their path; the path must start with `/` (not `//`); `.html` / `.plain.html` is stripped and `{path}.plain.html` is fetched each time the dialog opens; a failed request opens nothing and shows no message.
  - Dependency Rules: the fragment page must be published (live) or previewed (preview site).
  - Visibility Rules: always visible (no `condition`).
  - Sample Content: `/content/tcs-corp/us/en/modals/awards` (published `/en/modals/awards`).
- **Button Text**
  - Purpose: the visible label of the opener.
  - Allowed Values: plain text. Character Limits: none enforced; Recommended: up to 30 characters.
  - Business Rules: empty or identical to the URL → "Open" (placeholder `open`). With the link it forms one link (field collapsing of `link` + `linkText`) that the block converts into a button.
  - Dependency Rules: needs Modal Content (without a link no button is rendered).
  - Visibility Rules: always visible. Sample Content: "View our awards".
- **Anchor ID / Hide block / Padding (4) / Margin (4)**
  - Purpose: the common block options; Allowed Values: Anchor ID `anchor-…`; Hide block on / off; each spacing select: Default; 0 (none); 0.25rem (space-100); 0.5rem (space-200); 0.75rem (space-300); 1rem (space-400); 1.25rem (space-500); 1.5rem (space-600); 2rem (space-800); 2.5rem (space-1000); 3rem (space-1200); 4rem (space-1600); 5rem (space-2000); 6rem (space-2400); 7.5rem (space-3000).

- Character Limits: Anchor ID none enforced (Recommended under 40 characters).
- Business Rules: they apply to the opener block on the page, not to the dialog. Anchor ID becomes the block id (also used as the data layer component id of the opener); duplicates get `-2`, `-3`.
- Dependency Rules: none. Visibility Rules: always visible. Sample Content: Margin top = 1.5rem (space-600).

6.23.7 Field Annotation Mapping

Marker	Field	Purpose
A	Modal block (Modal Content, Button Text, Additional)	Block properties
B	Button Text (on the opener button)	Opens the dialog

6.23.8 Component Specification

Attribute	Value
Component Name	Modal (`modal`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`blocks/fragment`, `scripts/aem.js`, `scripts/scripts.js`, `decorators/button-decorator.js`, `decorators/icon-button-decorator.js`, `decorators/data-layer-decorator.js`, `utils/analytics.js`, `utils/ids.js`, `utils/placeholders.js`, `icons/close.svg`
Component Type	Block (opener) plus a dialog block created at runtime
Supported Variants	Modal block (button); auto-linked `/modals/` links; component dialogs (Video Play in a Pop-up)
Supported Templates	Any page
Supported Metadata	None
Supported Tags	None
Supported Personalization	None; `cmp:show` / `cmp:hide` are available for future Adobe Target / Journey Optimizer use (not implemented)
Caching Considerations	Fragment `.plain.html` is cached by the Edge Delivery CDN and the browser; republish the fragment to update every opener
Performance Considerations	No cost until opened: the fragment, modal CSS and the auto-link module load on click; the fragment is fetched again at each opening
Accessibility Compliance	WCAG 2.1 AA: native modal dialog (focus containment, Escape), accessible name (4.1.2), focus return (2.4.3), labelled icon close button (1.1.1, 4.1.2), `aria-haspopup` on the opener
SEO Compliance	Content not part of the page HTML; `modals/` and `references/` pages excluded from the query index and sitemap

6.23.9 Input Model

- **Content Inputs:** the Modal Content link and the Button Text (one link); the fragment page's content.
- **Metadata Inputs:** none. **Tags Inputs:** none.
- **Page Context Inputs:** whether the page runs in a frame (Universal Editor): then the visible area is measured; the locale (placeholders).
- **Query Inputs:** none.
- **Manual Inputs:** both fields; the fragment page content.

Authored HTML received by the block (illustrative; the AEM path is mapped to the published path on Edge Delivery):

```
<div class="modal mt-600">
  <div>
    <div>
      <p class="button-container">
        <a href="/en/modals/awards" title="View our awards">View our awards</a>
      </p>
    </div>
  </div>
</div>
```

6.23.10 Output Model

Rendered Output

- On the page: `div.modal.block` containing `button.button.primary[aria-haspopup=dialog]`.
- When open: a new `div.modal.block` appended to `main`, containing `dialog[aria-labelledby | aria-label] > button.close-button` (tertiary icon button, `aria-label` "Close") and `div.modal-content` (the fragment's sections); `body` gets `modal-open`. The dialog block is removed when the dialog closes.

Generated HTML

```
<div class="modal block" data-block-name="modal" data-block-status="loaded">
  <dialog aria-labelledby="modal-title-1" open>
    <button type="button" class="close-button button tertiary" aria-label="Close"
      title="Close"></button>
    <div class="modal-content">
      <div class="section">
        <div class="default-content-wrapper"><h2 id="modal-title-1">Our awards</h2>...</
div>
      </div>
    </div>
  </dialog>
</div>
```

Generated JSON: none. **Generated Metadata:** none.

Analytics Tracking

- Opening pushes `cmp:show` with the dialog block's component id (`modal-{n}`; a new id at every opening because a new block is created):

```
{ "event": "cmp:show", "eventInfo": { "path": "component.modal-2", "interaction":
"dialog" } }
```

- Closing (any way) pushes `cmp:hide` (captured `close` event):

```
{ "event": "cmp:hide", "eventInfo": { "path": "component.modal-2", "interaction":
"dialog" } }
```

- The opener button and the close button push `cmp:click` (`interaction` "button", `dc:title` the button text / "Close", `xdm:linkType` "other", `breakpoint`); links inside the dialog push `cmp:click` with `xdm:linkURL` and `xdm:linkType`.

- Component state: the opener block is registered as `tcs-corp/components/modal`; the dialog block may be registered by the delayed `trackBlocks` pass if it is open at that time.

Personalization Output: none. **Search Index Output:** none.

Target Personalization Output: None in the block today. Opening and closing push cmp:show and cmp:hide (interaction dialog) to the Adobe Client Data Layer, available for future Adobe Target or Journey Optimizer use (not implemented).

6.23.11 Business Rules

1. Modal block without a link: nothing is changed.
2. Opener text: link text, else "Open" when the text is empty or equals the URL.
3. The link `title` is copied to the button only if it differs from the text and the URL.
4. The opener is a `<button type="button">` with `aria-haspopup="dialog"`, styled as a primary button; the link's editor instrumentation moves to it.
5. Absolute URLs are reduced to their path; fragment paths must start with `/` and not `//`.
6. The fragment is fetched (`{path}.plain.html`) and fully decorated each time the dialog opens; a failed fetch silently does nothing.
7. The dialog's name: its first heading (h1 to h6; an id `modal-title-{n}` is added if it has none), else `aria-label` "Dialog" (placeholder `dialog`).
8. The close button is labelled "Close" (placeholder `close`).
9. A click on the backdrop (outside the dialog's box) closes the dialog; clicks inside do not.
10. Escape closes the dialog (native `<dialog>`).
11. On close: the page scroll lock is removed, the dialog block is removed from the page and focus returns to the element that opened it.
12. On open: the page is locked (`body.modal-open { overflow: hidden }`) and the dialog scrolls to the top.
13. In a frame (Universal Editor) the dialog is hidden until the visible area is measured, is centred in that area, and wheel scrolling outside it or past its ends is blocked.
14. Links whose URL path contains `/modals/` open as a modal, unless the click was already handled; this listener starts in the lazy phase.
15. `cmp:show` on open and `cmp:hide` on close (interaction `dialog`).
16. The dialog is at most 56.25rem wide and never taller than the visible area minus twice the gap (1.5rem below 900px, 2.5rem from 900px).

6.23.12 Author Best Practices

- **Recommended Content Length:** a heading and up to about 300 words, or a short form; longer content belongs on a page (Recommended).
- **Image Dimensions:** the content width is at most about 52rem (56.25rem minus padding); images of 1200px width are sufficient; use landscape images (16:9 or 3:2).
- **CTA Writing Guidelines:** Button Text with a verb and object ("View our awards", "Read the terms"); avoid "Click here" and "Open".
- **Accessibility Guidelines:** start every modal page with a heading; keep a single purpose per dialog; do not open a modal from inside a modal.
- **SEO Guidelines:** keep indexable content on regular pages; use modals for supplementary content only.
- **Metadata Guidelines:** modal fragment pages need no SEO metadata (excluded from the index); give them a clear Title for authors.
- **Taxonomy Guidelines:** not applicable.
- **Localization Guidelines:** create the modal page in each locale (`/de-de/modals/...`) and link the locale's own page; the "Open", "Close" and "Dialog" texts come from the locale's placeholders sheet.

6.23.13 Troubleshooting Guide

Issue 1 — The button does nothing
Symptoms: Selecting the opener shows no dialog and no error.

Root Cause: The fragment page is not published / previewed, the path is wrong, or the link is not a site path.

Diagnosis Steps: Inspect the button's original link in the authored content; open `{path}.plain.html` on the same host; check the Network tab for a 404.

Resolution Steps: Publish the fragment; correct Modal Content.

Validation Steps: The dialog opens.

Preventive Measures: Publish fragments with their referencing pages.

Issue 2 — No button appears
Symptoms: The Modal block is empty on the page.

Root Cause: Modal Content is not set (no link), or Hide block is on.

Diagnosis Steps: Check both fields.

Resolution Steps: Choose the fragment; switch Hide block off.

Validation Steps: The button is visible.

Preventive Measures: Checklist.

Issue 3 — The button says "Open"
Symptoms: Generic label.

Root Cause: Button Text is empty or the same as the URL.

Diagnosis Steps: Check Button Text.

Resolution Steps: Enter a descriptive text.

Validation Steps: The label is correct.

Preventive Measures: Always fill Button Text.

Issue 4 — A link opens a dialog instead of navigating (or the reverse)
Symptoms: A link unexpectedly opens a modal, or a modal link navigates to the page.

Root Cause: Its path contains `/modals/` (auto-link), or the click happened before the lazy phase / in Universal Editor (editor navigation).

Diagnosis Steps: Check the link URL; retest on the preview site after the page loads.

Resolution Steps: Move content pages out of `modals` folders; for dialogs use a Modal block in the editor.

Validation Steps: Behaviour as intended on `.aem.page`.

Preventive Measures: Reserve `modals` folders for dialog content.

Issue 5 — Screen readers announce "Dialog" only
Symptoms: Generic dialog name.

Root Cause: The fragment page has no heading.

Diagnosis Steps: Inspect the dialog for `aria-label="Dialog"`.

Resolution Steps: Add a heading at the top of the fragment page.

Validation Steps: `aria-labelledby` points to the heading.

Preventive Measures: Template for modal pages starting with a heading.

Issue 6 — Dialog content looks unstyled or blocks are missing
Symptoms: Blocks in the dialog show raw rows.

Root Cause: A block on the fragment page failed to load, or a block's styles depend on its page context.

Diagnosis Steps: Console errors `failed to load block …`; open the fragment page on its own.

Resolution Steps: Fix the block content; escalate block errors to development.

Validation Steps: Content renders like on the fragment page.

Preventive Measures: Preview fragment pages before linking them.

Issue 7 — No cmp:show / cmp:hide events
Symptoms: Analytics shows no dialog interactions.

Root Cause: Adobe Tags not yet embedded (events exist but are not sent), or the dialog did not open.

Diagnosis Steps: `window.adobeDataLayer.filter((e) => e.eventInfo?.interaction === 'dialog')`.

Resolution Steps: Configure the Adobe Tags rule once embedded; otherwise fix Issue 1.

Validation Steps: Events present with `component.modal-{n}` paths.

Preventive Measures: Note that the component id changes at every opening; build rules on `interaction: dialog`.

6.23.14 Support Runbook
Monitoring Requirements
- 404 monitoring for `/{locale}/modals/*.plain.html` and other fragment requests.
- RUM for pages with modals (INP of the opener).
- [To be confirmed: monitoring tool and thresholds — owner: AMS lead].

Logs
- Browser console: the block logs nothing itself; block load errors (`failed to load block modal`, or of blocks inside the fragment) come from `scripts/aem.js`.
- Network tab: the `.plain.html` request of the fragment and `blocks/modal/modal.css`.
- Admin API status of the page and the fragment page; AEM author logs for publication errors.

Common Errors

Error	Likely cause	First action
Nothing opens	Fragment 404 / wrong path	Open `{path}.plain.html`
No button	No link / Hide block	Check fields
"Open" label	Empty Button Text	Fill it
Unexpected modal	Link path contains `/modals/`	Move the page
"Dialog" name	No heading in fragment	Add a heading
Page scrolls behind	`modal-open` missing (script error)	Check console

Escalation Matrix

Level	Who	What they check
L1	Author support	Modal Content, Button Text, fragment publication, heading
L2	AMS / site admin	Fragment URL status (Admin API), CDN cache, redirects, Code Sync
L3	Development team	`modal.js` / `modal.css`, `autolinkModals`, blocks inside fragments, data layer
L4	Adobe Support	Edge Delivery delivery, Universal Editor frame behaviour

Recovery Procedures: restore and republish the fragment or page; Hide block for the opener; revert code on `main`.

Health Checks: opener opens the dialog; Escape, close button and backdrop close it; focus returns; `document.querySelector('main > .modal')` exists only while open.

Operational Procedures: maintain modal pages per locale in `modals/` folders; republish them after edits; check all openers after renaming or moving a modal page.

Known Limitations

- No automatic opening (on load, timer or exit intent); no size or style options.
- The fragment is fetched again at every opening; failures are silent.
- A new dialog block (and data layer id) is created at every opening.
- Dialog content is not part of the page HTML (not indexed with the page).
- Auto-linking depends on `/modals/` in the URL path and starts in the lazy phase.

