Document Control

Document Information

Attribute	Value
Document title	TCS Corporate Website — Project Handover
Document type	Official production handover artifact
Version	2.0
Date	14 October 2026
Status	Draft for review [To be confirmed: approval — owner: Product Owner]
Solution	Adobe Experience Manager (AEM) as a Cloud Service, Universal Editor authoring, Edge Delivery Services delivery (xwalk)
Code repository	GitHub `sradha-tcs/tcs-corp`, branch `main`
AEM program / environment	p220207 / e2271469 (author `author-p220207-e2271469.adobeaemcloud.com`)
Edge Delivery site	org `sradha-tcs`, site `tcs-corp`
Source of truth	The code on `main` as of 13 October 2026 (after pull request #62) and the published preview on that date; version 1.1 adds the Cards and Card analysis of 14 October 2026 (pull request #64, no code change); version 2.0 (14 October 2026) reflects the code on `main` after pull request #68 and the screenshots generated on that date
Classification	Internal — project and support teams [To be confirmed: classification — owner: Information Security]

Revision History

Version	Date	Author	Change
0.1	11 October 2026	Delivery team	First handover guides (author, developer and admin guides)
1.0	13 October 2026	Delivery team	Complete enterprise handover: architecture, every component and variation, field specifications, metadata, taxonomy, sheets, operations, AMS runbook, findings register
1.1	14 October 2026	Delivery team	Cards and Card analysis (`docs/proposals/cards-card-refactoring.md`): Cards blocks made before the redesign have no block model and changed appearance; chapter 6.15 (variation 45, Issues 6 and 11, known limitations), findings F-34, F-41, F-42, open item O-20, reference documents
1.2	14 October 2026	Delivery team	Screenshots: 598 renderings of every component and variation (desktop, tablet, mobile; sample content on the preview), 31 annotated previews in editor mode and 32 dialog references generated from the component models embedded as figures; 403 placeholders remain for Universal Editor steps, AEM consoles and shots that need live video or third-party players (15.9)
1.3	14 October 2026	Delivery team	Every rendering screenshot (596) rebuilt from an authoring spec and followed by an **Authoring steps** table (Step, Where, Field, Value) that reproduces it in Universal Editor; every editor-step and console placeholder (405) replaced by its steps table; findings F-43 to F-48 from the spec work
1.4	14 October 2026	Delivery team	Findings F-43 to F-48 fixed in the code: List Item cells read in model order (with a unit test against the model), the Video poster read from its grouped cell, the Conversation Canvas voice button and the Teaser Lotto animation named by their collapsed alt

Version	Date	Author	Change
			texts, the 404 “Go back” button added after the content is loaded (placeholder `goBack`), an inverse hover / focus style for secondary buttons on Dark, Navy and Brand cards; chapters 4.5.3, 6.28, 10.2, 13.7 and Part 16 updated
2.0	14 October 2026	Delivery team	Complete enterprise handover package for the client brief: every screenshot (596) re-captured with callout letters on the fields and followed by its authoring block (Screenshot Details; Field Entry Table with Callout, Field Name, Example Value, Mandatory, Business Purpose, What Author Should Enter, Validation Rules; Expected Page Output; Business Rules; Common Authoring Mistakes; Troubleshooting); a step-by-step walkthrough for every variation with a screenshot (461); per component Business Problem Solved, Supported Taxonomy, Target Personalization Output, Common Authoring Mistakes, Author Quick Reference Guide and Component Execution Example; new chapters 2.10 Architecture Component Considerations, 2.11 Data Flow Architecture, 6.0 Component Inventory, 8.4 Metadata Field Usage Matrix; an escalation process for every Part 13 issue; new Part 17 Operations Guide and Part 18 New Joiner Training Guide; corrections and findings F-49 to F-60

Review and Approval

Role	Name	Responsibility	Signature / Date
Product Owner	[To be confirmed]	Business scope, content model, open items	[Pending]
Solution Architect	[To be confirmed]	Architecture, integrations	[Pending]
Technical Lead	[To be confirmed]	Code, components, deployment	[Pending]
Content Lead	[To be confirmed]	Authoring guide, governance	[Pending]
QA Lead	[To be confirmed]	Validation processes	[Pending]
AMS / Support Lead	[To be confirmed]	Runbook, escalation, monitoring	[Pending]

About This Document

This document is the official handover of the TCS Corporate Website. It describes the solution as it is implemented — its architecture, site and content structure, every authorable component and each of its variations, the metadata, taxonomy and data sheets, the analytics data layer, the release process and the operational and support procedures — so that a team member with no prior project knowledge can author, maintain, troubleshoot and enhance the site.

It serves as the project handover document, technical architecture document, solution design document, authoring guide, training workbook, AMS handover guide, support runbook, operations guide, new joiner onboarding guide and component specification guide. Every screenshot is followed by the exact values to enter (with callout letters on the screenshot), the expected output, the business rules, the common mistakes and a troubleshooting case; every variation has a step-by-step walkthrough from opening the page to publishing.

All statements were verified against the code on `main` and the published preview on 13 October 2026 (version 2.0: the code after pull request #68, 14 October 2026). Where a business fact (a name, an SLA, a production domain) wasn't available, the text says `[To be confirmed: … — owner: …]`; Part 16 collects these open items.

Audience Guide

Audience	Start with	Then read
Business teams and Product Owners	Part 1 Project Overview	Part 2.1–2.2 architecture overview, Part 6 component purposes (section 1 of each chapter), Part 16 open items
New joiners (any role)	Part 18 New Joiner Training Guide	The learning path of your role (18.1), the hands-on exercises (18.10) and the knowledge validation checklist (18.11)
Content authors (beginners)	Part 5 Authoring Fundamentals	Per component you use: the variation screenshots with their Field Entry Tables (section 3), the walkthroughs (section 5), the Author Quick Reference Guide and the Component Execution Example (last sections); Part 15.5 cheat sheets
Content managers	Part 4 Content Architecture	Parts 7 Taxonomy, 8 Metadata, 9 Data Sheets, 10 Error Pages
Site administrators	Part 3 Site Structure	Parts 9, 10, 12 Publishing & Release, 14 Runbook
Developers	Part 2 Solution Architecture	Part 6 sections 8–11 of each component, Parts 11 Analytics, 12, 15.4 Content Modeling Standards
Architects	Part 2 (with 2.10 component considerations and 2.11 data flows)	Parts 3, 4, 6.0 Component Inventory, 11, 16
QA teams	Part 5.7 validation process	Section 5 Validation Process and section 11 Business Rules of each component, Part 13
Release teams	Part 12	Part 17.5 Release Activities, Part 14.7 health checks
AMS, operations and support	Part 14 Operational Runbook & AMS Handover	Part 17 Operations Guide, Part 13 Global Troubleshooting (with the escalation process of each issue), sections 13–14 and Common Authoring Mistakes of each component, Part 16

Conventions Used

Convention	Meaning
Enforced	A rule the dialog (model validation) or the code applies; content that breaks it is rejected, corrected or not shown
Recommended	Editorial guidance (lengths, image sizes, wording); not checked by the system
`[To be confirmed: … — owner: …]`	A fact not available at handover; listed in Part 16
Not implemented (as of this handover)	A capability that doesn't exist in the code today
`> **Note:**`, `> **Important:**`, `> **Tip:**`, `> **Warning:**`	Call-outs
Screenshot authoring blocks	Each screenshot shows a component with sample content (captured on 14 October 2026 from the preview, at the width named in its description) and is followed by **Screenshot Details**, the **Field Entry Table** (the values to enter, in dialog order, with Mandatory, Business Purpose, What Author Should Enter and Validation Rules from the chapter's field specification), **Expected Page Output**, **Business Rules**, **Common Authoring Mistakes** and **Troubleshooting**. Fields not listed keep their default values
Callouts	Red letters on a screenshot mark the rendered output of the field with the same letter in its Field Entry Table; a letter in brackets, such as (H), has no marker because the field has no visible output of its own (alt text, a setting, a label, a link target). Annotated previews (`*-authoring-view`) use the letters of the chapter's Annotations list

Convention	Meaning
Walkthroughs	Section 5 of each component ends with a walkthrough per variation: Action and Expected Result for every step from opening the page to publishing
Steps — …	An editor or console step (Universal Editor, AEM consoles, live media) given as a steps table instead of a screenshot (Where, Field / control, Value / action)
Breakpoints	Mobile < 600px, tablet 600–1199px, desktop ≥ 1200px (some layouts and the header switch at 900px; each chapter states where)
Paths	AEM paths (`/content/tcs-corp/us/en/…`) and published paths (`/en/…`); Part 3.2 maps them

Executive Summary

The TCS Corporate Website runs on Adobe Experience Manager as a Cloud Service with Universal Editor for authoring and Edge Delivery Services for delivery. Content is authored in AEM and published to Edge Delivery; the code (vanilla JavaScript and CSS, no build step) lives in GitHub and is deployed by AEM Code Sync on every merge to `main`.

Area	State at handover
Sites	13 locale sites (`/en`, `/de-de`, `/fr-fr`, `/fr-ca`, `/es-es`, `/pt-pt`, `/nl-nl`, `/sv-se`, `/da-dk`, `/no-no`, `/zh-cn`, `/ja-jp`, `/ko-kr`), each with references, error pages, block library, placeholders, metadata, taxonomy, redirects and data sheets
Templates	Home, Article, Blog, Press Release (Page Type), plus pages without a template
Components	31 documented components: 4 page-level (Header, Footer, Fragment, Page Header), 5 page structure and default content (Section, Text, Title, Image, Button) and 22 content blocks (Part 6, inventory in 15.8)
Authoring	Universal Editor with component models for every block; an Additional tab (Anchor ID, Hide block, padding, margin) on every block but header and footer; UI text from placeholders
Dynamic content	List and Filter List read the query index; Page Header, Teaser and cards read page metadata; Footer reads the Social Links sheet; tags are labelled from the taxonomy
Accessibility	Built to WCAG 2.1 AA (keyboard, focus, names, headings, reduced motion, pause controls); open contrast points in Part 16
Performance	Three-phase loading (eager, lazy, delayed); PageSpeed check on every pull request
Analytics	Adobe Client Data Layer for every page and block (state and events) — ready for Adobe Tags and the Web SDK, which aren't installed yet
Integrations	Not implemented yet: tag manager (Analytics, CJA, Target, Journey Optimizer), form back end (Salesforce / Marketo / API), search service, production domain and CDN
Operations	Runbooks, troubleshooting and AMS handover in Parts 13–14; open items and findings in Part 16

> **Important:** Part 16 lists findings from the code review done for this handover (for example, the contact form confirms a submission although no back end receives it). Review them before go-live.

Part 1 — Project Overview

1.1 Project Name and Summary

Attribute	Value
Project name	TCS Corporate Website
Code name	`tcs-corp`
Document version	1.0
Document date	13 October 2026
Platform	Adobe Experience Manager (AEM) as a Cloud Service with Edge Delivery Services
Authoring	Universal Editor (AEM authoring for Edge Delivery Services, also called "xwalk")
Content source	AEM as a Cloud Service author `https://author-p220207-e2271469.adobeaemcloud.com` (program p220207, environment e2271469)
Delivery bridge	`bin/franklin.delivery/sradha-tcs/tcs-corp/main` (configured in `fstab.yaml`)
Code repository	GitHub `sradha-tcs/tcs-corp`, default branch `main`
Boilerplate	`adobe-rnd/aem-boilerplate-xwalk`
Edge Delivery org / site	`sradha-tcs` / `tcs-corp`
Technology	Vanilla JavaScript (ES modules), CSS3, semantic HTML5; no framework, no transpiling, no build step
Sites	13 locale sites under `/content/tcs-corp/{country}/{language}`, published at language-only paths (`/en`, `/de-de`, …)
Production domain	[To be confirmed: production domain and CDN — owner: Site Administrator]

Summary. The TCS Corporate Website is the multi-locale corporate web presence of TCS, delivered on Adobe Edge Delivery Services. Content is authored in AEM as a Cloud Service with the Universal Editor, a visual, in-context editor, and published to Edge Delivery Services, which renders pages from the authored HTML and the code in the GitHub repository. Pages are decorated in the browser by a small set of vanilla JavaScript and CSS modules: 26 block folders (two of them, Gen Carousel and Tabs, also provide section types), four default-content components (Text, Title, Image, Button), four page templates (Home, Article, Blog, Press Release) and a shared library of decorators (code that builds UI) and utils (helpers that build no UI).

The site is structured as 13 locale sites (United States English plus 12 European and Asia-Pacific locales). Each locale site owns its pages and its own navigation, footer, error pages, UI text (placeholders), bulk metadata, taxonomy, redirects and data sheets (authors, locations, partners, social links, media contacts). The code resolves the locale of every page from its path and loads the matching locale resources, so one code base serves all locales.

Every page and block pushes its state and user interactions to the Adobe Client Data Layer (`window.adobeDataLayer`) in the AEM Core Components schema. The data layer is ready for Adobe Tags with the Adobe Experience Platform Web SDK; no tag manager is loaded yet.

1.2 Business Objectives

The objectives below are derived from the delivered implementation. Business KPIs and target values are not recorded in the repository.

#	Objective	How the implementation supports it
BO-1	One corporate web platform for all markets	13 locale sites served by one code base; locale-aware navigation, footer, error pages, UI text, taxonomy and data (`utils/site.js`)
BO-2	Fast, search-friendly pages	Edge Delivery Services rendering with three-phase loading (eager / lazy / delayed), image optimisation, self-hosted variable font, Lighthouse / PageSpeed target of 100
BO-3	Autonomous, efficient content authoring	Universal Editor with component models for every block, an **Additional** tab (anchor, hide, spacing) on every block except header and footer, Site Global Templates authors copy, block libraries per locale
BO-4	Consistent brand experience	TCS.com Design System (Figma) variations implemented as blocks; design tokens in `styles/styles.css` (spacing, colour, radii, border widths, type scale)
BO-5	Content discovery	List, Filter List, Cards and Conversation Canvas blocks over the query index (`/query-index.json`) and taxonomy
BO-6	Measurable digital experience	Adobe Client Data Layer for every page and block (page, component state; `cmp:click`, `cmp:show`, `cmp:hide`, `cmp:media`, `cmp:search`, `cmp:submit`, `cmp:change`)
BO-7	Inclusive experience	WCAG 2.1 AA target: semantic markup, ARIA on interactive controls, keyboard support, reduced-motion handling, screen-reader announcements
BO-8	Low operational overhead	Serverless delivery (no application servers for the public site), Git-based code deployment through AEM Code Sync, no build pipeline
BO-9	Business KPIs	[To be confirmed: business KPIs (traffic, engagement, lead targets) — owner: Business Owner]

1.3 Program Goals

#	Goal	Status (as of this handover)
PG-1	Launch the corporate site on Edge Delivery Services with Universal Editor authoring	Implemented on preview / live hosts (`*.aem.page` / `*.aem.live`); production domain [To be confirmed: production domain and CDN — owner: Site Administrator]
PG-2	Provide a block library that covers the TCS.com Design System page patterns	Implemented (see 1.6.1); Interactive Dashboard is a placeholder only
PG-3	Set up 13 locale sites with their own references, error pages, sheets and data	Implemented in code and in `paths.json`; content population per locale [To be confirmed: content status per locale — owner: Content Lead]
PG-4	Page templates for recurring page types	Implemented: Home, Article, Blog, Press Release (`templates/`)
PG-5	Analytics readiness	Data layer implemented; Adobe Tags / Web SDK / Analytics / CJA / Target / Journey Optimizer not implemented
PG-6	Accessibility (WCAG 2.1 AA)	Implemented in the blocks and decorators; formal third-party audit [To be confirmed: accessibility audit — owner: QA Lead]
PG-7	Performance (Lighthouse / PageSpeed 100)	Architecture follows "Keeping it 100"; PageSpeed results per release [To be confirmed: PageSpeed baseline — owner: Development Lead]
PG-8	Handover to the run organisation (AMS)	This document

1.4 Key Stakeholders

Role	Responsibility	Name
Executive Sponsor	Funding, strategic direction, final sign-off	[To be confirmed: name — owner: Program Management]
Business Owner / Product Owner	Business requirements, prioritisation, acceptance	[To be confirmed: name — owner: Program Management]
Program / Project Manager	Plan, scope, risks, reporting	[To be confirmed: name — owner: Program Management]
Digital Marketing Lead	Campaigns, analytics requirements, personalisation roadmap	[To be confirmed: name — owner: Business Owner]
Content Lead / Managing Editor	Content strategy, authoring standards, publishing approvals	[To be confirmed: name — owner: Business Owner]
Locale Content Owners (13)	Content, translations, placeholders and data sheets of each locale	[To be confirmed: name per locale — owner: Content Lead]
Taxonomy Owner	Tag namespaces, taxonomy page per locale	[To be confirmed: name — owner: Content Lead]
SEO Lead	Metadata, sitemap, redirects, canonical strategy	[To be confirmed: name — owner: Digital Marketing Lead]
Solution Architect	Architecture, integrations, technical decisions	[To be confirmed: name — owner: Program Management]
Development Lead	Code base, reviews, releases	[To be confirmed: name — owner: Solution Architect]
Front-end Developers	Blocks, templates, decorators, utils	[To be confirmed: names — owner: Development Lead]
QA / Accessibility Lead	Functional, accessibility and performance testing	[To be confirmed: name — owner: Program Management]
AEM Platform Administrator	AEM author environment, users and groups (Adobe Admin Console / IMS), Cloud Manager	[To be confirmed: name — owner: IT Operations]
Edge Delivery Site Administrator	Site configuration (Configuration Service), paths, metadata source, admin API, cache purges	[To be confirmed: name — owner: IT Operations]
CDN / Network Owner	Production domain, DNS, CDN rules, redirects, error responses	[To be confirmed: name — owner: IT Operations]
Security Officer	Security review, CSP, data protection	[To be confirmed: name — owner: IT Security]
Privacy / Legal	Consent, cookie policy, form data processing	[To be confirmed: name — owner: Legal]
AMS (Application Management Services) Lead	Run support, incident management	[To be confirmed: name — owner: IT Operations]
Adobe Customer Success / Support contact	Adobe product support, escalations	[To be confirmed: name — owner: AEM Platform Administrator]

1.5 Business Benefits

Benefit	Description	Source in the implementation
Performance and SEO	Pages are pre-rendered by Edge Delivery Services and served from its CDN; only the code needed for the visible blocks is loaded; the first section is rendered before anything else (LCP). Fast pages improve search ranking and conversion	`scripts/scripts.js` (`loadEager`, `loadLazy`, `loadDelayed`), `scripts/aem.js`
Faster time to market	Authors build pages from ready blocks in the Universal Editor and publish without developer involvement; new code is deployed by merging to `main` (AEM Code Sync), without a build or deployment window	Component models (`blocks/*/_*.json`, `models/*.json`), GitHub workflow
Lower cost of ownership	No application server for delivery; no front-end framework or build chain to maintain; one code base for 13 locales	Repository structure, `utils/site.js`
Global consistency with local autonomy	Shared design and blocks; each locale owns its navigation, footer, 404 page, UI text, taxonomy, metadata, redirects and data sheets	`utils/site.js`, `utils/placeholders.js`, `utils/inherited-metadata.js`
Data-driven optimisation (once tags are deployed)	Every block and interaction is described in the Adobe Client Data Layer, so Adobe Tags rules and the Web SDK can be configured without block changes	`decorators/data-layer-decorator.js`, `utils/analytics.js`
Inclusive reach	WCAG 2.1 AA practices built into shared decorators reduce legal risk and widen the audience	`decorators/a11y-decorator.js`, `decorators/link-decorator.js`, block code
Reuse	Templates add structure (Page Header, About the author, Media contacts) from metadata and sheets, so authors don't repeat it	`templates/`, `decorators/template-decorator.js`

1.6 Scope

1.6.1 In Scope (implemented)

Locale sites. 13 locale sites under `/content/tcs-corp`, each published at a language-only path: `us/en` → `/en`, `de/de-de` → `/de-de`, `fr/fr-fr` → `/fr-fr`, `ca/fr-ca` → `/fr-ca`, `es/es-es` → `/es-es`, `pt/pt-pt` → `/pt-pt`, `nl/nl-nl` → `/nl-nl`, `se/sv-se` → `/sv-se`, `dk/da-dk` → `/da-dk`, `no/no-no` → `/no-no`, `cn/zh-cn` → `/zh-cn`, `jp/ja-jp` → `/ja-jp`, `kr/ko-kr` → `/ko-kr` (see Part 3).

Blocks inventory. The component palette of the Universal Editor (`component-definition.json`) and the block folders (`blocks/`):

Component	Kind	Purpose	Status
Text, Title, Image, Button	Default content	Rich text, headings with Title Type, images with alt text, links styled as buttons (Views, Type, Icon, Alignment)	Implemented
Section	Section	Container with Style (Highlight), Width Type (Full / Fixed), Rounded edge, Background Image, Image alt text, Anchor name	Implemented
Gen Carousel	Section type	A section whose content (Hero, Teaser) becomes carousel slides; Navigation and Autoplay interval	Implemented
Tabs Container	Section type	A section whose Tab items and following components become tabs	Implemented
Accordion (+ Accordion Item)	Block	Collapsible items built on `<details>`	Implemented

Component	Kind	Purpose	Status
Anchor List	Block	Chapter navigation to sections by Anchor name, optional sticky	Implemented
Cards (+ Card)	Block	Manually authored cards in the List presentation	Implemented
Columns	Block	Multi-column layout of default content	Implemented
Conversation Canvas (+ Button)	Block	Search / conversation entry point with menu, speech input and buttons; dispatches `conversation-canvas:search`	Implemented (no search service connected)
Embed	Block	YouTube, Vimeo and X (Twitter) embeds	Implemented
Filter List	Block	Content discovery over the query index with filter pills, advanced filter, featured cards	Implemented
Footer	Block	Page footer (footer page fragment and Social Links) and the authored footer bar	Implemented
Form Variations (+ field items)	Block	Forms with text, select, textarea, consent checkbox, contact card output and submit; client-side validation	Implemented (no submit back end)
Fragment	Block	Includes another page's content	Implemented
Header	Block (auto)	Navigation from the Navigation page with dropdowns and mobile menu	Implemented
Hero	Block	Hero with image or Lottie animation, eyebrow, title, description, CTA list	Implemented
Interactive Dashboard	Block	Placeholder: renders nothing on the site; labelled placeholder in the editor	Not implemented (placeholder)
List (+ List Item)	Block	AEM Core List equivalent: child pages, fixed list or tagged pages from the query index	Implemented
Modal	Block	Opens a fragment in a dialog; links to `/modals/` paths open as modals	Implemented
Page Header	Block	Page title area from page metadata (layouts, author, dates, tags, listen / share / download)	Implemented
Quote	Block	Quote card overlapping a portrait image	Implemented
Separator	Block	AEM Core Separator equivalent (`<hr>` with variants)	Implemented
Tab	Item block	Marks the start of a tab in a Tabs Container section	Implemented
Table (+ rows)	Block	Data tables (2–5 columns) with header options and scroll region	Implemented
Table List (+ Header, Item)	Block	Industries / solutions / products lists	Implemented
Tabs (+ Tab)	Block	Tabs whose panels show fragments	Implemented
Teaser	Block	Image and text layouts (several Figma patterns)	Implemented
Testimonial	Block	Testimonial with author and stats	Implemented
Video	Block	AEM Assets video, YouTube or Vimeo with playback options	Implemented

Templates. Home, Article, Blog, Press Release (`templates/{name}/`), selected by the Page Type page property or the metadata sheet's `page-type` column; template pages live in `/content/tcs-corp/site-global-templates` (author only).

Data layer. Adobe Client Data Layer for page, components and interactions (`decorators/data-layer-decorator.js`, `utils/analytics.js`).

Accessibility. WCAG 2.1 AA practices in all blocks and shared decorators.

Universal Editor authoring. Component definitions, models and filters (`component-definition.json`, `component-models.json`, `component-filters.json`, generated from `blocks/*/_*.json` and `models/_*.json` by `npm run build:json`); editor live updates (`scripts/editor-support.js`); editor-only hints and placeholders in blocks.

Site data. Placeholders, metadata, taxonomy, redirects and data sheets per locale; the query index (`helix-query.yaml`) and sitemap (`helix-sitemap.yaml`); path mapping (`paths.json`).

SEO. Bulk metadata SEO / social columns mapped to standard head tags (`decorators/seo-decorator.js`); `<html lang>` per locale or `language` metadata; sitemap from the query index.

1.6.2 Out of Scope / Not Implemented (as of this handover)

Item	Status	Evidence	Note
Tag manager (Adobe Tags / Launch)	Not implemented	`scripts/delayed.js` contains only a comment; no Tags embed code anywhere	Integration-ready: the embed code goes into `scripts/delayed.js` (delayed phase)
Adobe Experience Platform Web SDK	Not implemented	No `alloy` / Web SDK code	Deployed through Adobe Tags
Adobe Analytics / Customer Journey Analytics	Not implemented	No report suite or data stream configuration	Data layer is ready
Adobe Target	Not implemented	No Target library; the Teaser has a Personalization flag that only adds a `personalization` class and `data-personalization="true"`	Integration-ready markers only
Adobe Journey Optimizer	Not implemented	—	—
Form back end (Salesforce, Marketo, API)	Not implemented	Form Variations dispatches a `form-variations:submit` DOM event and shows the success message; no data is sent	[To be confirmed: form back end — owner: Solution Architect]
Search service	Not implemented	Conversation Canvas dispatches `conversation-canvas:search`; no listener in the code base	[To be confirmed: search service — owner: Solution Architect]
Production CDN and domain	Not configured	`helix-sitemap.yaml` origin is `https://main--tcs-corp--sradha-tcs.aem.live`	[To be confirmed: production domain and CDN — owner: Site Administrator]
Per-locale redirects applied at the edge	Not implemented	Edge Delivery applies only a root `/redirects.json`; locale sheets are read only by the List block	Needs CDN rules or another mechanism
Root `/` → `/en/` redirect	Not implemented in code	The site root is outside all locales and isn't published	Needs a root `/redirects.json` entry or CDN rule
403 / 500 / maintenance pages served by the platform	Not implemented	Edge Delivery serves only `404.html`	Authored 403 / 500 pages exist per locale for a CDN to use
hreflang alternates	Not implemented	No `hreflang` in code or sitemap configuration	Recommended for multi-locale SEO
Interactive Dashboard	Placeholder	`blocks/interactive-dashboard/interactive-dashboard.js` renders nothing	Dialog and logic to be added
Authentication / gated content	Not implemented	Public site, no login	—

Item	Status	Evidence	Note
Consent management (cookie banner)	Not implemented	No consent code	Required before tags / marketing cookies [To be confirmed: consent platform — owner: Privacy / Legal]
Language switcher	Not implemented as a dedicated component	Locales are reached by path; a navigation link list can be authored in the nav page	[To be confirmed: language selector requirement — owner: Business Owner]

1.7 Non-Functional Requirements

1.7.1 Performance

Requirement	Implementation	Type
Lighthouse / PageSpeed Insights score of 100 (mobile and desktop) on feature preview URLs before merge	Project publishing process (developer guidelines in the repository), step "PageSpeed Insights check"	Recommended (process); not enforced by CI (CI runs lint only)
Largest Contentful Paint from the first section	`loadEager` decorates `main` and loads only the first section (`loadSection(main.querySelector('.section'), waitForFirstImage)`); the first image is set to `loading="eager"`	Enforced by code
Three-phase loading	Eager (head decoration, template, first section), Lazy (header, remaining sections, footer, `lazy-styles.css`, fonts), Delayed (after 3 seconds: late block tracking and `scripts/delayed.js`)	Enforced by code
Fonts don't block LCP	`fonts.css` (self-hosted Inter variable font, `font-display: swap`) loads in the eager phase only on viewports ≥ 900px or when already cached in the session (`sessionStorage` flag `fonts-loaded`), otherwise in the lazy phase; an `inter-fallback` font face reduces layout shift	Enforced by code
Per-block code splitting	Each block's JS and CSS are loaded only when the block is on the page (`loadBlock` in `scripts/aem.js`)	Enforced by code
Image optimisation	Authored images are delivered as optimised `/media_…` resources with responsive `<picture>` sources (`createOptimizedPicture`, `decorators/responsive-image-decorator.js`); section backgrounds use 2000px (≥ 600px) and 750px widths	Enforced by code
No third-party scripts on load	No external script in `head.html`; X (Twitter) widgets script loads only when an X embed is rendered; Lottie player is vendored (`scripts/lib/lottie`) and loaded when an animation is near the viewport	Enforced by code
Shared data loaded once	Query index, placeholders, taxonomy, redirects, data sheets are fetched once per page view (in-memory promise cache); inherited metadata cached per browser session	Enforced by code
Real-user monitoring	`sampleRUM` (Edge Delivery Operational Telemetry) in `scripts/aem.js`; `404.html` sends a `404` checkpoint with the referrer	Enforced by code

1.7.2 Accessibility

Requirement	Implementation
WCAG 2.1 AA conformance (target)	Semantic HTML (`nav`, `main`, `header`, `footer`, `details`, `dialog`, `hr`, tables with headers); buttons with `aria-expanded` / `aria-controls`; accessible names from placeholders
Keyboard operability	Header dropdowns and mobile menu close on Escape with focus returned; focus leaving the nav closes it; carousels, tabs and scrollers support keyboard; scrollable tables are focusable labelled regions
New-window links announced	`announceNewTab` adds visually hidden text or extends the `aria-label` (WCAG 3.2.5); `rel="noopener noreferrer"` set
Motion	`prefers-reduced-motion` respected (animations, autoplay, smooth scrolling); Lottie animations have a pause / play control (WCAG 2.2.2)
Images	Alt text fields on images; empty alt marks decorative images; section background alt text field
Language	`<html lang>` from the locale (or `language` metadata); content from another locale (e.g. `/en` 404 fallback) is marked with its `lang`
Forced colours / print	`forced-colors: active` and `print` media queries present in the CSS
Heading hierarchy	Title Type fields on blocks; authors are responsible for a logical order (Recommended)

1.7.3 SEO

Requirement	Implementation
Server-rendered content	Edge Delivery Services serves the full authored HTML; blocks decorate it in the browser
Title, description, keywords	Page properties Title, Description, Keywords; bulk metadata `meta-title`, `meta-description`, `meta-keywords` mapped by `decorators/seo-decorator.js` (in the browser)
Open Graph / Twitter	`og-*`, `twitter-*` columns mapped to standard tags, with fallbacks (og-* → meta-, *twitter-* → og-*)
Canonical	`canonical-url` → `<link rel="canonical">` and `og:url`
Robots	`robots` metadata (standard, works server side)
Sitemap	`helix-sitemap.yaml`: `/sitemap.xml` from `/query-index.json`, `lastmod` YYYY-MM-DD, origin currently the `.aem.live` host
Index hygiene	`helix-query.yaml` excludes references, error pages, data, nav / footer, block libraries, templates, fragments and modals
Multi-locale	Language-only paths; `<html lang>` per locale; hreflang not implemented

> **Note:** The SEO decorator runs in the browser. Search engines that execute JavaScript see the mapped tags; the HTML delivered by Edge Delivery Services carries the raw columns as `<meta name="meta-title">` etc. The page's own Title and Description page properties are rendered server side.

1.7.4 Security

Requirement	Implementation
Content Security Policy	`head.html` and `404.html`: `script-src 'nonce-aem' 'strict-dynamic' 'unsafe-inline' http: https:; base-uri 'self'; object-src 'none';` with `move-to-http-header="true"` (Edge Delivery Services sends it as an HTTP header and replaces the `aem` nonce per response)
No secrets in client code	No API keys, tokens or credentials in the repository; everything is public client-side code

Requirement	Implementation
Safe links	`isSafeUrl` (`utils/card-list-config.js`) rejects `javascript:`, `data:` and other non-http(s) schemes in List and Cards links
Fragments same-origin only	`loadFragment` accepts only paths starting with `/` (not `//`)
Editor updates sanitised	Universal Editor patches are sanitised with DOMPurify 3.2.4 before re-rendering (`scripts/editor-support.js`)
Form data never in analytics	`cmp:submit` events carry field names only, never values
Author access	Adobe IMS through the Adobe Admin Console; AEM permissions
Served files	`.hlxignore` excludes dot files, `*.md`, `package*.json`, `test/*`, `docs/*`, `_*` (model partials), `LICENSE`, `karma.config.js` from the code bus

1.7.5 Browser Support

Item	Value
Supported browsers	Current evergreen browsers (Chrome, Edge, Firefox, Safari, including mobile Safari and Chrome on Android)
Rationale	The CSS uses media query range syntax (`width >= 600px`), `:has()`, custom properties, grid; the JS uses ES modules and modern DOM APIs. Internet Explorer is not supported
Formal support matrix	[To be confirmed: browser and device support matrix — owner: QA Lead]

1.7.6 Responsiveness

Breakpoint	Range	Notes
Mobile	< 600px	Mobile-first base styles
Tablet	600px – 1199px	`@media (width >= 600px)`; some type tokens step up at 900px
Desktop	≥ 1200px	`@media (width >= 1200px)`
Header	switches to the desktop navigation at 900px	`blocks/header/header.js` `matchMedia('(min-width: 900px)')`
Units	rem (1rem = 16px); only breakpoints in px	Code style rule

1.7.7 Localisation

Requirement	Implementation
13 locales	`LOCALES` in `utils/site.js`; `paths.json` generated from it (`npm run build:paths`)
UI text	`/{locale}/placeholders.json` with English fallbacks in code (`utils/placeholders.js`); keys match regardless of case and separators
Tag labels	`/{locale}/taxonomy.json`, the locale's language sheet when translated, else labels derived from tag IDs
Locale resources	Navigation, footer, 404 page, metadata, redirects, data sheets per locale
Typography	Inter variable font covers Latin (the `unicode-range` of `fonts.css`); Chinese, Japanese and Korean text falls back to the system sans-serif font
Dates	`utils/dates.js` formats (DD-MM-YYYY, MM-DD-YYYY, MMM d, yyyy, DD/MM/YY, DD MMM YY)

1.7.8 Maintainability

Requirement	Implementation
Code style	Airbnb ESLint, Stylelint standard, xwalk model lint rules (`eslint-plugin-xwalk`); `npm run lint`
CI	GitHub Actions `Build` workflow runs `npm ci` and `npm run lint` on every push
Pre-commit	Husky pre-commit hook rebuilds `component-*.json` when a `_*.json` model partial is staged
Unit tests	`npm test` (Node test runner): `test/list`, `test/cards`, `test/separator`
Shared code	One purpose per file in `decorators/` and `utils/`, each with a README; utils never import decorators
Dependencies	No runtime npm dependencies; dev dependencies kept up to date by Renovate (`.renovaterc.json`, dev dependencies auto-merged, ESLint pinned to v8)
Core library	`scripts/aem.js` must never be modified (boilerplate rule)

1.8 Assumptions

1. AEM as a Cloud Service (author `p220207-e2271469`) remains the single content source; no other mount points are added to `fstab.yaml`.
2. The Edge Delivery site configuration (Configuration Service) for `sradha-tcs/tcs-corp` holds the `public.json` paths mapping matching the repository `paths.json`; AEM uses the configuration, not the repository file. [To be confirmed: configuration in sync — owner: Site Administrator]
3. The bulk metadata of the 13 locales is applied only after all 13 sheets are listed in the site configuration's `metadata.source`. [To be confirmed: metadata.source configured — owner: Site Administrator]
4. Each locale has, at least, `references/nav`, `references/footer` and `error-pages/404` published; otherwise the header stays empty, the footer shows only Social Links, and the 404 page falls back to `/en`.
5. Authors use the Universal Editor; documents (Google Drive / SharePoint) are not a content source.
6. The site is public; no personal data is stored by the site itself.
7. A production domain and CDN (Adobe-managed or customer-managed) will be configured before go-live. [To be confirmed: production domain and CDN — owner: Site Administrator]
8. Analytics, personalisation and form processing will be added after this handover using the data layer and DOM events provided.
9. Translations are managed in AEM (e.g. language copies or a translation integration). [To be confirmed: translation process — owner: Content Lead]
10. Users run current evergreen browsers.

1.9 Dependencies

Dependency	Type	Used for	Impact if unavailable
AEM as a Cloud Service author (p220207 / e2271469)	Adobe service	Authoring, preview / publish of content to Edge Delivery	No content changes can be made or published; the live site keeps serving the last published content
Universal Editor	Adobe service	Visual authoring	Authors can't edit pages
Edge Delivery Services (code, content and media bus; admin API)	Adobe service	Rendering and delivery	Site unavailable on `aem.page` / `aem.live`
AEM Code Sync (GitHub App)	Adobe service	Synchronising code from GitHub	Code changes not deployed

Dependency	Type	Used for	Impact if unavailable
GitHub `sradha-tcs/tcs-corp`	SaaS	Code repository, pull requests, CI	No code changes
Adobe IMS / Admin Console	Adobe service	Author identity and access	Authors can't sign in
AEM Assets (`/content/dam/tcs-corp/`)	Adobe service	Images, videos, PDFs	Assets can't be picked; published assets keep working
YouTube, Vimeo, X (Twitter)	Third party	Embeds and videos, only where authored	Those embeds don't render
Browser Web Speech API	Browser	Conversation Canvas speech input, only where supported	The microphone button is not functional; typing works
Production CDN / DNS	Customer or Adobe	Production domain	[To be confirmed: production domain and CDN — owner: Site Administrator]
Adobe Tags, Web SDK, Analytics, CJA, Target, AJO	Adobe services	Future analytics and personalisation	Not implemented; no current impact
Node.js (20 or newer; CI uses 24) and npm	Tooling	Lint, tests, JSON build, paths generation	Developer tooling only
AEM CLI (`@adobe/aem-cli`)	Tooling	Local development server	Developer tooling only

1.10 Success Criteria

#	Criterion	Measure	Target
SC-1	All 13 locale sites published	Home, nav, footer, 404 published per locale	13 / 13 [To be confirmed: launch scope per locale — owner: Content Lead]
SC-2	Performance	PageSpeed Insights (mobile) on key templates	100 (project standard); [To be confirmed: accepted minimum — owner: Development Lead]
SC-3	Core Web Vitals (field)	LCP, INP, CLS from Operational Telemetry / CrUX	"Good" thresholds [To be confirmed: targets — owner: Development Lead]
SC-4	Accessibility	Automated and manual WCAG 2.1 AA checks	No AA violations [To be confirmed: audit — owner: QA Lead]
SC-5	Lint and tests	`npm run lint`, `npm test`	Pass on `main`
SC-6	Authoring autonomy	Authors create and publish pages from templates without developer help	[To be confirmed: authoring acceptance — owner: Content Lead]
SC-7	Analytics readiness	Data layer entries present for page, every block and interactions	Verified in the browser console (`window.adobeDataLayer`)
SC-8	SEO	Sitemap generated; no indexed references / error pages; metadata applied	Verified on preview
SC-9	Business KPIs	Traffic, engagement, leads	[To be confirmed: KPIs and targets — owner: Business Owner]
SC-10	Operational readiness	AMS runbooks accepted; escalation contacts named	[To be confirmed: AMS acceptance — owner: AMS Lead]

1.11 Contact and Ownership Matrix

R = Responsible, A = Accountable, C = Consulted, I = Informed.

Area	Content Lead	Locale Content Owners	Taxonomy Owner	SEO Lead	Development Lead	Site Administrator	AEM Platform Admin	CDN Owner	Digital Marketing / Analytics	AMS
Page content and publishing	A	R	I	C	I	I	I	I	I	C
Navigation and footer pages (references)	A	R	I	C	C	I	I	I	I	C
Error pages (404 / 403 / 500)	A	R	I	C	C	C	I	C	I	C
Taxonomy (tags, translations)	C	C	A/R	C	C	I	C	I	C	I
Bulk metadata sheets	C	R	I	A	C	C	I	I	C	I
Placeholders sheets (UI text)	A	R	I	I	C	I	I	I	I	I
Data sheets (authors, locations, partners, social links, media contacts)	A	R	I	I	C	I	I	I	I	I
Redirects sheets	C	R	I	A	C	C	I	R	I	C
Code (blocks, templates, decorators, utils)	C	I	I	C	A/R	I	I	I	C	C
Component models (Universal Editor dialogs)	C	I	I	I	A/R	I	I	I	I	I
Site configuration (paths, metadata source, admin API)	I	I	I	C	C	A/R	C	C	I	C
AEM environment (users, groups, Cloud Manager)	I	I	I	I	C	C	A/R	I	I	C
CDN, DNS, production domain, edge redirects	I	I	I	C	C	C	C	A/R	I	C
Analytics and tags (future)	I	I	I	C	C	C	I	I	A/R	I
Run support (AMS)	I	I	I	I	C	C	C	C	I	A/R

Area	Named owner	Contact
Content	[To be confirmed: name — owner: Business Owner]	[To be confirmed: contact — owner: Business Owner]
Taxonomy	[To be confirmed: name — owner: Content Lead]	[To be confirmed: contact — owner: Content Lead]
Metadata and SEO	[To be confirmed: name — owner: Digital Marketing Lead]	[To be confirmed: contact — owner: Digital Marketing Lead]
Sheets (placeholders, data, redirects)	[To be confirmed: name — owner: Content Lead]	[To be confirmed: contact — owner: Content Lead]

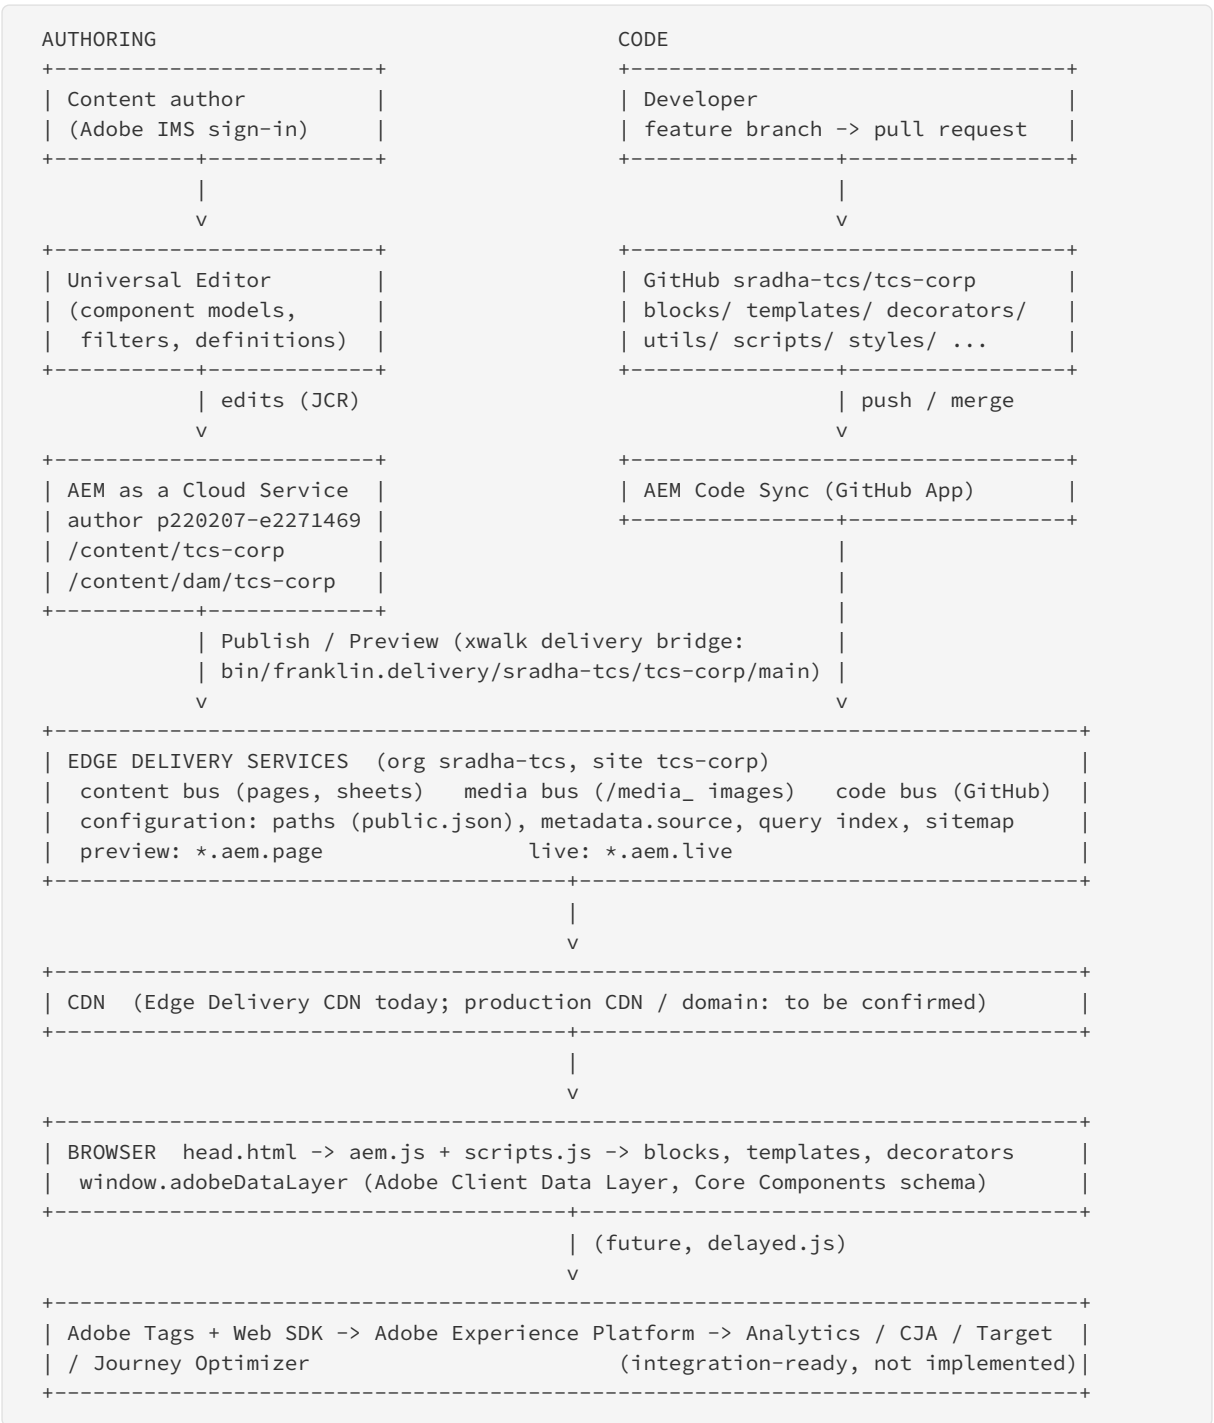
Part 2 — Solution Architecture

2.1 High-Level Architecture

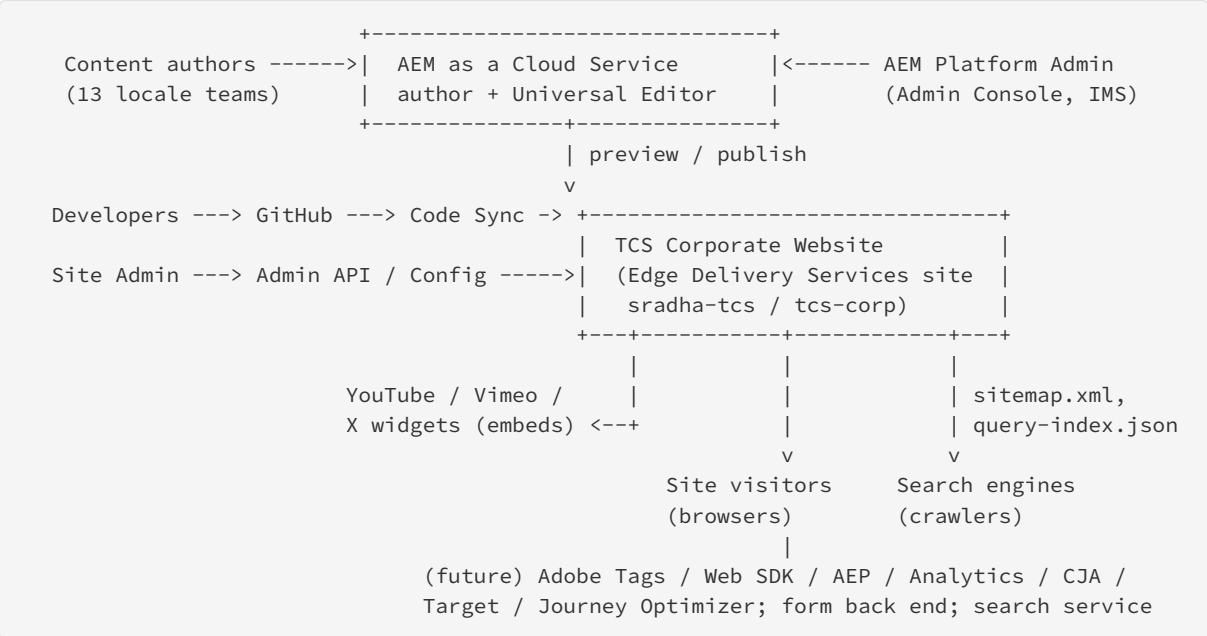
The solution separates three concerns: **authoring** in AEM as a Cloud Service with the Universal Editor, **code** in GitHub synchronised by AEM Code Sync, and **delivery** by Edge Delivery Services, which combines the published content with the code and serves it through its CDN. The browser decorates the delivered HTML with the project's JavaScript and CSS.



Key characteristics

- Content is stored in AEM (JCR) and authored with the Universal Editor. On preview / publish, AEM renders the page as Edge Delivery markup through the xwalk delivery bridge configured in `fstab.yaml` (`https://author-p220207-e2271469.adobeaemcloud.com/bin/franklin.delivery/sradha-tcs/tcs-corp/main`, type `markup`, suffix `.html`).
- AEM paths are mapped to published paths by `paths.json` (applied through the site configuration's `public.json` → `paths`): `/content/tcs-corp/de/de-de/...` is published at `/de-de/...`.
- Edge Delivery Services stores pages and sheets on the **content bus**, images on the **media bus** (served as `/media_<hash>` URLs), and code from GitHub on the **code bus**.
- The browser receives server-rendered HTML with `head.html` injected; `scripts/scripts.js` decorates sections and blocks and loads each block's JS / CSS on demand.
- The data layer is populated in the browser; a tag manager (Adobe Tags) is not loaded yet.

2.2 Solution Context Diagram



Actor / System	Interaction with the site
Content authors	Create, edit, preview and publish pages and sheets in AEM with the Universal Editor; use AEM Sidekick on preview / live pages
Developers	Change code in GitHub through pull requests; preview changes on feature-branch hosts
Site Administrator	Configures the Edge Delivery site (paths, metadata source, access), uses the admin API for preview / publish / cache operations
AEM Platform Administrator	Manages the AEM environment, users and groups, Cloud Manager
Site visitors	Browse the 13 locale sites
Search engines	Crawl pages and `/sitemap.xml`
Third-party media	YouTube (including `youtube-nocookie.com`), Vimeo players and the X widgets script, loaded only for authored embeds / videos

Actor / System	Interaction with the site
Future systems	Adobe Tags, Web SDK, AEP, Analytics, CJA, Target, Journey Optimizer, form back end, search service (not implemented)

2.3 Component Architecture

2.3.1 Code Layers

```
+-------------------------------------------------------------------------+
| head.html          CSP, viewport, aem.js, scripts.js, styles.css        |
+-------------------------------------------------------------------------+
| scripts/aem.js     Edge Delivery core library (NEVER modified): sections, |
|                    blocks, loadBlock, loadCSS, loadScript, RUM, metadata  |
+-------------------------------------------------------------------------+
| scripts/scripts.js page lifecycle: loadEager / loadLazy / loadDelayed,    |
|                    decorateMain, section options, templates, 404 loading  |
+-------------------------------------------------------------------------+
| templates/{name}/  home, article, blog, press-release (structure + CSS)   |
+-------------------------------------------------------------------------+
| blocks/{name}/     26 blocks: {name}.js, {name}.css, _{name}.json (models) |
+-------------------------------------------------------------------------+
| decorators/        shared UI builders (buttons, links, images, data layer, |
|                    SEO, block options, card list, media, ...)             |
+-------------------------------------------------------------------------+
| utils/             no-UI helpers (site/locale, metadata, placeholders,     |
|                    taxonomy, data sheets, query index, redirects, ...)    |
+-------------------------------------------------------------------------+
| styles/            styles.css (tokens, global, LCP), lazy-styles.css,      |
|                    fonts.css, card-list.css                               |
+-------------------------------------------------------------------------+
| scripts/editor-support.js (+ editor-support-rte.js, dompurify.min.js)     |
|                    Universal Editor live updates (editor context only)    |
+-------------------------------------------------------------------------+
```

Layering rules (from `decorators/README.md` and `utils/README.md`): blocks and templates import decorators and utils; **decorators may import utils; utils never import decorators**; each file has one purpose. `scripts/aem.js` is the boilerplate core library and must not be changed.

2.3.2 Page Lifecycle (`scripts/scripts.js`)

`loadPage()` runs `loadEager(document)`, then `loadLazy(document)`, then `loadDelayed()`.

```
loadEager                          loadLazy                        loadDelayed (+3 s)
---------                          --------                        ------------------
decorateHead (SEO, <html lang>)    autolinkModals (/modals/ links)  trackBlocks(document)
trackInteractions (data layer)     loadHeader (nav fragment)        import('./delayed.js')
decorateTemplateAndTheme           loadSections (all sections)        (empty today: place
decoratePageType (body class)      trackBlocks(main)                   for Adobe Tags)
404: loadErrorPage(main)           404: addErrorBackButton (Go back)
                                   scroll to #hash element
  else: loadTemplate(main)         loadFooter (footer fragment)
decorateMain(main)                 lazy-styles.css
body.appear                        loadFonts()
```

```
loadSection(first, waitForFirstImage)
fonts.css if >= 900px or cached
```

Eager phase (`loadEager`)

1. `decorateHead()` (`decorators/seo-decorator.js`): sets `<html lang>` (`language` metadata if it is a valid language tag, else the locale's `lang`), maps `meta-title`, `meta-description`, `meta-keywords`, `og-*`, `twitter-*`, `canonical-url` to standard head tags.
2. `trackInteractions()` (`decorators/data-layer-decorator.js`): pushes the page entry to `window.adobeDataLayer` and adds capture-phase listeners for click, toggle, close, play / pause / ended, submit and change.
3. `decorateTemplateAndTheme()` (aem.js) adds the `template` / `theme` metadata as body classes; `decoratePageType()` adds the Page Type (`page-type` metadata) as a body class.
4. On the 404 page (`window.isErrorPage`), `loadErrorPage(main)` replaces the built-in content with the authored 404 page (Part 10). Otherwise `loadTemplate(main)` loads `templates/{name}/{name}.js` and `.css` when the Page Type is one of `home`, `article`, `blog`, `press-release` (`TEMPLATES`), and calls its default export with `main` before decoration. A template failure is logged (`failed to load template {name}`) and the page continues.
5. `decorateMain(main)`: `decorateIcons` → `buildAutoBlocks` (empty placeholder) → `decorateSectionsWithOptions` (sections plus the section options Style, Width Type, Rounded edge, Background Image, Image alt text, Anchor name; then Gen Carousel and Tabs Container sections are wrapped in synthetic `gen-carousel` / `tabs` blocks) → `decorateBlocks` → `applyBlockOptions` (Additional tab: `anchor-…` class becomes a unique id) → `decorateButtons` (authored links become buttons).
6. `body.appear` is added; the first section is loaded and the first image is awaited (`waitForFirstImage` sets it to `loading="eager"`) — this is the LCP.
7. Fonts: `fonts.css` is loaded now only if the viewport is ≥ 900px or the session already loaded it.

Lazy phase (`loadLazy`)

1. `autolinkModals(doc)`: a document click listener opens links whose path contains `/modals/` with the Modal block (`openModal`), unless another handler already prevented the default.
2. `loadHeader()`: builds and loads the `header` block (Navigation page as a fragment, see 3.5).
3. `loadSections(main)`: loads all remaining sections in order (each block's JS and CSS); after the first section, RUM enhancement runs.
4. `trackBlocks(main)`: pushes the component state of every loaded block to the data layer.
5. On 404 pages, `addErrorBackButton(main)`: adds "Go back" (placeholder `goBack`) when the visitor came from a page of the site (10.2.4).
6. Scrolls to the element of the URL hash, if any.
7. `loadFooter()`: builds and loads the `footer` block.
8. Loads `styles/lazy-styles.css` and `fonts.css`.

Delayed phase (`loadDelayed`)

After 3 seconds: `trackBlocks(document)` (header, footer and late blocks such as modals) and `import('./delayed.js')`. `scripts/delayed.js` is empty (`// add delayed functionality here`); this is where the Adobe Tags embed code belongs.

2.3.3 Block Loading (`scripts/aem.js`)

- `decorateBlock(block)` marks the element as a block (`.block`, `data-block-name`, `data-block-status="initialized"`) and wraps cell content.

- `loadBlock(block)` sets `data-block-status="loading"`, loads `/blocks/{name}/{name}.css` and imports `/blocks/{name}/{name}.js` in parallel, calls its default export, then sets `data-block-status="loaded"`. A failure in the module is caught and logged (`failed to load module for {name}`); the block is still marked loaded so the page continues.
- `loadSection()` loads the blocks of a section one after another and then shows the section (sections are hidden until loaded).

2.3.4 Templates

Page Type	Template code	Adds
`home`	`templates/home/`	Layout styles only
`article`	`templates/article/`	A Page Header (unless authored, `ensurePageHeader`); "About the author" from the Authors sheet (`author-id`), loaded without blocking (`appendLoadedSection`)
`blog`	`templates/blog/`	The article structure and styles
`press-release`	`templates/press-release/`	A Page Header (unless authored); "Media contacts" from the Media Contacts sheet filtered by the page's `region` (else all)

Template pages authors copy live in `/content/tcs-corp/site-global-templates/` (excluded from publishing in `paths.json`).

2.3.5 Decorators and Utils

Layer	Modules (selection)	Responsibility
Decorators	`button-decorator.js`, `icon-button-decorator.js`, `content-buttons-decorator.js`, `link-decorator.js`, `heading-decorator.js`, `content-decorator.js`, `image-decorator.js`, `responsive-image-decorator.js`, `scroller-decorator.js`, `card-list-decorator.js`, `masonry-decorator.js`, `date-decorator.js`, `tag-decorator.js`, `media-decorator.js`, `animation-decorator.js`, `article-meta-decorator.js`, `stats-decorator.js`, `seo-decorator.js`, `social-links-decorator.js`, `template-decorator.js`, `author-bio-decorator.js`, `contact-list-decorator.js`, `a11y-decorator.js`, `block-options-decorator.js`, `data-layer-decorator.js`	Create or decorate elements consistently in every block
Utils	`site.js`, `inherited-metadata.js`, `metadata.js`, `placeholders.js`, `taxonomy.js`, `data.js`, `properties.js`, `multifield.js`, `links.js`, `buttons.js`, `dates.js`, `query-index.js`, `redirects.js`, `analytics.js`, `cells.js`, `card-list-config.js`, `tags.js`, `urls.js`, `ids.js`, `environment.js`, `viewport.js`, `media.js`, `lottie.js`	Read authored values, site data and context without building UI

2.3.6 Universal Editor Support (`scripts/editor-support.js`)

- Loaded only in the Universal Editor context (it isn't referenced by `head.html`).
- Listens on `main` for `aue:content-patch`, `aue:content-update`, `aue:content-add`, `aue:content-move`, `aue:content-remove`, `aue:content-copy`.
- For each change it loads `scripts/dompurify.min.js`, sanitises the returned HTML (`DOMPurify.sanitize(content, { USE_PROFILES: { html: true } })`), and re-decorates only the changed part: the whole `main` (`decorateMain`, `loadSections`), a block (`decorateButtons`, `decorateIcons`, `decorateBlock`, `applyBlockOptions`, `decorateRichtext`, `loadBlock`), a section (`decorateSectionsWithOptions`, `decorateBlocks`, `applyBlockOptions`, `loadSections`) or default content.

- If the change can't be applied in place, the page is reloaded.
- `editor-support-rte.js` groups rich-text instrumentation (`data-richtext-*`) and is re-run through a `MutationObserver`.
- Blocks detect the editor with `isEditing()` (`html.adobe-ue-edit`) to show editor-only hints (empty List / Cards / Filter List messages, Tabs hints, Separator warnings, Interactive Dashboard placeholder) and to stop animations, autoplay and sticky behaviour while editing; Hide block keeps hidden blocks visible in the editor.

2.3.7 Component Model Files

File	Content	Generated from
`component-definition.json`	Component palette: groups Default Content, Sections, Blocks	`models/_component-definition.json` + `blocks/*/_*.json` (`npm run build:json`)
`component-models.json`	Dialog fields per model	`models/_component-models.json` + partials
`component-filters.json`	Allowed children: `main` (section, gen-carousel, tabs), `section` (27 components), item filters (accordion, cards, columns, form-variations, list, table, tabs, …)	`models/_component-filters.json` + partials
`models/_page.json`	Page properties (Title, Description, Keywords, Page Type, Navigation, Footer, 404 Page)	—
`models/_section.json`	Section properties	—
`xwalk.json`	`public.xwalk.multi-field.enabled: true` (composite multifields)	—

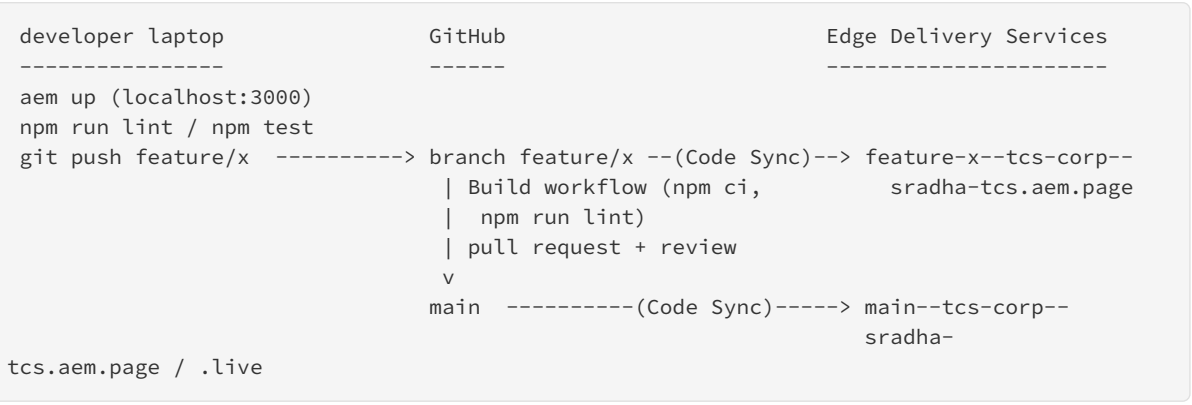
2.4 Application Landscape

System	Category	Role in this solution	Status
AEM as a Cloud Service (author p220207-e2271469)	Content management	Content repository, authoring, publishing to Edge Delivery	Implemented
Universal Editor	Authoring UI	Visual in-context editing with the project's component models	Implemented
Edge Delivery Services	Delivery	Rendering, content / media / code bus, preview and live hosts, query index, sitemap	Implemented
xwalk delivery bridge (`bin/franklin.delivery`)	Integration	Renders AEM pages as Edge Delivery markup	Implemented
AEM Assets (`/content/dam/tcs-corp/`)	DAM	Images, videos, PDFs picked in the Universal Editor	Implemented
GitHub (`sradha-tcs/tcs-corp`)	Source control / CI	Code, pull requests, lint workflow	Implemented
AEM Code Sync	Deployment	Pushes code changes to the code bus per branch	Implemented
AEM Sidekick	Authoring tool	Preview / publish / edit actions on site pages (`tools/sidekick/config.json`)	Implemented

System	Category	Role in this solution	Status
Adobe IMS / Admin Console	Identity	Author authentication and product access	Implemented (platform)
Edge Delivery CDN	CDN	Serves `*.aem.page` / `*.aem.live`	Implemented (platform)
Production CDN / domain	CDN	Production hostname, edge redirects, error responses	[To be confirmed: production domain and CDN — owner: Site Administrator]
Adobe Client Data Layer	Analytics data	`window.adobeDataLayer` page, component and event entries	Implemented
Adobe Tags + Web SDK	Tag management / collection	Would read the data layer and send XDM to AEP	Integration-ready, not implemented
Adobe Analytics / CJA	Analytics	Reporting	Not implemented
Adobe Target	Personalisation	A/B tests and personalisation	Not implemented (Teaser personalisation marker only)
Adobe Journey Optimizer	Journeys	Messaging, journeys, offers	Not implemented
Salesforce / Marketo / API	Lead management	Form submissions	Not implemented (`form-variations:submit` event)
Search service	Search	Site search / conversational search	Not implemented (`conversation-canvas:search` event)
YouTube / Vimeo / X	Third-party media	Embeds and videos	Implemented (per authored component)
Operational Telemetry (RUM)	Monitoring	Sampled real-user data from `sampleRUM`	Implemented (platform)

2.5 Deployment Architecture

2.5.1 Code Deployment



1. Developers work on a feature branch; the AEM CLI dev server (`aem up`) serves local code with previewed content.
2. A push triggers AEM Code Sync, which updates the code bus for that branch: `https://{branch}--tcs-corp--sradha-tcs.aem.page/`.
3. The GitHub `Build` workflow (`.github/workflows/main.yaml`) runs `npm ci` and `npm run lint` on every push.

4. A pull request (template `.github/pull_request_template.md`) includes before / after test URLs; a reviewer merges to `main`.
5. Code Sync updates `main`; preview and live hosts serve the new code immediately (code isn't versioned per content publish).
6. Rollback: revert the commit on `main` (a new commit); Code Sync deploys the revert.

> **Note:** There is no build step: the files in the repository are the files served. `.hlxignore` keeps dot files, Markdown, `package*.json`, `test/*`, `docs/*`, `_*` model partials, `LICENSE` and `karma.config.js` off the code bus.

2.5.2 Content Deployment

1. Authors edit pages in the Universal Editor on the AEM author.
2. **Preview** (Universal Editor or AEM Sites console / AEM Sidekick) sends the page through the delivery bridge to the content bus preview partition → `*.aem.page`.
3. **Publish** sends it to the live partition → `*.aem.live` (and the production CDN once configured).
4. Images are moved to the media bus and served as `/media_<hash>.<ext>` URLs; AEM Assets that are linked (videos, PDFs) are published at their DAM path (`/content/dam/tcs-corp/` is in `paths.json` includes).
5. Sheets (placeholders, metadata, redirects, data) are published as JSON (`.json` appended to the mapped path); the taxonomy page is mapped explicitly to `/{locale}/taxonomy.json`.

2.5.3 Configuration Files

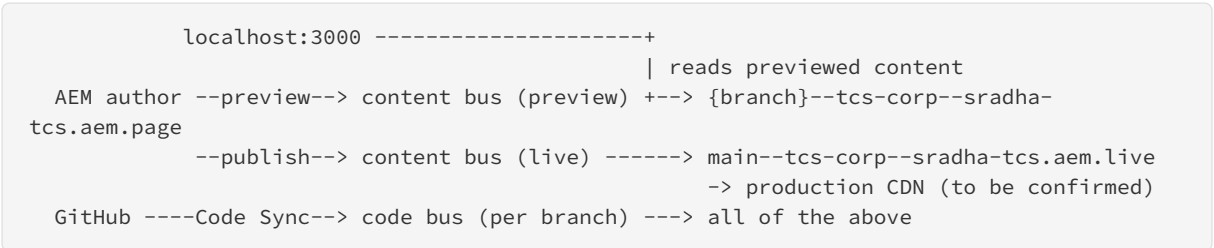
File	Purpose	Key content
`fstab.yaml`	Content source mount point	`/` → AEM author delivery bridge, type `markup`, suffix `.html`
`paths.json`	AEM path → published path mappings, includes, excludes (generated by `npm run build:paths` from `LOCALES`)	143 mappings (13 locale folders, 13 locale Home pages, 13 × 8 sheets, 13 taxonomy pages); 14 includes (13 locale pages + `/content/dam/tcs-corp/`); 28 excludes (26 block-library entries + `site-global-templates` and its children)
`helix-query.yaml`	Query index definition	Index `pages`, target `/query-index.json`, includes `/**`, excludes `/**.json`, `/*/references/**`, `/*/error-pages/**`, `/*/data/**`, `/*/nav`, `/*/footer`, `/*/block-library(/**)`, `/site-global-templates/**`, `/**/fragments/**`, `/**/modals/**`; properties for all metadata columns
`helix-sitemap.yaml`	Sitemap	`default`: origin `https://main--tcs-corp--sradha-tcs.aem.live`, source `/query-index.json`, destination `/sitemap.xml`, `lastmod: YYYY-MM-DD`
`component-definition.json`, `component-models.json`, `component-filters.json`	Universal Editor palette, dialogs and filters	Generated by `npm run build:json` (also by the pre-commit hook)
`head.html`	Global head	CSP, viewport, `aem.js`, `scripts.js`, `styles.css`
`404.html`	Not-found page	Built-in content and the authored 404 loader (Part 10)
`xwalk.json`	xwalk feature flags	Multi-field enabled
`tools/sidekick/config.json`	AEM Sidekick project config	`editUrlLabel: "AEM Editor"`, `editUrlPattern: "{{contentSourceUrl}}{{pathname}}?cmd=open"`; project label still "AEM XWalk Boilerplate"
`.hlxignore`	Files not served	See note above

File	Purpose	Key content
`.well-known/adobe/cloud-manager-challenge`	Cloud Manager domain / ownership challenge file	Present in the repository

Important: AEM reads the path mappings from the site configuration (`public.json` → `paths`), not from the repository `paths.json`. After `npm run build:paths`, the Site Administrator must apply the same mappings to the configuration.

2.6 Environment Topology

Environment	URL	Content	Code	Purpose
Local development	`http://localhost:3000` (`aem up`)	Previewed content (same as preview) or `drafts/` with `--html-folder drafts`	Local working copy (uncommitted)	Development and testing
Feature preview	`https://{branch}--tcs-corp--sradha-tcs.aem.page/`	Previewed content	Feature branch	Pull-request validation, PageSpeed checks
Preview (main)	`https://main--tcs-corp--sradha-tcs.aem.page/`	Previewed content	`main`	Author review before publishing
Live (main)	`https://main--tcs-corp--sradha-tcs.aem.live/`	Published content	`main`	Published site until the production domain exists
Production	[To be confirmed: production domain and CDN — owner: Site Administrator]	Published content	`main`	Public website
AEM author	`https://author-p220207-e2271469.adobeaemcloud.com`	Source content (JCR)	—	Authoring in Universal Editor
AEM publish	[To be confirmed: AEM publish tier usage — owner: AEM Platform Admin]	—	—	Not used for page delivery (Edge Delivery serves pages)
Other AEM environments (dev / stage)	[To be confirmed: other Cloud Manager environments — owner: AEM Platform Admin]	—	—	—



2.7 Security Architecture

2.7.1 Content Security Policy

`head.html` (all pages) and `404.html` declare the policy below (the `content` value is a single line in the files; it's wrapped here for readability):

```
<meta
  http-equiv="Content-Security-Policy"
  content="script-src 'nonce-aem' 'strict-dynamic' 'unsafe-inline' http: https:;
    base-uri 'self'; object-src 'none';"
  move-to-http-header="true"
>
```

Directive	Effect
`script-src 'nonce-aem' 'strict-dynamic'`	Only scripts carrying the nonce (the `<script nonce="aem">` tags of `head.html` / `404.html`) and the scripts they load (modules, `loadScript`) run; `'unsafe-inline'` `http: https:` are fallbacks for old browsers and ignored where `strict-dynamic` is supported
`base-uri 'self'`	Prevents `<base>` injection
`object-src 'none'`	Blocks plugins (`<object>`, `<embed>`)
`move-to-http-header="true"`	Edge Delivery Services sends the policy as an HTTP response header
Not restricted	`style-src`, `img-src`, `frame-src`, `connect-src` aren't set (embeds from YouTube, Vimeo and X work without changes)

> **Note:** When Adobe Tags is added, its embed must be loaded by the project code (`scripts/delayed.js`) so `strict-dynamic` trusts it; inline scripts injected by tag rules need a review against the policy.

2.7.2 Client-Side Security Measures

Measure	Where	Detail
No secrets in code	Whole repository	Everything is public client-side code; no API keys or tokens
DOMPurify (3.2.4)	`scripts/dompurify.min.js`, used only by `scripts/editor-support.js`	Sanitises Universal Editor update HTML before it's parsed and re-rendered; not loaded on the public site
Same-origin fragments	`blocks/fragment/fragment.js` `loadFragment`	Only paths that start with `/` and not `//` are fetched (`{path}.plain.html`); used by header, footer, modal, tabs, footer canvas
Error page content	`scripts/scripts.js` `loadPageContent`	Fetches same-origin `.plain.html` paths built from locale paths or the resolved 404 Page property
Safe URL checks	`utils/card-list-config.js` `isSafeUrl` (List, Cards)	Allows `http:`, `https:`, `mailto:`, `tel:` and relative paths; rejects `javascript:`, `data:` and other schemes
Embeds built from the DOM	`decorators/media-decorator.js`, `utils/media.js`	iframes created with DOM APIs; YouTube privacy-enhanced host (`youtube-nocookie.com`) available; Vimeo URLs encoded

Measure	Where	Detail
New window links	`decorators/link-decorator.js` `setLinkTarget`	`target="_blank"` with `rel="noopener noreferrer"`
Form data	`decorators/data-layer-decorator.js`	`cmp:submit` events contain field names only, never values; no submission endpoint exists
Analytics never breaks pages	`utils/analytics.js`	`pushToDataLayer` is wrapped in `try / catch`
innerHTML	`fragment.js`, `scripts.js`	Only for same-origin Edge Delivery `.plain.html` responses (trusted content bus)

2.7.3 Platform Security

Area	Implementation
Author authentication	Adobe IMS (Adobe Admin Console product profiles); AEM permissions on `/content/tcs-corp` and `/content/dam/tcs-corp`
Public site	No login, no gated content, no cookies set by project code (the `fonts-loaded` and `tcs-inherited-metadata` values are `sessionStorage`)
Edge Delivery admin	Admin API operations (preview, publish, cache, configuration) require authorised users [To be confirmed: admin roles in the site configuration — owner: Site Administrator]
Preview protection	[To be confirmed: whether preview / live hosts are access-restricted — owner: Site Administrator]
Served files	`.hlxignore` keeps non-runtime files off the code bus
Dependency hygiene	No runtime npm dependencies; Renovate updates dev dependencies
Unpublished areas	Block libraries and Site Global Templates are excluded in `paths.json`

2.8 Integration Architecture

#	Integration	Direction	Mechanism	Status
1	AEM author → Edge Delivery Services	Outbound from AEM	xwalk delivery bridge (`fstab.yaml`), preview / publish	Implemented
2	GitHub → Edge Delivery Services	Outbound from GitHub	AEM Code Sync GitHub App	Implemented
3	AEM Assets → pages	Internal	Asset picker in Universal Editor; media bus `/media_` URLs; DAM path includes	Implemented
4	Query index	Internal	`helix-query.yaml` → `/query-index.json`; read by `utils/query-index.js` (pages of 500, cached per page)	Implemented
5	Sitemap	Outbound to crawlers	`helix-sitemap.yaml` → `/sitemap.xml`	Implemented (origin to be replaced by the production domain)
6	Locale sheets (placeholders, metadata, taxonomy, redirects, data)	Internal	Published sheets read by utils	Implemented
7	Adobe Client Data Layer	Browser	`window.adobeDataLayer` array (Core Components schema)	Implemented (the ACDL library itself is provided by the future Tags extension)

#	Integration	Direction	Mechanism	Status
8	Adobe Tags (Launch)	Browser → Adobe	Embed in `scripts/delayed.js`	Integration-ready, not implemented
9	Adobe Experience Platform Web SDK	Browser → AEP Edge Network	Through Adobe Tags	Integration-ready, not implemented
10	Adobe Analytics	AEP → Analytics	Data stream	Not implemented
11	Customer Journey Analytics	AEP → CJA	Connection / data view	Not implemented
12	Adobe Target	Browser ↔ Target	Web SDK personalisation; Teaser personalisation marker	Not implemented
13	Adobe Journey Optimizer	AEP ↔ AJO	Web SDK / AEP profile	Not implemented
14	Form back end (Salesforce / Marketo / API)	Browser → back end	Listener on `form-variations:submit`	Not implemented
15	Search service	Browser → search API	Listener on `conversation-canvas:search`	Not implemented
16	YouTube / Vimeo / X	Browser → third party	iframes, X widgets script	Implemented
17	Web Speech API	Browser	`SpeechRecognition` in Conversation Canvas	Implemented (browser support dependent)
18	Operational Telemetry	Browser → Adobe	`sampleRUM`	Implemented (platform)
19	Production CDN	CDN ↔ Edge Delivery	Origin `*.aem.live`, push invalidation	[To be confirmed: production domain and CDN — owner: Site Administrator]
20	Authentication for visitors	—	—	Not implemented (public site)

Integration hooks provided by the code

```
// Form Variations: a valid submit (no network request is made)
document.addEventListener('form-variations:submit', (e) => {
  const { data } = e.detail; // field values of the form
});

// Conversation Canvas: the search query
document.addEventListener('conversation-canvas:search', (e) => {
  const { query } = e.detail;
});

// Data layer: page, components and events (Core Components schema)
window.adobeDataLayer = window.adobeDataLayer || [];
```

Warning: The Form Variations block shows its success message (`formSuccess`, default "Thank you, your details were sent.") after a valid submit even though no data is sent anywhere. Connect a back end before forms are used in production.

2.9 System Catalogue

2.9.1 AEM Author

Purpose: The AEM as a Cloud Service author environment (`https://author-p220207-e2271469.adobeaemcloud.com`, program p220207, environment e2271469) is the system of record for all content of the TCS Corporate Website: pages under `/content/tcs-corp`, assets under `/content/dam/tcs-corp`, sheets, taxonomy and data.

Responsibilities:

- Store pages, sections and blocks as JCR content using the xwalk (`core/franklin/components/...`) resource types.
- Host the 13 locale sites (`/content/tcs-corp/{country}/{language}`) with their `references/`, `error-pages/`, `block-library/`, `data/` folders and the placeholders, metadata, taxonomy and redirects sheets; host `site-global-templates/`.
- Provide page properties (Title, Description, Keywords, Page Type, Navigation, Footer, 404 Page — `models/_page.json`).
- Trigger preview and publish to Edge Delivery Services; manage workflows, versions and permissions.

Dependencies: Adobe IMS (sign-in), Universal Editor, the component models served from the code repository (`component-*.json`), Edge Delivery Services (target of preview / publish), AEM Assets.

Data Flow: Author edits in Universal Editor → JCR → on preview / publish AEM renders the page through `bin/franklin.delivery/sradha-tcs/tcs-corp/main` as Edge Delivery markup → content bus (preview or live). The AEM path is mapped to the published path by the site configuration's `paths` (same as `paths.json`).

Failure Handling: If the author is unavailable, the live site is unaffected (Edge Delivery serves the last published content); authors can't edit or publish until it's restored. Failed publications show in the AEM publish status / Universal Editor; re-publish after the cause is fixed. Escalate platform outages to Adobe Support through the AEM Platform Administrator.

Security Considerations: Access through Adobe IMS and Admin Console product profiles; AEM groups control who may edit and publish per locale [To be confirmed: group and permission model per locale — owner: AEM Platform Admin]. Block libraries and site-global-templates must stay excluded from publishing (`paths.json` excludes).

Performance Considerations: Authoring performance depends on AEM; it doesn't affect site performance. Large pages with many blocks re-render more slowly in the Universal Editor.

Implementation Status: Implemented (content source in `fstab.yaml`).

2.9.2 Universal Editor

Purpose: The visual, in-context editor in which authors build pages from the project's components.

Responsibilities:

- Show the component palette (`component-definition.json`: Default Content, Sections, Blocks), dialogs (`component-models.json`) and allowed children (`component-filters.json`).
- Render the page with the project code; apply edits live through `scripts/editor-support.js`.
- Provide asset picking (AEM Assets) and content picking (`aem-content` fields such as Navigation, Footer, 404 Page, links).

Dependencies: AEM author, Adobe IMS, the project code (served from the code bus), `component-*.json`.

Data Flow: Author changes a field → Universal Editor writes to AEM → dispatches `aue:content-*` events → `editor-support.js` fetches no extra data; it sanitises the returned HTML with DOMPurify and re-decorates the changed main, section, block or default content; otherwise reloads the page.

Failure Handling: If a change can't be applied in place (`applyChanges` returns false), the page reloads. Blocks show editor hints instead of empty output (List, Cards, Filter List, Tabs, Separator, Interactive Dashboard). Hidden blocks (Additional tab → Hide block) stay visible in the editor. Query-index-based blocks show "The pages show on the published page (from the query index)" because the index isn't available in the editor.

Security Considerations: Editor update HTML is sanitised (DOMPurify `USE_PROFILES: { html: true }`). Access requires IMS sign-in and AEM permissions.

Performance Considerations: Animations, autoplay and sticky behaviour are disabled while editing (`isEditing()`), which keeps the editor responsive.

Implementation Status: Implemented.

2.9.3 Edge Delivery Services

Purpose: Adobe's delivery platform that renders and serves the website from published content and GitHub code.

Responsibilities:

- Content bus (pages and sheets), media bus (optimised images at `/media_…`), code bus (repository files).
- Hosts: preview `*.aem.page`, live `*.aem.live`, per branch.
- Inject `head.html`, apply metadata (page properties, bulk metadata sheets listed in `metadata.source`), serve `404.html` for missing pages, build the query index and sitemap.
- Admin API for preview, publish, cache purge, index, configuration.

Dependencies: AEM author (content), GitHub and AEM Code Sync (code), the site configuration (Configuration Service).

Data Flow: Preview / publish → content bus; Code Sync → code bus; request → CDN → HTML with `head.html` → browser loads `/scripts`, `/styles`, `/blocks` from the code bus and `.json` sheets, `.plain.html` fragments and `/query-index.json` from the content bus.

Failure Handling: Missing pages return HTTP 404 with `404.html` (authored 404 loading, Part 10). Missing sheets or fragments return 404 to the code, which falls back gracefully (English placeholders, empty lists, empty header). Platform incidents: check Adobe status and escalate to Adobe Support.

Security Considerations: CSP moved to the HTTP header; `.hlxignore` hides non-runtime files; admin operations require authorised users; no server-side code runs for the project.

Performance Considerations: Pages served from CDN cache; push invalidation on publish; per-block code loading; image optimisation; Operational Telemetry (RUM) sampling.

Implementation Status: Implemented (org `sradha-tcs`, site `tcs-corp`).

2.9.4 xwalk (Franklin) Content Delivery Bridge

Purpose: The AEM-side renderer (`/bin/franklin.delivery/sradha-tcs/tcs-corp/main`) that converts AEM pages built with the `core/franklin/components/*` resource types into Edge Delivery markup (sections, blocks as `div` tables, metadata in the head).

Responsibilities:

- Render sections (`core/franklin/components/section/v1/section`), blocks (`.../block/v1/block`), block items (`.../block/v1/block/item`) and default content.
- Render block fields as rows (or key-value rows), `classes_*` fields as block classes (Additional tab), section properties as `data-*` attributes or section metadata, page properties as `<meta>` tags.

- Apply the path mapping so links and references use published paths.

Dependencies: AEM author, component models (field names drive the markup), `paths.json` / site configuration `paths`.

Data Flow: AEM page (JCR) → delivery bridge → HTML (`.html` suffix per `fstab.yaml`) → Edge Delivery content bus.

Failure Handling: If a field is missing, the cell is left out; blocks handle missing cells (e.g. `utils/cells.js` `matchCells` maps cells to model fields when AEM leaves out unset fields). Markup errors appear as undecorated blocks; re-publish after fixing the content or model.

Security Considerations: Runs inside AEM with AEM permissions; only published content leaves AEM.

Performance Considerations: Rendering happens at publish time, not at request time.

Implementation Status: Implemented.

2.9.5 Adobe Data Collection (Tags) and Web SDK

Purpose: Adobe Tags (formerly Launch) would load tracking and marketing tools and map the Adobe Client Data Layer to XDM for the Adobe Experience Platform Web SDK.

Responsibilities (target state):

- Load the Adobe Client Data Layer extension and Web SDK extension.
- Rules on data layer events: `cmp:click` (with `xdm:linkURL`, `xdm:linkType` other / exit / download, `position`, `breakpoint`), `cmp:show` / `cmp:hide`, `cmp:media`, `cmp:search` (`xdm:searchTerm`), `cmp:submit` (field names only), `cmp:change`; page and component state.
- Send events to the AEP Edge Network data stream.

Dependencies: `window.adobeDataLayer` (implemented), a Tags property and data stream [To be confirmed: Tags property and data stream — owner: Digital Marketing Lead], consent management [To be confirmed: consent platform — owner: Privacy / Legal].

Data Flow: Page code pushes entries to `window.adobeDataLayer` (`trackPage` once per page, `trackBlocks` after sections load and again after 3 seconds, interaction events on capture listeners) → (future) Tags reads the data layer → Web SDK → AEP Edge Network.

Failure Handling: `pushToDataLayer` never throws; analytics can't break rendering or links. A failing Tags library would not affect the page because it would load in the delayed phase.

Security Considerations: The Tags embed must be loaded by project code in `scripts/delayed.js` so that the CSP (`strict-dynamic`) trusts it; review custom code in Tags rules against the CSP; no personal data is in the data layer (form values are never pushed).

Performance Considerations: Load in the delayed phase (3 seconds after lazy loading) to protect LCP and the PageSpeed score.

Implementation Status: Integration-ready, not implemented (`scripts/delayed.js` is empty; no Tags embed).

2.9.6 Adobe Analytics

Purpose: Web analytics reporting (traffic, content performance, link and media tracking).

Responsibilities (target state): Receive Web SDK events (through a data stream with Adobe Analytics enabled), map XDM to report suite variables.

Dependencies: Adobe Tags and Web SDK, data stream, report suite [To be confirmed: report suite — owner: Digital Marketing Lead].

Data Flow: Data layer → Tags → Web SDK → AEP Edge Network → Adobe Analytics.

Failure Handling: Not applicable until implemented; the site works without it.

Security Considerations: Consent before collection; no form values or personal data in the data layer.

Performance Considerations: Collection must run in the delayed phase.

Implementation Status: Not implemented.

2.9.7 Customer Journey Analytics

Purpose: Cross-channel analysis on Adobe Experience Platform datasets.

Responsibilities (target state): Report on web events collected through the Web SDK into AEP datasets (connection, data view).

Dependencies: Web SDK, AEP schema / dataset, CJA connection [To be confirmed: CJA licence and connection — owner: Digital Marketing Lead].

Data Flow: Data layer → Tags → Web SDK → AEP dataset → CJA.

Failure Handling: Not applicable until implemented.

Security Considerations: Data governance labels in AEP; consent.

Performance Considerations: No site impact beyond the Web SDK.

Implementation Status: Not implemented.

2.9.8 Adobe Target

Purpose: A/B testing and personalisation of page content.

Responsibilities (target state): Deliver offers through the Web SDK; swap or modify block content.

Dependencies: Web SDK with Target enabled in the data stream; markers in content. The Teaser block's personalisation option (`isOn(props.personalization)`) adds the `personalization` class and `data-personalization="true"` with no visible change, as a hook for a future personalisation script. The Conversation Canvas exports `setConversationCanvasFilters(block, tags)` so a script (e.g. a personalisation service) can supply its filter tags.

Data Flow: (future) Web SDK request → Target decisions → DOM changes on marked blocks.

Failure Handling: Not applicable until implemented; any future implementation must avoid flicker and fall back to the authored content.

Security Considerations: Consent; offer content must respect the CSP.

Performance Considerations: Personalising above-the-fold content conflicts with the eager LCP phase; a pre-hiding strategy would need a performance review.

Implementation Status: Not implemented (markers only).

2.9.9 Adobe Journey Optimizer

Purpose: Journeys, messaging and web / in-app offers based on AEP profiles.

Responsibilities (target state): Web channel experiences and code-based experiences delivered through the Web SDK.

Dependencies: AEP, Web SDK, profile and consent.

Data Flow: (future) Web SDK → AEP Edge → AJO decisions.

Failure Handling: Not applicable until implemented.

Security Considerations: Profile data governance, consent.

Performance Considerations: Same as Target.

Implementation Status: Not implemented.

2.9.10 DAM / AEM Assets

Purpose: Digital asset management for images, videos and documents (`/content/dam/tcs-corp/`).

Responsibilities:

- Asset picking in the Universal Editor (`reference` fields: images, section Background Image, Poster Image, author images).
- Images published to the Edge Delivery media bus and delivered as optimised `/media_<hash>` URLs with responsive `<picture>` (`createOptimizedPicture`, `decorators/responsive-image-decorator.js`).
- Videos and PDFs linked from pages are published at their DAM path (`/content/dam/tcs-corp/` is in `paths.json` includes).
- Lottie animations (Hero / Teaser "Lotto" image type) as `.json` links.

Dependencies: AEM author, Edge Delivery media bus.

Data Flow: Asset in DAM → referenced by a page → on publish the image is copied to the media bus (content-addressed) → page HTML references `/media_…`; documents / videos are served from their published DAM path.

Failure Handling: An unpublished or missing asset shows as a broken image; `waitForFirstImage` resolves on image errors so LCP isn't blocked. Re-publish the page after fixing the asset.

Security Considerations: Only assets referenced by published pages (or below the included DAM folder) are delivered; access to DAM controlled by AEM permissions.

Performance Considerations: Upload images at sufficient resolution; Edge Delivery generates widths (e.g. section backgrounds 2000px ≥ 600px, 750px below). Assets committed to Git (icons, fonts) must be optimised.

Implementation Status: Implemented.

2.9.11 Salesforce

Purpose: CRM for leads and contacts (potential form destination).

Responsibilities (target state): Receive Form Variations submissions (Web-to-Lead or an API).

Dependencies: A listener on `form-variations:submit`, a server-side proxy or service, consent text.

Data Flow: (future) Form → `form-variations:submit` (`detail.data`) → proxy / API → Salesforce.

Failure Handling: Not implemented; today the form shows its success message without sending data.

Security Considerations: Never put Salesforce credentials in client code; use a server-side endpoint; spam protection; data protection review.

Performance Considerations: Load any form integration script only on pages with forms.

Implementation Status: Not implemented. [To be confirmed: form back end — owner: Solution Architect]

2.9.12 Marketo

Purpose: Marketing automation (potential form and campaign destination).

Responsibilities (target state): Receive form submissions, track campaign membership.

Dependencies: A listener on `form-variations:submit`; Marketo Forms API or server-side integration; the `campaign-id` metadata column exists in the query index and metadata for campaign attribution.

Data Flow: (future) Form → event → integration → Marketo.

Failure Handling: Not implemented.

Security Considerations: No client-side secrets; consent.

Performance Considerations: Marketo Munchkin or Forms 2.0 scripts must load in the delayed phase or on demand.

Implementation Status: Not implemented. [To be confirmed: marketing automation platform — owner: Digital Marketing Lead]

2.9.13 APIs

Purpose: Data interfaces used by the site.

Responsibilities:

API	Provider	Used by	Notes
`/query-index.json?offset=&limit=500`	Edge Delivery	List, Filter List, Conversation Canvas (`utils/query-index.js`)	Paged, cached per page view, filtered to the current locale root
`/{locale}/placeholders.json`	Edge Delivery sheet	All blocks with UI text	English fallbacks
`/{locale}/taxonomy.json`	Edge Delivery (taxonomy page)	Teaser, Page Header, Filter List, Conversation Canvas	Language sheet, else default
`/{locale}/metadata.json`	Edge Delivery sheet	Applied by the platform (when in `metadata.source`)	Not fetched by code
`/{locale}/redirects.json`	Edge Delivery sheet	List (`utils/redirects.js`)	Not applied by the platform
`/{locale}/data/{authors,locations,partners,social-links,media-contacts}.json`	Edge Delivery sheets	Page Header, Filter List, footer, templates (`utils/data.js`)	Missing sheets give empty lists
`{path}.plain.html`	Edge Delivery	Fragments (header, footer, modal, tabs, footer canvas), authored 404	Same-origin only
Edge Delivery Admin API	Adobe	Site Administrator (preview, publish, cache, config)	Authenticated

Dependencies: Edge Delivery Services.

Data Flow: Browser `fetch` to same-origin JSON / HTML resources; no third-party APIs are called by project code (except the X widgets script for X embeds).

Failure Handling: Every util catches failures: placeholders → English fallbacks; taxonomy → labels from tag IDs; data sheets, redirects, query index → empty lists; fragments → `null` (the caller keeps or empties its content).

Security Considerations: Public JSON; don't put confidential data in sheets.

Performance Considerations: Each resource is loaded once per page view; the query index is paged (500 rows per request).

Implementation Status: Implemented (site-internal); no external business APIs.

2.9.14 CDN

Purpose: Cache and serve the site close to users; host the production domain.

Responsibilities:

- Today: the Edge Delivery CDN serves `*.aem.page` and `*.aem.live` with push invalidation on preview / publish.
- Target: a production CDN (Adobe-managed or customer-managed BYO CDN) for the production domain, with edge redirects (including `/` → `/en/` and the per-locale redirects sheets), 403 / 500 / maintenance error responses using the authored error pages, and push invalidation.

Dependencies: Edge Delivery origin, DNS, TLS certificates, site configuration `cdn.prod.host` [To be confirmed: production domain and CDN — owner: Site Administrator].

Data Flow: Browser → CDN → (cache miss) Edge Delivery origin `main--tcs-corp--sradha-tcs.aem.live`.

Failure Handling: CDN errors (5xx) can serve the locale's authored `error-pages/500` page; maintenance via a CDN rule (Part 10). [To be confirmed: CDN error configuration — owner: CDN Owner]

Security Considerations: TLS, WAF / DDoS protection [To be confirmed — owner: CDN Owner]; preserve the CSP header from the origin.

Performance Considerations: Respect origin cache headers; configure push invalidation so publishes appear immediately.

Implementation Status: Edge Delivery CDN implemented; production CDN not configured.

2.9.15 Search Services

Purpose: Full-text or conversational site search.

Responsibilities (current): Content discovery uses the query index: List (child pages, fixed list, tagged pages), Filter List (filters over metadata), Conversation Canvas menu (pages below its Menu root path).

Responsibilities (target state): A search service listening on `conversation-canvas:search` (`detail.query`) and rendering results; the data layer already emits `cmp:search` with `xdm:searchTerm`.

Dependencies: Query index (implemented); a search service [To be confirmed: search service — owner: Solution Architect].

Data Flow: (current) `/query-index.json` → blocks. (future) Conversation Canvas → event → search service → results.

Failure Handling: Without a listener the search form does nothing visible after submit; an empty query is ignored.

Security Considerations: Search queries may contain personal data; don't send them to analytics beyond `xdm:searchTerm` without review.

Performance Considerations: The query index is downloaded fully per page view where used; very large indexes increase transfer size.

Implementation Status: Query-index discovery implemented; search service not implemented.

2.9.16 Authentication Services

Purpose: Identity for authors and administrators.

Responsibilities: Adobe IMS authenticates AEM author, Universal Editor, AEM Sidekick and admin API users; Adobe Admin Console assigns product profiles. Visitors aren't authenticated.

Dependencies: Adobe IMS, the organisation's identity provider (federated) [To be confirmed: SSO / federated ID — owner: AEM Platform Admin].

Data Flow: User → IMS → token for AEM / Universal Editor / Sidekick / admin API.

Failure Handling: IMS outage prevents authoring; the live site isn't affected.

Security Considerations: Least-privilege product profiles and AEM groups; offboarding process; no tokens in the repository.

Performance Considerations: None for the public site.

Implementation Status: Implemented (platform) for authors; not applicable for visitors (public site).

2.9.17 GitHub and AEM Code Sync

Purpose: Source control, review and deployment of the code.

Responsibilities:

- Repository `sradha-tcs/tcs-corp` (default branch `main`), pull requests with test URLs (`.github/pull_request_template.md`).
- GitHub Actions `Build` (`npm ci`, `npm run lint`) on every push.
- AEM Code Sync GitHub App: syncs every branch to the code bus (`{branch}--tcs-corp--sradha-tcs`).
- Renovate for dev dependency updates; Husky pre-commit rebuilds `component-*.json`.

Dependencies: GitHub, AEM Code Sync app installed on the repository.

Data Flow: Commit → push → Code Sync → code bus → served immediately on that branch's hosts.

Failure Handling: If Code Sync fails, the branch host serves the previous code; re-push or check the app installation. Bad deployments are rolled back by reverting on `main`.

Security Considerations: Branch protection on `main` and required reviews [To be confirmed: branch protection settings — owner: Development Lead]; never commit secrets; everything in the repository not in `.hlxignore` is public.

Performance Considerations: No build step; changes are live within seconds.

Implementation Status: Implemented.

2.9.18 AEM Sidekick

Purpose: Browser extension for authors to preview, publish and open the editor from site pages.

Responsibilities: Configured by `tools/sidekick/config.json`: edit button "AEM Editor" opening `{{contentSourceUrl}}{{pathname}}?cmd=open` (the page in AEM); preview / publish / unpublish actions according to the user's permissions.

Dependencies: Edge Delivery admin API, IMS sign-in, the site configuration.

Data Flow: Sidekick on `*.aem.page` / `*.aem.live` → admin API → content bus / AEM editor.

Failure Handling: If actions fail, authors use the Universal Editor or AEM Sites console to publish.

Security Considerations: Actions require the corresponding admin role.

Performance Considerations: None for visitors.

Implementation Status: Implemented. The configuration still uses the boilerplate project label ("AEM XWalk Boilerplate") — a cosmetic change recommended.

2.10 Architecture Component Considerations

Section 2.9 catalogues the systems of the solution. This chapter looks at the same solution component by component from an operations and design point of view: what each component is for in this project, what it is responsible for, what it depends on, how data passes through it, how it fails and recovers, and its security, scalability and performance considerations. The flows themselves are drawn in 2.11; the procedures are in Part 12 (publishing and release), Part 13 (troubleshooting), Part 14 (runbook) and Part 17 (operations).

#	Component	Implementation status (as of this handover)	Operational owner
2.10.1	AEM as a Cloud Service author and Universal Editor	Implemented	AEM Platform Administrator, Content Lead

#	Component	Implementation status (as of this handover)	Operational owner
2.10.2	xwalk content delivery (`bin/franklin.delivery`, `paths.json`)	Implemented	Site Administrator, Development
2.10.3	Edge Delivery content bus, preview and live	Implemented (org `sradha-tcs`, site `tcs-corp`)	Site Administrator
2.10.4	CDN	Edge Delivery CDN implemented; production CDN not configured	Site Administrator, CDN Owner
2.10.5	GitHub repository and AEM Code Sync	Implemented	Technical Lead
2.10.6	Browser runtime (`head.html`, `aem.js`, `scripts.js`, blocks, decorators, utils, styles)	Implemented	Development
2.10.7	Query index (`helix-query.yaml`) and sitemap (`helix-sitemap.yaml`)	Implemented; live index out of date (F-10)	Site Administrator, Development
2.10.8	Sheets: placeholders, metadata, taxonomy, redirects and data sheets	Implemented; partly published (F-09, F-11)	Content Lead
2.10.9	Adobe Client Data Layer and the planned Adobe Tags / Web SDK	Data layer implemented; Tags and Web SDK not implemented	Analytics Lead, Development
2.10.10	Form submission	Not implemented beyond the `form-variations:submit` event	Product Owner, Development
2.10.11	Third-party embeds and media (YouTube, Vimeo, X, Lottie)	Implemented	Development
2.10.12	AEM Assets and images	Implemented	Content Lead
2.10.13	Admin API and site configuration	Implemented (platform); configuration partly confirmed (O-04)	Site Administrator
2.10.14	Operational Telemetry (RUM)	Implemented (platform, `sampleRUM`)	Site Administrator, AMS Lead

2.10.1 AEM as a Cloud Service Author and Universal Editor

Purpose: The AEM as a Cloud Service author `https://author-p220207-e2271469.adobeaemcloud.com` (program `p220207`, environment `e2271469`) is the system of record for all content: the 13 locale sites under `/content/tcs-corp/{country}/{language}`, `site-global-templates`, the per-locale sheets and taxonomy pages, and the assets under `/content/dam/tcs-corp/`. The Universal Editor is the only authoring interface for pages; it renders each page with the code of `main` (the `fstab.yaml` mount ends in `/main`).

Responsibilities:

- Store pages, sections, blocks and block items as JCR content with the xwalk `core/franklin/components/*` resource types; the section filter (`models/_section.json`, aggregated in `component-filters.json`) allows 27 components, container filters allow their items (accordion, cards, columns, form-variations, list, table, tabs, …).
- Provide the page properties of `models/_page.json` (Title, Description, Keywords, Page Type, Navigation, Footer, 404 Page) and the standard Tags property (`cq:tags`).
- Host the AEM spreadsheets of every locale (`placeholders`, `metadata`, `redirects`, `data/authors`, `data/locations`, `data/partners`, `data/social-links`, `data/media-contacts`) and the `taxonomy` page; host each locale's `block-library/` (author only).
- Show the component palette, dialogs and filters from `component-definition.json`, `component-models.json` and `component-filters.json` of `main`; apply edits in place through `scripts/editor-support.js` (2.3.6).
- Start preview and publication (Universal Editor Publish, Sites console Quick Publish and Manage Publication, scheduled publication), keep page versions and run publication workflows (12.1).

Dependencies: Adobe IMS and Admin Console product profiles (sign-in); the code bus of `main` (component JSON files, `editor-support.js`, blocks); the xwalk delivery bridge (2.10.2); AEM Assets (2.10.12); Cloud Manager for environment status and logs (14.3.2).

Data Flow: The author changes a field → the Universal Editor writes it to the JCR → it dispatches an `aue:content-*` event → `editor-support.js` sanitises the returned HTML with DOMPurify and re-decorates the changed main, section, block or default content (or reloads the page). In the editor the page URL is the AEM path (`/content/tcs-corp/de/de-de/insights.html`): `utils/site.js` `getLocale` resolves the locale from it, `getParentPages` builds AEM `.html` URLs for the Navigation / Footer inheritance, while sheets (`localeSheetPath`, for example `/de-de/placeholders.json`) and `/query-index.json` are requested at their published paths on the author host, where they may not resolve (14.9 #18). On publication the page leaves AEM through the delivery bridge (2.11.1).

Failure Handling:

- Author unavailable: the live site keeps serving the last published content; freeze publishing and raise an Adobe case through the AEM Platform Administrator (14.6).
- An edit that can't be applied in place reloads the page (13.29); stale or missing dialog fields mean the aggregated model files are not on `main` or the editor was not reloaded (13.5).
- In the editor, English placeholder fallbacks, tag labels derived from IDs and empty page lists are expected (13.10, 14.9 #18); blocks show editor hints instead of empty output (List, Cards, Filter List, Tabs, Separator, Interactive Dashboard).
- Failed or stuck publications: Sites console publication status and Tools → Workflow → Instances; republish after the cause is fixed; AEM logs from Cloud Manager (14.3.2).

Security Considerations:

- Access through IMS and Admin Console product profiles; AEM groups control editing and publishing per locale [To be confirmed: group and permission model per locale — owner: AEM Platform Admin].
- The block libraries and `site-global-templates` are excluded from publishing in `paths.json`; content stored there is never public, and content pages must not be moved there.
- Hide block hides with CSS only; the content is still in the published HTML (13.18): never use it for confidential content.
- Editor update HTML is sanitised (DOMPurify 3.2.4, `USE_PROFILES: { html: true }`).
- The page code, including the data layer, also runs in the editor; a future Tags embed must not load there (11.7.2).
- Leavers are removed in the monthly access review (14.7.3 #8).

Scalability Considerations: All 13 locales share one author environment and one set of component models; a new locale follows 14.8.1 and needs no new components. Author-tier capacity is managed by Adobe as part of AEM as a Cloud Service [To be confirmed: number of concurrent authors per locale — owner: Content Lead]. Each locale keeps its own block library, sheets and references, so the content operations effort grows with every locale (13 placeholder, taxonomy and data sheets to keep in step, 14.7.3).

Performance Considerations: Authoring performance does not affect the public site. Pages with many blocks re-render more slowly; container sections (Gen Carousel, Tabs Container) and dependent blocks re-render as a whole (13.29). `isEditing()` stops animations, autoplay and sticky behaviour while editing, and blocks that read the query index don't fetch it in the editor, which keeps the editor responsive.

2.10.2 xwalk Content Delivery (franklin.delivery and paths.json)

Purpose: The xwalk delivery bridge renders AEM pages as Edge Delivery markup when they are previewed or published. `fstab.yaml` mounts `/` to `https://author-p220207-e2271469.adobeaemcloud.com/bin/franklin.delivery/sradha-tcs/tcs-corp/main` (type `markup`, suffix `.html`); the path mapping of the site configuration (`public.json` → `paths`, identical to the repository `paths.json`) decides at which published path each AEM page, sheet and asset appears.

Responsibilities:

- Render sections, blocks, block items and default content as `div` tables; block fields as rows or key-value rows; `classes_*` fields (Additional tab) as block classes; section properties as `data-*` attributes; page properties as `<meta>` tags.
- Map paths with the 143 mappings generated by `npm run build:paths` (`tools/paths/generate-paths.mjs` from `utils/site.js` `LOCALES`): 13 locale folders (`/content/tcs-corp/de/de-de/:/de-de/`), then 13 locale Home pages (`/content/tcs-corp/de/de-de:/de-de/`, published as `/de-de/index`), then 13 × 8 sheets (`…/data/authors:/de-de/data/authors`, `.json` appended) and 13 taxonomy pages (`…/taxonomy:/de-de/taxonomy.json`).
- Publish only the 14 includes (the 13 locale pages and everything below them, and `/content/dam/tcs-corp/`) and never the 28 excludes (26 block-library entries, `site-global-templates` and its children).
- Rewrite links and references to published paths.

Dependencies: AEM author availability; the component models (field names and order drive the markup); the site configuration `paths`; `LOCALES` in `utils/site.js`.

Data Flow: JCR page → delivery bridge (`.html`) → content bus preview or live partition (2.11.1). Positional blocks read their cells in model order, so the model order is part of the contract: F-43 (List Item cells) was fixed in 1.4 and `test/list` now checks the order against `_list.json`. Grouped and collapsed fields arrive as one cell (F-44 to F-46).

Failure Handling:

- `public.json` paths different from `paths.json`, or `paths.json` not regenerated after a `LOCALES` change: pages at wrong paths or 404, a locale Home page 404 (13.4); recover by re-applying the generated file and republishing (12.6.3).
- A page under an excluded path is never published (by design).
- Fields never set may be left out of item rows (O-18); blocks must tolerate missing cells (`utils/cells.js` `matchCells`); an unexpected structure appears as an undecorated block or `failed to load module for …` (13.3).
- If the author is down, no new publication is possible; the live site is unaffected.

Security Considerations: The bridge runs inside AEM with AEM permissions and only included paths leave AEM. `paths.json` is generated, never edited by hand, and must be applied unchanged to `public.json` (12.5). `fstab.yaml` is changed only when the AEM environment changes; pointing it elsewhere would publish another environment's content.

Scalability Considerations: A new locale adds 11 mappings (folder, Home page, 8 sheets, taxonomy), one include and two excludes; a new data sheet type means a change to `SHEETS` in `tools/paths/generate-paths.mjs` and 13 new mappings. Publishing a locale with all children (Manage Publication) is processed asynchronously; allow several minutes before concluding that a page is missing (12.1.4).

Performance Considerations: Rendering happens at publication time, not at request time; the bridge adds no latency for visitors. Large bulk publications delay the moment pages, index rows and sitemap entries appear.

2.10.3 Edge Delivery Content Bus, Preview and Live

Purpose: Edge Delivery Services stores the published content and serves the site: the content bus (pages and sheets) with a preview and a live partition, the media bus (`/media_<hash>` images) and the code bus (2.10.5). Hosts: `https://{branch}--tcs-corp--sradha-tcs.aem.page/` (preview) and `https://main--tcs-corp--sradha-tcs.aem.live/` (live, the production origin until a production domain exists).

Responsibilities:

- Serve every page with `head.html` injected, the CSP moved to an HTTP header, and the page and bulk metadata as `<meta>` tags (bulk metadata only from the sheets listed in `metadata.source`).
- Serve `.plain.html` for fragments, nav, footer and error pages, `.json` for sheets and `/query-index.json`, and `404.html` with HTTP 404 for every missing path.
- Purge its CDN cache for the path on every preview and publication; update the query index row and the sitemap on publication (12.1.7).
- Apply a root `/redirects.json` only; the per-locale redirect sheets are published but not applied (13.12).

Dependencies: The delivery bridge (content), AEM Code Sync (code), the configuration service (paths, `metadata.source`, CDN, access; 2.10.13), the Adobe platform.

Data Flow: Preview → preview partition → `*.aem.page`; publish → live partition → `*.aem.live` (CDN purge, index row, sitemap). A request returns the HTML; the browser then loads `/scripts`, `/styles` and `/blocks` from the code bus and the sheets, fragments and the index from the content bus, all same-origin (2.11.2). For one branch, preview and live run the same code; code is not versioned per publication.

Failure Handling:

- Missing page: `404.html` with HTTP 404 and the authored 404 lookup (2.11.3, Part 10).
- Missing sheet or fragment: 404 to the code, which falls back (English placeholders, ID-derived tag labels, empty lists, empty header).
- Stale content: Admin API status, republish, cache purge (13.2).
- Urgent takedown: unpublish in AEM, else `DELETE https://admin.hlx.page/live/sradha-tcs/tcs-corp/main/{path}` (14.6).
- Platform incident: Adobe status page, Adobe Support case with program `p220207`, environment `e2271469`, org / site `sradha-tcs/tcs-corp`, paths and UTC timestamps (14.5).

Security Considerations: Everything published is public, including every sheet's JSON (Authors and Media Contacts include names, e-mail addresses and phone numbers by design). Unpublished and excluded content is not exposed. `.hlxignore` keeps non-runtime repository files off the code bus. No server-side project code runs. Access protection of the preview and live hosts isn't confirmed [To be confirmed: whether preview / live hosts are access-restricted — owner: Site Administrator].

Scalability Considerations: One site serves all 13 locales by path; one query index and one sitemap cover all of them (2.10.7). Platform capacity is managed by Adobe. Admin API bulk operations (`/*` paths) act on all locales at once and must be agreed and logged (12.1.9).

Performance Considerations: Pages are served from the CDN cache with push invalidation; each block loads its own JS and CSS on demand; images on the media bus are optimised. The preview host is the place to check PageSpeed before publishing; the live host is the production origin.

2.10.4 CDN

Purpose: Cache and serve the site close to visitors and, later, host the production domain. Today the Edge Delivery CDN serves `*.aem.page` and `*.aem.live`; the production CDN and domain are not configured [To be confirmed: production domain and CDN — owner: Site Administrator].

Responsibilities:

- Today: cache and push invalidation for the Edge Delivery hosts (automatic).
- Target: the production host (`cdn.prod.host` in the site configuration); push invalidation from Edge Delivery; redirects (`/` → `/en/` and the rows of the 13 `/{locale}/redirects.json` sheets, 13.12); 403, 500 and maintenance responses from the authored `error-pages/403` and `error-pages/500` (Part 10; the maintenance page is not implemented, 16.4); TLS and WAF.

Dependencies: The live origin `main--tcs-corp--sradha-tcs.aem.live`; DNS and TLS certificates; the site configuration; `helix-sitemap.yaml` `origin` (to be changed with the domain, 13.25); the Cloud Manager domain challenge file `.well-known/adobe/cloud-manager-challenge` in the repository.

Data Flow: Browser → CDN → cache hit, or the origin on a miss; a publication triggers push invalidation of the path (once configured for the production CDN).

Failure Handling:

- No root redirect: `/` returns 404 (F-36, 13.28) — a go-live blocker.
- Old URLs return 404 until the per-locale redirect sheets are applied by a CDN mechanism (13.12).
- Stale pages after a confirmed publication on a CDN without push invalidation: purge on the CDN (13.2).
- CDN 5xx: the locale's authored `error-pages/500` page [To be confirmed: CDN error configuration — owner: CDN Owner].

Security Considerations: TLS, WAF and DDoS protection [To be confirmed — owner: CDN Owner]; the CDN must pass the origin's CSP response header unchanged; production `robots.txt` and the indexing of the `*.aem.page` / `*.aem.live` hosts are not configured [To be confirmed: production robots.txt, CDN and access settings — owner: Site Administrator].

Scalability Considerations: The CDN absorbs visitor traffic; all 13 locales share the domain by path, so a single CDN configuration (rules, certificates) serves every locale. Redirect volume grows with the 13 redirect sheets; a CDN rule set that reads them must be refreshed when the sheets are published.

Performance Considerations: Respect the origin's cache headers and configure push invalidation so publications appear immediately; keep redirects at the edge (not in page code) so they cost no page load.

2.10.5 GitHub Repository and AEM Code Sync

Purpose: `https://github.com/sradha-tcs/tcs-corp` (default branch `main`, based on `adobe-rnd/aem-boilerplate-xwalk`) is the source of truth for all code and repository configuration; the AEM Code Sync GitHub app deploys every push of every branch to the code bus.

Responsibilities:

- Hold blocks, templates, decorators, utils, scripts, styles, models, `helix-query.yaml`, `helix-sitemap.yaml`, `head.html`, `404.html`, `fstab.yaml`, `paths.json`, `xwalk.json`, `tools/sidekick/config.json` and `.hlxignore`.
- Run the `Build` workflow (`.github/workflows/main.yaml`: `npm ci`, `npm run lint`) on every push; the Husky pre-commit hook rebuilds `component-*.json` when a model partial is staged; Renovate opens dependency PRs; the aem-psi-check runs PageSpeed on PR URLs (12.2.4).
- Serve each branch at `https://{branch}--tcs-corp--sradha-tcs.aem.page/` (slashes become hyphens).

Dependencies: GitHub organisation and repository access; the Code Sync app installation; Node.js 20 or newer locally (the workflow installs Node 24); development dependencies only (ESLint 8 with Airbnb base and `eslint-plugin-xwalk`, Stylelint, Husky, `merge-json-cli`, `npm-run-all`).

Data Flow: Commit → push → Code Sync → code bus of the branch → served immediately; merge to `main` → `main--tcs-corp--sradha-tcs.aem.page` / `.aem.live` and, after a reload, the Universal Editor (2.11.8).

Failure Handling:

- Code Sync check missing on a commit: re-trigger (`POST https://admin.hlx.page/code/sradha-tcs/tcs-corp/main/{path}` or an empty commit, 13.22).
- Build check red: `npm run lint` / `npm run lint:fix` (13.15).
- Faulty merge: revert in GitHub (12.6.1); never force-push `main`.
- Unit tests are not run in CI (F-37): reviewers confirm `npm test` was run.
- Partials changed without `npm run build:json`: dialogs outdated (13.5).
- Repository access lost: the code bus keeps serving the last sync (14.6).

Security Considerations: Every repository file not in `.hlxignore` is public on the code bus (including `tools/`, `component-*.json`, the YAML files and `fstab.yaml`); never commit secrets. Branch protection on `main` and required reviews are not confirmed [To be confirmed: branch protection rules on `main` — owner: Repository Administrator]. Renovate auto-merges devDependency updates labelled `ignore-psi-check` when tests pass; review other dependency PRs weekly (14.7.2).

Scalability Considerations: Trunk-based development with short-lived `feature/tcs-<topic>` branches; the branch name is part of the host name, so keep it short and lower case. There are no release tags and `package.json` keeps the boilerplate version (F-37); tag releases so rollbacks can target a known state (12.3).

Performance Considerations: There is no build step; a push is live on its branch host within seconds to a few minutes, and Code Sync purges the CDN for changed code files. The aem-psi-check and a manual PageSpeed run on the feature preview protect the target score of 100.

2.10.6 Browser Runtime

Purpose: The code that turns the delivered HTML into the finished page in the visitor's browser: `head.html` (CSP, viewport, `scripts/aem.js`, `scripts/scripts.js`, `styles/styles.css`), the Edge Delivery core library `scripts/aem.js` (never modified), the page lifecycle in `scripts/scripts.js`, 4 templates, 26 blocks, the shared `decorators/` and `utils/`, and `styles/` (`styles.css`, `lazy-styles.css`, `fonts.css`, `card-list.css`).

Responsibilities:

- Eager / lazy / delayed loading (2.3.2): SEO head mapping and `<html lang>`, page-type body class and template, section options, block decoration, Additional tab options, buttons, first section and LCP image; then header, remaining sections, footer, lazy styles and fonts; after 3 seconds the delayed tracking and `scripts/delayed.js`.
- Resolve the locale (`utils/site.js`) and load site data once per page (2.10.8); the Navigation, Footer and 404 Page inheritance (`utils/inherited-metadata.js`).
- The 404 page (`404.html` → `loadErrorPage`, 2.11.3) and the modal auto-linking of `/modals/` links.
- The data layer (2.10.9); in the Universal Editor only, `scripts/editor-support.js`.

Dependencies: The code bus (same origin), the content bus JSON and `.plain.html` resources, `sessionStorage` (`fonts-loaded`, `tcs-inherited-metadata`), the vendored Lottie player (`/scripts/lib/lottie/lottie_light.min.js`) and, in the editor, `scripts/dompurify.min.js`. There are no runtime npm dependencies.

Data Flow: The HTML arrives with the content and metadata; `scripts.js` decorates it and requests code and data as described in 2.11.2; nothing is sent to a server except RUM samples (2.10.14) and third-party players the author embedded (2.10.11).

Failure Handling:

- A block whose module fails to load or whose `decorate()` throws logs `failed to load module for {name}` and is still marked loaded, so the page continues (13.3).
- A failing template logs `failed to load template {name}` and the page renders without it (13.26).
- Every util catches network and parse errors (English placeholders, ID-derived tags, empty lists, `null` fragments); analytics pushes are wrapped in `try / catch`; storage errors are ignored.
- `waitForFirstImage` resolves on image errors, so a broken LCP image doesn't block the page.

Security Considerations: CSP `script-src 'nonce-aem' 'strict-dynamic'`: only the nonce scripts of `head.html` / `404.html` and the scripts they load run (13.23); fragments and error pages are fetched only from same-origin paths starting with `/`; `innerHTML` is used only for those responses; `isSafeUrl` rejects `javascript:` and `data:` links in List and Cards; new-window links get `rel="noopener noreferrer"`; no cookies are set by project code (2.7.2).

Scalability Considerations: Per-block code splitting means a page loads only the blocks it uses, so adding blocks doesn't grow other pages. Shared decorators and utils are used by many blocks: a change to one affects every

user listed in `decorators/README.md` / `utils/README.md` and needs a wider regression check (block libraries of the affected locales). The layering rule (decorators may import utils, utils never import decorators) keeps the dependency graph acyclic as the code grows.

Performance Considerations: Only the first section and its first image are loaded before LCP; `fonts.css` loads eagerly only at 900 px and wider or when the session flag is set; header and footer are lazy; analytics and future tags are delayed by 3 seconds. Targets: PageSpeed 100 (AGENTS.md) and, from RUM, LCP ≤ 2.5 s, CLS ≤ 0.1, INP ≤ 200 ms at the 75th percentile (14.2). Blocks that build content from fetched data (List, Filter List, Page Header with the Authors sheet) change height after loading; avoid them as the first block (13.16).

2.10.7 Query Index and Sitemap

Purpose: `helix-query.yaml` defines one index, `pages`, published as `/query-index.json` for all 13 locales; it is the data source of every automatic page list. `helix-sitemap.yaml` builds `/sitemap.xml` from it.

Responsibilities:

- Index `/**` except `/**.json`, `/*/references/**`, `/*/error-pages/**`, `/*/data/**`, `/*/nav`, `/*/footer`, `/*/block-library(/**)`, `/site-global-templates/**`, `/**/fragments/**` and `/**/modals/**`.
- Extract 34 properties from the server-delivered head: `lastModified`, `robots`, `title` (`og:title`), `description`, `image` (`og:image` path), `tags` (`article:tag`, multi-value) and 28 metadata columns (`metaTitle` … `hideInNav`, 8.1.8).
- Serve List (child pages, tagged pages), Filter List and the Conversation Canvas menu through `utils/query-index.js` `getPages()`: pages of 500 rows (`?offset=…&limit=500`), loaded once per page view and filtered to the current locale root.
- Build the sitemap (`default`: origin `https://main--tcs-corp--sradha-tcs.aem.live`, `lastmod: YYYY-MM-DD`); pages with `robots noindex` are left out.

Dependencies: Published pages (live partition); page and bulk metadata in the server head (values set by JavaScript, such as the SEO decorator's, are not indexed); `metadata.source` for bulk columns (13.17); the tag publishing format (F-07: `cq-tags` versus `article:tag`).

Data Flow: Publication → row added or updated; unpublication → row removed; a change to `helix-query.yaml` affects rows only after republication or an Admin API index operation; the browser reads the index (2.11.4).

Failure Handling:

- The live index doesn't match `helix-query.yaml` (F-10): card, eyebrow, category, hide-in-nav, author and feature columns have no effect until the site is re-indexed.
- A page missing from lists: 13.9; an index request failure gives an empty list (List "There are no items to show.", Filter List "No resources found.").
- In the editor the index isn't available: hints instead of cards (13.10).
- Wrong sitemap host: 13.25.

Security Considerations: `/query-index.json` is public and lists every indexed page with its metadata columns (including `persona`, `campaign-id`, `region`); don't put internal-only values in metadata. `noindex` pages are left out of the sitemap but stay in the index and in the List and Filter List (no code checks `robots`).

Scalability Considerations: One index for all 13 locales: every page view with a List, Filter List or Conversation Canvas downloads all rows of all locales in pages of 500 and keeps only its own locale, so transfer size and request count grow with the total number of published pages (the Filter List downloads the whole index, F-30). One sitemap without hreflang serves all locales (14.9 #13). Per-locale indexes and sitemaps are a recommended extension, not implemented.

Performance Considerations: The index is fetched once per page view and shared by all blocks on the page. Avoid index-based blocks in the first section (LCP, 13.16). The sitemap is regenerated automatically when the index changes.

2.10.8 Sheets: Placeholders, Metadata, Taxonomy, Redirects and Data

Purpose: Per-locale site data authored as AEM spreadsheets (and the taxonomy page) and published as JSON at the locale's path, so that UI text, tag labels, bulk metadata, redirects and shared data are authorable and translatable without code.

Responsibilities:

Sheet (below `/content/tcs-corp/{country}/{language}/`)	Published at (example)	Read by	Fallback when missing
`placeholders` (Key, Text, Description, Category)	`/de-de/placeholders.json`	`utils/placeholders.js` (92 keys)	English text passed in code
`metadata` (`url` + 39 columns)	`/de-de/metadata.json`	Edge Delivery, only when listed in `metadata.source`	No bulk metadata
`taxonomy` (tag, title; a sheet per language)	`/de-de/taxonomy.json`	`utils/taxonomy.js` `resolveTags`	Label derived from the tag ID
`redirects` (Source, Destination)	`/de-de/redirects.json`	`utils/redirects.js` (List card links only)	Links not rewritten
`data/authors`	`/de-de/data/authors.json`	`utils/data.js` (Page Header, article template, List, Filter List)	No author lookup
`data/locations`, `data/partners`	`/de-de/data/locations.json`, …/`partners.json`	Loaders only, no block (F-40)	—
`data/social-links`	`/de-de/data/social-links.json`	Footer	No social icons
`data/media-contacts`	`/de-de/data/media-contacts.json`	Press-release template	No Media contacts

Dependencies: The `paths.json` sheet and taxonomy mappings; publication of each sheet; the site configuration `metadata.source` (bulk metadata); the AEM tag namespace (`tcs-corp:`) for taxonomy rows.

Data Flow: AEM spreadsheet → publish → JSON on the content bus → loaded once per page view by the util (in-memory promise) → blocks (2.11.5). A multi-sheet taxonomy uses the sheet named after the locale's ISO 639-1 language, else the default sheet.

Failure Handling: All loaders turn errors and 404s into their fallback; nothing breaks the page. Known state: only the English taxonomy is published (F-09); `/en/metadata.json` has 29 of the 39 columns and no rows, other locales' metadata sheets are not published (F-11). Diagnosis: 13.13 (placeholders), 13.14 (taxonomy), 13.17 (metadata), 13.12 (redirects), 13.26 / 13.27 (data sheets). Recovery: restore the sheet version in AEM and publish (12.6.2).

Security Considerations: All sheet JSON is public. Authors and Media Contacts expose names, e-mail addresses and phone numbers of the people listed [To be confirmed: consent of the listed persons to publication — owner: Privacy / Legal]; never put confidential data in a sheet. Redirect destinations are used as link targets without further checks, so only site paths or trusted URLs belong there.

Scalability Considerations: 13 locales × 9 resources = 117 published sheet resources. Every new placeholder key or tag must be added to all 13 locales (12.4.1 #8 and #9; monthly completeness checks 14.7.3 #5 and #6). A new data sheet type needs a `paths.json` change (2.10.2).

Performance Considerations: Each sheet is requested at most once per page view and shared by all blocks; sheets are small JSON files served from the CDN. There is no session cache, so a published change appears on the next page view.

2.10.9 Adobe Client Data Layer and Planned Adobe Tags / Web SDK

Purpose: Provide measurement data for Adobe Tags and the Adobe Experience Platform Web SDK without block-specific analytics code: `window.adobeDataLayer` in the AEM Core Components schema (Part 11). Tags, the Web SDK, Adobe Analytics, Customer Journey Analytics, Adobe Target and Adobe Journey Optimizer are not implemented (as of this handover).

Responsibilities:

- `decorators/data-layer-decorator.js`: `trackPage()` (one page entry: `@type`, `dc:title`, `xdm:language`, `xdm:template`, `xdm:tags`, `repo:path`), `trackBlocks()` (one component entry per block: `@type tcs-corp/components/{block}`, `parentId`, `dc:title`), `trackInteractions()` (capture listeners for `cmp:click`, `cmp:show`, `cmp:hide`, `cmp:media`, `cmp:search`, `cmp:submit`, `cmp:change`).
- Block refinements through `data-cmp-id`, `data-cmp-interaction`, `data-cmp-value`, `data-cmp-position` and `data-analytics` (`off` / `custom`); custom state of List, Cards and Separator; `cmp:show` pushes of Tabs, Gen Carousel and Modal (11.5, 11.6).
- Target state: the Tags embed in `scripts/delayed.js`, the ACDL and Web SDK extensions, XDM mapping and rules (11.7).

Dependencies: `utils/analytics.js`, `utils/metadata.js` (`getPageMetadata`, `getPageLanguage`, `getPageTags`), `utils/viewport.js` (`breakpoint`); for the target state a Tags property, datastreams and a consent platform [To be confirmed: Adobe Tags property, Web SDK datastreams, consent platform — owner: Analytics Lead].

Data Flow: Eager phase → page entry; while blocks decorate → List / Cards / Separator state; after `loadSections(main)` → component entries; after 3 seconds → header, footer and late blocks, then `delayed.js`; interactions → `cmp:*` events (2.11.6). Nothing leaves the browser today.

Failure Handling: Every push is wrapped in `try / catch`, so analytics never breaks rendering or links. Missing entries: 13.20. A future failing Tags library would not affect the page because it loads in the delayed phase.

Security Considerations: No form values and no personal data in the state; labels truncated to 100 characters. Residual risks before data is sent (11.9): free-text search terms, `mailto:` / `tel:` link URLs (F-05), query parameters in link URLs; consent must be implemented first. The Tags embed must be loaded by project code so `strict-dynamic` trusts it, and not in the Universal Editor.

Scalability Considerations: Tracking is generic: new blocks are tracked without code (11.5.1). Component ids `{block}-{n}` change when blocks are added or reordered; reports that must stay comparable need stable Anchor IDs or Component IDs. Additional page dimensions (author, content type, region, persona, campaign) need a change to `trackPage()` (8.1.10).

Performance Considerations: Entries are plain array pushes with no network cost; the Tags embed belongs in the delayed phase (3 seconds) to protect LCP. Visits shorter than about 3 seconds would send no page view; loading Tags in the lazy phase instead needs a Core Web Vitals review (11.7.2).

2.10.10 Form Submission

Purpose: Collect visitor enquiries with the Form Variations block (6.29). There is no submission back end (as of this handover); the integration target (Salesforce, Marketo or an API) is open [To be confirmed: form back end — owner: Product Owner].

Responsibilities:

- Implemented: build the fields from the block items, validate them in the browser (`checkValidity`, errors next to the field linked with `aria-describedby`), and on a valid submit dispatch the bubbling DOM event `form-variations:submit` with `{ detail: { data } }`, reset the form and show the `formSuccess` placeholder ("Thank you, your details were sent.").
- Data layer: `cmp:submit` with the field names only, pushed in the capture phase before validation (F-02).
- Target: a listener that sends `detail.data` to a server-side endpoint.

Dependencies: `blocks/form-variations/form-variations.js`, `utils/placeholders.js` (labels and messages); for the target state a server-side proxy or service, spam protection, privacy notices and consent text (O-08).

Data Flow: Visitor input → validation → `form-variations:submit` → (no listener) → success message; no network request is made (2.11.7).

Failure Handling: Visitors are told their details were sent although nothing is received (F-01, P1, 13.21). Until an integration exists, don't publish lead forms, or change `formSuccess` in the locale's placeholders sheet so it promises nothing.

Security Considerations: Never put CRM or marketing credentials in client code; any endpoint must be server-side with spam protection and a data protection review. Field values are never pushed to the data layer (11.9).

Scalability Considerations: One event contract serves every form on every locale; a single listener (for example in `scripts/delayed.js` or a dedicated module) can route by block or field set. Locale-specific privacy rules apply per jurisdiction (11.7.6).

Performance Considerations: Any integration script must load only on pages with a form, or in the delayed phase (2.9.12).

2.10.11 Third-Party Embeds and Media (YouTube, Vimeo, X, Lottie)

Purpose: Show authored third-party players and animations: the Embed block (YouTube, Vimeo, X / Twitter, other frameable URLs), the Video block (AEM Assets files, YouTube, Vimeo), and Lottie animations in the Hero and Teaser ("Lotto" image type).

Responsibilities:

- Build players with DOM APIs (`decorators/media-decorator.js`, `utils/media.js`): YouTube (`youtube-nocookie.com` available, the Video block's privacy-enhanced mode), Vimeo (`player.vimeo.com/video/{id}`), X (`https://platform.twitter.com/widgets.js` through `loadScript`).
- Load the embed after the Play click when a placeholder image is set, otherwise when it comes near the viewport (`onVisible`).
- Load the vendored Lottie player once per page (`utils/lottie.js`) and add a pause / play button (`decorators/animation-decorator.js`, WCAG 2.2.2); respect reduced motion.

Dependencies: The providers' availability and framing policies; the visitor's consent and ad blockers; `/scripts/lib/lottie/lottie_light.min.js`; the `.json` animation files.

Data Flow: Authored URL → player iframe or widget script in the browser → provider. Native `<video>` / `<audio>` events become `cmp:media`; iframe players are not tracked except the Embed Play click (`cmp:click`, `interaction play`).

Failure Handling: An unsupported or non-frameable URL shows an empty frame (13.24); a failing Lottie logs `failed to play the Lottie animation` (13.30); with reduced motion videos are click-to-play and animations paused by design. Known defects: YouTube autoplay uses `muted=1` instead of `mute=1`, the Embed uses no privacy-enhanced domain and Vimeo accepts only `vimeo.com/{id}` URLs (F-26).

Security Considerations: Third-party players set their own cookies and receive the visitor's IP address; approved embed domains and consent are open (O-16). `frame-src` is not restricted by the CSP, so any frameable URL can be

embedded by an author; the X widgets script runs with the page's privileges (allowed by `strict-dynamic` because project code loads it).

Scalability Considerations: Every new provider needs code in `utils/media.js` / `decorators/media-decorator.js`; other URLs are framed as they are.

Performance Considerations: Deferred loading (Play click or near-viewport) keeps third-party code out of LCP; Lottie files are not optimised by the platform, so their size must be controlled with the design team (13.8).

2.10.12 AEM Assets and Images

Purpose: Images, videos, documents and Lottie files under `/content/dam/tcs-corp/`, picked in the Universal Editor and delivered by Edge Delivery.

Responsibilities:

- Images referenced by pages are copied to the media bus on publication and served as optimised `/media_<hash>` URLs; `createOptimizedPicture` and `decorators/responsive-image-decorator.js` `buildImage` build responsive `<picture>` elements (WebP and width variants, for example section backgrounds 2000 px at 600 px and wider, 750 px below).
- Videos and PDFs are published at their DAM path (`/content/dam/tcs-corp/` is in `paths.json` includes).
- Image paths in metadata columns (`featured-image`, `thumbnail-image`, `card-image`, `og-image`) are read by the Page Header, List, Filter List and the SEO decorator.

Dependencies: AEM author and Assets, the media bus, the asset picker of the Universal Editor; publication of referenced assets (Publish dialog reference list).

Data Flow: Asset → referenced by a page or a metadata column → publication → media bus or DAM path → the page HTML or index row references it → `<picture>` in the browser.

Failure Handling: An unpublished asset shows a broken image; `waitForFirstImage` resolves on errors so LCP isn't blocked. Images typed as external URLs or non-`/media_` paths are used as they are, without optimisation (13.8); a featured image that isn't same-origin site media is lazy-loaded (F-14).

Security Considerations: Only assets referenced by published pages or below the included DAM folder are delivered; DAM access is controlled by AEM permissions. Everything below `/content/dam/tcs-corp/` that is published becomes public; keep internal documents elsewhere.

Scalability Considerations: Media bus resources are content-addressed, so the same image used on many pages and locales is stored and cached once.

Performance Considerations: Upload images at sufficient resolution and let the platform create the widths; set the LCP image in the first block (Hero, Page Header Landing `featured-image` with high fetch priority); images committed to Git (`icons/`, `fonts/`) must be optimised before committing.

2.10.13 Admin API and Site Configuration

Purpose: The Edge Delivery Admin API (`https://admin.hlx.page`) and the configuration service for org `sradha-tcs`, site `tcs-corp`: the operations behind publishing and the settings that live outside the repository.

Responsibilities:

- Path operations on `https://admin.hlx.page/{status,preview,live,index,cache,code,sitemap}/sradha-tcs/tcs-corp/main/{path}` and the audit log `GET /log/sradha-tcs/tcs-corp/main` (12.1.9).
- Site configuration: `public.json` → `paths` (same content as `paths.json`), `metadata.json` `source` (the 13 `/{locale}/metadata.json` sheets), CDN (`cdn.prod.host`), access and admin roles, `robots.txt` (12.5).

Dependencies: Authenticated users or API keys with roles in the site configuration (no credentials in the repository or this document) [To be confirmed: admin roles in the site configuration — owner: Site Administrator]; IMS for AEM Sidekick users.

Data Flow: Site Administrator or Sidekick → Admin API → content bus, index, CDN or configuration; AEM publication uses the same operations behind the delivery bridge.

Failure Handling:

- Configuration and repository out of step: wrong paths (13.4) or no bulk metadata (13.17); recover by re-applying the previous configuration (12.6.3), so keep a copy of the JSON before every change.
- Admin API errors for correct content are a platform issue for Adobe Support (14.5).
- A configuration backup process isn't defined [To be confirmed: backup of the site configuration before changes — owner: Site Administrator].

Security Considerations: Operations act immediately on the public site; bulk operations need the site owner's agreement and a change record (12.1.9). Review the Admin API log weekly for unexpected publishers (14.7.2 #6) and the roles monthly (14.7.3 #8).

Scalability Considerations: One configuration serves all locales; a new locale changes `paths` and `metadata.source` (14.8.1). Path operations accept wildcards for bulk work.

Performance Considerations: Cache and index operations are asynchronous; allow minutes before verifying. Avoid site-wide cache purges during peak traffic, as every page is then fetched from the origin again.

2.10.14 Operational Telemetry (RUM)

Purpose: Real-user monitoring of performance and errors through the Edge Delivery operational telemetry built into `scripts/aem.js` (`sampleRUM`).

Responsibilities: Sample about 1 in 100 page views (weight 100; `?rum=on` forces sampling) and send checkpoints to `https://ot.aem.live`; load the RUM enhancer for sampled views; `404.html` sends a `404` checkpoint with the referrer; JavaScript errors and unhandled rejections are sent as `error` checkpoints. A CSP violation is sent (as an `error` with source `csp`) only when it blocks the RUM enhancer itself; other CSP violations are visible in the browser console only (13.23).

Dependencies: The collector `ot.aem.live`; the RUM explorer / dashboard and its domain key [To be confirmed: RUM domain key and dashboard access — owner: Site Administrator].

Data Flow: Sampled page view → checkpoints (Core Web Vitals, 404, errors) → collector → dashboard reviewed daily and weekly (Part 17).

Failure Handling: If the collector is unavailable, no telemetry is collected; the page is not affected. A CSP block of the enhancer is reported by `aem.js` and doesn't break the page. Because other CSP violations don't reach RUM, a script blocked by the policy (13.23) is found only in the console or by the post-release checks (12.4.3).

Security Considerations: RUM data is sampled and anonymous (no cookies set by project code); the referrer of 404 checkpoints can contain query parameters of the previous page.

Scalability Considerations: Sampling keeps the volume proportional to traffic; low-traffic locales produce few samples, so their trends need longer periods.

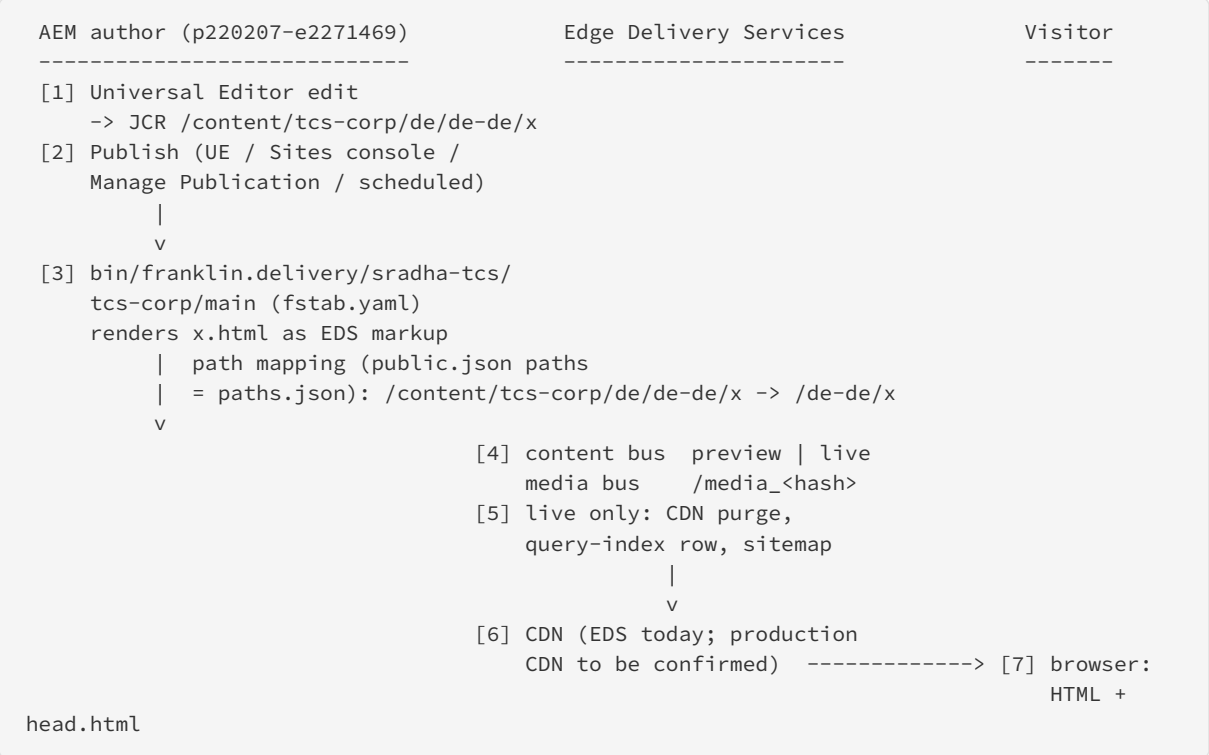
Performance Considerations: Sampled checkpoints are small beacons; the enhancer loads only for sampled views.

2.11 Data Flow Architecture

This chapter traces every flow of data through the solution: from authoring to delivery, through a page view, the inherited Navigation / Footer / 404 Page values, the page lists, the site data sheets, the data layer, forms and code deployment. Each flow has a text diagram, the numbered steps as implemented in this repository, and its failure points with the chapter that handles them. The components named here are described in 2.9 and 2.10.

Conventions: `{locale}` is the published locale code (`en`, `de-de`, `fr-fr`, `fr-ca`, `es-es`, `pt-pt`, `nl-nl`, `sv-se`, `da-dk`, `no-no`, `zh-cn`, `ja-jp`, `ko-kr`); `{host}` is `main--tcs-corp--sradha-tcs.aem.page` (preview) or `main--tcs-corp--sradha-tcs.aem.live` (live, the production origin until a production domain is configured); admin calls go to `https://admin.hlx.page/{operation}/sradha-tcs/tcs-corp/main/{path}`.

2.11.1 Authoring, Preview, Publish and Delivery



1. The author edits the page in the Universal Editor (edits save automatically: state Draft).
2. The author publishes: Universal Editor Publish (destination Live, or Preview where the dialog offers it), Sites console Quick Publish, Manage Publication (Now or Later, with children), or a scheduled publication (12.1.3, 12.1.4). Referenced items (fragments, nav, footer, assets) are listed in the dialog and must stay selected if they changed.
3. AEM renders the page through the delivery bridge (`fstab.yaml`: `.html` suffix, type `markup`) and maps its path with the site configuration's `paths` (143 mappings, 14 includes, 28 excludes). Excluded paths (`block-library`, `site-global-templates`) are never published.
4. The page lands in the preview or the live partition; images are copied to the media bus, linked DAM videos and PDFs are published at their DAM path; sheets become JSON (12.1.6).
5. On live: the CDN cache for the path is purged, the query index row is updated (or removed on unpublish) and the sitemap is regenerated (12.1.7).
6. The CDN serves the page (Edge Delivery CDN today; the production CDN with push invalidation once configured).

7. The browser receives the HTML with `head.html` injected, the CSP as an HTTP header and the page metadata as `<meta>` tags, and runs the page view (2.11.2).

Step	Failure point	Symptom	Detection	Recovery
1	Author or IMS unavailable	No editing; live unaffected	Cloud Manager, Adobe status	Freeze publishing, Adobe case (14.6)
2	Published to preview only; reference not selected	Live old, or header / fragment old	Admin API `status`; Sites console publication status	Republish with references (13.2)
2	Scheduled or bulk publication still running	Pages appear minutes later	Tools → Workflow → Instances	Wait; check again (12.1.4)
3	`public.json` paths differ from `paths.json`; page under an excluded path	Page at a wrong path, or 404	Compare configuration and repository; `npm run build:paths` diff	Re-apply generated paths, republish (13.4)
3	Content in an unexpected structure (missing or merged cells)	Undecorated block, `failed to load module for …`	`.plain.html` against the model	Fix content or code (13.3)
4	Asset not published	Broken image	Network 404 on the asset	Publish the asset (2.10.12)
5	Index not updated (configuration changed, F-10)	Page missing from lists	`/query-index.json`	Admin API `index` (13.9)
6	Production CDN without push invalidation	Some visitors see old content	`curl -I` on CDN and origin	Purge the CDN (13.2)
7	Browser cache; inherited values cached in `sessionStorage`	One user sees old content	Private window	New session (13.2)

2.11.2 Page View (Eager, Lazy, Delayed)

Requests of a page view, in order. All are same-origin unless marked.

#	Phase	Request	Made by	Notes
1	Eager	`GET /{locale}/{path}` (HTML)	Browser	HTTP 404 serves `404.html` (2.11.3)
2	Eager	`/scripts/aem.js`, `/scripts/scripts.js` (modules with `nonce="aem"`), `/styles/styles.css`	`head.html`	CSP `strict-dynamic` trusts what they load

#	Phase	Request	Made by	Notes
3	Eager	`/decorators/*.js`, `/utils/*.js` imported by `scripts.js` (SEO, data layer, block options, buttons, images, site)	ES module imports	Cached by the browser across pages
4	Eager	`/templates/{name}/{name}.js` and `.css`	`loadTemplate`	Only for Page Type `home`, `article`, `blog`, `press-release`
5	Eager	`/blocks/{name}/{name}.js` and `.css` for the blocks of the first section	`loadSection` → `loadBlock`	One request pair per block type
6	Eager	Data of first-section blocks: `/{locale}/placeholders.json`, `/{locale}/taxonomy.json`, `/{locale}/data/authors.json`, `/query-index.json?offset=0&limit=500` (…)	utils	Each at most once per page view
7	Eager	First image `/media_<hash>.<ext>?width=…&format=webply…`	`waitForFirstImage` (set to eager)	The LCP element
8	Eager	`/styles/fonts.css` and the font files	`loadFonts`	Only at ≥ 900 px or when `fonts-loaded` is set in `sessionStorage`
9	Lazy	`/blocks/header/header.js` and `.css`; parent pages' HTML (only without an own `nav`); `/{locale}/references/nav.plain.html` (or the configured Navigation page)	`loadHeader` (not awaited)	2.11.3
10	Lazy	Blocks, fragments (`{path}.plain.html`), sheets and lazy images of the remaining sections	`loadSections(main)`	Sections are shown when their blocks are loaded
11	Lazy	Template data appended without blocking: Authors (article / blog), Media Contacts (press release)	`appendLoadedSection`	`/{locale}/data/authors.json`, `/{locale}/data/media-contacts.json`
12	Lazy	`/blocks/footer/footer.js` and `.css`; `/{locale}/references/footer.plain.html` (or the configured Footer page); `/{locale}/data/social-links.json`; footer canvas fragment	`loadFooter`	Inherited values come from the cache filled by the header
13	Lazy	`/styles/lazy-styles.css`, `/styles/fonts.css`	`loadLazy`	
14	Delayed	`/scripts/delayed.js`	`loadDelayed` after 3 s	Empty today; the Tags embed belongs here (11.7.2)
15	Any	`https://ot.aem.live/…` beacons, RUM enhancer (third party, Adobe)	`sampleRUM`	About 1 in 100 views (2.10.14)
16	On demand	YouTube / Vimeo iframes, `https://platform.twitter.com/widgets.js`, `/scripts/lib/lottie/lottie_light.min.js` (third party except Lottie)	Embed, Video, Hero, Teaser	Near the viewport or on Play (2.10.11)
17	On demand	`/blocks/modal/modal.js` and the modal page `.plain.html`	`autolinkModals`	Links whose path contains `/modals/`

Steps

1. Eager: `decorateHead()` maps the SEO columns and sets `<html lang>`; `trackInteractions()` pushes the page entry and starts the listeners; `decorateTemplateAndTheme()` and `decoratePageType()` add body classes; on the 404 page `loadErrorPage(main)` runs, otherwise `loadTemplate(main)`; `decorateMain(main)`

(icons, sections and section options, Gen Carousel / Tabs containers, blocks, Additional tab options, buttons); `body.appear`; the first section is loaded and its first image awaited (LCP).
2. Lazy: modal auto-linking; the header (not awaited); all remaining sections in order; `trackBlocks(main)`; on 404 pages the Go back button; scroll to the URL hash; the footer; lazy styles and fonts.
3. Delayed: after 3 seconds `trackBlocks(document)` (header, footer, modals) and `delayed.js`.

Step	Failure point	Symptom	Detection	Recovery
Eager 4	Template JS / CSS fails	No Page Header / author / contacts; `failed to load template …`	Console	13.26
Eager 5	Block JS 404, syntax error or `decorate()` throws	Raw rows; `failed to load module for …`	Console, Network	13.3
Eager 6	Index-based block in the first section	Slow LCP, layout shift	PageSpeed, RUM	Move the block (13.16)
Eager 7	LCP image external or not on the media bus	Unoptimised image, slow LCP	Network (Img)	Use AEM Assets (13.8)
Eager 8	Fonts late on mobile	Fallback font, small shift	PageSpeed	Accepted by design (13.16)
Lazy 9 / 12	Nav or footer page not published, wrong inherited value	Empty or wrong header / footer	`.plain.html` 404; `<meta name="nav">`	13.6
Lazy 10	Fragment not published or not same-origin	Empty Fragment / Tab / Modal	Network	13.31
Any	A script added outside project code	`Refused to load the script …`	Console	13.23
Delayed	Tags not loaded	No analytics	`scripts/delayed.js`	13.20

2.11.3 Header, Footer and 404 Inheritance

```
 page /de-de/insights/blogs/x                    (published host; AEM .html URLs in the
editor)
   |
   |  getInheritedMetadata('nav' | 'footer')      getInheritedMetadata('error-page') on
404.html
   v
 [1] own <meta name="nav|footer|error-page">  -- set --> use it
   | empty
   v
 [2] parents in parallel, nearest first:
     /de-de/insights/blogs  /de-de/insights  /de-de/
     (fetch HTML, read the 3 metas; cache in sessionStorage 'tcs-inherited-metadata')
   | first parent with a value --> use it
   | none
   v
 [3] default: resolvePagePath('', 'references/nav')    -> /de-de/references/nav
              resolvePagePath('', 'references/footer') -> /de-de/references/footer
   v
 [4] loadFragment(path) -> {path}.plain.html -> decorateMain + loadSections -> header /
```

```
footer

 404 only:  [3'] try in order, first that loads wins:
            configured error-page -> /de-de/error-pages/404 -> /en/error-pages/404
            -> built-in 404.html content ("Page Not Found", "Go home")
            content from another locale: main[lang] = that locale's lang
            then: Go back (placeholder goBack) if the referrer is same-origin
```

1. The header and footer blocks call `getInheritedMetadata('nav')` / `('footer')`; on the 404 page `loadErrorPage` calls `getInheritedMetadata('error-page')`.
2. If the page has its own value (page property or the metadata sheet's `nav` / `footer` / `error-page` column), it is used.
3. Otherwise `utils/site.js getParentPages()` lists the parent pages up to the locale Home page (for a missing page, starting at its nearest parent). Their published HTML is fetched in parallel, once per page view and URL, and the three metas are cached for the browser session.
4. `resolvePagePath(value, fallback)` turns the value (AEM path, published path or a path relative to the locale root such as `references/nav-careers`) into the path to fetch: the published path on the site, the AEM path in the editor; empty values give the locale default.
5. `loadFragment(path)` fetches `{path}.plain.html` (same-origin paths only), decorates it and renders the header (desktop dropdowns at ≥ 900 px) or the footer (with the Social Links sheet).
6. On the 404 page the candidate pages are tried in order with `{path}.plain.html`; the first that returns 200 replaces the built-in content (`main.error-authored`); then the Go back button is added after the sections are loaded when the visitor came from a page of the site.

Step	Failure point	Symptom	Detection	Recovery
2	A parent sets a special Navigation that children inherit unintentionally	Wrong header in a section	Walk the parents' `<meta name="nav">`	Move the value to the right page (13.6)
3	Parent value changed	Old header until a new session	`sessionStorage tcs-inherited-metadata`	New session (F-35, 14.9 #14)
4	Value points to another locale	Foreign-language header / footer	Page source	Use a locale-relative value (13.6)
5	`references/nav` or `references/footer` not published (new locale)	Empty header or footer	`.plain.html` 404	Publish them (14.8.1)
6	`error-pages/404` not published in the locale	English 404 or built-in 404	`main[lang]`, `main.error-authored`	Publish the locale's 404 (13.7)
6	Built-in 404 texts	"Page Not Found", "Go home" in English	—	Author the 404 pages (F-20)

2.11.4 List and Filter List from the Query Index, and Redirects

```
 publish page  -->  head metas  -->  helix-query.yaml  -->  /query-index.json (all 13
locales)
                                                              |
         utils/query-index.js getPages(): ?offset=0&limit=500, 500, ... (once per page
view)
         keep rows below the current locale root (/de-de/...)
                                                              |
             +------------------------------------------------+-----------------------+
             v                                                                        v
```

```
 LIST (blocks/list)                                          FILTER LIST (blocks/filter-
list)
 source: child pages | tagged pages | fixed list            placeholders + index +
taxonomy
 + /{locale}/redirects.json (utils/redirects.js)            + data/authors.json
 isListable: skip hide-in-nav = yes                         candidates: Root path, Page
types,
 card links -> resolveRedirect (max 5 hops)                 Content types (or Manual list)
 tags -> taxonomy labels                                    hero / featured / cards,
pills,
 empty: message | hide | fallback to fixed                  advanced filters, sort, load
more
             |                                                                  |
             v                                                                  v
        cards + data layer (custom state)                       cards + cmp:change /
cmp:click
```

1. Publishing a page writes its row: path, `lastModified`, `robots`, `title`, `description`, `image`, `tags` and 28 metadata columns from the server-delivered head (8.1.8).
2. A List (sources other than a pure fixed list of external links), a Filter List or a Conversation Canvas calls `getPages()`: the index is read in pages of 500 rows until `total` is reached, kept in memory for the page view and filtered to the current locale root.
3. List: child pages (Parent page, Child depth) or tagged pages (tags, any / all, Search root, descendants) from the rows, or a fixed list (List Items, internal paths enriched from the index); pages with `hide-in-nav` yes are skipped; internal card links are resolved through `/{locale}/redirects.json` (up to 5 hops, loops stopped); tag IDs become taxonomy labels; with no cards the block shows its message, hides itself or falls back to the fixed list.
4. Filter List: placeholders, index, taxonomy and Authors are loaded together; candidates are the pages below Root path of the selected Page types and Content types (or the Manual list); hero and featured cards follow `featured` / `priority`; pills and advanced filters are built from the tags used by the candidates.
5. The redirect sheets are not applied to requests by the platform: an old URL returns 404 unless a CDN rule redirects it (13.12); the List only avoids linking to redirected pages.

Step	Failure point	Symptom	Detection	Recovery
1	Page not live, excluded path, JS-only metadata	Page missing	`/query-index.json`	Publish; move; use server metadata (13.9)
1	Live index older than `helix-query.yaml` (F-10)	Card overrides, hide-in-nav, featured ignored	Index columns	Re-index (Admin API `index`)
1	Tags published as `cq-tags` (F-07)	No tags in lists and filters	`tags` column empty	Align code or publishing
2	Index not available (Universal Editor)	Editor hint instead of cards	Message text	Expected (13.10)
2	Index request fails	"There are no items to show." / "No resources found."	Network	Check the host (13.11)
3	Settings exclude the pages (depth, root, tag match, Maximum items)	Pages missing	`?debug=list`	Fix settings (13.11)
4	Page types / Content types don't match the metadata values	Empty Filter List	Index `pageType`, `contentType`	Align values (F-12, 13.11)
4	Filter List ignores `hide-in-nav` and redirects (F-30)	Pages listed that the List hides	Compare	Known limitation

Step	Failure point	Symptom	Detection	Recovery
5	No redirect mechanism	Old URLs and / return 404	`curl -I`	CDN rules (13.12, 13.28)

2.11.5 Placeholders, Taxonomy and Data Sheets

```
 AEM spreadsheet /content/tcs-corp/de/de-de/placeholders --publish--> /de-de/
placeholders.json
                .../taxonomy (tag, title; sheet "de")   --publish--> /de-de/taxonomy.json
                .../data/authors, ... media-contacts    --publish--> /de-de/data/*.json
                                                                      |
 block -> getPlaceholders() / resolveTags() / getAuthor() ...         |
       -> localeSheetPath(name) = getLocale().root + '/' + name + '.json'  |
       -> fetch once per page view (shared promise) <----------------------+
       -> rows (sheetRows: data[], or multi-sheet: language sheet, else default)
       -> value, or the fallback: English text | label from the tag ID | empty list
```

1. A block asks for site data: `t('loadMore', 'Load more')` (placeholders), `resolveTags(ids)` (taxonomy), `getAuthor(id)`, `getSocialLinks()`, `getMediaContacts()` (data sheets).
2. The util builds the sheet URL from the current locale's published root (`/de-de/…`), also in the Universal Editor, where the request goes to the author host.
3. The first call fetches the JSON; later calls on the same page reuse the promise.
4. Rows are read: placeholders by `Key` / `Text` (keys compared without case or separators), taxonomy by `tag` / `title` from the sheet named after the ISO 639-1 language (for example `de`), else the default sheet; data sheets by their columns (9.5–9.9).
5. Missing sheets, rows or keys give the fallback; the page never fails.

Step	Failure point	Symptom	Detection	Recovery
Publish	Sheet edited but not published	Old or English text	`/{locale}/placeholders.json`	Publish the sheet (12.1.6)
2	Mapping missing in `paths.json` / `public.json`	Sheet 404	Network	Regenerate paths (13.4, 13.14)
2	In the editor, sheet not reachable on the author host	English fallbacks, ID labels in the editor	Validate on preview	Expected (14.9 #18)
4	Columns not named `Key` / `Text`; key differs	English text	Sheet JSON	Fix the row (13.13)
4	Language sheet missing; only English taxonomy published (F-09)	Untranslated or ID-derived tag labels	`:names` of the JSON	Publish the taxonomy (13.14)
4	Author ID not in the Authors sheet	No author lockup / "About the author"	Authors JSON	Add the author (13.27)
4	Region not in Media Contacts	All contacts shown	Media Contacts JSON	Align region values (8.2.27)

2.11.6 Analytics Data Layer

```
 loadEager   trackInteractions() --> { page: { 'page-<hash>': {...} } }      (first entry)
             capture listeners on document: click, toggle, close, play, pause,
             ended, submit, change
 decorate    List / Cards / Separator (Analytics on) --> custom component state
 loadLazy    trackBlocks(main) --> { component: { '<id>': { @type, parentId,
```

```
dc:title } } }
 +3 s        trackBlocks(document) --> header, footer, modals
             import delayed.js --> (future) Adobe Tags embed
 interaction --> { event: 'cmp:click' | 'cmp:show' | 'cmp:hide' | 'cmp:media' |
                  'cmp:search' | 'cmp:submit' | 'cmp:change', eventInfo: { path, ... } }
                                  |
                      window.adobeDataLayer (plain array today)
                                  |  (future, 11.7)
                                  v
     ACDL extension -> Tags rules -> Web SDK sendEvent (XDM) -> AEP Edge Network
(datastream)
     -> Adobe Analytics / CJA / Target / Journey Optimizer          [consent first,
11.7.6]
```

1. The eager phase pushes the page entry (`dc:title`, `xdm:language`, `xdm:template`, `xdm:tags`, `repo:path`) and registers the listeners.
2. List, Cards and Separator push their own state while they decorate (`data-analytics="custom"`).
3. After the main sections load, every other block gets a component entry; 3 seconds later the header, footer and late blocks follow.
4. Interactions push `cmp:*` events whose `eventInfo.path` is `component.{id}` (the nearest `data-cmp-id`, else the block, else the page id).
5. Today the array stays in the browser. Target state: the Tags ACDL extension processes the array (earlier entries included), rules map events to Web SDK `sendEvent` calls, and the datastream forwards them to the Adobe applications, after consent.

Step	Failure point	Symptom	Detection	Recovery
1–4	A push throws	Nothing visible (caught)	Console	None needed
3	Block inside `data-analytics` or Analytics off	No state, no events	`data-analytics` attribute	Turn Analytics on (13.20)
3	Unstable `{block}-{n}` ids	Report series break after edits	Compare ids	Set Anchor / Component IDs (11.3.2)
4	`cmp:submit` before validation (F-02); empty `cmp:search` (F-03)	Over-counting	Event log	Tags rule conditions; code fix
4	Card clicks without `position` (F-04)	Empty position reports	Event log	Code fix
4	`mailto:` / `tel:` URLs pushed (F-05)	Personal data in analytics	Event log	Mask in Tags (11.9)
5	No Tags embed (F-06)	No data collected	`scripts/delayed.js`	Implement 11.7
5	Tags loaded in the editor or without consent	Author traffic or non-consented data	Debugger	Loader conditions, consent (11.7)

2.11.7 Forms

```
 visitor fills Form Variations form
        |
        | submit (capture listener, data-layer-decorator.js)
        +--> cmp:submit { path, dc:title: 'form-variations', fields: [names] }   (every
attempt)
        v
 form-variations.js submit handler: preventDefault
```

```
       |
   validate(form) -- invalid --> errors next to fields (aria-describedby); stop
       | valid
       v
 dispatch 'form-variations:submit' { detail: { data } } -- no listener today --> (nothing
sent)
 form.reset(); status = t('formSuccess', 'Thank you, your details were sent.')
       :
       :  target state [To be confirmed: form back end — owner: Product Owner]
       v
 listener -> server-side endpoint (spam protection, consent) -> Salesforce / Marketo / API
```

1. The visitor submits; the capture-phase data layer listener pushes `cmp:submit` with the field names only.
2. The block's submit handler prevents the browser submission and validates; invalid fields get an error message linked with `aria-describedby` and the submission stops.
3. A valid submission dispatches `form-variations:submit` with the field values in `detail.data`, resets the form and shows the `formSuccess` placeholder.
4. No network request is made (as of this handover); a future listener would send `detail.data` to a server-side endpoint.

Step	Failure point	Symptom	Detection	Recovery
1	Event pushed for invalid attempts (F-02)	Over-counted submissions	Data layer	Code fix (11.4.6)
3	No back end (F-01)	Visitor told "sent", data lost	Network: no request	Don't publish lead forms; integrate (13.21)
3	Success text promises delivery	Misleading message	Placeholders sheet	Change `formSuccess` per locale
4	Future endpoint called from the browser with credentials	Credential exposure	Code review	Server-side endpoint only (2.10.10)

2.11.8 Code Deployment

```
 developer                GitHub sradha-tcs/tcs-corp          Edge Delivery / AEM author
 ---------                --------------------------          --------------------------
 feature/tcs-<topic>
 npm install (husky)
 aem up (localhost:3000)
 npm run build:json / build:paths (if models / LOCALES changed)
 npm run lint, npm test
 git push  ------------->  Build (npm ci, npm run lint)
                          AEM Code Sync  ------------------->  feature-tcs-<topic>--tcs-
corp--
                                                               sradha-tcs.aem.page
                          PR (preview link), aem-psi-check
                          review + merge to main
                          AEM Code Sync  ------------------->  main--tcs-corp--sradha-tcs
                                                               .aem.page and .aem.live
                                                               (CDN purged for code
files)
                                                               Universal Editor (after
reload)
 config change (paths, metadata.source) ---- Admin API ---->    site configuration (12.5)
```

1. Branch from `main` (`feature/tcs-<topic>`), `npm install` (installs the Husky hook), develop against preview content with `aem up`.
2. Rebuild `component-*.json` (`npm run build:json`, also by the pre-commit hook) and `paths.json` (`npm run build:paths`) when partials or `LOCALES` change; run `npm run lint` and `npm test`.
3. Push: the `Build` workflow lints; Code Sync deploys the branch to its preview host.
4. Open a PR with the feature preview link (mandatory), let aem-psi-check and review pass, merge.
5. Code Sync deploys `main`; preview and live serve the new code immediately; authors reload the Universal Editor for new models.
6. Configuration that lives outside the repository (paths, metadata sources, CDN) is applied by the Site Administrator through the Admin API in the same release (12.4.2 #2); content that needs the new code is published after it (code first, then content).

Step	Failure point	Symptom	Detection	Recovery
2	`build:json` skipped (`--no-verify`, no hook)	Dialog fields missing	`npm run build:json` diff	Rebuild, merge (13.5)
2	`npm test` not run (not in CI, F-37)	List / Cards / Separator regressions	Review checklist	Run before PR
3	Lint failure	Red Build check	Actions log	`npm run lint:fix` (13.15)
3 / 5	Code Sync didn't run	Old code on the host	Code Sync check; request the file	Admin API `code`, empty commit (13.22)
4	PR without a valid preview URL; performance regression	aem-psi-check fails	PR checks	Fix URL or regression (13.15, 13.16)
5	Defect reaches `main`	Broken blocks on every page	Post-release checks (12.4.3)	Revert the merge (12.6.1)
6	`paths.json` merged without updating `public.json`	Locale pages at wrong paths	13.4 diagnosis	Apply the generated paths
6	Content published before the code	New fields ignored, blocks undecorated	Feature check on live	Publish after Code Sync (12.4.2)

Part 3 — Site Structure

3.1 Site Hierarchy

The AEM content tree `/content/tcs-corp` holds 13 locale sites and the Site Global Templates. Every locale site has the same layout; `us/en` is shown in full.

```
/content/tcs-corp/                    site root (not published; "/" needs a redirect
to /en/)
├── us/                               country folder
│   └── en/                           locale page = Home of /en (published at /en/)
│       ├── …                         content pages (published below /en/)
│       ├── references/               fragments and reference pages
│       │   ├── nav                   header (Navigation page)
│       │   ├── footer                footer page (Footer block)
│       │   └── …                     other fragments, e.g. alternative nav / footer
pages
│       ├── error-pages/
│       │   ├── 404                   used by 404.html
│       │   ├── 403                   for the CDN (not used by code)
│       │   └── 500                   for the CDN (not used by code)
│       ├── block-library/            a page per block with every variation (not
published)
│       ├── placeholders              sheet: Key, Text, Description, Category
│       ├── metadata                  sheet: bulk metadata (URL patterns /en/**)
│       ├── taxonomy                  taxonomy page (tag, title; a sheet per language)
│       ├── redirects                 sheet: source, destination
│       └── data/
│           ├── authors               sheet
│           ├── locations             sheet
│           ├── partners              sheet
│           ├── social-links          sheet
│           └── media-contacts        sheet
├── de/de-de/  fr/fr-fr/  ca/fr-ca/  es/es-es/  pt/pt-pt/  nl/nl-nl/
├── se/sv-se/  dk/da-dk/  no/no-no/  cn/zh-cn/  jp/ja-jp/  kr/ko-kr/
│                                     12 more locale sites, same layout
└── site-global-templates/            template pages authors copy (not published):
                                      home, press release, blog, article, ...

/content/dam/tcs-corp/                AEM Assets (images, videos, PDFs); published with
pages
```

Published structure (example for German):

```
/de-de/                       Home (AEM /content/tcs-corp/de/de-de, published as /de-de/
index)
/de-de/{page path}            content pages
/de-de/references/nav         header fragment     (.plain.html loaded by the header)
/de-de/references/footer      footer fragment     (.plain.html loaded by the footer)
/de-de/error-pages/404        authored 404 content (.plain.html loaded by 404.html)
/de-de/placeholders.json      UI text
/de-de/metadata.json          bulk metadata (applied when listed in metadata.source)
/de-de/taxonomy.json          tag labels
/de-de/redirects.json         redirects (read by the List block only)
/de-de/data/authors.json      and locations, partners, social-links, media-contacts
```

```
/query-index.json              one index for all locales (blocks filter by /de-de/)
/sitemap.xml                   one sitemap for all locales
```

3.2 Locale Structure

3.2.1 Locale Table

The locales are defined once in `utils/site.js` (`LOCALES`); the first entry (`en`) is the default locale (`DEFAULT_LOCALE`).

#	AEM path	Published path	lang (`<html lang>`)	Country	Region (descriptive)
1	`/content/tcs-corp/us/en`	`/en`	en-US	United States	North America
2	`/content/tcs-corp/de/de-de`	`/de-de`	de-DE	Germany	Europe
3	`/content/tcs-corp/fr/fr-fr`	`/fr-fr`	fr-FR	France	Europe
4	`/content/tcs-corp/ca/fr-ca`	`/fr-ca`	fr-CA	Canada (French)	North America
5	`/content/tcs-corp/es/es-es`	`/es-es`	es-ES	Spain	Europe
6	`/content/tcs-corp/pt/pt-pt`	`/pt-pt`	pt-PT	Portugal	Europe
7	`/content/tcs-corp/nl/nl-nl`	`/nl-nl`	nl-NL	Netherlands	Europe
8	`/content/tcs-corp/se/sv-se`	`/sv-se`	sv-SE	Sweden	Europe
9	`/content/tcs-corp/dk/da-dk`	`/da-dk`	da-DK	Denmark	Europe
10	`/content/tcs-corp/no/no-no`	`/no-no`	no-NO	Norway	Europe
11	`/content/tcs-corp/cn/zh-cn`	`/zh-cn`	zh-CN	China	Asia Pacific
12	`/content/tcs-corp/jp/ja-jp`	`/ja-jp`	ja-JP	Japan	Asia Pacific
13	`/content/tcs-corp/kr/ko-kr`	`/ko-kr`	ko-KR	South Korea	Asia Pacific

> **Note:** The "Region" column is descriptive only; the code doesn't group locales by region. The `region` metadata column (pages) and the `region` column of the Authors and Media Contacts sheets are separate, authored values (e.g. the Press Release template shows the media contacts of the page's `region`).

3.2.2 How the Locale Is Resolved (`getLocale`)

`getLocale(pathname = window.location.pathname)` in `utils/site.js`:

1. Detects an AEM content path: the pattern `^/content/(?!dam/)[^/]+` (e.g. `/content/tcs-corp`), present when the page is opened in the Universal Editor on the AEM author.
2. **Editing (AEM path):** strips `/content/tcs-corp` and matches the remainder against each locale's AEM folders `/{country}/{code}` (e.g. `/de/de-de`).
3. **Site (published path):** matches the path against each locale's published root `/{code}` (e.g. `/de-de`). Matching is case-insensitive and requires the full folder (`/de-de` or `/de-de/...`, not `/de-dex`).
4. **No match** (e.g. `/`, `/site-global-templates/...`, drafts): the default locale `en`.
5. Returns `{ country, code, lang, language, root, aemRoot, contentRoot }`, e.g. for `/de-de/about`: `code: 'de-de'`, `lang: 'de-DE'`, `language: 'de'`, `root: '/de-de'`, `aemRoot: '/de/de-de'`, `contentRoot: ''`.