6.23.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
Selecting the button opens nothing	The fragment page is not published to that environment or the path is wrong	Publish the fragment page and check {path}.plain.html returns 200
No button appears	Modal Content is empty or Hide block is on	Choose the fragment page and switch Hide block off
The button reads Open	Button Text is empty or equals the URL	Enter a descriptive Button Text
Screen readers announce only Dialog	The fragment page has no heading	Start the fragment page with a heading
A link opens a dialog unexpectedly	The linked page sits in a modals folder	Move content pages out of modals folders
A link to a modal page navigates instead	The click came before the lazy phase or inside Universal Editor	Test on aem.page after load, or use a Modal block
The dialog shows outdated content	Only the button page was republished	Republish the fragment page
Spacing set on the Modal block does not change the dialog	The Additional tab applies to the opener block only	Change the fragment page content instead; the dialog has no style options

6.23.16 Author Quick Reference Guide

Mandatory Fields

- Modal Content — needed for the component to render: without a link no button appears (not required in the model)
- A published fragment page — without it the button opens nothing

Recommended Fields

- Button Text — a verb and an object such as View our awards; empty shows Open
- A heading at the top of the fragment page — it names the dialog

- A fragment page in the same locale's modals folder

Optional Fields

- Anchor ID — an anchor- id for the opener block
- Hide block — hides the opener without deleting it
- Padding and Margin left, right, top, bottom — spacing of the opener, not of the dialog

Authoring Checklist

1. Create and publish the fragment page first, e.g. /content/tcs-corp/us/en/modals/awards
2. Start the fragment page with a heading
3. Add Modal to the section where the button should appear
4. Pick the fragment page in Modal Content with the content picker
5. Enter Button Text with a verb and an object
6. For inline links, link the text to a page in a modals folder instead
7. Keep dialog content to a heading and about 300 words

Pre-Publish Checklist

1. Switch to Preview and select the button: the dialog opens
2. Close it with the close button, Escape and a backdrop click; focus returns to the button
3. Check long content scrolls inside the dialog and the page stays still
4. Check the fragment's .plain.html loads on aem.page
5. Test at 375 px, 768 px and 1440 px

Post-Publish Validation Checklist

1. Open the page on aem.live and open the dialog
2. Confirm the fragment page is live, not only previewed
3. Check the dialog's aria-labelledby points to the fragment heading
4. Check window.adobeDataLayer shows cmp:show on open and cmp:hide on close
5. After editing the fragment, republish it and recheck every opener

6.23.17 Component Execution Example

Business example: Awards dialog on the English site.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Title
Title (Title)	Recognised for excellence
Title Type (Title)	h2
Component (Section › Add (+))	Text
Text (Text)	Our teams are recognised every year for the outcomes they deliver with clients in every industry.
Component (Section › Add (+))	Modal
Modal Content (Modal › Content)	Select the page or enter /en/shots/modals/awards
Button Text (Modal › Content)	View our awards
Content (Fragment page /en/shots/modals/awards (in AEM a page in the modals folder: /content/tcs-corp/us/en/modals/awards))	Heading 2 "Awards and recognition", a paragraph, a bulleted list of four awards and the link "More about us"

All other fields keep their default values.

Rendered Result:

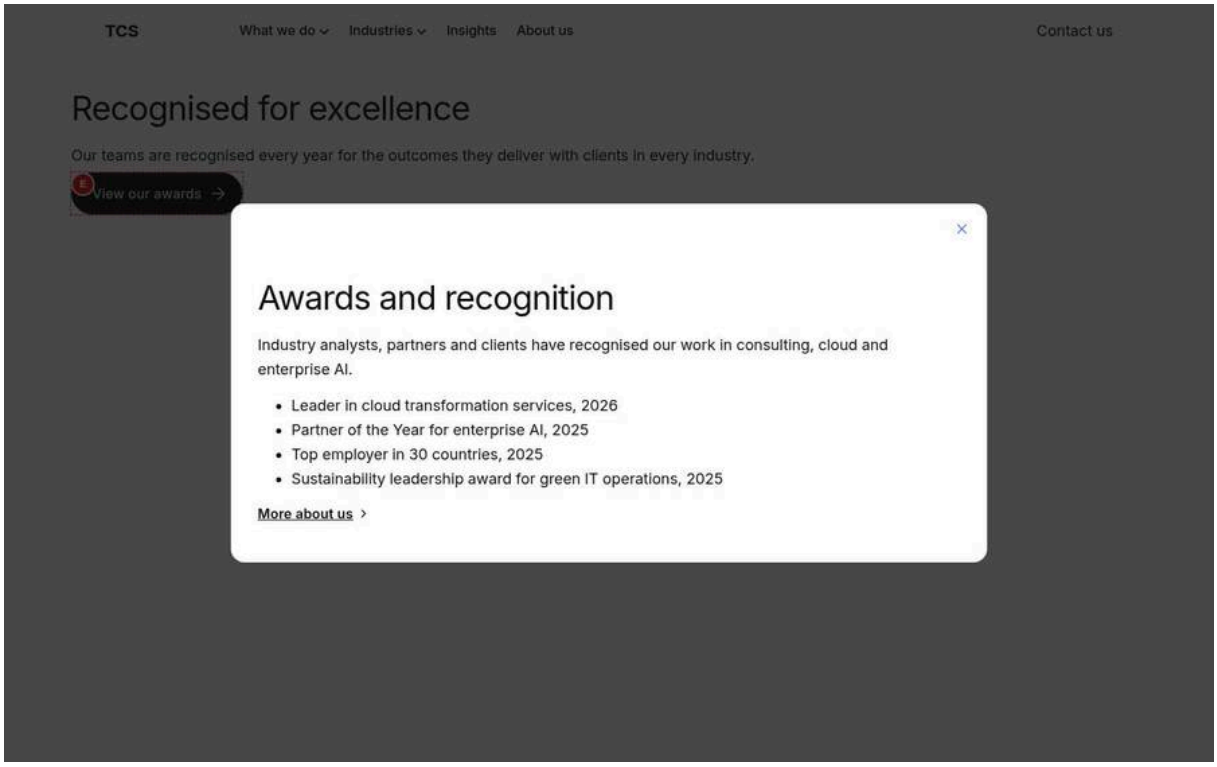

Figure 42: Execution example — At 1440 px: the section with the H2 Recognised for excellence, the paragraph and the primary button View our awards, dimmed under the dark backdrop, and the awards dialog (56.25rem wide, the H2 Awards and recognition, four bulleted awards and More about us) open over it rather than next to it. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/modal-block-button.jpg)

Author Notes

- The awards list is authored once on /content/tcs-corp/us/en/modals/awards and published before the button page.
- The section holds a Title Recognised for excellence (h2), a Text and the Modal block with Button Text View our awards.
- Modal Content is chosen with the content picker, so the link maps to the published path on Edge Delivery.
- The dialog is tested in Preview mode: open, scroll, close with Close, Escape and the backdrop.

Business Notes

- Visitors see the full award list without leaving the page and return to the same place on close.
- One fragment page can serve every opener on the site; updating it updates all dialogs.
- The dialog content is not indexed with the page, so the headline message stays in the page text.

Technical Notes

- decorate() replaces the block's first link with button.button.primary[aria-haspopup=dialog] and moves the editor instrumentation to it.
- openModal() fetches {path}.plain.html through loadFragment, decorates it and shows a native dialog with showModal().
- The dialog is named by its first heading (id modal-title-N) and removed from main on close, with focus back on the opener.
- cmp:show is pushed on open and cmp:hide on close with a new component id modal-N at every opening.

6.24 Gen Carousel Block

The Gen Carousel (`blocks/gen-carousel`) shows a sequence of slides, one at a time, with previous / next buttons, dots, swipe and keyboard navigation and an optional autoplay with a pause / play button. It is a **section-based** component: authors add a **Gen Carousel** section at the page level and place **Hero** or **Teaser** blocks in it; `scripts/scripts.js` (`buildCarouselSections`) wraps the section content in a synthetic `gen-carousel` block, and every child of that block becomes a slide, whatever it contains. The carousel therefore never depends on the markup of its slides; each Hero or Teaser keeps its own design and authoring. It follows the WAI-ARIA carousel pattern (region and slide role descriptions from the placeholders sheet) and pushes a `cmp:show` data layer event for every slide change.

6.24.1 Component Purpose

Business Objective

Feature several campaigns, stories or offers in the same prominent space (typically the top of the home page) while keeping each message a full-size Hero or Teaser.

Business Use Cases

- Home page hero rotation (brand campaign, latest results, major event).
- Rotating success stories or case studies (Teasers).
- Event or campaign highlights on landing pages.

When To Use

- Two to five messages of similar importance that share one space.
- Each message is a complete Hero or Teaser with its own CTA.

When Not To Use

- One message only (a carousel with one slide shows no controls; use the Hero or Teaser directly).
- Critical information every visitor must see (later slides are often not viewed).
- Lists of many items (cards, news): use the List or Cards block (horizontal scroll layouts).
- Content other than Hero / Teaser: the section only allows these two blocks (filter `gen-carousel`).

Dependencies

Dependency	Type	Use
`blocks/gen-carousel/gen-carousel.js`	Block	Slides, controls, autoplay, keyboard, data layer, editor selection
`blocks/gen-carousel/gen-carousel.css`	Block styles	Scroll-snap track, slide sizing, controls and dots
`blocks/gen-carousel/_gen-carousel.json`	Model	Section definition `gen-carousel`, model, filter (hero, teaser)
`scripts/scripts.js` (`buildCarouselSections`, `wrapSectionContent`)	Shared code	Builds the synthetic block from the section and its options
`decorators/button-decorator.js` (`decorateButton`)	Decorator	Pause / play icon switching
`decorators/icon-button-decorator.js` (`createIconButton`)	Decorator	Previous, next, pause / play icon buttons
`utils/analytics.js` (`pushComponentEvent`)	Util	`cmp:show` per slide change

Dependency	Type	Use
`utils/environment.js` (`isEditing`, `prefersReducedMotion`, `scrollBehavior`)	Util	Editor behaviour; reduced motion
`utils/viewport.js` (`watchVisibility`)	Util	Pauses autoplay off screen
`utils/ids.js` (`uniqueId`)	Util	Ids `gen-carousel-{n}`, `…-slides`, `…-slide-{i}`
`utils/placeholders.js`	Util	`carouselRole`, `carousel`, `slideRole`, `slideOf`, `showSlide`, `pauseSlides`, `playSlides`, `previousSlide`, `nextSlide`
`decorators/data-layer-decorator.js`	Decorator	`cmp:click` for controls (`data-cmp-interaction`)
`icons/chevron-left.svg`, `chevron-right.svg`, `pause.svg`, `play.svg`	Icons	Control icons
Hero and Teaser blocks	Blocks	The slides

Related Components

Hero Block and Teaser Block (the slides); List / Cards (horizontal scroll card lists); Tabs (switchable content without rotation).

Applicable Templates

Any page; added at the page level (the `main` filter allows `section`, `gen-carousel` and `tabs`). Typical: home template, landing pages.

Supported Content Types

Hero and Teaser blocks with their own images, headings, text and CTAs.

Business Problem Solved

Home and landing pages need several equally important messages in the space of one banner, and earlier slider implementations depended on the markup of their slides. The Gen Carousel turns a section of Hero or Teaser blocks into accessible slides with arrows, dots, swipe, keyboard and optional autoplay with pause, while each slide keeps its own authoring and design.

Supported Taxonomy

None: the Gen Carousel has no tag field and reads no page tags or taxonomy (Supported Tags: None); Teaser slides may display their own tags.

6.24.2 Visual Overview

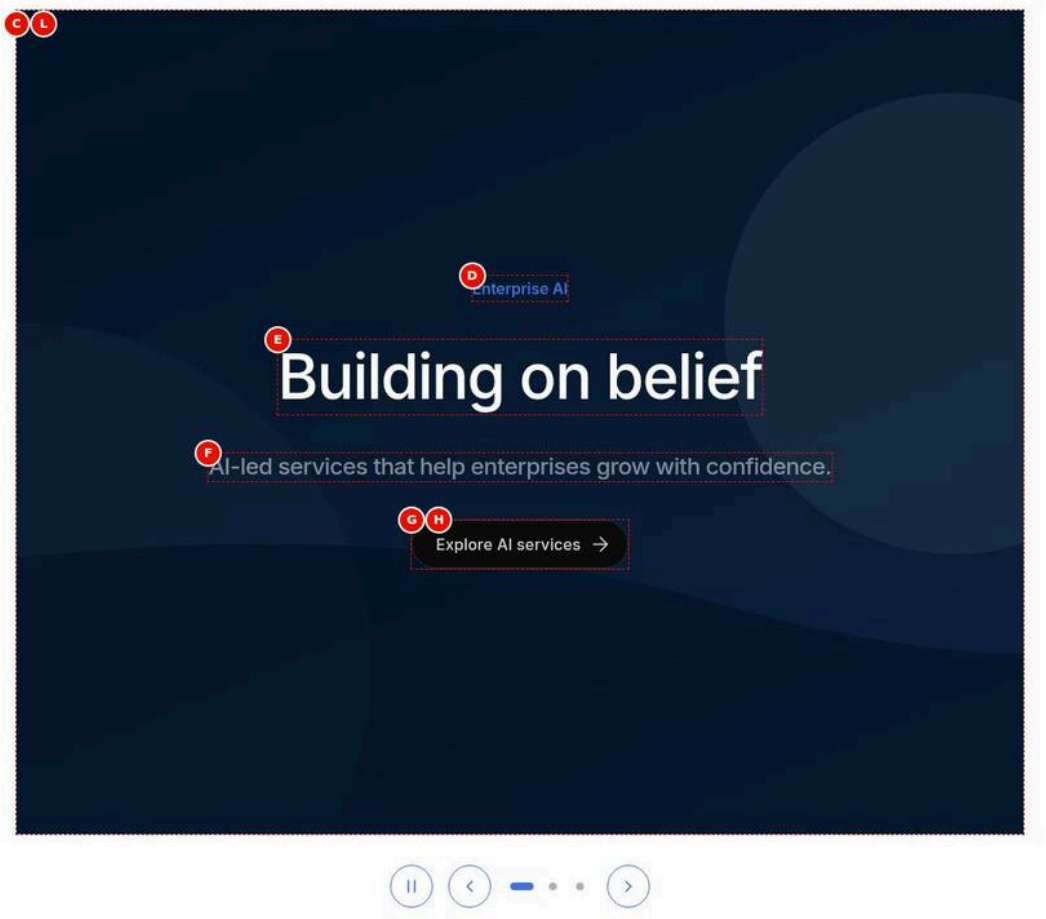

Figure 43: Desktop rendering — At 1200 px: slide 1 of a three-Hero carousel at full content width (navy overlay, eyebrow Enterprise AI, H1 Building on belief, the description and the primary button Explore AI services, centred), and 2rem below it the pause button, previous arrow, three dots (the first a wide brand pill) and next arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/gen-carousel-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/gen-carousel-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	At 1200 px: slide 1 of a three-Hero carousel at full content width (navy overlay, eyebrow Enterprise AI, H1 Building on belief, the description and the primary button Explore AI services, centred), and 2rem below it the pause button, previous arrow, three dots (the first a wide brand pill) and next arrow.
Business Context	A home or landing page rotates three strategic messages (enterprise AI, cloud, sustainability) in the space of one banner.
Author Objective	Build a Gen Carousel section with Navigation Manual and Auto, a 7-second interval and three Hero slides.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Gen Carousel	Yes	Adds the Gen Carousel to the page	Choose Add (+) on the page and pick Gen Carousel	Only components the section allows (section filter)
(A)	Navigation (Gen Carousel › Content)	Manual and Auto	No	How slides change	Manual unless rotation is required	Manual / Auto / Manual and Auto; unknown values → Manual (code)
(B)	Autoplay interval (seconds) (Gen Carousel › Content)	7	No	Seconds per slide	5 to 10 seconds for reading time	Enforced in the dialog: min 2, max 30; code: minimum 2, empty / invalid → 5
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
C	Hero Image Path (Hero › Image)	Select the asset wide.svg (/en/media/wide.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
D	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
E	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
F	Description (Hero › Content)	AI-led services that help enterprises grow with confidence.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
G	CTA Title (Hero › Links › CTA List › Item 1)	Explore AI services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
H	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services/ai	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(I)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(J)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
(K)	Hero Image Path (Hero › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
L	Eyebrow (Hero › Content)	Cloud	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
(M)	Title (Hero › Content)	Modernise on any cloud	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
(N)	Title heading level (Hero › Content)	H2	No	Semantic heading level of the title	H1 for the first hero, H2 for others	Options: H1, H2
(O)	Description (Hero › Content)	Migrate, modernise and run your workloads with a partner you trust.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
(P)	CTA Title (Hero › Links › CTA List › Item 1)	Discover cloud services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
(Q)	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services/cloud	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(R)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(S)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
(T)	Hero Image Path (Hero › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
(U)	Eyebrow (Hero › Content)	Sustainability	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
(V)	Title (Hero › Content)	Technology for a greener future	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
(W)	Title heading level (Hero › Content)	H2	No	Semantic heading level of the title	H1 for the first hero, H2 for others	Options: H1, H2
(X)	Description (Hero › Content)	Measure, reduce and report your footprint with data-driven operations.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
(Y)	CTA Title (Hero › Links › CTA List › Item 1)	See how	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					characters (Recommended)	
(Z)	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/about	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(AA)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(AB)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
—	Screen width (Preview)	1200 px (desktop)	—	Check on the preview (not stored in the content)	1200 px (desktop)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** One Hero slide filling the width, 53.125rem high from 900 px, with white centred text over the navy overlay; below it one centred row of controls: pause, previous, three dots, next.
- **Rendering behaviour:** Slides sit in a horizontal scroll-snap track; autoplay advances every 7 seconds and pauses on hover, keyboard focus, when less than 25 % is on screen, in a hidden tab and in edit mode. Controls are 2rem below the slides from 900 px.
- **Publishing behaviour:** Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Business Rules

- Navigation Manual and Auto gives pause / play, previous, next, dots and swipe together.
- Autoplay interval 7 is used in seconds; values below 2 are raised to 2, and an empty or invalid value gives 5.
- Previous and next wrap around; a button or dot click restarts the interval.
- With reduce motion set in the operating system the carousel starts paused, showing Play.
- Only the first slide uses H1; slides 2 and 3 set Title heading level to H2.