Related helpers:

Function	Purpose	Example
`localePagePath(path)`	A page of the current locale	`references/nav` → `/de-de/references/nav` (editing: `/content/tcs-corp/de/de-de/references/nav`)
`resolvePagePath(value, fallback)`	A configured page (AEM path, published path or path relative to the locale root), else the fallback in the current locale	`/content/tcs-corp/de/de-de/references/nav-careers` → `/de-de/references/nav-careers` on the site
`localeSheetPath(name)`	A sheet URL of the current locale	`placeholders` → `/de-de/placeholders.json`
`toPublishedPath(path)`	AEM path → published path	`/content/tcs-corp/de/de-de/about` → `/de-de/about`
`toAemPath(path, root)`	Published path → AEM path	`/de-de/about` → `/content/tcs-corp/de/de-de/about`
`getParentPages(path)`	Parent pages up to the locale Home, nearest first	`/de-de/insights/blogs/x` → `/de-de/insights/blogs`, `/de-de/insights`, `/de-de/`
`sheetRows(json, sheet)`	Rows of a (multi-)sheet JSON	Taxonomy language sheet

The language used for `<html lang>` is the page's `language` metadata when it is a valid language tag (`getPageLanguage` in `utils/metadata.js`), otherwise the locale's `lang`.

3.2.3 Adding or Changing a Locale

1. Add the locale to `LOCALES` in `utils/site.js` (`{ country, code, lang }`), e.g. `{ country: 'it', code: 'it-it', lang: 'it-IT' }`.
2. Run `npm run build:paths` (`tools/paths/generate-paths.mjs`). It regenerates `paths.json`: the locale folder mapping, the Home page mapping, the 8 sheet mappings (`placeholders`, `metadata`, `redirects`, `data/authors`, `data/locations`, `data/partners`, `data/social-links`, `data/media-contacts`), the taxonomy mapping (`.../taxonomy:/{code}/taxonomy.json`), the include and the block-library excludes.
3. Commit `utils/site.js` and `paths.json` together; run `npm run lint`.
4. Site Administrator: apply the new mappings to the site configuration (`public.json` → `paths`) and add `/{code}/metadata.json` to `metadata.source`.
5. AEM: create `/content/tcs-corp/{country}/{code}` with `references/nav`, `references/footer`, `error-pages/404` (and 403 / 500), `placeholders`, `metadata`, `taxonomy`, `redirects`, `data/*`, `block-library/`; publish the references, error pages and sheets.
6. If the new language needs a non-Latin script, check typography (the Inter font covers Latin only).
7. Verify on preview: header, footer, 404, placeholders and `<html lang>`.

> **Important:** `paths.json` is generated — never edit it by hand. A locale missing from `LOCALES` is treated as the default `en` locale (its sheets, nav and footer won't be found).

3.3 Page Model

3.3.1 Page Properties (`models/_page.json`, model `page-metadata`)

Field	Name	Type	Inherited by child pages	Description
Title	`jcr:title`	text	No	Page title (`<title>`, `og:title`, used by Page Header and cards)
Description	`jcr:description`	text	No	Meta description, card description fallback
Keywords	`keywords`	text, multi	No	Meta keywords
Page Type	`page-type`	select: Default (empty), Home (`home`), Article (`article`), Blog (`blog`), Press Release (`press-release`)	No	Selects the Site Global Template code and body class; overrides the metadata sheet's `page-type` column
Navigation	`nav`	aem-content	Yes	The header page; empty → nearest parent's Navigation (or the metadata sheet's `nav` column), else `references/nav`
Footer	`footer`	aem-content	Yes	The footer page; empty → nearest parent's Footer (or `footer` column), else `references/footer`
404 Page	`error-page`	aem-content	Yes	The page shown when a page below this one isn't found; empty → nearest parent's 404 Page (or `error-page` column), else the locale's `error-pages/404`

All other page-level values (SEO, social, card, author, dates, region, featured, …) are columns of the locale's bulk metadata sheet (columns: `url`, `page-type`, `meta-title`, `meta-description`, `meta-keywords`, `author-id`, `publish-date`, `modified-date`, `reading-time`, `og-title`, `og-description`, `og-image`, `og-type`, `twitter-card`, `twitter-title`, `twitter-description`, `twitter-image`, `canonical-url`, `robots`, `region`, `country`, `language`, `persona`, `thumbnail-image`, `featured-image`, `campaign-id`, `content-type`, `featured`, `priority`, `listen-link`, `author`, `card-title`, `card-description`, `card-image`, `card-image-alt`, `image-alt`, `eyebrow`, `category`, `hide-in-nav` (the inherited `nav`, `footer` and `error-page` values can also be set as columns)). Each column is published as `<meta name="{column}">`.

3.3.2 Sections (`models/_section.json`)

Field	Name	Type	Effect
Section Name	`name`	text	Label in the Content Tree only
Style	`style`	multiselect: Highlight	Section class `highlight`
Width Type	`sectionWidth`	select: Full Width (default), Fixed Width	`fixed-width` class for Fixed Width

Field	Name	Type	Effect
Rounded edge	`roundedEdge`	boolean	`rounded` class
Background Image	`backgroundImage`	reference	`.section-background` wrapper with an optimised image (2000px ≥ 600px, 750px below), `has-background` class
Image alt text	`backgroundImageAlt`	text	Alt of the background image; empty = decorative
Anchor name	`anchorName`	text	Section `id` (normalised with `toClassName`, leading # removed; not set if the id is already used) — target of Anchor List links

Section types available at the top level of `main` (filter `main`): **Section**, **Gen Carousel** (style `gen-carousel-section`; Navigation, Autoplay interval; allowed children Hero, Teaser) and **Tabs Container** (style `tabs-section`; ID, Width Type, Label, Style, Alignment, Orientation; children Tab, Columns, Title, Text, Image, Button). `scripts.js` wraps the content of Gen Carousel and Tabs Container sections in synthetic `gen-carousel` / `tabs` blocks.

3.3.3 Blocks

A section (filter `section`) accepts 27 components: Text, Image, Button, Title, Page Header, Hero, Teaser, Quote, Testimonial, Anchor List, Accordion, Tabs, Table, Table List, List, Separator, Embed, Video, Modal, Form Variations, Filter List, Interactive Dashboard, Conversation Canvas, Cards, Columns, Fragment, Footer. Every block except header and footer has an **Additional** tab: Anchor ID (`anchor-…`), Hide block, Padding left / right / top / bottom and Margin left / right / top / bottom from the spacing tokens (applied by `decorators/block-options-decorator.js` and `styles/styles.css`).

3.3.4 Default Content

Component	Model fields
Text	Rich text
Title	Title, Title Type
Image	Image (reference), Alt Text
Button	Link, Text, Title, Views, Type, Icon, Alignment

Authored links in default content become buttons (`decorators/content-buttons-decorator.js`).

3.3.5 Markup the Code Receives

```
<main>
  <div>                                  <!-- section -->
    <h1>Page title</h1>                  <!-- default content -->
    <p>Intro text</p>
    <div class="teaser anchor-overview pt-200">   <!-- block with Additional classes -->
      <div><div>title</div><div><h2>Our services</h2></div></div>
    </div>
    <div class="section-metadata">       <!-- section options (document style) -->
      <div><div>style</div><div>highlight</div></div>
    </div>
  </div>
</main>
```

3.4 Folder Structure

3.4.1 Repository Folders

Path	Purpose	Notes
`blocks/{name}/`	Block code: `{name}.js`, `{name}.css`, `_{name}.json` (definitions, models, filters); some have `README.md`, data modules (`list-data.js`, `cards-data.js`, `separator-config.js`)	26 blocks
`templates/{name}/`	Page Type code (`home`, `article`, `blog`, `press-release`)	See `templates/README.md`
`decorators/`	Shared UI builders	See `decorators/README.md`
`utils/`	Shared helpers without UI	See `utils/README.md`
`scripts/`	`aem.js` (core, never modified), `scripts.js`, `delayed.js`, `editor-support.js`, `editor-support-rte.js`, `dompurify.min.js`, `lib/lottie/` (vendored Lottie light player)	—
`styles/`	`styles.css` (tokens, global, LCP), `lazy-styles.css`, `fonts.css`, `card-list.css` (shared by List and Cards)	—
`models/`	`_page.json`, `_section.json`, `_text.json`, `_title.json`, `_image.json`, `_button.json`, `_card-list.json` and the aggregation entry points `_component-*.json`	—
`fonts/`	`inter-variable.woff2`	Self-hosted
`icons/`	SVG icons (arrows, chevrons, close, download, social, filter, headphones, menu, mic, pause, play, search, share)	Used with `:icon:` syntax / code
`tools/paths/`	`generate-paths.mjs`	`npm run build:paths`
`tools/sidekick/`	`config.json`	AEM Sidekick
`test/`	Node unit tests (`list`, `cards`, `separator`)	`npm test`; not served
`docs/`	Documentation	Not served (`.hlxignore`)
`.github/`	`workflows/main.yaml` (lint), `cleanup-on-create.yaml` (boilerplate), PR template	—
`.husky/`	Pre-commit hook (rebuild component JSON)	—
Root files	`head.html`, `404.html`, `fstab.yaml`, `paths.json`, `helix-query.yaml`, `helix-sitemap.yaml`, `component-*.json`, `xwalk.json`, `.hlxignore`, `package.json`, `README.md`, `favicon.ico`	—

3.4.2 AEM Folders

AEM path	Published	Purpose	Indexed
`/content/tcs-corp/{country}/{code}`	`/{code}/`	Locale Home and content pages	Yes
`…/references/`	`/{code}/references/`	Nav, footer and other fragments	No (excluded)
`…/error-pages/`	`/{code}/error-pages/`	404 / 403 / 500	No (excluded)

AEM path	Published	Purpose	Indexed
…/block-library/	Not published	Block test pages	No
…/data/	/{code}/data/*.json	Data sheets	No
…/placeholders, metadata, redirects	/{code}/*.json	Sheets	No (/**.json excluded)
…/taxonomy	/{code}/taxonomy.json	Taxonomy	No
Fragment folders …/fragments/, modal folders …/modals/ (if used)	Published	Content included in pages / opened as modals	No (excluded)
/content/tcs-corp/site-global-templates	Not published	Template pages	No
/content/dam/tcs-corp/	At their DAM path	Assets	No

3.5 Navigation Model

3.5.1 Header

The header is not authored on each page; scripts/aem.js loadHeader creates a header block in <header> during the lazy phase.

Which Navigation page is used (blocks/header/header.js):

```
page's own Navigation (page property `nav`, or the metadata sheet's `nav` column)
  └ else the nearest parent page's Navigation, up to the locale Home page
      └ else the locale's references/nav  (e.g. /de-de/references/nav)
```

- getInheritedMetadata('nav') (utils/inherited-metadata.js) loads the published HTML of all parent pages in parallel (getParentPages), reads <meta name="nav">, and takes the nearest non-empty value. Values are cached per URL in sessionStorage (tcs-inherited-metadata) for the browser session — a changed parent property shows in a new session.
- resolvePagePath(value, 'references/nav') accepts AEM paths, published paths or paths relative to the locale root (e.g. references/nav-careers).
- The page is loaded as a fragment (loadFragment → {path}.plain.html, decorated like a page).

Navigation page structure (authored in references/nav): three sections, in order:

Section	Class	Content
1	nav-brand	Logo / brand link (its button decoration is removed, a plain link)
2	nav-sections	A bulleted list of links; a list item with a nested list becomes a dropdown
3	nav-tools	Tools (e.g. links, icons)

Dropdowns. Each top-level item with a sub-list gets a toggle <button class="nav-drop-toggle"> with aria-controls (sub-list id nav-submenu-…) and aria-expanded. A plain label becomes the button; a linked label keeps its link and gets a separate toggle button labelled "Show {label} menu" (placeholder showSubmenu). On desktop, opening one dropdown closes the others; the sub-list opens as a 12.5rem panel below the item.

Mobile menu (< 900px). A hamburger button (aria-controls="nav-sections", label "Open navigation" / "Close navigation" from placeholders openNavigation / closeNavigation) opens the sections full height; the sub-lists

are expanded in the menu; page scrolling is locked (`body overflow-y: hidden`) while open. The header wrapper is fixed on mobile and relative on desktop; the nav height is `--nav-height` (4rem).

Keyboard and focus. Escape closes the open dropdown (desktop) or the menu (mobile) and returns focus to its button; focus leaving the nav closes the dropdowns / the menu. Crossing the 900px breakpoint resets the state.

Accessibility name. `<nav id="nav" aria-label="Main navigation">` (placeholder `mainNavigation`).

Failure. No Navigation page published (e.g. a new locale): the header stays empty.

3.5.2 Footer

`loadFooter` creates a `footer` block in `<footer>`:

```
page's own Footer (page property `footer`, or the metadata sheet's `footer` column)
  └ else the nearest parent page's Footer, up to the locale Home page
      └ else the locale's references/footer
```

- The footer page is loaded as a fragment together with the locale's Social Links sheet (`/{locale}/data/social-links.json`, in `sort-order`), rendered as an icon list (`footer-social`, labels "Follow us on {platform}", placeholder `followUsOn`).
- On the footer page, the authored **Footer** block (model `_footer.json`) renders: the Conversation Canvas Page (a page with the Conversation Canvas block, loaded as a fragment), the Copyright Text (rich text; `{year}` becomes the current year) and the Link List (Link Title, Link Path, Link Type Default / Open in new window) as `<nav class="footer-links" aria-label="Footer links">`.
- Missing footer page: only the Social Links (if any) are shown.

3.5.3 In-Page Navigation

- **Anchor List** links jump to sections by Anchor name (section property) or any element id; optional sticky.
- **Additional tab Anchor ID** (`anchor-…`) gives blocks unique ids for `#` links; on load, the URL hash scrolls to its element after the sections are loaded.
- **Modal links**: links to a path containing `/modals/` open as a modal dialog.

3.5.4 Alternative Navigation per Area

Because Navigation and Footer are inherited, a site area (e.g. Careers) can use its own header and footer by setting the property once on the area's top page, for example Navigation = `/content/tcs-corp/us/en/references/nav-careers`. All pages below inherit it unless they set their own.

3.6 Content Organization Strategy

Principle	Implementation	Type
One locale tree per market	`/content/tcs-corp/{country}/{code}`; every locale owns its pages, references, error pages, sheets and data	Enforced (code resolves resources per locale)
Locale resources in fixed locations	`references/nav`, `references/footer`, `error-pages/404`, `placeholders`, `metadata`, `taxonomy`, `redirects`, `data/*`	Enforced (default paths in code and `paths.json`)
Hierarchy drives inheritance	Navigation, Footer and 404 Page are inherited from parent pages up to Home	Enforced
Hierarchy drives discovery	List "child pages" and Filter List Root path use the published path hierarchy from the query index	Enforced

Principle	Implementation	Type
Page types for recurring layouts	Page Type property or `page-type` metadata column (e.g. `/en/newsroom/**` → `press-release`)	Enforced
Metadata at scale	Bulk metadata sheet per locale with URL patterns starting with the locale (`/de-de/**`)	Recommended (applies only when listed in `metadata.source`)
Tags from taxonomy	Tags resolved to labels from the locale's taxonomy	Enforced (fallback to ID-derived labels)
Hidden from listings	`hide-in-nav = yes` excludes a page from List results	Enforced
Templates as starting points	Authors copy pages from `site-global-templates`	Recommended
Fragments and modals in their own folders	`references/`, `fragments/`, `modals/` are excluded from the query index	Enforced (by path)
Block libraries for validation	`block-library/` per locale shows every block variation in the locale's language	Recommended; excluded from publishing
Short, lowercase, hyphenated URLs	Page names become URLs	Recommended

3.7 Error Page Strategy

Summary (details in Part 10):

Error	Served by	Content
404 Not Found	Edge Delivery Services (`404.html`)	The inherited **404 Page** property of the nearest parent, else `/{locale}/error-pages/404`, else `/en/error-pages/404`, else the built-in "404 / Page Not Found / Go home"
403 Forbidden	Not served by Edge Delivery	Authored `error-pages/403` for a CDN to serve [To be confirmed: CDN — owner: CDN Owner]
500 Server Error	Not served by Edge Delivery	Authored `error-pages/500` for a CDN to serve
Maintenance	Not implemented	Recommended: CDN rule (Part 10.5)

3.8 Redirect Strategy

3.8.1 Current State

Mechanism	Status	Detail
Per-locale redirects sheets `/{locale}/redirects.json` (Source, Destination)	Authored and published per locale; **not applied by the platform**	Edge Delivery Services applies only a root `/redirects.json`; there's no setting for more sheets
Root `/redirects.json`	Not present	The site root `/content/tcs-corp` is outside the locales and isn't published
`/` → `/en/`	Not implemented	Needs a root redirect or a CDN rule
CDN redirect rules	Not configured	[To be confirmed: production domain and CDN — owner: Site Administrator]

Mechanism	Status	Detail
List block	Implemented	Links to pages that redirect point to the final target

3.8.2 List Block Redirect Resolution (`utils/redirects.js`)

- `loadRedirects()` loads the current locale's sheet once per page (`localeSheetPath('redirects')`), accepting `Source` / `source` and `Destination` / `destination` columns. Rows are kept only when the source starts with `/` and a destination exists.
- `normalizeRedirectPath()` compares paths without query, hash, `.html` and trailing slash (except `/`).
- `resolveRedirect(map, href)` follows internal redirects up to **5 hops**, stops on loops and at external destinations; non-internal hrefs are returned unchanged.
- Used only by the List block (`blocks/list`); other links (navigation, default content) aren't rewritten.

3.8.3 Recommended Target State

1. Configure the production CDN with redirect rules generated from the 13 `/{locale}/redirects.json` sheets (sources must start with the locale, e.g. `/de-de/old` → `/de-de/new`), returning HTTP 301.
2. Add `/` → `/en/` (or a language-negotiating rule) at the CDN; alternatively, publish a root `/redirects.json` with the root redirect and global redirects.
3. Keep the sheets as the single source authors maintain; define a sync process (manual export or automation) [To be confirmed: redirect sync mechanism — owner: CDN Owner].
4. Avoid chains: point sources to final destinations (the List block follows at most 5 hops).
5. Test redirects on preview with the List block and at the CDN after each change.

Part 4 — Content Architecture

This part describes how the content of the TCS Corporate Website is organised: the Site Global Templates and the code behind them, the page and content types, the metadata and taxonomy models, the placeholders (user interface text), the reference pages (navigation, footer, fragments), the data sheets, the shared content and the localization strategy across the 13 locale sites.

Every statement in this part was verified against the repository (`sradha-tcs/tcs-corp`, branch `main`) and, where noted, against the published preview (`https://main--tcs-corp--sradha-tcs.aem.page/`) on 13 October 2026.

```
/content/tcs-corp/                        AEM as a Cloud Service (author)
|
+-- us/en/  (Home page = the locale page itself, published at /en/)
|   +-- ...content pages...                -> /en/...
|   +-- references/  nav, footer, fragments  -> /en/references/...
|   +-- error-pages/ 404, 403, 500          -> /en/error-pages/...
|   +-- block-library/                      (not published)
|   +-- placeholders  (sheet)               -> /en/placeholders.json
|   +-- metadata      (sheet)               -> /en/metadata.json
|   +-- taxonomy      (taxonomy page)       -> /en/taxonomy.json
|   +-- redirects     (sheet)               -> /en/redirects.json
|   +-- data/ authors, locations, partners, social-links, media-contacts
|                                           -> /en/data/{name}.json
+-- de/de-de/ ... kr/ko-kr/  (12 more locale sites, same layout)
+-- site-global-templates/  home, article, blog, press-release  (not published)
```

4.1 Templates

A **template** in this project has two halves:

1. **A template page** under `/content/tcs-corp/site-global-templates/` (Site Global Templates) that authors copy to create a new page of that kind. The page name is the Page Type (`home`, `article`, `blog`, `press-release`). The template pages are excluded from publishing in `paths.json` (`/content/tcs-corp/site-global-templates` and `/content/tcs-corp/site-global-templates/**`) and from the query index (`/site-global-templates/**` in `helix-query.yaml`, as a safeguard).
2. **Template code** in `templates/{name}/{name}.js` and `templates/{name}/{name}.css`, which runs on every page whose Page Type is that name and can add structure to the page before it is decorated.

How the Page Type selects the template (enforced by code, `scripts/scripts.js`):

```
loadEager()
  decorateHead()            SEO / social metadata, <html lang>
  decorateTemplateAndTheme() body classes from "template" and "theme" metadata (aem.js)
  decoratePageType()        body class from the "page-type" metadata (e.g. body.article)
  loadTemplate(main)        name = page-type, else "template" metadata (class-name form)
                            if name is in TEMPLATES = [home, article, blog, press-
release]:
                              import templates/{name}/{name}.js
                              + loadCSS templates/{name}/{name}.css   (in parallel)
                              await template.default(main)      (before main is decorated)
                            on error: console.error("failed to load template {name}",
error)
  decorateMain(main)        sections, blocks, buttons, block options
  loadSection(first)        LCP
```

- The **Page Type** value comes from the **Page Type** page property (`page-type`, a select in `models/_page.json` with the options Default (empty), Home, Article, Blog, Press Release) or, when the page property is empty, from the `page-type` column of the locale's bulk metadata sheet (for example a row `/en/newsroom/**` with `page-type` = `press-release`). Page-level values win over the sheet.
- The value is converted to a class name (lower case, hyphenated). `decoratePageType()` adds it as a body class (only from `page-type`); `loadTemplate()` also accepts the standard `template` metadata as a fallback.
- Only values listed in `TEMPLATES` load template code. Any other value (for example `landing`, `listing`, `report`, set through the metadata sheet) only becomes a body class and is still available to blocks (the Page Header uses `landing` and `listing`; the Filter List filters on page types).
- The template JavaScript and CSS are loaded **eagerly** (before the first section is shown), in parallel. Templates keep the LCP content authored and load data sheet content without blocking (see `appendLoadedSection` below).
- Templates run in the Universal Editor too, because the editor renders the same page code. Content that a template adds is generated, not authored: it has no editor instrumentation and cannot be selected or edited in the Universal Editor.

Shared template building blocks (`decorators/template-decorator.js`):

Function	What it does	Used by
`ensurePageHeader(main)`	If the page has no authored Page Header block (`.page-header`), it inserts an empty Page Header block as the first section. The Page Header block then builds its content from the page metadata (title, description, tags, content type, publish date, reading time, author, featured image, listen link).	Article, Blog, Press Release
`appendLoadedSection(main, className, build)`	Appends a new last section containing an `<aside class="{className}">`, then fills it when `build()` resolves (for example after a data sheet is loaded). If `build()` returns nothing or fails, the section is removed. The page is never delayed.	Article, Blog (author bio); Press Release (media contacts)

> **Note:** A page without a Page Type (Default) loads no template code. This is the "Default (no template)" case described in 4.1.5.

4.1.1 Home Template

Purpose: The layout of a locale's Home page (the locale page itself, for example `/content/tcs-corp/us/en`, published at `/en/`). The Home page is composed entirely of authored blocks (for example Hero, Gen Carousel sections, Teasers); the template adds no generated content.

Ownership: Template page `site-global-templates/home`: [To be confirmed: content owner of the Home template page — owner: Digital marketing / web content lead]. Template code `templates/home/`: development team.

Usage:

- Page Type value: `home` (Page Type page property option "Home").
- `templates/home/home.js` exports an empty `decorate(main)` (no generated structure).
- `templates/home/home.css` removes the top margin of the first section and the top padding of its content (`body.home main > .section:first-of-type { margin-block-start: 0; }` and `... > div { padding-block-start: 0; }`), so the first section (usually a Hero or a Gen Carousel) meets the header without a gap.
- To create a locale Home page: the locale page itself is the Home page; set its Page Type to **Home** and build it like `site-global-templates/home` (copy the blocks from the template page).

Dependencies: `scripts/scripts.js` (`TEMPLATES`, `loadTemplate`, `decoratePageType`); the blocks the authors place on the page. No data sheets, no placeholders.

Governance:

- Enforced: the template CSS only applies when the body has the `home` class (Page Type = `home`).
- Recommended: only the locale Home pages use the Home Page Type; other landing pages use Default (or the `landing` page type via the metadata sheet, for the Page Header Landing layout).
- Changes to `templates/home/` follow the development process (feature branch, pull request, review).

Best Practices:

- Make the first section the LCP element (a Hero image or the first Gen Carousel slide) and keep it authored.
- Do not add a Page Header block to the Home page unless the design calls for it; the Home template does not add one.
- Keep the Home page's **Navigation**, **Footer** and **404 Page** properties set to the locale defaults (the published preview of `/en/` sets `nav = /en/references/nav`, `footer = /en/references/footer`, `error-page = /en/error-pages/404`); every page of the locale inherits them.

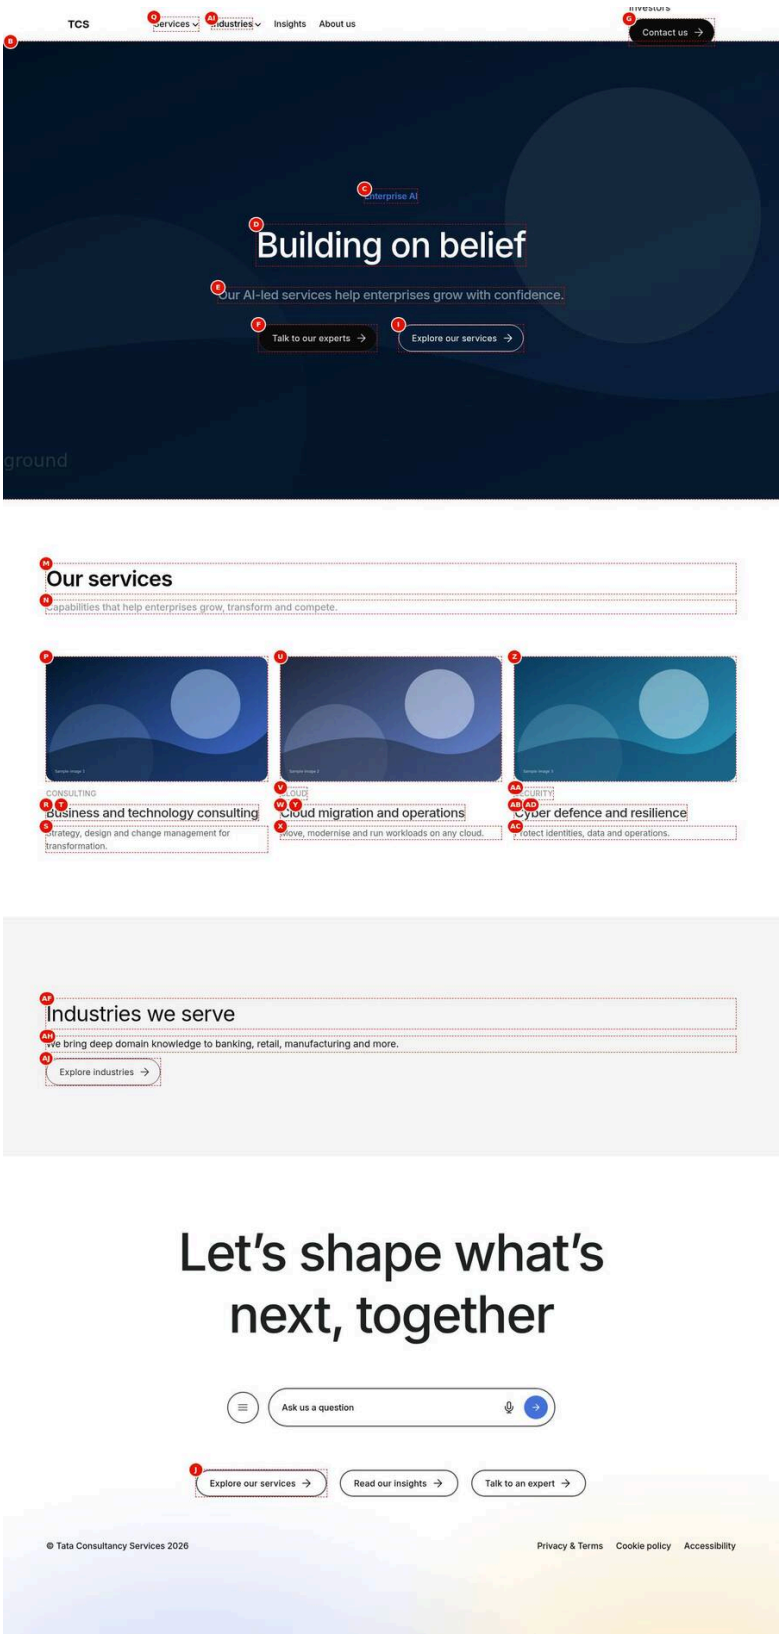


Figure 1: Desktop rendering — The Home page at 1440 px: the dark blue Hero directly under the header with the eyebrow Enterprise AI, the H1 Building on belief, the description and the buttons Talk to our experts (primary) and Explore our services (secondary); then Our services with three image cards Consulting, Cloud and Security; then a light grey Highlight section with the H2 Industries we serve, its text and the secondary Explore industries button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/template-home-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/template-home-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Home page at 1440 px: the dark blue Hero directly under the header with the eyebrow Enterprise AI, the H1 Building on belief, the description and the buttons Talk to our experts (primary) and Explore our services (secondary); then Our services with three image cards Consulting, Cloud and Security; then a light grey Highlight section with the H2 Industries we serve, its text and the secondary Explore industries button.
Business Context	The /en/ Home page is the locale page us/en itself; its Page Type Home loads templates/home so the opening Hero meets the header, and its Navigation, Footer and 404 Page values are inherited by every /en page.
Author Objective	Set Page Type to Home on the locale page, author a dark Hero, a three-card Our services row and a Highlight section with a button, and set the locale's nav, footer and 404 references.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Page Type (Page properties)	Home	No	The Site Global Template of the page (layout and template code). Overrides the page-type column of the metadata sheet.	The Site Global Template of the page (layout and template code). Overrides the page-type column of the metadata sheet.	None
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
B	Hero Image Path (Hero › Image)	Select the asset wide.svg (/en/media/wide.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
C	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
D	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
E	Description (Hero › Content)	Our AI-led services help enterprises grow with confidence.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
F	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
G	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(H)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
I	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
J	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(K)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(L)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
M	Title (Cards › Content)	Our services	No	Heading of the block	Short, descriptive; up to 60 characters (Recommended)	None
N	Description (Cards › Content)	Capabilities that help enterprises grow, transform and compete.	No	Intro text under the title	One or two sentences	None
(O)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
P	Image (Card 1 › Content)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
Q	Eyebrow (Card 1 › Content)	Consulting	No	Label above the title	1–3 words	None
R	Title (Card 1 › Content)	Business and technology consulting	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
S	Description (Card 1 › Content)	Strategy, design and change management for transformation.	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
T	Link (Card 1 › Link)	Select the page or enter /en/services/consulting	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
U	Image (Card 2 › Content)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
V	Eyebrow (Card 2 › Content)	Cloud	No	Label above the title	1–3 words	None
W	Title (Card 2 › Content)	Cloud migration and operations	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
X	Description (Card 2 › Content)	Move, modernise and run workloads on any cloud.	No	Card text	1–3 sentences; lists and links allowed	None
Y	Link (Card 2 › Link)	Select the page or enter /en/services/cloud	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
Z	Image (Card 3 › Content)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
AA	Eyebrow (Card 3 › Content)	Security	No	Label above the title	1–3 words	None
AB	Title (Card 3 › Content)	Cyber defence and resilience	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
AC	Description (Card 3 › Content)	Protect identities, data and operations.	No	Card text	1–3 sentences; lists and links allowed	None
AD	Link (Card 3 › Link)	Select the page or enter /en/services/cybersecurity	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
(AE)	Style (Section properties)	Highlight	No	Background style of the band	Choose Highlight for a grey band	Enforced: options list (Highlight)
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
AF	Title (Title)	Industries we serve	Recommended	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			(an empty Title renders an empty heading or nothing)			
(AG)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
AH	Text (Text)	We bring deep domain knowledge to banking, retail, manufacturing and more.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
AI	Link (Button)	Select the page or enter /en/industries	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
AJ	Text (Button)	Explore industries	Yes (Recommended)	Visible link text	Short, descriptive	None
(AK)	Type (Button)	Secondary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
(AL)	Navigation (Page properties)	/content/tcs-corp/us/en/references/nav	No	—	—	None
(AM)	Footer (Page properties)	/content/tcs-corp/us/en/references/footer	No	—	—	None
(AN)	404 Page (Page properties)	/content/tcs-corp/us/en/error-pages/404	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the dark blue Hero (Enterprise AI, the H1 Building on belief, the description, Talk to our experts and Explore our services) sits directly under the header; below it Our services with three image cards; then a light grey Highlight section with the H2 Industries we serve, its text and the Explore industries button.

- **Rendering behaviour:** The body gets the class home; home.css removes the top margin of the first section and the top padding of its content, so the Hero touches the header. home.js adds nothing; the template CSS loads eagerly in parallel with the template script, before the first section (LCP) is shown.
- **Publishing behaviour:** Publish sends the locale page to aem.page or aem.live, where it is served as /en/. references/nav, references/footer and error-pages/404 are separate pages and must be published themselves; the Home page only points to them.

Business Rules

- Page Type Home is meant for the locale page itself (us/en, published as /en/); other landing pages stay Default.
- The Home template adds no Page Header and no generated content: every block on the page is authored.
- The gap removal applies only to the first section and only while the body has the class home.
- Navigation, Footer and 404 Page set here are inherited by every /en page that doesn't set its own value.
- Keep the Hero in the first section so wide.svg is the LCP image.

Common Authoring Mistakes

Error	Root Cause	Resolution
A white gap shows between the header and the Hero	Page Type was left on Default, so templates/home/home.css isn't loaded	Set Page Type to Home in Page properties, save and publish
A second H1 title area appears above the Hero	A Page Header block was added to the Home page	Remove the Page Header block; the Home template doesn't need one
Every /en page shows a campaign footer	The Footer property of the Home page points to references/footer-campaign	Set Footer back to /content/tcs-corp/us/en/references/footer and publish the Home page

Troubleshooting

- **Symptoms:** The dark blue Hero starts below a white band instead of touching the header.
- **Cause:** The published Home page has no page-type home, so the body lacks the class home and templates/home/home.css isn't requested.
- **Resolution:** Open Page properties of /content/tcs-corp/us/en, choose Page Type Home, save and publish the page.
- **Verification Steps:** Reload /en/ in a private window; the browser developer tools show body class home, a 200 for templates/home/home.css and no gap above the Hero.

4.1.2 Article Template

Purpose: Thought-leadership and insight articles. The template guarantees a consistent article header and an "About the author" box without the author having to build them.

Ownership: Template page `site-global-templates/article`: [To be confirmed: content owner — owner: Editorial / content strategy lead]. Template code `templates/article/`: development team. Author data: the locale's Authors data sheet (see 9.5).

Usage:

- Page Type value: `article` (Page Type option "Article").
- `templates/article/article.js`:
  1. `ensurePageHeader(main)`: adds a Page Header block as the first section unless one is authored. With Page Type `article` and no Layout chosen, the Page Header uses the **Article** layout (meta row with tags and content type, published date, reading time, listen / download / share actions; title and author; description and CTAs).
  2. Reads `author-id` from the page metadata (`getPageMetadata().authorId`). If there is none, it stops.

3. Otherwise appends a section `<aside class="template-author">` and fills it, without blocking the page, with `buildAuthorBio()` (`decorators/author-bio-decorator.js`) from the Authors sheet entry (`getAuthor(authorId)`, case-insensitive ID match).

- The author bio card shows: the author image (round, 6rem), the heading "About the author" (placeholder `aboutTheAuthor`), the name, the designation and region ("designation, region"), the bio text, and a "View LinkedIn profile" link (placeholder `viewLinkedinProfile`) when the sheet has a LinkedIn URL. If the author is not found, or the entry has no name, the section is removed.
- `templates/article/article.css` styles the bio card (`main .template-author .author-bio`): a bordered, rounded card; from 600 px the image and the text sit side by side (`grid-template-columns: auto 1fr`).

Dependencies: `decorators/template-decorator.js`, `decorators/author-bio-decorator.js`, `utils/data.js` (`getAuthor`), `utils/metadata.js` (`getPageMetadata`), `utils/placeholders.js`; the Page Header block; the locale's `data/authors` sheet; page metadata `author-id`, `publish-date`, `reading-time`, `content-type`, tags, `listen-link`.

Governance:

- Enforced: the author box only appears when `author-id` is set and matches a row (with a `name`) of the locale's Authors sheet.
- Enforced: an authored Page Header block always wins over the generated one.
- Recommended: set `author-id`, `publish-date` and `reading-time` for every article (bulk metadata sheet row covering the article path, or page-level metadata).
- Recommended: copy new articles from `site-global-templates/article` so the Page Type is already set.

Best Practices:

- Keep author IDs stable and lower case with hyphens (for example `jane-doe`); the template matches them case-insensitively, but the List and Filter List blocks match them exactly.
- Maintain each author in every locale's Authors sheet where they publish (sheets are per locale).
- Use a square author image (it is cropped to a circle with `object-fit: cover`).

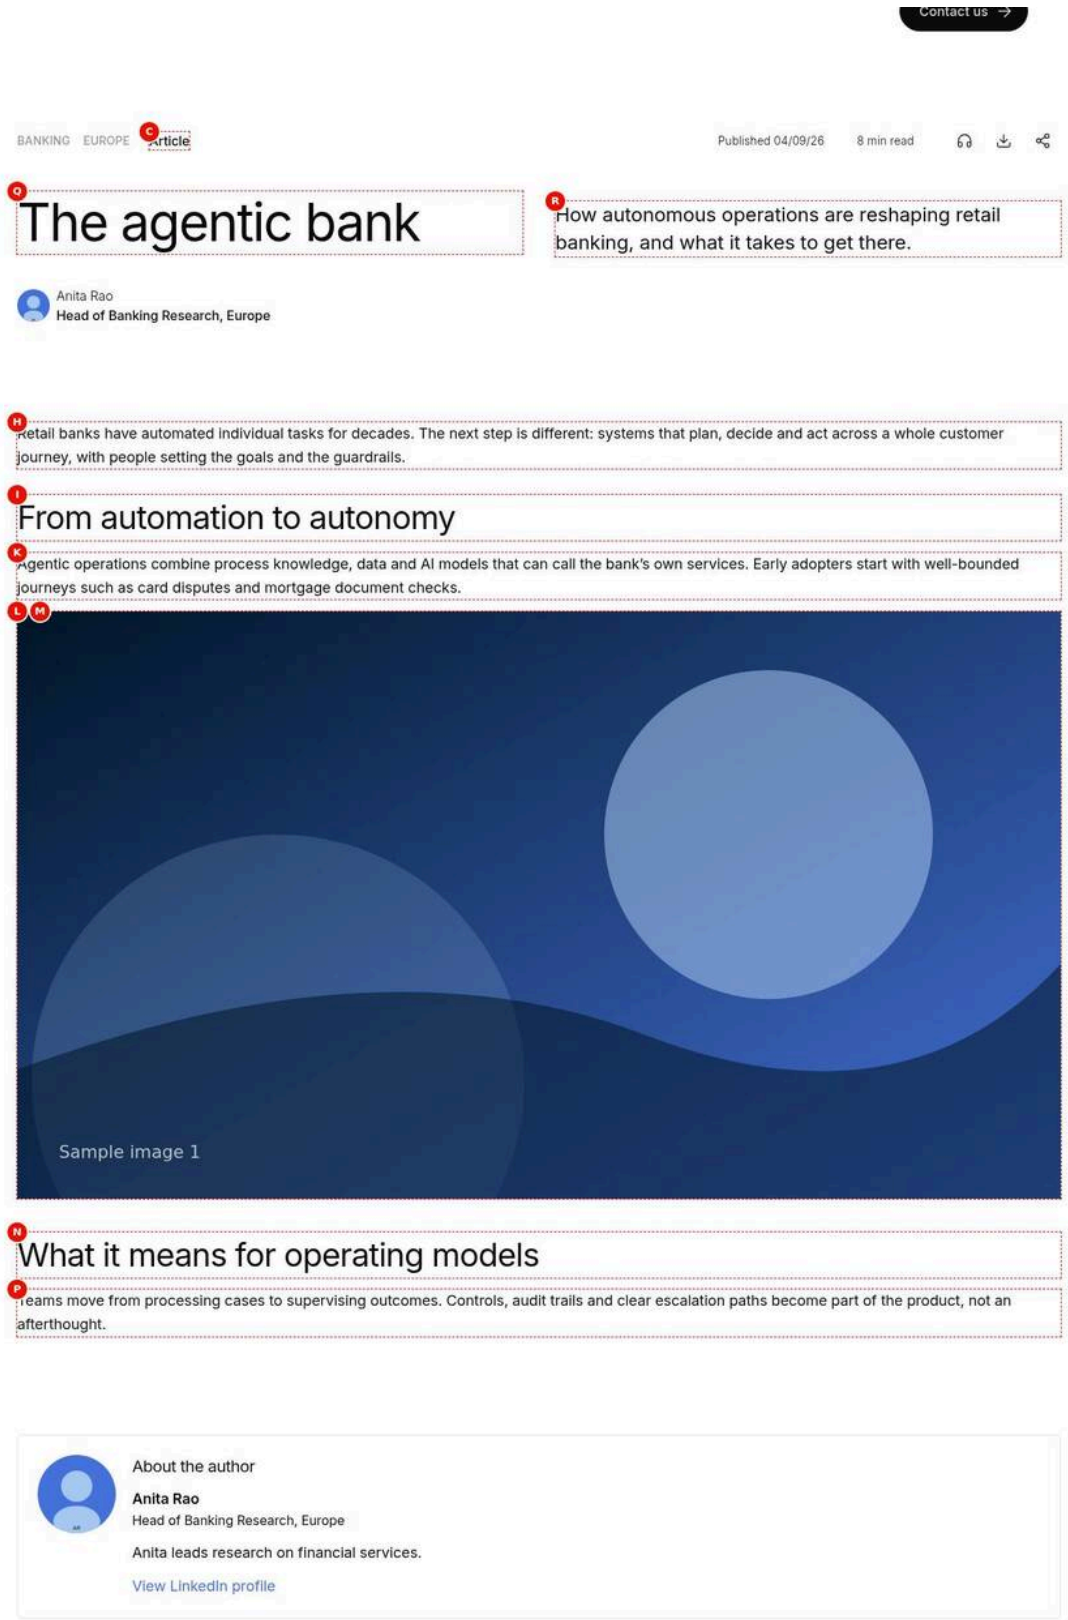

Figure 2: Desktop rendering — The article The agentic bank at 1440 px: the generated Article-layout Page Header with the labels Banking, Europe and Article, Published 04/09/26, 8 min read, the listen, download and share icons, the H1, Anita Rao's author lockup and the description; the body with two H2s and photo-1.svg; at the end the About the author card with her photo, Head of Banking Research, Europe, her bio and View LinkedIn profile. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/template-article-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/template-article-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The article The agentic bank at 1440 px: the generated Article-layout Page Header with the labels Banking, Europe and Article, Published 04/09/26, 8 min read, the listen, download and share icons, the H1, Anita Rao's author lockup and the description; the body with two H2s and photo-1.svg; at the end the About the author card with her photo, Head of Banking Research, Europe, her bio and View LinkedIn profile.
Business Context	Insight articles such as The agentic bank must open with a consistent Article header and end with an About the author box, without the author building either by hand.
Author Objective	Set Page Type to Article, give the page its metadata row (tags, content-type, author-id arao, publish-date, reading-time, listen-link) and an Authors sheet row, then author the body.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Page Type (Page properties)	Article	No	The Site Global Template of the page (layout and template code). Overrides the page-type column of the metadata sheet.	The Site Global Template of the page (layout and template code). Overrides the page-type column of the metadata sheet.	None
(B)	tags (Metadata sheet (row of this page))	tcs-corp:industry/banking, tcs-corp:region/europe	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
C	content-type (Metadata sheet (row of this page))	Article	No	Eyebrow / collection	One short term	None
(D)	author-id (Metadata sheet (row of this page))	arao	No	Authors sheet lookup	An ID of `data/authors`	Case-insensitive match
(E)	publish-date (Metadata sheet (row of this page))	2026-09-04	No	Published date (Article)	YYYY-MM-DD	Non-ISO text shown as is
(F)	reading-time (Metadata sheet (row of this page))	8	No	Reading time (Article)	Minutes as a number	Digits → "{n} min read"; other text as is
(G)	listen-link (Metadata sheet (row of this page))	/en/insights/media/the-agentic-bank.mp3	No	Listen action (Article)	Audio URL	None
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
H	Text (Text)	Retail banks have automated individual tasks for decades. The next step is different: systems that plan, decide and act	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		across a whole customer journey, with people setting the goals and the guardrails.				
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
I	Title (Title)	From automation to autonomy	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(J)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
K	Text (Text)	Agentic operations combine process knowledge, data and AI models that can call the bank's own services. Early adopters start with well-bounded journeys such as card disputes and mortgage document checks.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Image	Yes	Adds the Image to the page	Select the section in the content tree, choose Add (+) and pick Image	Only components the section allows (section filter)
L	Image (Image)	Select the asset photo-1.svg (/en/media/photo-1.svg)	Recommended (without an image the component renders nothing)	The image to show	High-quality original from `/content/dam/tcs-corp/`	None in the model
M	Alt Text (Image)	Abstract illustration of connected banking services	Recommended for informative images	Text alternative	Describe content and purpose; empty if decorative	None in the model
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
N	Title (Title)	What it means for operating models	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(O)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
P	Text (Text)	Teams move from processing cases to supervising outcomes. Controls, audit trails and clear escalation paths become part of the product, not an afterthought.	No	Card text	1–3 sentences; lists and links allowed	None
Q	Title (Page properties)	The agentic bank	No	—	—	None
R	Description (Page properties)	How autonomous operations are reshaping retail banking, and what it takes to get there.	No	—	—	None
—	Row 1 (Authors sheet /content/tcs-corp/us/en/data/authors)	author-id = arao; name = Anita Rao; designation = Head of Banking Research; bio = Anita leads research on financial services.; image = /en/media/person-1.svg; linkedin = https://www.linkedin.com/in/example-anita; region = Europe	—	Check on the preview (not stored in the content)	author-id = arao; name = Anita Rao; designation = Head of Banking Research; bio = Anita leads research on financial services.; image = /en/media/person-1.svg; linkedin = https://www.linkedin.com/in/example-anita; region = Europe	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px a generated Page Header in the Article layout: the tag labels and Article, Published 04/09/26, 8 min read and the listen, download and share icons, the H1 The agentic bank, Anita Rao's author lockup and the description; then the body; at the end a bordered About the author card with her round photo, name, Head of Banking Research, Europe, bio and View LinkedIn profile.
- **Rendering behaviour:** templates/article inserts an empty Page Header as the first section (none is authored) and the Page Header fills it from metadata; the author card is appended as an aside.template-author once the Authors sheet loads, without delaying the page. From 600 px the card shows image and text side by side.

- **Publishing behaviour:** Publish sends the article to aem.page or aem.live. The metadata sheet and data/authors are separate publish steps; sheet values apply only once the locale's metadata.json is listed in the site configuration's metadata.source. The article appears in List and Filter List after the query index is updated.

Business Rules

- The About the author card appears only when author-id matches an Authors sheet row (case-insensitive) that has a name.
- An authored Page Header block wins over the generated one; with no Layout chosen the Article layout is used.
- A numeric reading-time such as 8 becomes 8 min read (placeholder minRead); other text is shown as typed.
- publish-date must be YYYY-MM-DD; it is shown as Published DD/MM/YY.
- The listen icon appears only because listen-link is set; download and share are always added.

Common Authoring Mistakes

Error	Root Cause	Resolution
No About the author card at the end	author-id arao is missing from the published /en/data/authors sheet	Add the arao row with a name to the Authors sheet and publish the sheet
The Page Header has no date, reading time or tags	The metadata sheet row doesn't match the article path or the sheet isn't in metadata.source	Correct the URL pattern, publish the sheet and ask the site administrator to list it in metadata.source
Two title areas at the top of the article	A Page Header block was authored with its own content and the template header is expected too	Keep only one Page Header; the authored one replaces the generated one

Troubleshooting

- **Symptoms:** The article ends after the last paragraph; the About the author card is missing.
- **Cause:** getAuthor('arao') finds no row: the Authors sheet row is missing, has no name, or the sheet wasn't published.
- **Resolution:** Add or fix the arao row (author-id, name, designation, region, bio, image, linkedin) in /content/tcs-corp/us/en/data/authors and publish the sheet.
- **Verification Steps:** Open /en/data/authors.json and find arao; reload the article and check the aside.template-author card shows Anita Rao.

4.1.3 Blog Template

Purpose: Blog posts. They share the article structure (Page Header and "About the author") and styles, but keep a separate Page Type so they can be filtered, indexed and styled separately.

Ownership: Template page `site-global-templates/blog`: [To be confirmed: content owner — owner: Editorial / blog lead]. Template code `templates/blog/`: development team.

Usage:

- Page Type value: `blog` (Page Type option "Blog").
- `templates/blog/blog.js` calls the Article template's `decorate(main)`: the same generated Page Header and "About the author" section.
- `templates/blog/blog.css` imports `../article/article.css` (identical styles today). Blog-specific styles can be added to `blog.css`, scoped to `body.blog` or to the content the template adds.
- With no Layout chosen, the generated Page Header uses the Article layout (the page type `blog` is not a landing page type).

Dependencies: As the Article template (4.1.2), plus `templates/article/article.js` and `templates/article/article.css`.

Governance:

- Enforced: the body class `blog` and the query index `pageType` value `blog` distinguish blog posts from articles (List and Filter List can select them by page type).
- Recommended: use the Blog Page Type only for blog posts; use `content-type` for the editorial label shown on cards and in the Page Header.

Best Practices: As for articles. Set `author-id`, `publish-date`, `reading-time` and tags for every post.

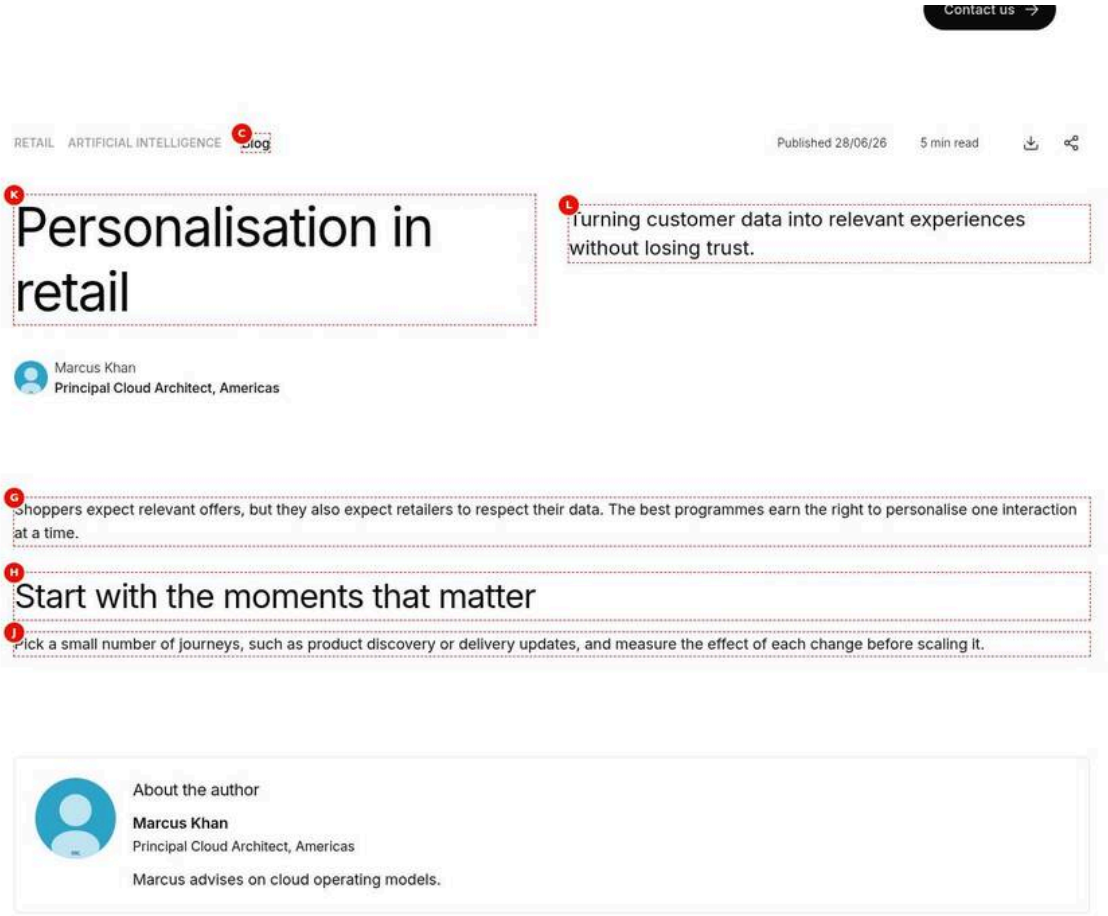

Figure 3: Desktop rendering — The blog post Personalisation in retail at 1440 px: the generated Article-layout Page Header with Retail, Artificial intelligence and Blog, Published 28/06/26, 5 min read and the download and share icons (no listen icon), the H1 and Marcus Khan's lockup; the body with the H2 Start with the moments that matter; the About the author card with Principal Cloud Architect, Americas and no LinkedIn link; the developer tools show body class blog. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/template-blog-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/template-blog-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The blog post Personalisation in retail at 1440 px: the generated Article-layout Page Header with Retail, Artificial intelligence and Blog, Published 28/06/26, 5 min read and the download and share icons (no listen icon), the H1 and Marcus Khan's lockup; the body with the H2 Start with the moments that matter; the About the author card with Principal Cloud Architect, Americas and no LinkedIn link; the developer tools show body class blog.
Business Context	Blog posts such as Personalisation in retail share the article header and author box but need their own Page Type so lists, filters and styles can tell them apart.

Item	Detail
Author Objective	Set Page Type to Blog, fill the page's metadata row (tags, content-type Blog, author-id mkhan, publish-date, reading-time) and the Authors sheet row, then author the body.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Page Type (Page properties)	Blog	No	The Site Global Template of the page (layout and template code). Overrides the page-type column of the metadata sheet.	The Site Global Template of the page (layout and template code). Overrides the page-type column of the metadata sheet.	None
(B)	tags (Metadata sheet (row of this page))	tcs-corp:industry/retail, tcs-corp:topic/ai	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
C	content-type (Metadata sheet (row of this page))	Blog	No	Eyebrow / collection	One short term	None
(D)	author-id (Metadata sheet (row of this page))	mkhan	No	Authors sheet lookup	An ID of `data/authors`	Case-insensitive match

(M)	body class (Browser developer tools › Elements)	blog (from the Page Type)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the generated Article-layout Page Header with the tag labels and Blog, Published 28/06/26, 5 min read, download and share icons (no listen icon), the H1 Personalisation in retail and Marcus Khan's lockup; at the end the About the author card with Principal Cloud Architect, Americas and no LinkedIn link; the developer tools show body class blog.
- **Rendering behaviour:** templates/blog/blog.js runs the Article template and blog.css imports article.css, so header and card look like an article. The page type blog isn't a landing page type, so the Page Header uses the Article layout.
- **Publishing behaviour:** Publish sends the post to aem.page or aem.live; the metadata sheet and data/authors are published separately, and sheet values apply only once metadata.source lists the locale's sheet. List and Filter List show the post with pageType blog after the query index is updated.

Business Rules

- The body class and the index pageType are blog, not article, so lists and filters can select blog posts only.

- The LinkedIn link is left out because the mkhan row has an empty linkedin cell.
- No listen icon appears because the page has no listen-link.
- Designation and region are joined as Principal Cloud Architect, Americas; an empty cell is skipped.
- content-type Blog is the label shown in the header and on cards, independent of the Page Type.

Common Authoring Mistakes

Error	Root Cause	Resolution
The post is listed among articles in a Filter List	Page Type was set to Article when copying an article page	Set Page Type to Blog and publish; the index then holds pageType blog
The About the author card shows an empty LinkedIn label	A space or placeholder text was typed into the linkedin cell	Leave the linkedin cell empty when the author has no profile
The header shows 5 Min. instead of 5 min read	reading-time was typed as text (5 Min.), which is shown as typed	Enter only the number 5; the minRead placeholder adds the text

Troubleshooting

- **Symptoms:** The blog post looks like an article but a Filter List set to Blog doesn't show it.
- **Cause:** The page-type isn't blog in the published page or in the query index (Page Type left on Article, or the index not yet updated).
- **Resolution:** Set Page Type to Blog, publish the page and wait for the query index update.
- **Verification Steps:** The developer tools show body class blog and /query-index.json lists the path with pageType blog.

4.1.4 Press Release Template

Purpose: Newsroom press releases with a consistent header and the media contacts at the end of every release.

Ownership: Template page `site-global-templates/press-release`: [To be confirmed: content owner — owner: Corporate communications / newsroom lead]. Template code `templates/press-release/`: development team. Media contacts: the locale's Media Contacts data sheet (see 9.9).

Usage:

- Page Type value: `press-release` (Page Type option "Press Release"). A metadata sheet row such as `/en/newsroom/**` with `page-type` = `press-release` gives every page in the newsroom folder this template.
- `templates/press-release/press-release.js`:
  1. `ensurePageHeader(main)`: a Page Header from the page metadata (title, publish date, tags, …) unless one is authored. With no Layout chosen, the Article layout is used.
  2. `appendLoadedSection(main, 'template-media-contacts', ...)`: loads the Media Contacts sheet (`getMediaContacts()`) and the placeholders in parallel; keeps the contacts whose `region` matches the page's `region` metadata (case-insensitive, `inRegion`); if no contact matches (or the page has no region), **all** contacts are shown; builds the list with `buildContactList()` (`decorators/contact-list-decorator.js`) under the heading "Media contacts" (placeholder `mediaContacts`).
  3. If the sheet has no contacts, the section is removed.
- Each contact shows the name, "designation, region", the email as a `mailto:` link and the phone as a `tel:` link (non-digit characters except `+` are removed from the `tel:` URL; the visible text stays as authored).
- `templates/press-release/press-release.css`: a top border above the list; contacts in one column on mobile, two columns from 600 px, three columns from 900 px.

Dependencies: `decorators/template-decorator.js`, `decorators/contact-list-decorator.js`, `utils/data.js` (`getMediaContacts`, `inRegion`), `utils/metadata.js`, `utils/placeholders.js`; the Page Header block; the locale's `data/media-contacts` sheet; page metadata `region`, `publish-date`, tags.

Governance:

- Enforced: contact selection by region (exact, case-insensitive match of the `region` values) with the fall back to all contacts.
- Recommended: use the same region vocabulary in the metadata sheet (`region` column) and in the Media Contacts sheet (for example `Americas`, `Europe`, `Asia Pacific`, `Middle East Africa`, matching the `tcs-corp:region/*` tag titles).
- Recommended: corporate communications reviews the Media Contacts sheet at least quarterly ([To be confirmed: review cadence — owner: Corporate communications]).

Best Practices:

- Set `publish-date` (YYYY-MM-DD) on every release; the Page Header shows it as "Published DD/MM/YY".
- Do not type the media contacts into the release body; maintain them in the sheet so every release stays current.

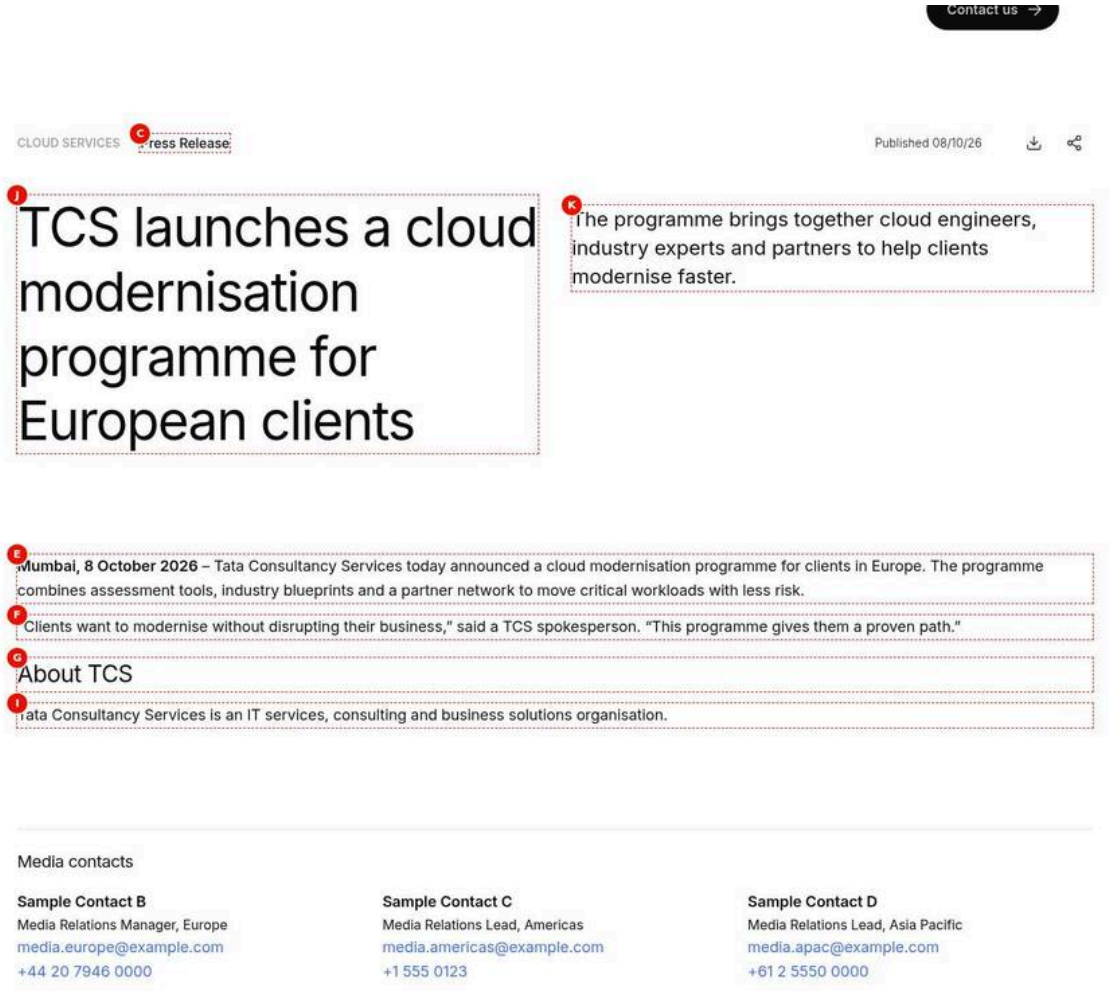

Figure 4: Desktop rendering — The press release at 1440 px: the generated Page Header with the label Cloud services and Press Release, Published 08/10/26, download and share, the H1 TCS launches a cloud modernisation programme for European clients and the description; the release text with the H3 About TCS; then a top border, the heading Media contacts and three columns: Sample Contact B (Europe), C (Americas) and D (Asia Pacific) with email and phone links. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/template-press-release-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/template-press-release-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The press release at 1440 px: the generated Page Header with the label Cloud services and Press Release, Published 08/10/26, download and share, the H1 TCS launches a cloud modernisation programme for European clients and the description; the release text with the H3 About TCS; then a top border, the heading Media contacts and three columns: Sample Contact B (Europe), C (Americas) and D (Asia Pacific) with email and phone links.
Business Context	Newsroom releases need the same header and an up-to-date Media contacts list on every release, maintained once in the locale's Media Contacts sheet.
Author Objective	Set Page Type to Press Release, fill the metadata row (tags, content-type, publish-date, empty region), author the release text and keep three contacts in the Media Contacts sheet.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Page Type (Page properties)	Press Release	No	The Site Global Template of the page (layout and template code). Overrides the page-type column of the metadata sheet.	The Site Global Template of the page (layout and template code). Overrides the page-type column of the metadata sheet.	None
(B)	tags (Metadata sheet (row of this page))	tcs-corp:service/cloud	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
C	content-type (Metadata sheet (row of this page))	Press Release	No	Eyebrow / collection	One short term	None
(D)	publish-date (Metadata sheet (row of this page))	2026-10-08	No	Published date (Article)	YYYY-MM-DD	Non-ISO text shown as is
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	**Mumbai, 8 October 2026** – Tata Consultancy Services today announced a cloud modernisation programme for clients in Europe. The programme combines assessment tools, industry blueprints and a partner network to move critical workloads with less risk.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
F	Text (Text)	"Clients want to modernise without disrupting their business," said a TCS spokesperson. "This programme gives them a proven path."	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
G	Title (Title)	About TCS	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(H)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
I	Text (Text)	Tata Consultancy Services is an IT services, consulting and business solutions organisation.	No	Card text	1–3 sentences; lists and links allowed	None
J	Title (Page properties)	TCS launches a cloud modernisation programme for European clients	No	—	—	None
K	Description (Page properties)	The programme brings together cloud engineers, industry experts and partners to help clients modernise faster.	No	—	—	None
(L)	region (Metadata sheet (row of this page))	Leave empty (all media contacts are shown)	No	—	—	None
(M)	Row 1 (Media Contacts sheet /content/tcs-corp/us/en/data/media-contacts)	id = media-europe-1; name = Sample Contact B; designation = Media Relations Manager; email = media.europe@example.com; phone = +44 20 7946 0000; region = Europe	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(N)	Row 2 (Media Contacts sheet /content/tcs-corp/us/en/data/media-contacts)	id = media-americas-1; name = Sample Contact C; designation = Media Relations Lead; email = media.americas@example.com; phone = +1 555 0123; region = Americas	No	—	—	None
(O)	Row 3 (Media Contacts sheet /content/tcs-corp/us/en/data/media-contacts)	id = media-apac-1; name = Sample Contact D; designation = Media Relations Lead; email = media.apac@example.com; phone = +61 2 5550 0000; region = Asia Pacific	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the generated Page Header with the tag label and Press Release, Published 08/10/26, download and share, the H1 TCS launches a cloud modernisation programme for European clients and the description; then the release text with the H3 About TCS; at the end a top border, the heading Media contacts and three columns: Sample Contact B, C and D with designation, region, email and phone links.
- **Rendering behaviour:** templates/press-release inserts the Page Header and appends aside.template-media-contacts once the sheet and placeholders load. Contacts sit in one column on mobile, two from 600 px and three from 900 px; tel: links keep only digits and +.
- **Publishing behaviour:** Publish sends the release to aem.page or aem.live; data/media-contacts and the metadata sheet are separate publish steps, and a contact change shows on every release without republishing them.

Business Rules

- With region empty no contact matches, so all three contacts are shown.
- A region value keeps only the contacts with the same region (case-insensitive); if none match, all are shown.
- If the sheet has no contacts the Media contacts section is removed.
- The phone +44 20 7946 0000 is shown as typed and dialled as tel:+442079460000.
- Don't type contacts into the release body; they come from the sheet.

Common Authoring Mistakes

Error	Root Cause	Resolution
Only the Europe contact appears	region was set to Europe in the page's metadata row	Leave region empty to show all contacts, or keep it to show the regional one only
The Media contacts section is missing	data/media-contacts wasn't published for /en	Publish the Media Contacts sheet and reload the release
The date shows as an unformatted value or not at all	publish-date was entered as 8 October 2026	Enter 2026-10-08 in the publish-date column

Troubleshooting

- **Symptoms:** The release ends after About TCS; no Media contacts heading appears.
- **Cause:** getMediaContacts() returns no rows: /en/data/media-contacts.json isn't published or its rows lack the expected columns.
- **Resolution:** Check the three rows (id, name, designation, email, phone, region) in /content/tcs-corp/us/en/data/media-contacts and publish the sheet.
- **Verification Steps:** Open /en/data/media-contacts.json, then reload the release and check three contact columns at 1440 px.

4.1.5 Default (no template)

Purpose: Every page whose Page Type is empty ("Default") or a value without template code: corporate pages, service and industry pages, landing pages, listing pages, legal pages.

Ownership: The page owner of each section of the site ([To be confirmed: section owners — owner: Web content lead]).

Usage:

- No template JavaScript or CSS is loaded; the page consists only of what is authored.
- If the Page Type (page property or `page-type` sheet column) holds another value, it still becomes a body class and an index column (`pageType`), and blocks can use it: the Page Header defaults to the **Landing** layout for `landing` and `listing`, and to the **Article** layout otherwise; the Filter List can restrict its results to page types (`article`, `blog`, `report`, `case-study`, `news`, `event`).
- A Page Header is not added automatically; add the Page Header block where the design needs it.

Dependencies: `scripts/scripts.js` only.

Governance:

- Enforced: values outside `TEMPLATES` never load code (no error).
- Recommended: values used in the `page-type` column follow a controlled list (see 4.2) so listings and filters stay consistent.

Best Practices: Create Default pages with **Create** > **Page** in the locale folder; add a Page Header block as the first block when the page needs a title area.

> **Tip:** To add a new template (for example `case-study`), follow `templates/README.md`: create the template page under Site Global Templates (page name = Page Type), add `templates/case-study/case-study.js` and `.css`, add the name to `TEMPLATES` in `scripts/scripts.js` and as an option of Page Type in `models/_page.json`, then run `npm run build:json`. This is a development task.

4.2 Content Types

The implementation distinguishes two classification fields. Both are page metadata (page property or bulk metadata sheet column) and both are indexed in `/query-index.json`.

Field	Metadata name	Index column	Purpose	Where it is set
Page Type	`page-type`	`pageType`	The template (layout and template code) and a structural class of page	Page Type page property (Default, Home, Article, Blog, Press Release); or the `page-type` sheet column (any value)

Field	Metadata name	Index column	Purpose	Where it is set
Content Type	`content-type`	`contentType`	The editorial label of a page (Report, Article, Case Study, …), shown on cards and in the Page Header	`content-type` column of the bulk metadata sheet (there is no page property for it)

4.2.1 Page Types

Value	Source	Template code	Effect in code
(empty)	Page Type "Default"	None	No template; Page Header (if authored) uses the Article layout by default
`home`	Page Type "Home"	`templates/home`	First section meets the header
`article`	Page Type "Article"	`templates/article`	Generated Page Header, "About the author"
`blog`	Page Type "Blog"	`templates/blog`	As article
`press-release`	Page Type "Press Release"	`templates/press-release`	Generated Page Header, "Media contacts"
`landing`	Metadata sheet only	None	Page Header defaults to the Landing layout (with the featured image)
`listing`	Metadata sheet only	None	Page Header defaults to the Landing layout
`report`, `case-study`, `news`, `event`	Metadata sheet only	None	Selectable in the Filter List **Page types** filter

> **Note:** The Filter List's Page types option list contains `article`, `blog`, `report`, `case-study`, `news` and `event`; `press-release` is not an option there (a Filter List can select press releases by Content type or by Root path instead).

4.2.2 Content Types

Values offered by the code (Filter List "Content types" option list, `blocks/filter-list/_filter-list.json`): Article (`article`), Blog (`blog`), Report (`report`), Case Study (`case-study`), News (`news`), Event (`event`), Whitepaper (`whitepaper`), Podcast (`podcast`), Video (`video`).

Content-type tags in the taxonomy (published `/en/taxonomy.json`, verified 13 October 2026): `tcs-corp:content-type/article` (Article), `.../blog` (Blog), `.../case-study` (Case Study), `.../press-release` (Press Release), `.../whitepaper` (Whitepaper), `.../research` (Research), `.../webinar` (Webinar), `.../event` (Event).

How the code uses `content-type`:

Component	Behaviour	Rule
Page Header	Landing and Secondary layouts: the content type is the eyebrow above the title (else the tags). Article layout: the content type is shown next to the tags in the meta row (`page-header-collection`). Display layout: tags only.	Displayed as authored (text)
List (query index source) and Cards	The card's content type label: next to the date on image cards; the kicker on report cards. With Card style **Mixed**, a card whose content type contains "report" (case-insensitive, `/report/i`) becomes a **report card**; cards without an image become panels; others image cards.	`kindOf()` in `utils/card-list-config.js`

Component	Behaviour	Rule
Filter List	**Content types** filter: a page is kept when `toClassName(content-type)` is one of the selected values (for example `Case Study` matches `case-study`). The card eyebrow comes from the **Eyebrow source** column (default `content-type`). With Card style **Mixed**, a page whose eyebrow text contains "report" is shown as a report card with a "Download" action.	`candidatesOf()`, `isReport()` in `blocks/filter-list/filter-list.js`
Query index	Indexed as `contentType`	`helix-query.yaml`

Governance:

- Enforced: the Filter List matches content types by class name; any spelling that converts to the same class name matches (`Case Study`, `case-study`, `CASE STUDY`).
- Enforced: the word "Report" anywhere in the content type (List / Cards) or eyebrow (Filter List) triggers report cards in Mixed style.
- Recommended: use the display form (Title Case, as in the option names: `Article`, `Report`, `Case Study`, `Whitepaper`, …) in the `content-type` column, because the value is shown to visitors as written.
- Recommended: keep the content-type values, the Filter List options and the `tcs-corp:content-type/*` tags aligned. Today they differ (the taxonomy has Press Release, Research and Webinar; the Filter List has Report, News, Podcast and Video). [To be confirmed: the master list of content types — owner: Content strategy lead].

> **Important:** Content type is a **metadata value**, not a tag. Tagging a page with `tcs-corp:content-type/article` does not set its `content-type` metadata; the Filter List "Content types" filter and the Mixed card style read the metadata.

4.3 Metadata Model

Page metadata has two sources, and both end up as `<meta>` tags in the published page's `<head>`, which the code then reads with `getMetadata()` (`scripts/aem.js`) and `getPageMetadata()` (`utils/metadata.js`).

4.3.1 Page properties

The page model (`models/_page.json`, model `page-metadata`) has exactly these fields:

Field	Name	Type	Published as	Inherited by child pages
Title	`jcr:title`	text	`<title>`, `og:title`, `twitter:title`	No
Description	`jcr:description`	text	`description`, `og:description`	No
Keywords	`keywords`	text, multi-value	`keywords`	No
Page Type	`page-type`	select: Default, Home, Article, Blog, Press Release	`<meta name="page-type">`	No
Navigation	`nav`	AEM content reference	`<meta name="nav">`	Yes (by code, `utils/inherited-metadata.js`)
Footer	`footer`	AEM content reference	`<meta name="footer">`	Yes (by code)
404 Page	`error-page`	AEM content reference	`<meta name="error-page">`	Yes (by code)

Page tags are not part of the page model; the code reads tags from `<meta property="article:tag">` (one per tag, as AEM publishes the page Tags) and, as a fallback, from a comma-separated `tags` metadata value (for example a `tags` column of the bulk metadata sheet). [To be confirmed: verify on a published, tagged page that the AEM page Tags are published as `article:tag` — owner: development team].

Everything else that is page-level (author, dates, SEO and social overrides, card overrides, featured flags, region) is a **column of the bulk metadata sheet**. Page-specific values that are not metadata (CTAs, author image overrides, share / download switches) are block fields.

4.3.2 Bulk metadata sheet

- One sheet per locale, at `/content/tcs-corp/{country}/{language}/metadata`, published at `/{locale}/metadata.json` (mapped in `paths.json`).
- Each row has a `url` pattern (glob, for example `/en/newsroom/**`) and values for any of the columns. Every column is published on the matching pages as `<meta name="{column}">`.
- The platform applies the sheets **only when all 13 are listed in the site configuration's `metadata.source`** (Configuration Service, `POST https://admin.hlx.page/config/sradha-tcs/sites/tcs-corp/metadata.json`). Until then no bulk metadata applies, English included. [To be confirmed: whether `metadata.source` has been configured — owner: site administrator]
- Each locale's URL patterns must start with that locale's published path (`/de-de/**` in the German sheet); rows for other locales have no effect.
- Page-level values (page properties) take precedence over sheet values.

4.3.3 How metadata reaches the head (SEO decorator)

`decorators/seo-decorator.js` (`decorateHead()`, first step of the eager phase) maps the SEO and social columns to the standard tags in the browser:

Sheet column	Head element	Fallback
`meta-title`	`<title>`	the page Title
`meta-description`	`<meta name="description">`	the page Description
`meta-keywords`	`<meta name="keywords">`	the page Keywords
`og-title`	`og:title`	`meta-title`

Sheet column	Head element	Fallback
`og-description`	`og:description`	`meta-description`
`og-image`	`og:image` (absolute URL)	none (platform default image)
`og-type`	`og:type`	none
`twitter-card`	`twitter:card`	none (platform default `summary_large_image`)
`twitter-title`	`twitter:title`	`og-title`, then `meta-title`
`twitter-description`	`twitter:description`	`og-description`, then `meta-description`
`twitter-image`	`twitter:image` (absolute URL)	`og-image`
`canonical-url`	`<link rel="canonical">` and `og:url`	the platform canonical
`language`	`<html lang>`	the locale's language tag (see 4.9)
`robots`	`<meta name="robots">` (standard name, applied server side)	none

> **Important:** The SEO decorator runs in the browser. Search engines that render JavaScript see the overrides; crawlers and link-preview bots that read the raw HTML see the platform values (page Title and Description). `robots` is a standard name and works server side.

4.3.4 Inheritance

Edge Delivery publishes each page with its own metadata only. The code adds AEM-style inheritance for three properties (`utils/inherited-metadata.js`, `INHERITED_METADATA = ['nav', 'footer', 'error-page']`):

1. The page's own value (page property, or the `nav` / `footer` / `error-page` column of the metadata sheet).
2. Else the value of the nearest parent page, up to the locale's Home page (`getParentPages()` in `utils/site.js`; the parent pages' published HTML heads are loaded in parallel and read).
3. Else the locale default: `references/nav`, `references/footer`, `error-pages/404`.

Parent values are cached in `sessionStorage` (key `tcs-inherited-metadata`) for the browser session: a changed parent property shows in a new session. On a 404 page the lookup starts at the missing page's nearest existing parent.

All other metadata is **not inherited**; use URL patterns in the bulk metadata sheet (`/en/insights/**`) to apply values to a whole folder.

4.3.5 Typed access in code

`getPageMetadata()` returns the values blocks use: `title` and `description` (as authored, read before the SEO decorator changes them), `image` (`featured-image`, else `og:image`), `pageType` (`page-type`, else `template`), `contentType`, `category`, `tags`, `authorId`, `author`, `publishDate` (`publish-date`, else `publication-date`), `modifiedDate`, `readingTime`, `listenLink`, `thumbnailImage`, `featuredImage`, `region`, `country` (else the locale's country), `language` (see 4.9), `persona`, `campaignId`, `featured` (true for yes / true / 1 / on / y) and `priority` (a number or null).

> **Note:** The complete field-by-field specification of every page property and every metadata column (type, allowed values, consumers, SEO impact) is in **Part 8**. The sheet itself (columns, examples, authoring) is documented in **9.2**.

4.4 Taxonomy Model

- **Tags** are AEM tags in the `tcs-corp:` namespace (tag IDs `namespace:path`, for example `tcs-corp:region/europe`). The published English taxonomy (verified 13 October 2026) holds the roots `tcs-corp:content-type`, `tcs-corp:industry` and `tcs-corp:region` with 12 child tags.
- **Taxonomy page per locale**: `/content/tcs-corp/{country}/{language}/taxonomy`, published as `/{locale}/taxonomy.json` (each mapped explicitly with `.json` in `paths.json`). Its rows have the columns `tag` (the tag ID) and `title` (the label).
- **Translated titles**: when the tags have translated titles, the taxonomy JSON is a multi-sheet; the code uses the sheet named after the locale's ISO 639-1 language (`de`, `fr`, `ja`, …), else the `default` sheet, else the first sheet (`sheetRows(json, getLocale().language)`).
- **Resolution** (`utils/taxonomy.js`): `loadTaxonomy()` loads the locale's taxonomy once per page into a map of tag ID to title; `resolveTags(values)` turns each value into `{ id, label }`: the taxonomy title when the ID is listed; else, for an ID-like value (contains `:` or `/`), a label derived from the last segment (`parseTag`: `tcs-corp:industry/banking-financial` becomes "Banking financial"); else the value as authored. A missing taxonomy gives an empty map, so labels fall back to derived names.
- **Consumers**: Page Header (page tags), Teaser (its Tags field), List and Cards (card tags), Filter List (filter pills, advanced filter categories and card tags; labels never show raw IDs), Conversation Canvas (suggestion pills from the page tags).
- **Page tags** come from `<meta property="article:tag">` (or a `tags` metadata value) through `getPageTags()`, and are indexed in the query index column `tags`.

> **Note:** The tag structure, the governance of tag creation and translation, and the per-component use of tags are documented in **Part 7**. The taxonomy sheet is documented in **9.3**.

4.5 Placeholders

Placeholders are the user-interface texts that the code shows or announces: button labels, accessible names, counters, empty-state and validation messages. They are authored per locale in a spreadsheet, so every text can be translated without a code change. The code never hard-codes user-facing strings without a placeholder key; every key has an English fallback in the code.

4.5.1 The placeholders sheet

Item	Value
AEM path	`/content/tcs-corp/{country}/{language}/placeholders` (for example `/content/tcs-corp/de/de-de/placeholders`)
Published path	`/{locale}/placeholders.json` (for example `/en/placeholders.json`, `/de-de/placeholders.json`)
Columns	`Key`, `Text`, `Description`, `Category`
Read by code	`Key` and `Text` (lower-case `key` / `text` headers are accepted too)

Item	Value
For authors only	`Description` (where the text appears), `Category` (grouping, for example CTA, Navigation, Forms)
Current state	`/en/placeholders.json` is published with one row (`read-more` / "Read More" / "CTA label" / "CTA"); the other 12 locales return 404 (verified 13 October 2026)

4.5.2 How `utils/placeholders.js` works

- **Loading:** `loadPlaceholders()` fetches `localeSheetPath('placeholders')`, which is the current locale's `/{locale}/placeholders.json` (from the AEM path in the Universal Editor, from the published path on the site; pages outside a locale use `/en/`). The request is made **once per page view**; the promise is kept in a module variable and shared by every block. There is no `sessionStorage` cache; the browser and the Edge Delivery CDN cache the JSON like any published resource.
- **Key matching:** keys are compared without case and without separators (`normalizeKey`: lower case, every character other than `a-z` and `0-9` removed). The code uses camelCase keys (`pauseSlides`), and the sheet may write them in any form: `pauseSlides`, `pause-slides`, `Pause Slides` and `PAUSE_SLIDES` all match. The published English row `read-more` therefore already overrides the code key `readMore`.
- **Lookup:** `getPlaceholders()` resolves to a function `t(key, fallback, values)`. It returns the sheet's Text for the key; if the key is missing, or its Text is empty, it returns the **English fallback** passed by the code.
- **Variables:** `fillPlaceholder(text, values)` replaces `{name}` tokens with the values passed by the code (for example `t('slideOf', '{n} of {total}', { n: 2, total: 5 })` gives "2 of 5"). A token the code does not pass stays visible as written. Translations must keep the tokens (the order may change: "{total} ⊠ {n}").
- **Failure handling:** if the sheet is not published (404), not valid JSON, or the request fails, the lookup map is empty and every text uses its English fallback. No error is shown.
- **Early rendering:** some components (Header, Conversation Canvas, Form Variations, Table List, the Lottie animation toggle) start with a fallback-only lookup and switch to the sheet once it has loaded; the animation toggle updates its label when the placeholders arrive.

```
import { getPlaceholders } from '../../utils/placeholders.js';

const t = await getPlaceholders();
button.setAttribute('aria-label', t('nextSlide', 'Next slide'));
label.textContent = t('slideOf', '{n} of {total}', { n: 1, total: 4 });
```

4.5.3 Complete list of placeholder keys

The table lists **every** placeholder key used in `blocks/`, `decorators/`, `scripts/`, `templates/` and `utils/` (92 keys, extracted from the code on 13 October 2026; `goBack` added in version 1.4). "Shown as" tells translators where the text appears: **Visible** (on the page), **Accessible name** (`aria-label`, read by screen readers, not visible), **Status** (announced live region text), **Editor only** (shown to authors in the Universal Editor, never to visitors).

Key	English fallback	Variables	Component	Shown as
`aboutTheAuthor`	About the author	none	Article and Blog templates (author bio)	Visible heading
`advancedFilters`	Advanced filters	none	Filter List	Visible panel heading and accessible name of the filter button
`all`	All	none	Filter List	Visible "All" filter pill
`back`	Back	none	Conversation Canvas	Accessible name of the menu Back button

Key	English fallback	Variables	Component	Shown as
`carousel`	Carousel	none	Gen Carousel	Accessible name of the carousel region (when not authored)
`carouselRole`	carousel	none	Gen Carousel	Screen reader role description (`aria-roledescription`)
`cards`	Cards	none	Cards	Accessible name of the scrolling card region (when the block has no heading)
`cardsEditorHint`	Add a Card to the block and give it a title, a description or an image.	none	Cards	Editor only (empty block)
`clearAll`	Clear all	none	Filter List	Visible button in the advanced filter panel
`close`	Close	none	Modal	Accessible name of the close button
`closeNavigation`	Close navigation	none	Header	Accessible name of the mobile menu button when open
`contentFrom`	Content from {source}	{source} (host name)	Embed	`title` of the embed iframe
`dialog`	Dialog	none	Modal	Accessible name of a dialog without a heading
`download`	Download	none	Filter List; List and Cards (card list)	Visible call to action of report cards
`downloadThisPage`	Download this page	none	Page Header; Teaser (article meta)	Accessible name of the download (print) icon button
`explore`	Explore	none	Filter List; Table List; List and Cards (card list)	Visible call to action of panel cards and Table List item buttons
`exploreItem`	Explore {title}	{title}	Table List	Accessible name of an item's arrow link
`fieldEmail`	Enter a valid email address.	none	Form Variations	Visible validation message
`fieldFormat`	Enter a valid value.	none	Form Variations	Visible validation message
`fieldRequired`	This field is required.	none	Form Variations	Visible validation message
`fieldTooLong`	This text is too long.	none	Form Variations	Visible validation message
`filterListEditor`	The results show on the published page, from the pages' metadata.	none	Filter List	Editor only (empty state)
`filters`	Filters	none	Filter List	Visible toolbar label (when no Filters label is authored) and accessible name of the pill group
`followUsOn`	Follow us on {platform}	{platform} (Social Links platform)	Footer	Accessible name of each social icon link
`footerLinks`	Footer links	none	Footer	Accessible name of the footer link navigation
`goBack`	Go back	none	404 page	Visible "Go back" button (when the visitor came from a page of the site)
`formSuccess`	Thank you, your details were sent.	none	Form Variations	Status message after a valid submit

Key	English fallback	Variables	Component	Shown as
`itemLinkLabel`	{text}: {title}	{text}, {title}	Table List	Accessible name of an item button ("Explore: Item title")
`linkCopied`	Link copied to clipboard	none	Page Header; Teaser (article meta)	Status message after Share copies the link
`list`	List	none	List and Cards (card list)	Accessible name of the scrolling card region (no heading, no list label)
`listEditorHint`	Set up the list in its properties: {problems}.	{problems} (configuration warnings)	List	Editor only (misconfigured list)
`listEditorPages`	The pages show on the published page (from the query index).	none	List	Editor only (query index not available in the editor)
`listEmpty`	There are no items to show.	none	List; Cards	Visible empty message (when no Empty message is authored)
`listenToThisPage`	Listen to this page	none	Page Header; Teaser (article meta)	Visible text / accessible name of the Listen link
`listNext`	Next items	none	List and Cards (card list)	Accessible name of the next arrow (horizontal scroll)
`listPrevious`	Previous items	none	List and Cards (card list)	Accessible name of the previous arrow (horizontal scroll)
`loadMore`	Load more	none	Filter List	Visible button
`mainNavigation`	Main navigation	none	Header	Accessible name of the header `<nav>`
`mediaContacts`	Media contacts	none	Press Release template	Visible heading
`menu`	Menu	none	Conversation Canvas	Accessible name of the menu toggle and menu
`minRead`	{n} min read	{n} (minutes)	Page Header; Teaser (article meta)	Visible reading time (numeric reading-time only)
`minutesShort`	{n}m	{n} (minutes)	Filter List; List and Cards (card list)	Visible reading time on cards (numeric reading-time only)
`nextSlide`	Next slide	none	Gen Carousel	Accessible name of the next button
`noPagesFound`	No pages found	none	Conversation Canvas	Visible empty menu message
`noResources`	No resources found.	none	Filter List	Visible empty-state title
`noResourcesHint`	Try selecting another filter.	none	Filter List	Visible empty-state hint
`onThisPage`	On this page	none	Anchor List	Accessible name of the anchor navigation
`open`	Open	none	Modal	Visible button text of a Modal link without its own text
`openNavigation`	Open navigation	none	Header	Accessible name of the mobile menu button when closed
`opensInNewTab`	(opens in a new tab)	none	Page Header (author LinkedIn link); List and Cards (card links)	Hidden text / accessible name suffix of links opening a new tab

Key	English fallback	Variables	Component	Shown as
pauseAnimation	Pause animation	none	Hero; Teaser (Lottie animation toggle)	Accessible name and title of the toggle
pauseSlides	Pause slides	none	Gen Carousel	Accessible name of the auto-play toggle while playing
pauseVideo	Pause video	none	Video	Accessible name of the play / pause button (video file playing)
play	Play	none	Embed	Accessible name of the play button of a click-to-load embed
playAnimation	Play animation	none	Hero; Teaser (Lottie animation toggle)	Accessible name and title of the toggle while paused
playSlides	Play slides	none	Gen Carousel	Accessible name of the auto-play toggle while paused
playVideo	Play video	none	Video	Accessible name of the play button (untitled video)
playVideoTitle	Play video: {title}	{title} (video title)	Video	Accessible name of the play button (titled video)
previousSlide	Previous slide	none	Gen Carousel	Accessible name of the previous button
published	Published	none	Page Header	Visible label before the publish date
readMore	Read more	none	Filter List	Visible call to action of featured-style cards
readTheTranscript	Read the transcript	none	Video	Visible transcript link text (when no text is authored)
requiredNote	* Required fields	none	Form Variations	Visible note above the form
resetFilters	Reset filters	none	Filter List	Visible button
resultCount	{n} results	{n}	Filter List	Visible / status result count (more than one)
resultCountOne	1 result	none	Filter List	Visible / status result count (exactly one)
searchByVoice	Search by voice	none	Conversation Canvas	Accessible name of the microphone button (when no alt text is authored)
searchPlaceholder	Ask us a question	none	Conversation Canvas	Visible search field placeholder (when none is authored)
selectAnOption	Select an option	none	Form Variations	Visible first option of dropdowns
selectedCount	{n} selected	{n}	Filter List	Accessible name suffix of the advanced filter button
send	Send	none	Form Variations	Visible submit button text (when no label is authored)
separatorHidden	Separator hidden on all devices	none	Separator	Editor only
separatorInvisible	Semantic separator without a line: screen readers announce a break nobody sees	none	Separator	Editor only
shareThisPage	Share this page	none	Page Header; Teaser (article meta)	Accessible name of the share icon button

Key	English fallback	Variables	Component	Shown as
`showingCount`	Showing {n} of {total}	{n}, {total}	Filter List	Visible status under the results
`showSlide`	Show slide {n} of {total}	{n}, {total}	Gen Carousel	Accessible name of each dot
`showSubmenu`	Show {label} menu	{label} (nav item text)	Header	Accessible name of a submenu toggle
`shownWhenValue`	Shown when a drop-down value is “{value}”	{value}	Form Variations	Editor only (conditional field note)
`siteNavigation`	Site	none	Conversation Canvas	Accessible name of the site menu navigation
`slideOf`	{n} of {total}	{n}, {total}	Gen Carousel	Accessible name of each slide
`slideRole`	slide	none	Gen Carousel	Screen reader role description of each slide
`stopVideo`	Stop video	none	Video	Accessible name of the play / stop button (embedded video playing)
`submit`	Submit	none	Conversation Canvas	Accessible name of the search submit button (when no label is authored)
`suggestions`	Suggestions	none	Conversation Canvas	Accessible name of the suggestion pill list
`table`	Table	none	Table	Accessible name of a scrollable table region without a heading
`tabNumber`	Tab {n}	{n}	Tabs	Visible tab label of a tab without a title
`tabs`	Tabs	none	Tabs	Accessible name of the tab list (when no Accessibility label is authored)
`tabsBlockEmpty`	Add a Tab, then choose the Fragment it shows in the Tab properties.	none	Tabs (block)	Editor only
`tabsEmpty`	Add a Tab, then the components of the tab after it.	none	Tabs (section)	Editor only
`video`	Video	none	Video	Default video title (when none is authored)
`viewAll`	View all	none	Table List	Visible View all button text (when no text is authored)
`viewLinkedinProfile`	View LinkedIn profile	none	Article and Blog templates (author bio)	Visible link text

Note: Texts that are **not** placeholders (as of this handover): the built-in content of `404.html` (“Page not found”, “Go home”), shown only when no authored 404 page can be loaded; the English month abbreviations of the date formats with “mmm” (`utils/dates.js`, see 4.9.7); and the Filter List card action accessible names, which combine a placeholder with the page title (“Download: {title}”). Keys in the JSDoc example of `utils/placeholders.js` (`nextSlide`, `slideOf`) are the Gen Carousel keys listed above.

4.5.4 Governance and best practices

- **Ownership:** [To be confirmed: owner of the placeholders sheets — owner: Localization / content operations lead]. Each locale's translator or content manager owns that locale's sheet.
- **Enforced:** the code falls back to English for every missing key, so an incomplete sheet never breaks a page; it only shows English text.
- **Recommended:** create the full key list (the table above) in the English sheet first, with a Description and a Category per key, then copy the sheet to every locale and translate the Text column.
- **Recommended:** keep `{variables}` exactly as written (same name, braces included).
- **Recommended:** write keys in camelCase as in the code; any casing works, but one convention avoids duplicates (`read-more` and `readMore` are the same key; if both exist, the later row wins).
- **Recommended:** publish the sheet after every change (preview, then live) and check `/{locale}/placeholders.json`.

4.6 References

The **references** folder of each locale (`/content/tcs-corp/{country}/{language}/references/`, published at `/{locale}/references/`) holds the pages that are not content pages but are included in other pages: the header navigation, the footer, alternative headers and footers, the Conversation Canvas page of the footer, modal pages and fragments. The query index excludes `/*/references/**`, so these pages never appear in listings or the sitemap.

Page	AEM path (us/en)	Published	Required	Used by
`nav`	`/content/tcs-corp/us/en/references/nav`	`/en/references/nav`	Yes	Header block (default navigation of the locale)
`footer`	`/content/tcs-corp/us/en/references/footer`	`/en/references/footer`	Yes	Footer block (default footer of the locale)
`nav-{name}`	for example `references/nav-careers`	`/en/references/nav-careers`	Optional	Header, when selected in a page's Navigation property (or the `nav` sheet column)
`footer-{name}`	for example `references/footer-campaign`	`/en/references/footer-campaign`	Optional	Footer, when selected in a page's Footer property (or the `footer` sheet column)
`footer-conversation-canvas`	`references/footer-conversation-canvas`	`/en/references/footer-conversation-canvas`	Optional	The authored Footer block's Conversation Canvas Page (a page with a Conversation Canvas block)
`modals/{name}`	for example `references/modals/contact-us`	`/en/references/modals/contact-us`	Optional	Any link to a path containing `/modals/` opens as a modal (`autolinkModals` in `scripts.js`); the Modal block
Fragments	for example `references/cta-banner`	`/en/references/cta-banner`	Optional	Fragment block; Tabs (block mode) Fragment field

4.6.1 How the header and footer page is resolved

```
Header (blocks/header)
value = getInheritedMetadata('nav')
  1. this page's Navigation / nav column
  2. nearest parent page's value up to Home
  3. ''
path = resolvePagePath(value,
         'references/nav')
loadFragment(path)  ->  {path}.plain.html
no page: header left empty
links
```

```
Footer (blocks/footer, page footer role)
value = getInheritedMetadata('footer')
  1. this page's Footer / footer column
  2. nearest parent page's value up to Home
  3. ''
 path = resolvePagePath(value,
          'references/footer')
  loadFragment(path) + Social Links sheet
  no page: footer shows only the social
```

`resolvePagePath(value, fallback)` (`utils/site.js`) accepts three forms of value and returns the path to fetch in the current context (the AEM path in the Universal Editor, the published path on the site):

Value form	Example	Result on the site
Empty	(none)	`/{locale}/references/nav` (the fallback in the current locale)
AEM path	`/content/tcs-corp/de/de-de/references/nav-jobs`	`/de-de/references/nav-jobs`
Published path	`/de-de/references/nav-jobs`	`/de-de/references/nav-jobs`
Relative to the locale root	`references/nav-jobs`	`/{current locale}/references/nav-jobs`

The 404 page uses the same mechanism with `error-page` and the fallback `error-pages/404`, then `/en/error-pages/404`, then the built-in content (`loadErrorPage` in `scripts.js`); content from another locale is marked with its `lang`.

4.6.2 Authoring references

1. In the AEM Sites console open the locale's `references` folder (create it as an empty folder page if it does not exist).
2. Create the page (**Create** > **Page**) with the exact page name (`nav`, `footer`, `nav-careers`, …). The page name is the URL; the title is free.
3. Open it in the Universal Editor and author it:
   - **nav:** three sections in this order: brand (logo link), sections (navigation lists; nested lists become submenus), tools. The Header adds the classes `nav-brand`, `nav-sections`, `nav-tools` by position.
   - **footer:** the content shown in the footer, typically a Footer block (Conversation Canvas Page, Copyright Text with `{year}`, Link List). The social icons are added from the locale's Social Links sheet.
   - **fragments:** any sections and blocks.
4. Publish the reference page (preview, then live). An unpublished `nav` leaves the header empty.
5. To use an alternative nav or footer for a section of the site, set the **Navigation** or **Footer** page property on the top page of that section. All pages below inherit it unless they set their own.

Steps — References folder in AEM: The AEM Sites console column view of `/content/tcs-corp/us/en/references` listing `nav`, `footer`, `footer-conversation-canvas` and a `modals` folder.

Step	Where	Field / control	Value / action
1	AEM Sites console	View	Column view
2	AEM Sites console	Navigate	TCS Corp › us › en › references

Step	Where	Field / control	Value / action
3	references	Pages	nav, footer, footer-conversation-canvas and the folder modals
4	AEM Sites console toolbar	Create › Page	For a new reference page, with the exact page name (e.g. nav-careers)

Steps — Inherited Navigation, Footer and 404 Page properties: The Universal Editor page properties panel of a section top page (for example /en/careers) with the Navigation field set to `references/nav-careers` and the Footer and 404 Page fields empty.

Step	Where	Field / control	Value / action
1	Universal Editor	Open	/content/tcs-corp/us/en/careers
2	Universal Editor › Properties (page)	Navigation	references/nav-careers
3	Universal Editor › Properties (page)	Footer	Leave empty (inherited)
4	Universal Editor › Properties (page)	404 Page	Leave empty (inherited)

> **Warning:** Parent values are cached for the browser session. After changing a Navigation or Footer property, test in a new private window.

4.7 Data Sheets

Each locale has a `data/` folder (`/content/tcs-corp/{country}/{language}/data/`, published at `/{locale}/data/`) with five spreadsheets: `authors`, `locations`, `partners`, `social-links` and `media-contacts`. They are read by `utils/data.js` (`loadDataSheet(name)`, once per page and sheet), which trims every value, converts the rows to objects with camelCase properties and returns an empty list for a sheet that is missing or fails to load.

Sheet	Read by	Status
`authors`	Page Header (author lockup), Article / Blog templates (About the author), List (feature card author), Filter List (hero / featured card author)	In use
`social-links`	Footer (social icons)	In use
`media-contacts`	Press Release template (Media contacts)	In use
`locations`	`getLocations()` only	No component reads it yet (as of this handover)
`partners`	`getPartners()` only	No component reads it yet (as of this handover)

The query index excludes `/*/data/**`. All five sheets are published for `/en/` with their column headers and no rows (verified 13 October 2026); the other locales return 404.

> **Note:** Columns, types, examples, business rules and authoring steps for each data sheet are in **Part 9** (9.5 to 9.9).

4.8 Shared Content

Mechanism	Where	What is shared	How it is included	Notes
Fragment block	Any page	A reference page (usually under `references/`)	Fragment block, **Reference** field (AEM content reference)	`blocks/fragment/fragment.js` loads `{path}.plain.html`, decorates its sections and blocks and replaces the block with them. The path must start with `/`. Media paths are rebased to the fragment.
Header / Footer	Every page	`references/nav`, `references/footer` (or the inherited alternatives)	Automatic (4.6)	One nav and one footer per locale by default
Footer Conversation Canvas	Footer	A page with a Conversation Canvas block	Footer block, Conversation Canvas Page field	Loaded as a fragment above the footer bar
Tabs (block mode)	Tabs block	A fragment per tab	Tab item Fragment field	Each tab panel shows its fragment
Modals	Any link	Pages under a `/modals/` path	A link to the page (or the Modal block)	Opens in a dialog
Data sheets	Templates and blocks	Authors, social links, media contacts	Automatic	Per locale (4.7)
Placeholders	All components	UI text	Automatic	Per locale (4.5)
Block library	`/{locale}/block-library/` (author only)	One page per block with every variation, in the locale's language	Not included in pages	Excluded from publishing (`paths.json` excludes each locale's `block-library` and `block-library/**`) and from the index. Used to validate blocks and as an authoring reference.
Site Global Templates	`/content/tcs-corp/site-global-templates/`	Starter pages (home, article, blog, press-release)	Copied by authors (copy / paste in the Sites console)	Not published. Changing a template page does not change pages already copied from it.

Governance:

- Enforced: a Fragment whose page is not published (or whose path does not start with `/`) renders nothing; the block stays empty.
- Recommended: keep all shared fragments under the locale's `references/` so they are excluded from the index and the sitemap. Fragments elsewhere are indexed unless they sit in a `fragments/` or `modals/` folder (`/**/fragments/**` and `/**/modals/**` are excluded).
- Recommended: name fragments by purpose (`cta-contact-sales`, `legal-disclaimer-financials`), and list them with their owners. [To be confirmed: fragment inventory and owners — owner: Web content lead]
- Recommended: before deleting or renaming a fragment, use the AEM **References** panel to find the pages that include it.
- Changes to a fragment are visible on every including page after the fragment is published; the including pages need no republish.

Steps — Selecting a fragment: The Universal Editor properties panel of a Fragment block with the Reference field open on the content picker at `/content/tcs-corp/us/en/references/`.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Fragment
2	Fragment › Content	Reference	Open the content picker
3	Content picker	Navigate	/content/tcs-corp/us/en/references/
4	Content picker	Select	The fragment page, e.g. cta-banner, and confirm

4.9 Localization Strategy

4.9.1 Locales

The 13 locale sites are defined once in code, in `LOCALES` (`utils/site.js`), and `paths.json` is generated from that list (`npm run build:paths`, `tools/paths/generate-paths.mjs`).

AEM folder	Published root	Language tag (`<html lang>`)	ISO 639-1 language (taxonomy sheet)	Country
`us/en`	`/en`	en-US	en	us
`de/de-de`	`/de-de`	de-DE	de	de
`fr/fr-fr`	`/fr-fr`	fr-FR	fr	fr
`ca/fr-ca`	`/fr-ca`	fr-CA	fr	ca
`es/es-es`	`/es-es`	es-ES	es	es
`pt/pt-pt`	`/pt-pt`	pt-PT	pt	pt
`nl/nl-nl`	`/nl-nl`	nl-NL	nl	nl
`se/sv-se`	`/sv-se`	sv-SE	sv	se
`dk/da-dk`	`/da-dk`	da-DK	da	dk
`no/no-no`	`/no-no`	no-NO	no	no
`cn/zh-cn`	`/zh-cn`	zh-CN	zh	cn
`jp/ja-jp`	`/ja-jp`	ja-JP	ja	jp
`kr/ko-kr`	`/ko-kr`	ko-KR	ko	kr

- **Locale detection** (`getLocale()`): in the Universal Editor from the AEM path (`/content/tcs-corp/de/de-de/...`), on the site from the published path (`/de-de/...`). Pages outside a locale (Site Global Templates, drafts) use the default locale `en` (en-US).
- **Default locale:** the first entry, `us/en` (`DEFAULT_LOCALE`). It is the final fallback for the 404 page.
- **Root path:** nothing is published at `/`; a redirect `/` to `/en/` is needed and is not applied automatically (see 9.4). [To be confirmed: CDN redirect for `/` and language selection — owner: site administrator]

4.9.2 Page language (`<html lang>`)

`decorateHead()` (`decorators/seo-decorator.js`) sets `document.documentElement.lang = getPageLanguage()`:

1. The page's `language` metadata, when it is a valid language code (pattern `^[a-z]{2,3}(-[a-z0-9]{2,8})*$`, case-insensitive; for example `en`, `en-GB`).

2. Otherwise the language tag of the locale site (`de-DE` for `/de-de/...`).

The same value is sent to the data layer (`xdm:language`). On the 404 page, content loaded from another locale (the `/en/` fallback) gets that locale's `lang` on `<main>`. Sorting in the List (alphabetical) and the Filter List uses `Intl.Collator` with the page language.

4.9.3 Placeholders per locale

Each locale has its own `placeholders` sheet (4.5). A locale without a published sheet, or a key missing from it, shows the English fallback from the code. There is no fallback from a locale's sheet to the English sheet: a missing key in `/de-de/placeholders.json` shows the **code's** English text, not the text of `/en/placeholders.json`.

4.9.4 Taxonomy per language

Each locale publishes its own taxonomy page (`/{locale}/taxonomy.json`). When tag titles are translated, the code reads the sheet named after the locale's ISO 639-1 language (for example `de`), else `default`, else the first sheet. `fr-fr` and `fr-ca` both read the `fr` sheet, and `zh-cn` reads `zh`. Tags missing from the taxonomy show a label derived from the tag ID (English words from the ID).

4.9.5 Metadata per locale

Each locale has its own bulk metadata sheet (`/{locale}/metadata.json`) with URL patterns starting with its root. All 13 must be listed in the site configuration's `metadata.source`. Values are not shared between locales: SEO titles, descriptions, social images, author IDs and dates are set per locale.

4.9.6 Translating content

Topic	Implemented in code	Process (outside the code)
Locale structure	13 locale sites, locale detection, per-locale nav / footer / 404 / sheets / taxonomy / data	Each locale is a separate AEM page tree; locales share no content
Creating a new locale's content	Not implemented (no automation)	Copy `us/en` (or a closer language) in the Sites console and translate it; or use AEM's translation features (language copies, translation projects with a translation connector) ([To be confirmed: whether AEM translation projects / a translation vendor connector are configured — owner: AEM administrator])
Keeping locales in sync (live copy / MSM)	Not implemented	[To be confirmed: whether MSM live copies or translation projects are used — owner: Localization lead]
Language navigation / language selector	Not implemented (no language switcher block or code)	Can be authored as links in each locale's nav
`hreflang` alternates	Not implemented (no code adds `<link rel="alternate" hreflang>`; `helix-sitemap.yaml` defines one default sitemap without language alternates)	[To be confirmed: hreflang strategy — owner: SEO lead]
Adding a locale	`LOCALES` + `npm run build:paths` (developer); see `utils/site.js`	Create the AEM folders, sheets and references; configure `metadata.source`; publish
UI text	Placeholders per locale	Translate the Text column of each sheet
Tag labels	Taxonomy per locale and language sheet	Translate tag titles in AEM Tagging, republish the taxonomy
Data sheets	Per locale	Maintain each locale's authors, social links and media contacts

4.9.7 Date formats

Dates are authored as `YYYY-MM-DD` (optionally with a time) and formatted from their calendar date as written, without time-zone conversion (`utils/dates.js` `formatDate`, `decorators/date-decorator.js` `buildTime`, which outputs `<time datetime="YYYY-MM-DD">`). Values that are not dates are shown as written.

Format value	Output for 2026-09-04	Used by
`dd-mm-yyyy`	04-09-2026	Teaser default; option in List, Cards
`mm-dd-yyyy`	09-04-2026	Option in Teaser, List, Cards
`mmm-d-yyyy`	Sep 4, 2026	Option in Teaser, List, Cards
`dd/mm/yy`	04/09/26	Page Header (fixed, after “Published”); option in Teaser, List, Cards
`dd-mmm-yy`	04 Sep 26	List and Cards default; Filter List (fixed)

Important: The month abbreviations (Jan to Dec) are English in every locale; they are not placeholders and are not localised with `Intl.DateTimeFormat` (as of this handover). For non-English locales, prefer the numeric formats (`dd-mm-yyyy`, `dd/mm/yy`) where the block offers a choice. The Page Header and Filter List formats are fixed in code.

Part 5 — Authoring Fundamentals

This part explains how content authors work on the TCS Corporate Website day to day: how to get access, how the Universal Editor is laid out, how pages, sections and blocks are created, how images are handled, the **Additional** tab that every block shares, and how content is previewed, published, validated and rolled back. It applies to all 13 locale sites (`/content/tcs-corp/{country}/{language}`, published at `/en`, `/de-de`, `/fr-fr`, `/fr-ca`, `/es-es`, `/pt-pt`, `/nl-nl`, `/sv-se`, `/da-dk`, `/no-no`, `/zh-cn`, `/ja-jp`, `/ko-kr`). Block-by-block instructions are in Part 6 (Component Library).

> **Note:** In the Universal Editor, blocks are called **components**. This document uses "block" for a component from the **Blocks** group (Hero, Teaser, List, …) and "default content" for the four simple components Text, Title, Image and Button.

5.1 Getting access

5.1.1 Systems an author uses

System	Purpose	Address
Adobe IMS (Adobe ID / enterprise ID)	Single sign-on for every Adobe system below	https://experience.adobe.com (sign-in page)
Adobe Admin Console	Where an administrator grants access (product profiles)	https://adminconsole.adobe.com (administrators only)
AEM as a Cloud Service author (Sites console)	Browse the content tree, create, copy, move, publish and unpublish pages, page versions	https://author-p220207-e2271469.adobeaemcloud.com/ui#/aem/sites.html/content/tcs-corp
Universal Editor	Visual editing of a page (canvas, content tree, properties panel)	Opened from the Sites console with **Edit**; URL pattern in 5.1.3
AEM Assets	Images and documents used on pages	`/content/dam/tcs-corp/` on the author environment
Preview site (Edge Delivery Services)	Check content before it goes live	https://main–tcs-corp–sradha-tcs.aem.page/en/ (and `/de-de/`, …)
Live site (Edge Delivery Services)	The public site	https://main–tcs-corp–sradha-tcs.aem.live/en/ (and `/de-de/`, …)
Production domain	The final public domain	[To be confirmed: production domain and CDN — owner: site administrator]
AEM Sidekick (browser extension)	Preview / publish status and switching between preview and live from the site	Chrome Web Store, "AEM Sidekick"

The author environment is program **p220207**, environment **e2271469**. Content is delivered to Edge Delivery Services through `bin/franklin.delivery/sradha-tcs/tcs-corp/main` (the mount point in `fstab.yaml`); authors never call this URL directly.

5.1.2 Requesting access

Step 1 — Request an Adobe account

Action: Ask your AEM administrator for access to the AEM as a Cloud Service author environment `author-p220207-e2271469`. The administrator adds you in the Adobe Admin Console to the product profile of that environment (typically the "AEM Users" profile of the author instance) and to the AEM user group for your locale.

Expected Result: You receive an Adobe invitation e-mail and can sign in at https://experience.adobe.com.

Step 2 — Get the right permissions in AEM

Action: Ask the administrator to add you to the group that matches your role: edit rights for your locale folder (for example `/content/tcs-corp/us/en` or `/content/tcs-corp/de/de-de`), publish (replicate) rights or an approval workflow, and read/write access to `/content/dam/tcs-corp/`. Content managers also need edit rights on the locale's sheets (`placeholders`, `metadata`, `taxonomy`, `redirects`, `data/*`) and the `references/` pages.

Expected Result: The locale folder shows in the Sites console and the **Edit**, **Create** and **Publish** actions are available.

> **Note:** The group names and the approval workflow are not part of the code repository. [To be confirmed: AEM user groups, permissions per locale and publish approval workflow — owner: AEM administrator]

Step 3 — Install AEM Sidekick (optional, recommended)

Action: Install the AEM Sidekick extension in Chrome (or Edge) and add the project `sradha-tcs/tcs-corp`. The repository's Sidekick configuration (`tools/sidekick/config.json`) labels the edit link **AEM Editor**; it opens the AEM source of the page you are viewing.

Expected Result: On a `*.aem.page` or `*.aem.live` page the Sidekick toolbar shows the page status and lets you switch between Preview and Live.

5.1.3 Universal Editor URL pattern

The Universal Editor is normally opened from the Sites console (select the page, then **Edit**). The editor address has this form:

```
https://experience.adobe.com/#/@{ims-org}/aem/editor/canvas/
  author-p220207-e2271469.adobeaemcloud.com/content/tcs-corp/{country}/{language}/
{page}.html
```

Example for the English home page: `.../canvas/author-p220207-e2271469.adobeaemcloud.com/content/tcs-corp/us/en.html`.

> **Note:** `{ims-org}` is the technical name of the Adobe organisation. [To be confirmed: IMS organisation name used in the Universal Editor URL — owner: AEM administrator]

> **Tip:** Bookmark the Universal Editor URL of the pages you edit most. The editor keeps you signed in through Adobe IMS.

5.1.4 Access troubleshooting

Symptom	Likely cause	Resolution
"You don't have access" after sign-in	Not in the AEM product profile	Ask the administrator to add you in the Admin Console
The locale folder is missing in the Sites console	No read permission on `/content/tcs-corp/{country}/{language}`	Ask for the locale group
Publish is greyed out	No replicate permission	Ask for publish rights or use the approval workflow
The canvas stays blank in the Universal Editor	Browser blocks third-party cookies or the session expired	Allow cookies for `adobe.com` and `adobeaemcloud.com`, sign in again
Images cannot be picked	No read access to `/content/dam/tcs-corp/`	Ask for Assets access

5.2 Universal Editor tour

The Universal Editor shows the real page (rendered by the project code) and lets you select and edit each part of it. Everything you see on the canvas is the same code that runs on the preview and live site, so what you see is very close to what visitors see.

Steps — Universal Editor overview: The Universal Editor with a TCS page open: the top toolbar (location, device size, Preview toggle, Publish), the page canvas in the middle, and the right rail with the Properties panel and the Content tree. Label each area A to E.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Open TCS Corp › us › en › about
2	AEM Sites console	Select	Select the page (check box of its card or row)
3	AEM Sites console toolbar	Edit	Select Edit: the page opens in the Universal Editor
4	Universal Editor header bar	Area A	Toolbar: location field, device size, Preview toggle, Publish
5	Universal Editor canvas	Area B	The page as rendered by the site code
6	Universal Editor right rail	Area C	Properties panel (select a component on the canvas to fill it)
7	Universal Editor right rail	Area D	Content tree (open it with the Content tree icon)
8	Universal Editor canvas	Area E	Component actions Add (+), Duplicate, Delete of the selected item

5.2.1 The main areas

Area	What it is	What you do there
Header bar	Adobe Experience Cloud header and the editor toolbar	Open another page (location field), switch device size (desktop / tablet / mobile emulation), switch **Preview** mode on and off, open the **Publish** dialog
Canvas	The page as rendered by the site code	Click a component to select it; double-click text to edit it inline (Text and Title)
Properties panel (right rail)	The fields of the selected component, grouped in tabs	Fill in the fields; changes are saved automatically

Area	What it is	What you do there
Content tree (right rail)	The page structure: sections, the components in each section and their items	Select, add, reorder (drag), duplicate and delete components
Component actions	Add (+), Duplicate, Delete buttons shown for the selected item	Insert a component from the picker; copy or remove the selected one

Steps — Content tree: The Content tree of a page expanded to show Main, two Sections, default content (Title, Text, Button) and a Cards block with three Card items; the Add (+), Duplicate and Delete actions are visible for the selected section.

Step	Where	Field / control	Value / action
1	Universal Editor right rail	Content tree	Open the Content tree
2	Universal Editor › Content tree	Main	Expand Main: two Sections
3	Universal Editor › Content tree	Section 1	Expand: Title, Text, Button (default content)
4	Universal Editor › Content tree	Section 2	Expand: Cards, then expand Cards: Card, Card, Card
5	Universal Editor › Content tree	Section 2	Select the section: Add (+), Duplicate and Delete appear

5.2.2 Page structure in the content tree

```
Main (page)                          allowed: Section, Gen Carousel, Tabs Container
 +-- Section                         allowed: Text, Image, Button, Title and the blocks
 |    +-- Title / Text / Image / Button        (default content)
 |    +-- Hero, Teaser, Cards, List, ...       (blocks)
 |         +-- Card, List Item, ...            (block items, only inside their block)
 +-- Gen Carousel (a carousel section)      allowed: Hero, Teaser
 +-- Tabs Container (a tabs section)        allowed: Tab, Columns, Title, Text, Image,
Button
```

What may be added where is defined by the **filters** (see 5.4.3). The **Add (+)** picker only lists the components the selected container allows.

5.2.3 Adding, duplicating, deleting and moving

Task	How
Add a component	Select the section (or container block) in the content tree, select **Add (+)**, choose the component
Add a section	Select **Main** (the page) in the content tree, select **Add (+)**, choose **Section** (or **Gen Carousel** / **Tabs Container**)
Duplicate	Select the component, select **Duplicate**; the copy appears after the original with the same field values
Delete	Select the component, select **Delete**, confirm
Move	Drag the component in the content tree to its new position (inside the same or another allowed container)
Edit text	Double-click a Text or Title on the canvas and type; formatting toolbar for rich text
Edit fields	Select the component; use the Properties panel

> **Note:** After each change the editor sends the update to AEM and the project code re-renders only the changed part (`scripts/editor-support.js`: it re-decorates the changed block, section or default content). If a change cannot be applied in place, the whole canvas reloads; this is expected.

Steps — Component picker: The Add (+) picker opened on a Section, showing the groups Default Content (Text, Title, Image, Button) and Blocks (Accordion, Anchor List, Cards, …).

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section
2	Universal Editor › Content tree	Add (+)	Select Add (+)
3	Component picker	Default Content	Shows Text, Title, Image, Button
4	Component picker	Blocks	Shows Accordion, Anchor List, Cards, … (the section filter)

5.2.4 Edit mode and Preview mode

The Universal Editor has two modes. The code detects the mode from a class on the page's `html` element: `adobe-ue-edit` in edit mode, `adobe-ue-preview` in preview mode (`utils/environment.js` `isEditing()`; `isInEditor()` is true in both modes because the editor instrumentation `data-aue-resource` is present).

Behaviour	Edit mode (`html.adobe-ue-edit`)	Preview mode, preview and live site
Clicking a link	Selects the component	Follows the link
Blocks with **Hide block** on	Shown faded (opacity 0.45) with a dashed outline, so you can still select them	Not displayed (`display: none`, its wrapper too)
Gen Carousel	Autoplay does not run; slides are not made inert	Autoplay runs (Auto modes); off-screen slides are inert
Hero and Table List entrance motion	Not applied (content always visible)	Applied when the option is set
Separator hidden on all breakpoints	Shown as a placeholder in edit mode	Not displayed
Interactive Dashboard (empty)	An editor placeholder is shown	Nothing
Tabs Container	Tab item markers visible in panels	Normal tabs
List, Cards, Filter List	Editor hints when the block is not set up (for example "Set up the list in its properties: …")	Empty-state message or nothing
Form Variations	"Shown when a dropdown value is …" notes on conditional fields	Fields shown or hidden by the condition

Steps — Hidden block in edit mode: A Teaser with Hide block switched on, shown faded with a dashed grey outline in edit mode, next to the same page in Preview mode where the teaser is absent.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Teaser	Select the Teaser
2	Teaser › Additional	Hide block	On

Step	Where	Field / control	Value / action
3	Universal Editor canvas	Edit mode	The Teaser is shown faded (opacity 0.45) with a dashed grey outline
4	Universal Editor toolbar	Preview	Switch Preview on: the Teaser is not displayed

Steps — Preview mode toggle: The Preview toggle in the editor toolbar switched on; the canvas behaves like the website (links are clickable, hidden blocks are gone).

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch Preview on
2	Universal Editor canvas	Link	Select a link: it is followed (not selected)
3	Universal Editor canvas	Hidden blocks	Blocks with Hide block on are not displayed

5.2.5 Device sizes

Use the device switch in the toolbar to check the page at the project breakpoints: mobile (below 600 px), tablet (600 to 1199 px) and desktop (1200 px and above). Some text sizes step at 900 px, and the header switches to the desktop navigation at 900 px.

5.3 Creating a page

5.3.1 Where pages live

Location	Contents	Published
`/content/tcs-corp/{country}/{language}` (for example `us/en`)	The locale's Home page (the locale page itself) and all content pages below it	Yes, at `/{language}/` (for example `/en/`)
`{locale}/references/`	Navigation (`nav`), `footer` and other fragments	Yes (used by other pages)
`{locale}/error-pages/`	`404` (used by the site), `403` and `500` (for the CDN)	Yes
`{locale}/block-library/`	Pages with every block variation, in the locale's language	No (author only)
`/content/tcs-corp/site-global-templates/`	Template pages to copy: home, article, blog, press release	No (author only)

5.3.2 Creating a page from a Site Global Template

Step 1 — Copy the template page

Action: In the Sites console open **TCS Corp > site-global-templates**, select the template page you need (home, article, blog or press-release) and select **Copy**.

Expected Result: The page is on the clipboard.

Step 2 — Paste it into your locale

Action: Open the target folder in your locale (for example `TCS Corp > us > en > newsroom`) and select **Paste**. Then select the copy and **Rename** / **Move** it: set the page title and the page name. The name becomes the URL, for example `newsroom/q3-results` in `us/en` is published as `/en/newsroom/q3-results`.

Expected Result: The new page appears in the folder with the template's Page Type already set.

Step 3 — Open it in the Universal Editor

Action: Select the page and select **Edit**.

Expected Result: The page opens in the Universal Editor with the template's sections and components.

Step 4 — Set the page properties

Action: Open the page properties (Sites console: select the page, **Properties**; in the Universal Editor the same page-level fields are shown when the page is selected [To be confirmed: page-properties entry point in the installed Universal Editor version]). Fill in the fields listed in 5.3.4.

Expected Result: Title and Description are filled in; Page Type matches the template.

Step 5 — Add the page's metadata sheet values

Action: If the page needs values that are not page properties (for example `author-id`, `publish-date`, `reading-time`, `region`, `content-type`, `featured-image`, card values or SEO / social columns), make sure a row of the locale's bulk metadata sheet (`{locale}/metadata`) covers the page URL, and publish the sheet.

Expected Result: The values show on the page once the sheet is published (and, for the bulk metadata sheets, once the administrator has listed them in the site configuration; see the note in 5.3.4).

Step 6 — Edit the content, then preview and publish

Action: Edit the sections and components (5.4), then follow 5.7.

Expected Result: The page is available on `.aem.page` and, after publishing to live, on `.aem.live`.

Steps — Copying a Site Global Template: The Sites console showing `site-global-templates` with the press-release page selected and the Copy action highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Open TCS Corp › site-global-templates
2	AEM Sites console	Select	Select the press-release page
3	AEM Sites console toolbar	Copy	Select Copy

For other pages (no matching template) use **Create > Page** in the locale folder. [To be confirmed: AEM page template offered by Create > Page — owner: AEM administrator]

5.3.3 Page Types and templates

The **Page Type** selects the site global template code (`scripts/scripts.js` `TEMPLATES` = `home`, `article`, `blog`, `press-release`; code in `templates/{name}/`). The value is also added to `<body>` as a class.

Page Type option	Value	What the template code adds
Default	(empty)	Nothing; the page shows exactly what is authored
Home	`home`	Layout styles only (the first section meets the header)
Article	`article`	A Page Header built from the page metadata (unless one is authored) and "About the author" from the Authors data sheet (`author-id`)
Blog	`blog`	The article structure and styles
Press Release	`press-release`	A Page Header (unless authored) and "Media contacts" from the Media Contacts data sheet (matching the page's `region`, else all)

Order of precedence: the **Page Type** page property, else the `page-type` column of the locale's metadata sheet, else the standard `template` metadata. A value that is not one of the four names loads no template code but is still added as a body class.

5.3.4 Page properties (models/_page.json)

Field Name	Field Type	Mandatory	Default	Purpose	Notes
Title (`jcr:title`)	Text	Recommended (no model validation)	(empty)	Browser title, SEO title, social title, Page Header heading, card title fallback	Keep it unique per page
Description (`jcr:description`)	Text	Recommended (no model validation)	(empty)	Meta description and Page Header description	Recommended 120–160 characters
Keywords (`keywords`)	Text, multi-value	No	(empty)	Meta keywords	One keyword per value
Page Type (`page-type`)	Select	No	Default (empty)	Site Global Template: Default, Home, Article, Blog, Press Release	Overrides the sheet's `page-type`
Navigation (`nav`)	AEM content picker	No	(empty)	Header page of this page and, unless they set their own, its child pages	Empty: nearest parent page's value (or the sheet's `nav`), else `{locale}/references/nav`
Footer (`footer`)	AEM content picker	No	(empty)	Footer page of this page and its child pages	Empty: nearest parent page's value (or the sheet's `footer`), else `{locale}/references/footer`
404 Page (`error-page`)	AEM content picker	No	(empty)	The "page not found" page for missing pages below this one	Empty: nearest parent's 404 Page (or the sheet's `error-page`), else `{locale}/error-pages/404`, else `/en/error-pages/404`, else the built-in text

Important: Navigation, Footer and 404 Page are **inherited**: leave them empty on ordinary pages. Set them on the top page of a sub-site (for example `/en/careers`) to change them for every page below it. Inherited values are cached for the browser session, so check changes in a new private window.

Note: All other page-level values (author, dates, reading time, region, images, card values, SEO and social values) come from the locale's **bulk metadata sheet** (`{locale}/metadata`, published as `/en/metadata.json`, `/de-de/metadata.json`, …). The platform applies these sheets only after the administrator lists all 13 in the site configuration (`metadata.source`). [To be confirmed: bulk metadata sheets listed in the site configuration — owner: site administrator]

5.4 Working with sections and blocks

5.4.1 Sections

A **section** is a horizontal band of the page. It contains default content (Text, Title, Image, Button) and blocks. Each section is rendered as `main > div.section`, and its content as one wrapper per block or run of default content (`div.default-content-wrapper`, `div.{block}-wrapper`). Spacing between sections, the content width and the side padding come from the layout tokens in `styles/styles.css` (see 6.5).

To add a section: select **Main** in the content tree, select **Add (+)** and choose **Section**. Then select the section and fill in its properties.

5.4.2 Section properties (models/_section.json)

Field	Type	Options / default	Effect
Section Name	Text	(empty)	Label of the section in the content tree only; not shown on the site
Style	Multi-select	Highlight	Adds the class `highlight`: light grey background (`--color-bg-secondary`), no outer margin, vertical padding of one section spacing
Width Type	Select	Full Width (default), Fixed Width	Fixed Width limits the section box (and its background) to the content width (90rem) and centres it; Full Width caps the content at the page width (120rem)
Rounded edge	Boolean	off	Adds `rounded`: corners with radius 1rem (`--radius-l`), content clipped
Background Image	AEM Assets reference	(empty)	An image behind the section content, scaled to cover the section
Image alt text	Text	(empty)	Alt text of the background image; empty marks it as decorative (`alt=""`)
Anchor name	Text	(empty)	The section's `id` (for Anchor List links and `#links`), normalised to lower case with hyphens

Full details, including the rules for anchors and backgrounds, are in chapter 6.5.

5.4.3 What each container allows (filters)

The filters are defined in `models/_component-filters.json` (page level), `models/_section.json` (sections) and each block's `_{block}.json`; the aggregated result is `component-filters.json`.

Container	Allowed components
Main (the page)	Section; Gen Carousel; Tabs Container
Section	Text; Image; Button; Title; Page Header; Hero; Teaser; Quote; Testimonial; Anchor List; Accordion; Tabs; Table; Table List; List; Separator; Embed; Video; Modal; Form Variations; Filter List; Interactive Dashboard; Conversation Canvas; Cards; Columns; Fragment; Footer
Gen Carousel (section)	Hero; Teaser
Tabs Container (section)	Tab; Columns; Title; Text; Image; Button
Accordion	Accordion Item
Cards	Card
Columns	Column (each Column allows Text, Image, Button, Title)

Container	Allowed components
Conversation Canvas	Conversation Canvas Button
Form Variations	Text Input Field; Dropdown / Select Field; Textarea Field; Consent Checkbox Field; Contact Card Output; Submit Button
List	List Item
Table List	Table List Item
Table	Row (the 2-, 3-, 4- and 5-column variants have their own Row items)
Tabs (block)	Tab
Video	(nothing)

Note: Tab (the Tabs Container item) is not available inside an ordinary section, and Gen Carousel and Tabs Container can only be added at page level. The **Footer** block is allowed in sections so the footer reference page (`{locale}/references/footer`) can be authored.

5.4.4 Default content

Component	Model	Fields	Chapter
Text	`models/_text.json` (no model fields; rich text)	The rich text itself	6.6
Title	`models/_title.json`	Title; Title Type (h1–h6)	6.7
Image	`models/_image.json`	Image; Alt Text	6.8
Button	`models/_button.json`	Link; Text; Title; Views; Type; Icon; Alignment	6.9

5.4.5 Working with blocks

1. Select the section in the content tree and select **Add (+)**.
2. Choose the block from the **Blocks** group.
3. Fill in its tabs in the Properties panel (most blocks have several tabs and always an **Additional** tab last; see 5.6).
4. For blocks with items (Cards, List, Accordion, Tabs, Table, Form Variations, …) select the block and use **Add (+)** to add items.
5. Check the block at the three device sizes and in Preview mode.

Tip: Each locale has a `block-library/` folder with pages showing every block variation in that language. Open them on author to see what each option looks like before using it.

5.5 Images and assets

5.5.1 Where images come from

Images are stored in **AEM Assets** under `/content/dam/tcs-corp/`. Image fields in the Universal Editor (component type `reference`: the Image component, the section Background Image, the image fields of blocks) open the **Assets picker**. You can also drag an asset from the Assets panel onto an image field.

Step 1 — Upload

Action: In AEM Assets open `/content/dam/tcs-corp/` (use the folder agreed for your locale or campaign), select **Create > Files** and upload the original image.

Expected Result: The asset is listed with a thumbnail.

Step 2 — Pick the image

Action: In the Universal Editor select the component, select the image field and choose the asset in the picker.

Expected Result: The image appears on the canvas.

Step 3 — Write the alt text

Action: Fill in the component's alt text field (Alt Text, Image alt text, …) describing what the image shows and why it matters on the page. Leave it empty only for purely decorative images.

Expected Result: The rendered `<img>` carries the alt text (or `alt=""` for decorative images).

Steps — Assets picker: The Assets picker opened from the Image field of an Image component, browsing `/content/dam/tcs-corp/` with one image selected.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Image	Select the Image component
2	Image › Properties	Image	Select the field: the Assets picker opens
3	Assets picker	Folder	Open /content/dam/tcs-corp/
4	Assets picker	Asset	Select one image, then Select

5.5.2 Image optimisation

When a page is published, Edge Delivery Services copies each referenced image into the site's media store (URLs of the form `./media_{hash}.{ext}`) and serves it in several widths and formats. Images placed in content arrive as responsive `<picture>` elements built by Edge Delivery Services. Where the code builds an image from a URL itself, it uses `createOptimizedPicture` (`scripts/aem.js`, through `decorators/responsive-image-decorator.js`) for site media (`/media_` URLs), for example section backgrounds (2000 px wide from 600 px viewport width, 750 px below); other URLs are used as they are, lazily loaded. The first image of the first section is loaded eagerly (it is usually the Largest Contentful Paint element); all other images are loaded lazily.

Do	Don't
Upload high-quality originals (JPEG for photos, PNG for graphics with transparency, SVG for icons where the field allows it)	Upload pre-shrunk thumbnails; they look blurred on large screens
Use descriptive file names (`tcs-cloud-team-mumbai.jpg`)	Use camera file names (`IMG_0042.jpg`)
Use images of at least 2000 px width for full-width backgrounds and heroes	Use images with text baked in (not translatable, not accessible)

Do	Don't
Check the crop at all three device sizes (backgrounds use `object-fit: cover`)	Rely on a specific crop of a cover image; edges are cut off on narrow screens
Publish (or let **Manage Publication** include) the referenced assets	Reference assets you have no right to use [To be confirmed: image licensing rules — owner: brand team]

> **Note:** For social sharing images (`og-image` in the metadata sheet) use at least 1200 × 630 px.

5.5.3 Alt text rules

Image type	Alt text
Informative (shows something the text does not say)	Describe it briefly, for example "TCS engineers reviewing a cloud dashboard"
Functional (inside a link or button)	Describe the destination, not the picture
Decorative (adds nothing; backgrounds, mood images)	Leave empty; the code then sets `alt=""`
Contains text	Repeat the text in the alt text

Recommended length: up to about 125 characters (not enforced by the models).

5.6 The Additional tab

Every block dialog has an **Additional** tab as its last tab, with the same ten fields. The tab is present in the models of: Accordion, Anchor List, Cards, Columns, Conversation Canvas, Embed, Filter List, Form Variations, Fragment, Gen Carousel, Hero, Interactive Dashboard, List, Modal, Page Header, Quote, Separator, Tab, Table, Table List, Tabs (block), Tabs Container, Teaser, Testimonial and Video (25 models).

It is **not** present on: the header and footer, block items (Accordion Item, Card, List Item, Tab items, Table rows, Table List items, form fields), the section, and default content (Text, Title, Image, Button).

The fields are "classes" fields (`classes_*`): AEM delivers their values as CSS classes of the block, never as content rows. `decorators/block-options-decorator.js` turns the Anchor ID class into the block's `id`; the other options are pure CSS in `styles/styles.css`.

Steps — The Additional tab: The Properties panel of a Teaser with the Additional tab open, showing Anchor ID, Hide block and the eight padding and margin selects.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Teaser	Select the Teaser
2	Teaser › Properties	Tabs	Open the Additional tab (last tab)
3	Teaser › Additional	Fields	Anchor ID, Hide block, Padding left / right / top / bottom, Margin left / right / top / bottom

5.6.1 Field table

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Anchor ID (`classes_anchor`)	Text	No	No	(empty)	Gives the block an `id` so links can jump to it (`#anchor-...`)	Start with `anchor-`; lowercase letters, digits and hyphens; unique on the page	Enforced: regular expression `^anchor-[a-z0-9][a-z0-9-]*$`, message "Start with anchor-, then lower-case letters, digits and hyphens."	`anchor-our-services`
Hide block (`classes_hideblock`)	Boolean	No	No	false	Temporarily hides the whole block on the site without deleting it	Use for content that is prepared but not yet released, or temporarily withdrawn	None	true
Padding left (`classes_paddingleft`)	Select	No	No	Default (empty)	Extra inner space on the left of the block	Use only when the design asks for it	Enforced: one of the options	`pl-600` (1.5rem)
Padding right (`classes_paddingright`)	Select	No	No	Default (empty)	Extra inner space on the right	As above	Enforced: one of the options	`pr-600`
Padding top (`classes_paddingtop`)	Select	No	No	Default (empty)	Extra inner space above the content	As above	Enforced: one of the options	`pt-1200` (3rem)
Padding bottom (`classes_paddingbottom`)	Select	No	No	Default (empty)	Extra inner space below the content	As above	Enforced: one of the options	`pb-1200`
Margin left (`classes_marginleft`)	Select	No	No	Default (empty)	Outer space on the left of the block	As above	Enforced: one of the options	`ml-0`
Margin right (`classes_marginright`)	Select	No	No	Default (empty)	Outer space on the right	As above	Enforced: one of the options	`mr-0`
Margin top (`classes_margintop`)	Select	No	No	Default (empty)	Outer space above the block	Use to separate a block from the previous one	Enforced: one of the options	`mt-800` (2rem)
Margin bottom (`classes_marginbottom`)	Select	No	No	Default (empty)	Outer space below the block	As above	Enforced: one of the options	`mb-0`

5.6.2 Spacing options and their values

Each padding and margin select offers the same 15 options. The option label shows the size; the stored value is a class `{prefix}-{token}` with the prefixes `pl`, `pr`, `pt`, `pb` (padding left, right, top, bottom) and `ml`, `mr`, `mt`, `mb` (margin).

Option label	Class suffix	Token	Size (rem)	Size (px at 16 px root)
Default	(none)	the block's own CSS	—	—
0 (none)	`-0`	`--space-0`	0	0
0.25rem (space-100)	`-100`	`--space-100`	0.25	4
0.5rem (space-200)	`-200`	`--space-200`	0.5	8

Option label	Class suffix	Token	Size (rem)	Size (px at 16 px root)
0.75rem (space-300)	`-300`	`--space-300`	0.75	12
1rem (space-400)	`-400`	`--space-400`	1	16
1.25rem (space-500)	`-500`	`--space-500`	1.25	20
1.5rem (space-600)	`-600`	`--space-600`	1.5	24
2rem (space-800)	`-800`	`--space-800`	2	32
2.5rem (space-1000)	`-1000`	`--space-1000`	2.5	40
3rem (space-1200)	`-1200`	`--space-1200`	3	48
4rem (space-1600)	`-1600`	`--space-1600`	4	64
5rem (space-2000)	`-2000`	`--space-2000`	5	80
6rem (space-2400)	`-2400`	`--space-2400`	6	96
7.5rem (space-3000)	`-3000`	`--space-3000`	7.5	120

The rules are written as `main .section .block.pl-600 { padding-left: var(--space-600); }` (and so on for every prefix and token). The `main .section` part makes them stronger than a block's own spacing rules, so the authored value wins. The values are the same at every breakpoint; there are no per-device spacing options. The larger tokens `--space-4000` to `--space-6000` exist in `styles/styles.css` but are not offered.

5.6.3 Anchor ID rules

1. **Format (Enforced by the model):** the value must match `^anchor-[a-z0-9][a-z0-9-]*$`: it starts with `anchor-`, the next character is a lower-case letter or digit, then lower-case letters, digits and hyphens only. `anchor-our-services` and `anchor-2026-results` are valid; `Anchor-Services`, `our-services`, `anchor-` and `anchor-our services` are rejected with "Start with anchor-, then lower-case letters, digits and hyphens.".
2. **Becomes the id:** `applyBlockOptions()` finds the class matching the same pattern and sets it as the block element's `id`, once per block. Link to it with `#anchor-our-services` (same page) or `/en/page#anchor-our-services`.
3. **Uniqueness (Enforced by code):** if another element on the page already has that id (another block, a section's Anchor name, a heading id generated from the heading text, a tab id), the block gets the first free suffix: `anchor-our-services-2`, then `-3`, and so on (`utils/ids.js` `availableId`). Links to the plain id then go to the first element. **Recommended:** use each Anchor ID once per page.
4. **Own ids win:** a block that already has an id is not changed. List, Cards and Separator have their own **Component ID** field, which they use as their id; set the Anchor ID only when no Component ID is set.
5. **Scrolling:** after the page has loaded, the site scrolls to the element named in the URL hash (`scripts/scripts.js` `loadLazy`).
6. **Analytics:** the id is also the block's component id in the data layer (Part 11), so changing an Anchor ID changes the analytics id of the block.
7. **Section anchors are different:** a section's **Anchor name** (section properties) has no `anchor-` prefix rule; it is normalised to lower case with hyphens and is skipped (not suffixed) if the id is already taken.

5.6.4 Hide block behaviour

Where	What happens
Live and preview site	The block and its wrapper are not displayed (`html:not(.adobe-ue-edit) main .block.hideblock` and `main .section > div:has(> .block.hideblock)` get `display: none`)
Universal Editor, Preview mode	Not displayed (same rule: the page has no `adobe-ue-edit` class)
Universal Editor, Edit mode	Shown faded (opacity 0.45) with a 0.125rem dashed outline (`--color-border-secondary`) 0.25rem outside the block, so it can be selected and switched back on
Page source	The block's content is still in the delivered HTML and its JavaScript still runs; search engines can read the text
Data layer	The block is still listed in the data layer component state (Part 11)
Section	The section stays; if every block in it is hidden, the empty section's spacing remains

Warning: Hide block is not a security or embargo mechanism. Confidential content (unreleased results, names) must not be published at all, hidden or not.

Note: For the two section-based containers (Gen Carousel and Tabs Container) the Additional values are stored on the section. The code that applies them reads block classes only, so their effect on these two containers could not be verified from the code. [To be confirmed: Additional tab on Gen Carousel and Tabs Container — owner: development team]

5.6.5 Padding and margin guidance

- **Recommended:** leave all eight selects on **Default**. Every block already follows the design system spacing, and sections already add spacing between each other (2.5rem on mobile, 5rem from 900 px, 7.5rem from 1200 px).
- Use **Margin top / bottom** to tighten or loosen the gap between two blocks in the same section.
- Use **Padding** when a block with a coloured background needs more inner space.
- Avoid large left / right values on mobile: the same value applies at every breakpoint and narrows the content.
- Margins of neighbouring blocks are added to the default layout; check the page at all three device sizes.

5.7 Preview, publish, validation and rollback

5.7.1 Environments

Environment	Address	Who sees it	How content gets there
Author	`author-p220207-e2271469.adobeaemcloud.com`	Signed-in authors	Saved automatically while editing
Preview	`https://main--tcs-corp--sradha-tcs.aem.page/{language}/...`	Anyone with the link (not indexed by search engines)	Publish to **Preview**
Live	`https://main--tcs-corp--sradha-tcs.aem.live/{language}/...`	Public	Publish to **Live** (Publish)

Environment	Address	Who sees it	How content gets there
Production domain	[To be confirmed: production domain and CDN — owner: site administrator]	Public	Served from Live through the CDN
Feature preview (developers)	`https://{branch}--tcs-corp--sradha-tcs.aem.page/`	Developers and testers	Code from a Git branch, content from Preview

```
 Author (Universal Editor) --Publish to Preview--> Preview  (*.aem.page)
        |                                                |
        +-----------------Publish (Live)-----------> Live     (*.aem.live) --> CDN /
domain
```

5.7.2 Publishing from the Universal Editor

Step 1 — Save and check

Action: Finish editing; check the page in Preview mode and at the three device sizes.

Expected Result: No editor hints ("Set up the list …") are visible; hidden blocks are absent in Preview mode.

Step 2 — Open the Publish dialog

Action: Select **Publish** in the editor toolbar.

Expected Result: The dialog lists the page and the references it uses (assets, fragments) and offers the destination(s) configured for this project (Preview and / or Live). [To be confirmed: publish destinations enabled in the Universal Editor for this program — owner: AEM administrator]

Steps — Universal Editor publish dialog: The Publish dialog with the page and its referenced assets listed, and the destination choice Preview / Live.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Select Publish
2	Publish dialog	Items	The page and its referenced assets are listed and selected
3	Publish dialog	Destination	Preview / Live

Step 3 — Publish to Preview and verify

Action: Choose **Preview**, publish, then open `https://main--tcs-corp--sradha-tcs.aem.page/{language}/{path}`.

Expected Result: The page shows the new content on `.aem.page`.

Step 4 — Publish to Live and verify

Action: When approved, publish again with destination **Live** (or use **Quick Publish** / **Manage Publication** in the Sites console). Open `https://main--tcs-corp--sradha-tcs.aem.live/{language}/{path}`.

Expected Result: The page is updated on `.aem.live`, normally within one to two minutes.

5.7.3 Publishing from the Sites console

Action	Use
Quick Publish	Publish the selected page(s) and their references now
Manage Publication	Publish or unpublish several pages, include child pages and referenced assets, or schedule a later date

Action	Use
Unpublish (Manage Publication > Unpublish)	Remove the page from the live site

5.7.4 What must be published separately

Changes to these items only take effect when the item itself is published: navigation and footer pages (`references/`), fragments, error pages, the locale's sheets (`placeholders`, `metadata`, `taxonomy`, `redirects`) and data sheets (`data/authors`, `locations`, `partners`, `social-links`, `media-contacts`), and images in AEM Assets. Listings (List, Filter List) read the query index (`/query-index.json`), which is updated when a page is published; republish a page if its card values in the metadata sheet changed.

5.7.5 Using AEM Sidekick

On a `.aem.page` or `.aem.live` page, open the Sidekick to see whether the page is previewed and published and when, to switch between **Preview** and **Live**, and to open the page in AEM (**AEM Editor**). Content is authored in AEM, so publish from AEM (Universal Editor or Sites console) rather than from the Sidekick. [To be confirmed: whether authors may use Sidekick preview / publish buttons in this project — owner: site administrator]

Steps — AEM Sidekick on the preview site: The Sidekick toolbar on a `.aem.page` page showing the Preview / Live switch and the last preview and publish times.

Step	Where	Field / control	Value / action
1	Browser	Address	Open https://main–tcs-corp–sradha-tcs.aem.page/en/about
2	Browser toolbar	AEM Sidekick	Select the Sidekick extension icon
3	Sidekick	Environment	Open the Preview / Live switch
4	Sidekick	Status	Point at the environment: last preview and publish times are shown

5.7.6 Caching

Edge Delivery Services purges its CDN cache for a page when it is published, so the new version is normally visible within a minute or two. If you still see the old version:

1. Hard-refresh the browser (Ctrl+Shift+R / Cmd+Shift+R) or open a private window.
2. Check that you published to **Live**, not only to **Preview**.
3. Check that the referenced item (fragment, sheet, image) was published too.
4. For inherited Navigation / Footer / 404 Page, use a new browser session (the values are cached per session).
5. If a production CDN is in front of `.aem.live`, its cache may add delay. [To be confirmed: production CDN cache and purge configuration — owner: site administrator]

5.7.7 Validation checklist (every page)

- ☐ Title and Description set in page properties; Page Type correct.
- ☐ One `h1` on the page (from the Page Header, a Hero with H1 or a Title with h1), headings in order.
- ☐ Every informative image has alt text; decorative images have none.
- ☐ Links work and point to published pages (`/en/...`, not `/content/tcs-corp/...`).
- ☐ No block is unintentionally hidden (check edit mode for faded blocks).
- ☐ Anchor links jump to the right block or section.
- ☐ The page looks right on mobile, tablet and desktop.
- ☐ Translated UI labels appear (locale placeholders sheet published).

- ☐ The preview URL (`.aem.page`) shows the change before you publish to Live.

5.7.8 Unpublishing a page

1. If the URL has been public, add a redirect from the old URL to a replacement in the locale's `redirects` sheet and publish it. **Note:** the per-locale redirects sheets are not applied by Edge Delivery on their own; another mechanism (for example CDN rules) must read them. [To be confirmed: redirect mechanism — owner: site administrator]
2. In the Sites console select the page, **Manage Publication** > **Unpublish** (or Quick Unpublish).
3. Check that the live URL now shows the locale's 404 page.
4. Delete the page on author only after it is unpublished.

5.7.9 Rolling back to an earlier version

AEM keeps versions of a page (created on publish and when you create one manually).

Step 1 — Open the timeline

Action: In the Sites console select the page, open the **Timeline** rail and filter on **Versions**.

Expected Result: The list of versions with date and author.

Step 2 — Restore

Action: Select the version and choose **Revert to this Version** (or use **Create** > **Restore** > **Restore Version** on the parent to restore a deleted child page).

Expected Result: The author page content returns to that version (the current state is kept as a new version).

Step 3 — Republish

Action: Open the page in the Universal Editor, check it, then publish to Preview and Live.

Expected Result: The live site shows the restored content.

Steps — Restoring a page version: The Sites console Timeline rail of a page with the Versions filter, one version selected and the Revert to this Version action visible.

Step	Where	Field / control	Value / action
1	AEM Sites console	Select	Select the page
2	AEM Sites console rail	Timeline	Open the Timeline rail
3	Timeline	Filter	Versions
4	Timeline	Version	Select a version
5	Timeline	Revert to this Version	Select Revert to this Version

> **Note:** Sheets, fragments and navigation pages are rolled back the same way, then republished. Code changes are rolled back by the development team (Git revert), not by authors.

5.8 Authoring do's and don'ts

Do	Don't
Start a templated page by copying it from Site Global Templates	Build article, blog or press-release pages from scratch

Do	Don't
Use one `h1` per page and keep heading levels in order (h2, then h3)	Pick a heading level for its size
Fill in alt text for every informative image	Put text inside images
Keep standalone links in their own paragraph to make them buttons; use the Button component for explicit control	Put several links in one paragraph and expect buttons
Use the locale's own references, sheets and data	Link to another locale's fragments or sheets
Use Anchor IDs with the `anchor-` prefix, once per page	Rename an Anchor ID that campaigns or analytics already use without telling the analytics team
Leave padding and margin on Default unless the design asks otherwise	Use spacing options to fix layout problems at one breakpoint only
Use Hide block for short-term withdrawals	Use Hide block to hide confidential content
Preview first, then publish to Live	Publish to Live without checking the preview
Publish sheets, fragments and assets after changing them	Expect a changed sheet to apply without publishing it
Add a redirect before unpublishing or moving a public page	Delete public pages without a redirect
Use the locale's block library pages to try options	Experiment on live pages
Keep UI labels in the locale's placeholders sheet	Type button labels or UI text into code-driven fields that come from placeholders
Keep personal data (names, e-mail addresses, phone numbers of individuals) out of free-text fields used for analytics labels	Put personal data in Anchor IDs, Component IDs or analytics labels

Part 6 — Component Library

This part documents every component authors can use on the TCS Corporate Website. Each chapter covers one component and follows the same fourteen-section template, so readers can find the same information in the same place for every component: 1 Component Purpose, 2 Visual Overview, 3 Component Variations, 4 Authoring Experience, 5 Authoring Guide, 6 Authorable Field Specification, 7 Field Annotation Mapping, 8 Component Specification, 9 Input Model, 10 Output Model, 11 Business Rules, 12 Author Best Practices, 13 Troubleshooting Guide and 14 Support Runbook. Field names, options, defaults and validation rules are taken from the component models (`blocks/{name}/_{name}.json`, `models/*.json`, aggregated in `component-models.json`); behaviour is taken from the component code. Rules are marked **Enforced** when the model or the code validates them and **Recommended** when they are editorial guidance. Chapters 6.5 to 6.9 cover the section container and the four default-content components (Text, Title, Image and Button), which have no Additional tab; the other blocks are documented in their own chapters. The complete inventory of components, items, models and filters is in the appendix.

6.0 Component Inventory

This chapter is the entry point to Part 6. It lists every component implemented on the TCS Corporate Website with its Universal Editor title, its type, the chapter that documents it, the number of variations documented there, its key fields, the site data it reads and its status (6.0.1); it maps the component names used in the client's handover brief to the components of this implementation (6.0.2); and it lists the item components that exist only inside a parent (6.0.3). The appendix inventory (15.8) adds the model names and presentation modes; this chapter and 15.8 agree on the variation counts.

Sources. Universal Editor titles and types are taken from `component-definition.json` (groups Default Content, Sections and Blocks) and the filters from `component-filters.json`, both generated by `npm run build:json` from `blocks/*/_*.json` and `models/_*.json`. Key fields are the dialog labels of `component-models.json`. "Variations documented" counts the `Variation` sub-headings of each chapter of Part 6 (484 in total). Data sources are checked in the block code (`utils/query-index.js`, `utils/data.js`, `utils/taxonomy.js`, `utils/placeholders.js`, `utils/metadata.js`, `utils/redirects.js`).

Type values. Block: a component from the Blocks group, placed in a section. **Block (auto)**: created by the page loader, not by authors. **Default content**: Text, Title, Image, Button. **Section**: a page-level container (Main allows Section, Gen Carousel and Tabs Container). **Item**: a component that can only be added inside its parent (6.0.3).

6.0.1 Implemented Components

No.	Component	Universal Editor title	Type	Chapter	Variations documented	Key fields	Data sources (metadata, query index, sheets)	Status
1	Header	None (no model, no dialog; created by `loadHeader` in `scripts/aem.js`)	Block (auto)	6.1	8	No fields: authors edit the Navigation page (sections brand, sections, tools)	Navigation page (inherited `nav` metadata, else `/{locale}/references/nav`); placeholders	Implemented

No.	Component	Universal Editor title	Type	Chapter	Variations documented	Key fields	Data sources (metadata, query index, sheets)	Status
2	Footer	Footer	Block (auto page footer) and block (authored footer bar on the footer page)	6.2	7	Conversation Canvas Page; Copyright Text (`{year}`); Link List (Link Title, Link Path, Link Type)	Footer page (inherited `footer`, else `/{locale}/references/footer`); `/{locale}/data/social-links.json`; Conversation Canvas page; placeholders	Implemented (no Additional tab)
3	Fragment	Fragment	Block	6.3	5	Reference	The referenced page (`{path}.plain.html`)	Implemented
4	Page Header	Page Header	Block	6.4	13	Layout (Default, Landing, Secondary, Article, Display); CTA List (CTA Title, CTA Link, CTA Link Type, CTA Link Style)	Page metadata (Title, Description, tags, `page-type`, `content-type`, `publish-date`, `reading-time`, `author-id`, `author`, `featured-image`, `listen-link`); `/{locale}/data/authors.json`; taxonomy; placeholders	Implemented
5	Section	Section	Section	6.5	6	Section Name; Style (Highlight); Width Type; Rounded edge; Background Image; Image alt text; Anchor name	AEM Assets (background image)	Implemented
6	Text	Text	Default content	6.6	7	Rich text	None	Implemented
7	Title	Title	Default content	6.7	6	Title; Title Type (h1 to h6)	None	Implemented
8	Image	Image	Default content	6.8	2	Image; Alt Text	AEM Assets	Implemented
9	Button	Button	Default content	6.9	7	Link; Text; Title; Views (Button, Icon, Link); Type (Primary, Secondary, Tertiary); Icon; Alignment	None	Implemented
10	Hero	Hero	Block	6.10	29	Hero Image type (Default, Lotto); Hero Image Path; Hero Image alt text; Hero View; Eyebrow; Title; Title heading level; Description; CTA List; Motion Type; Vertical / Horizontal / Text Alignment; BG Color	AEM Assets; Lottie JSON; placeholders (animation toggle)	Implemented
11	Teaser	Teaser	Block	6.11	66	Layout (Image & Text, Text split, Background image, Card); Eyebrow; Title; Title Type; Description; Date; Tags; author fields; Image type; Image; Image position; BG Color; Links (single, Primary / Secondary CTA, Multiple links); Stats; Personalization	Taxonomy (Tags labels); placeholders (article meta, animation toggle); AEM Assets	Implemented

No.	Component	Universal Editor title	Type	Chapter	Variations documented	Key fields	Data sources (metadata, query index, sheets)	Status
12	Quote	Quote	Block	6.12	5	Eyebrow; Title; Title Type; Quote; Quote Author; Image; Image Alt Text; Image Position (Desktop / Mobile); BG Color	AEM Assets	Implemented
13	Testimonial	Testimonial	Block	6.13	9	Eyebrow; Title; Description; Author; Author Image; Designation & Location; BG Color; Show / Hide switches; Stats (Stats Title, Stats Value)	AEM Assets	Implemented
14	Columns	Columns	Block (container)	6.14	4	Columns; Rows (not read by the code, F-23); Column cells with Text, Image, Button, Title	None	Implemented
15	Cards	Cards	Block (container)	6.15	46	Title; Heading type; Description; CTA link / text / style; Card style; Card colour; Image ratio; First card as feature; Show switches; Date format; per-breakpoint Layout (display, columns, gap, items visible, controls); Card items	Taxonomy (Card Tags labels); placeholders	Implemented (pre-redesign instances: F-34, F-41, F-42)
16	List	List	Block (container)	6.16	69	List source (Child pages, Fixed list, Tagged pages); Parent page; Search root; Tags; Match; Order by; Sort order; Maximum items; the Cards and Layout settings of Cards; List Items	`/query-index.json` (Child pages, Tagged pages); page metadata columns (`card-title`, `card-description`, `card-image`, `eyebrow`, `category`, `content-type`, `publish-date`, `reading-time`, `author-id`, `hide-in-nav`); `/{locale}/redirects.json`; `/{locale}/data/authors.json`; taxonomy; placeholders	Implemented (index columns: F-10)
17	Filter List	Filter List	Block	6.17	25	Title; Default layout; Cards per page; Datasource (Query Index, Manual List); Root path; Page types; Content types; Sort by; Primary filter category / tags; Show All filter; Allow multi select; Advanced filter categories; Filter logic; Card style; featured and hero card rules; Mapping (image, eyebrow, title, description, tag, URL, author sources)	`/query-index.json` (or the Manual List pages); metadata columns `featured-image`, `thumbnail-image`, `content-type`, `featured`, `priority`, `publish-date`, `reading-time`, `author`, `author-id`, `page-type`; taxonomy; `/{locale}/data/authors.json`; placeholders	Implemented (F-30)
18	Table List	Table List	Block (container)	6.18	17	Variation (Industries, Solutions, Products); Heading; Heading Type; Maximum items; Call to action (Text, Link, Style); Numbers; Item link; Button text; Motion Type; Table List Items	Placeholders	Implemented

No.	Component	Universal Editor title	Type	Chapter	Variations documented	Key fields	Data sources (metadata, query index, sheets)	Status
19	Anchor List	Anchor List	Block	6.19	2	Links (Link Title, Anchor Name); Sticky	Section Anchor names and element ids of the page; placeholders	Implemented
20	Accordion	Accordion	Block (container)	6.20	1	Accordion Items (Summary, Text); the block itself has only the Additional tab	None	Implemented
21	Tabs	Tabs Container (section) and Tabs (block)	Section and block (container)	6.21	12	Section: Component, ID, Width Type, Label, Style (Underline, Boxed, Pills), Alignment, Orientation; block: ID, Label, Style, Alignment, Orientation and Tab items with a Fragment	Fragment pages (block mode); placeholders	Implemented
22	Tab	Tab	Item (marker inside a Tabs Container section; listed in the Blocks group)	6.22	3	Title; ID; Active tab	None	Implemented
23	Modal	Modal	Block	6.23	3	Modal Content; Button Text (links to `/modals/` pages open as modals without the block)	The fragment page; placeholders	Implemented
24	Gen Carousel	Gen Carousel	Section	6.24	6	Style; Navigation (Manual, Auto, Manual and Auto); Autoplay interval (seconds); slides are Hero or Teaser blocks	Placeholders	Implemented
25	Table	Table	Block (container)	6.25	12	Options (Striped, Bordered, No Header, First Column Header); Columns (1 to 5); Rows	Placeholders	Implemented
26	Separator	Separator	Block	6.26	43	Component ID; Accessibility mode; Separator variant; Theme; Line style / thickness / colour / opacity; Separator width; Alignment; decorations; per-breakpoint settings; spacing	Placeholders (editor hints)	Implemented
27	Embed	Embed	Block	6.27	5	Placeholder Image; Placeholder Image Alt Text; URI	YouTube, Vimeo, X (third-party players); placeholders	Implemented (F-26)
28	Video	Video	Block	6.28	33	Video; Title; Caption; Transcript; Poster Image; Playback (Play button, Autoplay, Background); Muted; Loop; controls; Start / End At; Play in a Pop-up; Captions; Aspect Ra-	AEM Assets; YouTube; Vimeo; WebVTT captions; placeholders	Implemented (F-27)

No.	Component	Universal Editor title	Type	Chapter	Variations documented	Key fields	Data sources (metadata, query index, sheets)	Status
						tio; Size; Alignment; Privacy-enhanced Mode		
29	Form Variations	Form Variations	Block (container)	6.29	13	Form Title / Heading; Form Description; Theme (Default, Dark); field items (6.0.3)	Placeholders; no submit endpoint (`form-variations:submit` event only)	Implemented, no back end (F-01)
30	Conversation Canvas	Conversation Canvas	Block (container)	6.30	18	Canvas Style (Default, Primary sticky, Secondary); Icon; Eyebrow; Title; Title Type; Text; Menu (Menu root path, Menu depth); Search bar (water mark, audio icon, button style, hover text); Conversation Canvas Buttons	`/query-index.json` (menu, sticky site navigation); page tags (suggestion pills); taxonomy; placeholders; no search service (`conversation-canvas:search` event only)	Implemented, no search service
31	Interactive Dashboard	Interactive Dashboard	Block	6.31	2	None (Additional tab only)	None	Placeholder: renders nothing on the site

Totals. 31 components in 31 chapters: 4 page-level components (Header, Footer, Fragment, Page Header), 5 page-structure and default-content components (Section, Text, Title, Image, Button) and 22 content blocks. Two chapters cover two Universal Editor entries each: Tabs (Tabs Container section and Tabs block) and Footer (page footer and authored footer bar). The 26 block folders in `blocks/` include `header` (no model) and `tab`; the definitions also contain 18 item components (6.0.3) without chapters of their own.

> **Note:** Two different Universal Editor entries are titled **Tab** (the Tabs Container marker, model `tab`, chapter 6.22, and the item of the Tabs block, model `tabs-item`, 6.21) and five are titled **Row** (`table-row`, `table-col-2` to `table-col-5`). The picker only offers the one the selected container allows, so authors are not offered both at once.

6.0.2 Handover Brief Components Mapped to This Implementation

The client's handover brief names generic components (in the AEM Core Components vocabulary). The table maps each name to what is implemented, with the chapter to read.

Requested component	Implemented as	Chapter	Notes
Hero	**Hero** block	6.10	Full-width banner with image or Lottie (Hero Image type Lotto), eyebrow, title (H1 or H2), description, CTA List, motion, nine positions and BG Color. Use the **Page Header** (6.4) for the title area of secondary pages built from metadata, and the Teaser Background image layout (6.11) for in-page banners; Hero and Teaser are also the slides of a Gen Carousel (6.24)
Cards	**Cards** block	6.15	Manually authored cards (image, panel, report, statistic, mixed, rows of links) in a grid or horizontal scroller per breakpoint; same presentation and settings as the List (shared `models/`

Requested component	Implemented as	Chapter	Notes
			`_card-list.json`, `decorators/card-list-decorator.js`, `styles/card-list.css`)
Card	**Card** item of the Cards block	6.15	Fields Image, Image alt text, Eyebrow, Title, Description, Label, Tags, Date, Content type, Reading time, Link, Link text, Call to action label, Open in a new tab, Card style, Card colour, Analytics label, Accessibility label; only inside Cards. A List Item (6.16) is the equivalent inside a List
List	**List** block	6.16	AEM Core List equivalent: Child pages, Fixed list (List Items) or Tagged pages from `/query-index.json`; cards from page metadata; pages with `hide-in-nav = yes` are left out; links follow the locale's `redirects.json` (up to 5 hops). Content Fragment lists: not supported by decision (16.4)
Filter List	**Filter List** block	6.17	Content discovery over the query index (or a manual list) below a Root path, with Page types, Content types, Sort by, filter pills (curated tags or a tag category), the Advanced filter (tags below taxonomy roots), featured and hero cards and Load more. Filtering runs in the browser; there is no server-side search
Carousel	**Gen Carousel** section	6.24	A page-level section whose Hero and Teaser blocks become slides; Navigation Manual, Auto or Manual and Auto; Autoplay interval; pause / play, dots, swipe and keyboard. Card carousels are the List / Cards **Horizontal scroll** display with Previous / next buttons (6.15, 6.16)
Accordion	**Accordion** block with **Accordion Item** items	6.20	Native `<details>` / `<summary>`; one variation (collapsible items); open and close push `cmp:show` / `cmp:hide`
Tabs	**Tabs Container** section with **Tab** markers, or the **Tabs** block with Tab items showing fragments	6.21, 6.22	Both modes render the same tabs: Style Underline, Boxed or Pills; Alignment Left, Center, Full width; Orientation Horizontal or Vertical; Active tab; tab selection pushes `cmp:show`
Header	**Header** block (automatic)	6.1	Created on every page by `loadHeader`; content from the Navigation page; dropdowns on desktop (from 900 px), hamburger menu below 900 px; no search, language switcher, login or mega menu (Not implemented (as of this handover))
Footer	**Footer** block (automatic page footer and authored footer bar)	6.2	The footer page (`references/footer` or the inherited Footer property) plus the Social Links sheet; the authored Footer block adds the Conversation Canvas page, the copyright (`{year}`) and the Link List
Navigation	**Header** with the Navigation reference page (`/{locale}/references/nav`)	6.1, 3.5, 4.6	Navigation is content, not a component: three sections (brand, sections, tools) of the nav page; nested lists become dropdowns. Alternative navigation per site area through the inherited **Navigation** page property (for example `references/nav-careers`). In-page navigation is the **Anchor List** (6.19); the Conversation Canvas Primary style adds a site navigation of pills built from the query index (6.30)
Breadcrumb	Not implemented (as of this handover)	—	No breadcrumb block, decorator or template code exists (no match for "breadcrumb" in `blocks/`, `decorators/`, `utils/`, `scripts/`, `templates/`, `models/`). How it could be added: see the note below this table [To be confirmed: breadcrumb requirement and design — owner: Product Owner]
Separator	**Separator** block	6.26	AEM Core Separator equivalent: one `<hr>`, 10 variants (default, subtle, strong, inset, full-width, dotted, dashed, gradient, branded, custom-design), themes, per-breakpoint settings, decorative or semantic mode

Requested component	Implemented as	Chapter	Notes
Related Content	**List** with List source **Tagged pages** (or Child pages), or a curated **Cards** block	6.16, 6.15	Tagged pages lists the pages below a Search root that carry the List's Tags (Match Any or All, child tags included), with Maximum items. The List doesn't read the current page's tags: the related tags are set on each List. For hand-picked related items use a Fixed list or Cards; for a browsable hub use the Filter List (6.17)
Search Components	**Conversation Canvas** search bar and menu; **Filter List** filters	6.30, 6.17	The Conversation Canvas has a search field with voice input and a submit button, but submitting only dispatches `conversation-canvas:search` (and pushes `cmp:search`): no search service or results page is connected (Not implemented (as of this handover), O-09). The Filter List pills and Advanced filter narrow listed pages in the browser. The header has no search box
Error Page Components	`404.html` with `loadErrorPage` (`scripts/scripts.js`), the authored locale 404 page and the inherited **404 Page** page property	Part 10, 13.7	No dedicated component: the 404 page (`/{locale}/error-pages/404`) is authored with ordinary components (Title, Text, Button, List or Cards). Fallbacks: the nearest parent's 404 Page, then the locale's 404, then `/en/error-pages/404` (marked `lang`), then the built-in English content; a "Go back" button (placeholder `goBack`) and a RUM `404` checkpoint are added. 403 / 500 pages are authored for a CDN; the maintenance page is Not implemented (as of this handover)
All custom components	The 31 components of 6.0.1	6.1–6.31	Built for this project from the TCS.com Design System: Page Header, Hero, Teaser, Quote, Testimonial, Cards, List, Filter List, Table List, Anchor List, Tabs and Tab, Gen Carousel, Separator, Form Variations, Conversation Canvas, Interactive Dashboard (placeholder). Based on the Block Collection or the boilerplate and adapted: Accordion, Columns, Embed, Fragment, Modal, Table, Video, Header and Footer (page loading by `loadHeader` / `loadFooter`). Every block except Header and Footer has the Additional tab (5.6) and is in the data layer (Part 11)

How a breadcrumb could be added. This is a design proposal, not an implemented feature; it follows AGENTS.md (shared code in `decorators/` and `utils/`, rem units, placeholders, data layer attributes):

1. Get the trail with `getParentPages()` (`utils/site.js`): the parent paths up to the locale Home, nearest first (for `/de-de/insights/blogs/x`: `/de-de/insights/blogs`, `/de-de/insights`, `/de-de/`); reverse it and add the current page.
2. Get the labels from the query index (`getPages()` in `utils/query-index.js`, loaded once per page view and already filtered to the locale) using the `title` column, and leave out pages with `hideInNav` = yes. A parent that isn't published (no index row) is skipped. The Home label comes from a new placeholder key (for example `home`), because the Home title is usually the site name.
3. Render `<nav aria-label="…">` (placeholder, for example `breadcrumb`) with an `<ol>`; the last item is the current page with `aria-current="page"` and no link; links carry `data-cmp-*` attributes so `decorators/data-layer-decorator.js` reports clicks.
4. Either as a block (`blocks/breadcrumb/`, with `_breadcrumb.json` including the Additional tab, added to the `section` filter, then `npm run build:json`), or automatically on templated pages (for example in `ensurePageHeader` in `decorators/template-decorator.js`), or as an option of the Page Header. Optionally add `BreadcrumbList` structured data in the head.
5. Add placeholders keys to all 13 sheets (4.5.3), document the component in a new 6.x chapter and update `decorators/README.md` / `utils/README.md`.

6.0.3 Item Components and Their Parents

Items are listed in the Universal Editor picker only when their parent is selected (filters in `component-filters.json`). They have no Additional tab and no chapter of their own; their fields are in the parent's Authorable Field Specification.

Item (Universal Editor title)	Model	Parent (filter)	Key fields	Documented in
Accordion Item	`accordion-item`	Accordion (`accordion`)	Summary; Text	6.20
Card	`card`	Cards (`cards`)	Image; Image alt text; Eyebrow; Title; Description; Label; Tags; Date; Content type; Reading time; Link; Link text; Call to action label; Open in a new tab; Card style; Card colour; Analytics label; Accessibility label	6.15
List Item	`list-item`	List (`list`; used when List source is Fixed list)	Page or link; Link text; Open in a new tab; Title; Description; Image; Image alt text; Eyebrow; Tags (overrides the page tags); Label; Call to action label; Card style; Card colour; Analytics label; Accessibility label	6.16
Tab (marker)	`tab`	Tabs Container section (`tabs`, with Columns, Title, Text, Image, Button)	Title; ID; Active tab	6.22
Tab (fragment tab)	`tabs-item`	Tabs block (`tabs-block`)	Title; ID; Active tab; Fragment	6.21
Table List Item	`table-list-card`	Table List (`table-list`)	Number; Title; Trademark; Description; Link; Button text	6.18
Table List Header (legacy)	`table-list-header`	None: in the definitions but not in the `table-list` filter, so it can't be added; existing instances are still read	Two fields (legacy heading row)	6.18 (F-31)
Row	`table-row`	Table with Columns = 1 Column (`table`)	One cell (rich text)	6.25
Row	`table-col-2` to `table-col-5`	Table with Columns = 2 to 5 Columns (`table-2-columns` to `table-5-columns`)	Two to five cells	6.25
Column	None (no definition; created from the Columns block's columns and rows)	Columns (`columns`); each column (`column` filter) allows Text, Image, Button, Title	The default content placed in it	6.14
Text Input Field	`field-text`	Form Variations (`form-variations`)	Field Name / ID; Field Label; Input Type (Text, Email, Tel); Mandatory Field (*); Show only if dropdown value equals	6.29
Dropdown / Select Field	`field-select`	Form Variations	Dropdown Name / ID; Dropdown Label; Mandatory Field (*); Options; Show only if dropdown value equals	6.29

Item (Universal Editor title)	Model	Parent (filter)	Key fields	Documented in
Textarea Field	`field-textarea`	Form Variations	Field Name / ID; Field Label; Max Character Limit (default 1500); Mandatory Field (*); Show only if dropdown value equals	6.29
Consent Checkbox Field	`field-checkbox`	Form Variations	Checkbox Name / ID; Consent Text / Disclaimer; Mandatory Field (*); Show only if dropdown value equals	6.29
Contact Card Output	`contact-card`	Form Variations	Show when dropdown value equals; Contact Name; Emails; Phones	6.29
Submit Button	`field-submit`	Form Variations	Button Label (default Send); Show only if dropdown value equals	6.29
Conversation Canvas Button	`button` (the Button model)	Conversation Canvas (`conversation-canvas`)	Link; Text; Title; Views; Type; Icon; Alignment	6.30
Hero, Teaser (as slides)	`hero`, `teaser`	Gen Carousel section (`gen-carousel`)	Their own fields: each slide is a full Hero or Teaser	6.24, 6.10, 6.11

Note: Hero and Teaser are blocks, not items: they are listed here because the Gen Carousel accepts only them. The Video block has an empty filter (`video`): nothing can be added inside it.

6.1 Header Block

The Header block is the site header and main navigation of every page. It isn't added to pages by authors: the page loader (`scripts/aem.js` `loadHeader`, called from `scripts/scripts.js` `loadLazy`) creates it inside the page's `<header>` element. The block loads a **navigation page** (the "nav" reference page) as a fragment and turns its three sections into the brand (logo), the navigation sections (with dropdowns) and the tools area. Authors change the header by editing the nav page, not by editing a block.

Source files: `blocks/header/header.js`, `blocks/header/header.css`. The Header has **no** `_header.json` model: it has no dialog, no properties panel and no Additional tab.

6.1.1 Component Purpose

Business Objective. Give every page of every locale site a consistent, accessible, responsive main navigation with the TCS brand, the top-level sections of the site and a tools area, maintained centrally by authors without code changes.

Business Use Cases.

- Global navigation of a locale site (`/en`, `/de-de`, …) from the locale's `references/nav` page.
- A different navigation for one area of the site (for example a Careers area using `references/nav-careers`), set once on the area's top page and inherited by all pages below it.
- Campaign or microsite pages with a reduced navigation (a dedicated nav page chosen in the page's Navigation property or the metadata sheet's `nav` column).
- Access to second-level pages through dropdowns (desktop) or an expanded menu (mobile and tablet).

When To Use. Always: the header is loaded on every page automatically. Authors decide only which nav page a page uses and what the nav page contains.

When Not To Use.

- Don't add the Header as a block on a page; it isn't in the component palette and isn't meant to be authored inside content.
- Don't use the nav page for page-specific content (promotions, banners). Use a Fragment, Teaser or Hero on the page instead.
- Don't build mega menus with more than two levels: only the first level gets dropdown behaviour (see Business Rules).

Dependencies.

Type	Dependency	Use
Code	`blocks/fragment/fragment.js` `loadFragment`	Loads `{navPath}.plain.html` and decorates it like a page
Code	`utils/inherited-metadata.js` `getInheritedMetadata('nav')`	The page's Navigation, else the nearest parent page's, up to the locale Home page
Code	`utils/site.js` `resolvePagePath`	Turns the configured value (AEM path, published path or locale-relative path) into the path to fetch; default `references/nav` of the locale
Code	`decorators/button-decorator.js` `removeButtonDecoration`	Keeps the brand (logo) link a plain link
Code	`utils/ids.js` `createIdFactory`	Unique ids for the dropdown sub-lists (`nav-submenu-…`)
Code	`utils/placeholders.js` `getPlaceholders`, `fillPlaceholder`	Translated accessible names
Content	Nav page per locale: `/content/tcs-corp/{country}/{language}/references/nav` (published `/{locale}/references/nav`)	The header content
Content	Optional alternative nav pages, e.g. `references/nav-careers`	Area-specific navigation
Page property	**Navigation** (`nav`) in Page Properties (`models/_page.json`)	Chooses the nav page; inherited by child pages
Sheet	Bulk metadata sheet column `nav` (`/{locale}/metadata.json`)	Alternative way to choose the nav page by URL pattern
Placeholders	`mainNavigation` ("Main navigation"); `openNavigation` ("Open navigation"); `closeNavigation` ("Close navigation"); showSubmenu ("Show {label} menu")	Accessible names of the nav and its controls
Styles	`styles/styles.css`: `--nav-height` (4rem), `--background-color`, `--light-color`, `--body-font-size-s`, `--heading-font-size-s`; `header { height: var(--nav-height) }`; the header is hidden until its `data-block-status` is `loaded`	Layout and loading state

Related Components. Footer (loaded the same way from `references/footer`); Fragment (the loading mechanism); Conversation Canvas (its menu can also list site pages); Page Header (the first block below the header on content pages); 404 handling in `scripts.js` (uses the same inheritance for the 404 Page property).

Applicable Templates. All pages and all templates (home, article, blog, press-release and pages without a Page Type), including the 404 page.

Supported Content Types. All content types; the header doesn't read page content type metadata.

Business Problem Solved

Every page of 13 locale sites needs the same brand, main navigation and call to action, maintained by authors without code changes. The Header loads one nav page per locale (or per area, such as nav-careers) in the browser, so one published edit updates the header of every page that uses it, with keyboard-accessible dropdowns on desktop and a full-screen menu below 900 px.

Supported Taxonomy

None: the Header has no tag field, reads no page tags and doesn't use the taxonomy. Its only page input is the inherited nav metadata (Navigation page property or the metadata sheet nav column).

6.1.2 Visual Overview

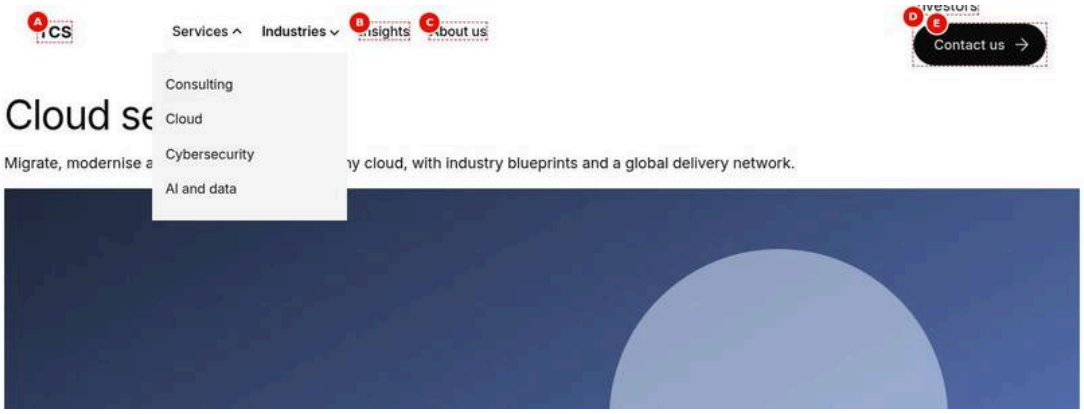

Figure 5: Desktop rendering — The header at 1440 px in one 4rem row: TCS at the left, Services, Industries, Insights and About us, then Investors and the Contact us primary button at the right. Services is open: its chevron points up and a light grey 12.5rem panel with a pointer triangle lists Consulting, Cloud, Cybersecurity and AI and data. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/header-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/header-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The header at 1440 px in one 4rem row: TCS at the left, Services, Industries, Insights and About us, then Investors and the Contact us primary button at the right. Services is open: its chevron points up and a light grey 12.5rem panel with a pointer triangle lists Consulting, Cloud, Cybersecurity and AI and data.
Business Context	Every /en page shows the same header, built in the browser from /en/references/nav: the TCS brand, four top-level sections and the tools; this is its desktop form with the Services dropdown open.
Author Objective	Author the brand, sections and tools of references/nav, leave Navigation empty on the content page and open Services at 1440 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 1 (brand))	Paragraph with the link "TCS" → /en/	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Text, bulleted list item 1 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—	Check on the preview (not stored in the content)	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—
—	Text, bulleted list item 2 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—	Check on the preview (not stored in the content)	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—
B	Text, bulleted list item 3 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Insights" as a link → /en/insights (no indented items)	No	—	—	None
C	Text, bulleted list item 4 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"About us" as a link → /en/about (no indented items)	No	—	—	None
D	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Paragraph with only the link "Investors" → /en/investors	No	—	—	None
E	Button (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Text "Contact us", Link /en/contact, Type Primary	No	—	—	None
(F)	Navigation (Content page › Page properties)	Leave empty (inherits the locale default references/nav)	No	—	—	None
—	Action (Preview)	Select Services to open its dropdown	—	Check on the preview (not stored in the content)	Select Services to open its dropdown	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px one row: TCS at the left, Services, Industries, Insights and About us, then Investors and the Contact us primary button at the right; below Services a light grey 12.5rem panel with a small pointer triangle lists Consulting, Cloud, Cybersecurity and AI and data.
- **Rendering behaviour:** From 900 px the nav is a flex row up to 79rem wide and 4rem high, labels don't wrap and Services and Industries carry a chevron that points up when open. The header is built in the lazy phase after the first section and scrolls away with the page.
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; references/nav is a separate page and must be published itself. The header loads the nav page in the browser, so a published nav change shows on every /en page without republishing them.

Business Rules

- Only the first three sections of the nav page become brand, sections and tools, in that order.
- A first-level item with indented items becomes a dropdown; Insights and About us stay plain links.
- Only one dropdown is open at a time; selecting another closes Services.
- There is no hover opening: dropdowns open on click, Enter or Space.
- The TCS link in the brand section is kept a plain link, never a button.

Common Authoring Mistakes

Error	Root Cause	Resolution
Services shows no chevron and no dropdown	Consulting, Cloud, Cybersecurity and AI and data were typed as first-level items instead of indented	Select the four items and use Increase indent below Services
The header is an empty 4rem band	references/nav was edited but never published	Publish the nav page to Preview and Live
Contact us appears in the middle of the row	The button was added to the sections section instead of the third section	Move the Button into Section 3 (tools)

Troubleshooting

- **Symptoms:** A white 4rem band at the top of /en pages, with no TCS link, sections or tools.
- **Cause:** The request for /en/references/nav.plain.html returns 404 because the nav page isn't published to the environment viewed.
- **Resolution:** Publish /content/tcs-corp/us/en/references/nav to Preview and Live.
- **Verification Steps:** In a private window the Network tab shows a 200 for the nav .plain.html and the header shows TCS, the four sections and the tools.

Desktop (>= 1200px, and the same from 900px). The navigation is a single horizontal row (flexbox, `justify-content: space-between`, 2rem gap) centred in the page with a maximum width of 79rem and 2rem padding left and right; the row height is `--nav-height` (4rem). The brand is on the left (an image is 8rem wide; text is shown at `--heading-font-size-s`, bold). The sections are a horizontal list (1.5rem gap, no wrapping: `white-space: nowrap`), first level medium weight (500), at `--body-font-size-s` (1rem from 900px). A section with a sub-list shows a small chevron drawn with borders to the right of its label; the chevron points down when closed and up when open. An open dropdown is an absolutely positioned panel 12.5rem wide, starting 150% of the item height below the label and 1.5rem to the left of it, with 1rem padding, the `--light-color` background (`--color-bg-secondary`) and a 0.5rem triangle pointing at the label; its items have 0.5rem vertical padding and regular weight (400). The hamburger button is hidden. The header scrolls away with the page (`.nav-wrapper` is `position: relative` from 900px).

Figure 6: Tablet rendering — The header at 768 px with the menu closed, in one 4rem row: the three-bar menu button at the left, TCS next to it and Investors with the Contact us button at the right; the four sections are hidden. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/header-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/header-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The header at 768 px with the menu closed, in one 4rem row: the three-bar menu button at the left, TCS next to it and Investors with the Contact us button at the right; the four sections are hidden.
Business Context	Tablet visitors at 768 px get the compact header: the desktop row starts only at 900 px, so the same nav page is shown as the mobile menu.
Author Objective	Use the standard references/nav and check the closed menu state at 768 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 1 (brand))	Paragraph with the link "TCS" → /en/	No	—	—	None
—	Text, bulleted list item 1 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—	Check on the preview (not stored in the content)	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—
—	Text, bulleted list item 2 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—	Check on the preview (not stored in the content)	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—
B	Text, bulleted list item 3 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Insights" as a link → /en/insights (no indented items)	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Text, bulleted list item 4 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"About us" as a link → /en/about (no indented items)	No	—	—	None
D	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Paragraph with only the link "Investors" → /en/investors	No	—	—	None
E	Button (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Text "Contact us", Link /en/contact, Type Primary	No	—	—	None
(F)	Navigation (Content page › Page properties)	Leave empty (inherits the locale default references/nav)	No	—	—	None
—	Screen width (Preview)	768 px (tablet), menu closed	—	Check on the preview (not stored in the content)	768 px (tablet), menu closed	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 768 px one 4rem row: the hamburger icon (three bars) at the left, TCS next to it and Investors with the Contact us button at the right; the four sections are hidden.
- **Rendering behaviour:** Below 900 px the nav is a grid with the areas hamburger, brand and tools; .nav-wrapper is fixed at the top (z-index 2) and the header element reserves 4rem so the page doesn't shift. Between 900 and 1199 px the desktop row is shown instead.
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; references/nav is published separately and serves every breakpoint, there is no separate tablet authoring.

Business Rules

- Below 900 px the sections stay hidden until the menu button is selected.
- The menu button is named Open navigation (placeholder openNavigation) while the menu is closed.
- The tools stay visible in the top row at the right.
- Keep 1–3 tools of 1–3 words so they fit next to the brand at 768 px.

Common Authoring Mistakes

Error	Root Cause	Resolution
The tools overlap TCS at 768 px	Four or more tools or long labels were authored in Section 3	Keep 1–3 short tools such as Investors and Contact us
Testers report the desktop row is missing on a tablet	The header switches to the row only from 900 px by design	Check tablets below 900 px in the closed menu state
The menu button is announced in English on /de-de	openNavigation isn't in the de-de placeholders sheet	Add the key with its translation and publish the sheet

Troubleshooting

- **Symptoms:** At 768 px the hamburger shows but selecting it opens an empty menu.
- **Cause:** The bulleted list isn't in the nav page's second section (for example brand and list share Section 1), so there is no .nav-sections content.
- **Resolution:** Put the TCS link alone in Section 1 and the list in Section 2, then publish the nav page.
- **Verification Steps:** At 768 px the open menu lists Services, Industries, Insights and About us.

Tablet (600–899px). Same as mobile: the header uses the mobile menu below 900px (the desktop navigation starts at 900px, not at the 1200px desktop breakpoint of the rest of the site). Between 900px and 1199px the desktop navigation is shown.

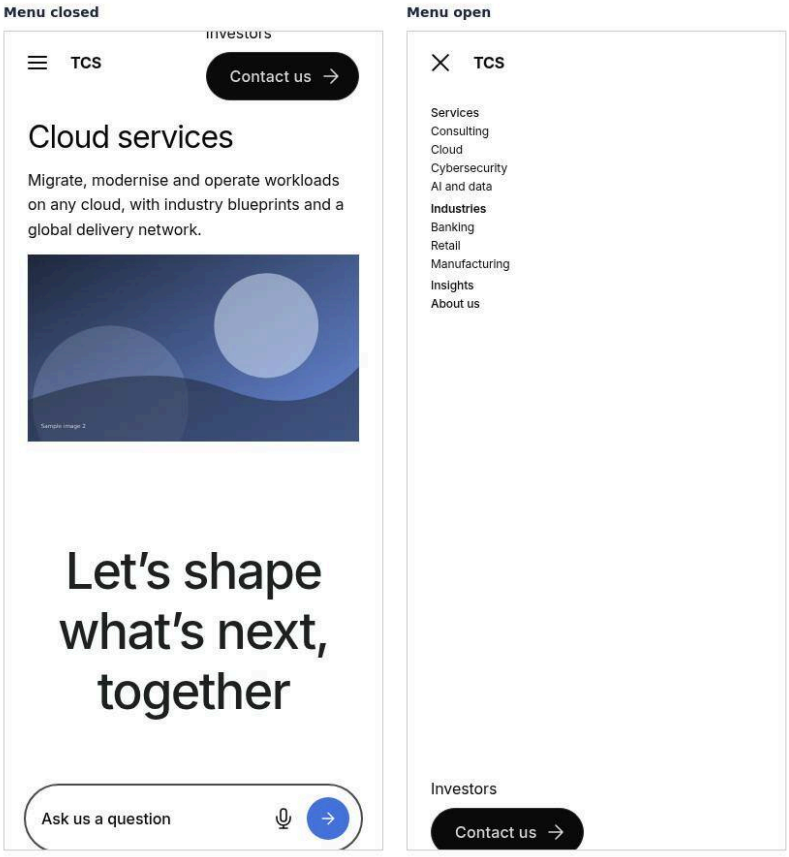

Figure 7: Mobile rendering — Two 390 px frames side by side. Menu closed: the menu button, TCS and the tools in one 4rem row. Menu open: the X icon and TCS, then Services with Consulting, Cloud, Cybersecurity and AI and data, Industries with Banking, Retail and Manufacturing, Insights and About us stacked, and Investors and Contact us at the bottom. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/header-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/header-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	Two 390 px frames side by side. Menu closed: the menu button, TCS and the tools in one 4rem row. Menu open: the X icon and TCS, then Services with Consulting, Cloud, Cybersecurity and AI and data, Industries with Banking, Retail and Manufacturing, Insights and About us stacked, and Investors and Contact us at the bottom.

Item	Detail
Business Context	On phones the header must stay reachable while scrolling and open a full-screen menu with the same sections as desktop.
Author Objective	Use the standard references/nav and compare the closed and the open menu at 390 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 1 (brand))	Paragraph with the link "TCS" → /en/	No	—	—	None
—	Text, bulleted list item 1 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—	Check on the preview (not stored in the content)	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—
—	Text, bulleted list item 2 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—	Check on the preview (not stored in the content)	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—
(B)	Text, bulleted list item 3 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Insights" as a link → /en/insights (no indented items)	No	—	—	None
(C)	Text, bulleted list item 4 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"About us" as a link → /en/about (no indented items)	No	—	—	None
(D)	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Paragraph with only the link "Investors" → /en/investors	No	—	—	None
(E)	Button (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Text "Contact us", Link /en/contact, Type Primary	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(F)	Navigation (Content page › Page properties)	Leave empty (inherits the locale default references/nav)	No	—	—	None
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—
—	Action (Preview)	Right: select the menu button to open the menu	—	Check on the preview (not stored in the content)	Right: select the menu button to open the menu	—

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two 390 px views: closed, the hamburger, TCS and the tools in one 4rem row; open, an X icon, TCS, then Services, Industries, Insights and About us stacked with their sub-links visible and Investors and Contact us at the bottom.
- **Rendering behaviour:** Open, the nav uses the areas hamburger brand, sections and tools, is at least 100dvh high, scrolls internally and locks page scrolling (body overflow-y hidden). The button switches to Close navigation and aria-expanded true; all dropdowns are marked expanded.
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; references/nav is a separate page and must be published itself; the mobile menu needs no extra content.

Business Rules

- Opening the menu marks every dropdown expanded; sub-lists are always visible in the open menu.
- Escape closes the menu and returns focus to the menu button.
- Focus leaving the nav closes the menu.
- Crossing 900 px resets the menu for the new mode.

Common Authoring Mistakes

Error	Root Cause	Resolution
The page behind can't be scrolled after closing	The menu was left in a broken state by a script error	Press Escape or the menu button, reload and report persistent cases to development
Second-level items appear as first-level items	The items weren't indented in the nav list	Indent them under their section label
The open menu is very long	Too many second-level items were authored	Keep about 8 items per section and 4–7 sections

Troubleshooting

- **Symptoms:** After closing the menu on a phone the page doesn't scroll.
- **Cause:** body overflow-y hidden stayed set because the menu state change was interrupted, for example by a console error.
- **Resolution:** Press the menu button or Escape, reload the page; report the device and browser to development if it persists.
- **Verification Steps:** With the menu closed document.body.style.overflowY is empty and the page scrolls.

Mobile (< 600px) and tablet (< 900px). The navigation is a CSS grid with the areas `hamburger brand tools` in one 4rem row and 1.5rem padding (maximum width 78rem). The `.nav-wrapper` is `position: fixed` at the top (z-index 2), so the header stays visible while the page scrolls; the `<header>` element reserves its 4rem height. The hamburger icon (three 1.25rem bars, 0.125rem thick) is drawn in CSS. When the menu is open, the nav switches to the areas `hamburger brand` / `sections` / `tools`, takes at least the full viewport height (`100dvh`), scrolls internally (`overflow-y: auto`), the page behind it doesn't scroll (`body overflow-y: hidden`), the icon turns into an "X" (two rotated 1.5rem bars), the sections are listed vertically with all sub-lists visible, and the tools move to the bottom row.

6.1.3 Component Variations

The header has no style options. Its variations are the nav page it shows, the breakpoint mode and the way each navigation section is authored.

Variation 1 — Default Locale Navigation

Variation Name: Default locale navigation (`references/nav`).

Business Purpose: One standard navigation per locale site, used by every page that doesn't choose another one.

Visual Example:

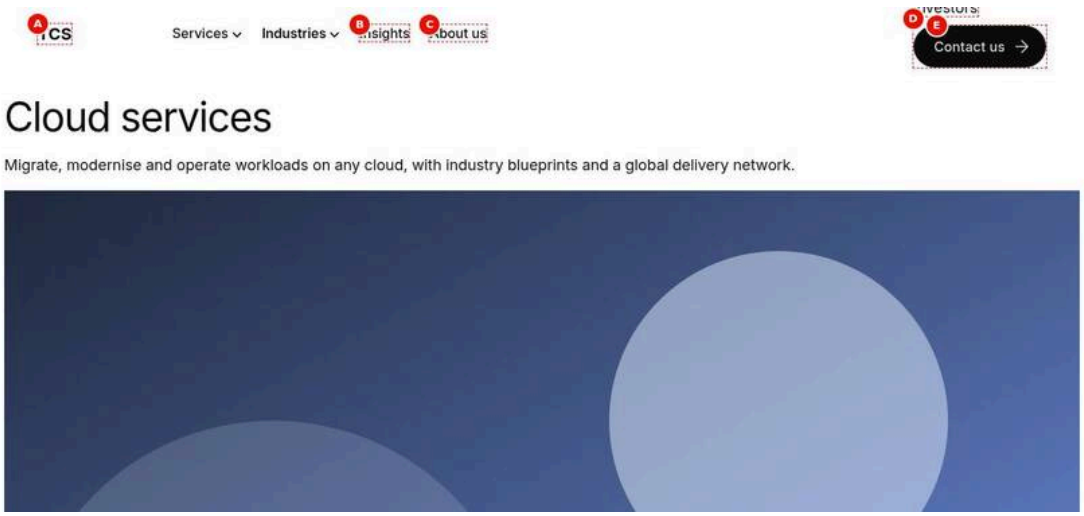

Figure 8: Default navigation of the /en locale — An /en content page at 1440 px with the header from /en/references/nav, all dropdowns closed: TCS, Services and Industries with chevrons, Insights, About us, Investors and the Contact us primary button, above the start of the page content. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/header-default-locale-navigation.jpg)

Screenshot Details — Default navigation of the /en locale

Item	Detail
Screenshot Name	`screenshots/header-default-locale-navigation.jpg`
Screenshot Purpose	Default navigation of the /en locale
Screen Description	An /en content page at 1440 px with the header from /en/references/nav, all dropdowns closed: TCS, Services and Industries with chevrons, Insights, About us, Investors and the Contact us primary button, above the start of the page content.
Business Context	Most pages never choose a navigation: they show their locale's standard references/nav, so one page per locale controls the header of the whole site.
Author Objective	Keep the content in /en/references/nav and leave Navigation empty on the page and its parents.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 1 (brand))	Paragraph with the link "TCS" → /en/	No	—	—	None
—	Text, bulleted list item 1 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—	Check on the preview (not stored in the content)	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—
—	Text, bulleted list item 2 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—	Check on the preview (not stored in the content)	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—
B	Text, bulleted list item 3 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Insights" as a link → /en/insights (no indented items)	No	—	—	None
C	Text, bulleted list item 4 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"About us" as a link → /en/about (no indented items)	No	—	—	None
D	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Paragraph with only the link "Investors" → /en/investors	No	—	—	None
E	Button (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Text "Contact us", Link /en/contact, Type Primary	No	—	—	None
(F)	Navigation (Content page › Page properties)	Leave empty (inherits the locale default references/nav)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** An /en content page with the header from /en/references/nav: TCS, Services, Industries, Insights, About us, Investors and the Contact us button.
- **Rendering behaviour:** With no Navigation value on the page or a parent, resolvePagePath falls back to references/nav of the locale: /en/references/nav on aem.page / aem.live, /content/tcs-corp/us/en/references/nav in Universal Editor.
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; the nav page is published on its own and its changes reach all /en pages without republishing them.

Business Rules

- Used when neither the page nor a parent up to the Home page has a Navigation value or a metadata sheet nav value.
- Each locale uses its own nav page: /de-de pages read /de-de/references/nav.
- Pages outside a locale (drafts, templates) use the /en nav page.
- If the nav page is missing or unpublished the header stays empty, without an error.

Common Authoring Mistakes

Error	Root Cause	Resolution
An /en page shows the Careers navigation	A parent page has Navigation set to references/nav-careers	Clear Navigation on that parent if the page shouldn't inherit it
A new locale shows an empty header	references/nav wasn't created or published for the locale	Create the nav page with three sections and publish it before go-live
German pages show English labels	The de-de nav page was copied from /en and not translated	Translate the labels and links to /de-de paths

Troubleshooting

- **Symptoms:** A page in the /en tree shows a different navigation from the rest of the site.
- **Cause:** The page or a parent has a Navigation value (page property or metadata sheet nav column) that it inherits.
- **Resolution:** Find the value in the page's meta nav and its parents'; clear it or move the page, then publish.
- **Verification Steps:** In a new private window the page shows the /en/references/nav header.

Use Cases: All locale pages; the Home page of each locale; error pages.

Authoring Guidelines: Leave the **Navigation** page property empty on the pages (and their parents) and don't set a `nav` value in the metadata sheet. Maintain the content in `/content/tcs-corp/{country}/{language}/references/nav`.

Business Rules: Used when the page and none of its parent pages (up to the locale Home page) has a Navigation value. Each locale has its own nav page: `/de-de/...` pages use `/de-de/references/nav`. Pages outside a locale (drafts, templates) use the `/en` locale.

Rendering Rules: `resolvePagePath('', 'references/nav')` returns `/{locale}/references/nav` on the published site and `/content/tcs-corp/{country}/{language}/references/nav` when editing in Universal Editor. If the nav page doesn't exist or isn't published, the header stays empty (4rem high, no content).

Responsive Behaviour: Desktop and from 900px: horizontal navigation with dropdowns. Tablet below 900px and mobile: hamburger menu.

SEO Impact: Navigation links are rendered in the browser (the header is built by JavaScript after the main content), so search engines that render JavaScript see them; the nav page itself is excluded from the query index (`/*/references/**`) and sitemap.

Accessibility Compliance: `<nav aria-label="Main navigation">` landmark; buttons with `aria-expanded` / `aria-controls`; Escape and focus handling (see 6.1.8).

Variation 2 — Alternate Navigation Page

Variation Name: Alternate navigation (for example `references/nav-careers`).

Business Purpose: A different header for an area of the site (Careers, Investors, a campaign) without changing the global navigation.

Visual Example:

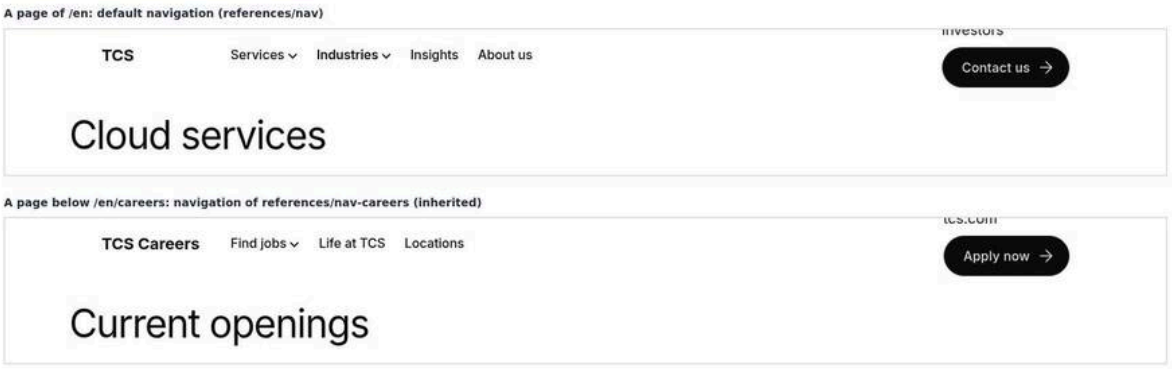

Figure 9: Area-specific navigation — Two 1440 px headers one above the other (not side by side). Top, a page of /en: TCS, Services, Industries, Insights, About us, Investors, Contact us. Bottom, /en/careers/jobs inheriting nav-careers: TCS Careers, Find jobs with a chevron, Life at TCS, Locations, tcs.com and the Apply now primary button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/header-alternate-navigation.jpg)

Screenshot Details — Area-specific navigation

Item	Detail
Screenshot Name	`screenshots/header-alternate-navigation.jpg`
Screenshot Purpose	Area-specific navigation
Screen Description	Two 1440 px headers one above the other (not side by side). Top, a page of /en: TCS, Services, Industries, Insights, About us, Investors, Contact us. Bottom, /en/careers/jobs inheriting nav-careers: TCS Careers, Find jobs with a chevron, Life at TCS, Locations, tcs.com and the Apply now primary button.
Business Context	The Careers area needs its own header (job categories and Apply now) while the rest of /en keeps the global navigation; it is set once on /en/careers and inherited below it.
Author Objective	Create references/nav-careers with three sections, set it as Navigation on /en/careers and leave Navigation empty on its child pages.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Text (Nav page / content/tcs-corp/us/en/references/nav-careers › Section 1 (brand))	Paragraph with the link "TCS Careers" → /en/careers	No	—	—	None
—	Text, bulleted list item 1 (Nav page / content/tcs-corp/us/en/references/	"Find jobs" as plain text, with the indented items Experienced profession-	—	Check on the preview (not stored in the content)	"Find jobs" as plain text, with the indented items Experienced profession-	—

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
	nav-careers › Section 2 (sections))	als → /en/careers/experienced, Graduates → /en/careers/graduates, Internships → /en/careers/internships			als → /en/careers/experienced, Graduates → /en/careers/graduates, Internships → /en/careers/internships	
(B)	Text, bulleted list item 2 (Nav page / content/tcs-corp/us/en/references/nav-careers › Section 2 (sections))	"Life at TCS" as a link → /en/careers/life (no indented items)	No	—	—	None
(C)	Text, bulleted list item 3 (Nav page / content/tcs-corp/us/en/references/nav-careers › Section 2 (sections))	"Locations" as a link → /en/careers/locations (no indented items)	No	—	—	None
(D)	Text (Nav page / content/tcs-corp/us/en/references/nav-careers › Section 3 (tools))	Paragraph with only the link "tcs.com" → /en/	No	—	—	None
(E)	Button (Nav page / content/tcs-corp/us/en/references/nav-careers › Section 3 (tools))	Text "Apply now", Link /en/careers/jobs, Type Primary	No	—	—	None
(F)	Navigation (Careers top page /content/tcs-corp/us/en/careers › Page properties)	/content/tcs-corp/us/en/references/nav-careers	No	—	—	None
(G)	Navigation (Child page /content/tcs-corp/us/en/careers/jobs › Page properties)	Leave empty (inherited from /en/careers)	No	—	—	None
(H)	Navigation (Other / en pages › Page properties)	Leave empty (references/nav, shown at the top)	No	—	—	None

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Side by side: a page below /en/careers with TCS Careers, Find jobs (with a chevron), Life at TCS, Locations, tcs.com and Apply now; and an ordinary /en page with the default TCS navigation.
- **Rendering behaviour:** The jobs page has no Navigation, so getInheritedMetadata loads the parent heads in parallel and finds nav-careers on /en/careers; the value is cached in sessionStorage tcs-inherited-metadata for the browser session.
- **Publishing behaviour:** Publish nav-careers, /en/careers and its child pages; child pages read the value from the parent's published head. Publish the nav page before or with the pages that reference it, otherwise their header is empty.

Business Rules

- The page's own Navigation wins; else the nearest parent's up to the Home page; else references/nav.
- Accepted values: an AEM path, a published path or a locale-relative path such as references/nav-careers.
- .html and .plain.html endings are removed from the value.
- Inherited values are cached per browser session; test changes in a new private window.
- Keep the brand, sections, tools order in nav-careers.

Common Authoring Mistakes

Error	Root Cause	Resolution
Pages below /en/careers still show the global nav	/en/careers was saved but not published, so its head has no nav value	Publish /en/careers and test in a new session
The Careers pages show an empty header	nav-careers was referenced but not published	Publish /content/tcs-corp/us/en/references/nav-careers
The whole site shows the Careers nav	Navigation was set on the Home page instead of /en/careers	Clear Navigation on the Home page and set it on /en/careers

Troubleshooting

- **Symptoms:** /en/careers/jobs shows the default TCS header although /en/careers has Navigation set.
- **Cause:** The tester's browser session still holds the cached inherited value, or /en/careers isn't published with its nav meta.
- **Resolution:** Publish /en/careers, then open the jobs page in a new private window.
- **Verification Steps:** The source of /en/careers shows meta nav with nav-careers and the jobs page shows TCS Careers and Apply now.

Use Cases: Section-specific navigation; microsites; landing pages with a reduced navigation.

Authoring Guidelines:

1. Create the nav page in the locale's `references/` folder (for example `references/nav-careers`), with the same three-section structure as `references/nav`.
2. Open the top page of the area (for example `/content/tcs-corp/us/en/careers`), open **Page Properties** and select the nav page in **Navigation**.
3. Publish the nav page and the top page.

Alternatively, add a row to the locale's metadata sheet with the URL pattern (for example `/en/careers/**`) and the `nav` column set to the nav page.

Business Rules: The value is inherited: the page's own Navigation (page property or metadata sheet `nav` column), else the nearest parent page's, up to the locale's Home page, else `references/nav`. Accepted values: an AEM path (`/content/tcs-corp/us/en/references/nav-careers`), a published path (`/en/references/nav-careers`) or a path relative to the locale root (`references/nav-careers`). A value with `.html` or `.plain.html` is accepted (the extension is removed).

Rendering Rules: Parent pages are looked up by loading their published HTML head in parallel (`getInheritedMetadata`), and the found values are cached in `sessionStorage` (key `tcs-inherited-metadata`) for the browser session.

Responsive Behaviour: As Variation 1.

SEO Impact: As Variation 1. Keep the brand link and main sections consistent so users and crawlers find the global pages.

Accessibility Compliance: As Variation 1. Keep the same order (brand, sections, tools) so users of assistive technology find the same structure in every area.

Variation 3 — Desktop Dropdown Navigation

Variation Name: Desktop dropdown navigation (viewport 900px and wider).

Business Purpose: Compact horizontal navigation for large screens, revealing second-level pages on demand.

Visual Example:

Figure 10: An open dropdown — The header at 1440 px with Services open: its chevron points up, and the light grey 12.5rem panel with the pointer triangle lists Consulting, Cloud, Cybersecurity and AI and data in regular weight, with Cloud underlined under the mouse pointer. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/header-desktop-dropdown.jpg)

Screenshot Details — An open dropdown

Item	Detail
Screenshot Name	`screenshots/header-desktop-dropdown.jpg`
Screenshot Purpose	An open dropdown
Screen Description	The header at 1440 px with Services open: its chevron points up, and the light grey 12.5rem panel with the pointer triangle lists Consulting, Cloud, Cybersecurity and AI and data in regular weight, with Cloud underlined under the mouse pointer.
Business Context	Second-level pages such as Cloud must be reachable from every page without a mega menu: on desktop they open in a dropdown under their section.
Author Objective	Indent the service links under Services in references/nav and open the dropdown at 1440 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 1 (brand))	Paragraph with the link "TCS" → /en/	No	—	—	None
—	Text, bulleted list item 1 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—	Check on the preview (not stored in the content)	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—
—	Text, bulleted list item 2 (Nav page / content/tcs-corp/us/en/references/	"Industries" as a bold link → /en/industries, with the indented items	—	Check on the preview (not stored in the content)	"Industries" as a bold link → /en/industries, with the indented items	—

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
	nav › Section 2 (sections))	Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing			Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	
B	Text, bulleted list item 3 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Insights" as a link → /en/insights (no indented items)	No	—	—	None
C	Text, bulleted list item 4 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"About us" as a link → /en/about (no indented items)	No	—	—	None
D	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Paragraph with only the link "Investors" → /en/investors	No	—	—	None
E	Button (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Text "Contact us", Link /en/contact, Type Primary	No	—	—	None
(F)	Navigation (Content page › Page properties)	Leave empty (inherits the locale default references/nav)	No	—	—	None
—	Action (Preview)	Select Services, then point at Cloud	—	Check on the preview (not stored in the content)	Select Services, then point at Cloud	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The Services chevron points up; below the label the light grey 12.5rem panel with its pointer triangle lists Consulting, Cloud, Cybersecurity and AI and data in regular weight, Cloud underlined under the pointer.
- **Rendering behaviour:** The Services li gets nav-drop and data-expanded true; its button has aria-expanded true and aria-controls nav-submenu-services. The panel is absolutely positioned 150 % of the item height below the label with 1rem padding; the sub-list is display none while closed.
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; the dropdown content lives in references/nav, which is published separately.

Business Rules

- Only one dropdown is open; opening Industries closes Services.
- Selecting Services again, Escape or focus leaving the nav closes the dropdown.

- Escape returns focus to the Services button.
- Pointing at a label doesn't open its dropdown.
- Only two levels: deeper lists aren't styled as nested dropdowns.

Common Authoring Mistakes

Error	Root Cause	Resolution
The dropdown doesn't open on mouse over	There is no hover behaviour by design	Select the label (click, Enter or Space)
A third level shows as a long unstyled list	A list was indented under Cloud	Keep only two levels; give deeper pages their own landing page
The dropdown stays open after clicking the page in Safari	Closing relies on focus leaving the nav and Safari doesn't focus buttons on click	Close with Services or Escape; an outside-click handler is a development task

Troubleshooting

- **Symptoms:** Selecting Services on desktop does nothing.
- **Cause:** The sub-items aren't a nested list of the Services item, so the item gets no nav-drop class or toggle button.
- **Resolution:** In Section 2 of references/nav indent Consulting to AI and data under Services and publish the nav page.
- **Verification Steps:** The rendered li has class nav-drop and a button.nav-drop-toggle; selecting it opens the panel.

Use Cases: All desktop and large-tablet visits.

Authoring Guidelines: On the nav page, in the second section, write the top-level items as a bulleted list; indent the second-level items below an item to create its dropdown.

Business Rules: Only one dropdown is open at a time: opening a dropdown closes the others. A dropdown closes when its toggle is selected again, when Escape is pressed (focus returns to its toggle) or when focus leaves the navigation. There is no hover behaviour: dropdowns open on click / Enter / Space only.

Rendering Rules: Each first-level `li` with a nested `ul` gets the class `nav-drop`, `data-expanded="false|true"` and a `<button class="nav-drop-toggle" aria-expanded aria-controls="nav-submenu-…">`. The sub-list is `display: none` until the item's `data-expanded` is `true`.

Responsive Behaviour: Desktop and 900–1199px: dropdown behaviour. Below 900px the same markup is shown as the mobile menu (Variation 4). Resizing across 900px resets the state (`matchMedia` change listener calls `toggleMenu`).

SEO Impact: Second-level links are in the DOM (hidden with `display: none` until opened), so they are discoverable after rendering.

Accessibility Compliance: Toggle buttons expose `aria-expanded` and `aria-controls`; the chevron is decorative CSS; Escape returns focus to the toggle (WCAG 2.1.1, 2.4.3, 4.1.2).

Variation 4 — Mobile and Tablet Menu

Variation Name: Mobile / tablet hamburger menu (viewport below 900px).

Business Purpose: A touch-friendly full-screen menu on small screens.

Visual Example:

Figure 11: Open mobile menu — The header at 390 px with the menu open over the full height: the X icon and TCS on top, then Services with Consulting, Cloud, Cybersecurity and AI and data, Industries with Banking, Retail and Manufacturing, Insights and About us stacked, and Investors and Contact us at the bottom. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/header-mobile-menu.jpg)

Screenshot Details — Open mobile menu

Item	Detail
Screenshot Name	`screenshots/header-mobile-menu.jpg`
Screenshot Purpose	Open mobile menu
Screen Description	The header at 390 px with the menu open over the full height: the X icon and TCS on top, then Services with Consulting, Cloud, Cybersecurity and AI and data, Industries with Banking, Retail and Manufacturing, Insights and About us stacked, and Investors and Contact us at the bottom.
Business Context	Phone visitors need all sections and second-level pages in one touch-friendly menu, maintained from the same nav page as desktop.
Author Objective	Use the standard references/nav and open the menu with the menu button at 390 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 1 (brand))	Paragraph with the link "TCS" → /en/	No	—	—	None
—	Text, bulleted list item 1 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—	Check on the preview (not stored in the content)	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—
—	Text, bulleted list item 2 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—	Check on the preview (not stored in the content)	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—
B	Text, bulleted list item 3 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Insights" as a link → /en/insights (no indented items)	No	—	—	None
C	Text, bulleted list item 4 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"About us" as a link → /en/about (no indented items)	No	—	—	None
D	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Paragraph with only the link "Investors" → /en/investors	No	—	—	None
E	Button (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Text "Contact us", Link /en/contact, Type Primary	No	—	—	None
(F)	Navigation (Content page › Page properties)	Leave empty (inherits the locale default references/nav)	No	—	—	None
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Action (Preview)	Select the menu button	—	Check on the preview (not stored in the content)	Select the menu button	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 390 px the X icon and TCS on top, then Services with Consulting, Cloud, Cybersecurity and AI and data, Industries with Banking, Retail and Manufacturing, Insights and About us stacked, and Investors and Contact us at the bottom.
- **Rendering behaviour:** nav data-expanded true shows .nav-sections; the menu is at least 100dvh high and scrolls internally while the page behind is locked. The menu button reads Close navigation with aria-expanded true; sub-lists stay visible even if a toggle is selected (Known Limitation).
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; the menu comes from references/nav, published separately.

Business Rules

- The menu button opens and closes the whole menu.
- Opening the menu marks all dropdowns expanded.
- Escape closes the menu and focuses the menu button.
- Section toggles change aria-expanded on mobile but don't hide their sub-lists (F-13, open).
- The hamburger is hidden from 900 px.

Common Authoring Mistakes

Error	Root Cause	Resolution
Services collapses on desktop but not on the phone	Mobile toggles don't hide sub-lists (known limitation)	Expect sub-lists always visible in the mobile menu
Labels wrap onto two lines	Long labels were authored	Keep labels to 1–3 words
The menu is announced as Open navigation after opening	closeNavigation is missing from the locale placeholders sheet	Add closeNavigation and publish the placeholders sheet

Troubleshooting

- **Symptoms:** In the open menu at 390 px Consulting, Cloud, Cybersecurity and AI and data appear as separate first-level items after Services, at the same indent.
- **Cause:** The service links were typed as first-level list items, so Services has no nested list and isn't a dropdown.
- **Resolution:** In Section 2 of references/nav select the four items, use Increase indent under Services and publish the nav page.
- **Verification Steps:** The open menu shows the four links indented under Services and the desktop row shows a chevron on Services.

Use Cases: Phones and tablets in portrait and landscape below 900px.

Authoring Guidelines: Same nav page as desktop; no separate authoring. Keep labels short so they fit on narrow screens.

Business Rules: The menu button (`.nav-hamburger button`) opens and closes the menu. When the menu opens, every dropdown is marked expanded. Escape closes the menu and focuses the menu button; focus leaving the navigation closes the menu.

Rendering Rules: `nav[data-expanded="true"]` shows `.nav-sections`; `body.style.overflowY = 'hidden'` while open. The button's `aria-expanded` and `aria-label` switch between "Open navigation" and "Close navigation".

Responsive Behaviour: Mobile and tablet only (the hamburger is hidden from 900px). Sub-lists are always visible inside the open menu; on mobile the dropdown toggles change `aria-expanded` but the CSS doesn't hide collapsed sub-lists (see Known Limitations).

SEO Impact: None beyond Variation 1.

Accessibility Compliance: Menu button with `aria-controls="nav-sections"`, `aria-expanded` and a translated `aria-label`; the icon is `aria-hidden`.

Variation 5 — Unlinked Section Label

Variation Name: Section label without a link (label is the dropdown button).

Business Purpose: A top-level grouping (for example "Services") that has no landing page of its own and only opens its sub-pages.

Visual Example:

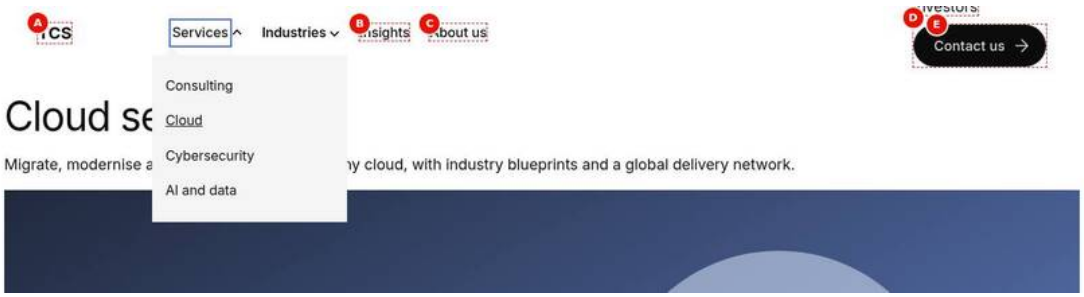

Figure 12: Section label rendered as a button — The header at 1440 px after Tab to Services and Enter: the Services button shows the keyboard focus ring and its chevron points up, and its dropdown lists Consulting, Cloud, Cybersecurity and AI and data. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/header-unlinked-section-label.jpg)

Screenshot Details — Section label rendered as a button

Item	Detail
Screenshot Name	`screenshots/header-unlinked-section-label.jpg`
Screenshot Purpose	Section label rendered as a button
Screen Description	The header at 1440 px after Tab to Services and Enter: the Services button shows the keyboard focus ring and its chevron points up, and its dropdown lists Consulting, Cloud, Cybersecurity and AI and data.
Business Context	Services is a grouping without a landing page of its own; its label only opens the dropdown with the four service pages.
Author Objective	Type Services as plain text with indented links and open its dropdown with the keyboard.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 1 (brand))	Paragraph with the link "TCS" → /en/	No	—	—	None
—	Text, bulleted list item 1 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—	Check on the preview (not stored in the content)	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—
—	Text, bulleted list item 2 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—	Check on the preview (not stored in the content)	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—
B	Text, bulleted list item 3 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Insights" as a link → /en/insights (no indented items)	No	—	—	None
C	Text, bulleted list item 4 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"About us" as a link → /en/about (no indented items)	No	—	—	None
D	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Paragraph with only the link "Investors" → /en/investors	No	—	—	None
E	Button (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Text "Contact us", Link /en/contact, Type Primary	No	—	—	None
(F)	Navigation (Content page › Page properties)	Leave empty (inherits the locale default references/nav)	No	—	—	None
—	Action (Preview)	Press Tab until Services is focused, then press Enter	—	Check on the preview (not stored in the content)	Press Tab until Services is focused, then press Enter	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The Services label with its chevron shows the keyboard focus ring; its dropdown with Consulting, Cloud, Cybersecurity and AI and data is open below it.
- **Rendering behaviour:** The plain text Services is replaced by button type button class nav-drop-toggle with the text Services; the text is its accessible name. Enter or Space toggles data-expanded and aria-expanded.
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; the label is part of references/nav, which is published separately.

Business Rules

- A plain text label becomes the dropdown button; it isn't a link.
- The button has no separate aria-label; Services is its accessible name.
- If the item has no label at all, an empty button is inserted.
- Give a group a landing page (linked label) only if it must be reachable as a page.

Common Authoring Mistakes

Error	Root Cause	Resolution
Services opens nothing and isn't a button	The indented items are missing under Services	Indent the service links under Services
Services is styled like a link but goes nowhere	A link with an empty or # target was added to the label	Remove the link so the label becomes the toggle button
Keyboard users can't reach the dropdown items	The dropdown was closed by tabbing away before Enter	Tab to Services, press Enter, then Tab into the items

Troubleshooting

- **Symptoms:** Tabbing reaches Services but Enter doesn't open the dropdown.
- **Cause:** Services was authored inside a link or the sub-list isn't nested, so no nav-drop-toggle button was created.
- **Resolution:** Make Services plain text and indent its four items, then publish references/nav.
- **Verification Steps:** Services renders as button.nav-drop-toggle and Enter sets aria-expanded true.

Use Cases: Grouping labels such as "What we do", "Industries", "Insights".

Authoring Guidelines: In the nav page's list, type the first-level item as plain text (no link) and indent its sub-items below it.

Business Rules: The label text becomes the button text; the button has no separate `aria-label` (its text is its accessible name).

Rendering Rules: The label node (the first element or non-empty text of the `li`) is replaced by `<button type="button" class="nav-drop-toggle">Services</button>`. If the item has no label at all, an empty button is inserted at the start of the item.

Responsive Behaviour: Desktop: the button opens the dropdown. Mobile: shown as a heading-like label above its always-visible sub-list.

SEO Impact: The label isn't a link; give important groups a landing page (Variation 6) if they need to rank.

Accessibility Compliance: Native `<button>` (keyboard operable with Enter and Space), `aria-expanded`, `aria-controls`.

Variation 6 — Linked Section Label

Variation Name: Section label with a link (label keeps its link, a separate toggle button is added).

Business Purpose: A top-level section that has its own landing page and sub-pages.

Visual Example:

Figure 13: Linked label with dropdown toggle — The header at 1440 px after Tab from the bold Industries link to its toggle and Enter: Industries stays a link with its chevron pointing up and the dropdown lists Banking, Retail and Manufacturing; no focus ring is visible because the toggle button is 0 × 0 (F-13). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/header-linked-section-label.jpg)

Screenshot Details — Linked label with dropdown toggle

Item	Detail
Screenshot Name	`screenshots/header-linked-section-label.jpg`
Screenshot Purpose	Linked label with dropdown toggle
Screen Description	The header at 1440 px after Tab from the bold Industries link to its toggle and Enter: Industries stays a link with its chevron pointing up and the dropdown lists Banking, Retail and Manufacturing; no focus ring is visible because the toggle button is 0 × 0 (F-13).
Business Context	Industries has an overview page and sub-pages; the label must stay a link to /en/industries while a separate toggle opens the dropdown.
Author Objective	Author Industries as a bold link with indented items and open its dropdown by keyboard from the toggle after the link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 1 (brand))	Paragraph with the link "TCS" → /en/	No	—	—	None
—	Text, bulleted list item 1 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—	Check on the preview (not stored in the content)	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—
—	Text, bulleted list item 2 (Nav page / content/tcs-corp/	"Industries" as a bold link → /en/industries, with the	—	Check on the preview (not stored in the content)	"Industries" as a bold link → /en/industries, with the	—

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
	us/en/references/nav › Section 2 (sections))	indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing			indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	
B	Text, bulleted list item 3 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Insights" as a link → /en/insights (no indented items)	No	—	—	None
C	Text, bulleted list item 4 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"About us" as a link → /en/about (no indented items)	No	—	—	None
D	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Paragraph with only the link "Investors" → /en/investors	No	—	—	None
E	Button (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Text "Contact us", Link /en/contact, Type Primary	No	—	—	None
(F)	Navigation (Content page › Page properties)	Leave empty (inherits the locale default references/nav)	No	—	—	None
—	Action (Preview)	Press Tab from the Industries link to its toggle button, then press Enter	—	Check on the preview (not stored in the content)	Press Tab from the Industries link to its toggle button, then press Enter	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Industries shown as a link with its chevron; the keyboard focus is on the toggle button after the link (no visible ring because the toggle has no size) and the Banking, Retail and Manufacturing dropdown is open.
- **Rendering behaviour:** The bold link is kept and button.nav-drop-toggle with aria-label Show Industries menu is inserted after it; the button is 0 × 0 and the chevron is drawn on the list item, so mouse and touch users can't open the dropdown on desktop (F-13, open).
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; the label is authored in references/nav, which is published separately.

Business Rules

- The link is kept only when it is inside an element such as bold formatting or a paragraph.

- A link that is the item's direct first child is replaced by a text button and loses its target.
- The toggle is named Show Industries menu (placeholder showSubmenu).
- Until F-13 is fixed, prefer unlinked labels with an Overview sub-item for dropdowns that mouse users need.

Common Authoring Mistakes

Error	Root Cause	Resolution
Industries no longer links to /en/industries	The link was the list item's direct child, not wrapped in bold	Make the link bold and publish references/nav
Clicking the Industries chevron does nothing	The toggle for linked labels has no visible size	Use an unlinked label with an Overview item or open it with the keyboard
No focus ring on the toggle	The zero-size toggle has no visible area (WCAG 2.4.7 gap)	Report to development; prefer unlinked labels until fixed

Troubleshooting

- **Symptoms:** After an edit Industries is a button that only opens the dropdown and no longer leads to /en/industries.
- **Cause:** The bold formatting was removed, so the link became the list item's direct child and decorateDrop replaced it (Business Rule 9).
- **Resolution:** Re-apply bold to the Industries link (or add an Overview sub-item) and publish references/nav.
- **Verification Steps:** The rendered li.nav-drop has an a href /en/industries before button.nav-drop-toggle.

Use Cases: Sections such as "Industries" with an overview page.

Authoring Guidelines: In the nav page's list, make the first-level label a link to the section page and indent its sub-items below it. The link must be inside an element (for example a paragraph or bold formatting) of the list item to be kept (see Business Rules).

Business Rules: The link is kept and a toggle button is added right after the label element, with the accessible name "Show {label} menu" (placeholder `showSubmenu`). The code checks for a link **inside** the label element (`label.querySelector('a[href]')`): when the list item's first child is the link itself (`<li><a href>…</a><ul>…`), the link isn't detected, so it is replaced by a text toggle button and the section page link is lost. Verify the rendered header after editing a linked label.

Rendering Rules: `<p><a href="/en/industries">Industries</a></p><button class="nav-drop-toggle" aria-label="Show Industries menu" aria-expanded="false" aria-controls="nav-submenu-industries"></button><ul id="nav-submenu-industries">…` The toggle button has no visible content and no size of its own in the CSS (measured 0 × 0 px in a browser check); the chevron is drawn on the list item (`.nav-drop::after`), not on the button.

Responsive Behaviour: Desktop: the link navigates; the dropdown can be opened by keyboard (Tab to the toggle, Enter). Because the toggle has no visible area, mouse and touch users can't open this dropdown on desktop (see Known Limitations). Mobile: the link and the always-visible sub-list are shown.

SEO Impact: The section landing page is linked from every page (good for internal linking).

Accessibility Compliance: Separate link and button, each with an accessible name. The zero-size toggle has no visible focus indicator area; this is a gap for WCAG 2.4.7 (Focus Visible) on desktop and must be fixed in code before relying on linked labels with dropdowns.

Variation 7 — Simple Section Link (No Dropdown)

Variation Name: First-level link without a sub-list.

Business Purpose: Direct links to key pages ("Contact", "Careers").

Visual Example:

Figure 14: Plain first-level link — The header at 1440 px with the pointer on Insights: Insights is underlined and has no chevron, like About us, while Services and Industries carry closed chevrons; no dropdown is open. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/header-simple-section-link.jpg)

Screenshot Details — Plain first-level link

Item	Detail
Screenshot Name	`screenshots/header-simple-section-link.jpg`
Screenshot Purpose	Plain first-level link
Screen Description	The header at 1440 px with the pointer on Insights: Insights is underlined and has no chevron, like About us, while Services and Industries carry closed chevrons; no dropdown is open.
Business Context	Insights and About us are single destinations without sub-pages, so they are plain links in the row next to the dropdown sections.
Author Objective	Add Insights and About us as linked first-level items without indented items and point at Insights.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 1 (brand))	Paragraph with the link "TCS" → /en/	No	—	—	None
—	Text, bulleted list item 1 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—	Check on the preview (not stored in the content)	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—
—	Text, bulleted list item 2 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—	Check on the preview (not stored in the content)	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—
B	Text, bulleted list item 3 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Insights" as a link → /en/insights (no indented items)	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Text, bulleted list item 4 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"About us" as a link → /en/about (no indented items)	No	—	—	None
D	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Paragraph with only the link "Investors" → /en/investors	No	—	—	None
E	Button (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Text "Contact us", Link /en/contact, Type Primary	No	—	—	None
(F)	Navigation (Content page › Page properties)	Leave empty (inherits the locale default references/nav)	No	—	—	None
—	Action (Preview)	Point at Insights	—	Check on the preview (not stored in the content)	Point at Insights	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px Services and Industries carry chevrons; Insights and About us have none, and Insights is underlined under the pointer.
- **Rendering behaviour:** Items without a nested list aren't decorated: no nav-drop class, no button, no data-expanded; they render as the authored li with an a in the text colour.
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; Insights and About us live in references/nav, published separately.

Business Rules

- An item without indented items stays a plain link with no chevron.
- The link text is the accessible name; avoid vague text.
- Labels don't wrap on desktop; keep them to 1–3 words.
- Mobile shows each plain link on one line of the open menu.

Common Authoring Mistakes

Error	Root Cause	Resolution
Insights shows a chevron but no dropdown items	An empty indented item was left under Insights	Delete the empty nested item
Insights isn't clickable	The label was typed as plain text without a link	Add the link /en/insights with the link tool
Insights links to the author instance	An author URL was pasted instead of a site path	Select the page with the picker or enter /en/insights

Troubleshooting

- **Symptoms:** Insights shows as a dropdown toggle with an empty panel.
- **Cause:** The list item contains an empty nested list left by the rich text editor, so it was decorated as a dropdown.
- **Resolution:** Remove the empty indented item under Insights in Section 2 and publish references/nav.
- **Verification Steps:** The rendered Insights li has no nav-drop class and links to /en/insights.

Use Cases: Single destination pages.

Authoring Guidelines: Add a first-level list item with a link and no indented sub-items.

Business Rules: Items without a nested list aren't decorated (no button, no `data-expanded`).

Rendering Rules: Rendered as the authored `<li><a>`; links inherit the text colour (`color: currentcolor`).

Responsive Behaviour: Desktop: inline in the row. Mobile: one line in the open menu.

SEO Impact: Standard internal link.

Accessibility Compliance: Standard link; the link text is its accessible name.

Variation 8 — Tools Area

Variation Name: Tools area (third section of the nav page).

Business Purpose: Utility links or buttons such as "Contact us", a language link or a search link.

Visual Example:

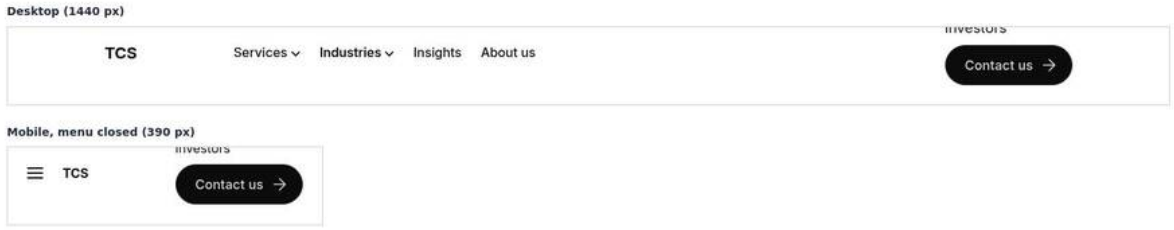

Figure 15: Tools on the right of the header — Two frames one above the other. Top, 1440 px: the full row with Investors as a link and the Contact us primary button at the right end. Bottom, 390 px with the menu closed: the menu button, TCS and the same two tools at the right of the 4rem row. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/header-tools-area.jpg)

Screenshot Details — Tools on the right of the header

Item	Detail
Screenshot Name	`screenshots/header-tools-area.jpg`
Screenshot Purpose	Tools on the right of the header
Screen Description	Two frames one above the other. Top, 1440 px: the full row with Investors as a link and the Contact us primary button at the right end. Bottom, 390 px with the menu closed: the menu button, TCS and the same two tools at the right of the 4rem row.
Business Context	The primary call to action Contact us and the Investors utility link must be visible on every page at every width.
Author Objective	Add the Investors link and the Contact us primary button to Section 3 of references/nav and compare 1440 px and 390 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 1 (brand))	Paragraph with the link "TCS" → /en/	No	—	—	None
—	Text, bulleted list item 1 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—	Check on the preview (not stored in the content)	"Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai	—
—	Text, bulleted list item 2 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—	Check on the preview (not stored in the content)	"Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing	—
(B)	Text, bulleted list item 3 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Insights" as a link → /en/insights (no indented items)	No	—	—	None
(C)	Text, bulleted list item 4 (Nav page / content/tcs-corp/us/en/references/nav › Section 2 (sections))	"About us" as a link → /en/about (no indented items)	No	—	—	None
(D)	Text (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Paragraph with only the link "Investors" → /en/investors	No	—	—	None
(E)	Button (Nav page / content/tcs-corp/us/en/references/nav › Section 3 (tools))	Text "Contact us", Link /en/contact, Type Primary	No	—	—	None
(F)	Navigation (Content page › Page properties)	Leave empty (inherits the locale default references/nav)	No	—	—	None
—	Screen width (Preview)	1440 px (top) and 390 px with the menu closed (bottom)	—	Check on the preview (not stored in the content)	1440 px (top) and 390 px with the menu closed (bottom)	—

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Top, 1440 px: Investors as a link and the Contact us primary button at the right end of the row. Bottom, 390 px with the menu closed: hamburger, TCS and the same two tools in the top row at the right.
- **Rendering behaviour:** The third section gets nav-tools and the grid area tools; there are no other tools styles. The standalone Investors link becomes a link button and the Button component keeps its Primary type (content buttons decorator); in the open mobile menu the tools move to the bottom row.
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; the tools are part of references/nav, which is published separately.

Business Rules

- Only the third section is the tools area; a fourth section is appended without a role.
- There is no built-in search, language switcher or login (Not implemented as of this handover).
- Keep one primary action and 1–3 items in total.
- A bold or italic standalone link gives a primary or secondary button; a plain one a link button.

Common Authoring Mistakes

Error	Root Cause	Resolution
Contact us shows as a plain link	The link was typed in a Text component without formatting or Type	Use a Button component with Type Primary, or make the link bold
A fourth group appears unstyled after the tools	A fourth section was added to the nav page	Keep three sections; move the content into Section 3
The tools crowd the brand on phones	Too many or long tool labels	Keep 1–3 short items

Troubleshooting

- **Symptoms:** The Contact us button appears in the middle of the desktop row instead of at the right.
- **Cause:** The nav page's sections are in the wrong order, so the tools content isn't the third section.
- **Resolution:** In the Content tree order the sections brand, sections, tools and publish references/nav.
- **Verification Steps:** The third nav child has class nav-tools and Contact us sits at the right end at 1440 px.

Use Cases: Primary call to action, secondary utility links.

Authoring Guidelines: Add a third section to the nav page with Text or Button components. A standalone link in a paragraph becomes a link button; bold or italic formatting (or the Button component's options) gives a primary / secondary button (`decorators/content-buttons-decorator.js`).

Business Rules: Only the first three sections of the nav page are used as brand, sections and tools; a fourth section is appended to the nav without a role class or specific styling. There is no built-in search, language switcher or login in the tools area (Not implemented as of this handover).

Rendering Rules: The section gets `nav-tools` and the grid area `tools`; there are no other tools-specific styles.

Responsive Behaviour: Desktop: at the right end of the row. Mobile closed: in the top row at the right. Mobile open: in the bottom row of the menu.

SEO Impact: Standard links.

Accessibility Compliance: Buttons and links keep their accessible names from the authored text; icon-only buttons get an `aria-label` from the button decorator.

6.1.4 Authoring Experience

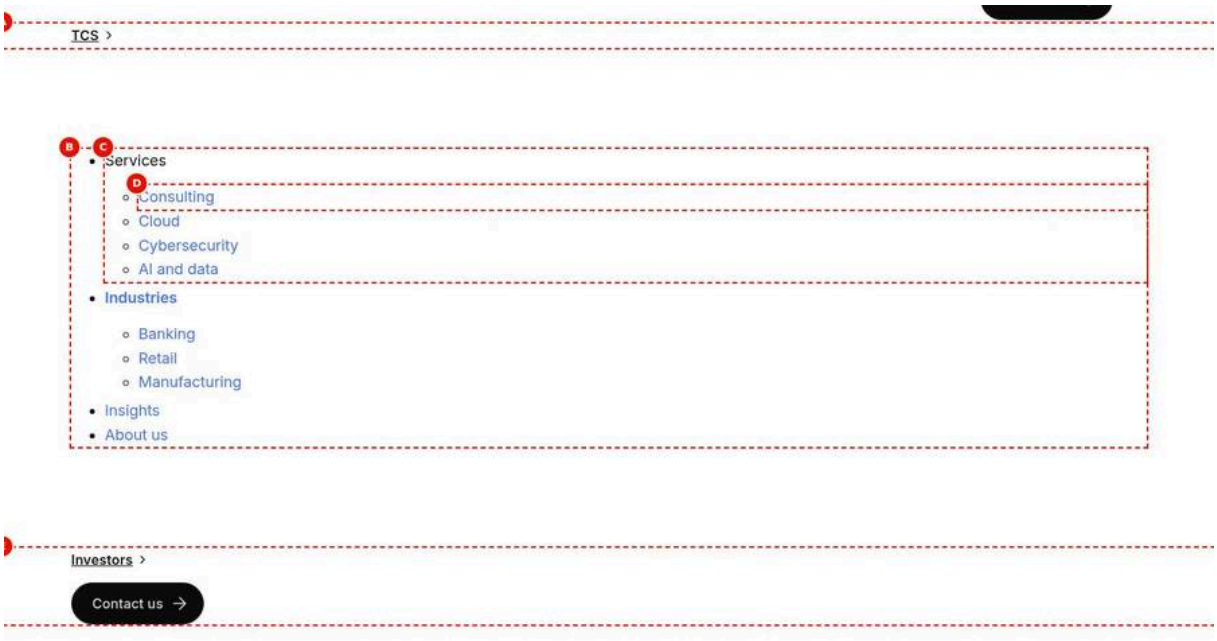

Figure 16: Universal Editor canvas of the nav page — references/nav opened directly in editor mode at 1440 px, rendered as an ordinary page under its own header: A the section with the TCS link, B the bulleted list, C Services with its four indented links, D one second-level link, E the section with Investors and the Contact us button. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/header-authoring-view.jpg)

Screenshot Details — Universal Editor canvas of the nav page

Item	Detail
Screenshot Name	`screenshots/header-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas of the nav page
Screen Description	references/nav opened directly in editor mode at 1440 px, rendered as an ordinary page under its own header: A the section with the TCS link, B the bulleted list, C Services with its four indented links, D one second-level link, E the section with Investors and the Contact us button.
Business Context	Authors change the header by editing the nav page, not a block; this view shows references/nav opened directly in Universal Editor with its three sections.
Author Objective	Name and fill the three sections of references/nav (Brand, Sections, Tools) with Text and Button components.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section Name (Section properties)	Brand	No	Label in the content tree	Short, descriptive name of the band's topic	None
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	TCS (link /en/)	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section Name (Section properties)	Sections	No	Label in the content tree	Short, descriptive name of the band's topic	None
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	• Services• Consulting (link /en/services/consulting) • Cloud (link /en/services/cloud) • Cybersecurity (link /en/services/cybersecurity) • AI and data (link /en/services/ai) • **Industries (link /en/industries)**• Banking (link /en/industries/banking) • Retail (link /en/industries/retail) • Manufacturing (link /en/industries/manufacturing) • Insights (link /en/insights) • About us (link /en/about)	No	Card text	1–3 sentences; lists and links allowed	None
—	Section Name (Section properties)	Tools	No	Label in the content tree	Short, descriptive name of the band's topic	None
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	Investors (link /en/investors)	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
—	Link (Button)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
—	Text (Button)	Contact us	Yes (Recommended)	Visible link text	Short, descriptive	None
—	Page (Universal Editor)	/content/tcs-corp/us/en/references/nav (the page opened directly)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The nav page rendered as an ordinary page with markers A to E: A the brand section with TCS, B the bulleted list, C Services with its indented items, D a second-level link, E the tools section with Investors and Contact us.
- **Rendering behaviour:** Opened directly, the nav page renders as sections and default content, not as a header; its own header is loaded from the nav page. Section Name only labels the sections in the Content tree; the header uses the section order.
- **Publishing behaviour:** Publish the nav page from the Universal Editor toolbar to Preview, check a content page on aem.page, then publish it to Live; content pages don't need republishing.

Business Rules

- The header reads the sections by position: first brand, second sections, third tools.
- Section Name and section Style aren't used by the header code.
- The list must be in the second section's default content to become the navigation.
- Check the result on a content page, not on the nav page itself.

Common Authoring Mistakes

Error	Root Cause	Resolution
The nav page looks like a normal page in the editor	Opened directly, it isn't rendered as a header by design	Check the header on a content page on aem.page
Renaming sections changed nothing in the header	Section Name only labels the Content tree	Reorder sections with drag in the Content tree instead
The header lost its tools	The Tools section was deleted or merged into Sections	Recreate Section 3 with the Investors link and the Contact us button

Troubleshooting

- **Symptoms:** After saving the nav page the content pages still show the old header.
- **Cause:** The nav page was saved in Universal Editor but not published to Preview or Live.
- **Resolution:** Publish references/nav from the Universal Editor toolbar to Preview, check, then to Live.
- **Verification Steps:** https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/en/references/nav shows the new preview and live dates and the header updates.

Annotations:

- A = Section 1 (brand): the logo image or the brand link (Image, Text or Button component).
- B = Section 2 (sections): the Text component with the bulleted list of first-level items.
- C = A first-level item with indented second-level items (becomes a dropdown).
- D = A second-level item (a link in the dropdown).
- E = Section 3 (tools): Text or Button components with utility links or buttons.

> **Note:** When the nav page is opened directly in Universal Editor, it is rendered as an ordinary page (sections and default content), not as a header; the header of that page is itself loaded from the nav page. Check the result on a content page.

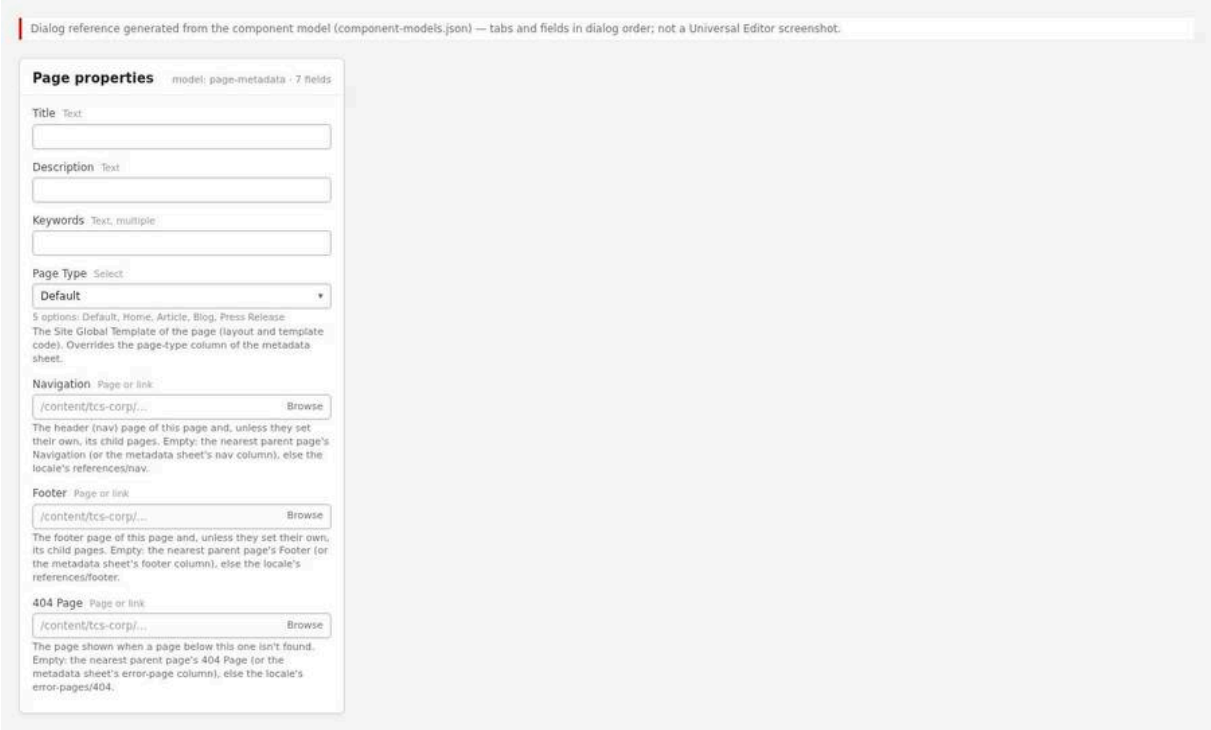

Figure 17: Properties used to choose the nav page — Page Properties of a content page with the Navigation field (and Footer, 404 Page) highlighted; plus the properties panel of the Text component holding the list on the nav page. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/header-properties-panel.jpg)

Properties panel description. The Header block itself has no properties panel. The fields involved are:

- **Page Properties > Navigation** (`nav`, AEM content picker): chooses the nav page for this page and, unless they set their own, its child pages.
- **Text component** (rich text) on the nav page: the list of sections; formatting, links and list indentation are edited in the rich text editor.
- **Image component** (Image, Image alt text) on the nav page: the logo.
- **Button component** (Link, Link Text, Link Title, Button View, Link Type, Button Icon, Button Alignment) on the nav page: buttons in the tools area; in the brand section any button styling is removed.
- **Section properties** of the nav page: not used by the header (section styles apply to the nav's sections but the header CSS doesn't plan for them).

6.1.5 Authoring Guide

Step 1 — Open the nav page in Universal Editor

Action: In AEM Sites, navigate to `/content/tcs-corp/{country}/{language}/references/`, select `nav` (or the alternate nav page) and choose **Edit**.

Expected Result: The nav page opens in Universal Editor with its sections.

Steps — Opening the nav page: AEM Sites console with the references folder of /us/en and the nav page selected, the Edit action highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › us › en › references
2	references	Select	nav (or the alternate nav page, e.g. nav-careers)

Step	Where	Field / control	Value / action
3	AEM Sites console toolbar	Edit	Open the page in Universal Editor

Step 2 — Check the three-section structure

Action: In the Content tree, confirm the page has three sections in this order: brand, sections, tools. Add a missing section with **Add > Section**.

Expected Result: Three sections are listed; their order matches brand, sections, tools.

Steps — Section order: The Content tree of the nav page with Section 1 (brand), Section 2 (sections), Section 3 (tools).

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Sections	Section 1 (brand), Section 2 (sections), Section 3 (tools), in this order
2	Universal Editor › Content tree	Add (+)	Section (only when one is missing)
3	Universal Editor › Content tree	Drag	Move the sections into the order brand, sections, tools

Step 3 — Edit the brand

Action: In section 1, select the Image component and pick the logo from AEM Assets, and fill **Image alt text** (for example “TCS home”); or use a Text / Button component with a link to the locale Home page.

Expected Result: The logo or brand link shows in the first section.

Steps — Brand section: Section 1 with the logo image selected and the Image alt text field filled.

Step	Where	Field / control	Value / action
1	Section 1 › Add (+)	Component	Image
2	Image › Properties	Image	Select the TCS logo in AEM Assets
3	Image › Properties	Alt Text	TCS home
4	Alternative: Section 1 › Text	Text	A paragraph with the link TCS → /en/ (the locale Home page)

Step 4 — Edit the navigation sections

Action: In section 2, select the Text component and edit the bulleted list: one first-level item per section; indent (increase indent) the second-level items under their section; add links with the link tool.

Expected Result: A nested bulleted list with first-level and second-level items.

Steps — Navigation list: Rich text editor with a two-level bulleted list, the indent button highlighted.

Step	Where	Field / control	Value / action
1	Section 2 › Text › Rich text editor	Bulleted list	Start a bulleted list
2	Bulleted list	Item	Services
3	Bulleted list (below Services)	Increase indent	Consulting, Cloud, Cybersecurity, AI and data (one item each)

Step	Where	Field / control	Value / action
4	Rich text editor	Link	Link each second-level item, e.g. Consulting → /en/services/consulting
5	Bulleted list	Decrease indent	Industries, Insights, About us as further first-level items

Step 5 — Decide linked or unlinked labels

Action: For each first-level item with sub-items, either leave the label as plain text (it becomes the dropdown button) or make it a link wrapped in formatting, for example a bold link (it stays a link and a toggle is added).

Expected Result: Labels are authored as intended; see Variations 5 and 6.

Steps — Label types: The list with one plain text label and one linked label.

Step	Where	Field / control	Value / action
1	Section 2 › Text › item Services	Formatting	None: plain text (becomes the dropdown button)
2	Section 2 › Text › item Industries	Link	/en/industries
3	Section 2 › Text › item Industries	Bold	Make the linked label bold (the link stays and a toggle is added)
4	Section 2 › Text › items Insights, About us	Link	/en/insights, /en/about (no indented items: plain links)

Step 6 — Edit the tools area

Action: In section 3, add or edit Text or Button components for the utility links and the call to action.

Expected Result: The tools appear in section 3.

Steps — Tools section: Section 3 with a Button component “Contact us” selected and its properties panel open.

Step	Where	Field / control	Value / action
1	Section 3 › Add (+)	Component	Button
2	Button › Properties	Link	/en/contact
3	Button › Properties	Text	Contact us
4	Button › Properties	Type	Primary
5	Section 3 › Add (+)	Component	Text
6	Text	Text	A paragraph with only the link Investors → /en/investors

Step 7 — (Optional) Assign an alternate nav page

Action: Open the top page of the area that needs the alternate navigation, open **Page Properties**, and pick the nav page in **Navigation**. Save.

Expected Result: The Navigation field holds the nav page path.

Steps — Navigation page property: Page Properties dialog of /en/careers with Navigation set to /content/tcs-corp/us/en/references/nav-careers.

Step	Where	Field / control	Value / action
1	AEM Sites console	Select	/content/tcs-corp/us/en/careers

Step	Where	Field / control	Value / action
2	AEM Sites console toolbar	Properties	Open Page Properties
3	Page Properties › Basic	Navigation	/content/tcs-corp/us/en/references/nav-careers
4	Page Properties	Save & Close	Save, then publish the page

Step 8 — Preview

Action: Publish the nav page to Preview (AEM Sidekick or **Publish** > **Preview**), then open a content page on `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/...`.

Expected Result: The preview page shows the updated header.

Steps — Preview check: A content page on the .aem.page host with the changed header.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar (nav page)	Publish	Publish to Preview
2	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/services (any content page of the locale)
3	Browser	Check	The header shows the changed nav page

Step 9 — Validate

Action: Run the Validation Process checklist below on desktop and mobile widths.

Expected Result: All checks pass.

Steps — Validation at two widths: The same page at 1440px with a dropdown open and at 390px with the menu open.

Step	Where	Field / control	Value / action
1	Browser	Screen width	1440 px
2	Header	Action	Select Services: the dropdown opens; press Escape: it closes and focus returns to Services
3	Browser	Screen width	390 px
4	Header	Action	Select the menu button: the menu opens with all sections; press Escape: it closes
5	Validation Process (6.1.5)	Check	All checks pass

Step 10 — Publish

Action: Publish the nav page (and any page whose Navigation property changed) to Live.

Expected Result: The live site (`https://main--tcs-corp--sradha-tcs.aem.live/`) shows the new header after the CDN cache refresh.

Steps — Publishing: The Publish dialog with the nav page selected and the Live destination.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar (nav page)	Publish	Open the Publish dialog
2	Publish dialog	Destination	Live

Step	Where	Field / control	Value / action
3	Publish dialog	Items	references/nav and every page whose Navigation property changed
4	Publish dialog	Publish	Confirm

Preview Process

1. Publish the nav page to Preview; the header on every preview page of that locale uses it immediately (no page re-publication is needed, because the header is loaded in the browser from the nav page).
2. Open several pages of different areas on `.aem.page` and check they use the expected nav page.
3. If you changed a Navigation page property, publish that page to Preview too: child pages read the value from the parent's published head.
4. Open a new private browser window when checking inheritance: inherited values are cached per browser session.

Publishing Process

1. Publish the nav page to Live.
2. Publish pages whose Navigation property changed.
3. If a new alternate nav page is used, publish it before (or together with) the pages that reference it; otherwise the header of those pages is empty.

Validation Process

- ☐ The logo shows and links to the locale Home page; it is a plain link, not a button.
- ☐ The first-level items appear in the authored order on desktop (900px and wider).
- ☐ Each section with sub-items shows a chevron; selecting its label opens the dropdown; opening another closes the first.
- ☐ Linked labels still link to their pages (and their dropdown opens with the keyboard).
- ☐ Escape closes an open dropdown and focus returns to its button.
- ☐ Tabbing out of the navigation closes the dropdown.
- ☐ Below 900px the hamburger opens a full-height menu; the page behind doesn't scroll; Escape closes it and focus returns to the menu button.
- ☐ The tools area shows its links / buttons at the right (desktop) and in the top row (mobile, closed).
- ☐ Screen reader: the landmark is announced as "Main navigation" (or the translated text); toggles announce expanded / collapsed.
- ☐ Pages in an area with an alternate nav page show that nav; other pages show the default.
- ☐ Translated labels (placeholders) are correct in non-English locales.

Rollback Process

1. In AEM, open the nav page's version history (**Timeline** or **Versions**), restore the previous version and publish it to Preview and Live.
2. If an alternate nav page caused the problem, clear the **Navigation** page property on the area's top page (or remove the `nav` value from the metadata sheet row) and publish; the pages fall back to the parent's or the locale's `references/nav`.
3. Tell testers to open a new browser session (inherited values are cached in `sessionStorage`).

The walkthroughs below repeat the steps above for each variation of chapter 6.1.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Default Locale Navigation

Reproduces the screenshot `screenshots/header-default-locale-navigation.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 1 (brand)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 1 (brand)** tab of the properties panel. Enter: **Text** (A) = Paragraph with the link "TCS" → /en/.

Expected Result: The first section of the nav page holds the paragraph with the link TCS to /en/, shown on the content page as the plain brand link at the left.

Step 3 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 1: "Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 4 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 2: "Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 5 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 2 (sections)** tab of the properties panel. Enter: **Text, bulleted list item 3** (B) = "Insights" as a link → /en/insights (no indented items); **Text, bulleted list item 4** (C) = "About us" as a link → /en/about (no indented items).

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 6 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 3 (tools)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 3 (tools)** tab of the properties panel. Enter: **Text** (D) = Paragraph with only the link "Investors" → /en/investors; **Button** (E) = Text "Contact us", Link /en/contact, Type Primary.

Expected Result: The third section holds the Investors link and the primary Contact us button, which become the tools area of the header.

Step 7 — Fill in Content page › Page properties

Action: Select **Content page** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Navigation** (F) = Leave empty (inherits the locale default references/nav).

Expected Result: Navigation stays empty, so the page inherits the locale default /en/references/nav.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: An /en content page with the header from /en/references/nav: TCS, Services, Industries, Insights, About us, Investors and the Contact us button.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the content page to aem.page or aem.live; the nav page is published on its own and its changes reach all /en pages without republishing them.

Step 10 — Verify

Action: On the live page check: In a new private window the page shows the /en/references/nav header.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Alternate Navigation Page

Reproduces the screenshot `screenshots/header-alternate-navigation.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Nav page /content/tcs-corp/us/en/references/nav-careers › Section 1 (brand)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav-careers** in the content tree and open the **Section 1 (brand)** tab of the properties panel. Enter: **Text** (A) = Paragraph with the link "TCS Careers" → /en/careers.

Expected Result: The first section of nav-careers holds the link TCS Careers to /en/careers.

Step 3 — Nav page /content/tcs-corp/us/en/references/nav-careers › Section 2 (sections)

Action: Text, bulleted list item 1: "Find jobs" as plain text, with the indented items Experienced professionals → /en/careers/experienced, Graduates → /en/careers/graduates, Internships → /en/careers/internships.

Expected Result: The list holds Find jobs with three indented links, then Life at TCS and Locations as plain links.

Step 4 — Fill in Nav page /content/tcs-corp/us/en/references/nav-careers › Section 2 (sections)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav-careers** in the content tree and open the **Section 2 (sections)** tab of the properties panel. Enter: **Text, bulleted list item 2** (B) = "Life at TCS" as a link → /en/careers/life (no indented items); **Text, bulleted list item 3** (C) = "Locations" as a link → /en/careers/locations (no indented items).

Expected Result: The list holds Find jobs with three indented links, then Life at TCS and Locations as plain links.

Step 5 — Fill in Nav page /content/tcs-corp/us/en/references/nav-careers › Section 3 (tools)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav-careers** in the content tree and open the **Section 3 (tools)** tab of the properties panel. Enter: **Text** (D) = Paragraph with only the link "tcs.com" → /en/; **Button** (E) = Text "Apply now", Link /en/careers/jobs, Type Primary.

Expected Result: The tools section holds the link tcs.com to /en/ and the primary Apply now button.

Step 6 — Fill in Careers top page /content/tcs-corp/us/en/careers › Page properties

Action: Select **Careers top page /content/tcs-corp/us/en/careers** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Navigation** (F) = /content/tcs-corp/us/en/references/nav-careers.

Expected Result: Navigation holds /content/tcs-corp/us/en/references/nav-careers, so the Careers header shows on /en/careers.

Step 7 — Fill in Child page /content/tcs-corp/us/en/careers/jobs › Page properties

Action: Select **Child page /content/tcs-corp/us/en/careers/jobs** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Navigation** (G) = Leave empty (inherited from /en/careers).

Expected Result: Navigation stays empty; the jobs page inherits nav-careers from /en/careers.

Step 8 — Fill in Other /en pages › Page properties

Action: Select **Other /en pages** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Navigation** (H) = Leave empty (references/nav, shown at the top).

Expected Result: Navigation stays empty; these pages keep the default references/nav header.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Side by side: a page below /en/careers with TCS Careers, Find jobs (with a chevron), Life at TCS, Locations, tcs.com and Apply now; and an ordinary /en page with the default TCS navigation.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish nav-careers, /en/careers and its child pages; child pages read the value from the parent's published head. Publish the nav page before or with the pages that reference it, otherwise their header is empty.

Step 11 — Verify

Action: On the live page check: The source of /en/careers shows meta nav with nav-careers and the jobs page shows TCS Careers and Apply now.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Desktop Dropdown Navigation

Reproduces the screenshot `screenshots/header-desktop-dropdown.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 1 (brand)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 1 (brand)** tab of the properties panel. Enter: **Text** (A) = Paragraph with the link "TCS" → /en/.

Expected Result: The first section of the nav page holds the paragraph with the link TCS to /en/, shown on the content page as the plain brand link at the left.

Step 3 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 1: "Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 4 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 2: "Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 5 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 2 (sections)** tab of the properties panel. Enter: **Text, bulleted list item 3** (B) = "Insights" as a link → /en/insights (no indented items); **Text, bulleted list item 4** (C) = "About us" as a link → /en/about (no indented items).

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 6 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 3 (tools)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 3 (tools)** tab of the properties panel. Enter: **Text** (D) = Paragraph with only the link "Investors" → /en/investors; **Button** (E) = Text "Contact us", Link /en/contact, Type Primary.

Expected Result: The third section holds the Investors link and the primary Contact us button, which become the tools area of the header.

Step 7 — Fill in Content page › Page properties

Action: Select **Content page** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Navigation** (F) = Leave empty (inherits the locale default references/nav).

Expected Result: Navigation stays empty, so the page inherits the locale default /en/references/nav.

Step 8 — Preview

Action: Action: Select Services, then point at Cloud.

Expected Result: Services opens its panel and pointing at Cloud underlines it; no other dropdown is open.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The Services chevron points up; below the label the light grey 12.5rem panel with its pointer triangle lists Consulting, Cloud, Cybersecurity and AI and data in regular weight, Cloud underlined under the pointer.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the content page to aem.page or aem.live; the dropdown content lives in references/nav, which is published separately.

Step 11 — Verify

Action: On the live page check: The rendered li has class nav-drop and a button.nav-drop-toggle; selecting it opens the panel.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Mobile and Tablet Menu

Reproduces the screenshot `screenshots/header-mobile-menu.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 1 (brand)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 1 (brand)** tab of the properties panel. Enter: **Text** (A) = Paragraph with the link "TCS" → /en/.

Expected Result: The first section of the nav page holds the paragraph with the link TCS to /en/, shown on the content page as the plain brand link at the left.

Step 3 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 1: "Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 4 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 2: "Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 5 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 2 (sections)** tab of the properties panel. Enter: **Text, bulleted list item 3** (B) = "Insights" as a link → /en/insights (no indented items); **Text, bulleted list item 4** (C) = "About us" as a link → /en/about (no indented items).

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 6 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 3 (tools)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 3 (tools)** tab of the properties panel. Enter: **Text** (D) = Paragraph with only the link "Investors" → /en/investors; **Button** (E) = Text "Contact us", Link /en/contact, Type Primary.

Expected Result: The third section holds the Investors link and the primary Contact us button, which become the tools area of the header.

Step 7 — Fill in Content page › Page properties

Action: Select **Content page** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Navigation** (F) = Leave empty (inherits the locale default references/nav).

Expected Result: Navigation stays empty, so the page inherits the locale default /en/references/nav.

Step 8 — Preview

Action: Screen width: 390 px (mobile).

Expected Result: At 390 px selecting the menu button opens the full-height menu with all sections and sub-links visible.

Step 9 — Preview

Action: Action: Select the menu button.

Expected Result: At 390 px selecting the menu button opens the full-height menu with all sections and sub-links visible.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 390 px the X icon and TCS on top, then Services with Consulting, Cloud, Cybersecurity and AI and data, Industries with Banking, Retail and Manufacturing, Insights and About us stacked, and Investors and Contact us at the bottom.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the content page to aem.page or aem.live; the menu comes from references/nav, published separately.

Step 12 — Verify

Action: On the live page check: The open menu shows the four links indented under Services and the desktop row shows a chevron on Services.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Unlinked Section Label

Reproduces the screenshot `screenshots/header-unlinked-section-label.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 1 (brand)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 1 (brand)** tab of the properties panel. Enter: **Text** (A) = Paragraph with the link "TCS" → /en/.

Expected Result: The first section of the nav page holds the paragraph with the link TCS to /en/, shown on the content page as the plain brand link at the left.

Step 3 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 1: "Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 4 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 2: "Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 5 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 2 (sections)** tab of the properties panel. Enter: **Text, bulleted list item 3** (B) = "Insights" as a link → /en/insights (no indented items); **Text, bulleted list item 4** (C) = "About us" as a link → /en/about (no indented items).

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 6 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 3 (tools)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 3 (tools)** tab of the properties panel. Enter: **Text** (D) = Paragraph with only the link "Investors" → /en/investors; **Button** (E) = Text "Contact us", Link /en/contact, Type Primary.

Expected Result: The third section holds the Investors link and the primary Contact us button, which become the tools area of the header.

Step 7 — Fill in Content page › Page properties

Action: Select **Content page** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Navigation** (F) = Leave empty (inherits the locale default references/nav).

Expected Result: Navigation stays empty, so the page inherits the locale default /en/references/nav.

Step 8 — Preview

Action: Action: Press Tab until Services is focused, then press Enter.

Expected Result: Tab focuses Services with the focus ring; Enter opens its dropdown.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The Services label with its chevron shows the keyboard focus ring; its dropdown with Consulting, Cloud, Cybersecurity and AI and data is open below it.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the content page to aem.page or aem.live; the label is part of references/nav, which is published separately.

Step 11 — Verify

Action: On the live page check: Services renders as button.nav-drop-toggle and Enter sets aria-expanded true.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Linked Section Label

Reproduces the screenshot `screenshots/header-linked-section-label.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 1 (brand)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 1 (brand)** tab of the properties panel. Enter: **Text** (A) = Paragraph with the link "TCS" → /en/.

Expected Result: The first section of the nav page holds the paragraph with the link TCS to /en/, shown on the content page as the plain brand link at the left.

Step 3 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 1: "Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 4 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 2: "Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 5 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 2 (sections)** tab of the properties panel. Enter: **Text, bulleted list item 3** (B) = "Insights" as a link → /en/insights (no indented items); **Text, bulleted list item 4** (C) = "About us" as a link → /en/about (no indented items).

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 6 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 3 (tools)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 3 (tools)** tab of the properties panel. Enter: **Text** (D) = Paragraph with only the link "Investors" → /en/investors; **Button** (E) = Text "Contact us", Link /en/contact, Type Primary.

Expected Result: The third section holds the Investors link and the primary Contact us button, which become the tools area of the header.

Step 7 — Fill in Content page › Page properties

Action: Select **Content page** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Navigation** (F) = Leave empty (inherits the locale default references/nav).

Expected Result: Navigation stays empty, so the page inherits the locale default /en/references/nav.

Step 8 — Preview

Action: Action: Press Tab from the Industries link to its toggle button, then press Enter.

Expected Result: Tab moves from the Industries link to its invisible toggle; Enter opens Banking, Retail and Manufacturing.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Industries shown as a link with its chevron; the keyboard focus is on the toggle button after the link (no visible ring because the toggle has no size) and the Banking, Retail and Manufacturing dropdown is open.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the content page to aem.page or aem.live; the label is authored in references/nav, which is published separately.

Step 11 — Verify

Action: On the live page check: The rendered li.nav-drop has an a href /en/industries before button.nav-drop-toggle.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Simple Section Link (No Dropdown)

Reproduces the screenshot `screenshots/header-simple-section-link.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 1 (brand)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 1 (brand)** tab of the properties panel. Enter: **Text** (A) = Paragraph with the link "TCS" → /en/.

Expected Result: The first section of the nav page holds the paragraph with the link TCS to /en/, shown on the content page as the plain brand link at the left.

Step 3 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 1: "Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 4 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 2: "Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 5 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 2 (sections)** tab of the properties panel. Enter: **Text, bulleted list item 3** (B) = "Insights" as a link → /en/insights (no indented items); **Text, bulleted list item 4** (C) = "About us" as a link → /en/about (no indented items).

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 6 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 3 (tools)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 3 (tools)** tab of the properties panel. Enter: **Text** (D) = Paragraph with only the link "Investors" → /en/investors; **Button** (E) = Text "Contact us", Link /en/contact, Type Primary.

Expected Result: The third section holds the Investors link and the primary Contact us button, which become the tools area of the header.

Step 7 — Fill in Content page › Page properties

Action: Select **Content page** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Navigation** (F) = Leave empty (inherits the locale default references/nav).

Expected Result: Navigation stays empty, so the page inherits the locale default /en/references/nav.

Step 8 — Preview

Action: Action: Point at Insights.

Expected Result: Pointing at Insights underlines it; no dropdown opens.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1440 px Services and Industries carry chevrons; Insights and About us have none, and Insights is underlined under the pointer.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the content page to aem.page or aem.live; Insights and About us live in references/nav, published separately.

Step 11 — Verify

Action: On the live page check: The rendered Insights li has no nav-drop class and links to /en/insights.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — Tools Area

Reproduces the screenshot `screenshots/header-tools-area.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 1 (brand)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 1 (brand)** tab of the properties panel. Enter: **Text** (A) = Paragraph with the link "TCS" → /en/.

Expected Result: The first section of the nav page holds the paragraph with the link TCS to /en/, shown on the content page as the plain brand link at the left.

Step 3 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 1: "Services" as plain text, with the indented items Consulting → /en/services/consulting, Cloud → /en/services/cloud, Cybersecurity → /en/services/cybersecurity, AI and data → /en/services/ai.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 4 — Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Text, bulleted list item 2: "Industries" as a bold link → /en/industries, with the indented items Banking → /en/industries/banking, Retail → /en/industries/retail, Manufacturing → /en/industries/manufacturing.

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 5 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 2 (sections)** tab of the properties panel. Enter: **Text, bulleted list item 3** (B) = "Insights" as a link → /en/insights (no indented items); **Text, bulleted list item 4** (C) = "About us" as a link → /en/about (no indented items).

Expected Result: The second section holds the bulleted list Services (plain text with four indented links), Industries (bold link with three indented links), Insights and About us.

Step 6 — Fill in Nav page /content/tcs-corp/us/en/references/nav › Section 3 (tools)

Action: Select **Nav page /content/tcs-corp/us/en/references/nav** in the content tree and open the **Section 3 (tools)** tab of the properties panel. Enter: **Text** (D) = Paragraph with only the link "Investors" → /en/investors; **Button** (E) = Text "Contact us", Link /en/contact, Type Primary.

Expected Result: The third section holds the Investors link and the primary Contact us button, which become the tools area of the header.

Step 7 — Fill in Content page › Page properties

Action: Select **Content page** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Navigation** (F) = Leave empty (inherits the locale default references/nav).

Expected Result: Navigation stays empty, so the page inherits the locale default /en/references/nav.

Step 8 — Preview

Action: Screen width: 1440 px (top) and 390 px with the menu closed (bottom).

Expected Result: At 1440 px the tools sit at the right end; at 390 px with the menu closed they are in the top row.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Top, 1440 px: Investors as a link and the Contact us primary button at the right end of the row. Bottom, 390 px with the menu closed: hamburger, TCS and the same two tools in the top row at the right.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the content page to aem.page or aem.live; the tools are part of references/nav, which is published separately.

Step 11 — Verify

Action: On the live page check: The third nav child has class nav-tools and Contact us sits at the right end at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.1.6 Authorable Field Specification

The Header block has no block model and no Additional tab. The authorable inputs are the Navigation page property and the content of the nav page.

Page Properties (model `page-metadata`, `models/_page.json`)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Navigation (`nav`)	aem-content (content picker)	No	No	Empty (inherit)	Chooses the nav page of the page and its children	Set only on the top page of an area that needs another navigation	None in the model; code accepts AEM, published or locale-relative paths	`/content/tcs-corp/us/en/references/nav-careers`

Nav page content (default content of the nav page)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Section 1 — Brand	Section with Image / Text / Button	Yes (Recommended)	No	None	Logo and Home link	One logo (image 8rem wide) or a brand link	None; button styling is removed in code	TCS logo linked to `/en/`
Image (brand)	reference (AEM Assets)	No	No	None	Logo image	Use an optimized SVG or PNG	None	`/content/dam/tcs/logo.svg`
Image alt text (brand)	text	Recommended	No	Empty	Accessible name of the logo	Describe the destination, e.g. "TCS home"	None	`TCS home`
Section 2 — Sections	Section with a Text component	Yes (Recommended)	No	None	First-level navigation	One bulleted list	Only lists directly in the section's default content are decorated	List of 4–7 items
First-level item	Rich text list item	Yes	Yes	None	A navigation section	Plain text label or a wrapped link	None	`Services`
Second-level item	Rich text nested list item	No	Yes	None	Dropdown entry	A link per item	None	`Consulting → /en/services/consulting`
Section 3 — Tools	Section with Text / Button	No	No	None	Utilities and call to action	Keep to 1–3 items	None	`Contact us` button

Field details

- **Navigation (`nav`).** Purpose: selects the header for a page tree. Allowed Values: any page path; typically `references/nav-*` pages of the same locale. Character Limits: none. Business Rules: inherited by child pages; the page's own value wins; the metadata sheet `nav` column is an equivalent source. Dependency Rules: the referenced page must be published. Visibility Rules: always visible (no `condition`). Sample Content: `/content/tcs-corp/us/en/references/nav-careers`.
- **Section 1 — Brand.** Purpose: the logo. Allowed Values: Image, Text or Button components. Character Limits: Recommended a single short brand text if not an image. Business Rules: the first `.button` / `.link-button` is turned back into a plain link. Dependency Rules: none. Visibility Rules: always shown. Sample Content: the TCS logo.
- **Section 2 — Sections.** Purpose: navigation tree. Allowed Values: one bulleted list with up to two levels. Character Limits: Recommended labels of 1–3 words (desktop row doesn't wrap). Business Rules: items with a nested list become dropdowns; others stay links. Dependency Rules: the list must be in the default content of

the second section. Visibility Rules: hidden below 900px until the menu is opened. Sample Content: Services (Consulting, Cloud, AI), Industries, Insights, Careers.

- **Section 3 — Tools.** Purpose: utilities. Allowed Values: Text and Button components. Character Limits: Recommended up to 3 items of 1–3 words. Business Rules: standalone links become buttons per the content buttons decorator. Dependency Rules: none. Visibility Rules: always visible. Sample Content: "Contact us" (primary button).

6.1.7 Field Annotation Mapping

Marker	Field	Purpose
A	Section 1 — Brand (Image / Text / Button)	Logo and Home link
B	Section 2 — Sections (Text with list)	First-level navigation
C	First-level item with sub-items	Dropdown section (button label or linked label)
D	Second-level item	Dropdown link
E	Section 3 — Tools	Utility links and call to action

6.1.8 Component Specification

Attribute	Value
Component Name	Header (`blocks/header`)
Version	1.0
Owner	[To be confirmed: product owner — owner: Digital Marketing]; technical owner: development team
Dependencies	`blocks/fragment/fragment.js`; `utils/inherited-metadata.js`; `utils/site.js`; `utils/ids.js`; `utils/placeholders.js`; `decorators/button-decorator.js`; nav pages in `references/`; Navigation page property; metadata sheet `nav` column
Component Type	Block (page-level, loaded automatically into `<header>`; not authorable on pages)
Supported Variants	Default nav; alternate nav pages; desktop dropdowns (>= 900px); mobile / tablet menu (< 900px); unlinked label; linked label; simple link; tools area
Supported Templates	All (home, article, blog, press-release, default, 404)
Supported Metadata	`nav` (page property Navigation, metadata sheet column), inherited from parent pages
Supported Tags	None
Supported Personalization	None. Different navigation per area via nav pages only. Adobe Target personalization would be possible in future through the data layer and Adobe Tags (not implemented)
Caching Considerations	The nav page `.plain.html` is served from the Edge Delivery CDN and the browser HTTP cache; parent-page Navigation values are cached in `sessionStorage` (`tcs-inherited-metadata`) for the session; placeholders are loaded once per page
Performance Considerations	Loaded in the lazy phase after the first section (LCP) is shown; one fetch for the nav page plus up to one fetch per parent page (in parallel) when the page has no own Navigation value; header area reserves 4rem to avoid layout shift; the logo isn't optimized by code (author an optimized asset)
Accessibility Compliance	`nav` landmark with translated `aria-label`; native buttons with `aria-expanded` / `aria-controls`; Escape closes and returns focus; focus leaving the nav closes it; hamburger icon `aria-hidden`; known gaps: zero-size toggle for linked labels, mobile toggles don't collapse visually
SEO Compliance	Links are standard `<a href>`; navigation is client-rendered; nav pages excluded from query index and sitemap

6.1.9 Input Model

- **Content Inputs:** the nav page's sections (brand, sections list, tools).
- **Metadata Inputs:** `<meta name="nav">` of the page (Navigation page property or metadata sheet `nav` column), else the parent pages' `nav` meta values.
- **Tags Inputs:** none.
- **Page Context Inputs:** the current path (locale and parent pages, published or AEM author path); viewport width (`(min-width: 900px)`).
- **Query Inputs:** none (no query index).
- **Manual Inputs:** the nav page's rich text and components.

Authored HTML received (nav page `.plain.html`, simplified):

```
<div>
  <p><a href="/en/"><picture><img src="./media_1a2b.png" alt="TCS home"></picture></a></p>
</div>
<div>
  <ul>
    <li>Services
      <ul>
        <li><a href="/en/services/consulting">Consulting</a></li>
        <li><a href="/en/services/cloud">Cloud</a></li>
      </ul>
    </li>
    <li><p><strong><a href="/en/industries">Industries</a></strong></p>
      <ul><li><a href="/en/industries/banking">Banking</a></li></ul>
    </li>
    <li><a href="/en/careers">Careers</a></li>
  </ul>
</div>
<div>
  <p><strong><a href="/en/contact">Contact us</a></strong></p>
</div>
```

The header block itself, as built by `aem.js`, is `<div class="header block" data-block-name="header">` with one empty row; its authored content is ignored.

6.1.10 Output Model

Rendered Output (DOM structure).

```
header
└─ div.header.block
   └─ div.nav-wrapper
      └─ nav#nav[aria-label][data-expanded]
         ├─ div.nav-hamburger > button[aria-controls][aria-expanded][aria-label]
         │                        > span.nav-hamburger-icon[aria-hidden]
         ├─ div.section.nav-brand      (section 1)
         ├─ div.section.nav-sections#nav-sections   (section 2)
         │  └─ div.default-content-wrapper > ul > li.nav-drop[data-expanded]
         │       ├─ button.nav-drop-toggle[aria-expanded][aria-controls]
         │       └─ ul#nav-submenu-{label}
         └─ div.section.nav-tools      (section 3)
```

Generated HTML (desktop, simplified).

```
<nav id="nav" aria-label="Main navigation" data-expanded="true">
  <div class="nav-hamburger">
    <button type="button" aria-controls="nav-sections" aria-expanded="false"
      aria-label="Open navigation"><span class="nav-hamburger-icon" aria-hidden="true"></
span>
    </button>
  </div>
  <div class="section nav-brand">…</div>
  <div class="section nav-sections" id="nav-sections">
    <div class="default-content-wrapper"><ul>
      <li class="nav-drop" data-expanded="false">
        <button type="button" class="nav-drop-toggle" aria-controls="nav-submenu-services"
          aria-expanded="false">Services</button>
        <ul id="nav-submenu-services">…</ul>
      </li>
    </ul></div>
  </div>
  <div class="section nav-tools">…</div>
</nav>
```

On desktop the `nav` keeps `data-expanded="true"` (the code opens the "menu" on desktop so the sections are visible) while the hamburger reports `aria-expanded="false"`; on mobile `data-expanded` follows the menu state.

Generated JSON: none.

Generated Metadata: none.

Analytics Tracking. The header block is a `.block`, so the data layer decorator (`decorators/data-layer-decorator.js`) tracks it:

- State (pushed in the delayed phase, about 3 seconds after load, by `trackBlocks(document)`):

```
{ "component": { "header-1": {
  "@type": "tcs-corp/components/header",
  "parentId": "page-1x2y3z" } } }
```

- Clicks on header links and buttons push `cmp:click` with `interaction` `link` or `button`, `dc:title` (the `aria-label` or text, up to 100 characters), `xdm:linkURL`, `xdm:linkType` (`other` for site links, `exit` for other domains, `download` for files) and `breakpoint`:

```
{ "event": "cmp:click", "eventInfo": {
  "path": "component.header-1", "interaction": "link", "dc:title": "Consulting",
  "xdm:linkURL": "https://main--tcs-corp--sradha-tcs.aem.live/en/services/consulting",
  "xdm:linkType": "other", "breakpoint": "desktop" } }
```

Blocks placed on the nav page are tracked as their own components with `parentId` `header-1`. No tag manager is loaded yet; events wait in `window.adobeDataLayer`.

Personalization Output: none.

Search Index Output: none; the nav pages are excluded from `/query-index.json` (`/*/references/**`) and from the sitemap.

Target Personalization Output: None. Different navigation per area is done with nav pages only; Adobe Target personalisation through the data layer and Adobe Tags would be possible in future (Not implemented (as of this handover)). The header is in the data layer as component.header-1 and its links are captured as cmp:click once Adobe Tags is installed (F-06).

6.1.11 Business Rules

1. The nav page is the page's Navigation value (page property or metadata sheet `nav` column), else the nearest parent page's up to the locale Home page, else `{locale}/references/nav`.
2. The Navigation value may be an AEM path, a published path or a path relative to the locale root; `.html` / `.plain.html` endings are removed; an unparsable value falls back to `references/nav`.
3. When editing in Universal Editor the nav page is loaded from its AEM author path (`/content/tcs-corp/...`); on the published site from its published path.
4. Parent-page values are looked up by loading the parents' published HTML in parallel and cached for the browser session (`sessionStorage` key `tcs-inherited-metadata`); a changed parent value is seen in a new session.
5. If the nav page can't be loaded (missing, not published, network error, or a path not starting with `/`), the header is left empty; no error is shown.
6. The nav page's first section is the brand, the second the sections, the third the tools; further sections are appended without a role.
7. In the brand section, the first button or link button is turned back into a plain link.
8. Only first-level list items (`.default-content-wrapper > ul > li` in the sections section) that contain a nested list become dropdowns.
9. An unlinked label becomes the toggle button's text; a label element containing a link keeps the link and gets an additional toggle button with the accessible name "Show {label} menu"; a list item whose first child is the link itself loses the link (it's replaced by a text button).
10. Sub-list ids are `nav-submenu-{label}` (lower-case, hyphenated), unique on the page (suffix `-2`, `-3`, ...); an existing id is kept.
11. Desktop (>= 900px): selecting a toggle closes all other dropdowns and toggles its own; only one is open.
12. Mobile (< 900px): the menu button toggles the whole menu; opening it marks all dropdowns expanded and locks page scrolling; closing it closes all dropdowns.
13. Escape: on desktop closes the open dropdown and focuses its toggle (nothing happens if none is open); on mobile closes the open menu and focuses the menu button.
14. Focus moving outside the nav closes all dropdowns (desktop) or the menu (mobile).
15. Crossing the 900px breakpoint resets the state for the new mode.
16. Accessible names come from the placeholders sheet (`mainNavigation`, `openNavigation`, `closeNavigation`, `showSubmenu`) with English fallbacks.
17. The header is invisible until the block has loaded (`data-block-status="loaded"`), and its height is reserved (4rem) to avoid layout shift.
18. There is no hover-to-open behaviour and no outside-click handler; closing on outside clicks relies on focus leaving the nav.
19. The header has no Additional tab (no anchor, hide or spacing options).

6.1.12 Author Best Practices

- **Recommended Content Length:** 4–7 first-level items; 1–3 words per label (the desktop row doesn't wrap); up to about 8 second-level items per dropdown (the panel is 12.5rem wide and its text wraps); 1–3 tools.
- **Image Dimensions:** the logo is displayed 8rem (128px) wide, height automatic; provide an SVG or a PNG at least 256px wide (2x) with a transparent background. The image isn't processed by `createOptimizedPicture` in the header code, so keep the file small (Recommended under 20 KB).
- **CTA Writing Guidelines:** one primary action in the tools area ("Contact us"); use verbs; avoid "Click here".
- **Accessibility Guidelines:** give the logo an alt text naming the destination ("TCS home"); use unlinked labels for dropdown sections until the linked-label toggle is fixed; keep the same structure across locales; don't use only icons without text.

- **SEO Guidelines:** link the main hub pages from the first level or the dropdowns; use descriptive link text; avoid duplicate links with different texts.
- **Metadata Guidelines:** set Navigation only on area top pages, not on every page; keep the metadata sheet `nav` column and page properties consistent and avoid setting both for the same page (both are published as the page's `nav` meta; on Edge Delivery, page-level metadata normally takes precedence over bulk metadata).
- **Taxonomy Guidelines:** not applicable (the header doesn't use tags).
- **Localization Guidelines:** each locale maintains its own `references/nav` with translated labels and locale links (`/de-de/...`); translate the four header placeholders in each locale's placeholders sheet; check that long translations (German, Dutch) still fit in one desktop row.

6.1.13 Troubleshooting Guide

Issue 1 — Header is empty

Symptoms: A 4rem white band at the top, no logo or links.

Root Cause: The nav page (default or inherited) doesn't exist, isn't published, or the Navigation value points to a wrong path.

Diagnosis Steps: Open the browser developer tools Network tab and look for the `.plain.html` request of the nav page and its status (404). Check the page's `<meta name="nav">` and its parents' values.

Resolution Steps: Publish the nav page, or correct / clear the Navigation property on the page or its parent, then publish.

Validation Steps: Reload in a new private window; the header shows.

Preventive Measures: Publish nav pages before pages that reference them; include `references/nav` in every new locale's go-live checklist.

Issue 2 — Area shows the default nav instead of the alternate nav

Symptoms: Pages below `/en/careers` still show the global navigation.

Root Cause: The Navigation property was set but the top page wasn't published, or the browser session still has the old cached value.

Diagnosis Steps: View the source of the published top page and check `<meta name="nav">`; inspect `sessionStorage` key `tcs-inherited-metadata`.

Resolution Steps: Publish the top page; test in a new browser session.

Validation Steps: All pages of the area show the alternate nav.

Preventive Measures: Always publish the page whose properties changed; tell testers to use a new session.

Issue 3 — A section page link disappeared

Symptoms: A first-level label that was a link is now a button that only opens the dropdown.

Root Cause: The link is the list item's direct first child; the code only keeps links inside an element (Business Rule 9).

Diagnosis Steps: Inspect the rendered `li.nav-drop`: there is no `<a>` before the `button.nav-drop-toggle`.

Resolution Steps: Wrap the label link in formatting (for example bold) or a paragraph, or add the section page as the first sub-item ("Overview"); for a permanent fix, development changes `decorateDrop` to also detect a label that is itself a link.

Validation Steps: The label navigates; the dropdown still opens.

Preventive Measures: Validate linked labels after every nav change.

Issue 4 — Dropdown of a linked label can't be opened with the mouse

Symptoms: On desktop, clicking the chevron of a linked section does nothing; only keyboard users can open it.

Root Cause: The toggle button for a linked label has no visible content or size; the chevron is drawn on the list item, which has no click handler.

Diagnosis Steps: Inspect `button.nav-drop-toggle[aria-label]`: its box is 0 × 0.

Resolution Steps: Short term: use an unlinked label and add an "Overview" sub-item. Long term: development gives the toggle a visible size and moves the chevron into it.

Validation Steps: Mouse, touch and keyboard all open the dropdown; the focus ring is visible.

Preventive Measures: Include mouse and keyboard checks in the Validation Process.

Issue 5 — Mobile menu stays open or the page doesn't scroll

Symptoms: After closing the menu or rotating the device the page can't be scrolled.

Root Cause: `body overflow-y: hidden` is set while the menu is open; a script error or an interrupted state change can leave it set.

Diagnosis Steps: Check `document.body.style.overflowY` and `nav[data-expanded]`; look for console errors.

Resolution Steps: Press Escape or the menu button; reload. Report persistent cases to development with the device and browser.

Validation Steps: The page scrolls with the menu closed.

Preventive Measures: Test open / close / rotate on iOS Safari and Android Chrome after header code changes.

Issue 6 — Labels or accessible names are in English on a non-English locale

Symptoms: Screen readers announce "Open navigation" on `/de-de`.

Root Cause: The locale's placeholders sheet lacks the keys `openNavigation`, `closeNavigation`, `mainNavigation`, `showSubmenu`, or the sheet isn't published.

Diagnosis Steps: Open `/{locale}/placeholders.json` and search for the keys.

Resolution Steps: Add the keys with translated Text and publish the sheet.

Validation Steps: Check `aria-label` values in the rendered header.

Preventive Measures: Keep the placeholders sheet complete in every locale.

Issue 7 — Dropdown doesn't close when clicking elsewhere (Safari)

Symptoms: On desktop Safari, a dropdown stays open after clicking in the page.

Root Cause: Closing relies on focus leaving the nav; Safari doesn't focus buttons on click, so no focus-out happens. There is no outside-click handler.

Diagnosis Steps: Reproduce in Safari and Chrome; compare.

Resolution Steps: Close with the toggle or Escape; development can add an outside-click handler.

Validation Steps: Dropdowns close on outside clicks in all browsers after the fix.

Preventive Measures: Cross-browser testing of navigation changes.

Issue 8 — Navigation wraps or overflows on smaller desktops

Symptoms: At 900–1100px the sections overlap the tools or are cut off.

Root Cause: Labels don't wrap (`white-space: nowrap`) and too many or too long items are authored.

Diagnosis Steps: Resize the browser from 900px upward.

Resolution Steps: Shorten labels or reduce the number of first-level items.

Validation Steps: No overlap at 900px, 1024px and 1200px.

Preventive Measures: Respect the Recommended content length.

6.1.14 Support Runbook

Monitoring Requirements. No dedicated monitoring exists. Recommended: a synthetic check per locale that loads the Home page and asserts `nav#nav` has children; Real User Monitoring (Edge Delivery RUM) for CLS on page load; data layer `cmp:click` events on `component.header-1` once Adobe Tags is installed.

Logs.

- Browser console: the header code emits no messages of its own; a failed nav fetch shows as a network 404 for `{path}.plain.html`; an exception during decoration (for example a network error) is logged by `aem.js` as `failed to load module for header`.
- Admin API status: `https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{locale}/references/nav` shows preview / live status of the nav page.
- Author logs: AEM publication and replication logs for the nav page; Universal Editor shows errors when saving content.

Common Errors.

Error	Likely Cause	Fix
Empty header	Nav page missing / unpublished	Publish or correct the Navigation value
Wrong nav in an area	Parent not published; stale session cache	Publish parent; new session
Linked label lost its link	Link not wrapped	Wrap link or add Overview item
Dropdown not mouse-operable	Linked label toggle has no size	Use unlinked label; code fix
English accessible names	Placeholders missing	Add keys to the locale sheet
Logo shown as a button	Logo authored outside section 1	Move it into section 1

Escalation Matrix.

Level	Team	Checks
L1	Author support	Nav page content, section order, publication status, Navigation property, placeholders sheet
L2	AMS / site admin	Admin API status of the nav and parent pages, `paths.json` mapping, CDN cache purge, metadata sheet `nav` column and `metadata.source` configuration
L3	Development team	`blocks/header/header.js` / `.css`, `utils/inherited-metadata.js`, `utils/site.js`, console errors, browser-specific behaviour
L4	Adobe Support	Edge Delivery delivery errors, Universal Editor or AEM publishing defects

Recovery Procedures. Restore the previous nav page version and publish; clear a faulty Navigation property; if a code release broke the header, revert the commit on `main` (AEM Code Sync deploys it within minutes).

Health Checks. For each of the 13 locales: `/{locale}/references/nav.plain.html` returns 200; the Home page header shows brand, sections and tools; a dropdown opens on desktop; the menu opens on mobile.

Operational Procedures. Nav changes follow Preview → validation → Live. New locale: create and publish `references/nav` with the three sections and translated placeholders before go-live. New alternate nav: create the page, set Navigation on the area's top page, publish both.

Known Limitations.

- Linked labels: a link that is the list item's direct child is replaced by the toggle; the extra toggle for wrapped links has no visible area (not mouse-operable, no visible focus on desktop).
- On mobile, dropdown toggles change `aria-expanded` but sub-lists stay visible.
- No hover opening, no outside-click closing, no arrow-key navigation within dropdowns.
- Only two levels; deeper lists aren't styled as nested dropdowns.
- No built-in search, language switcher, sticky desktop header or mega menu (Not implemented as of this handover).
- Inherited values are cached per session; parent changes appear in a new session.
- The logo isn't optimized by code.

6.1.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
Empty header band	The nav page or the referenced alternate nav page isn't published	Publish the nav page, then the pages that reference it
A section page link disappeared	The label link is the list item's direct child	Wrap the link in bold or add an Overview sub-item
A linked dropdown can't be opened with the mouse	The toggle for linked labels has no size (F-13)	Use an unlinked label or open it with the keyboard
The area still shows the default nav	The area top page isn't published or the session cache is stale	Publish the top page and test in a new private window
The logo renders as a button	The logo was authored outside Section 1	Move it into Section 1 (brand)
Sub-pages appear as top-level items	Second-level items weren't indented	Indent them under their label
English accessible names on /de-de	Header placeholders missing in the locale sheet	Add the four keys and publish the placeholders sheet
The row overlaps the tools at 900–1100 px	Too many or too long first-level labels	Shorten labels or reduce the number of items

6.1.16 Author Quick Reference Guide

Mandatory Fields

- Nav page references/nav of the locale — needed for the header to render; without a published nav page the header stays empty
- Section 2 (sections) bulleted list — needed for the navigation sections and the mobile menu

Recommended Fields

- Section 1 (brand) — the TCS logo (Image with Image alt text such as TCS home) or a link to the locale Home page
- Image alt text (brand) — names the destination, e.g. TCS home
- Section 3 (tools) — one primary Button such as Contact us
- Placeholders openNavigation, closeNavigation, mainNavigation, showSubmenu translated in every locale

Optional Fields

- Navigation page property — only on the top page of an area that needs another nav page
- Metadata sheet nav column — the alternative to the page property by URL pattern
- Second-level items — indented links that form a dropdown
- Linked label — a bold link as a first-level label (see F-13)

Authoring Checklist

1. Keep three sections in the order brand, sections, tools
2. Write the sections as one bulleted list; indent second-level items under their label
3. Use plain text labels for dropdown groups such as Services
4. Wrap a linked label in bold so the link is kept
5. Keep 4–7 first-level items of 1–3 words
6. Keep 1–3 tools with one primary action
7. Set Navigation only on the area top page, never on every page

Pre-Publish Checklist

1. Publish the nav page to Preview and open a content page on aem.page
2. At 1440 px open each dropdown; opening another closes the first
3. Press Escape: the dropdown closes and focus returns to its label
4. At 390 px open the menu: all sections show and the page behind doesn't scroll
5. Check linked labels still link to their pages
6. Check alternate nav areas in a new private window

Post-Publish Validation Checklist

1. Publish the nav page and any page whose Navigation changed to Live
2. Open the locale Home page on aem.live and check brand, sections and tools
3. Check a page of each area with an alternate nav page
4. Check non-English locales for translated labels and accessible names
5. Confirm /{locale}/references/nav.plain.html returns 200

6.1.17 Component Execution Example

Business example: Main navigation of the English site.

Example Values Entered:

Field	Value
Text (Nav page /content/tcs-corp/us/en/references/nav › Section 1 (brand))	Paragraph with the link "TCS" → /en/
Text, bulleted list item 3 (Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections))	"Insights" as a link → /en/insights (no indented items)
Text, bulleted list item 4 (Nav page /content/tcs-corp/us/en/references/nav › Section 2 (sections))	"About us" as a link → /en/about (no indented items)
Text (Nav page /content/tcs-corp/us/en/references/nav › Section 3 (tools))	Paragraph with only the link "Investors" → /en/investors
Button (Nav page /content/tcs-corp/us/en/references/nav › Section 3 (tools))	Text "Contact us", Link /en/contact, Type Primary
Navigation (Content page › Page properties)	Leave empty (inherits the locale default references/nav)

All other fields keep their default values.

Rendered Result:

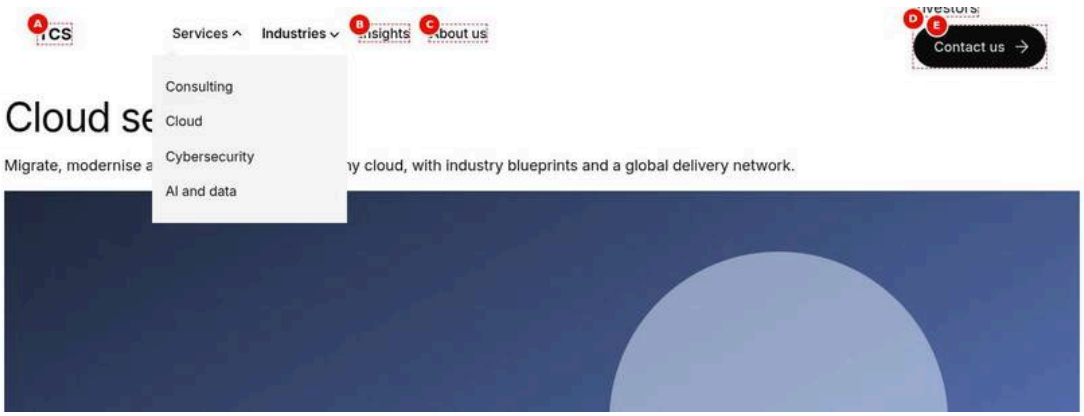

Figure 18: Execution example — The header at 1440 px in one 4rem row: TCS at the left, Services, Industries, Insights and About us, then Investors and the Contact us primary button at the right. Services is open: its chevron points up and a light grey 12.5rem panel with a pointer triangle lists Consulting, Cloud, Cybersecurity and AI and data. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/header-desktop-view.jpg)

Author Notes

- Edit /content/tcs-corp/us/en/references/nav, not a block on the page
- Services is plain text with four indented links, Industries a bold link with three
- Insights and About us are plain first-level links without sub-items
- Investors is a standalone link and Contact us a Button with Type Primary in Section 3

Business Notes

- One nav page serves every /en page that doesn't choose another
- Contact us is the single primary call to action of the header
- Area navigation such as Careers is a separate nav page set on the area top page

Technical Notes

- blocks/header/header.js loads the nav page with loadFragment in the lazy phase
- The nav value is inherited through getInheritedMetadata and cached in sessionStorage tcs-inherited-meta-data
- Dropdowns are buttons with aria-expanded and aria-controls nav-submenu-*; the desktop row starts at 900 px
- There is no hover opening and no outside-click handler

6.2 Footer Block

The Footer block has **two roles under one block name** (`blocks/footer/footer.js`):

1. **The page footer.** The page loader (`scripts/aem.js loadFooter`, called from `scripts/scripts.js loadLazy`) creates a `footer` block inside the page's `<footer>` element. It loads the **footer page** (the locale's `references/footer`, or the inherited Footer page property) as a fragment and appends the locale's **Social Links** data sheet as a list of social profile links.
2. **The authored Footer block** placed on the footer page. Authors add it in Universal Editor; it renders an optional **Conversation Canvas** (a page with the Conversation Canvas block, loaded as a fragment) above the **footer bar** with the copyright text and the footer link list.

The code decides the role by the block's parent: a block directly inside `<footer>` is the page footer, any other Footer block is the authored footer bar. Source files: `blocks/footer/footer.js`, `blocks/footer/footer.css`, `blocks/footer/_footer.json`. The Footer has **no** Additional tab.

6.2.1 Component Purpose

Business Objective. Close every page with a consistent, brand-compliant footer (legal copyright, policy links, social channels and, optionally, the conversational search entry point), maintained per locale by authors.

Business Use Cases.

- Legal footer of every page: copyright with the current year, Privacy / Terms / Cookie / Accessibility links.
- Social channel links (LinkedIn, X, Facebook, Instagram, YouTube) per locale from a data sheet, without editing the footer page.
- The Conversation Canvas ("Ask us a question" search and quick links) at the bottom of every page, as in the TCS design (Figma "Footer – Desktop / Tablet / Mobile").
- A different footer for an area or campaign (for example `references/footer-campaign`) set once on the area's top page.

When To Use. The page footer is always loaded. Use the authored Footer block only on footer pages in `references/` (for example `references/footer`, `references/footer-campaign`).

When Not To Use.

- Don't add the Footer block to content pages: it is offered in the section's component list (`models/_section.json` filter), but its styles are scoped to the `<footer>` element, so inside a page it renders unstyled.
- Don't put social links into the Link List; maintain them in the Social Links data sheet so every footer page shows the same channels.
- Don't use the footer for page-specific calls to action.

Dependencies.

Type	Dependency	Use
Code	`blocks/fragment/fragment.js` `loadFragment`	Loads the footer page and the conversation canvas page
Code	`utils/inherited-metadata.js` `getInheritedMetadata('footer')`	The page's Footer, else the nearest parent's up to the locale Home page
Code	`utils/site.js` `resolvePagePath`	Path to fetch (AEM path when editing, published path on the site)
Code	`utils/data.js` `getSocialLinks`	Rows of `/{locale}/data/social-links.json` in Sort Order
Code	`decorators/social-links-decorator.js` `buildSocialLinks`	Social list with icons and accessible names
Code	`utils/links.js` `readLinkItems`	Link List items and their Link Type
Code	`decorators/button-decorator.js` `removeButtonDecoration`; `decorators/link-decorator.js` `setLinkTarget`	Plain links; new-window target
Code	`decorators/content-decorator.js` `fromCell`; `scripts/scripts.js` `moveInstrumentation`	Copyright rich text and editor instrumentation
Code	`utils/placeholders.js`	`footerLinks` ("Footer links"), `followUsOn` ("Follow us on {platform}")
Content	Footer page per locale `references/footer`; optional alternatives `references/footer-*`	Footer content
Content	Conversation canvas page, e.g. `references/footer-conversation-canvas` (the `/en` sample)	Canvas above the bar

Type	Dependency	Use
Page property	**Footer** (`footer`, `models/_page.json`)	Chooses the footer page; inherited by child pages
Sheet	Metadata sheet column `footer`; data sheet `data/social-links` (platform, url, icon, sort-order)	Footer choice; social links
Icons	`/icons/linkedin.svg`, `x.svg`, `facebook.svg`, `instagram.svg`, `youtube.svg`	Social icons
Styles	`styles/styles.css` tokens (`--space-*`, `--color-bg-default`, `--color-bg-brand`, `--color-bg-warning`, `--color-text-default`, `--font-weight-medium`, `--page-max-width`); footer hidden until loaded	Layout

Related Components. Header (same loading and inheritance); Fragment; Conversation Canvas (the canvas shown in the footer; its sticky dock hides when the footer comes into view); 404 page (uses the same footer).

Applicable Templates. All pages and templates, including the 404 page.

Supported Content Types. All; the footer doesn't read content type metadata.

Business Problem Solved

Every page of every locale must end with the legal copyright, policy links, social channels and, in the TCS design, the conversational canvas. The Footer loads one footer page per locale (or per area, such as footer-campaign) and the locale's Social Links sheet in the browser, so one published change updates every page, and {year} keeps the copyright current without edits.

Supported Taxonomy

None: the Footer has no tag field, reads no page tags and doesn't use the taxonomy. Its page input is the inherited footer metadata (Footer page property or the metadata sheet footer column).

6.2.2 Visual Overview

Figure 19: Desktop rendering — The footer at 1440 px on white with blue and yellow glows at the bottom: the title Let's shape what's next, together on two lines, the menu button and the Ask us a question field, the buttons Explore our services, Read our insights and Talk to an expert in a row, then © Tata Consultancy Services 2026 at the left and Privacy & Terms, Cookie policy and Accessibility at the right, then the LinkedIn, X, YouTube and Instagram icons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/footer-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/footer-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The footer at 1440 px on white with blue and yellow glows at the bottom: the title Let's shape what's next, together on two lines, the menu button and the Ask us a question field, the buttons Explore our services, Read our insights and Talk to an expert in a row, then © Tata Consultancy Services 2026 at the left and Privacy & Terms, Cookie policy and Accessibility at the right, then the LinkedIn, X, YouTube and Instagram icons.
Business Context	Every /en page closes with the TCS design footer: a large conversational prompt with search and quick links, the legal bar and the social channels, all maintained in references/footer, its canvas page and the Social Links sheet.
Author Objective	Add a Footer block to references/footer with the canvas page, the copyright with {year} and three policy links, and keep four rows in the Social Links sheet.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Component (Footer page /content/tcs-	Footer	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
	corp/us/en/references/footer › Section › Add (+))					
(B)	Conversation Canvas Page (Footer page /content/tcs-corp/us/en/references/footer › Footer)	Select the page / content/tcs-corp/us/en/references/footer-conversation-canvas	No	—	—	None
(C)	Copyright Text (Footer page /content/tcs-corp/us/en/references/footer › Footer)	© Tata Consultancy Services {year}	No	—	—	None
(D)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 1)	Privacy & Terms / / en/privacy / Default	No	—	—	None
(E)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 2)	Cookie policy / /en/cookie-policy / Default	No	—	—	None
(F)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 3)	Accessibility / /en/accessibility / Default	No	—	—	None
G	Title (Canvas page / content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content)	Let's shape what's next, together	No	—	—	None
(H)	Menu root path / Menu depth (Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content)	/content/tcs-corp/us/en / 2	No	—	—	None
(I)	Search bar water mark / hover text (Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas › Con-	Ask us a question / Search	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
	versation Canvas › Content)					
(J)	Conversation Canvas Button (3 items) (Canvas page › Conversation Canvas › Add (+))	Explore our services → /en/services; Read our insights → /en/insights; Talk to an expert → /en/contact; each with Type Secondary	No	—	—	None
—	Rows (platform, url, icon, sort-order) (Social Links sheet /content/tcs-corp/us/en/data/social-links)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4	—	Check on the preview (not stored in the content)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4	—
(K)	Footer (Content page › Page properties)	Leave empty (inherits the locale default references/footer)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px a white footer with soft blue and yellow glows at the bottom: the title Let's shape what's next, together on two lines, the menu button and the Ask us a question field, three secondary buttons in a row, then the bar with © Tata Consultancy Services 2026 at the left and Privacy & Terms, Cookie policy and Accessibility at the right, then the LinkedIn, X, YouTube and Instagram icons.
- **Rendering behaviour:** From 1200 px the footer is a column up to 120rem with 7.5rem top and 5rem side padding and at least 50.125rem high with the canvas; the canvas title is 6rem with a maximum width of 61.5rem. The canvas loses its own surface inside the footer; the footer loads in the lazy phase.
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; references/footer and references/footer-conversation-canvas are separate pages and data/social-links a separate sheet, each published itself. The footer loads them in the browser, so their changes show on every /en page without republishing.

Business Rules

- {year} is replaced by the visitor's current four-digit year; type it exactly in lower case.
- Link List items without a Link Path are skipped; footer links are plain links, never buttons.
- The social icons come from data/social-links, not from the footer page, and follow the footer content.
- The canvas is shown only if its page loads and has content; otherwise only the bar remains.
- The Footer block has no Additional tab.

Common Authoring Mistakes

Error	Root Cause	Resolution
The copyright shows {Year} literally	The placeholder was typed with a capital letter	Type exactly {year}
No canvas above the bar	references/footer-conversation-canvas isn't published	Publish the canvas page
Social icons appear in the wrong order	sort-order holds text or is empty for some rows	Enter the numbers 1 to 4 in sort-order and publish the sheet

Troubleshooting

- **Symptoms:** The /en footer shows only the LinkedIn, X, YouTube and Instagram icons, with no canvas, copyright or links.
- **Cause:** references/footer isn't published (or the inherited Footer value points to a missing page), so only the Social Links list is appended.
- **Resolution:** Publish /content/tcs-corp/us/en/references/footer, or correct the Footer value on the page or its parent.
- **Verification Steps:** In a private window /en/references/footer.plain.html returns 200 and the footer shows the canvas, bar and icons.

Desktop (>= 1200px). White background (`--color-bg-default`) with two radial-gradient glows at the bottom edge: a blue glow (`--color-bg-brand` at 30%) and a yellow glow (`--color-bg-warning` at 30%). Content is a vertical flex column, maximum width `--page-max-width` (120rem), padding 7.5rem top, 5rem left and right, 2.5rem bottom, 5rem gap between the footer page's sections. With a conversation canvas the footer is at least 50.125rem high and the bar sits at the bottom; the canvas title is 6rem (line height 7.1875rem, letter-spacing –3%) with a maximum width of 61.5rem (two lines). The bar is a wrapping flex row (`justify-content: space-between`): copyright left (at least 19.375rem wide), links right with 1.5rem column gap; text 1rem, line height 1.375rem, medium weight. Social links follow as a wrapping row with 1rem gap and 1.5rem icons.

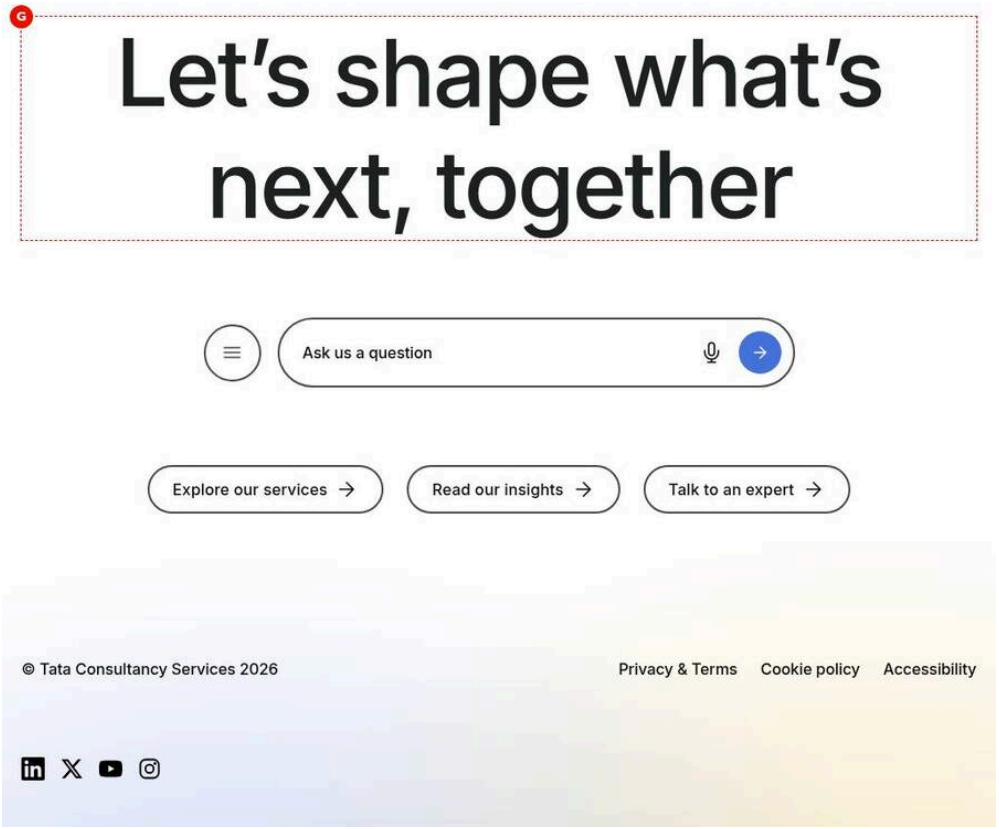

Figure 20: Tablet rendering — The footer at 1024 px: the canvas title Let's shape what's next, together without a maximum width, the menu button and the Ask us a question field, the three canvas buttons in a row, then the bar with © Tata Consultancy Services 2026 and the three links, and the four social icons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/footer-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/footer-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The footer at 1024 px: the canvas title Let's shape what's next, together without a maximum width, the menu button and the Ask us a question field, the three canvas buttons in a row, then the bar with © Tata Consultancy Services 2026 and the three links, and the four social icons.
Business Context	Tablet visitors at 1024 px get the same footer content, laid out for the medium width: the canvas title spans the width and the canvas menu button stays visible.
Author Objective	Use the standard references/footer with its canvas and check it at 1024 px.

Field Entry Table — enter these values in Universal Editor, in this order:

(K)	Footer (Content page › Page properties)	Leave empty (inherits the locale default references/footer)	No	—	—	None
—	Screen width (Preview)	1024 px (tablet)	—	Check on the preview (not stored in the content)	1024 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1024 px the canvas title Let's shape what's next, together runs one line wide, the menu button and Ask us a question field sit below it, the three buttons in a row, then the copyright and the three links in the bar and the four social icons.
- **Rendering behaviour:** Between 600 and 1199 px the padding is 7.5rem top and 1.25rem at the sides, the footer is at least 59.75rem high with the canvas, the title is 6rem without a maximum width and the canvas menu button is shown. The glows move to 25 % and 88 % of the width.
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; the footer page, the canvas page and the Social Links sheet are published separately and serve every width.

Business Rules

- The tablet layout applies from 600 to 1199 px; there is no separate tablet authoring.
- Keep the canvas title to a short sentence; it shows at 6rem.
- The bar wraps the links below the copyright when they don't fit in one row.
- The canvas menu button is visible on tablet and desktop only.

Common Authoring Mistakes

Error	Root Cause	Resolution
The canvas title fills most of the screen	A long sentence was entered as the canvas Title	Shorten the title to a short sentence
Links wrap onto several lines	More than six or long link titles	Keep 3–6 links of up to 30 characters
The tablet shows an unstyled footer bar inside the page	A Footer block was added to a content page	Remove it; the Footer block belongs on references/ footer pages only

Troubleshooting

- **Symptoms:** At 1024 px only the bar shows; the canvas title, search and buttons are missing.
- **Cause:** The canvas page doesn't load in this environment (unpublished or empty), so buildCanvas returns nothing.
- **Resolution:** Publish /content/tcs-corp/us/en/references/footer-conversation-canvas and check its Conversation Canvas block.
- **Verification Steps:** Reload at 1024 px; div.footer-canvas is present above div.footer-bar.

Tablet (600–1199px). Padding 7.5rem top, 1.25rem left and right, 2.5rem bottom; with a canvas the minimum height is 59.75rem, the canvas gap 5rem, the title 6rem without a maximum width, the canvas buttons in a row, the menu button of the canvas visible (`display: grid`), the search field padding 1.5rem at the start; bar text 1rem / 1.375rem. The glows move to 25% (blue) and 88% (yellow) of the width.

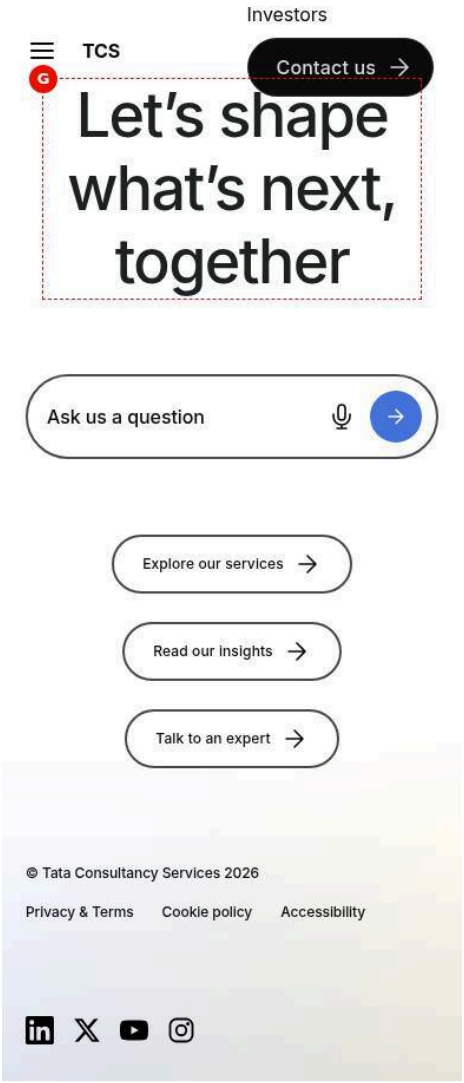

Figure 21: Mobile rendering — The footer at 390 px: the title Let's shape what's next, together at 3.25rem over several centred lines, the Ask us a question field without a menu button, the three buttons stacked, then © Tata Consultancy Services 2026 above Privacy & Terms, Cookie policy and Accessibility, and the four social icons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/footer-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/footer-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The footer at 390 px: the title Let's shape what's next, together at 3.25rem over several centred lines, the Ask us a question field without a menu button, the three buttons stacked, then © Tata Consultancy Services 2026 above Privacy & Terms, Cookie policy and Accessibility, and the four social icons.
Business Context	Phone visitors get the footer stacked for a narrow screen; the canvas menu is left out because the site header already offers the navigation.
Author Objective	Use the standard references/footer with its canvas and check it at 390 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Component (Footer page /content/tcs-corp/us/en/references/footer › Section › Add (+))	Footer	No	—	—	None

(E)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 2)	Cookie policy / /en/cookie-policy / Default	No	—	—	None
(F)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 3)	Accessibility / /en/accessibility / Default	No	—	—	None
G	Title (Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content)	Let's shape what's next, together	No	—	—	None
(H)	Menu root path / Menu depth (Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content)	/content/tcs-corp/us/en / 2	No	—	—	None
(I)	Search bar water mark / hover text (Canvas page /content/tcs-corp/us/en/references/footer-conversa-	Ask us a question / Search	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
	tion-canvas › Conversation Canvas › Content)					
(J)	Conversation Canvas Button (3 items) (Canvas page › Conversation Canvas › Add (+))	Explore our services → /en/services; Read our insights → /en/insights; Talk to an expert → /en/contact; each with Type Secondary	No	—	—	None
—	Rows (platform, url, icon, sort-order) (Social Links sheet /content/tcs-corp/us/en/data/social-links)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4	—	Check on the preview (not stored in the content)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4	—
(K)	Footer (Content page › Page properties)	Leave empty (inherits the locale default references/footer)	No	—	—	None
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 390 px the title Let's shape what's next, together over several centred lines, the Ask us a question field without a menu button, the three buttons stacked, then the copyright above the three links and the four social icons.
- **Rendering behaviour:** Below 600 px the padding is 3.5rem top and 1.25rem at the sides, the title 3.25rem limited to 20rem, the canvas buttons stacked and the menu button hidden. Bar text is 0.75rem and the copyright takes at least 19.375rem, so the links wrap below it.
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; the footer page, canvas page and Social Links sheet are published separately.

Business Rules

- The canvas menu button is hidden below 600 px.
- Canvas buttons stack in one column on mobile.
- The copyright sits above the links because it takes at least 19.375rem.
- Social icons wrap in a row with a 1rem gap.

Common Authoring Mistakes

Error	Root Cause	Resolution
The canvas menu is expected on phones	It is hidden below 600 px by design	Use the header menu on mobile
The copyright wraps over three lines	More than about 80 characters were entered	Keep the copyright to about 80 characters
A social icon shows as an empty square	The icon value names a file not in /icons	Use linkedin, x, facebook, instagram or youtube, or an image URL

Troubleshooting

- **Symptoms:** At 390 px the copyright reads © Tata Consultancy Services {year}.
- **Cause:** The placeholder was typed differently (for example { year } with spaces), so fillYear doesn't find it.
- **Resolution:** Edit Copyright Text on references/footer to contain exactly {year} and publish the footer page.
- **Verification Steps:** The footer shows © Tata Consultancy Services 2026.

Mobile (< 600px). Padding 3.5rem top, 1.25rem sides, 1.5rem bottom; with a canvas the minimum height is 50rem, the canvas gap 4rem, the title 3.25rem (line height 3.875rem) limited to 20rem wide and centred, the canvas buttons stacked in a column, the canvas menu button hidden (the site header has the navigation), the search field padding 1rem at the start. Bar text 0.75rem, line height 1.0625rem; the copyright takes at least 19.375rem (or the full width), so the links wrap below it. Glows: blue near the left edge (6%), yellow mostly beyond the right edge (130%).

6.2.3 Component Variations

Variation 1 — Default Locale Footer

Variation Name: Default locale footer (`references/footer`).

Business Purpose: One standard footer per locale for every page.

Visual Example:

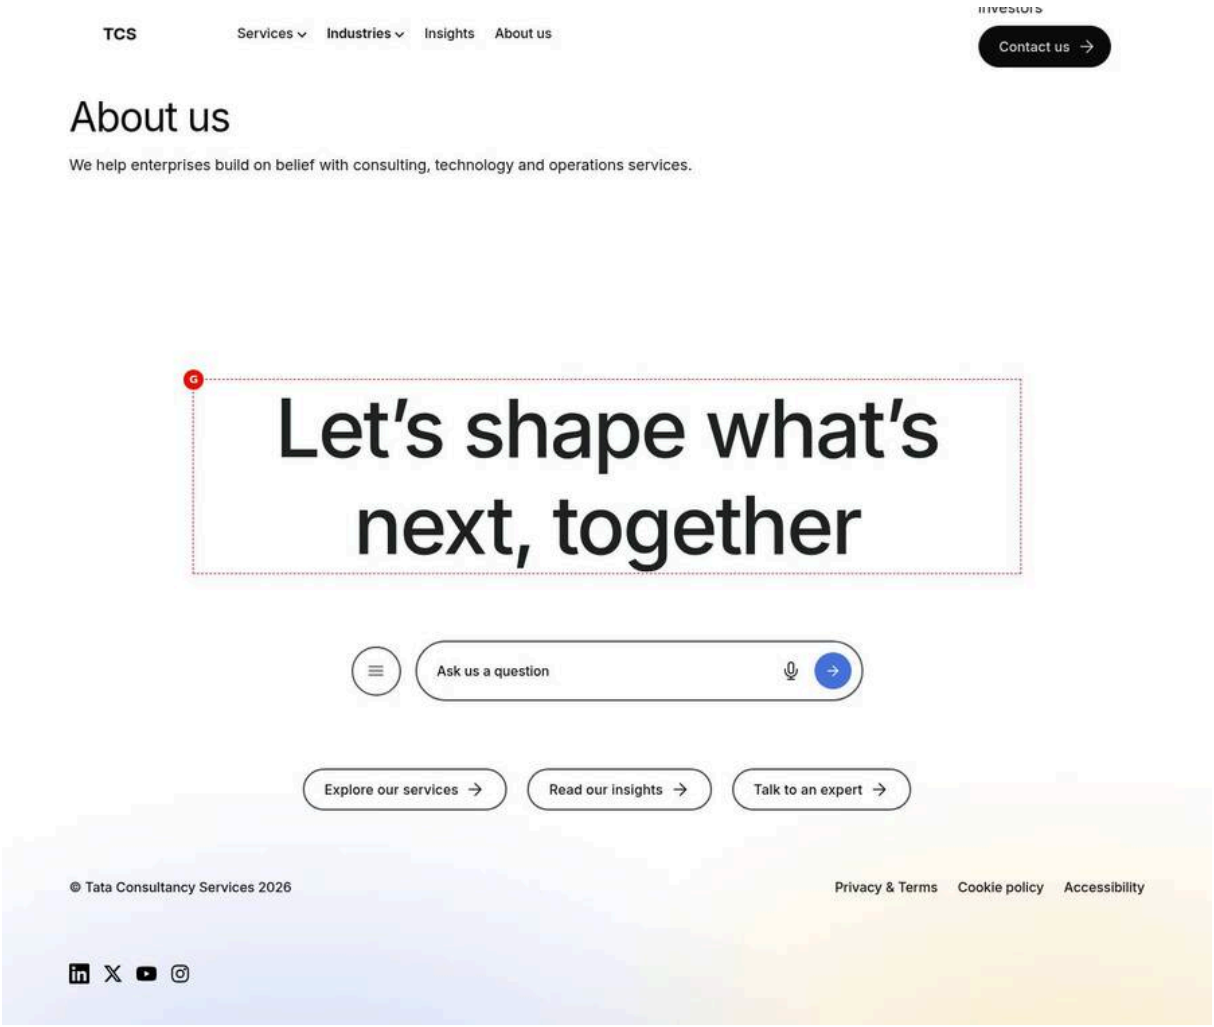

Figure 22: Default footer of /en — A full /en content page at 1440 px ending with the footer from /en/references/footer: the canvas with its title, search field and three buttons, the bar with © Tata Consultancy Services 2026, Privacy & Terms, Cookie policy and Accessibility, and the LinkedIn, X, YouTube and Instagram icons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/footer-default-locale-footer.jpg)

Screenshot Details — Default footer of /en

Item	Detail
Screenshot Name	`screenshots/footer-default-locale-footer.jpg`
Screenshot Purpose	Default footer of /en
Screen Description	A full /en content page at 1440 px ending with the footer from /en/references/footer: the canvas with its title, search field and three buttons, the bar with © Tata Consultancy Services 2026, Privacy & Terms, Cookie policy and Accessibility, and the LinkedIn, X, YouTube and Instagram icons.
Business Context	Most pages never choose a footer: they show their locale's references/footer, so one footer page per locale controls the legal links and canvas of the whole site.
Author Objective	Maintain /en/references/footer and leave Footer empty on the page and its parents.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Component (Footer page /content/tcs-corp/us/en/references/footer › Section › Add (+))	Footer	No	—	—	None
(B)	Conversation Canvas Page (Footer page /content/tcs-corp/us/en/references/footer › Footer)	Select the page /content/tcs-corp/us/en/references/footer-conversation-canvas	No	—	—	None
(C)	Copyright Text (Footer page /content/tcs-corp/us/en/references/footer › Footer)	© Tata Consultancy Services {year}	No	—	—	None
(D)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 1)	Privacy & Terms / / en/privacy / Default	No	—	—	None
(E)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 2)	Cookie policy / /en/cookie-policy / Default	No	—	—	None
(F)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 3)	Accessibility / /en/accessibility / Default	No	—	—	None
G	Title (Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content)	Let's shape what's next, together	No	—	—	None
(H)	Menu root path / Menu depth (Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content)	/content/tcs-corp/us/en / 2	No	—	—	None
(I)	Search bar water mark / hover text (Canvas page /content/tcs-corp/us/en/references/footer-conversa-	Ask us a question / Search	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
	tion-canvas › Conversation Canvas › Content)					
(J)	Conversation Canvas Button (3 items) (Canvas page › Conversation Canvas › Add (+))	Explore our services → /en/services; Read our insights → /en/insights; Talk to an expert → /en/contact; each with Type Secondary	No	—	—	None
—	Rows (platform, url, icon, sort-order) (Social Links sheet /content/tcs-corp/us/en/data/social-links)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4	—	Check on the preview (not stored in the content)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4	—
(K)	Footer (Content page › Page properties)	Leave empty (inherits the locale default references/footer)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** An /en content page ending with the footer from /en/references/footer: the canvas, © Tata Consultancy Services 2026, Privacy & Terms, Cookie policy, Accessibility and the social icons.
- **Rendering behaviour:** With no Footer value, resolvePagePath falls back to references/footer of the locale; the footer page's sections are moved into footer > .footer > div and the Social Links list is appended after them.
- **Publishing behaviour:** Publish sends the content page to aem.page or aem.live; references/footer is published separately and its changes reach every /en page without republishing them.

Business Rules

- Used when neither the page nor a parent up to the Home page has a Footer value.
- Each locale has its own references/footer and data/social-links.
- The footer page, the Social Links and the placeholders load in parallel.
- The page footer is the contentinfo landmark; the links are a nav named Footer links.

Common Authoring Mistakes

Error	Root Cause	Resolution
An /en page shows the campaign footer	A parent page has Footer set to footer-campaign	Clear Footer on that parent or move the page

Error	Root Cause	Resolution
A new locale has no footer	references/footer wasn't created or published for the locale	Create and publish the footer page before go-live
The links are English on /de-de	The footer page was copied from /en and not translated	Translate the Link Titles and point the paths to /de-de

Troubleshooting

- **Symptoms:** One /en page shows a different footer from the rest of the locale.
- **Cause:** The page or a parent has a Footer value (page property or metadata sheet footer column) that it inherits.
- **Resolution:** Check meta footer on the page and its parents, clear the unwanted value and publish.
- **Verification Steps:** In a new private window the page shows the /en/references/footer content.

Use Cases: All pages without their own Footer value.

Authoring Guidelines: Leave the **Footer** page property empty; maintain `/content/tcs-corp/{country}/{language}/references/footer`.

Business Rules: Used when neither the page nor its parents up to the locale Home page has a Footer value. Each locale has its own footer page.

Rendering Rules: The footer page's sections are moved into `footer > .footer > div`; the Social Links list is appended after them.

Responsive Behaviour: See 6.2.2.

SEO Impact: Footer links are client-rendered; the footer page is excluded from the query index and sitemap.

Accessibility Compliance: The page `<footer>` is the contentinfo landmark; the link list is a `nav` landmark named "Footer links".

Variation 2 — Alternate Footer Page

Variation Name: Alternate footer (for example `references/footer-campaign`).

Business Purpose: A different footer for an area, campaign or microsite.

Visual Example:

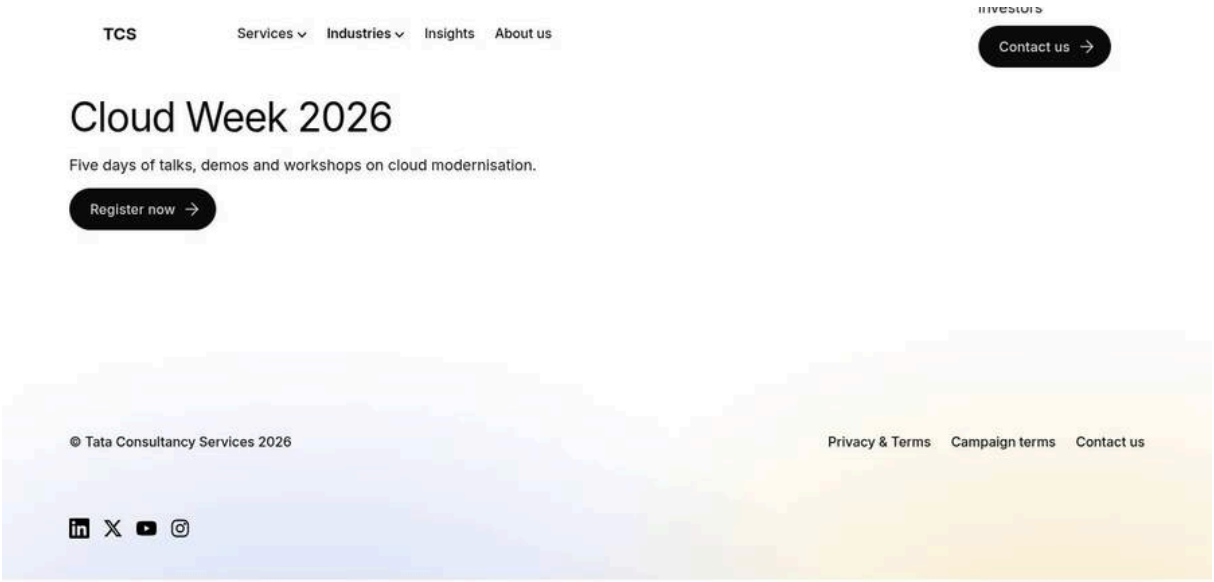

Figure 23: Area-specific footer — A full campaign page at 1440 px ending with the footer from references/footer-campaign, without a canvas: © Tata Consultancy Services 2026 at the left, Privacy & Terms, Campaign terms and Contact us at the right, and below them the LinkedIn, X, YouTube and Instagram icons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/footer-alternate-footer.jpg)

Screenshot Details — Area-specific footer

Item	Detail
Screenshot Name	`screenshots/footer-alternate-footer.jpg`
Screenshot Purpose	Area-specific footer
Screen Description	A full campaign page at 1440 px ending with the footer from references/footer-campaign, without a canvas: © Tata Consultancy Services 2026 at the left, Privacy & Terms, Campaign terms and Contact us at the right, and below them the LinkedIn, X, YouTube and Instagram icons.
Business Context	The Cloud Week campaign needs a compact legal footer with campaign terms instead of the global footer with the canvas; it is set once on the campaign top page.
Author Objective	Create references/footer-campaign with a Footer block without a canvas and set it as Footer on /en/campaigns/cloud-week.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Component (Footer page /content/tcs-corp/us/en/references/footer-campaign › Section › Add (+))	Footer	No	—	—	None
(B)	Copyright Text (Footer page /con-	© Tata Consultancy Services {year}	No	—	—	None

—	Rows (platform, url, icon, sort-order) (Social Links sheet /content/tcs-corp/us/en/data/social-links)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4	—	Check on the preview (not stored in the content)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4	—
(F)	Footer (Campaign top page /content/tcs-corp/us/en/campaigns/cloud-week › Page properties)	/content/tcs-corp/us/en/references/footer-campaign	No	—	—	None

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A campaign page ending with a white footer bar: © Tata Consultancy Services 2026 at the left, Privacy & Terms, Campaign terms and Contact us at the right, then the LinkedIn, X, YouTube and Instagram icons; no canvas.

- **Rendering behaviour:** The campaign page's Footer value footer-campaign is used (pages below inherit it via getInheritedMetadata, cached per browser session). Without a canvas there is no minimum height; the Social Links list is appended as on every footer.
- **Publishing behaviour:** Publish footer-campaign and /en/campaigns/cloud-week; publish the footer page before or with the pages that use it. Social Links come from the locale sheet, published separately.

Business Rules

- The page's own Footer wins; else the nearest parent's up to the Home page; else references/footer.
- Accepted values: an AEM path, a published path or a locale-relative path such as references/footer-campaign.
- The Social Links are appended to every footer page, including the campaign one.
- Inherited values are cached per session; check in a new private window.

Common Authoring Mistakes

Error	Root Cause	Resolution
Campaign pages still show the global footer	/en/campaigns/cloud-week wasn't published after setting Footer	Publish the top page and test in a new session
The campaign footer shows the locale social icons	Social Links are always appended from the locale sheet, whatever footer page is used	Accept the locale icons; a per-footer option would be a development change
The campaign pages show only icons	footer-campaign isn't published	Publish /content/tcs-corp/us/en/references/footer-campaign

Troubleshooting

- **Symptoms:** Pages below /en/campaigns/cloud-week show the canvas and the global links.
- **Cause:** The campaign top page with the Footer value isn't published, or the tester's session cache holds the old inherited value.
- **Resolution:** Publish /en/campaigns/cloud-week and reopen the page in a new private window.
- **Verification Steps:** The campaign page source shows meta footer with footer-campaign and the footer shows Campaign terms.

Use Cases: Campaign pages; areas with different legal links.

Authoring Guidelines: Create the page in `references/`, add a Footer block, then set **Footer** in the Page Properties of the area's top page (or the `footer` column of the metadata sheet). Values: AEM path, published path or locale-relative path (`references/footer-campaign`).

Business Rules: Inherited like Navigation (see 6.1); parent values cached per browser session.

Rendering Rules: As Variation 1 with the alternate page; the Social Links list is always appended (it doesn't depend on the footer page).

Responsive Behaviour: As Variation 1.

SEO Impact: As Variation 1.

Accessibility Compliance: As Variation 1.

Variation 3 — Footer Bar (Copyright and Links)

Variation Name: Footer bar only (no Conversation Canvas Page).

Business Purpose: A compact legal footer.

Visual Example:

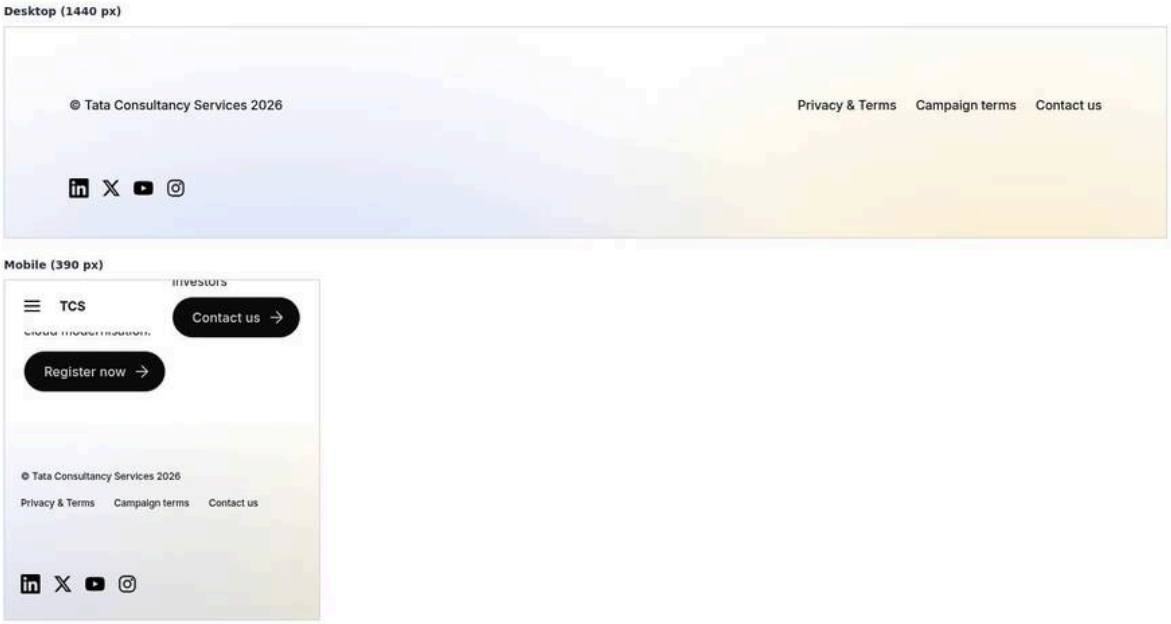

Figure 24: Bar without canvas — Two frames scrolled to the footer, one above the other. Top, 1440 px: one row with © Tata Consultancy Services 2026 at the left and Privacy & Terms, Campaign terms and Contact us at the right, then the social icons. Bottom, 390 px: the copyright above the three links in smaller text, then the icons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/footer-bar-only.jpg)

Screenshot Details — Bar without canvas

Item	Detail
Screenshot Name	`screenshots/footer-bar-only.jpg`
Screenshot Purpose	Bar without canvas
Screen Description	Two frames scrolled to the footer, one above the other. Top, 1440 px: one row with © Tata Consultancy Services 2026 at the left and Privacy & Terms, Campaign terms and Contact us at the right, then the social icons. Bottom, 390 px: the copyright above the three links in smaller text, then the icons.
Business Context	Simple microsites and campaigns only need the legal line and a few policy links, without the large conversational canvas.
Author Objective	Leave Conversation Canvas Page empty and fill Copyright Text and three Link List items; compare 1440 px and 390 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Component (Footer page /content/tcs-corp/us/en/references/footer-campaign › Section › Add (+))	Footer	No	—	—	None
(B)	Copyright Text (Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer)	© Tata Consultancy Services {year}	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 1)	Privacy & Terms / /en/privacy / Default	No	—	—	None
(D)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 2)	Campaign terms / /en/campaigns/terms / Default	No	—	—	None
(E)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 3)	Contact us / /en/contact / Default	No	—	—	None
—	Screen width (Preview)	1440 px (top) and 390 px (bottom), scrolled to the footer	—	Check on the preview (not stored in the content)	1440 px (top) and 390 px (bottom), scrolled to the footer	—

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Top, 1440 px: one row with © Tata Consultancy Services 2026 at the left and Privacy & Terms, Campaign terms and Contact us at the right. Bottom, 390 px: the copyright above the three links in smaller text.
- **Rendering behaviour:** The block renders div.footer-bar with div.footer-copyright and nav.footer-links; links are plain, underlined on hover and focus. Desktop text is 1rem medium weight; below 600 px 0.75rem and the links wrap below the copyright.
- **Publishing behaviour:** Publish footer-campaign to aem.page or aem.live; the pages using it read it in the browser and need no republishing.

Business Rules

- With Conversation Canvas Page empty no canvas is loaded and there is no minimum height.
- The bar is rendered even when the copyright and the links are empty (F-16, open).
- An empty copyright renders no copyright element.
- The link nav is named Footer links (placeholder footerLinks).

Common Authoring Mistakes

Error	Root Cause	Resolution
An empty white strip ends the page	Copyright Text and Link List were both left empty, but the bar still renders	Fill at least the copyright or remove the Footer block

Error	Root Cause	Resolution
Contact us shows as a plain link	Footer links are always plain links by design	Use the canvas buttons for calls to action
A link is missing from the bar	The item has a Link Title but no Link Path	Pick the page in Link Path

Troubleshooting

- **Symptoms:** Campaign terms is missing from the bar although three items were added.
- **Cause:** Item 2 has no Link Path, so readLinkItems skips it.
- **Resolution:** Select /en/campaigns/terms in Link Path of Item 2 and publish footer-campaign.
- **Verification Steps:** The bar lists Privacy & Terms, Campaign terms and Contact us at 1440 px and 390 px.

Use Cases: Campaign footers, simple microsites.

Authoring Guidelines: In the Footer block leave **Conversation Canvas Page** empty; fill **Copyright Text** and add **Link List** items.

Business Rules: `{year}` in the copyright is replaced by the current year (browser time). The bar is rendered even if both copyright and links are empty (an empty `div.footer-bar`).

Rendering Rules: `div.footer-bar` with `div.footer-copyright` (the rich text) and `nav.footer-links > ul > li > a`; links are plain links (button styling removed), underlined on hover and focus.

Responsive Behaviour: Desktop and tablet: copyright and links in one row if they fit, else wrapping. Mobile: links below the copyright.

SEO Impact: Policy links on every page.

Accessibility Compliance: `nav` with `aria-label` from placeholder `footerLinks`; links underlined on hover / focus.

Variation 4 — Footer with Conversation Canvas

Variation Name: Footer with Conversation Canvas.

Business Purpose: The TCS design footer: a large conversational prompt with search and quick links above the bar.