Common Authoring Mistakes

Error	Root Cause	Resolution
Slides change before visitors can read them	Autoplay interval set to 2 or 3 seconds	Use at least 5 seconds; 7 as in this example
Three H1 headings on the page	Title heading level left at the default H1 on every Hero	Set H2 on slides 2 and 3
The Heroes are stacked, no controls	The Heroes were added to a standard section	Add a Gen Carousel section and move the Heroes into it

Troubleshooting

- **Symptoms:** On aem.page the slides do not advance although Navigation is Manual and Auto.
- **Cause:** The pointer rests over the slides, keyboard focus is inside the carousel, or reduce motion is on, so autoplay is paused by design.
- **Resolution:** Move the pointer away, select Play if the button shows Play, and check the operating system motion setting.
- **Verification Steps:** Without interaction the next slide appears after 7 seconds and its dot becomes the brand pill.

Desktop (1200px and wider). One slide fills the full width of the section content area; slides of different blocks are stretched to the same height. Below the slides, the controls are centred in one row, 2rem below the slides (from 900px), 1rem apart: pause / play (Auto modes), previous (Manual modes), the dots, next (Manual modes). Each dot has a 1.5rem round hit area with a 0.5rem dot in the tertiary neutral border colour; the current slide's dot is a 1.5rem wide brand-coloured pill; hovering a dot turns it to the brand hover colour. Slides move with a smooth horizontal scroll and snap into place.

Figure 44: Tablet rendering — At 768 px: slide 1 of a three-Teaser carousel, the photo-4 image above the eyebrow Case study, the H2 A digital core for a European bank, the description and the primary button Read the story, and 1.5rem below it the previous arrow, three dots and next arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/gen-carousel-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/gen-carousel-tablet-view.jpg`
Screenshot Purpose	Tablet rendering

Item	Detail
Screen Description	At 768 px: slide 1 of a three-Teaser carousel, the photo-4 image above the eyebrow Case study, the H2 A digital core for a European bank, the description and the primary button Read the story, and 1.5rem below it the previous arrow, three dots and next arrow.
Business Context	Further down a page, three case studies (banking, retail, manufacturing) share one space as a story rotation the visitor browses.
Author Objective	Build a Gen Carousel with three Teaser slides and the default Manual navigation.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Gen Carousel	Yes	Adds the Gen Carousel to the page	Choose Add (+) on the page and pick Gen Carousel	Only components the section allows (section filter)
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Case study	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	A digital core for a European bank	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	A cloud-native core banking platform launched new products in weeks instead of months.	No	Main text	Up to 300 characters (Recommended)	None

—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (H), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A Teaser slide at full width with its 10:9 rounded image on top and the text below, then a centred row with the previous arrow, three dots and the next arrow.
- **Rendering behaviour:** Below 900 px the Teaser stacks image and text in one column (two columns from 900 px) and the controls are 1.5rem below the slides; Manual navigation allows swiping one slide at a time with scroll snap.
- **Publishing behaviour:** Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Business Rules

- Navigation keeps its default Manual: no autoplay, no pause button and no Autoplay interval field.
- Each Teaser is one slide; slides of different heights are aligned to the tallest one.
- Every Teaser image has its alt text, e.g. Bank employees reviewing a digital dashboard.
- Slides that are not shown are inert, so their Read the story links are not reached with Tab.

Common Authoring Mistakes

Error	Root Cause	Resolution
Three identical Read the story links confuse screen reader users	All CTAs share the same text	Keep the titles distinct; consider CTA texts naming the story
A dot shows an empty slide	A Teaser with Hide block on still counts as a slide	Delete or move the Teaser instead of hiding it
Slides jump in height	Teaser images use different Image ratio values	Keep the same Image ratio on all slides

Troubleshooting

- **Symptoms:** Swiping the slides on a tablet does nothing.
- **Cause:** Navigation was changed to Auto, which disables swiping (overflow-x hidden) by design.
- **Resolution:** Set Navigation to Manual, or Manual and Auto if rotation is also wanted, and publish the page.
- **Verification Steps:** A horizontal swipe moves to the next Teaser and the dot of that slide becomes the brand pill.

Tablet (600px to 1199px). Same layout. Below 900px the controls are 1.5rem below the slides. In Manual modes the slides can be swiped horizontally (scroll snap, one slide at a time).

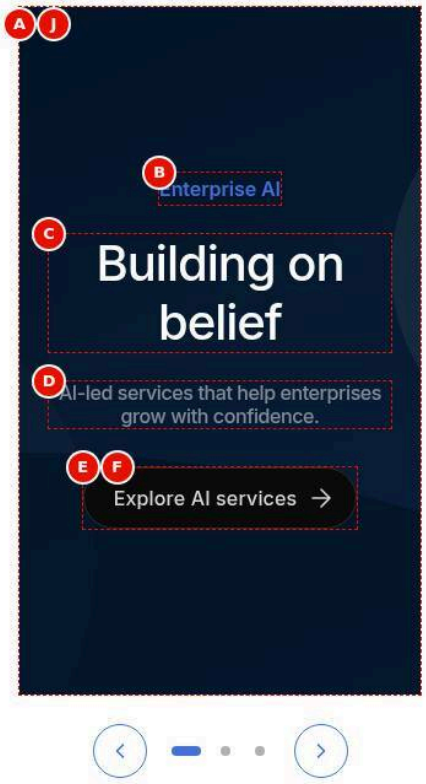

Figure 45: Mobile rendering — At 375 px: slide 1 of a three-Hero carousel in the Hero mobile layout (35rem high, navy overlay, eyebrow Enterprise AI, H1 Building on belief, description and the button Explore AI services, centred), and below it the previous arrow, three dots and next arrow on one line. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/gen-carousel-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/gen-carousel-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	At 375 px: slide 1 of a three-Hero carousel in the Hero mobile layout (35rem high, navy overlay, eyebrow Enterprise AI, H1 Building on belief, description and the button Explore AI services, centred), and below it the previous arrow, three dots and next arrow on one line.
Business Context	On phones the home page banner keeps its three messages in one screen-high slot that visitors swipe through.
Author Objective	Check the three-Hero carousel with Manual navigation on a phone.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Gen Carousel	Yes	Adds the Gen Carousel to the page	Choose Add (+) on the page and pick Gen Carousel	Only components the section allows (section filter)
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Hero Image Path (Hero › Image)	Select the asset wide.svg (/en/media/wide.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
B	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	AI-led services that help enterprises grow with confidence.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Explore AI services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services/ai	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary

(Z)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay,

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
						Dark blue, Dark blue (subtle), Black
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A full-width Hero slide 35rem high with centred white text over the navy overlay, and a centred row of previous, three dots and next 1.5rem below.
- **Rendering behaviour:** Each Hero uses its own mobile layout inside the slide; the visitor swipes between slides (scroll snap, one at a time) and the controls wrap onto further lines only if they do not fit.
- **Publishing behaviour:** Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Business Rules

- Manual navigation (the default) means no autoplay; visitors swipe or use the arrows and dots.
- Each dot has a 1.5rem round hit area; the current slide's dot is a wider brand pill.
- The slide at least 60 % visible after a swipe becomes the current slide.
- Keep important image areas away from the edges: the Hero image is cropped to cover on mobile.

Common Authoring Mistakes

Error	Root Cause	Resolution
The headline wraps onto many lines on phones	A long Title such as a full sentence	Keep slide titles short, up to about 60 characters
The subject of the image is cut off	Image with the subject near the edge	Use images with the subject centred
English control labels on a localised page	Placeholder keys such as previousSlide missing in the locale's sheet	Add the keys to the locale's placeholders sheet and publish it

Troubleshooting

- **Symptoms:** On the phone the second and third messages are never seen in analytics.
- **Cause:** Manual navigation shows only slide 1 unless the visitor swipes; no cmp:show is pushed for the first slide on load.
- **Resolution:** Put the most important message on slide 1, or agree with the business on Manual and Auto with at least 5 seconds.
- **Verification Steps:** window.adobeDataLayer shows cmp:show with position 2 after a swipe to slide 2.

Mobile (below 600px). One slide at full width in its own mobile layout (from the Hero / Teaser CSS); swipe in Manual modes; the controls and dots wrap onto several lines when they do not fit.

6.24.3 Component Variations

Variation 1 — Navigation: Manual
Variation Name

Manual (`carouselNavigation` = `manual`, default).

Business Purpose

The visitor controls the slides; nothing moves on its own (the most accessible option).

Visual Example

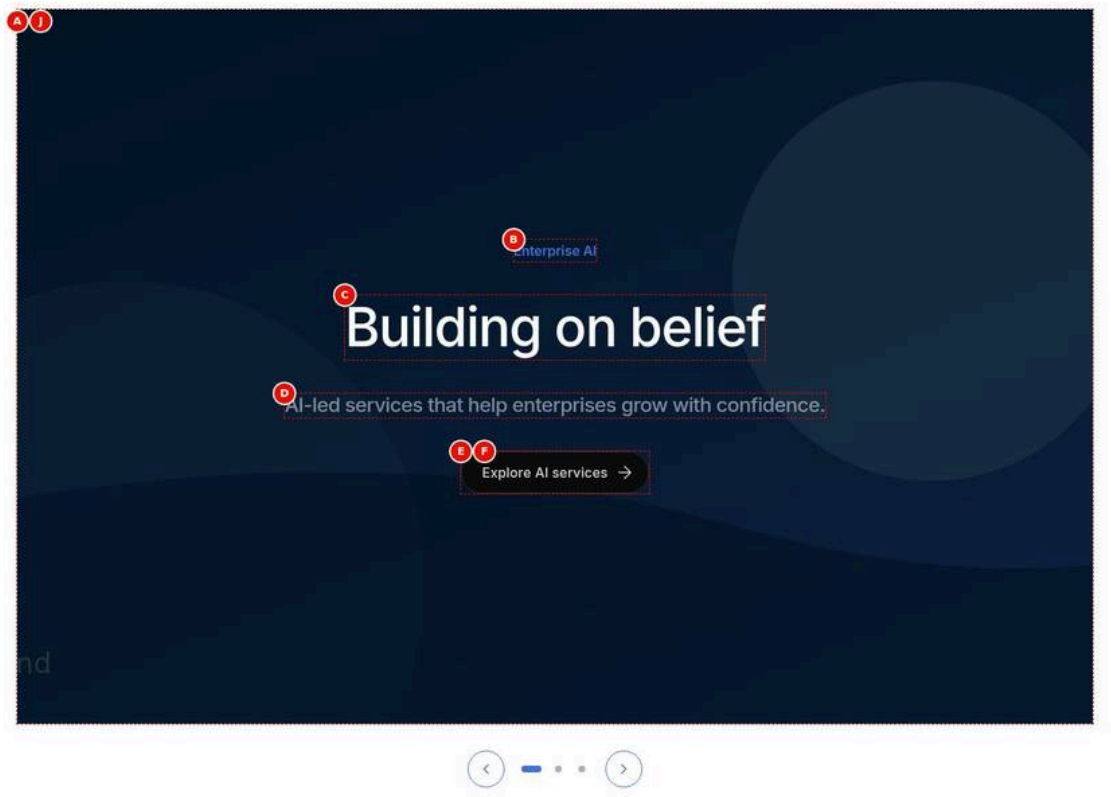

Figure 46: Manual navigation — At 1440 px: slide 1 of the three-Hero carousel (navy overlay, Enterprise AI, H1 Building on belief, description, Explore AI services) and centred 2rem below it the previous arrow, three dots and next arrow, with no pause button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/gen-carousel-manual.jpg)

Screenshot Details — Manual navigation

Item	Detail
Screenshot Name	`screenshots/gen-carousel-manual.jpg`
Screenshot Purpose	Manual navigation
Screen Description	At 1440 px: slide 1 of the three-Hero carousel (navy overlay, Enterprise AI, H1 Building on belief, description, Explore AI services) and centred 2rem below it the previous arrow, three dots and next arrow, with no pause button.
Business Context	A landing page presents three messages the visitor reads at their own pace, the most accessible carousel option.
Author Objective	Use the default Navigation Manual so the slides change only on visitor action.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Gen Carousel	Yes	Adds the Gen Carousel to the page	Choose Add (+) on the page and pick Gen Carousel	Only components the section allows (section filter)

(R)	Hero Image Path (Hero › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
(S)	Eyebrow (Hero › Content)	Sustainability	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
(T)	Title (Hero › Content)	Technology for a greener future	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
(U)	Title heading level (Hero › Content)	H2	No	Semantic heading level of the title	H1 for the first hero, H2 for others	Options: H1, H2
(V)	Description (Hero › Content)	Measure, reduce and report your footprint with data-driven operations.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
(W)	CTA Title (Hero › Links › CTA List › Item 1)	See how	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
(X)	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/about	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(Y)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(Z)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A full-width Hero slide with centred white text over the navy overlay; below it previous, three dots (first as a brand pill) and next, no pause button.
- **Rendering behaviour:** Class manual on the carousel; previous / next wrap around, swipe is enabled and ArrowLeft / ArrowRight move the slides while focus is on the controls, then focus moves to the current dot.
- **Publishing behaviour:** Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Business Rules

- Manual is the default; the Autoplay interval field is hidden while it is selected.
- Nothing moves on its own, so no pause control is needed (WCAG 2.2.2 not triggered).
- Slide changes are announced politely (aria-live polite) and off-screen slides are inert.
- Only the first slide uses H1 (Building on belief); slides 2 and 3 set Title heading level to H2.