Visual Example:

Figure 25: Canvas in the footer — The footer at 1440 px with the canvas from references/footer-conversation-canvas: the title Let's shape what's next, together, the menu button and the Ask us a question field with its Search button, the three secondary buttons with dark 2px borders on white, then the bar and the four social icons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/footer-with-conversation-canvas.jpg)

Screenshot Details — Canvas in the footer

Item	Detail
Screenshot Name	`screenshots/footer-with-conversation-canvas.jpg`
Screenshot Purpose	Canvas in the footer
Screen Description	The footer at 1440 px with the canvas from references/footer-conversation-canvas: the title Let's shape what's next, together, the menu button and the Ask us a question field with its Search button, the three secondary buttons with dark 2px borders on white, then the bar and the four social icons.
Business Context	The corporate footer carries the conversational entry point of the TCS design, so every page ends with a prompt, a search field and quick links to services, insights and contact.
Author Objective	Select references/footer-conversation-canvas in Conversation Canvas Page and author the canvas title, menu, search and three secondary buttons there.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Component (Footer page /content/tcs-corp/us/en/references/footer › Section › Add (+))	Footer	No	—	—	None
(B)	Conversation Canvas Page (Footer	Select the page / content/tcs-corp/	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
	page /content/tcs-corp/us/en/references/footer › Footer)	us/en/references/footer-conversation-canvas				
(C)	Copyright Text (Footer page /content/tcs-corp/us/en/references/footer › Footer)	© Tata Consultancy Services {year}	No	—	—	None
(D)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 1)	Privacy & Terms / / en/privacy / Default	No	—	—	None
(E)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 2)	Cookie policy / /en/cookie-policy / Default	No	—	—	None
(F)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 3)	Accessibility / /en/accessibility / Default	No	—	—	None
G	Title (Canvas page / content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content)	Let's shape what's next, together	No	—	—	None
(H)	Menu root path / Menu depth (Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content)	/content/tcs-corp/us/en / 2	No	—	—	None
(I)	Search bar water mark / hover text (Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content)	Ask us a question / Search	No	—	—	None
(J)	Conversation Canvas Button (3 items) (Canvas page › Con-	Explore our services → /en/services; Read our insights → /en/in-	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
	versation Canvas › Add (+))	sights; Talk to an expert → /en/contact; each with Type Secondary				
—	Rows (platform, url, icon, sort-order) (Social Links sheet /content/tcs-corp/us/en/data/social-links)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4	—	Check on the preview (not stored in the content)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4	—
(K)	Footer (Content page › Page properties)	Leave empty (inherits the locale default references/footer)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The canvas title Let's shape what's next, together, the floating menu button and the Ask us a question field, three secondary buttons with dark 2px borders on white, then the bar and the social icons.
- **Rendering behaviour:** div.footer-canvas holds the canvas page's sections; its own background, radius, glow and padding are removed and the footer's sizes apply. The footer gets a minimum height and the bar is pushed to its bottom.
- **Publishing behaviour:** The canvas page is a separate page and must be published itself, as must references/footer; the search dispatches conversation-canvas:search but no search service is connected.

Business Rules

- The canvas page must contain a Conversation Canvas block and be published.
- Conversation Canvas Page may be a link or a text path, resolved like Navigation.
- If the canvas page doesn't load or is empty, only the bar remains.
- Button Alignment and BG Style of the canvas have no effect (F-33, open).
- Keep the canvas title out of competition with the page H1.

Common Authoring Mistakes

Error	Root Cause	Resolution
The search button is announced as sradha	The footer canvas sample has the label sradha (F-33)	Correct the search hover text on the canvas page
Only the bar shows	The canvas page path points to another locale or an unpublished page	Reselect the /en canvas page and publish it
The canvas buttons look different from the design	Button Alignment or BG Style were changed, which has no effect	Leave them at their defaults

Troubleshooting

- **Symptoms:** The footer shows only the bar although Conversation Canvas Page is set.
- **Cause:** references/footer-conversation-canvas isn't published or has no sections, so the fragment is empty.
- **Resolution:** Publish the canvas page and check it contains the Conversation Canvas block; reselect it in the Footer block.
- **Verification Steps:** div.footer-canvas appears above div.footer-bar with the title and the three buttons.

Use Cases: Global footers of the corporate locales.

Authoring Guidelines: Create a page in `references/` (for example `references/footer-conversation-canvas`) containing a Conversation Canvas block; in the Footer block select it in **Conversation Canvas Page**.

Business Rules: The value may be a link or plain text path; it is resolved like Navigation values (AEM, published or locale-relative path). If the page can't be loaded or is empty, no canvas is shown and the bar remains.

Rendering Rules: `div.footer-canvas` holds the canvas page's sections; the canvas loses its own surface, radius, glow and padding (`background: none`) and uses footer sizes; the footer gets a minimum height and the bar is pushed to the bottom (`justify-content: space-between`). Canvas secondary buttons: 2px `#494c4e` border, white background, medium weight, 50px tall.

Responsive Behaviour: Mobile: title 3.25rem, buttons stacked, menu button hidden. Tablet: title 6rem, buttons in a row, menu button shown. Desktop: title max-width 61.5rem.

SEO Impact: The canvas title is part of every page's DOM (client-rendered); avoid heading levels that compete with the page H1 (see Conversation Canvas chapter).

Accessibility Compliance: Inherits the Conversation Canvas accessibility (search field label, buttons); the search dispatches `conversation-canvas:search` (no search service is connected).

Variation 5 — Social Links with Platform Icons

Variation Name: Social links with /icons icons.

Business Purpose: Recognizable channel icons from the Social Links sheet.

Visual Example:

Figure 26: Social icon row — The end of a page at 1440 px with the footer-campaign bar (© Tata Consultancy Services 2026, Privacy & Terms, Campaign terms, Contact us) and below it a row of 1.5rem icons in sort-order: LinkedIn, X, YouTube, Instagram and Facebook. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/footer-social-links-icons.jpg)

Screenshot Details — Social icon row

Item	Detail
Screenshot Name	`screenshots/footer-social-links-icons.jpg`
Screenshot Purpose	Social icon row

Item	Detail
Screen Description	The end of a page at 1440 px with the footer-campaign bar (© Tata Consultancy Services 2026, Privacy & Terms, Campaign terms, Contact us) and below it a row of 1.5rem icons in sort-order: LinkedIn, X, YouTube, Instagram and Facebook.
Business Context	The corporate social channels must appear on every footer of the locale, maintained once in the Social Links data sheet instead of on each footer page.
Author Objective	Add five rows (LinkedIn, X, YouTube, Instagram, Facebook) with icon names and sort-order to data/social-links and publish the sheet.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Component (Footer page /content/tcs-corp/us/en/references/footer-campaign › Section › Add (+))	Footer	No	—	—	None
(B)	Copyright Text (Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer)	© Tata Consultancy Services {year}	No	—	—	None
(C)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 1)	Privacy & Terms / / en/privacy / Default	No	—	—	None
(D)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 2)	Campaign terms / / en/campaigns/terms / Default	No	—	—	None
(E)	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 3)	Contact us / /en/contact / Default	No	—	—	None
—	Rows (platform, url, icon, sort-order) (Social Links sheet /content/tcs-corp/us/en/data/social-links)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Insta-	—	Check on the preview (not stored in the content)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Insta-	—

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		gram, https://www.instagram.com/example, instagram, 4; Facebook, https://www.facebook.com/example, facebook, 5			gram, https://www.instagram.com/example, instagram, 4; Facebook, https://www.facebook.com/example, facebook, 5	
(F)	Publish (Social Links sheet /content/tcs-corp/us/en/data/social-links)	Publish the sheet; every footer of the locale shows the row	No	—	—	None

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At the end of the footer, after the bar, a row of 1.5rem icons: LinkedIn, X, YouTube, Instagram and Facebook, in sort-order 1 to 5.
- **Rendering behaviour:** ul.footer-social has one li per row with an a, span.icon.icon-{name} and a visually hidden label Follow us on {platform}; links to other domains open in a new tab with noopener noreferrer. The row wraps with a 1rem gap.
- **Publishing behaviour:** The Social Links sheet is a separate publish step; once published every footer of the locale shows the row, without republishing footer or content pages.

Business Rules

- Rows without url are skipped.
- Rows are ordered by numeric sort-order; rows without one come last.
- Only linkedin, x, facebook, instagram and youtube exist in /icons; twitter maps to x.
- The accessible name is Follow us on {platform} (placeholder followUsOn); the new tab isn't announced (F-16, open).

Common Authoring Mistakes

Error	Root Cause	Resolution
Facebook doesn't appear	The row has no url	Enter https://www.facebook.com/example in url
Facebook appears first	sort-order 5 was typed as five	Enter the number 5
The X icon is broken	icon was set to twitter-x, which has no file	Use x, or leave icon empty with platform X

Troubleshooting

- **Symptoms:** No social icons appear on any /en footer.
- **Cause:** /en/data/social-links.json isn't published or its column headers differ (for example Sort Order instead of sort-order).
- **Resolution:** Use the headers platform, url, icon, sort-order and publish the sheet.
- **Verification Steps:** Open /en/data/social-links.json, then reload a page; five icons follow the bar.

Use Cases: Standard corporate channels.

Authoring Guidelines: In `/{locale}/data/social-links` add rows with `platform` (LinkedIn), `url`, optional `icon` (an icon name: `linkedin`, `x`, `facebook`, `instagram`, `youtube`) and `sort-order` (1, 2, 3…). Publish the sheet.

Business Rules: Rows without a `url` are skipped. Order: by `sort-order` ascending; rows without a number come last in sheet order. Without an `icon`, the platform name is used as the icon name when it is one of the five platforms (`twitter` maps to `x`).

Rendering Rules: `ul.footer-social > li > a > span.icon.icon-{name}` plus a visually hidden label "Follow us on {platform}"; links to another domain open in a new tab (`target="_blank" rel="noopener noreferrer"`).

Responsive Behaviour: Wrapping row with 1rem gap at all sizes.

SEO Impact: Outbound links to social profiles.

Accessibility Compliance: Each icon link has a text name (hidden label). The new tab isn't announced (no "(opens in a new tab)" text, a recommended improvement for WCAG 3.2.5, which is AAA).

Variation 6 — Social Links with Image Icons or Text Labels

Variation Name: Social links with an image icon, or as text.

Business Purpose: Channels without an icon in `/icons` (for example a regional network).

Visual Example:

Figure 27: Image and text fallbacks — The end of a page at 1440 px with the footer-campaign bar and below it the social row: the LinkedIn icon, the square-2.svg image for Glassdoor at 1.5rem and the visible text link Follow us on Xing. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/footer-social-links-text-image.jpg)

Screenshot Details — Image and text fallbacks

Item	Detail
Screenshot Name	`screenshots/footer-social-links-text-image.jpg`
Screenshot Purpose	Image and text fallbacks
Screen Description	The end of a page at 1440 px with the footer-campaign bar and below it the social row: the LinkedIn icon, the square-2.svg image for Glassdoor at 1.5rem and the visible text link Follow us on Xing.
Business Context	Regional channels such as Glassdoor or Xing have no icon in /icons; the sheet supports a custom image or a text link for them.
Author Objective	Add Glassdoor with an image path and Xing without an icon to the Social Links sheet next to LinkedIn.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Rows (platform, url, icon, sort-order) (Social Links sheet /content/tcs-corp/us/en/data/social-links)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; Glassdoor, https://www.glassdoor.com/example, /en/media/square-2.svg, 2; Xing, https://www.xing.com/pages/example, (empty), 3	—	Check on the preview (not stored in the content)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; Glassdoor, https://www.glassdoor.com/example, /en/media/square-2.svg, 2; Xing, https://www.xing.com/pages/example, (empty), 3	—

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	icon of Glassdoor (Social Links sheet)	An image path (/en/media/square-2.svg): shown as the image	No	—	—	None
B	icon of Xing (Social Links sheet)	Empty, and /icons has no xing icon: shown as the text “Follow us on Xing”	No	—	—	None

All other fields keep their default values. Each callout letter marks the field’s output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The social row shows the LinkedIn icon, the square-2.svg image for Glassdoor (1.5rem square) and the visible text Follow us on Xing.
- **Rendering behaviour:** An icon value with . or / is an image: site media is optimised, its alt is empty and the label stays hidden. Xing has no icon and isn’t one of the five platforms, so no icon is built and the label Follow us on Xing is shown as text.
- **Publishing behaviour:** Publish the Social Links sheet; the image /en/media/square-2.svg must be published too. Every footer of the locale updates without republishing pages.

Business Rules

- A value containing . or / in icon is treated as an image URL.
- An icon name without a file in /icons gives a broken icon (F-16, open).
- Without an icon and with an unknown platform the text label Follow us on {platform} is visible.
- Images display at 1.5rem × 1.5rem; provide a square image of 48 px or more.

Common Authoring Mistakes

Error	Root Cause	Resolution
Xing shows a broken icon	icon was set to xing, which has no file in /icons	Leave icon empty for a text link or enter an image path
Glassdoor shows text instead of the image	The image path lacks the leading / or the file isn’t published	Enter /en/media/square-2.svg and publish the asset
The text link reads Follow us on https://www.xing.com	platform was left empty	Enter Xing in platform

Troubleshooting

- **Symptoms:** An empty square appears in the social row where Glassdoor should be.
- **Cause:** The image at /en/media/square-2.svg doesn’t load (not published or wrong path).
- **Resolution:** Publish the image and correct the icon path in the Glassdoor row, then publish the sheet.
- **Verification Steps:** The Glassdoor image request returns 200 and the image shows at 1.5rem.

Use Cases: Additional or regional channels.

Authoring Guidelines: Put an image URL in `icon` (any value containing `.` or `/`, for example a published `/media_…png` or a DAM URL) for an image icon; leave `icon` empty for a platform without an icon to show text.

Business Rules: An icon value with `.` or `/` is an image (site media is optimized, other URLs used as is with `loading="lazy"`); an icon name that has no file in `/icons` produces a broken icon (the `/icons/{name}.svg` request fails). Without an icon and an unknown platform, the label "Follow us on {platform}" is shown as text.

Rendering Rules: Image icon: `<picture>` or `<img alt="">` (decorative) plus hidden label; text: visible `<span>` label.

Responsive Behaviour: As Variation 5; images are 1.5rem × 1.5rem.

SEO Impact: As Variation 5.

Accessibility Compliance: Decorative images (`alt=""`) with a hidden text label; text links readable as is.

Variation 7 — Footer Link Opening in a New Window

Variation Name: Link List item with Link Type "Open in new window".

Business Purpose: External policy or group pages opened without leaving the site.

Visual Example:

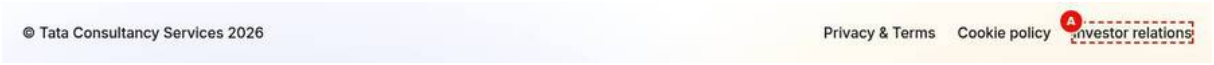

Figure 28: New-window link — The investors page footer at 1440 px: © Tata Consultancy Services 2026, Privacy & Terms, Cookie policy and Investor relations, then the four social icons; marker A on Investor relations, whose anchor has target="_blank" and rel="noopener noreferrer". (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/footer-link-new-window.jpg)

Screenshot Details — New-window link

Item	Detail
Screenshot Name	`screenshots/footer-link-new-window.jpg`
Screenshot Purpose	New-window link
Screen Description	The investors page footer at 1440 px: © Tata Consultancy Services 2026, Privacy & Terms, Cookie policy and Investor relations, then the four social icons; marker A on Investor relations, whose anchor has target="_blank" and rel="noopener noreferrer".
Business Context	The Investors area links to the external investor relations site; the footer link opens it in a new tab so visitors keep the TCS page open.
Author Objective	Create references/footer-investors with Investor relations set to Open in new window and set it as Footer on /en/investors.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Footer page /content/tcs-corp/us/en/references/footer-investors › Section › Add (+))	Footer	No	—	—	None
—	Copyright Text (Footer page /content/tcs-corp/us/en/references/footer-investors › Footer)	© Tata Consultancy Services {year}	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer-investors › Footer › Link List › Item 1)	Privacy & Terms / / en/privacy / Default	No	—	—	None
—	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer-investors › Footer › Link List › Item 2)	Cookie policy / /en/cookie-policy / Default	No	—	—	None
—	Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer-investors › Footer › Link List › Item 3)	Investor relations / https://investors.example.com/ / Open in new window	No	—	—	None
—	Rows (platform, url, icon, sort-order) (Social Links sheet /content/tcs-corp/us/en/data/social-links)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4	—	Check on the preview (not stored in the content)	LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4	—
—	Footer (Investors top page /content/tcs-corp/us/en/investors › Page properties)	/content/tcs-corp/us/en/references/footer-investors	No	—	—	None
—	Inspect (A) (Preview › Browser developer tools)	Investor relations: target="_blank" rel="noopener noreferrer"	—	Check on the preview (not stored in the content)	Investor relations: target="_blank" rel="noopener noreferrer"	—

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The footer bar with © Tata Consultancy Services 2026, Privacy & Terms, Cookie policy and Investor relations; the developer tools show target="_blank" and rel="noopener noreferrer" on Investor relations (A).
- **Rendering behaviour:** Link Type new-window makes setLinkTarget add target _blank and rel noopener noreferrer; Default items stay in the same tab. The link looks like the other footer links.
- **Publishing behaviour:** Publish footer-investors and /en/investors (and its child pages); the footer page must be published before or with the pages that use it.

Business Rules

- Use Open in new window only for external sites such as investors.example.com.
- The new tab isn't announced to screen readers in the footer (F-16, open); say so in the link text if needed.
- The value is inherited by the child pages of /en/investors.
- Default leaves the link in the same tab.

Common Authoring Mistakes

Error	Root Cause	Resolution
Investor relations opens in the same tab	Link Type was left on Default	Set Link Type to Open in new window
Screen reader users aren't told about the new tab	Footer links don't get the new-tab hint (F-16)	Add (opens in a new tab) to the Link Title or avoid new windows
The investors pages show the global footer	/en/investors wasn't published after setting Footer	Publish it and test in a new session

Troubleshooting

- **Symptoms:** Investor relations replaces the TCS page instead of opening a new tab.
- **Cause:** The item's Link Type is Default, so the anchor has no target.
- **Resolution:** Set Link Type to Open in new window on Item 3 of footer-investors and publish the page.
- **Verification Steps:** The developer tools show target="_blank" rel="noopener noreferrer" on Investor relations.

Use Cases: Links to external sites (group company pages, regulatory sites).

Authoring Guidelines: In a Link List item set **Link Type** to **Open in new window**.

Business Rules: `new-window` adds `target="_blank"` and `rel="noopener noreferrer"`; Default leaves the link in the same tab.

Rendering Rules: Same markup as other footer links.

Responsive Behaviour: As Variation 3.

SEO Impact: None beyond the link itself.

Accessibility Compliance: The new tab isn't announced to screen readers in the footer (no hidden hint); Recommended: add "(opens in a new tab)" to the link text or avoid new windows.

6.2.4 Authoring Experience

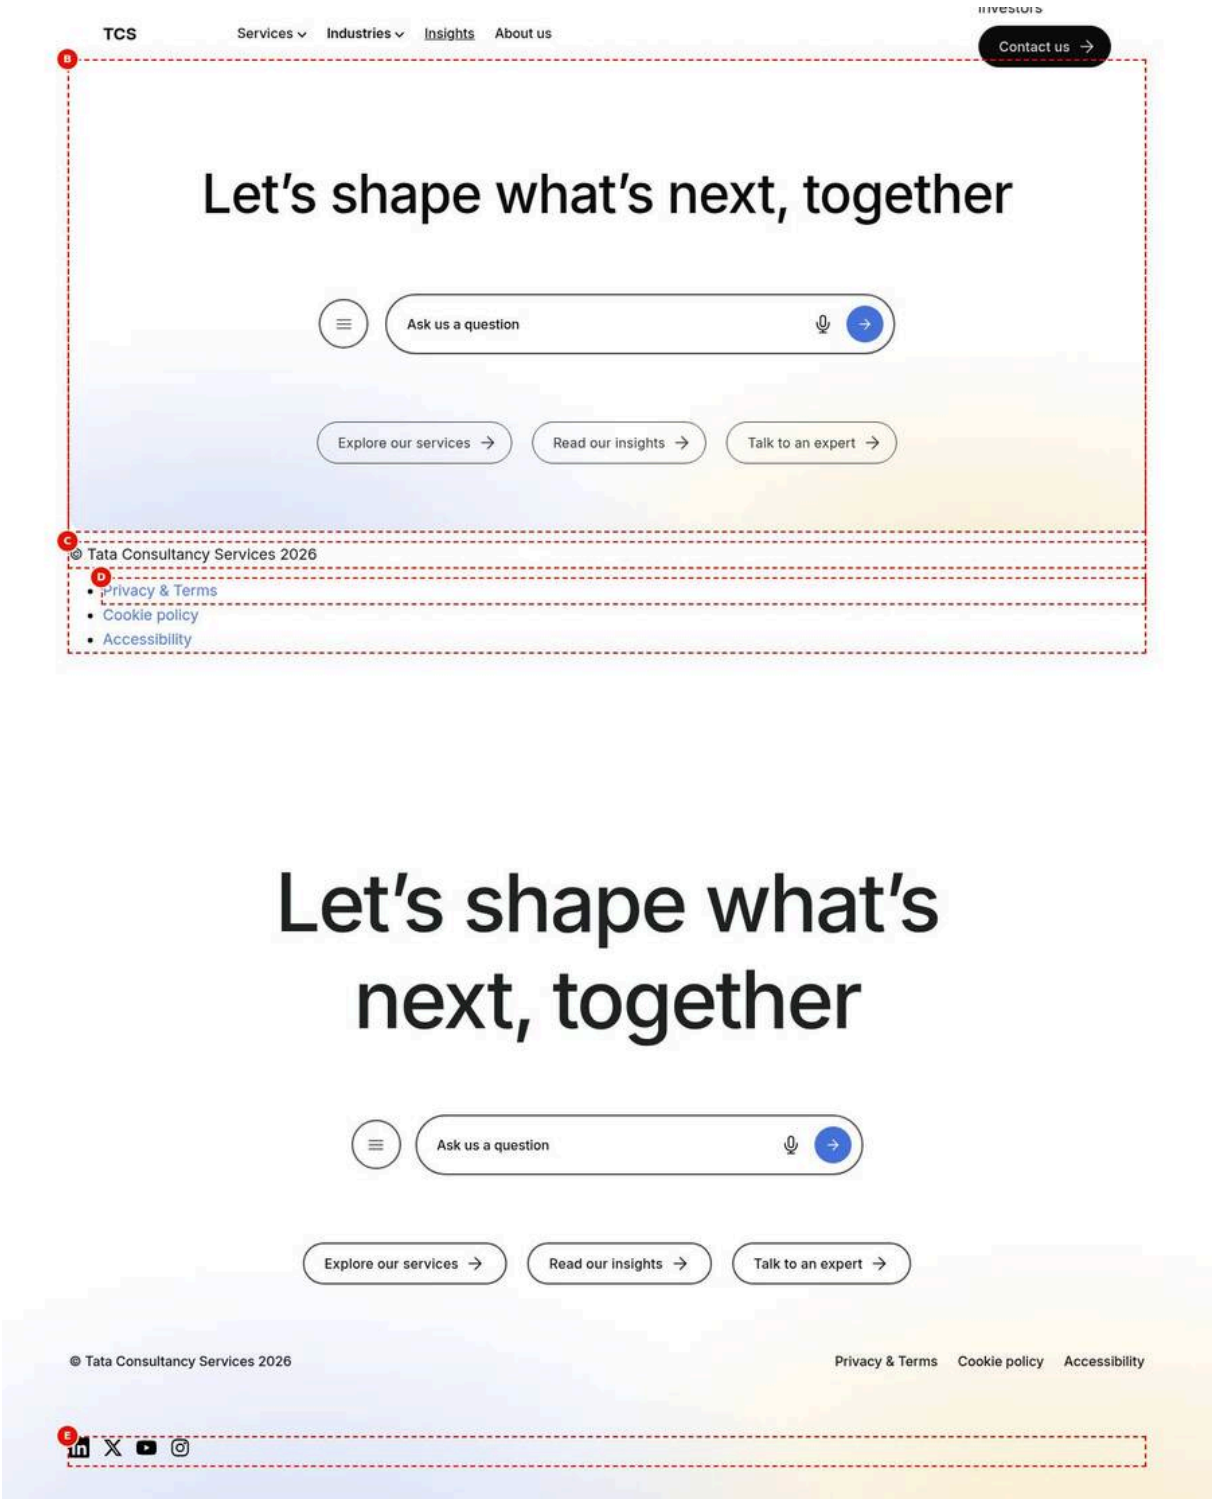

Figure 29: Universal Editor canvas of the footer page — references/footer in editor mode at 1440 px: A the Footer block, B the canvas with Let's shape what's next, together, C the copyright © Tata Consultancy Services 2026, D the first link Privacy & Terms, and E the LinkedIn, X, YouTube and Instagram row in the page footer below. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/footer-authoring-view.jpg)

Screenshot Details — Universal Editor canvas of the footer page

Item	Detail
Screenshot Name	`screenshots/footer-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas of the footer page
Screen Description	references/footer in editor mode at 1440 px: A the Footer block, B the canvas with Let's shape what's next, together, C the copyright © Tata Consultancy Services 2026, D the first link Privacy & Terms, and E the LinkedIn, X, YouTube and Instagram row in the page footer below.
Business Context	Authors edit the footer on its own page in references/; this view shows references/footer in Universal Editor with the Footer block and what each part maps to.
Author Objective	Add the Footer block to references/footer and fill Conversation Canvas Page, Copyright Text and the three Link List items.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Footer	Yes	Adds the Footer to the page	Select the section in the content tree, choose Add (+) and pick Footer	Only components the section allows (section filter)
—	Conversation Canvas Page (Footer)	Select the page or enter /content/tcs-corp/us/en/references/footer-conversation-canvas	No	Canvas above the bar	Pick a `references/` page with a Conversation Canvas block	None in the model; ignored if the page doesn't load
—	Copyright Text (Footer)	© Tata Consultancy Services {year}	No (Recommended)	Legal copyright	Use `{year}` for the current year	None
—	Link Title (Footer › Link List › Item 1)	Privacy & Terms	Yes (Recommended)	Visible link text	Short, descriptive	None
—	Link Path (Footer › Link List › Item 1)	Select the page or enter /en/privacy	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
—	Link Title (Footer › Link List › Item 2)	Cookie policy	Yes (Recommended)	Visible link text	Short, descriptive	None
—	Link Path (Footer › Link List › Item 2)	Select the page or enter /en/cookie-policy	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
—	Link Title (Footer › Link List › Item 3)	Accessibility	Yes (Recommended)	Visible link text	Short, descriptive	None
—	Link Path (Footer › Link List › Item 3)	Select the page or enter /en/accessibility	Yes (Enforced by code: items with-	Destination	AEM page or external URL	Items without a link are dropped

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			out a link are skipped)			
—	Page (Universal Editor)	/content/tcs-corp/us/en/references/footer (the page opened directly)	No	—	—	None
—	Rows (Social Links sheet /content/tcs-corp/us/en/data/social-links (E))	LinkedIn (1), X (2), YouTube (3), Instagram (4)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** references/footer in editor mode with markers: A the Footer block, B the canvas area, C the copyright, D the first Link List item, E the social row in the page footer.
- **Rendering behaviour:** Opened directly, the footer page also loads its own page footer from itself; the canvas and copyright keep their editor instrumentation so they stay selectable. The social row (E) comes from data/social-links and isn't editable here.
- **Publishing behaviour:** Publish references/footer from the Universal Editor toolbar to Preview, check a content page on aem.page, then to Live; the canvas page and Social Links sheet are published separately.

Business Rules

- The Footer block rows are read by position: canvas page, copyright, link list.
- The Footer model has no tabs and no Additional tab.
- Edit the block in the main content area; check the result on a content page.
- Social links are edited in the sheet, not in the Footer block.

Common Authoring Mistakes

Error	Root Cause	Resolution
The footer seems to appear twice in the editor	The footer page loads its own page footer as well	Edit the block in the main area and ignore the page footer
Social icons can't be selected	They come from the Social Links sheet	Edit /content/tcs-corp/us/en/data/social-links
A Footer block was added to a content page	It is offered in the section component list	Remove it; it is unstyled outside the footer

Troubleshooting

- **Symptoms:** After saving the footer page, content pages still show the old copyright and links.
- **Cause:** references/footer was saved but not published to Preview or Live.
- **Resolution:** Publish references/footer from the Universal Editor toolbar to Preview, check, then to Live.
- **Verification Steps:** The admin status of /en/references/footer shows the new dates and content pages show the new bar.

Annotations:

- A = The Footer block on the footer page (select it to open its properties).
- B = The Conversation Canvas area (rendered from the Conversation Canvas Page).
- C = Copyright Text.

- D = A Link List item (Link Title, Link Path, Link Type).
- E = The Social Links row (not editable here: comes from the `data/social-links` sheet, shown only in the page footer of content pages).

> **Note:** When the footer page itself is opened in Universal Editor, its own page footer is also loaded from the footer page; edit the block in the main content area, and check the final result on a content page.

Figure 30: Footer block properties — The properties panel of the Footer block with Conversation Canvas Page, Copyright Text and the Link List with two items expanded. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/footer-properties-panel.jpg)

Properties panel description. The Footer model has no tabs (and no Additional tab). Fields, in order:

- **Conversation Canvas Page** (content picker): a page with the Conversation Canvas block, shown above the copyright and links.
- **Copyright Text** (rich text): for example "©TATA Consultancy Services {year}"; `{year}` becomes the current year.
- **Link List** (multifield of items), each with **Link Title** (text), **Link Path** (content picker) and **Link Type** (Default / Open in new window).

6.2.5 Authoring Guide

Step 1 — Open the footer page in Universal Editor

Action: In AEM Sites, open `/content/tcs-corp/{country}/{language}/references/footer` with **Edit**.

Expected Result: The footer page opens with its Footer block.

Steps — Opening the footer page: Sites console, references folder, footer page selected, Edit highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › us › en › references
2	references	Select	footer
3	AEM Sites console toolbar	Edit	Open the page in Universal Editor

Step 2 — Add the Footer block (new footer pages only)

Action: Select the section, choose **Add** (+) and pick **Footer**.

Expected Result: An empty Footer block is added.

Steps — Adding the block: The component picker with Footer highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Select	The section of the footer page
2	Section › Add (+)	Component	Footer

Step 3 — Select the Conversation Canvas Page (optional)

Action: Select the Footer block; in **Conversation Canvas Page** choose the canvas page (for example `references/footer-conversation-canvas`), or leave it empty.

Expected Result: The canvas appears above the bar after the block re-renders.

Steps — Canvas page picker: The content picker dialog with the canvas page selected.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Select	Footer
2	Footer › Properties	Conversation Canvas Page	Open the content picker
3	Content picker	Select	/content/tcs-corp/us/en/references/footer-conversation-canvas
4	Content picker	Select (button)	Confirm (leave the field empty for a footer bar only)

Step 4 — Enter the Copyright Text

Action: In **Copyright Text** type, for example, "©TATA Consultancy Services {year}".

Expected Result: The bar shows the copyright with the current year.

Steps — Copyright field: The rich text field with {year} and the canvas preview showing 2026.

Step	Where	Field / control	Value / action
1	Footer › Properties	Copyright Text	© Tata Consultancy Services {year}
2	Universal Editor canvas	Check	The bar shows © Tata Consultancy Services 2026

Step 5 — Add Link List items

Action: In **Link List** choose **Add**; fill **Link Title** ("Privacy & Terms"), pick **Link Path**, set **Link Type**. Repeat; reorder by dragging.

Expected Result: The links appear in the bar in the item order.

Steps — Link items: Two expanded Link List items with title, path and type.

Step	Where	Field / control	Value / action
1	Footer › Properties › Link List	Add	Item 1
2	Link List › Item 1	Link Title	Privacy & Terms
3	Link List › Item 1	Link Path	/en/privacy
4	Link List › Item 1	Link Type	Default
5	Footer › Properties › Link List	Add	Item 2

Step	Where	Field / control	Value / action
6	Link List › Item 2	Link Title / Link Path / Link Type	Cookie policy / /en/cookie-policy / Default
7	Footer › Properties › Link List	Drag	Reorder the items in the order of the bar

Step 6 — Maintain the Social Links sheet

Action: Open `/content/tcs-corp/{country}/{language}/data/social-links`; edit rows (platform, url, icon, sort-order); publish the sheet.

Expected Result: `/{locale}/data/social-links.json` lists the rows.

Steps — Social Links data: The social-links sheet with five rows and the four column headers.

Step	Where	Field / control	Value / action
1	AEM Sites console	Open	/content/tcs-corp/us/en/data/social-links
2	Sheet	Columns	platform, url, icon, sort-order
3	Sheet › Row 1	platform / url / icon / sort-order	LinkedIn / https://www.linkedin.com/company/example / linkedin / 1
4	Sheet › Row 2	platform / url / icon / sort-order	X / https://x.com/example / x / 2
5	Sheet › Row 3	platform / url / icon / sort-order	YouTube / https://www.youtube.com/@example / youtube / 3
6	Sheet › Row 4	platform / url / icon / sort-order	Instagram / https://www.instagram.com/example / instagram / 4
7	Sheet › Row 5	platform / url / icon / sort-order	Facebook / https://www.facebook.com/example / facebook / 5
8	AEM Sites console	Quick Publish	Publish the sheet

Step 7 — (Optional) Assign an alternate footer

Action: On the area's top page, open **Page Properties** and pick the footer page in **Footer**.

Expected Result: The field shows the footer page path.

Steps — Footer page property: Page Properties with Footer set to references/footer-campaign.

Step	Where	Field / control	Value / action
1	AEM Sites console	Select	/content/tcs-corp/us/en/campaigns/cloud-week
2	AEM Sites console toolbar	Properties	Open Page Properties
3	Page Properties › Basic	Footer	/content/tcs-corp/us/en/references/footer-campaign
4	Page Properties	Save & Close	Save, then publish the page

Step 8 — Preview

Action: Publish the footer page (and canvas page, sheet, changed pages) to Preview; open a content page on `.aem.page`.

Expected Result: The content page shows the new footer.

Steps — Preview check: A preview content page scrolled to the footer.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Preview: the footer page, the canvas page, the social-links sheet and pages with a changed Footer
2	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/about
3	Browser	Action	Scroll to the end of the page

Step 9 — Validate

Action: Run the Validation Process checklist at mobile, tablet and desktop widths.

Expected Result: All checks pass.

Steps — Validation: The footer at 390px, 1024px and 1440px.

Step	Where	Field / control	Value / action
1	Browser	Screen width	390 px: canvas buttons stacked, no menu button, links below the copyright
2	Browser	Screen width	1024 px: canvas buttons in a row, menu button visible
3	Browser	Screen width	1440 px: canvas title on two lines, the bar at the bottom
4	Validation Process (6.2.5)	Check	All checks pass

Step 10 — Publish

Action: Publish the same pages and sheets to Live.

Expected Result: The live footer is updated after cache refresh.

Steps — Publishing: Publish dialog listing the footer page, the canvas page and the social-links sheet.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Open the Publish dialog
2	Publish dialog	Destination	Live
3	Publish dialog	Items	references/footer-conversation-canvas, data/social-links, references/footer and pages with a changed Footer
4	Publish dialog	Publish	Confirm

Preview Process

1. Preview the footer page, the conversation canvas page and the `data/social-links` sheet.
2. Check the footer on several content pages of the locale on `.aem.page`.
3. For inherited Footer values, preview the area's top page and test in a new browser session.

Publishing Process

1. Publish the canvas page and the social-links sheet first, then the footer page, then any page with a changed Footer property.
2. Never unpublish `references/footer` of a live locale: pages without a footer show only the social links.

Validation Process

- ☐ The copyright shows the current year (no literal `{year}`).
- ☐ All Link List links work and open in the right window.
- ☐ Links aren't styled as buttons.

- ☐ The canvas (if configured) shows above the bar; the bar sits at the bottom of the footer.
- ☐ Mobile: canvas buttons stacked, menu button hidden, links below the copyright.
- ☐ Tablet / desktop: canvas buttons in a row, menu button visible.
- ☐ Social icons appear in Sort Order; each has an accessible name ("Follow us on LinkedIn"); no broken icons.
- ☐ Screen reader: "Footer links" navigation landmark announced.
- ☐ Localized placeholders (`footerLinks`, `followUsOn`) in non-English locales.
- ☐ Areas with an alternate footer show it.

Rollback Process

1. Restore the previous version of the footer page (or the canvas page / sheet) in AEM and publish it.
2. Clear a faulty Footer page property (or metadata sheet `footer` value) and publish; pages fall back to the parent's or the locale's `references/footer`.
3. Retest in a new browser session.

The walkthroughs below repeat the steps above for each variation of chapter 6.2.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Default Locale Footer

Reproduces the screenshot `screenshots/footer-default-locale-footer.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Footer page /content/tcs-corp/us/en/references/footer › Section › Add (+)

Action: Select **Footer page /content/tcs-corp/us/en/references/footer** in the content tree and open the **Section › Add (+)** tab of the properties panel. Enter: **Component** (A) = Footer.

Expected Result: An empty Footer block is placed in the section of references/footer; it renders an empty bar until its fields are filled.

Step 3 — Fill in Footer page /content/tcs-corp/us/en/references/footer › Footer

Action: Select **Footer page /content/tcs-corp/us/en/references/footer** in the content tree and open the **Footer** tab of the properties panel. Enter: **Conversation Canvas Page** (B) = Select the page /content/tcs-corp/us/en/references/footer-conversation-canvas; **Copyright Text** (C) = © Tata Consultancy Services {year}.

Expected Result: The Conversation Canvas Page and the Copyright Text are set; the canvas appears above the bar and the copyright reads © Tata Consultancy Services 2026.

Step 4 — Fill in Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 1

Action: Select **Footer page /content/tcs-corp/us/en/references/footer** in the content tree and open the **Footer › Link List › Item 1** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (D) = Privacy & Terms / /en/privacy / Default.

Expected Result: Privacy & Terms appears as the first plain link in the bar, linking to /en/privacy.

Step 5 — Fill in Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 2

Action: Select **Footer page /content/tcs-corp/us/en/references/footer** in the content tree and open the **Footer › Link List › Item 2** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (E) = Cookie policy / /en/cookie-policy / Default.

Expected Result: Cookie policy appears next to it, linking to /en/cookie-policy.

Step 6 — Fill in Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 3

Action: Select **Footer page /content/tcs-corp/us/en/references/footer** in the content tree and open the **Footer › Link List › Item 3** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (F) = Accessibility / /en/accessibility / Default.

Expected Result: Accessibility appears as the third link, linking to /en/accessibility in the same tab.

Step 7 — Fill in Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content

Action: Select **Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas** in the content tree and open the **Conversation Canvas › Content** tab of the properties panel. Enter: **Title** (G) = Let's shape what's next, together; **Menu root path / Menu depth** (H) = /content/tcs-corp/us/en / 2; **Search bar water mark / hover text** (I) = Ask us a question / Search.

Expected Result: The canvas page shows the title Let's shape what's next, together, the Ask us a question search field and a menu of /en pages two levels deep.

Step 8 — Fill in Canvas page › Conversation Canvas › Add (+)

Action: Select **Canvas page** in the content tree and open the **Conversation Canvas › Add (+)** tab of the properties panel. Enter: **Conversation Canvas Button (3 items)** (J) = Explore our services → /en/services; Read our insights → /en/insights; Talk to an expert → /en/contact; each with Type Secondary.

Expected Result: Three secondary buttons appear: Explore our services, Read our insights and Talk to an expert.

Step 9 — Social Links sheet /content/tcs-corp/us/en/data/social-links

Action: Rows (platform, url, icon, sort-order): LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4.

Expected Result: After the sheet is published, the LinkedIn, X, YouTube and Instagram icons follow the bar in sort-order 1 to 4.

Step 10 — Fill in Content page › Page properties

Action: Select **Content page** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Footer** (K) = Leave empty (inherits the locale default references/footer).

Expected Result: Footer stays empty, so the page inherits the locale default /en/references/footer.

Step 11 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: An /en content page ending with the footer from /en/references/footer: the canvas, © Tata Consultancy Services 2026, Privacy & Terms, Cookie policy, Accessibility and the social icons.

Step 12 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the content page to aem.page or aem.live; references/footer is published separately and its changes reach every /en page without republishing them.

Step 13 — Verify

Action: On the live page check: In a new private window the page shows the /en/references/footer content.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Alternate Footer Page

Reproduces the screenshot `screenshots/footer-alternate-footer.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Section › Add (+)

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Section › Add (+)** tab of the properties panel. Enter: **Component** (A) = Footer.

Expected Result: An empty Footer block is placed on references/footer-campaign; it has no Conversation Canvas Page.

Step 3 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Footer** tab of the properties panel. Enter: **Copyright Text** (B) = © Tata Consultancy Services {year}.

Expected Result: Copyright Text © Tata Consultancy Services {year} is shown as © Tata Consultancy Services 2026 at the left of the bar.

Step 4 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 1

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Footer › Link List › Item 1** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (C) = Privacy & Terms / /en/privacy / Default.

Expected Result: Privacy & Terms appears as the first link, to /en/privacy.

Step 5 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 2

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Footer › Link List › Item 2** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (D) = Campaign terms / /en/campaigns/terms / Default.

Expected Result: Campaign terms appears next, linking to /en/campaigns/terms.

Step 6 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 3

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Footer › Link List › Item 3** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (E) = Contact us / /en/contact / Default.

Expected Result: Contact us appears as the third plain link, to /en/contact, not as a button.

Step 7 — Social Links sheet /content/tcs-corp/us/en/data/social-links

Action: Rows (platform, url, icon, sort-order): LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4.

Expected Result: After the sheet is published, the LinkedIn, X, YouTube and Instagram icons follow the bar in sort-order 1 to 4.

Step 8 — Fill in Campaign top page /content/tcs-corp/us/en/campaigns/cloud-week › Page properties

Action: Select **Campaign top page /content/tcs-corp/us/en/campaigns/cloud-week** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Footer** (F) = /content/tcs-corp/us/en/references/footer-campaign.

Expected Result: Footer holds /content/tcs-corp/us/en/references/footer-campaign; the campaign page and its children show the compact bar.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A campaign page ending with a white footer bar: © Tata Consultancy Services 2026 at the left, Privacy & Terms, Campaign terms and Contact us at the right, then the LinkedIn, X, YouTube and Instagram icons; no canvas.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish footer-campaign and /en/campaigns/cloud-week; publish the footer page before or with the pages that use it. Social Links come from the locale sheet, published separately.

Step 11 — Verify

Action: On the live page check: The campaign page source shows meta footer with footer-campaign and the footer shows Campaign terms.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Footer Bar (Copyright and Links)

Reproduces the screenshot `screenshots/footer-bar-only.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Section › Add (+)

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Section › Add (+)** tab of the properties panel. Enter: **Component** (A) = Footer.

Expected Result: An empty Footer block is placed on references/footer-campaign; it has no Conversation Canvas Page.

Step 3 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Footer** tab of the properties panel. Enter: **Copyright Text** (B) = © Tata Consultancy Services {year}.

Expected Result: Copyright Text © Tata Consultancy Services {year} is shown as © Tata Consultancy Services 2026 at the left of the bar.

Step 4 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 1

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Footer › Link List › Item 1** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (C) = Privacy & Terms / /en/privacy / Default.

Expected Result: Privacy & Terms appears as the first link, to /en/privacy.

Step 5 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 2

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Footer › Link List › Item 2** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (D) = Campaign terms / /en/campaigns/terms / Default.

Expected Result: Campaign terms appears next, linking to /en/campaigns/terms.

Step 6 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 3

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Footer › Link List › Item 3** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (E) = Contact us / /en/contact / Default.

Expected Result: Contact us appears as the third plain link, to /en/contact, not as a button.

Step 7 — Preview

Action: Screen width: 1440 px (top) and 390 px (bottom), scrolled to the footer.

Expected Result: At 1440 px copyright and links share one row; at 390 px the links sit below the copyright.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Top, 1440 px: one row with © Tata Consultancy Services 2026 at the left and Privacy & Terms, Campaign terms and Contact us at the right. Bottom, 390 px: the copyright above the three links in smaller text.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish footer-campaign to aem.page or aem.live; the pages using it read it in the browser and need no republishing.

Step 10 — Verify

Action: On the live page check: The bar lists Privacy & Terms, Campaign terms and Contact us at 1440 px and 390 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Footer with Conversation Canvas

Reproduces the screenshot `screenshots/footer-with-conversation-canvas.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Footer page /content/tcs-corp/us/en/references/footer › Section › Add (+)

Action: Select **Footer page /content/tcs-corp/us/en/references/footer** in the content tree and open the **Section › Add (+)** tab of the properties panel. Enter: **Component** (A) = Footer.

Expected Result: An empty Footer block is placed in the section of references/footer; it renders an empty bar until its fields are filled.

Step 3 — Fill in Footer page /content/tcs-corp/us/en/references/footer › Footer

Action: Select **Footer page /content/tcs-corp/us/en/references/footer** in the content tree and open the **Footer** tab of the properties panel. Enter: **Conversation Canvas Page** (B) = Select the page /content/tcs-corp/us/en/references/footer-conversation-canvas; **Copyright Text** (C) = © Tata Consultancy Services {year}.

Expected Result: The Conversation Canvas Page and the Copyright Text are set; the canvas appears above the bar and the copyright reads © Tata Consultancy Services 2026.

Step 4 — Fill in Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 1

Action: Select **Footer page /content/tcs-corp/us/en/references/footer** in the content tree and open the **Footer › Link List › Item 1** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (D) = Privacy & Terms / / en/privacy / Default.

Expected Result: Privacy & Terms appears as the first plain link in the bar, linking to /en/privacy.

Step 5 — Fill in Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 2

Action: Select **Footer page /content/tcs-corp/us/en/references/footer** in the content tree and open the **Footer › Link List › Item 2** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (E) = Cookie policy / /en/cookie-policy / Default.

Expected Result: Cookie policy appears next to it, linking to /en/cookie-policy.

Step 6 — Fill in Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 3

Action: Select **Footer page /content/tcs-corp/us/en/references/footer** in the content tree and open the **Footer › Link List › Item 3** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (F) = Accessibility / /en/accessibility / Default.

Expected Result: Accessibility appears as the third link, linking to /en/accessibility in the same tab.

Step 7 — Fill in Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content

Action: Select **Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas** in the content tree and open the **Conversation Canvas › Content** tab of the properties panel. Enter: **Title** (G) = Let's shape what's next, together; **Menu root path / Menu depth** (H) = /content/tcs-corp/us/en / 2; **Search bar water mark / hover text** (I) = Ask us a question / Search.

Expected Result: The canvas page shows the title Let's shape what's next, together, the Ask us a question search field and a menu of /en pages two levels deep.

Step 8 — Fill in Canvas page › Conversation Canvas › Add (+)

Action: Select **Canvas page** in the content tree and open the **Conversation Canvas › Add (+)** tab of the properties panel. Enter: **Conversation Canvas Button (3 items)** (J) = Explore our services → /en/services; Read our insights → /en/insights; Talk to an expert → /en/contact; each with Type Secondary.

Expected Result: Three secondary buttons appear: Explore our services, Read our insights and Talk to an expert.

Step 9 — Social Links sheet /content/tcs-corp/us/en/data/social-links

Action: Rows (platform, url, icon, sort-order): LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4.

Expected Result: After the sheet is published, the LinkedIn, X, YouTube and Instagram icons follow the bar in sort-order 1 to 4.

Step 10 — Fill in Content page › Page properties

Action: Select **Content page** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Footer** (K) = Leave empty (inherits the locale default references/footer).

Expected Result: Footer stays empty, so the page inherits the locale default /en/references/footer.

Step 11 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The canvas title Let's shape what's next, together, the floating menu button and the Ask us a question field, three secondary buttons with dark 2px borders on white, then the bar and the social icons.

Step 12 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The canvas page is a separate page and must be published itself, as must references/footer; the search dispatches conversation-canvas:search but no search service is connected.

Step 13 — Verify

Action: On the live page check: div.footer-canvas appears above div.footer-bar with the title and the three buttons.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Social Links with Platform Icons

Reproduces the screenshot `screenshots/footer-social-links-icons.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Section › Add (+)

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Section › Add (+)** tab of the properties panel. Enter: **Component** (A) = Footer.

Expected Result: An empty Footer block is placed on references/footer-campaign; it has no Conversation Canvas Page.

Step 3 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Footer** tab of the properties panel. Enter: **Copyright Text** (B) = © Tata Consultancy Services {year}.

Expected Result: Copyright Text © Tata Consultancy Services {year} is shown as © Tata Consultancy Services 2026 at the left of the bar.

Step 4 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 1

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Footer › Link List › Item 1** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (C) = Privacy & Terms / /en/privacy / Default.

Expected Result: Privacy & Terms appears as the first link, to /en/privacy.

Step 5 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 2

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Footer › Link List › Item 2** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (D) = Campaign terms / /en/campaigns/terms / Default.

Expected Result: Campaign terms appears next, linking to /en/campaigns/terms.

Step 6 — Fill in Footer page /content/tcs-corp/us/en/references/footer-campaign › Footer › Link List › Item 3

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-campaign** in the content tree and open the **Footer › Link List › Item 3** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** (E) = Contact us / /en/contact / Default.

Expected Result: Contact us appears as the third plain link, to /en/contact, not as a button.

Step 7 — Social Links sheet /content/tcs-corp/us/en/data/social-links

Action: Rows (platform, url, icon, sort-order): LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4; Facebook, https://www.facebook.com/example, facebook, 5.

Expected Result: The sheet holds five rows; LinkedIn, X, YouTube, Instagram and Facebook are ordered by sort-order 1 to 5.

Step 8 — Fill in Social Links sheet /content/tcs-corp/us/en/data/social-links

Action: Select **Social Links sheet /content/tcs-corp/us/en/data/social-links** in the content tree and enter in the properties panel: **Publish** (F) = Publish the sheet; every footer of the locale shows the row.

Expected Result: The sheet holds five rows; LinkedIn, X, YouTube, Instagram and Facebook are ordered by sort-order 1 to 5.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At the end of the footer, after the bar, a row of 1.5rem icons: LinkedIn, X, YouTube, Instagram and Facebook, in sort-order 1 to 5.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The Social Links sheet is a separate publish step; once published every footer of the locale shows the row, without republishing footer or content pages.

Step 11 — Verify

Action: On the live page check: Open /en/data/social-links.json, then reload a page; five icons follow the bar.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Social Links with Image Icons or Text Labels

Reproduces the screenshot `screenshots/footer-social-links-text-image.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Social Links sheet /content/tcs-corp/us/en/data/social-links

Action: Rows (platform, url, icon, sort-order): LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; Glassdoor, https://www.glassdoor.com/example, /en/media/square-2.svg, 2; Xing, https://www.xing.com/pages/example, (empty), 3.

Expected Result: The sheet holds LinkedIn (linkedin, 1), Glassdoor (/en/media/square-2.svg, 2) and Xing (empty icon, 3).

Step 3 — Fill in Social Links sheet

Action: Select **Social Links sheet** in the content tree and enter in the properties panel: **icon of Glassdoor** (A) = An image path (/en/media/square-2.svg): shown as the image; **icon of Xing** (B) = Empty, and /icons has no xing icon: shown as the text "Follow us on Xing".

Expected Result: After publishing, Glassdoor shows its image and Xing the visible text Follow us on Xing.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The social row shows the LinkedIn icon, the square-2.svg image for Glassdoor (1.5rem square) and the visible text Follow us on Xing.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the Social Links sheet; the image /en/media/square-2.svg must be published too. Every footer of the locale updates without republishing pages.

Step 6 — Verify

Action: On the live page check: The Glassdoor image request returns 200 and the image shows at 1.5rem.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Footer Link Opening in a New Window

Reproduces the screenshot `screenshots/footer-link-new-window.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Footer page /content/tcs-corp/us/en/references/footer-investors › Section › Add (+)

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-investors** in the content tree and open the **Section › Add (+)** tab of the properties panel. Enter: **Component** = Footer.

Expected Result: An empty Footer block is placed on references/footer-investors; it has no Conversation Canvas Page.

Step 3 — Fill in Footer page /content/tcs-corp/us/en/references/footer-investors › Footer

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-investors** in the content tree and open the **Footer** tab of the properties panel. Enter: **Copyright Text** = © Tata Consultancy Services {year}.

Expected Result: Copyright Text © Tata Consultancy Services {year} is shown as © Tata Consultancy Services 2026 at the left of the bar.

Step 4 — Fill in Footer page /content/tcs-corp/us/en/references/footer-investors › Footer › Link List › Item 1

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-investors** in the content tree and open the **Footer › Link List › Item 1** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** = Privacy & Terms / /en/privacy / Default.

Expected Result: Privacy & Terms appears as the first link, to /en/privacy.

Step 5 — Fill in Footer page /content/tcs-corp/us/en/references/footer-investors › Footer › Link List › Item 2

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-investors** in the content tree and open the **Footer › Link List › Item 2** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** = Cookie policy / /en/cookie-policy / Default.

Expected Result: Cookie policy appears next, linking to /en/cookie-policy.

Step 6 — Fill in Footer page /content/tcs-corp/us/en/references/footer-investors › Footer › Link List › Item 3

Action: Select **Footer page /content/tcs-corp/us/en/references/footer-investors** in the content tree and open the **Footer › Link List › Item 3** tab of the properties panel. Enter: **Link Title / Link Path / Link Type** = Investor relations / https://investors.example.com/ / Open in new window.

Expected Result: Investor relations appears as the third link, to https://investors.example.com/, opening in a new tab.

Step 7 — Social Links sheet /content/tcs-corp/us/en/data/social-links

Action: Rows (platform, url, icon, sort-order): LinkedIn, https://www.linkedin.com/company/example, linkedin, 1; X, https://x.com/example, x, 2; YouTube, https://www.youtube.com/@example, youtube, 3; Instagram, https://www.instagram.com/example, instagram, 4.

Expected Result: After the sheet is published, the LinkedIn, X, YouTube and Instagram icons follow the bar in sort-order 1 to 4.

Step 8 — Fill in Investors top page /content/tcs-corp/us/en/investors › Page properties

Action: Select **Investors top page /content/tcs-corp/us/en/investors** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Footer** = /content/tcs-corp/us/en/references/footer-investors.

Expected Result: Footer holds /content/tcs-corp/us/en/references/footer-investors; the investors pages show its bar.

Step 9 — Preview › Browser developer tools

Action: Inspect (A): Investor relations: target="_blank" rel="noopener noreferrer".

Expected Result: Inspecting Investor relations (A) shows target="_blank" and rel="noopener noreferrer".

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The footer bar with © Tata Consultancy Services 2026, Privacy & Terms, Cookie policy and Investor relations; the developer tools show target="_blank" and rel="noopener noreferrer" on Investor relations (A).

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish footer-investors and /en/investors (and its child pages); the footer page must be published before or with the pages that use it.

Step 12 — Verify

Action: On the live page check: The developer tools show target="_blank" rel="noopener noreferrer" on Investor relations.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.2.6 Authorable Field Specification

Footer block (model `footer`, `blocks/footer/_footer.json`; no tabs)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Conversation Canvas Page (`conversationCanvas`)	aem-content	No	No	Empty	Canvas above the bar	Pick a `references/` page with a Conversation Canvas block	None in the model; ignored if the page doesn't load	`/content/tcs-corp/us/en/references/footer-conversation-canvas`
Copyright Text (`copyright`)	richtext	No (Recommended)	No	Empty	Legal copyright	Use `{year}` for the current year	None	`©TATA Consultancy Services {year}`
Link List (`links`)	container (composite multifield)	No	Yes	No items	Footer links	3–6 policy links	None	Privacy & Terms; Cookie Policy

Link List item (fields of the `links` container)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Link Title (`linkText`)	text	Yes (Recommended)	No	Empty	Visible link text	Short, descriptive	None	`Privacy & Terms`
Link Path (`link`)	aem-content	Yes (Enforced by code: items without a link are skipped)	No	Empty	Destination	AEM page or external URL	Items without a link are dropped	`/content/tcs-corp/us/en/privacy`
Link Type (`linkTarget`)	select	No	No	Default (`""`)	Same or new window	Use new window only for external sites	Options: Default (`""`); Open in new window (`new-window`)	`new-window`

Social Links data sheet (`/{locale}/data/social-links`, not a dialog)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
platform	sheet text	Recommended	No	Empty	Name used in the label and as the default icon	Use the platform name	None	`LinkedIn`
url	sheet text	Yes (Enforced: rows without url skipped)	No	Empty	Profile URL	Full https URL	Rows without url skipped	`https://www.linkedin.com/company/tata-consultancy-services`
icon	sheet text	No	No	Empty (platform name)	Icon name or image URL	`linkedin`, `x`, `facebook`, `instagram`, `youtube`, or an image URL	Value with `.` or `/` = image	`linkedin`

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
sort-order	sheet number	No	No	Empty (last)	Order	1, 2, 3…	Non-numbers treated as empty	1

There is no Additional tab (Anchor ID, Hide block, padding and margin fields don't exist on the Footer model).

Field details

- **Conversation Canvas Page.** Purpose: shows a conversation canvas above the bar. Allowed Values: a page path (link or text); AEM, published or locale-relative. Character Limits: none. Business Rules: loaded as a fragment; ignored when it can't be loaded or has no content. Dependency Rules: the canvas page must be published and contain a Conversation Canvas block. Visibility Rules: always visible (no `condition`). Sample Content: `references/footer-conversation-canvas`.
- **Copyright Text.** Purpose: legal line. Allowed Values: rich text (bold, italic, links). Character Limits: Recommended up to about 80 characters (the copyright column is at least 19.375rem wide). Business Rules: every `{year}` is replaced by the current year; empty text renders no copyright element. Dependency Rules: none. Visibility Rules: always. Sample Content: "©TATA Consultancy Services {year}".
- **Link List.** Purpose: legal / policy links. Allowed Values: items with a link. Character Limits: Recommended up to 6 items. Business Rules: items without a link are skipped; links are plain links. Dependency Rules: none. Visibility Rules: always. Sample Content: Privacy & Terms; Cookies; Accessibility.
- **Link Title.** Purpose: link text. Allowed Values: plain text. Character Limits: Recommended up to 30 characters. Business Rules: collapsed with Link Path into one anchor by AEM. Dependency Rules: requires Link Path. Visibility Rules: always. Sample Content: "Privacy & Terms".
- **Link Path.** Purpose: destination. Allowed Values: AEM page or URL. Character Limits: none. Business Rules: mandatory in practice. Dependency Rules: none. Visibility Rules: always. Sample Content: `/content/tcs-corp/us/en/privacy`.
- **Link Type.** Purpose: window. Allowed Values: Default, Open in new window. Character Limits: n/a. Business Rules: `new-window` opens a new tab with `noopener noreferrer`. Dependency Rules: requires Link Path. Visibility Rules: always. Sample Content: Default.
- **Social Links columns.** See the table; the sheet is loaded once per page; missing sheet = no social links.

6.2.7 Field Annotation Mapping

Marker	Field	Purpose
A	Footer block	Holds the footer bar fields
B	Conversation Canvas Page	Canvas above the bar
C	Copyright Text	Legal copyright with `{year}`
D	Link List item (Link Title, Link Path, Link Type)	Footer links
E	Social Links sheet rows (platform, url, icon, sort-order)	Social icon row in the page footer

6.2.8 Component Specification

Attribute	Value
Component Name	Footer (`blocks/footer`)
Version	1.0

Attribute	Value
Owner	[To be confirmed: product owner — owner: Digital Marketing]; technical owner: development team
Dependencies	Fragment; inherited-metadata, site, data, links, placeholders utils; social-links, button, link, content decorators; Conversation Canvas block; footer pages; Social Links sheet
Component Type	Block with two roles: page-level footer (automatic, in `<footer>`) and authored block on footer pages (with a Link List composite multifield)
Supported Variants	Default footer; alternate footer; bar only; with Conversation Canvas; social icons; social image / text; new-window links
Supported Templates	All
Supported Metadata	`footer` (page property Footer, metadata sheet column), inherited
Supported Tags	None
Supported Personalization	None; alternate footers per area only; future Target personalization through Adobe Tags (not implemented)
Caching Considerations	Footer and canvas pages and the social-links JSON are cached by the Edge Delivery CDN and the browser; inherited values cached per session; data sheets and placeholders loaded once per page
Performance Considerations	Lazy phase, after main sections; footer page, social links and placeholders load in parallel; the canvas page is a second fragment request; social image icons lazy-loaded; footer hidden until loaded (no flash)
Accessibility Compliance	contentinfo landmark (`<footer>`); `nav` "Footer links"; social icon links with hidden text names; decorative icon images `alt=""`; hover and focus underline; new-tab links not announced (recommended improvement)
SEO Compliance	Plain `<a href>` links; client-rendered; footer pages excluded from index and sitemap

6.2.9 Input Model

- **Content Inputs:** the footer page's sections; the Footer block rows (canvas page, copyright, links); the canvas page.
- **Metadata Inputs:** `<meta name="footer">` of the page or its parents.
- **Tags Inputs:** none.
- **Page Context Inputs:** current path (locale, parent pages; AEM path when editing); current year (browser clock).
- **Query Inputs:** `/{locale}/data/social-links.json`; `/{locale}/placeholders.json`.
- **Manual Inputs:** Footer block fields; Social Links sheet rows.

Authored HTML received (footer page `.plain.html`, based on the `/en` sample in `content/en/references/footer.plain.html`, which has the year typed as 2027 instead of `{year}`):

```
<div>
  <div class="footer">
    <div><div><a href="/en/references/footer-conversation-canvas">…</a></div></div>
    <div><div>© TATA Consultancy Services {year}</div></div>
    <div><div><hr><p><a href="/en/privacy">Privacy &amp;amp; Terms</a></p><hr></div></div>
  </div>
  <div class="section-metadata">
    <div><div>sectionWidth</div><div>full-width</div></div>
  </div>
</div>
```

Rows are positional: row 1 Conversation Canvas Page, row 2 Copyright Text, row 3 Link List (items as `<ul><li>` or runs separated by `<hr>`; a `new-window` value in an item marks it for a new window).

6.2.10 Output Model

Rendered Output (DOM structure).

```
footer
└─ div.footer.block                (page footer)
   └─ div
      ├─ div.section …             (footer page sections)
      │  └─ div.footer-wrapper > div.footer.block   (authored Footer block)
      │     ├─ div.footer-canvas > div.section > … div.conversation-canvas.block
      │     └─ div.footer-bar
      │        ├─ div.footer-copyright
      │        └─ nav.footer-links[aria-label] > ul > li > a
      └─ ul.footer-social > li > a > span.icon.icon-{name} + span.visually-hidden
```

Generated HTML (bar and social links, simplified).

```
<div class="footer-bar">
  <div class="footer-copyright">© TATA Consultancy Services 2026</div>
  <nav class="footer-links" aria-label="Footer links">
    <ul><li><a href="/en/privacy">Privacy &amp;amp; Terms</a></li></ul>
  </nav>
</div>
<ul class="footer-social">
  <li><a href="https://www.linkedin.com/company/…" target="_blank"
    rel="noopener noreferrer"><span class="icon icon-linkedin"><img …></span>
    <span class="visually-hidden">Follow us on LinkedIn</span></a></li>
</ul>
```

Generated JSON: none (reads the social-links JSON).

Generated Metadata: none.

Analytics Tracking. Both footer blocks are `.block` elements and tracked in the delayed phase (`trackBlocks(document)`), for example `footer-1` (page footer, `parentId` the page) and `footer-2` (authored block, `parentId` `footer-1`); a Conversation Canvas inside is its own component with its own events. Clicks push `cmp:click` to the nearest block:

```
{ "event": "cmp:click", "eventInfo": {
  "path": "component.footer-1", "interaction": "link",
  "dc:title": "Follow us on LinkedIn",
  "xdm:linkURL": "https://www.linkedin.com/company/tata-consultancy-services",
  "xdm:linkType": "exit", "breakpoint": "mobile" } }
```

Footer bar links report `component.footer-2`, `xdm:linkType` `other` (same site) or `exit` (other domain).

Personalization Output: none.

Search Index Output: none (footer and canvas pages excluded from `/query-index.json`).

Target Personalization Output: None. Different footers per area are done with footer pages only; Adobe Target personalisation is Not implemented (as of this handover). Footer link clicks are captured centrally by the data layer decorator once Adobe Tags is installed (F-06).

6.2.11 Business Rules

1. A Footer block whose parent is `<footer>` is the page footer; every other Footer block is the authored footer bar.

2. The footer page is the page's Footer value (page property or metadata `footer` column), else the nearest parent's up to the locale Home page, else `{locale}/references/footer`; values may be AEM, published or locale-relative paths.
3. The footer page, Social Links and placeholders load in parallel; the footer page's sections are moved into the page footer.
4. If the footer page can't be loaded, the page footer contains only the Social Links (or nothing).
5. Social Links are always appended after the footer page content, regardless of which footer page is used.
6. Social rows without `url` are skipped; rows are ordered by numeric `sort-order`, rows without one last in sheet order; a missing sheet gives no list.
7. Social icon: a value with `.` or `/` is an image; otherwise the icon name, else the platform alias (`twitter` → `x`) or name; without an icon value and an unknown platform, no icon and the text label is visible.
8. Social links to another origin open in a new tab; links on the same origin stay in the tab.
9. The social link's accessible name is "Follow us on {platform}" (placeholder `followUsOn`); when the platform is empty the URL is used in its place ("Follow us on https://…"); the name is visually hidden when an icon is shown.
10. Authored block rows are read by position: canvas page, copyright, link list.
11. The canvas is loaded only when the first row has a link or text; it is skipped when the page doesn't load or has no sections.
12. `{year}` (all occurrences) in the copyright is replaced with the current four-digit year from the visitor's clock.
13. An empty copyright renders no copyright element; a link list without links renders no `nav`.
14. The bar element is always rendered (it may be empty).
15. Link List items without a link are skipped; links lose any button styling; `new-window` items open in a new tab.
16. Editor instrumentation is kept on the canvas and copyright so they stay selectable in Universal Editor.
17. With a canvas, the footer has a minimum height (50rem / 59.75rem / 50.125rem) and the bar sits at its bottom.
18. The canvas's own background, radius, glow and padding are removed inside the footer; its menu button is hidden below 600px.
19. The footer is invisible until loaded (`data-block-status="loaded"`).
20. There are no Additional tab options; the Footer block offered in sections isn't styled outside `<footer>`.

6.2.12 Author Best Practices

- **Recommended Content Length:** copyright up to about 80 characters; 3–6 links of up to 30 characters; 3–6 social channels; canvas title as in the Conversation Canvas chapter (it shows at 6rem on tablet and desktop, so keep it to a short sentence).
- **Image Dimensions:** social image icons display at 1.5rem × 1.5rem (24px); provide square SVG or PNG at 48px or more. Icons from `/icons` need no upload.
- **CTA Writing Guidelines:** footer links are navigational, not CTAs: use nouns ("Privacy & Terms", "Cookie Policy"). Canvas buttons follow the Conversation Canvas guidance.
- **Accessibility Guidelines:** give each social row a `platform` value (it builds the accessible name); avoid new-window links or say so in the link text; keep link text unique.
- **SEO Guidelines:** link the legal and key corporate pages; avoid duplicate links to the header's pages with different texts.
- **Metadata Guidelines:** set Footer only on area top pages; don't set it on every page.
- **Taxonomy Guidelines:** not applicable.
- **Localization Guidelines:** each locale maintains `references/footer`, its canvas page and `data/social-links` (regional channel URLs); translate `footerLinks` and `followUsOn` in the placeholders sheet; keep `{year}` in translated copyright text.

6.2.13 Troubleshooting Guide

Issue 1 — Footer shows only social icons
Symptoms: The footer has social icons but no copyright, links or canvas.

Root Cause: The footer page (default or inherited) is missing or unpublished, or the Footer value is wrong.

Diagnosis Steps: Network tab: the footer page's `.plain.html` request returns 404; check `<meta name="footer">` on the page and its parents.

Resolution Steps: Publish the footer page or correct the Footer value.

Validation Steps: The full footer shows in a new session.

Preventive Measures: Publish footer pages before referencing them.

Issue 2 — `{year}` is not replaced, or the year is wrong
Symptoms: The copyright shows "{year}" or a fixed year.

Root Cause: The placeholder is written differently (for example `{Year}` or `{ year }`), or the year was typed as a number (the `/en` sample has a typed year).

Diagnosis Steps: Open the footer page and check the exact text.

Resolution Steps: Use exactly `{year}`.

Validation Steps: The current year shows.

Preventive Measures: Use the sample "©TATA Consultancy Services {year}".

Issue 3 — Social links missing or in the wrong order
Symptoms: No social icons, or a channel is missing or misplaced.

Root Cause: The `data/social-links` sheet isn't published, a row has no `url`, `sort-order` isn't a number, or the column headers differ (`sort-order`, lower-case).

Diagnosis Steps: Open `/{locale}/data/social-links.json` and check rows and headers.

Resolution Steps: Fix headers and values; publish the sheet.

Validation Steps: Icons appear in Sort Order.

Preventive Measures: Keep the header row exactly `platform | url | icon | sort-order`.

Issue 4 — Broken social icon
Symptoms: An empty square or nothing where an icon should be.

Root Cause: The `icon` value is a name without a file in `/icons` (only linkedin, x, facebook, instagram, youtube exist), or an image URL that doesn't load.

Diagnosis Steps: Network tab: a failing `/icons/{name}.svg` or image request.

Resolution Steps: Use an existing icon name, an image URL, or leave `icon` empty for a text link; request new icons from development.

Validation Steps: All icons render.

Preventive Measures: Document allowed icon names in the sheet's guidance.

Issue 5 — Conversation canvas not shown in the footer
Symptoms: Only the bar shows, although a canvas page is selected.

Root Cause: The canvas page isn't published, is empty, or the path doesn't resolve in this locale.

Diagnosis Steps: Network tab for the canvas `.plain.html`; open it directly.

Resolution Steps: Publish the canvas page; check its Conversation Canvas block; reselect the page.

Validation Steps: The canvas appears above the bar.

Preventive Measures: Publish canvas pages together with footer pages.

Issue 6 — Footer links look like buttons, or the footer is unstyled

Symptoms: Footer bar shown in a content page without styles, or links appear as buttons.

Root Cause: The Footer block was added to a content page (styles are scoped to `<footer>`), or a link was authored outside the Link List (as content text).

Diagnosis Steps: Check where the block is placed; inspect the link classes.

Resolution Steps: Remove the Footer block from content pages; put footer links into the Link List.

Validation Steps: Footer links are plain text links.

Preventive Measures: Use the Footer block only in `references/` footer pages.

Issue 7 — Wrong footer in an area

Symptoms: An area shows the global footer instead of its own.

Root Cause: The area's top page with the Footer property isn't published, or the session cache holds old values.

Diagnosis Steps: Check the top page's published `<meta name="footer">`; `sessionStorage tcs-inherited-metadata`.

Resolution Steps: Publish the top page; new session.

Validation Steps: The area shows its footer.

Preventive Measures: Publish property changes.

6.2.14 Support Runbook

Monitoring Requirements. Recommended synthetic checks per locale: `/{locale}/references/footer.plain.html` and `/{locale}/data/social-links.json` return 200; the Home page footer contains `.footer-bar`. Once Adobe Tags is installed, monitor `cmp:click` on footer components for exit links.

Logs.

- Browser console: the footer code emits no messages of its own; failures appear as network errors (footer page, canvas page, social-links JSON, icon SVGs); an exception during decoration is logged by `aem.js` as `failed to load module for footer`.
- Admin API status: `https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{locale}/references/footer` (and the canvas page, `data/social-links.json`).
- Author logs: AEM publication logs for the footer page, canvas page and sheet.

Common Errors.

Error	Likely Cause	Fix
Only social icons	Footer page missing / unpublished	Publish / correct Footer value
No social icons	Sheet missing, no url, wrong headers	Fix and publish sheet
Broken icon	Unknown icon name	Use a supported name or image URL
`{year}` visible	Wrong placeholder spelling	Use `{year}`
No canvas	Canvas page unpublished / empty	Publish / fix canvas page
Unstyled footer bar in content	Block placed on a content page	Remove it

Escalation Matrix.

Level	Team	Checks
L1	Author support	Footer page content and publication, canvas page, Link List, Social Links sheet, Footer property
L2	AMS / site admin	Admin API status, `paths.json` mapping of `data/social-links`, CDN cache purge, metadata sheet `footer` column / `metadata.source`
L3	Development team	`blocks/footer/*`, `decorators/social-links-decorator.js`, `utils/data.js`, icons, console errors
L4	Adobe Support	Edge Delivery delivery or AEM publishing defects

Recovery Procedures. Restore and republish the previous footer / canvas page or sheet version; clear a faulty Footer property; revert faulty code on `main`.

Health Checks. Per locale: footer page and social-links JSON available; the footer shows copyright with the current year, links and social icons; canvas renders where configured; layout correct at 390px, 1024px and 1440px.

Operational Procedures. New locale: create `references/footer` with a Footer block, the canvas page (if used) and `data/social-links`; translate placeholders; publish all. Yearly: no action needed for the year when `{year}` is used.

Known Limitations.

- New-tab links (footer links, external social links) aren't announced to screen readers.
- Unknown icon names produce broken icons (no fallback to text).
- The bar is rendered even when empty.
- The Footer block is offered in every section's component list but only styled inside the page footer.
- No newsletter sign-up, language selector or back-to-top control (Not implemented as of this handover).
- Inherited values cached per browser session.

6.2.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
Footer shows only social icons	The footer page is missing or unpublished, or Footer points to a wrong path	Publish the footer page or correct the Footer value
The copyright shows {year} or a fixed year	The placeholder was typed differently or the year was typed as a number	Type exactly {year}
Social icons missing or misordered	Sheet unpublished, url empty, sort-order not a number or headers differ	Use platform, url, icon, sort-order and publish the sheet
Broken social icon	icon names a file not in /icons	Use one of the five names, an image URL or leave it empty
No canvas above the bar	The canvas page isn't published or is empty	Publish the canvas page with its Conversation Canvas block
An unstyled footer bar inside a page	A Footer block was added to a content page	Remove it; use the Footer block only on references/ footer pages
An area shows the global footer	The area top page isn't published or the session cache is stale	Publish the top page and test in a new private window
A footer link opens in the same tab	Link Type left on Default for an external link	Set Link Type to Open in new window

Error	Root Cause	Resolution
An empty strip at the end of a footer page	Copyright and Link List both empty; the bar still renders (F-16)	Fill the copyright or remove the Footer block

6.2.16 Author Quick Reference Guide

Mandatory Fields

- Footer page references/footer of the locale — needed for the copyright, links and canvas; without it only the social links render
- Link Path of each Link List item — enforced by code: items without a link are skipped
- url of each Social Links row — enforced by code: rows without url are skipped

Recommended Fields

- Copyright Text — the legal line with {year}, e.g. © Tata Consultancy Services {year}
- Link Title — short policy names such as Privacy & Terms
- platform of each Social Links row — builds the accessible name Follow us on {platform}
- sort-order — the numbers 1, 2, 3 for the order of the icons
- Placeholders footerLinks and followUsOn translated in every locale

Optional Fields

- Conversation Canvas Page — a references/ page with a Conversation Canvas block shown above the bar
- Link Type — Open in new window for external sites only
- icon — an icon name (linkedin, x, facebook, instagram, youtube) or an image URL
- Footer page property — only on the top page of an area with its own footer
- Metadata sheet footer column — the alternative to the page property

Authoring Checklist

1. Add the Footer block only to footer pages in references/
2. Type {year} exactly in the Copyright Text
3. Keep 3–6 Link List items of up to 30 characters
4. Give every Link List item a Link Path
5. Use Open in new window only for external sites
6. Maintain social channels in data/social-links, not in the Link List
7. Set Footer only on the top page of an area that needs its own footer

Pre-Publish Checklist

1. Publish the footer page, the canvas page and the Social Links sheet to Preview
2. Open a content page on aem.page at 1440 px, 1024 px and 390 px
3. Check the copyright shows the current year
4. Check every link opens the right page and new-window links open a new tab
5. Check the social icons, their order and that no icon is broken
6. Check area footers in a new private window

Post-Publish Validation Checklist

1. Publish the footer page and any page whose Footer changed to Live
2. Open the locale Home page on aem.live and check canvas, bar and icons
3. Check a page of each area with an alternate footer
4. Check translated Footer links and Follow us on labels in non-English locales
5. Confirm /{locale}/references/footer.plain.html returns 200

6.2.17 Component Execution Example

Business example: Global footer of the English site.

Example Values Entered:

Field	Value
Component (Footer page /content/tcs-corp/us/en/references/footer › Section › Add (+))	Footer
Conversation Canvas Page (Footer page /content/tcs-corp/us/en/references/footer › Footer)	Select the page /content/tcs-corp/us/en/references/footer-conversation-canvas
Copyright Text (Footer page /content/tcs-corp/us/en/references/footer › Footer)	© Tata Consultancy Services {year}
Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 1)	Privacy & Terms / /en/privacy / Default
Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 2)	Cookie policy / /en/cookie-policy / Default
Link Title / Link Path / Link Type (Footer page /content/tcs-corp/us/en/references/footer › Footer › Link List › Item 3)	Accessibility / /en/accessibility / Default
Title (Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content)	Let's shape what's next, together
Menu root path / Menu depth (Canvas page /content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content)	/content/tcs-corp/us/en / 2
Search bar water mark / hover text (Canvas page / content/tcs-corp/us/en/references/footer-conversation-canvas › Conversation Canvas › Content)	Ask us a question / Search
Conversation Canvas Button (3 items) (Canvas page › Conversation Canvas › Add (+))	Explore our services → /en/services; Read our insights → /en/insights; Talk to an expert → /en/contact; each with Type Secondary
Footer (Content page › Page properties)	Leave empty (inherits the locale default references/footer)

All other fields keep their default values.

Rendered Result:

Figure 31: Execution example — The footer at 1440 px on white with blue and yellow glows at the bottom: the title Let's shape what's next, together on two lines, the menu button and the Ask us a question field, the buttons Explore our services, Read our insights and Talk to an expert in a row, then © Tata Consultancy Services 2026 at the left and Privacy & Terms, Cookie policy and Accessibility at the right, then the LinkedIn, X, YouTube and Instagram icons. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/footer-desktop-view.jpg)

Author Notes

- Edit /content/tcs-corp/us/en/references/footer, not a block on content pages
- Conversation Canvas Page selects references/footer-conversation-canvas
- Copyright Text © Tata Consultancy Services {year} shows the current year
- Three Link List items: Privacy & Terms, Cookie policy and Accessibility, Link Type Default
- Social icons come from data/social-links rows 1 to 4

Business Notes

- One footer page per locale gives every page the same legal links
- The canvas offers search and quick links to services, insights and contact on every page
- Social channels are maintained once per locale in a sheet

Technical Notes

- The page footer (parent footer) and the authored bar share blocks/footer/footer.js, chosen by the block's parent
- The footer page, Social Links and placeholders load in parallel in the lazy phase
- The footer value is inherited through getInheritedMetadata and cached per session
- The canvas loses its own surface inside the footer; the search dispatches conversation-canvas:search with no service connected

6.3 Fragment Block

The Fragment block includes the content of another page (a **fragment page**) in the current page. The module `blocks/fragment/fragment.js` has two parts:

- `loadFragment(path)`, an exported function used by other code to load and fully decorate a page's content: the Header (nav page), the Footer (footer page and conversation canvas page), the Tabs block (a tab's Fragment) and the Modal block (`openModal`, also used for links to `/modals/` pages).
- The authored **Fragment** block (`decorate`), which reads the Reference field and replaces its own content with the fragment page's sections.

Source files: `blocks/fragment/fragment.js`, `blocks/fragment/fragment.css` (empty: the fragment's content keeps the styles of its own blocks and sections), `blocks/fragment/_fragment.json`. Based on the AEM Block Collection Fragment block.

6.3.1 Component Purpose

Business Objective. Author shared content once and reuse it on many pages, so a change is made in one place (for example a legal disclaimer, a contact banner or a recurring call-to-action section).

Business Use Cases.

- A shared "Talk to us" or newsletter section on many pages.
- Regulatory disclaimers repeated on all investor or press pages.
- Shared promotional banners for a campaign period.
- Technical reuse: the header, footer, tab panels and modal dialogs are all loaded as fragments.

When To Use. When the same content must be identical on several pages of the same locale and maintained centrally.

When Not To Use.

- For content that differs per page (author it on the page).
- For the header and footer (they are loaded automatically; use the Navigation / Footer page properties).
- For content that must be indexed as part of the page or appear in the page's server HTML for SEO (fragments are loaded in the browser).
- For the first, LCP-critical section of a page (fragments add a network round trip).
- Never let a fragment page include itself, directly or through another fragment (there is no protection against loops).

Dependencies.

Type	Dependency	Use
Code	`scripts/scripts.js` `decorateMain`	Decorates the fragment's icons, sections (with section options), blocks, block options and buttons
Code	`scripts/aem.js` `loadSections`	Loads the fragment's blocks (JS and CSS)
Content	Fragment pages, by convention in the locale's `references/` folder (for example `references/cta-banner`)	Shared content
Styles	The styles of the blocks and sections inside the fragment; `styles/styles.css` Additional tab classes (`main .section .block.pl-*` etc., `hideblock`)	Layout
Placeholders	None	—

Related Components. Header, Footer, Tabs (tab Fragment field), Modal (fragment pages in dialogs), Conversation Canvas (shown in the footer through a fragment).

Applicable Templates. Any page; all templates.

Supported Content Types. Any content that can be authored on a page: default content (text, title, image, button) and any block allowed in a section.

Business Problem Solved

Shared sections such as the Talk to our experts banner had to be re-authored on every page, so one change meant editing many copies and the copies drifted apart. The Fragment block includes one published page, by convention in the locale's references/ folder, wherever it is referenced; the same loader also feeds the header, the footer, tab panels and modal dialogs.

Supported Taxonomy

None: the Fragment block has no tag field and reads no page tags; the fragment page's own tags and metadata aren't used (Supported Tags: None). Tag-driven blocks inside a fragment keep their own rules.

6.3.2 Visual Overview

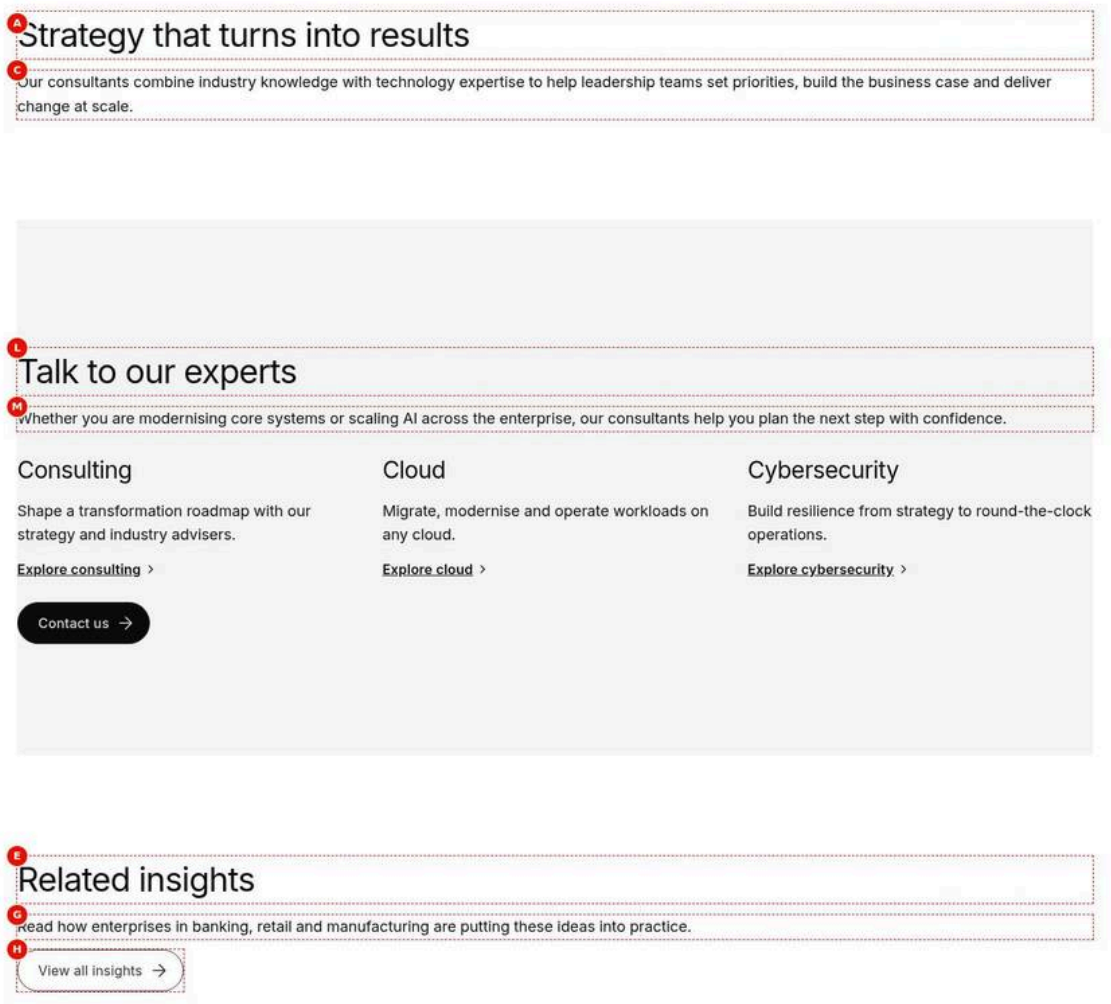

Figure 32: Desktop rendering — The Consulting page at 1440 px: the H2 Strategy that turns into results and its text, then the grey Highlight section of references/cta-banner with the H2 Talk to our experts, its intro text, the H3 columns Consulting, Cloud and Cybersecurity with the links Explore consulting, Explore cloud and Explore cybersecurity, and a black Contact us primary button, the three columns side by side, then the H2 Related insights, its text and an outlined View all insights button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/fragment-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/fragment-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Consulting page at 1440 px: the H2 Strategy that turns into results and its text, then the grey Highlight section of references/cta-banner with the H2 Talk to our experts, its intro text, the H3 columns Consulting, Cloud and Cybersecurity with the links Explore consulting, Explore cloud and Explore cybersecurity, and a black Contact us primary button, the three columns side by side, then the H2 Related insights, its text and an outlined View all insights button.
Business Context	The Consulting page needs the shared Talk to our experts banner that also appears on other service pages; it is maintained once in references/cta-banner instead of being re-authored on each page.
Author Objective	Place a Fragment block between two authored sections and point its Reference at references/cta-banner.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Strategy that turns into results	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Our consultants combine industry knowledge with technology expertise to help leadership teams set priorities, build the business case and deliver change at scale.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Fragment	Yes	Adds the Fragment to the page	Select the section in the content tree, choose Add (+) and pick Fragment	Only components the section allows (section filter)
(D)	Reference (Fragment › Content)	Select the page or enter /en/shots/g01b/references/cta-banner	Yes (Recommended; without it nothing is included)	The fragment page	Pick a page in the locale's `references/`	None in the model; code requires a path starting with `/`
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
E	Title (Title)	Related insights	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(F)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree,	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Text	
G	Text (Text)	Read how enterprises in banking, retail and manufacturing are putting these ideas into practice.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
H	Link (Button)	Select the page or enter /en/insights	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
(I)	Text (Button)	View all insights	Yes (Recommended)	Visible link text	Short, descriptive	None
(J)	Type (Button)	Secondary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
(K)	Style (Fragment page references/cta-banner › Section properties)	Highlight	No	—	—	None
L	Title (H2) (Fragment page references/cta-banner › Title)	Talk to our experts	No	—	—	None
M	Text (Fragment page references/cta-banner › Text)	Whether you are modernising core systems or scaling AI across the enterprise, our consultants help you plan the next step with confidence.	No	—	—	None
(N)	Column 1 / 2 / 3 (Fragment page references/cta-banner › Columns (3 columns, 1 row))	Title (H3), Text and a link each: Consulting (/en/services/consulting), Cloud (/en/services/cloud), Cybersecurity (/en/services/cybersecurity)	No	—	—	None
(O)	Link, Text, Type (Fragment page references/cta-banner › Button)	/en/contact, Contact us, Primary	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the H2 Strategy that turns into results and its text, then a grey Highlight section with the H2 Talk to our experts, three columns (Consulting, Cloud, Cybersecurity) and a black Contact us button, then Related insights with an outlined View all insights button.
- **Rendering behaviour:** The Fragment block has no styles of its own (fragment.css is empty); the included section keeps its Highlight style and the Columns sit side by side from 900 px. The fragment is fetched when the second section loads, so it isn't part of the eager LCP phase.
- **Publishing behaviour:** Publish sends the host page to aem.page (Preview) or aem.live (Live); references/cta-banner is a separate page and must be published itself. Its .plain.html is fetched in the browser, so a published change to the fragment shows on every host page without republishing them.

Business Rules

- Reference must be a site path starting with /; the content picker gives one, full https:// URLs are ignored.
- The Fragment block's content is replaced by the fragment's decorated sections; the host page adds no styling.
- The included H2 and H3 headings must fit the host page; keep H1 out of fragment pages.
- The included content isn't in the host page's delivered HTML or its query index entry.
- The fragment page's own metadata (title, tags) is not used.

Common Authoring Mistakes

Error	Root Cause	Resolution
The banner text is typed again on the Consulting page	The author edited a copy instead of referencing the shared page	Delete the copy, add a Fragment and pick references/cta-banner
The Fragment shows only a link	references/cta-banner was saved but not published	Publish the fragment page to Preview and Live
The banner shows English on a German page	Reference still points to the /en/ fragment after the page was copied	Re-point Reference to the de-de references/cta-banner page

Troubleshooting

- **Symptoms:** The second section shows the bare link /en/shots/g01b/references/cta-banner instead of the grey Talk to our experts banner.
- **Cause:** The fragment page isn't published to the environment being viewed, so its .plain.html returns 404 and the block keeps its authored content.
- **Resolution:** Publish references/cta-banner to Preview (and Live), then reload the host page; re-pick Reference with the content picker if it was typed as a full URL.
- **Verification Steps:** In the Network tab the cta-banner.plain.html request returns 200 and the banner with its three columns and Contact us button renders.

Desktop (>= 1200px). The Fragment block has no visual style of its own (`fragment.css` is empty). After loading, it contains the fragment page's sections, each rendered with its own section options (style, width, background) and blocks, inside the section of the current page that holds the Fragment block. Spacing comes from the inner sections and from the Additional tab padding / margin of the Fragment block.

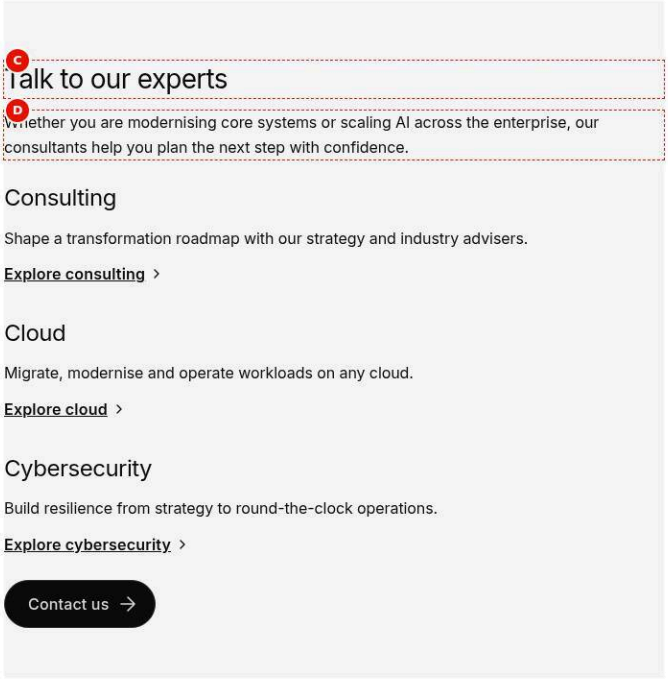

Figure 33: Tablet rendering — The Fragment at 768 px: the grey Highlight section with the H2 Talk to our experts and its text, the columns Consulting, Cloud and Cybersecurity stacked one below the other (Columns go side by side only from 900 px), each with its Explore link, and the black Contact us button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/fragment-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/fragment-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The Fragment at 768 px: the grey Highlight section with the H2 Talk to our experts and its text, the columns Consulting, Cloud and Cybersecurity stacked one below the other (Columns go side by side only from 900 px), each with its Explore link, and the black Contact us button.
Business Context	Service pages are often read on tablets in portrait; the shared banner must stay readable there without a separate tablet version.
Author Objective	Check the same Fragment with references/cta-banner at a 768 px screen width.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Fragment	Yes	Adds the Fragment to the page	Select the section in the content tree, choose Add (+) and pick Fragment	Only components the section allows (section filter)
(A)	Reference (Fragment › Content)	Select the page or enter /en/shots/g01b/references/cta-banner	Yes (Recommended; without it nothing is included)	The fragment page	Pick a page in the locale's `references/`	None in the model; code requires a path starting with `/`

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Style (Fragment page references/cta-banner › Section properties)	Highlight	No	—	—	None
C	Title (H2) (Fragment page references/cta-banner › Title)	Talk to our experts	No	—	—	None
D	Text (Fragment page references/cta-banner › Text)	Whether you are modernising core systems or scaling AI across the enterprise, our consultants help you plan the next step with confidence.	No	—	—	None
(E)	Column 1 / 2 / 3 (Fragment page references/cta-banner › Columns (3 columns, 1 row))	Title (H3), Text and a link each: Consulting (/en/services/consulting), Cloud (/en/services/cloud), Cybersecurity (/en/services/cybersecurity)	No	—	—	None
(F)	Link, Text, Type (Fragment page references/cta-banner › Button)	/en/contact, Contact us, Primary	No	—	—	None
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 768 px the grey Highlight section shows the H2 Talk to our experts and its text, then Consulting, Cloud and Cybersecurity stacked one below the other with their Explore links, and the black Contact us button.
- **Rendering behaviour:** Below 900 px the Columns block inside the fragment stacks its columns; the Fragment adds no breakpoints of its own. Each inner block follows its own tablet rules.
- **Publishing behaviour:** Publish sends the host page to aem.page (Preview) or aem.live (Live); references/cta-banner is a separate page and must be published itself. Its .plain.html is fetched in the browser, so a published change to the fragment shows on every host page without republishing them.

Business Rules

- The responsive behaviour is that of the blocks inside the fragment, not of the Fragment block.
- Columns side by side start at 900 px; at 768 px they stack in authored order.
- Spacing around the included section comes from its Highlight style and the Fragment's Additional tab, if set.

Common Authoring Mistakes

Error	Root Cause	Resolution
Columns look too long on tablet	Long column texts in the fragment page stack into a tall section	Shorten each column text on references/ cta-banner to one or two lines
A tablet-only copy of the banner was created	The author expected the Fragment to need a separate layout	Use one fragment page; the inner blocks are responsive

Troubleshooting

- **Symptoms:** At 768 px the columns still sit side by side and the text is cut.
- **Cause:** The Preview window is wider than it looks (browser zoom or device emulation off), or the CSS of the old code is cached.
- **Resolution:** Set the device emulation to 768 px width at 100 % zoom and hard-reload the page on aem.page.
- **Verification Steps:** Consulting, Cloud and Cybersecurity stack one below the other and the Contact us button follows them.

Tablet (600–1199px). The inner blocks follow their own tablet rules.

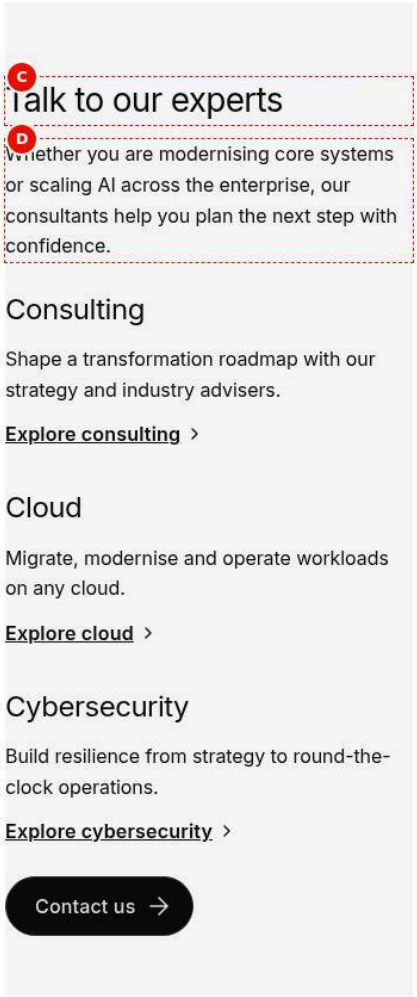

Figure 34: Mobile rendering — The Fragment at 390 px: the grey Highlight section with the H2 Talk to our experts, the intro text wrapped over four lines, Consulting, Cloud and Cybersecurity stacked with their texts and Explore links, and the black Contact us button last. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/fragment-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/fragment-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The Fragment at 390 px: the grey Highlight section with the H2 Talk to our experts, the intro text wrapped over four lines, Consulting, Cloud and Cybersecurity stacked with their texts and Explore links, and the black Contact us button last.
Business Context	Most visitors of service pages arrive on phones; the shared banner has to work at 390 px exactly as authored on the fragment page.
Author Objective	Check the Fragment with references/cta-banner at a 390 px screen width.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Fragment	Yes	Adds the Fragment to the page	Select the section in the content tree, choose Add (+) and pick Fragment	Only components the section allows (section filter)
(A)	Reference (Fragment › Content)	Select the page or enter /en/shots/g01b/references/cta-banner	Yes (Recommended; without it nothing is included)	The fragment page	Pick a page in the locale's `references/`	None in the model; code requires a path starting with `/`
(B)	Style (Fragment page references/cta-banner › Section properties)	Highlight	No	—	—	None
C	Title (H2) (Fragment page references/cta-banner › Title)	Talk to our experts	No	—	—	None
D	Text (Fragment page references/cta-banner › Text)	Whether you are modernising core systems or scaling AI across the enterprise, our consultants help you plan the next step with confidence.	No	—	—	None
(E)	Column 1 / 2 / 3 (Fragment page references/cta-banner › Columns (3 columns, 1 row))	Title (H3), Text and a link each: Consulting (/en/services/consulting), Cloud (/en/services/cloud), Cybersecurity (/en/services/cybersecurity)	No	—	—	None
(F)	Link, Text, Type (Fragment page references/cta-banner › Button)	/en/contact, Contact us, Primary	No	—	—	None
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 390 px the grey section fills the width: the H2 Talk to our experts, the wrapped intro text, the three stacked columns with Explore links and the black Contact us button under them.
- **Rendering behaviour:** The inner blocks follow their mobile rules; the section uses the mobile section padding. Before the fragment is loaded, or if it fails, the block shows its authored content, the Reference link.
- **Publishing behaviour:** Publish sends the host page to aem.page (Preview) or aem.live (Live); references/cta-banner is a separate page and must be published itself. Its .plain.html is fetched in the browser, so a published change to the fragment shows on every host page without republishing them.

Business Rules

- Keep the fragment short: on mobile every column of the Columns block becomes a full-width row.
- The Contact us button keeps its primary style on all widths; it comes from the fragment page.
- A failed fragment request leaves the Reference link visible on mobile too.

Common Authoring Mistakes

Error	Root Cause	Resolution
The page jumps when the banner appears	The fragment loads after the surrounding content and pushes the Related insights section down	Keep the Fragment out of the first screen and the first section
Headings in the banner look larger than the page title	The fragment uses H2 where the host page has smaller headings	Align the fragment headings with the host page hierarchy (H2 then H3)

Troubleshooting

- **Symptoms:** On a phone the banner section stays empty for several seconds.
- **Cause:** A slow network delays the extra .plain.html request; nested fragments inside cta-banner add sequential requests.
- **Resolution:** Keep references/cta-banner free of further Fragment blocks and keep its images small.
- **Verification Steps:** With network throttling the banner appears shortly after the second section loads, with one fragment request.

Mobile (< 600px). The inner blocks follow their own mobile rules. Before the fragment is loaded (or if it fails), the block shows its authored content: the Reference link.

6.3.3 Component Variations

The Fragment block has no style options. Its variations are the ways fragments are used.

Variation 1 — Authored Fragment Block

Variation Name: Fragment block on a page.

Business Purpose: Reuse a shared section on content pages.

Visual Example:

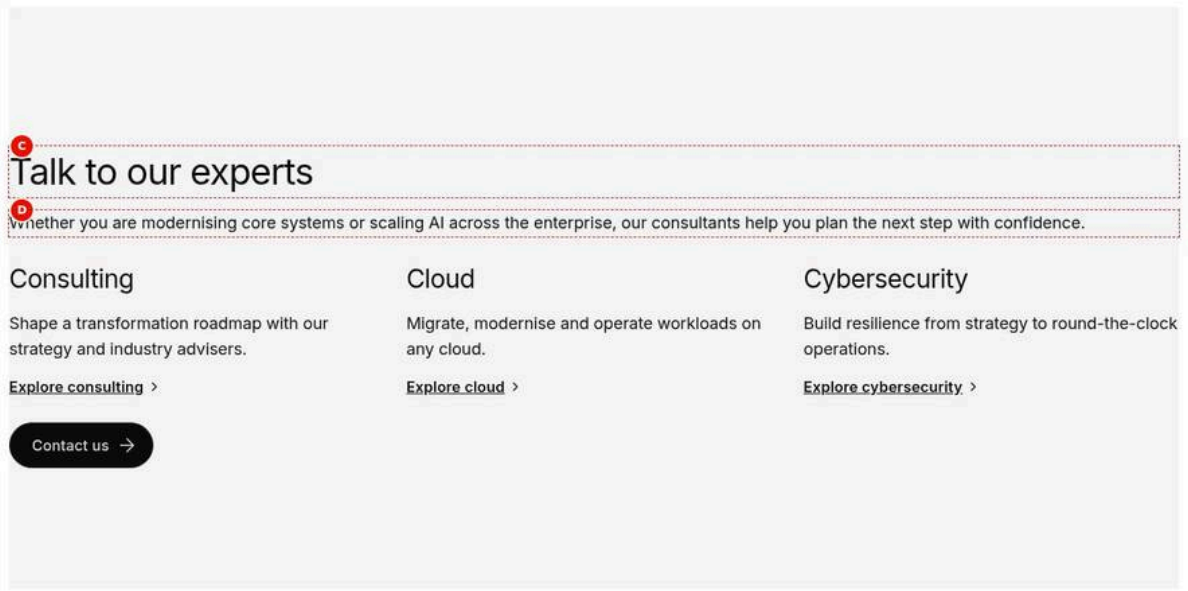

Figure 35: Fragment block in a page — The selected Fragment block in Universal Editor at 1440 px, cropped to the block: the grey Highlight section of references/cta-banner with the H2 Talk to our experts, its intro text, the H3 columns Consulting, Cloud and Cybersecurity with the links Explore consulting, Explore cloud and Explore cybersecurity, and a black Contact us primary button, the columns side by side. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/fragment-authored-block.jpg)

Screenshot Details — Fragment block in a page

Item	Detail
Screenshot Name	`screenshots/fragment-authored-block.jpg`
Screenshot Purpose	Fragment block in a page
Screen Description	The selected Fragment block in Universal Editor at 1440 px, cropped to the block: the grey Highlight section of references/cta-banner with the H2 Talk to our experts, its intro text, the H3 columns Consulting, Cloud and Cybersecurity with the links Explore consulting, Explore cloud and Explore cybersecurity, and a black Contact us primary button, the columns side by side.
Business Context	Authors working in Universal Editor need to see which part of a page is shared content, so they don't try to edit the banner on the host page.
Author Objective	Select the Fragment block in Universal Editor and see the included references/cta-banner content inside it.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Fragment	Yes	Adds the Fragment to the page	Select the section in the content tree, choose Add (+) and pick Fragment	Only components the section allows (section filter)
(A)	Reference (Fragment › Content)	Select the page or enter /en/shots/g01b/references/cta-banner	Yes (Recommended; without it nothing is included)	The fragment page	Pick a page in the locale's `references/`	None in the model; code requires a path starting with `/`

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Style (Fragment page references/cta-banner › Section properties)	Highlight	No	—	—	None
C	Title (H2) (Fragment page references/cta-banner › Title)	Talk to our experts	No	—	—	None
D	Text (Fragment page references/cta-banner › Text)	Whether you are modernising core systems or scaling AI across the enterprise, our consultants help you plan the next step with confidence.	No	—	—	None
(E)	Column 1 / 2 / 3 (Fragment page references/cta-banner › Columns (3 columns, 1 row))	Title (H3), Text and a link each: Consulting (/en/services/consulting), Cloud (/en/services/cloud), Cybersecurity (/en/services/cybersecurity)	No	—	—	None
(F)	Link, Text, Type (Fragment page references/cta-banner › Button)	/en/contact, Contact us, Primary	No	—	—	None
(G)	Select (Universal Editor)	The Fragment block	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Universal Editor shows the Consulting page with the Fragment block selected; inside its outline the grey Talk to our experts section with the three columns and the Contact us button.
- **Rendering behaviour:** In Universal Editor the Reference is an AEM path and the AEM author .plain.html of the fragment page is loaded. The block re-renders after Reference changes.
- **Publishing behaviour:** Publish sends the host page to aem.page (Preview) or aem.live (Live); references/cta-banner is a separate page and must be published itself. Its .plain.html is fetched in the browser, so a published change to the fragment shows on every host page without republishing them.

Business Rules

- Selecting the Fragment opens only Reference and the Additional tab; the included content isn't editable here.
- Edit the banner by opening references/cta-banner in Universal Editor.
- The Additional tab (Anchor ID, Hide block, spacing) applies to the Fragment block, not to the fragment page.
- Hide block shows the Fragment faded with a dashed outline in the editor and hides it on the site.

Common Authoring Mistakes

Error	Root Cause	Resolution
Edits to the banner text are not possible	The author tries to edit the included content on the host page	Open references/cta-banner and edit it there
The editor keeps showing the old banner	The fragment page was changed in another tab and the host wasn't reloaded	Reload Universal Editor on the host page

Troubleshooting

- **Symptoms:** In Universal Editor the selected Fragment shows the Reference path but no content.
- **Cause:** The author .plain.html of the fragment page can't be loaded, for example the page was moved or the path was typed incorrectly.
- **Resolution:** Re-select the page with the Reference content picker and check that /content/tcs-corp/us/en/references/cta-banner exists.
- **Verification Steps:** After the re-render the selected block shows the grey Talk to our experts section.

Use Cases: Shared banners, disclaimers, contact sections.

Authoring Guidelines: Add **Fragment** to a section; in **Reference** pick the fragment page; optionally set the Additional tab.

Business Rules: The reference must be a site path starting with `/` (the content picker gives one). Full URLs (`https://…`) and protocol-relative paths (`//…`) are ignored.

Rendering Rules: The block's children are replaced by the fragment page's sections (`div.section`), already decorated and loaded.

Responsive Behaviour: That of the inner content.

SEO Impact: The included content is added in the browser; it isn't in the page's delivered HTML and isn't part of the query index entry of the page (the index reads the page head).

Accessibility Compliance: Depends on the fragment's content; check its heading levels fit the host page.

Variation 2 — Header Navigation Fragment

Variation Name: Nav page loaded by the Header.

Business Purpose: Header content managed as a page.

Visual Example:

Steps — Nav page as fragment: Developer tools Network tab with the request /en/references/nav.plain.html and the rendered header.

Step	Where	Field / control	Value / action
1	Browser	Address	Open a page of the locale, e.g. /en/insights
2	Browser	Developer tools › Network	Open (F12), filter by plain.html, reload the page
3	Network tab	Request	/en/references/nav.plain.html (status 200): the Navigation page (inherited Navigation value, else references/nav)
4	Page	Header	Rendered from the nav page: brand link, What we do, Industries, Insights, About us, Contact us

Use Cases: Every page.

Authoring Guidelines: Edit the nav page (see 6.1).

Business Rules: The path comes from the inherited Navigation value or `references/nav` (resolved for the locale and for author / published mode by `utils/site.js`).

Rendering Rules: The header moves the decorated sections into its `nav` (see 6.1.10).

Responsive Behaviour: See 6.1.

SEO Impact: See 6.1.

Accessibility Compliance: See 6.1.

Variation 3 — Footer and Conversation Canvas Fragments

Variation Name: Footer page and canvas page loaded by the Footer.

Business Purpose: Footer content managed as pages.

Visual Example:

Steps — Footer fragments: Network tab with /en/references/footer.plain.html and /en/references/footer-conversation-canvas.plain.html, and the rendered footer.

Step	Where	Field / control	Value / action
1	Browser	Address	Open a page of the locale, e.g. /en/insights
2	Browser	Developer tools › Network	Open (F12), filter by plain.html, reload and scroll to the footer
3	Network tab	Request	/en/references/footer.plain.html (status 200): the Footer page (inherited Footer value, else references/footer)
4	Network tab	Request	/en/references/footer-conversation-canvas.plain.html (status 200): the Footer block's Conversation Canvas Page
5	Page	Footer	Rendered from the footer page, with the conversation canvas loaded from its page

Use Cases: Every page.

Authoring Guidelines: See 6.2.

Business Rules: The footer page path comes from the inherited Footer value or `references/footer`; the canvas page from the Footer block's Conversation Canvas Page (a nested fragment: the footer page's Footer block loads the canvas page).

Rendering Rules: See 6.2.10.

Responsive Behaviour: See 6.2.

SEO Impact: See 6.2.

Accessibility Compliance: See 6.2.

Variation 4 — Tab Panel Fragment

Variation Name: Fragment of a Tabs item.

Business Purpose: Rich tab panels (columns, images, buttons) authored on their own page.

Visual Example:

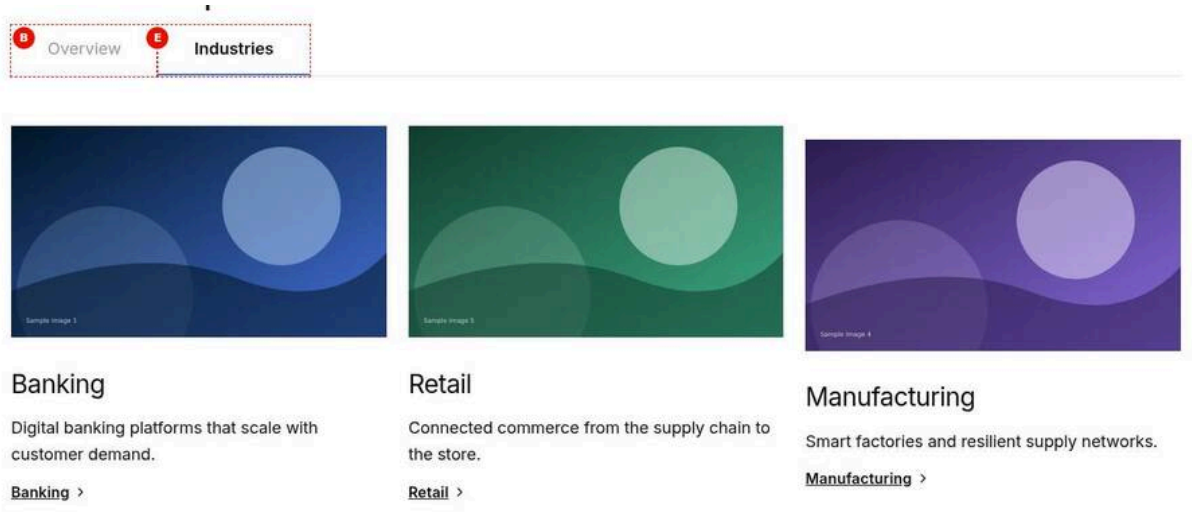

Figure 36: Fragment in a tab — The Tabs block How we help at 1440 px in the Underline style: the tabs Overview and Industries, Industries selected with a blue underline; its panel shows the tab-industries fragment, three columns Banking, Retail and Manufacturing, each with a sample image, an H3, a short text and a link. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/fragment-tab-panel.jpg)

Screenshot Details — Fragment in a tab

Item	Detail
Screenshot Name	`screenshots/fragment-tab-panel.jpg`
Screenshot Purpose	Fragment in a tab
Screen Description	The Tabs block How we help at 1440 px in the Underline style: the tabs Overview and Industries, Industries selected with a blue underline; its panel shows the tab-industries fragment, three columns Banking, Retail and Manufacturing, each with a sample image, an H3, a short text and a link.
Business Context	The How we help page groups its offer in tabs; the Industries tab needs a three-column layout with images that the Tab item fields can't hold.
Author Objective	Add a Tabs block with two Tab items whose Fragment fields point to references/tab-overview and references/tab-industries.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Tabs	Yes	Adds the Tabs to the page	Select the section in the content tree, choose Add (+) and pick Tabs	Only components the section allows (section filter)
(A)	Label (Tabs › Accessibility)	How we help	No	aria-label of the tab list	Describe the group	None (trimmed)
—	Item (Content tree › Tabs › Add (+))	Tab	Yes	Adds a Tab to the Tabs	Select the Tabs in the content tree, choose Add (+) and pick Tab	Only the item types the Tabs allows
B	Title (Tab 1 › Tab)	Overview	Recommended (an empty Title renders an	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			empty heading or nothing)			
(C)	ID (Tab 1 › Tab)	overview	No	Panel id for deep links	Lower case, no spaces	Normalised by `toClassName`; de-duplicated with `-2`, `-3`
(D)	Fragment (Tab 1 › Fragment)	Select the page or enter /en/shots/g01b/references/tab-overview	No (code tolerates empty)	Page whose content fills the panel	Pick a page under `references/`	Code: path must start with `/`; otherwise ignored
—	Item (Content tree › Tabs › Add (+))	Tab	Yes	Adds a Tab to the Tabs	Select the Tabs in the content tree, choose Add (+) and pick Tab	Only the item types the Tabs allows
E	Title (Tab 2 › Tab)	Industries	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(F)	ID (Tab 2 › Tab)	industries	No	Panel id for deep links	Lower case, no spaces	Normalised by `toClassName`; de-duplicated with `-2`, `-3`
(G)	Fragment (Tab 2 › Fragment)	Select the page or enter /en/shots/g01b/references/tab-industries	No (code tolerates empty)	Page whose content fills the panel	Pick a page under `references/`	Code: path must start with `/`; otherwise ignored
(H)	Title (H3), Text (Fragment page references/tab-overview › Title, Text)	A partner for the whole journey; two paragraphs	No	—	—	None
(I)	Column 1 / 2 / 3 (Fragment page references/tab-industries › Columns (3 columns, 1 row))	Image, Title (H3), Text and a link each: Banking (photo-1.svg), Retail (photo-5.svg), Manufacturing (photo-4.svg)	No	—	—	None
—	Action (Preview)	Select the Industries tab	—	Check on the preview (not stored in the content)	Select the Industries tab	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** An underline tab list with Overview and Industries; Industries is selected with a blue underline and its panel shows Banking, Retail and Manufacturing columns, each with an image, an H3, a text and a link.

- **Rendering behaviour:** The Tabs block loads both fragments when it is decorated and wraps each in div.tabs-fragment inside its role tabpanel; the hidden Overview panel is in the DOM. Columns sit side by side from 900 px.
- **Publishing behaviour:** Publish sends the How we help page to aem.page or aem.live; references/tab-overview and references/tab-industries are separate pages and must be published themselves, or their panels stay empty.

Business Rules

- The tab ID industries becomes the panel id: a link to #industries opens that tab.
- Fragment must be a site path; a full URL is ignored and the panel stays without content.
- If a fragment can't be loaded the tab still shows, with an empty panel.
- Fragment headings start at H3 here because the page has the H2 How we help.
- Label How we help names the tab list for screen readers.

Common Authoring Mistakes

Error	Root Cause	Resolution
The Industries panel is empty	references/tab-industries isn't published	Publish the fragment page, then reload the host page
Two tabs open the same panel by link	Both Tab items were given the same ID	Give each Tab a unique ID such as overview and industries
Panel headings are H2 under the H2 How we help	The fragment pages start at H2	Use H3 in the tab fragment pages

Troubleshooting

- **Symptoms:** Selecting Industries shows an empty panel while Overview shows its text.
- **Cause:** The request for tab-industries.plain.html returns 404 because that fragment page isn't published or the path is wrong.
- **Resolution:** Re-pick Fragment in Tab 2 with the content picker and publish references/tab-industries.
- **Verification Steps:** The Industries panel shows the three columns with images and Network shows a 200 for tab-industries.plain.html.

Use Cases: Tab content too complex for the tab's own fields.

Authoring Guidelines: In the Tabs block's tab item, set **Fragment** (content picker: "A page whose content … is shown in the tab").

Business Rules: A full URL is ignored like in Variation 1; if the fragment can't be loaded the panel stays without that content.

Rendering Rules: The fragment's sections are wrapped in `div.tabs-fragment` in the tab panel (see the Tabs chapter).

Responsive Behaviour: As the inner content within the tab panel.

SEO Impact: As Variation 1; hidden panels' content is in the DOM.

Accessibility Compliance: The panel content is inside the tab panel's `role="tabpanel"`.

Variation 5 — Modal Fragment

Variation Name: Fragment shown in a modal dialog.

Business Purpose: Show forms, videos or details in a dialog without leaving the page.

Visual Example:

Figure 37: Fragment in a modal — The Get in touch page at 1440 px dimmed behind an open dialog loaded from /en/shots/g01b/modals/contact-form: a close icon, the H2 Contact our team, the description, the * Required fields note taking a grid column beside Full name (F-32), Business e-mail, Company, How can we help? with 0/1500, the consent checkbox and the Send button cut at the bottom. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/fragment-modal.jpg)

Screenshot Details — Fragment in a modal

Item	Detail
Screenshot Name	`screenshots/fragment-modal.jpg`
Screenshot Purpose	Fragment in a modal
Screen Description	The Get in touch page at 1440 px dimmed behind an open dialog loaded from /en/shots/g01b/modals/contact-form: a close icon, the H2 Contact our team, the description, the * Required fields note taking a grid column beside Full name (F-32), Business e-mail, Company, How can we help? with 0/1500, the consent checkbox and the Send button cut at the bottom.
Business Context	The Get in touch page offers a contact form without sending visitors to another page; the form lives on its own page so it can be reused in a dialog.
Author Objective	Add a Modal block that opens modals/contact-form, with the button text Contact our team.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Modal	Yes	Adds the Modal to the page	Select the section in the content tree, choose Add (+) and pick Modal	Only components the section allows (section filter)
(A)	Modal Content (Modal › Content)	Select the page or enter /en/shots/	Yes (Enforced by code:	Destination	AEM page or external URL	Items without a link are dropped

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		g01b/modals/contact-form	items without a link are skipped)			
B	Button Text (Modal › Content)	Contact our team	Yes (Recommended)	Visible link text	Short, descriptive	None
(C)	Form Title, Form Description (Fragment page modals/contact-form › Form Variations)	Contact our team; Tell us about your business challenge and an expert will get back to you within two working days.	No	—	—	None
—	Items (Fragment page modals/contact-form › Form Variations › Add (+))	Text Input Field Full name (fullName, required); Text Input Field Business e-mail (email, Email, required); Text Input Field Company (company); Textarea Field How can we help? (message); Consent Checkbox Field (consent, required); Submit Button Send	—	Check on the preview (not stored in the content)	Text Input Field Full name (fullName, required); Text Input Field Business e-mail (email, Email, required); Text Input Field Company (company); Textarea Field How can we help? (message); Consent Checkbox Field (consent, required); Submit Button Send	—
—	Action (Preview)	Select Contact our team	—	Check on the preview (not stored in the content)	Select Contact our team	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The page behind is dimmed by a dark backdrop; a white rounded dialog shows a close icon at the top right, the H2 Contact our team, the description, Full name, Business e-mail, Company, How can we help? with a 0/1500 counter, the consent checkbox and the Send button.
- **Rendering behaviour:** The Modal block renders a primary button with aria-haspopup dialog; selecting it fetches the fragment and opens a native dialog, at most 56.25rem wide, named by its first heading. Long content scrolls inside the dialog.
- **Publishing behaviour:** Publish sends the Get in touch page to aem.page or aem.live; modals/contact-form is a separate page and must be published itself. Pages under /modals/ are excluded from the query index.

Business Rules

- Modal Content must be the fragment page; Button Text Contact our team becomes the button label.
- The dialog closes with Escape, the close button or a click on the backdrop, and focus returns to the button.
- Unlike the Fragment block, openModal converts a full URL to its path before loading.
- Any link to a /modals/ page opens as a modal, even without a Modal block.
- The form has no submit back end: Send shows the thank-you message but nothing is sent (F-01).

Common Authoring Mistakes

Error	Root Cause	Resolution
The button reads Open	Button Text was left empty	Enter Contact our team in Button Text
The dialog has no title for screen readers	Form Title on the fragment page is empty, so the dialog has no heading	Enter Form Title Contact our team on modals/contact-form
Visitors think their message was sent	Form Variations has no submit endpoint yet (F-01)	Don't publish the form until a back end is connected

Troubleshooting

- **Symptoms:** Selecting Contact our team does nothing; no dialog opens.
- **Cause:** The request for contact-form.plain.html returns 404 because modals/contact-form isn't published, so openModal stops without a message.
- **Resolution:** Publish modals/contact-form to the same environment and re-pick Modal Content if the page was moved.
- **Verification Steps:** Selecting the button opens the dialog with the Contact our team heading and the form fields.

Use Cases: Contact forms, video players, terms.

Authoring Guidelines: Use the Modal block with a link to the fragment page, or link any text to a page whose path contains `/modals/` (opened as a modal automatically by `scripts.js` `autolinkModals`).

Business Rules: `openModal` converts a full URL (`http…`) to its path before loading, so absolute links work for modals (unlike the Fragment block).

Rendering Rules: The fragment's content is placed in the modal dialog (see the Modal chapter).

Responsive Behaviour: As the Modal block.

SEO Impact: Modal content isn't in the page HTML; `/modals/` pages are excluded from the query index.

Accessibility Compliance: As the Modal block (dialog semantics, focus handling).

6.3.4 Authoring Experience

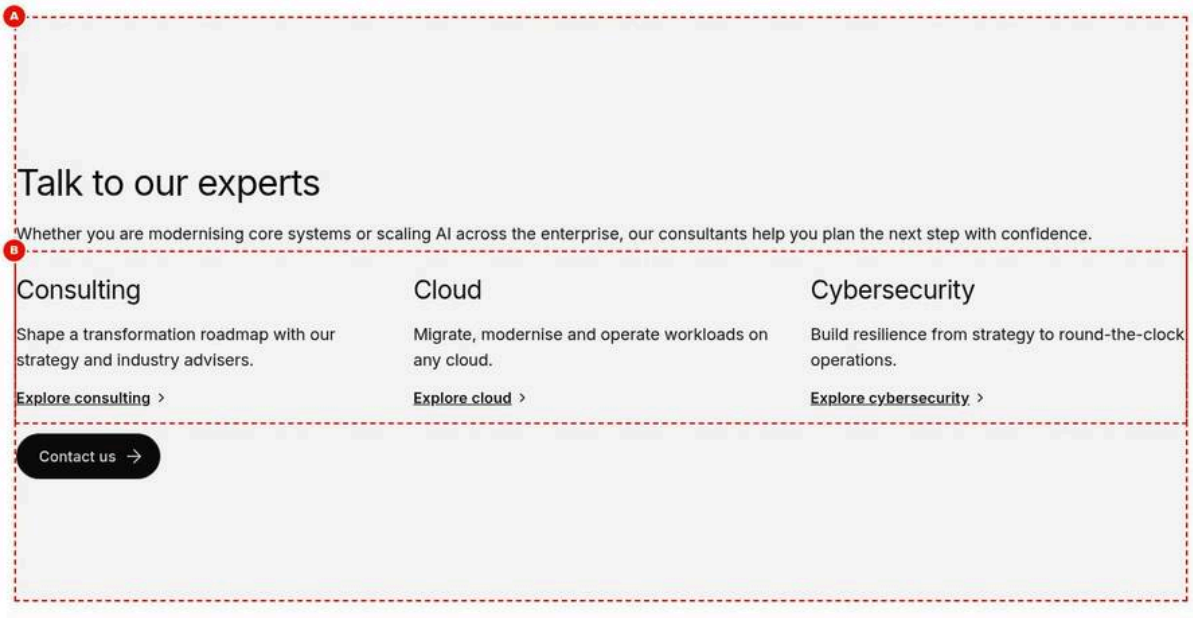

Figure 38: Universal Editor canvas — The Fragment at 1440 px in editor mode with two markers: A around the whole Fragment block (the grey Talk to our experts section) and B around the included Columns block only (Consulting, Cloud, Cybersecurity with their Explore links); the H2, the text and the Contact us button lie inside A, outside B. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/fragment-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/fragment-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	The Fragment at 1440 px in editor mode with two markers: A around the whole Fragment block (the grey Talk to our experts section) and B around the included Columns block only (Consulting, Cloud, Cybersecurity with their Explore links); the H2, the text and the Contact us button lie inside A, outside B.
Business Context	The handover shows authors which parts of the canvas belong to the host page and which to the shared fragment page.
Author Objective	Identify the Fragment block (A) and the included content (B) on the canvas.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Fragment	Yes	Adds the Fragment to the page	Select the section in the content tree, choose Add (+) and pick Fragment	Only components the section allows (section filter)
—	Reference (Fragment › Content)	Select the page or enter /en/shots/g01b/references/cta-banner	Yes (Recommended; without it nothing is included)	The fragment page	Pick a page in the locale's `references/`	None in the model; code requires a path starting with `/`

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Style (Fragment page references/cta-banner › Section properties)	Highlight	No	—	—	None
—	Title (H2) (Fragment page references/cta-banner › Title)	Talk to our experts	No	—	—	None
—	Text (Fragment page references/cta-banner › Text)	Whether you are modernising core systems or scaling AI across the enterprise, our consultants help you plan the next step with confidence.	No	—	—	None
—	Column 1 / 2 / 3 (Fragment page references/cta-banner › Columns (3 columns, 1 row))	Title (H3), Text and a link each: Consulting (/en/services/consulting), Cloud (/en/services/cloud), Cybersecurity (/en/services/cybersecurity)	No	—	—	None
—	Link, Text, Type (Fragment page references/cta-banner › Button)	/en/contact, Contact us, Primary	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The grey cta-banner section in editor mode with marker A around the whole Fragment block and marker B around the included Columns with Consulting, Cloud and Cybersecurity.
- **Rendering behaviour:** A is the block that holds Reference and the Additional options; B is rendered from the fragment page and decorated like a page (sections, blocks, buttons).
- **Publishing behaviour:** Publish sends the host page to aem.page (Preview) or aem.live (Live); references/cta-banner is a separate page and must be published itself. Its .plain.html is fetched in the browser, so a published change to the fragment shows on every host page without republishing them.

Business Rules

- Marker A is the only selectable part for this Fragment; its Content tab has Reference only.
- Marker B is included content: change it on references/cta-banner.
- Anchor ID must match anchor- followed by lower-case letters, digits and hyphens.

Common Authoring Mistakes

Error	Root Cause	Resolution
Spacing set on the Columns has no effect on the host page	The author expects host-page options to change included blocks	Set spacing on the Fragment (A) or on the Columns in the fragment page
Anchor ID contact is rejected	The value doesn't start with anchor-	Enter anchor-contact

Troubleshooting

- **Symptoms:** A link to #anchor-contact doesn't jump to the banner.
- **Cause:** Another block on the page already uses anchor-contact, so this Fragment got the id anchor-contact-2.
- **Resolution:** Give the Fragment a unique Anchor ID and update the link to match it.
- **Verification Steps:** Inspect the Fragment block: its id equals the link target and the link scrolls to the banner.

Annotations:

- A = The Fragment block (select it to set Reference and the Additional options).
- B = The included content of the fragment page (not editable here; edit it on the fragment page).

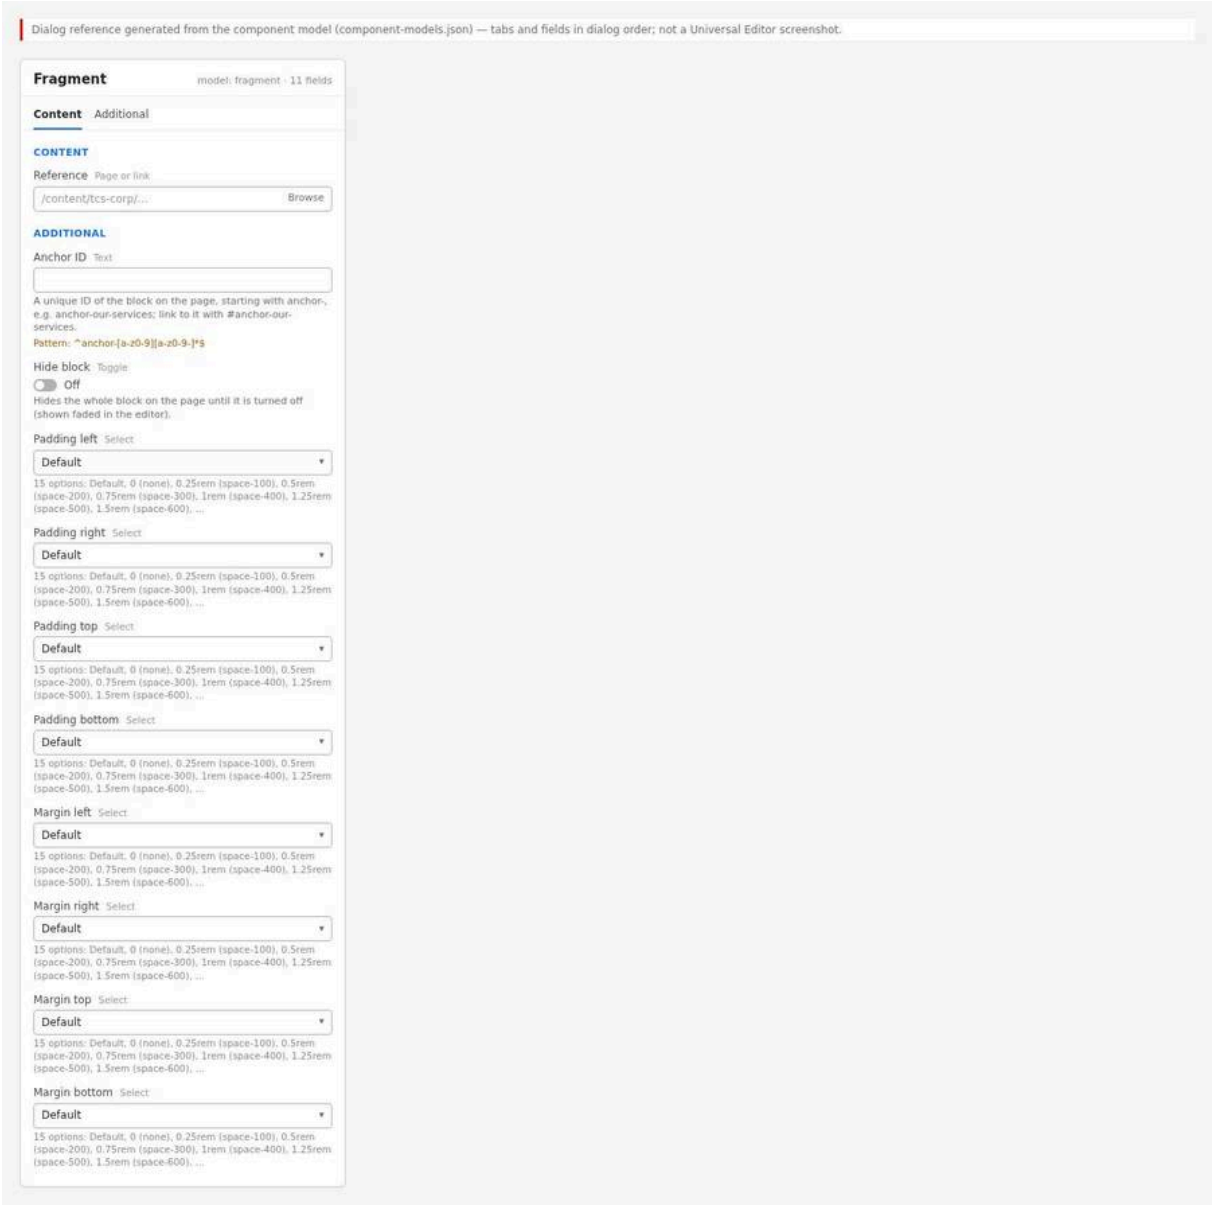

Figure 39: Properties panel — The Fragment block's properties with the Content tab (Reference) and the Additional tab (Anchor ID, Hide block, padding and margin selects). (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/fragment-properties-panel.jpg)

Properties panel description.

- **Content tab: Reference** (content picker): the fragment page.
- **Additional tab: Anchor ID** (text, must match `^anchor-[a-z0-9][a-z0-9-]*$`); **Hide block** (switch); **Padding left / right / top / bottom** and **Margin left / right / top / bottom** (selects: Default, 0, 0.25rem … 7.5rem from the spacing tokens).

6.3.5 Authoring Guide

Step 1 — Create or open the fragment page

Action: In AEM Sites, create a page in `/content/tcs-corp/{country}/{language}/references/` (for example `cta-banner`) and author its sections and blocks; publish it.

Expected Result: The fragment page exists and is published.

Steps — Fragment page: The references folder with the new cta-banner page.

Step	Where	Field / control	Value / action
1	AEM Sites › /content/tcs-corp/us/en/references	Create	Page
2	Create Page wizard	Template	The site's page template
3	Create Page wizard › Properties	Title	CTA banner
4	Create Page wizard › Properties	Name	cta-banner
5	Create Page wizard	Create	Create, then Open the page in Universal Editor
6	Universal Editor (references/cta-banner) › Section	Add (+)	Title, Text, Columns and Button: the banner content
7	Universal Editor toolbar	Publish	Publish to Preview and Live

Step 2 — Open the target page in Universal Editor

Action: Open the content page that should show the fragment with **Edit**.

Expected Result: The page opens in Universal Editor.

Steps — Target page: The content page open in Universal Editor.

Step	Where	Field / control	Value / action
1	AEM Sites › /content/tcs-corp/us/en	Select	The content page that shows the fragment (e.g. services/consulting)
2	AEM Sites toolbar	Edit	The page opens in Universal Editor

Step 3 — Add the Fragment block

Action: Select the section, choose **Add** (+) and pick **Fragment**.

Expected Result: An empty Fragment block is added.

Steps — Adding the block: The component picker with Fragment highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section that holds the fragment
2	Section › Add (+)	Component	Fragment

Step 4 — Set the Reference

Action: In the Content tab, choose **Reference** and pick the fragment page.

Expected Result: After re-rendering, the block shows the fragment's content.

Steps — Reference picker: The content picker with references/cta-banner selected.

Step	Where	Field / control	Value / action
1	Fragment › Content	Reference	Open the content picker
2	Content picker	Page	/content/tcs-corp/us/en/references/cta-banner
3	Content picker	Select	Confirm; the block re-renders with the fragment's content

Step 5 — Fill the Additional tab (optional)

Action: Set an **Anchor ID** (for example `anchor-contact`), spacing selects, or **Hide block**.

Expected Result: Spacing applies; hidden blocks show faded in the editor.

Steps — Additional tab: The Additional tab with Anchor ID and Margin top set.

Step	Where	Field / control	Value / action
1	Fragment › Additional	Anchor ID	anchor-contact
2	Fragment › Additional	Margin top	3rem (space-1200)

Step 6 — Preview

Action: Publish the page (and the fragment page) to Preview and open it on `.aem.page`.

Expected Result: The fragment content shows in place.

Steps — Preview: The preview page with the included section.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Publish to Preview: the page and references/cta-banner
2	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/services/consulting
3	Preview	Check	The Talk to our experts section shows in place of the Fragment block

Step 7 — Validate

Action: Run the Validation Process checklist.

Expected Result: All checks pass.

Steps — Validation: The page at desktop and mobile widths.

Step	Where	Field / control	Value / action
1	Preview	Screen width	1440 px (desktop)
2	Preview	Screen width	390 px (mobile)
3	Preview	Check	Content shown (not the bare link), blocks styled, one H1, images load, spacing as set
4	Browser	Address	Add #anchor-contact: the page jumps to the block

Step 8 — Publish

Action: Publish the fragment page and the page to Live.

Expected Result: The live page shows the fragment.

Steps — Publishing: Publish dialog with both pages.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Publish
2	Publish dialog	Destination	Live
3	Publish dialog	Items	references/cta-banner and the page
4	Publish dialog	Publish	Confirm

Preview Process

1. Preview the fragment page first; every page using it shows the change immediately on Preview (no page re-publication needed).
2. Check a sample of the pages that use the fragment.

Publishing Process

1. Publish the fragment page to Live; all pages using it update (after CDN cache refresh).
2. Publish new pages that use the fragment after the fragment page.

Validation Process

- ☐ The fragment content appears (not the bare Reference link).
- ☐ Its blocks are fully styled and interactive.
- ☐ Heading levels fit the host page (no second H1).
- ☐ Images load (relative media paths are rebased to the fragment page).
- ☐ Spacing from the Additional tab is as intended.
- ☐ The Anchor ID link (`#anchor-…`) jumps to the block.
- ☐ The fragment is in the same locale as the page.
- ☐ No fragment includes itself.

Rollback Process

1. Restore the previous version of the fragment page and publish it (all pages update).
2. Or remove / hide the Fragment block on the affected page and publish the page.

The walkthroughs below repeat the steps above for each variation of chapter 6.3.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Authored Fragment Block

Reproduces the screenshot `screenshots/fragment-authored-block.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Fragment

Action: Select the section in the content tree, choose **Add (+)** and pick **Fragment**.

Expected Result: An empty Fragment block is added to the section; until Reference is set it shows nothing of its own.

Step 3 — Fill in Fragment › Content

Action: Select **Fragment** in the content tree and open the **Content** tab of the properties panel. Enter: **Reference** (A) = Select the page or enter /en/shots/g01b/references/cta-banner.

Expected Result: After the re-render the block shows the sections of references/cta-banner in place of the Reference link.

Step 4 — Fill in Fragment page references/cta-banner › Section properties

Action: Select **Fragment page references/cta-banner** in the content tree and open the **Section properties** tab of the properties panel. Enter: **Style** (B) = Highlight.

Expected Result: On the fragment page, the section gets the Highlight style: a light grey background with section spacing above and below.

Step 5 — Fill in Fragment page references/cta-banner › Title

Action: Select **Fragment page references/cta-banner** in the content tree and open the **Title** tab of the properties panel. Enter: **Title (H2)** (C) = Talk to our experts.

Expected Result: The H2 Talk to our experts appears at the top of the grey section of the fragment page.

Step 6 — Fill in Fragment page references/cta-banner › Text

Action: Select **Fragment page references/cta-banner** in the content tree and open the **Text** tab of the properties panel. Enter: **Text** (D) = Whether you are modernising core systems or scaling AI across the enterprise, our consultants help you plan the next step with confidence.

Expected Result: The paragraph about modernising core systems and scaling AI appears under the H2 on the fragment page.

Step 7 — Fill in Fragment page references/cta-banner › Columns (3 columns, 1 row)

Action: Select **Fragment page references/cta-banner** in the content tree and open the **Columns (3 columns, 1 row)** tab of the properties panel. Enter: **Column 1 / 2 / 3** (E) = Title (H3), Text and a link each: Consulting (/en/services/consulting), Cloud (/en/services/cloud), Cybersecurity (/en/services/cybersecurity).

Expected Result: Three columns appear: H3 Consulting, Cloud and Cybersecurity, each with a short text and an Explore link.

Step 8 — Fill in Fragment page references/cta-banner › Button

Action: Select **Fragment page references/cta-banner** in the content tree and open the **Button** tab of the properties panel. Enter: **Link, Text, Type** (F) = /en/contact, Contact us, Primary.

Expected Result: A black filled Contact us primary button with an arrow appears below the columns, linking to /en/contact.

Step 9 — Fill in Universal Editor

Action: Select **Universal Editor** in the content tree and enter in the properties panel: **Select** (G) = The Fragment block.

Expected Result: The Fragment block is selected: its outline surrounds the included banner and the properties panel shows Reference.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Universal Editor shows the Consulting page with the Fragment block selected; inside its outline the grey Talk to our experts section with the three columns and the Contact us button.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the host page to aem.page (Preview) or aem.live (Live); references/cta-banner is a separate page and must be published itself. Its .plain.html is fetched in the browser, so a published change to the fragment shows on every host page without republishing them.

Step 12 — Verify

Action: On the live page check: After the re-render the selected block shows the grey Talk to our experts section.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Tab Panel Fragment

Reproduces the screenshot `screenshots/fragment-tab-panel.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Tabs

Action: Select the section in the content tree, choose **Add (+)** and pick **Tabs**.

Expected Result: An empty Tabs block is added; in the editor it shows the hint to add a Tab and choose its Fragment.

Step 3 — Fill in Tabs › Accessibility

Action: Select **Tabs** in the content tree and open the **Accessibility** tab of the properties panel. Enter: **Label** (A) = How we help.

Expected Result: Nothing changes visually; the tab list gets the accessible name How we help.

Step 4 — Add a Tab

Action: Select the Tabs in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: A new Tab item appears in the content tree under Tabs and a new tab button appears in the list.

Step 5 — Fill in Tab 1 › Tab

Action: Select **Tab 1** in the content tree and open the **Tab** tab of the properties panel. Enter: **Title** (B) = Overview; **ID** (C) = overview.

Expected Result: The first tab button reads Overview and its panel gets the id overview.

Step 6 — Fill in Tab 1 › Fragment

Action: Select **Tab 1** in the content tree and open the **Fragment** tab of the properties panel. Enter: **Fragment** (D) = Select the page or enter /en/shots/g01b/references/tab-overview.

Expected Result: The Overview panel shows the content of references/tab-overview after the re-render.

Step 7 — Add a Tab

Action: Select the Tabs in the content tree, choose **Add (+)** and pick **Tab**.

Expected Result: A new Tab item appears in the content tree under Tabs and a new tab button appears in the list.

Step 8 — Fill in Tab 2 › Tab

Action: Select **Tab 2** in the content tree and open the **Tab** tab of the properties panel. Enter: **Title** (E) = Industries; **ID** (F) = industries.

Expected Result: The second tab button reads Industries and its panel gets the id industries.

Step 9 — Fill in Tab 2 › Fragment

Action: Select **Tab 2** in the content tree and open the **Fragment** tab of the properties panel. Enter: **Fragment** (G) = Select the page or enter /en/shots/g01b/references/tab-industries.

Expected Result: The Industries panel is filled from references/tab-industries; it shows when the tab is selected.

Step 10 — Fill in Fragment page references/tab-overview › Title, Text

Action: Select **Fragment page references/tab-overview** in the content tree and open the **Title, Text** tab of the properties panel. Enter: **Title (H3), Text** (H) = A partner for the whole journey; two paragraphs.

Expected Result: On the fragment page the H3 A partner for the whole journey and two paragraphs appear.

Step 11 — Fill in Fragment page references/tab-industries › Columns (3 columns, 1 row)

Action: Select **Fragment page references/tab-industries** in the content tree and open the **Columns (3 columns, 1 row)** tab of the properties panel. Enter: **Column 1 / 2 / 3** (I) = Image, Title (H3), Text and a link each: Banking (photo-1.svg), Retail (photo-5.svg), Manufacturing (photo-4.svg).

Expected Result: On the fragment page three columns appear: Banking, Retail and Manufacturing, each with an image, H3, text and link.

Step 12 — Preview

Action: Action: Select the Industries tab.

Expected Result: Selecting Industries underlines it in blue and shows the three columns; Overview is hidden.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: An underline tab list with Overview and Industries; Industries is selected with a blue underline and its panel shows Banking, Retail and Manufacturing columns, each with an image, an H3, a text and a link.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the How we help page to aem.page or aem.live; references/tab-overview and references/tab-industries are separate pages and must be published themselves, or their panels stay empty.

Step 15 — Verify

Action: On the live page check: The Industries panel shows the three columns with images and Network shows a 200 for tab-industries.plain.html.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Modal Fragment

Reproduces the screenshot `screenshots/fragment-modal.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Modal

Action: Select the section in the content tree, choose **Add (+)** and pick **Modal**.

Expected Result: An empty Modal block is added to the section; without a link it renders nothing.

Step 3 — Fill in Modal › Content

Action: Select **Modal** in the content tree and open the **Content** tab of the properties panel. Enter: **Modal Content** (A) = Select the page or enter /en/shots/g01b/modals/contact-form; **Button Text** (B) = Contact our team.

Expected Result: A black primary Contact our team button appears; it opens the contact-form page in a dialog.

Step 4 — Fill in Fragment page modals/contact-form › Form Variations

Action: Select **Fragment page modals/contact-form** in the content tree and open the **Form Variations** tab of the properties panel. Enter: **Form Title, Form Description** (C) = Contact our team; Tell us about your business challenge and an expert will get back to you within two working days.

Expected Result: On the fragment page the form shows the H2 Contact our team and its description.

Step 5 — Fragment page modals/contact-form › Form Variations › Add (+)

Action: Items: Text Input Field Full name (fullName, required); Text Input Field Business e-mail (email, Email, required); Text Input Field Company (company); Textarea Field How can we help? (message); Consent Checkbox Field (consent, required); Submit Button Send.

Expected Result: The fields Full name, Business e-mail, Company, How can we help?, the consent checkbox and Send appear.

Step 6 — Preview

Action: Action: Select Contact our team.

Expected Result: Selecting Contact our team dims the page and opens the dialog with the form.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The page behind is dimmed by a dark backdrop; a white rounded dialog shows a close icon at the top right, the H2 Contact our team, the description, Full name, Business e-mail, Company, How can we help? with a 0/1500 counter, the consent checkbox and the Send button.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the Get in touch page to aem.page or aem.live; modals/contact-form is a separate page and must be published itself. Pages under /modals/ are excluded from the query index.

Step 9 — Verify

Action: On the live page check: Selecting the button opens the dialog with the Contact our team heading and the form fields.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.3.6 Authorable Field Specification

Fragment block (model `fragment`)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Content tab — Reference (`reference`)	aem-content	Yes (Recommended; without it nothing is included)	No	Empty	The fragment page	Pick a page in the locale's `references/`	None in the model; code requires a path starting with `/`	`/content/tcs-corp/us/en/references/cta-banner`
Additional tab — Anchor ID (`classes_anchor`)	text	No	No	Empty	Block id for # links	Start with `anchor-`	Enforced: `^anchor-[a-z0-9][a-z0-9-]*$` ("Start with anchor-, then lower-case letters, digits and hyphens.")	`anchor-contact`
Hide block (`classes_hideblock`)	boolean	No	No	false	Hide without deleting	Use for temporary removal	None	false
Padding left (`classes_paddingleft`)	select	No	No	Default (`""`)	Inner spacing	Use tokens only	Options: Default; 0; 0.25rem; 0.5rem; 0.75rem; 1rem; 1.25rem; 1.5rem; 2rem; 2.5rem; 3rem; 4rem; 5rem; 6rem; 7.5rem (`pl-0` … `pl-3000`)	`pl-400`
Padding right (`classes_paddingright`)	select	No	No	Default	Inner spacing	As above	Same options (`pr-*`)	`pr-400`
Padding top (`classes_paddingtop`)	select	No	No	Default	Inner spacing	As above	Same options (`pt-*`)	`pt-800`
Padding bottom (`classes_paddingbottom`)	select	No	No	Default	Inner spacing	As above	Same options (`pb-*`)	`pb-800`
Margin left (`classes_marginleft`)	select	No	No	Default	Outer spacing	As above	Same options (`ml-*`)	`ml-0`
Margin right (`classes_marginright`)	select	No	No	Default	Outer spacing	As above	Same options (`mr-*`)	`mr-0`
Margin top (`classes_margintop`)	select	No	No	Default	Outer spacing	As above	Same options (`mt-*`)	`mt-1200`
Margin bottom (`classes_marginbottom`)	select	No	No	Default	Outer spacing	As above	Same options (`mb-*`)	`mb-1200`

Field details

- **Reference.** Purpose: the page to include. Allowed Values: a page path from the content picker (AEM path; published as the site path). Character Limits: none. Business Rules: a path not starting with `/`, or starting with `//`, is ignored; `.html` / `.plain.html` endings are removed; the page's `.plain.html` is fetched. Dependency Rules: the page must be published (Preview for `.aem.page`, Live for `.aem.live`). Visibility Rules: always visible. Sample Content: `references/cta-banner`.
- **Anchor ID.** Purpose: makes the block a jump target. Allowed Values: `anchor-` followed by lower-case letters, digits and hyphens. Character Limits: none enforced (Recommended up to 40 characters). Business Rules: becomes the block's `id`; a duplicate on the page gets `-2`, `-3`… (`decorators/block-options-decorator.js`). Dependency Rules: none. Visibility Rules: always. Sample Content: `anchor-contact`.
- **Hide block.** Purpose: hide the block on the site. Allowed Values: on / off. Business Rules: `hideblock` class: hidden on the site (`display: none` for the block and its wrapper), shown at 45% opacity with a dashed outline in Universal Editor. Dependency Rules: none. Visibility Rules: always. Sample Content: off.

- **Padding / Margin selects (8 fields).** Purpose: spacing around / inside the block. Allowed Values: Default or one of 14 tokens (0, 0.25rem (space-100), 0.5rem (space-200), 0.75rem (space-300), 1rem (space-400), 1.25rem (space-500), 1.5rem (space-600), 2rem (space-800), 2.5rem (space-1000), 3rem (space-1200), 4rem (space-1600), 5rem (space-2000), 6rem (space-2400), 7.5rem (space-3000)). Business Rules: applied by `styles/styles.css` (`main .section .block.pl-400` etc.); Default leaves the block's own spacing. Dependency Rules: none. Visibility Rules: always. Sample Content: Margin top 3rem.

6.3.7 Field Annotation Mapping

Marker	Field	Purpose
A	Fragment block (Reference; Additional tab fields)	Chooses the fragment page and block options
B	Included content (fragment page)	Shared content, edited on the fragment page

6.3.8 Component Specification

Attribute	Value
Component Name	Fragment (`blocks/fragment`)
Version	1.0
Owner	[To be confirmed: product owner — owner: Digital Marketing]; technical owner: development team
Dependencies	`scripts/scripts.js` `decorateMain`; `scripts/aem.js` `loadSections`; fragment pages; block options decorator and styles
Component Type	Block (container of included sections); also a shared loader function (`loadFragment`)
Supported Variants	Authored block; header nav; footer and canvas; tab panel; modal
Supported Templates	All
Supported Metadata	None (the fragment page's metadata isn't used)
Supported Tags	None
Supported Personalization	None; future: different fragment per audience through Adobe Target (not implemented)
Caching Considerations	`.plain.html` served by the Edge Delivery CDN and cached by the browser; no caching in code: each call fetches (the same fragment used twice on a page is requested twice, normally from the browser cache)
Performance Considerations	One extra request per fragment, made when the block's section loads; avoid in the first section (LCP); nested fragments add sequential requests
Accessibility Compliance	Inherits the fragment content's compliance; headings must fit the host page's hierarchy
SEO Compliance	Content added in the browser; not in the delivered page HTML; fragment pages in `references/`, `/fragments/` and `/modals/` are excluded from the query index

6.3.9 Input Model

- **Content Inputs:** the fragment page's `.plain.html` (its sections).
- **Metadata Inputs:** none.
- **Tags Inputs:** none.
- **Page Context Inputs:** `window.location` (to rebase `./media_` image URLs).
- **Query Inputs:** none.
- **Manual Inputs:** Reference; Additional tab.

Authored HTML received:

```
<div class="fragment mt-1200">
  <div>
    <div><a href="/en/references/cta-banner">
      /content/tcs-corp/us/en/references/cta-banner</a></div>
  </div>
</div>
```

6.3.10 Output Model

Rendered Output (DOM structure).

```
div.fragment.block[data-block-name=fragment]
├─ div.section …[data-section-status=loaded]   (fragment section 1)
│   ├─ div.default-content-wrapper
│   └─ div.{block}-wrapper > div.{block}.block
└─ div.section …                               (fragment section 2)
```

Generated HTML (simplified).

```
<div class="fragment block mt-1200" id="anchor-contact" data-block-name="fragment"
  data-block-status="loaded">
  <div class="section" data-section-status="loaded">
    <div class="default-content-wrapper"><h2>Talk to our experts</h2>…</div>
  </div>
</div>
```

Generated JSON: none. **Generated Metadata:** none.

Analytics Tracking. The Fragment block is tracked as a component (for example `fragment-1`, `@type tcs-corp/components/fragment`); blocks inside it are tracked with `parentId fragment-1`; clicks are reported for the nearest block (`cmp:click`, see 6.1.10 for the event shape). Clicks on links in the fragment's default content are reported for the fragment block.

```
{ "component": {
  "fragment-1": { "@type": "tcs-corp/components/fragment", "parentId": "page-1x2y3z" },
  "teaser-3": { "@type": "tcs-corp/components/teaser", "parentId": "fragment-1",
    "dc:title": "Talk to our experts" } } }
```

Personalization Output: none. **Search Index Output:** none for the host page (the index reads the page head); the fragment page itself is excluded when in `references/`, `/fragments/` or `/modals/`.

Target Personalization Output: None in the block today: every visitor sees the same fragment. A different fragment per audience through Adobe Target is Not implemented (as of this handover). The block is in the data layer as tcs-corp/components/fragment, with its inner blocks as children (parentId).

6.3.11 Business Rules

1. The path is the `href` of the first link in the block, else the block's text.
2. Only paths starting with `/` and not `//` are loaded; anything else (empty, full URL, relative) is ignored and the block keeps its authored content.
3. The first `.plain.html` or `.html` in the path is removed, then `{path}.plain.html` is fetched.
4. A non-OK response (404, 401…) returns nothing: the authored block stays as it is (showing the Reference link).

5. A network error throws; `aem.js` logs `failed to load module for fragment` and marks the block loaded with its authored content.
6. Image `src` and `srcset` values starting with `./media_` are rebased to the fragment page's URL so images load on the host page.
7. The fragment is decorated like a page (`decorateMain`): icons, sections with their options (style, width, rounded edge, background, anchor name), Gen Carousel and Tabs sections, blocks, block options (anchor ids) and content buttons; then all its sections and blocks are loaded.
8. The Fragment block's content is replaced by the fragment's sections.
9. The path isn't localized: the page referenced is used as is (pick a page of the same locale).
10. When editing in Universal Editor the reference is an AEM path and the AEM author `.plain.html` is loaded.
11. There is no loop protection: a fragment including itself never finishes loading.
12. No caching in code; each use fetches the page.
13. The Additional tab applies to the Fragment block (anchor id, hide, spacing).

6.3.12 Author Best Practices

- **Recommended Content Length:** one to three sections per fragment; a fragment should be a self-contained unit (for example one banner).
- **Image Dimensions:** as required by the blocks inside the fragment (see their chapters).
- **CTA Writing Guidelines:** CTAs in fragments appear on many pages: keep them generic and valid for all host pages.
- **Accessibility Guidelines:** start fragment content at H2 (pages have their H1 in the Page Header or Hero); don't rely on surrounding page text for context.
- **SEO Guidelines:** don't put unique page content in fragments; use fragments for boilerplate only.
- **Metadata Guidelines:** the fragment page's metadata isn't used; give it a clear title for authors.
- **Taxonomy Guidelines:** not applicable.
- **Localization Guidelines:** create one fragment page per locale (`/de-de/references/cta-banner`) and reference the locale's own page.

6.3.13 Troubleshooting Guide

Issue 1 — The block shows a bare link instead of the content

Symptoms: The page shows the fragment's path as a link.

Root Cause: The fragment page isn't published (404), or the Reference is a full URL.

Diagnosis Steps: Network tab: the `.plain.html` request status; check the Reference value.

Resolution Steps: Publish the fragment page; pick the page with the content picker (site path).

Validation Steps: The content renders.

Preventive Measures: Publish fragment pages before host pages.

Issue 2 — Images in the fragment are broken

Symptoms: Missing images in included content.

Root Cause: Image paths that aren't `./media_` relative paths and don't resolve from the host page, or unpublished assets.

Diagnosis Steps: Inspect the `img src`; check it loads directly.

Resolution Steps: Re-select the images in the fragment page and republish.

Validation Steps: Images load on the host page.

Preventive Measures: Use AEM Assets via the image picker.

Issue 3 — Page never finishes loading / browser hangs
Symptoms: The section with the fragment stays empty and the browser becomes slow.

Root Cause: The fragment includes itself (directly or through another fragment).

Diagnosis Steps: Network tab: repeated requests for the same `.plain.html`.

Resolution Steps: Remove the self-reference from the fragment page; publish.

Validation Steps: One request per fragment.

Preventive Measures: Never place Fragment blocks pointing to the same page in a fragment page.

Issue 4 — Wrong language content
Symptoms: English content on a German page.

Root Cause: The Reference points to another locale's fragment (copied page kept the old reference).

Diagnosis Steps: Check the Reference path's locale.

Resolution Steps: Re-point to the locale's fragment page.

Validation Steps: Content in the page language.

Preventive Measures: Review references after copying pages between locales.

Issue 5 — Changes to the fragment don't appear
Symptoms: The old content is shown.

Root Cause: The fragment page was saved but not published, or caches still hold the old version.

Diagnosis Steps: Admin API status of the fragment page; open its `.plain.html` directly.

Resolution Steps: Publish; wait for or request a CDN cache purge.

Validation Steps: The new content shows after reload.

Preventive Measures: Publish the fragment page, not only the host page.

Issue 6 — Two H1 headings on the page
Symptoms: Accessibility checker reports multiple H1.

Root Cause: The fragment contains an H1 (or a Page Header).

Diagnosis Steps: Inspect headings in the included content.

Resolution Steps: Change the fragment's headings to H2 or lower.

Validation Steps: One H1 per page.

Preventive Measures: Start fragment headings at H2.

Issue 7 — Anchor link doesn't jump to the fragment
Symptoms: `#anchor-contact` stays at the top.

Root Cause: Invalid Anchor ID (rejected by validation), or a duplicate id renamed to `anchor-contact-2`.

Diagnosis Steps: Inspect the block's `id`.

Resolution Steps: Use a unique, valid Anchor ID; update the link.

Validation Steps: The link jumps to the block.

Preventive Measures: Keep anchors unique per page.

6.3.14 Support Runbook

Monitoring Requirements. Recommended: periodic checks that frequently used fragment pages return 200 on `.aem.live`; RUM for layout shift on pages with fragments.

Logs.

- Browser console: `failed to load module for fragment` (network error during the fetch or an error in an inner block); 404s for `.plain.html` in the Network tab (no console message).
- Admin API status: `https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}` for the fragment page.
- Author logs: publication logs of the fragment page.

Common Errors.

Error	Likely Cause	Fix
Bare link shown	Fragment unpublished or full URL	Publish; pick with content picker
Broken images	Unresolvable image path	Reselect images; republish
Endless loading	Self-including fragment	Remove the loop
Wrong language	Reference to another locale	Re-point to the locale's fragment
Stale content	Fragment not published	Publish fragment page

Escalation Matrix.

Level	Team	Checks
L1	Author support	Reference value, fragment page publication, heading levels, locale
L2	AMS / site admin	Admin API status, CDN purge, `paths.json` coverage of the fragment path
L3	Development team	`blocks/fragment/fragment.js`, `decorateMain`, console errors, inner block errors
L4	Adobe Support	Edge Delivery delivery of `.plain.html`, AEM publishing

Recovery Procedures. Restore the previous fragment page version and publish; or hide (Additional tab > Hide block) or remove the Fragment block on affected pages.

Health Checks. Fragment pages used site-wide load with 200; host pages render the content; no console errors.

Operational Procedures. Keep an inventory of shared fragment pages per locale ([To be confirmed: fragment inventory owner — owner: Content Lead]); review fragments before campaigns end; unpublish fragments only after removing their references.

Known Limitations.

- Full URLs in Reference aren't supported (only site paths).
- No loop protection; no caching in code.
- Fragment content isn't in the delivered HTML or the page's index entry.
- Fragments aren't localized automatically.
- Personalized or scheduled fragments: Not implemented (as of this handover).

6.3.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
The block shows a bare link	Fragment page not published to that environment	Publish references/cta-banner to Preview and Live
Nothing is included	Reference entered as a full https:// URL	Pick the page with the content picker (site path)
The page never finishes loading	The fragment page includes itself, directly or nested (F-15)	Remove the self-reference from the fragment page and publish it
English banner on a German page	Reference kept the /en/ fragment after copying the page	Re-point Reference to the de-de fragment page
Old banner text still shows	Only the host page was published	Publish the fragment page; it is a separate page
Two H1 headings on the page	The fragment contains an H1 or a Page Header	Use H2 or lower in fragment pages
Images in the banner are broken	Image paths that don't resolve from the host page, or unpublished assets	Re-select the images with the image picker and republish the fragment
Anchor link doesn't jump to the block	Anchor ID duplicated on the page and renamed with –2	Use a unique Anchor ID and update the link

6.3.16 Author Quick Reference Guide

Mandatory Fields

- Reference (Content tab) — not required in the model, but needed to render anything: a site path starting with /, picked with the content picker

Recommended Fields

- A fragment page in the locale's references/ folder, e.g. references/cta-banner, published to Preview and Live
- Fragment headings from H2 down, so the host page keeps one H1
- A section style on the fragment page (Highlight) to set the shared section apart

Optional Fields

- Anchor ID — e.g. anchor-contact, a #anchor-contact jump target
- Hide block — hides the block on the site, faded in the editor
- Padding left / right / top / bottom — spacing tokens inside the block
- Margin left / right / top / bottom — e.g. Margin top 3rem (space-1200)

Authoring Checklist

1. Create and publish the fragment page first, in references/ of the same locale
2. Pick Reference with the content picker; full https:// URLs are ignored
3. Edit included content on the fragment page, not on the host page
4. Keep the Fragment out of the first section (an extra request before LCP)
5. Never let a fragment include itself, directly or nested (no loop protection, F-15)
6. Keep CTAs in a fragment valid for every host page
7. After copying a page to another locale, re-point Reference to that locale's fragment

Pre-Publish Checklist

1. Publish the fragment page to Preview before the host page
2. Check on aem.page that the content shows, not the bare Reference link
3. Check the fragment .plain.html request returns 200 in the Network tab
4. Check one H1 on the page and fragment headings at H2 or lower

5. Check the page at 1440, 768 and 390 px
6. Check images inside the fragment load on the host page

Post-Publish Validation Checklist

1. Publish the fragment page to Live, then the host page
2. Open the host page on aem.live and confirm the shared section renders
3. Spot-check other pages that use the same fragment
4. Test #anchor- links if an Anchor ID was set
5. Remove references from host pages before unpublishing a fragment page

6.3.17 Component Execution Example

Business example: Shared Talk to our experts banner on the Consulting page.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Title
Title (Title)	Strategy that turns into results
Title Type (Title)	h2
Component (Section › Add (+))	Text
Text (Text)	Our consultants combine industry knowledge with technology expertise to help leadership teams set priorities, build the business case and deliver change at scale.
Component (Section › Add (+))	Fragment
Reference (Fragment › Content)	Select the page or enter /en/shots/g01b/references/cta-banner
Component (Section › Add (+))	Title
Title (Title)	Related insights
Title Type (Title)	h2
Component (Section › Add (+))	Text
Text (Text)	Read how enterprises in banking, retail and manufacturing are putting these ideas into practice.
Component (Section › Add (+))	Button
Link (Button)	Select the page or enter /en/insights
Text (Button)	View all insights
Type (Button)	Secondary
Style (Fragment page references/cta-banner › Section properties)	Highlight
Title (H2) (Fragment page references/cta-banner › Title)	Talk to our experts
Text (Fragment page references/cta-banner › Text)	Whether you are modernising core systems or scaling AI across the enterprise, our consultants help you plan the next step with confidence.
Column 1 / 2 / 3 (Fragment page references/cta-banner › Columns (3 columns, 1 row))	Title (H3), Text and a link each: Consulting (/en/services/consulting), Cloud (/en/services/cloud), Cybersecurity (/en/services/cybersecurity)

Field	Value
Link, Text, Type (Fragment page references/cta-banner › Button)	/en/contact, Contact us, Primary

All other fields keep their default values.

Rendered Result:

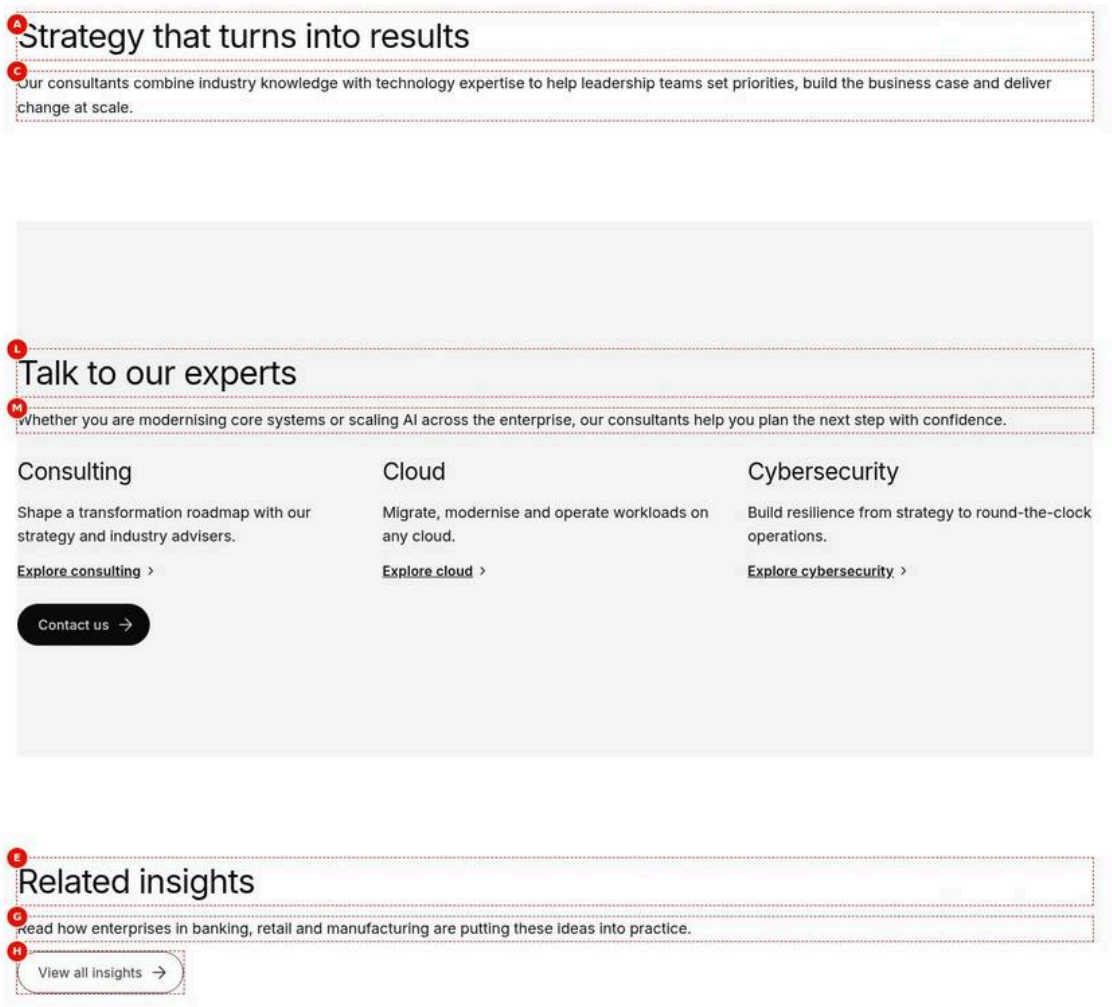

Figure 40: Execution example — The Consulting page at 1440 px: the H2 Strategy that turns into results and its text, then the grey Highlight section of references/cta-banner with the H2 Talk to our experts, its intro text, the H3 columns Consulting, Cloud and Cybersecurity with the links Explore consulting, Explore cloud and Explore cybersecurity, and a black Contact us primary button, the three columns side by side, then the H2 Related insights, its text and an outlined View all insights button. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/fragment-desktop-view.jpg)

Author Notes

- The banner is authored once on references/cta-banner: Highlight section, H2, text, Columns and a Contact us button.
- On the Consulting page the author adds only a Fragment and picks the page in Reference.
- Both pages are published: the fragment page first, then the host page.
- Edits to the banner are made on references/cta-banner and appear on every host page after it is published.

Business Notes

- One banner keeps the consulting, cloud and cybersecurity offer identical across service pages.
- Campaign changes to the banner need one publication instead of one per page.
- The banner content isn't part of the host page's HTML or index entry, so it shouldn't carry unique page content.

Technical Notes

- decorate reads the first link of the block, loadFragment fetches /en/shots/g01b/references/cta-banner.plain.html.
- The fragment is decorated with decorateMain and loaded with loadSections, then replaces the block's children.
- Image paths starting with ./media_ are rebased to the fragment page URL.
- A non-OK response leaves the authored Reference link; there is no caching or loop guard in code (F-15).

TCS Corporate Website — Project Handover

Volume 2 of 13 — Components 6.4–6.9: Page Header, Section, Text, Title, Image, Button

Date: October 14, 2026

Adobe

Table of Contents

Part 6 — Component Library (continued) 3
6.4 Page Header Block 3
6.5 Section Block 83
6.6 Text Component 141
6.7 Title Component 177
6.8 Image Component 211
6.9 Button Component 236

Part 6 — Component Library (continued)

> **Note:** This is volume 2 of 13 of the TCS Corporate Website project handover (version 2.0). Volume 1 holds the document control, the audience guide and the conventions.

6.4 Page Header Block

The Page Header is the header area at the top of a content page: eyebrow, H1 title, description, calls to action and, depending on the layout, tags, publish date, reading time, the author lockup, the listen / download / share actions or the featured image. **All its text and images come from the page's metadata** (page properties and the locale's bulk metadata sheet) and the locale's **Authors** data sheet; authors only choose the **Layout** and author the **CTA List** in the block. The Article, Blog and Press Release templates add a Page Header automatically when the page has none.

Source files: `blocks/page-header/page-header.js`, `blocks/page-header/page-header.css`, `blocks/page-header/_page-header.json` (a key-value block). Shared code: `decorators/article-meta-decorator.js` (date, reading time, actions, author lockup), `decorators/tag-decorator.js`, `decorators/button-decorator.js`, `decorators/link-decorator.js`, `decorators/responsive-image-decorator.js`, `utils/metadata.js`, `utils/data.js`, `utils/taxonomy.js`, `utils/links.js`, `utils/properties.js`, `utils/placeholders.js`. Design reference: TCS.com design system Figma "Secondary Page Header" / "L3 Header".

6.4.1 Component Purpose

Business Objective. Give every secondary page (landing, listing, article, blog, press release, insight) a consistent, design-system header whose content is always in sync with the page's metadata, so the title, description, tags, dates and author shown to visitors are the same values used for SEO, the query index, cards and listings.

Business Use Cases.

- Landing pages (services, industries) with a large title, description, CTAs and a featured image.
- Article, blog and insight pages with tags, content type, publish date, reading time, author with LinkedIn link, and listen / download / share actions.
- Press releases (automatic Page Header from the template).
- Secondary pages with a title on the left and the description and CTAs on the right.
- Campaign or statement pages with a very large display title.

When To Use. As the first block of every page that isn't the Home page and doesn't start with a Hero; on landing, listing, article, blog and press-release pages.

When Not To Use.

- On the Home page (use Hero or Gen Carousel).
- When the header needs content that isn't page metadata (a video, a custom image per breakpoint): use Hero or Teaser.
- More than once per page (it renders an H1).
- Don't type the title or description into the block: there are no such fields; change the page properties or the metadata sheet.

Dependencies.

Type	Dependency	Use
Page properties	Title (`jcr:title`); Description (`jcr:description`); Page Type (`page-type`); page Tags	Title (H1), description, default layout, tags
Bulk metadata sheet (`/{locale}/metadata.json`)	`page-type`, `content-type`, `publish-date`, `reading-time`, `author-id`, `author`, `featured-image`, `listen-link`; `tags` (comma-separated fallback)	Eyebrow / collection, date, reading time, author, image, listen link
Data sheet	`/{locale}/data/authors.json` (author-id, name, designation, bio, image, linkedin, region)	Author lockup
Taxonomy	`/{locale}/taxonomy.json` (tag, title; per-language sheets)	Tag labels
Placeholders	`published` ("Published"); `minRead` ("{n} min read"); `listenToThisPage`; `downloadThisPage`; `shareThisPage`; `linkCopied` ("Link copied to clipboard"); `opensInNewTab` ("(opens in a new tab)")	UI text
Icons	`/icons/headphones.svg`, `download.svg`, `share.svg`	Action icons
Code	`decorators/article-meta-decorator.js` `buildPublished`, `buildReadingTime`, `buildPageActions`, `buildAuthorLockup`	Article meta parts
Code	`decorators/tag-decorator.js` `buildTagList`; `utils/taxonomy.js` `resolveTags`	Tags
Code	`decorators/button-decorator.js` `decorateButton`; `utils/links.js` `readLinkItems`	CTA List
Code	`decorators/link-decorator.js` `setLinkTarget`, `announceNewTab`	LinkedIn link
Code	`decorators/responsive-image-decorator.js` `buildImage`	Featured image and author image
Code	`utils/metadata.js` `getPageMetadata`; `utils/data.js` `getAuthor`; `utils/properties.js` `readProperties`, `optionOf`	Inputs
Templates	`templates/article`, `templates/blog`, `templates/press-release` via `decorators/template-decorator.js` `ensurePageHeader`	Automatic Page Header

Related Components. Hero (alternative first block); Teaser (shares the article meta decorator); Filter List and List (show the same metadata on cards); "About the author" (article template, from the same Authors sheet); SEO decorator (uses the same metadata for the document head).

Applicable Templates. Article and Blog (added automatically), Press Release (added automatically), pages with Page Type Default; landing / listing pages (Page Type set to `landing` / `listing` in the metadata sheet). Not recommended for Home.

Supported Content Types. Any `content-type` value (for example Industry, Service, Insight, Blog, Press Release, Case Study); it is shown as the eyebrow (Landing, Secondary) or the collection label (Article).

Business Problem Solved

Page titles, descriptions, dates and authors were typed separately into page headers, SEO fields, cards and listings, so they drifted apart. The Page Header renders the design-system header for landing, secondary, article, display and press-release pages entirely from page metadata and the Authors sheet; authors choose only the Layout and the CTA List, and templates add it automatically.

Supported Taxonomy

Page tags (article:tag, else the comma-separated tags column) are shown as labels: in the Article meta row, as the Display eyebrow, and as the Landing and Secondary eyebrow when content-type is empty. Labels come from /{locale}/taxonomy.json, else are derived from the tag ID. F-07, F-08 and F-09 are open.

6.4.2 Visual Overview

Figure 1: Desktop rendering — The article Page Header at 1440 px: the meta row with BANKING, ARTIFICIAL INTELLIGENCE and Insight on the left and Published 12/03/26, 6 min read and the headphones, download and share icons on the right; then the title and the Anita Rao lockup (Head of Banking Research, Europe) on the left, the description, Talk to an expert (black) and Download the report (outlined) on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/page-header-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The article Page Header at 1440 px: the meta row with BANKING, ARTIFICIAL INTELLIGENCE and Insight on the left and Published 12/03/26, 6 min read and the headphones, download and share icons on the right; then the title and the Anita Rao lockup (Head of Banking Research, Europe) on the left, the description, Talk to an expert (black) and Download the report (outlined) on the right.
Business Context	An insight article on agentic AI in banking needs the design-system article header so that visitors see topic, date, reading time and author, and the same values feed SEO and listings.
Author Objective	Fill the page properties and metadata row, add a Page Header with Layout Article and two CTAs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Title (Page properties)	How agentic AI is reshaping banking operations	Recommended (no model validation)	—	—	None
B	Description (Page properties)	Autonomous agents are taking on reconciliation, onboarding and fraud triage. We	Recommended (no model validation)	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		look at what this means for operating models, controls and the workforce.				
(C)	Page Type (Page properties)	Article	No	Default layout	`landing` / `listing` for Landing	Case-insensitive
(D)	tags (Metadata sheet (row of this page))	tcs-corp:industry/banking, tcs-corp:topic/ai	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
E	content-type (Metadata sheet (row of this page))	Insight	No	Eyebrow / collection	One short term	None
(F)	publish-date (Metadata sheet (row of this page))	2026-03-12	No	Published date (Article)	YYYY-MM-DD	Non-ISO text shown as is
(G)	reading-time (Metadata sheet (row of this page))	6	No	Reading time (Article)	Minutes as a number	Digits → "{n} min read"; other text as is
(H)	author-id (Metadata sheet (row of this page))	arao	No	Authors sheet lookup	An ID of `data/authors`	Case-insensitive match
(I)	listen-link (Metadata sheet (row of this page))	https://www.example.com/audio/agentic-banking-operations.mp3	No	Listen action (Article)	Audio URL	None
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)
(J)	Layout (Page Header › Style)	Article (meta row, author)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`
K	CTA Title (Page Header › CTAs › CTA List › Item 1)	Talk to an expert	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
L	CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(M)	CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Sec-

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
						ondary Button `secondary`
N	CTA Title (Page Header › CTAs › CTA List › Item 2)	Download the report	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
O	CTA Link (Page Header › CTAs › CTA List › Item 2)	Select the page or enter /en/insights/state-of-ai-2026	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(P)	CTA Link Style (Page Header › CTAs › CTA List › Item 2)	Secondary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1440 px the meta row shows BANKING, ARTIFICIAL INTELLIGENCE and Insight on the left, Published 12/03/26, 6 min read and three icons on the right; below, the large title with the Anita Rao lockup on the left and the description with two CTAs on the right.
- **Rendering behaviour:** From 900 px the block has 7.5rem top padding and two equal columns with a 2.5rem gap; the summary sits 0.75rem lower. The title uses 4rem regular weight; the description 1.5rem.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- The H1 and the description are the page Title and Description as authored, not meta-title or meta-description.
- publish-date 2026-03-12 shows as Published 12/03/26 in a time element; non-ISO text is shown as typed.
- reading-time 6 becomes 6 min read; download and share are always offered, listen only with listen-link.
- author-id arao is matched in /en/data/authors: photo, LinkedIn-linked name and Head of Banking Research, Europe.
- Tags show taxonomy labels: tcs-corp:topic/ai shows Artificial intelligence.

Common Authoring Mistakes

Error	Root Cause	Resolution
The title is typed into a Title component under the header	The author looked for a title field in the block	Remove it; change the Title in Page Properties
Published shows March 12	publish-date was typed as text	Enter 2026-03-12
No author lockup appears	author-id arao is missing from the Authors sheet or the sheet is unpublished	Add the arao row to /en/data/authors and publish it

Troubleshooting

- **Symptoms:** The meta row shows no date, reading time or Insight label although they are in the metadata sheet.
- **Cause:** Bulk metadata isn't applied: the sheet row is unpublished, its URL pattern doesn't match the page, or metadata.source isn't configured (F-11).
- **Resolution:** Publish the metadata sheet, check the row URL, and ask the site admin to configure metadata.source; reload the editor.
- **Verification Steps:** View the page source: meta tags publish-date, reading-time and content-type exist and the meta row shows them.

Desktop (>= 1200px; layout changes start at 900px). The block is a vertical flex column with 2.5rem gaps and 7.5rem top padding. Secondary, Article and Display place the intro (title side) and the summary (description and CTAs) in two equal columns (`repeat(2, minmax(0, 1fr))`, 2.5rem gap); Secondary and Article move the summary down by 0.75rem; Display centres both columns vertically. Landing with a featured image is a two-column grid (text | image, 5rem gap, vertically centred). Title sizes from 900px: Landing and Display 6rem (letter-spacing –0.18rem and –0.12rem), Article `--display-font-size-2` (4rem), Secondary `--heading-font-size-xxl` (3rem, semibold). Description `--body-font-size-l` (1.5rem, line height 1.417); Landing description `--body-font-size-m` (1.125rem, line height 1.61).

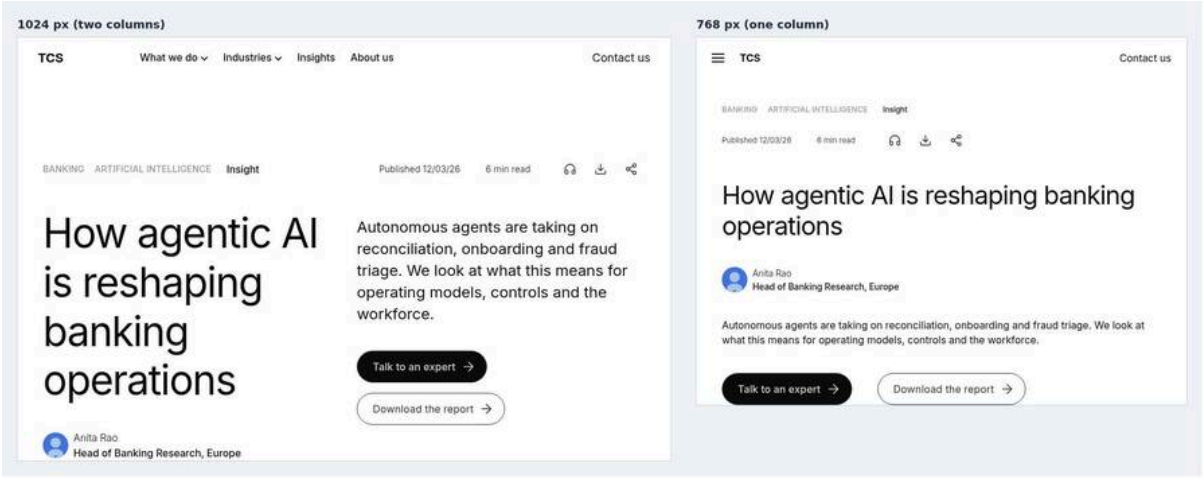

Figure 2: Tablet rendering — The same article at 1024 px and 768 px side by side. At 1024 px the meta row is one line and the title with the Anita Rao lockup and the description with the two CTAs are in two columns; at 768 px the labels and the info wrap onto two lines and title, lockup, description and CTAs stack in one column. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/page-header-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same article at 1024 px and 768 px side by side. At 1024 px the meta row is one line and the title with the Anita Rao lockup and the description with the two CTAs are in two columns; at 768 px the labels and the info wrap onto two lines and title, lockup, description and CTAs stack in one column.
Business Context	Articles are read on tablets in landscape and portrait; the header must switch between two columns and one column without author action.
Author Objective	Check the article Page Header at 1024 px and 768 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Title (Page properties)	How agentic AI is reshaping banking operations	Recommended (no model validation)	—	—	None
(B)	Description (Page properties)	Autonomous agents are taking on reconciliation, onboarding and fraud triage. We look at what this means for operating models, controls and the workforce.	Recommended (no model validation)	—	—	None
(C)	Page Type (Page properties)	Article	No	Default layout	`landing` / `listing` for Landing	Case-insensitive
(D)	tags (Metadata sheet (row of this page))	tcs-corp:industry/banking, tcs-corp:topic/ai	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
(E)	content-type (Metadata sheet (row of this page))	Insight	No	Eyebrow / collection	One short term	None

(G)	reading-time (Metadata sheet (row of this page))	6	No	Reading time (Article)	Minutes as a number	Digits → "{n} min read"; other text as is
(H)	author-id (Metadata sheet (row of this page))	arao	No	Authors sheet lookup	An ID of `data/authors`	Case-insensitive match
(I)	listen-link (Metadata sheet (row of this page))	https://www.example.com/audio/agentic-banking-operations.mp3	No	Listen action (Article)	Audio URL	None
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)
(J)	Layout (Page Header › Style)	Article (meta row, author)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`
(K)	CTA Title (Page Header › CTAs › CTA List › Item 1)	Talk to an expert	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(L)	CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(M)	CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
(N)	CTA Title (Page Header › CTAs › CTA List › Item 2)	Download the report	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
(O)	CTA Link (Page Header › CTAs › CTA List › Item 2)	Select the page or enter /en/insights/state-of-ai-2026	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(P)	CTA Link Style (Page Header › CTAs › CTA List › Item 2)	Secondary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
—	Screen width (Preview)	1024 px (tablet, landscape)	—	Check on the preview (not stored in the content)	1024 px (tablet, landscape)	—
—	Screen width (Preview)	768 px (tablet, portrait)	—	Check on the preview (not stored in the content)	768 px (tablet, portrait)	—

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1024 px the header looks like desktop with two columns; at 768 px the meta row wraps (labels above date, reading time and icons) and the title, author lockup, description and CTAs stack in one column.
- **Rendering behaviour:** From 900 px the two-column grid and the large type tokens apply; between 600 and 899 px the header is as on mobile: one column, 2.5rem top padding, title 2.5rem and description 1rem.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- The layout switch is at 900 px, not at 600 px.
- The meta row wraps with a 1rem row gap and a 2.5rem column gap.
- The reading order stays title, author, description and CTAs at every width.

Common Authoring Mistakes

Error	Root Cause	Resolution
The 768 px title wraps into many lines	A long Title over 70 characters	Shorten the page Title to 40–70 characters
CTAs wrap awkwardly	Long CTA Titles	Keep CTA Titles to 2–4 words

Troubleshooting

- **Symptoms:** At 1024 px the header is still one column.
- **Cause:** The preview window is below 900 px wide because of browser zoom or scrollbars in device emulation.
- **Resolution:** Set the emulated width to 1024 px at 100 % zoom and reload.
- **Verification Steps:** Title and author sit in the left column, description and CTAs in the right column.

Tablet (600–1199px). From 900px as desktop. Between 600px and 899px as mobile (single column); the type tokens step at 900px.

Figure 3: Mobile rendering — The article Page Header at 390 px: the meta row wraps onto three lines (BANKING, ARTIFICIAL INTELLIGENCE, Insight; Published 12/03/26 and 6 min read; the three icons), then the title, the Anita Rao lockup, the description, and Talk to an expert and Download the report stacked. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/page-header-mobile-view.jpg`
Screenshot Purpose	Mobile rendering

Item	Detail
Screen Description	The article Page Header at 390 px: the meta row wraps onto three lines (BANKING, ARTIFICIAL INTELLIGENCE, Insight; Published 12/03/26 and 6 min read; the three icons), then the title, the Anita Rao lockup, the description, and Talk to an expert and Download the report stacked.
Business Context	Most readers open insight articles from social links on phones; the header has to keep date, author and sharing within reach at 390 px.
Author Objective	Check the article Page Header at a 390 px screen width.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Title (Page properties)	How agentic AI is reshaping banking operations	Recommended (no model validation)	—	—	None
B	Description (Page properties)	Autonomous agents are taking on reconciliation, onboarding and fraud triage. We look at what this means for operating models, controls and the workforce.	Recommended (no model validation)	—	—	None
(C)	Page Type (Page properties)	Article	No	Default layout	`landing` / `listing` for Landing	Case-insensitive
(D)	tags (Metadata sheet (row of this page))	tcs-corp:industry/banking, tcs-corp:topic/ai	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
E	content-type (Metadata sheet (row of this page))	Insight	No	Eyebrow / collection	One short term	None
(F)	publish-date (Metadata sheet (row of this page))	2026-03-12	No	Published date (Article)	YYYY-MM-DD	Non-ISO text shown as is
(G)	reading-time (Metadata sheet (row of this page))	6	No	Reading time (Article)	Minutes as a number	Digits → "{n} min read"; other text as is
(H)	author-id (Metadata sheet (row of this page))	arao	No	Authors sheet lookup	An ID of `data/authors`	Case-insensitive match
(I)	listen-link (Metadata sheet (row of this page))	https://www.example.com/audio/agentic-banking-operations.mp3	No	Listen action (Article)	Audio URL	None
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(J)	Layout (Page Header › Style)	Article (meta row, author)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`
K	CTA Title (Page Header › CTAs › CTA List › Item 1)	Talk to an expert	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
L	CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(M)	CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
N	CTA Title (Page Header › CTAs › CTA List › Item 2)	Download the report	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
O	CTA Link (Page Header › CTAs › CTA List › Item 2)	Select the page or enter /en/insights/state-of-ai-2026	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(P)	CTA Link Style (Page Header › CTAs › CTA List › Item 2)	Secondary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 390 px the meta row wraps onto three lines, then the title, the Anita Rao lockup, the description and the two CTAs stack in one column.
- **Rendering behaviour:** One column with 2.5rem gaps and 2.5rem top padding; title 2.5rem, description 1rem, labels 0.75rem uppercase. The listen, download and share icons are 2.75rem touch targets.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- Share opens the device share dialog on phones, else copies the URL and shows Link copied to clipboard for 3 seconds.
- Download prints the page (window.print), so visitors can save it as PDF.
- The listen icon links to the mp3 in the same tab; no player is embedded.

Common Authoring Mistakes

Error	Root Cause	Resolution
Share seems to do nothing on a test page	The page was opened over plain HTTP or in a frame where the clipboard is blocked	Test on the aem.page HTTPS URL in a normal window
The meta row is very long on mobile	Too many tags on the page	Keep 1–4 tags

Troubleshooting

- **Symptoms:** On a phone the headphones icon is missing from the meta row.
- **Cause:** listen-link is empty for this page in the metadata sheet, or the row change isn't published.
- **Resolution:** Enter the mp3 URL in listen-link for the page row and publish the metadata sheet.
- **Verification Steps:** The headphones icon appears before download and share and opens the audio file.

Mobile (< 600px, and up to 899px). Everything stacks in one column with 2.5rem gaps and 2.5rem top padding; the Landing image follows the text. Title sizes: Landing and Display `--display-font-size-1` (2.75rem), Article `--display-font-size-2` (2.5rem), Secondary `--heading-font-size-xxl` (2rem). Description 1rem. Eyebrow and tags 0.75rem uppercase; the meta row wraps (1rem row gap, 2.5rem column gap). Icon actions are 2.75rem square touch targets.

6.4.3 Component Variations

Variation 1 — Default Layout (from the Page Type)

Variation Name: Default (from the Page Type).

Business Purpose: The right layout without a decision by the author.

Visual Example:

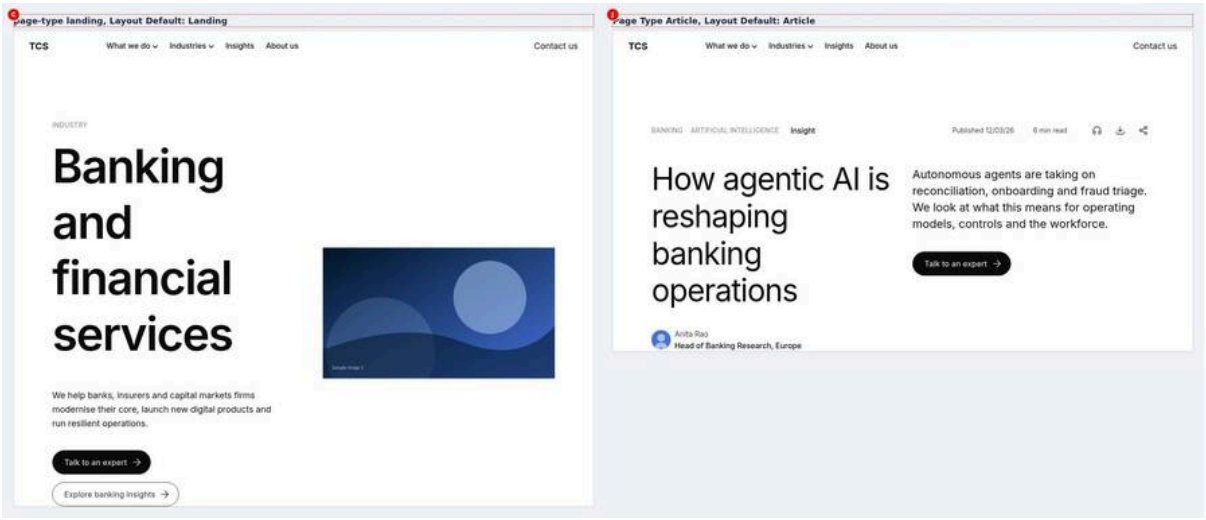

Figure 4: Layout chosen by Page Type — Two pages with Layout Default at 1200 px. Left, page-type landing: the Landing layout with INDUSTRY, Banking and financial services, the description and two CTAs beside the blue featured image. Right, Page Type Article: the meta row, the agentic AI title with the Anita Rao lockup, the description and one Talk to an expert button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-default-layout.jpg)

Screenshot Details — Layout chosen by Page Type

Item	Detail
Screenshot Name	`screenshots/page-header-default-layout.jpg`
Screenshot Purpose	Layout chosen by Page Type
Screen Description	Two pages with Layout Default at 1200 px. Left, page-type landing: the Landing layout with INDUSTRY, Banking and financial services, the description and two CTAs beside the blue featured image. Right, Page Type Article: the meta row, the agentic AI title with the Anita Rao lockup, the description and one Talk to an expert button.
Business Context	Most pages are created from templates; the Page Header should pick the right layout without authors choosing one, so an industry hub and an article each look right.
Author Objective	Leave Layout on Default on a landing page and an article page and compare the resolved layouts.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Title (First page (landing) › Page properties)	Banking and financial services	No	—	—	None
(B)	Description (First page (landing) › Page properties)	We help banks, insurers and capital markets firms modernise their core, launch new digital products and run resilient operations.	No	—	—	None
C	page-type (First page (landing) › Metadata sheet (row of this page))	landing	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(D)	content-type (First page (landing) › Metadata sheet (row of this page))	Industry	No	—	—	None
(E)	featured-image (First page (landing) › Metadata sheet (row of this page))	/en/media/photo-1.svg	No	—	—	None
(F)	Component (First page (landing) › Section › Add (+))	Page Header	No	—	—	None
(G)	Layout (First page (landing) › Page Header › Style)	Default (from the Page Type), left as it is	No	—	—	None
—	CTA List (First page (landing) › Page Header › CTAs)	Item 1: CTA Title = Talk to an expert, CTA Link = Select the page or enter / en/contact, CTA Link Style = Primary Button; Item 2: CTA Title = Explore banking insights, CTA Link = Select the page or enter /en/insights, CTA Link Style = Secondary Button	—	Check on the preview (not stored in the content)	Item 1: CTA Title = Talk to an expert, CTA Link = Select the page or enter / en/contact, CTA Link Style = Primary Button; Item 2: CTA Title = Explore banking insights, CTA Link = Select the page or enter /en/insights, CTA Link Style = Secondary Button	—
(H)	Title (Second page (article) › Page properties)	How agentic AI is reshaping banking operations	No	—	—	None
(I)	Description (Second page (article) › Page properties)	Autonomous agents are taking on reconciliation, onboarding and fraud triage. We look at what this means for operating models, controls and the workforce.	No	—	—	None
J	Page Type (Second page (article) › Page properties)	Article	No	—	—	None
(K)	tags (Second page (article) › Metadata sheet (row of this page))	tcs-corp:industry/banking, tcs-corp:topic/ai	No	—	—	None
(L)	content-type (Second page (article) › Metadata sheet (row of this page))	Insight	No	—	—	None
(M)	publish-date (Second page (article) ›	2026-03-12	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
	Metadata sheet (row of this page))					
(N)	reading-time (Second page (article) › Metadata sheet (row of this page))	6	No	—	—	None
(O)	author-id (Second page (article) › Metadata sheet (row of this page))	arao	No	—	—	None
(P)	listen-link (Second page (article) › Metadata sheet (row of this page))	https://www.example.com/audio/agentic-banking-operations.mp3	No	—	—	None
(Q)	Component (Second page (article) › Section › Add (+))	Page Header	No	—	—	None
(R)	Layout (Second page (article) › Page Header › Style)	Default (from the Page Type), left as it is	No	—	—	None
(S)	CTA List (Second page (article) › Page Header › CTAs)	Item 1: CTA Title = Talk to an expert, CTA Link = Select the page or enter / en/contact, CTA Link Style = Primary Button	No	—	—	None
—	Screen width (Preview)	1200 px (desktop, both pages)	—	Check on the preview (not stored in the content)	1200 px (desktop, both pages)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two pages at 1200 px: on the left Banking and financial services in the Landing layout with the INDUSTRY eyebrow and the featured image beside the text; on the right the agentic AI article in the Article layout with its meta row and author.
- **Rendering behaviour:** Default resolves to Landing when page-type is landing or listing (any case), else to Article; the resolved layout is added as the block class. Each page then follows the responsive rules of its layout.
- **Publishing behaviour:** Publish sends each page to aem.page or aem.live; the page-type landing value comes from the metadata sheet, which must be published itself and listed in metadata.source (F-11).

Business Rules

- page-type landing or listing gives Landing; any other value, including empty and Article, gives Article.
- Page Type in Page Properties offers no landing option; set it in the metadata sheet's page-type column (F-12).
- The template metadata is used when page-type is empty.
- Choose a Layout explicitly when the Page Type doesn't match the design.

Common Authoring Mistakes

Error	Root Cause	Resolution
A whole folder of pages shows the Landing layout	A metadata sheet row with a folder pattern sets page-type landing	Narrow the URL pattern or choose Layout explicitly
The industry page shows the Article meta row	page-type landing wasn't set for its URL	Add page-type landing to the page's meta-data sheet row

Troubleshooting

- **Symptoms:** The banking hub page renders the Article layout with Download and Share icons.
- **Cause:** The page has no page-type landing meta because the sheet row isn't applied or misspells the value.
- **Resolution:** Check meta name page-type in the page source; fix the sheet row and publish the sheet, or set Layout to Landing.
- **Verification Steps:** The block has the class landing and the featured image shows beside the text.

Use Cases: Pages created from the Site Global Templates; the automatic Page Header of the templates.

Authoring Guidelines: Leave **Layout** on "Default (from the Page Type)".

Business Rules: Page Type (`page-type` metadata, else the `template` metadata) `landing` or `listing` (any case) → Landing; any other value, including empty, Home, Article, Blog, Press Release → Article. The Page Type page property only offers Default, Home, Article, Blog and Press Release; `landing` and `listing` are set in the metadata sheet's `page-type` column (they have no template code).

Rendering Rules: The resolved layout is added as a class (`landing` or `article`) after removing any other layout class.

Responsive Behaviour: That of the resolved layout.

SEO Impact: As the resolved layout.

Accessibility Compliance: As the resolved layout.

Variation 2 — Landing with Featured Image

Variation Name: Landing (with the featured image).

Business Purpose: Hub pages (services, industries) that need a strong visual.

Visual Example:

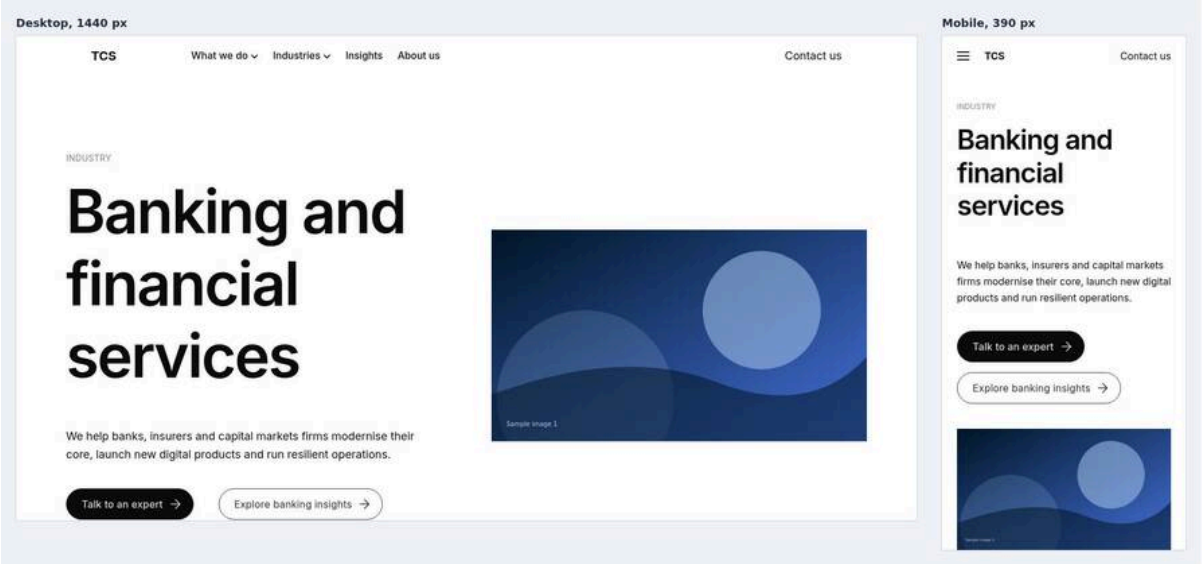

Figure 5: Landing with image — The Landing layout at 1440 px and 390 px. Desktop: INDUSTRY, the semibold 6rem title Banking and financial services, the description, Talk to an expert (black) and Explore banking insights (outlined) on the left, the blue sample image on the right. Mobile: the text and CTAs stacked, the image below them. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-landing-with-image.jpg)

Screenshot Details — Landing with image

Item	Detail
Screenshot Name	`screenshots/page-header-landing-with-image.jpg`
Screenshot Purpose	Landing with image
Screen Description	The Landing layout at 1440 px and 390 px. Desktop: INDUSTRY, the semibold 6rem title Banking and financial services, the description, Talk to an expert (black) and Explore banking insights (outlined) on the left, the blue sample image on the right. Mobile: the text and CTAs stacked, the image below them.
Business Context	The banking and financial services hub is an entry page for a whole industry; it needs a large title and a strong visual like the other industry pages.
Author Objective	Set content-type and featured-image, add a Page Header with Layout Landing and two CTAs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Title (Page properties)	Banking and financial services	Recommended (no model validation)	—	—	None
(B)	Description (Page properties)	We help banks, insurers and capital markets firms modernise their core, launch new digital products and run resilient operations.	Recommended (no model validation)	—	—	None
(C)	content-type (Metadata sheet (row of this page))	Industry	No	Eyebrow / collection	One short term	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(D)	featured-image (Metadata sheet (row of this page))	/en/media/photo-1.svg	No	Landing image	Site media URL	`/media_` same origin = optimized and eager
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)
(E)	Layout (Page Header › Style)	Landing (with the featured image)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`
(F)	CTA Title (Page Header › CTAs › CTA List › Item 1)	Talk to an expert	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
(G)	CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(H)	CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
(I)	CTA Title (Page Header › CTAs › CTA List › Item 2)	Explore banking insights	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
(J)	CTA Link (Page Header › CTAs › CTA List › Item 2)	Select the page or enter /en/insights	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(K)	CTA Link Style (Page Header › CTAs › CTA List › Item 2)	Secondary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
—	Screen width (Preview)	1440 px (desktop)	—	Check on the preview (not stored in the content)	1440 px (desktop)	—
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Desktop: INDUSTRY eyebrow, a very large semibold title, the description and two CTAs on the left, the blue featured image on the right. Mobile: the same text stacked, then the image below the CTAs.
- **Rendering behaviour:** From 900 px a two-column grid with a 5rem gap, vertically centred; title 6rem (−0.18rem letter-spacing), 2.75rem below 900 px. The sample image /en/media/photo-1.svg isn't /media_ site media, so it is a plain lazy img (F-14).
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- The eyebrow is content-type Industry; with content-type empty the tags are used.
- The featured image is decorative (alt empty): don't put information in it.
- Only same-origin /media_ images become an optimised picture loaded eagerly with high priority.
- Title, description and CTAs all sit on the text side.

Common Authoring Mistakes

Error	Root Cause	Resolution
The image loads late and LCP is poor	featured-image isn't AEM Assets site media (F-14)	Use an image delivered as /media_ site media
No image appears	featured-image was set as a page property that doesn't exist	Set featured-image in the page's metadata sheet row
The title wraps into four lines at 6rem	Title longer than about 40 characters	Shorten the Title for Landing pages

Troubleshooting

- **Symptoms:** PageSpeed Insights reports the featured image as a slow LCP element.
- **Cause:** The image URL isn't same-origin /media_ site media, so the block renders a lazy plain img without fetch priority (F-14).
- **Resolution:** Upload the image to AEM Assets and reference it so it is delivered as site media; development can extend eager loading (F-14).
- **Verification Steps:** Inspect the image: a picture element with loading eager and fetchpriority high.

Use Cases: Industry, service and capability landing pages; listing pages.

Authoring Guidelines: Set **Layout** to "Landing (with the featured image)" (or Default with `page-type` landing / listing); set `featured-image` in the metadata sheet; optionally `content-type`; add CTAs.

Business Rules: Eyebrow = `content-type`; if empty, the tags (as a list); title, description and CTAs all on the text side; the image has an empty alt (decorative).

Rendering Rules: `div.page-header-intro` (eyebrow, H1, description, CTAs) + `div.page-header-media` (picture); the block gets `landing page-header-has-image`. Site media (`/media_…` on the same origin) is a responsive picture (1200px wide from 900px, 750px below) loaded eagerly with `fetchpriority="high"` (LCP candidate). Other image URLs are used as a plain `<img>` with `loading="lazy"` (eager loading isn't applied to them).

Responsive Behaviour: From 900px: two-column grid, 5rem gap, centred vertically. Below 900px: text then image, stacked. Title 2.75rem → 6rem.

SEO Impact: The H1 is the page Title; the featured image is the likely LCP element: use a site-media image so it loads eagerly.

Accessibility Compliance: Single H1; decorative image (`alt=""`): don't put essential information in the image.

Variation 3 — Landing without Featured Image

Variation Name: Landing (text only).

Business Purpose: Landing or listing pages without a hero image.

Visual Example:

Figure 6: Landing without image — The Landing layout without a featured image at 1440 px: the INSIGHTS eyebrow, the very large semibold title All insights, the description Research, perspectives and case studies from our consultants and industry experts, and a black Subscribe to updates button, stacked on the left. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-landing-text-only.jpg)

Screenshot Details — Landing without image

Item	Detail
Screenshot Name	`screenshots/page-header-landing-text-only.jpg`
Screenshot Purpose	Landing without image
Screen Description	The Landing layout without a featured image at 1440 px: the INSIGHTS eyebrow, the very large semibold title All insights, the description Research, perspectives and case studies from our consultants and industry experts, and a black Subscribe to updates button, stacked on the left.
Business Context	The All insights listing page needs a strong opening without a hero image, consistent with the landing pages that have one.
Author Objective	Add a Page Header with Layout Landing on a page without featured-image and one CTA.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Title (Page properties)	All insights	Recommended (no model validation)	—	—	None
B	Description (Page properties)	Research, perspectives and case studies from our consultants and industry experts.	Recommended (no model validation)	—	—	None
C	content-type (Metadata sheet (row of this page))	Insights	No	Eyebrow / collection	One short term	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)
(D)	Layout (Page Header › Style)	Landing (with the featured image)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`
E	CTA Title (Page Header › CTAs › CTA List › Item 1)	Subscribe to updates	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
F	CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(G)	CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The INSIGHTS eyebrow, the very large semibold title All insights, the description and a black Subscribe to updates button stacked across the full width; no image.
- **Rendering behaviour:** Without an image the block isn't a grid and has no page-header-has-image class; everything stacks at all widths. Title 2.75rem below 900 px and 6rem from 900 px; the H1 is the LCP candidate.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- The Layout option label says with the featured image, but without featured-image the layout is text only.
- content-type Insights becomes the eyebrow in upper case.
- Only one CTA is authored here; empty CTA List items without a link are skipped.

Common Authoring Mistakes

Error	Root Cause	Resolution
An image appears unexpectedly	A folder-wide metadata row sets featured-image for the page	Remove featured-image for this URL in the sheet
The CTA is missing	CTA Link was left empty	Pick /en/contact in CTA Link

Troubleshooting

- **Symptoms:** The INSIGHTS eyebrow is missing above the title.
- **Cause:** content-type isn't applied to the page and the page has no tags to fall back on.
- **Resolution:** Set content-type Insights in the page's metadata sheet row and publish the sheet.
- **Verification Steps:** The eyebrow INSIGHTS shows above All insights.

Use Cases: Listing pages ("All insights"), simple landing pages.

Authoring Guidelines: Landing layout and no `featured-image`.

Business Rules: Without an image the block isn't a grid; all text stacks.

Rendering Rules: Only `div.page-header-intro`; no `page-header-has-image` class.

Responsive Behaviour: Single column at all widths; title 2.75rem → 6rem.

SEO Impact: H1 is the LCP candidate (text).

Accessibility Compliance: As Variation 2.

Variation 4 — Secondary

Variation Name: Secondary (title left, text right).

Business Purpose: Secondary pages with a balanced header.

Visual Example:

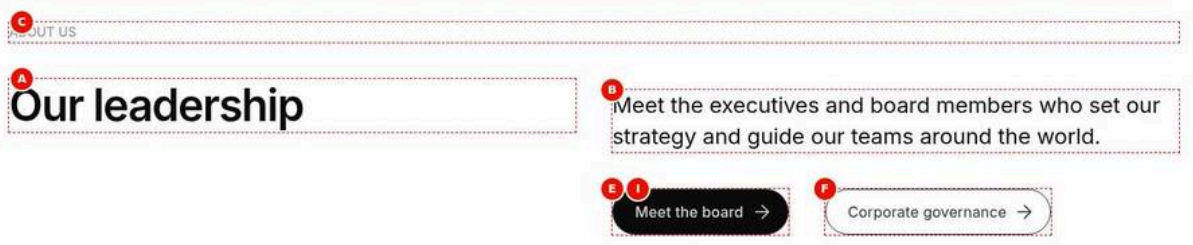

Figure 7: Secondary layout — The Secondary layout at 1440 px: the ABOUT US eyebrow above both columns, the semibold title Our leadership on the left; on the right, slightly lower, the description, Meet the board (black) and Corporate governance (outlined). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-secondary.jpg)

Screenshot Details — Secondary layout

Item	Detail
Screenshot Name	`screenshots/page-header-secondary.jpg`
Screenshot Purpose	Secondary layout
Screen Description	The Secondary layout at 1440 px: the ABOUT US eyebrow above both columns, the semibold title Our leadership on the left; on the right, slightly lower, the description, Meet the board (black) and Corporate governance (outlined).
Business Context	The Our leadership page is a secondary About page; it needs a balanced header without image, author or dates.
Author Objective	Add a Page Header with Layout Secondary and two CTAs on a page with content-type About us.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Title (Page properties)	Our leadership	Recommended (no model validation)	—	—	None
B	Description (Page properties)	Meet the executives and board members who set our strategy and guide our teams around the world.	Recommended (no model validation)	—	—	None
C	content-type (Metadata sheet (row of this page))	About us	No	Eyebrow / collection	One short term	None
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)
(D)	Layout (Page Header › Style)	Secondary (title left, text right)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`
E	CTA Title (Page Header › CTAs › CTA List › Item 1)	Meet the board	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
F	CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/about	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(G)	CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
(H)	CTA Title (Page Header › CTAs › CTA List › Item 2)	Corporate governance	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
I	CTA Link (Page Header › CTAs › CTA List › Item 2)	Select the page or enter /en/about	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(J)	CTA Link Style (Page Header › CTAs › CTA List › Item 2)	Secondary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** ABOUT US eyebrow above both columns; the semibold title Our leadership on the left; the description, Meet the board (black primary) and Corporate governance (outlined secondary) on the right, slightly lower.
- **Rendering behaviour:** From 900 px two equal columns with the summary 0.75rem lower; below 900 px stacked. Title 2rem below 900 px, 3rem from 900 px, semibold.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- The eyebrow is content-type About us, else the tags; it sits above both columns.
- Secondary shows no image, author or meta row even when the metadata exists.
- Empty columns are left out; with no description and no CTAs only the title remains.

Common Authoring Mistakes

Error	Root Cause	Resolution
Both CTAs lead to /en/about	The same CTA Link was picked for both items	Point Corporate governance to its own page when it exists
Two primary buttons appear	CTA Link Style was left on the default Primary Button for item 2	Set item 2 to Secondary Button

Troubleshooting

- **Symptoms:** The title shows the old page name.
- **Cause:** Page Properties Title was changed but the editor wasn't reloaded or the page wasn't republished.
- **Resolution:** Reload Universal Editor and publish the page.
- **Verification Steps:** The H1 reads Our leadership.

Use Cases: About, leadership, careers subpages.

Authoring Guidelines: Set **Layout** to "Secondary (title left, text right)"; optional `content-type`.

Business Rules: Eyebrow = `content-type`, else the tags; it sits above both columns; no image, author or meta row.

Rendering Rules: `p.page-header-eyebrow` (or `ul.page-header-tags`) then `div.page-header-columns` with `div.page-header-intro` (H1) and `div.page-header-summary` (description, CTAs); empty columns are left out.

Responsive Behaviour: From 900px: two equal columns. Below: stacked. Title 2rem → 3rem, semibold.

SEO Impact: H1 page Title; description visible.

Accessibility Compliance: Reading order eyebrow → title → description → CTAs.

Variation 5 — Article

Variation Name: Article (meta row, author).

Business Purpose: Editorial pages showing context, credibility and sharing tools.

Visual Example:

Figure 8: Article layout — The Article layout at 1440 px: BANKING, ARTIFICIAL INTELLIGENCE and Insight left in the meta row, Published 12/03/26, 6 min read and the headphones, download and share icons right; the title with the round Anita Rao photo, name and Head of Banking Research, Europe below it; the description, Talk to an expert and Download the report on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-article.jpg)

Screenshot Details — Article layout

Item	Detail
Screenshot Name	`screenshots/page-header-article.jpg`
Screenshot Purpose	Article layout
Screen Description	The Article layout at 1440 px: BANKING, ARTIFICIAL INTELLIGENCE and Insight left in the meta row, Published 12/03/26, 6 min read and the headphones, download and share icons right; the title with the round Anita Rao photo, name and Head of Banking Research, Europe below it; the description, Talk to an expert and Download the report on the right.
Business Context	Editorial pages must show context and credibility: topic tags, content type, date, reading time and a named author with a LinkedIn profile, plus sharing tools.
Author Objective	Use Layout Article with the full article metadata and two CTAs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Title (Page properties)	How agentic AI is reshaping banking operations	Recommended (no model validation)	—	—	None
B	Description (Page properties)	Autonomous agents are taking on reconciliation, onboarding and fraud triage. We look at what this means for operating models, controls and the workforce.	Recommended (no model validation)	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Page Type (Page properties)	Article	No	Default layout	`landing` / `listing` for Landing	Case-insensitive
(D)	tags (Metadata sheet (row of this page))	tcs-corp:industry/banking, tcs-corp:topic/ai	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
E	content-type (Metadata sheet (row of this page))	Insight	No	Eyebrow / collection	One short term	None
(F)	publish-date (Metadata sheet (row of this page))	2026-03-12	No	Published date (Article)	YYYY-MM-DD	Non-ISO text shown as is
(G)	reading-time (Metadata sheet (row of this page))	6	No	Reading time (Article)	Minutes as a number	Digits → "{n} min read"; other text as is
(H)	author-id (Metadata sheet (row of this page))	arao	No	Authors sheet lookup	An ID of `data/authors`	Case-insensitive match
(I)	listen-link (Metadata sheet (row of this page))	https://www.example.com/audio/agentic-banking-operations.mp3	No	Listen action (Article)	Audio URL	None
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)
(J)	Layout (Page Header › Style)	Article (meta row, author)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`
K	CTA Title (Page Header › CTAs › CTA List › Item 1)	Talk to an expert	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
L	CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(M)	CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
N	CTA Title (Page Header › CTAs › CTA List › Item 2)	Download the report	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
O	CTA Link (Page Header › CTAs › CTA List › Item 2)	Select the page or enter /en/insights/state-of-ai-2026	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(P)	CTA Link Style (Page Header › CTAs › CTA List › Item 2)	Secondary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Meta row with BANKING and ARTIFICIAL INTELLIGENCE in grey caps, Insight, Published 12/03/26, 6 min read and headphones, download and share icons; title with the round Anita Rao photo, name and Head of Banking Research, Europe; description and two CTAs on the right.
- **Rendering behaviour:** The meta row spreads labels and info to both ends and wraps on small screens; columns from 900 px. Title 2.5rem below 900 px, 4rem from 900 px, regular weight; the author photo is a 2.5rem circle loaded lazily.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- The H1 and the description are the page Title and Description as authored, not meta-title or meta-description.
- publish-date 2026-03-12 shows as Published 12/03/26 in a time element; non-ISO text is shown as typed.
- reading-time 6 becomes 6 min read; download and share are always offered, listen only with listen-link.
- author-id arao is matched in /en/data/authors: photo, LinkedIn-linked name and Head of Banking Research, Europe.
- Tags show taxonomy labels: tcs-corp:topic/ai shows Artificial intelligence.

Common Authoring Mistakes

Error	Root Cause	Resolution
Tags show tcs:… values or nothing	Tags were typed with the tcs: namespace instead of tcs-corp: (F-08)	Use tcs-corp:industry/banking and tcs-corp:topic/ai
Reading time shows 6 minutes min read	reading-time was typed as text	Enter only the number 6
The LinkedIn link is missing	The linkedin column of the arao row is empty	Add the LinkedIn URL to the Authors sheet and publish it

Troubleshooting

- **Symptoms:** The tags show no labels in the meta row although the page is tagged.
- **Cause:** AEM may publish page tags as cq-tags while the block reads article:tag (F-07), and the sheet tags column is empty.

- **Resolution:** Check the page source for article:tag; until F-07 is resolved, set the tags column in the metadata sheet row.
- **Verification Steps:** BANKING and ARTIFICIAL INTELLIGENCE show before Insight.

Use Cases: Articles, blogs, insights, press releases (template default).

Authoring Guidelines: Set **Layout** to "Article (meta row, author)" or keep Default on article / blog / press-release pages. Fill `content-type`, `publish-date` (YYYY-MM-DD), `reading-time`, `author-id` (or `author`), `listen-link` and page tags.

Business Rules: The meta row has the labels (tags; `content-type` as the "collection") and the info (Published date, reading time, actions). Download and share are always offered, so the meta row always exists; listen only with `listen-link`. The author lockup follows the title.

Rendering Rules: `div.page-header-meta-row` (`div.page-header-labels`, `div.page-header-info` with `p.page-header-date`, `p.page-header-reading-time`, `div.page-header-actions`) then `div.page-header-columns` (intro: H1 and `div.page-header-author`; summary).

Responsive Behaviour: Meta row: labels left, info right (`space-between`), wrapping on small screens. Columns from 900px. Title 2.5rem → 4rem regular weight.

SEO Impact: Visible date and author support E-E-A-T signals; no structured data (JSON-LD) is generated (Not implemented).

Accessibility Compliance: `<time datetime>` for ISO dates; icon buttons with `aria-label` and `title`; share feedback in a `role="status"` live region; LinkedIn link announces "(opens in a new tab)".

Variation 6 — Display

Variation Name: Display (large title).

Business Purpose: Statement pages with a very large title and tags as eyebrow.

Visual Example:

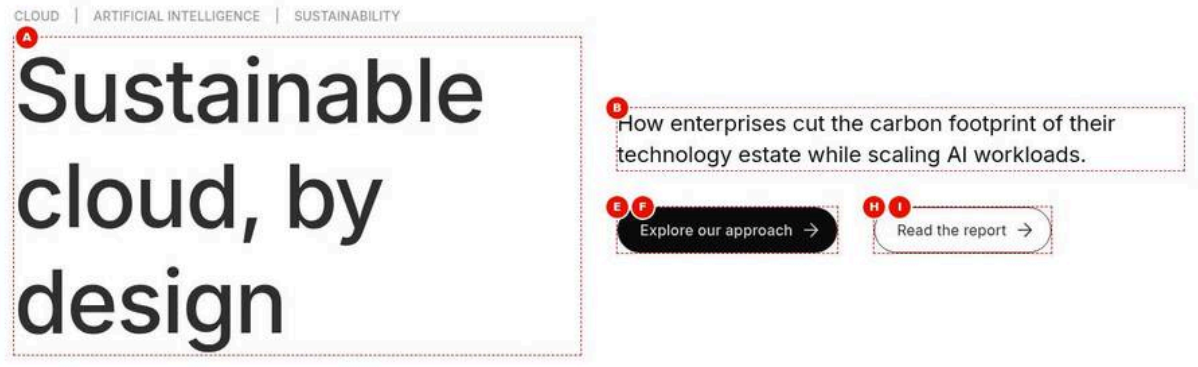

Figure 9: Display layout — The Display layout at 1440 px: the tags CLOUD, ARTIFICIAL INTELLIGENCE and SUSTAINABILITY separated by vertical bars above the 6rem medium-weight dark slate title Sustainable cloud, by design on the left; the description, Explore our approach (black) and Read the report (outlined) vertically centred on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-display.jpg)

Screenshot Details — Display layout

Item	Detail
Screenshot Name	`screenshots/page-header-display.jpg`
Screenshot Purpose	Display layout
Screen Description	The Display layout at 1440 px: the tags CLOUD, ARTIFICIAL INTELLIGENCE and SUSTAINABILITY separated by vertical bars above the 6rem medium-weight dark slate title Sustainable cloud, by design on the left; the description, Explore our approach (black) and Read the report (outlined) vertically centred on the right.
Business Context	The sustainable cloud page is a thought-leadership statement; it needs a very large title and its topics as the eyebrow rather than a content type.
Author Objective	Tag the page with three topics and add a Page Header with Layout Display and two CTAs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Title (Page properties)	Sustainable cloud, by design	Recommended (no model validation)	—	—	None
B	Description (Page properties)	How enterprises cut the carbon footprint of their technology estate while scaling AI workloads.	Recommended (no model validation)	—	—	None
(C)	tags (Metadata sheet (row of this page))	tcs-corp:topic/cloud, tcs-corp:topic/ai, tcs-corp:topic/sustainability	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)
(D)	Layout (Page Header › Style)	Display (large title)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`
E	CTA Title (Page Header › CTAs › CTA List › Item 1)	Explore our approach	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
F	CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/services/cloud	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(G)	CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Sec-

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
						ondary Button `secondary`
H	CTA Title (Page Header › CTAs › CTA List › Item 2)	Read the report	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
I	CTA Link (Page Header › CTAs › CTA List › Item 2)	Select the page or enter /en/insights/state-of-ai-2026	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(J)	CTA Link Style (Page Header › CTAs › CTA List › Item 2)	Secondary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** CLOUD, ARTIFICIAL INTELLIGENCE and SUSTAINABILITY separated by vertical bars above a very large dark slate title on the left; the description and Explore our approach and Read the report buttons vertically centred on the right.
- **Rendering behaviour:** From 900 px two columns centred vertically; title 6rem medium weight (–0.12rem), 2.75rem below 900 px. The bars are CSS generated content between list items.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- The eyebrow is always the tags, never content-type.
- tcs-corp:topic/ai shows the taxonomy label Artificial intelligence; topic/sustainability isn't in the taxonomy and shows Sustainability derived from the ID.
- Tags are a ul list; screen readers may read the bar separators.
- Keep the Title short: at 6rem Sustainable cloud, by design already takes three lines.

Common Authoring Mistakes

Error	Root Cause	Resolution
No eyebrow appears	The page has content-type but no tags	Tag the page; Display ignores content-type
A tag shows a derived label	tcs-corp:topic/sustainability is missing from /en/taxonomy.json	Add the tag and its title to the taxonomy and publish it

Troubleshooting

- **Symptoms:** Tag labels are English on the de-de version of the page.
- **Cause:** Only the English taxonomy is published; other locales derive labels from the tag IDs (F-09).
- **Resolution:** Publish the de-de taxonomy with translated titles.
- **Verification Steps:** The eyebrow shows the German labels separated by bars.

Use Cases: Thought leadership, campaign pages, topic hubs.

Authoring Guidelines: Set **Layout** to "Display (large title)"; tag the page.

Business Rules: The eyebrow is always the tags (never `content-type`); tags separated by "|".

Rendering Rules: `div.page-header-columns` with intro (`ul.page-header-tags`, H1) and summary; separators are CSS (`li + li::before { content: '|' }`).

Responsive Behaviour: From 900px: two columns centred vertically, title 6rem (–0.12rem). Below: stacked, title 2.75rem.

SEO Impact: As Secondary.

Accessibility Compliance: Tags are a list (`ul`); the "|" separators are CSS generated content (some screen readers may read them).

Variation 7 — Automatic Page Header (Templates)

Variation Name: Page Header added by the Article, Blog and Press Release templates.

Business Purpose: Every article, blog and press release gets a header without authoring.

Visual Example:

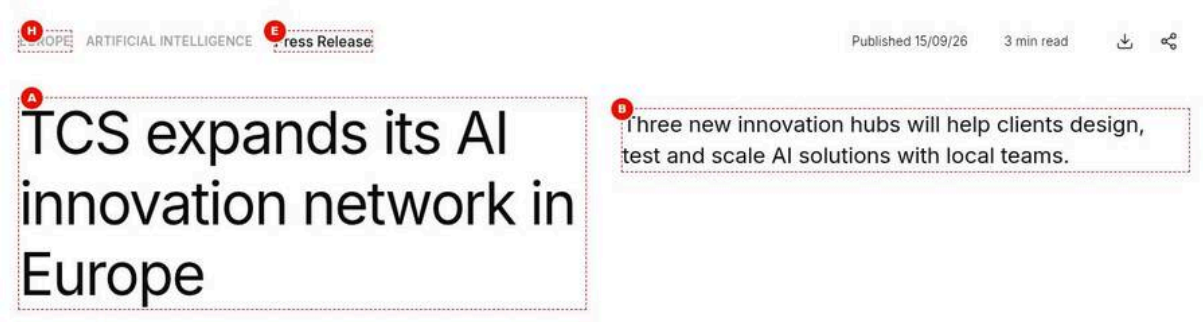

Figure 10: Template-generated header — The header the Press Release template adds at 1440 px, cropped to the block: EUROPE, ARTIFICIAL INTELLIGENCE and Press Release left, Published 15/09/26, 3 min read and only the download and share icons right; the title TCS expands its AI innovation network in Europe left and the description right, with no author and no CTAs. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-template-automatic.jpg)

Screenshot Details — Template-generated header

Item	Detail
Screenshot Name	`screenshots/page-header-template-automatic.jpg`
Screenshot Purpose	Template-generated header
Screen Description	The header the Press Release template adds at 1440 px, cropped to the block: EUROPE, ARTIFICIAL INTELLIGENCE and Press Release left, Published 15/09/26, 3 min read and only the download and share icons right; the title TCS expands its AI innovation network in Europe left and the description right, with no author and no CTAs.
Business Context	Press releases are published quickly by the communications team; every release needs a correct header without anyone authoring a block.
Author Objective	Set the press release metadata and Page Type Press Release without adding a Page Header.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Title (Page properties)	TCS expands its AI innovation network in Europe	Recommended (no model validation)	—	—	None
B	Description (Page properties)	Three new innovation hubs will help clients design, test and scale AI solutions with local teams.	Recommended (no model validation)	—	—	None
(C)	Page Type (Page properties)	Press Release	No	Default layout	`landing` / `listing` for Landing	Case-insensitive
(D)	tags (Metadata sheet (row of this page))	tcs-corp:region/europe, tcs-corp:topic/ai	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
E	content-type (Metadata sheet (row of this page))	Press Release	No	Eyebrow / collection	One short term	None
(F)	publish-date (Metadata sheet (row of this page))	2026-09-15	No	Published date (Article)	YYYY-MM-DD	Non-ISO text shown as is
(G)	reading-time (Metadata sheet (row of this page))	3	No	Reading time (Article)	Minutes as a number	Digits → "{n} min read"; other text as is
H	region (Metadata sheet (row of this page))	Europe	Yes (dialog)	The value that shows the card	Exact option text	Required in the dialog; one value
(I)	Page Header (Page)	None authored: the Press Release template adds it (Article layout, no CTAs)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** EUROPE, ARTIFICIAL INTELLIGENCE and Press Release on the left of the meta row, Published 15/09/26, 3 min read and download and share icons on the right; the title on the left and the description on the right; no CTAs and no author.
- **Rendering behaviour:** The Press Release template adds an empty Page Header in a new first section when the page has none; with no Layout it renders the Article layout. The template also appends Media contacts for the region Europe at the end of the page.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the header is built from the page metadata on load, so the metadata sheet row must be published too. The Media Contacts sheet is a separate publish step.

Business Rules

- An authored Page Header always wins; the template adds one only if the page has none.
- The generated header has no CTAs and can't be edited in Universal Editor.

- No listen icon appears because listen-link is empty; download and share are always shown.
- No author lockup appears because neither author-id nor author is set.
- region Europe selects the media contacts shown at the end of the page.

Common Authoring Mistakes

Error	Root Cause	Resolution
The author can't select the header in the editor	The header is generated by the template	Add a Page Header block to the page to author Layout and CTAs
Two headers appear	A Title H1 or Hero was authored at the top as well	Remove the extra H1; keep the automatic header

Troubleshooting

- **Symptoms:** The press release page shows no header at all.
- **Cause:** Page Type isn't Press Release (and page-type isn't press-release in the sheet), so the template isn't loaded.
- **Resolution:** Set Page Type to Press Release in Page Properties and publish the page.
- **Verification Steps:** The body has the press-release class and the Article layout header appears at the top.

Use Cases: Pages with Page Type Article, Blog or Press Release.

Authoring Guidelines: Nothing to author. To add CTAs or choose another layout, add a Page Header block yourself (an authored one always wins).

Business Rules: `ensurePageHeader` adds an empty `page-header` block in a new first section only if the page has no `.page-header`; with no Layout and these page types the layout is Article; there are no CTAs.

Rendering Rules: As Variation 5.

Responsive Behaviour: As Variation 5.

SEO Impact: As Variation 5.

Accessibility Compliance: As Variation 5. The generated block isn't editable in Universal Editor (it has no content resource).

Variation 8 — CTA Style: Primary Button

Variation Name: CTA Link Style "Primary Button" (default).

Business Purpose: The main action.

Visual Example:

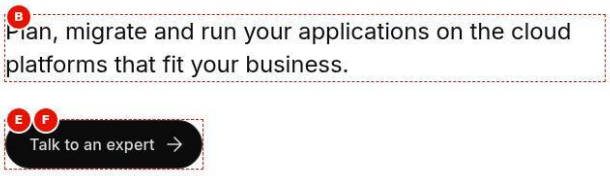

Figure 11: Primary CTA — The summary column of the Secondary header at 1440 px: the description Plan, migrate and run your applications on the cloud platforms that fit your business, and below it Talk to an expert as a black filled pill with white text and an arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-cta-primary.jpg)

Screenshot Details — Primary CTA

Item	Detail
Screenshot Name	`screenshots/page-header-cta-primary.jpg`
Screenshot Purpose	Primary CTA
Screen Description	The summary column of the Secondary header at 1440 px: the description Plan, migrate and run your applications on the cloud platforms that fit your business, and below it Talk to an expert as a black filled pill with white text and an arrow.
Business Context	The cloud transformation service page has one main action, contacting an expert, which must stand out in the header.
Author Objective	Add one CTA List item Talk to an expert with CTA Link Style Primary Button.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Title (Page properties)	Cloud transformation services	Recommended (no model validation)	—	—	None
B	Description (Page properties)	Plan, migrate and run your applications on the cloud platforms that fit your business.	Recommended (no model validation)	—	—	None
(C)	content-type (Metadata sheet (row of this page))	Service	No	Eyebrow / collection	One short term	None
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)
(D)	Layout (Page Header › Style)	Secondary (title left, text right)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`
E	CTA Title (Page Header › CTAs › CTA List › Item 1)	Talk to an expert	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
F	CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(G)	CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The summary column with the description and a black filled pill Talk to an expert with a trailing arrow below it.
- **Rendering behaviour:** The item renders as a.button.primary through the button decorator; CTAs wrap with a 1rem row gap and a 2.5rem column gap.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- Primary Button is the default CTA Link Style of a new item.
- Use one Primary Button per header.
- Items without a CTA Link are skipped.
- Open in New Window adds target _blank; the new tab isn't announced.

Common Authoring Mistakes

Error	Root Cause	Resolution
The CTA doesn't appear	CTA Title filled but CTA Link empty	Pick /en/contact in CTA Link
The contact page opens in a new tab	CTA Link Type set to Open in New Window	Use Default for site pages

Troubleshooting

- **Symptoms:** The button text shows the URL /en/contact instead of Talk to an expert.
- **Cause:** CTA Title was left empty, so the link keeps its URL as text.
- **Resolution:** Enter Talk to an expert in CTA Title and save.
- **Verification Steps:** The black button reads Talk to an expert.

Use Cases: "Contact us", "Talk to an expert".

Authoring Guidelines: CTA List item with **CTA Link Style** = Primary Button.

Business Rules: Default value of the field; one primary per header is Recommended.

Rendering Rules: `a.button.primary`.

Responsive Behaviour: CTAs wrap (1rem row gap, 2.5rem column gap).

SEO Impact: Standard link.

Accessibility Compliance: Link with visible text; focus styles from `styles/styles.css`.

Variation 9 — CTA Style: Secondary Button

Variation Name: CTA Link Style "Secondary Button".

Business Purpose: A second, lower-emphasis action.

Visual Example:

Figure 12: Secondary CTA — The summary column at 1440 px: the description, then Talk to an expert as a black filled pill and, beside it, Explore services as an outlined pill with dark text, both with an arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-cta-secondary.jpg)

Screenshot Details — Secondary CTA

Item	Detail
Screenshot Name	`screenshots/page-header-cta-secondary.jpg`
Screenshot Purpose	Secondary CTA
Screen Description	The summary column at 1440 px: the description, then Talk to an expert as a black filled pill and, beside it, Explore services as an outlined pill with dark text, both with an arrow.
Business Context	Next to contacting an expert, visitors of the service page may want to browse all services; that action needs less emphasis.
Author Objective	Add a second CTA List item Explore services with CTA Link Style Secondary Button.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Title (Page properties)	Cloud transformation services	Recommended (no model validation)	—	—	None
B	Description (Page properties)	Plan, migrate and run your applications on the cloud platforms that fit your business.	Recommended (no model validation)	—	—	None
C	content-type (Metadata sheet (row of this page))	Service	No	Eyebrow / collection	One short term	None
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)
(D)	Layout (Page Header › Style)	Secondary (title left, text right)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`
E	CTA Title (Page Header › CTAs › CTA List › Item 1)	Talk to an expert	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
F	CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(G)	CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
(H)	CTA Title (Page Header › CTAs › CTA List › Item 2)	Explore services	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
I	CTA Link (Page Header › CTAs › CTA List › Item 2)	Select the page or enter /en/services	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(J)	CTA Link Style (Page Header › CTAs › CTA List › Item 2)	Secondary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The black Talk to an expert button and, beside it, an outlined Explore services pill with dark text and an arrow.
- **Rendering behaviour:** Item 2 renders as a.button.secondary; on hover and focus the border and text turn brand blue. The buttons wrap onto a new line when the column is narrow.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- CTA order in the header is the order of the CTA List items.
- Secondary Button must be chosen; new items default to Primary Button.
- Keep CTA Titles to 2–4 words so the two buttons fit side by side.

Common Authoring Mistakes

Error	Root Cause	Resolution
Both buttons are black	Item 2 kept the default Primary Button	Set CTA Link Style to Secondary Button
Explore services comes first	Items were added in the wrong order	Reorder the CTA List items

Troubleshooting

- **Symptoms:** Only Talk to an expert appears.
- **Cause:** Item 2 has no CTA Link, so it is skipped.
- **Resolution:** Pick /en/services in CTA Link of item 2.
- **Verification Steps:** The outlined Explore services button shows next to the primary button.

Use Cases: "Download the report", "Explore services".

Authoring Guidelines: CTA Link Style = Secondary Button.

Business Rules: None beyond the style.

Rendering Rules: `a.button.secondary`.

Responsive Behaviour: As Variation 8.

SEO Impact: Standard link.

Accessibility Compliance: As Variation 8.

Variation 10 — CTA Style: Text Link

Variation Name: CTA Link Style "Text link".

Business Purpose: A subtle tertiary action.

Visual Example:

Figure 13: Text link CTA — The summary column at 1440 px: the description, Talk to an expert (black pill) and Explore services (outlined pill) on one line, and below them View all case studies as a plain text link with an arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-cta-text-link.jpg)

Screenshot Details — Text link CTA

Item	Detail
Screenshot Name	`screenshots/page-header-cta-text-link.jpg`
Screenshot Purpose	Text link CTA
Screen Description	The summary column at 1440 px: the description, Talk to an expert (black pill) and Explore services (outlined pill) on one line, and below them View all case studies as a plain text link with an arrow.
Business Context	A third, minor action, all case studies, should be offered without competing with the two buttons.
Author Objective	Add a third CTA List item View all case studies and set its CTA Link Style to Text link.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Title (Page properties)	Cloud transformation services	Recommended	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			(no model validation)			
B	Description (Page properties)	Plan, migrate and run your applications on the cloud platforms that fit your business.	Recommended (no model validation)	—	—	None
C	content-type (Metadata sheet (row of this page))	Service	No	Eyebrow / collection	One short term	None
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)
(D)	Layout (Page Header › Style)	Secondary (title left, text right)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`
E	CTA Title (Page Header › CTAs › CTA List › Item 1)	Talk to an expert	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
F	CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(G)	CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
(H)	CTA Title (Page Header › CTAs › CTA List › Item 2)	Explore services	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
I	CTA Link (Page Header › CTAs › CTA List › Item 2)	Select the page or enter /en/services	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(J)	CTA Link Style (Page Header › CTAs › CTA List › Item 2)	Secondary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
K	CTA Title (Page Header › CTAs › CTA List › Item 3)	View all case studies	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
L	CTA Link (Page Header › CTAs › CTA List › Item 3)	Select the page or enter /en/insights	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(M)	Note (Page Header)	CTA List item 3: set CTA Link Style to "Text link"	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The black Talk to an expert and outlined Explore services buttons, and below them the plain text link View all case studies with an arrow.
- **Rendering behaviour:** Item 3 renders as a.button.tertiary; it wraps to its own line at this column width.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- Text link has the empty value; any value other than primary or secondary renders the tertiary style.
- New items default to Primary Button, so Text link must be selected explicitly.
- Use descriptive text such as View all case studies rather than Learn more.

Common Authoring Mistakes

Error	Root Cause	Resolution
The third CTA is a black button	CTA Link Style left on the default Primary Button	Choose Text link
Four CTAs crowd the header	More than three items authored	Keep 1–3 CTAs

Troubleshooting

- **Symptoms:** View all case studies appears as a third primary button.
- **Cause:** CTA Link Style of item 3 kept its default value Primary Button.
- **Resolution:** Open item 3 in CTA List and set CTA Link Style to Text link.
- **Verification Steps:** Inspect the link: class button tertiary, shown as text with an arrow.

Use Cases: "Learn more", "View all".

Authoring Guidelines: CTA Link Style = Text link.

Business Rules: Any value other than primary / secondary renders the tertiary style.

Rendering Rules: `a.button.tertiary`.

Responsive Behaviour: As Variation 8.

SEO Impact: Standard link.

Accessibility Compliance: Use descriptive text (not "Learn more" alone where several appear).

Variation 11 — Author from the Authors Sheet

Variation Name: Author lockup from `author-id`.

Business Purpose: Consistent author presentation with photo and LinkedIn profile.

Visual Example:

Steps — Author lockup: Round 2.5rem photo, the name linked to LinkedIn, and "Chief Technology Officer, Europe" below.

Step	Where	Field / control	Value / action
1	AEM Sites › /content/tcs-corp/us/en/data/authors	author-id, name	arao, Anita Rao
2	AEM Sites › /content/tcs-corp/us/en/data/authors	designation, region	Head of Banking Research, Europe
3	AEM Sites › /content/tcs-corp/us/en/data/authors	image, linkedin	/en/media/person-1.svg, https://www.linkedin.com/in/example-anita
4	Metadata sheet (row of this page)	author-id	arao
5	Page Header › Style	Layout	Article (meta row, author)

Use Cases: Articles and blogs by registered authors.

Authoring Guidelines: Set `author-id` (metadata sheet or page metadata) to an ID of `/{locale}/data/authors`.

Business Rules: ID matched case-insensitively; name, image, designation and region from the sheet; designation and region joined with ","; name linked to `linkedin` (new tab) when present. Article layout only.

Rendering Rules: `div.page-header-author` > `div.page-header-author-image` (picture, `alt=""`) + `div.page-header-author-details` (`p.page-header-author-name` [with `a`], `p.page-header-author-designation`).

Responsive Behaviour: Same at all sizes; text 0.875rem → 1rem.

SEO Impact: Visible authorship.

Accessibility Compliance: Decorative photo; LinkedIn link with hidden "(opens in a new tab)".

Variation 12 — Author from Author Metadata

Variation Name: Author name only (`author` metadata).

Business Purpose: Guest or external authors not in the Authors sheet.

Visual Example:

Figure 14: Name-only author — The intro column of the Article header at 1440 px: the title Lessons from a mainframe-to-cloud migration over three lines and below it the name Jordan Example in light weight, with no photo, designation or link. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-author-metadata.jpg)

Screenshot Details — Name-only author

Item	Detail
Screenshot Name	`screenshots/page-header-author-metadata.jpg`
Screenshot Purpose	Name-only author
Screen Description	The intro column of the Article header at 1440 px: the title Lessons from a mainframe-to-cloud migration over three lines and below it the name Jordan Example in light weight, with no photo, designation or link.
Business Context	A guest contributor writes a blog post; the contributor isn't in the Authors sheet but must still be credited in the header.
Author Objective	Set the author metadata Jordan Example without an author-id and use Layout Article.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Title (Page properties)	Lessons from a mainframe-to-cloud migration	Recommended (no model validation)	—	—	None
(B)	Description (Page properties)	A guest contributor shares what worked, what did not and what they would do differently next time.	Recommended (no model validation)	—	—	None
(C)	content-type (Metadata sheet (row of this page))	Blog	No	Eyebrow / collection	One short term	None
(D)	publish-date (Metadata sheet (row of this page))	2026-08-27	No	Published date (Article)	YYYY-MM-DD	Non-ISO text shown as is
(E)	reading-time (Metadata sheet (row of this page))	4	No	Reading time (Article)	Minutes as a number	Digits → "{n} min read"; other text as is
F	author (Metadata sheet (row of this page))	Jordan Example	No	Fallback author name	When no author-id	None
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)
(G)	Layout (Page Header › Style)	Article (meta row, author)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The title Lessons from a mainframe-to-cloud migration and under it the name Jordan Example in light weight, without a photo, designation or link.
- **Rendering behaviour:** The author lockup has the name only; text 0.875rem below 900 px and 1rem from 900 px. The meta row shows Blog, Published 27/08/26, 4 min read and the download and share icons.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- author is used only when author-id has no match in the Authors sheet.
- A name from author has no photo, designation or LinkedIn link.
- The lockup appears only in the Article layout.

Common Authoring Mistakes

Error	Root Cause	Resolution
The guest shows a staff photo	author-id of a staff member was left in the row	Clear author-id for the guest post
No name appears	Layout Secondary or Display was chosen	Use Layout Article

Troubleshooting

- **Symptoms:** The guest name doesn't appear under the title.
- **Cause:** The author column isn't in the locale's metadata sheet or the row isn't published (F-11).
- **Resolution:** Add the author column with Jordan Example to the page row and publish the sheet.
- **Verification Steps:** meta name author is in the page source and the name shows under the title.

Use Cases: Guest posts, external contributors.

Authoring Guidelines: Leave `author-id` empty (or use an ID not in the sheet) and set `author`.

Business Rules: The name comes from `author` when the Authors sheet has no match; no image, designation or link.

Rendering Rules: Lockup with the name only.

Responsive Behaviour: As Variation 11.

SEO Impact: As Variation 11.

Accessibility Compliance: Plain text.

Variation 13 — Article with Listen Action

Variation Name: Listen action (`listen-link`).

Business Purpose: Offer an audio version of the page.

Visual Example:

Figure 15: Listen icon — The info part of the article meta row at 1440 px: Published 12/03/26, 6 min read, then the headphones (listen), download and share icons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/page-header-listen-action.jpg)

Screenshot Details — Listen icon

Item	Detail
Screenshot Name	`screenshots/page-header-listen-action.jpg`
Screenshot Purpose	Listen icon
Screen Description	The info part of the article meta row at 1440 px: Published 12/03/26, 6 min read, then the headphones (listen), download and share icons.
Business Context	The agentic banking article has a recorded audio version for listeners on the move; the header offers it next to download and share.
Author Objective	Set listen-link to the mp3 file of the article on a page with Layout Article.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Title (Page properties)	How agentic AI is reshaping banking operations	Recommended (no model validation)	—	—	None
(B)	Description (Page properties)	Autonomous agents are taking on reconciliation, onboarding and fraud triage. We look at what this means for operating models, controls and the workforce.	Recommended (no model validation)	—	—	None
(C)	Page Type (Page properties)	Article	No	Default layout	`landing` / `listing` for Landing	Case-insensitive
(D)	tags (Metadata sheet (row of this page))	tcs-corp:industry/banking, tcs-corp:topic/ai	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
(E)	content-type (Metadata sheet (row of this page))	Insight	No	Eyebrow / collection	One short term	None
(F)	publish-date (Metadata sheet (row of this page))	2026-03-12	No	Published date (Article)	YYYY-MM-DD	Non-ISO text shown as is
(G)	reading-time (Metadata sheet (row of this page))	6	No	Reading time (Article)	Minutes as a number	Digits → "{n} min read"; other text as is
(H)	author-id (Metadata sheet (row of this page))	arao	No	Authors sheet lookup	An ID of `data/authors`	Case-insensitive match
(I)	listen-link (Metadata sheet (row of this page))	https://www.example.com/audio/agentic-banking-operations.mp3	No	Listen action (Article)	Audio URL	None
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree,	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Page Header	
(J)	Layout (Page Header › Style)	Article (meta row, author)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`
(K)	CTA Title (Page Header › CTAs › CTA List › Item 1)	Talk to an expert	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
(L)	CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(M)	CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
(N)	CTA Title (Page Header › CTAs › CTA List › Item 2)	Download the report	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
(O)	CTA Link (Page Header › CTAs › CTA List › Item 2)	Select the page or enter /en/insights/state-of-ai-2026	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
(P)	CTA Link Style (Page Header › CTAs › CTA List › Item 2)	Secondary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The info part of the meta row: Published 12/03/26, 6 min read, then the headphones, download and share icons.
- **Rendering behaviour:** The listen icon is a.button.tertiary.icon-button with the headphones icon, aria-label and title Listen to this page; each icon is a 2.75rem target, dark, brand blue on hover.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- The listen icon appears only in the Article layout and only with listen-link.
- It is a link opening the audio in the same tab; no player is embedded (Not implemented).
- Its name comes from the placeholder listenToThisPage.
- A click is reported as interaction listen, with link type download for .mp3 files.

Common Authoring Mistakes

Error	Root Cause	Resolution
The headphones icon is missing	listen-link set as a page property that doesn't exist	Set listen-link in the metadata sheet row
The icon opens a 404	The mp3 URL is wrong or unpublished	Check the audio URL opens directly

Troubleshooting

- **Symptoms:** The tooltip of the icon reads Listen to this page on the German site.
- **Cause:** The de-de placeholders sheet has no translated listenToThisPage text.
- **Resolution:** Add the translation for listenToThisPage to /de-de/placeholders and publish it.
- **Verification Steps:** Hovering the icon on the de-de page shows the German text.

Use Cases: Articles with a recorded or generated audio file or podcast page.

Authoring Guidelines: Set `listen-link` to the audio file or audio page URL.

Business Rules: Only in the Article layout; the link opens in the same tab; no player is embedded (Not implemented).

Rendering Rules: `a.button.tertiary.icon-button` with `--icon-url` headphones, `aria-label` / `title` "Listen to this page", `data-cmp-interaction="listen"`.

Responsive Behaviour: 2.75rem icon button at all sizes.

SEO Impact: None.

Accessibility Compliance: Accessible name from placeholder `listenToThisPage`.

6.4.4 Authoring Experience

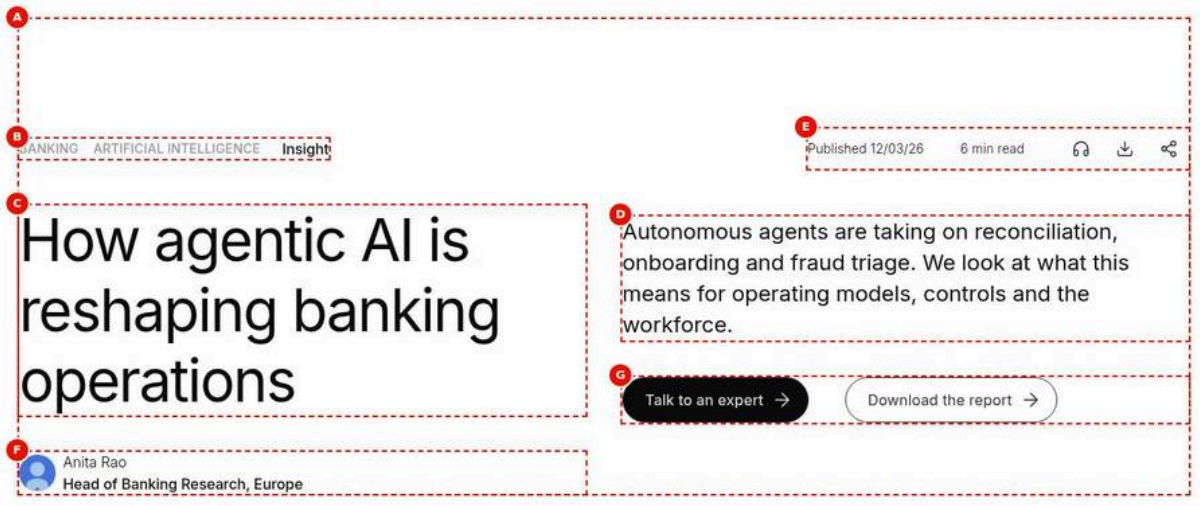

Figure 16: Universal Editor canvas — The article Page Header at 1440 px in editor mode with markers A to G: A the block, B BANKING, ARTIFICIAL INTELLIGENCE and Insight, C the title, D the description, E the date, reading time and icons, F the Anita Rao lockup, G the two CTAs. There is no H: the featured image appears only in the Landing layout. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/page-header-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/page-header-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	The article Page Header at 1440 px in editor mode with markers A to G: A the block, B BANKING, ARTIFICIAL INTELLIGENCE and Insight, C the title, D the description, E the date, reading time and icons, F the Anita Rao lockup, G the two CTAs. There is no H: the featured image appears only in the Landing layout.
Business Context	Authors need to know which parts of the header come from the block and which from page metadata, since most of it can't be edited in the block.
Author Objective	Select the Page Header in Universal Editor and map markers A to G to their sources.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Title (Page properties)	How agentic AI is reshaping banking operations	Recommended (no model validation)	—	—	None
—	Description (Page properties)	Autonomous agents are taking on reconciliation, onboarding and fraud triage. We look at what this means for operating models, controls and the workforce.	Recommended (no model validation)	—	—	None
—	Page Type (Page properties)	Article	No	Default layout	`landing` / `listing` for Landing	Case-insensitive
—	tags (Metadata sheet (row of this page))	tcs-corp:industry/banking, tcs-corp:topic/ai	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
—	content-type (Metadata sheet (row of this page))	Insight	No	Eyebrow / collection	One short term	None
—	publish-date (Metadata sheet (row of this page))	2026-03-12	No	Published date (Article)	YYYY-MM-DD	Non-ISO text shown as is
—	reading-time (Metadata sheet (row of this page))	6	No	Reading time (Article)	Minutes as a number	Digits → "{n} min read"; other text as is
—	author-id (Metadata sheet (row of this page))	arao	No	Authors sheet lookup	An ID of `data/authors`	Case-insensitive match
—	listen-link (Metadata sheet (row of this page))	https://www.example.com/audio/agentic-banking-operations.mp3	No	Listen action (Article)	Audio URL	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)
—	Layout (Page Header › Style)	Article (meta row, author)	No	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`
—	CTA Title (Page Header › CTAs › CTA List › Item 1)	Talk to an expert	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
—	CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
—	CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
—	CTA Title (Page Header › CTAs › CTA List › Item 2)	Download the report	Yes (Recommended)	Visible CTA text	Verb first, 2–4 words	None
—	CTA Link (Page Header › CTAs › CTA List › Item 2)	Select the page or enter /en/insights/state-of-ai-2026	Yes (Enforced by code: items without a link are skipped)	Destination	Page or URL	Items without link dropped
—	CTA Link Style (Page Header › CTAs › CTA List › Item 2)	Secondary Button	No	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`
—	Select (Universal Editor)	The Page Header block	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The article header in editor mode with markers: A the block, B tags and Insight, C the title, D the description, E date, reading time and icons, F the author lockup, G the CTAs.
- **Rendering behaviour:** Only Layout (A) and the CTA List (G) are authored in the block; B to F are read from metadata when the page loads, so the editor must be reloaded after Page Properties changes.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Business Rules

- B comes from page tags and content-type, C from Title, D from Description.
- E comes from publish-date, reading-time and listen-link; download and share come from code.
- F comes from author-id and the Authors sheet, or author.
- Marker H (featured image) applies only to Landing and isn't on this article.

Common Authoring Mistakes

Error	Root Cause	Resolution
The author looks for a Title field in the block	Expecting text fields in the Page Header	Edit Title and Description in Page Properties
Changed Description doesn't show in the editor	Metadata is read on page load	Reload Universal Editor

Troubleshooting

- **Symptoms:** Universal Editor shows the previous title after Page Properties were saved.
- **Cause:** The block reads metadata only when the page loads.
- **Resolution:** Reload Universal Editor in the browser after saving Page Properties.
- **Verification Steps:** C shows the new title.

Annotations:

- A = The Page Header block (select it to open Layout and CTA List).
- B = Eyebrow / tags (from `content-type` or the page tags; not editable in the block).
- C = Title H1 (from the page Title in Page Properties).
- D = Description (from the page Description in Page Properties).
- E = Meta row: Published date, reading time (metadata `publish-date`, `reading-time`) and actions (listen from `listen-link`; download and share from code).
- F = Author lockup (`author-id` and the Authors sheet, or `author`).
- G = CTA List items (authored in the block).
- H = Featured image (Landing; metadata `featured-image`).

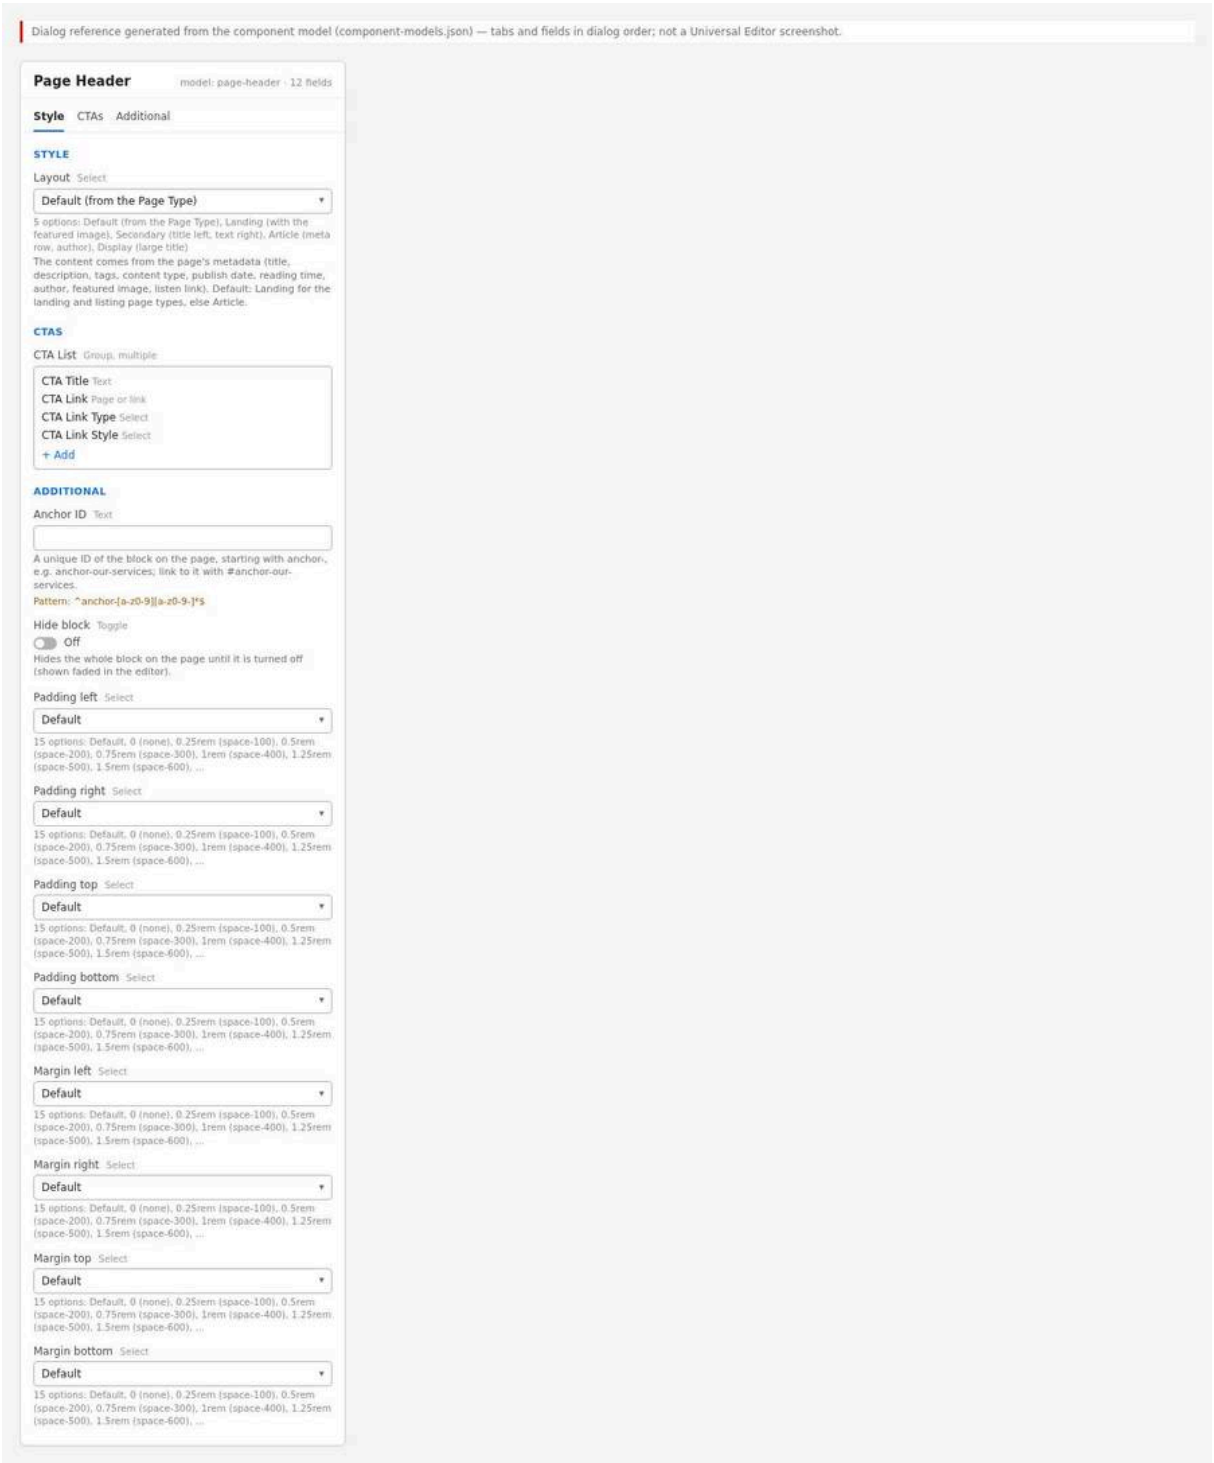

Figure 17: Properties panel — The Page Header properties with the Style tab (Layout select open), the CTAs tab with two CTA List items, and the Additional tab. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/page-header-properties-panel.jpg)

Properties panel description.

- **Style tab: Layout** (select): Default (from the Page Type); Landing (with the featured image); Secondary (title left, text right); Article (meta row, author); Display (large title). Its help text lists the metadata the block reads.
- **CTAs tab: CTA List** (multifield); each item: **CTA Title** (text), **CTA Link** (content picker), **CTA Link Type** (Default / Open in New Window), **CTA Link Style** (Text link / Primary Button / Secondary Button; default Primary Button).

- **Additional tab: Anchor ID**, **Hide block**, **Padding left / right / top / bottom**, **Margin left / right / top / bottom**.

6.4.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites select the page and choose **Edit**.

Expected Result: The page opens in Universal Editor.

Steps — Open the page: Sites console with the page selected and Edit highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites › /content/tcs-corp/us/en/insights	Select	The page (e.g. agentic-banking-operations)
2	AEM Sites toolbar	Edit	The page opens in Universal Editor

Step 2 — Fill the page metadata

Action: Open **Page Properties**: enter **Title** (the H1), **Description**, page tags, and the **Page Type**. In the locale's metadata sheet, add or update the row for the page URL with `content-type`, `publish-date` (YYYY-MM-DD), `reading-time` (minutes), `author-id`, `featured-image` and `listen-link` as needed. Publish the sheet.

Expected Result: The page metadata contains the values.

Steps — Metadata inputs: Page Properties with Title and Description, and the metadata sheet row with content-type, publish-date, reading-time and author-id.

Step	Where	Field / control	Value / action
1	AEM Sites › Page Properties	Title	How agentic AI is reshaping banking operations
2	AEM Sites › Page Properties	Description	Autonomous agents are taking on reconciliation, onboarding and fraud triage. We look at what this means for operating models, controls and the workforce.
3	AEM Sites › Page Properties	Page Type	Article
4	Metadata sheet (/content/tcs-corp/us/en/metadata)	url	/en/insights/agentic-banking-operations
5	Metadata sheet (/content/tcs-corp/us/en/metadata)	content-type, publish-date	Insight, 2026-03-12
6	Metadata sheet (/content/tcs-corp/us/en/metadata)	reading-time, author-id	6, arao
7	Metadata sheet (/content/tcs-corp/us/en/metadata)	listen-link	https://www.example.com/audio/agentic-banking-operations.mp3
8	Universal Editor toolbar	Publish	Publish the metadata sheet

Step 3 — Add the Page Header block

Action: Select the first section, choose **Add** (+) and pick **Page Header**; move it to the top of the first section.

Expected Result: The block renders from the metadata (Article or Landing layout by default).

Steps — Adding the block: The component picker with Page Header highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section 1	Select the first section

Step	Where	Field / control	Value / action
2	Section › Add (+)	Component	Page Header
3	Universal Editor › Content tree	Page Header	Drag to the top of the first section

Step 4 — Choose the Layout (Style tab)

Action: Select the block; in **Style > Layout** choose the layout or keep Default.

Expected Result: The block re-renders in the chosen layout.

Steps — Layout select: The Layout select open with its five options.

Step	Where	Field / control	Value / action
1	Page Header › Style	Layout	Open the select: Default (from the Page Type); Landing (with the featured image); Secondary (title left, text right); Article (meta row, author); Display (large title)
2	Page Header › Style	Layout	Article (meta row, author)

Step 5 — Add CTAs (CTAs tab)

Action: In **CTAs > CTA List** choose **Add**; fill **CTA Title**, pick **CTA Link**, choose **CTA Link Type** and **CTA Link Style**. Repeat and reorder.

Expected Result: The CTAs appear below the description.

Steps — CTA List: Two CTA items: “Talk to an expert” (Primary) and “Explore services” (Secondary).

Step	Where	Field / control	Value / action
1	Page Header › CTAs	CTA List › Add	Item 1
2	CTA List item 1	CTA Title	Talk to an expert
3	CTA List item 1	CTA Link	/content/tcs-corp/us/en/contact
4	CTA List item 1	CTA Link Style	Primary Button
5	Page Header › CTAs	CTA List › Add	Item 2
6	CTA List item 2	CTA Title	Explore services
7	CTA List item 2	CTA Link	/content/tcs-corp/us/en/services
8	CTA List item 2	CTA Link Style	Secondary Button

Step 6 — Set the Additional tab (optional)

Action: Set Anchor ID, spacing or Hide block.

Expected Result: Options apply to the block.

Steps — Additional tab: The Additional tab with Padding bottom set.

Step	Where	Field / control	Value / action
1	Page Header › Additional	Padding bottom	4rem (space-1600)

Step 7 — Check the author data

Action: For the Article layout, verify the `author-id` exists in `/{locale}/data/authors` with name, designation, region, image and LinkedIn.

Expected Result: The author lockup shows photo, name and designation.

Steps — Authors sheet: The authors sheet row for the author-id used on the page.

Step	Where	Field / control	Value / action
1	AEM Sites › /content/tcs-corp/us/en/data/authors	Open	The Authors sheet
2	Authors sheet › row	author-id	arao (the page's author-id)
3	Authors sheet › row	name, designation, region	Anita Rao, Head of Banking Research, Europe
4	Authors sheet › row	image	/en/media/person-1.svg
5	Authors sheet › row	linkedin	https://www.linkedin.com/in/example-anita
6	Universal Editor toolbar	Publish	Publish the Authors sheet if changed

Step 8 — Reload and preview

Action: Reload the editor (metadata changes are read when the page loads), then publish the page to Preview and open it on `.aem.page`.

Expected Result: The preview shows all metadata-driven parts.

Steps — Preview: The preview page header at desktop width.

Step	Where	Field / control	Value / action
1	Browser	Reload	Reload Universal Editor (metadata is read when the page loads)
2	Universal Editor toolbar	Publish	Publish to Preview
3	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/insights/agentic-banking-operations
4	Preview	Screen width	1440 px (desktop)

Step 9 — Validate

Action: Run the Validation Process checklist at 390px, 768px, 1024px and 1440px.

Expected Result: All checks pass.

Steps — Validation: The header at mobile and desktop widths side by side.

Step	Where	Field / control	Value / action
1	Preview	Screen width	390 px (mobile)
2	Preview	Screen width	768 px (tablet)
3	Preview	Screen width	1024 px (tablet)
4	Preview	Screen width	1440 px (desktop)
5	Preview	Check	One H1 equal to the Title; layout, eyebrow / tags, date dd/mm/yy, reading time, author, CTAs

Step 10 — Publish

Action: Publish the page (and the metadata / authors sheets if changed) to Live.

Expected Result: The live page shows the header.

Steps — Publishing: Publish dialog with the page and the metadata sheet.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Publish
2	Publish dialog	Destination	Live
3	Publish dialog	Items	The page and the metadata sheet (and the Authors sheet if changed)
4	Publish dialog	Publish	Confirm

Preview Process

1. Publish the metadata sheet, the authors sheet and the taxonomy (if changed) to Preview, then the page.
2. Check the header on `.aem.page`; bulk metadata applies only once all 13 locale sheets are listed in the site configuration's `metadata.source` (see Part on administration); until then use page properties.

Publishing Process

1. Publish sheets first, then the page, to Live.
2. Changes to metadata sheets affect every page matching the row's URL pattern.

Validation Process

- ☐ Exactly one H1 on the page, equal to the page Title.
- ☐ The layout is the intended one (check Default resolution by Page Type).
- ☐ Eyebrow / tags show the right labels (taxonomy titles in the locale's language).
- ☐ Article: date as dd/mm/yy after "Published"; reading time "{n} min read"; listen (if set), download and share icons work; "Link copied to clipboard" shows on browsers without a share dialog.
- ☐ Author: photo, name, designation and region correct; LinkedIn link opens a new tab.
- ☐ CTAs in the right styles and order; new-window CTAs open a new tab.
- ☐ Landing: featured image loads, sharp at 1200px; no layout shift.
- ☐ Display: tags separated by "|".
- ☐ Translated UI text in non-English locales.
- ☐ No empty spaces from missing metadata.

Rollback Process

1. Restore the previous page version (Layout and CTAs) and publish.
2. Restore the previous metadata / authors sheet version and publish.
3. To remove a broken authored header on a template page, delete it: the template adds the automatic header again.

The walkthroughs below repeat the steps above for each variation of chapter 6.4.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Default Layout (from the Page Type)

Reproduces the screenshot `screenshots/page-header-default-layout.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in First page (landing) › Page properties

Action: Select **First page (landing)** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Title** (A) = Banking and financial services; **Description** (B) = We help banks, insurers and capital markets firms modernise their core, launch new digital products and run resilient operations.

Expected Result: Title Banking and financial services and its Description are set; they become the H1 and the paragraph.

Step 3 — Fill in First page (landing) › Metadata sheet (row of this page)

Action: Select **First page (landing)** in the content tree and open the **Metadata sheet (row of this page)** tab of the properties panel. Enter: **page-type** (C) = landing; **content-type** (D) = Industry; **featured-image** (E) = /en/media/photo-1.svg.

Expected Result: The row sets page-type landing, content-type Industry and featured-image /en/media/photo-1.svg for the page.

Step 4 — Fill in First page (landing) › Section › Add (+)

Action: Select **First page (landing)** in the content tree and open the **Section › Add (+)** tab of the properties panel. Enter: **Component** (F) = Page Header.

Expected Result: A Page Header is added to the first section and renders from the metadata.

Step 5 — Fill in First page (landing) › Page Header › Style

Action: Select **First page (landing)** in the content tree and open the **Page Header › Style** tab of the properties panel. Enter: **Layout** (G) = Default (from the Page Type), left as it is.

Expected Result: With Default the block resolves to Landing: INDUSTRY eyebrow, large title, description and the image on the right.

Step 6 — First page (landing) › Page Header › CTAs

Action: CTA List: Item 1: CTA Title = Talk to an expert, CTA Link = Select the page or enter /en/contact, CTA Link Style = Primary Button; Item 2: CTA Title = Explore banking insights, CTA Link = Select the page or enter /en/insights, CTA Link Style = Secondary Button.

Expected Result: Talk to an expert and Explore banking insights appear under the description.

Step 7 — Fill in Second page (article) › Page properties

Action: Select **Second page (article)** in the content tree and open the **Page properties** tab of the properties panel. Enter: **Title** (H) = How agentic AI is reshaping banking operations; **Description** (I) = Autonomous agents are taking on reconciliation, onboarding and fraud triage. We look at what this means for operating models, controls and the workforce; **Page Type** (J) = Article.

Expected Result: Title, Description and Page Type Article are set on the article page.

Step 8 — Fill in Second page (article) › Metadata sheet (row of this page)

Action: Select **Second page (article)** in the content tree and open the **Metadata sheet (row of this page)** tab of the properties panel. Enter: **tags** (K) = tcs-corp:industry/banking, tcs-corp:topic/ai; **content-type** (L) = Insight; **publish-date** (M) = 2026-03-12; **reading-time** (N) = 6; **author-id** (O) = arao; **listen-link** (P) = https://www.example.com/audio/agentic-banking-operations.mp3.

Expected Result: Tags, Insight, the date, 6 min read, arao and the listen link fill the meta row and the author lockup.

Step 9 — Fill in Second page (article) › Section › Add (+)

Action: Select **Second page (article)** in the content tree and open the **Section › Add (+)** tab of the properties panel. Enter: **Component** (Q) = Page Header.

Expected Result: A Page Header is added to the first section of the article page.

Step 10 — Fill in Second page (article) › Page Header › Style

Action: Select **Second page (article)** in the content tree and open the **Page Header › Style** tab of the properties panel. Enter: **Layout** (R) = Default (from the Page Type), left as it is.

Expected Result: With Default the block resolves to Article: meta row, title with author, description column.

Step 11 — Fill in Second page (article) › Page Header › CTAs

Action: Select **Second page (article)** in the content tree and open the **Page Header › CTAs** tab of the properties panel. Enter: **CTA List** (S) = Item 1: CTA Title = Talk to an expert, CTA Link = Select the page or enter /en/contact, CTA Link Style = Primary Button.

Expected Result: One black Talk to an expert primary button appears under the description.

Step 12 — Preview

Action: Screen width: 1200 px (desktop, both pages).

Expected Result: Both pages at 1200 px: the landing page in the Landing layout, the article in the Article layout.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two pages at 1200 px: on the left Banking and financial services in the Landing layout with the INDUSTRY eyebrow and the featured image beside the text; on the right the agentic AI article in the Article layout with its meta row and author.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends each page to aem.page or aem.live; the page-type landing value comes from the metadata sheet, which must be published itself and listed in metadata.source (F-11).

Step 15 — Verify

Action: On the live page check: The block has the class landing and the featured image shows beside the text.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Landing with Featured Image

Reproduces the screenshot `screenshots/page-header-landing-with-image.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Page properties

Action: Open the page properties of the page (Universal Editor › Page properties) and enter: **Title** (A) = Banking and financial services; **Description** (B) = We help banks, insurers and capital markets firms modernise their core, launch new digital products and run resilient operations.

Expected Result: Title Banking and financial services becomes the H1 and the Description the paragraph under it.

Step 3 — Fill in Metadata sheet (row of this page)

Action: In the locale's bulk metadata sheet, add or edit the row of this page and enter: **content-type** (C) = Industry; **featured-image** (D) = /en/media/photo-1.svg.

Expected Result: content-type Industry becomes the INDUSTRY eyebrow; featured-image /en/media/photo-1.svg becomes the image beside the text.

Step 4 — Add the Page Header

Action: Select the section in the content tree, choose **Add (+)** and pick **Page Header**.

Expected Result: A Page Header is added to the first section and renders from the page metadata.

Step 5 — Fill in Page Header › Style

Action: Select **Page Header** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (E) = Landing (with the featured image).

Expected Result: Layout Landing places eyebrow, title, description and CTAs on the left and the featured image on the right.

Step 6 — Fill in Page Header › CTAs

Action: Select **Page Header** in the content tree and open the **CTAs** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (F) = Talk to an expert, **CTA Link** (G) = Select the page or enter /en/contact, **CTA Link Style** (H) = Primary Button; **CTA List** › Item 2: **CTA Title** (I) = Explore banking insights, **CTA Link** (J) = Select the page or enter /en/insights, **CTA Link Style** (K) = Secondary Button.

Expected Result: Talk to an expert (black primary) and Explore banking insights (outlined secondary) appear under the description.

Step 7 — Preview

Action: Screen width: 1440 px (desktop).

Expected Result: At 1440 px the image sits beside the text; at 390 px it follows the CTAs below the text.

Step 8 — Preview

Action: Screen width: 390 px (mobile).

Expected Result: At 1440 px the image sits beside the text; at 390 px it follows the CTAs below the text.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Desktop: INDUSTRY eyebrow, a very large semibold title, the description and two CTAs on the left, the blue featured image on the right. Mobile: the same text stacked, then the image below the CTAs.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Step 11 — Verify

Action: On the live page check: Inspect the image: a picture element with loading eager and fetchpriority high.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Landing without Featured Image

Reproduces the screenshot `screenshots/page-header-landing-text-only.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Page properties

Action: Open the page properties of the page (Universal Editor › Page properties) and enter: **Title** (A) = All insights; **Description** (B) = Research, perspectives and case studies from our consultants and industry experts.

Expected Result: Title All insights becomes the H1 and the Description the paragraph under it.

Step 3 — Fill in Metadata sheet (row of this page)

Action: In the locale's bulk metadata sheet, add or edit the row of this page and enter: **content-type** (C) = Insights.

Expected Result: content-type Insights appears as the INSIGHTS eyebrow above the title.

Step 4 — Add the Page Header

Action: Select the section in the content tree, choose **Add (+)** and pick **Page Header**.

Expected Result: A Page Header is added to the first section and renders from the page metadata.

Step 5 — Fill in Page Header › Style

Action: Select **Page Header** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Landing (with the featured image).

Expected Result: Layout Landing stacks eyebrow, title and description across the full width, as there is no featured image.

Step 6 — Fill in Page Header › CTAs

Action: Select **Page Header** in the content tree and open the **CTAs** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Subscribe to updates, **CTA Link** (F) = Select the page or enter /en/contact, **CTA Link Style** (G) = Primary Button.

Expected Result: A black Subscribe to updates primary button appears under the description.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The INSIGHTS eyebrow, the very large semibold title All insights, the description and a black Subscribe to updates button stacked across the full width; no image.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Step 9 — Verify

Action: On the live page check: The eyebrow INSIGHTS shows above All insights.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Secondary

Reproduces the screenshot `screenshots/page-header-secondary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Page properties

Action: Open the page properties of the page (Universal Editor › Page properties) and enter: **Title** (A) = Our leadership; **Description** (B) = Meet the executives and board members who set our strategy and guide our teams around the world.

Expected Result: Title Our leadership becomes the H1 and the Description the paragraph in the right column.

Step 3 — Fill in Metadata sheet (row of this page)

Action: In the locale's bulk metadata sheet, add or edit the row of this page and enter: **content-type** (C) = About us.

Expected Result: content-type About us appears as the ABOUT US eyebrow above both columns.

Step 4 — Add the Page Header

Action: Select the section in the content tree, choose **Add (+)** and pick **Page Header**.

Expected Result: A Page Header is added and renders from the page metadata in the default Article layout.

Step 5 — Fill in Page Header › Style

Action: Select **Page Header** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Secondary (title left, text right).

Expected Result: Layout Secondary removes the meta row and places the title left and the description right.

Step 6 — Fill in Page Header › CTAs

Action: Select **Page Header** in the content tree and open the **CTAs** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Meet the board, **CTA Link** (F) = Select the page or enter /en/about, **CTA Link Style** (G) = Primary Button; **CTA List** › Item 2: **CTA Title** (H) = Corporate governance, **CTA Link** (I) = Select the page or enter /en/about, **CTA Link Style** (J) = Secondary Button.

Expected Result: Meet the board (black primary) and Corporate governance (outlined secondary) appear under the description.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: ABOUT US eyebrow above both columns; the semibold title Our leadership on the left; the description, Meet the board (black primary) and Corporate governance (outlined secondary) on the right, slightly lower.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Step 9 — Verify

Action: On the live page check: The H1 reads Our leadership.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Article

Reproduces the screenshot `screenshots/page-header-article.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Page properties

Action: Open the page properties of the page (Universal Editor › Page properties) and enter: **Title** (A) = How agentic AI is reshaping banking operations; **Description** (B) = Autonomous agents are taking on reconciliation, onboarding and fraud triage. We look at what this means for operating models, controls and the workforce; **Page Type** (C) = Article.

Expected Result: Title becomes the H1 How agentic AI is reshaping banking operations, Description the paragraph; Page Type Article sets the default layout.

Step 3 — Fill in Metadata sheet (row of this page)

Action: In the locale's bulk metadata sheet, add or edit the row of this page and enter: **tags** (D) = tcs-corp:industry/banking, tcs-corp:topic/ai; **content-type** (E) = Insight; **publish-date** (F) = 2026-03-12; **reading-time** (G) = 6; **author-id** (H) = arao; **listen-link** (I) = https://www.example.com/audio/agentic-banking-operations.mp3.

Expected Result: After reload the meta row shows BANKING, ARTIFICIAL INTELLIGENCE, Insight, Published 12/03/26, 6 min read, the listen icon and the Anita Rao lockup.

Step 4 — Add the Page Header

Action: Select the section in the content tree, choose **Add (+)** and pick **Page Header**.

Expected Result: A Page Header is added and renders at once from the page metadata, in the Article layout for this Page Type.

Step 5 — Fill in Page Header › Style

Action: Select **Page Header** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (J) = Article (meta row, author).

Expected Result: Layout Article (meta row, author) keeps the meta row, the title with the author lockup and the summary column.

Step 6 — Fill in Page Header › CTAs

Action: Select **Page Header** in the content tree and open the **CTAs** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (K) = Talk to an expert, **CTA Link** (L) = Select the page or enter /en/contact, **CTA Link Style** (M) = Primary Button; **CTA List** › Item 2: **CTA Title** (N) = Download the report, **CTA Link** (O) = Select the page or enter /en/insights/state-of-ai-2026, **CTA Link Style** (P) = Secondary Button.

Expected Result: Talk to an expert (black primary) and Download the report (outlined secondary) appear under the description.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Meta row with BANKING and ARTIFICIAL INTELLIGENCE in grey caps, Insight, Published 12/03/26, 6 min read and headphones, download and share icons; title with the round Anita Rao photo, name and Head of Banking Research, Europe; description and two CTAs on the right.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Step 9 — Verify

Action: On the live page check: BANKING and ARTIFICIAL INTELLIGENCE show before Insight.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Display

Reproduces the screenshot `screenshots/page-header-display.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Page properties

Action: Open the page properties of the page (Universal Editor › Page properties) and enter: **Title** (A) = Sustainable cloud, by design; **Description** (B) = How enterprises cut the carbon footprint of their technology estate while scaling AI workloads.

Expected Result: Title Sustainable cloud, by design becomes the H1 and the Description the paragraph on the right.

Step 3 — Fill in Metadata sheet (row of this page)

Action: In the locale's bulk metadata sheet, add or edit the row of this page and enter: **tags** (C) = tcs-corp:topic/cloud, tcs-corp:topic/ai, tcs-corp:topic/sustainability.

Expected Result: The three tags appear as CLOUD, ARTIFICIAL INTELLIGENCE and SUSTAINABILITY.

Step 4 — Add the Page Header

Action: Select the section in the content tree, choose **Add (+)** and pick **Page Header**.

Expected Result: A Page Header is added and renders from the page metadata in the default Article layout.

Step 5 — Fill in Page Header › Style

Action: Select **Page Header** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Display (large title).

Expected Result: Layout Display shows the tags with bars above a 6rem title and centres both columns.

Step 6 — Fill in Page Header › CTAs

Action: Select **Page Header** in the content tree and open the **CTAs** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Explore our approach, **CTA Link** (F) = Select the page or enter /en/services/cloud, **CTA Link Style** (G) = Primary Button; **CTA List** › Item 2: **CTA Title** (H) = Read the report, **CTA Link** (I) = Select the page or enter /en/insights/state-of-ai-2026, **CTA Link Style** (J) = Secondary Button.

Expected Result: Explore our approach (black primary) and Read the report (outlined secondary) appear under the description.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: CLOUD, ARTIFICIAL INTELLIGENCE and SUSTAINABILITY separated by vertical bars above a very large dark slate title on the left; the description and Explore our approach and Read the report buttons vertically centred on the right.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Step 9 — Verify

Action: On the live page check: The eyebrow shows the German labels separated by bars.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Automatic Page Header (Templates)

Reproduces the screenshot `screenshots/page-header-template-automatic.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Page properties

Action: Open the page properties of the page (Universal Editor › Page properties) and enter: **Title** (A) = TCS expands its AI innovation network in Europe; **Description** (B) = Three new innovation hubs will help clients design, test and scale AI solutions with local teams; **Page Type** (C) = Press Release.

Expected Result: Title, Description and Page Type Press Release are set; the template adds the header and the H1.

Step 3 — Fill in Metadata sheet (row of this page)

Action: In the locale's bulk metadata sheet, add or edit the row of this page and enter: **tags** (D) = tcs-corp:region/europe, tcs-corp:topic/ai; **content-type** (E) = Press Release; **publish-date** (F) = 2026-09-15; **reading-time** (G) = 3; **region** (H) = Europe.

Expected Result: Tags, Press Release, 15/09/26 and 3 min read fill the meta row; region Europe filters the media contacts.

Step 4 — Fill in Page

Action: Select **Page** in the content tree and enter in the properties panel: **Page Header** (I) = None authored: the Press Release template adds it (Article layout, no CTAs).

Expected Result: No block is authored; the page shows the Article layout header without CTAs, added by the template.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: EUROPE, ARTIFICIAL INTELLIGENCE and Press Release on the left of the meta row, Published 15/09/26, 3 min read and download and share icons on the right; the title on the left and the description on the right; no CTAs and no author.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the header is built from the page metadata on load, so the metadata sheet row must be published too. The Media Contacts sheet is a separate publish step.

Step 7 — Verify

Action: On the live page check: The body has the press-release class and the Article layout header appears at the top.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — CTA Style: Primary Button

Reproduces the screenshot `screenshots/page-header-cta-primary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Page properties

Action: Open the page properties of the page (Universal Editor › Page properties) and enter: **Title** (A) = Cloud transformation services; **Description** (B) = Plan, migrate and run your applications on the cloud platforms that fit your business.

Expected Result: Title Cloud transformation services becomes the H1 and the Description the paragraph in the summary column.

Step 3 — Fill in Metadata sheet (row of this page)

Action: In the locale's bulk metadata sheet, add or edit the row of this page and enter: **content-type** (C) = Service.

Expected Result: content-type Service appears as the SERVICE eyebrow above both columns.

Step 4 — Add the Page Header

Action: Select the section in the content tree, choose **Add (+)** and pick **Page Header**.

Expected Result: A Page Header is added and renders from the page metadata in the default Article layout.

Step 5 — Fill in Page Header › Style

Action: Select **Page Header** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Secondary (title left, text right).

Expected Result: Layout Secondary places the title left and the description with the CTAs right.

Step 6 — Fill in Page Header › CTAs

Action: Select **Page Header** in the content tree and open the **CTAs** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to an expert, **CTA Link** (F) = Select the page or enter /en/contact, **CTA Link Style** (G) = Primary Button.

Expected Result: A black filled Talk to an expert button with an arrow appears under the description.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The summary column with the description and a black filled pill Talk to an expert with a trailing arrow below it.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Step 9 — Verify

Action: On the live page check: The black button reads Talk to an expert.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — CTA Style: Secondary Button

Reproduces the screenshot `screenshots/page-header-cta-secondary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Page properties

Action: Open the page properties of the page (Universal Editor › Page properties) and enter: **Title** (A) = Cloud transformation services; **Description** (B) = Plan, migrate and run your applications on the cloud platforms that fit your business.

Expected Result: Title Cloud transformation services becomes the H1 and the Description the paragraph in the summary column.

Step 3 — Fill in Metadata sheet (row of this page)

Action: In the locale's bulk metadata sheet, add or edit the row of this page and enter: **content-type** (C) = Service.

Expected Result: content-type Service appears as the SERVICE eyebrow above both columns.

Step 4 — Add the Page Header

Action: Select the section in the content tree, choose **Add (+)** and pick **Page Header**.

Expected Result: A Page Header is added and renders from the page metadata in the default Article layout.

Step 5 — Fill in Page Header › Style

Action: Select **Page Header** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Secondary (title left, text right).

Expected Result: Layout Secondary places the title left and the description with the CTAs right.

Step 6 — Fill in Page Header › CTAs

Action: Select **Page Header** in the content tree and open the **CTAs** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to an expert, **CTA Link** (F) = Select the page or enter /en/contact, **CTA Link Style** (G) = Primary Button; **CTA List** › Item 2: **CTA Title** (H) = Explore services, **CTA Link** (I) = Select the page or enter /en/services, **CTA Link Style** (J) = Secondary Button.

Expected Result: Talk to an expert (black primary) and Explore services (outlined secondary) appear side by side.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The black Talk to an expert button and, beside it, an outlined Explore services pill with dark text and an arrow.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Step 9 — Verify

Action: On the live page check: The outlined Explore services button shows next to the primary button.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 10 — CTA Style: Text Link

Reproduces the screenshot `screenshots/page-header-cta-text-link.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Page properties

Action: Open the page properties of the page (Universal Editor › Page properties) and enter: **Title** (A) = Cloud transformation services; **Description** (B) = Plan, migrate and run your applications on the cloud platforms that fit your business.

Expected Result: Title Cloud transformation services becomes the H1 and the Description the paragraph in the summary column.

Step 3 — Fill in Metadata sheet (row of this page)

Action: In the locale's bulk metadata sheet, add or edit the row of this page and enter: **content-type** (C) = Service.

Expected Result: content-type Service appears as the SERVICE eyebrow above both columns.

Step 4 — Add the Page Header

Action: Select the section in the content tree, choose **Add (+)** and pick **Page Header**.

Expected Result: A Page Header is added and renders from the page metadata in the default Article layout.

Step 5 — Fill in Page Header › Style

Action: Select **Page Header** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (D) = Secondary (title left, text right).

Expected Result: Layout Secondary places the title left and the description with the CTAs right.

Step 6 — Fill in Page Header › CTAs

Action: Select **Page Header** in the content tree and open the **CTAs** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to an expert, **CTA Link** (F) = Select the page or enter /en/contact, **CTA Link Style** (G) = Primary Button; **CTA List** › Item 2: **CTA Title** (H) = Explore services, **CTA Link** (I) = Select the page or enter /en/services, **CTA Link Style** (J) = Secondary Button; **CTA List** › Item 3: **CTA Title** (K) = View all case studies, **CTA Link** (L) = Select the page or enter /en/insights.

Expected Result: Three CTAs appear; item 3 shows as a black button until its style is changed.

Step 7 — Fill in Page Header

Action: Select **Page Header** in the content tree and enter in the properties panel: **Note** (M) = CTA List item 3: set CTA Link Style to "Text link".

Expected Result: With CTA Link Style Text link, View all case studies becomes a plain text link with an arrow.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The black Talk to an expert and outlined Explore services buttons, and below them the plain text link View all case studies with an arrow.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Step 10 — Verify

Action: On the live page check: Inspect the link: class button tertiary, shown as text with an arrow.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 12 — Author from Author Metadata

Reproduces the screenshot `screenshots/page-header-author-metadata.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Page properties

Action: Open the page properties of the page (Universal Editor › Page properties) and enter: **Title** (A) = Lessons from a mainframe-to-cloud migration; **Description** (B) = A guest contributor shares what worked, what did not and what they would do differently next time.

Expected Result: Title Lessons from a mainframe-to-cloud migration becomes the H1 and the Description the paragraph.

Step 3 — Fill in Metadata sheet (row of this page)

Action: In the locale's bulk metadata sheet, add or edit the row of this page and enter: **content-type** (C) = Blog; **publish-date** (D) = 2026-08-27; **reading-time** (E) = 4; **author** (F) = Jordan Example.

Expected Result: Blog, Published 27/08/26, 4 min read and the name Jordan Example fill the meta row and the lockup.

Step 4 — Add the Page Header

Action: Select the section in the content tree, choose **Add (+)** and pick **Page Header**.

Expected Result: A Page Header is added to the first section; with no Page Type set it resolves to Article.

Step 5 — Fill in Page Header › Style

Action: Select **Page Header** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (G) = Article (meta row, author).

Expected Result: Layout Article shows the meta row and the name-only lockup under the title.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The title Lessons from a mainframe-to-cloud migration and under it the name Jordan Example in light weight, without a photo, designation or link.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Step 8 — Verify

Action: On the live page check: meta name author is in the page source and the name shows under the title.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 13 — Article with Listen Action

Reproduces the screenshot `screenshots/page-header-listen-action.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Page properties

Action: Open the page properties of the page (Universal Editor › Page properties) and enter: **Title** (A) = How agentic AI is reshaping banking operations; **Description** (B) = Autonomous agents are taking on reconciliation, onboarding and fraud triage. We look at what this means for operating models, controls and the workforce; **Page Type** (C) = Article.

Expected Result: Title becomes the H1 How agentic AI is reshaping banking operations, Description the paragraph; Page Type Article sets the default layout.

Step 3 — Fill in Metadata sheet (row of this page)

Action: In the locale's bulk metadata sheet, add or edit the row of this page and enter: **tags** (D) = tcs-corp:industry/banking, tcs-corp:topic/ai; **content-type** (E) = Insight; **publish-date** (F) = 2026-03-12; **reading-time** (G) = 6; **author-id** (H) = arao; **listen-link** (I) = https://www.example.com/audio/agentic-banking-operations.mp3.

Expected Result: After reload the meta row shows BANKING, ARTIFICIAL INTELLIGENCE, Insight, Published 12/03/26, 6 min read, the listen icon and the Anita Rao lockup.

Step 4 — Add the Page Header

Action: Select the section in the content tree, choose **Add (+)** and pick **Page Header**.

Expected Result: A Page Header is added and renders at once from the page metadata, in the Article layout for this Page Type.

Step 5 — Fill in Page Header › Style

Action: Select **Page Header** in the content tree and open the **Style** tab of the properties panel. Enter: **Layout** (J) = Article (meta row, author).

Expected Result: Layout Article (meta row, author) keeps the meta row, the title with the author lockup and the summary column.

Step 6 — Fill in Page Header › CTAs

Action: Select **Page Header** in the content tree and open the **CTAs** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (K) = Talk to an expert, **CTA Link** (L) = Select the page or enter /en/contact, **CTA Link Style** (M) = Primary Button; **CTA List** › Item 2: **CTA Title** (N) = Download the report, **CTA Link** (O) = Select the page or enter /en/insights/state-of-ai-2026, **CTA Link Style** (P) = Secondary Button.

Expected Result: Talk to an expert (black primary) and Download the report (outlined secondary) appear under the description.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The info part of the meta row: Published 12/03/26, 6 min read, then the headphones, download and share icons.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the metadata sheet row and the Authors sheet are separate publish steps. Bulk metadata applies only once metadata.source lists the locale sheets (F-11); the query index shows the new values after it is updated.

Step 9 — Verify

Action: On the live page check: Hovering the icon on the de-de page shows the German text.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.4.6 Authorable Field Specification

Page Header block (model `page-header`, key-value)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Style tab — Layout (`classes`)	select	No	No	Default (`""`)	Layout	Keep Default unless the page needs another layout	Options: Default (from the Page Type) `""`; Landing `landing`; Secondary `secondary`; Article `article`; Display `display`	`secondary`
CTAs tab — CTA List (`ctas`)	container (composite multi-field)	No	Yes	No items	Calls to action	1–2 CTAs	Items without a link are skipped	Talk to an expert; Explore services
Additional tab — Anchor ID (`classes_anchor`)	text	No	No	Empty	Block id	Start with `anchor-`	Enforced: `^anchor-[a-z0-9][a-z0-9-]*$`	`anchor-intro`
Hide block (`classes_hideblock`)	boolean	No	No	false	Hide on site	Temporary use	None	false
Padding left (`classes_paddingleft`)	select	No	No	Default	Spacing	Tokens only	Default; 0; 0.25rem … 7.5rem (`pl-*`)	`pl-0`
Padding right (`classes_paddingright`)	select	No	No	Default	Spacing	Tokens only	Same (`pr-*`)	`pr-0`
Padding top (`classes_paddingtop`)	select	No	No	Default	Spacing	Overrides the block's 2.5rem / 7.5rem top padding	Same (`pt-*`)	`pt-1200`
Padding bottom (`classes_paddingbottom`)	select	No	No	Default	Spacing	Tokens only	Same (`pb-*`)	`pb-800`
Margin left (`classes_marginleft`)	select	No	No	Default	Spacing	Tokens only	Same (`ml-*`)	`ml-0`
Margin right (`classes_marginright`)	select	No	No	Default	Spacing	Tokens only	Same (`mr-*`)	`mr-0`
Margin top (`classes_margintop`)	select	No	No	Default	Spacing	Tokens only	Same (`mt-*`)	`mt-0`
Margin bottom (`classes_marginbottom`)	select	No	No	Default	Spacing	Tokens only	Same (`mb-*`)	`mb-1600`

CTA List item (fields of `ctas`)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
CTA Title (`ctaText`)	text	Yes (Recommended)	No	Empty	Visible CTA text	Verb first, 2–4 words	None	`Talk to an expert`

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
CTA Link (`cta`)	aem-content	Yes (Enforced by code: items without a link are skipped)	No	Empty	Destination	Page or URL	Items without link dropped	`/content/tcs-corp/us/en/contact`
CTA Link Type (`ctaTarget`)	select	No	No	Default (`""`)	Window	New window for external only	Default `""`; Open in New Window `new-window`	`""`
CTA Link Style (`ctaStyle`)	select	No	No	Primary Button (`primary`)	Emphasis	One primary	Text link `""`; Primary Button `primary`; Secondary Button `secondary`	`secondary`

Metadata read by the block (not block fields; page properties and bulk metadata sheet)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Title (page property)	text	Yes (Recommended)	No	Page name	H1	40–70 characters	None; read as authored (not `meta-title`)	`Cloud transformation for banks`
Description (page property)	text	Recommended	No	Empty	Description paragraph	120–200 characters	None; read as authored (not `meta-description`)	`How banks modernise …`
Page tags	tags	No	Yes	None	Tags eyebrow / labels	1–4 tags	Labels from taxonomy, else derived from the tag ID	`tcs-corp:topic/cloud`
`page-type`	sheet / page property	No	No	Empty	Default layout	`landing` / `listing` for Landing	Case-insensitive	`landing`
`content-type`	sheet	No	No	Empty	Eyebrow / collection	One short term	None	`Insight`
`publish-date` (or `publication-date`)	sheet	No	No	Empty	Published date (Article)	YYYY-MM-DD	Non-ISO text shown as is	`2026-03-12`
`reading-time`	sheet	No	No	Empty	Reading time (Article)	Minutes as a number	Digits → "{n} min read"; other text as is	`6`
`author-id`	sheet	No	No	Empty	Authors sheet lookup	An ID of `data/authors`	Case-insensitive match	`jdoe`
`author`	sheet	No	No	Empty	Fallback author name	When no author-id	None	`Jane Doe`
`featured-image`	sheet	No	No	Empty	Landing image	Site media URL	`/media_` same origin = optimized and eager	`/en/media_1ab2.jpg`

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
`listen-link`	sheet	No	No	Empty	Listen action (Article)	Audio URL	None	`https://…/article.mp3`

Field details

- **Layout.** Purpose: chooses the presentation. Allowed Values: Default, Landing, Secondary, Article, Display. Character Limits: n/a. Business Rules: Default → Landing for `landing` / `listing` page types, else Article; a layout class on the block (from any source) is honoured if the select is empty. Dependency Rules: Landing uses `featured-image`; Article uses the article metadata; Display uses tags. Visibility Rules: no `condition`; always visible. Sample Content: Secondary.
- **CTA List.** Purpose: calls to action. Allowed Values: items with a link. Character Limits: Recommended up to 3 items. Business Rules: items without a link are skipped; order is kept. Dependency Rules: none. Visibility Rules: always. Sample Content: Talk to an expert (Primary); Explore services (Secondary).
- **CTA Title.** Purpose: link text. Allowed Values: text. Character Limits: Recommended up to 25 characters (buttons don't wrap well). Business Rules: collapsed with CTA Link into one anchor. Dependency Rules: CTA Link. Visibility Rules: always. Sample Content: "Talk to an expert".
- **CTA Link.** Purpose: destination. Allowed Values: page path or URL. Character Limits: none. Business Rules: required for the item to render. Dependency Rules: none. Visibility Rules: always. Sample Content: `/content/tcs-corp/us/en/contact`.
- **CTA Link Type.** Purpose: same / new window. Allowed Values: Default, Open in New Window. Business Rules: new window adds `target="_blank" rel="noopener noreferrer"`; the new tab isn't announced. Dependency Rules: CTA Link. Visibility Rules: always. Sample Content: Default.
- **CTA Link Style.** Purpose: emphasis. Allowed Values: Text link (tertiary), Primary Button, Secondary Button. Business Rules: default Primary; values other than primary / secondary render tertiary. Dependency Rules: CTA Link. Visibility Rules: always. Sample Content: Secondary Button.
- **Anchor ID, Hide block, Padding / Margin.** As in 6.3.6: Anchor ID Enforced pattern `^anchor-[a-z0-9][a-z0-9-]*$`, duplicates get `-2`…; Hide block hides on the site and fades in the editor; 14 spacing tokens plus Default.
- **Metadata inputs.** See the table: they are edited in Page Properties or the metadata sheet, never in the block. Title and Description are the page values as authored, captured before the SEO decorator replaces the document title and description with `meta-title` / `meta-description`.

6.4.7 Field Annotation Mapping

Marker	Field	Purpose
A	Page Header block (Layout; Additional tab)	Layout and block options
B	`content-type` / page tags	Eyebrow or tag labels
C	Page Title	H1
D	Page Description	Description paragraph
E	`publish-date`, `reading-time`, `listen-link`	Meta row (Article)
F	`author-id` (Authors sheet) or `author`	Author lockup (Article)
G	CTA List (CTA Title, CTA Link, CTA Link Type, CTA Link Style)	Calls to action
H	`featured-image`	Landing image

6.4.8 Component Specification

Attribute	Value
Component Name	Page Header (`blocks/page-header`)
Version	1.0
Owner	[To be confirmed: product owner — owner: Digital Marketing]; technical owner: development team
Dependencies	article-meta, tag, button, link, responsive-image decorators; metadata, data, taxonomy, links, properties, placeholders utils; metadata sheet; Authors sheet; taxonomy; placeholders; icons
Component Type	Block (key-value) with a CTA List composite multifield
Supported Variants	Default; Landing with image; Landing text only; Secondary; Article; Display; automatic (templates); CTA styles Primary / Secondary / Text link; author from sheet / from metadata; listen action
Supported Templates	Article, Blog, Press Release (automatic), Default, landing / listing page types; not Home
Supported Metadata	Title, Description, tags, page-type / template, content-type, publish-date / publication-date, reading-time, author-id, author, featured-image, listen-link
Supported Tags	Page tags (`article:tag` meta, else a comma-separated `tags` meta), labels from `/{locale}/taxonomy.json`
Supported Personalization	None; content follows metadata. Future: Target offers via Adobe Tags (not implemented)
Caching Considerations	Metadata is in the page HTML (CDN cached); Authors sheet, taxonomy and placeholders are fetched once per page and cached by CDN / browser
Performance Considerations	Usually in the first section (eager phase: LCP); waits for placeholders, taxonomy and Authors sheet in parallel before rendering; Landing image eager with high fetch priority when it is site media; author image lazy
Accessibility Compliance	One H1; `<time datetime>`; icon buttons 2.75rem with names and tooltips; `role="status"` share feedback; LinkedIn new-tab hint; decorative images `alt=""`; CTA new windows not announced
SEO Compliance	H1 = page Title; visible description and dates; no JSON-LD (Not implemented); client-rendered from the head metadata already in the page

6.4.9 Input Model

- **Content Inputs:** CTA List items.
- **Metadata Inputs:** `og:title` / document title (Title), `description`, `page-type` / `template`, `content-type`, `publish-date` / `publication-date`, `reading-time`, `author-id`, `author`, `featured-image`, `listen-link`.
- **Tags Inputs:** `meta[property="article:tag"]` values (or a `tags` meta), resolved through the locale taxonomy.
- **Page Context Inputs:** locale (for sheets and taxonomy language); `window.location.href` (share); viewport (`(min-width: 900px)` picture source).
- **Query Inputs:** `/{locale}/data/authors.json`, `/{locale}/taxonomy.json`, `/{locale}/placeholders.json`.
- **Manual Inputs:** Layout, CTA List, Additional tab.

Authored HTML received (illustrative; key-value rows):

```
<div class="page-header secondary">
  <div>
    <div>ctas</div>
    <div>
      <p><a href="/en/contact">Talk to an expert</a></p><p>primary</p>
      <hr>
      <p><a href="/en/services">Explore services</a></p><p>secondary</p>
    </div>
```

```
  </div>
</div>
```

The template-generated block is just `<div class="page-header"></div>`.

6.4.10 Output Model

Rendered Output (DOM structure, Article).

```
div.page-header.block.article
├─ div.page-header-meta-row
│   ├─ div.page-header-labels
│   │   ├─ ul.page-header-tags > li[data-tag]
│   │   └─ p.page-header-collection
│   └─ div.page-header-info
│       ├─ p.page-header-date > time[datetime]
│       ├─ p.page-header-reading-time
│       └─ div.page-header-actions
│           ├─ a|button.button.tertiary.icon-button (listen, download, share)
│           └─ p.page-header-status[role=status]
└─ div.page-header-columns
    ├─ div.page-header-intro > h1.page-header-title ; div.page-header-author
    └─ div.page-header-summary
        ├─ div.page-header-description > p
        └─ div.page-header-ctas > a.button
```

Generated HTML (Landing, simplified).

```
<div class="page-header block landing page-header-has-image">
  <div class="page-header-intro">
    <p class="page-header-eyebrow">Industry</p>
    <h1 class="page-header-title">Banking and financial services</h1>
    <div class="page-header-description"><p>Reimagine banking …</p></div>
    <div class="page-header-ctas">
      <a href="/en/contact" class="button primary">Contact us</a></div>
  </div>
  <div class="page-header-media"><picture>…<img loading="eager" fetchpriority="high"
    alt=""></picture></div>
</div>
```

Generated JSON: none. **Generated Metadata:** none (reads metadata only).

Analytics Tracking. Component state (lazy phase, after sections load):

```
{ "component": { "page-header-1": {
  "@type": "tcs-corp/components/page-header", "parentId": "page-1x2y3z",
  "dc:title": "Cloud transformation for banks" } } }
```

Clicks: CTAs (`interaction link`), LinkedIn (`link`, `xdm:linkType exit`), and the actions with their `data-cmp-interaction`:

```
{ "event": "cmp:click", "eventInfo": {
  "path": "component.page-header-1", "interaction": "share",
  "dc:title": "Share this page", "xdm:linkType": "other", "breakpoint": "desktop" } }
```

The listen link reports `interaction listen` with its `xdm:linkURL` (`xdm:linkType download` for audio files such as `.mp3`); download reports `download`.

Personalization Output: none. **Search Index Output:** none from the block; the query index reads the same metadata from the page head (title, description, tags, pageType, contentType, authorId, publishDate, readingTime, featuredImage).

Target Personalization Output: None: the header shows the same metadata to every visitor (Supported Personalization: None). Target offers via Adobe Tags are Not implemented (as of this handover); the block is in the data layer as tcs-corp/components/page-header with its dc:title, and CTA, listen, download and share clicks are tracked centrally.

6.4.11 Business Rules

1. Layout = the Layout select value (or a layout class on the block); else Landing when Page Type (`page-type`, else `template`) is `landing` or `listing`, else Article.
2. Title (H1) = the page's `og:title` (page Title) or the document title as delivered, read before `meta-title` is applied; no title → no H1.
3. Description = the page `description` meta as delivered (before `meta-description`); empty → no description.
4. Tags = `article:tag` metas, else the comma-separated `tags` meta, de-duplicated; labels from the locale taxonomy (language sheet), else derived from the tag ID (last segment, hyphens to spaces, first letter capitalised), else the authored text.
5. Eyebrow: Landing and Secondary show `content-type`, else the tags; Display always shows the tags; Article doesn't use the eyebrow (tags and content type are in the meta row).
6. Landing: eyebrow, title, description and CTAs in one column; the featured image (decorative) beside it from 900px.
7. Landing image: same-origin `/media_` URLs become an optimized `<picture>` (1200px from 900px, 750px below) with `loading="eager"` and `fetchpriority="high"`; other URLs a plain lazy `<img>`.
8. Secondary: eyebrow above the columns; title | description and CTAs.
9. Article: meta row (tags and `content-type` | Published date, reading time, actions) then title and author | description and CTAs.
10. Display: tags and title | description and CTAs; tags separated by "|".
11. Published date: "Published" + date as dd/mm/yy in a `<time datetime="YYYY-MM-DD">` for ISO dates (no time zone shift); other text shown as authored; `publication-date` is a fallback for `publish-date`.
12. Reading time: digits only → "{n} min read" (placeholder `minRead`); other text as authored; empty → nothing.
13. Actions (Article only): listen only when `listen-link` is set (a link, same tab); download (prints the page with `window.print()`, the visitor can save as PDF) and share always.
14. Share uses the device share dialog when available (title = page title, URL = current URL); otherwise copies the URL and shows "Link copied to clipboard" for 3 seconds; a dismissed dialog or blocked clipboard is ignored silently.
15. Author: the `author-id` row of the Authors sheet (case-insensitive), else the `author` metadata for the name; designation = "designation, region"; name linked to `linkedin` in a new tab with the "(opens in a new tab)" hint; image decorative; no name and no designation → no lockup (even with an image).
16. CTAs: items without a link are skipped; style primary / secondary, anything else tertiary (Text link); Open in New Window → new tab.
17. Empty parts (columns, meta row parts, CTAs) are left out; if nothing remains the block is empty.
18. Placeholders, taxonomy and the Authors sheet are loaded in parallel; missing sheets give empty results (no author, ID-derived tag labels, English text).
19. Any previous layout class is removed and the resolved one added; `page-header-has-image` marks Landing with an image.

20. The Article, Blog and Press Release templates add an empty Page Header as the first section when the page has none; an authored one wins.
21. Metadata changes are read when the page loads: reload the editor after changing Page Properties.
22. Additional tab options apply (anchor id, hide, spacing).

6.4.12 Author Best Practices

- **Recommended Content Length:** Title 40–70 characters (Landing / Display at 6rem: keep under about 40 characters); Description 120–200 characters; `content-type` one or two words; 1–4 tags; 1–2 CTAs with 2–4 words each.
- **Image Dimensions:** the featured image has no fixed aspect ratio in the CSS (full column width, height automatic); it is requested at 1200px wide (desktop) and 750px (mobile). Recommended: landscape 4:3 or 16:9 at least 1200 × 900px, uploaded to AEM Assets so it's delivered as site media (`/media_`) and loaded eagerly. Author photos: square, at least 160 × 160px (shown as a 2.5rem circle, `object-fit: cover`).
- **CTA Writing Guidelines:** start with a verb ("Talk to an expert", "Download the report"); one Primary Button; use Secondary or Text link for further actions; avoid new windows for site pages.
- **Accessibility Guidelines:** one H1 per page (don't add a Title H1 below); don't rely on the featured image to convey information (it has no alt text); keep tag labels meaningful; check colour contrast of text on any section background.
- **SEO Guidelines:** the H1 is the page Title: write it for users and search; keep `meta-title` (document title) consistent with it; keep Description consistent with `meta-description`.
- **Metadata Guidelines:** always use ISO dates (YYYY-MM-DD) for `publish-date`; `reading-time` as a number; maintain `author-id` values in the Authors sheet; set `featured-image` for landing pages; set `page-type` landing / listing in the sheet for landing defaults.
- **Taxonomy Guidelines:** use tags from the TCS taxonomy (`tcs:...`) and keep their titles translated in each locale's taxonomy; free-text tags show as typed.
- **Localization Guidelines:** each locale has its own metadata sheet, Authors sheet, taxonomy and placeholders; translate `published`, `minRead`, `listenToThisPage`, `downloadThisPage`, `shareThisPage`, `linkCopied`, `opensInNewTab`. The date format dd/mm/yy is the same in every locale (not localised).

6.4.13 Troubleshooting Guide

Issue 1 — Title or description is wrong or missing

Symptoms: The H1 shows an old title or nothing; no description.

Root Cause: Page Properties Title / Description not updated or the page not republished; the block reads the authored page values, not `meta-title` / `meta-description`.

Diagnosis Steps: View the page source: `og:title` and `description` metas.

Resolution Steps: Update Title / Description in Page Properties; publish.

Validation Steps: The H1 matches the Title.

Preventive Measures: Edit page text in Page Properties, not in the block.

Issue 2 — Wrong layout

Symptoms: An article shows the Landing layout or the reverse.

Root Cause: Layout left on Default and the `page-type` metadata resolves differently (for example a sheet row sets `landing` for a whole folder).

Diagnosis Steps: Check `<meta name="page-type">`; check the block's Layout.

Resolution Steps: Choose the Layout explicitly, or fix the metadata sheet row.

Validation Steps: The block has the expected layout class.

Preventive Measures: Use explicit layouts where the Page Type doesn't match the design.

Issue 3 — Author lockup missing or incomplete

Symptoms: No author, or a name without photo or designation.

Root Cause: `author-id` not in `/{locale}/data/authors`, the sheet isn't published, columns misnamed, or the layout isn't Article.

Diagnosis Steps: Check `<meta name="author-id">`; open `/{locale}/data/authors.json`.

Resolution Steps: Add or fix the author row (author-id, name, designation, image, linkedin, region); publish.

Validation Steps: Full lockup appears.

Preventive Measures: Maintain authors in every locale's sheet.

Issue 4 — Tags show technical names

Symptoms: Tags like "Artificial intelligence" derived from IDs, or English labels on a German page.

Root Cause: The tag is missing from `/{locale}/taxonomy.json` or its language sheet.

Diagnosis Steps: Open the taxonomy JSON and search for the tag ID.

Resolution Steps: Add or translate the tag title; publish the taxonomy.

Validation Steps: Proper labels show.

Preventive Measures: Use only taxonomy tags.

Issue 5 — Date shows in the wrong format

Symptoms: "Published March 12" instead of "Published 12/03/26".

Root Cause: `publish-date` isn't ISO (YYYY-MM-DD); non-ISO values are shown as typed.

Diagnosis Steps: Check the metadata value.

Resolution Steps: Use YYYY-MM-DD.

Validation Steps: The date shows as dd/mm/yy with `datetime`.

Preventive Measures: Validate dates in the metadata sheet.

Issue 6 — Landing image loads late (poor LCP)

Symptoms: PageSpeed Insights reports a slow LCP on the image.

Root Cause: `featured-image` isn't site media (`/media_` on the same host), so it's a lazy `<img>`; or the image is very large.

Diagnosis Steps: Inspect the image: `loading="lazy"` and no `<picture>`.

Resolution Steps: Use an image delivered as site media; development can apply eager loading to plain images too.

Validation Steps: `loading="eager"`, `fetchpriority="high"`; LCP improves.

Preventive Measures: Use site media for featured images.

Issue 7 — Share does nothing

Symptoms: Selecting share shows no dialog and no message.

Root Cause: No device share dialog and the clipboard is blocked (insecure context, permissions, embedded frame); errors are ignored.

Diagnosis Steps: Test on HTTPS in a normal browser window; check permissions.

Resolution Steps: Use HTTPS hosts (`.aem.page`, `.aem.live`, production domain); no author action.

Validation Steps: Dialog opens or the copied message shows.

Preventive Measures: Test share on mobile and desktop browsers.

Issue 8 — Two H1 headings

Symptoms: Accessibility checker reports multiple H1.

Root Cause: A Title / Hero with H1 or a second Page Header on the page; or an authored Page Header placed after the template's automatic one (the template adds one only if none exists, so check for a Hero H1).

Diagnosis Steps: List headings in developer tools.

Resolution Steps: Change other H1s to H2; keep one Page Header.

Validation Steps: One H1.

Preventive Measures: Follow the heading guidance.

6.4.14 Support Runbook

Monitoring Requirements. Recommended: PageSpeed Insights checks of key landing and article pages (LCP from the Page Header); periodic validation that each locale's `data/authors.json`, `taxonomy.json` and `placeholders.json` return 200; data layer monitoring of `share` / `download` / `listen` interactions once Adobe Tags is installed.

Logs.

- Browser console: the block emits no messages of its own; exceptions are logged by `aem.js` as `failed to load module for page-header`.
- Network: requests for `authors.json`, `taxonomy.json`, `placeholders.json` (a 404 means an unpublished sheet).
- Admin API status of the page and sheets: `https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`.
- Author logs: AEM publication of pages and sheets.

Common Errors.

Error	Likely Cause	Fix
Old title / description	Page Properties not published	Update and publish
Wrong layout	Page Type resolution	Choose Layout explicitly / fix sheet
No author	author-id missing in Authors sheet	Add row; publish sheet
ID-like tag labels	Taxonomy missing or untranslated	Update taxonomy
Date shown as typed	Non-ISO date	Use YYYY-MM-DD
Slow LCP	Non-site-media featured image	Use site media
Bulk metadata not applied	Sheets not in `metadata.source`	Admin configures `metadata.source`

Escalation Matrix.

Level	Team	Checks
L1	Author support	Page Properties, metadata sheet row, Authors sheet, taxonomy, Layout, CTA List, publication
L2	AMS / site admin	`metadata.source` configuration, `paths.json` mappings of sheets, Admin API status, CDN purge

Level	Team	Checks
L3	Development team	`blocks/page-header/*`, article-meta decorator, metadata / data / taxonomy utils, console errors, template insertion
L4	Adobe Support	Metadata publishing by Edge Delivery, AEM / Universal Editor defects

Recovery Procedures. Restore previous page or sheet versions and publish; on template pages, deleting a broken authored Page Header brings back the automatic one; revert faulty code on `main`.

Health Checks. Sample one page per layout and locale: one H1 equal to the Title; correct eyebrow / tags; Article meta row with date, reading time and working actions; author lockup; Landing image eager; no console errors.

Operational Procedures. New author: add the row to every locale's Authors sheet where they publish. New content type: agree the `content-type` term per locale. New layout: development adds it to `LAYOUTS` in `page-header.js`, the CSS and the Layout options in `_page-header.json`, then runs `npm run build:json`.

Known Limitations.

- Text content can't be edited in the block (metadata only); metadata changes need an editor reload.
- `landing` / `listing` page types aren't Page Type options in Page Properties (metadata sheet only).
- Non-site-media featured images are lazy-loaded; featured image and author photo have no alt text (decorative).
- Download prints the page (no PDF generation); listen is a link (no embedded player); no JSON-LD structured data (Not implemented as of this handover).
- Date format fixed to dd/mm/yy for all locales.
- New-window CTAs aren't announced to screen readers.
- The template-generated Page Header has no CTAs and can't be edited in Universal Editor.

6.4.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
Title or description is old	Page Properties not updated or the page not republished	Update Title and Description in Page Properties and publish
Wrong layout	Layout left on Default and page-type resolves differently	Choose the Layout explicitly or fix the sheet row
No author lockup	author-id missing from the Authors sheet, sheet unpublished, or layout not Article	Add the row to /{locale}/data/authors, publish it and use Article
Tags show ID-derived labels	Tag missing from the locale taxonomy (F-09)	Add or translate the tag title and publish the taxonomy
Date shows as typed	publish-date isn't YYYY-MM-DD	Enter the ISO date
Slow LCP on landing pages	featured-image isn't /media_ site media (F-14)	Use an AEM Assets image delivered as site media
Metadata sheet values don't apply	metadata.source doesn't list the locale sheets (F-11)	Ask the site admin to configure metadata.source
Two H1 headings	A Title H1 or Hero added below the header	Change other H1s to H2
Third CTA renders as a primary button	New items default to Primary Button	Choose Text link or Secondary Button

6.4.16 Author Quick Reference Guide

Mandatory Fields

- Title (Page properties) — not a block field, but without it the block renders no H1
- CTA Link (CTA List item) — required for an item to render; items without it are skipped

Recommended Fields

- Description (Page properties) — the paragraph beside or under the title
- content-type (metadata sheet) — the eyebrow (Landing, Secondary) or the collection (Article)
- Page tags — labels in the meta row and the Display eyebrow
- publish-date (YYYY-MM-DD) and reading-time (a number) — Article meta row
- author-id — an ID of /{locale}/data/authors for the Article lockup
- featured-image — site media (/media_) for Landing
- CTA Title — 2–4 words starting with a verb

Optional Fields

- Layout — Default (from the Page Type), Landing, Secondary, Article or Display
- author — a name for guest authors not in the Authors sheet
- listen-link — an audio URL for the listen icon (Article)
- CTA Link Type — Open in New Window for external links only
- CTA Link Style — Text link, Primary Button (default) or Secondary Button
- Anchor ID, Hide block, Padding and Margin (Additional tab)

Authoring Checklist

1. One Page Header per page, at the top of the first section
2. Edit title and description in Page Properties, never in the block
3. Keep Layout on Default unless the Page Type doesn't match the design
4. Set page-type landing or listing in the metadata sheet for Landing defaults (F-12)
5. Use ISO dates YYYY-MM-DD for publish-date and a number for reading-time
6. One Primary Button; further CTAs as Secondary Button or Text link
7. Reload Universal Editor after changing Page Properties or sheets
8. On article, blog and press-release pages the template adds the header; add one only for CTAs or another layout

Pre-Publish Checklist

1. Publish the metadata, Authors and taxonomy sheets to Preview first
2. Check one H1 equal to the page Title
3. Check the resolved layout class on the block
4. Article: check Published dd/mm/yy, {n} min read and the icons
5. Check the author photo, name, designation and LinkedIn link
6. Check CTA styles and order at 390, 768, 1024 and 1440 px
7. Landing: check the featured image loads (site media is eager)

Post-Publish Validation Checklist

1. Publish the sheets to Live, then the page
2. Open the page on aem.live and check the header content
3. Test share (dialog or Link copied to clipboard) and download
4. Check cards and listings show the same title once the query index is updated
5. Run PageSpeed Insights on landing pages for the LCP of the header

6.4.17 Component Execution Example

Business example: Article header for the agentic AI in banking insight.

Example Values Entered:

Field	Value
Title (Page properties)	How agentic AI is reshaping banking operations
Description (Page properties)	Autonomous agents are taking on reconciliation, onboarding and fraud triage. We look at what this means for operating models, controls and the workforce.
Page Type (Page properties)	Article
tags (Metadata sheet (row of this page))	tcs-corp:industry/banking, tcs-corp:topic/ai
content-type (Metadata sheet (row of this page))	Insight
publish-date (Metadata sheet (row of this page))	2026-03-12
reading-time (Metadata sheet (row of this page))	6
author-id (Metadata sheet (row of this page))	arao
listen-link (Metadata sheet (row of this page))	https://www.example.com/audio/agentic-banking-operations.mp3
Component (Section › Add (+))	Page Header
Layout (Page Header › Style)	Article (meta row, author)
CTA Title (Page Header › CTAs › CTA List › Item 1)	Talk to an expert
CTA Link (Page Header › CTAs › CTA List › Item 1)	Select the page or enter /en/contact
CTA Link Style (Page Header › CTAs › CTA List › Item 1)	Primary Button
CTA Title (Page Header › CTAs › CTA List › Item 2)	Download the report
CTA Link (Page Header › CTAs › CTA List › Item 2)	Select the page or enter /en/insights/state-of-ai-2026
CTA Link Style (Page Header › CTAs › CTA List › Item 2)	Secondary Button

All other fields keep their default values.

Rendered Result:

Figure 18: Execution example — The article Page Header at 1440 px: the meta row with BANKING, ARTIFICIAL INTELLIGENCE and Insight on the left and Published 12/03/26, 6 min read and the headphones, download and share icons on the right; then the title and the Anita Rao lockup (Head of Banking Research, Europe) on the left, the description, Talk to an expert (black) and Download the report (outlined) on the right. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/page-header-desktop-view.jpg)

Author Notes

- Title, Description and Page Type Article are set in Page Properties.
- The page row of /en/metadata sets tags, Insight, 2026-03-12, 6, arao and the mp3 listen-link.
- The block only gets Layout Article and two CTAs: Talk to an expert (Primary) and Download the report (Secondary).
- The editor is reloaded to show metadata changes, then the sheets and the page are published.

Business Notes

- The visible title, date and author are the same values used for SEO, cards and the query index.
- The author lockup with LinkedIn supports credibility of research content.
- Listen, download and share give readers audio, print-to-PDF and sharing without extra authoring.

Technical Notes

- getPageMetadata reads the authored Title and Description before the SEO decorator applies meta-title.
- Placeholders, taxonomy and the Authors sheet load in parallel before the block renders.
- buildPublished renders 12/03/26 in a time element with datetime 2026-03-12.
- Share uses navigator.share, else the clipboard and a role status message for 3 seconds.

6.5 Section Block

6.5.1 Component Purpose

Business Objective: Give every page a consistent rhythm of horizontal bands, with the design system's spacing, content widths and a small set of authorable backgrounds, so that authors can structure pages without custom code.

Business Use Cases:

- Splitting a page into topics (introduction, services, case studies, contact).
- Highlighting a band of content with a light grey background.

- Placing content over a full-cover background image (campaign bands, banners built from default content).
- Constraining a band to the narrower content width, optionally with rounded corners (a "card-like" band).
- Making a band the target of an Anchor List or a `#link` (chapter navigation).

When To Use: Always: every piece of content on a page lives in a section. Start a new section whenever the background, width or topic changes.

When Not To Use:

- For carousels: use **Gen Carousel** (a special section added at page level).
- For tabbed content spanning several components: use **Tabs Container** (a special section added at page level) or the **Tabs** block.
- For a dark or brand-coloured band: not authorable on sections (see Variation notes); use a block with a background colour option (for example Hero, Teaser BG Color).

Dependencies:

Type	Item
Model	`models/_section.json` (definition `section`, model `section`, filter `section`)
Code	`scripts/scripts.js` (`decorateSectionsWithOptions`, `readSectionOptions`, `buildSectionBackground`); `scripts/aem.js` (`decorateSections`, `loadSection`, `loadSections`, `waitForFirstImage`); `decorators/responsive-image-decorator.js` (`buildImage`); `scripts/editor-support.js` (re-decoration in the editor)
Styles	`styles/styles.css` (layout tokens `--page-max-width`, `--content-max-width`, `--section-padding-inline`, `--section-spacing`; section rules; Hide block wrapper rule)
Data sources / sheets / placeholders	None

Related Components: Gen Carousel and Tabs Container (section-based containers with their own models); Anchor List (links to section anchors); every block and default-content component (children of a section).

Applicable Templates: Any page (Default, Home, Article, Blog, Press Release). The article, blog and press-release templates add their own sections (Page Header, About the author, Media contacts) before or after the authored ones.

Supported Content Types: Default content (Text, Title, Image, Button) and all blocks of the section filter (see 6.5.9).

Business Problem Solved

Pages of the 13 locale sites needed a consistent rhythm of horizontal bands with the design system spacing, content widths and a few authorable backgrounds (grey Highlight, full-cover image, framed Fixed Width band, anchors for chapter navigation), so authors can structure pages without custom code or per-page CSS.

Supported Taxonomy

None: the section has no tag field and reads no page tags, taxonomy or metadata (Supported Tags: None). Tag the page in its page properties; sections are not part of the query index.

6.5.2 Visual Overview

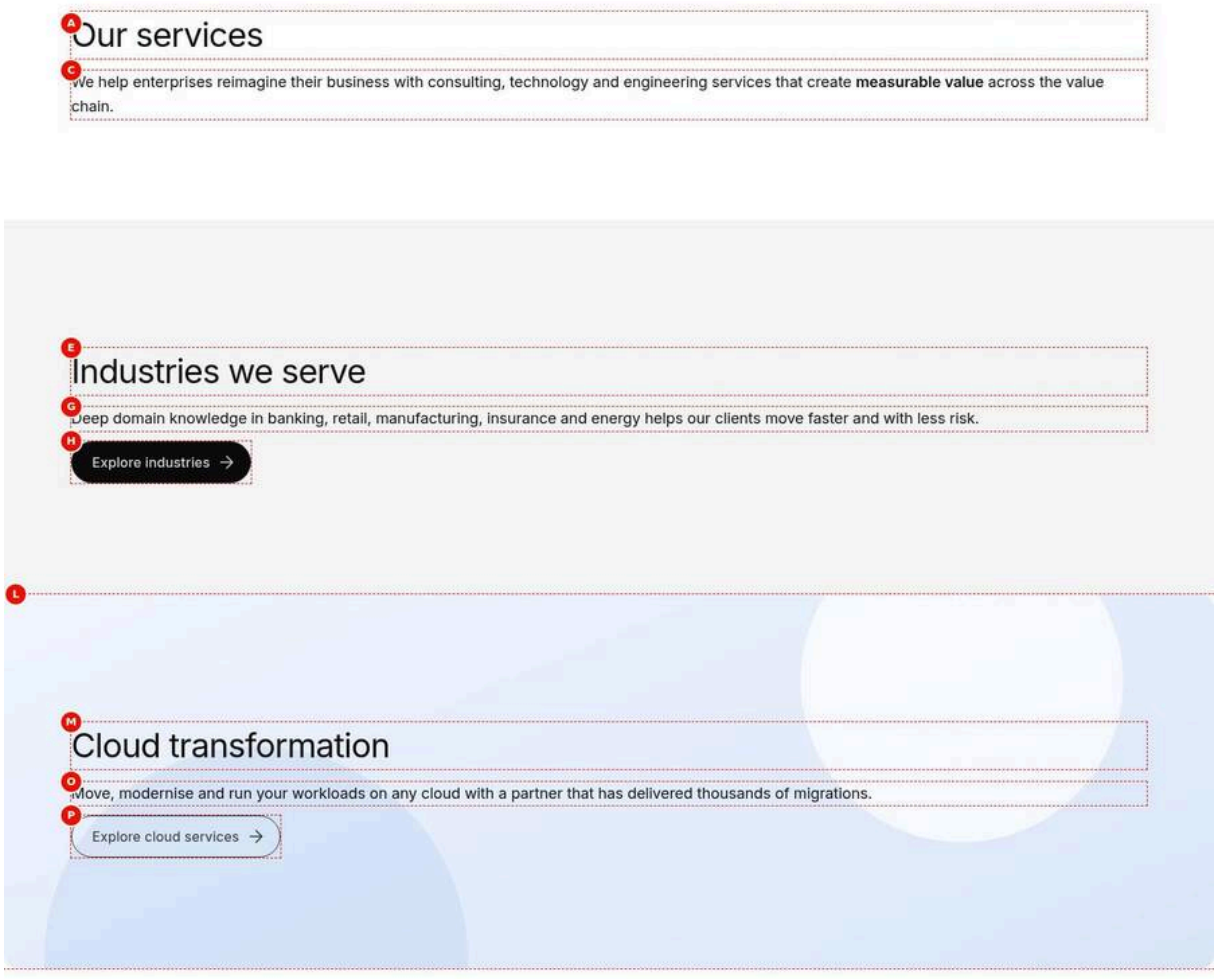

Figure 19: Desktop rendering — The page at 1440 px with three stacked sections: 'Our services' and its text on white; a full-width grey Highlight band with 'Industries we serve' and the primary 'Explore industries'; a band on the pale blue light.svg gradient with 'Cloud transformation', its text and the secondary 'Explore cloud services' in dark text. At 1440 px the Fixed Width box equals the screen width, so its rounded corners sit at the screen edges. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/section-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/section-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The page at 1440 px with three stacked sections: 'Our services' and its text on white; a full-width grey Highlight band with 'Industries we serve' and the primary 'Explore industries'; a band on the pale blue light.svg gradient with 'Cloud transformation', its text and the secondary 'Explore cloud services' in dark text. At 1440 px the Fixed Width box equals the screen width, so its rounded corners sit at the screen edges.
Business Context	A services overview page of the English site built only from sections and default content: a white introduction, a grey Highlight band for industries and a framed band with a background for the cloud offer, checked at 1440 px before sign-off.
Author Objective	Build three sections (default, Highlight, and Fixed Width with Rounded edge and the light.svg background), each with a Title, a Text and, in the last two, a Button, and confirm the desktop spacing.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Our services	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	We help enterprises reimagine their business with consulting, technology and engineering services that create **measurable value** across the value chain.	No	Card text	1–3 sentences; lists and links allowed	None
(D)	Style (Section properties)	Highlight	No	Background style of the band	Choose Highlight for a grey band	Enforced: options list (Highlight)
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
E	Title (Title)	Industries we serve	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(F)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
G	Text (Text)	Deep domain knowledge in banking, retail, manufacturing, insurance and energy helps our clients move faster and with less risk.	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
H	Link (Button)	Select the page or enter /en/industries	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
(I)	Text (Button)	Explore industries	Yes (Recommended)	Visible link text	Short, descriptive	None
(J)	Width Type (Section properties)	Fixed Width	No	Width of the band	Fixed Width for a 90rem band on wide screens	Enforced: Full Width or Fixed Width
(K)	Rounded edge (Section properties)	On	No	Rounded corners	Combine with Highlight / background and Fixed Width	None
L	Background Image (Section properties)	Select the asset light.svg (/en/media/light.svg)	No	Image behind the section	Wide, high-resolution image; important subject in the centre	None
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
M	Title (Title)	Cloud transformation	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(N)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
O	Text (Text)	Move, modernise and run your workloads on any cloud with a partner that has delivered thousands of migrations.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
P	Link (Button)	Select the page or enter /en/services/cloud	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
(Q)	Text (Button)	Explore cloud services	Yes (Recommended)	Visible link text	Short, descriptive	None
(R)	Type (Button)	Secondary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three bands: 'Our services' on white; 'Industries we serve' with the 'Explore industries' primary button on a full-width grey-100 band; 'Cloud transformation' with the 'Explore cloud services' secondary button over the pale blue light.svg gradient with rounded corners.
- **Rendering behaviour:** From 1200 px the content of each band is capped at 120rem (90rem in the Fixed Width band) with 5rem side padding; the default section is separated by a 7.5rem margin, while the Highlight and background bands have no outer margin but 7.5rem padding top and bottom. At 1440 px the Fixed Width box is exactly 90rem, so it still spans the screen.
- **Publishing behaviour:** Publish to Preview shows the page on main–tcs-corp–sradha-tcs.aem.page and Publish to Live copies it to aem.live. light.svg must be published with the page (select it as a reference in the Publish dialog), otherwise the third band renders without its background.

Business Rules

- Each band is its own section: the Highlight Style and the Fixed Width, Rounded edge and Background Image options apply to the whole section they are set on.
- Section 2 keeps Width Type Full Width, so its grey band runs edge to edge at every screen width.
- Section 3 combines Fixed Width, Rounded edge and Background Image; the rounded frame only shows on screens wider than 1440 px.
- Image alt text is empty, so light.svg is decorative (alt="").
- Every band starts with an h2 Title so screen reader users can move between the topics.

Common Authoring Mistakes

Error	Root Cause	Resolution
The grey band also covers the cloud content	Title 'Cloud transformation' and its Text and Button were added to the Highlight section instead of a new section	Add a new section under Main and move the three components into it in the content tree
'Explore cloud services' looks the same as 'Explore industries'	Type left on the default Primary	Select the Button and set Type to Secondary
The third band has no rounded corners at 1440 px	Fixed Width is only narrower than the screen above 90rem (1440 px)	Check the band at 1920 px; at 1440 px the corners sit at the screen edges by design

Troubleshooting

- **Symptoms:** On aem.page the third band shows the text on white, without the light.svg background.
- **Cause:** light.svg was not published with the page, so the background image request fails.
- **Resolution:** Publish light.svg (Manage Publication with references) and publish the page again.
- **Verification Steps:** Reload the preview at 1440 px: the section has the classes has-background, fixed-width and rounded, and div.section-background holds the loaded image.

Desktop (1200 px and above): each section's content is centred and capped at 120rem (Full Width) or 90rem (Fixed Width), with 5rem side padding (`--section-padding-inline: var(--spacing-l)`). Sections are separated by a vertical margin of 7.5rem (`--section-spacing: var(--space-3000)`); the first section has no top margin. Highlight and background sections have no outer margin but 7.5rem padding top and bottom, so their colour or image fills the band.

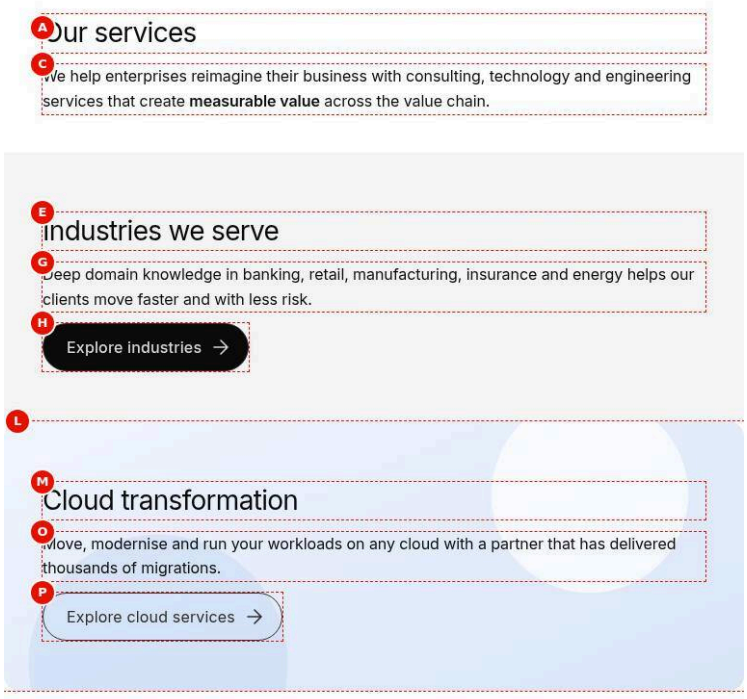

Figure 20: Tablet rendering — The same three sections at 768 px: 2.5rem side padding and 2.5rem section spacing; the grey Highlight band runs edge to edge; the third band shows the light.svg gradient cropped to cover it, looking like a Full Width band. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/section-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/section-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same three sections at 768 px: 2.5rem side padding and 2.5rem section spacing; the grey Highlight band runs edge to edge; the third band shows the light.svg gradient cropped to cover it, looking like a Full Width band.
Business Context	The same three-band services overview checked at 768 px, the width of a portrait tablet, so reviewers see how the bands, padding and background behave between the mobile and desktop layouts.
Author Objective	Confirm that the default, Highlight and Fixed Width background sections reflow at tablet width with the expected padding and spacing.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)

—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
M	Title (Title)	Cloud transformation	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(N)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
O	Text (Text)	Move, modernise and run your workloads on any cloud with a partner that has delivered thousands of migrations.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
P	Link (Button)	Select the page or enter /en/services/cloud	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
(Q)	Text (Button)	Explore cloud services	Yes (Recommended)	Visible link text	Short, descriptive	None
(R)	Type (Button)	Secondary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The three bands stack with narrower side padding; the grey Highlight band still runs edge to edge; the Fixed Width band looks like a full-width band and light.svg is cropped to cover it.
- **Rendering behaviour:** Between 600 and 1199 px the side padding is 2.5rem; the section spacing is 2.5rem up to 899 px, so at 768 px the bands are 2.5rem apart and the Highlight and background bands have 2.5rem padding. Fixed Width has no visible effect because the screen is narrower than 90rem.
- **Publishing behaviour:** The tablet layout comes from the same published page; nothing is authored per device. Publish the page and light.svg to Preview and Live together, then check aem.page in the browser's device mode at 768 px.

Business Rules

- Sections have no per-device settings: Style, Width Type, Rounded edge and Background Image apply at every width.
- Fixed Width only changes the layout on screens wider than 1440 px; at 768 px the band spans the screen.
- The background picture uses the 2000 px source from 600 px for site media, cropped by object-fit cover.
- Rounded corners of the third band sit at the screen edges at this width, as the band is not narrower than the viewport.

Common Authoring Mistakes

Error	Root Cause	Resolution
The third band is reported as not fixed width on the tablet	Fixed Width is a 90rem cap, wider than any tablet	Explain to reviewers that it shows only above 1440 px; no change is needed
The important part of the background is cut off	object-fit cover crops the left and right of a wide image on narrower screens	Choose an image with its subject in the centre third

Troubleshooting

- **Symptoms:** At 768 px a large white gap appears between the first and second band.
- **Cause:** An empty section (for example one whose blocks all have Hide block on) is left between them and keeps its section spacing.
- **Resolution:** Delete the empty section in the content tree or move its content, then republish.
- **Verification Steps:** Reload aem.page at 768 px; the grey band follows the first band with only the 2.5rem section spacing.

Tablet (600–1199 px): side padding 2.5rem (`--spacing-m`). The section spacing is 2.5rem up to 899 px and 5rem (`--spacing-l`) from 900 px. A Fixed Width section is narrower than 90rem on these screens anyway, so it looks like a Full Width section unless the viewport is wider than 90rem.

Figure 21: Mobile rendering — The same three sections at 375 px: 1.5rem side padding, 2.5rem section spacing, the grey band edge to edge and light.svg cropped around its centre behind 'Cloud transformation' and the secondary 'Explore cloud services'. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/section-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/section-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The same three sections at 375 px: 1.5rem side padding, 2.5rem section spacing, the grey band edge to edge and light.svg cropped around its centre behind 'Cloud transformation' and the secondary 'Explore cloud services'.
Business Context	The three-band services overview checked at 375 px, the most common phone width, to confirm the bands stay readable and the background image still covers its band.
Author Objective	Confirm the mobile padding, spacing and background cropping of the default, Highlight and Fixed Width background sections.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)

—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
H	Link (Button)	Select the page or enter /en/industries	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
(I)	Text (Button)	Explore industries	Yes (Recommended)	Visible link text	Short, descriptive	None
(J)	Width Type (Section properties)	Fixed Width	No	Width of the band	Fixed Width for a 90rem band on wide screens	Enforced: Full Width or Fixed Width
(K)	Rounded edge (Section properties)	On	No	Rounded corners	Combine with Highlight / background and Fixed Width	None
L	Background Image (Section properties)	Select the asset light.svg (/en/media/light.svg)	No	Image behind the section	Wide, high-resolution image; important subject in the centre	None
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
M	Title (Title)	Cloud transformation	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(N)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
O	Text (Text)	Move, modernise and run your workloads on any cloud with a partner that has delivered thousands of migrations.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
P	Link (Button)	Select the page or enter /en/services/cloud	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
(Q)	Text (Button)	Explore cloud services	Yes (Recommended)	Visible link text	Short, descriptive	None
(R)	Type (Button)	Secondary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The bands stack at full phone width with 1.5rem side padding; the grey band runs edge to edge; light.svg is cropped around its centre behind 'Cloud transformation' and the 'Explore cloud services' button.
- **Rendering behaviour:** Below 600 px the side padding is 1.5rem and the section spacing 2.5rem; the Highlight and background bands have 2.5rem padding top and bottom. For site media the background uses the 750 px rendition with object-fit cover.
- **Publishing behaviour:** The mobile layout comes from the same published page and needs no separate publish; check it on aem.page at 375 px before publishing to Live.

Business Rules

- The wide light.svg is cropped at the left and right on a phone; keep the important part of a background in the centre.
- Text over the background must still meet 4.5:1 contrast at 375 px, where it covers a different part of the image.
- The buttons keep their Type; they are not stretched to full width by the section.
- The order of the bands on the phone is the content tree order.