Common Authoring Mistakes

Error	Root Cause	Resolution
The interval value has no effect	An Autoplay interval was entered and Navigation set back to Manual	Nothing to fix; choose an Auto mode only if rotation is wanted
Arrow keys move slides inside a form	Expectation only; the arrows work only on the controls	Focus a control (arrow or dot) to use ArrowLeft and ArrowRight
A one-slide carousel shows no arrows	Only one Hero in the section	Add a second slide or use the Hero on its own

Troubleshooting

- **Symptoms:** The previous and next arrows are missing below the slides.
- **Cause:** Navigation is set to Auto, which shows only the pause button and the dots.
- **Resolution:** Select the Gen Carousel section and set Navigation to Manual (or Manual and Auto), then publish.
- **Verification Steps:** Previous, three dots and next are shown and the next arrow moves to slide 2.

Use Cases

Stories the visitor reads at their own pace; most carousels.

Authoring Guidelines

Gen Carousel section, Content tab, **Navigation** = Manual. The Autoplay interval field is hidden.

Business Rules

No autoplay; previous / next wrap around (from the last slide, next goes to the first).

Rendering Rules

Class `manual`; controls: previous, dots, next; swipe enabled (horizontal scroll with snap); ArrowLeft / ArrowRight work while focus is on the controls.

Responsive Behaviour

Same controls at all widths; swipe on touch devices.

SEO Impact

All slides are in the page HTML and indexable; each Hero / Teaser keeps its own headings.

Accessibility Compliance

No moving content (WCAG 2.2.2 not triggered); slide changes announced politely (`aria-live="polite"`); off-screen slides are `inert`.

Variation 2 — Navigation: Auto

Variation Name

Auto (`carouselNavigation` = `auto`).

Business Purpose

Slides advance on their own, like a rotating banner, with a pause button.

Visual Example

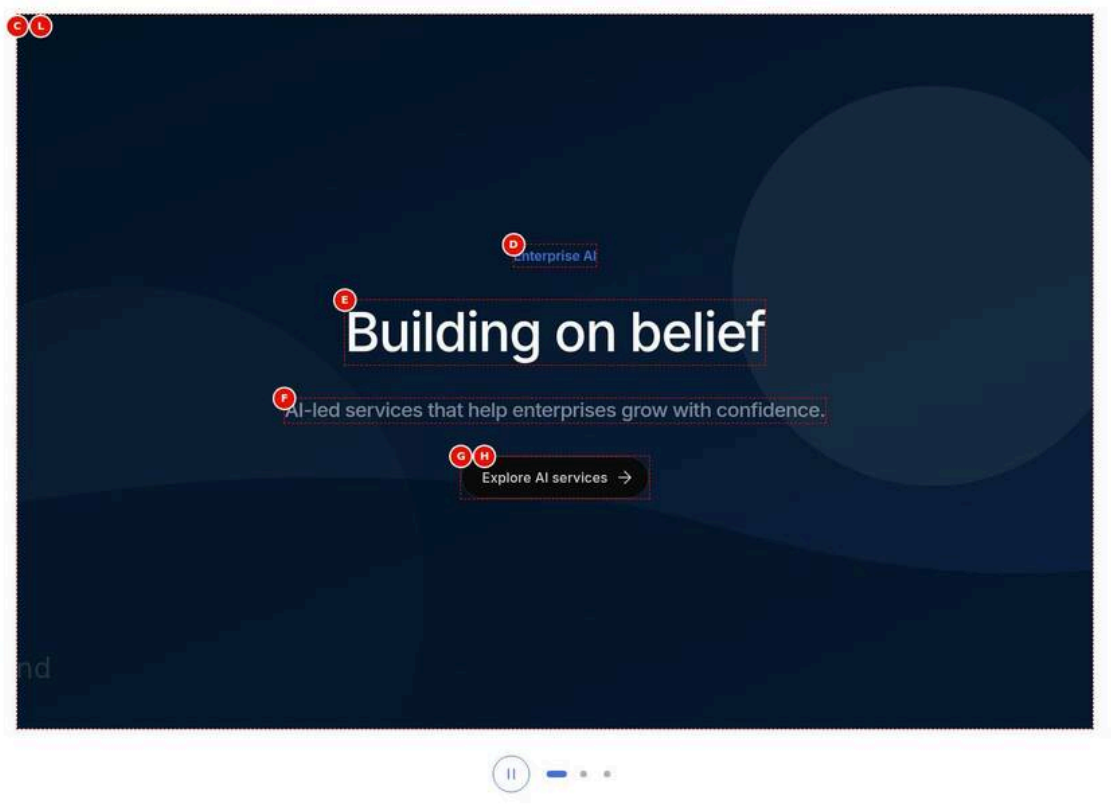

Figure 47: Auto navigation — At 1440 px: slide 1 of the three-Hero carousel (Enterprise AI, H1 Building on belief, Explore AI services over the navy overlay) and below it only the pause button and three dots, without previous or next arrows. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/gen-carousel-auto.jpg)

Screenshot Details — Auto navigation

Item	Detail
Screenshot Name	`screenshots/gen-carousel-auto.jpg`
Screenshot Purpose	Auto navigation
Screen Description	At 1440 px: slide 1 of the three-Hero carousel (Enterprise AI, H1 Building on belief, Explore AI services over the navy overlay) and below it only the pause button and three dots, without previous or next arrows.
Business Context	An ambient brand rotation shows three messages in turn where visitor interaction is not expected.
Author Objective	Set Navigation to Auto with a 7-second interval so the slides advance on their own.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Gen Carousel	Yes	Adds the Gen Carousel to the page	Choose Add (+) on the page and pick Gen Carousel	Only components the section allows (section filter)

(O)	Description (Hero › Content)	Migrate, modernise and run your workloads with a partner you trust.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
(P)	CTA Title (Hero › Links › CTA List › Item 1)	Discover cloud services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
(Q)	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services/cloud	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(R)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(S)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
(T)	Hero Image Path (Hero › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
(U)	Eyebrow (Hero › Content)	Sustainability	No	Short context line above the title	Max. about 40 characters (Recom-	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					mended); only shown with a title	
(V)	Title (Hero › Content)	Technology for a greener future	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
(W)	Title heading level (Hero › Content)	H2	No	Semantic heading level of the title	H1 for the first hero, H2 for others	Options: H1, H2
(X)	Description (Hero › Content)	Measure, reduce and report your footprint with data-driven operations.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
(Y)	CTA Title (Hero › Links › CTA List › Item 1)	See how	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
(Z)	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/about	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(AA)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(AB)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A full-width Hero slide; below it a centred pause icon button followed by three dots, the first a brand pill.
- **Rendering behaviour:** Class auto; the slides advance every 7 seconds, cannot be swiped (overflow-x hidden) and have no arrow-key navigation; the dots stay clickable and aria-live is off while playing.
- **Publishing behaviour:** Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Business Rules

- Auto shows the pause / play button and the dots only; previous and next are not rendered.
- The rotation pauses on hover, keyboard focus inside, under 25 % on screen, in a hidden tab and in edit mode.
- Pause switches to Play slides with the play icon; the rotation stays stopped until Play is selected.
- With reduce motion set the carousel starts paused.
- Only the first slide uses H1 (Building on belief); slides 2 and 3 set Title heading level to H2.

Common Authoring Mistakes

Error	Root Cause	Resolution
Touch users cannot swipe	Auto disables swiping by design	Use Manual and Auto if swiping is required
The rotation is too fast	Interval left at 2 or 3	Set 5 to 10 seconds; 7 here
Autoplay never runs while checking in the editor	Autoplay is off in edit mode	Check in Preview mode or on aem.page

Troubleshooting

- **Symptoms:** The slides change every 5 seconds instead of 7.
- **Cause:** Autoplay interval was left empty or holds an invalid value, so the code default of 5 seconds applies.
- **Resolution:** Select the Gen Carousel section, enter 7 in Autoplay interval (seconds) and publish.
- **Verification Steps:** The carousel block has data-interval 7 and slides change every 7 seconds without interaction.

Use Cases

Ambient brand rotation where interaction is not expected.

Authoring Guidelines

Navigation = Auto; set **Autoplay interval (seconds)** (2 to 30, default 5).

Business Rules

- Slides advance every interval; the rotation pauses while the pointer is over the slides, while keyboard focus is inside the carousel (except on the pause / play button), while less than 25% of the carousel is on screen, while the browser tab is hidden, in Universal Editor edit mode, and when the visitor selects Pause.
- With "reduce motion" set in the operating system, the carousel starts paused (Play shown).
- Swiping is disabled (the slides cannot be scrolled by hand); dots remain clickable.

Rendering Rules

Class `auto`; controls: pause / play button and dots; the track has `overflow-x: hidden`; no arrow-key navigation.

Responsive Behaviour

Same at all widths; no swipe on touch devices.

SEO Impact

As Variation 1.

Accessibility Compliance

Pause control for moving content (WCAG 2.2.2); while playing, `aria-live` is "off" so automatic changes are not announced; button label switches between "Pause slides" and "Play slides".

Variation 3 — Navigation: Manual and Auto

Variation Name

Manual and Auto (`carouselNavigation` = `manual-auto`).

Business Purpose

Rotating slides that the visitor can also control.

Visual Example

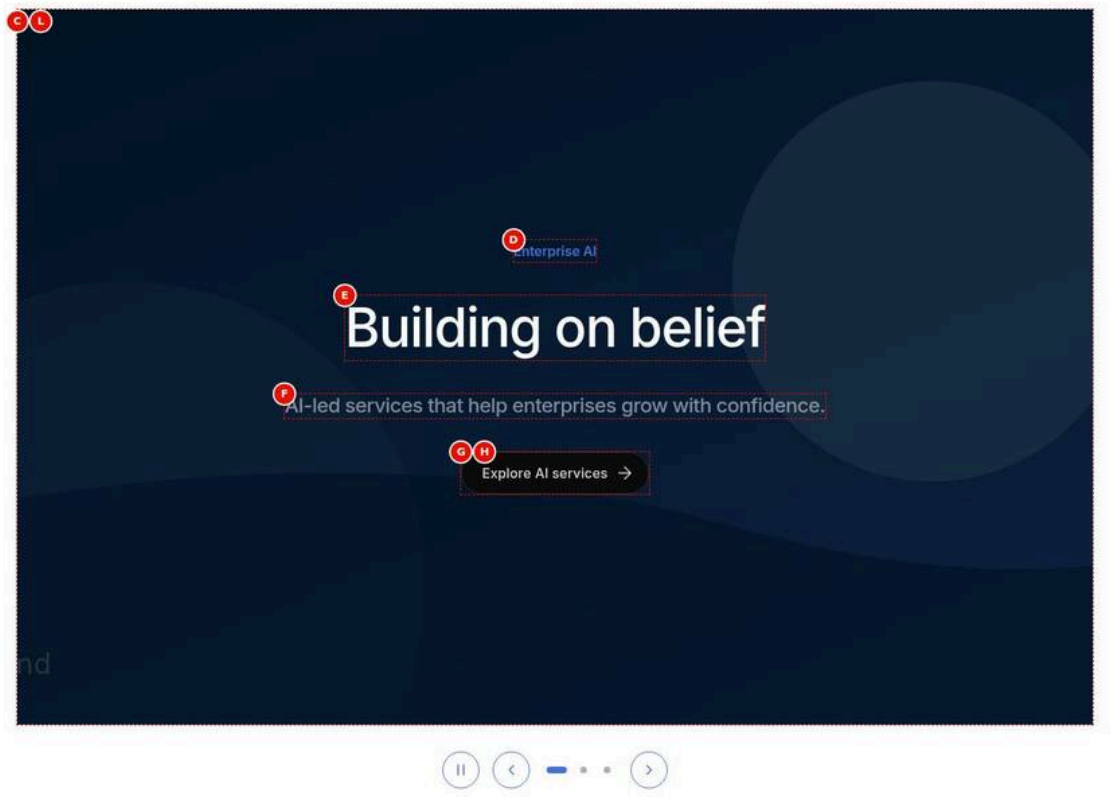

Figure 48: Manual and Auto navigation — At 1440 px: slide 1 of the three-Hero carousel (Enterprise AI, H1 Building on belief, Explore AI services over the navy overlay) and centred below it the pause button, previous arrow, three dots and next arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/gen-carousel-manual-auto.jpg)

Screenshot Details — Manual and Auto navigation

Item	Detail
Screenshot Name	`screenshots/gen-carousel-manual-auto.jpg`
Screenshot Purpose	Manual and Auto navigation
Screen Description	At 1440 px: slide 1 of the three-Hero carousel (Enterprise AI, H1 Building on belief, Explore AI services over the navy overlay) and centred below it the pause button, previous arrow, three dots and next arrow.
Business Context	A home page hero rotation advances on its own but lets visitors go back, skip or stop at any time.
Author Objective	Set Navigation to Manual and Auto with a 7-second interval.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Gen Carousel	Yes	Adds the Gen Carousel to the page	Choose Add (+) on the page and pick Gen Carousel	Only components the section allows (section filter)
(A)	Navigation (Gen Carousel › Content)	Manual and Auto	No	How slides change	Manual unless rotation is required	Manual / Auto / Manual and Auto; unknown values → Manual (code)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Autoplay interval (seconds) (Gen Carousel › Content)	7	No	Seconds per slide	5 to 10 seconds for reading time	Enforced in the dialog: min 2, max 30; code: minimum 2, empty / invalid → 5
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
C	Hero Image Path (Hero › Image)	Select the asset wide.svg (/en/media/wide.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
D	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
E	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
F	Description (Hero › Content)	AI-led services that help enterprises grow with confidence.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
G	CTA Title (Hero › Links › CTA List › Item 1)	Explore AI services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
H	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services/ai	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(I)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(J)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
(K)	Hero Image Path (Hero › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
L	Eyebrow (Hero › Content)	Cloud	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
(M)	Title (Hero › Content)	Modernise on any cloud	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(N)	Title heading level (Hero › Content)	H2	No	Semantic heading level of the title	H1 for the first hero, H2 for others	Options: H1, H2
(O)	Description (Hero › Content)	Migrate, modernise and run your workloads with a partner you trust.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
(P)	CTA Title (Hero › Links › CTA List › Item 1)	Discover cloud services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
(Q)	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services/cloud	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(R)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(S)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
(T)	Hero Image Path (Hero › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
(U)	Eyebrow (Hero › Content)	Sustainability	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
(V)	Title (Hero › Content)	Technology for a greener future	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
(W)	Title heading level (Hero › Content)	H2	No	Semantic heading level of the title	H1 for the first hero, H2 for others	Options: H1, H2
(X)	Description (Hero › Content)	Measure, reduce and report your footprint with data-driven operations.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
(Y)	CTA Title (Hero › Links › CTA List › Item 1)	See how	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
(Z)	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/about	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(AA)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(AB)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A full-width Hero slide; below it one centred row with pause, previous, three dots (the first a brand pill) and next.
- **Rendering behaviour:** Class manual-auto: autoplay every 7 seconds as in Auto, plus previous / next, swipe and arrow keys on the controls; any button or dot click moves the slide and restarts the interval.
- **Publishing behaviour:** Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Business Rules

- All four kinds of control are rendered: pause / play, previous, dots and next.
- Pointer clicks on the controls do not pause the rotation; keyboard focus inside the carousel does.
- Selecting Pause stops the rotation until Play is selected.
- Every slide change, including automatic ones, pushes cmp:show with the slide position.
- Only the first slide uses H1 (Building on belief); slides 2 and 3 set Title heading level to H2.

Common Authoring Mistakes

Error	Root Cause	Resolution
Analytics count many slide views	Autoplay pushes cmp:show at every automatic change	Agree the slide-view definition with the analytics team
The interval seems to reset	A click on a dot or arrow restarts the interval	Expected behaviour; no change needed
Slides rotate while a visitor reads	Interval too short for the description length	Raise the interval or shorten the slide text

Troubleshooting

- **Symptoms:** The pause button is missing and the slides never rotate.
- **Cause:** Navigation was saved as Manual, so no autoplay and no pause / play button are rendered.
- **Resolution:** Select the Gen Carousel section, set Navigation to Manual and Auto, enter 7 seconds and publish.
- **Verification Steps:** The pause button is first in the controls and slide 2 appears after 7 seconds.

Use Cases

Home page hero rotation.

Authoring Guidelines

Navigation = Manual and Auto; set the Autoplay interval.

Business Rules

Autoplay as Variation 2; previous / next / dot clicks move the slide and restart the interval; swipe enabled.

Rendering Rules

Class `manual-auto`; controls: pause / play, previous, dots, next; arrow keys on the controls.

Responsive Behaviour

All controls at all widths, wrapping on narrow screens; swipe on touch.

SEO Impact

As Variation 1.

Accessibility Compliance

As Variations 1 and 2 combined.

Variation 4 — Single slide (static)

Variation Name

Single slide.

Business Purpose

A carousel prepared with one slide (for example while other slides are being produced) shows as a static block.

Visual Example

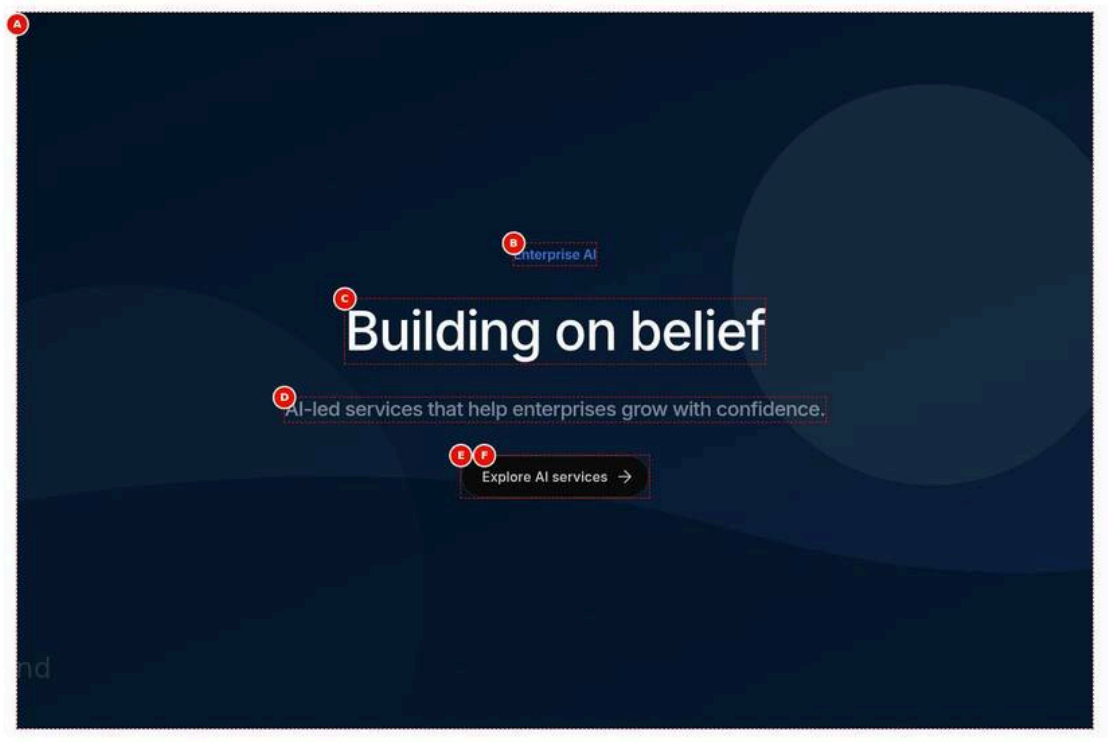

Figure 49: Single slide — At 1440 px: a Gen Carousel with a single Hero (navy overlay, eyebrow Enterprise AI, H1 Building on belief, description and Explore AI services, centred) and no controls below it. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/gen-carousel-single-slide.jpg)

Screenshot Details — Single slide

Item	Detail
Screenshot Name	`screenshots/gen-carousel-single-slide.jpg`
Screenshot Purpose	Single slide
Screen Description	At 1440 px: a Gen Carousel with a single Hero (navy overlay, eyebrow Enterprise AI, H1 Building on belief, description and Explore AI services, centred) and no controls below it.
Business Context	A carousel prepared for a campaign currently holds one message while the other slides are being produced.
Author Objective	See how a Gen Carousel with only one Hero renders.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Gen Carousel	Yes	Adds the Gen Carousel to the page	Choose Add (+) on the page and pick Gen Carousel	Only components the section allows (section filter)
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset wide.svg (/en/media/wide.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
B	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	AI-led services that help enterprises grow with confidence.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Explore AI services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services/ai	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(H)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** One full-width Hero exactly as on its own, without arrows, dots or a pause button below.
- **Rendering behaviour:** With fewer than two slides the block sets the region and slide roles, marks the slide active and stops: no controls, no autoplay, no keyboard handling and no slide events.
- **Publishing behaviour:** Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Business Rules

- One slide renders no div.gen-carousel-controls, whatever Navigation is set to.
- The slide is still announced as a carousel region with the slide label 1 of 1.
- For a permanent single message use the Hero directly instead of a carousel.
- Controls appear automatically once a second Hero or Teaser is added.

Common Authoring Mistakes

Error	Root Cause	Resolution
No arrows or dots appear	Only one Hero in the section	Add a second Hero or Teaser
Screen readers announce a carousel for one banner	A one-slide carousel kept permanently	Replace the carousel with the Hero itself

Troubleshooting

- **Symptoms:** The carousel shows the Hero but no arrows, dots or pause button.
- **Cause:** The Gen Carousel section contains only one block, so the controls are not built.
- **Resolution:** Add the planned slides to the section, or move the Hero to a standard section if it stays alone.
- **Verification Steps:** With two slides the controls appear and the dot count matches the number of slides.

Use Cases

Temporary state; seasonal reductions to one campaign.

Authoring Guidelines

Place only one Hero or Teaser in the section.

Business Rules

With fewer than two slides there are no controls, no autoplay, no keyboard handling and no slide events; the slide is marked active.

Rendering Rules

Region and slide roles are still set; no `div.gen-carousel-controls`.

Responsive Behaviour

The slide's own responsive layout.

SEO Impact

As Variation 1.

Accessibility Compliance

Still announced as a carousel region with "1 of 1"; consider using the Hero directly instead.

Variation 5 — Hero slides

Variation Name

Hero slides.

Business Purpose

Full-impact slides with background image, heading, text and CTAs.

Visual Example

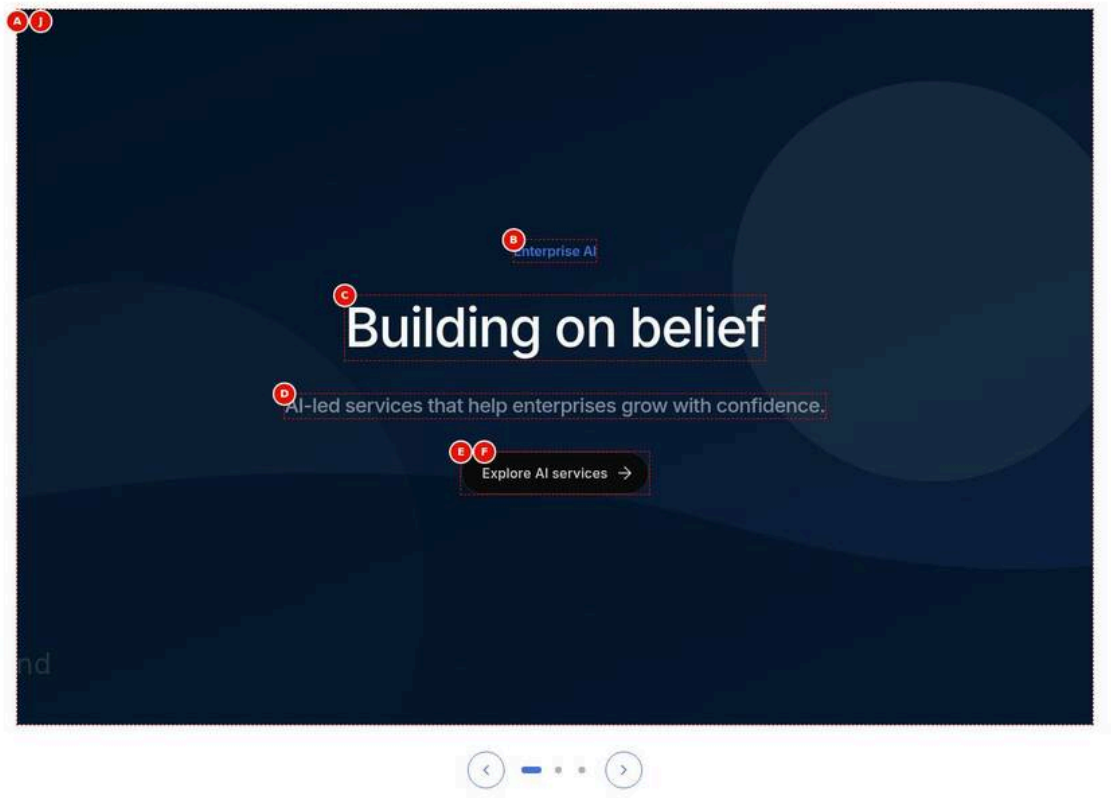

Figure 50: Hero slides — At 1440 px: slide 1 of three Hero slides, a full-width photograph under the navy overlay with the eyebrow Enterprise AI, the H1 Building on belief, the description and the primary button Explore AI services, and below it previous, three dots and next. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/gen-carousel-hero-slides.jpg)

Screenshot Details — Hero slides

Item	Detail
Screenshot Name	`screenshots/gen-carousel-hero-slides.jpg`
Screenshot Purpose	Hero slides
Screen Description	At 1440 px: slide 1 of three Hero slides, a full-width photograph under the navy overlay with the eyebrow Enterprise AI, the H1 Building on belief, the description and the primary button Explore AI services, and below it previous, three dots and next.
Business Context	The home page top banner of a locale site rotates full-impact Hero messages for AI, cloud and sustainability.
Author Objective	Add three Hero blocks to a Gen Carousel section as full-impact slides.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Gen Carousel	Yes	Adds the Gen Carousel to the page	Choose Add (+) on the page and pick Gen Carousel	Only components the section allows (section filter)
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset wide.svg (/en/media/wide.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
B	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	AI-led services that help enterprises grow with confidence.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Explore AI services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services/ai	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(H)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
(I)	Hero Image Path (Hero › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
J	Eyebrow (Hero › Content)	Cloud	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
(K)	Title (Hero › Content)	Modernise on any cloud	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(L)	Title heading level (Hero › Content)	H2	No	Semantic heading level of the title	H1 for the first hero, H2 for others	Options: H1, H2
(M)	Description (Hero › Content)	Migrate, modernise and run your workloads with a partner you trust.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
(N)	CTA Title (Hero › Links › CTA List › Item 1)	Discover cloud services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
(O)	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services/cloud	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(P)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(Q)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
(R)	Hero Image Path (Hero › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
(S)	Eyebrow (Hero › Content)	Sustainability	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
(T)	Title (Hero › Content)	Technology for a greener future	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
(U)	Title heading level (Hero › Content)	H2	No	Semantic heading level of the title	H1 for the first hero, H2 for others	Options: H1, H2
(V)	Description (Hero › Content)	Measure, reduce and report your footprint with data-driven operations.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
(W)	CTA Title (Hero › Links › CTA List › Item 1)	See how	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
(X)	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/about	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
(Y)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary but-ton	One Primary per hero	Options: Default, Primary, Secondary
(Z)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A Hero slide 53.125rem high with a background image under the navy overlay and centred white text and one primary CTA; the Manual controls below.
- **Rendering behaviour:** Each Hero wrapper becomes the slide content, stretched to the slide height so all slides line up; each Hero keeps its own breakpoints, image cropping and options inside the slide.
- **Publishing behaviour:** Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Business Rules

- Each Hero is one slide; its own Image, Content, Links, Style and Additional options apply inside the slide.
- Only slide 1 has the H1 Building on belief; Modernise on any cloud and Technology for a greener future are H2.
- Hero Image alt text is empty in this example; enter one unless the image is decorative.
- CTAs in slides that are not shown are inert until their slide is displayed.

Common Authoring Mistakes

Error	Root Cause	Resolution
Three H1 headings on the page	Title heading level left at H1 on every Hero	Set H2 on slides 2 and 3
Slides have different heights	Different Hero View or image types per slide	Use the same Hero settings on all slides
The first slide loads slowly	A heavy image on slide 1, the LCP element	Use an optimised image from AEM Assets

Troubleshooting

- **Symptoms:** Slide 2 shows its title as H1, giving the page two main headings.
- **Cause:** Title heading level was left at the Hero default H1 on Modernise on any cloud.
- **Resolution:** Select the second Hero, set Title heading level to H2 in Hero › Content and publish.
- **Verification Steps:** The page outline shows one H1 Building on belief and H2s for slides 2 and 3.

Use Cases

Home page top banner.

Authoring Guidelines

Add **Hero** blocks to the Gen Carousel section; author each Hero as described in the Hero Block chapter.

Business Rules

Each Hero is one slide; its own options (layout, image, CTAs, Additional) apply inside the slide.

Rendering Rules

The Hero's wrapper becomes the slide content and is stretched to the slide height so all slides line up.

Responsive Behaviour

Each Hero follows its own breakpoints within the slide width.

SEO Impact

Use one page-level h1 only: if the first Hero has an h1, later Heroes should use h2.

Accessibility Compliance

Hero images need alternative text (or be marked decorative); CTAs in hidden slides are not focusable until their slide is shown (`inert`).

Variation 6 — Teaser slides

Variation Name

Teaser slides.