Common Authoring Mistakes

Error	Root Cause	Resolution
The headline over the background is hard to read on the phone	A different, busier part of the image sits behind the text at 375 px; the code adds no overlay	Choose a calmer image or move the text into a block with its own background
The background image looks blurry on large phones	The original asset is too small for the 750 px and 2000 px renditions	Upload an original at least 2000 px wide

Troubleshooting

- **Symptoms:** On the phone the third band shows white instead of the pale blue background.
- **Cause:** The image request for the background fails because light.svg was not published, or the asset was moved after it was selected.
- **Resolution:** Re-select light.svg in Background Image, publish the asset and the page again.
- **Verification Steps:** Open aem.page at 375 px; div.section-background contains the image and the request returns 200.

Mobile (below 600 px): side padding 1.5rem (`--spacing-s`), section spacing 2.5rem (`--spacing-m`). Background images use the 750 px-wide rendition and `object-fit: cover`, so the left and right edges of wide images are cut off.

6.5.3 Component Variations

Variation 1 — Default (Full Width)

Variation Name: Default section (Width Type: Full Width, no Style).

Business Purpose: The standard band for most content.

Visual Example:

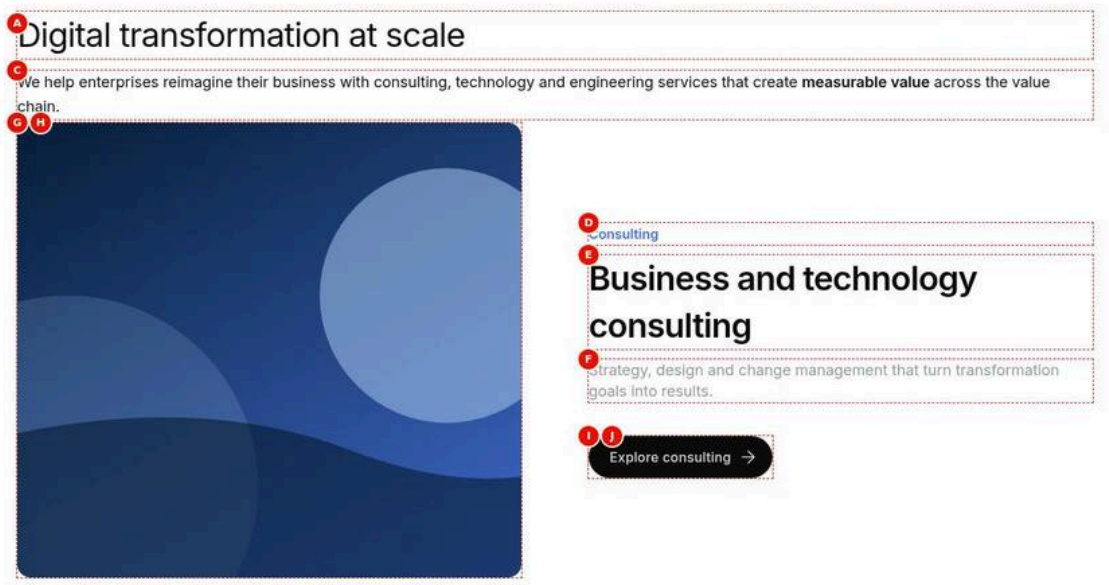

Figure 22: Default section — A white default section at 1440 px: the h2 'Digital transformation at scale', the introduction with 'measurable value' in bold, then a Teaser with photo-1.svg on the left and the eyebrow 'Consulting', the title 'Business and technology consulting', the description and the 'Explore consulting' button on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/section-default.jpg)

Screenshot Details — Default section

Item	Detail
Screenshot Name	`screenshots/section-default.jpg`
Screenshot Purpose	Default section
Screen Description	A white default section at 1440 px: the h2 'Digital transformation at scale', the introduction with 'measurable value' in bold, then a Teaser with photo-1.svg on the left and the eyebrow 'Consulting', the title 'Business and technology consulting', the description and the 'Explore consulting' button on the right.
Business Context	The opening band of a consulting page: a heading and introduction followed by a Teaser for the consulting offer, on the default white background used for most content.
Author Objective	Add a default section (no Style, Full Width) with a Title, a Text and a Teaser with eyebrow, title, description, image and a Primary CTA.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Digital transformation at scale	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	We help enterprises reimagine their business with consulting, technology and engineering services that create **measurable value** across the value chain.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
D	Eyebrow (Teaser › Content)	Consulting	No	Kicker above the title	Up to 40 characters (Recommended)	None
E	Title (Teaser › Content)	Business and technology consulting	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
F	Description (Teaser › Content)	Strategy, design and change management that turn transformation goals into results.	No	Main text	Up to 300 characters (Recommended)	None
G	Image (Teaser › Image)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Image or animation	See Layout for placement	None
H	Image alt text (Teaser › Image)	Consultants planning a transformation roadmap	No	Alt text / animation label	Empty if decorative	None
I	Primary CTA Title (Teaser › Links)	Explore consulting	No	Primary CTA text	Verb first	Shown only with Multiple links off
J	Primary CTA Link (Teaser › Links)	Select the page or enter /en/services/consulting	No	Primary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** On white: the h2 'Digital transformation at scale', the introduction with 'measurable value' in bold, then a text split Teaser with photo-1.svg, the eyebrow 'Consulting', the title 'Business and technology consulting', its description and the 'Explore consulting' button.
- **Rendering behaviour:** The section adds no class: the wrappers are centred, capped at 120rem, with 5rem side padding from 1200 px, 2.5rem from 600 px and 1.5rem below. As the first section of the page it has no top margin and loads in the eager phase.
- **Publishing behaviour:** Publish to Preview, then to Live; select photo-1.svg as a reference in the Publish dialog so the Teaser image is available on aem.page and aem.live.

Business Rules

- Leave Style empty and Width Type on Full Width: the default adds no class and no background.
- The Title and Text are default content and share one default-content-wrapper; the Teaser gets its own teaser-wrapper.
- As the first section it loads eagerly, so its first image is the LCP candidate.
- The Teaser brings its own layout; the section only provides the width and side padding.

Common Authoring Mistakes

Error	Root Cause	Resolution
The band is unexpectedly grey	Style was set to Highlight on this section	Clear Style in the section properties
The Teaser appears in the next section	The Teaser was added with the following section selected	Drag the Teaser into this section in the content tree
The heading looks like body text	Title Type left empty or set to a low level such as h5	Set Title Type to h2

Troubleshooting

- **Symptoms:** The page starts with a gap above 'Digital transformation at scale'.
- **Cause:** An empty section was added above this one, so this section is no longer the first and keeps its top margin.
- **Resolution:** Delete the empty section in the content tree and republish.
- **Verification Steps:** On aem.page the heading starts directly under the header and the section is the first main > .section.

Use Cases: Body content, introductions, any block that brings its own background.

Authoring Guidelines: Add a Section; leave Style empty and Width Type on Full Width.

Business Rules: Full Width is the default and adds no class.

Rendering Rules: `main > .section` with `--section-max-width: var(--page-max-width)` (120rem); each wrapper (`main > .section > div`) is centred with `margin: auto` and `padding: 0 var(--section-padding-inline)`; vertical `margin: var(--section-spacing) 0`; first section `margin-top: 0`.

Responsive Behaviour: Desktop: 5rem side padding, 7.5rem spacing. Tablet: 2.5rem side padding, 2.5rem / 5rem spacing (below / from 900 px). Mobile: 1.5rem side padding, 2.5rem spacing.

SEO Impact: None by itself; sections are `div` elements. Use headings inside to structure the content.

Accessibility Compliance: No landmark or role is added; the reading order follows the content tree order.

Variation 2 — Highlight

Variation Name: Highlight (Style: Highlight).

Business Purpose: Draw attention to a band, or alternate backgrounds to separate topics.

Visual Example:

Figure 23: Highlight section — At 1440 px, a light grey (grey-100) Highlight band spanning the viewport width with the h2 'Industries we serve', the paragraph on banking, retail, manufacturing, insurance and energy and the primary 'Explore industries' button, with white page space above and below. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/section-highlight.jpg)

Screenshot Details — Highlight section

Item	Detail
Screenshot Name	`screenshots/section-highlight.jpg`
Screenshot Purpose	Highlight section
Screen Description	At 1440 px, a light grey (grey-100) Highlight band spanning the viewport width with the h2 'Industries we serve', the paragraph on banking, retail, manufacturing, insurance and energy and the primary 'Explore industries' button, with white page space above and below.
Business Context	An industries band between two white sections of a corporate page, set apart with the light grey Highlight background so the call to explore industries stands out.
Author Objective	Set the section Style to Highlight and add a Title, a Text and a Button 'Explore industries' to /en/industries.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Style (Section properties)	Highlight	No	Background style of the band	Choose Highlight for a grey band	Enforced: options list (Highlight)
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
B	Title (Title)	Industries we serve	Recommended (an empty Title ren-	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			ders an empty heading or nothing)			
(C)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	Deep domain knowledge in banking, retail, manufacturing, insurance and energy helps our clients move faster and with less risk.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
E	Link (Button)	Select the page or enter /en/industries	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
(F)	Text (Button)	Explore industries	Yes (Recommended)	Visible link text	Short, descriptive	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A light grey (grey-100, #f5f5f5) band spans the full viewport width; inside it the h2 'Industries we serve', the paragraph and the primary 'Explore industries' button, with white sections above and below.
- **Rendering behaviour:** The section gets the class highlight: background var(–color-bg-secondary), no outer margin and padding equal to the section spacing (7.5rem from 1200 px, 5rem from 900 px, 2.5rem below). The content stays capped at 120rem with the normal side padding.
- **Publishing behaviour:** Publish to Preview and Live from Universal Editor; the band is part of the page HTML, so no asset or other page needs publishing. The CDN cache is purged on publish.

Business Rules

- Highlight is the only authorable Style; Dark, Brand and Light exist in CSS only (F-21, open).
- The Highlight band has no outer margin, so two Highlight sections in a row touch and look like one band.
- Text stays black on grey-100, well above the 4.5:1 contrast for body text.
- Do not use the grey alone to convey meaning; keep the heading 'Industries we serve'.

Common Authoring Mistakes

Error	Root Cause	Resolution
Two grey bands merge into one	The next section also has Style Highlight	Put a default section between them or merge their content into one section
The author cannot find a dark band option	Only Highlight is offered in the section model	Use a block with a background colour option (Hero, Teaser BG Color) or request the style (F-21)
The grey band also appears on another topic	Content of the next topic was added to the Highlight section	Add a new section for the next topic and move the components there

Troubleshooting

- **Symptoms:** The band is white on aem.page although Highlight was selected.
- **Cause:** The change was made in Universal Editor but the page was not published again, so the preview still serves the earlier version.
- **Resolution:** Publish the page to Preview (and Live) again.
- **Verification Steps:** Reload aem.page; the section element has the class highlight and a grey background.

Use Cases: Key messages, statistics, a call-to-action band, alternating content bands.

Authoring Guidelines: Select the section; in Style choose **Highlight**.

Business Rules: Style is a multi-select with a single option (`highlight`); the value is added as a class.

Rendering Rules: `main .section.highlight` (and the CSS-only alias `.light`): `background-color: var(--color-bg-secondary)` (grey-100), `margin: 0`, `padding: var(--section-spacing) 0`. Two consecutive Highlight sections touch without a gap.

Responsive Behaviour: The padding follows `--section-spacing`: 7.5rem desktop, 5rem from 900 px, 2.5rem below 900 px.

SEO Impact: None.

Accessibility Compliance: Text colour stays the default (`--color-text-default`, black) on grey-100, which keeps body text contrast well above 4.5:1. Do not rely on the background alone to convey meaning (WCAG 1.4.1).

Variation 3 — Fixed Width

Variation Name: Fixed Width (Width Type: Fixed Width).

Business Purpose: Constrain a band to the content width (90rem) on very wide screens, for a calmer, card-like layout.

Visual Example:

Figure 24: Fixed Width section — On a 1920 px screen, a Highlight section with Fixed Width: the grey band is 1440 px (90rem) wide and centred with white space left and right, holding 'Industries we serve', its paragraph and the primary 'Explore industries' button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/section-fixed-width.jpg)

Screenshot Details — Fixed Width section

Item	Detail
Screenshot Name	`screenshots/section-fixed-width.jpg`
Screenshot Purpose	Fixed Width section
Screen Description	On a 1920 px screen, a Highlight section with Fixed Width: the grey band is 1440 px (90rem) wide and centred with white space left and right, holding 'Industries we serve', its paragraph and the primary 'Explore industries' button.
Business Context	The industries band of a corporate page viewed on a 1920 px monitor, where a full-width grey band would feel heavy; Fixed Width keeps it to the content width.
Author Objective	Set Style Highlight and Width Type Fixed Width on the section and add a Title, a Text and the Button 'Explore industries'.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Style (Section properties)	Highlight	No	Background style of the band	Choose Highlight for a grey band	Enforced: options list (Highlight)
(B)	Width Type (Section properties)	Fixed Width	No	Width of the band	Fixed Width for a 90rem band on wide screens	Enforced: Full Width or Fixed Width
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
C	Title (Title)	Industries we serve	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(D)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	Deep domain knowledge in banking, retail, manufacturing, insurance and energy helps our clients move faster and with less risk.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
F	Link (Button)	Select the page or enter /en/industries	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
(G)	Text (Button)	Explore industries	Yes (Recommended)	Visible link text	Short, descriptive	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1920 px the grey band is 1440 px (90rem) wide and centred, with white space left and right; 'Industries we serve', the paragraph and the primary 'Explore industries' button sit inside it.
- **Rendering behaviour:** The section gets fixed-width: the wrappers are capped at 90rem and the section box itself gets max-width 90rem and margin-inline auto, after the Highlight rule. Below 1440 px it looks like a Full Width Highlight band.
- **Publishing behaviour:** Publish to Preview and Live; the change is in the page HTML only. Reviewers must check aem.page on a screen or device mode wider than 1440 px to see the effect.

Business Rules

- Fixed Width adds the class fixed-width only when the value is fixed-width; Full Width adds nothing.
- The grey box is centred at 90rem on screens wider than 1440 px only.
- Highlight keeps its section-spacing padding; Fixed Width only limits the width.
- Add Rounded edge if the framed band should have soft corners.

Common Authoring Mistakes

Error	Root Cause	Resolution
Reviewers report no difference to Full Width	The page was checked on a screen of 1440 px or less	Check at 1920 px in the browser's device mode

Error	Root Cause	Resolution
The band is narrow but has no grey	Width Type set to Fixed Width without Style Highlight or a background	Select Highlight in Style or add a Background Image

Troubleshooting

- **Symptoms:** At 1920 px the grey band still runs edge to edge.
- **Cause:** Width Type is still Full Width (the default) or the page was not republished after the change.
- **Resolution:** Select the section, set Width Type to Fixed Width and publish the page again.
- **Verification Steps:** On aem.page at 1920 px the section has the class fixed-width and the grey box is 1440 px wide and centred.

Use Cases: Highlight or background bands that should not run edge to edge on large monitors; combined with Rounded edge for a framed band.

Authoring Guidelines: Set Width Type to **Fixed Width**.

Business Rules: The class `fixed-width` is added only when the value normalises to `fixed-width`.

Rendering Rules: `--section-max-width: var(--content-max-width)` (90rem) for the wrappers, and the section box itself gets `max-width: var(--content-max-width); margin-inline: auto` (after the Style and background rules, so a Highlight or background section is also centred at 90rem).

Responsive Behaviour: Visible only on viewports wider than 90rem (1440 px); below that it looks like Full Width, except that the wrapper width cap is 90rem instead of 120rem.

SEO Impact: None.

Accessibility Compliance: No effect; content reflows at 320 px width (WCAG 1.4.10).

Variation 4 — Rounded edge

Variation Name: Rounded edge (Rounded edge: on).

Business Purpose: Soften the corners of a coloured or image band.

Visual Example:

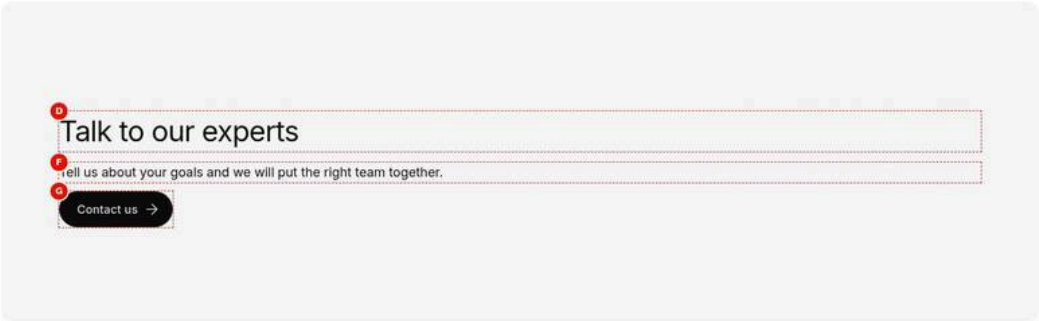

Figure 25: Rounded edge section — On a 1920 px screen, a centred 1440 px grey Highlight band with 1rem (16 px) rounded corners holding the h2 'Talk to our experts', the sentence 'Tell us about your goals and we will put the right team together.' and the primary 'Contact us' button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/section-rounded-edge.jpg)

Screenshot Details — Rounded edge section

Item	Detail
Screenshot Name	`screenshots/section-rounded-edge.jpg`
Screenshot Purpose	Rounded edge section
Screen Description	On a 1920 px screen, a centred 1440 px grey Highlight band with 1rem (16 px) rounded corners holding the h2 'Talk to our experts', the sentence 'Tell us about your goals and we will put the right team together.' and the primary 'Contact us' button.
Business Context	A framed contact call-to-action band near the end of a page, shown on a 1920 px screen where the rounded grey box stands out from the white page.
Author Objective	Set Style Highlight, Width Type Fixed Width and Rounded edge on, then add the Title 'Talk to our experts', a Text and the Button 'Contact us'.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Style (Section properties)	Highlight	No	Background style of the band	Choose Highlight for a grey band	Enforced: options list (Highlight)
(B)	Width Type (Section properties)	Fixed Width	No	Width of the band	Fixed Width for a 90rem band on wide screens	Enforced: Full Width or Fixed Width
(C)	Rounded edge (Section properties)	On	No	Rounded corners	Combine with Highlight / background and Fixed Width	None
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
D	Title (Title)	Talk to our experts	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(E)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
F	Text (Text)	Tell us about your goals and we will put the right team together.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
G	Link (Button)	Select the page or enter /en/contact	Yes (Enforced by code:	Destination	AEM page or external URL	Items without a link are dropped

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			items without a link are skipped)			
(H)	Text (Button)	Contact us	Yes (Recommended)	Visible link text	Short, descriptive	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 1920 px a centred 1440 px grey box with 1rem (16 px) rounded corners holds the h2 'Talk to our experts', the sentence about putting the right team together and the primary 'Contact us' button.
- **Rendering behaviour:** The section gets highlight, fixed-width and rounded: border-radius var(–radius-l) (1rem) and overflow hidden clip the band and its content to the corners. The radius is the same at all sizes; below 1440 px the corners sit at the screen edges.
- **Publishing behaviour:** Publish to Preview and Live; no asset is involved. Check the corners on aem.page at a width above 1440 px.

Business Rules

- Rounded edge adds the class rounded only when the value is true.
- The corners are visible only with a background (Highlight or an image) and Fixed Width on a screen wider than 1440 px.
- overflow hidden can clip focus outlines of elements touching the edge; keep the button inside the default padding.
- Use at most one primary button, here 'Contact us', in the framed band.

Common Authoring Mistakes

Error	Root Cause	Resolution
The corners look square	Rounded edge is on but the band has no background or is Full Width	Add Highlight and set Width Type to Fixed Width
The focus ring of 'Contact us' is cut off	Padding or margin was reduced so the button touches the clipped edge	Keep the default section padding around the content

Troubleshooting

- **Symptoms:** On a 1920 px screen the grey box has square corners.
- **Cause:** Rounded edge was not saved as on, so the section lacks the class rounded.
- **Resolution:** Select the section, switch Rounded edge on and publish the page again.
- **Verification Steps:** On aem.page at 1920 px the section has highlight, fixed-width and rounded, and the box corners are rounded.

Use Cases: Framed call-to-action bands, image bands inside a page with white margins.

Authoring Guidelines: Switch **Rounded edge** on; combine with Highlight or a Background Image, and with Fixed Width so the corners are visible.

Business Rules: The class `rounded` is added only when the value is `true` (case-insensitive).

Rendering Rules: `border-radius: var(--radius-l)` (1rem) and `overflow: hidden` (content and background are clipped to the corners).

Responsive Behaviour: Same radius at all sizes. A Full Width section spans the viewport, so its rounded corners sit at the screen edges; combine with Fixed Width for a visible frame on wide screens.

SEO Impact: None.

Accessibility Compliance: `overflow: hidden` can clip focus outlines of elements touching the edge; keep content inside the default padding.

Variation 5 — Background Image

Variation Name: Background image (Background Image set, optional Image alt text).

Business Purpose: Place content over a full-cover image for campaign or mood bands.

Visual Example:

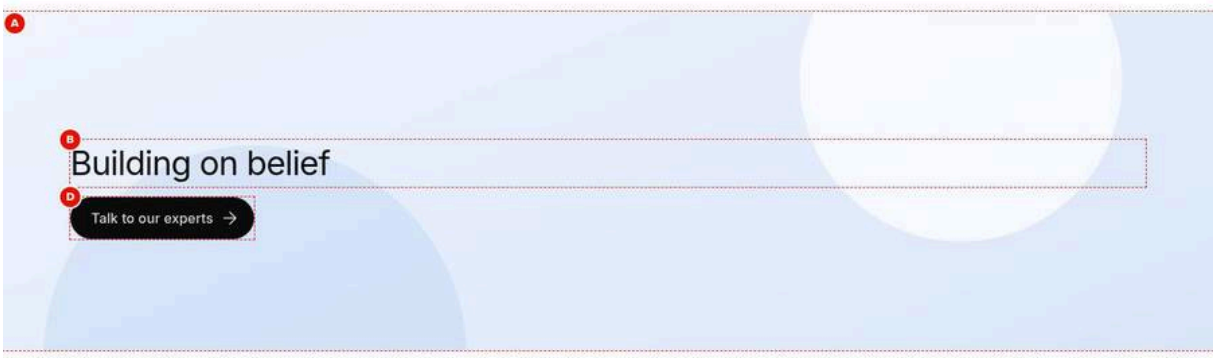

Figure 26: Section with background image — At 1440 px, a band filled edge to edge with the pale blue light.svg gradient (an illustration, not a photograph) behind the h2 'Building on belief' and the primary 'Talk to our experts' button, both in the default dark text colour; no overlay. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/section-background-image.jpg)

Screenshot Details — Section with background image

Item	Detail
Screenshot Name	`screenshots/section-background-image.jpg`
Screenshot Purpose	Section with background image
Screen Description	At 1440 px, a band filled edge to edge with the pale blue light.svg gradient (an illustration, not a photograph) behind the h2 'Building on belief' and the primary 'Talk to our experts' button, both in the default dark text colour; no overlay.
Business Context	A campaign band with the brand line 'Building on belief' and a contact call to action, set over a full-cover background image to break up a long page.
Author Objective	Select light.svg as the section's Background Image and add a Title and a Button 'Talk to our experts' to /en/contact.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Background Image (Section properties)	Select the asset light.svg (/en/media/light.svg)	No	Image behind the section	Wide, high-resolution image; important subject in the centre	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
B	Title (Title)	Building on belief	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(C)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
D	Link (Button)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
(E)	Text (Button)	Talk to our experts	Yes (Recommended)	Visible link text	Short, descriptive	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The pale blue light.svg gradient fills the band edge to edge; the h2 'Building on belief' and the primary 'Talk to our experts' button sit on it in the default dark text colour.
- **Rendering behaviour:** A div.section-background with the picture is placed first in the section, absolutely positioned behind the content (z-index –1, object-fit cover); the section gets has-background, no outer margin and section-spacing padding. No overlay is added and the text colour does not change.
- **Publishing behaviour:** Publish the page with light.svg selected as a reference; an unpublished asset leaves the band without its background on aem.page and aem.live. Site media is served with long cache lifetimes.

Business Rules

- Image alt text is empty, so the background is decorative and gets alt="".
- The code adds no scrim: the text must meet 4.5:1 contrast over light.svg at every width.
- The band height comes from the content plus the section spacing padding, not from the image ratio.
- In the first section the background is the LCP candidate and loads eagerly; elsewhere it loads lazily.
- Do not put important text only in the background image.

Common Authoring Mistakes

Error	Root Cause	Resolution
The title is unreadable over the image	A busy or dark image was chosen and the text stays black	Choose a lighter, calmer image such as light.svg, or put the text in a block with its own background
Screen readers announce the background	Image alt text was filled for a decorative image	Clear Image alt text so the image gets alt=""
The background is pixelated on desktop	The original is smaller than the 2000 px rendition	Upload an original at least 2000 px wide, landscape 2:1 to 3:1

Troubleshooting

- **Symptoms:** The band shows only white behind 'Building on belief'.
- **Cause:** light.svg was not published, or the Background Image reference points to a moved asset.
- **Resolution:** Re-select light.svg in Background Image, publish the asset with the page (Manage Publication with references).
- **Verification Steps:** Inspect the section on aem.page: it has has-background and div.section-background whose image request returns 200.

Use Cases: Campaign bands, event teasers, section openers built from default content.

Authoring Guidelines: Pick an image in **Background Image**; fill **Image alt text** only if the image conveys information, otherwise leave it empty.

Business Rules: The image comes from the field's picture / image, else from its link or URL text; site media (`/media_`) is optimised, other URLs are used as they are. The alt field wins over an alt that AEM merged into the image; empty means decorative (`alt=""`).

Rendering Rules: A `div.section-background` with the picture is prepended to the section; the section gets `has-background` (`position: relative; isolation: isolate; margin: 0; padding: var(--section-spacing) 0`). The background is absolutely positioned (`inset: 0; z-index: -1`) and the image fills it (`width/height: 100%; object-fit: cover`). No overlay is added and the text colour does not change.

Responsive Behaviour: Picture sources: 2000 px wide from 600 px viewport width, 750 px below. Cropped by `object-fit: cover` to the band's shape at each size; the band height is set by its content plus the section spacing padding.

SEO Impact: Background images are real `<img>` elements; with alt text they can be indexed as images. A decorative background (empty alt) has no SEO weight.

Accessibility Compliance: Authors must ensure the text over the image meets 4.5:1 contrast (WCAG 1.4.3); the code adds no scrim. Decorative images get `alt=""` so screen readers skip them.

Variation 6 — Anchored section

Variation Name: Anchored section (Anchor name set).

Business Purpose: Let Anchor List links and `#links` jump to a section.

Visual Example:

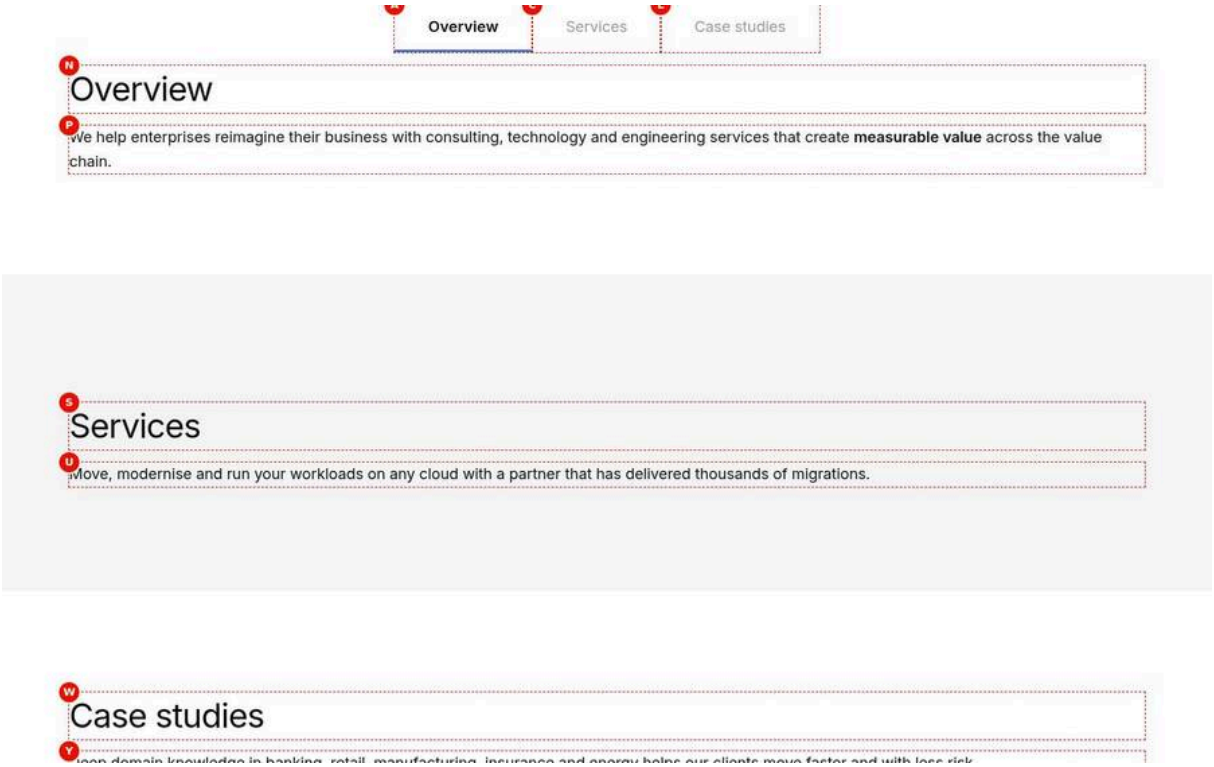

Figure 27: Anchored section — The 1440 px viewport after selecting Overview in the sticky Anchor List: the list with Overview, Services and Case studies pinned at the top, the 'Overview' section with its h2 and text below it and #overview in the address bar. On aem.page the heading 'Overview' carries the id overview, so the jump lands on the heading. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/section-anchored.jpg)

Screenshot Details — Anchored section

Item	Detail
Screenshot Name	`screenshots/section-anchored.jpg`
Screenshot Purpose	Anchored section
Screen Description	The 1440 px viewport after selecting Overview in the sticky Anchor List: the list with Overview, Services and Case studies pinned at the top, the 'Overview' section with its h2 and text below it and #overview in the address bar. On aem.page the heading 'Overview' carries the id overview, so the jump lands on the heading.
Business Context	A long cloud transformation page with chapter navigation: a sticky Anchor List at the top lets visitors jump to the Overview, Services and Case studies sections.
Author Objective	Add a sticky Anchor List with three links, give the three chapter sections the Anchor names overview, services and case-studies, and check that the Overview link scrolls to its section.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Anchor List	Yes	Adds the Anchor List to the page	Select the section in the content tree, choose Add (+) and pick Anchor List	Only components the section allows (section filter)
A	Link Title (Anchor List › Content › Links › Item 1)	Overview	No	Visible link text	Short chapter name	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Anchor Name (Anchor List › Content › Links › Item 1)	overview	No	Section id for Anchor List and `#links`	Lower case, no spaces, unique on the page	None in the model; normalised by code
C	Link Title (Anchor List › Content › Links › Item 2)	Services	No	Visible link text	Short chapter name	None
(D)	Anchor Name (Anchor List › Content › Links › Item 2)	services	No	Section id for Anchor List and `#links`	Lower case, no spaces, unique on the page	None in the model; normalised by code
E	Link Title (Anchor List › Content › Links › Item 3)	Case studies	No	Visible link text	Short chapter name	None
(F)	Anchor Name (Anchor List › Content › Links › Item 3)	case-studies	No	Section id for Anchor List and `#links`	Lower case, no spaces, unique on the page	None in the model; normalised by code
(G)	Sticky (Anchor List › Content)	On	No	Pins the list while scrolling	On for long pages	None
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
H	Title (Title)	Cloud transformation services	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(I)	Title Type (Title)	h1	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
J	Text (Text)	Move, modernise and run your workloads on any cloud with a partner that has delivered thousands of migrations.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Image	Yes	Adds the Image to the page	Select the section in the content tree, choose Add (+) and pick Image	Only components the section allows (section filter)
K	Image (Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	Recommended (without an image the component renders nothing)	The image to show	High-quality original from `/content/dam/tcs-corp/`	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
L	Alt Text (Image)	Engineers reviewing a cloud dashboard	Recommended for informative images	Text alternative	Describe content and purpose; empty if decorative	None in the model
(M)	Anchor name (Section properties)	overview	No	Section id for Anchor List and `#links`	Lower case, no spaces, unique on the page	None in the model; normalised by code
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
N	Title (Title)	Overview	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(O)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
P	Text (Text)	We help enterprises reimagine their business with consulting, technology and engineering services that create **measurable value** across the value chain.	No	Card text	1–3 sentences; lists and links allowed	None
(Q)	Style (Section properties)	Highlight	No	Background style of the band	Choose Highlight for a grey band	Enforced: options list (Highlight)
(R)	Anchor name (Section properties)	services	No	Section id for Anchor List and `#links`	Lower case, no spaces, unique on the page	None in the model; normalised by code
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
S	Title (Title)	Services	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(T)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
U	Text (Text)	Move, modernise and run your workloads on any cloud with a partner that has delivered thousands of migrations.	No	Card text	1–3 sentences; lists and links allowed	None
(V)	Anchor name (Section properties)	case-studies	No	Section id for Anchor List and `#links`	Lower case, no spaces, unique on the page	None in the model; normalised by code
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
W	Title (Title)	Case studies	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(X)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
Y	Text (Text)	Deep domain knowledge in banking, retail, manufacturing, insurance and energy helps our clients move faster and with less risk.	No	Card text	1–3 sentences; lists and links allowed	None
—	Action (Preview)	Select the Overview link of the Anchor List (the address bar shows #overview)	—	Check on the preview (not stored in the content)	Select the Overview link of the Anchor List (the address bar shows #overview)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The page is scrolled to the 'Overview' band, with #overview in the address bar and the Anchor List pinned at the top of the screen showing Overview, Services and Case studies; the grey Services band follows.

- **Rendering behaviour:** The code sets section.id from Anchor name (lower case, other characters as hyphens) only when no element on the page already has that id. The Anchor List pins to the top once scrolled to and scrolls targets to just below itself; after loading, the page scrolls to the element named in the URL hash.
- **Publishing behaviour:** Publish the page to Preview and Live; anchors are part of the page HTML. Deep links such as /en/…#overview work only once the published page carries the same Anchor names.

Business Rules

- The Anchor Name of each Anchor List item must equal the section's Anchor name: overview, services, case-studies.
- A leading # is removed and the value normalised; there is no suffix, so on an id conflict the section anchor is silently skipped.
- Headings can carry ids from their text: here 'Overview', 'Services' and 'Case studies' may take overview, services and case-studies first, and the link then jumps to the heading instead of the band.
- Keep anchors identical across locales if campaigns deep link to them.
- Only one H1 on the page: 'Cloud transformation services'; the chapters use h2.

Common Authoring Mistakes

Error	Root Cause	Resolution
Selecting Case studies does not scroll	Anchor name typed case-study in the section but case-studies in the Anchor List item	Use case-studies in both the section and the Anchor List item
The link stops at the heading, not at the top of the grey band	Another element (the heading or a block Anchor ID) already has the id, so the section id was skipped	Use a distinct anchor such as services-band, or accept the heading as the target
The Anchor List scrolls away on long chapters	Sticky left off	Switch Sticky on in the Anchor List

Troubleshooting

- **Symptoms:** Opening the page with #services stays at the top.
- **Cause:** The section's Anchor name differs from the link (typo, case or spaces), or the id is already used by another element.
- **Resolution:** Search the DOM for id="services" in the developer tools, align the section and Anchor List values, rename a conflicting block Anchor ID, then republish.
- **Verification Steps:** Open the aem.page URL with #services; the page scrolls to the Services band just below the pinned Anchor List.

Use Cases: Long pages with chapter navigation, deep links from campaigns.

Authoring Guidelines: Enter a short lower-case name such as `overview` in **Anchor name**; use the same value in the Anchor List item.

Business Rules: A leading `#` is removed and the value is normalised (lower case, other characters become hyphens). The id is set only if no element already has it; there is no suffix.

Rendering Rules: `section.id = {anchor}`. After loading, the page scrolls to the element named in the URL hash.

Responsive Behaviour: None.

SEO Impact: Fragment links (`#overview`) can appear as "jump to" links in search results; keep anchors stable.

Accessibility Compliance: Supports WCAG 2.4.1 (bypass blocks) when used with an Anchor List.

Note: `styles/styles.css` also styles the section classes `light` (same as Highlight), `dark` (black background `--color-bg-neutral`, white text, brand-300 links, dark-variant buttons) and `brand` (`--color-bg-brand-secondary-hover`). The section model offers only **Highlight**, so `dark`, `brand` and `light` are **not authorable** on sections (as of this handover); the `gen-carousel-section` and `tabs-section` styles are set by the Gen Carousel and Tabs Container definitions, not by authors.

6.5.4 Authoring Experience

Figure 28: Section on the Universal Editor canvas — The page in editor mode at 1440 px (an annotated preview, not a Universal Editor screenshot): the section with the light.svg background framed as A, and its content, the h2 'Building on belief', the sentence on AI-led services and the primary 'Talk to our experts', marked C. B and D (content tree) are not marked. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/section-authoring-view.jpg)

Screenshot Details — Section on the Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/section-authoring-view.jpg`
Screenshot Purpose	Section on the Universal Editor canvas
Screen Description	The page in editor mode at 1440 px (an annotated preview, not a Universal Editor screenshot): the section with the light.svg background framed as A, and its content, the h2 'Building on belief', the sentence on AI-led services and the primary 'Talk to our experts', marked C. B and D (content tree) are not marked.
Business Context	How an author finds and edits a campaign band in Universal Editor: the selected section on the canvas, its background, its content and its labelled entry in the content tree.
Author Objective	Name a section 'Campaign band', give it the light.svg background, add a Title, a Text and a Button, and select it in the content tree.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Section Name (Section properties)	Campaign band	No	Label in the content tree	Short, descriptive name of the band's topic	None
—	Background Image (Section properties)	Select the asset light.svg (/en/media/light.svg)	No	Image behind the section	Wide, high-resolution image; important subject in the centre	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
—	Title (Title)	Building on belief	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
—	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	Our AI-led services help enterprises grow with confidence.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
—	Link (Button)	Select the page or enter /en/contact	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped
—	Text (Button)	Talk to our experts	Yes (Recommended)	Visible link text	Short, descriptive	None
—	Section (Universal Editor › Content tree)	Select the section labelled “Campaign band” (D)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter’s Annotations list.

Expected Page Output

- **Visual output:** The band with the light.svg background has a blue selection frame (A, B); ‘Building on belief’, the sentence and the ‘Talk to our experts’ button sit inside it (C); the content tree highlights the entry ‘Campaign band’ (D).
- **Rendering behaviour:** In the editor the section is re-decorated in place after each property change (options, blocks, block options); if that fails the canvas reloads. Section Name is only a content tree label and is not rendered on the page.
- **Publishing behaviour:** Edits are saved to AEM author at once but appear on aem.page only after Publish to Preview and on aem.live after Publish to Live; include light.svg in the publication.

Business Rules

- Section Name ‘Campaign band’ is not shown on the site; it only labels the section in the content tree.

- Select the band itself (A), not a component inside it, to see the section properties.
- The section dialog has a single list of fields and no Additional tab: no Hide, padding or margin on sections.
- Background Image is edited on the section (B); the Title, Text and Button are edited through their own components (C).

Common Authoring Mistakes

Error	Root Cause	Resolution
The Properties panel shows Title fields instead of the section fields	The heading inside the band was selected	Select the section entry 'Campaign band' in the content tree (D)
The author looks for 'Campaign band' on the published page	Section Name is a content tree label only	Use a Title for visible headings
Several sections are labelled Section in the tree	Section Name left empty	Name every section by its topic, up to about 40 characters

Troubleshooting

- **Symptoms:** After changing Background Image the canvas reloads and the selection is lost.
- **Cause:** The in-place re-decoration of the section failed, so Universal Editor reloads the canvas.
- **Resolution:** Wait for the reload, select 'Campaign band' in the content tree again and check the field value was saved.
- **Verification Steps:** The band shows light.svg on the canvas and the Properties panel lists it in Background Image.

Annotations:

- A = the section band (select it to edit Section Name, Style, Width Type, Rounded edge, Anchor name)
- B = the section background image (Background Image, Image alt text)
- C = default content inside the section (edited through its own component)
- D = the section entry in the content tree (shows the Section Name)

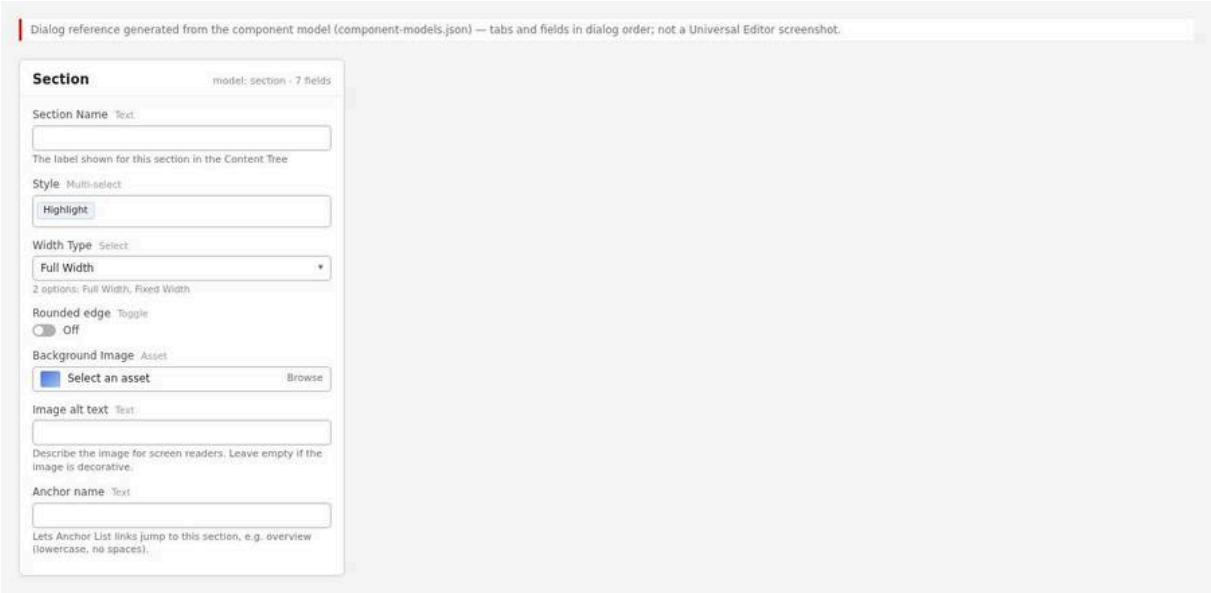

Figure 29: Section properties panel — The Properties panel of a section showing Section Name, Style, Width Type, Rounded edge, Background Image, Image alt text and Anchor name. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/section-properties-panel.jpg)

The section dialog has a single list of fields (no tabs): **Section Name** (text, content tree label), **Style** (multi-select: Highlight), **Width Type** (select: Full Width / Fixed Width), **Rounded edge** (switch), **Background Image** (Assets

picker), **Image alt text** (text, with the help text "Describe the image for screen readers. Leave empty if the image is decorative.") and **Anchor name** (text, help text "Lets Anchor List links jump to this section, e.g. overview (lowercase, no spaces)."). There is no Additional tab on sections.

6.5.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In the Sites console select the page and select **Edit**.

Expected Result: The page opens on the canvas; the content tree shows Main and its sections.

Steps — Step 1: The page open in the Universal Editor with the content tree expanded to Main.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Open TCS Corp › us › en › services
2	AEM Sites console	Select	Select the page (check box of its card or row)
3	AEM Sites console toolbar	Edit	Select Edit: the page opens in the Universal Editor
4	Universal Editor › Content tree	Main	Expand Main: its sections are listed

Step 2 — Add a section

Action: Select **Main** in the content tree, select **Add (+)** and choose **Section**.

Expected Result: An empty section appears at the end of the page (drag it to its position in the content tree if needed).

Steps — Step 2: The Add (+) picker at Main level showing Section, Gen Carousel and Tabs Container, with Section highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Main	Select Main
2	Universal Editor › Content tree	Add (+)	Select Add (+): Section, Gen Carousel, Tabs Container
3	Component picker	Section	Select Section

Step 3 — Name the section

Action: With the section selected, enter a **Section Name** such as "Services overview".

Expected Result: The content tree shows the new label; nothing changes on the page.

Steps — Step 3: The Section Name field filled in and the content tree showing the label.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the new section
2	Section properties	Section Name	Services overview

Step 4 — Choose the style and width

Action: Select **Highlight** in Style if the band should be grey; choose **Fixed Width** in Width Type if it should be limited to the content width; switch **Rounded edge** on if wanted.

Expected Result: The canvas updates with the grey band, the narrower box and / or rounded corners.

Steps — Step 4: Style Highlight, Width Type Fixed Width and Rounded edge on, with the canvas showing the framed grey band.

Step	Where	Field / control	Value / action
1	Section properties	Style	Highlight
2	Section properties	Width Type	Fixed Width
3	Section properties	Rounded edge	On

Step 5 — Add a background image (optional)

Action: Select **Background Image**, pick an image in AEM Assets, and fill **Image alt text** only if the image is informative.

Expected Result: The image covers the band behind the content.

Steps — Step 5: The Assets picker opened from Background Image and the canvas showing the image behind the section content.

Step	Where	Field / control	Value / action
1	Section properties	Background Image	Select the field: the Assets picker opens
2	Assets picker	Asset	Open /content/dam/tcs-corp/, select the image, then Select
3	Section properties	Image alt text	Leave empty (decorative) or describe an informative image

Step 6 — Set the anchor (optional)

Action: Enter an **Anchor name**, for example `overview`.

Expected Result: The section gets the id `overview`; `#overview` links jump to it.

Steps — Step 6: The Anchor name field with `overview` and an Anchor List item pointing to it.

Step	Where	Field / control	Value / action
1	Section properties	Anchor name	overview
2	Universal Editor › Content tree	Anchor List	Select the Anchor List of the page
3	Anchor List › Content	Links › Item	Link Title = Overview, Anchor Name = overview

Step 7 — Add content

Action: Select the section, select **Add (+)** and insert Title, Text, Button, Image or blocks.

Expected Result: The components appear inside the band in content tree order.

Steps — Step 7: The section with a Title, a Text and a Cards block added, shown in the content tree.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section, then Add (+)
2	Component picker	Title	Select Title
3	Universal Editor › Content tree	Section › Add (+)	Text

Step	Where	Field / control	Value / action
4	Universal Editor › Content tree	Section › Add (+)	Cards

Step 8 — Preview

Action: Switch on **Preview** mode and check the section at desktop, tablet and mobile sizes.

Expected Result: Spacing and background behave as described in 6.5.2.

Steps — Step 8: The section in Preview mode at mobile size.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch Preview on
2	Universal Editor toolbar	Device size	Mobile

Step 9 — Validate and publish

Action: Run the checklist below, then **Publish** to Preview and to Live.

Expected Result: The section shows on `.aem.page` and then `.aem.live`.

Steps — Step 9: The Publish dialog listing the page and the background image asset.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Select Publish
2	Publish dialog	Items	Keep the page and its references selected (the background image asset)
3	Publish dialog	Destination	Preview
4	Publish dialog	Publish	Select Publish; check the page on https://main–tcs-corp–sradha-tcs.aem.page/en/…
5	Publish dialog	Destination	Live (when approved), then Publish; check https://main–tcs-corp–sradha-tcs.aem.live/en/…

Preview Process

Publish to Preview and open `https://main--tcs-corp--sradha-tcs.aem.page/{language}/{path}`. Check the section at 375 px, 768 px and 1440 px (browser developer tools device mode). For a Fixed Width section, also check a viewport wider than 1440 px.

Publishing Process

Publish the page to Live from the Universal Editor or with Quick Publish / Manage Publication in the Sites console. Include the background image asset in the publication (the dialog lists references).

Validation Process

- ☐ The section appears in the intended order.
- ☐ Highlight band is grey and spans the viewport (or 90rem when Fixed Width).
- ☐ Background image covers the band; the important part of the image is not cropped away on mobile.
- ☐ Text over the background image has sufficient contrast (4.5:1 for body text).
- ☐ Background alt text is filled only for informative images.
- ☐ The anchor id is present (`#overview` in the address bar scrolls to the section).
- ☐ Rounded corners are visible (Fixed Width on wide screens, or with a background).

- ☐ No unexpected empty section remains (for example when all its blocks are hidden).

Rollback Process

Undo the field change in the Properties panel, or restore the previous page version in the Sites console (Timeline > Versions > Revert to this Version), then republish. Deleting a section deletes its content: restore the page version to recover it.

The walkthroughs below repeat the steps above for each variation of chapter 6.5.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Default (Full Width)

Reproduces the screenshot `screenshots/section-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: The Title, the Text and an empty Teaser appear one after the other inside the white section.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Digital transformation at scale; **Title Type** (B) = h2.

Expected Result: The h2 'Digital transformation at scale' appears at the top of the section.

Step 4 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: The Title, the Text and an empty Teaser appear one after the other inside the white section.

Step 5 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = We help enterprises reimagine their business with consulting, technology and engineering services that create **measurable value** across the value chain.

Expected Result: The introduction paragraph appears under the heading with 'measurable value' in bold.

Step 6 — Add the Teaser

Action: Select the section in the content tree, choose **Add (+)** and pick **Teaser**.

Expected Result: The Title, the Text and an empty Teaser appear one after the other inside the white section.

Step 7 — Fill in Teaser › Content

Action: Select **Teaser** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (D) = Consulting; **Title** (E) = Business and technology consulting; **Description** (F) = Strategy, design and change management that turn transformation goals into results.

Expected Result: The eyebrow 'Consulting', the title 'Business and technology consulting' and the description fill the Teaser's text column.

Step 8 — Fill in Teaser › Image

Action: Select **Teaser** in the content tree and open the **Image** tab of the properties panel. Enter: **Image** (G) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Image alt text** (H) = Consultants planning a transformation roadmap.

Expected Result: photo-1.svg appears in the Teaser's image column on the left, with the alt text 'Consultants planning a transformation roadmap'.

Step 9 — Fill in Teaser › Links

Action: Select **Teaser** in the content tree and open the **Links** tab of the properties panel. Enter: **Primary CTA Title** (I) = Explore consulting; **Primary CTA Link** (J) = Select the page or enter /en/services/consulting.

Expected Result: The 'Explore consulting' primary button appears under the Teaser description, linking to /en/services/consulting.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: On white: the h2 'Digital transformation at scale', the introduction with 'measurable value' in bold, then a text split Teaser with photo-1.svg, the eyebrow 'Consulting', the title 'Business and technology consulting', its description and the 'Explore consulting' button.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview, then to Live; select photo-1.svg as a reference in the Publish dialog so the Teaser image is available on aem.page and aem.live.

Step 12 — Verify

Action: On the live page check: On aem.page the heading starts directly under the header and the section is the first main > .section.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Highlight

Reproduces the screenshot `screenshots/section-highlight.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Style** (A) = Highlight.

Expected Result: Selecting Highlight in Style turns the selected band light grey on the canvas.

Step 3 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: The Title, the Text and the Button appear inside the grey band in content tree order.

Step 4 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (B) = Industries we serve; **Title Type** (C) = h2.

Expected Result: The h2 'Industries we serve' appears at the top of the grey band.

Step 5 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: The Title, the Text and the Button appear inside the grey band in content tree order.

Step 6 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = Deep domain knowledge in banking, retail, manufacturing, insurance and energy helps our clients move faster and with less risk.

Expected Result: The paragraph about banking, retail, manufacturing, insurance and energy appears under the heading.

Step 7 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: The Title, the Text and the Button appear inside the grey band in content tree order.

Step 8 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (E) = Select the page or enter /en/industries; **Text** (F) = Explore industries.

Expected Result: The primary button 'Explore industries' appears under the text, linking to /en/industries.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A light grey (grey-100, #f5f5f5) band spans the full viewport width; inside it the h2 'Industries we serve', the paragraph and the primary 'Explore industries' button, with white sections above and below.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview and Live from Universal Editor; the band is part of the page HTML, so no asset or other page needs publishing. The CDN cache is purged on publish.

Step 11 — Verify

Action: On the live page check: Reload aem.page; the section element has the class highlight and a grey background.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Fixed Width

Reproduces the screenshot `screenshots/section-fixed-width.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Style** (A) = Highlight; **Width Type** (B) = Fixed Width.

Expected Result: Highlight turns the band grey and Fixed Width narrows it to 90rem, centred, on a canvas wider than 1440 px.

Step 3 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: The Title, the Text and the Button appear inside the centred grey box.

Step 4 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (C) = Industries we serve; **Title Type** (D) = h2.

Expected Result: The h2 'Industries we serve' appears at the top of the box.

Step 5 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: The Title, the Text and the Button appear inside the centred grey box.

Step 6 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = Deep domain knowledge in banking, retail, manufacturing, insurance and energy helps our clients move faster and with less risk.

Expected Result: The paragraph about the industries appears under the heading within the 90rem width.

Step 7 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: The Title, the Text and the Button appear inside the centred grey box.

Step 8 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (F) = Select the page or enter / en/industries; **Text** (G) = Explore industries.

Expected Result: The primary button 'Explore industries' appears under the text, linking to /en/industries.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1920 px the grey band is 1440 px (90rem) wide and centred, with white space left and right; 'Industries we serve', the paragraph and the primary 'Explore industries' button sit inside it.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview and Live; the change is in the page HTML only. Reviewers must check aem.page on a screen or device mode wider than 1440 px to see the effect.

Step 11 — Verify

Action: On the live page check: On aem.page at 1920 px the section has the class fixed-width and the grey box is 1440 px wide and centred.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Rounded edge

Reproduces the screenshot `screenshots/section-rounded-edge.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Style** (A) = Highlight; **Width Type** (B) = Fixed Width; **Rounded edge** (C) = On.

Expected Result: Highlight, Fixed Width and Rounded edge turn the band into a centred grey box with rounded corners on a wide canvas.

Step 3 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: The Title, the Text and the Button appear inside the rounded grey box.

Step 4 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (D) = Talk to our experts; **Title Type** (E) = h2.

Expected Result: The h2 'Talk to our experts' appears at the top of the box.

Step 5 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: The Title, the Text and the Button appear inside the rounded grey box.

Step 6 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (F) = Tell us about your goals and we will put the right team together.

Expected Result: The sentence 'Tell us about your goals and we will put the right team together.' appears under the heading.

Step 7 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: The Title, the Text and the Button appear inside the rounded grey box.

Step 8 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (G) = Select the page or enter /en/contact; **Text** (H) = Contact us.

Expected Result: The primary button 'Contact us' appears under the text, linking to /en/contact.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: At 1920 px a centred 1440 px grey box with 1rem (16 px) rounded corners holds the h2 'Talk to our experts', the sentence about putting the right team together and the primary 'Contact us' button.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview and Live; no asset is involved. Check the corners on aem.page at a width above 1440 px.

Step 11 — Verify

Action: On the live page check: On aem.page at 1920 px the section has highlight, fixed-width and rounded, and the box corners are rounded.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Background Image

Reproduces the screenshot `screenshots/section-background-image.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Background Image** (A) = Select the asset light.svg (/en/media/light.svg).

Expected Result: After light.svg is selected in Background Image, the pale blue gradient covers the selected band behind any content.

Step 3 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: The Title and the Button appear on top of the background image in content tree order.

Step 4 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (B) = Building on belief; **Title Type** (C) = h2.

Expected Result: The h2 ‘Building on belief’ appears over the gradient in the default dark text colour.

Step 5 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: The Title and the Button appear on top of the background image in content tree order.

Step 6 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (D) = Select the page or enter /en/contact; **Text** (E) = Talk to our experts.

Expected Result: The primary button ‘Talk to our experts’ appears under the title, linking to /en/contact.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The pale blue light.svg gradient fills the band edge to edge; the h2 ‘Building on belief’ and the primary ‘Talk to our experts’ button sit on it in the default dark text colour.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page with light.svg selected as a reference; an unpublished asset leaves the band without its background on aem.page and aem.live. Site media is served with long cache lifetimes.

Step 9 — Verify

Action: On the live page check: Inspect the section on aem.page: it has has-background and div.section-background whose image request returns 200.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Anchored section

Reproduces the screenshot `screenshots/section-anchored.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Anchor List

Action: Select the section in the content tree, choose **Add (+)** and pick **Anchor List**.

Expected Result: The Anchor List, Titles, Texts and the Image appear in their sections in content tree order.

Step 3 — Fill in Anchor List › Content

Action: Select **Anchor List** in the content tree and open the **Content** tab of the properties panel. Enter: **Links** › Item 1: **Link Title** (A) = Overview, **Anchor Name** (B) = overview; **Links** › Item 2: **Link Title** (C) = Services, **Anchor Name** (D) = services; **Links** › Item 3: **Link Title** (E) = Case studies, **Anchor Name** (F) = case-studies; **Sticky** (G) = On.

Expected Result: Three links Overview, Services and Case studies appear in the Anchor List, which is marked to stay pinned when scrolled.

Step 4 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: The Anchor List, Titles, Texts and the Image appear in their sections in content tree order.

Step 5 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (H) = Cloud transformation services; **Title Type** (I) = h1.

Expected Result: The h1 'Cloud transformation services' and the h2 chapter headings appear at the top of their sections.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: The Anchor List, Titles, Texts and the Image appear in their sections in content tree order.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (J) = Move, modernise and run your workloads on any cloud with a partner that has delivered thousands of migrations.

Expected Result: The paragraphs appear under their headings in each chapter section.

Step 8 — Add the Image

Action: Select the section in the content tree, choose **Add (+)** and pick **Image**.

Expected Result: The Anchor List, Titles, Texts and the Image appear in their sections in content tree order.

Step 9 — Fill in Image

Action: Select **Image** in the content tree and enter in the properties panel: **Image** (K) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Alt Text** (L) = Engineers reviewing a cloud dashboard.

Expected Result: photo-2.svg appears under the introduction with the alt text 'Engineers reviewing a cloud dashboard'.

Step 10 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Anchor name** (M) = overview.

Expected Result: Nothing changes visually except the grey Services band; the sections receive the ids overview, services and case-studies.

Step 11 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: The Anchor List, Titles, Texts and the Image appear in their sections in content tree order.

Step 12 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (N) = Overview; **Title Type** (O) = h2.

Expected Result: The h1 'Cloud transformation services' and the h2 chapter headings appear at the top of their sections.

Step 13 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: The Anchor List, Titles, Texts and the Image appear in their sections in content tree order.

Step 14 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (P) = We help enterprises reimagine their business with consulting, technology and engineering services that create **measurable value** across the value chain.

Expected Result: The paragraphs appear under their headings in each chapter section.

Step 15 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Style** (Q) = Highlight; **Anchor name** (R) = services.

Expected Result: Nothing changes visually except the grey Services band; the sections receive the ids overview, services and case-studies.

Step 16 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: The Anchor List, Titles, Texts and the Image appear in their sections in content tree order.

Step 17 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (S) = Services; **Title Type** (T) = h2.

Expected Result: The h1 'Cloud transformation services' and the h2 chapter headings appear at the top of their sections.

Step 18 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: The Anchor List, Titles, Texts and the Image appear in their sections in content tree order.

Step 19 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (U) = Move, modernise and run your workloads on any cloud with a partner that has delivered thousands of migrations.

Expected Result: The paragraphs appear under their headings in each chapter section.

Step 20 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Anchor name** (V) = case-studies.

Expected Result: Nothing changes visually except the grey Services band; the sections receive the ids overview, services and case-studies.

Step 21 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: The Anchor List, Titles, Texts and the Image appear in their sections in content tree order.

Step 22 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (W) = Case studies; **Title Type** (X) = h2.

Expected Result: The h1 'Cloud transformation services' and the h2 chapter headings appear at the top of their sections.

Step 23 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: The Anchor List, Titles, Texts and the Image appear in their sections in content tree order.

Step 24 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (Y) = Deep domain knowledge in banking, retail, manufacturing, insurance and energy helps our clients move faster and with less risk.

Expected Result: The paragraphs appear under their headings in each chapter section.

Step 25 — Preview

Action: Action: Select the Overview link of the Anchor List (the address bar shows #overview).

Expected Result: The page scrolls to the Overview section, the Overview link is current and the address bar shows #overview.

Step 26 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The page is scrolled to the 'Overview' band, with #overview in the address bar and the Anchor List pinned at the top of the screen showing Overview, Services and Case studies; the grey Services band follows.

Step 27 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page to Preview and Live; anchors are part of the page HTML. Deep links such as /en/…#overview work only once the published page carries the same Anchor names.

Step 28 — Verify

Action: On the live page check: Open the aem.page URL with #services; the page scrolls to the Services band just below the pinned Anchor List.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.5.6 Authorable Field Specification

Model `section` (single panel, no tabs)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Section Name (`name`)	Text	No	No	(empty)	Label in the content tree	Short, descriptive name of the band's topic	None	Services overview
Style (`style`)	Multi-select	No	Yes	(empty)	Background style of the band	Choose Highlight for a grey band	Enforced: options list (Highlight)	highlight
Width Type (`sectionWidth`)	Select	No	No	Full Width (`full-width`)	Width of the band	Fixed Width for a 90rem band on wide screens	Enforced: Full Width or Fixed Width	fixed-width
Rounded edge (`roundedEdge`)	Boolean	No	No	false	Rounded corners	Combine with Highlight / background and Fixed Width	None	true
Background Image (`backgroundImage`)	Reference (AEM Assets)	No	No	(empty)	Image behind the section	Wide, high-resolution image; important subject in the centre	None	/content/dam/tcs-corp/campaigns/ai-band.jpg
Image alt text (`backgroundImageAlt`)	Text	No	No	(empty)	Accessible description of the background	Empty if decorative	None	Engineers in a TCS innovation lab
Anchor name (`anchorName`)	Text	No	No	(empty)	Section id for Anchor List and `#links`	Lower case, no spaces, unique on the page	None in the model; normalised by code	overview

Additional tab: Not applicable. Sections have no Additional tab (the Anchor ID, Hide block, padding and margin fields exist only on blocks).

Field details

- **Section Name** — Purpose: content tree label. Allowed Values: any text. Character Limits: Recommended up to 40 characters. Business Rules: not rendered on the site. Dependency Rules: none. Visibility Rules: always visible. Sample Content: "Case studies".
- **Style** — Purpose: background style. Allowed Values: `highlight`. Character Limits: not applicable. Business Rules: each selected value becomes a class (normalised). Dependency Rules: combine with Rounded edge and Fixed Width as needed. Visibility Rules: always visible. Sample Content: Highlight.
- **Width Type** — Purpose: band width. Allowed Values: `full-width`, `fixed-width`. Character Limits: not applicable. Business Rules: only `fixed-width` adds a class. Dependency Rules: affects Highlight, background and rounded corners (the box is centred at 90rem). Visibility Rules: always visible. Sample Content: Fixed Width.
- **Rounded edge** — Purpose: corner radius 1rem. Allowed Values: on / off. Character Limits: not applicable. Business Rules: applied when the value is `true`. Dependency Rules: visible only with a background (Highlight or image) or Fixed Width on wide screens. Visibility Rules: always visible. Sample Content: on.

- **Background Image** — Purpose: full-cover background. Allowed Values: an AEM Assets image (or a URL). Character Limits: not applicable. Business Rules: site media is optimised (2000 px from 600 px, 750 px below); the first section's background image is loaded eagerly as the LCP candidate, others lazily. Dependency Rules: Image alt text. Visibility Rules: always visible. Sample Content: a 2400 × 1200 px photograph.
- **Image alt text** — Purpose: background alt. Allowed Values: text. Character Limits: Recommended up to 125 characters. Business Rules: wins over an alt merged by AEM; empty becomes `alt=""`. Dependency Rules: used only with Background Image. Visibility Rules: always visible. Sample Content: "Aerial view of the TCS Siruseri campus".
- **Anchor name** — Purpose: section id. Allowed Values: text; normalised to lower case letters, digits and hyphens. Character Limits: Recommended up to 30 characters. Business Rules: leading `#` removed; not set if the id already exists. Dependency Rules: Anchor List items must use the same value. Visibility Rules: always visible. Sample Content: `overview`.

6.5.7 Field Annotation Mapping

Marker	Field	Purpose
A	Section Name; Style; Width Type; Rounded edge; Anchor name	Properties of the selected band
B	Background Image; Image alt text	Background image and its alt text
C	(child components)	Content of the section, edited through each component
D	Section Name	Label shown in the content tree

6.5.8 Component Specification

Attribute	Value
Component Name	Section (`section`, resource type `core/franklin/components/section/v1/section`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`models/_section.json`; `scripts/scripts.js`; `scripts/aem.js`; `decorators/responsive-image-decorator.js`; `styles/styles.css`
Component Type	Container (section)
Supported Variants	Default (Full Width); Highlight; Fixed Width; Rounded edge; Background Image; Anchored section (combinable)
Supported Templates	Any page
Supported Metadata	None (section properties only)
Supported Tags	None
Supported Personalization	None (as of this handover)
Caching Considerations	Part of the page HTML, cached by the Edge Delivery CDN and purged on publish; background images are served from the media store with long cache lifetimes
Performance Considerations	The first section is loaded in the eager phase (its first image, often the background, gets `loading="eager"` and LCP waits for it); later sections load in the lazy phase; each section is hidden (`display: none`) until its blocks are loaded
Accessibility Compliance	WCAG 2.1 AA: author-controlled contrast over backgrounds (1.4.3), decorative backgrounds `alt=""` (1.1.1), anchors support bypass navigation (2.4.1), reflow at 320 px (1.4.10)

Attribute	Value
SEO Compliance	No semantic element is added; headings inside sections carry the structure; informative backgrounds can carry alt text

6.5.9 Input Model

- **Content Inputs:** the components in the section (default content and blocks).
- **Metadata Inputs:** none.
- **Tags Inputs:** none.
- **Page Context Inputs:** position of the section (the first section is eager); existing ids on the page (anchor conflicts).
- **Query Inputs:** none.
- **Manual Inputs:** the seven section fields.

Allowed children (filter `section`): Text, Image, Button, Title, Page Header, Hero, Teaser, Quote, Testimonial, Anchor List, Accordion, Tabs, Table, Table List, List, Separator, Embed, Video, Modal, Form Variations, Filter List, Interactive Dashboard, Conversation Canvas, Cards, Columns, Fragment, Footer.

Authored HTML received from AEM (a section with options; the code reads the options either as data attributes of the section or as rows of a `section-metadata` block, then removes them):

```
<div>
  <h2>Our services</h2>
  <p>From cloud to AI, ...</p>
  <div class="teaser"><div><div>...</div></div></div>
  <div class="section-metadata">
    <div><div>style</div><div>highlight</div></div>
    <div><div>sectionWidth</div><div>fixed-width</div></div>
    <div><div>roundedEdge</div><div>true</div></div>
    <div><div>backgroundImage</div><div><picture>...</picture></div></div>
    <div><div>backgroundImageAlt</div><div>Engineers in a TCS lab</div></div>
    <div><div>anchorName</div><div>overview</div></div>
  </div>
</div>
```

6.5.10 Output Model

Rendered Output: `main > div.section` with the classes `highlight`, `fixed-width`, `rounded`, `has-background` as applicable, an optional `id`, a first child `div.section-background` (when a background is set), then one wrapper per run of default content (`div.default-content-wrapper`) or per block (`div.{block}-wrapper` containing `div.{block}.block`). Status attribute `data-section-status` (`initialized`, `loading`, `loaded`).

Generated HTML:

```
<div class="section highlight fixed-width rounded has-background" id="overview"
     data-section-status="loaded">
  <div class="section-background">
    <picture>
      <source type="image/webp" srcset="./media_1a2b.jpg?width=2000&format=webply..."
              media="(min-width: 600px)">
      <img loading="eager" alt="Engineers in a TCS lab" src="./media_1a2b.jpg?
width=750...">
    </picture>
  </div>
  <div class="default-content-wrapper"><h2 id="our-services">Our services</h2><p>...</p></
```

```
div>
  <div class="teaser-wrapper"><div class="teaser block" data-block-name="teaser">...</
div></div>
</div>
```

Generated JSON: none.

Generated Metadata: none.

Analytics Tracking: sections are not components in the data layer (only `.block` elements are). Clicks on links in a section's default content are pushed as `cmp:click` with the page as the component (`eventInfo.path component.page-{hash}`); blocks in the section are tracked as their own components with the page as `parentId` (Part 11).

Personalization Output: none.

Search Index Output: none (the query index reads page metadata, not sections).

Target Personalization Output: None (as of this handover): sections add no personalisation marker and are not components in the data layer; only the blocks inside them are tracked, with the page as parent. Links in default content are pushed as cmp:click with the page as the component.

6.5.11 Business Rules

1. Section options are read before the section is decorated, from the section's data attributes (`sectionwidth`, `roundededge`, `backgroundimage`, `backgroundimagealt`, `anchorname`) or from `section-metadata` rows whose normalised names match; matching rows are removed.
2. Style values are split at commas, normalised (`toClassName`) and added as classes; empty values are ignored.
3. Width Type adds `fixed-width` only when the value normalises to `fixed-width`; Full Width (or any other value) adds nothing.
4. Rounded edge adds `rounded` only when the value is `true` (case-insensitive).
5. Anchor name: a leading `#` is removed, the rest is normalised; the id is set only when no element with that id exists (no suffix is added; the anchor is silently skipped on a conflict).
6. Background image: the cell's `<picture>` or `<img>` is used; otherwise the cell link or the URL text is built into an image; same-origin `/media_` URLs become an optimised picture (2000 px from 600 px, 750 px below), other URLs a plain lazy `<img>`.
7. Background alt: the Image alt text wins; otherwise an alt already on the image is kept; otherwise `alt=""` (decorative).
8. When a background exists, `div.section-background` is prepended and the section gets `has-background` (no outer margin, section-spacing padding).
9. Highlight, background, and the CSS-only `light`, `dark`, `brand` styles remove the outer margin and add section-spacing padding.
10. Fixed Width also limits and centres the section box itself (after the Style and background rules).
11. The first section has no top margin.
12. A section whose Style is `gen-carousel-section` or `tabs-section` is turned into a Gen Carousel or Tabs container (set by those definitions, not by the Section model).
13. A wrapper whose block has Hide block on is not displayed outside edit mode; the section itself stays.
14. The first section is loaded in the eager phase and waits for its first image; all other sections load in the lazy phase.
15. In the Universal Editor, a changed section is re-decorated in place (`decorateSectionsWithOptions`, blocks, block options); if that fails the canvas reloads.

6.5.12 Author Best Practices

Recommended Content Length: one topic per section; typically one heading, up to three paragraphs and one block, or one block with its own heading.

Image Dimensions: background images at least 2000 px wide (served at 2000 px from 600 px viewport width and 750 px below); landscape 2:1 to 3:1; keep the subject in the centre third because `object-fit: cover` crops the edges.

CTA Writing Guidelines: a background or Highlight band should have at most one primary button; use action verbs ("Explore our services").

Accessibility Guidelines: check text contrast over images; leave the alt text empty for decorative backgrounds; give each section a heading so screen reader users can navigate by headings.

SEO Guidelines: structure sections with h2 headings; do not put important text only in background images.

Metadata Guidelines: not applicable (sections have no metadata).

Taxonomy Guidelines: not applicable.

Localization Guidelines: Section Name and Anchor name are not translated on the site (Anchor name is technical; keep it identical across locales if campaigns link to it); translate background alt text per locale.

6.5.13 Troubleshooting Guide

Issue 1 — Anchor link does not jump to the section

Symptoms: Selecting an Anchor List link or `#overview` URL stays at the top.

Root Cause: The anchor name differs (case, spaces, typo), or another element already has that id so the section was skipped.

Diagnosis Steps: In the browser developer tools, search the DOM for `id="overview"`; check which element has it.

Resolution Steps: Use the same normalised value in the section and the link; rename the conflicting block Anchor ID or heading.

Validation Steps: Open the page with `#overview`; the page scrolls to the section.

Preventive Measures: Use lower-case, hyphenated anchors unique on the page.

Issue 2 — Background image does not appear

Symptoms: The section has no image on preview or live.

Root Cause: The asset was not published, or the field holds a URL that is not reachable.

Diagnosis Steps: Inspect the section for `div.section-background`; check the image URL in the network panel.

Resolution Steps: Publish the asset (Manage Publication with references), re-pick the image, republish the page.

Validation Steps: The section has the class `has-background` and the image loads.

Preventive Measures: Always publish with references.

Issue 3 — Text is unreadable over the background image

Symptoms: Low contrast between text and image.

Root Cause: The code adds no overlay or text colour change.

Diagnosis Steps: Check contrast with a contrast checker at all three sizes.

Resolution Steps: Choose a calmer or darker / lighter image, or move the text into a block with its own background.

Validation Steps: Contrast 4.5:1 for body text, 3:1 for large text.

Preventive Measures: Agree background images with the design team. [To be confirmed: request for a dark section style or overlay — owner: product owner]

Issue 4 — Rounded corners are not visible

Symptoms: Rounded edge is on but the corners look square.

Root Cause: The section has no background and is full width, so the corners are at the screen edges and invisible on white.

Diagnosis Steps: Check that the section has `rounded` and either `highlight` or `has-background`.

Resolution Steps: Add Highlight or a background image and use Fixed Width.

Validation Steps: On a wide screen the framed band shows rounded corners.

Preventive Measures: Use Rounded edge only with a background.

Issue 5 — Two highlight bands merge

Symptoms: Two consecutive Highlight sections look like one band.

Root Cause: Highlight sections have no outer margin by design.

Diagnosis Steps: Check the content tree order.

Resolution Steps: Put a default section between them or merge them into one section.

Validation Steps: The bands are visually separated.

Preventive Measures: Alternate Highlight and default sections.

Issue 6 — Fixed Width has no visible effect

Symptoms: A Fixed Width section looks the same as Full Width.

Root Cause: The viewport is narrower than 90rem (1440 px).

Diagnosis Steps: Check the viewport width.

Resolution Steps: None needed; check on a wider screen.

Validation Steps: At 1920 px the band is centred at 1440 px.

Preventive Measures: Explain to reviewers that Fixed Width matters only on large screens.

Issue 7 — Dark or brand section requested

Symptoms: An author cannot find a Dark or Brand style.

Root Cause: Only Highlight is offered in the section model; `dark` and `brand` exist in CSS only.

Diagnosis Steps: Open the Style select (only Highlight).

Resolution Steps: Use a block with a background colour option, or request the style options from the development team.

Validation Steps: Not applicable.

Preventive Measures: Plan section styles with the design team.

Issue 8 — An empty gap remains where content was hidden

Symptoms: Extra white space in the page.

Root Cause: All blocks of the section have Hide block on; the section and its spacing remain.

Diagnosis Steps: In edit mode look for faded blocks in the section.

Resolution Steps: Hide or delete the whole section's content differently (for example move it to another page) or delete the section.

Validation Steps: The gap is gone on preview.

Preventive Measures: Hide whole sections by removing them, not by hiding every block.

6.5.14 Support Runbook

Monitoring Requirements: No section-specific monitoring. Core Web Vitals (LCP) of pages whose first section has a background image should be checked in PageSpeed Insights after large changes. [To be confirmed: RUM / monitoring tool — owner: site administrator]

Logs: Sections emit no console messages. Editor re-decoration errors show as a full canvas reload. Publish status can be checked with the Admin API (`https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`, authenticated) and in the AEM author replication log.

Common Errors:

Error	Cause	Fix
Anchor ignored	Id already used	Rename one of the ids
No background	Asset not published	Publish the asset
Background blurry	Small original image	Upload a 2000 px or wider original
Contrast failure	Busy image	Change the image
Unexpected grey band	Highlight selected	Clear Style

Escalation Matrix:

Level	Who	Checks
L1	Author support	Field values, publication of page and asset, browser cache
L2	AMS / site administrator	Publish status (Admin API), CDN cache, content source mapping (`paths.json`)
L3	Development team	`scripts/scripts.js` section code, `styles/styles.css` section rules
Adobe Support	Adobe	Edge Delivery Services or AEM author outages, Universal Editor defects

Recovery Procedures: Revert the section's field values or restore the page version and republish.

Health Checks: Open a page with each section variation in the locale's block library on author and on preview after each code release.

Operational Procedures: Section style options are changed by developers in `models/_section.json` and `styles/styles.css`, followed by `npm run build:json`.

Known Limitations: Only Highlight is authorable; no overlay or text colour for background images; no per-breakpoint background image; section anchors are not de-duplicated; sections have no Additional tab (no Hide, padding or margin options).

6.5.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
Two grey bands look like one	Consecutive sections both have Style Highlight and no outer margin	Put a default section between them or merge them

Error	Root Cause	Resolution
Rounded corners not visible	Rounded edge on a white Full Width section	Add Highlight or a Background Image and Fixed Width
Fixed Width has no effect	Viewport is 1440 px or narrower	Check on a screen wider than 1440 px
Anchor link does not jump	Anchor name differs from the link, or the id is already used on the page	Use the same normalised value; rename the conflicting id
Background missing on aem.page	Asset not published with the page	Publish with references and republish
Text unreadable over the image	No overlay or text colour change is applied	Choose a calmer image or a block with its own background
No Dark or Brand style	Only Highlight is in the section model (F-21, open)	Use a block with a background colour option or request the style
Empty gap on the page	All blocks of a section have Hide block on; sections have no Hide option	Delete the section or move its content
Section Name expected on the page	Section Name is a content tree label only	Add a Title for a visible heading

6.5.16 Author Quick Reference Guide

Mandatory Fields

- None: every field has a default or is optional.

Recommended Fields

- Section Name: a topic label for the content tree such as Services overview, up to about 40 characters
- Image alt text: only for informative backgrounds, up to about 125 characters; empty means decorative
- Anchor name: lower case and hyphens, unique on the page, when an Anchor List or #link targets the band

Optional Fields

- Style: Highlight for a light grey band
- Width Type: Fixed Width for a 90rem band on screens wider than 1440 px
- Rounded edge: 1rem corners, with Highlight or a background and Fixed Width
- Background Image: a wide image at least 2000 px, subject in the centre third

Authoring Checklist

1. Start a new section whenever the background, width or topic changes
2. Give every section an h2 Title so the page can be navigated by headings
3. Alternate Highlight and default sections; two Highlight sections in a row merge into one band
4. Use Rounded edge only with Highlight or a Background Image and Fixed Width
5. Check text contrast over a Background Image yourself; the code adds no overlay
6. Use the same Anchor name in the section and in the Anchor List item
7. Remove a section instead of hiding all of its blocks

Pre-Publish Checklist

1. Preview the page at 375 px, 768 px and 1440 px, and above 1440 px for Fixed Width
2. Check the sections are in the intended content tree order
3. Check the Highlight band is grey and full width, or 90rem when Fixed Width
4. Check the background covers the band and its subject is not cropped on mobile
5. Check text over the background meets 4.5:1 contrast
6. Check Image alt text is filled only for informative backgrounds
7. Open the page with #anchor and confirm it scrolls to the section

Post-Publish Validation Checklist

1. Open the page on aem.live and confirm each band renders as on aem.page
2. Confirm the background image request returns 200 (asset published with references)
3. Confirm the anchor deep links work on aem.live
4. Check for unexpected empty gaps from sections whose blocks are all hidden
5. Run PageSpeed Insights when the first section has a background image (LCP)

6.5.17 Component Execution Example

Business example: Three-band services overview on the English site.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Title
Title (Title)	Our services
Title Type (Title)	h2
Component (Section › Add (+))	Text
Text (Text)	We help enterprises reimagine their business with consulting, technology and engineering services that create **measurable value** across the value chain.
Style (Section properties)	Highlight
Component (Section › Add (+))	Title
Title (Title)	Industries we serve
Title Type (Title)	h2
Component (Section › Add (+))	Text
Text (Text)	Deep domain knowledge in banking, retail, manufacturing, insurance and energy helps our clients move faster and with less risk.
Component (Section › Add (+))	Button
Link (Button)	Select the page or enter /en/industries
Text (Button)	Explore industries
Width Type (Section properties)	Fixed Width
Rounded edge (Section properties)	On
Background Image (Section properties)	Select the asset light.svg (/en/media/light.svg)
Component (Section › Add (+))	Title
Title (Title)	Cloud transformation
Title Type (Title)	h2
Component (Section › Add (+))	Text
Text (Text)	Move, modernise and run your workloads on any cloud with a partner that has delivered thousands of migrations.
Component (Section › Add (+))	Button
Link (Button)	Select the page or enter /en/services/cloud
Text (Button)	Explore cloud services

Field	Value
Type (Button)	Secondary

All other fields keep their default values.

Rendered Result:

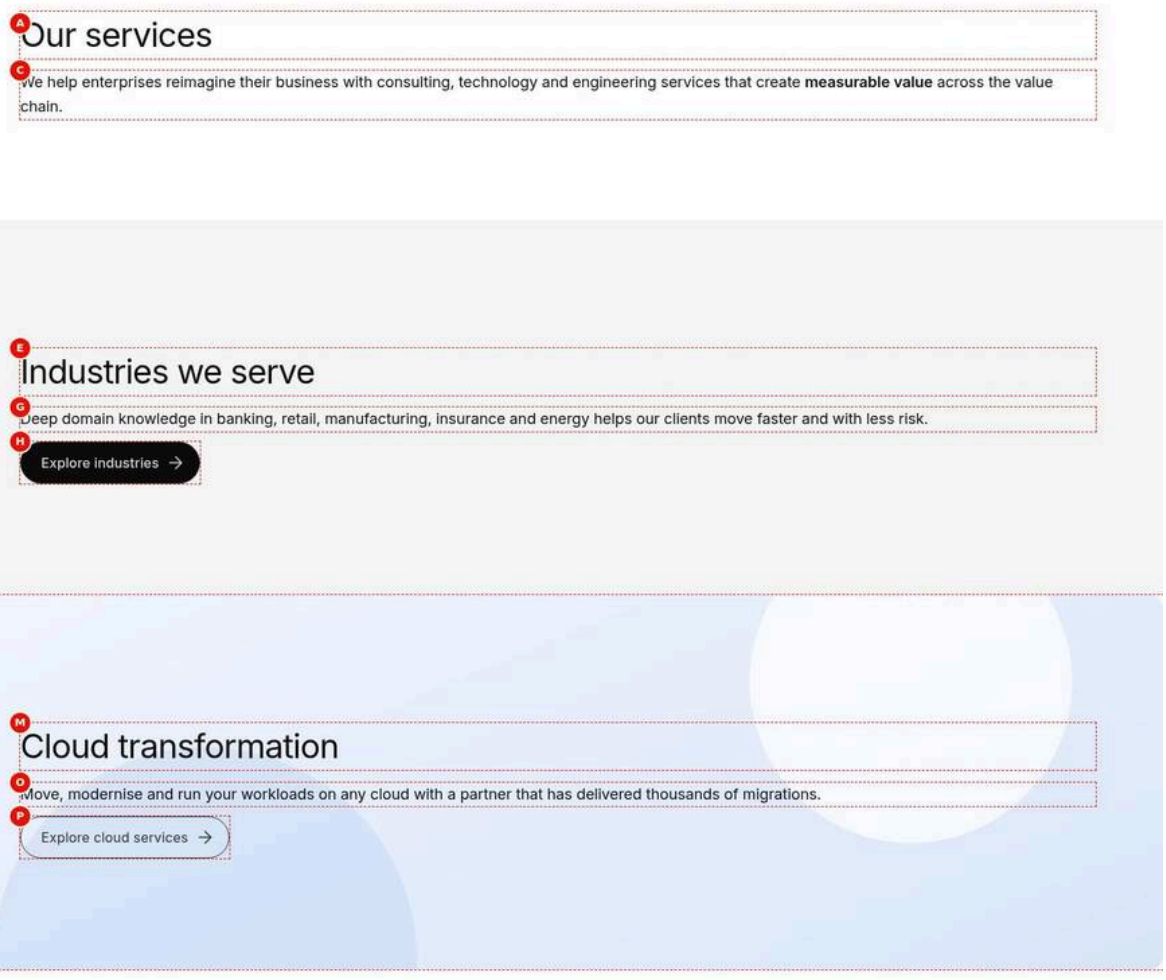

Figure 30: Execution example — The page at 1440 px with three stacked sections: 'Our services' and its text on white; a full-width grey Highlight band with 'Industries we serve' and the primary 'Explore industries'; a band on the pale blue light.svg gradient with 'Cloud transformation', its text and the secondary 'Explore cloud services' in dark text. At 1440 px the Fixed Width box equals the screen width, so its rounded corners sit at the screen edges. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/section-desktop-view.jpg)

Author Notes

- Section 1 keeps all defaults; section 2 sets only Style Highlight
- Section 3 sets Width Type Fixed Width, Rounded edge on and Background Image light.svg, with Image alt text empty
- Each band gets an h2 Title and a Text; the Buttons go to /en/industries (Primary) and /en/services/cloud (Secondary)
- Name the sections in Section Name so they can be found in the content tree

Business Notes

- One topic per band: introduction, industries, cloud offer

- The grey band and the framed band separate the calls to action from the introduction
- Each band has at most one primary action

Technical Notes

- The options arrive as section data attributes or section-metadata rows and are read before decorateSections
- Classes added: highlight, fixed-width, rounded, has-background; the background is a div.section-background prepended to the section
- Highlight and background sections have no outer margin and section-spacing padding (7.5rem from 1200 px)
- The first section loads in the eager phase; later ones in the lazy phase

6.6 Text Component

6.6.1 Component Purpose

Business Objective: Let authors write and format running text (paragraphs, lists, links, emphasis) directly on the page, with the site's typography applied automatically.

Business Use Cases:

- Introductions and body copy on any page.
- Lists of benefits, steps or facts.
- Inline links to other pages, documents or external sites.
- Quick calls to action: a link on its own line becomes a link button, or a button when it is bold and / or italic.

When To Use: For any flowing text that does not need a block's layout.

When Not To Use:

- For a heading on its own: use **Title** (explicit heading level).
- For a call to action that needs a specific view, icon or alignment: use **Button**.
- For text with an image side by side: use **Teaser** or **Columns**.
- For tabular data: use **Table**.

Dependencies:

Type	Item
Model	`models/_text.json` (definition `text`, resource type `core/franklin/components/text/v1/text`; no model fields: the content is rich text)
Code	`decorators/content-buttons-decorator.js` (`decorateButtons`), `utils/buttons.js` (`readButtonOptions`), `decorators/button-decorator.js`; `scripts/aem.js` (`decorateIcons`); `scripts/editor-support-rte.js` (`decorateRichtext`, groups rich text for inline editing)
Styles	`styles/styles.css` (body typography, headings, lists, links, buttons)
Data sources / sheets / placeholders	None

Related Components: Title, Button, Image (other default content); Columns (Text inside a Column); Tabs Container (Text inside tab panels).

Applicable Templates: Any page.

Supported Content Types: Paragraphs, headings (when available in the rich text toolbar), bulleted and numbered lists, bold, italic, links (internal pages, assets, external URLs, `mailto:`), line breaks.

Business Problem Solved

Authors needed to write running text (paragraphs, lists, inline links, emphasis) directly on the page in the site typography, and to turn a link into a call to action without adding a block: a standalone link becomes a link button, or a primary, secondary or tertiary button by its bold and italic formatting.

Supported Taxonomy

None: the Text component has no fields, reads no page tags, taxonomy or metadata (Supported Tags: None). Its text is indexed by search engines but not by the query index, which reads page metadata.

6.6.2 Visual Overview

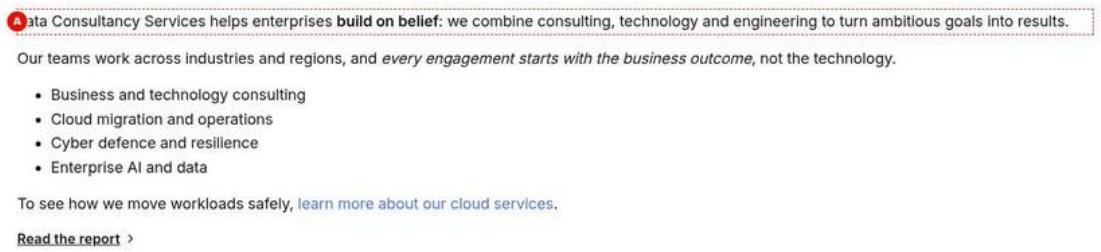

Figure 31: Desktop rendering — The Text at 1440 px: two paragraphs with 'build on belief' in bold and the outcome phrase in italic, a four-item bulleted list, a paragraph with 'learn more about our cloud services' in brand blue and 'Read the report' as an underlined semibold link button with a chevron. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/text-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/text-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Text at 1440 px: two paragraphs with 'build on belief' in bold and the outcome phrase in italic, a four-item bulleted list, a paragraph with 'learn more about our cloud services' in brand blue and 'Read the report' as an underlined semibold link button with a chevron.
Business Context	The introduction of the English corporate page: the body copy, the list of four service lines and the links to the cloud services page and the latest report, checked at 1440 px.
Author Objective	Add one Text component with two paragraphs (bold and italic phrases), a bulleted list, an inline link and a standalone link, and confirm the desktop typography.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Tata Consultancy Services helps enterprises **build on belief**: we combine consulting, technology and engineering to turn ambitious goals into results. Our teams work across indus-	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		tries and regions, and *every engagement starts with the business outcome*, not the technology. • Business and technology consulting • Cloud migration and operations • Cyber defence and resilience • Enterprise AI and data To see how we move workloads safely, learn more about our cloud services (link /en/services/cloud). Read the report (link /en/insights/reports)				

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** Inter body text in black with 'build on belief' in bold and the outcome sentence in italic, four bullet points, 'learn more about our cloud services' in brand blue, and 'Read the report' semibold and underlined with a trailing chevron.
- **Rendering behaviour:** From 900 px the body size is 1.125rem with line height 1.6; paragraphs and lists have a top margin of 0.8 and a bottom margin of 0.25 times the body size. The text spans the section content width, up to 120rem less 5rem side padding.
- **Publishing behaviour:** Publish to Preview shows the text on main–tcs-corp–sradha-tcs.aem.page and Publish to Live copies it to aem.live. The linked pages /en/services/cloud and /en/insights/reports must be published themselves, otherwise the links lead to a 404.

Business Rules

- The whole sample is one Text component: two paragraphs, a bulleted list, a paragraph with an inline link and a paragraph with only a link.
- 'learn more about our cloud services' stays an inline link because its paragraph contains other text.
- 'Read the report' is alone in its paragraph and unformatted, so it becomes a link button with a chevron.
- The text has no size or colour options; typography comes from the global styles.

Common Authoring Mistakes

Error	Root Cause	Resolution
'Read the report' shows as a black button	The link was made bold	Remove the bold formatting from the standalone link
The list shows as paragraphs with typed bullets	Bullets typed as characters instead of the list button	Select the lines and use the bulleted list button of the toolbar
'Read the report' stays inline	A full stop or space was typed after the link in its paragraph	Leave only the link in that paragraph

Troubleshooting

- **Symptoms:** On aem.live 'learn more about our cloud services' leads to a 404 page.

- **Cause:** /en/services/cloud is not published, or the link was typed as an author path /content/tcs-corp/… outside the mappings.
- **Resolution:** Re-pick the target with the content picker and publish /en/services/cloud, then republish the page.
- **Verification Steps:** On aem.live the link href is /en/services/cloud and the page opens.

Desktop (1200 px and above): body text in Inter (`--body-font-family`) at `--body-font-size-m` = 1.125rem (from 900 px), line height 1.6, letter-spacing –0.005 × font size. Paragraphs and lists have a top margin of 0.8 × and a bottom margin of 0.25 × the body size. Links are brand blue (`--color-text-brand`), not underlined, underlined and brand-600 on hover, with a 0.125rem brand outline on keyboard focus. Text spans the section content width (up to 120rem minus 5rem side padding).

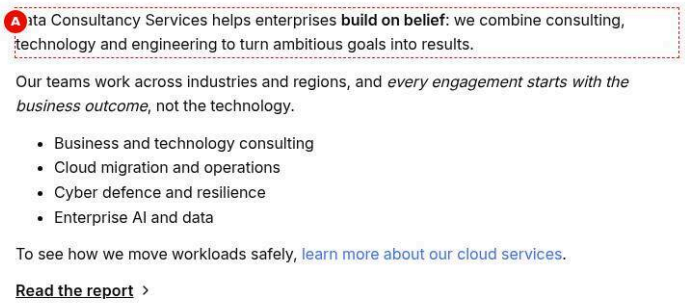

Figure 32: Tablet rendering — The same Text at 768 px, wrapping within the 2.5rem side padding at the 1rem body size: paragraphs, the four bullets, the blue inline link and the 'Read the report' link button on its own line. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/text-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/text-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same Text at 768 px, wrapping within the 2.5rem side padding at the 1rem body size: paragraphs, the four bullets, the blue inline link and the 'Read the report' link button on its own line.
Business Context	The same introduction text checked at 768 px, so reviewers see the wrapping of paragraphs, list and links inside the tablet section padding.
Author Objective	Confirm that the Text component with paragraphs, list, inline link and link button reflows at tablet width.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Tata Consultancy Services helps enterprises **build on belief**: we combine consulting, technology and engineering to turn ambitious goals into re-	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		sults. Our teams work across industries and regions, and *every engagement starts with the business outcome*, not the technology. • Business and technology consulting • Cloud migration and operations • Cyber defence and resilience • Enterprise AI and data To see how we move workloads safely, learn more about our cloud services (link /en/services/cloud). Read the report (link /en/insights/reports)				

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** The paragraphs and the four-item list wrap inside 2.5rem side padding; the inline link stays brand blue within its sentence; 'Read the report' stays on its own line with the chevron.
- **Rendering behaviour:** Between 600 and 899 px the body text is 1rem, from 900 px 1.125rem; the section side padding is 2.5rem up to 1199 px. Nothing is authored per device.
- **Publishing behaviour:** Publish to Preview shows the text on main–tcs-corp–sradha-tcs.aem.page and Publish to Live copies it to aem.live. The linked pages /en/services/cloud and /en/insights/reports must be published themselves, otherwise the links lead to a 404.

Business Rules

- The whole sample is one Text component: two paragraphs, a bulleted list, a paragraph with an inline link and a paragraph with only a link.
- 'learn more about our cloud services' stays an inline link because its paragraph contains other text.
- 'Read the report' is alone in its paragraph and unformatted, so it becomes a link button with a chevron.
- The text has no size or colour options; typography comes from the global styles.

Common Authoring Mistakes

Error	Root Cause	Resolution
'Read the report' shows as a black button	The link was made bold	Remove the bold formatting from the standalone link
The list shows as paragraphs with typed bullets	Bullets typed as characters instead of the list button	Select the lines and use the bulleted list button of the toolbar
'Read the report' stays inline	A full stop or space was typed after the link in its paragraph	Leave only the link in that paragraph

Troubleshooting

- **Symptoms:** At 768 px a large empty space appears between two paragraphs.
- **Cause:** Text pasted from Word or e-mail left an empty paragraph or line breaks.

- **Resolution:** Delete the empty paragraph, or paste the copy as plain text and reformat it with the toolbar.
- **Verification Steps:** Inspect the default-content-wrapper on aem.page: no empty p or br elements, regular paragraph spacing.

Tablet (600–1199 px): body text 1rem below 900 px and 1.125rem from 900 px; 2.5rem section side padding.

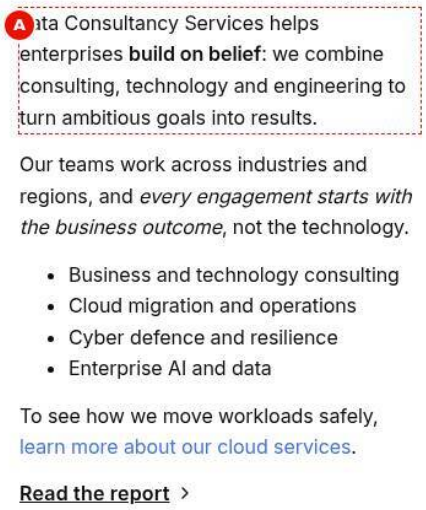

Figure 33: Mobile rendering — The same Text at 375 px with 1.5rem side padding and 1rem body text; the bullets keep their indent and 'Read the report' with its chevron stands on its own line. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/text-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/text-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The same Text at 375 px with 1.5rem side padding and 1rem body text; the bullets keep their indent and 'Read the report' with its chevron stands on its own line.
Business Context	The introduction text checked at 375 px, where most visitors read it, to confirm line length, list indentation and the link button on its own line.
Author Objective	Confirm that the paragraphs, the list, the inline link and the 'Read the report' link button read well on a phone.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Tata Consultancy Services helps enterprises **build on belief**: we combine consulting, technology and engineering to turn ambitious goals into re-	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		sults. Our teams work across industries and regions, and *every engagement starts with the business outcome*, not the technology. • Business and technology consulting • Cloud migration and operations • Cyber defence and resilience • Enterprise AI and data To see how we move workloads safely, learn more about our cloud services (link /en/services/cloud). Read the report (link /en/insights/reports)				

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** The text runs in 1rem body size inside 1.5rem side padding; the bullets keep their indent; 'Read the report' sits on its own line with the chevron after it.
- **Rendering behaviour:** Below 600 px the body text is 1rem and the side padding 1.5rem; links break long words (overflow-wrap break-word). The link button keeps its 1rem semibold label.
- **Publishing behaviour:** Publish to Preview shows the text on main–tcs-corp–sradha-tcs.aem.page and Publish to Live copies it to aem.live. The linked pages /en/services/cloud and /en/insights/reports must be published themselves, otherwise the links lead to a 404.

Business Rules

- The whole sample is one Text component: two paragraphs, a bulleted list, a paragraph with an inline link and a paragraph with only a link.
- 'learn more about our cloud services' stays an inline link because its paragraph contains other text.
- 'Read the report' is alone in its paragraph and unformatted, so it becomes a link button with a chevron.
- The text has no size or colour options; typography comes from the global styles.
- Long words and URLs wrap at 375 px (overflow-wrap break-word on links).

Common Authoring Mistakes

Error	Root Cause	Resolution
'Read the report' shows as a black button	The link was made bold	Remove the bold formatting from the standalone link
The list shows as paragraphs with typed bullets	Bullets typed as characters instead of the list button	Select the lines and use the bulleted list button of the toolbar
'Read the report' stays inline	A full stop or space was typed after the link in its paragraph	Leave only the link in that paragraph

Troubleshooting

- **Symptoms:** On the phone the inline link text is unreadably long or runs out of the screen.

- **Cause:** A raw URL was used as link text; such links stay plain links and are only broken at the screen edge.
- **Resolution:** Replace the URL with descriptive text such as 'learn more about our cloud services'.
- **Verification Steps:** At 375 px the link wraps with the sentence and reads as a phrase.

Mobile (below 600 px): body text 1rem; 1.5rem side padding; long URLs wrap (`overflow-wrap: break-word` on links).

6.6.3 Component Variations

Variation 1 — Rich text paragraphs

Variation Name: Paragraphs (plain rich text).

Business Purpose: Readable body copy.

Visual Example:

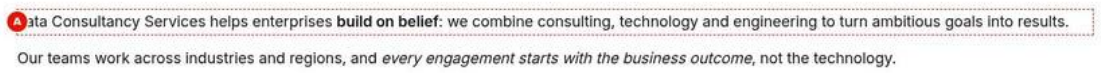

Figure 34: Paragraphs — The two paragraphs at 1440 px: 'Tata Consultancy Services helps enterprises build on belief…' with 'build on belief' in bold, and 'Our teams work across industries and regions…' with 'every engagement starts with the business outcome' in italic. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/text-paragraphs.jpg)

Screenshot Details — Paragraphs

Item	Detail
Screenshot Name	`screenshots/text-paragraphs.jpg`
Screenshot Purpose	Paragraphs
Screen Description	The two paragraphs at 1440 px: 'Tata Consultancy Services helps enterprises build on belief…' with 'build on belief' in bold, and 'Our teams work across industries and regions…' with 'every engagement starts with the business outcome' in italic.
Business Context	Body copy of a corporate introduction: two paragraphs stating what TCS does and how engagements start, with one phrase emphasised in bold and one in italic.
Author Objective	Add a Text component with two paragraphs, 'build on belief' in bold and 'every engagement starts with the business outcome' in italic.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Tata Consultancy Services helps enterprises **build on belief**: we combine consulting, technology and engineering to turn ambitious goals into results. Our teams work across indus-	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		tries and regions, and *every engagement starts with the business outcome*, not the technology.				

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** Two black Inter paragraphs on white; 'build on belief' in weight 600 and the outcome phrase in italic, with regular paragraph spacing.
- **Rendering behaviour:** Plain p elements in the section's default-content-wrapper, styled by the global p rules: 1.125rem from 900 px, 1rem below, line height 1.6. The bold and italic stay as text formatting because they are not on a standalone link.
- **Publishing behaviour:** Publish to Preview and to Live; the text is server-rendered in the page HTML and cached by the CDN, which is purged on publish.

Business Rules

- Bold and italic inside a sentence stay formatting; only on a link alone in its paragraph do they make a button.
- Keep paragraphs to about 80 words; this sample has two.
- Use Title, not a bold paragraph, for a heading.
- Do not use colour or bold alone to carry meaning.

Common Authoring Mistakes

Error	Root Cause	Resolution
Both paragraphs run together	Shift+Enter (line break) used instead of Enter	Press Enter to start a new paragraph
The bold phrase looks like a heading	A whole short paragraph was made bold to act as a heading	Add a Title component with the right Title Type instead
Strange fonts or colours in the text	Formatting pasted from another tool	Paste as plain text and reapply bold and italic with the toolbar

Troubleshooting

- **Symptoms:** The edited paragraph still shows the old wording on the canvas.
- **Cause:** The in-place update after the inline edit failed or the editor session expired.
- **Resolution:** Reload Universal Editor, sign in again if asked, and re-enter the change.
- **Verification Steps:** After the reload the canvas shows the new wording, and after publishing so does aem.page.

Use Cases: Introductions, descriptions, explanations.

Authoring Guidelines: Add a Text component and type on the canvas; use the toolbar for bold and italic.

Business Rules: Bold renders with weight 600 (`strong, b`). Bold or italic applied to a whole standalone link changes it into a button (Variations 5–7).

Rendering Rules: `<p>` elements in `div.default-content-wrapper`, styled by the global `p` rules.

Responsive Behaviour: Desktop and tablet from 900 px: 1.125rem; below 900 px: 1rem.

SEO Impact: Indexable text in the delivered HTML.

Accessibility Compliance: Line height 1.6 and paragraph spacing support WCAG 1.4.12 (text spacing); text colour black on white.

Variation 2 — Lists

Variation Name: Bulleted and numbered lists.

Business Purpose: Scannable enumerations.

Visual Example:

Figure 35: Lists — At 1440 px, the paragraph 'Our services' followed by a bulleted list of four services, then the paragraph 'How we start' followed by a numbered list of three steps. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/text-lists.jpg)

Screenshot Details — Lists

Item	Detail
Screenshot Name	`screenshots/text-lists.jpg`
Screenshot Purpose	Lists
Screen Description	At 1440 px, the paragraph 'Our services' followed by a bulleted list of four services, then the paragraph 'How we start' followed by a numbered list of three steps.
Business Context	A services page section that lists the four service lines and the three steps of an engagement, so visitors can scan them quickly.
Author Objective	Add a Text component with the lead-ins 'Our services' and 'How we start', a four-item bulleted list and a three-item numbered list.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our services • Business and technology consulting • Cloud migration and operations • Cyber defence and resilience • Enterprise AI and data How we start • Assess your current landscape • Agree the target state and roadmap • Deliver in measurable increments	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** 'Our services' followed by four bullets (consulting, cloud, cyber defence, enterprise AI), then 'How we start' followed by three numbered steps, in the body typography.
- **Rendering behaviour:** ul and ol elements with the same margins as paragraphs (0.8 times the body size above, 0.25 below) and the browser's list markers; body size 1.125rem from 900 px, 1rem below.
- **Publishing behaviour:** Publish to Preview and Live with the page; lists are part of the page HTML and need no other publication.

Business Rules

- Use the toolbar list buttons; typed dashes or bullets are not lists for screen readers.
- Bulleted for unordered items (the services), numbered for a sequence (the steps).
- Keep lists to about 7 items.
- 'Our services' and 'How we start' are paragraphs here; use a Title if they should be headings in the page outline.

Common Authoring Mistakes

Error	Root Cause	Resolution
The steps show bullets instead of numbers	The bulleted list button was used for 'How we start'	Select the three steps and choose the numbered list button
Screen readers do not announce a list	Bullets were typed as characters	Recreate the items with the list button
The lead-in appears as a list item	The list was started one line too early	Move 'Our services' out of the list with the list button

Troubleshooting

- **Symptoms:** The numbered list starts at 4 instead of 1.
- **Cause:** The two lists were authored as one list continued across the lead-in, or the copy was pasted with a start number.
- **Resolution:** Delete and recreate the numbered list with the toolbar after 'How we start'.
- **Verification Steps:** On aem.page the ol starts at 1 and lists the three steps.

Use Cases: Benefits, features, steps.

Authoring Guidelines: Use the list buttons of the rich text toolbar.

Business Rules: None beyond the browser defaults.

Rendering Rules: `<ul>` / `<ol>` with the same margins as paragraphs.

Responsive Behaviour: Same as paragraphs.

SEO Impact: Lists are semantic and can be used for featured snippets.

Accessibility Compliance: Screen readers announce the list and item count.

Variation 3 — Inline link

Variation Name: Link inside a sentence.

Business Purpose: Cross-linking in context.

Visual Example:

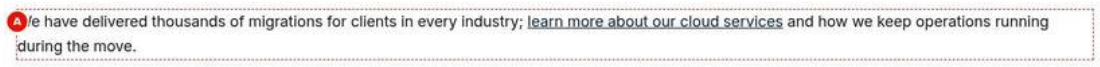

Figure 36: Inline link — At 1440 px, the paragraph on thousands of migrations with 'learn more about our cloud services' in brand-600, underlined because the pointer is over it. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/text-inline-link.jpg)

Screenshot Details — Inline link

Item	Detail
Screenshot Name	`screenshots/text-inline-link.jpg`
Screenshot Purpose	Inline link
Screen Description	At 1440 px, the paragraph on thousands of migrations with 'learn more about our cloud services' in brand-600, underlined because the pointer is over it.
Business Context	A cross-link in context: a sentence about delivered migrations sends interested readers to the cloud services page without a separate call to action.
Author Objective	Add a Text component with a sentence in which 'learn more about our cloud services' links to /en/services/cloud, and check its hover state.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	We have delivered thousands of migrations for clients in every industry; learn more about our cloud services (link /en/services/cloud) and how we keep operations running during the move.	No	Card text	1–3 sentences; lists and links allowed	None
—	Action (Preview)	Point at the link "learn more about our cloud services" (hover state)	—	Check on the preview (not stored in the content)	Point at the link "learn more about our cloud services" (hover state)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** A black paragraph with 'learn more about our cloud services' in brand blue, shown underlined and in brand-600 while the pointer is over it.
- **Rendering behaviour:** The link stays a plain link because its paragraph contains other text; it gets a title equal to its text. a:any-link is brand blue with no underline, underlined and brand-600 on hover, with a 0.125rem outline on keyboard focus.
- **Publishing behaviour:** Publish the page to Preview and Live; /en/services/cloud must be published itself or the link leads to the 404 page. Link clicks are pushed to the data layer as cmp:click with the page as the component.

Business Rules

- A link inside a sentence is never turned into a button, whatever its formatting.
- The link text must describe the target; avoid 'click here' (WCAG 2.4.4).
- Pick internal pages with the content picker so the published href is /en/services/cloud.
- Link to pages of the same locale.

Common Authoring Mistakes

Error	Root Cause	Resolution
The link is not visible as a link	Bold or colour applied by hand, or the link was removed during editing	Reselect the words and add the link with the toolbar
The link points to /content/tcs-corp/us/en/services/cloud on live	The author path was typed instead of picked	Re-pick the page with the content picker
Link text says 'here'	Only one word was linked	Link the descriptive phrase 'learn more about our cloud services'

Troubleshooting

- **Symptoms:** Selecting the link on aem.live opens the 404 page.
- **Cause:** /en/services/cloud has not been published, or the link points to an author path outside the locale mappings.
- **Resolution:** Publish the target page and re-pick the link with the content picker, then republish.
- **Verification Steps:** On aem.live the link's href is /en/services/cloud and the page opens.

Use Cases: References to other pages, documents and external sources.

Authoring Guidelines: Select words in a sentence and add a link with the toolbar; pick internal pages with the content picker.

Business Rules: A link is left as a plain link when its paragraph contains other text. Every link in a paragraph gets a `title` equal to its text when it has no title.

Rendering Rules: `a:any-link` brand colour, no underline; hover underline and brand-600.

Responsive Behaviour: Wraps with the text; long URLs break.

SEO Impact: Descriptive anchor text helps search engines understand the target.

Accessibility Compliance: Link purpose must be clear from the link text (WCAG 2.4.4); colour plus hover underline; keyboard focus outline.

Variation 4 — Standalone link (link button)

Variation Name: Link on its own line, no formatting.

Business Purpose: A low-emphasis call to action without a button container.

Visual Example:

Figure 37: Link button from text — The standalone link 'Read the report', semibold and underlined in the default text colour with a trailing chevron, cropped closely around the link. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/text-link-button.jpg)

Screenshot Details — Link button from text

Item	Detail
Screenshot Name	`screenshots/text-link-button.jpg`
Screenshot Purpose	Link button from text
Screen Description	The standalone link 'Read the report', semibold and underlined in the default text colour with a trailing chevron, cropped closely around the link.
Business Context	A low-emphasis call to action at the end of an insights text: 'Read the report' sends readers to the reports page without the weight of a filled button.
Author Objective	Add a Text component with a paragraph that contains only the unformatted link 'Read the report' to /en/insights/reports.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Read the report (link /en/insights/reports)	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** 'Read the report' in semibold 1rem default text colour, underlined, with a 1rem chevron-right after it; it turns brand blue on hover.
- **Rendering behaviour:** Because the paragraph text equals the link text and the link is not formatted, the paragraph becomes p.button-wrapper (0.75rem vertical margin) and the link a.link-button with title 'Read the report'. The chevron is CSS-only.
- **Publishing behaviour:** Publish the page and /en/insights/reports to Preview and Live; the link button is decorated in the browser from the published HTML.

Business Rules

- The link must be alone in its paragraph: any other character keeps it a plain link.
- No bold or italic: bold would make it a primary button, italic a secondary one.
- The link text must not be the URL itself, or it stays a plain link.
- The chevron is not announced; the link text alone must state the purpose.

Common Authoring Mistakes

Error	Root Cause	Resolution
It shows as a plain blue link	Other text or a full stop is in the paragraph	Put the link alone in its own paragraph
It shows as a black button	The link was made bold	Remove the bold formatting
It stays a plain link showing /en/insights/reports	The URL was used as link text	Type 'Read the report' as the link text

Troubleshooting

- **Symptoms:** 'Read the report' appears without the chevron and underline on aem.page.
- **Cause:** The paragraph contains a trailing space or another character, so the link is not standalone.

- **Resolution:** Edit the paragraph so it holds only the link, then republish.
- **Verification Steps:** Inspect the paragraph on aem.page: it has the class button-wrapper and the link the class link-button.

Use Cases: "Read more", "View all", secondary navigation at the end of a text.

Authoring Guidelines: Put the link alone in its own paragraph without bold or italic.

Business Rules: Applies when the paragraph's text equals the link text, the link text is not its own URL, and the link does not wrap an image.

Rendering Rules: The paragraph becomes `p.button-wrapper` and the link `a.link-button` (semibold 1rem, underlined, default text colour, chevron-right icon 1rem; brand colour on hover).

Responsive Behaviour: Same at all sizes.

SEO Impact: Same as a link.

Accessibility Compliance: Underline and icon distinguish it from text (WCAG 1.4.1); the chevron is CSS-only and not announced.

Variation 5 — Bold standalone link (primary button)

Variation Name: Standalone link formatted bold.

Business Purpose: The main call to action of a text.

Visual Example:

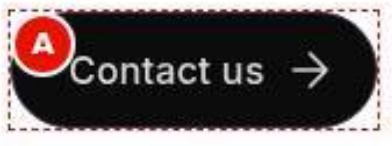

Figure 38: Primary button from text — A black pill-shaped primary button 'Contact us' with a grey-300 label and a trailing arrow, created from a bold standalone link, cropped closely around the button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/text-primary-button.jpg)

Screenshot Details — Primary button from text

Item	Detail
Screenshot Name	`screenshots/text-primary-button.jpg`
Screenshot Purpose	Primary button from text
Screen Description	A black pill-shaped primary button 'Contact us' with a grey-300 label and a trailing arrow, created from a bold standalone link, cropped closely around the button.
Business Context	The main call to action at the end of a text: a contact button made directly in the rich text, without adding a Button component.
Author Objective	Add a Text component whose only paragraph is the link 'Contact us' to /en/contact, formatted bold.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree,	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Text	
A	Text (Text)	**Contact us (link / en/contact)**	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** A black pill-shaped button 'Contact us' with grey-300 medium-weight text and a trailing arrow; the text turns slate-400 on hover.
- **Rendering behaviour:** Bold on a standalone link means primary: the link becomes a.button.primary in p.button-wrapper and the strong element is removed. The button is at least 3.125rem high, fully rounded, with padding 0.75rem 1rem 0.75rem 1.5rem; the label never wraps.
- **Publishing behaviour:** Publish the page and /en/contact to Preview and Live; the button is decorated in the eager phase from the published HTML.

Business Rules

- The whole link must be bold and alone in its paragraph.
- Bold equals primary; use one primary button per text.
- Keep the label short (about 25 characters); it never wraps and is clipped when wider than the column.
- Start the label with a verb, as in 'Contact us'.

Common Authoring Mistakes

Error	Root Cause	Resolution
'Contact us' is a bold inline link	Other text is in the same paragraph	Move the link to its own paragraph
The button is outlined, not black	The link was made italic instead of bold	Remove italic and apply bold to the whole link
Only part of the label is bold and no button appears	Bold applied to one word of the link	Select the whole link and apply bold

Troubleshooting

- **Symptoms:** On the phone the end of a longer label such as 'Contact our cloud specialists today' is cut off.
- **Cause:** Buttons do not wrap their label by design (white-space nowrap, overflow hidden).
- **Resolution:** Shorten the label, for example back to 'Contact us'.
- **Verification Steps:** At 320 px width the full label is visible on aem.page.

Use Cases: Contact, download, register.

Authoring Guidelines: Put the link alone in its paragraph and make the whole link bold.

Business Rules: Bold = primary; the bold formatting is removed after it has been read.

Rendering Rules: `a.button.primary`: black background and border (`--color-bg-neutral`), grey-300 text, medium weight, 3.125rem minimum height, full radius, padding 0.75rem 1rem 0.75rem 1.5rem, trailing arrow-right icon 1.5rem; hover text slate-400.

Responsive Behaviour: Same at all sizes; the label does not wrap (`white-space: nowrap`) and is clipped if wider than the container.

SEO Impact: Same as a link.

Accessibility Compliance: Keyboard focusable link with visible focus outline; label text is the accessible name.

Variation 6 — Italic standalone link (secondary button)

Variation Name: Standalone link formatted italic.

Business Purpose: A second, lower-emphasis call to action.

Visual Example:

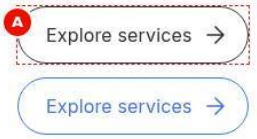

Figure 39: Secondary button from text — At 402 px, two outlined secondary buttons 'Explore services' with arrows, stacked in their own paragraphs (not side by side); the lower one, under the pointer, has a white fill with brand blue border and label. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/text-secondary-button.jpg)

Screenshot Details — Secondary button from text

Item	Detail
Screenshot Name	`screenshots/text-secondary-button.jpg`
Screenshot Purpose	Secondary button from text
Screen Description	At 402 px, two outlined secondary buttons 'Explore services' with arrows, stacked in their own paragraphs (not side by side); the lower one, under the pointer, has a white fill with brand blue border and label.
Business Context	A second, lower-emphasis call to action in a text, typically next to a primary one, shown in its normal and hover states.
Author Objective	Add a Text component with two paragraphs, each the italic link 'Explore services' to /en/services, and check the hover state of the second.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	*Explore services (link /en/services)* *Explore services (link /en/services)*	No	Card text	1–3 sentences; lists and links allowed	None
—	Action (Preview)	Point at the second button (hover state)	—	Check on the preview (not stored in the content)	Point at the second button (hover state)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** Two outlined pill buttons 'Explore services' with slate-900 border, text and arrow; the second, under the pointer, has a white fill with brand blue border and text.
- **Rendering behaviour:** Italic on a standalone link means secondary: each link becomes a.button.secondary in its own p.button-wrapper and the em element is removed. Size, padding and the no-wrap label are as for the primary button.

- **Publishing behaviour:** Publish the page and /en/services to Preview and Live; nothing else is needed for the button styles.

Business Rules

- Italic equals secondary; the whole link must be italic and alone in its paragraph.
- Each paragraph gives one button; two links in one paragraph stay plain links.
- Use the secondary style for the alternative next to one primary button.
- Hover and keyboard focus show the brand border and text.

Common Authoring Mistakes

Error	Root Cause	Resolution
Both links stay plain italic links	The two links were placed in the same paragraph	Put each link in its own paragraph
The second button is black	Bold was applied as well as or instead of italic	Remove bold; keep italic only (bold and italic gives tertiary)

Troubleshooting

- **Symptoms:** The hover state shows no colour change on aem.page.
- **Cause:** The links are not decorated as buttons because a stray character remains in the paragraph.
- **Resolution:** Remove the extra text so each paragraph holds only the italic link, then republish.
- **Verification Steps:** Each paragraph has the class button-wrapper and the links a.button.secondary; hovering shows the brand border.

Use Cases: “Explore”, “Learn more” next to a primary button.

Authoring Guidelines: Put the link alone in its paragraph and make it italic.

Business Rules: Italic = secondary.

Rendering Rules: `a.button.secondary`: transparent background, slate-900 border and text; hover white background, brand border and text.

Responsive Behaviour: As Variation 5.

SEO Impact: Same as a link.

Accessibility Compliance: As Variation 5.

Variation 7 — Bold and italic standalone link (tertiary button)

Variation Name: Standalone link formatted bold and italic.

Business Purpose: A text-only call to action with an arrow.

Visual Example:

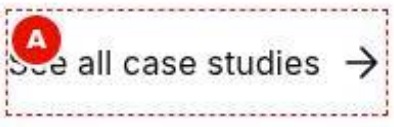

Figure 40: Tertiary button from text — The text ‘See all case studies’ with a trailing arrow and no border or fill, created from a bold and italic standalone link, cropped closely around it. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/text-tertiary-button.jpg)

Screenshot Details — Tertiary button from text

Item	Detail
Screenshot Name	`screenshots/text-tertiary-button.jpg`
Screenshot Purpose	Tertiary button from text
Screen Description	The text 'See all case studies' with a trailing arrow and no border or fill, created from a bold and italic standalone link, cropped closely around it.
Business Context	A text-only call to action at the end of a dense insights text, leading to all case studies without a button container.
Author Objective	Add a Text component whose only paragraph is the link 'See all case studies' to /en/insights/case-studies, formatted bold and italic.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	***See all case studies (link /en/insights/case-studies)***	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** The text 'See all case studies' in the default text colour with a trailing arrow and no border or fill; on hover it turns brand blue and the arrow moves closer.
- **Rendering behaviour:** Bold and italic together on a standalone link mean tertiary: the link becomes a.button.tertiary in p.button-wrapper, with no border, radius or padding; both formatting elements are removed.
- **Publishing behaviour:** Publish the page and /en/insights/case-studies to Preview and Live.

Business Rules

- Both bold and italic must cover the whole link, and the link must be alone in its paragraph.
- Bold only gives primary, italic only secondary; check the result on the canvas.
- The label does not wrap; keep it short.
- The arrow is decorative; the label must state the destination.

Common Authoring Mistakes

Error	Root Cause	Resolution
A black button appears	Only bold was applied	Add italic to the whole link
An outlined button appears	Only italic was applied	Add bold to the whole link

Troubleshooting

- **Symptoms:** 'See all case studies' shows as a bold italic inline link.
- **Cause:** The paragraph holds other text, so the link is not standalone.
- **Resolution:** Move the link into its own paragraph and republish.
- **Verification Steps:** On aem.page the link has the classes button tertiary and a trailing arrow.

Use Cases: Inline-looking calls to action in dense layouts.

Authoring Guidelines: Put the link alone in its paragraph and make it bold and italic.

Business Rules: Bold + italic = tertiary.

Rendering Rules: `a.button.tertiary`: no border or padding, default text colour, arrow; hover brand colour and the arrow moves closer (gap 0).

Responsive Behaviour: As Variation 5.

SEO Impact: Same as a link.

Accessibility Compliance: As Variation 5.

6.6.4 Authoring Experience

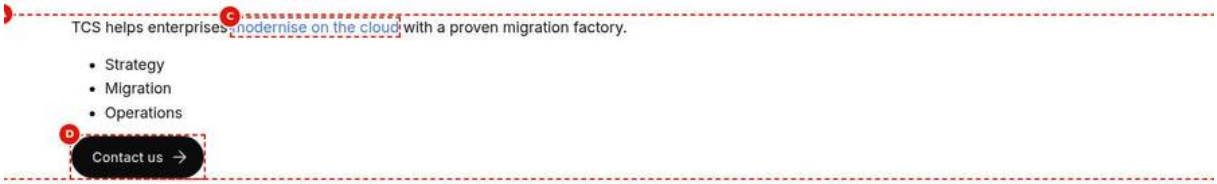

Figure 41: Text on the Universal Editor canvas — The Text in editor mode at 1440 px (an annotated preview, not a Universal Editor screenshot): the paragraph with the inline link, the list Strategy, Migration, Operations and the black 'Contact us' button; A marks the text, C the link 'modernise on the cloud', D the button. The rich text toolbar (B) is not shown. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/text-authoring-view.jpg)

Screenshot Details — Text on the Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/text-authoring-view.jpg`
Screenshot Purpose	Text on the Universal Editor canvas
Screen Description	The Text in editor mode at 1440 px (an annotated preview, not a Universal Editor screenshot): the paragraph with the inline link, the list Strategy, Migration, Operations and the black 'Contact us' button; A marks the text, C the link 'modernise on the cloud', D the button. The rich text toolbar (B) is not shown.
Business Context	How an author edits a Text component in Universal Editor: inline on the canvas with the rich text toolbar, here for a cloud paragraph with a list and a contact button.
Author Objective	Add a Text with an inline link, a three-item list and a bold standalone 'Contact us' link, and edit it inline with the rich text toolbar.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	TCS helps enterprises modernise on the cloud (link /en/services/cloud) with a proven migration factory. • Strategy • Migration • Operations **Con-**	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		tact us (link /en/contact)				
—	Text (Canvas)	Double-click the text to edit it inline; the rich text toolbar (B) opens	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The Text in inline-editing mode (A) with the rich text toolbar (B); 'modernise on the cloud' as a brand blue link (C), the list Strategy, Migration, Operations, and the bold 'Contact us' shown as a primary button (D).
- **Rendering behaviour:** The Text has no model fields, so the Properties panel has no tabs and no Additional tab. After an inline edit the changed default content is replaced and its buttons and icons are decorated again on the canvas.
- **Publishing behaviour:** Inline edits are saved to AEM author at once; they reach aem.page only with Publish to Preview and aem.live with Publish to Live. /en/services/cloud and /en/contact must be published too.

Business Rules

- Double-click the text on the canvas to edit it; the toolbar offers bold, italic, lists and link.
- 'modernise on the cloud' stays inline because its sentence has other text.
- 'Contact us' is bold and alone in its paragraph, so it becomes a primary button.
- Headings and tables in the toolbar: [To be confirmed: rich text toolbar options (headings, tables) enabled for this project — owner: AEM administrator].

Common Authoring Mistakes

Error	Root Cause	Resolution
The toolbar does not open	The component was single-clicked (selected) only	Double-click the text to start inline editing
'Contact us' becomes a button the author did not want	The standalone link was made bold	Remove the bold or add the link to a sentence
The list items are pasted as one paragraph	Copy pasted with line breaks	Use the list button of the toolbar on the three lines

Troubleshooting

- **Symptoms:** After an inline edit the canvas reloads and the change seems lost.
- **Cause:** The in-place update of the default content failed, so the editor reloaded the canvas.
- **Resolution:** Double-click the text again and check whether the edit was saved; re-enter it if not.
- **Verification Steps:** The canvas shows the new text after the reload and the Text in the content tree holds it.

Annotations:

- A = the rich text area (edited inline on the canvas)
- B = the rich text toolbar (bold, italic, lists, link)
- C = an inline link
- D = a standalone formatted link that becomes a button

Figure 42: Text properties panel — The Properties panel with a Text component selected, showing the rich text field (no other fields, no tabs). (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/text-properties-panel.jpg)

The Text component has no model fields (`models/_text.json` has an empty models list), so there are no tabs and no Additional tab. The content is the rich text itself, edited inline on the canvas (and, depending on the Universal Editor version, in a rich text field in the Properties panel). [To be confirmed: rich text toolbar options (headings, tables) enabled for this project — owner: AEM administrator]

6.6.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: Sites console > select the page > **Edit**.

Expected Result: The page opens on the canvas.

Steps — Step 1: The page open in the Universal Editor.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Open TCS Corp › us › en › services
2	AEM Sites console	Select	Select the page (check box of its card or row)
3	AEM Sites console toolbar	Edit	Select Edit: the page opens in the Universal Editor

Step 2 — Add a Text component

Action: Select the section in the content tree, **Add (+)** > **Text**.

Expected Result: An empty Text component appears at the end of the section.

Steps — Step 2: The component picker with Text highlighted under Default Content.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section
2	Universal Editor › Content tree	Add (+)	Select Add (+)
3	Component picker › Default Content	Text	Select Text

Step 3 — Write the text

Action: Double-click the component on the canvas and type or paste the text. Use the toolbar for bold, italic and lists.

Expected Result: The text shows in the site's typography.

Steps — Step 3: Inline editing with the toolbar and two paragraphs typed.

Step	Where	Field / control	Value / action
1	Universal Editor canvas	Text	Double-click the Text component: the rich text toolbar opens

Step	Where	Field / control	Value / action
2	Universal Editor canvas	Text	Type two paragraphs; use Bold / Italic / List in the toolbar

Step 4 — Add links

Action: Select words and add a link; for internal pages pick the page with the content picker.

Expected Result: The words become a brand blue link.

Steps — Step 4: The link dialog with an internal page selected.

Step	Where	Field / control	Value / action
1	Universal Editor canvas	Text	Select the words “learn more about our cloud services”
2	Rich text toolbar	Link	Select Link
3	Link dialog	URL	Pick the page /content/tcs-corp/us/en/services/cloud with the content picker
4	Link dialog	Save	Select Save

Step 5 — Add a call to action (optional)

Action: Put a link alone in a new paragraph. Leave it unformatted for a link button, make it bold for a primary button, italic for a secondary button, bold and italic for a tertiary button.

Expected Result: The link is shown as the chosen button style.

Steps — Step 5: A bold standalone link rendered as a primary button on the canvas.

Step	Where	Field / control	Value / action
1	Universal Editor canvas	Text	Press Enter for a new paragraph and add the link “Contact us” to /content/tcs-corp/us/en/contact
2	Rich text toolbar	Bold	Select the whole link and select Bold: it shows as a primary button

Step 6 — Preview

Action: Switch on Preview mode, test the links and check the three device sizes.

Expected Result: Links open their targets; buttons do not overflow on mobile.

Steps — Step 6: Preview mode at mobile size.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch Preview on
2	Universal Editor toolbar	Device size	Mobile

Step 7 — Validate and publish

Action: Run the checklist, then publish to Preview and Live.

Expected Result: The text shows on `.aem.page` and `.aem.live`.

Steps — Step 7: The Publish dialog for the page.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Select Publish

Step	Where	Field / control	Value / action
2	Publish dialog	Items	Keep the page and its references selected
3	Publish dialog	Destination	Preview
4	Publish dialog	Publish	Select Publish; check the page on https://main–tcs-corp–sradha-tcs.aem.page/en/…
5	Publish dialog	Destination	Live (when approved), then Publish; check https://main–tcs-corp–sradha-tcs.aem.live/en/…

Preview Process
Publish to Preview and open the `.aem.page` URL; click every link; check that links point to published URLs (`/en/...`), not to `/content/tcs-corp/...`.

Publishing Process
Publish the page to Live. Linked assets (PDFs) must be published too (include references in Manage Publication).

Validation Process
- ☐ Spelling and grammar checked; text matches the approved copy.
- ☐ Inline links have descriptive text (no "click here").
- ☐ Standalone links render as the intended style (link button, primary, secondary, tertiary).
- ☐ Button labels fit on one line on mobile.
- ☐ Lists use the list buttons (not typed dashes).
- ☐ No pasted formatting (fonts, colours) from other tools.
- ☐ External links point to the right site; document links open the published asset.

Rollback Process
Undo in the editor, or restore the page version in the Sites console and republish.

The walkthroughs below repeat the steps above for each variation of chapter 6.6.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Rich text paragraphs
Reproduces the screenshot `screenshots/text-paragraphs.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: An empty Text component appears at the end of the selected section.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Tata Consultancy Services helps enterprises **build on belief**: we combine consulting, technology and engineering to turn ambitious goals into results. Our teams work across industries and regions, and *every engagement starts with the business outcome*, not the technology.

Expected Result: The two paragraphs appear with 'build on belief' in bold and the outcome phrase in italic.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two black Inter paragraphs on white; 'build on belief' in weight 600 and the outcome phrase in italic, with regular paragraph spacing.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview and to Live; the text is server-rendered in the page HTML and cached by the CDN, which is purged on publish.

Step 6 — Verify

Action: On the live page check: After the reload the canvas shows the new wording, and after publishing so does aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Lists

Reproduces the screenshot `screenshots/text-lists.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: An empty Text component appears at the end of the selected section.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our services • Business and technology consulting • Cloud migration and operations • Cyber defence and resilience • Enterprise AI and data How we start • Assess your current landscape • Agree the target state and roadmap • Deliver in measurable increments.

Expected Result: The two lead-ins appear with the four bullets under 'Our services' and the three numbered steps under 'How we start'.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: 'Our services' followed by four bullets (consulting, cloud, cyber defence, enterprise AI), then 'How we start' followed by three numbered steps, in the body typography.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview and Live with the page; lists are part of the page HTML and need no other publication.

Step 6 — Verify

Action: On the live page check: On aem.page the ol starts at 1 and lists the three steps.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Inline link

Reproduces the screenshot `screenshots/text-inline-link.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: An empty Text component appears at the end of the selected section.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = We have delivered thousands of migrations for clients in every industry; learn more about our cloud services (link /en/services/cloud) and how we keep operations running during the move.

Expected Result: The sentence appears with 'learn more about our cloud services' in brand blue.

Step 4 — Preview

Action: Action: Point at the link "learn more about our cloud services" (hover state).

Expected Result: With the pointer on the link it is underlined and turns brand-600.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A black paragraph with 'learn more about our cloud services' in brand blue, shown underlined and in brand-600 while the pointer is over it.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page to Preview and Live; /en/services/cloud must be published itself or the link leads to the 404 page. Link clicks are pushed to the data layer as cmp:click with the page as the component.

Step 7 — Verify

Action: On the live page check: On aem.live the link's href is /en/services/cloud and the page opens.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Standalone link (link button)

Reproduces the screenshot `screenshots/text-link-button.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: An empty Text component appears at the end of the selected section.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Read the report (link /en/insights/reports).

Expected Result: The link 'Read the report' appears on its own line as an underlined link button with a chevron.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: 'Read the report' in semibold 1rem default text colour, underlined, with a 1rem chevron-right after it; it turns brand blue on hover.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and /en/insights/reports to Preview and Live; the link button is decorated in the browser from the published HTML.

Step 6 — Verify

Action: On the live page check: Inspect the paragraph on aem.page: it has the class button-wrapper and the link the class link-button.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Bold standalone link (primary button)

Reproduces the screenshot `screenshots/text-primary-button.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: An empty Text component appears at the end of the selected section.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = **Contact us (link /en/contact)**.

Expected Result: The bold link 'Contact us' appears as a black pill-shaped primary button with an arrow.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A black pill-shaped button 'Contact us' with grey-300 medium-weight text and a trailing arrow; the text turns slate-400 on hover.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and /en/contact to Preview and Live; the button is decorated in the eager phase from the published HTML.

Step 6 — Verify

Action: On the live page check: At 320 px width the full label is visible on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Italic standalone link (secondary button)

Reproduces the screenshot `screenshots/text-secondary-button.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: An empty Text component appears at the end of the selected section.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = *Explore services (link /en/services) Explore services (link /en/services).*

Expected Result: The two italic links appear as outlined secondary buttons 'Explore services' with arrows.

Step 4 — Preview

Action: Action: Point at the second button (hover state).

Expected Result: With the pointer on the second button its fill turns white and the border and text brand blue.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two outlined pill buttons 'Explore services' with slate-900 border, text and arrow; the second, under the pointer, has a white fill with brand blue border and text.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and /en/services to Preview and Live; nothing else is needed for the button styles.

Step 7 — Verify

Action: On the live page check: Each paragraph has the class button-wrapper and the links a.button.secondary; hovering shows the brand border.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Bold and italic standalone link (tertiary button)

Reproduces the screenshot `screenshots/text-tertiary-button.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: An empty Text component appears at the end of the selected section.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = ***See all case studies (link /en/insights/case-studies)***.

Expected Result: The bold and italic link appears as the tertiary text-and-arrow call to action 'See all case studies'.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The text 'See all case studies' in the default text colour with a trailing arrow and no border or fill; on hover it turns brand blue and the arrow moves closer.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and /en/insights/case-studies to Preview and Live.

Step 6 — Verify

Action: On the live page check: On aem.page the link has the classes button tertiary and a trailing arrow.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.6.6 Authorable Field Specification

Model `text` (no model fields; rich text content)

Field Name	Field Type	Mandatory	Multi Value	De-fault Value	Business Purpose	Author Guidance	Valida-tion Rules	Example Value
Text (rich text content of the component)	Rich text	Recom-mended (an empty Text renders noth-ing)	No	(empty)	Body copy, lists, links	Short paragraphs; one idea per paragraph; standalone links for CTAs	None in the model	"TCS helps enter-prises … **Contact us**"

Additional tab: Not applicable. Default content has no Additional tab (no Anchor ID, Hide block, padding or margin).

Field details

- **Text** — Purpose: rich text body. Allowed Values: paragraphs, lists, bold, italic, links (and headings if enabled in the toolbar). Character Limits: none enforced; Recommended paragraphs of up to about 80 words, button labels up to about 25 characters (the button does not wrap). Business Rules: standalone links become buttons or link buttons by their formatting; every paragraph link without a title gets its text as title. Dependency Rules: none. Visibility Rules: always visible. Sample Content: "Our consultants help you modernise legacy systems." followed by a standalone bold link "Talk to an expert".

6.6.7 Field Annotation Mapping

Marker	Field	Purpose
A	Text	The rich text area
B	Text (toolbar)	Formatting of the rich text
C	Text (inline link)	Link in a sentence
D	Text (standalone formatted link)	Button created from a link

6.6.8 Component Specification

Attribute	Value
Component Name	Text (`text`, `core/franklin/components/text/v1/text`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`decorators/content-buttons-decorator.js`; `utils/buttons.js`; `decorators/button-decorator.js`; `scripts/editor-support-rte.js`; `styles/styles.css`
Component Type	Default content
Supported Variants	Paragraphs; Lists; Inline link; Link button; Primary, Secondary and Tertiary buttons from formatted links
Supported Templates	Any page
Supported Metadata	None
Supported Tags	None
Supported Personalization	None (as of this handover)
Caching Considerations	Part of the page HTML (Edge Delivery CDN, purged on publish)
Performance Considerations	No JavaScript of its own; buttons are decorated during the eager phase (`decorateMain`)
Accessibility Compliance	WCAG 2.1 AA: link purpose (2.4.4), focus visible (2.4.7), use of colour plus underline on hover (1.4.1), text spacing (1.4.12)
SEO Compliance	Server-rendered, indexable text and links

6.6.9 Input Model

- **Content Inputs:** the rich text.
- **Metadata Inputs:** none.
- **Tags Inputs:** none.
- **Page Context Inputs:** the section's style (link and button colours differ in the CSS-only `dark` section style).

- **Query Inputs:** none.
- **Manual Inputs:** the rich text.

Authored HTML received from AEM:

```
<p>TCS helps enterprises <a href="/en/services/cloud">modernise on the cloud</a>.</p>
<ul><li>Strategy</li><li>Migration</li></ul>
<p><strong><a href="/en/contact">Contact us</a></strong></p>
<p><a href="/en/insights">Read our insights</a></p>
```

6.6.10 Output Model

Rendered Output: the text in `div.default-content-wrapper`; standalone links turned into `p.button-wrapper > a.button.{type}` or `p.button-wrapper > a.link-button`.

Generated HTML:

```
<div class="default-content-wrapper">
  <p>TCS helps enterprises <a href="/en/services/cloud"
     title="modernise on the cloud">modernise on the cloud</a>.</p>
  <ul><li>Strategy</li><li>Migration</li></ul>
  <p class="button-wrapper"><a href="/en/contact" title="Contact us"
     class="button primary">Contact us</a></p>
  <p class="button-wrapper"><a href="/en/insights" title="Read our insights"
     class="link-button">Read our insights</a></p>
</div>
```

Generated JSON: none.

Generated Metadata: none.

Analytics Tracking: clicks on links in default content are pushed as `cmp:click` with the page as the component:

```
{
  "event": "cmp:click",
  "eventInfo": {
    "path": "component.page-1x2y3z",
    "interaction": "link",
    "dc:title": "Contact us",
    "xdm:linkURL": "https://main--tcs-corp--sradha-tcs.aem.live/en/contact",
    "xdm:linkType": "other",
    "breakpoint": "desktop"
  }
}
```

The Text component itself is not a data layer component (default content is not a block).

Personalization Output: none.

Search Index Output: none directly (the query index uses page metadata; the text is indexed by search engines).

Target Personalization Output: None (as of this handover): default content is not a data layer component. Clicks on its links and buttons are pushed as cmp:click with the page as the component (eventInfo.path component.page-{hash}), which Adobe Target could use once Adobe Tags is added.

6.6.11 Business Rules

1. Only links inside paragraphs (`p a[href]`) are considered for buttons.
2. Every such link without a `title` gets its text as `title`.

3. A link stays a plain link when its paragraph contains any other text.
4. A link whose text is its own URL stays a plain link.
5. A link wrapping an image stays a plain link (unless it is an icon link).
6. Formatting decides the type: bold = primary, italic = secondary, bold + italic = tertiary; a type, `view-*` or `align-*` class or data value on the link or its paragraph also counts (a bare `button` class is not read as a view).
7. View: an explicit view wins; else an icon link becomes an icon button; else a link with a type becomes a button; else a link button.
8. An icon-only link without type or view stays plain.
9. The formatting element that encoded the type is removed after decoration.
10. The paragraph becomes `p.button-wrapper` (0.75rem vertical margin) and gets `button-align-{left|center|right}` when an alignment was read.
11. Buttons do not wrap their label (`white-space: nowrap; overflow: hidden; max-width: 100%`).
12. In the editor, after an inline edit the changed default content is replaced and buttons and icons are decorated again (`scripts/editor-support.js`).

6.6.12 Author Best Practices

Recommended Content Length: paragraphs of up to about 80 words; up to about 7 list items; button labels up to about 25 characters (Recommended; not enforced).

Image Dimensions: not applicable (use the Image component).

CTA Writing Guidelines: start with a verb ("Download the report"); one primary button per text; use secondary or link buttons for further options; avoid "Click here".

Accessibility Guidelines: descriptive link text; do not use bold or italic on standalone links unless you want a button; do not use colour alone for emphasis.

SEO Guidelines: use meaningful anchor text and link to related pages in the same locale.

Metadata Guidelines: not applicable.

Taxonomy Guidelines: not applicable.

Localization Guidelines: translate link text and button labels; link to the target locale's pages (`/de-de/...` from German pages); allow for text expansion (German and French labels can be 30 % longer), keeping button labels short.

6.6.13 Troubleshooting Guide

Issue 1 — A link did not become a button

Symptoms: A call-to-action link shows as a plain inline link.

Root Cause: The paragraph contains other text (even a space or a full stop), or several links share the paragraph.

Diagnosis Steps: Inspect the paragraph in developer tools; compare its text with the link text.

Resolution Steps: Put the link alone in its own paragraph.

Validation Steps: The paragraph has the class `button-wrapper`.

Preventive Measures: One CTA link per paragraph.

Issue 2 — A link became a button unintentionally

Symptoms: A bold link that should be inline shows as a black button.

Root Cause: It is alone in its paragraph and formatted bold.

Diagnosis Steps: Check the paragraph content.

Resolution Steps: Remove the bold formatting, or add the link to a sentence.

Validation Steps: It renders as a link or link button.

Preventive Measures: Use bold / italic on standalone links only for buttons.

Issue 3 — Button label is cut off on mobile

Symptoms: The end of a long button label is hidden.

Root Cause: Buttons do not wrap their text by design.

Diagnosis Steps: View at 375 px.

Resolution Steps: Shorten the label.

Validation Steps: Full label visible at 320 px width.

Preventive Measures: Keep labels short.

Issue 4 — Link shows the URL as text and is not a button

Symptoms: A standalone link with its URL as text is not decorated.

Root Cause: Links whose text is their URL are left alone on purpose.

Diagnosis Steps: Compare text and href.

Resolution Steps: Give the link a descriptive text.

Validation Steps: The link becomes a link button.

Preventive Measures: Never use raw URLs as link text.

Issue 5 — Internal link leads to a 404 on the live site

Symptoms: The link works on author but not on live.

Root Cause: The target page is not published, or the link points to an author path outside the locale mappings.

Diagnosis Steps: Check the href on the live page (`/en/...`) and open it.

Resolution Steps: Publish the target page; re-pick the link with the content picker.

Validation Steps: The link opens the page on live.

Preventive Measures: Publish linked pages first.

Issue 6 — Pasted text has odd formatting

Symptoms: Unexpected line breaks, empty paragraphs or spacing.

Root Cause: Formatting pasted from Word or e-mail.

Diagnosis Steps: Inspect for empty `<p>` or `<br>` elements.

Resolution Steps: Paste as plain text and reformat with the toolbar.

Validation Steps: Paragraph spacing is regular.

Preventive Measures: Paste as plain text.

Issue 7 — Text changes do not show on the canvas

Symptoms: The canvas keeps the old text after an edit.

Root Cause: The in-place update failed (the editor then reloads) or the session expired.

Diagnosis Steps: Reload the editor.

Resolution Steps: Re-enter the change; sign in again if needed.

Validation Steps: The canvas shows the new text after reload.

Preventive Measures: Avoid editing the same page in two tabs.

6.6.14 Support Runbook

Monitoring Requirements: None specific. Broken-link checks of published pages are recommended. [To be confirmed: link checking tool — owner: site administrator]

Logs: No console messages from the Text component. Publish status via the Admin API (`https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`) and AEM replication logs.

Common Errors:

Error	Cause	Fix
Link not a button	Other text in the paragraph	Separate paragraph
Unwanted button	Bold / italic standalone link	Remove formatting
Clipped label	Long label	Shorten
404 link	Target unpublished	Publish target
Author path in link	Link to `/content/...` outside the mappings	Re-pick with the content picker

Escalation Matrix:

Level	Who	Checks
L1	Author support	Paragraph structure, formatting, publication of targets
L2	AMS / site administrator	Publish status, `paths.json` mappings, cache
L3	Development team	`decorators/content-buttons-decorator.js`, `utils/buttons.js`, `styles/styles.css`
Adobe Support	Adobe	Universal Editor rich text defects, AEM rendering

Recovery Procedures: Restore the page version and republish.

Health Checks: After code releases, check the block library page with all four link styles on preview.

Operational Procedures: Changes to link and button styles are made by developers in `styles/styles.css` and the button decorators.

Known Limitations: No Additional tab; no text colour or size options; button labels never wrap; the button type depends on formatting, which is easy to apply by accident.

6.6.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
A call to action stays an inline link	Other text, a space or a full stop is in its paragraph	Put the link alone in its own paragraph
An unwanted black button appears	A standalone link was made bold	Remove the bold or put the link in a sentence
Secondary expected, tertiary shown	Both bold and italic applied	Keep italic only
Button label cut off on mobile	Buttons never wrap their label	Shorten the label to about 25 characters

Error	Root Cause	Resolution
Link shows its URL and is not a button	Links whose text is their URL are left alone	Give the link descriptive text
Link leads to 404 on live	Target page not published or author path typed	Publish the target and re-pick it with the content picker
Irregular spacing or fonts	Formatting pasted from Word or e-mail	Paste as plain text and reformat
Bold paragraph used as a heading	Text has no heading level option of its own	Use a Title with the right Title Type

6.6.16 Author Quick Reference Guide

Mandatory Fields

- Text (rich text): not required in the model, but an empty Text renders nothing

Recommended Fields

- Paragraphs of up to about 80 words, one idea each
- Descriptive link text for inline links (no 'click here')
- Lists made with the toolbar list buttons, up to about 7 items
- Button labels of up to about 25 characters, starting with a verb

Optional Fields

- Bold and italic emphasis inside sentences
- Standalone unformatted link: link button with chevron
- Standalone bold link: primary button
- Standalone italic link: secondary button
- Standalone bold and italic link: tertiary button
- Headings and tables, if enabled in the toolbar [To be confirmed: rich text toolbar options (headings, tables) enabled for this project — owner: AEM administrator]

Authoring Checklist

1. Double-click the Text on the canvas to edit inline with the rich text toolbar
2. Press Enter for a new paragraph; each call to action needs its own paragraph
3. Format a whole standalone link only when you want a button: bold primary, italic secondary, both tertiary
4. Use one primary button per text; add alternatives as secondary or link buttons
5. Pick internal pages with the content picker so links become /{locale}/… paths
6. Paste copy as plain text and reformat with the toolbar
7. Use a Title, not a bold paragraph, for headings; use the Button component for icon or alignment

Pre-Publish Checklist

1. Check spelling and that the text matches the approved copy
2. Check every standalone link renders as intended (link button, primary, secondary, tertiary)
3. Check inline links have descriptive text
4. Check button labels fit on one line at 375 px
5. Check lists use the list buttons, not typed dashes
6. Check no pasted fonts, colours or empty paragraphs remain
7. Check links point to /en/… paths, not /content/tcs-corp/…

Post-Publish Validation Checklist

1. Click every link on aem.live and confirm the targets open (no 404)
2. Confirm linked pages and PDFs are published
3. Check the buttons and link buttons look as on aem.page

4. Check the text at mobile width on aem.live
5. Spot-check the data layer for cmp:click on the main call to action

6.6.17 Component Execution Example

Business example: Corporate introduction text with list and links.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Text
Text (Text)	Tata Consultancy Services helps enterprises **build on belief**: we combine consulting, technology and engineering to turn ambitious goals into results. Our teams work across industries and regions, and *every engagement starts with the business outcome*, not the technology. • Business and technology consulting • Cloud migration and operations • Cyber defence and resilience • Enterprise AI and data To see how we move workloads safely, learn more about our cloud services (link /en/services/cloud). Read the report (link /en/insights/reports)

All other fields keep their default values.

Rendered Result:

Figure 43: Execution example — The Text at 1440 px: two paragraphs with 'build on belief' in bold and the outcome phrase in italic, a four-item bulleted list, a paragraph with 'learn more about our cloud services' in brand blue and 'Read the report' as an underlined semibold link button with a chevron. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/text-desktop-view.jpg)

Author Notes

- One Text component holds two paragraphs, a four-item list and two link paragraphs
- 'build on belief' is bold and the outcome phrase italic; they stay formatting because they are not on standalone links
- 'learn more about our cloud services' sits inside a sentence and stays an inline link
- 'Read the report' is alone and unformatted, so it becomes a link button

Business Notes

- The introduction states the positioning before the service list
- The inline link sends readers to /en/services/cloud in context
- The link button gives a low-emphasis route to /en/insights/reports

Technical Notes

- The content arrives as plain HTML in default-content-wrapper; the Text has no JavaScript of its own
- decorateButtons checks p a[href]: a link alone in its paragraph becomes p.button-wrapper with a.link-button or a.button.{type}
- Each paragraph link without a title gets its text as title
- Body text 1.125rem from 900 px, 1rem below, line height 1.6

6.7 Title Component

6.7.1 Component Purpose

Business Objective: Provide headings with an explicit, author-chosen level so pages have a correct document outline for accessibility and SEO, with the design system's type scale.

Business Use Cases:

- The page heading (h1) on pages without a Page Header or Hero heading.
- Section headings (h2) and sub-headings (h3–h4).
- Small labels styled as headings (h5–h6) where the outline requires them.

When To Use: Whenever a heading stands on its own in default content.

When Not To Use:

- When a block already provides the heading (Page Header, Hero, Teaser, List and Cards headings).
- For visual emphasis of normal text (use bold in Text).

Dependencies:

Type	Item
Model	`models/_title.json` (definition `title`, resource type `core/franklin/components/title/v1/title`, model `title`)
Code	None specific (rendered by AEM / Edge Delivery; editor re-decoration via `scripts/editor-support.js`)
Styles	`styles/styles.css` (`h1`–`h6`, heading font size tokens)
Data sources / sheets / placeholders	None

Related Components: Text, Page Header, Hero, Anchor List (which can link to a section containing the heading).

Applicable Templates: Any page. On article, blog and press-release pages the template's Page Header already renders the h1.

Supported Content Types: Plain heading text.

Business Problem Solved

Pages needed headings with an explicit, author-chosen level so each page has a correct document outline for screen readers and search engines, rendered in the design system's type scale, instead of bold paragraphs or levels picked for their size.

Supported Taxonomy

None: the Title has no tag field and reads no page tags, taxonomy or metadata (Supported Tags: None). Headings are indexed by search engines, not by the query index.

6.7.2 Visual Overview

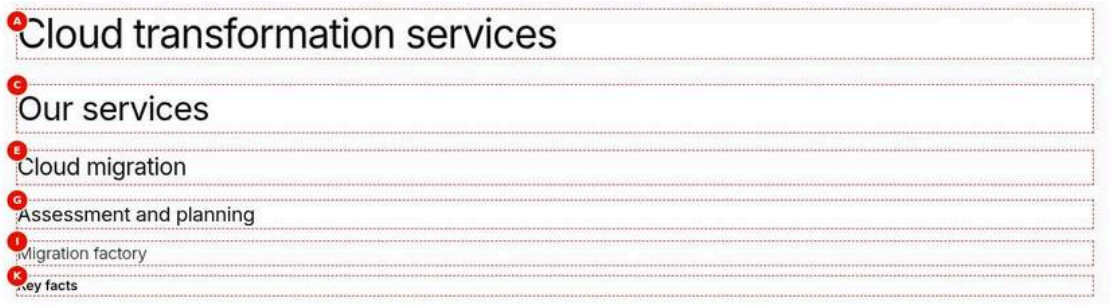

Figure 44: Desktop rendering — Six headings stacked at 1440 px: h1 'Cloud transformation services' 3rem, h2 'Our services' 2.5rem, h3 'Cloud migration' 1.75rem, h4 'Assessment and planning' 1.5rem, h5 'Migration factory' 1.25rem light, h6 'Key facts' 1rem semibold. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/title-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/title-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	Six headings stacked at 1440 px: h1 'Cloud transformation services' 3rem, h2 'Our services' 2.5rem, h3 'Cloud migration' 1.75rem, h4 'Assessment and planning' 1.5rem, h5 'Migration factory' 1.25rem light, h6 'Key facts' 1rem semibold.
Business Context	The heading scale of the cloud transformation page checked at 1440 px: one page heading and the section, sub-section and label headings below it.
Author Objective	Add six Title components, 'Cloud transformation services' (h1) to 'Key facts' (h6), and confirm the desktop type scale.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Cloud transformation services	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h1	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
C	Title (Title)	Our services	Recommended (an empty	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			Title renders an empty heading or nothing)			
(D)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
E	Title (Title)	Cloud migration	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(F)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
G	Title (Title)	Assessment and planning	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(H)	Title Type (Title)	h4	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
I	Title (Title)	Migration factory	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(J)	Title Type (Title)	h5	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
K	Title (Title)	Key facts	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(L)	Title Type (Title)	h6	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Six stacked headings in Inter, black: h1 3rem, h2 2.5rem, h3 1.75rem, h4 1.5rem, h5 1.25rem light and h6 1rem semibold, each with spacing proportional to its size.
- **Rendering behaviour:** From 900 px the desktop tokens apply; h1 has line height 1.2 and letter-spacing −0.03 times its size, the others line height 1.4. Each heading has a top margin of 0.8 and a bottom margin of 0.25 times its font size.
- **Publishing behaviour:** Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Business Rules

- Choose the level by the page outline, not by the size: h1 once, then h2, h3, h4, h5 and h6 without skipping.
- Only 'Cloud transformation services' is h1; the page must not also have a Page Header or a Hero with H1.
- h5 is light (300) and h6 semibold (600); h1 to h4 are regular (400).
- Edge Delivery Services gives each heading an id from its text, for example our-services.

Common Authoring Mistakes

Error	Root Cause	Resolution
The checker reports two h1 headings	A Hero or Page Header on the page also renders an h1	Keep one h1; set this Title to h2
'Key facts' looks bolder than 'Migration factory'	h6 is semibold by design while h5 is light	Choose the level by structure; ask design if the scale does not fit
A heading renders at another level than expected	Title Type was left empty, so the renderer default applies	Select the Title Type explicitly and republish

Troubleshooting

- **Symptoms:** An accessibility scan of the page reports a skipped heading level.
- **Cause:** A Title Type was changed (for example 'Cloud migration' set to h4), so h2 is followed by h4.
- **Resolution:** Set each Title Type in order: h1, h2, h3, h4, h5, h6, and republish.
- **Verification Steps:** The accessibility tree or a heading outline tool on aem.page lists the six levels without gaps.

Desktop (from 900 px): h1 3rem (line height 1.2, letter-spacing −0.03 × font size), h2 2.5rem, h3 1.75rem, h4 1.5rem, h5 1.25rem (light weight 300), h6 1rem (semibold 600); h1–h4 regular weight 400; line height 1.4 except h1. Each heading has a top margin of 0.8 × and a bottom margin of 0.25 × its font size.

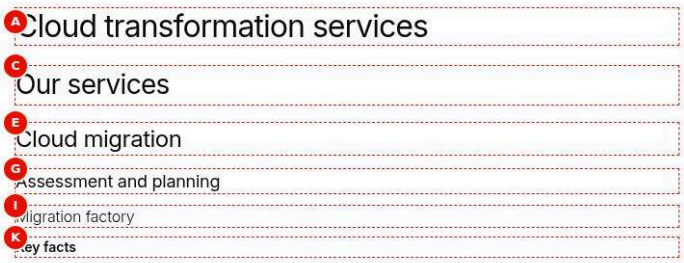

Figure 45: Tablet rendering — The same six headings at 768 px in the mobile scale: h1 2rem, h2 1.75rem, h3 1.5rem, h4 1.125rem, h5 1rem light, h6 0.875rem semibold. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/title-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/title-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same six headings at 768 px in the mobile scale: h1 2rem, h2 1.75rem, h3 1.5rem, h4 1.125rem, h5 1rem light, h6 0.875rem semibold.
Business Context	The same six-level heading scale checked at 768 px, where the mobile type scale still applies, to confirm the headings stay readable and in order.
Author Objective	Confirm the h1 to h6 Titles at tablet width, below the 900 px step of the type scale.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Cloud transformation services	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h1	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
C	Title (Title)	Our services	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(D)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
E	Title (Title)	Cloud migration	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(F)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
G	Title (Title)	Assessment and planning	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(H)	Title Type (Title)	h4	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
I	Title (Title)	Migration factory	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(J)	Title Type (Title)	h5	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
K	Title (Title)	Key facts	Recommended (an empty Title renders an empty	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
			heading or nothing)			
(L)	Title Type (Title)	h6	Recom-mended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The six headings stack with the smaller mobile sizes: h1 2rem, h2 1.75rem, h3 1.5rem, h4 1.125rem, h5 1rem light and h6 0.875rem semibold, inside 2.5rem side padding.
- **Rendering behaviour:** Heading sizes step at 900 px only: at 768 px the mobile tokens apply, from 900 px the desktop ones. The headings wrap within the section width; nothing is authored per device.
- **Publishing behaviour:** Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Business Rules

- The tablet sizes are the mobile type scale; no Title option changes them.
- Long headings wrap; keep h1 to about 70 and h2 to h3 to about 60 characters.
- The level stays the same at every width; only the size changes.
- All headings keep scroll-margin 2.5rem for anchor jumps.

Common Authoring Mistakes

Error	Root Cause	Resolution
Reviewers report the h1 as too small at 768 px	The mobile scale (2rem) applies below 900 px by design	Check at 900 px or more for the 3rem desktop size
A higher level is chosen to get a bigger heading on tablet	Level picked for size	Keep the outline level and raise a design request instead

Troubleshooting

- **Symptoms:** At 768 px 'Cloud transformation services' wraps with one word on the last line.
- **Cause:** The heading is long for the 2rem size on a narrow column.
- **Resolution:** Shorten or reword the heading.
- **Verification Steps:** Check aem.page at 768 px and 375 px; the h1 wraps into balanced lines.

Tablet: below 900 px the mobile sizes apply; from 900 px the desktop sizes.

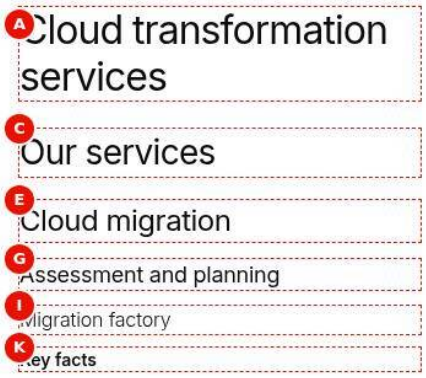

Figure 46: Mobile rendering — The same six headings at 375 px in the mobile scale within 1.5rem side padding; 'Cloud transformation services' wraps over two lines. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/title-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/title-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The same six headings at 375 px in the mobile scale within 1.5rem side padding; 'Cloud transformation services' wraps over two lines.
Business Context	The six-level heading scale checked at 375 px, the most common phone width, where long headings are most likely to wrap badly.
Author Objective	Confirm the h1 to h6 Titles wrap cleanly and keep their order at mobile width.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Cloud transformation services	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h1	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
C	Title (Title)	Our services	Recommended (an empty Title ren-	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			ders an empty heading or nothing)			
(D)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
E	Title (Title)	Cloud migration	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(F)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
G	Title (Title)	Assessment and planning	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(H)	Title Type (Title)	h4	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
I	Title (Title)	Migration factory	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(J)	Title Type (Title)	h5	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
K	Title (Title)	Key facts	Recommended	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			(an empty Title renders an empty heading or nothing)			
(L)	Title Type (Title)	h6	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The six headings stack inside 1.5rem side padding at the mobile sizes; 'Cloud transformation services' wraps over two lines at 2rem.
- **Rendering behaviour:** Below 900 px: h1 2rem, h2 1.75rem, h3 1.5rem, h4 1.125rem, h5 1rem, h6 0.875rem. Headings wrap; all have scroll-margin 2.5rem so anchor jumps leave space above them.
- **Publishing behaviour:** Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Business Rules

- Avoid headings longer than two lines on mobile.
- Do not type headings in capitals; use sentence case.
- The h1 should match the page topic and the page Title property.
- There is no alignment, colour or size option on the Title.

Common Authoring Mistakes

Error	Root Cause	Resolution
A heading overflows the screen	A very long word or URL in the heading	Reword the heading without the long string
The h1 takes three lines on the phone	Heading longer than about 70 characters	Shorten the h1

Troubleshooting

- **Symptoms:** On the phone the h6 'Key facts' looks larger than body text and is mistaken for a section heading.
- **Cause:** h6 is 0.875rem semibold, close to emphasised body text, and was chosen for its look.
- **Resolution:** Use h6 only where the outline needs a fifth-level heading; use bold Text for labels.
- **Verification Steps:** The heading outline on aem.page matches the intended structure.

Mobile (below 900 px): h1 2rem, h2 1.75rem, h3 1.5rem, h4 1.125rem, h5 1rem, h6 0.875rem. Headings wrap; all have `scroll-margin: 2.5rem` so anchor jumps leave space above them.

6.7.3 Component Variations

Variation 1 — Heading level h1

Variation Name: Title Type h1.

Business Purpose: The main heading of the page.

Visual Example:

Figure 47: h1 — The h1 'Cloud transformation services' at 1440 px, 3rem regular weight with line height 1.2. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/title-h1.jpg)

Screenshot Details — h1

Item	Detail
Screenshot Name	`screenshots/title-h1.jpg`
Screenshot Purpose	h1
Screen Description	The h1 'Cloud transformation services' at 1440 px, 3rem regular weight with line height 1.2.
Business Context	The page heading of a Default page about cloud transformation that has no Page Header or Hero, so the Title provides the one h1.
Author Objective	Add a Title 'Cloud transformation services' with Title Type h1.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Cloud transformation services	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h1	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** 'Cloud transformation services' in Inter regular, 3rem on desktop with line height 1.2 and tight letter-spacing, black on white.
- **Rendering behaviour:** The h1 uses –heading-font-size-xxl: 3rem from 900 px, 2rem below, letter-spacing –0.03 times the size. In the first section without an image it can be the LCP element.
- **Publishing behaviour:** Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Business Rules

- Exactly one h1 per page; it is Recommended, not enforced.
- Do not add an h1 Title on article, blog or press-release pages: their Page Header already renders the h1.
- Align the h1 with the page Title property and topic.
- Keep the h1 to about 70 characters.

Common Authoring Mistakes

Error	Root Cause	Resolution
Two h1 on the page	A Hero with H1 or a Page Header is also on the page	Set this Title to h2
The page heading is not found by screen readers	Title Type left on h2 for the page heading	Set Title Type to h1

Troubleshooting

- **Symptoms:** An SEO audit reports a missing h1 though the heading looks large.
- **Cause:** Title Type is h2, chosen for size, so the page has no h1.
- **Resolution:** Set Title Type to h1 and republish.
- **Verification Steps:** On aem.page the developer tools show h1 id="cloud-transformation-services".

Use Cases: Page title on Default pages without a Page Header or a Hero with H1.

Authoring Guidelines: Title Type **h1**; exactly one h1 per page.

Business Rules: Recommended: one h1 per page (not enforced).

Rendering Rules: `h1`: `--heading-font-size-xxl`, line height 1.2, letter-spacing –0.03 × size.

Responsive Behaviour: 2rem below 900 px, 3rem from 900 px.

SEO Impact: Strongest on-page topic signal; should match the page title.

Accessibility Compliance: Screen reader users jump to the h1 to find the main content (WCAG 1.3.1, 2.4.6).

Variation 2 — Heading level h2

Variation Name: Title Type h2.

Business Purpose: Section headings.

Visual Example:

Figure 48: h2 — The h2 'Our services' at 1440 px, 2.5rem regular weight. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/title-h2.jpg)

Screenshot Details — h2

Item	Detail
Screenshot Name	`screenshots/title-h2.jpg`
Screenshot Purpose	h2
Screen Description	The h2 'Our services' at 1440 px, 2.5rem regular weight.
Business Context	A section heading of a services page: 'Our services' opens the band that lists the service lines.
Author Objective	Add a Title 'Our services' with Title Type h2.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Our services	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** 'Our services' in Inter regular at 2.5rem on desktop, black, with a top margin of 2rem and a bottom margin of 0.625rem.
- **Rendering behaviour:** The h2 uses –heading-font-size-xl: 2.5rem from 900 px, 1.75rem below, letter-spacing –0.025 times the size. The delivered heading gets the id our-services.
- **Publishing behaviour:** Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Business Rules

- Use one h2 per section to open its topic.
- An h2 follows the page's h1 (Title, Hero or Page Header).
- The id our-services changes with the text and per locale; use a section Anchor name for stable links.
- Keep h2 headings to about 60 characters.

Common Authoring Mistakes

Error	Root Cause	Resolution
The h2 renders with a large top gap	The heading margin (0.8 times the size) adds to the section spacing	Expected; do not add empty paragraphs to adjust it
A link to #our-services breaks in German	The heading id is derived from the translated text	Link to a section Anchor name instead

Troubleshooting

- **Symptoms:** The heading shows at another size than h2.
- **Cause:** Title Type was left empty, so the renderer default applies [To be confirmed: heading level rendered when Title Type is empty — expected h2], or the change was not saved.
- **Resolution:** Select h2 explicitly in Title Type and republish.
- **Verification Steps:** On aem.page the element is h2 id="our-services".

Use Cases: One per section.

Authoring Guidelines: Title Type **h2**.

Business Rules: Follows the h1.

Rendering Rules: `--heading-font-size-xl`, letter-spacing –0.025 × size.

Responsive Behaviour: 1.75rem / 2.5rem.

SEO Impact: Structures the topics of the page.

Accessibility Compliance: Correct outline (WCAG 1.3.1).

Variation 3 — Heading level h3

Variation Name: Title Type h3.

Business Purpose: Sub-sections.

Visual Example:

Figure 49: h3 — At 1440 px, the h2 'Our services' (2.5rem) with the h3 'Cloud migration' (1.75rem) below it. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/title-h3.jpg)

Screenshot Details — h3

Item	Detail
Screenshot Name	`screenshots/title-h3.jpg`
Screenshot Purpose	h3
Screen Description	At 1440 px, the h2 'Our services' (2.5rem) with the h3 'Cloud migration' (1.75rem) below it.
Business Context	A sub-section inside the services band: 'Cloud migration' is one topic under the h2 'Our services'.
Author Objective	Add a Title 'Our services' (h2) and, below it, a Title 'Cloud migration' (h3).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Our services	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
C	Title (Title)	Cloud migration	Recommended (an empty	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			Title renders an empty heading or nothing)			
(D)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** 'Our services' at 2.5rem and, below it, 'Cloud migration' at 1.75rem on desktop, both regular weight.
- **Rendering behaviour:** The h3 uses –heading-font-size-l: 1.75rem from 900 px, 1.5rem below, letter-spacing –0.02 times the size. Both are default content in one default-content-wrapper.
- **Publishing behaviour:** Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Business Rules

- An h3 must follow an h2; do not skip levels.
- Use h3 for topics within a section.
- Both Titles are separate components in content tree order.
- Sentence case, not capitals.

Common Authoring Mistakes

Error	Root Cause	Resolution
'Cloud migration' appears above 'Our services'	The Titles are in the wrong content tree order	Drag 'Cloud migration' below 'Our services'
The outline jumps from h2 to h4	Title Type of 'Cloud migration' set to h4 for its size	Set it to h3

Troubleshooting

- **Symptoms:** An accessibility checker reports 'heading levels should only increase by one'.
- **Cause:** 'Cloud migration' was set to h4 directly after the h2.
- **Resolution:** Set Title Type of 'Cloud migration' to h3 and republish.
- **Verification Steps:** The accessibility tree on aem.page shows h2 'Our services' followed by h3 'Cloud migration'.

Use Cases: Topics within a section.

Authoring Guidelines: Title Type **h3** after an h2.

Business Rules: Do not skip levels (Recommended).

Rendering Rules: `--heading-font-size-l`, letter-spacing –0.02 × size.

Responsive Behaviour: 1.5rem / 1.75rem.

SEO Impact: Sub-topic structure.

Accessibility Compliance: As above.

Variation 4 — Heading level h4

Variation Name: Title Type h4.

Business Purpose: Third-level sub-sections.

Visual Example:

Figure 50: h4 — At 1440 px, the h3 'Cloud migration' (1.75rem) with the h4 'Assessment and planning' (1.5rem) below it. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/title-h4.jpg)

Screenshot Details — h4

Item	Detail
Screenshot Name	`screenshots/title-h4.jpg`
Screenshot Purpose	h4
Screen Description	At 1440 px, the h3 'Cloud migration' (1.75rem) with the h4 'Assessment and planning' (1.5rem) below it.
Business Context	A third-level heading in a detailed service description: 'Assessment and planning' is a step under the topic 'Cloud migration'.
Author Objective	Add a Title 'Cloud migration' (h3) and, below it, a Title 'Assessment and planning' (h4).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Cloud migration	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
C	Title (Title)	Assessment and planning	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(D)	Title Type (Title)	h4	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** 'Cloud migration' at 1.75rem and 'Assessment and planning' at 1.5rem on desktop, both regular weight, black.
- **Rendering behaviour:** The h4 uses –heading-font-size-m: 1.5rem from 900 px, 1.125rem below, letter-spacing –0.015 times the size.
- **Publishing behaviour:** Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Business Rules

- An h4 follows an h3; do not skip levels.
- Use h4 for detailed documents and FAQs.
- On mobile the h4 (1.125rem) is close to body size; keep it short.
- No size override exists; the level sets the size.

Common Authoring Mistakes

Error	Root Cause	Resolution
'Assessment and planning' is h3 too	Title Type copied from the previous Title	Set it to h4
The h4 looks like body text on mobile	1.125rem below 900 px by design	Keep the level; shorten the heading to keep it distinct

Troubleshooting

- **Symptoms:** The h4 appears without the h3 above it on the published page.
- **Cause:** The 'Cloud migration' Title was deleted or moved to another section.
- **Resolution:** Restore 'Cloud migration' above it in the content tree and republish.
- **Verification Steps:** On aem.page the h3 is followed by the h4 in the same section.

Use Cases: Detailed documents, FAQs.

Authoring Guidelines: Title Type **h4** after an h3.

Business Rules: As above.

Rendering Rules: `--heading-font-size-m`, letter-spacing –0.015 × size.