Business Purpose

Lighter slides (image and text side by side, story teasers) in the same rotation.

Visual Example

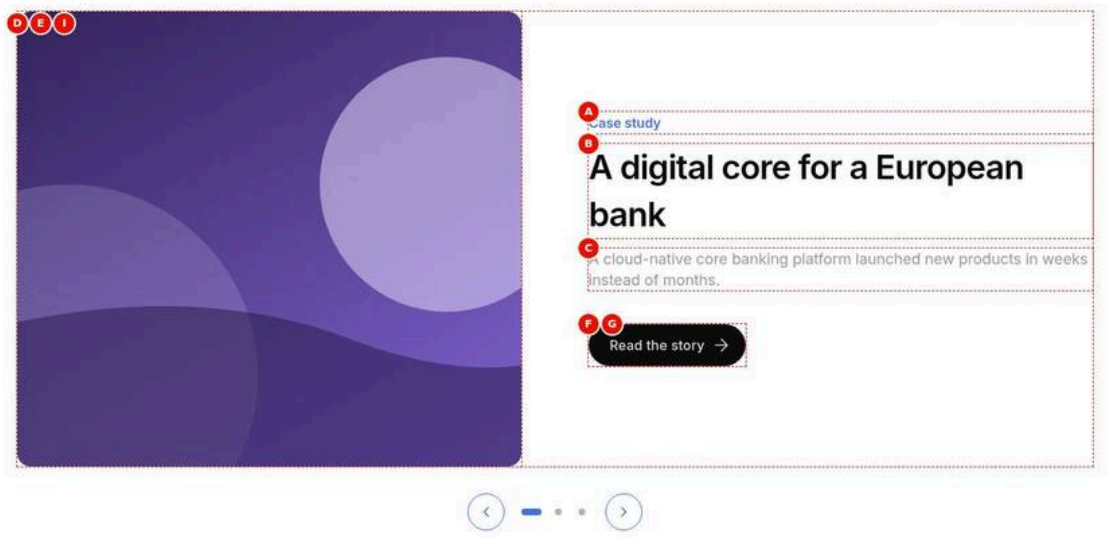

Figure 51: Teaser slides — At 1440 px: slide 1 of three Teaser slides, the rounded photo-4 image on the left and on the right the eyebrow Case study, the H2 A digital core for a European bank, the description and the primary button Read the story, with previous, three dots and next below. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/gen-carousel-teaser-slides.jpg)

Screenshot Details — Teaser slides

Item	Detail
Screenshot Name	`screenshots/gen-carousel-teaser-slides.jpg`
Screenshot Purpose	Teaser slides
Screen Description	At 1440 px: slide 1 of three Teaser slides, the rounded photo-4 image on the left and on the right the eye-brow Case study, the H2 A digital core for a European bank, the description and the primary button Read the story, with previous, three dots and next below.
Business Context	A services or industry page rotates three case studies as lighter image-and-text slides further down the page.

Item	Detail
Author Objective	Add three Teaser blocks to a Gen Carousel section as story slides.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Gen Carousel	Yes	Adds the Gen Carousel to the page	Choose Add (+) on the page and pick Gen Carousel	Only components the section allows (section filter)
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Case study	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	A digital core for a European bank	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	A cloud-native core banking platform launched new products in weeks instead of months.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Bank employees reviewing a digital dashboard	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Read the story	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/insights/agentic-bank	No	Primary CTA target	Page or URL	Shown only with Multiple links off
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
(H)	Eyebrow (Teaser › Content)	Case study	No	Kicker above the title	Up to 40 characters (Recommended)	None
I	Title (Teaser › Content)	Personalised retail at scale	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
(J)	Description (Teaser › Content)	AI-driven recommendations lifted online conversion for a global retailer.	No	Main text	Up to 300 characters (Recommended)	None
(K)	Image (Teaser › Image)	Select the asset photo-5.svg (/en/media/photo-5.svg)	No	Image or animation	See Layout for placement	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(L)	Image alt text (Teaser › Image)	Store associate using a tablet in a retail store	No	Alt text / animation label	Empty if decorative	None
(M)	Primary CTA Title (Teaser › Links)	Read the story	No	Primary CTA text	Verb first	Shown only with Multiple links off
(N)	Primary CTA Link (Teaser › Links)	Select the page or enter /en/insights/retail-personalisation	No	Primary CTA target	Page or URL	Shown only with Multiple links off
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
(O)	Eyebrow (Teaser › Content)	Case study	No	Kicker above the title	Up to 40 characters (Recommended)	None
(P)	Title (Teaser › Content)	The connected factory	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
(Q)	Description (Teaser › Content)	Predictive maintenance cut unplanned downtime across twelve plants.	No	Main text	Up to 300 characters (Recommended)	None
(R)	Image (Teaser › Image)	Select the asset photo-6.svg (/en/media/photo-6.svg)	No	Image or animation	See Layout for placement	None
(S)	Image alt text (Teaser › Image)	Engineers inspecting a production line	No	Alt text / animation label	Empty if decorative	None
(T)	Primary CTA Title (Teaser › Links)	Read the story	No	Primary CTA text	Verb first	Shown only with Multiple links off
(U)	Primary CTA Link (Teaser › Links)	Select the page or enter /en/insights/supply-chain-resilience	No	Primary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (H), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A two-column Teaser slide (image left, text right) at full width, and the centred previous arrow, three dots and next arrow 2rem below.
- **Rendering behaviour:** From 900 px each Teaser shows image and text side by side in two equal columns; the slides are stretched to the tallest one; Manual navigation with swipe and arrow keys on the controls.
- **Publishing behaviour:** Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Business Rules

- Each Teaser is one slide; Heroes and Teasers can be mixed in the same carousel.
- Teaser titles default to H2, which suits slides below the page H1.
- Each image has its alt text, e.g. Store associate using a tablet in a retail store.
- Each slide links to its own story: agentic-bank, retail-personalisation and supply-chain-resilience.

Common Authoring Mistakes

Error	Root Cause	Resolution
A slide links to the wrong story	Primary CTA Link copied from another Teaser	Check each Primary CTA Link against its title
An empty slide and dot appear	An extra Teaser without content in the section	Delete the empty Teaser
Images with different shapes	Image ratio changed on one Teaser	Use the same Image ratio on every slide

Troubleshooting

- **Symptoms:** The three Teasers are shown one below another instead of as slides.
- **Cause:** They were added to a standard section, which has no gen-carousel-section style.
- **Resolution:** Add a Gen Carousel section at page level and drag the three Teasers into it.
- **Verification Steps:** One Teaser is visible with previous, three dots and next below it.

Use Cases

Case study or story rotation further down a page.

Authoring Guidelines

Add **Teaser** blocks to the section; Heroes and Teasers can be mixed.

Business Rules

As Variation 5; slides of different heights are aligned to the tallest one.

Rendering Rules

As Variation 5.

Responsive Behaviour

The Teaser's own breakpoints within the slide.

SEO Impact

As Variation 5.

Accessibility Compliance

As Variation 5.

6.24.4 Authoring Experience

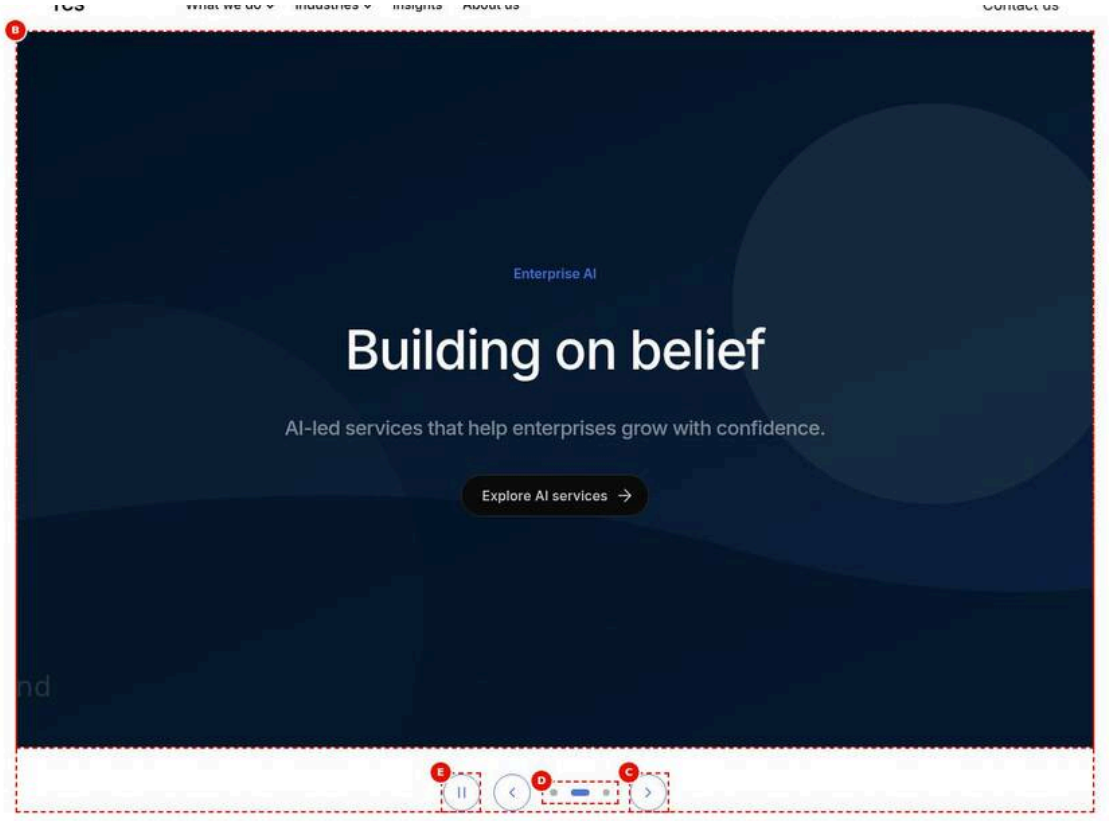

Figure 52: Universal Editor canvas — Universal Editor edit mode at 1440 px: a Gen Carousel of Hero, Teaser, Hero showing slide 2, the Teaser A digital core for a European bank, because it is selected; letters A (carousel), B (current slide), C (next button), D (dots) and E (pause button). (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/gen-carousel-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/gen-carousel-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	Universal Editor edit mode at 1440 px: a Gen Carousel of Hero, Teaser, Hero showing slide 2, the Teaser A digital core for a European bank, because it is selected; letters A (carousel), B (current slide), C (next button), D (dots) and E (pause button).
Business Context	Authors editing a mixed carousel need to reach each slide on the canvas and know which controls are generated.
Author Objective	Select the Teaser (slide 2) in the content tree to show and edit it on the canvas.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section (Page › Add (+))	Gen Carousel	Yes	Adds the Gen Carousel to the page	Choose Add (+) on the page and pick Gen Carousel	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Navigation (Gen Carousel › Content)	Manual and Auto	No	How slides change	Manual unless rotation is required	Manual / Auto / Manual and Auto; unknown values → Manual (code)
—	Autoplay interval (seconds) (Gen Carousel › Content)	7	No	Seconds per slide	5 to 10 seconds for reading time	Enforced in the dialog: min 2, max 30; code: minimum 2, empty / invalid → 5
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
—	Hero Image Path (Hero › Image)	Select the asset wide.svg (/en/media/wide.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
—	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
—	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
—	Description (Hero › Content)	AI-led services that help enterprises grow with confidence.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
—	CTA Title (Hero › Links › CTA List › Item 1)	Explore AI services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
—	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services/ai	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
—	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
—	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
—	Eyebrow (Teaser › Content)	Case study	No	Kicker above the title	Up to 40 characters (Recommended)	None
—	Title (Teaser › Content)	A digital core for a European bank	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Description (Teaser › Content)	A cloud-native core banking platform launched new products in weeks instead of months.	No	Main text	Up to 300 characters (Recommended)	None
—	Image (Teaser › Image)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No	Image or animation	See Layout for placement	None
—	Image alt text (Teaser › Image)	Bank employees reviewing a digital dashboard	No	Alt text / animation label	Empty if decorative	None
—	Primary CTA Title (Teaser › Links)	Read the story	No	Primary CTA text	Verb first	Shown only with Multiple links off
—	Primary CTA Link (Teaser › Links)	Select the page or enter /en/insights/agentic-bank	No	Primary CTA target	Page or URL	Shown only with Multiple links off
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
—	Hero Image Path (Hero › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
—	Eyebrow (Hero › Content)	Cloud	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
—	Title (Hero › Content)	Modernise on any cloud	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
—	Title heading level (Hero › Content)	H2	No	Semantic heading level of the title	H1 for the first hero, H2 for others	Options: H1, H2
—	Description (Hero › Content)	Migrate, modernise and run your workloads with a partner you trust.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
—	CTA Title (Hero › Links › CTA List › Item 1)	Discover cloud services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
—	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services/cloud	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
—	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
—	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
—	Mode (Universal Editor)	Edit; select the Teaser (slide 2) in the content tree	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The carousel scrolled to the Teaser slide with its image and text, and below it the pause, previous, three dots (the second as a brand pill) and next controls, annotated A to E.
- **Rendering behaviour:** In edit mode autoplay never runs and all slides stay focusable (no inert); selecting a component in the content tree (aue:ui-select) scrolls the carousel to the slide containing it.
- **Publishing behaviour:** Panel edits save to AEM at once; Publish sends the page with all three slides to aem.page or aem.live. The Navigation and interval are section properties and publish with the page.

Business Rules

- A = the Gen Carousel section: Style, Navigation, Autoplay interval and Additional.
- B = the current slide, a Hero or Teaser edited with its own properties.
- C, D and E are generated controls: previous / next, dots and pause / play.
- The Additional tab of the Gen Carousel section has no effect on the page (F-22, open).
- The section allows only Hero and Teaser blocks (filter gen-carousel).

Common Authoring Mistakes

Error	Root Cause	Resolution
Spacing set on the Gen Carousel does nothing	Additional options are not applied to sec-tions	Use the spacing options of the slides
Autoplay seems broken in the editor	Autoplay never runs in edit mode	Check rotation in Preview mode
Cannot find slide 3 on the canvas	Only the current slide is visible	Select the block in the content tree to scroll to it

Troubleshooting

- **Symptoms:** A Columns or Text component cannot be added to the Gen Carousel section.
- **Cause:** The gen-carousel filter allows only Hero and Teaser blocks as slides.
- **Resolution:** Build the slide content as a Hero or Teaser, or place other content in a standard section.
- **Verification Steps:** The Add (+) menu of the section lists Hero and Teaser and the new slide gets a dot.

Annotations

- A = Gen Carousel section (select it for Style, Navigation, Autoplay interval, Additional).
- B = Slide (a Hero or Teaser block; select it to edit it with its own properties).
- C = Previous / next buttons (Manual modes).
- D = Dots (one per slide).
- E = Pause / play button (Auto modes; autoplay never runs in edit mode).