Responsive Behaviour: 1.125rem / 1.5rem.

SEO Impact: Minor.

Accessibility Compliance: As above.

Variation 5 — Heading level h5

Variation Name: Title Type h5.

Business Purpose: Fourth-level headings.

Visual Example:

Figure 51: h5 — The h5 'Migration factory' at 1440 px, 1.25rem in light weight (300). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/title-h5.jpg)

Screenshot Details — h5

Item	Detail
Screenshot Name	`screenshots/title-h5.jpg`
Screenshot Purpose	h5
Screen Description	The h5 'Migration factory' at 1440 px, 1.25rem in light weight (300).
Business Context	A fourth-level heading in a deep service structure: 'Migration factory' is a detail under 'Assessment and planning'.
Author Objective	Add a Title 'Migration factory' with Title Type h5.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Migration factory	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h5	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** 'Migration factory' at 1.25rem on desktop in light weight (300), black on white.
- **Rendering behaviour:** The h5 uses –heading-font-size-s: 1.25rem from 900 px, 1rem below, weight light and letter-spacing –0.01 times the size.
- **Publishing behaviour:** Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Business Rules

- h5 is rare; use it only after an h4.
- Its light weight is by design; do not bold it.
- Do not choose h5 to make a heading look smaller.
- Keep it short; at 1rem on mobile it is near body size.

Common Authoring Mistakes

Error	Root Cause	Resolution
The h5 looks too thin	Light weight 300 is the design for h5	Keep it; use h4 if the outline allows
h5 used directly after an h2	Level chosen for its size	Use h3 and h4 levels in between, or a smaller topic structure

Troubleshooting

- **Symptoms:** A checker reports a skipped level at 'Migration factory'.
- **Cause:** No h4 precedes the h5 in this section.
- **Resolution:** Add the missing h4 or change 'Migration factory' to the correct level.
- **Verification Steps:** The heading outline on aem.page has no gap before the h5.

Use Cases: Rare; deep document structures.

Authoring Guidelines: Title Type **h5** after an h4.

Business Rules: As above.

Rendering Rules: `--heading-font-size-s`, weight light (300), letter-spacing –0.01 × size.

Responsive Behaviour: 1rem / 1.25rem.

SEO Impact: Minor.

Accessibility Compliance: As above.

Variation 6 — Heading level h6

Variation Name: Title Type h6.

Business Purpose: Fifth-level headings or small heading-like labels.

Visual Example:

Figure 52: h6 — The h6 'Key facts' at 1440 px, 1rem in semibold (600). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/title-h6.jpg)

Screenshot Details — h6

Item	Detail
Screenshot Name	`screenshots/title-h6.jpg`
Screenshot Purpose	h6
Screen Description	The h6 'Key facts' at 1440 px, 1rem in semibold (600).
Business Context	A small heading-like label: 'Key facts' introduces a short list of facts at the deepest level of the outline.
Author Objective	Add a Title 'Key facts' with Title Type h6.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Key facts	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h6	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** 'Key facts' at 1rem on desktop in semibold (600), no letter-spacing, black.
- **Rendering behaviour:** The h6 uses –heading-font-size-xs: 1rem from 900 px, 0.875rem below, weight semi-bold, letter-spacing 0.
- **Publishing behaviour:** Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Business Rules

- h6 is rare; use it after an h5 or for small heading-like labels where the outline requires them.
- It is semibold by design and smaller than the body text on mobile (0.875rem).
- Do not use h6 for visual emphasis of normal text; use bold in Text.
- No colour or alignment options exist.

Common Authoring Mistakes

Error	Root Cause	Resolution
'Key facts' appears in the outline though it is just a label	h6 used for styling	Use bold Text if it is not a heading
The h6 is smaller than the following text on mobile	0.875rem below 900 px by design	Keep it short or use a higher level where the outline allows

Troubleshooting

- **Symptoms:** Screen readers announce 'Key facts' as heading level 6 where users expect level 3.
- **Cause:** h6 was chosen for its small size within an h2 section.
- **Resolution:** Set the level that fits the outline (here h3) and republish.
- **Verification Steps:** The accessibility tree on aem.page lists 'Key facts' at the intended level.

Use Cases: Rare.

Authoring Guidelines: Title Type **h6** after an h5.

Business Rules: As above.

Rendering Rules: `--heading-font-size-xs`, weight semibold (600), no letter-spacing.

Responsive Behaviour: 0.875rem / 1rem.

SEO Impact: Minor.

Accessibility Compliance: As above.

6.7.4 Authoring Experience

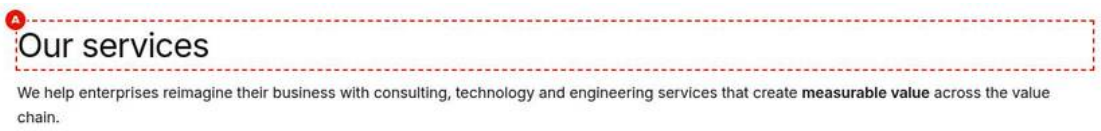

Figure 53: Title on the Universal Editor canvas — The h2 'Our services' and the introduction paragraph with 'measurable value' in bold in editor mode at 1440 px (an annotated preview, not a Universal Editor screenshot); A marks the heading. B, the level, is not marked separately; it shows only through the h2 size. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/title-authoring-view.jpg)

Screenshot Details — Title on the Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/title-authoring-view.jpg`
Screenshot Purpose	Title on the Universal Editor canvas
Screen Description	The h2 'Our services' and the introduction paragraph with 'measurable value' in bold in editor mode at 1440 px (an annotated preview, not a Universal Editor screenshot); A marks the heading. B, the level, is not marked separately; it shows only through the h2 size.
Business Context	How an author edits a heading in Universal Editor: the 'Our services' Title is edited inline on the canvas above its introduction text.
Author Objective	Add a Title 'Our services' (h2) and a Text, then edit the heading inline on the canvas.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
—	Title (Title)	Our services	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
—	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	We help enterprises reimagine their business with consulting, technology and engineering services that create **measurable value** across the value chain.	No	Card text	1–3 sentences; lists and links allowed	None
—	Title (Canvas)	Double-click the heading to edit its text inline (A); its size shows the Title Type h2 (B)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The selected Title 'Our services' with its text in inline editing (A), shown at the h2 size that reflects Title Type (B), above the introduction paragraph with 'measurable value' in bold.

- **Rendering behaviour:** The Title has no JavaScript; the heading element is rendered by AEM and Edge Delivery and left unchanged by code. After an edit the canvas re-renders the default content.
- **Publishing behaviour:** Edits are saved to AEM author at once; they reach aem.page with Publish to Preview and aem.live with Publish to Live.

Business Rules

- The dialog has two fields, Title and Title Type, and no tabs or Additional tab.
- The size on the canvas shows the level: h2 here.
- Title Type has no default in the model; always select it.
- The Text below is a separate component, edited by itself.

Common Authoring Mistakes

Error	Root Cause	Resolution
The size does not change after editing	Only the text was changed; Title Type is in the Properties panel	Select the Title and change Title Type in the Properties panel
The introduction becomes part of the heading	The paragraph was typed into the Title field	Move it into the Text component

Troubleshooting

- **Symptoms:** The inline edit of 'Our services' is not kept after reloading the editor.
- **Cause:** The edit was not saved because the session expired or the page was open in two tabs.
- **Resolution:** Sign in again, edit the heading in one tab only and confirm the Title field value in the Properties panel.
- **Verification Steps:** After reloading Universal Editor the heading shows the new text.

Annotations:

- A = the heading text (Title), editable inline
- B = the heading level as rendered (Title Type), visible through the size

Figure 54: Title properties panel — The Properties panel with Title (text) and Title Type (select h1–h6). (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/title-properties-panel.jpg)

The dialog has two fields and no tabs: **Title** (text) and **Title Type** (select with h1, h2, h3, h4, h5, h6). There is no Additional tab.

6.7.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: Sites console > select the page > **Edit**.

Expected Result: The page opens on the canvas.

Steps — Step 1: The page open in the Universal Editor.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Open TCS Corp › us › en › services
2	AEM Sites console	Select	Select the page (check box of its card or row)
3	AEM Sites console toolbar	Edit	Select Edit: the page opens in the Universal Editor

Step 2 — Add a Title

Action: Select the section, **Add (+)** > **Title**.

Expected Result: A Title component appears in the section.

Steps — Step 2: The picker with Title highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section
2	Universal Editor › Content tree	Add (+)	Select Add (+)
3	Component picker › Default Content	Title	Select Title

Step 3 — Enter the heading text

Action: Type the text in **Title** (or inline on the canvas).

Expected Result: The heading shows on the canvas.

Steps — Step 3: The Title field filled in.

Step	Where	Field / control	Value / action
1	Title › Properties	Title	Our services

Step 4 — Choose the level

Action: Select the **Title Type** that fits the outline (h1 for the page heading, h2 for sections, h3 below an h2, …).

Expected Result: The heading changes size.

Steps — Step 4: The Title Type select open with h2 highlighted.

Step	Where	Field / control	Value / action
1	Title › Properties	Title Type	Open the select and choose h2

Step 5 — Preview

Action: Switch on Preview mode; check the heading at the three sizes.

Expected Result: The heading wraps cleanly on mobile.

Steps — Step 5: Preview mode at mobile size.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch Preview on
2	Universal Editor toolbar	Device size	Mobile

Step 6 — Validate and publish

Action: Check the heading outline (see Validation Process), then publish to Preview and Live.

Expected Result: The heading is live.

Steps — Step 6: The Publish dialog.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Select Publish
2	Publish dialog	Items	Keep the page and its references selected
3	Publish dialog	Destination	Preview
4	Publish dialog	Publish	Select Publish; check the page on https://main–tcs-corp–sradha-tcs.aem.page/en/…
5	Publish dialog	Destination	Live (when approved), then Publish; check https://main–tcs-corp–sradha-tcs.aem.live/en/…

Preview Process
On `.aem.page`, use a heading outline browser extension or the accessibility tree in developer tools to check the heading levels of the whole page.

Publishing Process
Publish the page to Live.

Validation Process
- ☐ Exactly one h1 on the page (including the Page Header / Hero heading).
- ☐ No skipped levels (h2 then h3, not h2 then h4).
- ☐ Heading text is short and descriptive.
- ☐ Heading text is not all upper case typed (use normal case).
- ☐ The heading wraps without breaking words badly on mobile.

Rollback Process
Change the text or level back, or restore the page version and republish.

The walkthroughs below repeat the steps above for each variation of chapter 6.7.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Heading level h1
Reproduces the screenshot `screenshots/title-h1.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: An empty Title component is added to the selected section.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Cloud transformation services; **Title Type** (B) = h1.

Expected Result: The heading 'Cloud transformation services' appears at the h1 size, 3rem on desktop.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: 'Cloud transformation services' in Inter regular, 3rem on desktop with line height 1.2 and tight letter-spacing, black on white.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Step 6 — Verify

Action: On the live page check: On aem.page the developer tools show h1 id="cloud-transformation-services".

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Heading level h2

Reproduces the screenshot `screenshots/title-h2.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: An empty Title component is added to the selected section.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Our services; **Title Type** (B) = h2.

Expected Result: The heading 'Our services' appears at the h2 size, 2.5rem on desktop.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: 'Our services' in Inter regular at 2.5rem on desktop, black, with a top margin of 2rem and a bottom margin of 0.625rem.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Step 6 — Verify

Action: On the live page check: On aem.page the element is h2 id="our-services".

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Heading level h3

Reproduces the screenshot `screenshots/title-h3.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: Two empty Title components are added to the selected section.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Our services; **Title Type** (B) = h2.

Expected Result: 'Our services' appears as h2 and 'Cloud migration' below it at the smaller h3 size.

Step 4 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: Two empty Title components are added to the selected section.

Step 5 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (C) = Cloud migration; **Title Type** (D) = h3.

Expected Result: 'Our services' appears as h2 and 'Cloud migration' below it at the smaller h3 size.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: 'Our services' at 2.5rem and, below it, 'Cloud migration' at 1.75rem on desktop, both regular weight.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Step 8 — Verify

Action: On the live page check: The accessibility tree on aem.page shows h2 'Our services' followed by h3 'Cloud migration'.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Heading level h4

Reproduces the screenshot `screenshots/title-h4.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: Two empty Title components are added to the selected section.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Cloud migration; **Title Type** (B) = h3.

Expected Result: 'Cloud migration' appears as h3 and 'Assessment and planning' below it at the h4 size.

Step 4 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: Two empty Title components are added to the selected section.

Step 5 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (C) = Assessment and planning; **Title Type** (D) = h4.

Expected Result: 'Cloud migration' appears as h3 and 'Assessment and planning' below it at the h4 size.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: 'Cloud migration' at 1.75rem and 'Assessment and planning' at 1.5rem on desktop, both regular weight, black.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Step 8 — Verify

Action: On the live page check: On aem.page the h3 is followed by the h4 in the same section.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Heading level h5

Reproduces the screenshot `screenshots/title-h5.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: An empty Title component is added to the selected section.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Migration factory; **Title Type** (B) = h5.

Expected Result: The heading 'Migration factory' appears at the h5 size in light weight.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: 'Migration factory' at 1.25rem on desktop in light weight (300), black on white.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Step 6 — Verify

Action: On the live page check: The heading outline on aem.page has no gap before the h5.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Heading level h6

Reproduces the screenshot `screenshots/title-h6.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: An empty Title component is added to the selected section.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Key facts; **Title Type** (B) = h6.

Expected Result: The heading 'Key facts' appears at the h6 size in semibold.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: 'Key facts' at 1rem on desktop in semibold (600), no letter-spacing, black.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the headings on main–tcs-corp–sradha-tcs.aem.page and Publish to Live on aem.live; headings are server-rendered in the page HTML and need no other publication.

Step 6 — Verify

Action: On the live page check: The accessibility tree on aem.page lists 'Key facts' at the intended level.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.7.6 Authorable Field Specification

Model `title`

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Title (`title`)	Text	Recommended (an empty Title renders an empty heading or nothing)	No	(empty)	The heading text	Short, descriptive, sentence case	None in the model	Our services
Title Type (`titleType`)	Select	Recommended	No	(none set in the model)	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6	h2

Additional tab: Not applicable (default content).

Field details

- **Title** — Purpose: heading text. Allowed Values: plain text. Character Limits: none enforced; Recommended up to 70 characters for h1 and up to 60 for h2–h3. Business Rules: Edge Delivery Services gives headings an `id` derived from their text (used by `#links`). Dependency Rules: none. Visibility Rules: always visible. Sample Content: "Why TCS for cloud".
- **Title Type** — Purpose: heading level. Allowed Values: h1–h6. Character Limits: not applicable. Business Rules: the model sets no default value; the level AEM renders when it is empty is the renderer's default. [To be confirmed: heading level rendered when Title Type is empty — expected h2] Dependency Rules: none. Visibility Rules: always visible. Sample Content: h2.

6.7.7 Field Annotation Mapping

Marker	Field	Purpose
A	Title	Heading text
B	Title Type	Heading level (size)

6.7.8 Component Specification

Attribute	Value
Component Name	Title (`title`, `core/franklin/components/title/v1/title`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`models/_title.json`; `styles/styles.css`
Component Type	Default content
Supported Variants	h1; h2; h3; h4; h5; h6

Attribute	Value
Supported Templates	Any page
Supported Metadata	None
Supported Tags	None
Supported Personalization	None (as of this handover)
Caching Considerations	Part of the page HTML
Performance Considerations	No JavaScript; an h1 in the first section can be the LCP element when there is no image
Accessibility Compliance	WCAG 2.1 AA: info and relationships (1.3.1), headings and labels (2.4.6), bypass blocks through heading navigation (2.4.1)
SEO Compliance	Server-rendered heading; level chosen by the author

6.7.9 Input Model

- **Content Inputs:** Title.
- **Metadata Inputs:** none.
- **Tags Inputs:** none.
- **Page Context Inputs:** none.
- **Query Inputs:** none.
- **Manual Inputs:** Title, Title Type.

Authored HTML received from AEM:

```
<h2 id="our-services">Our services</h2>
```

6.7.10 Output Model

Rendered Output: the heading element inside `div.default-content-wrapper`, unchanged by code.

Generated HTML:

```
<div class="default-content-wrapper">
  <h2 id="our-services">Our services</h2>
</div>
```

Generated JSON: none.

Generated Metadata: none.

Analytics Tracking: none for the Title itself. The first heading inside a block is used as that block's `dc:title` in the data layer; a Title is default content, so it is not used for any block.

Personalization Output: none.

Search Index Output: none (the query index uses page metadata).

Target Personalization Output: None (as of this handover): the Title is default content, not a data layer component, and is not used as any block's dc:title. No personalisation marker is added.

6.7.11 Business Rules

1. The heading level is the Title Type value (h1–h6).

2. Heading ids are generated from the text by Edge Delivery Services; a block Anchor ID equal to a heading id gets a numeric suffix (5.6.3).
3. Heading sizes step at 900 px (mobile and desktop type scale).
4. All headings have `scroll-margin: 2.5rem` (anchor jumps leave space above).
5. h5 is light (300), h6 semibold (600), h1–h4 regular (400).
6. One h1 per page is Recommended, not enforced.
7. The article, blog and press-release templates add a Page Header with the page heading when none is authored; an extra h1 Title then duplicates it.

6.7.12 Author Best Practices

Recommended Content Length: h1 up to about 70 characters; h2–h3 up to about 60 characters; avoid headings longer than two lines on mobile.

Image Dimensions: not applicable.

CTA Writing Guidelines: not applicable (headings are not links).

Accessibility Guidelines: choose the level by structure, not size; never skip levels; no empty headings.

SEO Guidelines: the h1 should express the page topic and align with the page Title property.

Metadata Guidelines: keep the h1 consistent with the page Title and Description.

Taxonomy Guidelines: not applicable.

Localization Guidelines: translate per locale; allow for longer translations; heading ids change with translated text, so links to heading ids differ per locale (use Anchor names / IDs for stable links).

6.7.13 Troubleshooting Guide

Issue 1 — Two h1 headings on the page

Symptoms: Accessibility checker reports multiple h1.

Root Cause: A Title h1 plus a Page Header / Hero h1 (or a template-added Page Header).

Diagnosis Steps: Inspect the headings outline.

Resolution Steps: Change the Title to h2.

Validation Steps: One h1 remains.

Preventive Measures: On templated pages never add an h1 Title.

Issue 2 — Heading too large or too small

Symptoms: The heading size does not match the design.

Root Cause: The level was chosen for size.

Diagnosis Steps: Check Title Type against the outline.

Resolution Steps: Use the correct level; ask design if the scale does not fit.

Validation Steps: Outline correct.

Preventive Measures: Choose by structure.

Issue 3 — Anchor link to a heading breaks after translation

Symptoms: `#heading-id` link does not jump in another locale.

Root Cause: Heading ids are derived from the (translated) text.

Diagnosis Steps: Inspect the heading id on both locales.

Resolution Steps: Link to a section Anchor name or a block Anchor ID instead.

Validation Steps: The link jumps in every locale.

Preventive Measures: Use stable anchors.

Issue 4 — Empty heading in the outline
Symptoms: Screen reader announces an empty heading.

Root Cause: A Title without text.

Diagnosis Steps: Find empty `h1–h6` elements.

Resolution Steps: Fill or delete the Title.

Validation Steps: No empty headings.

Preventive Measures: Delete unused Titles.

Issue 5 — Heading level not as selected
Symptoms: The heading renders at another level.

Root Cause: Title Type empty (renderer default applies) or the change was not saved.

Diagnosis Steps: Check the Title Type field.

Resolution Steps: Select the level explicitly; republish.

Validation Steps: Correct element in the HTML.

Preventive Measures: Always set Title Type.

Issue 6 — Heading wraps awkwardly on mobile
Symptoms: A single word on the last line, or long words overflow.

Root Cause: Long heading text at 2rem on narrow screens.

Diagnosis Steps: View at 320 and 375 px.

Resolution Steps: Shorten the heading.

Validation Steps: Clean wrapping.

Preventive Measures: Keep headings short.

6.7.14 Support Runbook
Monitoring Requirements: Accessibility scans (heading order) after content releases are recommended. [To be confirmed: accessibility scanning tool — owner: site administrator]

Logs: None emitted.

Common Errors:

Error	Cause	Fix
Multiple h1	Title h1 on a templated page	Use h2
Skipped level	h2 followed by h4	Use h3
Empty heading	Empty Title	Delete or fill
Broken heading link	Translated heading id	Use anchors

Escalation Matrix:

Level	Who	Checks
L1	Author support	Title Type, outline, duplicates
L2	AMS / site administrator	Publish status, cache
L3	Development team	`styles/styles.css` heading rules and tokens
Adobe Support	Adobe	AEM title rendering defects

Recovery Procedures: Restore the page version and republish.

Health Checks: Block library page with h1–h6 on preview after releases.

Operational Procedures: Heading sizes are design tokens (`--heading-font-size-*`) changed by developers.

Known Limitations: No alignment, colour or size override; no Additional tab; no default Title Type in the model.

6.7.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
Two h1 headings	A Title h1 on a page with a Page Header or Hero H1	Set the Title to h2
Skipped heading level	h2 followed by an h4 chosen for its size	Use h3
Empty heading announced	A Title without text	Fill or delete the Title
Level not as expected	Title Type left empty (renderer default)	Select the level explicitly and republish
Heading link breaks in another locale	Heading ids come from the translated text	Link to a section Anchor name or block Anchor ID
Heading wraps badly on mobile	Long text at 2rem	Shorten the heading
Heading looks wrong in size	Level chosen to fit the design size	Use the outline level and ask design about the scale
Heading typed in capitals	Upper case typed instead of sentence case	Retype in sentence case

6.7.16 Author Quick Reference Guide

Mandatory Fields

- Title: not required in the model, but an empty Title renders an empty heading or nothing

Recommended Fields

- Title Type: no default in the model; select h1 to h6 explicitly
- Title text: up to about 70 characters for h1, 60 for h2 and h3, sentence case

Optional Fields

- None: the Title has only Title and Title Type; there is no alignment, colour, size option or Additional tab

Authoring Checklist

1. Use exactly one h1 per page, counting the Page Header and Hero headings
2. Do not add an h1 Title on article, blog or press-release pages; the Page Header renders it
3. Give each section an h2 and nest h3 to h6 without skipping levels
4. Choose the level by structure, not by size
5. Delete Titles left empty

6. Use section Anchor names, not heading ids, for stable #links across locales
7. Use bold Text, not h5 or h6, for labels that are not headings

Pre-Publish Checklist

1. Check the heading outline of the whole page on aem.page (one h1, no skipped levels)
2. Check no heading is empty
3. Check the headings wrap cleanly at 375 px
4. Check the h1 matches the page Title property
5. Check the text is in sentence case, not typed in capitals

Post-Publish Validation Checklist

1. Run an accessibility scan of the live page for heading order
2. Check the h1 and h2 render as on aem.page
3. Check #links to headings still work after translation
4. Check search snippets use the h1 topic as intended
5. Spot-check the page in each locale for overlong translated headings

6.7.17 Component Execution Example

Business example: Six-level heading scale of the cloud page.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Title
Title (Title)	Cloud transformation services
Title Type (Title)	h1
Component (Section › Add (+))	Title
Title (Title)	Our services
Title Type (Title)	h2
Component (Section › Add (+))	Title
Title (Title)	Cloud migration
Title Type (Title)	h3
Component (Section › Add (+))	Title
Title (Title)	Assessment and planning
Title Type (Title)	h4
Component (Section › Add (+))	Title
Title (Title)	Migration factory
Title Type (Title)	h5
Component (Section › Add (+))	Title
Title (Title)	Key facts
Title Type (Title)	h6

All other fields keep their default values.

Rendered Result:

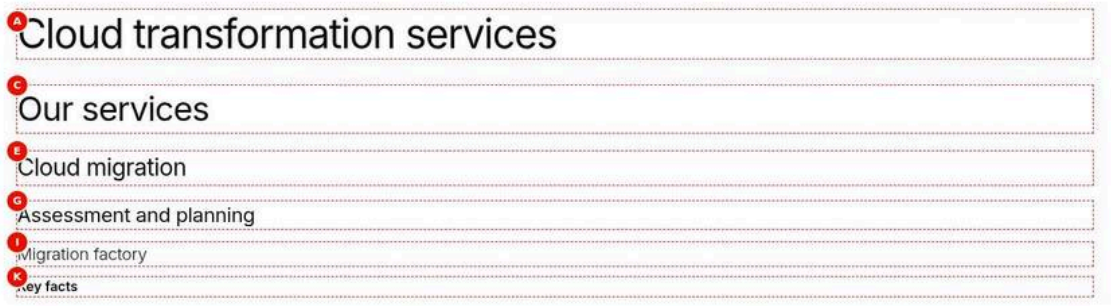

Figure 55: Execution example — Six headings stacked at 1440 px: h1 'Cloud transformation services' 3rem, h2 'Our services' 2.5rem, h3 'Cloud migration' 1.75rem, h4 'Assessment and planning' 1.5rem, h5 'Migration factory' 1.25rem light, h6 'Key facts' 1rem semibold. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/title-desktop-view.jpg)

Author Notes

- Six Titles from 'Cloud transformation services' (h1) to 'Key facts' (h6)
- Each Title Type is selected explicitly; the model has no default
- Only one h1 on the page, with no Hero or Page Header
- The levels follow each other without gaps

Business Notes

- The h1 states the page topic for search and screen readers
- h2 to h4 structure the services into topics and steps
- h5 and h6 are rare and only used where the outline needs them

Technical Notes

- The heading is rendered by AEM and Edge Delivery and not changed by code
- Edge Delivery Services adds an id from the text, for example our-services
- Sizes step at 900 px: h1 3rem desktop, 2rem mobile
- All headings have scroll-margin 2.5rem

6.8 Image Component

6.8.1 Component Purpose

Business Objective: Place a single, automatically optimised image from AEM Assets in the flow of a page, with accessible alt text.

Business Use Cases:

- Illustrations, diagrams and photographs between paragraphs.
- Infographics with a text alternative.
- Images inside Columns or Tabs Container panels.

When To Use: For a standalone image in default content.

When Not To Use:

- For an image with text side by side: use **Teaser** or **Columns**.
- For a full-width banner with a heading and CTAs: use **Hero**.
- For a background behind content: use the section **Background Image**.
- For a clickable image: not supported by the Image component (no link field); use a block with a link (Teaser, Cards).

- For video or animation: use **Video**, **Embed** or the Hero Lottie option.

Dependencies:

Type	Item
Model	`models/_image.json` (definition `image`, resource type `core/franklin/components/image/v1/image`; model `image`)
Code	None specific; Edge Delivery Services delivers the responsive `<picture>`; `scripts/aem.js` `waitForFirstImage` makes the first image of the first section eager
Styles	`styles/styles.css` (`main img { max-width: 100%; width: auto; height: auto; }`)
Data sources	AEM Assets (`/content/dam/tcs-corp/`)

Related Components: Text, Title, Button; Columns; Teaser; Hero; section Background Image.

Applicable Templates: Any page.

Supported Content Types: Raster images from AEM Assets (JPEG, PNG, WebP, GIF); SVG as supported by AEM Assets and Edge Delivery. [To be confirmed: SVG handling for the Image component — owner: development team]

Business Problem Solved

Pages needed a simple way to place a single image from AEM Assets in the flow of the text, delivered automatically as optimised responsive renditions and with an accessible text alternative, without building a block for each illustration, diagram or photograph.

Supported Taxonomy

None: the Image has no tag field and reads no page tags, taxonomy or asset metadata (Supported Tags: None). Image columns of the query index come from the page metadata, not from Image components.

6.8.2 Visual Overview

Figure 56: Desktop rendering — At 1440 px, the paragraph on the migration factory, photo-2.svg left aligned at its natural width up to the content width, and the paragraph on optimising cost, performance and security below it. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/image-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/image-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	At 1440 px, the paragraph on the migration factory, photo-2.svg left aligned at its natural width up to the content width, and the paragraph on optimising cost, performance and security below it.
Business Context	A cloud migration story on the English site where a photograph of engineers at work sits between the two paragraphs it illustrates, checked at 1440 px.
Author Objective	Add a Text, an Image with photo-2.svg and the Alt Text 'TCS engineers reviewing a cloud dashboard', and a second Text, and confirm the desktop layout.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our cloud migration factory combines automated discovery, proven	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		runbooks and a dedicated operations team, so workloads move safely and on schedule.				
—	Component (Section › Add (+))	Image	Yes	Adds the Image to the page	Select the section in the content tree, choose Add (+) and pick Image	Only components the section allows (section filter)
B	Image (Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	Recommended (without an image the component renders nothing)	The image to show	High-quality original from `/content/dam/tcs-corp/`	None in the model
C	Alt Text (Image)	TCS engineers reviewing a cloud dashboard	Recommended for informative images	Text alternative	Describe content and purpose; empty if decorative	None in the model
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	After the move, we keep optimising cost, performance and security, with clear reports for every stakeholder.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** The first paragraph, then photo-2.svg left aligned at its natural width up to the content width with its aspect ratio kept, then the paragraph about optimising cost, performance and security.
- **Rendering behaviour:** main img has max-width 100%, width and height auto: the image is never stretched and never wider than the content area (up to 110rem with Full Width). It is lazy unless it is the first image of the first section, which is set to eager as the LCP candidate.
- **Publishing behaviour:** Publish the page with photo-2.svg selected as a reference in the Publish dialog; on publish the asset is copied to the site's media store and served with a content-hash media_ URL from aem.page and aem.live.

Business Rules

- The Image has only Image and Alt Text: no link, caption, alignment, crop or size option.
- The image is shown at its natural size, never wider than the content area, with its aspect ratio kept.
- Alt Text 'TCS engineers reviewing a cloud dashboard' describes the photograph because it supports the text.
- The image sits in a paragraph of the default-content-wrapper, so it is left aligned with paragraph margins.

Common Authoring Mistakes

Error	Root Cause	Resolution
The image does not fill the content width	The original is narrower than the content area; images are never enlarged	Upload a wider original, at least 2000 px
Screen readers say 'image' only	Alt Text left empty for an informative photograph	Enter a description such as 'TCS engineers reviewing a cloud dashboard'
The image appears after the second paragraph	Components in the wrong content tree order	Drag the Image between the two Texts

Troubleshooting

- **Symptoms:** On aem.live a broken image icon shows between the paragraphs.
- **Cause:** photo-2.svg was not published, or was moved or deleted in AEM Assets after it was picked.
- **Resolution:** Publish the asset (or re-pick it if moved) and republish the page with references.
- **Verification Steps:** On aem.live the img request returns 200 and the photograph shows between the paragraphs.

Desktop (1200 px and above): the image is shown at its intrinsic width, never wider than the content area (`max-width: 100%`), with its aspect ratio preserved (`height: auto`). It sits in a paragraph inside `div.default-content-wrapper`, so it is left-aligned and gets the paragraph margins.

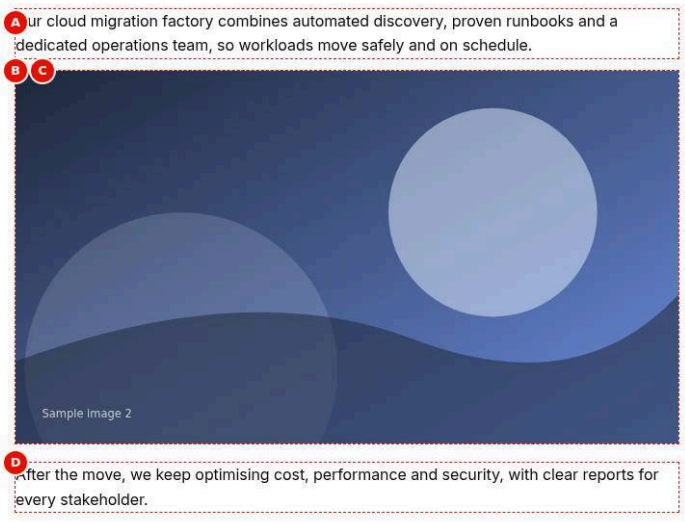

Figure 57: Tablet rendering — The same paragraphs and photo-2.svg at 768 px, the image scaled down to the content width with its aspect ratio kept. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/image-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/image-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same paragraphs and photo-2.svg at 768 px, the image scaled down to the content width with its aspect ratio kept.
Business Context	The same cloud migration story checked at 768 px, where the photograph must scale down to the tablet content width without distortion.
Author Objective	Confirm that the Image with photo-2.svg scales down between the two paragraphs at tablet width.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our cloud migration factory combines automated discovery, proven runbooks and a dedicated operations team, so workloads move safely and on schedule.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Image	Yes	Adds the Image to the page	Select the section in the content tree, choose Add (+) and pick Image	Only components the section allows (section filter)
B	Image (Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	Recommended (without an image the component renders nothing)	The image to show	High-quality original from `/content/dam/tcs-corp/`	None in the model
C	Alt Text (Image)	TCS engineers reviewing a cloud dashboard	Recommended for informative images	Text alternative	Describe content and purpose; empty if decorative	None in the model
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	After the move, we keep optimising cost, performance and security, with clear reports for every stakeholder.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** photo-2.svg fills the content width between the 2.5rem side paddings, scaled down with its aspect ratio kept, between the two paragraphs.
- **Rendering behaviour:** From 600 px the browser picks the large rendition (Edge Delivery typically serves 2000 px wide sources) and scales it to the content width; no cropping. Nothing is authored per device.
- **Publishing behaviour:** Publish the page with photo-2.svg selected as a reference in the Publish dialog; on publish the asset is copied to the site's media store and served with a content-hash media_ URL from aem.page and aem.live.

Business Rules

- The same image is used at every width; there is no art direction or per-device crop.
- The image scales down only; it keeps its aspect ratio (height auto).

- The surrounding paragraphs reflow at the tablet body size.
- Keep text out of the image: it would shrink with the image on tablets.

Common Authoring Mistakes

Error	Root Cause	Resolution
Text inside the image becomes unreadable on the tablet	Words were baked into the picture	Put the text in the Text components and keep the image free of text
The image looks distorted	A width or height was forced outside the component (for example in pasted HTML)	Re-add the Image component and pick the asset again

Troubleshooting

- **Symptoms:** At 768 px the page loads the image slowly.
- **Cause:** A very large original is used, so the 2000 px rendition is heavy.
- **Resolution:** Upload an original of about 2000 to 2400 px under about 5 MB and re-pick it.
- **Verification Steps:** In the Network panel at 768 px a WebP rendition of about 2000 px width loads quickly.

Tablet (600–1199 px): the browser picks the large rendition (Edge Delivery typically serves 2000 px wide sources from 600 px) and scales it to the content width.

Figure 58: Mobile rendering — The same paragraphs and photo-2.svg at 375 px, the image across the content width inside 1.5rem side padding, not cropped. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/image-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/image-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The same paragraphs and photo-2.svg at 375 px, the image across the content width inside 1.5rem side padding, not cropped.
Business Context	The cloud migration story checked at 375 px, where the photograph takes the full phone content width between the paragraphs.
Author Objective	Confirm that the Image with photo-2.svg loads the small rendition and scales to the mobile content width.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our cloud migration factory combines automated discovery, proven runbooks and a dedicated operations team, so workloads move safely and on schedule.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Image	Yes	Adds the Image to the page	Select the section in the content tree, choose Add (+) and pick Image	Only components the section allows (section filter)
B	Image (Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	Recommended (without an image the component renders nothing)	The image to show	High-quality original from `/content/dam/tcs-corp/`	None in the model
C	Alt Text (Image)	TCS engineers reviewing a cloud dashboard	Recommended for informative images	Text alternative	Describe content and purpose; empty if decorative	None in the model
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	After the move, we keep optimising cost, performance and security, with clear reports for every stakeholder.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** photo-2.svg spans the content width inside 1.5rem side padding, with the full picture visible and no cropping, between the two paragraphs.
- **Rendering behaviour:** Below 600 px the small rendition (typically 750 px wide) is loaded and scaled to the content width; the aspect ratio is kept and nothing is cropped.
- **Publishing behaviour:** Publish the page with photo-2.svg selected as a reference in the Publish dialog; on publish the asset is copied to the site's media store and served with a content-hash media_ URL from aem.page and aem.live.

Business Rules

- No crop is applied on mobile: keep important details large enough to read at 375 px.
- The 750 px rendition is used below 600 px.

- The Alt Text is the same at every width.
- For a full-bleed visual use a Hero or a section Background Image instead.

Common Authoring Mistakes

Error	Root Cause	Resolution
Details of the photograph are too small on the phone	A wide image with small details is scaled to 375 px	Choose a tighter crop of the asset in AEM Assets
Authors expect a different mobile crop	The Image has no per-device option	Use a block with mobile image options, or a separate asset

Troubleshooting

- **Symptoms:** At 375 px the image appears blurry.
- **Cause:** The original is smaller than 750 px, so the small rendition is upscaled by the screen density.
- **Resolution:** Upload an original at least 2000 px wide and re-pick it.
- **Verification Steps:** On aem.page at 375 px the loaded rendition is about 750 px wide and sharp.

Mobile (below 600 px): the small rendition (typically 750 px wide) is loaded and scaled to the content width; no cropping.

6.8.3 Component Variations

Variation 1 — Informative image

Variation Name: Image with alt text.

Business Purpose: Convey information visually and to assistive technology.

Visual Example:

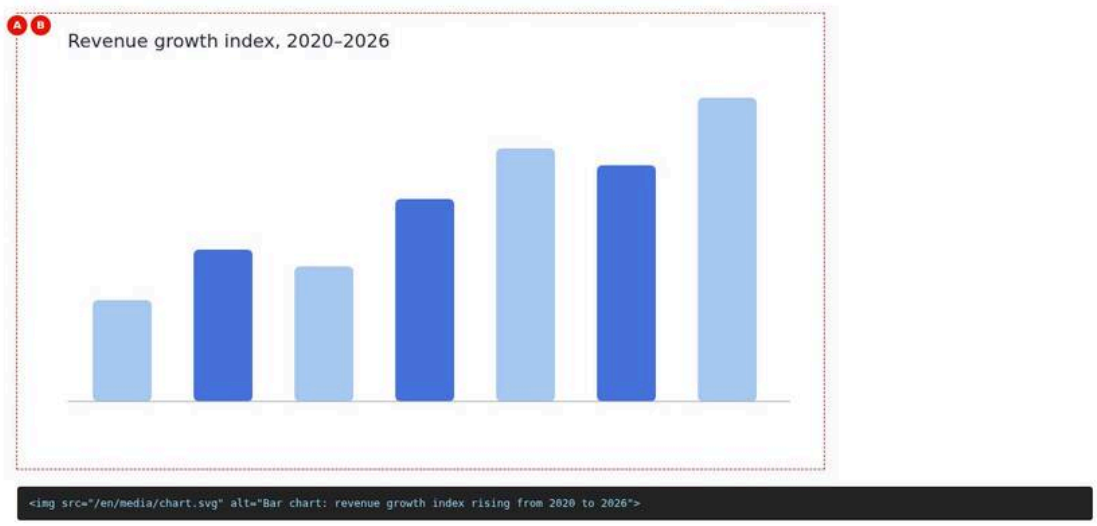

Figure 59: Informative image — chart.svg, a bar chart of a revenue growth index from 2020 to 2026 (not a diagram of the migration approach), with an inspector box below it showing the img with alt="Bar chart: revenue growth index rising from 2020 to 2026". (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/image-informative.jpg)

Screenshot Details — Informative image

Item	Detail
Screenshot Name	`screenshots/image-informative.jpg`
Screenshot Purpose	Informative image
Screen Description	chart.svg, a bar chart of a revenue growth index from 2020 to 2026 (not a diagram of the migration approach), with an inspector box below it showing the img with alt="Bar chart: revenue growth index rising from 2020 to 2026".
Business Context	An investor-style insights page shows a revenue growth chart; the chart carries information, so its content must also be available to screen reader users.
Author Objective	Add an Image with chart.svg and the Alt Text 'Bar chart: revenue growth index rising from 2020 to 2026', and check the alt attribute in the developer tools.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Image	Yes	Adds the Image to the page	Select the section in the content tree, choose Add (+) and pick Image	Only components the section allows (section filter)
A	Image (Image)	Select the asset chart.svg (/en/media/chart.svg)	Recommended (without an image the component renders nothing)	The image to show	High-quality original from `/content/dam/tcs-corp/`	None in the model
B	Alt Text (Image)	Bar chart: revenue growth index rising from 2020 to 2026	Recommended for informative images	Text alternative	Describe content and purpose; empty if decorative	None in the model
—	Developer tools (Preview)	Inspect the image: the carries the Alt Text (shown below the image)	—	Check on the preview (not stored in the content)	Inspect the image: the carries the Alt Text (shown below the image)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** chart.svg at its natural width; below it, for the screenshot, the inspected img with alt="Bar chart: revenue growth index rising from 2020 to 2026".
- **Rendering behaviour:** A picture with WebP and fallback sources and an img carrying the Alt Text as alt; lazy loading unless it is the first image of the first section.
- **Publishing behaviour:** Publish the page with chart.svg as a reference to Preview and Live; on aem.live the image is served from the media store with a media_ URL.

Business Rules

- Alt Text is Recommended for every informative image but not enforced by the model.
- The alt text names the chart type and the trend; keep it to about 125 characters.
- Explain the figures of a complex chart in the surrounding text as well.
- Translate the Alt Text per locale; use a locale-specific chart if it contains text.

Common Authoring Mistakes

Error	Root Cause	Resolution
The alt text repeats the file name	'chart.svg' or 'image' entered as Alt Text	Describe the content: 'Bar chart: revenue growth index rising from 2020 to 2026'
The checker reports images of text	Labels and figures exist only inside the chart	Repeat the key figures in a Text next to the chart
Alt text stays English on the German page	Alt Text not translated	Enter the translated Alt Text on the German page

Troubleshooting

- **Symptoms:** An accessibility scan reports 'Image without alternative text' for the chart.
- **Cause:** Alt Text was left empty or the change was not republished.
- **Resolution:** Enter the Alt Text and publish the page again.
- **Verification Steps:** Inspect the img on aem.page: alt="Bar chart: revenue growth index rising from 2020 to 2026".

Use Cases: Diagrams, product shots, photographs that support the text.

Authoring Guidelines: Pick the image in **Image**; describe it in **Alt Text**.

Business Rules: Alt Text is not enforced by the model (Recommended for every informative image).

Rendering Rules: `<picture>` with WebP and fallback sources and an `<img alt="...">`; lazy loading except for the first image of the first section.

Responsive Behaviour: Scales down with the container at all sizes; no crop.

SEO Impact: Alt text and the file context help image search.

Accessibility Compliance: WCAG 1.1.1 non-text content; complex diagrams also need the information in the text.

Variation 2 — Decorative image

Variation Name: Image without alt text.

Business Purpose: Visual atmosphere without information.

Visual Example:

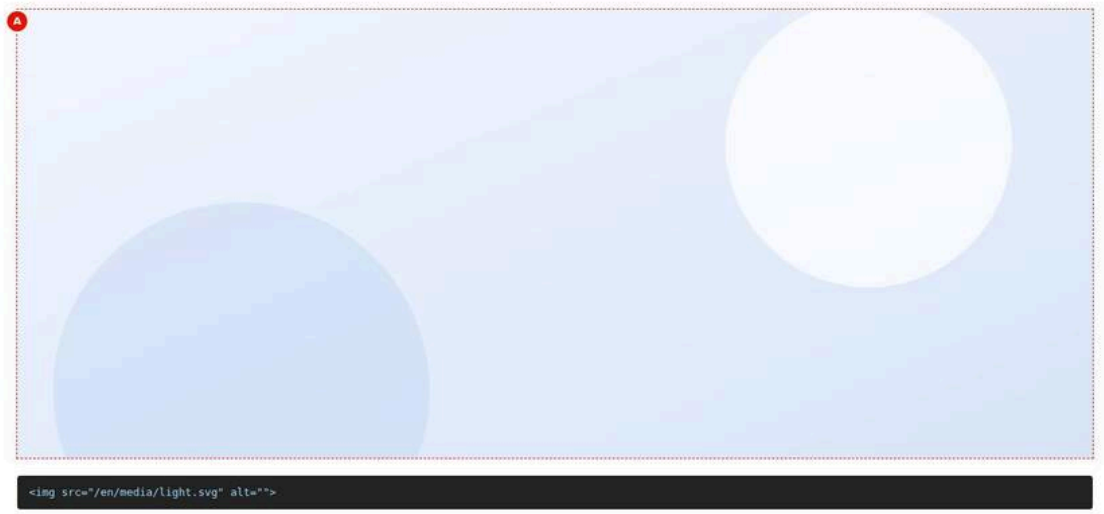

Figure 60: Decorative image — The pale blue light.svg pattern at its natural width, with an inspector box below it showing the img with alt="". (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/image-decorative.jpg)

Screenshot Details — Decorative image

Item	Detail
Screenshot Name	`screenshots/image-decorative.jpg`
Screenshot Purpose	Decorative image
Screen Description	The pale blue light.svg pattern at its natural width, with an inspector box below it showing the img with alt="".
Business Context	A light brand pattern used as visual atmosphere between content; it carries no information, so screen readers should skip it.
Author Objective	Add an Image with light.svg, leave Alt Text empty, and check the alt attribute in the developer tools.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Image	Yes	Adds the Image to the page	Select the section in the content tree, choose Add (+) and pick Image	Only components the section allows (section filter)
A	Image (Image)	Select the asset light.svg (/en/media/light.svg)	Recommended (without an image the component renders nothing)	The image to show	High-quality original from `/content/dam/tcs-corp/`	None in the model
(B)	Alt Text (Image)	Leave empty (decorative image)	No	—	—	None
—	Developer tools (Preview)	Inspect the image: alt="" (shown below the image)	—	Check on the preview (not stored in the content)	Inspect the image: alt="" (shown below the image)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The pale blue light.svg pattern at its natural width, and below it the inspected img showing alt="".
- **Rendering behaviour:** The picture is delivered as for any image; with an empty alt attribute screen readers skip it. What AEM renders for an empty Alt Text is [To be confirmed: alt value rendered when Alt Text is empty].
- **Publishing behaviour:** Publish the page with light.svg as a reference to Preview and Live; check the rendered alt attribute on aem.page before publishing to Live.

Business Rules

- Leave Alt Text empty only when the image adds no information.
- Check that the rendered img has alt="" and no fallback from the asset metadata.
- Do not use decorative images for content that a section Background Image would serve better.
- No text in decorative images.

Common Authoring Mistakes

Error	Root Cause	Resolution
Screen readers announce ‘light dot svg’	No alt attribute rendered, so the file name is read	Check the rendered alt; report it as the open [To be confirmed] point if the alt is missing
A decorative image gets a long description	Alt Text filled for a mood image	Clear Alt Text
A pattern meant as background sits between paragraphs	Image component used instead of a section Background Image	Set light.svg as the section Background Image

Troubleshooting

- **Symptoms:** The inspector shows an alt taken from the asset title instead of alt=“”.
- **Cause:** The AEM renderer filled the empty Alt Text from the asset metadata.
- **Resolution:** Clear the asset’s title or description used as fallback, or escalate to the development team (open point).
- **Verification Steps:** Inspect the img on aem.page: it has alt=“”.

Use Cases: Mood images, separators made of images.

Authoring Guidelines: Leave **Alt Text** empty.

Business Rules: What AEM renders for an empty Alt Text (empty alt or a fallback from the asset metadata) depends on the AEM renderer. [To be confirmed: alt value rendered when Alt Text is empty]

Rendering Rules: As Variation 1.

Responsive Behaviour: As Variation 1.

SEO Impact: None.

Accessibility Compliance: An empty `alt=""` lets screen readers skip the image (WCAG 1.1.1).

6.8.4 Authoring Experience

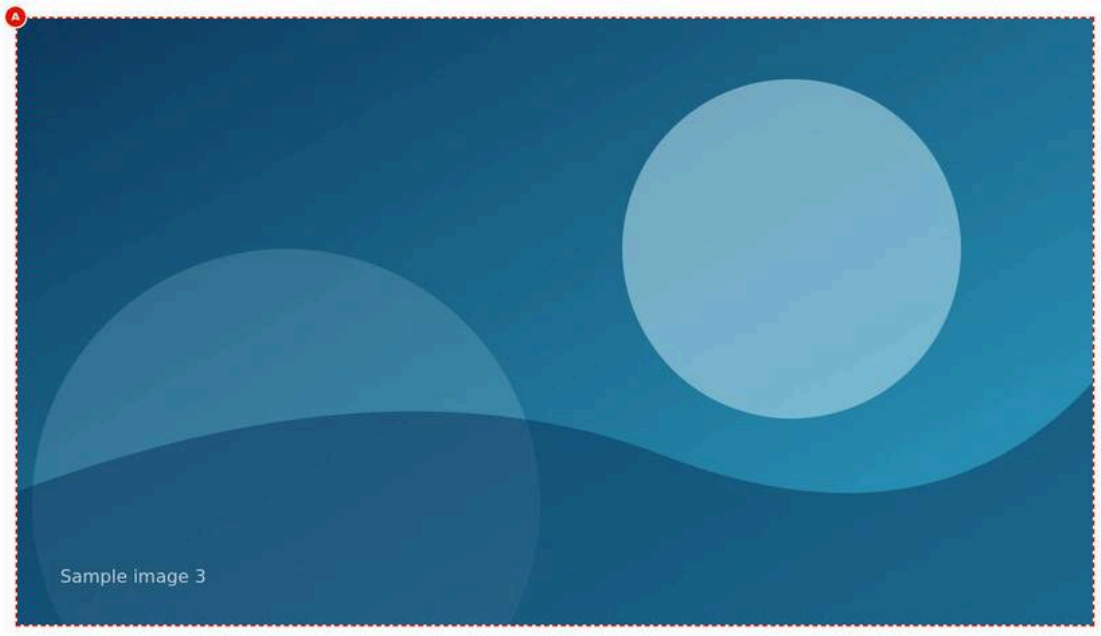

Figure 61: Image on the Universal Editor canvas — photo-3.svg in editor mode at 1440 px (an annotated preview, not a Universal Editor screenshot), the image marked A. No Assets panel or dragging is shown, and the Alt Text 'Security analysts monitoring threats in an operations centre' (B) is not visible. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/image-authoring-view.jpg)

Screenshot Details — Image on the Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/image-authoring-view.jpg`
Screenshot Purpose	Image on the Universal Editor canvas
Screen Description	photo-3.svg in editor mode at 1440 px (an annotated preview, not a Universal Editor screenshot), the image marked A. No Assets panel or dragging is shown, and the Alt Text 'Security analysts monitoring threats in an operations centre' (B) is not visible.
Business Context	How an author places an image in Universal Editor: an asset is dragged from the Assets panel onto the selected Image component and described in Alt Text.
Author Objective	Add an Image, drop photo-3.svg on it from the Assets panel and enter the Alt Text 'Security analysts monitoring threats in an operations centre'.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Image	Yes	Adds the Image to the page	Select the section in the content tree, choose Add (+) and pick Image	Only components the section allows (section filter)
—	Image (Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	Recommended (without an image the component	The image to show	High-quality original from `/content/dam/tcs-corp/`	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			renders nothing)			
—	Alt Text (Image)	Security analysts monitoring threats in an operations centre	Recommended for informative images	Text alternative	Describe content and purpose; empty if decorative	None in the model
—	Image (Universal Editor › Assets panel)	Drag photo-3.svg onto the selected Image (A)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The selected Image component on the canvas (A) with photo-3.svg being dropped from the Assets panel; the Alt Text (B) is not visible on the canvas but shown in the Properties panel.
- **Rendering behaviour:** In the editor a changed image is re-rendered in place. The dialog has two fields, Image and Alt Text, and no tabs or Additional tab.
- **Publishing behaviour:** The asset reference is saved on author at once; Publish to Preview and Live must include photo-3.svg as a reference, otherwise the published page shows a broken image.

Business Rules

- Select the Image component first (A), then drop the asset on it.
- Alt Text (B) is entered in the Properties panel; it never shows on the canvas.
- Use assets from /content/dam/tcs-corp/ that are processed and published.
- One asset per Image component.

Common Authoring Mistakes

Error	Root Cause	Resolution
The asset is dropped next to the Image and nothing changes	The Image component was not selected	Select the Image (A) and drop the asset on it again
The asset is not listed in the Assets panel	Missing permissions on the DAM folder or the asset is still processing	Wait for processing or ask for folder access

Troubleshooting

- **Symptoms:** photo-3.svg shows on the canvas but not on aem.page.
- **Cause:** The page was published without its referenced asset.
- **Resolution:** Publish the page again with photo-3.svg selected in the references of the Publish dialog.
- **Verification Steps:** On aem.page the img loads from a media_ URL and the Alt Text is in its alt attribute.

Annotations:

- A = the image (Image field; select it to open the Assets picker or drop an asset)
- B = the alt text, not visible on the canvas but shown in the Properties panel (Alt Text)

Figure 62: Image properties panel — The Properties panel with the Image reference field (thumbnail and picker button) and the Alt Text field. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/image-properties-panel.jpg)

The dialog has two fields and no tabs: **Image** (AEM Assets reference, single) and **Alt Text** (text). There is no Additional tab.

6.8.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: Sites console > select the page > **Edit**.

Expected Result: The page opens on the canvas.

Steps — Step 1: The page open in the Universal Editor.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Open TCS Corp › us › en › services
2	AEM Sites console	Select	Select the page (check box of its card or row)
3	AEM Sites console toolbar	Edit	Select Edit: the page opens in the Universal Editor

Step 2 — Add an Image

Action: Select the section (or Column / tab panel), **Add (+)** > **Image**.

Expected Result: An empty Image component appears.

Steps — Step 2: The picker with Image highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section
2	Universal Editor › Content tree	Add (+)	Select Add (+)
3	Component picker › Default Content	Image	Select Image

Step 3 — Pick the image

Action: Select the **Image** field and choose the asset in the Assets picker (or drag it from the Assets panel).

Expected Result: The image shows on the canvas.

Steps — Step 3: The Assets picker with an image selected.

Step	Where	Field / control	Value / action
1	Image › Properties	Image	Select the field: the Assets picker opens
2	Assets picker	Asset	Open /content/dam/tcs-corp/, select the image, then Select

Step 4 — Write the alt text

Action: Fill **Alt Text** for informative images; leave it empty for decorative ones.

Expected Result: The alt text is saved (visible in the inspector).

Steps — Step 4: The Alt Text field filled in.

Step	Where	Field / control	Value / action
1	Image › Properties	Alt Text	TCS engineers reviewing a cloud dashboard

Step 5 — Preview

Action: Switch on Preview mode and check the three device sizes.

Expected Result: The image scales down without distortion.

Steps — Step 5: Preview at mobile size.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch Preview on
2	Universal Editor toolbar	Device size	Mobile

Step 6 — Validate and publish

Action: Run the checklist; publish the page with its references to Preview and Live.

Expected Result: The image is served from the site's media URL (`./media_...`).

Steps — Step 6: The Publish dialog listing the page and the image asset.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Select Publish
2	Publish dialog	Items	Keep the page and its references selected (the image asset)
3	Publish dialog	Destination	Preview
4	Publish dialog	Publish	Select Publish; check the page on https://main–tcs-corp–sradha-tcs.aem.page/en/…
5	Publish dialog	Destination	Live (when approved), then Publish; check https://main–tcs-corp–sradha-tcs.aem.live/en/…

Preview Process
On `.aem.page`, open developer tools > Network, filter on images and check that a WebP rendition of an appropriate width is loaded for the viewport.

Publishing Process
Publish the page; make sure the asset is included (references) or already published.

Validation Process
- ☐ The right image (version, crop) is used.
- ☐ Informative image: alt text present and meaningful; decorative: no alt text.
- ☐ The image is sharp on a desktop screen (original at least as wide as its display width, ideally 2×).
- ☐ No text baked into the image (or the text is repeated in alt text / the page).
- ☐ The image loads on the live site (asset published).
- ☐ File size reasonable (original under about 5 MB; Edge Delivery optimises renditions).

Rollback Process
Re-pick the previous asset, or restore the page version and republish.

The walkthroughs below repeat the steps above for each variation of chapter 6.8.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Informative image
Reproduces the screenshot `screenshots/image-informative.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Image

Action: Select the section in the content tree, choose **Add (+)** and pick **Image**.

Expected Result: An empty Image component is added to the selected section.

Step 3 — Fill in Image

Action: Select **Image** in the content tree and enter in the properties panel: **Image** (A) = Select the asset chart.svg (/en/media/chart.svg); **Alt Text** (B) = Bar chart: revenue growth index rising from 2020 to 2026.

Expected Result: chart.svg appears on the canvas and the Alt Text is saved in the Properties panel.

Step 4 — Preview

Action: Developer tools: Inspect the image: the carries the Alt Text (shown below the image).

Expected Result: The developer tools show the img with the alt text 'Bar chart: revenue growth index rising from 2020 to 2026'.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: chart.svg at its natural width; below it, for the screenshot, the inspected img with alt="Bar chart: revenue growth index rising from 2020 to 2026".

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page with chart.svg as a reference to Preview and Live; on aem.live the image is served from the media store with a media_ URL.

Step 7 — Verify

Action: On the live page check: Inspect the img on aem.page: alt="Bar chart: revenue growth index rising from 2020 to 2026".

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Decorative image
Reproduces the screenshot `screenshots/image-decorative.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Image

Action: Select the section in the content tree, choose **Add (+)** and pick **Image**.

Expected Result: An empty Image component is added to the selected section.

Step 3 — Fill in Image

Action: Select **Image** in the content tree and enter in the properties panel: **Image** (A) = Select the asset light.svg (/en/media/light.svg); **Alt Text** (B) = Leave empty (decorative image).

Expected Result: light.svg appears on the canvas with the Alt Text field left empty.

Step 4 — Preview

Action: Developer tools: Inspect the image: alt="" (shown below the image).

Expected Result: The developer tools show the img with an empty alt attribute (alt="").

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The pale blue light.svg pattern at its natural width, and below it the inspected img showing alt="".

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page with light.svg as a reference to Preview and Live; check the rendered alt attribute on aem.page before publishing to Live.

Step 7 — Verify

Action: On the live page check: Inspect the img on aem.page: it has alt="".

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.8.6 Authorable Field Specification

Model `image`

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Image (`image`)	Reference (AEM Assets)	Recommended (without an image the component renders nothing)	No	(empty)	The image to show	High-quality original from `/content/dam/tcs-corp/`	None in the model	/content/dam/tcs-corp/insights/ai-lab.jpg
Alt Text (`imageAlt`)	Text	Recommended for informative images	No	(empty)	Text alternative	Describe content and purpose; empty if decorative	None in the model	Researchers testing a robotics prototype

Additional tab: Not applicable (default content).

Field details

- **Image** — Purpose: the asset. Allowed Values: one AEM Assets image. Character Limits: not applicable. Business Rules: delivered as a responsive picture; the first image of the first section is loaded eagerly (LCP),

others lazily. Dependency Rules: Alt Text. Visibility Rules: always visible. Sample Content: a 2000 × 1125 px JPEG.

- **Alt Text** — Purpose: accessible description. Allowed Values: text. Character Limits: Recommended up to 125 characters (not enforced). Business Rules: rendered as the `alt` attribute. Dependency Rules: meaningful only with an image. Visibility Rules: always visible. Sample Content: "Map of TCS delivery centres in Europe".

6.8.7 Field Annotation Mapping

Marker	Field	Purpose
A	Image	The asset shown
B	Alt Text	Text alternative (not visible)

6.8.8 Component Specification

Attribute	Value
Component Name	Image (`image`, `core/franklin/components/image/v1/image`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`models/_image.json`; AEM Assets; `styles/styles.css`
Component Type	Default content
Supported Variants	Informative image; Decorative image
Supported Templates	Any page
Supported Metadata	None
Supported Tags	None
Supported Personalization	None (as of this handover)
Caching Considerations	Images are copied to the site's media store on publish and served with content-hash URLs (`media_{hash}`), cacheable long-term; a changed asset gets a new hash after republishing the page
Performance Considerations	WebP renditions per breakpoint; lazy loading except the LCP candidate (first image of the first section, set to eager by `waitForFirstImage`)
Accessibility Compliance	WCAG 2.1 AA: text alternatives (1.1.1); images of text avoided (1.4.5)
SEO Compliance	Server-rendered `<img>` with alt; width and height attributes from the pipeline help layout stability

6.8.9 Input Model

- **Content Inputs:** Image, Alt Text.
- **Metadata Inputs:** none (asset metadata in AEM Assets is not read by the code).
- **Tags Inputs:** none.
- **Page Context Inputs:** position (first section's first image is eager).
- **Query Inputs:** none.
- **Manual Inputs:** Image, Alt Text.

Authored HTML received from AEM / Edge Delivery (typical; the widths and formats are chosen by Edge Delivery Services):

```
<p>
  <picture>
    <source type="image/webp" srcset="./media_3c4d.jpg?
width=2000&format=webply&optimize=medium"
            media="(min-width: 600px)">
    <source type="image/webp" srcset="./media_3c4d.jpg?
width=750&format=webply&optimize=medium">
    <source type="image/jpeg" srcset="./media_3c4d.jpg?
width=2000&format=jpeg&optimize=medium"
            media="(min-width: 600px)">
    <img loading="lazy" alt="Researchers testing a robotics prototype"
         src="./media_3c4d.jpg?width=750&format=jpeg&optimize=medium"
         width="2000" height="1125">
  </picture>
</p>
```

6.8.10 Output Model

Rendered Output: the picture is kept as delivered inside `div.default-content-wrapper`; the code does not change it (except `loading="eager"` for the LCP candidate).

Generated HTML: as in 6.8.9, inside `<div class="default-content-wrapper">`.

Generated JSON: none.

Generated Metadata: none (the page's `og-image` / `featured-image` come from the metadata sheet, not from Image components).

Analytics Tracking: none (an image without a link has no interaction; default content is not a data layer component).

Personalization Output: none.

Search Index Output: none (the query index's image columns come from metadata).

Target Personalization Output: None (as of this handover): the Image is default content without a link, so it is not a data layer component and has no interaction event or personalisation marker.

6.8.11 Business Rules

1. The image is shown at its natural size, never wider than its container; the aspect ratio is kept.
2. The first `img` of the first section is set to `loading="eager"`, and the first section is shown only after it has loaded (or failed).
3. Other images keep `loading="lazy"`.
4. There is no link, caption, alignment, crop or size option.
5. The alt text is the Alt Text field as rendered by AEM.
6. In the editor, a changed image is re-rendered in place.

6.8.12 Author Best Practices

Recommended Content Length: alt text up to about 125 characters; complex images (charts) explained in the surrounding text.

Image Dimensions: at least as wide as the largest display width (content area up to 110rem / 1760 px on wide screens with Full Width); 2000 px wide originals recommended; any aspect ratio (no crop is applied); the component does not stretch small images.

CTA Writing Guidelines: not applicable (no link).

Accessibility Guidelines: describe informative images; leave decorative images without alt text; avoid images of text; ensure charts have a text equivalent.

SEO Guidelines: descriptive file names and alt text; avoid very large originals.

Metadata Guidelines: set the page's social image in the metadata sheet (`og-image`), not by placing an Image.

Taxonomy Guidelines: not applicable.

Localization Guidelines: translate alt text per locale; use locale-specific images when they contain text or culture-specific content.

6.8.13 Troubleshooting Guide

Issue 1 — Image missing on the live site

Symptoms: A broken image or nothing where the image should be.

Root Cause: The asset is not published, or was moved / deleted in AEM Assets.

Diagnosis Steps: Check the image request in the network panel; check the asset in AEM Assets.

Resolution Steps: Publish the asset and republish the page.

Validation Steps: The image loads from `./media_...`.

Preventive Measures: Publish with references.

Issue 2 — Image looks blurry

Symptoms: Soft or pixelated image on desktop.

Root Cause: The original is smaller than its display size.

Diagnosis Steps: Check the asset's dimensions.

Resolution Steps: Upload a larger original and re-pick it.

Validation Steps: Sharp at 1440 px.

Preventive Measures: Use 2000 px originals.

Issue 3 — Old image still shows after replacing the asset

Symptoms: The site shows the previous version.

Root Cause: The page was not republished, so its media reference was not updated.

Diagnosis Steps: Compare the `media_` hash before and after.

Resolution Steps: Republish the page.

Validation Steps: New hash and new image.

Preventive Measures: Republish pages after replacing assets.

Issue 4 — Image is not full width

Symptoms: A small image does not fill the content width.

Root Cause: The CSS never enlarges images beyond their natural size.

Diagnosis Steps: Compare the natural width with the container.

Resolution Steps: Use a wider original, or a Hero / section background for full-width visuals.

Validation Steps: Image fills the area.

Preventive Measures: Choose the component by layout need.

Issue 5 — Accessibility checker reports missing alt text
Symptoms: "Image without alternative text" in scans.

Root Cause: Alt Text empty for an informative image, or the rendered alt attribute is missing.

Diagnosis Steps: Inspect the `img` alt attribute.

Resolution Steps: Fill Alt Text; republish.

Validation Steps: Scan passes.

Preventive Measures: Validation checklist before publishing.

Issue 6 — Slow page load (LCP)
Symptoms: PageSpeed Insights reports a slow LCP image.

Root Cause: A very large image in the first section, or many images above the fold.

Diagnosis Steps: Run PageSpeed Insights on the preview URL.

Resolution Steps: Use a smaller original or move the image below the first section.

Validation Steps: LCP under 2.5 s.

Preventive Measures: Keep the first section light.

Issue 7 — Image cannot be selected in the picker
Symptoms: The asset is not visible in the Assets picker.

Root Cause: Missing permissions on the DAM folder, or the asset is still processing.

Diagnosis Steps: Open the folder in AEM Assets.

Resolution Steps: Wait for processing; ask for access.

Validation Steps: Asset selectable.

Preventive Measures: Upload assets before editing.

6.8.14 Support Runbook
Monitoring Requirements: Core Web Vitals (LCP, CLS) for pages with large images. [To be confirmed: monitoring tool]

Logs: No console messages. Image failures show as failed requests in the browser network panel. Asset processing status in AEM Assets.

Common Errors:

Error	Cause	Fix
404 on `media_` URL	Page published before the asset was available	Republish the page
Broken image on author	Asset deleted	Re-pick
Blurry image	Small original	Larger original
Missing alt	Empty Alt Text	Fill Alt Text
Slow LCP	Huge first image	Optimise / move

Escalation Matrix:

Level	Who	Checks
L1	Author support	Asset publication, alt text, original size

Level	Who	Checks
L2	AMS / site administrator	Publish status, media delivery, CDN cache
L3	Development team	Image CSS, LCP handling in `scripts/aem.js`
Adobe Support	Adobe	AEM Assets processing, Edge Delivery media delivery

Recovery Procedures: Re-pick a valid asset or restore the page version; republish.

Health Checks: Block library image page on preview after releases.

Operational Procedures: DAM folder structure and asset governance. [To be confirmed: DAM governance — owner: brand / DAM team]

Known Limitations: No link, caption, alignment, crop, focal point or size options; no Additional tab; no art direction (different crops per device).

6.8.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
Image missing on live	Asset not published, moved or deleted	Publish the asset and republish the page
Image blurry	Original smaller than its display size	Upload a larger original and re-pick it
Old image still shown	Page not republished after the asset changed	Republish the page
Image not full width	CSS never enlarges images	Use a wider original, or a Hero or section background
Missing alt text reported	Alt Text empty for an informative image	Fill Alt Text and republish
Slow LCP	Very large image in the first section	Use a smaller original or move it below the first section
Asset not in the picker	No DAM permissions or asset still processing	Wait for processing or request access
Image expected to link somewhere	The Image has no link field	Use a Teaser or Cards with a link

6.8.16 Author Quick Reference Guide

Mandatory Fields

- Image: not required in the model, but without an asset the component renders nothing

Recommended Fields

- Alt Text: for every informative image, up to about 125 characters; empty for decorative images

Optional Fields

- None beyond Image and Alt Text: no link, caption, alignment, crop, size option or Additional tab

Authoring Checklist

1. Use originals at least 2000 px wide; small images are never enlarged
2. Keep text out of images, or repeat it in the page text
3. Describe content and purpose in Alt Text, not the file name
4. Leave Alt Text empty for decorative images and check the rendered alt=""
5. Explain charts and diagrams in the surrounding text too

6. Use a Teaser, Cards or Hero for clickable or full-width images
7. Avoid a very large image as the first image of the first section (LCP)

Pre-Publish Checklist

1. Check the right asset version is used
2. Check the image is sharp at 1440 px and scales without distortion at 768 px and 375 px
3. Check the alt attribute in the inspector on aem.page
4. Check the original is under about 5 MB
5. Check the asset is included in the Publish dialog references

Post-Publish Validation Checklist

1. Open the page on aem.live and confirm the image request returns 200
2. Check a WebP rendition of a suitable width is loaded per viewport
3. Run PageSpeed Insights when the image is in the first section (LCP)
4. Run an accessibility scan for missing alt text
5. Republish the page after replacing the asset so the new media_ hash is used

6.8.17 Component Execution Example

Business example: Photograph in the cloud migration story.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Text
Text (Text)	Our cloud migration factory combines automated discovery, proven runbooks and a dedicated operations team, so workloads move safely and on schedule.
Component (Section › Add (+))	Image
Image (Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)
Alt Text (Image)	TCS engineers reviewing a cloud dashboard
Component (Section › Add (+))	Text
Text (Text)	After the move, we keep optimising cost, performance and security, with clear reports for every stakeholder.

All other fields keep their default values.

Rendered Result:

Figure 63: Execution example — At 1440 px, the paragraph on the migration factory, photo-2.svg left aligned at its natural width up to the content width, and the paragraph on optimising cost, performance and security below it. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/image-desktop-view.jpg)

Author Notes

- The Image sits between two Text components in content tree order
- Image is photo-2.svg picked from /en/media
- Alt Text 'TCS engineers reviewing a cloud dashboard' describes the photograph
- No other fields exist; the image keeps its natural size

Business Notes

- The photograph makes the migration factory tangible between the two paragraphs
- Alt text gives screen reader users the same context
- A wide original keeps the image sharp on large screens

Technical Notes

- Edge Delivery delivers a picture with WebP and fallback sources (typically 2000 px from 600 px, 750 px below)
- main img max-width 100% and height auto: no stretch, no crop
- The first image of the first section is set to eager by waitForFirstImage; others stay lazy
- On publish the asset is copied to the media store with a content-hash media_ URL

6.9 Button Component

6.9.1 Component Purpose

Business Objective: Give authors a consistent, accessible call to action with the TCS design system's button views, types, icons and alignment, without formatting tricks.

Business Use Cases:

- Primary call to action of a section (“Contact us”, “Download the report”).
- Secondary or tertiary actions next to a primary one.
- Icon-only actions (search, arrow, chevron).
- Text link calls to action (“View all insights”).

When To Use: For any standalone call to action in default content, especially when you need a specific view, icon or alignment.

When Not To Use:

- Inside a sentence: use an inline link in **Text**.
- For CTAs that belong to a block (Hero, Teaser, Page Header, List, Cards have their own CTA fields).
- For navigation menus: use the navigation page (`references/nav`).

Dependencies:

Type	Item
Model	`models/_button.json` (definition `button`, resource type `core/franklin/components/button/v1/button`, model `button`)
Code	`decorators/content-buttons-decorator.js` (`decorateButtons`), `utils/buttons.js` (`BUTTON_VIEWS`, `BUTTON_TYPES`, `BUTTON_ALIGNMENTS`, `readButtonOptions`), `decorators/button-decorator.js` (`decorateButton`, `setButtonAlignment`); `decorators/data-layer-decorator.js` (click tracking)
Styles	`styles/styles.css` (`a.button`, `.primary`, `.secondary`, `.tertiary`, `.icon-button`, `a.link-button`, `.button-align-*`, `p.button-wrapper`)
Icons	`icons/arrow-right.svg`, `chevron-right.svg`, `chevron-down.svg`, `search.svg` (Icon options); `arrow-right.svg` (trailing icon of buttons); `chevron-right.svg` (link button)
Data sources / placeholders	None

Related Components: Text (formatted standalone links create the same buttons), Hero / Teaser / Page Header CTAs (same decorator), Columns (Button inside a Column), Tabs Container.

Applicable Templates: Any page.

Supported Content Types: A link to an AEM page, an asset or an external URL.

Business Problem Solved

Authors needed a consistent, accessible call to action in default content with the TCS design system’s views (button, icon, text link), types (primary, secondary, tertiary), four icons and alignment, chosen in a dialog instead of the bold and italic formatting tricks of the Text component.

Supported Taxonomy

None: the Button has no tag field and reads no page tags, taxonomy or metadata (Supported Tags: None). It is not part of the query index.

6.9.2 Visual Overview

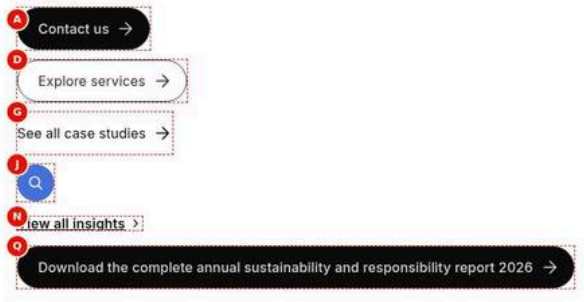

Figure 64: Desktop rendering — Six buttons at 1440 px, stacked left aligned in their own paragraphs (not a row): primary 'Contact us', secondary 'Explore services', tertiary 'See all case studies', a blue circular search icon button, the link view 'View all insights' with a chevron and a primary pill with the long download label. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/button-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/button-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	Six buttons at 1440 px, stacked left aligned in their own paragraphs (not a row): primary 'Contact us', secondary 'Explore services', tertiary 'See all case studies', a blue circular search icon button, the link view 'View all insights' with a chevron and a primary pill with the long download label.
Business Context	The call-to-action set of the English site shown together at 1440 px, so authors can compare every Button view and type before choosing one for a section.
Author Objective	Add six Buttons: Primary 'Contact us' with a Title, Secondary 'Explore services', Tertiary 'See all case studies', an Icon view Search, a Link view 'View all insights' and a long download label.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
A	Link (Button)	Select the page or enter /en/contact	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(B)	Text (Button)	Contact us	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(C)	Title (Button)	Contact the TCS team	No	Tooltip (`title` attribute)	Extra context only	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Link (Button)	Select the page or enter /en/services	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(E)	Text (Button)	Explore services	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(F)	Type (Button)	Secondary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
G	Link (Button)	Select the page or enter /en/insights/case-studies	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(H)	Text (Button)	See all case studies	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(I)	Type (Button)	Tertiary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
J	Link (Button)	Select the page or enter /en/search	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(K)	Text (Button)	Search	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(L)	Views (Button)	Icon	No	Button, icon-only or text link	Button for most CTAs	Enforced: Button, Icon, Link
(M)	Icon (Button)	Search	Recommended when Views is Icon	Icon of the Icon view	Pick the icon matching the action	Enforced: Arrow right, Chevron right, Chevron down, Search
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
N	Link (Button)	Select the page or enter /en/insights	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(O)	Text (Button)	View all insights	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(P)	Views (Button)	Link	No	Button, icon-only or text link	Button for most CTAs	Enforced: Button, Icon, Link
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
Q	Link (Button)	Select the page or enter /en/insights/reports	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(R)	Text (Button)	Download the complete annual sustainability and responsibility report 2026	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Stacked left-aligned buttons: a black pill 'Contact us', an outlined pill 'Explore services', the text-and-arrow 'See all case studies', a blue 2.75rem circle with the search icon, the underlined 'View all insights' with a chevron and a black pill with the long download label.
- **Rendering behaviour:** Each button sits in its own p.button-wrapper (0.75rem vertical margin) with button-align-left. Pills are at least 3.125rem high with a 1rem label and a 1.5rem trailing arrow; the icon button is a 2.75rem circle with a 1.25rem icon; the link view is 1rem semibold with a 1rem chevron.
- **Publishing behaviour:** Publish to Preview and Live from Universal Editor; the targets /en/contact, /en/services, /en/insights/case-studies, /en/search, /en/insights and /en/insights/reports must be published themselves, otherwise the buttons lead to a 404.

Business Rules

- One primary per section: 'Contact us' is the only Primary (the default Type); the others use Secondary, Tertiary, Icon or Link.
- The Search icon button shows no text: Text 'Search' becomes its aria-label and title.
- Type is hidden and ignored for Views Link ('View all insights').
- Labels never wrap; the 70-character download label is a deliberate example of a label that is too long.
- Title 'Contact the TCS team' is the tooltip; empty Titles get the label as title.

Common Authoring Mistakes

Error	Root Cause	Resolution
The download label is cut off	Labels never wrap and are clipped at the content width	Shorten it to about 25 characters, e.g. 'Download the 2026 report'
The search icon has no accessible name	Text left empty for the Icon view	Enter 'Search' in Text
'View all insights' still looks like a button	Views left on Button	Set Views to Link

Troubleshooting

- **Symptoms:** The Search button appears as a pill with the text 'Search' and an arrow.
- **Cause:** No icon was resolved for the Icon view (Icon empty or not delivered), so it falls back to a normal button.
- **Resolution:** Select Search in Icon and republish; if it is set but ignored, escalate to development ([To be confirmed: delivered markup of the Button component's Views, Icon and Alignment — owner: development team]).
- **Verification Steps:** On aem.page the link has the classes button primary icon-button and aria-label 'Search'.

Desktop: buttons are pill-shaped (`--radius-full`), at least 3.125rem high, label 1rem (`--button-font-size`), padding 0.75rem 1rem 0.75rem 1.5rem, with a 1.5rem trailing arrow; icon buttons are 2.75rem circles with a 1.25rem icon; the link view is a semibold underlined text with a 1rem chevron. Each button sits in its own `p.button-wrapper` (0.75rem top and bottom margin), aligned left, centre or right.

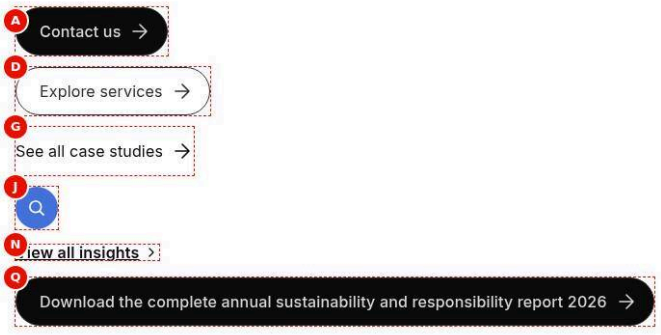

Figure 65: Tablet rendering — The same six stacked buttons at 768 px at identical sizes; the long label 'Download the complete annual sustainability and responsibility report 2026' still fits on one line. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/button-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/button-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same six stacked buttons at 768 px at identical sizes; the long label 'Download the complete annual sustainability and responsibility report 2026' still fits on one line.
Business Context	The same six calls to action checked at 768 px, to confirm the button sizes are unchanged on tablets and the long label still fits.
Author Objective	Confirm that the six Buttons keep their size and style at tablet width.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
A	Link (Button)	Select the page or enter /en/contact	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(B)	Text (Button)	Contact us	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(C)	Title (Button)	Contact the TCS team	No	Tooltip (`title` attribute)	Extra context only	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
D	Link (Button)	Select the page or enter /en/services	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(E)	Text (Button)	Explore services	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(F)	Type (Button)	Secondary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
G	Link (Button)	Select the page or enter /en/insights/case-studies	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(H)	Text (Button)	See all case studies	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(I)	Type (Button)	Tertiary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
J	Link (Button)	Select the page or enter /en/search	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(K)	Text (Button)	Search	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(L)	Views (Button)	Icon	No	Button, icon-only or text link	Button for most CTAs	Enforced: Button, Icon, Link
(M)	Icon (Button)	Search	Recommended when Views is Icon	Icon of the Icon view	Pick the icon matching the action	Enforced: Arrow right, Chevron right, Chevron down, Search
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
N	Link (Button)	Select the page or enter /en/insights	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(O)	Text (Button)	View all insights	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(P)	Views (Button)	Link	No	Button, icon-only or text link	Button for most CTAs	Enforced: Button, Icon, Link
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
Q	Link (Button)	Select the page or enter /en/insights/reports	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(R)	Text (Button)	Download the complete annual sustainability and responsibility report 2026	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The same stacked buttons as on desktop, at identical sizes, inside the 2.5rem section padding; the long download label still fits on one line at 768 px.
- **Rendering behaviour:** Button tokens do not change per breakpoint: 3.125rem minimum height, 1rem label, 2.75rem icon buttons at every width. Alignment is the same on every device.
- **Publishing behaviour:** Publish to Preview and Live from Universal Editor; the targets /en/contact, /en/services, /en/insights/case-studies, /en/search, /en/insights and /en/insights/reports must be published themselves, otherwise the buttons lead to a 404.

Business Rules

- Button sizes are identical at all widths; nothing is authored per device.
- Alignment Left, Center or Right applies at every width; there is no per-breakpoint alignment.
- The long label is still visible at 768 px but is clipped at 375 px.
- Keep at most one primary per section on every device.

Common Authoring Mistakes

Error	Root Cause	Resolution
Reviewers expect bigger buttons on tablet	Button tokens are fixed by design	No change; raise a design request if needed
The long label passes the tablet check but fails on phones	Only checked at 768 px	Also check at 375 px and 320 px

Troubleshooting

- **Symptoms:** At 768 px 'Explore services' shows black instead of outlined.
- **Cause:** Type Secondary was not saved, so the default Primary applies.
- **Resolution:** Select the Button, set Type to Secondary again and republish.
- **Verification Steps:** On aem.page the link has the classes button secondary.

Tablet: identical sizes (button tokens do not change per breakpoint).

Figure 66: Mobile rendering — The same six stacked buttons at 375 px at identical sizes; the primary pill with the long download label is clipped at the content edge. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/button-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/button-mobile-view.jpg`

Item	Detail
Screenshot Purpose	Mobile rendering
Screen Description	The same six stacked buttons at 375 px at identical sizes; the primary pill with the long download label is clipped at the content edge.
Business Context	The six calls to action checked at 375 px, where long labels are the most common failure: the download label shows how a too-long label is clipped.
Author Objective	Confirm the Buttons at mobile width and identify the clipped download label.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)

(F)	Type (Button)	Secondary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
G	Link (Button)	Select the page or enter /en/insights/case-studies	Recommended (without a link nothing is ren-	Button target	Pick internal pages with the picker	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			dered as a button)			
(H)	Text (Button)	See all case studies	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(I)	Type (Button)	Tertiary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
J	Link (Button)	Select the page or enter /en/search	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(K)	Text (Button)	Search	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(L)	Views (Button)	Icon	No	Button, icon-only or text link	Button for most CTAs	Enforced: Button, Icon, Link
(M)	Icon (Button)	Search	Recommended when Views is Icon	Icon of the Icon view	Pick the icon matching the action	Enforced: Arrow right, Chevron right, Chevron down, Search
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
N	Link (Button)	Select the page or enter /en/insights	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(O)	Text (Button)	View all insights	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(P)	Views (Button)	Link	No	Button, icon-only or text link	Button for most CTAs	Enforced: Button, Icon, Link
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
Q	Link (Button)	Select the page or enter /en/insights/reports	Recommended (without a link nothing is ren-	Button target	Pick internal pages with the picker	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			dered as a button)			
(R)	Text (Button)	Download the complete annual sustainability and responsibility report 2026	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The buttons keep their desktop sizes inside 1.5rem side padding; the black pill 'Download the complete annual sustainability and responsibility report 2026' is cut off at the content edge.
- **Rendering behaviour:** Labels never wrap (white-space nowrap); a button wider than the content area is limited by max-width 100% and its label clipped by overflow hidden.
- **Publishing behaviour:** Publish to Preview and Live from Universal Editor; the targets /en/contact, /en/services, /en/insights/case-studies, /en/search, /en/insights and /en/insights/reports must be published themselves, otherwise the buttons lead to a 404.

Business Rules

- Labels of about 25 characters fit at 320 px; the 70-character download label does not.
- Put format and size information in Title, not in the label.
- German and French translations are about 30 % longer; check them at 320 px.
- Icon buttons stay 2.75rem (44 px) targets.

Common Authoring Mistakes

Error	Root Cause	Resolution
The end of the download label is hidden	The label is far longer than about 25 characters	Shorten it to 'Download the 2026 report' and add '(PDF, 2 MB)' in Title
Translated labels overflow on the German page	Text expansion of the translation	Shorten the translated label

Troubleshooting

- **Symptoms:** At 375 px the download button ends mid-word without its arrow.
- **Cause:** Buttons do not wrap their label by design and are clipped at the container width.
- **Resolution:** Shorten the Text of the Button and republish.
- **Verification Steps:** At 320 px on aem.page the whole label and the arrow are visible.

Mobile: identical sizes; labels never wrap (`white-space: nowrap`), and a label wider than the content area is clipped (`max-width: 100%; overflow: hidden`).

6.9.3 Component Variations

Variation 1 — Primary button

Variation Name: Views: Button, Type: Primary.

Business Purpose: The main action of a section.

Visual Example:

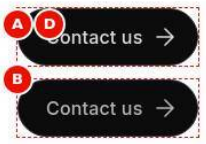

Figure 67: Primary button — At 402 px, two black primary pills 'Contact us' with arrows, stacked; the lower one, under the pointer, has its label and arrow in slate-400. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/button-primary.jpg)

Screenshot Details — Primary button

Item	Detail
Screenshot Name	`screenshots/button-primary.jpg`
Screenshot Purpose	Primary button
Screen Description	At 402 px, two black primary pills 'Contact us' with arrows, stacked; the lower one, under the pointer, has its label and arrow in slate-400.
Business Context	The main call to action of a contact band: 'Contact us' leads to the contact page, shown in its default and hover states.
Author Objective	Add two Buttons 'Contact us' to /en/contact with the Title 'Contact the TCS team', keeping Views Button and Type Primary, and check the hover state of the second.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
A	Link (Button)	Select the page or enter /en/contact	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
B	Text (Button)	Contact us	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(C)	Title (Button)	Contact the TCS team	No	Tooltip (`title` attribute)	Extra context only	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
D	Link (Button)	Select the page or enter /en/contact	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(E)	Text (Button)	Contact us	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(F)	Title (Button)	Contact the TCS team	No	Tooltip (`title` attribute)	Extra context only	None
—	Action (Preview)	Point at the second button (hover state)	—	Check on the preview (not stored in the content)	Point at the second button (hover state)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two black pill buttons 'Contact us' with grey-300 medium-weight labels and trailing arrows; the second, under the pointer, has its label and arrow in slate-400.
- **Rendering behaviour:** a.button.primary: black border and background, grey-300 label, medium weight, at least 3.125rem high, padding 0.75rem 1rem 0.75rem 1.5rem; hover and focus change the label to slate-400. The title attribute is 'Contact the TCS team'.
- **Publishing behaviour:** Publish the page and /en/contact to Preview and Live. A click pushes cmp:click with dc:title 'Contact us' and the page as the component.

Business Rules

- Primary is the default Type; one primary per section is Recommended.
- Title 'Contact the TCS team' becomes the tooltip; it adds context to the label.
- The label starts with a verb and fits on one line at 320 px.
- Keyboard focus shows the same state as hover plus the focus outline.

Common Authoring Mistakes

Error	Root Cause	Resolution
The button links to /content/tcs-corp/us/en/contact on live	A path was typed outside the mappings instead of picked	Re-pick the page in Link with the content picker
Two primary buttons in one section	Both Buttons kept the default Type	Set the less important one to Secondary

Troubleshooting

- **Symptoms:** 'Contact us' shows as a plain blue link.
- **Cause:** Link is empty or the label equals the URL, so the link is not decorated.
- **Resolution:** Select /en/contact in Link and enter 'Contact us' in Text, then republish.
- **Verification Steps:** On aem.page the paragraph is p.button-wrapper and the link a.button.primary.

Use Cases: Contact, register, download.

Authoring Guidelines: Views **Button**, Type **Primary** (the defaults).

Business Rules: Primary is the default type; one primary per section is Recommended.

Rendering Rules: `a.button.primary`: black border and background (`--color-border-neutral`, `--color-bg-neutral`), grey-300 label (`--color-text-tertiary`), medium weight; hover / focus label slate-400.

Responsive Behaviour: Same at all sizes; label does not wrap.

SEO Impact: A normal link with its label as anchor text.

Accessibility Compliance: Keyboard focusable link with 0.125rem brand focus outline; the arrow is decorative CSS.

Variation 2 — Secondary button

Variation Name: Views: Button, Type: Secondary.

Business Purpose: An alternative action next to the primary.

Visual Example:

Figure 68: Secondary button — At 402 px, two outlined secondary pills 'Explore services', stacked; the lower one, under the pointer, has a white fill with brand blue border and label. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/button-secondary.jpg)

Screenshot Details — Secondary button

Item	Detail
Screenshot Name	`screenshots/button-secondary.jpg`
Screenshot Purpose	Secondary button
Screen Description	At 402 px, two outlined secondary pills 'Explore services', stacked; the lower one, under the pointer, has a white fill with brand blue border and label.
Business Context	An alternative action next to a primary one: 'Explore services' leads to the services overview, shown in its default and hover states.
Author Objective	Add two Buttons 'Explore services' to /en/services with Type Secondary and check the hover state of the second.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
A	Link (Button)	Select the page or enter /en/services	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
B	Text (Button)	Explore services	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(C)	Type (Button)	Secondary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Link (Button)	Select the page or enter /en/services	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(E)	Text (Button)	Explore services	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(F)	Type (Button)	Secondary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
—	Action (Preview)	Point at the second button (hover state)	—	Check on the preview (not stored in the content)	Point at the second button (hover state)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two outlined pill buttons with slate-900 border, label and arrow; the second, under the pointer, has a white fill with brand blue border and label.
- **Rendering behaviour:** a.button.secondary: transparent background, slate-900 border and label; hover and focus give a white background and the brand border and text colour. Size and padding as for the primary type.
- **Publishing behaviour:** Publish the page and /en/services to Preview and Live.

Business Rules

- Use Secondary for the alternative next to one primary.
- Type is shown in the dialog because Views is Button.
- Hover and focus states are the same.
- The label never wraps; keep it short.

Common Authoring Mistakes

Error	Root Cause	Resolution
The button is black	Type left on the default Primary	Set Type to Secondary
The secondary button disappears on a dark band	Placed on a dark background from a block or image	Place it on a white or Highlight section

Troubleshooting

- **Symptoms:** Hovering 'Explore services' on aem.page shows no colour change.
- **Cause:** The Button was not decorated (no link), so it is a plain link without the secondary classes.
- **Resolution:** Check Link is set to /en/services and republish.
- **Verification Steps:** On aem.page the link has the classes button secondary and turns brand blue on hover.

Use Cases: "Learn more", "Explore".

Authoring Guidelines: Views **Button**, Type **Secondary**.

Business Rules: None beyond the type.

Rendering Rules: `a.button.secondary`: transparent background, slate-900 border and label; hover white background, brand border and label. In the CSS-only `dark` section style: lighter border and white label.

Responsive Behaviour: As Variation 1.

SEO Impact: As Variation 1.

Accessibility Compliance: As Variation 1.

Variation 3 — Tertiary button

Variation Name: Views: Button, Type: Tertiary.

Business Purpose: A lightweight action with an arrow.

Visual Example:

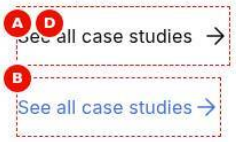

Figure 69: Tertiary button — At 402 px, two tertiary calls to action 'See all case studies' with arrows and no container, stacked; the lower one, under the pointer, is brand blue with the arrow closer. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/button-tertiary.jpg)

Screenshot Details — Tertiary button

Item	Detail
Screenshot Name	`screenshots/button-tertiary.jpg`
Screenshot Purpose	Tertiary button
Screen Description	At 402 px, two tertiary calls to action 'See all case studies' with arrows and no container, stacked; the lower one, under the pointer, is brand blue with the arrow closer.
Business Context	A lightweight action at the end of a case study teaser: 'See all case studies' leads to the overview without a button container.
Author Objective	Add two Buttons 'See all case studies' to /en/insights/case-studies with Type Tertiary and check the hover state of the second.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
A	Link (Button)	Select the page or enter /en/insights/case-studies	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
B	Text (Button)	See all case studies	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Type (Button)	Tertiary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
D	Link (Button)	Select the page or enter /en/insights/case-studies	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(E)	Text (Button)	See all case studies	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(F)	Type (Button)	Tertiary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
—	Action (Preview)	Point at the second button (hover state)	—	Check on the preview (not stored in the content)	Point at the second button (hover state)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two text calls to action 'See all case studies' in the default text colour with a trailing arrow and no border; the second, under the pointer, is brand blue with the arrow moved closer.
- **Rendering behaviour:** a.button.tertiary: no border, radius or padding, default text colour; hover and focus switch to the brand colour and the gap to the arrow becomes 0. The minimum height of 3.125rem keeps a large click target.
- **Publishing behaviour:** Publish the page and /en/insights/case-studies to Preview and Live.

Business Rules

- Tertiary is for third-level actions or dense layouts.
- It keeps the arrow; for a chevron text link use Views Link.
- The label must state the destination: 'See all case studies'.
- Do not pair two tertiary actions without a primary or secondary.

Common Authoring Mistakes

Error	Root Cause	Resolution
An underlined text with a chevron appears instead	Views set to Link	Set Views to Button and Type to Tertiary
It is mistaken for body text	Tertiary placed inside running text	Keep it in its own paragraph after the text

Troubleshooting

- **Symptoms:** 'See all case studies' shows as an outlined pill.
- **Cause:** Type Secondary was selected instead of Tertiary.

- **Resolution:** Set Type to Tertiary and republish.
- **Verification Steps:** On aem.page the link has the classes button tertiary and no border.

Use Cases: Third-level actions, dense layouts.

Authoring Guidelines: Views **Button**, Type **Tertiary**.

Business Rules: None beyond the type.

Rendering Rules: `a.button.tertiary`: no border, radius or padding; default text colour; hover brand colour and gap 0.

Responsive Behaviour: As Variation 1.

SEO Impact: As Variation 1.

Accessibility Compliance: As Variation 1; minimum height 3.125rem keeps a large target.

Variation 4 — Icon button

Variation Name: Views: Icon (Type Primary / Secondary / Tertiary; Icon Arrow right / Chevron right / Chevron down / Search).

Business Purpose: A compact, icon-only action.

Visual Example:

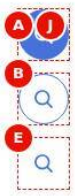

Figure 70: Icon button — At 402 px, three 2.75rem circular search icon buttons stacked: primary filled blue with a white icon, secondary with a blue outline and icon, tertiary a blue icon only. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/button-icon.jpg)

Screenshot Details — Icon button

Item	Detail
Screenshot Name	`screenshots/button-icon.jpg`
Screenshot Purpose	Icon button
Screen Description	At 402 px, three 2.75rem circular search icon buttons stacked: primary filled blue with a white icon, secondary with a blue outline and icon, tertiary a blue icon only.
Business Context	Compact search entry points, for example in a hero or a band header, shown in the three icon button types.
Author Objective	Add three Buttons to /en/search with Text 'Search', Views Icon and Icon Search: Type Primary (default), Secondary and Tertiary.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Link (Button)	Select the page or enter /en/search	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
B	Text (Button)	Search	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(C)	Views (Button)	Icon	No	Button, icon-only or text link	Button for most CTAs	Enforced: Button, Icon, Link
(D)	Icon (Button)	Search	Recommended when Views is Icon	Icon of the Icon view	Pick the icon matching the action	Enforced: Arrow right, Chevron right, Chevron down, Search
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
E	Link (Button)	Select the page or enter /en/search	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(F)	Text (Button)	Search	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(G)	Views (Button)	Icon	No	Button, icon-only or text link	Button for most CTAs	Enforced: Button, Icon, Link
(H)	Type (Button)	Secondary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
(I)	Icon (Button)	Search	Recommended when Views is Icon	Icon of the Icon view	Pick the icon matching the action	Enforced: Arrow right, Chevron right, Chevron down, Search
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
J	Link (Button)	Select the page or enter /en/search	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(K)	Text (Button)	Search	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(L)	Views (Button)	Icon	No	Button, icon-only or text link	Button for most CTAs	Enforced: Button, Icon, Link
(M)	Type (Button)	Tertiary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
(N)	Icon (Button)	Search	Recommended when Views is Icon	Icon of the Icon view	Pick the icon matching the action	Enforced: Arrow right, Chevron right, Chevron down, Search

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three 2.75rem circular buttons with the 1.25rem search icon: blue-filled with a white icon (primary), blue outline and icon (secondary) and a blue icon only (tertiary).
- **Rendering behaviour:** a.button.{type}.icon-button with –icon-url /icons/search.svg as a mask that follows the text colour; the text is moved into a hidden span and aria-label and title are 'Search'. Primary turns brand-600 on hover.
- **Publishing behaviour:** Publish the page and /en/search to Preview and Live; the icon is a static file in /icons cached by the CDN.

Business Rules

- Text 'Search' is required in practice: it becomes the accessible name and tooltip and is not shown.
- The Icon field appears only when Views is Icon; four icons are available.
- Without a resolvable icon the Icon view renders as a normal button of the chosen type.
- The 2.75rem (44 px) circle meets the recommended target size.

Common Authoring Mistakes

Error	Root Cause	Resolution
Screen readers announce only 'link'	Text left empty, so the name falls back to the title or the icon name	Enter 'Search' in Text
A pill with 'Search' and an arrow appears	Icon not selected	Select Search in Icon
The arrow icon is used for search	Wrong Icon option	Choose the icon matching the action

Troubleshooting

- **Symptoms:** The three icon buttons show the text 'Search' in pills instead of circles.
- **Cause:** The Views value Icon or the Icon value was not delivered in the page markup.
- **Resolution:** Re-select Views Icon and Icon Search and republish; escalate to development if it persists ([To be confirmed: delivered markup of the Button component's Views, Icon and Alignment — owner: development team]).
- **Verification Steps:** On aem.page each link has the class icon-button and aria-label 'Search'.

Use Cases: Search entry points, "next" arrows, expand chevrons.

Authoring Guidelines: Views **Icon**; choose **Type** and **Icon**; fill **Text** with the action (it becomes the accessible name and tooltip, it is not shown).

Business Rules: The Icon field is shown only when Views is Icon. If no icon can be resolved, the link is rendered as a normal button of the chosen type.

Rendering Rules: `a.button.{type}.icon-button`: 2.75rem circle, padding 0.75rem, icon 1.25rem drawn from `/icons/{name}.svg` as a mask (follows the text colour); the text is wrapped in a hidden span; `aria-label` and `title` = the text (or the title, or the icon name). Primary: brand-500 background, white icon, brand-600 on hover. Secondary: brand border and icon. Tertiary: brand icon only.

Responsive Behaviour: Same at all sizes.

SEO Impact: The link has no visible text; search engines read the hidden text / `aria-label`.

Accessibility Compliance: Accessible name from the text (WCAG 4.1.2, 2.5.3); 2.75rem target (44 px) meets the recommended target size.

Variation 5 — Link view

Variation Name: Views: Link.

Business Purpose: A text call to action without a button container.

Visual Example:

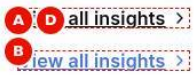

Figure 71: Link view — At 402 px, two underlined semibold 'View all insights' links with chevrons, stacked; the lower one, under the pointer, is brand blue. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/button-link.jpg)

Screenshot Details — Link view

Item	Detail
Screenshot Name	`screenshots/button-link.jpg`
Screenshot Purpose	Link view
Screen Description	At 402 px, two underlined semibold 'View all insights' links with chevrons, stacked; the lower one, under the pointer, is brand blue.
Business Context	A text call to action at the end of an insights section: 'View all insights' leads to the insights hub with the lowest visual weight.
Author Objective	Add two Buttons 'View all insights' to /en/insights with Views Link and check the hover state of the second.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
A	Link (Button)	Select the page or enter /en/insights	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Text (Button)	View all insights	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(C)	Views (Button)	Link	No	Button, icon-only or text link	Button for most CTAs	Enforced: Button, Icon, Link
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
D	Link (Button)	Select the page or enter /en/insights	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(E)	Text (Button)	View all insights	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(F)	Views (Button)	Link	No	Button, icon-only or text link	Button for most CTAs	Enforced: Button, Icon, Link
—	Action (Preview)	Point at the second button (hover state)	—	Check on the preview (not stored in the content)	Point at the second button (hover state)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two underlined semibold texts 'View all insights' in the default text colour with a 1rem chevron; the second, under the pointer, is brand blue.
- **Rendering behaviour:** a.link-button: inline-flex, 1rem semibold, underlined, default text colour with a chevron-right mask; hover and focus switch to the brand colour. Type is hidden and ignored for this view.
- **Publishing behaviour:** Publish the page and /en/insights to Preview and Live.

Business Rules

- Views Link ignores Type; the field is hidden in the dialog.
- Use it for 'View all' or 'Read more' at the end of a section.
- Underline and chevron distinguish it from body text.
- The link view also comes from an unformatted standalone link in Text.

Common Authoring Mistakes

Error	Root Cause	Resolution
A pill button appears	Views left on Button	Set Views to Link
Expected a brand blue link but text is black	The link view uses the default text colour until hover by design	Keep it; use an inline link in Text for a blue link

Troubleshooting

- **Symptoms:** 'View all insights' shows without the chevron.

- **Cause:** The Views value was not saved or not delivered, so another view applies.
- **Resolution:** Re-select Views Link and republish; escalate if the class link-button is still missing.
- **Verification Steps:** On aem.page the link has the class link-button and a chevron.

Use Cases: "View all", "Read more" at the end of a section.

Authoring Guidelines: Views **Link** (Type is hidden for this view).

Business Rules: Type is ignored for the link view.

Rendering Rules: `a.link-button`: inline-flex, 1rem, semibold, underlined, default text colour, chevron-right 1rem; hover brand colour.

Responsive Behaviour: Same at all sizes.

SEO Impact: As a normal link.

Accessibility Compliance: Underline plus icon distinguish it from text.

Variation 6 — Centre alignment

Variation Name: Alignment: Center.

Business Purpose: Centre a button under centred content.

Visual Example:

Figure 72: Centre-aligned button — At 1440 px, the black primary pill 'Contact us' with its arrow, centred horizontally in the section content area. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/button-align-center.jpg)

Screenshot Details — Centre-aligned button

Item	Detail
Screenshot Name	`screenshots/button-align-center.jpg`
Screenshot Purpose	Centre-aligned button
Screen Description	At 1440 px, the black primary pill 'Contact us' with its arrow, centred horizontally in the section content area.
Business Context	The closing call to action of a centred band: 'Contact us' is centred under a centred heading.
Author Objective	Add a Button 'Contact us' to /en/contact with the Title 'Contact the TCS team' and Alignment Center.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
A	Link (Button)	Select the page or enter /en/contact	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Text (Button)	Contact us	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(C)	Title (Button)	Contact the TCS team	No	Tooltip (`title` attribute)	Extra context only	None
(D)	Alignment (Button)	Center	No	Horizontal position	Left unless the layout is centred	Enforced: Left, Center, Right

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The black primary pill 'Contact us' with its arrow, centred horizontally in the section content area.
- **Rendering behaviour:** The paragraph gets button-align-center (text-align center); the button keeps its primary style. The alignment is the same at all widths.
- **Publishing behaviour:** Publish the page and /en/contact to Preview and Live.

Business Rules

- Alignment applies to the button's own paragraph, not to the section.
- Use Center only when the surrounding content is centred.
- Each Button is aligned separately; set Center on every Button of a centred group.
- Alignment is not configurable per breakpoint.

Common Authoring Mistakes

Error	Root Cause	Resolution
The button stays left	Alignment value not saved or not delivered	Re-select Center and republish; escalate if button-align-center is missing
The heading above is left aligned while the button is centred	Title has no alignment option	Use a block with text alignment (Hero, Teaser) for a fully centred band

Troubleshooting

- **Symptoms:** Alignment Center has no effect on aem.page.
- **Cause:** The alignment value was not delivered, or a block's CSS around the button overrides it.
- **Resolution:** Re-select Center and republish; if the paragraph lacks button-align-center, escalate to development.
- **Verification Steps:** On aem.page the paragraph has the classes button-wrapper button-align-center.

Use Cases: Call-to-action bands, end-of-page actions.

Authoring Guidelines: Alignment **Center**.

Business Rules: Alignment applies to the button's paragraph.

Rendering Rules: `p.button-wrapper.button-align-center { text-align: center; }`.

Responsive Behaviour: Centred at all sizes.

SEO Impact: None.

Accessibility Compliance: No effect on reading order.

Variation 7 — Right alignment

Variation Name: Alignment: Right.

Business Purpose: Align a button to the end of the line.

Visual Example:

Figure 73: Right-aligned button — At 1440 px, the outlined secondary pill 'Explore services' with its arrow, aligned to the right edge of the content area. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/button-align-right.jpg)

Screenshot Details — Right-aligned button

Item	Detail
Screenshot Name	`screenshots/button-align-right.jpg`
Screenshot Purpose	Right-aligned button
Screen Description	At 1440 px, the outlined secondary pill 'Explore services' with its arrow, aligned to the right edge of the content area.
Business Context	A forward action aligned to the end of the line, for example after a right-aligned element: 'Explore services' sits at the right edge.
Author Objective	Add a Button 'Explore services' to /en/services with Type Secondary and Alignment Right.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
A	Link (Button)	Select the page or enter /en/services	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
(B)	Text (Button)	Explore services	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
(C)	Type (Button)	Secondary	No	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary
(D)	Alignment (Button)	Right	No	Horizontal position	Left unless the layout is centred	Enforced: Left, Center, Right

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The outlined secondary pill 'Explore services' with its arrow, aligned to the right edge of the content area.

- **Rendering behaviour:** The paragraph gets button-align-right (text-align end), so in a right-to-left context it would align left. Right alignment applies at every width.
- **Publishing behaviour:** Publish the page and /en/services to Preview and Live.

Business Rules

- Right alignment uses text-align end.
- Use it sparingly: screen magnifier users may miss right-aligned buttons.
- It cannot be switched to Left on mobile only.
- Combine with Secondary for an alternative action.

Common Authoring Mistakes

Error	Root Cause	Resolution
The important action is overlooked on mobile	Primary call to action aligned right	Keep important actions left aligned
The button is right aligned but black	Type left on Primary	Set Type to Secondary

Troubleshooting

- **Symptoms:** The button sits at the left on aem.page.
- **Cause:** Alignment Right was not saved or not delivered in the markup.
- **Resolution:** Re-select Right and republish; escalate if the paragraph lacks button-align-right.
- **Verification Steps:** On aem.page the paragraph has the class button-align-right and the button is at the right edge.

Use Cases: "Next" actions, layouts mirroring a right-aligned element.

Authoring Guidelines: Alignment **Right**.

Business Rules: Uses `text-align: end`, so in a right-to-left context it aligns left.

Rendering Rules: `p.button-wrapper.button-align-right { text-align: end; }`.

Responsive Behaviour: Right-aligned at all sizes; consider Left on mobile-heavy pages (not configurable per breakpoint).

SEO Impact: None.

Accessibility Compliance: Screen magnifier users may miss right-aligned buttons; use sparingly.

> **Note:** Alignment **Left** (the default) adds `button-align-left` (`text-align: start`).

6.9.4 Authoring Experience

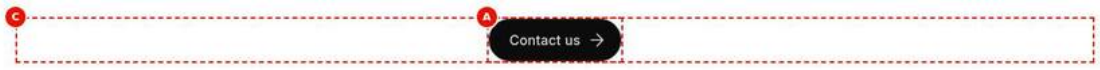

Figure 74: Button on the Universal Editor canvas — The centred primary pill 'Contact us' in editor mode at 1440 px (an annotated preview, not a Universal Editor screenshot); A marks the button label and C its paragraph (Alignment). B (Views, Type) is not marked. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/button-authoring-view.jpg)

Screenshot Details — Button on the Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/button-authoring-view.jpg`
Screenshot Purpose	Button on the Universal Editor canvas
Screen Description	The centred primary pill 'Contact us' in editor mode at 1440 px (an annotated preview, not a Universal Editor screenshot); A marks the button label and C its paragraph (Alignment). B (Views, Type) is not marked.
Business Context	How an author configures a Button in Universal Editor: the selected 'Contact us' button on the canvas with its label, appearance and alignment marked.
Author Objective	Add a Button 'Contact us' to /en/contact with the Title 'Contact the TCS team' and Alignment Center, and identify its fields on the canvas.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
—	Link (Button)	Select the page or enter /en/contact	Recommended (without a link nothing is rendered as a button)	Button target	Pick internal pages with the picker	None in the model
—	Text (Button)	Contact us	Recommended	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model
—	Title (Button)	Contact the TCS team	No	Tooltip (`title` attribute)	Extra context only	None
—	Alignment (Button)	Center	No	Horizontal position	Left unless the layout is centred	Enforced: Left, Center, Right

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The selected centred primary pill 'Contact us' on the canvas: its label (A, Text), its appearance (B, Views and Type) and its position in the line (C, Alignment).
- **Rendering behaviour:** In the editor the changed button is re-decorated in place by decorateButtons. The dialog has seven fields and no tabs: Link, Text, Title, Views, Type, Icon (only for Views Icon) and Alignment.
- **Publishing behaviour:** Field changes are saved on author at once; they reach aem.page with Publish to Preview and aem.live with Publish to Live. Clicking in edit mode selects the component and pushes no cmp:click.

Business Rules

- A (Text) is the visible label 'Contact us'; Title is only the tooltip.
- B shows Views Button and the default Type Primary.
- C is Alignment Center, applied to the button's paragraph.
- There is no open-in-new-tab option and no Additional tab.

Common Authoring Mistakes

Error	Root Cause	Resolution
The Type field is missing	Views set to Link, which hides Type	Set Views to Button
Clicking the button on the canvas does not open /en/contact	Edit mode selects components instead of following links	Switch to Preview mode to test the link

Troubleshooting

- **Symptoms:** No cmp:click appears in adobeDataLayer when testing the button.
- **Cause:** The test was done in edit mode, where clicks select components, or an ancestor has data-analytics="off".
- **Resolution:** Test on aem.page or in Preview mode and check the ancestors for data-analytics.
- **Verification Steps:** window.adobeDataLayer holds a cmp:click with dc:title 'Contact us' after the click.

Annotations:

- A = the button label (Text)
- B = the button's appearance (Views, Type, Icon)
- C = the button's position in its paragraph (Alignment)

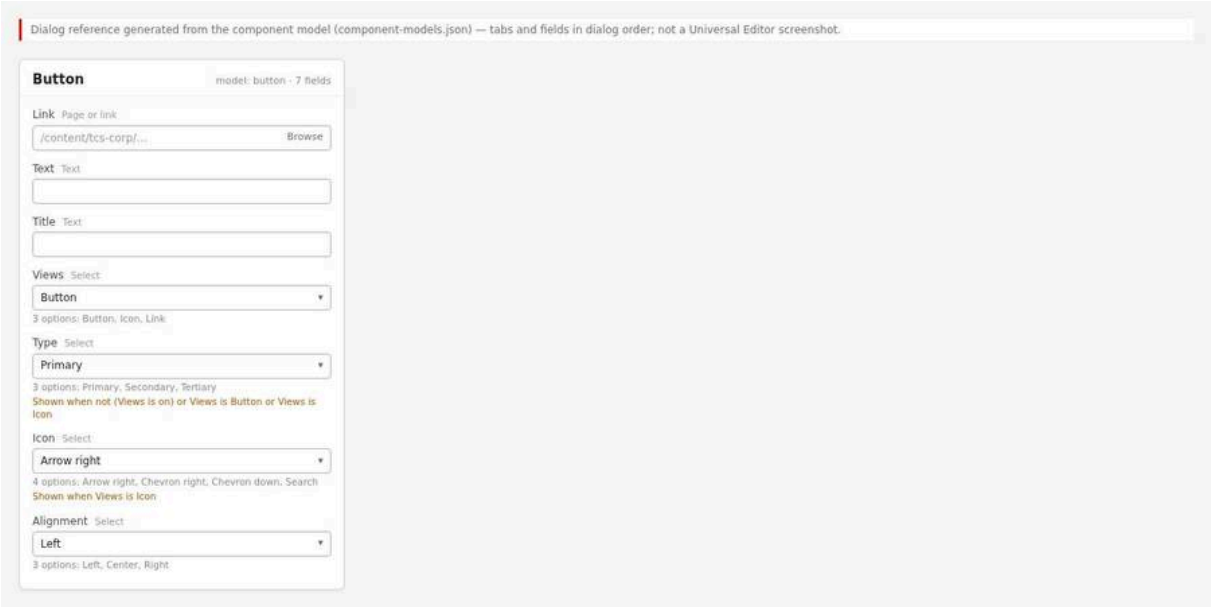

Figure 75: Button properties panel — The Properties panel with Link, Text, Title, Views, Type, Icon (visible because Views is Icon) and Alignment. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/button-properties-panel.jpg)

The dialog has seven fields and no tabs: **Link** (AEM content picker or URL), **Text** (label), **Title** (tooltip), **Views** (Button / Icon / Link, default Button), **Type** (Primary / Secondary / Tertiary, default Primary; shown when Views is empty, Button or Icon), **Icon** (Arrow right / Chevron right / Chevron down / Search; shown only when Views is Icon) and **Alignment** (Left / Center / Right, default Left). There is no Additional tab.

6.9.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: Sites console > select the page > **Edit**.

Expected Result: The page opens on the canvas.

Steps — Step 1: The page open in the Universal Editor.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Open TCS Corp › us › en › services
2	AEM Sites console	Select	Select the page (check box of its card or row)
3	AEM Sites console toolbar	Edit	Select Edit: the page opens in the Universal Editor

Step 2 — Add a Button

Action: Select the section (or Column / tab panel), **Add (+)** > **Button**.

Expected Result: A Button component appears.

Steps — Step 2: The picker with Button highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section
2	Universal Editor › Content tree	Add (+)	Select Add (+)
3	Component picker › Default Content	Button	Select Button

Step 3 — Set the link

Action: In **Link** pick a page (content picker) or paste a URL.

Expected Result: The link target is saved.

Steps — Step 3: The content picker selecting `/content/tcs-corp/us/en/contact`.

Step	Where	Field / control	Value / action
1	Button › Properties	Link	Open the content picker
2	Content picker	Page	Select /content/tcs-corp/us/en/contact

Step 4 — Write the label and title

Action: Enter the label in **Text** and, optionally, a tooltip in **Title**.

Expected Result: The canvas shows the label.

Steps — Step 4: Text “Contact us” and Title “Contact the TCS team”.

Step	Where	Field / control	Value / action
1	Button › Properties	Text	Contact us
2	Button › Properties	Title	Contact the TCS team

Step 5 — Choose the view and type

Action: Choose **Views** (Button, Icon or Link); for Button and Icon choose **Type**; for Icon choose **Icon**.

Expected Result: The button changes appearance.

Steps — Step 5: Views Icon, Type Secondary, Icon Search, and the canvas showing the outlined search icon button.

Step	Where	Field / control	Value / action
1	Button › Properties	Views	Icon
2	Button › Properties	Type	Secondary

Step	Where	Field / control	Value / action
3	Button › Properties	Icon	Search

Step 6 — Choose the alignment

Action: Choose **Alignment** (Left, Center or Right).

Expected Result: The button moves within its line.

Steps — Step 6: Alignment Center with the button centred.

Step	Where	Field / control	Value / action
1	Button › Properties	Alignment	Center

Step 7 — Preview

Action: Switch on Preview mode; click the button; check the three device sizes.

Expected Result: The link opens; the label fits on mobile.

Steps — Step 7: Preview at mobile size.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch Preview on
2	Universal Editor toolbar	Device size	Mobile
3	Universal Editor canvas	Button	Select the button: the link opens

Step 8 — Validate and publish

Action: Run the checklist; publish to Preview and Live.

Expected Result: The button is live.

Steps — Step 8: The Publish dialog.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Select Publish
2	Publish dialog	Items	Keep the page and its references selected
3	Publish dialog	Destination	Preview
4	Publish dialog	Publish	Select Publish; check the page on https://main–tcs-corp–sradha-tcs.aem.page/en/…
5	Publish dialog	Destination	Live (when approved), then Publish; check https://main–tcs-corp–sradha-tcs.aem.live/en/…

Preview Process

On `.aem.page`, click the button, check the target and inspect the classes (`button primary`, `icon-button`, `link-button`, `button-align-*`).

Publishing Process

Publish the page; publish the target page or asset if it is new.

Validation Process

- ☐ The link target is correct and published (internal links as `/en/...`).

- ☐ The label is action-oriented and fits on one line at 320 px.
- ☐ View, type and alignment as designed; at most one primary button per section.
- ☐ Icon buttons have a meaningful Text (accessible name) and the right icon.
- ☐ The tooltip (Title) adds information or repeats the label (it is set to the label when empty).
- ☐ `cmp:click` is pushed on click (console `adobeDataLayer`, see Part 11).

Rollback Process
Change the fields back, or restore the page version and republish.

The walkthroughs below repeat the steps above for each variation of chapter 6.9.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Primary button
Reproduces the screenshot `screenshots/button-primary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: Two Button components are added to the selected section.

Step 3 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (A) = Select the page or enter /en/contact; **Text** (B) = Contact us; **Title** (C) = Contact the TCS team.

Expected Result: Two black pill buttons 'Contact us' with arrows appear, each with the tooltip 'Contact the TCS team'.

Step 4 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: Two Button components are added to the selected section.

Step 5 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (D) = Select the page or enter /en/contact; **Text** (E) = Contact us; **Title** (F) = Contact the TCS team.

Expected Result: Two black pill buttons 'Contact us' with arrows appear, each with the tooltip 'Contact the TCS team'.

Step 6 — Preview

Action: Action: Point at the second button (hover state).

Expected Result: With the pointer on the second button its label and arrow turn slate-400.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two black pill buttons 'Contact us' with grey-300 medium-weight labels and trailing arrows; the second, under the pointer, has its label and arrow in slate-400.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and /en/contact to Preview and Live. A click pushes cmp:click with dc:title 'Contact us' and the page as the component.

Step 9 — Verify

Action: On the live page check: On aem.page the paragraph is p.button-wrapper and the link a.button.primary.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Secondary button

Reproduces the screenshot `screenshots/button-secondary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: Two Button components are added to the selected section.

Step 3 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (A) = Select the page or enter /en/services; **Text** (B) = Explore services; **Type** (C) = Secondary.

Expected Result: Two outlined secondary buttons 'Explore services' with arrows appear.

Step 4 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: Two Button components are added to the selected section.

Step 5 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (D) = Select the page or enter /en/services; **Text** (E) = Explore services; **Type** (F) = Secondary.

Expected Result: Two outlined secondary buttons 'Explore services' with arrows appear.

Step 6 — Preview

Action: Action: Point at the second button (hover state).

Expected Result: With the pointer on the second button its fill turns white and the border and label brand blue.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two outlined pill buttons with slate-900 border, label and arrow; the second, under the pointer, has a white fill with brand blue border and label.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and /en/services to Preview and Live.

Step 9 — Verify

Action: On the live page check: On aem.page the link has the classes button secondary and turns brand blue on hover.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Tertiary button

Reproduces the screenshot `screenshots/button-tertiary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: Two Button components are added to the selected section.

Step 3 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (A) = Select the page or enter /en/insights/case-studies; **Text** (B) = See all case studies; **Type** (C) = Tertiary.

Expected Result: Two tertiary calls to action 'See all case studies' with arrows and no container appear.

Step 4 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: Two Button components are added to the selected section.

Step 5 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (D) = Select the page or enter /en/insights/case-studies; **Text** (E) = See all case studies; **Type** (F) = Tertiary.

Expected Result: Two tertiary calls to action 'See all case studies' with arrows and no container appear.

Step 6 — Preview

Action: Action: Point at the second button (hover state).

Expected Result: With the pointer on the second one it turns brand blue and the arrow moves closer.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two text calls to action 'See all case studies' in the default text colour with a trailing arrow and no border; the second, under the pointer, is brand blue with the arrow moved closer.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and /en/insights/case-studies to Preview and Live.

Step 9 — Verify

Action: On the live page check: On aem.page the link has the classes button tertiary and no border.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Icon button

Reproduces the screenshot `screenshots/button-icon.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: Three Button components are added to the selected section.

Step 3 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (A) = Select the page or enter /en/search; **Text** (B) = Search; **Views** (C) = Icon; **Icon** (D) = Search.

Expected Result: Three circular search icon buttons appear: filled primary, outlined secondary and icon-only tertiary.

Step 4 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: Three Button components are added to the selected section.

Step 5 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (E) = Select the page or enter /en/search; **Text** (F) = Search; **Views** (G) = Icon; **Type** (H) = Secondary; **Icon** (I) = Search.

Expected Result: Three circular search icon buttons appear: filled primary, outlined secondary and icon-only tertiary.

Step 6 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: Three Button components are added to the selected section.

Step 7 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (J) = Select the page or enter /en/search; **Text** (K) = Search; **Views** (L) = Icon; **Type** (M) = Tertiary; **Icon** (N) = Search.

Expected Result: Three circular search icon buttons appear: filled primary, outlined secondary and icon-only tertiary.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three 2.75rem circular buttons with the 1.25rem search icon: blue-filled with a white icon (primary), blue outline and icon (secondary) and a blue icon only (tertiary).

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and /en/search to Preview and Live; the icon is a static file in /icons cached by the CDN.

Step 10 — Verify

Action: On the live page check: On aem.page each link has the class icon-button and aria-label 'Search'.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Link view

Reproduces the screenshot `screenshots/button-link.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: Two Button components are added to the selected section.

Step 3 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (A) = Select the page or enter /en/insights; **Text** (B) = View all insights; **Views** (C) = Link.

Expected Result: Two underlined 'View all insights' links with chevrons appear.

Step 4 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: Two Button components are added to the selected section.

Step 5 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (D) = Select the page or enter /en/insights; **Text** (E) = View all insights; **Views** (F) = Link.

Expected Result: Two underlined 'View all insights' links with chevrons appear.

Step 6 — Preview

Action: Action: Point at the second button (hover state).

Expected Result: With the pointer on the second link it turns brand blue.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two underlined semibold texts 'View all insights' in the default text colour with a 1rem chevron; the second, under the pointer, is brand blue.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and /en/insights to Preview and Live.

Step 9 — Verify

Action: On the live page check: On aem.page the link has the class link-button and a chevron.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Centre alignment

Reproduces the screenshot `screenshots/button-align-center.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: A Button component is added to the selected section.

Step 3 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (A) = Select the page or enter /en/contact; **Text** (B) = Contact us; **Title** (C) = Contact the TCS team; **Alignment** (D) = Center.

Expected Result: The primary button 'Contact us' appears centred in the section.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The black primary pill 'Contact us' with its arrow, centred horizontally in the section content area.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and /en/contact to Preview and Live.

Step 6 — Verify

Action: On the live page check: On aem.page the paragraph has the classes button-wrapper button-align-center.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Right alignment

Reproduces the screenshot `screenshots/button-align-right.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Button

Action: Select the section in the content tree, choose **Add (+)** and pick **Button**.

Expected Result: A Button component is added to the selected section.

Step 3 — Fill in Button

Action: Select **Button** in the content tree and enter in the properties panel: **Link** (A) = Select the page or enter /en/services; **Text** (B) = Explore services; **Type** (C) = Secondary; **Alignment** (D) = Right.

Expected Result: The secondary button 'Explore services' appears at the right edge of the content area.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The outlined secondary pill 'Explore services' with its arrow, aligned to the right edge of the content area.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page and /en/services to Preview and Live.

Step 6 — Verify

Action: On the live page check: On aem.page the paragraph has the class button-align-right and the button is at the right edge.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.9.6 Authorable Field Specification

Model `button`

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Link (`link`)	AEM content (picker or URL)	Recommended (without a link nothing is rendered as a button)	No	(empty)	Button target	Pick internal pages with the picker	None in the model	/content/tcs-corp/us/en/contact
Text (`linkText`)	Text	Recommended	No	(empty)	Visible label (accessible name for Icon view)	Verb first, up to about 25 characters	None in the model	Contact us
Title (`linkTitle`)	Text	No	No	(empty; the code sets the label as title)	Tooltip (`title` attribute)	Extra context only	None	Contact the TCS team
Views (`buttonView`)	Select	No	No	Button (`button`)	Button, icon-only or text link	Button for most CTAs	Enforced: Button, Icon, Link	button
Type (`linkType`)	Select	No	No	Primary (`primary`)	Emphasis of Button / Icon views	One primary per section	Enforced: Primary, Secondary, Tertiary	secondary

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Icon (`buttonIcon`)	Select	Recommended when Views is Icon	No	(empty)	Icon of the Icon view	Pick the icon matching the action	Enforced: Arrow right, Chevron right, Chevron down, Search	search
Alignment (`buttonAlignment`)	Select	No	No	Left (`left`)	Horizontal position	Left unless the layout is centred	Enforced: Left, Center, Right	center

Additional tab: Not applicable (default content).

Field details

- **Link** — Purpose: target. Allowed Values: AEM page, asset or URL. Character Limits: not applicable. Business Rules: internal AEM paths are mapped to published paths by Edge Delivery (`paths.json`); downloads (`.pdf`, `.docx`, …) are tracked as `xdm:linkType download`, other origins as `exit`. Dependency Rules: none. Visibility Rules: always visible. Sample Content: `/content/tcs-corp/us/en/contact`.
- **Text** — Purpose: label. Allowed Values: text. Character Limits: Recommended up to about 25 characters (labels never wrap and are clipped). Business Rules: for the Icon view it is hidden and becomes `aria-label` and `title`. Dependency Rules: none. Visibility Rules: always visible. Sample Content: “Download the report”.
- **Title** — Purpose: tooltip. Allowed Values: text. Character Limits: Recommended up to 60 characters. Business Rules: when empty, the code sets the link text as title. Dependency Rules: none. Visibility Rules: always visible. Sample Content: “Annual report 2026 (PDF)”.
- **Views** — Purpose: view. Allowed Values: `button`, `icon`, `link`. Character Limits: not applicable. Business Rules: an explicit view wins; Link ignores Type. Dependency Rules: controls the visibility of Type and Icon. Visibility Rules: always visible. Sample Content: Button.
- **Type** — Purpose: emphasis. Allowed Values: `primary`, `secondary`, `tertiary`. Character Limits: not applicable. Business Rules: default primary. Dependency Rules: Views. Visibility Rules: shown when Views is empty, `button` or `icon` (model `condition`). Sample Content: Primary.
- **Icon** — Purpose: icon. Allowed Values: `arrow-right`, `chevron-right`, `chevron-down`, `search`. Character Limits: not applicable. Business Rules: drawn from `/icons/{name}.svg`; without an icon the Icon view falls back to a normal button. Dependency Rules: Views = Icon. Visibility Rules: shown only when Views is `icon` (model `condition`). Sample Content: Search.
- **Alignment** — Purpose: position. Allowed Values: `left`, `center`, `right`. Character Limits: not applicable. Business Rules: adds `button-align-{value}` to the paragraph. Dependency Rules: none. Visibility Rules: always visible. Sample Content: Center.

> **Note:** How AEM delivers the Views, Icon and Alignment values in the page markup (classes or data attributes of the link or its paragraph) could not be verified from the repository; `utils/buttons.js` reads both forms (type classes, `view-{view}` and `align-{alignment}` classes, and view / type / icon / alignment data values). [To be confirmed: delivered markup of the Button component’s Views, Icon and Alignment — owner: development team]

6.9.7 Field Annotation Mapping

Marker	Field	Purpose
A	Text; Title; Link	Label, tooltip and target
B	Views; Type; Icon	Appearance

Marker	Field	Purpose
C	Alignment	Position in the line

6.9.8 Component Specification

Attribute	Value
Component Name	Button (`button`, `core/franklin/components/button/v1/button`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`models/_button.json`; `decorators/content-buttons-decorator.js`; `decorators/button-decorator.js`; `utils/buttons.js`; `styles/styles.css`; `/icons`
Component Type	Default content
Supported Variants	Primary; Secondary; Tertiary; Icon (3 types × 4 icons); Link; Alignment Left / Center / Right
Supported Templates	Any page
Supported Metadata	None
Supported Tags	None
Supported Personalization	None (as of this handover); clicks are in the data layer for future Target / Journey Optimizer use
Caching Considerations	Part of the page HTML; icons are static files cached by the CDN
Performance Considerations	Decorated in the eager phase (`decorateMain`); icons are CSS masks (one small SVG request each)
Accessibility Compliance	WCAG 2.1 AA: focus visible (2.4.7), accessible names for icon buttons (4.1.2), target size 2.75rem / 3.125rem, colour contrast of the types
SEO Compliance	A real `<a href>` with label text (hidden text for icon buttons)

6.9.9 Input Model

- **Content Inputs:** Link, Text, Title.
- **Metadata Inputs:** none.
- **Tags Inputs:** none.
- **Page Context Inputs:** the section style (dark section overrides in CSS).
- **Query Inputs:** none.
- **Manual Inputs:** all seven fields.

Authored HTML received from AEM (typical; the standard button rendering encodes the type as formatting and the other options as classes or data values, see the note in 6.9.6):

```
<p class="button-container">
  <strong><a href="/en/contact" title="Contact the TCS team"
     class="button">Contact us</a></strong>
</p>
```

6.9.10 Output Model

Rendered Output: `p.button-wrapper.button-align-{alignment}` containing `a.button.{type}` (Button view), `a.button.{type}.icon-button` (Icon view, with `--icon-url`, `aria-label`, hidden text span) or `a.link-button` (Link view). The formatting element (`strong` / `em`) is removed.

Generated HTML:

```
<p class="button-wrapper button-align-center">
  <a href="/en/contact" title="Contact the TCS team" class="button primary">Contact us</a>
</p>
<p class="button-wrapper button-align-left">
  <a href="/en/search" title="Search" aria-label="Search" class="button secondary icon-
button"
     style="--icon-url: url('/icons/search.svg')"><span>Search</span></a>
</p>
```

Generated JSON: none.

Generated Metadata: none.

Analytics Tracking: a click pushes `cmp:click` with the page as the component (default content):

```
{
  "event": "cmp:click",
  "eventInfo": {
    "path": "component.page-1x2y3z",
    "interaction": "link",
    "dc:title": "Contact us",
    "xdm:linkURL": "https://main--tcs-corp--sradha-tcs.aem.live/en/contact",
    "xdm:linkType": "other",
    "breakpoint": "mobile"
  }
}
```

For icon buttons `dc:title` is the `aria-label` (the Text). Links to other origins have `xdm:linkType` `exit`; links with `download` or a file extension (`pdf`, `doc(x)`, `xls(x)`, `ppt(x)`, `zip`, `csv`, `txt`, `mp3`, `mp4`) have `download`.

Personalization Output: none.

Search Index Output: none.

Target Personalization Output: None (as of this handover): no personalisation marker. Clicks push cmp:click with the page as the component, dc:title = the label (aria-label for icon buttons) and xdm:linkType other, exit or download, for future Target or Journey Optimizer use once Adobe Tags is added.

6.9.11 Business Rules

1. Only a link that is alone in its paragraph is decorated; a link sharing its paragraph with text stays a plain link.
2. A link whose text is its URL stays plain (unless it is an icon link).
3. View: the explicit Views value wins; else an icon link is an Icon button; else a link with a Type is a button; else a link button.
4. Type: an explicit type class or value wins; else bold = primary, italic = secondary, bold + italic = tertiary; default primary when a button is rendered without a type.
5. Type is ignored for the Link view (and hidden in the dialog).
6. The Icon field is shown only for the Icon view; an Icon view without a resolvable icon renders as a normal button.
7. An icon-only link without type or view stays plain.
8. Icon buttons: the text is moved into a hidden span; `aria-label` = existing aria-label, else text, else title, else the icon name with spaces; `title` set when empty.
9. Every decorated link gets `title` = its text when it has none.
10. Alignment adds `button-align-left|center|right` to the paragraph; unknown values are ignored.
11. Labels never wrap and are clipped at the container width.

12. Disabled states exist in the decorator and CSS but are not authorable for the Button component.
13. No open-in-new-tab option exists for the Button component (as of this handover).
14. In the editor, changed buttons are re-decorated in place (`decorateButtons` from `scripts/editor-support.js`).

6.9.12 Author Best Practices

Recommended Content Length: labels of 2–4 words, up to about 25 characters; Title up to 60 characters.

Image Dimensions: not applicable.

CTA Writing Guidelines: start with a verb; describe the outcome ("Download the 2026 report", not "Click here"); one primary per section; pair a primary with a secondary or link view; mention the format for downloads ("(PDF, 2 MB)") in the Title.

Accessibility Guidelines: always fill Text for icon buttons; do not rely on the icon alone; avoid right alignment for important actions.

SEO Guidelines: descriptive labels; link to the locale's own pages.

Metadata Guidelines: not applicable.

Taxonomy Guidelines: not applicable.

Localization Guidelines: translate Text and Title; check translated labels at 320 px (German and French expand); link to the target locale's pages.

6.9.13 Troubleshooting Guide

Issue 1 — Button shows as a plain link

Symptoms: No button styling.

Root Cause: No link set, the label equals the URL, or the paragraph contains other text.

Diagnosis Steps: Inspect the paragraph; check Link and Text.

Resolution Steps: Set a link and a descriptive Text.

Validation Steps: The link has the class `button` or `link-button`.

Preventive Measures: Always fill Link and Text.

Issue 2 — Wrong type shown

Symptoms: Primary instead of Secondary, or the reverse.

Root Cause: Type not saved, or an inconsistent value delivered by AEM.

Diagnosis Steps: Check the Type field and the classes in the HTML.

Resolution Steps: Re-select the type; republish.

Validation Steps: Correct class.

Preventive Measures: Check in Preview mode before publishing.

Issue 3 — Icon button shows a normal button with an arrow

Symptoms: Views is Icon but a pill button with text appears.

Root Cause: No icon resolved (Icon empty or not delivered).

Diagnosis Steps: Check the Icon field; inspect for `--icon-url`.

Resolution Steps: Choose an Icon; if set but ignored, escalate to development (see the note in 6.9.6).

Validation Steps: A circular icon button appears.

Preventive Measures: Always choose an Icon with the Icon view.

Issue 4 — Label clipped on mobile
Symptoms: The end of the label is cut off.

Root Cause: Labels never wrap.

Diagnosis Steps: View at 320 / 375 px.

Resolution Steps: Shorten the label.

Validation Steps: Full label visible.

Preventive Measures: Up to about 25 characters.

Issue 5 — Alignment has no effect
Symptoms: Centre / Right does not move the button.

Root Cause: The alignment value was not delivered, or the button is inside a block whose CSS overrides alignment.

Diagnosis Steps: Inspect for `button-align-center` on the paragraph.

Resolution Steps: Re-select the alignment; escalate if the class is missing.

Validation Steps: Class present and button moved.

Preventive Measures: Check in Preview mode.

Issue 6 — External link opens in the same tab
Symptoms: Visitors leave the site in the same tab.

Root Cause: The Button component has no new-tab option.

Diagnosis Steps: Inspect for `target`.

Resolution Steps: Accept, or use a block with an "open in new tab" option; request the feature from development.

Validation Steps: Not applicable.

Preventive Measures: Agree the external-link policy. [To be confirmed: external link policy — owner: product owner]

Issue 7 — Click not visible in analytics
Symptoms: No `cmp:click` in the data layer.

Root Cause: The button is inside an element with `data-analytics="off"`, or the check happened in the editor's edit mode (clicks select components).

Diagnosis Steps: On preview, run `adobeDataLayer.filter(e => e.event === 'cmp:click')` in the console after clicking (use a link that does not leave the page, or preserve the console log).

Resolution Steps: Test on preview / live; check ancestors for `data-analytics`.

Validation Steps: An entry with the button label appears.

Preventive Measures: Validate analytics on preview.

6.9.14 Support Runbook
Monitoring Requirements: Broken-link checks; click volumes once a tag manager is connected (Part 11).

Logs: No console messages. Clicks appear in `window.adobeDataLayer`.

Common Errors:

Error	Cause	Fix
Plain link	Missing link / text	Fill fields
Clipped label	Long label	Shorten
Missing icon	Icon empty	Choose icon
Wrong target	Unpublished page	Publish target
No tracking	`data-analytics="off"` ancestor	Check container

Escalation Matrix:

Level	Who	Checks
L1	Author support	Field values, target publication, label length
L2	AMS / site administrator	Publish status, cache, `paths.json` mapping of the target
L3	Development team	`decorators/content-buttons-decorator.js`, `utils/buttons.js`, `decorators/button-decorator.js`, `styles/styles.css`
Adobe Support	Adobe	AEM button rendering, Universal Editor dialog defects

Recovery Procedures: Restore field values or the page version; republish.

Health Checks: After releases, check the locale block library page with every view, type and alignment.

Operational Procedures: New icons: add an SVG to `/icons` and an option to `models/_button.json`, then `npm run build:json` (development team).

Known Limitations: No new-tab option; no disabled state for authors; four icons only; labels never wrap; no Additional tab; alignment not configurable per breakpoint.

6.9.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
Button shows as a plain link	No link, the label equals the URL or other text in the paragraph	Set Link and a descriptive Text
Wrong type shown	Type not saved or inconsistent value delivered	Re-select Type and republish
Icon view shows a pill with text	No icon resolved	Choose an Icon; escalate if set but ignored
Label clipped on mobile	Labels never wrap	Shorten the label to about 25 characters
Alignment has no effect	Value not delivered or overridden by a block	Re-select it; escalate if the class is missing
External link opens in the same tab	No new-tab option on the Button	Accept it or use a block with a new-tab option
No click in analytics	Tested in edit mode or data-analytics off on an ancestor	Test on preview or live; check ancestors
Icon button has no accessible name	Text left empty	Fill Text with the action
Type field missing in the dialog	Views is Link	Set Views to Button or Icon

6.9.16 Author Quick Reference Guide

Mandatory Fields

- Link: not required in the model, but without a link nothing is rendered as a button
- Text: needed as the label, and as the accessible name for the Icon view

Recommended Fields

- Title: tooltip with extra context, e.g. file format and size; set to the label when empty
- Icon: required in practice when Views is Icon; otherwise the view falls back to a normal button

Optional Fields

- Views: Button (default), Icon or Link
- Type: Primary (default), Secondary or Tertiary; hidden for Views Link
- Alignment: Left (default), Center or Right

Authoring Checklist

1. Pick internal pages with the content picker in Link
2. Start the label with a verb and keep it to about 25 characters
3. Use one Primary per section; pair it with Secondary, Tertiary or Link
4. Always fill Text for icon buttons and choose the matching Icon
5. Use Center only under centred content and Right sparingly
6. Use an inline link in Text for links inside sentences
7. Use the CTA fields of Hero, Teaser, Page Header, List and Cards for their calls to action

Pre-Publish Checklist

1. Click the button on aem.page and check the target
2. Check the label fits on one line at 320 px, also in translations
3. Check view, type and alignment classes in the inspector
4. Check icon buttons have aria-label and the right icon
5. Check at most one primary button per section
6. Check the target page or asset is published

Post-Publish Validation Checklist

1. Click the button on aem.live and confirm the target opens
2. Check cmp:click in window.adobeDataLayer
3. Check external targets are labelled as leaving the site where needed (no new-tab option)
4. Run a broken-link check of the page
5. Check the button in the locale block library after code releases

6.9.17 Component Execution Example

Business example: Call-to-action set of the English site.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Button
Link (Button)	Select the page or enter /en/contact
Text (Button)	Contact us
Title (Button)	Contact the TCS team
Component (Section › Add (+))	Button

Field	Value
Link (Button)	Select the page or enter /en/services
Text (Button)	Explore services
Type (Button)	Secondary
Component (Section › Add (+))	Button
Link (Button)	Select the page or enter /en/insights/case-studies
Text (Button)	See all case studies
Type (Button)	Tertiary
Component (Section › Add (+))	Button
Link (Button)	Select the page or enter /en/search
Text (Button)	Search
Views (Button)	Icon
Icon (Button)	Search
Component (Section › Add (+))	Button
Link (Button)	Select the page or enter /en/insights
Text (Button)	View all insights
Views (Button)	Link
Component (Section › Add (+))	Button
Link (Button)	Select the page or enter /en/insights/reports
Text (Button)	Download the complete annual sustainability and responsibility report 2026

All other fields keep their default values.

Rendered Result:

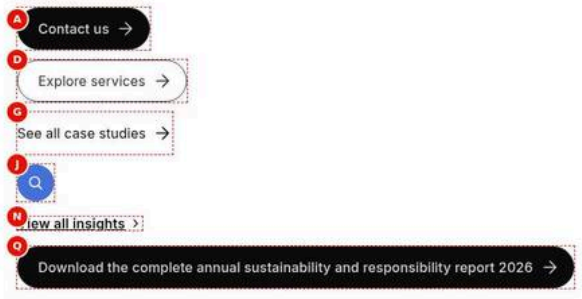

Figure 76: Execution example — Six buttons at 1440 px, stacked left aligned in their own paragraphs (not a row): primary 'Contact us', secondary 'Explore services', tertiary 'See all case studies', a blue circular search icon button, the link view 'View all insights' with a chevron and a primary pill with the long download label. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/button-desktop-view.jpg)

Author Notes

- 'Contact us' keeps Views Button and Type Primary and gets the Title 'Contact the TCS team'
- 'Explore services' is Secondary and 'See all case studies' Tertiary
- The search button uses Views Icon, Icon Search and Text 'Search' as its accessible name
- 'View all insights' uses Views Link; the long download label shows what not to do

Business Notes

- One primary action, contact, with the alternatives in lower emphasis
- The icon button offers a compact search entry point
- The link view closes a section with 'View all insights'

Technical Notes

- decorateButtons turns each standalone link into p.button-wrapper with a.button.{type}, a.button.{type}.icon-button or a.link-button
- utils/buttons.js reads type, view, icon and alignment from classes or data values; bold = primary, italic = secondary, both = tertiary
- Labels never wrap (white-space nowrap, overflow hidden, max-width 100%)
- Clicks are pushed as cmp:click by the central data layer decorator

TCS Corporate Website — Project Handover

Volume 3 of 13 — Component 6.10: Hero

Date: October 14, 2026

Adobe

Table of Contents

Part 6 — Component Library (continued) 3
6.10 Hero Block 3

Part 6 — Component Library (continued)

> **Note:** This is volume 3 of 13 of the TCS Corporate Website project handover (version 2.0). Volume 1 holds the document control, the audience guide and the conventions.

6.10 Hero Block

The Hero is the large, full-width opening banner of a page: an image or a Lottie animation fills (or sits contained inside) the banner, an overlay keeps the text readable, and a content block with an optional icon, eyebrow, title, description and a list of calls to action (CTAs) is placed at one of nine positions. It implements the TCS.com Design System Figma "L1 Header" variations.

Source files: `blocks/hero/hero.js`, `blocks/hero/hero.css`, `blocks/hero/_hero.json`.

6.10.1 Component Purpose

Business Objective

Give every key landing page a strong, brand-consistent first impression that states the page's message in one headline, supports it with imagery or motion, and routes visitors to the next step through one or more CTAs. As the first element of a page the Hero is usually the Largest Contentful Paint (LCP) element, so the block is optimised to load its image first.

Business Use Cases

- Home page opening banner of each of the 13 locale sites (`/en`, `/de-de`, …).
- Service, industry and capability landing pages ("L1" pages) with a headline and CTAs.
- Campaign pages with a Lottie animation as the background ("Lotto" image type).
- Illustrated banners where the artwork must be shown whole (Contained image view).
- Brand statements on a dark navy or black background with white text.
- A slide of a Gen Carousel section (the Gen Carousel filter allows the Hero as a slide).
- In-page "Discover more" banners whose CTA scrolls down to a section of the same page (CTA Arrow Down).

When To Use

- At the top of a page that needs a visual banner with a single, strong headline.
- When the message benefits from a full-bleed background image or animation.
- When the page needs up to a few prominent CTAs above the fold.

When Not To Use

- On article, blog and press-release pages: their templates add a Page Header block (with the page title as the H1) from the page metadata; use the Page Header block instead.
- For a smaller image-and-text promotion inside the page flow: use the Teaser block.
- For a list of pages or cards: use List, Cards or Filter List.
- For a background video: a video background is **Not implemented (as of this handover)** in the Hero; use the Video or Embed block in its own section instead.
- Several Heroes in a row: use a Gen Carousel section if several banners must rotate.

Dependencies

Type	Dependency	Used for
Code module	`scripts/scripts.js` `moveInstrumentation`	Keeps Universal Editor instrumentation on the rebuilt elements
Decorator	`decorators/animation-decorator.js` `createAnimation`	Lottie animation player and its pause / play button
Decorator	`decorators/button-decorator.js` `decorateButton`	CTA buttons (primary, secondary, tertiary) and new-window links
Decorator	`decorators/icon-button-decorator.js` (through the animation decorator)	Pause / play icon button
Decorator	`decorators/link-decorator.js` `setLinkTarget` (through the button decorator)	`target="_blank"` and `rel="noopener noreferrer"`
Util	`utils/buttons.js` `readButtonOptions`	Reads the CTA view (bold = primary, italic = secondary)
Util	`utils/links.js` `readLinkItems`, `NEW_WINDOW`	Reads the CTA List items, their Link Type and CTA Arrow values
Util	`utils/multifield.js` (through `readLinkItems`)	Splits the CTA List composite multifield into items
Util	`utils/environment.js` `isEditing`, `prefersReducedMotion`	Disables Motion Type in the editor and for reduced motion
Util	`utils/viewport.js` `onVisible`, `watchVisibility`	Starts motion and the animation when the hero is on screen
Util	`utils/media.js` `isAnimation`	Recognises a Lottie file (`.json` link)
Util	`utils/lottie.js` `loadLottie`	Loads the vendored player `scripts/lib/lottie/lottie_light.min.js` once per page
Util	`utils/placeholders.js` `getPlaceholders` (through the animation decorator)	Labels of the pause / play button
Global CSS	`styles/styles.css`	Button styles, design tokens, Additional tab classes
Data source	AEM Assets (DAM)	Hero image, icon and Lottie `.json` file
Sheet	`/{locale}/placeholders.json`	Keys `pauseAnimation`, `playAnimation` (English fallbacks “Pause animation”, “Play animation”)
Icons	`icons/arrow-right.svg`, `icons/arrow-down.svg`, `icons/pause.svg`, `icons/play.svg`	CTA arrows and the animation toggle

The Hero reads no page metadata, data sheet, taxonomy or query index.

Related Components

- Page Header block: the metadata-driven page title area of article, blog and press-release pages (use it instead of a Hero there).
- Teaser block: a smaller image-and-text or background-image promotion in the page flow; it shares the Lotto image type and the animation decorator.
- Gen Carousel section: rotates several Hero (or Teaser) blocks as slides.
- Video and Embed blocks: for video content (the Hero has no video background).
- Button component: the CTA buttons use the same button decorator and styles.

Applicable Templates

Any page. The Hero is allowed in every Section and in Gen Carousel sections (filters `section` and `gen-carousel`). On pages with Page Type `home`, the Home template removes the top margin and padding of the first section so

that a Hero placed there meets the header. On `article`, `blog` and `press-release` pages a Page Header is added automatically; a Hero with an H1 there would create a second H1 (see the SEO guidance).

Supported Content Types

- Images (JPEG, PNG, WebP, SVG from AEM Assets), delivered as an optimised `<picture>`.
- Lottie animations: a Lottie JSON file (`.json`) from AEM Assets, with Hero Image type “Lotto”.
- Icon image (small square image or SVG above the eyebrow).
- Plain text (eyebrow, title), rich text (description), links (CTAs).
- Not supported: video files, YouTube / Vimeo, GIF animation as a “video” (a GIF can be used as an image), several images.

Business Problem Solved

Home and landing pages of the 13 locale sites needed one consistent, fast-loading opening banner that states the page’s message in a single headline, supports it with a photograph, illustration or Lottie animation, keeps the text readable with an overlay and routes visitors on with CTAs, following the TCS DS Figma ‘L1 Header’ variations instead of page-by-page layouts.

Supported Taxonomy

None: the Hero has no tag field and reads no page tags, taxonomy or metadata; tag the page itself in its page properties. Hero content is not part of the query index.

6.10.2 Visual Overview

Figure 1: Desktop rendering — The Hero at 1440 px: photo-1.svg full width under the 80 % white overlay; centred, the 3rem square-3 icon, the brand-blue eyebrow 'Enterprise AI', the 4rem H1 'Building on belief', the grey description 'Our AI-led services help enterprises grow, transform and compete with confidence.' and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/hero-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Hero at 1440 px: photo-1.svg full width under the 80 % white overlay; centred, the 3rem square-3 icon, the brand-blue eyebrow 'Enterprise AI', the 4rem H1 'Building on belief', the grey description 'Our AI-led services help enterprises grow, transform and compete with confidence.' and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side.

Item	Detail
Business Context	The opening banner of the English Enterprise AI landing page, checked at desktop width before sign-off; the Hero sits in the first section, so its photograph is the LCP element.
Author Objective	Author a Hero with icon, cover photograph, eyebrow, H1 title, description and a Primary and a Secondary CTA, and confirm the 1440 px layout.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Icon (Hero › Image)	Select the asset square-3.svg (/en/media/square-3.svg)	No	Small brand or topic icon above the eyebrow	Square icon, SVG or PNG; optional	None
B	Hero Image Path (Hero › Image)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
C	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
D	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
E	Description (Hero › Content)	Our AI-led services help enterprises grow, transform and compete with confidence.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
F	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
G	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(H)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
I	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
J	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			not rendered)			
(K)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (H), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-1.svg fills the full browser width under the 80 % white overlay; the 3rem square-3 icon, the brand-blue eyebrow 'Enterprise AI', the 4rem title 'Building on belief', the 1.5rem grey description and the two CTAs are centred, the CTAs side by side.
- **Rendering behaviour:** From 900 px the hero is at least 53.125rem high with 7.5rem top and bottom and 2.75rem side padding; the content block is up to 84.5rem wide and centred. In the first section the image gets loading="eager" and fetchpriority="high".
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-1.svg and square-3.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it.

Business Rules

- Keep this Hero in the page's first section: only there is photo-1.svg loaded eagerly with high fetch priority as the LCP image.
- square-3.svg becomes the icon because it stands alone before the title; Icon Image Alt Text is empty, so the icon is decorative.
- Hero Image alt text is empty, so photo-1.svg is treated as decorative; enter alt text when the photograph carries information.
- Title heading level keeps the default H1; the page must not have a Page Header or a second H1 Hero.
- One Primary CTA per hero: 'Talk to our experts' is Primary, 'Explore our services' Secondary.

Common Authoring Mistakes

Error	Root Cause	Resolution
The CTAs appear as plain text inside the description	Extra text typed into a CTA List item, so the CTA cell no longer holds links only and is read as content	Remove the stray text; each item holds only CTA Title, CTA Link and its options
'Explore our services' is missing on the page	CTA Link of Item 2 left empty; items without a link are dropped	Select /en/services in CTA Link of Item 2
The SEO audit reports two H1 headings	Another Hero or a Page Header on the page also uses H1	Set Title heading level to H2 on every other Hero

Troubleshooting

- **Symptoms:** At 1440 px the hero shows only the white overlay; photo-1.svg is missing.
- **Cause:** The asset was not published with the page, so the image request on aem.page or aem.live fails.
- **Resolution:** Publish photo-1.svg in AEM Assets (or select it as a referenced asset in the Publish dialog) and publish the page again.
- **Verification Steps:** Reload the preview URL at 1440 px; the image request returns 200 in the Network tab and the photograph shows behind the overlay.

Desktop (900 px and wider; the same rules apply at 1200 px and above)

- The Hero spans the full width of the browser: the section wrapper of a Hero has no maximum width and no padding (`.hero-container .hero-wrapper`).
- Minimum height 53.125rem (850 px); padding 7.5rem top and bottom, 2.75rem left and right.
- The image covers the whole hero (`object-fit: cover`), behind an overlay: white at 80 % (Default), none (Light, no overlay), navy `#01121f` at 80 % (Dark blue), navy at 60 % (Dark blue subtle) or black at 80 % (Black).
- Content block maximum width 84.5rem; when the Horizontal Alignment is Left or Right it is limited to 47.5rem so its position is visible.
- Title: display size 2 (4rem), medium weight, line height 1.2, letter spacing –0.025 em of the size, maximum width 72.5rem.
- Eyebrow: 1rem, semibold, brand blue; 2.5rem space below. Icon: 3rem × 3rem with 0.5rem below.
- Description: 1.5rem, line height 1.2, maximum width 53.125rem, 2.5rem above it.
- CTAs: in one row (wrapping when needed), 2.5rem between CTAs and 2.5rem above the row.
- Lottie: the pause / play button sits in the bottom-right corner of the hero, 1rem from the edges.

Figure 2: Tablet rendering — The same Hero at 768 px: a banner at least 40rem high, photo-1.svg cropped to its centre, the 2.5rem icon, the eyebrow 'Enterprise AI', the 2.5rem H1 'Building on belief', the 1rem description and the two CTAs, all centred; the CTAs wrap only when they do not fit in one row. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/hero-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same Hero at 768 px: a banner at least 40rem high, photo-1.svg cropped to its centre, the 2.5rem icon, the eyebrow 'Enterprise AI', the 2.5rem H1 'Building on belief', the 1rem description and the two CTAs, all centred; the CTAs wrap only when they do not fit in one row.
Business Context	The same Enterprise AI landing-page banner checked at 768 px, the tablet range where the Hero switches to its 40rem minimum height and smaller type.
Author Objective	Confirm that the authored Hero (icon, photo-1.svg, eyebrow, H1, description, two CTAs) stays complete and readable at 768 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Icon (Hero › Image)	Select the asset square-3.svg (/en/media/square-3.svg)	No	Small brand or topic icon above the eyebrow	Square icon, SVG or PNG; optional	None
B	Hero Image Path (Hero › Image)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
C	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
D	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
E	Description (Hero › Content)	Our AI-led services help enterprises grow, transform and compete with confidence.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
F	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
G	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(H)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
I	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
J	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(K)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (H), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-1.svg is cropped to its centre in a shorter banner; the 2.5rem icon, the eyebrow, the 2.5rem title 'Building on belief', the 1rem description and the two CTAs stay centred, the CTAs wrapping to a second line when they do not fit side by side.
- **Rendering behaviour:** Between 600 and 899 px the hero is at least 40rem high with 4rem top and bottom and 2.5rem side padding, title 2.5rem, description 1rem, CTA gap 2rem; the content block uses the full width. From 900 px the desktop rules apply.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-1.svg and square-3.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. There is no tablet-specific content: the same published page serves every width.

Business Rules

- Below 900 px the content block is always full width; Horizontal Alignment Left or Right shows only through the text alignment.
- Buttons never wrap their text (`white-space: nowrap`); keep CTA Titles such as 'Talk to our experts' to about 25 characters.
- The cover image is cropped around its centre; keep the subject of photo-1.svg in the central area.
- Type sizes come from the global tokens and step up at 900 px; there is no tablet field in the dialog.

Common Authoring Mistakes

Error	Root Cause	Resolution
The subject of the photograph is cut off at 768 px	The subject sits near the edge of the image and Hero View Default crops it to cover	Choose an image with a centred subject or move the text with Vertical Alignment
A CTA button runs past the edge of the banner	A very long CTA Title; button text does not wrap	Shorten the CTA Title to 2 to 4 words

Troubleshooting

- **Symptoms:** At 768 px the title wraps over four or more lines and pushes the CTAs far down the banner.

- **Cause:** The Title is much longer than the recommended 60 characters for the 2.5rem tablet title size.
- **Resolution:** Shorten the headline to about 60 characters, as 'Building on belief', and move details into the Description.
- **Verification Steps:** Check the preview at 768 px and 1024 px: the title fits on two or three lines and both CTAs are visible.

Tablet (600 px to 1199 px)

- 600 px to 899 px: minimum height 40rem (640 px); padding 4rem top and bottom, 2.5rem left and right; title 2.5rem; description 1rem; eyebrow 1rem with 1.5rem below; icon 2.5rem; CTA gap 2rem; the content block uses the full width (Left / Right positions show only through the text alignment).
- 900 px to 1199 px: the desktop rules above apply (minimum height 53.125rem, 4rem title, 47.5rem content width for Left / Right).

Figure 3: Mobile rendering — The Hero at 375 px: a banner at least 35rem high with photo-1.svg cropped to its centre; the icon, the eyebrow 'Enterprise AI', the 2.5rem H1 'Building on belief' and the 1rem description stacked and centred, the CTAs 'Talk to our experts' and 'Explore our services' wrapping one per line when they do not fit side by side. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/hero-mobile-view.jpg`

Item	Detail
Screenshot Purpose	Mobile rendering
Screen Description	The Hero at 375 px: a banner at least 35rem high with photo-1.svg cropped to its centre; the icon, the eyebrow 'Enterprise AI', the 2.5rem H1 'Building on belief' and the 1rem description stacked and centred, the CTAs 'Talk to our experts' and 'Explore our services' wrapping one per line when they do not fit side by side.
Business Context	The Enterprise AI banner checked on a phone, where the Hero fills the first screen and the cover photograph is cropped the most.
Author Objective	Check that the Hero with icon, photo-1.svg, eyebrow, H1, description and two CTAs works at 375 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Icon (Hero › Image)	Select the asset square-3.svg (/en/media/square-3.svg)	No	Small brand or topic icon above the eyebrow	Square icon, SVG or PNG; optional	None
B	Hero Image Path (Hero › Image)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
C	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
D	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
E	Description (Hero › Content)	Our AI-led services help enterprises grow, transform and compete with confidence.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
F	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
G	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(H)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
I	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
J	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(K)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (H), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 35rem tall banner with photo-1.svg cropped to its centre; icon, eyebrow, the 2.5rem title 'Building on belief' and the 1rem description stacked and centred; 'Talk to our experts' and 'Explore our services' each on its own line.
- **Rendering behaviour:** Below 600 px the hero has a 35rem minimum height, 4rem top and bottom and 1.5rem side padding, and gaps of 0.75rem (icon), 1.5rem (eyebrow, description) and 2rem (CTAs). In the first section the image still loads eagerly.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-1.svg and square-3.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Check the published page on a real phone as well as in responsive mode.

Business Rules

- The 1.5rem side padding leaves about 20rem for text at 375 px; keep the eyebrow to one line of about 40 characters.
- CTAs wrap one per line when the two buttons do not fit side by side; their text never wraps.
- Horizontal Alignment does not move the block below 900 px; only Text Alignment moves the text.
- There is no separate mobile image field; the same photo-1.svg is cropped with `object-fit: cover`.

Common Authoring Mistakes

Error	Root Cause	Resolution
The title fills the whole phone screen	Headline far longer than 60 characters at the 2.5rem size	Shorten the Title and move details into the Description
The photograph's subject is hidden behind the text	The subject lies where the centred content sits after the centre crop	Use an image with a different composition or set Vertical Alignment Top or Bottom

Troubleshooting

- **Symptoms:** On the phone the grey description is hard to read over the cropped photograph.
- **Cause:** The centre crop of photo-1.svg puts a busy or dark area behind the dark text under the 80 % white overlay.
- **Resolution:** Choose an image with a calm centre, or a dark BG Color such as Dark blue, which switches the text to white.

- **Verification Steps:** Check the preview at 375 px with a contrast checker: at least 4.5:1 for the description and 3:1 for the title.

Mobile (below 600 px)

- Minimum height 35rem (560 px); padding 4rem top and bottom, 1.5rem left and right.
- The cover image is cropped around its centre to fill the taller, narrower box.
- Title 2.5rem; eyebrow and description 1rem; icon 2.5rem; gaps 0.75rem (icon), 1.5rem (eyebrow, description) and 2rem (CTAs).
- CTAs wrap; long CTA labels do not wrap inside a button (buttons use `white-space: nowrap`).
- The content block always uses the full width; Horizontal Alignment Left / Right moves the text start, not the block.

6.10.3 Component Variations

Each option of the Hero dialog that changes the presentation or behaviour is described below as its own variation. Options combine: for example Lotto + Dark blue + Bottom + Left + Fade in is one valid Hero. A video background is **Not implemented (as of this handover)**: the Hero Image Path accepts an image or a Lottie `.json` file only.

Variation 1 — Default Image Hero (cover image)

Variation Name: Hero Image type "Default" with Hero View "Default".

Business Purpose: The standard brand banner: a photograph fills the whole hero behind the text.

Visual Example:

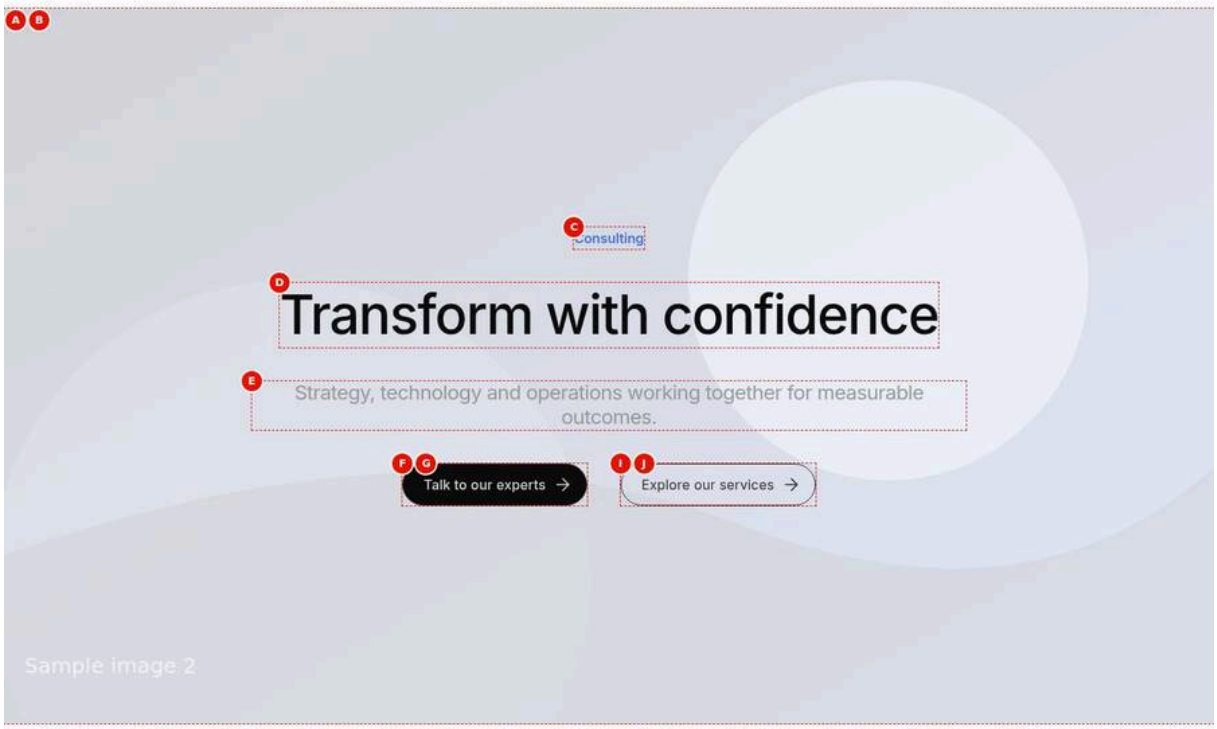

Figure 4: Default image hero — The Hero at 1440 px: photo-2.svg (alt 'Consultants reviewing a transformation roadmap') full width under the 80 % white overlay, with the brand-blue eyebrow 'Consulting', the H1 'Transform with confidence', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side, centred. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-default-image.jpg)

Screenshot Details — Default image hero

Item	Detail
Screenshot Name	`screenshots/hero-default-image.jpg`
Screenshot Purpose	Default image hero
Screen Description	The Hero at 1440 px: photo-2.svg (alt 'Consultants reviewing a transformation roadmap') full width under the 80 % white overlay, with the brand-blue eyebrow 'Consulting', the H1 'Transform with confidence', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side, centred.
Business Context	The Consulting landing page opens with a photograph of consultants at work; the image shows what the service is about, so it needs alt text.
Author Objective	Add a cover-image Hero with meaningful alt text, eyebrow 'Consulting', H1 'Transform with confidence', a description and two CTAs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
B	Hero Image alt text (Hero › Image)	Consultants reviewing a transformation roadmap	No	Text alternative of the image / animation	Describe meaningful media; empty if decorative	None
C	Eyebrow (Hero › Content)	Consulting	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
D	Title (Hero › Content)	Transform with confidence	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
E	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
F	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
G	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(H)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
I	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
J	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(K)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (H), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-2.svg fills the banner under the 80 % white overlay; the brand-blue eyebrow 'Consulting', the dark title 'Transform with confidence', the grey description and the Primary and Secondary CTAs are centred.
- **Rendering behaviour:** The picture moves into `div.hero-media` with `object-fit: cover` and the block gets `hero-has-media`, which draws the white overlay; the image alt is 'Consultants reviewing a transformation roadmap'. Heights: 35rem mobile, 40rem tablet, 53.125rem from 900 px.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-2.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it.

Business Rules

- Hero Image type Default and Hero View Default: the photograph fills the hero and is cropped, never letterboxed.
- Exactly one image is used; the image row holds only the picture.
- The alt text 'Consultants reviewing a transformation roadmap' describes the content; leave alt text empty only for decorative images.
- The white overlay is drawn only because there is media.
- In the first section of the page the image is loaded eagerly with high fetch priority (LCP).

Common Authoring Mistakes

Error	Root Cause	Resolution
Screen readers announce nothing useful for the photograph	Hero Image alt text left empty or filled with 'image' for a meaningful photograph	Describe what it shows, e.g. 'Consultants reviewing a transformation roadmap'
The text is hard to read over the photograph	BG Color changed to Light, no overlay with a busy photograph	Set BG Color back to Default (80 % white overlay)
Nothing shows behind the text	A .json file chosen in Hero Image Path with Hero Image type Default	Select an image, or set Hero Image type to Lotto for an animation

Troubleshooting

- **Symptoms:** photo-2.svg shows on aem.page but not on the live site.

- **Cause:** The page was published to Live but the asset was not.
- **Resolution:** Publish the asset with the page (referenced assets selected in the Publish dialog) and publish again.
- **Verification Steps:** Open the aem.live URL with the cache disabled; the image request returns 200 and the img element has the alt 'Consultants reviewing a transformation roadmap'.

Use Cases: Home page banner; service and industry landing pages.

Authoring Guidelines: Image tab: Hero Image type = Default, select an image in Hero Image Path, enter Hero Image alt text (or leave it empty if decorative), Hero View = Default.

Business Rules: Exactly one image is used; the image cell must contain only the picture. When the hero is in the first section of the page the image is loaded eagerly with high fetch priority (LCP).

Rendering Rules: The picture is moved into `div.hero-media` (absolute, behind the content); `img` uses `object-fit: cover`; the block gets `hero-has-media`, which draws the overlay (`::before`) in the BG Color.

Responsive Behaviour: Desktop: 53.125rem minimum height, image cropped to fill. Tablet: 40rem (600–899 px) or 53.125rem (900 px+). Mobile: 35rem, centre crop.

SEO Impact: The image is a real `<img>` with alt text (indexable); the eager, high-priority load supports a good LCP and Core Web Vitals score.

Accessibility Compliance: Meaningful images need alt text (WCAG 1.1.1); decorative images get an empty alt. The overlay keeps text contrast; check contrast against busy images (WCAG 1.4.3).

Variation 2 — Lotto (Lottie Animation) Hero

Variation Name: Hero Image type "Lotto" (block class `lottie`).

Business Purpose: A motion background for campaigns and innovation themes, using a light vector Lottie animation instead of a video.

Visual Example:

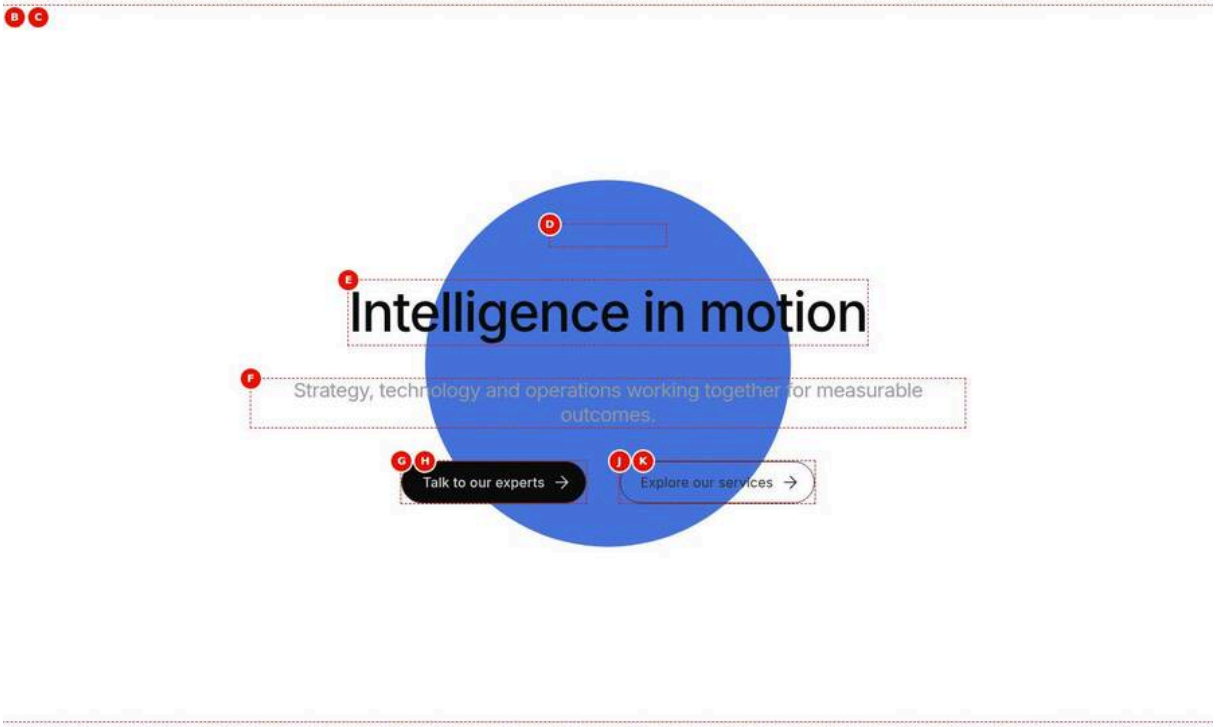

Figure 5: Lottie animation hero — The Hero at 1440 px with Hero Image type Lotto: the pulsing-circle animation.json playing behind the content with no overlay (Light, no overlay); centred, the eyebrow 'AI and automation', the H1 'Intelligence in motion', the description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; the round pause button 1rem from the bottom-right corner. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-lotto-animation.jpg)

Screenshot Details — Lottie animation hero

Item	Detail
Screenshot Name	`screenshots/hero-lotto-animation.jpg`
Screenshot Purpose	Lottie animation hero
Screen Description	The Hero at 1440 px with Hero Image type Lotto: the pulsing-circle animation.json playing behind the content with no overlay (Light, no overlay); centred, the eyebrow 'AI and automation', the H1 'Intelligence in motion', the description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; the round pause button 1rem from the bottom-right corner.
Business Context	An AI and automation campaign page uses a looping Lottie animation instead of a photograph to express a connected, intelligent enterprise.
Author Objective	Add a Hero with Hero Image type Lotto, the animation.json file with alt text, BG Color Light, no overlay, the text and two CTAs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Hero Image type (Hero › Image)	Lotto	No	Image or Lottie animation	Lotto only with a `.json` file	Options: Default, Lotto
B	Hero Image Path (Hero › Image)	Select the asset animation.json (/en/media/animation.json)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
C	Hero Image alt text (Hero › Image)	Pulsing circle, symbolising a connected enterprise	No	Text alternative of the image / animation	Describe meaningful media; empty if decorative	None
D	Eyebrow (Hero › Content)	AI and automation	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
E	Title (Hero › Content)	Intelligence in motion	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
F	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
G	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
H	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(I)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
J	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
K	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(L)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(M)	BG Color (Hero › Style)	Light, no overlay	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The pulsing-circle animation plays behind the centred eyebrow 'AI and automation', the title 'Intelligence in motion', the description and the two CTAs, with no overlay; a round pause button sits 1rem from the bottom-right corner.
- **Rendering behaviour:** `createAnimation()` renders the SVG player in `div.hero-animation` with 'xMidYMid meet', so bands may show at the sides on narrow screens; the player loads once per page when the hero is within 200 px of the viewport and the browser is idle. The animation loops and pauses off screen.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. animation.json must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Translated pause / play labels come from the locale placeholders sheet, a separate publish step; the Lottie player is code and is deployed by Code Sync.