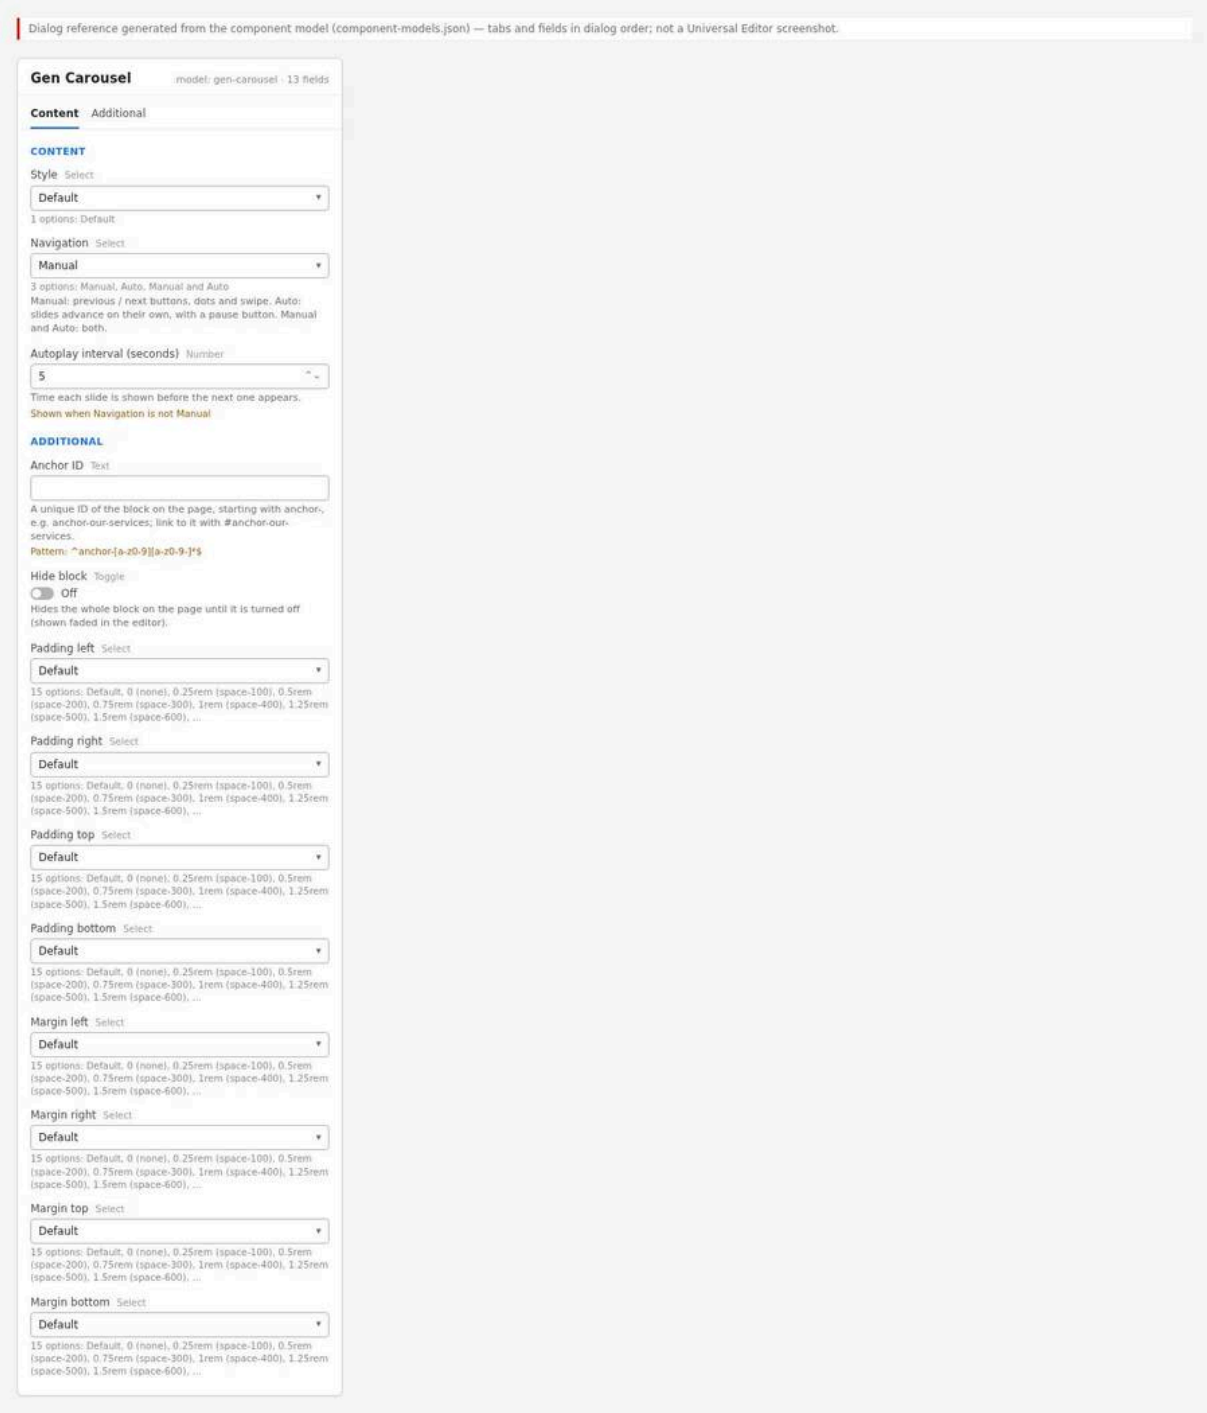

Figure 53: Properties panel — The Gen Carousel properties panel with the Content tab (Style, Navigation, Autoplay interval) and the Additional tab. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/gen-carousel-properties-panel.jpg)

Properties panel, Gen Carousel (model `gen-carousel`)

- **Content:** Style (select, only "Default"); Navigation (Manual / Auto / Manual and Auto); Autoplay interval (seconds) (number 2 to 30; shown only when Navigation is not Manual).
- **Additional:** Anchor ID; Hide block; Padding left / right / top / bottom; Margin left / right / top / bottom (see the note in 6.24.6: not applied to this section-based component).

In edit mode, selecting a slide (or a component inside it) in the content tree scrolls the carousel to that slide, and all slides stay focusable (no `inert`).

6.24.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: Open the page in Universal Editor.

Expected Result: Edit mode with the content tree.

Steps — Step 1: The page open in Universal Editor.

Step	Where	Field / control	Value / action
1	AEM Sites › /content/tcs-corp/us/en	Select the page	The page that gets the carousel (e.g. the locale Home page)
2	AEM Sites toolbar	Edit	Opens the page in Universal Editor (edit mode, content tree on the left)

Step 2 — Add the Gen Carousel section

Action: Select the page root (`main`) in the content tree, **+** (Add), **Gen Carousel**.

Expected Result: A new section with Style Default, Navigation Manual and interval 5 is added.

Steps — Step 2: The Add menu at page level with Gen Carousel highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	main (page root)	Select it
2	Universal Editor › Content tree	main › Add (+)	Gen Carousel
3	Gen Carousel › Content	Defaults	Style: Default; Navigation: Manual; Autoplay interval (seconds): 5

Step 3 — Choose the Navigation

Action: In the Content tab, choose Navigation: Manual, Auto or Manual and Auto.

Expected Result: For Auto modes the Autoplay interval field appears.

Steps — Step 3: The Navigation select open with its three options.

Step	Where	Field / control	Value / action
1	Gen Carousel › Content	Navigation	Open the select: Manual, Auto, Manual and Auto
2	Gen Carousel › Content	Navigation	Manual and Auto
3	Gen Carousel › Content	Autoplay interval (seconds)	The field appears (Navigation is not Manual)

Step 4 — Set the Autoplay interval (Auto modes)

Action: Enter the seconds per slide (2 to 30), e.g. 7.

Expected Result: The value is accepted only within 2 to 30.

Steps — Step 4: Autoplay interval field with the value 7.

Step	Where	Field / control	Value / action
1	Gen Carousel › Content	Autoplay interval (seconds)	7

Step 5 — Add the slides

Action: Select the Gen Carousel section, **+** (Add), choose **Hero** or **Teaser**; repeat for each slide.

Expected Result: Each block is a slide; dots appear from two slides.

Steps — Step 5: Content tree with three Heroes under the Gen Carousel section.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Gen Carousel › Add (+)	Hero
2	Universal Editor › Content tree	Gen Carousel › Add (+)	Hero
3	Universal Editor › Content tree	Gen Carousel › Add (+)	Hero
4	Universal Editor › Content tree	Gen Carousel	Lists Hero, Hero, Hero; the canvas shows the dots from two slides

Step 6 — Author each slide

Action: Select each Hero / Teaser and fill its fields (image with alternative text, heading, text, CTAs) as described in its chapter.

Expected Result: The selected slide is shown on the canvas while you edit it.

Steps — Step 6: The second Hero selected and displayed, with its properties panel.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Gen Carousel › Hero (2nd)	Select it: the canvas shows slide 2
2	Hero › Image	Hero Image Path	Select the asset photo-2.svg (/en/media/photo-2.svg)
3	Hero › Content	Eyebrow	Cloud
4	Hero › Content	Title	Modernise on any cloud
5	Hero › Content	Title heading level	H2
6	Hero › Content	Description	Migrate, modernise and run your workloads with a partner you trust.
7	Hero › Links	CTA List	Item 1: CTA Text = Discover cloud services, CTA Link = /en/services/cloud, Type = Primary

Step 7 — Order the slides

Action: Drag the blocks in the content tree.

Expected Result: The slide and dot order follows the content tree.

Steps — Step 7: A Hero dragged to the first position.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Gen Carousel › Hero (3rd)	Drag it above the first Hero
2	Canvas	Slides and dots	Follow the new order of the content tree

Step 8 — Preview

Action: Switch to **Preview**; use the arrows, dots, swipe, keyboard and pause / play.

Expected Result: Navigation works; in Auto modes the slides advance after the interval (the rotation runs only outside edit mode).

Steps — Step 8: Preview mode with the second dot active after selecting next.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	Canvas	Next slide (>)	Select it once: slide 2 shows, the second dot is active
3	Canvas	Dots / Pause slides	Try a dot, swipe, ArrowLeft / ArrowRight on the controls and pause / play

Step 9 — Validate

Action: Run the checklist below.

Expected Result: All checks pass.

Steps — Step 9: The data layer in the console showing cmp:show entries for slides 2 and 3.

Step	Where	Field / control	Value / action
1	Preview (aem.page)	Next slide (>)	Select it twice
2	Browser developer tools › Console	window.adobeDataLayer	cmp:show entries for slide 2 (position 2) and slide 3 (position 3)
3	Browser developer tools	Tab key	Links of hidden slides are not reached

Step 10 — Publish

Action: Publish the page.

Expected Result: The carousel appears on the live site.

Steps — Step 10: The Publish dialog for the page.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Open the Publish dialog
2	Publish dialog	Destination	Publish to Live
3	Publish dialog	Publish	Confirm

Preview Process

1. Universal Editor Preview for interaction (autoplay runs in Preview, not in edit mode).
2. Edge Delivery preview: `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}`.
3. Test touch swipe on a phone or device emulation, and reduced motion (the carousel should start paused).

Publishing Process

Publish the page (slides are part of it). Live: `https://main--tcs-corp--sradha-tcs.aem.live/{locale}/{path}` ([To be confirmed: production domain and CDN]).

Validation Process

- ☐ Two to five slides; each a Hero or Teaser with heading, image alternative text and CTA.
- ☐ Only one h1 on the page (first slide at most).
- ☐ Navigation mode as agreed; for Auto modes the interval gives enough reading time (at least 5 seconds Recommended).
- ☐ Previous / next / dots / swipe / arrow keys (on the controls) work; wrap-around works.
- ☐ Pause stops the rotation and Play resumes it; hovering and keyboard focus pause it.

- ☐ Hidden slides' links cannot be reached with Tab.
- ☐ `window.adobeDataLayer` shows `cmp:show` with `position` on each slide change.
- ☐ Correct at below 600px, 600 to 899px, 900px and wider.

Rollback Process

1. Restore the previous page version and republish.
2. To stop a rotation quickly: set Navigation to Manual and publish.
3. To remove a slide quickly: delete or move it (Hide block on a Hero / Teaser hides its content, but the empty slide and its dot remain).
4. Code regressions: revert on `main`.

The walkthroughs below repeat the steps above for each variation of chapter 6.24.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Navigation: Manual

Reproduces the screenshot `screenshots/gen-carousel-manual.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Gen Carousel

Action: Choose Add (+) on the page and pick **Gen Carousel**.

Expected Result: A new Gen Carousel section is added to the page with Style Default, Navigation Manual and interval 5.

Step 3 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: Three Hero blocks are added to the Gen Carousel section, each becoming one slide with a dot.

Step 4 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: Each slide gets its photograph (wide.svg, photo-2.svg, photo-3.svg) behind the overlay.

Step 5 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Enterprise AI; **Title** (C) = Building on belief; **Description** (D) = AI-led services that help enterprises grow with confidence.

Expected Result: The eyebrows Enterprise AI, Cloud and Sustainability, the titles and descriptions appear centred; slides 2 and 3 use H2.

Step 6 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Explore AI services, **CTA Link** (F) = Select the page or enter /en/services/ai, **CTA view** (G) = Primary.

Expected Result: Each slide shows one primary CTA: Explore AI services, Discover cloud services and See how.

Step 7 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (H) = Dark blue.

Expected Result: BG Color Dark blue puts the navy 80 % overlay over each image with white text.

Step 8 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: Three Hero blocks are added to the Gen Carousel section, each becoming one slide with a dot.

Step 9 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (I) = Select the asset photo-2.svg (/en/media/photo-2.svg).

Expected Result: Each slide gets its photograph (wide.svg, photo-2.svg, photo-3.svg) behind the overlay.

Step 10 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (J) = Cloud; **Title** (K) = Modernise on any cloud; **Title heading level** (L) = H2; **Description** (M) = Migrate, modernise and run your workloads with a partner you trust.

Expected Result: The eyebrows Enterprise AI, Cloud and Sustainability, the titles and descriptions appear centred; slides 2 and 3 use H2.

Step 11 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (N) = Discover cloud services, **CTA Link** (O) = Select the page or enter /en/services/cloud, **CTA view** (P) = Primary.

Expected Result: Each slide shows one primary CTA: Explore AI services, Discover cloud services and See how.

Step 12 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (Q) = Dark blue.

Expected Result: BG Color Dark blue puts the navy 80 % overlay over each image with white text.

Step 13 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: Three Hero blocks are added to the Gen Carousel section, each becoming one slide with a dot.

Step 14 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (R) = Select the asset photo-3.svg (/en/media/photo-3.svg).

Expected Result: Each slide gets its photograph (wide.svg, photo-2.svg, photo-3.svg) behind the overlay.

Step 15 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (S) = Sustainability; **Title** (T) = Technology for a greener future; **Title heading level** (U) = H2; **Description** (V) = Measure, reduce and report your footprint with data-driven operations.

Expected Result: The eyebrows Enterprise AI, Cloud and Sustainability, the titles and descriptions appear centred; slides 2 and 3 use H2.

Step 16 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (W) = See how, **CTA Link** (X) = Select the page or enter /en/about, **CTA view** (Y) = Primary.

Expected Result: Each slide shows one primary CTA: Explore AI services, Discover cloud services and See how.

Step 17 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (Z) = Dark blue.

Expected Result: BG Color Dark blue puts the navy 80 % overlay over each image with white text.

Step 18 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A full-width Hero slide with centred white text over the navy overlay; below it previous, three dots (first as a brand pill) and next, no pause button.

Step 19 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Step 20 — Verify

Action: On the live page check: Previous, three dots and next are shown and the next arrow moves to slide 2.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Navigation: Auto

Reproduces the screenshot `screenshots/gen-carousel-auto.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Gen Carousel

Action: Choose Add (+) on the page and pick **Gen Carousel**.

Expected Result: A new Gen Carousel section is added to the page with Style Default, Navigation Manual and interval 5.

Step 3 — Fill in Gen Carousel › Content

Action: Select **Gen Carousel** in the content tree and open the **Content** tab of the properties panel. Enter: **Navigation** (A) = Auto; **Autoplay interval (seconds)** (B) = 7.

Expected Result: Navigation Auto and Autoplay interval (seconds) 7; the interval field appears once Navigation is not Manual.

Step 4 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: Three Hero blocks are added to the Gen Carousel section, each becoming one slide with a dot.

Step 5 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (C) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: Each slide gets its photograph (wide.svg, photo-2.svg, photo-3.svg) behind the overlay.

Step 6 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (D) = Enterprise AI; **Title** (E) = Building on belief; **Description** (F) = AI-led services that help enterprises grow with confidence.

Expected Result: The eyebrows Enterprise AI, Cloud and Sustainability, the titles and descriptions appear centred; slides 2 and 3 use H2.

Step 7 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (G) = Explore AI services, **CTA Link** (H) = Select the page or enter /en/services/ai, **CTA view** (I) = Primary.

Expected Result: Each slide shows one primary CTA: Explore AI services, Discover cloud services and See how.

Step 8 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (J) = Dark blue.

Expected Result: BG Color Dark blue puts the navy 80 % overlay over each image with white text.

Step 9 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: Three Hero blocks are added to the Gen Carousel section, each becoming one slide with a dot.

Step 10 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (K) = Select the asset photo-2.svg (/en/media/photo-2.svg).

Expected Result: Each slide gets its photograph (wide.svg, photo-2.svg, photo-3.svg) behind the overlay.

Step 11 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (L) = Cloud; **Title** (M) = Modernise on any cloud; **Title heading level** (N) = H2; **Description** (O) = Migrate, modernise and run your workloads with a partner you trust.

Expected Result: The eyebrows Enterprise AI, Cloud and Sustainability, the titles and descriptions appear centred; slides 2 and 3 use H2.

Step 12 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (P) = Discover cloud services, **CTA Link** (Q) = Select the page or enter /en/services/cloud, **CTA view** (R) = Primary.

Expected Result: Each slide shows one primary CTA: Explore AI services, Discover cloud services and See how.

Step 13 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (S) = Dark blue.

Expected Result: BG Color Dark blue puts the navy 80 % overlay over each image with white text.

Step 14 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: Three Hero blocks are added to the Gen Carousel section, each becoming one slide with a dot.

Step 15 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (T) = Select the asset photo-3.svg (/en/media/photo-3.svg).

Expected Result: Each slide gets its photograph (wide.svg, photo-2.svg, photo-3.svg) behind the overlay.

Step 16 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (U) = Sustainability; **Title** (V) = Technology for a greener future; **Title heading level** (W) = H2; **Description** (X) = Measure, reduce and report your footprint with data-driven operations.

Expected Result: The eyebrows Enterprise AI, Cloud and Sustainability, the titles and descriptions appear centred; slides 2 and 3 use H2.

Step 17 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (Y) = See how, **CTA Link** (Z) = Select the page or enter /en/about, **CTA view** (AA) = Primary.

Expected Result: Each slide shows one primary CTA: Explore AI services, Discover cloud services and See how.

Step 18 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (AB) = Dark blue.

Expected Result: BG Color Dark blue puts the navy 80 % overlay over each image with white text.

Step 19 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A full-width Hero slide; below it a centred pause icon button followed by three dots, the first a brand pill.

Step 20 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Step 21 — Verify

Action: On the live page check: The carousel block has data-interval 7 and slides change every 7 seconds without interaction.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Navigation: Manual and Auto

Reproduces the screenshot `screenshots/gen-carousel-manual-auto.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Gen Carousel

Action: Choose Add (+) on the page and pick **Gen Carousel**.

Expected Result: A new Gen Carousel section is added to the page with Style Default, Navigation Manual and interval 5.

Step 3 — Fill in Gen Carousel › Content

Action: Select **Gen Carousel** in the content tree and open the **Content** tab of the properties panel. Enter: **Navigation** (A) = Manual and Auto; **Autoplay interval (seconds)** (B) = 7.

Expected Result: Navigation Manual and Auto and Autoplay interval (seconds) 7; the interval field is shown.

Step 4 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: Three Hero blocks are added to the Gen Carousel section, each becoming one slide with a dot.

Step 5 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (C) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: Each slide gets its photograph (wide.svg, photo-2.svg, photo-3.svg) behind the overlay.

Step 6 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (D) = Enterprise AI; **Title** (E) = Building on belief; **Description** (F) = AI-led services that help enterprises grow with confidence.

Expected Result: The eyebrows Enterprise AI, Cloud and Sustainability, the titles and descriptions appear centred; slides 2 and 3 use H2.

Step 7 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (G) = Explore AI services, **CTA Link** (H) = Select the page or enter /en/services/ai, **CTA view** (I) = Primary.

Expected Result: Each slide shows one primary CTA: Explore AI services, Discover cloud services and See how.

Step 8 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (J) = Dark blue.

Expected Result: BG Color Dark blue puts the navy 80 % overlay over each image with white text.

Step 9 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: Three Hero blocks are added to the Gen Carousel section, each becoming one slide with a dot.

Step 10 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (K) = Select the asset photo-2.svg (/en/media/photo-2.svg).

Expected Result: Each slide gets its photograph (wide.svg, photo-2.svg, photo-3.svg) behind the overlay.

Step 11 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (L) = Cloud; **Title** (M) = Modernise on any cloud; **Title heading level** (N) = H2; **Description** (O) = Migrate, modernise and run your workloads with a partner you trust.

Expected Result: The eyebrows Enterprise AI, Cloud and Sustainability, the titles and descriptions appear centred; slides 2 and 3 use H2.

Step 12 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (P) = Discover cloud services, **CTA Link** (Q) = Select the page or enter /en/services/cloud, **CTA view** (R) = Primary.

Expected Result: Each slide shows one primary CTA: Explore AI services, Discover cloud services and See how.

Step 13 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (S) = Dark blue.

Expected Result: BG Color Dark blue puts the navy 80 % overlay over each image with white text.

Step 14 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: Three Hero blocks are added to the Gen Carousel section, each becoming one slide with a dot.

Step 15 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (T) = Select the asset photo-3.svg (/en/media/photo-3.svg).

Expected Result: Each slide gets its photograph (wide.svg, photo-2.svg, photo-3.svg) behind the overlay.

Step 16 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (U) = Sustainability; **Title** (V) = Technology for a greener future; **Title heading level** (W) = H2; **Description** (X) = Measure, reduce and report your footprint with data-driven operations.

Expected Result: The eyebrows Enterprise AI, Cloud and Sustainability, the titles and descriptions appear centred; slides 2 and 3 use H2.

Step 17 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (Y) = See how, **CTA Link** (Z) = Select the page or enter /en/about, **CTA view** (AA) = Primary.

Expected Result: Each slide shows one primary CTA: Explore AI services, Discover cloud services and See how.

Step 18 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (AB) = Dark blue.

Expected Result: BG Color Dark blue puts the navy 80 % overlay over each image with white text.

Step 19 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A full-width Hero slide; below it one centred row with pause, previous, three dots (the first a brand pill) and next.

Step 20 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Step 21 — Verify

Action: On the live page check: The pause button is first in the controls and slide 2 appears after 7 seconds.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Single slide (static)

Reproduces the screenshot `screenshots/gen-carousel-single-slide.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Gen Carousel

Action: Choose Add (+) on the page and pick **Gen Carousel**.

Expected Result: A new Gen Carousel section is added to the page with Style Default, Navigation Manual and interval 5.

Step 3 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: One Hero block is added to the Gen Carousel section as its only slide.

Step 4 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: The wide.svg photograph fills the slide behind the overlay.

Step 5 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Enterprise AI; **Title** (C) = Building on belief; **Description** (D) = AI-led services that help enterprises grow with confidence.

Expected Result: The eyebrow Enterprise AI, the H1 Building on belief and the description appear centred.

Step 6 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Explore AI services, **CTA Link** (F) = Select the page or enter /en/services/ai, **CTA view** (G) = Primary.

Expected Result: The primary button Explore AI services appears under the description.

Step 7 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (H) = Dark blue.

Expected Result: BG Color Dark blue adds the navy 80 % overlay with white text.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: One full-width Hero exactly as on its own, without arrows, dots or a pause button below.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Step 10 — Verify

Action: On the live page check: With two slides the controls appear and the dot count matches the number of slides.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Hero slides

Reproduces the screenshot `screenshots/gen-carousel-hero-slides.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Gen Carousel

Action: Choose Add (+) on the page and pick **Gen Carousel**.

Expected Result: A new Gen Carousel section is added to the page with Style Default, Navigation Manual and interval 5.

Step 3 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: Three Hero blocks are added to the Gen Carousel section, each becoming one slide with a dot.

Step 4 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: Each slide gets its photograph (wide.svg, photo-2.svg, photo-3.svg) behind the overlay.

Step 5 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Enterprise AI; **Title** (C) = Building on belief; **Description** (D) = AI-led services that help enterprises grow with confidence.

Expected Result: The eyebrows Enterprise AI, Cloud and Sustainability, the titles and descriptions appear centred; slides 2 and 3 use H2.

Step 6 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Explore AI services, **CTA Link** (F) = Select the page or enter /en/services/ai, **CTA view** (G) = Primary.

Expected Result: Each slide shows one primary CTA: Explore AI services, Discover cloud services and See how.

Step 7 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (H) = Dark blue.

Expected Result: BG Color Dark blue puts the navy 80 % overlay over each image with white text.

Step 8 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: Three Hero blocks are added to the Gen Carousel section, each becoming one slide with a dot.

Step 9 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (I) = Select the asset photo-2.svg (/en/media/photo-2.svg).

Expected Result: Each slide gets its photograph (wide.svg, photo-2.svg, photo-3.svg) behind the overlay.

Step 10 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (J) = Cloud; **Title** (K) = Modernise on any cloud; **Title heading level** (L) = H2; **Description** (M) = Migrate, modernise and run your workloads with a partner you trust.

Expected Result: The eyebrows Enterprise AI, Cloud and Sustainability, the titles and descriptions appear centred; slides 2 and 3 use H2.

Step 11 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (N) = Discover cloud services, **CTA Link** (O) = Select the page or enter /en/services/cloud, **CTA view** (P) = Primary.

Expected Result: Each slide shows one primary CTA: Explore AI services, Discover cloud services and See how.

Step 12 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (Q) = Dark blue.

Expected Result: BG Color Dark blue puts the navy 80 % overlay over each image with white text.

Step 13 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: Three Hero blocks are added to the Gen Carousel section, each becoming one slide with a dot.

Step 14 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (R) = Select the asset photo-3.svg (/en/media/photo-3.svg).

Expected Result: Each slide gets its photograph (wide.svg, photo-2.svg, photo-3.svg) behind the overlay.

Step 15 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (S) = Sustainability; **Title** (T) = Technology for a greener future; **Title heading level** (U) = H2; **Description** (V) = Measure, reduce and report your footprint with data-driven operations.

Expected Result: The eyebrows Enterprise AI, Cloud and Sustainability, the titles and descriptions appear centred; slides 2 and 3 use H2.

Step 16 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (W) = See how, **CTA Link** (X) = Select the page or enter /en/about, **CTA view** (Y) = Primary.

Expected Result: Each slide shows one primary CTA: Explore AI services, Discover cloud services and See how.

Step 17 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (Z) = Dark blue.

Expected Result: BG Color Dark blue puts the navy 80 % overlay over each image with white text.

Step 18 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A Hero slide 53.125rem high with a background image under the navy overlay and centred white text and one primary CTA; the Manual controls below.

Step 19 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Step 20 — Verify

Action: On the live page check: The page outline shows one H1 Building on belief and H2s for slides 2 and 3.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Teaser slides

Reproduces the screenshot `screenshots/gen-carousel-teaser-slides.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Gen Carousel

Action: Choose Add (+) on the page and pick **Gen Carousel**.

Expected Result: A new Gen Carousel section is added to the page with Style Default, Navigation Manual and interval 5.

Step 3 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Three Teaser blocks are added to the Gen Carousel section, each becoming a slide with a dot.

Step 4 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Case study; **Title** (B) = A digital core for a European bank; **Description** (C) = A cloud-native core banking platform launched new products in weeks instead of months.

Expected Result: Each slide shows the eyebrow Case study, its H2 title and its description.

Step 5 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (D) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Image alt text** (E) = Bank employees reviewing a digital dashboard.

Expected Result: The images photo-4, photo-5 and photo-6 appear on the left with their alt texts.

Step 6 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (F) = Read the story; **Primary CTA Link** (G) = Select the page or enter /en/insights/agentic-bank.

Expected Result: Each slide shows the primary button Read the story linking to its insights page.

Step 7 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Three Teaser blocks are added to the Gen Carousel section, each becoming a slide with a dot.

Step 8 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (H) = Case study; **Title** (I) = Personalised retail at scale; **Description** (J) = AI-driven recommendations lifted online conversion for a global retailer.

Expected Result: Each slide shows the eyebrow Case study, its H2 title and its description.

Step 9 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (K) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Image alt text** (L) = Store associate using a tablet in a retail store.

Expected Result: The images photo-4, photo-5 and photo-6 appear on the left with their alt texts.

Step 10 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (M) = Read the story; **Primary CTA Link** (N) = Select the page or enter /en/insights/retail-personalisation.

Expected Result: Each slide shows the primary button Read the story linking to its insights page.

Step 11 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: Three Teaser blocks are added to the Gen Carousel section, each becoming a slide with a dot.

Step 12 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (O) = Case study; **Title** (P) = The connected factory; **Description** (Q) = Predictive maintenance cut unplanned downtime across twelve plants.

Expected Result: Each slide shows the eyebrow Case study, its H2 title and its description.

Step 13 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (R) = Select the asset photo-6.svg (/en/media/photo-6.svg); **Image alt text** (S) = Engineers inspecting a production line.

Expected Result: The images photo-4, photo-5 and photo-6 appear on the left with their alt texts.

Step 14 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (T) = Read the story; **Primary CTA Link** (U) = Select the page or enter /en/insights/supply-chain-resilience.

Expected Result: Each slide shows the primary button Read the story linking to its insights page.

Step 15 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.