Business Rules

- The animation plays only with Hero Image type Lotto and a .json file; with Default the .json file shows no media at all.
- The alt text 'Pulsing circle, symbolising a connected enterprise' gives the animation role img and an aria-label; without alt text it is aria-hidden.
- With reduced motion the animation starts paused on its first frame; the pause / play button lets every visitor stop the loop (WCAG 2.2.2).
- Button labels come from the placeholders `pauseAnimation` and `playAnimation` (fallbacks 'Pause animation', 'Play animation').
- Light, no overlay keeps the text dark, so the animation must stay light behind the text.

Common Authoring Mistakes

Error	Root Cause	Resolution
The hero is empty although animation.json was selected	Hero Image type left on Default	Set Hero Image type to Lotto
The console shows 'failed to play the Lottie animation'	The file is not valid Lottie JSON or uses After Effects expressions the light player does not support	Re-export the animation for the SVG renderer and publish the asset again
The pause button covers a CTA	Content set to Bottom and Right, next to the bottom-right toggle	Keep Bottom and Right content clear of the corner or choose another alignment

Troubleshooting

- **Symptoms:** The animation shows a still first frame and does not move.
- **Cause:** The visitor's system prefers reduced motion, so the animation starts paused by design.
- **Resolution:** No content change is needed: press Play on the toggle, or test with the reduced-motion setting off.
- **Verification Steps:** With reduced motion off, reload the preview: the circle pulses in a loop and the button switches between 'Pause animation' and 'Play animation'.

Use Cases: Campaign launches, AI / innovation pages, animated brand moments.

Authoring Guidelines: Image tab: Hero Image type = Lotto; Hero Image Path = the Lottie `.json` file from AEM Assets; Hero Image alt text = a short description if the animation conveys information, or empty if decorative.

Business Rules: The animation plays only when the Hero Image type is Lotto **and** the file is a `.json` link. With Lotto and an image, the image is shown instead. With Default and a `.json` file, no media is shown at all. The animation loops; it starts paused on its first frame when the visitor prefers reduced motion; it pauses whenever it is off screen.

Rendering Rules: `createAnimation()` creates `div.hero-animation` inside `div.hero-media` (SVG renderer, `preserveAspectRatio` "xMidYMid meet"). The player (`/scripts/lib/lottie/lottie_light.min.js`) is loaded once per page when the hero comes within 200 px of the viewport and the browser is idle. A pause / play `<button class="animation-toggle">` is appended to the block (bottom-right, above the overlay and the content). With an alt text the animation has `role="img"` and `aria-label`; without, `aria-hidden="true"`.

Responsive Behaviour: The animation fills the hero box at every breakpoint and keeps its aspect ratio ("meet", so it may show bands at the sides on narrow screens); the toggle stays 1rem from the bottom-right corner.

SEO Impact: The animation is not indexable content and is not an LCP image; the title and description remain the indexable content. The player script is loaded after rendering, so it does not block the LCP.

Accessibility Compliance: WCAG 2.2.2 (Pause, Stop, Hide): the pause / play button (labels from placeholders `pauseAnimation` / `playAnimation`) lets visitors stop the loop. Reduced motion (WCAG 2.3.3) is respected: the animation starts paused.

Variation 3 — Contained Image View

Variation Name: Hero View "Contained image" (block class `media-contained`).

Business Purpose: Show an illustration or artwork whole, centred behind the content, instead of cropping it.

Visual Example:

Figure 6: Contained image hero — The Hero at 1440 px: the bar chart chart.svg shown whole and centred with no overlay (Contained image, Light, no overlay); at the top, centred, the eyebrow 'Annual report 2026', the H1 'Growth you can measure', the description and one Primary button 'Read the report'. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-contained-image.jpg)

Screenshot Details — Contained image hero

Item	Detail
Screenshot Name	`screenshots/hero-contained-image.jpg`
Screenshot Purpose	Contained image hero
Screen Description	The Hero at 1440 px: the bar chart chart.svg shown whole and centred with no overlay (Contained image, Light, no overlay); at the top, centred, the eyebrow 'Annual report 2026', the H1 'Growth you can measure', the description and one Primary button 'Read the report'.
Business Context	The Annual report 2026 landing page shows its revenue chart illustration whole behind the headline; cropping the chart would cut off data.
Author Objective	Add a Hero with Hero View Contained image for chart.svg, alt text, Vertical Alignment Top, BG Color Light, no overlay and one Primary CTA 'Read the report'.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset chart.svg (/en/media/chart.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
B	Hero Image alt text (Hero › Image)	Bar chart of the revenue growth index, 2020 to 2026	No	Text alternative of the image / animation	Describe meaningful media; empty if decorative	None
(C)	Hero View (Hero › Image)	Contained image	No	Cover or contained image	Contained for illustrations	Options: Default, Contained image
D	Eyebrow (Hero › Content)	Annual report 2026	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
E	Title (Hero › Content)	Growth you can measure	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
F	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
G	CTA Title (Hero › Links › CTA List › Item 1)	Read the report	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
H	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/insights/annual-report	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(I)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(J)	Vertical Alignment (Hero › Style)	Top	No	Vertical position of the content	Keep the image subject visible	Options: Top, Middle, Bottom
(K)	BG Color (Hero › Style)	Light, no overlay	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The bar chart is shown whole and centred inside the banner with no overlay; the eyebrow 'Annual report 2026', the title 'Growth you can measure', the description and the 'Read the report' button sit at the top, centred.
- **Rendering behaviour:** `div.hero-media` becomes a centred flex box with 1.5rem padding and the image uses `object-fit: contain` with max-width and max-height 100 %; on mobile the chart scales down to the narrow width, leaving empty space above and below.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. chart.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. The CTA target /en/insights/annual-report must be published too, or the link leads to a 404.

Business Rules

- Contained image is for illustrations, charts and transparent SVG or PNG artwork; photographs use Hero View Default.
- The alt text 'Bar chart of the revenue growth index, 2020 to 2026' names the chart; give the figures in the page text as well.
- Vertical Alignment Top places the content right below the top padding, over the upper part of the chart; check legibility.
- Light, no overlay leaves the chart at full strength and keeps the text dark.
- One CTA only: 'Read the report' as Primary.

Common Authoring Mistakes

Error	Root Cause	Resolution
The chart is cut off at the sides	Hero View left on Default (cover)	Set Hero View to Contained image
The title runs over the bars of the chart	No overlay and the content placed over a busy part of the artwork	Use BG Color Default for the white overlay or move the content with Vertical Alignment

Troubleshooting

- **Symptoms:** On mobile the chart is very small, with large empty bands above and below it.
- **Cause:** Contained image scales the whole wide chart to the narrow width of the 35rem banner.
- **Resolution:** Accept it for wide artwork, or supply an illustration with a squarer aspect ratio designed for the hero.
- **Verification Steps:** Check 375 px and 1440 px: the whole chart is visible and the text stays readable.

Use Cases: Illustrated hero artwork, product diagrams, logos or graphics that must not be cropped.

Authoring Guidelines: Image tab: Hero View = Contained image; choose an illustration (ideally a transparent PNG or SVG) in Hero Image Path.

Business Rules: Applies to images; a Lottie animation already keeps its aspect ratio.

Rendering Rules: `div.hero-media` becomes a centred flex box with 1.5rem padding; the image uses `object-fit: contain`, `max-width: 100%`, `max-height: 100%`, `width/height: auto`.

Responsive Behaviour: The whole image always shows; on mobile it is scaled down to the narrow width, leaving empty space above and below.

SEO Impact: As Variation 1.

Accessibility Compliance: As Variation 1; make sure the text placed over the artwork keeps enough contrast (use the overlay of the BG Color).

Variation 4 — Text-only Hero (no image)

Variation Name: Hero without Hero Image Path.

Business Purpose: A large typographic banner when no imagery is available or wanted.

Visual Example:

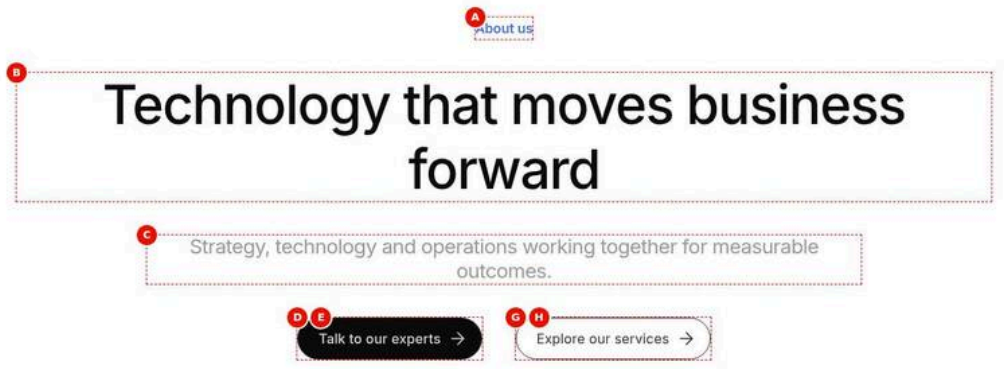

Figure 7: Hero without media — The Hero at 1440 px without an image: a plain white banner with no overlay; centred, the brand-blue eyebrow 'About us', the H1 'Technology that moves business forward', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-text-only.jpg)

Screenshot Details — Hero without media

Item	Detail
Screenshot Name	`screenshots/hero-text-only.jpg`
Screenshot Purpose	Hero without media

Item	Detail
Screen Description	The Hero at 1440 px without an image: a plain white banner with no overlay; centred, the brand-blue eyebrow 'About us', the H1 'Technology that moves business forward', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side.
Business Context	The About us page opens with a typographic statement because no approved imagery exists for it yet.
Author Objective	Add a Hero without Hero Image Path: eyebrow 'About us', H1 title, description and two CTAs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Eyebrow (Hero › Content)	About us	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
B	Title (Hero › Content)	Technology that moves business forward	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
C	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
D	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
E	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(F)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
G	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
H	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(I)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A plain white banner with no image and no overlay; the eyebrow 'About us', the title 'Technology that moves business forward', the description and the two CTAs centred in dark text.
- **Rendering behaviour:** Only `div.hero-content` is rendered; the block does not get `hero-has-media`, so no overlay is drawn, while the minimum heights (35, 40 and 53.125rem) and paddings still apply.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. No asset is involved, so publishing the page is enough; the CTA targets /en/contact and /en/services must be published.

Business Rules

- Leave Hero Image Path empty; BG Color Default and Light, no overlay both give a white background.
- Dark blue, Dark blue (subtle) or Black give a navy or black background with white text, even without an image.
- 'Technology that moves business forward' has 38 characters, within the recommended 60.
- Motion Type Zoom (image) has nothing to animate without media; use Fade in or Slide up if motion is wanted.

Common Authoring Mistakes

Error	Root Cause	Resolution
An old image still shows behind the text	Hero Image Path kept the asset of the page the Hero was copied from	Clear Hero Image Path in the Image tab
The banner looks empty on desktop	Text-only hero at the 53.125rem desktop minimum height with a short text	Add a description and CTAs or an image; there is no height field

Troubleshooting

- **Symptoms:** 'About us' shows as plain grey text and there is no headline.
- **Cause:** The Title was left empty; without a heading the eyebrow is treated as description text.
- **Resolution:** Enter the Title 'Technology that moves business forward' with Title heading level H1.
- **Verification Steps:** On preview 'About us' is brand blue above an h1 with class hero-title.

Use Cases: Statement pages, temporary pages before imagery is ready, dark brand banners.

Authoring Guidelines: Leave Hero Image Path empty; optionally choose a dark BG Color.

Business Rules: Without media the block does not get `hero-has-media` and no overlay is drawn; the background is white (Default, Light) or the BG Color's navy / black.

Rendering Rules: Only `div.hero-content` is rendered; minimum heights and paddings still apply.

Responsive Behaviour: As for the other variations (minimum heights 35 / 40 / 53.125rem).

SEO Impact: No image; the headline stays the main content signal.

Accessibility Compliance: Text colours follow the BG Color (dark text on white, white on navy / black), which meet WCAG AA contrast.

Variation 5 — BG Color "Default" (light overlay)

Variation Name: BG Color "Default" (no class).

Business Purpose: Light, airy banner with dark text over a softened photograph.

Visual Example:

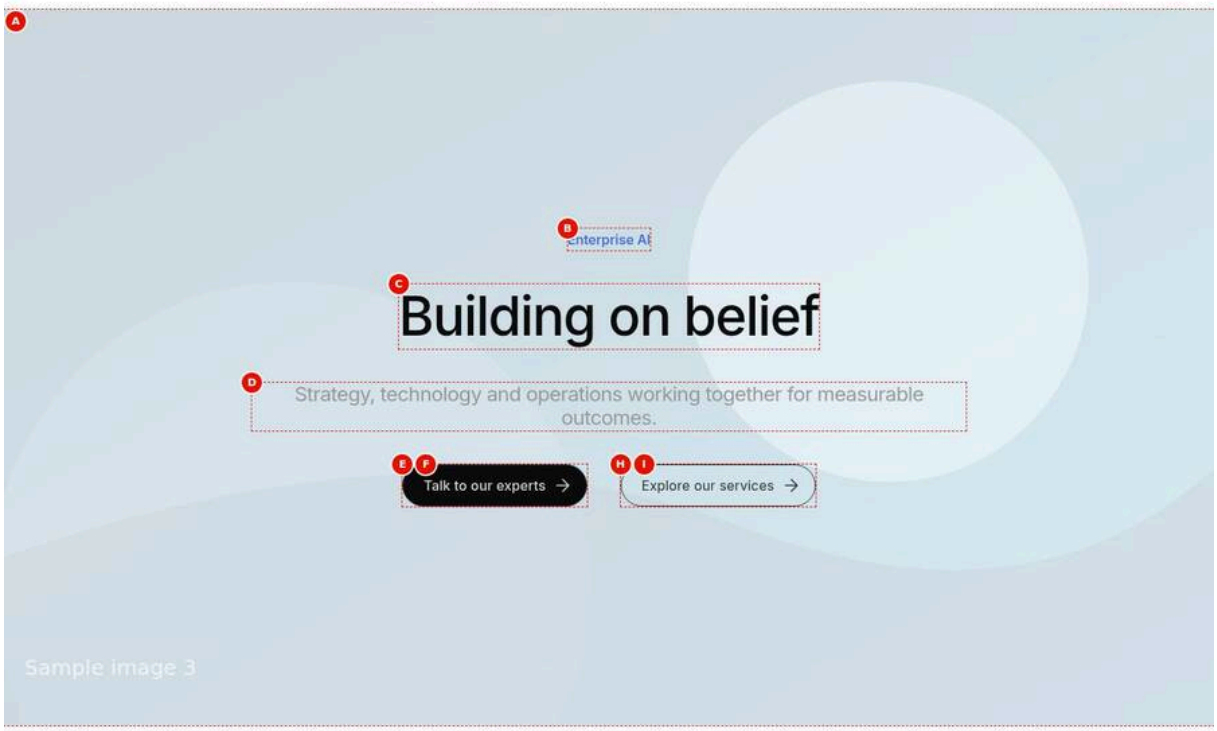

Figure 8: Default light overlay — The Hero at 1440 px with BG Color Default: photo-3.svg under an 80 % white overlay, the brand-blue eyebrow 'Enterprise AI', the dark H1 'Building on belief', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side, centred. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-bg-default.jpg)

Screenshot Details — Default light overlay

Item	Detail
Screenshot Name	`screenshots/hero-bg-default.jpg`
Screenshot Purpose	Default light overlay
Screen Description	The Hero at 1440 px with BG Color Default: photo-3.svg under an 80 % white overlay, the brand-blue eyebrow 'Enterprise AI', the dark H1 'Building on belief', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side, centred.
Business Context	An Enterprise AI landing page uses the light, airy corporate look: a photograph softened by a white overlay under dark text.
Author Objective	Add a Hero with photo-3.svg and leave BG Color on Default to get the 80 % white overlay.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
B	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recom-	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					mended); only shown with a title	
C	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-3.svg seen through an 80 % white overlay; the brand-blue eyebrow 'Enterprise AI', the black title 'Building on belief', the grey description and the Primary and Secondary CTAs centred.
- **Rendering behaviour:** BG Color Default adds no class: the overlay is `rgb(255 255 255 / 80%)`, the title `--color-text-default`, the eyebrow `--color-text-brand`, the description `--color-text-secondary`, on a white background; the same at every breakpoint.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-3.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- The overlay is drawn only when the Hero has media; a text-only Hero is plain white.
- Dark text on an 80 % white overlay usually exceeds 4.5:1; verify with very dark or busy images.
- Default is the usual choice for corporate banners; Primary stays filled and Secondary outlined.

Common Authoring Mistakes

Error	Root Cause	Resolution
The photograph looks washed out	The 80 % white overlay of Default hides most of the image	Use Light, no overlay with a light image, or a dark BG Color
The grey description is hard to read	A dark or busy area of photo-3.svg lies behind the description	Choose a calmer image or a dark BG Color

Troubleshooting

- **Symptoms:** After replacing the image the banner is white with no photograph.
- **Cause:** The new asset was selected in Hero Image Path but not published.
- **Resolution:** Publish the new image and publish the page again.
- **Verification Steps:** Preview and live pages show the photograph under the white overlay.

Use Cases: Most corporate banners.

Authoring Guidelines: Style tab: BG Color = Default.

Business Rules: The overlay is drawn only when there is media.

Rendering Rules: `--hero-overlay: rgb(255 255 255 / 80%)`; title `--color-text-default`, eyebrow `--color-text-brand`, description `--color-text-secondary`; background `--color-bg-default` (white).

Responsive Behaviour: Same at every breakpoint.

SEO Impact: None.

Accessibility Compliance: Dark text on an 80 % white overlay keeps contrast above 4.5:1 in most cases; verify with very dark or busy images.

Variation 6 — BG Color "Light, no overlay"

Variation Name: BG Color "Light, no overlay" (class `bg-light`).

Business Purpose: Show the image exactly as designed (for example a light gradient artwork) with dark text.

Visual Example:

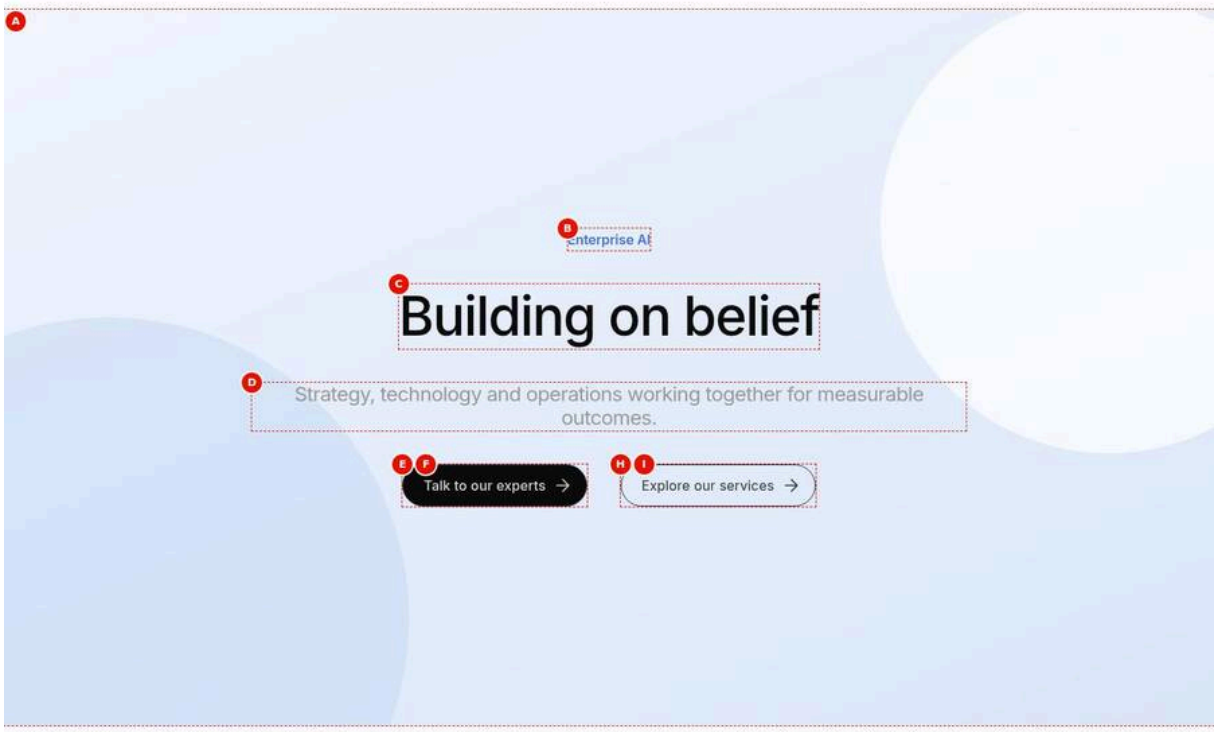

Figure 9: Light background without overlay — The Hero at 1440 px with BG Color Light, no overlay: the light gradient light.svg at full strength, with the brand-blue eyebrow 'Enterprise AI', the dark H1 'Building on belief', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side, centred. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-bg-light.jpg)

Screenshot Details — Light background without overlay

Item	Detail
Screenshot Name	`screenshots/hero-bg-light.jpg`
Screenshot Purpose	Light background without overlay
Screen Description	The Hero at 1440 px with BG Color Light, no overlay: the light gradient light.svg at full strength, with the brand-blue eyebrow 'Enterprise AI', the dark H1 'Building on belief', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side, centred.
Business Context	A pre-designed light gradient artwork (light.svg) must show exactly as designed, without a white wash over it.
Author Objective	Add a Hero with light.svg and set BG Color to Light, no overlay.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset light.svg (/en/media/light.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(K)	BG Color (Hero › Style)	Light, no overlay	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The light gradient fills the banner at full strength; the eyebrow 'Enterprise AI', the dark title 'Building on belief', the description and the two CTAs centred on it.
- **Rendering behaviour:** Class `bg-light` sets the overlay to transparent; the text colours stay as in Default. The gradient is cropped like any cover image, so on mobile the text may land on another part of it.

- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. light.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- Use Light, no overlay only with light images: the text stays dark and contrast (WCAG 1.4.3) is the author's responsibility.
- Do not use it over photographs or busy images; use Default instead.
- For dark images choose Dark blue, Dark blue (subtle) or Black, which switch the text to white.
- Light, no overlay is not a fill colour: without an image the hero is white.

Common Authoring Mistakes

Error	Root Cause	Resolution
Dark text over a dark part of the image	Light, no overlay chosen for a photograph	Choose Default or a dark BG Color
The author expects a light-blue background	Light means the image without overlay, not a colour	Use an image with the wanted colour

Troubleshooting

- **Symptoms:** On mobile the title is hard to read on the gradient.
- **Cause:** The centre crop puts a more saturated part of light.svg behind the dark text.
- **Resolution:** Use a lighter or more even gradient, or switch BG Color to Default for the white overlay.
- **Verification Steps:** Check 375 px and 1440 px with a contrast checker: at least 3:1 for the title and 4.5:1 for the description.

Use Cases: Pre-designed light backgrounds and gradients.

Authoring Guidelines: Style tab: BG Color = Light, no overlay; use a light image.

Business Rules: The overlay is transparent; the text stays dark, so the image must be light enough behind the text.

Rendering Rules: `--hero-overlay: transparent`; text colours as Default.

Responsive Behaviour: Same at every breakpoint; check the crop on mobile because the text may land on a darker area of the image.

SEO Impact: None.

Accessibility Compliance: The author is responsible for contrast (WCAG 1.4.3): only use light images.

Variation 7 — BG Color "Dark blue"

Variation Name: BG Color "Dark blue" (class `bg-dark`).

Business Purpose: A strong, premium brand look: white text on a navy overlay.

Visual Example:

Figure 10: Dark blue overlay — The Hero at 1440 px with BG Color Dark blue: photo-4.svg under an 80 % navy overlay, the eyebrow 'Enterprise AI' still brand blue, the white H1 'Building on belief', the 50 % white description, an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white, centred. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-bg-dark.jpg)

Screenshot Details — Dark blue overlay

Item	Detail
Screenshot Name	`screenshots/hero-bg-dark.jpg`
Screenshot Purpose	Dark blue overlay
Screen Description	The Hero at 1440 px with BG Color Dark blue: photo-4.svg under an 80 % navy overlay, the eyebrow 'Enterprise AI' still brand blue, the white H1 'Building on belief', the 50 % white description, an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white, centred.
Business Context	A brand statement banner on a technology landing page uses the premium navy look with white text.
Author Objective	Add a Hero with photo-4.svg, BG Color Dark blue, a Secondary CTA and a Default (text) CTA.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
B	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recom-	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					mended); only shown with a title	
C	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-4.svg under an 80 % navy overlay; the brand-blue eyebrow, the white title 'Building on belief', the 50 % white description, a white-outline 'Talk to our experts' button and a white 'Explore our services' text link with an arrow.
- **Rendering behaviour:** Class `bg-dark`: overlay navy `rgb(1 18 31 / 80%)`, background `#01121f`; title `--color-text-on-neutral` (white), description white at 50 % with medium weight; Secondary and Default CTAs are white until hover or focus, the Default one turning light blue (`--brand-300`). The same at every breakpoint.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-4.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- On dark BG Colors use Secondary and Default CTAs: they switch to white; Primary keeps its normal fill.
- The eyebrow stays brand blue on navy (Part 16 F-17, open); check its contrast or keep it short.
- Check the 50 % white description against bright parts of photo-4.svg (WCAG 1.4.3).
- Item 2 has no CTA view, so 'Explore our services' renders as a tertiary text link with a right arrow.

Common Authoring Mistakes

Error	Root Cause	Resolution
The eyebrow is hard to read on navy	The brand-blue eyebrow does not change on dark backgrounds (F-17)	Keep it short and check contrast, or leave Eyebrow empty
The second CTA looks like a link, not a button	CTA view of Item 2 left on Default	Set CTA view to Secondary if a button is wanted

Troubleshooting

- **Symptoms:** A contrast checker flags the description.
- **Cause:** The 50 % white description sits over a bright area of photo-4.svg under the 80 % navy overlay.
- **Resolution:** Choose a darker image or BG Color Black; move the content to a calmer area of the image.
- **Verification Steps:** The contrast at the description position is at least 4.5:1 on the preview page.

Use Cases: Brand statements, home page, technology themes.

Authoring Guidelines: Style tab: BG Color = Dark blue.

Business Rules: Secondary and Default CTAs switch to white; on hover they return to their normal hover colours (Default CTAs turn light blue `--brand-300`).

Rendering Rules: `--hero-overlay: rgb(1 18 31 / 80%)`, background `#01121f`; title `--color-text-on-neutral` (white); description white at 50 % with medium weight. The eyebrow keeps the brand blue.

Responsive Behaviour: Same at every breakpoint.

SEO Impact: None.

Accessibility Compliance: White text on 80 % navy meets AA. The eyebrow stays brand blue (`--brand-500 #4673db`) and the description is 50 % white: check their contrast (WCAG 1.4.3) in validation.

Variation 8 — BG Color "Dark blue (subtle)"

Variation Name: BG Color "Dark blue (subtle)" (class `bg-dark-subtle`).

Business Purpose: A dark look that lets more of the photograph show through.

Visual Example:

Figure 11: Subtle dark blue overlay — The Hero at 1440 px with BG Color Dark blue (subtle): photo-5.svg under a 60 % navy overlay, more visible than with Dark blue; the brand-blue eyebrow 'Enterprise AI', the white H1 'Building on belief', the 50 % white description, an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white, centred. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-bg-dark-subtle.jpg)

Screenshot Details — Subtle dark blue overlay

Item	Detail
Screenshot Name	`screenshots/hero-bg-dark-subtle.jpg`
Screenshot Purpose	Subtle dark blue overlay
Screen Description	The Hero at 1440 px with BG Color Dark blue (subtle): photo-5.svg under a 60 % navy overlay, more visible than with Dark blue; the brand-blue eyebrow 'Enterprise AI', the white H1 'Building on belief', the 50 % white description, an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white, centred.
Business Context	A dark Enterprise AI banner where more of the photograph should show through than with Dark blue.
Author Objective	Add a Hero with photo-5.svg and BG Color Dark blue (subtle), with a Secondary and a Default CTA.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset photo-5.svg (/en/media/photo-5.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	BG Color (Hero › Style)	Dark blue (subtle)	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-5.svg under a 60 % navy overlay, so the image is more visible than with Dark blue; white title 'Building on belief', 50 % white description, brand-blue eyebrow, a white-outline button and a white text link.
- **Rendering behaviour:** Class `bg-dark-subtle`: overlay navy `rgb(1 18 31 / 60%)`, background `#01121f`; title `--color-text-on-neutral` (white), description white at 50 % with medium weight; Secondary and Default CTAs are white until hover or focus, the Default one turning light blue (`--brand-300`). The same at every breakpoint.

- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-5.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- The lighter 60 % overlay needs a darker image to keep white text readable.
- The 50 % white description is the most at risk; verify its contrast on every image change.
- Text and CTA colours are the same as Dark blue; only the overlay strength differs.
- The eyebrow stays brand blue (Part 16 F-17, open).

Common Authoring Mistakes

Error	Root Cause	Resolution
White text disappears over a bright sky	Dark blue (subtle) used with a bright photograph	Switch to Dark blue (80 %) or choose a darker image
The author sees no difference from Dark blue	A very dark image, where 60 % and 80 % look alike	Keep Dark blue for consistency or use a lighter image

Troubleshooting

- **Symptoms:** The description is barely visible on the published page.
- **Cause:** The 60 % navy overlay lets a bright area of photo-5.svg through behind the 50 % white text.
- **Resolution:** Switch BG Color to Dark blue or Black, or replace the image with a darker one.
- **Verification Steps:** A contrast checker shows at least 4.5:1 for the description on the preview.

Use Cases: Dark banners with expressive imagery.

Authoring Guidelines: Style tab: BG Color = Dark blue (subtle).

Business Rules: As Dark blue; the lighter overlay needs a darker image.

Rendering Rules: `--hero-overlay: rgb(1 18 31 / 60%)`, background `#01121f`, white text and CTAs as Dark blue.

Responsive Behaviour: Same at every breakpoint.

SEO Impact: None.

Accessibility Compliance: Verify contrast: with bright images 60 % navy may not be enough for the 50 % white description.

Variation 9 — BG Color "Black"

Variation Name: BG Color "Black" (class `bg-black`).

Business Purpose: A neutral, dramatic black banner.

Visual Example:

Figure 12: Black overlay — The Hero at 1440 px with BG Color Black: photo-6.svg under an 80 % black overlay; the brand-blue eyebrow 'Enterprise AI', the white H1 'Building on belief', the 50 % white description, an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white, centred. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-bg-black.jpg)

Screenshot Details — Black overlay

Item	Detail
Screenshot Name	`screenshots/hero-bg-black.jpg`
Screenshot Purpose	Black overlay
Screen Description	The Hero at 1440 px with BG Color Black: photo-6.svg under an 80 % black overlay; the brand-blue eyebrow 'Enterprise AI', the white H1 'Building on belief', the 50 % white description, an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white, centred.
Business Context	An event or campaign banner with cinematic imagery uses a neutral, dramatic black look.
Author Objective	Add a Hero with photo-6.svg and BG Color Black, with a Secondary and a Default CTA.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset photo-6.svg (/en/media/photo-6.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
B	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recom-	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					mended); only shown with a title	
C	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	BG Color (Hero › Style)	Black	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-6.svg under an 80 % black overlay; white title 'Building on belief', 50 % white description, brand-blue eyebrow, a white-outline 'Talk to our experts' button and a white 'Explore our services' text link.
- **Rendering behaviour:** Class `bg-black`: overlay black `rgb(0 0 0 / 80%)`, background `--black-1000` (`#0c0c0d`); title `--color-text-on-neutral` (white), description white at 50 % with medium weight; Secondary and Default CTAs are white until hover or focus, the Default one turning light blue (`--brand-300`). The same at every breakpoint.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-6.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- Black uses the same white text and CTA rules as Dark blue.
- Choose Black for neutral or cinematic images; brand statements use Dark blue.
- The eyebrow stays brand blue on black (Part 16 F-17, open); check its contrast.
- Without an image the hero is a plain black banner with white text.

Common Authoring Mistakes

Error	Root Cause	Resolution
The banner looks almost plain black	A dark photograph under the 80 % black overlay	Use a brighter image or Dark blue (subtle)
A Primary CTA looks out of place	Primary keeps its normal fill on dark backgrounds	Use Secondary or Default CTAs on Black

Troubleshooting

- **Symptoms:** The live banner is plain black with white text and no photograph.
- **Cause:** photo-6.svg was not published, so the Hero has no media and only the `--black-1000` background shows.
- **Resolution:** Publish photo-6.svg in AEM Assets and publish the page again.
- **Verification Steps:** On aem.live the photograph shows under the 80 % black overlay and its request returns 200.

Use Cases: Events, campaigns, cinematic imagery.

Authoring Guidelines: Style tab: BG Color = Black.

Business Rules: As Dark blue.

Rendering Rules: `--hero-overlay: rgb(0 0 0 / 80%)`, background `--black-1000` (`#0c0c0d`), white text and CTAs.

Responsive Behaviour: Same at every breakpoint.

SEO Impact: None.

Accessibility Compliance: As Dark blue.

Variation 10 — Vertical Alignment "Top"

Variation Name: Vertical Alignment "Top" (class `align-top`).

Business Purpose: Place the content at the top of the banner, leaving the lower part of the image visible.

Visual Example:

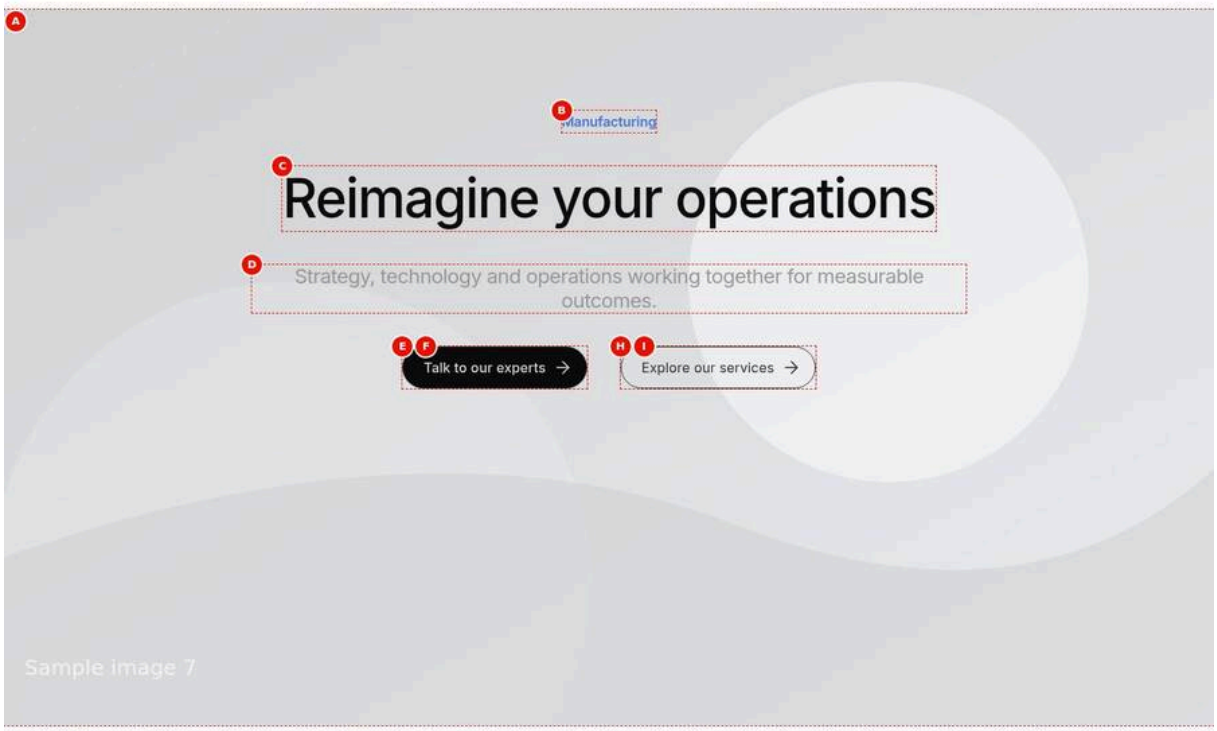

Figure 13: Content at the top — The Hero at 1440 px: photo-7.svg under the 80 % white overlay with the brand-blue eyebrow 'Manufacturing', the H1 'Reimagine your operations', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; with Vertical Alignment Top the centred content starts right below the 7.5rem top padding, leaving the lower part of the image free. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-align-top.jpg)

Screenshot Details — Content at the top

Item	Detail
Screenshot Name	`screenshots/hero-align-top.jpg`
Screenshot Purpose	Content at the top
Screen Description	The Hero at 1440 px: photo-7.svg under the 80 % white overlay with the brand-blue eyebrow 'Manufacturing', the H1 'Reimagine your operations', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; with Vertical Alignment Top the centred content starts right below the 7.5rem top padding, leaving the lower part of the image free.
Business Context	A Manufacturing landing page whose photograph shows its subject in the lower half, so the text goes to the top.
Author Objective	Add a Hero with photo-7.svg and set Vertical Alignment to Top.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset photo-7.svg (/en/media/photo-7.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Eyebrow (Hero › Content)	Manufacturing	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Reimagine your operations	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(K)	Vertical Alignment (Hero › Style)	Top	No	Vertical position of the content	Keep the image subject visible	Options: Top, Middle, Bottom

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow 'Manufacturing', the title 'Reimagine your operations', the description and the two CTAs start right below the top padding, centred; the lower half of photo-7.svg stays free.
- **Rendering behaviour:** Class `align-top` sets `justify-content: flex-start` on the column flex box; the effect shows only because the hero is taller than its content (35, 40 or 53.125rem). Applies at every breakpoint.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-7.svg must be published with the page (referenced

assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- Vertical Alignment moves the whole content block; reading order is unchanged.
- Top only shows when the hero is taller than its content; long content fills the hero anyway.
- Horizontal Alignment and Text Alignment keep their defaults Center and Center align here.

Common Authoring Mistakes

Error	Root Cause	Resolution
No visible change after choosing Top	The content is as tall as the hero, so there is no free space	Shorten the description or accept the full banner
The text covers the image subject at the top	Top chosen for an image whose subject is at the top	Use Bottom for such images

Troubleshooting

- **Symptoms:** The content is at the top on desktop but looks centred on mobile.
- **Cause:** On mobile the stacked content nearly fills the 35rem banner, so little free space is left below it.
- **Resolution:** Accept it, or shorten the description so the position shows.
- **Verification Steps:** Check 375 px and 1440 px on the preview: the content starts below the top padding at both widths.

Use Cases: Images with the subject at the bottom.

Authoring Guidelines: Style tab: Vertical Alignment = Top.

Business Rules: Only visible when the hero is taller than its content (minimum heights).

Rendering Rules: `justify-content: flex-start` on the hero (a column flex box).

Responsive Behaviour: Applies at every breakpoint.

SEO Impact: None.

Accessibility Compliance: No impact; reading order is unchanged.

Variation 11 — Vertical Alignment "Middle" (default)

Variation Name: Vertical Alignment "Middle" (class `align-middle`, set by the block template).

Business Purpose: The balanced default: the content in the vertical centre.

Visual Example:

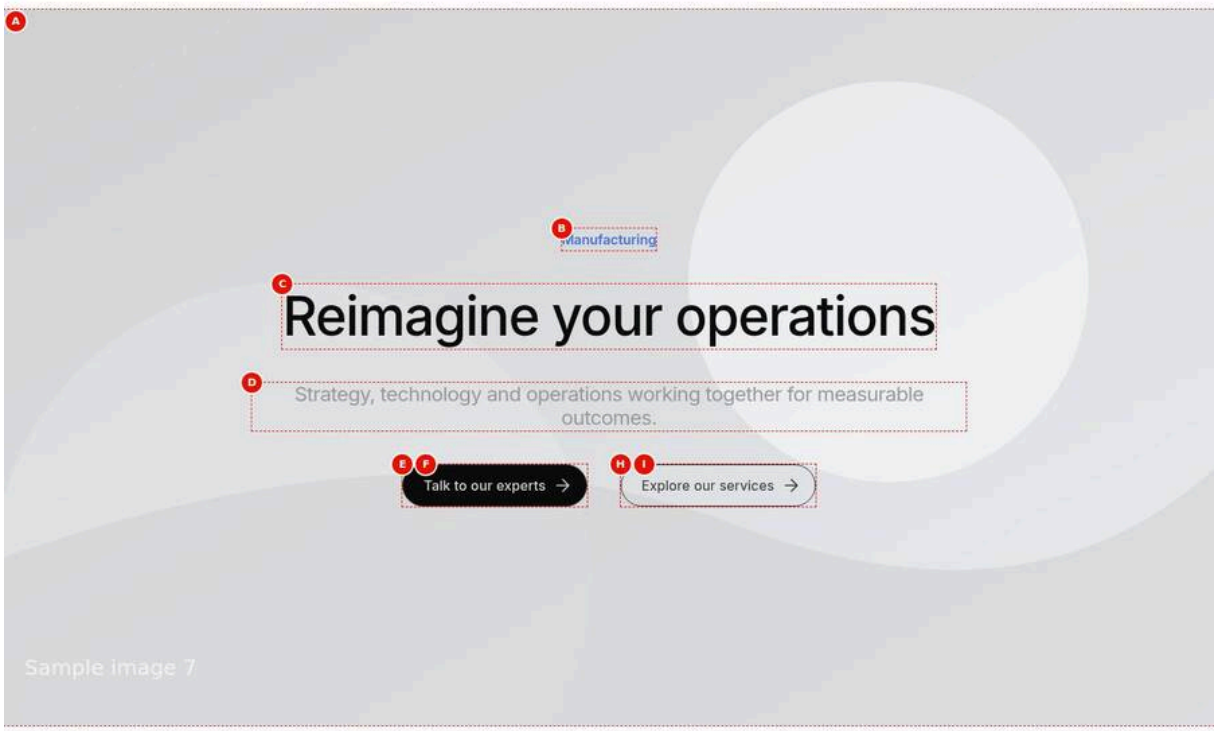

Figure 14: Content in the middle — The Hero at 1440 px: photo-7.svg under the 80 % white overlay with the brand-blue eyebrow 'Manufacturing', the H1 'Reimagine your operations', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; with the default Middle the content is centred vertically and horizontally. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-align-middle.jpg)

Screenshot Details — Content in the middle

Item	Detail
Screenshot Name	`screenshots/hero-align-middle.jpg`
Screenshot Purpose	Content in the middle
Screen Description	The Hero at 1440 px: photo-7.svg under the 80 % white overlay with the brand-blue eyebrow 'Manufacturing', the H1 'Reimagine your operations', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; with the default Middle the content is centred vertically and horizontally.
Business Context	The same Manufacturing banner with the balanced default layout, the content in the vertical centre.
Author Objective	Add a Hero with photo-7.svg and keep Vertical Alignment on its default Middle.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset photo-7.svg (/en/media/photo-7.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Eyebrow (Hero › Content)	Manufacturing	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Reimagine your operations	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow 'Manufacturing', the title 'Reimagine your operations', the description and the two CTAs centred vertically and horizontally over photo-7.svg.
- **Rendering behaviour:** The block template sets `align-middle`; the base `.hero` rule centres the content with `justify-content: center` at every breakpoint.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-7.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- Middle is pre-selected for every new Hero (model default and block template).
- No Style change is needed for this layout.
- Keep the image subject away from the centre, where the text sits.

Common Authoring Mistakes

Error	Root Cause	Resolution
The text covers the image subject	Subject in the centre of photo-7.svg, under the centred content	Choose Top or Bottom, or another image
A copied Hero shows content at the top	Vertical Alignment Top kept from the source Hero	Set Vertical Alignment back to Middle

Troubleshooting

- **Symptoms:** The content block sits clearly higher or lower than the middle of the banner although Middle is selected.
- **Cause:** Padding top or Padding bottom was changed in the Additional tab, so the space in which Middle centres the content is uneven.
- **Resolution:** Set Padding top and Padding bottom back to Default.
- **Verification Steps:** The content is vertically centred at 375 px and 1440 px on the preview.

Use Cases: Most heroes.

Authoring Guidelines: Style tab: Vertical Alignment = Middle (pre-selected for new Heroes).

Business Rules: Default value of the model and of the block template.

Rendering Rules: `justify-content: center` (the base `.hero` rule).

Responsive Behaviour: Applies at every breakpoint.

SEO Impact: None.

Accessibility Compliance: No impact.

Variation 12 — Vertical Alignment "Bottom"

Variation Name: Vertical Alignment "Bottom" (class `align-bottom`).

Business Purpose: Anchor the content at the bottom, showing the top of the image.

Visual Example:

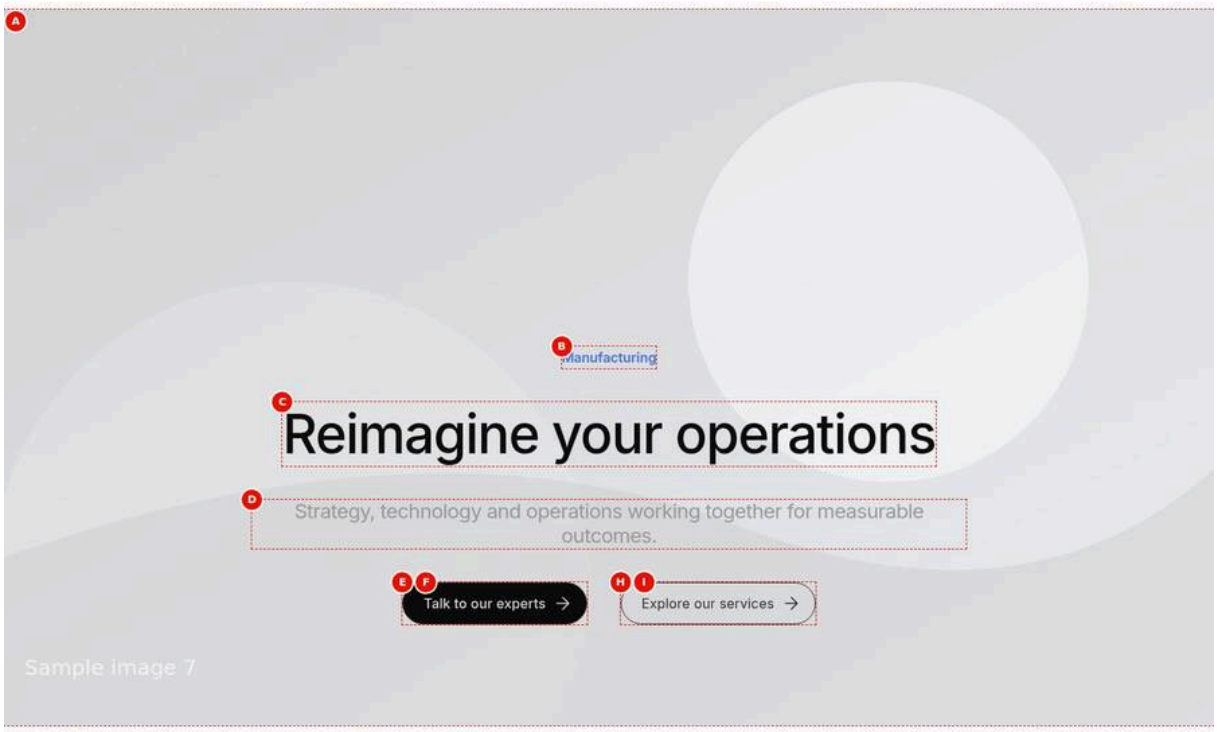

Figure 15: Content at the bottom — The Hero at 1440 px: photo-7.svg under the 80 % white overlay with the brand-blue eyebrow 'Manufacturing', the H1 'Reimagine your operations', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; with Vertical Alignment Bottom the centred content rests above the 7.5rem bottom padding, leaving the upper part of the image free. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-align-bottom.jpg)

Screenshot Details — Content at the bottom

Item	Detail
Screenshot Name	`screenshots/hero-align-bottom.jpg`
Screenshot Purpose	Content at the bottom
Screen Description	The Hero at 1440 px: photo-7.svg under the 80 % white overlay with the brand-blue eyebrow 'Manufacturing', the H1 'Reimagine your operations', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; with Vertical Alignment Bottom the centred content rests above the 7.5rem bottom padding, leaving the upper part of the image free.
Business Context	A Manufacturing banner whose photograph shows sky or the subject at the top, so the text rests at the bottom.
Author Objective	Add a Hero with photo-7.svg and set Vertical Alignment to Bottom.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset photo-7.svg (/en/media/photo-7.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Eyebrow (Hero › Content)	Manufacturing	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Reimagine your operations	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(K)	Vertical Alignment (Hero › Style)	Bottom	No	Vertical position of the content	Keep the image subject visible	Options: Top, Middle, Bottom

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow, the title 'Reimagine your operations', the description and the two CTAs rest just above the bottom padding, centred; the upper part of photo-7.svg stays free.
- **Rendering behaviour:** Class `align-bottom` sets `justify-content: flex-end`; visible whenever the hero is taller than its content, at every breakpoint.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-7.svg must be published with the page (referenced

assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- Bottom suits images with the subject at the top and editorial looks.
- With a Lottie animation the pause / play button is also at the bottom right; keep the content clear of it.
- Horizontal and Text Alignment keep Center here.

Common Authoring Mistakes

Error	Root Cause	Resolution
The CTAs collide with the pause button	Bottom combined with a Lotto animation and Right alignment	Use Center or Left, or Vertical Alignment Middle
The content looks cut off at the bottom	Margin or padding bottom set to 0 in the Additional tab	Reset Padding bottom to Default

Troubleshooting

- **Symptoms:** The content seems glued to the next section on mobile.
- **Cause:** Padding bottom was reduced in the Additional tab, overriding the 4rem default.
- **Resolution:** Set Padding bottom back to Default.
- **Verification Steps:** The content rests 4rem above the bottom edge at 375 px and 7.5rem at 1440 px.

Use Cases: Images with the subject at the top; editorial looks.

Authoring Guidelines: Style tab: Vertical Alignment = Bottom.

Business Rules: With a Lottie animation, the pause / play button is also at the bottom right; keep Right / Bottom content clear of it.

Rendering Rules: `justify-content: flex-end`.

Responsive Behaviour: Applies at every breakpoint.

SEO Impact: None.

Accessibility Compliance: No impact.

Variation 13 — Horizontal Alignment "Left"

Variation Name: Horizontal Alignment "Left" (class `align-left`).

Business Purpose: Place the content block on the left side of the banner, leaving the right side of the image free.

Visual Example:

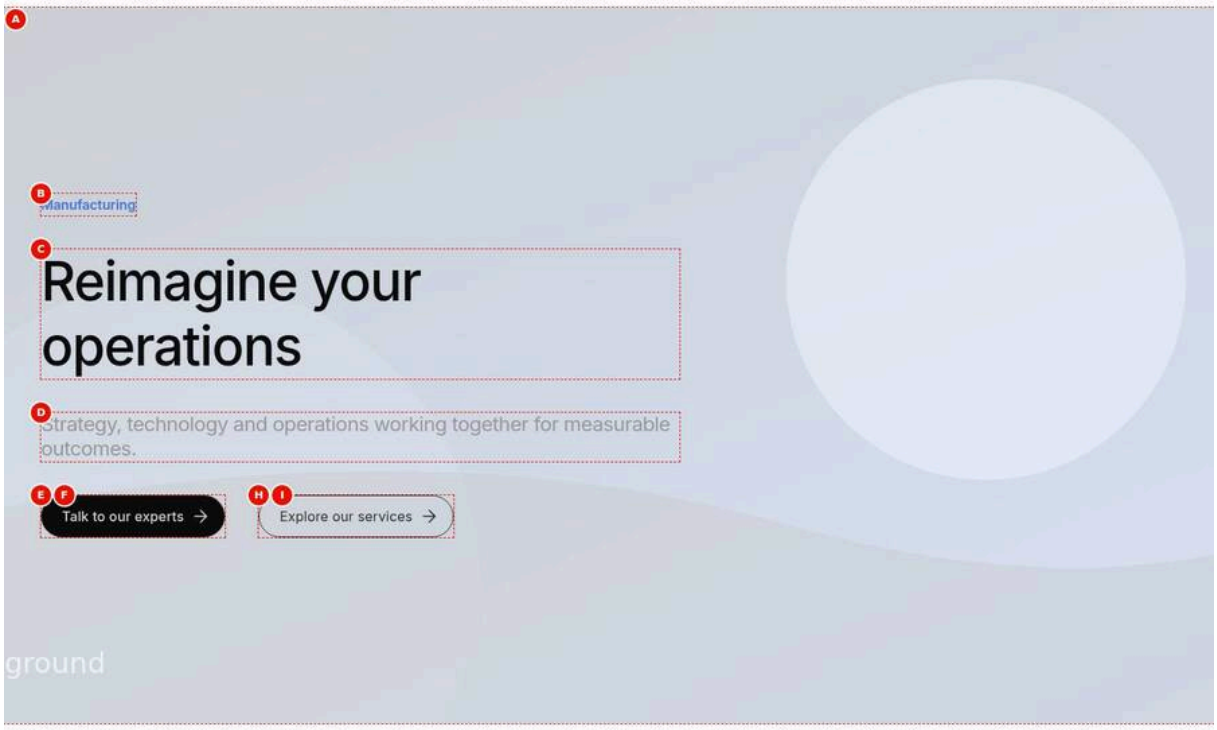

Figure 16: Content on the left — The Hero at 1440 px: wide.svg under the 80 % white overlay with the brand-blue eyebrow 'Manufacturing', the H1 'Reimagine your operations', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; with Horizontal Alignment Left and Left align the 47.5rem content block sits on the left, its text and CTAs left aligned. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-align-left.jpg)

Screenshot Details — Content on the left

Item	Detail
Screenshot Name	`screenshots/hero-align-left.jpg`
Screenshot Purpose	Content on the left
Screen Description	The Hero at 1440 px: wide.svg under the 80 % white overlay with the brand-blue eyebrow 'Manufacturing', the H1 'Reimagine your operations', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; with Horizontal Alignment Left and Left align the 47.5rem content block sits on the left, its text and CTAs left aligned.
Business Context	A Manufacturing banner with a wide image whose subject is on the right, so the content block goes to the left.
Author Objective	Add a Hero with wide.svg, Horizontal Alignment Left and Text Alignment Left align.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset wide.svg (/en/media/wide.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Eyebrow (Hero › Content)	Manufacturing	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Reimagine your operations	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(K)	Horizontal Alignment (Hero › Style)	Left	No	Horizontal position of the content (desktop)	Combine with a matching Text Alignment	Options: Left, Center, Right
(L)	Text Alignment (Hero › Style)	Left align	No	Alignment of icon, text and CTAs	Left for long descriptions	Options: Left align, Center align, Right align

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** On desktop a 47.5rem wide content block sits on the left of the banner with its eyebrow, title, description and CTAs left aligned; the right side of wide.svg stays free.

- **Rendering behaviour:** Class `align-left` sets `--hero-position: flex-start`; from 900 px the content block is limited to 47.5rem. Below 900 px the block is full width, so only the left-aligned text shows.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. wide.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- Horizontal Alignment positions the block, Text Alignment the text inside it; set both to Left.
- New Heroes get Text Alignment Center align from the template, so without Left align the text stays centred in the left block.
- The block position shows only from 900 px.
- Left-aligned text is the easiest to read for long descriptions.

Common Authoring Mistakes

Error	Root Cause	Resolution
The block moved left but the text is centred	Text Alignment left on the pre-selected Center align	Set Text Alignment to Left align
On tablet the content is not on the left	Below 900 px the content block is always full width	Expected; check the layout from 900 px

Troubleshooting

- **Symptoms:** On a 768 px tablet the text runs across the whole image, over the subject.
- **Cause:** Below 900 px the content block is full width; only the text alignment is left.
- **Resolution:** Shorten the description or choose an image whose subject still shows at tablet width.
- **Verification Steps:** Check 768 px and 1440 px on the preview.

Use Cases: Images with the subject on the right.

Authoring Guidelines: Style tab: Horizontal Alignment = Left; usually combined with Text Alignment = Left align.

Business Rules: If no Text Alignment is set (heroes authored before the option existed), the text follows the position (left aligned).

Rendering Rules: `--hero-position: flex-start`; at 900 px and wider the content block is limited to 47.5rem.

Responsive Behaviour: Desktop (900 px+): block on the left, 47.5rem wide. Tablet below 900 px and mobile: the block is full width, so only the text alignment shows.

SEO Impact: None.

Accessibility Compliance: Left-aligned text is the easiest to read for long descriptions (WCAG 1.4.8 advisory).

Variation 14 — Horizontal Alignment "Center" (default)

Variation Name: Horizontal Alignment "Center" (class `align-center`, set by the block template).

Business Purpose: The symmetrical default banner.

Visual Example:

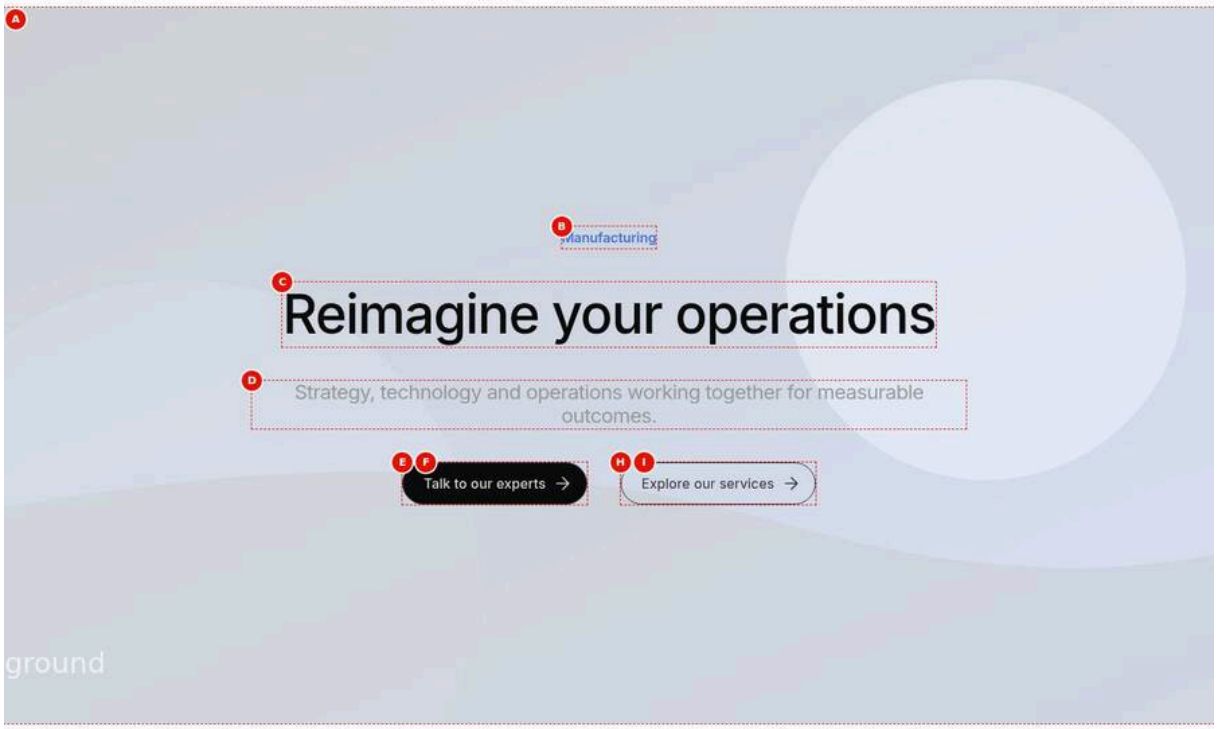

Figure 17: Content in the centre — The Hero at 1440 px: wide.svg under the 80 % white overlay with the brand-blue eyebrow 'Manufacturing', the H1 'Reimagine your operations', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; with the default Center and Center align the content block and its text are centred. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-align-center.jpg)

Screenshot Details — Content in the centre

Item	Detail
Screenshot Name	`screenshots/hero-align-center.jpg`
Screenshot Purpose	Content in the centre
Screen Description	The Hero at 1440 px: wide.svg under the 80 % white overlay with the brand-blue eyebrow 'Manufacturing', the H1 'Reimagine your operations', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; with the default Center and Center align the content block and its text are centred.
Business Context	The symmetrical default Manufacturing banner, with the content block in the horizontal centre.
Author Objective	Add a Hero with wide.svg and keep Horizontal Alignment on its default Center.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset wide.svg (/en/media/wide.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Eyebrow (Hero › Content)	Manufacturing	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Reimagine your operations	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow 'Manufacturing', the title 'Reimagine your operations', the description and the two CTAs centred horizontally, with centred text.
- **Rendering behaviour:** The template sets `align-center` and `text-center`; the content block is up to 84.5rem wide, centred at every breakpoint.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. wide.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- Center is pre-selected for new Heroes (model default and template).
- Keep centred descriptions short; long centred paragraphs are harder to read.
- No Style change is needed for this layout.

Common Authoring Mistakes

Error	Root Cause	Resolution
The content covers the subject of wide.svg	Centred content over a centred subject	Choose Left or Right with the matching Text Alignment
A long description is hard to read	Centred text over many lines	Shorten it to about 200 characters

Troubleshooting

- **Symptoms:** The text is centred but the block sits to one side.
- **Cause:** Horizontal Alignment Left or Right was kept from a copied Hero.
- **Resolution:** Set Horizontal Alignment back to Center.
- **Verification Steps:** The block has class align-center and is centred at 1440 px.

Use Cases: Most heroes.

Authoring Guidelines: Style tab: Horizontal Alignment = Center (pre-selected).

Business Rules: Default value of the model and the block template.

Rendering Rules: `--hero-position: center`; content up to 84.5rem wide.

Responsive Behaviour: Centred at every breakpoint.

SEO Impact: None.

Accessibility Compliance: Keep centred descriptions short; long centred paragraphs are harder to read.

Variation 15 — Horizontal Alignment "Right"

Variation Name: Horizontal Alignment "Right" (class `align-right`).

Business Purpose: Place the content block on the right, the image subject on the left.

Visual Example:

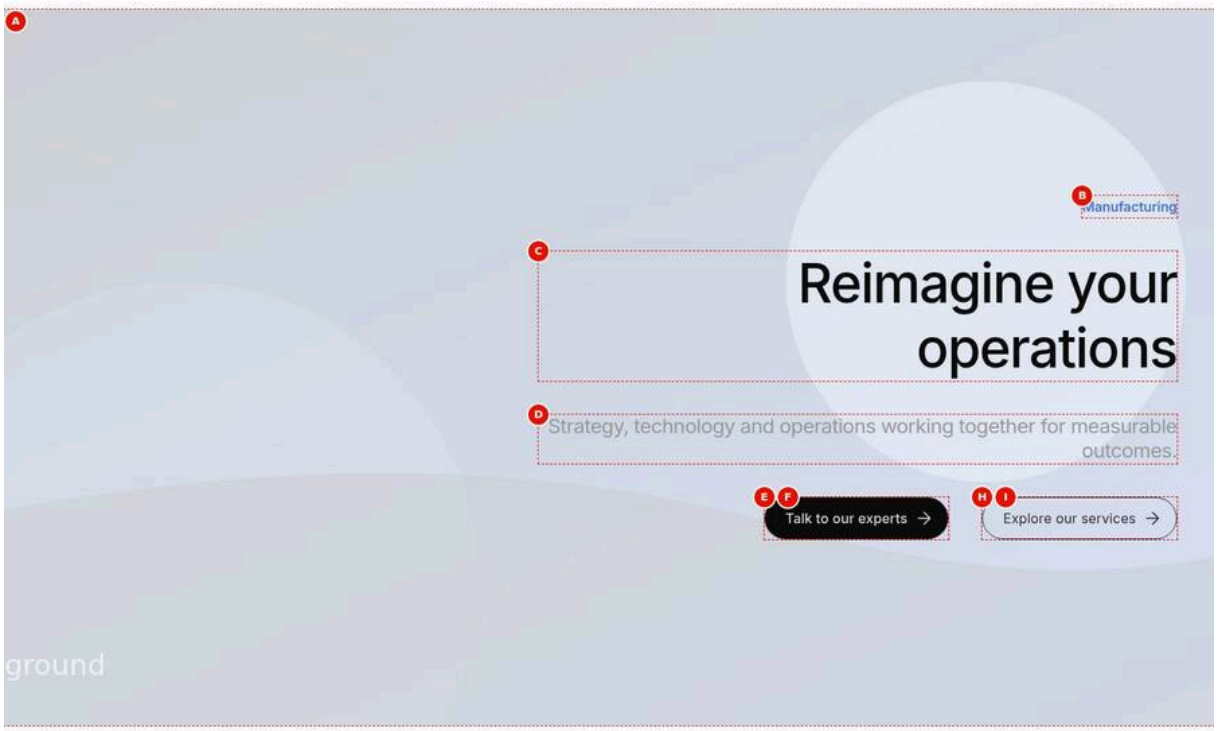

Figure 18: Content on the right — The Hero at 1440 px: wide.svg under the 80 % white overlay with the brand-blue eyebrow 'Manufacturing', the H1 'Reimagine your operations', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; with Horizontal Alignment Right and Right align the 47.5rem content block sits on the right, its text and CTAs right aligned. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-align-right.jpg)

Screenshot Details — Content on the right

Item	Detail
Screenshot Name	`screenshots/hero-align-right.jpg`
Screenshot Purpose	Content on the right
Screen Description	The Hero at 1440 px: wide.svg under the 80 % white overlay with the brand-blue eyebrow 'Manufacturing', the H1 'Reimagine your operations', the grey description and the buttons 'Talk to our experts' (Primary, filled) and 'Explore our services' (Secondary, outline) side by side; with Horizontal Alignment Right and Right align the 47.5rem content block sits on the right, its text and CTAs right aligned.
Business Context	A Manufacturing banner with a wide image whose subject is on the left, so the content block goes to the right.
Author Objective	Add a Hero with wide.svg, Horizontal Alignment Right and Text Alignment Right align.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset wide.svg (/en/media/wide.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Eyebrow (Hero › Content)	Manufacturing	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Reimagine your operations	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(K)	Horizontal Alignment (Hero › Style)	Right	No	Horizontal position of the content (desktop)	Combine with a matching Text Alignment	Options: Left, Center, Right
(L)	Text Alignment (Hero › Style)	Right align	No	Alignment of icon, text and CTAs	Left for long descriptions	Options: Left align, Center align, Right align

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** On desktop the 47.5rem content block sits on the right of the banner with right-aligned eyebrow, title, description and CTAs; the left side of wide.svg stays free.

- **Rendering behaviour:** Class `align-right` sets `--hero-position: flex-end`; from 900 px the block is 47.5rem wide. `text-right` uses the logical `end`, so it is right aligned in left-to-right languages. Below 900 px the block is full width.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. wide.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- Set Horizontal Alignment Right and Text Alignment Right align together.
- Avoid long right-aligned descriptions in left-to-right languages.
- With a Lottie animation keep Right content clear of the pause button at the bottom right.
- The block position shows only from 900 px.

Common Authoring Mistakes

Error	Root Cause	Resolution
The block is on the right but the text is centred	Text Alignment left on Center align	Set Text Alignment to Right align
The CTAs are hard to find	Right-aligned buttons at the end of a long right-aligned text	Shorten the description or use Left

Troubleshooting

- **Symptoms:** On mobile the text is right aligned across the full width and looks ragged.
- **Cause:** Text Alignment Right align applies at every width, while the block is full width below 900 px.
- **Resolution:** Accept it or choose Center align for a calmer mobile layout.
- **Verification Steps:** Check 375 px and 1440 px on the preview.

Use Cases: Images with the subject on the left.

Authoring Guidelines: Style tab: Horizontal Alignment = Right; choose a Text Alignment.

Business Rules: Without a Text Alignment the text is right aligned (`end`).

Rendering Rules: `--hero-position: flex-end`; 47.5rem content width at 900 px+.

Responsive Behaviour: As Variation 13, mirrored.

SEO Impact: None.

Accessibility Compliance: Avoid right-aligned long text for left-to-right languages.

Variation 16 — Text Alignment "Left align"

Variation Name: Text Alignment "Left align" (class `text-left`).

Business Purpose: Align the icon, eyebrow, title, description and CTAs to the start of the content block.

Visual Example:

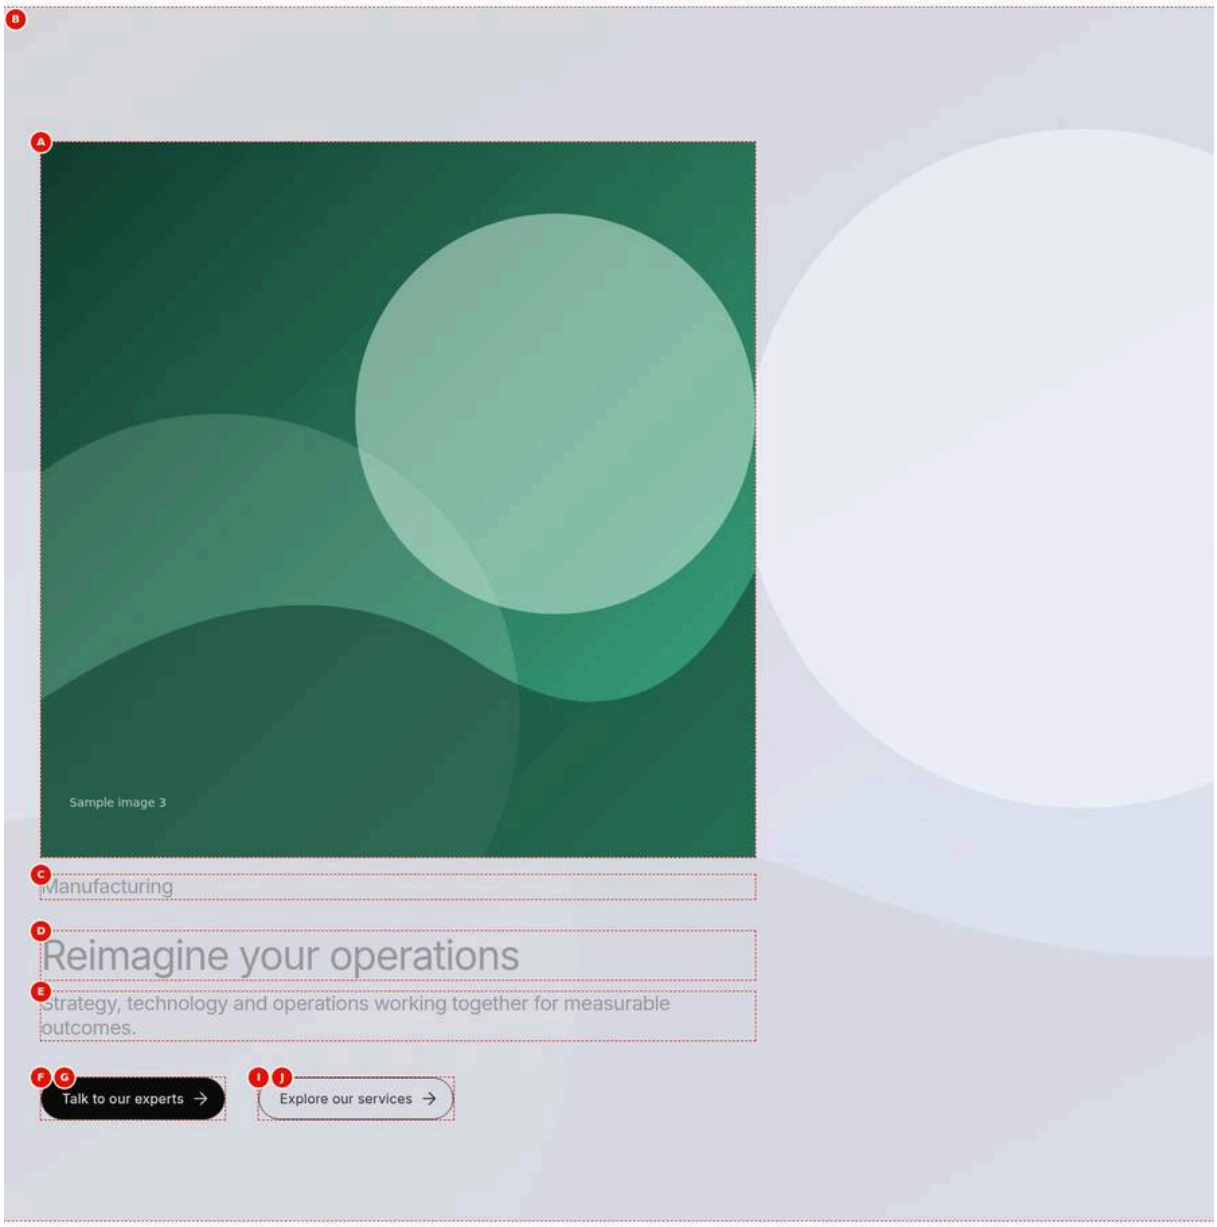

Figure 19: Left-aligned text — The Hero at 1440 px: photo-2.svg under the white overlay; inside the centred content block the square-3 icon, the eyebrow 'Manufacturing', the H1 'Reimagine your operations', the description and the Primary and Secondary CTAs all start at its left edge (Text Alignment Left align). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-text-left.jpg)

Screenshot Details — Left-aligned text

Item	Detail
Screenshot Name	`screenshots/hero-text-left.jpg`
Screenshot Purpose	Left-aligned text
Screen Description	The Hero at 1440 px: photo-2.svg under the white overlay; inside the centred content block the square-3 icon, the eyebrow 'Manufacturing', the H1 'Reimagine your operations', the description and the Primary and Secondary CTAs all start at its left edge (Text Alignment Left align).
Business Context	A Manufacturing banner whose description reads better left aligned, while the content block stays in the centre of the hero.

Item	Detail
Author Objective	Add a Hero with the square-3 icon, photo-2.svg and Text Alignment Left align, keeping Horizontal Alignment Center.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Icon (Hero › Image)	Select the asset square-3.svg (/en/media/square-3.svg)	No	Small brand or topic icon above the eyebrow	Square icon, SVG or PNG; optional	None
B	Hero Image Path (Hero › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
C	Eyebrow (Hero › Content)	Manufacturing	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
D	Title (Hero › Content)	Reimagine your operations	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
E	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
F	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
G	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(H)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
I	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
J	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(K)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(L)	Text Alignment (Hero › Style)	Left align	No	Alignment of icon, text and CTAs	Left for long descriptions	Options: Left align, Center align, Right align

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (H), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Inside the centred content block the icon, the eyebrow, the title, the description and the CTA row all start at the left edge of the block.
- **Rendering behaviour:** Class `text-left` sets `--hero-text-align: start` and `--hero-align: flex-start`, which also moves the icon and the CTA row to the start; it overrides the alignment implied by Horizontal Alignment, at every breakpoint.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-2.svg and square-3.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- Text Alignment aligns the icon, text and CTAs inside the content block; it does not move the block.
- With Horizontal Alignment Center the 84.5rem block stays centred, so on wide screens the text starts left of centre.
- Left align is recommended for long descriptions.
- Text Alignment overrides the text alignment that Left or Right Horizontal Alignment would imply.

Common Authoring Mistakes

Error	Root Cause	Resolution
Left-aligned text looks unbalanced over the photograph	Left align combined with an image composed for centred text	Choose an image with free space on the left or keep Center align
The block is still in the middle	Text Alignment only aligns the content inside the block	Set Horizontal Alignment Left to move the block

Troubleshooting

- **Symptoms:** The text is left aligned but sits in the middle of a wide screen.
- **Cause:** The content block is centred (Horizontal Alignment Center) and up to 84.5rem wide.
- **Resolution:** Set Horizontal Alignment to Left if the block should start at the left side.
- **Verification Steps:** At 1440 px the block position and text alignment match the design.

Use Cases: Left-positioned content; long descriptions.

Authoring Guidelines: Style tab: Text Alignment = Left align.

Business Rules: Overrides the text alignment implied by the Horizontal Alignment.

Rendering Rules: `--hero-text-align: start`, `--hero-align: flex-start` (icon and CTA row start).

Responsive Behaviour: Applies at every breakpoint.

SEO Impact: None.

Accessibility Compliance: Recommended for readability.

Variation 17 — Text Alignment "Center align" (default)

Variation Name: Text Alignment "Center align" (class `text-center`, set by the block template).

Business Purpose: Centred text for symmetrical banners.

Visual Example:

Figure 20: Centred text — The Hero at 1440 px: photo-2.svg under the white overlay; the square-3 icon, the eyebrow 'Manufacturing', the H1 'Reimagine your operations', the description and the Primary and Secondary CTAs all centred in the content block (default Center align). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-text-center.jpg)

Screenshot Details — Centred text

Item	Detail
Screenshot Name	`screenshots/hero-text-center.jpg`
Screenshot Purpose	Centred text
Screen Description	The Hero at 1440 px: photo-2.svg under the white overlay; the square-3 icon, the eyebrow 'Manufacturing', the H1 'Reimagine your operations', the description and the Primary and Secondary CTAs all centred in the content block (default Center align).
Business Context	The default symmetrical Manufacturing banner with all content centred inside the content block.
Author Objective	Add a Hero with the square-3 icon and photo-2.svg and keep Text Alignment on its default Center align.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Icon (Hero › Image)	Select the asset square-3.svg (/en/media/square-3.svg)	No	Small brand or topic icon above the eyebrow	Square icon, SVG or PNG; optional	None
B	Hero Image Path (Hero › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
C	Eyebrow (Hero › Content)	Manufacturing	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
D	Title (Hero › Content)	Reimagine your operations	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
E	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
F	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
G	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(H)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
I	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
J	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(K)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (H), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The icon, the eyebrow 'Manufacturing', the title 'Reimagine your operations', the description and the CTA row all centred inside the content block.
- **Rendering behaviour:** The template sets `text-center`, giving `--hero-text-align: center` and `--hero-align: center` for the icon and the CTA row; the same at every breakpoint.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-2.svg and square-3.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- Center align is pre-selected for new Heroes, also when Horizontal Alignment is changed to Left or Right.
- Keep centred text short.
- No Style change is needed for this layout.

Common Authoring Mistakes

Error	Root Cause	Resolution
After moving the block left the text is still centred	Center align stays pre-selected	Change Text Alignment too
A long centred description is hard to read	Many lines of centred text	Shorten it or use Left align

Troubleshooting

- **Symptoms:** In a Hero authored before the Text Alignment option, the text follows a Left or Right position although no text alignment was chosen.
- **Cause:** Without a text class, Horizontal Alignment Left or Right also aligns the text (backwards compatibility).
- **Resolution:** Select Center align (or the wanted value) in Text Alignment so the class is saved.
- **Verification Steps:** The block has class text-center and the icon, text and CTAs are centred on the preview.

Use Cases: Default banners.

Authoring Guidelines: Style tab: Text Alignment = Center align (pre-selected).

Business Rules: Default of the model and the block template, so new Heroes are centred even when the Horizontal Alignment is changed to Left or Right (change Text Alignment too).

Rendering Rules: `--hero-text-align: center`, `--hero-align: center`.

Responsive Behaviour: Applies at every breakpoint.

SEO Impact: None.

Accessibility Compliance: Keep centred text short.

Variation 18 — Text Alignment "Right align"

Variation Name: Text Alignment "Right align" (class `text-right`).

Business Purpose: Right-aligned content, for right-positioned blocks.

Visual Example:

Figure 21: Right-aligned text — The Hero at 1440 px: photo-2.svg under the white overlay; inside the centred content block the square-3 icon, the eyebrow 'Manufacturing', the H1 'Reimagine your operations', the description and the Primary and Secondary CTAs all aligned to its right edge (Text Alignment Right align). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-text-right.jpg)

Screenshot Details — Right-aligned text

Item	Detail
Screenshot Name	`screenshots/hero-text-right.jpg`
Screenshot Purpose	Right-aligned text
Screen Description	The Hero at 1440 px: photo-2.svg under the white overlay; inside the centred content block the square-3 icon, the eyebrow 'Manufacturing', the H1 'Reimagine your operations', the description and the Primary and Secondary CTAs all aligned to its right edge (Text Alignment Right align).
Business Context	A Manufacturing banner variant with all content aligned to the right edge of the content block.
Author Objective	Add a Hero with the square-3 icon, photo-2.svg and Text Alignment Right align.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Icon (Hero › Image)	Select the asset square-3.svg (/en/media/square-3.svg)	No	Small brand or topic icon above the eyebrow	Square icon, SVG or PNG; optional	None
B	Hero Image Path (Hero › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
C	Eyebrow (Hero › Content)	Manufacturing	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
D	Title (Hero › Content)	Reimagine your operations	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
E	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
F	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
G	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(H)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
I	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
J	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(K)	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(L)	Text Alignment (Hero › Style)	Right align	No	Alignment of icon, text and CTAs	Left for long descriptions	Options: Left align, Center align, Right align

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (H), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Inside the centred content block the icon, the eyebrow, the title, the description and the CTAs line up at the right edge.
- **Rendering behaviour:** Class `text-right` sets `--hero-text-align: end` and `--hero-align: flex-end`; it uses the logical end, so it is right aligned in left-to-right languages, at every breakpoint.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-2.svg and square-3.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Business Rules

- Right align is meant for content blocks placed on the right (Horizontal Alignment Right).
- Avoid it for long text in left-to-right languages.
- The block itself stays centred here because Horizontal Alignment is Center.

Common Authoring Mistakes

Error	Root Cause	Resolution
Right-aligned text in the middle of the screen	Horizontal Alignment left on Center	Set Horizontal Alignment Right as well
The description is hard to read	Several lines of right-aligned text	Shorten it or use Left align

Troubleshooting

- **Symptoms:** On the live page the text is still centred although Right align was chosen.
- **Cause:** The page was not published again after the Style change, so aem.live still serves the earlier version.
- **Resolution:** Publish the page to Live again.
- **Verification Steps:** The live block has class text-right and the icon, text and CTAs align right.

Use Cases: Right-positioned content blocks.

Authoring Guidelines: Style tab: Text Alignment = Right align.

Business Rules: Uses logical `end`, so it is right aligned in left-to-right languages.

Rendering Rules: `--hero-text-align: end`, `--hero-align: flex-end`.

Responsive Behaviour: Applies at every breakpoint.

SEO Impact: None.

Accessibility Compliance: Avoid for long text.

Variation 19 — Motion Type "None" (default)

Variation Name: Motion Type "None" (no class).

Business Purpose: A static hero, shown immediately.

Visual Example:

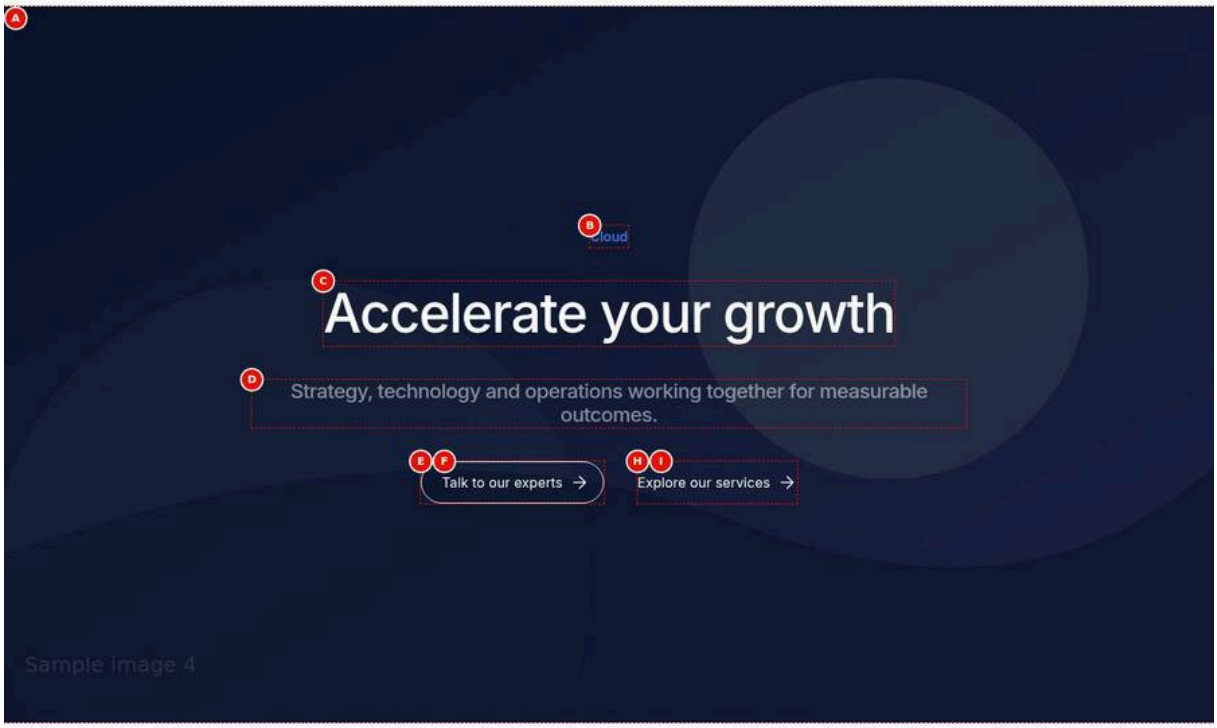

Figure 22: No motion — The Hero at 1440 px: photo-4.svg under the 80 % navy overlay with the brand-blue eyebrow 'Cloud', the white H1 'Accelerate your growth', the 50 % white description and an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white, centred and fully visible with no entrance animation (Motion Type None). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-motion-none.jpg)

Screenshot Details — No motion

Item	Detail
Screenshot Name	`screenshots/hero-motion-none.jpg`
Screenshot Purpose	No motion
Screen Description	The Hero at 1440 px: photo-4.svg under the 80 % navy overlay with the brand-blue eyebrow 'Cloud', the white H1 'Accelerate your growth', the 50 % white description and an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white, centred and fully visible with no entrance animation (Motion Type None).
Business Context	A Cloud landing-page banner that must be fully visible as soon as the page loads, as most first-section heroes should be.
Author Objective	Add a Dark blue Hero with photo-4.svg and leave Motion Type on None.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
B	Eyebrow (Hero › Content)	Cloud	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Accelerate your growth	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-4.svg under the 80 % navy overlay with the brand-blue eyebrow 'Cloud', the white title 'Accelerate your growth', the 50 % white description, a white-outline 'Talk to our experts' button and a white 'Explore our services' text link, all visible at once.
- **Rendering behaviour:** Without a motion class `hero.js` adds neither `motion-ready` nor `is-visible`; image and content render immediately, so the LCP of a first-section Hero is not delayed.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page, where the motion can be checked; Publish to Live copies it to aem.live. photo-4.svg must be published with the page. Motion Type is a block class saved with the page.

Business Rules

- None is the default value of Motion Type.
- Motion Type is the last field of the Links tab, not of the Style tab.
- Keep None on first-section heroes unless an entrance animation is explicitly wanted.
- Dark blue switches the Secondary and Default CTAs to white; the eyebrow stays brand blue (Part 16 F-17, open).

Common Authoring Mistakes

Error	Root Cause	Resolution
The content appears with a delay on page load	Motion Type Fade in or Slide up kept from a copied Hero	Set Motion Type to None
Motion Type cannot be found in the Style tab	The field is in the Links tab, under the CTA List	Open the Links tab and choose None

Troubleshooting

- **Symptoms:** The banner still fades in on the live page although None is selected in the editor.
- **Cause:** The Motion Type change was saved in AEM but the page was not published to Live again.
- **Resolution:** Publish the page to Live.
- **Verification Steps:** On aem.live the block has no motion-fade class and the content shows immediately.

Use Cases: Default; pages where motion is not wanted.

Authoring Guidelines: Links tab: Motion Type = None.

Business Rules: Default value.

Rendering Rules: No `motion-ready` / `is-visible` classes are added.

Responsive Behaviour: Not applicable.

SEO Impact: None.

Accessibility Compliance: No motion.

Variation 20 — Motion Type "Fade in"

Variation Name: Motion Type "Fade in" (class `motion-fade`).

Business Purpose: A subtle entrance: the content fades in when the hero comes into view.

Visual Example:

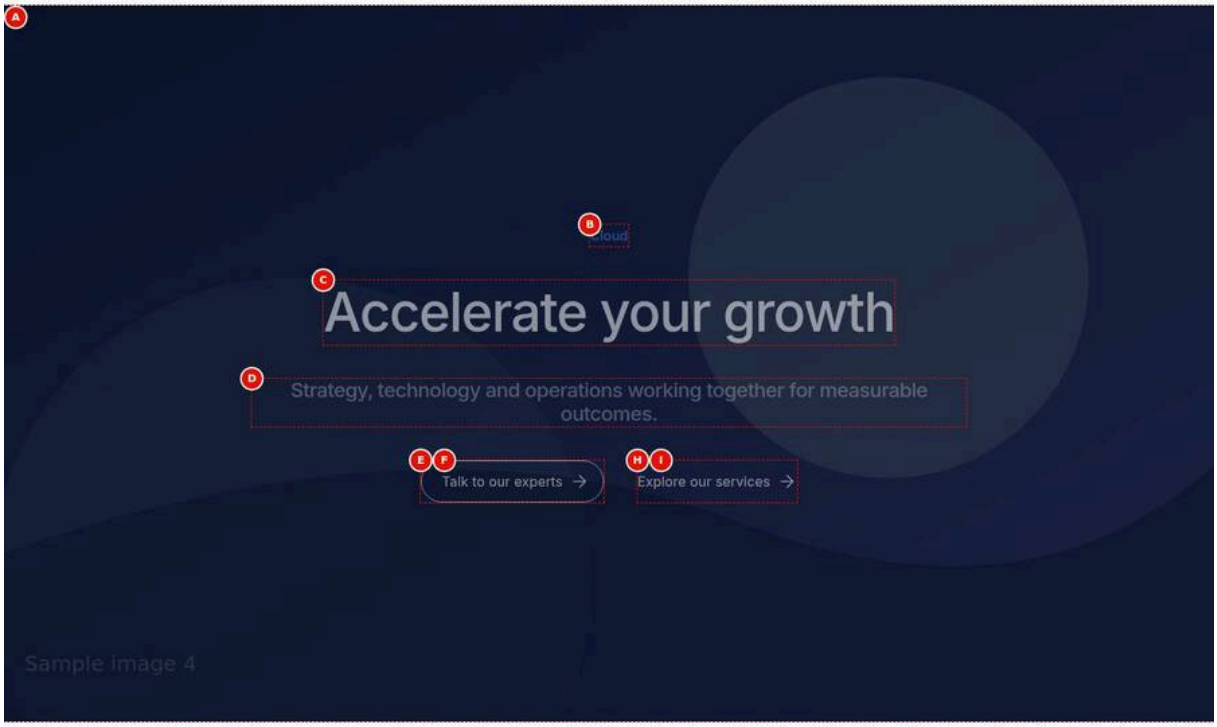

Figure 23: Fade-in motion — The Hero at 1440 px: photo-4.svg under the 80 % navy overlay with the brand-blue eyebrow 'Cloud', the white H1 'Accelerate your growth', the 50 % white description and an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white; a frame about 250 ms into the 800 ms Fade in, the whole content block half transparent while the image is static. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-motion-fade.jpg)

Screenshot Details — Fade-in motion

Item	Detail
Screenshot Name	`screenshots/hero-motion-fade.jpg`
Screenshot Purpose	Fade-in motion
Screen Description	The Hero at 1440 px: photo-4.svg under the 80 % navy overlay with the brand-blue eyebrow 'Cloud', the white H1 'Accelerate your growth', the 50 % white description and an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white; a frame about 250 ms into the 800 ms Fade in, the whole content block half transparent while the image is static.
Business Context	A Cloud campaign banner further down a page gets a subtle entrance: the content fades in when the visitor scrolls to it.
Author Objective	Add the Dark blue Cloud Hero and set Motion Type to Fade in, then check the animation in Preview.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Eyebrow (Hero › Content)	Cloud	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Accelerate your growth	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	Motion Type (Hero › Links)	Fade in	No	Entrance animation	Use sparingly; none on most pages	Options: None, Fade in, Slide up, Zoom (image)
(K)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
—	Action (Preview)	Scroll the Hero into view; the frame shows the fade-in about 250 ms into the 800 ms animation	—	Check on the preview (not stored in the content)	Scroll the Hero into view; the frame shows the fade-in about 250 ms into the 800 ms animation	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A frame about 250 ms into the 800 ms animation: photo-4.svg and the navy overlay fully visible, the eyebrow 'Cloud', the title 'Accelerate your growth', the description and the two CTAs half transparent.
- **Rendering behaviour:** `hero.js` adds `motion-ready` (content at opacity 0) and, when 10 % of the hero is visible, `is-visible`, which plays `hero-fade` (800 ms, ease) once on `.hero-content`. Never in Universal Editor edit mode or with reduced motion.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page, where the motion can be checked; Publish to Live copies it to aem.live. photo-4.svg must be published with the page. Motion Type is a block class saved with the page.

Business Rules

- Fade in plays once, when 10 % of the Hero is in view; the image is not animated.
- It never plays in edit mode or when the visitor prefers reduced motion; the content is then shown as is.
- The content is in the HTML from the start, so search engines are not affected.
- In the first section the content is briefly transparent, which can delay the visual LCP of the text.

Common Authoring Mistakes

Error	Root Cause	Resolution
The fade does not play while editing	Motion is disabled in edit mode by design	Check it in Preview mode or on aem.page
The first-screen headline appears late	Fade in used on the first-section Hero	Use None for the opening Hero
The fade never plays for some visitors	Their system prefers reduced motion	Expected behaviour (WCAG 2.3.3); nothing to change

Troubleshooting

- **Symptoms:** The title and CTAs stay invisible on the preview page.
- **Cause:** The block has `motion-ready` but never gets `is-visible`, typically after a script error that stopped the visibility observer.
- **Resolution:** Set Motion Type to None as a quick fix and report the console error to the development team (L3).
- **Verification Steps:** Reload the preview: the content is visible and the block has no motion-ready class.

Use Cases: Heroes further down a page or in campaigns.

Authoring Guidelines: Links tab: Motion Type = Fade in.

Business Rules: Plays once, when 10 % of the hero is visible; never in Universal Editor edit mode or when the visitor prefers reduced motion (then the content is shown as is).

Rendering Rules: `hero.js` adds `motion-ready` (content at opacity 0) and, when visible, `is-visible`, which plays `hero-fade` (800 ms, ease) on `.hero-content`.

Responsive Behaviour: Same at every breakpoint.

SEO Impact: The content is in the HTML from the start; search engines are not affected. For a first-section hero the content is briefly transparent, which can delay the visual LCP of the text slightly.

Accessibility Compliance: Respects `prefers-reduced-motion` (WCAG 2.3.3).

Variation 21 — Motion Type "Slide up"

Variation Name: Motion Type "Slide up" (class `motion-slide`).

Business Purpose: A more dynamic entrance: the content rises and fades in.

Visual Example:

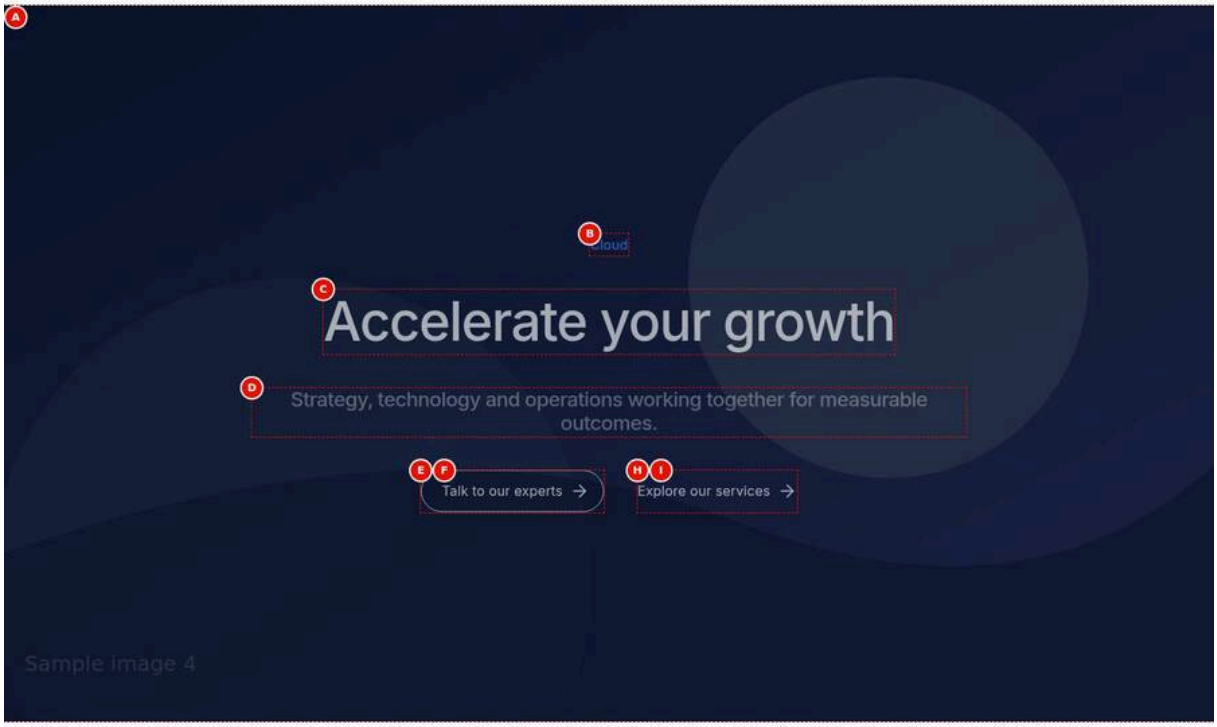

Figure 24: Slide-up motion — The Hero at 1440 px: photo-4.svg under the 80 % navy overlay with the brand-blue eyebrow 'Cloud', the white H1 'Accelerate your growth', the 50 % white description and an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white; a frame about 300 ms into the 800 ms Slide up, the content block slightly below its final place and partly transparent. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-motion-slide.jpg)

Screenshot Details — Slide-up motion

Item	Detail
Screenshot Name	`screenshots/hero-motion-slide.jpg`
Screenshot Purpose	Slide-up motion
Screen Description	The Hero at 1440 px: photo-4.svg under the 80 % navy overlay with the brand-blue eyebrow 'Cloud', the white H1 'Accelerate your growth', the 50 % white description and an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white; a frame about 300 ms into the 800 ms Slide up, the content block slightly below its final place and partly transparent.
Business Context	A product-launch style Cloud banner gets a more dynamic entrance: the content rises into place as it fades in.
Author Objective	Add the Dark blue Cloud Hero and set Motion Type to Slide up, then check the animation in Preview.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Eyebrow (Hero › Content)	Cloud	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Accelerate your growth	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	Motion Type (Hero › Links)	Slide up	No	Entrance animation	Use sparingly; none on most pages	Options: None, Fade in, Slide up, Zoom (image)
(K)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
—	Action (Preview)	Scroll the Hero into view; the frame shows the slide-up about 300 ms into the 800 ms animation	—	Check on the preview (not stored in the content)	Scroll the Hero into view; the frame shows the slide-up about 300 ms into the 800 ms animation	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A frame about 300 ms into the 800 ms animation: the content block slightly below its final position and partly transparent over the static photograph and navy overlay.
- **Rendering behaviour:** `motion-ready` hides the content until 10 % of the hero is visible; `is-visible` then plays `hero-slide` (800 ms, ease) from opacity 0 and `translateY(2rem)`. Not in edit mode, not with reduced motion.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page, where the motion can be checked; Publish to Live copies it to aem.live. photo-4.svg must be published with the page. Motion Type is a block class saved with the page.

Business Rules

- Slide up follows the same rules as Fade in: once, at 10 % visibility, never in edit mode or with reduced motion.
- The movement is 2rem upwards; the hero overflow is hidden, so nothing spills into the next section.
- Avoid combining Slide up with a Lottie background; one moving element is enough.
- Keep the opening Hero static; use Slide up for campaign heroes further down.

Common Authoring Mistakes

Error	Root Cause	Resolution
Reviewers think the content is missing below the fold	Slide up hides the content until 10 % of the Hero is in view	Scroll the Hero into view in Preview; use None if that is not wanted
Slide up and the Lottie animation compete for attention	Motion Type combined with Hero Image type Lotto	Set Motion Type to None for Lotto heroes

Troubleshooting

- **Symptoms:** The content appears only after the visitor scrolls a little.
- **Cause:** Slide up waits until 10 % of the Hero is in view; a Hero just below the fold starts hidden.
- **Resolution:** Expected; set Motion Type to None if the content must be visible without scrolling.
- **Verification Steps:** Scroll the preview: the content slides up once and stays visible.

Use Cases: Campaign and product launch heroes.

Authoring Guidelines: Links tab: Motion Type = Slide up.

Business Rules: As Fade in.

Rendering Rules: `hero-slide` (800 ms, ease) from opacity 0 and `translateY(2rem)`.

Responsive Behaviour: Same at every breakpoint.

SEO Impact: As Fade in.

Accessibility Compliance: As Fade in.

Variation 22 — Motion Type "Zoom (image)"

Variation Name: Motion Type "Zoom (image)" (class `motion-zoom`).

Business Purpose: A cinematic effect: the background slowly settles from a slight zoom.

Visual Example:

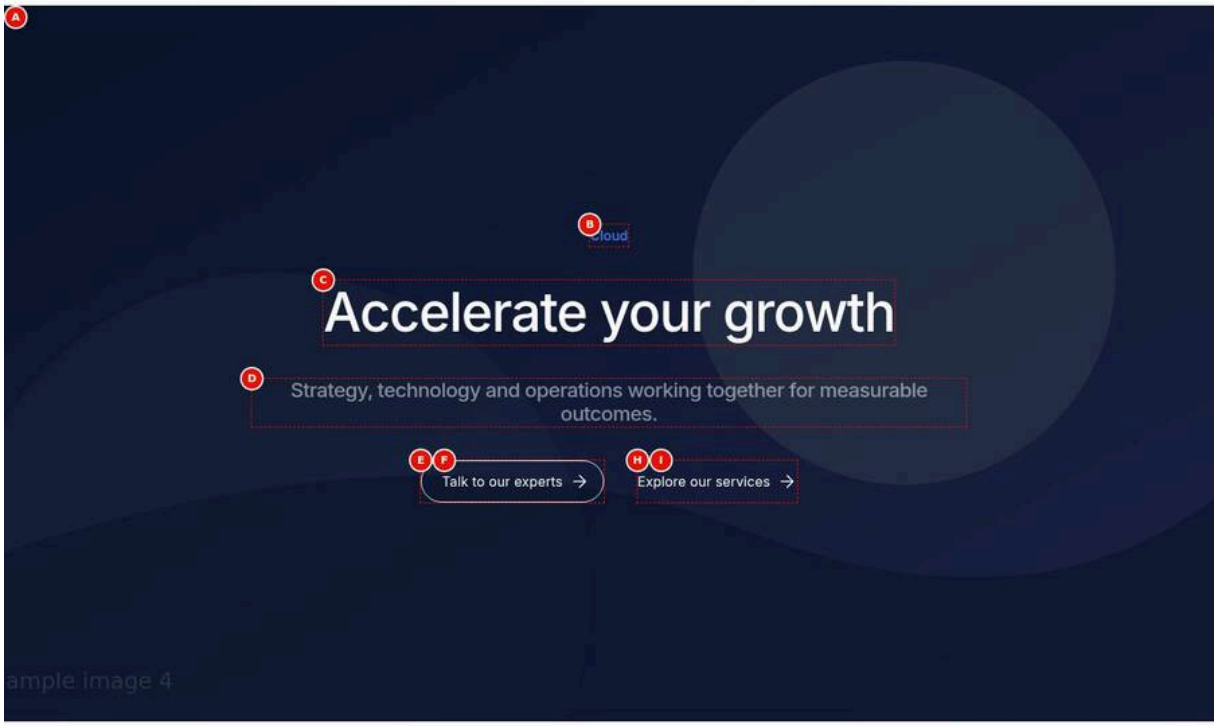

Figure 25: Zoom motion — The Hero at 1440 px: photo-4.svg under the 80 % navy overlay with the brand-blue eyebrow 'Cloud', the white H1 'Accelerate your growth', the 50 % white description and an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white; a frame about 300 ms into the 1600 ms Zoom (image), the photograph slightly enlarged while the text is fully visible. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-motion-zoom.jpg)

Screenshot Details — Zoom motion

Item	Detail
Screenshot Name	`screenshots/hero-motion-zoom.jpg`
Screenshot Purpose	Zoom motion
Screen Description	The Hero at 1440 px: photo-4.svg under the 80 % navy overlay with the brand-blue eyebrow 'Cloud', the white H1 'Accelerate your growth', the 50 % white description and an outline 'Talk to our experts' button and a text link 'Explore our services' with an arrow, both white; a frame about 300 ms into the 1600 ms Zoom (image), the photograph slightly enlarged while the text is fully visible.
Business Context	A photography-led Cloud banner uses a cinematic effect: the background settles from a slight zoom while the text is already readable.
Author Objective	Add the Dark blue Cloud Hero and set Motion Type to Zoom (image), then check it in Preview.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Eyebrow (Hero › Content)	Cloud	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Accelerate your growth	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
D	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
E	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
F	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(G)	CTA view (Hero › Links › CTA List › Item 1)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
H	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
I	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(J)	Motion Type (Hero › Links)	Zoom (image)	No	Entrance animation	Use sparingly; none on most pages	Options: None, Fade in, Slide up, Zoom (image)
(K)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
—	Action (Preview)	Scroll the Hero into view; the frame shows the zoom about 300 ms into the 1600 ms animation	—	Check on the preview (not stored in the content)	Scroll the Hero into view; the frame shows the zoom about 300 ms into the 1600 ms animation	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (G), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A frame about 300 ms into the 1600 ms animation: photo-4.svg slightly enlarged behind the navy overlay, while the eyebrow, title, description and CTAs are fully visible and static.
- **Rendering behaviour:** `is-visible` plays `hero-zoom` (1600 ms, ease-out) on `.hero-media` from `scale(1.08)`; the hero `overflow: hidden` clips the enlarged image. The content is never hidden by this option.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page, where the motion can be checked; Publish to Live copies it to aem.live. photo-4.svg must be published with the page. Motion Type is a block class saved with the page.

Business Rules

- Zoom (image) animates the media only; the text is visible from the start.
- It needs media: a text-only Hero has nothing to zoom.
- It does not play in edit mode or with reduced motion.
- The image is clipped to the hero box during the zoom, so its edges never show.

Common Authoring Mistakes

Error	Root Cause	Resolution
Nothing moves on a text-only Hero	Zoom (image) chosen without Hero Image Path	Add an image or choose Fade in
The zoom looks blurry	A low-resolution image enlarged by 8 %	Use an image of at least 1920 x 1080 px

Troubleshooting

- **Symptoms:** The image does not zoom on the preview page.
- **Cause:** The visitor (or tester) has reduced motion enabled, or the page is open in Universal Editor edit mode.
- **Resolution:** Test in a browser without the reduced-motion setting, on the aem.page URL.
- **Verification Steps:** Scrolled into view, the image settles from a slight zoom over 1.6 seconds.

Use Cases: Photography-led banners.

Authoring Guidelines: Links tab: Motion Type = Zoom (image).

Business Rules: Animates the media only; the text is visible from the start. Not in the editor and not with reduced motion.

Rendering Rules: `hero-zoom` (1600 ms, ease-out) on `.hero-media` from `scale(1.08)`; the hero's `overflow: hidden` clips the enlarged image.

Responsive Behaviour: Same at every breakpoint.

SEO Impact: None (text is not hidden).

Accessibility Compliance: Respects reduced motion.

Variation 23 — CTA View "Default" (text link with arrow)

Variation Name: CTA view "Default" (tertiary button).

Business Purpose: A lightweight text CTA with an arrow, for secondary actions.

Visual Example:

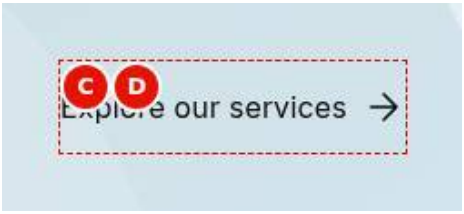

Figure 26: Default CTA view — A crop of the CTA row of a Hero at 1440 px (title 'Building on belief' over photo-3.svg): the CTA 'Explore our services' (CTA view Default) as dark text with a trailing right arrow, no border or fill. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-cta-default.jpg)

Screenshot Details — Default CTA view

Item	Detail
Screenshot Name	`screenshots/hero-cta-default.jpg`
Screenshot Purpose	Default CTA view
Screen Description	A crop of the CTA row of a Hero at 1440 px (title 'Building on belief' over photo-3.svg): the CTA 'Explore our services' (CTA view Default) as dark text with a trailing right arrow, no border or fill.
Business Context	A banner's lightweight secondary action, 'Explore our services', shown as a text link rather than a button.
Author Objective	Add a Hero with photo-3.svg, the title 'Building on belief' and one CTA with CTA view left on Default.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
(A)	Hero Image Path (Hero › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
(B)	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
C	CTA Title (Hero › Links › CTA List › Item 1)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
D	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Below the title, the CTA 'Explore our services' as dark text with a trailing right arrow, with no border or fill.

- **Rendering behaviour:** Any CTA that is not Primary or Secondary is rendered as `a.button.tertiary`; the arrow is the global `arrow-right.svg` mask in `::after`. On dark BG Colors the text turns white, light blue on hover.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. photo-3.svg must be published with the page, and the CTA target /en/services must be published too.

Business Rules

- CTA view Default renders a tertiary text link with an arrow.
- Use it for secondary actions such as 'Explore our services' or 'Learn more', next to a Primary button.
- The link text must make sense out of context (WCAG 2.4.4); avoid 'Click here'.
- The arrow is decorative CSS; CTA Arrow is pre-set to Right.

Common Authoring Mistakes

Error	Root Cause	Resolution
The CTA does not appear	CTA Link left empty; items without a link are dropped	Select /en/services in CTA Link
The CTA shows as a button	CTA view set to Primary or Secondary	Set CTA view to Default

Troubleshooting

- **Symptoms:** 'Explore our services' shows as plain text inside the description area.
- **Cause:** The CTA item contains extra text, so the CTA cell no longer holds links only and is read as content.
- **Resolution:** Open the CTA List item and remove anything other than CTA Title, CTA Link and its options.
- **Verification Steps:** On preview the link sits in the hero-ctas row with the tertiary arrow style.

Use Cases: "Learn more", "Discover our story".

Authoring Guidelines: Links tab, CTA List item: CTA view = Default.

Business Rules: Any CTA that is not Primary or Secondary renders as tertiary.

Rendering Rules: `a.button.tertiary` with the arrow (`::after`, `arrow-right.svg`); white on dark BG Colors, light blue on hover there.

Responsive Behaviour: Wraps with the other CTAs.

SEO Impact: A crawlable link with descriptive text.

Accessibility Compliance: Use descriptive link text (WCAG 2.4.4); the arrow is decorative CSS.

Variation 24 — CTA View "Primary"

Variation Name: CTA view "Primary".

Business Purpose: The main action of the hero.

Visual Example:

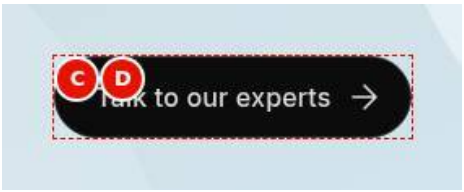

Figure 27: Primary CTA — A crop of the CTA row of a Hero at 1440 px (title 'Building on belief' over photo-3.svg): the Primary CTA 'Talk to our experts' as a pill-shaped filled black button with white text and a right arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-cta-primary.jpg)

Screenshot Details — Primary CTA

Item	Detail
Screenshot Name	`screenshots/hero-cta-primary.jpg`
Screenshot Purpose	Primary CTA
Screen Description	A crop of the CTA row of a Hero at 1440 px (title 'Building on belief' over photo-3.svg): the Primary CTA 'Talk to our experts' as a pill-shaped filled black button with white text and a right arrow.
Business Context	The main action of a banner, 'Talk to our experts', needs the strongest visual weight.
Author Objective	Add a Hero with photo-3.svg, the title 'Building on belief' and one CTA with CTA view Primary.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
(A)	Hero Image Path (Hero › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
(B)	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
C	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
D	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(E)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Below the title, a pill-shaped filled black button 'Talk to our experts' with white text and a right arrow.
- **Rendering behaviour:** CTA view Primary is stored as bold formatting of the link and rendered as `a.button.primary`; the button text does not wrap, the button wraps to a new line as a whole.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. photo-3.svg must be published with the page, and the contact page /en/contact must be published too.

Business Rules

- Use one Primary CTA per Hero.
- Primary keeps its filled style on every BG Color; on dark heroes Secondary and Default CTAs are the usual choice.
- Keep the CTA Title to 2 to 4 words, about 25 characters, verb first ('Talk to our experts').
- Focus and hover styles come from the global button styles.

Common Authoring Mistakes

Error	Root Cause	Resolution
Two filled buttons compete for attention	Both CTAs set to Primary	Set the second CTA to Secondary or Default
The button text is cut or runs out of the banner on mobile	A long CTA Title; button text does not wrap	Shorten the CTA Title

Troubleshooting

- **Symptoms:** The CTA renders as a text link although a button was intended.
- **Cause:** CTA view was left on Default in the CTA List item; only Primary and Secondary give a button.
- **Resolution:** Set CTA view to Primary in the CTA List item.
- **Verification Steps:** On preview the link has the classes button primary.

Use Cases: "Contact us", "Get started".

Authoring Guidelines: CTA List item: CTA view = Primary (stored as bold formatting of the link).

Business Rules: Recommended: one Primary CTA per hero.

Rendering Rules: `a.button.primary` (neutral fill, rounded, arrow).

Responsive Behaviour: Does not wrap its text; wraps to a new line as a whole.

SEO Impact: As Variation 23.

Accessibility Compliance: Button colours meet AA; focus-visible styles come from the global button styles.

Variation 25 — CTA View "Secondary"

Variation Name: CTA view "Secondary".

Business Purpose: An alternative action next to the primary CTA.

Visual Example:

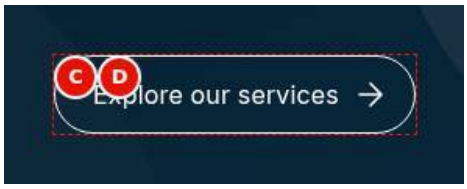

Figure 28: Secondary CTA — A crop of the CTA row of a Dark blue Hero at 1440 px (title 'Building on belief' over photo-3.svg under the navy overlay): the Secondary CTA 'Explore our services' as a pill-shaped outline button with white border, white text and a right arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-cta-secondary.jpg)

Screenshot Details — Secondary CTA

Item	Detail
Screenshot Name	`screenshots/hero-cta-secondary.jpg`
Screenshot Purpose	Secondary CTA

Item	Detail
Screen Description	A crop of the CTA row of a Dark blue Hero at 1440 px (title 'Building on belief' over photo-3.svg under the navy overlay): the Secondary CTA 'Explore our services' as a pill-shaped outline button with white border, white text and a right arrow.
Business Context	An alternative action on a dark navy banner, shown as an outline button that turns white on the dark background.
Author Objective	Add a Dark blue Hero with photo-3.svg, the title 'Building on belief' and one CTA with CTA view Secondary.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
(A)	Hero Image Path (Hero › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
(B)	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
C	CTA Title (Hero › Links › CTA List › Item 1)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
D	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(E)	CTA view (Hero › Links › CTA List › Item 1)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
(F)	BG Color (Hero › Style)	Dark blue	No	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Below the white title, a pill-shaped outline button 'Explore our services' with a white border, white text and a right arrow on the navy overlay.
- **Rendering behaviour:** CTA view Secondary is stored as italic formatting and rendered as `a.button.secondary`; on Dark blue, Dark blue (subtle) and Black its border and text are white until hover or keyboard focus.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. photo-3.svg must be published with the page, and the CTA target /en/services must be published too.

Business Rules

- Use Secondary next to a Primary CTA, or as the main button on dark BG Colors.
- On dark BG Colors the white outline applies only until hover or focus; then the normal secondary hover style shows.
- The 80 % navy overlay of Dark blue keeps the white outline readable on photo-3.svg.

Common Authoring Mistakes

Error	Root Cause	Resolution
The outline button is hard to see over a dark photograph	BG Color left on Default or Light, no overlay, so the CTA keeps its dark outline	Set BG Color to Dark blue so the CTA turns white
The author expected a filled button	Secondary is the outline style	Choose Primary for a filled button

Troubleshooting

- **Symptoms:** On hover the white outline button switches to the normal secondary colours.
- **Cause:** The white override on dark BG Colors applies only until hover or keyboard focus.
- **Resolution:** Expected behaviour; ask the design team if the hover state needs a dark-background variant.
- **Verification Steps:** Hover and Tab to the button on the preview: the hover and focus states stay readable on navy.

Use Cases: "View our services" next to "Contact us".

Authoring Guidelines: CTA List item: CTA view = Secondary (stored as italic formatting).

Business Rules: On dark BG Colors the border and text are white until hover / focus.

Rendering Rules: `a.button.secondary`.

Responsive Behaviour: As Variation 24.

SEO Impact: As Variation 23.

Accessibility Compliance: As Variation 24.

Variation 26 — CTA Arrow "Right" (default)

Variation Name: CTA Arrow "Right".

Business Purpose: Signals navigation to another page.

Visual Example:

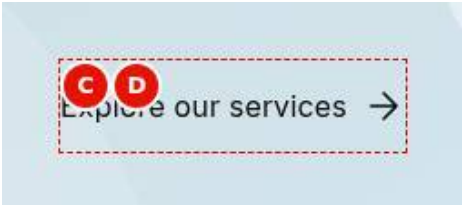

Figure 29: Right arrow CTA — A crop of the CTA row of a Hero at 1440 px (title 'Building on belief' over photo-3.svg): the text CTA 'Explore our services' (CTA view Default, CTA Arrow Right) with a right-pointing arrow after the text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-cta-arrow-right.jpg)

Screenshot Details — Right arrow CTA

Item	Detail
Screenshot Name	`screenshots/hero-cta-arrow-right.jpg`

Item	Detail
Screenshot Purpose	Right arrow CTA
Screen Description	A crop of the CTA row of a Hero at 1440 px (title 'Building on belief' over photo-3.svg): the text CTA 'Explore our services' (CTA view Default, CTA Arrow Right) with a right-pointing arrow after the text.
Business Context	A CTA that leads to another page, /en/services, shows the standard right-pointing arrow.
Author Objective	Add a Hero with one CTA 'Explore our services' and CTA Arrow Right.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
(A)	Hero Image Path (Hero › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
(B)	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
C	CTA Title (Hero › Links › CTA List › Item 1)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
D	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(E)	CTA Arrow (Hero › Links › CTA List › Item 1)	Right	No	Arrow direction	Down for links within the page	Options: Right, Down

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Below the title, the text CTA 'Explore our services' with a right-pointing arrow after the text.
- **Rendering behaviour:** CTA Arrow Right adds no class: the global `arrow-right.svg` mask is drawn by `a.button::after`. With CTA view Default the link is a tertiary text link.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. photo-3.svg must be published with the page, and the CTA target /en/services must be published too.

Business Rules

- Right is the pre-selected value of CTA Arrow in a new CTA List item.
- Use Right for links to other pages and external sites.
- The arrow is decorative and is not announced by screen readers.

Common Authoring Mistakes

Error	Root Cause	Resolution
The arrow points down for a link to another page	CTA Arrow set to Down	Set CTA Arrow to Right
No arrow at all is expected	Every Hero CTA has an arrow; there is no None option	Accept the arrow or use a Text block link instead

Troubleshooting

- **Symptoms:** A CTA to /en/services shows a down arrow.
- **Cause:** CTA Arrow is Down, or an older item has no arrow value and its link starts with #.
- **Resolution:** Open the CTA List item, set CTA Arrow to Right and check CTA Link.
- **Verification Steps:** On preview the arrow points right and the link has no hero-cta-down class.

Use Cases: Links to other pages.

Authoring Guidelines: CTA List item: CTA Arrow = Right (pre-selected).

Business Rules: Default value. A link without an arrow value that starts with `#` points down automatically (see Variation 27).

Rendering Rules: Global `arrow-right.svg` mask on `a.button::after`.

Responsive Behaviour: Same at every breakpoint.

SEO Impact: None.

Accessibility Compliance: Decorative icon only.

Variation 27 — CTA Arrow "Down" (in-page link)

Variation Name: CTA Arrow "Down" (class `hero-cta-down` on the link).

Business Purpose: Signals a jump to a section of the same page.

Visual Example:

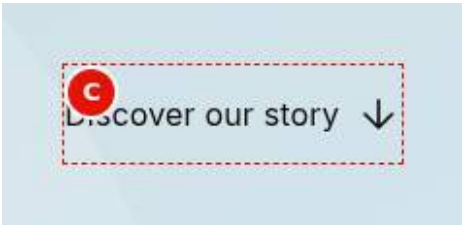

Figure 30: Down arrow CTA — A crop of the CTA row of a Hero at 1440 px (title 'Building on belief' over photo-3.svg): the text CTA 'Discover our story' (link #anchor-our-story, CTA Arrow Down) with a down-pointing arrow after the text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-cta-arrow-down.jpg)

Screenshot Details — Down arrow CTA

Item	Detail
Screenshot Name	`screenshots/hero-cta-arrow-down.jpg`
Screenshot Purpose	Down arrow CTA
Screen Description	A crop of the CTA row of a Hero at 1440 px (title 'Building on belief' over photo-3.svg): the text CTA 'Discover our story' (link #anchor-our-story, CTA Arrow Down) with a down-pointing arrow after the text.
Business Context	An in-page 'Discover our story' CTA jumps to a block further down the same page, so its arrow points down.
Author Objective	Add a Hero with one CTA 'Discover our story', CTA Link #anchor-our-story and CTA Arrow Down.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
(A)	Hero Image Path (Hero › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
(B)	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
C	CTA Title (Hero › Links › CTA List › Item 1)	Discover our story	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
(D)	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter #anchor-our-story	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(E)	CTA Arrow (Hero › Links › CTA List › Item 1)	Down	No	Arrow direction	Down for links within the page	Options: Right, Down

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Below the title, the text CTA 'Discover our story' with a down-pointing arrow after the text.
- **Rendering behaviour:** CTA Arrow Down adds the class `hero-cta-down`, whose `::after` uses `icons/arrow-down.svg`. The link is a plain `#anchor-our-story` fragment, scrolled to by the browser.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. photo-3.svg must be published with the page; the target block with Anchor ID anchor-our-story is on the same page, so no other page is involved.

Business Rules

- Use Down only for links to the same page, e.g. a block whose Additional tab Anchor ID is anchor-our-story.
- CTA Arrow is pre-set to Right in new items, so choose Down explicitly for in-page links.
- The target must exist on the page; Anchor IDs start with anchor- and must be unique.
- The link text must say where it goes; the arrow is decorative.

Common Authoring Mistakes

Error	Root Cause	Resolution
The CTA does nothing when clicked	No block on the page has the Anchor ID anchor-our-story	Set Anchor ID anchor-our-story on the target block
The in-page CTA shows a right arrow	CTA Arrow kept its pre-selected Right	Set CTA Arrow to Down

Error	Root Cause	Resolution
The jump lands on a second block	The Anchor ID was used twice and de-duplicated to anchor-our-story-2	Make the Anchor ID unique on the page

Troubleshooting

- **Symptoms:** Clicking 'Discover our story' does not scroll the page.
- **Cause:** No element on the page has the id anchor-our-story; the Anchor ID is missing, misspelt or on another page.
- **Resolution:** Enter anchor-our-story in the Additional tab Anchor ID of the target block and publish.
- **Verification Steps:** `document.getElementById('anchor-our-story')` returns the block and the CTA scrolls to it.

Use Cases: "Discover our story" linking to `#anchor-our-story`.

Authoring Guidelines: CTA List item: CTA Arrow = Down; CTA Link = the anchor of a block (Additional tab Anchor ID) or section on the page, e.g. `#anchor-our-story`.

Business Rules: The arrow points down when CTA Arrow = Down, or when no arrow value is stored and the link starts with `#`.

Rendering Rules: `a.button.hero-cta-down::after` uses `icons/arrow-down.svg`.

Responsive Behaviour: Same at every breakpoint.

SEO Impact: In-page links do not affect crawling.

Accessibility Compliance: The link text must say where it goes; the arrow is decorative.

Variation 28 — CTA Link Type "Open in New Window"

Variation Name: CTA Link Type "Open in New Window".

Business Purpose: Open external or document links without leaving the TCS page.

Visual Example:

Figure 31: New-window CTA — A crop of the CTA row of a Hero at 1440 px (title 'Building on belief' over photo-3.svg): the Primary button 'Read the full report' in its hover state; it links to https://www.example.com/reports/ai-outlook-2026.pdf and opens in a new tab, with no visible new-tab hint. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-cta-new-window.jpg)

Screenshot Details — New-window CTA

Item	Detail
Screenshot Name	`screenshots/hero-cta-new-window.jpg`
Screenshot Purpose	New-window CTA
Screen Description	A crop of the CTA row of a Hero at 1440 px (title 'Building on belief' over photo-3.svg): the Primary button 'Read the full report' in its hover state; it links to https://www.example.com/reports/ai-outlook-2026.pdf and opens in a new tab, with no visible new-tab hint.
Business Context	A banner links to the external AI outlook 2026 PDF report, which should open without the visitor leaving the TCS page.

Item	Detail
Author Objective	Add a Hero with a Primary CTA 'Read the full report' to the external PDF and CTA Link Type Open in New Window.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
(A)	Hero Image Path (Hero › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
(B)	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
C	CTA Title (Hero › Links › CTA List › Item 1)	Read the full report	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
D	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter https://www.example.com/reports/ai-outlook-2026.pdf	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(E)	CTA Link Type (Hero › Links › CTA List › Item 1)	Open in New Window	No	Same or new window	New window for external sites / documents	Options: Default, Open in New Window (`new-window`)
(F)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
—	Action (Preview)	Hover the CTA; it opens the report in a new tab (target="_blank")	—	Check on the preview (not stored in the content)	Hover the CTA; it opens the report in a new tab (target="_blank")	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Below the title, the filled Primary button 'Read the full report' in its hover state, with the browser status bar showing the external report URL.
- **Rendering behaviour:** The item value `new-window` makes `decorateButton` set `target="_blank"` and `rel="noopener noreferrer"`. The Hero adds no visual or screen-reader hint that a new tab opens (Part 16 F-17, open).
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. photo-3.svg must be published with the page; the external PDF on www.example.com is not an AEM page and is not published by AEM.

Business Rules

- Use Open in New Window for external sites and documents such as the PDF report.
- No '(opens in a new tab)' hint is added in the Hero (Not implemented (as of this handover)); say it in the text, e.g. 'Read the full report (PDF)'.
- rel noopener noreferrer is added automatically.
- Keep internal TCS pages in the same window (CTA Link Type Default).

Common Authoring Mistakes

Error	Root Cause	Resolution
Screen-reader users are not told that a new tab opens	The Hero adds no new-tab hint	Add '(PDF)' or 'opens in a new tab' to the CTA Title
The report opens in the same tab	CTA Link Type left on Default	Set CTA Link Type to Open in New Window

Troubleshooting

- **Symptoms:** The CTA leads to an error page.
- **Cause:** The external URL changed or the PDF was removed from the external site.
- **Resolution:** Correct CTA Link with the current report URL and publish the page.
- **Verification Steps:** On preview the button opens the PDF in a new tab and the link has target _blank.

Use Cases: External partner sites, PDF reports.

Authoring Guidelines: CTA List item: CTA Link Type = Open in New Window.

Business Rules: The item value `new-window` sets `target="_blank"` and `rel="noopener noreferrer"`. The Hero does not add a visual or screen-reader "opens in a new tab" hint (Not implemented (as of this handover) for the Hero; the Page Header and card lists have it).

Rendering Rules: `decorateButton(a, { newWindow: true })` → `setLinkTarget`.

Responsive Behaviour: Not applicable.

SEO Impact: None; `noopener noreferrer` is the safe default.

Accessibility Compliance: WCAG 3.2.5 (advisory): mention the new window in the CTA text, e.g. "Read the report (PDF)", because the hint is not added automatically.

Variation 29 — Title Heading Level "H2" (secondary hero)

Variation Name: Title heading level "H2" (default "H1").

Business Purpose: Use a Hero lower on a page, or in a Gen Carousel slide after the first, without creating several H1 headings.

Visual Example:

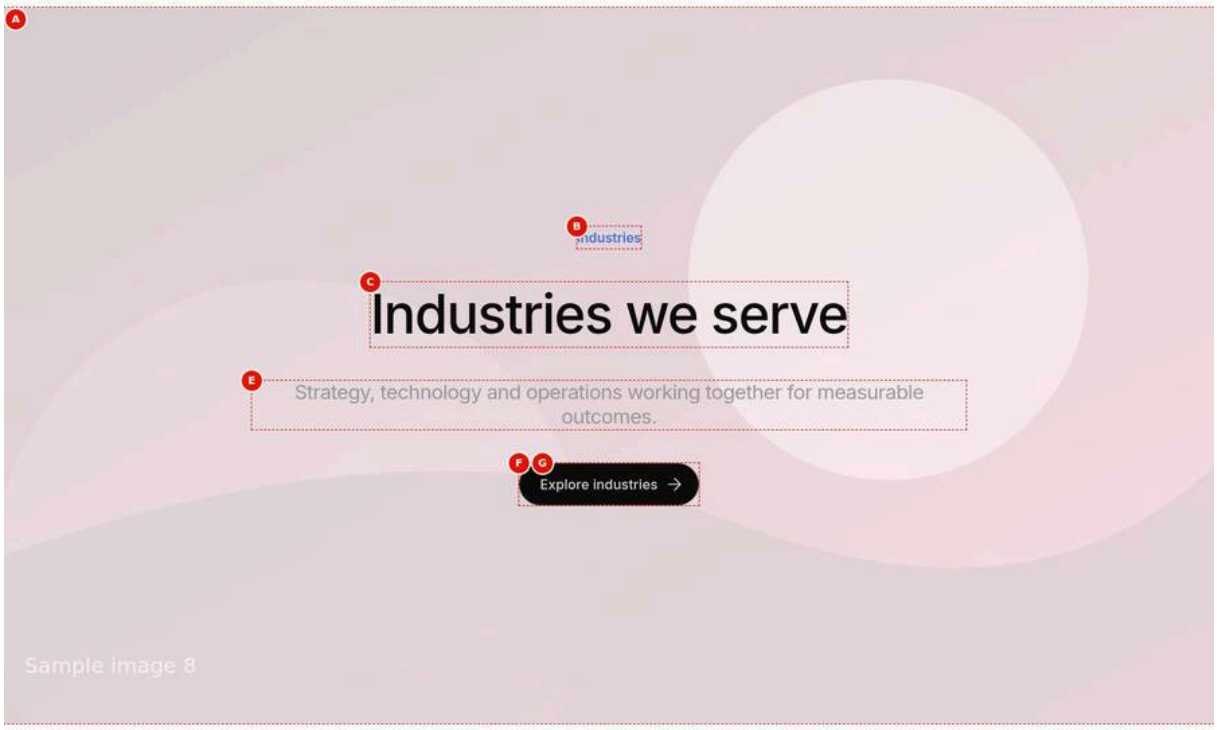

Figure 32: Hero with an H2 title — The Hero at 1440 px: photo-8.svg under the 80 % white overlay with the eyebrow 'Industries', the title 'Industries we serve', the description and one Primary button 'Explore industries', centred; it looks the same as an H1 Hero, but the title is an h2 element. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/hero-title-h2.jpg)

Screenshot Details — Hero with an H2 title

Item	Detail
Screenshot Name	`screenshots/hero-title-h2.jpg`
Screenshot Purpose	Hero with an H2 title
Screen Description	The Hero at 1440 px: photo-8.svg under the 80 % white overlay with the eyebrow 'Industries', the title 'Industries we serve', the description and one Primary button 'Explore industries', centred; it looks the same as an H1 Hero, but the title is an h2 element.
Business Context	The Industries we serve banner sits lower on a page whose H1 is already set elsewhere, so it needs a second-level heading.
Author Objective	Add a Hero with photo-8.svg, eyebrow 'Industries', title 'Industries we serve' at Title heading level H2, a description and one Primary CTA.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
A	Hero Image Path (Hero › Image)	Select the asset photo-8.svg (/en/media/photo-8.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Eyebrow (Hero › Content)	Industries	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
C	Title (Hero › Content)	Industries we serve	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
(D)	Title heading level (Hero › Content)	H2	No	Semantic heading level of the title	H1 for the first hero, H2 for others	Options: H1, H2
E	Description (Hero › Content)	Strategy, technology and operations working together for measurable outcomes.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
F	CTA Title (Hero › Links › CTA List › Item 1)	Explore industries	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
G	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/industries	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
(H)	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Identical to an H1 hero: photo-8.svg under the white overlay, the centred eyebrow, the title 'Industries we serve' at 4rem on desktop, the description and the 'Explore industries' button; only the accessibility tree shows heading level 2.
- **Rendering behaviour:** The title is rendered as `h2` with class `hero-title`; `.hero-title` styles every level, so size and weight do not change. Outside the page's first section the image is not set to eager loading.
- **Publishing behaviour:** Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-8.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it.

Business Rules

- Keep exactly one H1 per page; every Hero after the first, and any Hero on a page with a Page Header, uses H2.
- The heading level changes the semantics only; check it in the browser's accessibility tree, not on screen.
- Article, blog and press-release templates add a Page Header with the H1, so a Hero there uses H2.
- Gen Carousel slides after the first one use H2.

Common Authoring Mistakes

Error	Root Cause	Resolution
The SEO audit reports two H1 headings	Title heading level left on the default H1	Choose H2 in the Content tab
The author expects a smaller title after choosing H2	H2 has the same hero-title styling as H1	Use H2 for structure only; shorten the text if it should look less prominent

Troubleshooting

- **Symptoms:** An accessibility checker reports that the page has no H1.
- **Cause:** Every Hero on the page was set to H2 and no Page Header or other H1 exists.
- **Resolution:** Set the page's main Hero back to H1 and keep H2 on the others.
- **Verification Steps:** `document.querySelectorAll('h1').length` returns 1 on the preview page.

Use Cases: Second and later heroes, carousel slides 2+, pages with a Page Header.

Authoring Guidelines: Content tab: Title heading level = H2.

Business Rules: The look is the same (`.hero-title` styles any level); only the semantics change. Default H1 (model and block template).

Rendering Rules: The heading is rendered as `<h1>` or `<h2>` with class `hero-title`.

Responsive Behaviour: Same as H1.

SEO Impact: Keep exactly one H1 per page; use H2 for every other hero.

Accessibility Compliance: Correct heading hierarchy (WCAG 1.3.1, 2.4.6).

6.10.4 Authoring Experience

Figure 33: Universal Editor canvas — The Hero at 1440 px in Universal Editor Edit mode (annotated preview, not a Universal Editor screenshot): the Enterprise AI banner selected, with A on the block, B on photo-1.svg, C on the square-3 icon, D on 'Enterprise AI', E on 'Building on belief', F on the description and G on the two CTAs. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/hero-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/hero-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	The Hero at 1440 px in Universal Editor Edit mode (annotated preview, not a Universal Editor screenshot): the Enterprise AI banner selected, with A on the block, B on photo-1.svg, C on the square-3 icon, D on 'Enterprise AI', E on 'Building on belief', F on the description and G on the two CTAs.

Item	Detail
Business Context	A new author learns which part of the Enterprise AI banner each dialog field controls before editing the home or landing-page heroes.
Author Objective	Select the Hero on the Universal Editor canvas and identify markers A to G: block, image, icon, eyebrow, title, description and CTAs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Hero	Yes	Adds the Hero to the page	Select the section in the content tree, choose Add (+) and pick Hero	Only components the section allows (section filter)
—	Icon (Hero › Image)	Select the asset square-3.svg (/en/media/square-3.svg)	No	Small brand or topic icon above the eyebrow	Square icon, SVG or PNG; optional	None
—	Hero Image Path (Hero › Image)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No (Recommended)	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None
—	Eyebrow (Hero › Content)	Enterprise AI	No	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None
—	Title (Hero › Content)	Building on belief	No (Recommended)	The headline of the hero and page	About 60 characters or less (Recommended)	None
—	Description (Hero › Content)	Our AI-led services help enterprises grow, transform and compete with confidence.	No	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None
—	CTA Title (Hero › Links › CTA List › Item 1)	Talk to our experts	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
—	CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/contact	Yes in practice (an item without a link is not rendered)	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code
—	CTA view (Hero › Links › CTA List › Item 1)	Primary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
—	CTA Title (Hero › Links › CTA List › Item 2)	Explore our services	No (Recommended)	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None
—	CTA Link (Hero › Links › CTA List › Item 2)	Select the page or enter /en/services	Yes in practice (an item without a link is	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			not rendered)			
—	CTA view (Hero › Links › CTA List › Item 2)	Secondary	No	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary
—	Mode (Universal Editor)	Edit (the Hero selected on the canvas)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The Hero is outlined on the canvas; letters mark the block (A), photo-1.svg (B), the square-3 icon (C), 'Enterprise AI' (D), 'Building on belief' (E), the description (F) and the CTA row (G).
- **Rendering behaviour:** In edit mode Motion Type never plays, so the content is always visible; a Lottie animation plays with its toggle. Eyebrow, title and description are editable in place; image, icon and CTAs only in the properties panel.
- **Publishing behaviour:** Universal Editor saves every change automatically, but nothing is public until Publish: Publish to Preview updates main–tcs-corp–sradha-tcs.aem.page, Publish to Live updates aem.live. photo-1.svg and square-3.svg are published with the page as referenced assets.

Business Rules

- Selecting the outline A opens the five tabs Image, Content, Links, Style and Additional.
- The instrumentation is moved to hero-media, hero-content and hero-ctas, so B to G stay selectable after decoration.
- A Hero with Hide block on is shown faded with a dashed outline in edit mode but hidden on preview and live.
- Changes to Motion Type show nothing on the canvas; check them in Preview mode.

Common Authoring Mistakes

Error	Root Cause	Resolution
Clicking a CTA on the canvas does not open its fields	CTAs are edited in the Links tab, not in place	Select the Hero (A) and open Links › CTA List
The motion chosen in the dialog never plays while editing	Motion is disabled in edit mode by design	Switch to Preview mode to see it

Troubleshooting

- **Symptoms:** Selecting the photograph (B) does not open an asset picker on the canvas.
- **Cause:** Images are not edited in place; Hero Image Path is a field of the Image tab.
- **Resolution:** Select the Hero (A) and change Hero Image Path in the Image tab of the properties panel.
- **Verification Steps:** The new image appears behind the overlay on the canvas.

Annotations

- A = Hero block (select it to open its properties: Image, Content, Links, Style, Additional).
- B = Hero image or Lottie animation (Hero Image Path; the background behind the overlay).
- C = Icon (small image above the eyebrow).
- D = Eyebrow (short line above the title).
- E = Title (H1 or H2).
- F = Description (rich text below the title).

- G = CTA List (the row of CTAs; each CTA is one item of the list).

Notes on the canvas: Motion Type never plays in edit mode, so the content is always visible; the Lottie animation plays in the editor (with its pause / play button); a Hero with Hide block on is shown faded with a dashed outline. The text elements (eyebrow, title, description) can be edited in place on the canvas; images and CTAs are edited in the properties panel.

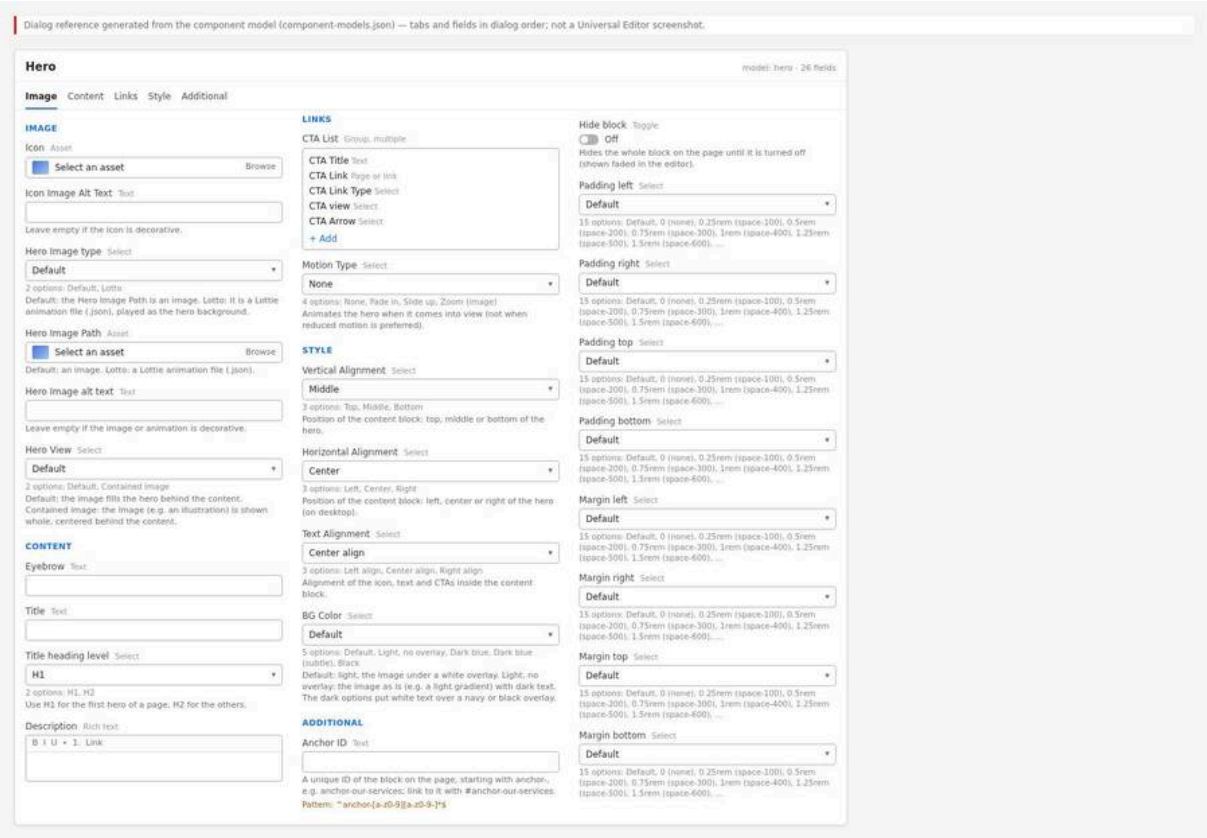

Figure 34: Properties panel — The Hero properties panel with its five tabs (Image, Content, Links, Style, Additional), the Image tab open showing Icon, Icon Image Alt Text, Hero Image type, Hero Image Path, Hero Image alt text and Hero View. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/hero-properties-panel.jpg)

Properties panel tabs and fields

- **Image** — Icon (asset picker), Icon Image Alt Text (text), Hero Image type (select: Default, Lotto), Hero Image Path (asset picker: an image, or a Lottie `.json` for Lotto), Hero Image alt text (text), Hero View (select: Default, Contained image).
- **Content** — Eyebrow (text), Title (text), Title heading level (select: H1, H2; default H1), Description (rich text).
- **Links** — CTA List (multifield; Add creates an item with CTA Title, CTA Link, CTA Link Type, CTA view, CTA Arrow), Motion Type (select: None, Fade in, Slide up, Zoom (image)).
- **Style** — Vertical Alignment (Top, Middle, Bottom; default Middle), Horizontal Alignment (Left, Center, Right; default Center), Text Alignment (Left align, Center align, Right align; default Center align), BG Color (Default, Light no overlay, Dark blue, Dark blue (subtle), Black).
- **Additional** — Anchor ID (validated text), Hide block (toggle), Padding left / right / top / bottom and Margin left / right / top / bottom (selects of the spacing tokens).

6.10.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM as a Cloud Service, open Sites, browse to the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the editing toolbar, the content tree and the properties panel.

Steps — Open the page: Universal Editor with the target page loaded and the content tree visible.

Step	Where	Field / control	Value / action
1	AEM Sites console	Sites › tcs-corp › us › en	Select the page
2	AEM Sites console toolbar	Edit	Open the page in Universal Editor

Step 2 — Add the Hero block

Action: Select the section that will hold the Hero (normally the first section; use a section of its own for the Hero), choose Add (+) and pick **Hero**.

Expected Result: A Hero is added with the defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1; it shows as an empty banner until content is added.

Steps — Add the block: The component picker of a section with Hero highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section (the first section of the page)	Select
2	Section › Add (+)	Component	Hero

Step 3 — Add the icon (optional)

Action: Select the Hero, open the **Image** tab, choose an asset in **Icon** and enter **Icon Image Alt Text** (leave empty if the icon is decorative).

Expected Result: A small icon appears above the eyebrow (2.5rem, 3rem on desktop).

Steps — Add the icon: The Image tab with an icon selected and the icon visible above the title on the canvas.

Step	Where	Field / control	Value / action
1	Content tree	Hero	Select
2	Hero › Image	Icon	Select the asset square-3.svg (/en/media/square-3.svg)
3	Hero › Image	Icon Image Alt Text	Leave empty (decorative icon)

Step 4 — Choose the Hero Image type and the image or animation

Action: In **Hero Image type** choose Default (image) or Lotto (Lottie animation). In **Hero Image Path** choose the image, or for Lotto the Lottie `.json` file, from AEM Assets.

Expected Result: The image fills the hero behind the content, or the animation starts playing with a pause button in the bottom-right corner.

Steps — Choose the image: The asset picker with a hero image selected and the Hero Image type set to Default.

Step	Where	Field / control	Value / action
1	Hero › Image	Hero Image type	Default
2	Hero › Image	Hero Image Path	Select the asset chart.svg (/en/media/chart.svg)

Step 5 — Enter the alt text and choose the Hero View

Action: Enter **Hero Image alt text** (a short description of a meaningful image or animation; empty for decorative ones). Choose **Hero View**: Default (fills the hero) or Contained image (shown whole).

Expected Result: The image is cropped to fill the hero (Default) or shown entirely and centred (Contained image).

Steps — Alt text and view: The Hero Image alt text filled in and Hero View set to Contained image, with the illustration shown whole.

Step	Where	Field / control	Value / action
1	Hero › Image	Hero Image alt text	Bar chart of the revenue growth index, 2020 to 2026
2	Hero › Image	Hero View	Contained image

Step 6 — Enter the eyebrow, title and heading level

Action: Open the **Content** tab. Enter **Eyebrow** and **Title**; choose **Title heading level** H1 for the first hero of the page, H2 for any other.

Expected Result: The eyebrow appears in brand blue above the large title.

Steps — Eyebrow and title: The Content tab with Eyebrow, Title and Title heading level filled in.

Step	Where	Field / control	Value / action
1	Hero › Content	Eyebrow	Enterprise AI
2	Hero › Content	Title	Building on belief
3	Hero › Content	Title heading level	H1

Step 7 — Enter the description

Action: Enter the **Description** in the rich-text editor (one or two short paragraphs).

Expected Result: The description appears below the title.

Steps — Description: The rich-text Description field and the description rendered below the title.

Step	Where	Field / control	Value / action
1	Hero › Content	Description	Our AI-led services help enterprises grow, transform and compete with confidence.

Step 8 — Add CTAs

Action: Open the **Links** tab. In **CTA List** choose Add for each CTA (recommended: one or two).

Expected Result: One empty item per CTA is created in the list.

Steps — Add CTA items: The CTA List multifield with two items added.

Step	Where	Field / control	Value / action
1	Hero › Links	CTA List › Add	Item 1
2	Hero › Links	CTA List › Add	Item 2

Step 9 — Configure each CTA

Action: For each item enter **CTA Title**, choose **CTA Link** (an AEM page or a URL), choose **CTA Link Type** (Default or Open in New Window), **CTA view** (Default, Primary, Secondary) and **CTA Arrow** (Right, Down).

Expected Result: The CTAs render as a text link with an arrow, a filled primary button or an outline secondary button, in a row below the description.

Steps — Configure a CTA: One CTA item with all five fields filled in and the resulting primary button on the canvas.

Step	Where	Field / control	Value / action
1	Hero › Links › CTA List › Item 1	CTA Title	Talk to our experts
2	Hero › Links › CTA List › Item 1	CTA Link	Select the page or enter /en/contact
3	Hero › Links › CTA List › Item 1	CTA Link Type	Default
4	Hero › Links › CTA List › Item 1	CTA view	Primary
5	Hero › Links › CTA List › Item 1	CTA Arrow	Right

Step 10 — Choose the Motion Type

Action: In the **Links** tab choose **Motion Type**: None, Fade in, Slide up or Zoom (image).

Expected Result: No change in the editor (motion never plays in edit mode); the motion plays in Preview and on the published page.

Steps — Motion Type: The Motion Type select open with its four options.

Step	Where	Field / control	Value / action
1	Hero › Links	Motion Type	Open the select (None, Fade in, Slide up, Zoom (image))
2	Hero › Links	Motion Type	Fade in

Step 11 — Set the Style options

Action: Open the **Style** tab. Choose **Vertical Alignment**, **Horizontal Alignment**, **Text Alignment** and **BG Color**.

Expected Result: The content block moves to the chosen position, the text aligns and the overlay / text colours change.

Steps — Style options: The Style tab set to Bottom, Left, Left align and Dark blue, with the canvas showing white text at the bottom left.

Step	Where	Field / control	Value / action
1	Hero › Style	Vertical Alignment	Bottom
2	Hero › Style	Horizontal Alignment	Left
3	Hero › Style	Text Alignment	Left align
4	Hero › Style	BG Color	Dark blue

Step 12 — Set the Additional options (optional)

Action: Open the **Additional** tab. Enter an **Anchor ID** if other links should jump to the Hero (for example `anchor-home-hero`), and adjust padding or margin only when the design requires it. Leave **Hide block** off.

Expected Result: The Anchor ID is accepted only in the form `anchor-` + lower-case letters, digits and hyphens; spacing changes show immediately.

Steps — Additional tab: The Additional tab with an Anchor ID entered and the spacing selects at Default.

Step	Where	Field / control	Value / action
1	Hero › Additional	Anchor ID	anchor-home-hero
2	Hero › Additional	Hide block	Off
3	Hero › Additional	Padding left / right / top / bottom, Margin left / right / top / bottom	Default (unchanged)

Step 13 — Preview

Action: Switch Universal Editor to Preview mode, then open the page preview (`https://main--tcs-corp--sradha-tcs.aem.page/{path}`) from AEM Sidekick or the Publish menu after a preview publish.

Expected Result: The Hero renders as on the live site, the motion plays once, the animation loops.

Steps — Preview: The page on the .aem.page preview host with the Hero at desktop width.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	Universal Editor toolbar	Publish	Publish to Preview
3	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/{path}
4	Browser	Screen width	1440 px (desktop)

Step 14 — Validate

Action: Run the Validation checklist below at desktop, tablet and mobile widths.

Expected Result: Every checklist item passes.

Steps — Validate: The preview page in a browser's responsive mode at 375 px width with the Hero checked.

Step	Where	Field / control	Value / action
1	Browser developer tools	Responsive mode	375 px (mobile), then 768 px and 1440 px
2	Preview page	Hero	Check the Validation checklist (image, text, CTAs, alt text, one H1)

Step 15 — Publish

Action: In Universal Editor choose Publish and select Live (or use the AEM Sites console / AEM Sidekick Publish).

Expected Result: The page is available on `https://main--tcs-corp--sradha-tcs.aem.live/{path}` (and the production domain, [To be confirmed: production domain and CDN]).

Steps — Publish: The Publish dialog of Universal Editor with the page selected for Live.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Open the Publish dialog
2	Publish dialog	Destination	Live
3	Publish dialog	Page	Selected (with its referenced assets)
4	Publish dialog	Publish	Confirm

Preview Process

1. Save the changes (Universal Editor saves automatically on each field change).

2. Use Preview mode in Universal Editor for a quick check (motion and links behave as on the site).
3. Publish to Preview to update `https://main--tcs-corp--sradha-tcs.aem.page/{path}`; review the page there with stakeholders.
4. Check desktop (1440 px), tablet (768 px and 1024 px) and mobile (375 px) widths.

Publishing Process

1. Confirm the Validation checklist below.
2. Publish the page to Live from Universal Editor or the Sites console.
3. If the Hero uses new assets (image, icon, Lottie `.json`), make sure the assets are published as well (Universal Editor publishes referenced assets with the page when selected in the publish dialog).
4. Open the live URL and reload with the browser cache disabled to confirm the change.

Validation Process

- ☐ Exactly one H1 on the page: the Hero title (heading level H1) or the Page Header, not both.
- ☐ The title is short and fits on at most two lines on desktop and four on mobile.
- ☐ The image is sharp at 1440 px and its subject stays visible in the 375 px centre crop.
- ☐ Meaningful images / animations have alt text; decorative ones have it empty.
- ☐ Text contrast is sufficient over the image (especially eyebrow and description on dark BG Colors and on Light, no overlay).
- ☐ Lotto: the animation plays, the pause / play button works and is reachable with the keyboard (Tab), and with reduced motion the animation is paused.
- ☐ Each CTA has a descriptive title, the correct link and view; in-page CTAs point down and jump to the right anchor.
- ☐ New-window CTAs open a new tab and their text says so where relevant.
- ☐ Motion Type plays once on the preview and the content is visible afterwards.
- ☐ The alignment (vertical, horizontal, text) matches the design at desktop width.
- ☐ Anchor ID (if any) is unique and links to it scroll to the Hero.
- ☐ Hide block is off.
- ☐ No errors in the browser console (for Lotto: no "failed to play the Lottie animation").
- ☐ The hero image is the LCP element and loads quickly (PageSpeed Insights on the preview URL).

Rollback Process

1. In AEM Sites, open the page's **Version history** (Timeline / Versions), compare and restore the previous version; or undo the field changes in Universal Editor.
2. Publish the restored page to Live.
3. If a new asset caused the problem, revert or replace the asset in AEM Assets and republish.
4. As an emergency measure, turn **Hide block** on (Additional tab) and publish: the Hero disappears from the page until it is fixed (remember that the page then has no H1 if the Hero held it).
5. Code problems are rolled back by the development team by reverting the commit on `main` (`blocks/hero/*`); Edge Delivery serves the reverted code after Code Sync.

The walkthroughs below repeat the steps above for each variation of chapter 6.10.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Default Image Hero (cover image)

Reproduces the screenshot `screenshots/hero-default-image.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Hero Image alt text** (B) = Consultants reviewing a transformation roadmap.

Expected Result: photo-2.svg fills the banner behind the white overlay; the alt text is stored on the image and is not visible on the canvas.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = Consulting; **Title** (D) = Transform with confidence; **Description** (E) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Consulting', 'Transform with confidence' and the description appear centred in dark text over the softened photograph.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (F) = Talk to our experts, **CTA Link** (G) = Select the page or enter /en/contact, **CTA view** (H) = Primary; **CTA List** › Item 2: **CTA Title** (I) = Explore our services, **CTA Link** (J) = Select the page or enter /en/services, **CTA view** (K) = Secondary.

Expected Result: Two CTAs appear in one row below the description: 'Talk to our experts' as a filled Primary button and 'Explore our services' as an outline Secondary button.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: photo-2.svg fills the banner under the 80 % white overlay; the brand-blue eyebrow 'Consulting', the dark title 'Transform with confidence', the grey description and the Primary and Secondary CTAs are centred.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-2.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it.

Step 8 — Verify

Action: On the live page check: Open the aem.live URL with the cache disabled; the image request returns 200 and the img element has the alt 'Consultants reviewing a transformation roadmap'.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Lotto (Lottie Animation) Hero

Reproduces the screenshot `screenshots/hero-lotto-animation.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image type** (A) = Lotto; **Hero Image Path** (B) = Select the asset animation.json (/en/media/animation.json); **Hero Image alt text** (C) = Pulsing circle, symbolising a connected enterprise.

Expected Result: With Lotto and animation.json selected, the pulsing circle plays behind the content and the round pause button appears in the bottom-right corner.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (D) = AI and automation; **Title** (E) = Intelligence in motion; **Description** (F) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'AI and automation', 'Intelligence in motion' and the description appear centred over the animation.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (G) = Talk to our experts, **CTA Link** (H) = Select the page or enter /en/contact, **CTA view** (I) = Primary; **CTA List** › Item 2: **CTA Title** (J) = Explore our services, **CTA Link** (K) = Select the page or enter /en/services, **CTA view** (L) = Secondary.

Expected Result: The Primary 'Talk to our experts' and Secondary 'Explore our services' CTAs appear in a row below the description.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (M) = Light, no overlay.

Expected Result: With Light, no overlay the white overlay disappears and the animation shows at full strength behind the dark text.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The pulsing-circle animation plays behind the centred eyebrow 'AI and automation', the title 'Intelligence in motion', the description and the two CTAs, with no overlay; a round pause button sits 1rem from the bottom-right corner.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. animation.json must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Translated pause / play labels come from the locale placeholders sheet, a separate publish step; the Lottie player is code and is deployed by Code Sync.

Step 9 — Verify

Action: On the live page check: With reduced motion off, reload the preview: the circle pulses in a loop and the button switches between 'Pause animation' and 'Play animation'.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Contained Image View

Reproduces the screenshot `screenshots/hero-contained-image.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset chart.svg (/en/media/chart.svg); **Hero Image alt text** (B) = Bar chart of the revenue growth index, 2020 to 2026; **Hero View** (C) = Contained image.

Expected Result: chart.svg appears whole and centred behind the content instead of filling the banner; the alt text is stored on the image.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (D) = Annual report 2026; **Title** (E) = Growth you can measure; **Description** (F) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Annual report 2026', 'Growth you can measure' and the description appear over the chart.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (G) = Read the report, **CTA Link** (H) = Select the page or enter /en/insights/annual-report, **CTA view** (I) = Primary.

Expected Result: One Primary button 'Read the report', linking to /en/insights/annual-report, appears below the description.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **Vertical Alignment** (J) = Top; **BG Color** (K) = Light, no overlay.

Expected Result: The content moves to the top of the banner and the white overlay is removed, so the chart shows at full strength.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The bar chart is shown whole and centred inside the banner with no overlay; the eyebrow 'Annual report 2026', the title 'Growth you can measure', the description and the 'Read the report' button sit at the top, centred.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. chart.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. The CTA target /en/insights/annual-report must be published too, or the link leads to a 404.

Step 9 — Verify

Action: On the live page check: Check 375 px and 1440 px: the whole chart is visible and the text stays readable.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Text-only Hero (no image)

Reproduces the screenshot `screenshots/hero-text-only.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = About us; **Title** (B) = Technology that moves business forward; **Description** (C) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: The eyebrow, title and description appear centred on a plain white banner with no overlay.

Step 4 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (D) = Talk to our experts, **CTA Link** (E) = Select the page or enter /en/contact, **CTA view** (F) = Primary; **CTA List** › Item 2: **CTA Title** (G) = Explore our services, **CTA Link** (H) = Select the page or enter /en/services, **CTA view** (I) = Secondary.

Expected Result: Two CTAs appear in one row below the description: 'Talk to our experts' as a filled Primary button and 'Explore our services' as an outline Secondary button.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A plain white banner with no image and no overlay; the eyebrow 'About us', the title 'Technology that moves business forward', the description and the two CTAs centred in dark text.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. No asset is involved, so publishing the page is enough; the CTA targets /en/contact and /en/services must be published.

Step 7 — Verify

Action: On the live page check: On preview 'About us' is brand blue above an h1 with class hero-title.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — BG Color "Default" (light overlay)

Reproduces the screenshot `screenshots/hero-bg-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-3.svg (/en/media/photo-3.svg).

Expected Result: photo-3.svg appears behind the 80 % white overlay of the default BG Color.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Enterprise AI; **Title** (C) = Building on belief; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Enterprise AI', 'Building on belief' and the description appear centred over the photograph in dark text.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Primary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services, **CTA view** (J) = Secondary.

Expected Result: Two CTAs appear in one row below the description: 'Talk to our experts' as a filled Primary button and 'Explore our services' as an outline Secondary button.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: photo-3.svg seen through an 80 % white overlay; the brand-blue eyebrow 'Enterprise AI', the black title 'Building on belief', the grey description and the Primary and Secondary CTAs centred.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-3.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 8 — Verify

Action: On the live page check: Preview and live pages show the photograph under the white overlay.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — BG Color "Light, no overlay"

Reproduces the screenshot `screenshots/hero-bg-light.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset light.svg (/en/media/light.svg).

Expected Result: light.svg fills the banner, still under the default 80 % white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Enterprise AI; **Title** (C) = Building on belief; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Enterprise AI', 'Building on belief' and the description appear centred over the photograph in dark text.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Primary;

CTA List › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services, **CTA view** (J) = Secondary.

Expected Result: Two CTAs appear in one row below the description: 'Talk to our experts' as a filled Primary button and 'Explore our services' as an outline Secondary button.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (K) = Light, no overlay.

Expected Result: With Light, no overlay the white overlay disappears and the gradient shows at full strength behind the dark text.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The light gradient fills the banner at full strength; the eyebrow 'Enterprise AI', the dark title 'Building on belief', the description and the two CTAs centred on it.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. light.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 9 — Verify

Action: On the live page check: Check 375 px and 1440 px with a contrast checker: at least 3:1 for the title and 4.5:1 for the description.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — BG Color "Dark blue"

Reproduces the screenshot `screenshots/hero-bg-dark.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-4.svg (/en/media/photo-4.svg).

Expected Result: photo-4.svg fills the banner, at first behind the default 80 % white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Enterprise AI; **Title** (C) = Building on belief; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Enterprise AI', 'Building on belief' and the description appear centred over the photograph in dark text.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Secondary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services.

Expected Result: 'Talk to our experts' appears as an outline Secondary button and 'Explore our services' (no CTA view) as a text link with a right arrow, still dark on the default overlay.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (J) = Dark blue.

Expected Result: Dark blue replaces the white overlay with navy `rgb(1 18 31 / 80%)` and switches the title, the description and both CTAs to white.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: photo-4.svg under an 80 % navy overlay; the brand-blue eyebrow, the white title 'Building on belief', the 50 % white description, a white-outline 'Talk to our experts' button and a white 'Explore our services' text link with an arrow.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-4.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 9 — Verify

Action: On the live page check: The contrast at the description position is at least 4.5:1 on the preview page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — BG Color "Dark blue (subtle)"

Reproduces the screenshot `screenshots/hero-bg-dark-subtle.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-5.svg (/en/media/photo-5.svg).

Expected Result: photo-5.svg fills the banner, at first behind the default 80 % white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Enterprise AI; **Title** (C) = Building on belief; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Enterprise AI', 'Building on belief' and the description appear centred over the photograph in dark text.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Secondary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services.

Expected Result: 'Talk to our experts' appears as an outline Secondary button and 'Explore our services' (no CTA view) as a text link with a right arrow, still dark on the default overlay.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (J) = Dark blue (subtle).

Expected Result: Dark blue (subtle) replaces the white overlay with navy `rgb(1 18 31 / 60%)` and switches the title, the description and both CTAs to white.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: photo-5.svg under a 60 % navy overlay, so the image is more visible than with Dark blue; white title 'Building on belief', 50 % white description, brand-blue eyebrow, a white-outline button and a white text link.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-5.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 9 — Verify

Action: On the live page check: A contrast checker shows at least 4.5:1 for the description on the preview.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — BG Color "Black"

Reproduces the screenshot `screenshots/hero-bg-black.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-6.svg (/en/media/photo-6.svg).

Expected Result: photo-6.svg fills the banner, at first behind the default 80 % white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Enterprise AI; **Title** (C) = Building on belief; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Enterprise AI', 'Building on belief' and the description appear centred over the photograph in dark text.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Secondary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services.

Expected Result: 'Talk to our experts' appears as an outline Secondary button and 'Explore our services' (no CTA view) as a text link with a right arrow, still dark on the default overlay.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (J) = Black.

Expected Result: Black replaces the white overlay with black `rgb(0 0 0 / 80%)` and switches the title, the description and both CTAs to white.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: photo-6.svg under an 80 % black overlay; white title 'Building on belief', 50 % white description, brand-blue eyebrow, a white-outline 'Talk to our experts' button and a white 'Explore our services' text link.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-6.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 9 — Verify

Action: On the live page check: On aem.live the photograph shows under the 80 % black overlay and its request returns 200.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 10 — Vertical Alignment "Top"

Reproduces the screenshot `screenshots/hero-align-top.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-7.svg (/en/media/photo-7.svg).

Expected Result: photo-7.svg fills the banner behind the white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Manufacturing; **Title** (C) = Reimagine your operations; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Manufacturing', 'Reimagine your operations' and the description appear centred in the middle of the banner.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Primary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services, **CTA view** (J) = Secondary.

Expected Result: Two CTAs appear in one row below the description: 'Talk to our experts' as a filled Primary button and 'Explore our services' as an outline Secondary button.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **Vertical Alignment** (K) = Top.

Expected Result: With Vertical Alignment Top the content block moves up to just below the top padding.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow 'Manufacturing', the title 'Reimagine your operations', the description and the two CTAs start right below the top padding, centred; the lower half of photo-7.svg stays free.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-7.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 9 — Verify

Action: On the live page check: Check 375 px and 1440 px on the preview: the content starts below the top padding at both widths.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 11 — Vertical Alignment "Middle" (default)

Reproduces the screenshot `screenshots/hero-align-middle.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-7.svg (/en/media/photo-7.svg).

Expected Result: photo-7.svg fills the banner behind the white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Manufacturing; **Title** (C) = Reimagine your operations; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Manufacturing', 'Reimagine your operations' and the description appear in the vertical and horizontal centre of the banner.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Primary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services, **CTA view** (J) = Secondary.

Expected Result: Two CTAs appear in one row below the description: 'Talk to our experts' as a filled Primary button and 'Explore our services' as an outline Secondary button.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow 'Manufacturing', the title 'Reimagine your operations', the description and the two CTAs centred vertically and horizontally over photo-7.svg.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-7.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 8 — Verify

Action: On the live page check: The content is vertically centred at 375 px and 1440 px on the preview.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 12 — Vertical Alignment "Bottom"

Reproduces the screenshot `screenshots/hero-align-bottom.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-7.svg (/en/media/photo-7.svg).

Expected Result: photo-7.svg fills the banner behind the white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Manufacturing; **Title** (C) = Reimagine your operations; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Manufacturing', 'Reimagine your operations' and the description appear centred in the middle of the banner.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Primary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services, **CTA view** (J) = Secondary.

Expected Result: Two CTAs appear in one row below the description: 'Talk to our experts' as a filled Primary button and 'Explore our services' as an outline Secondary button.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **Vertical Alignment** (K) = Bottom.

Expected Result: With Vertical Alignment Bottom the content block moves down to just above the bottom padding.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow, the title 'Reimagine your operations', the description and the two CTAs rest just above the bottom padding, centred; the upper part of photo-7.svg stays free.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-7.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 9 — Verify

Action: On the live page check: The content rests 4rem above the bottom edge at 375 px and 7.5rem at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 13 — Horizontal Alignment "Left"

Reproduces the screenshot `screenshots/hero-align-left.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: wide.svg fills the banner behind the white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Manufacturing; **Title** (C) = Reimagine your operations; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Manufacturing', 'Reimagine your operations' and the description appear centred over the image.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Primary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services, **CTA view** (J) = Secondary.

Expected Result: Two CTAs appear in one row below the description: 'Talk to our experts' as a filled Primary button and 'Explore our services' as an outline Secondary button.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **Horizontal Alignment** (K) = Left; **Text Alignment** (L) = Left align.

Expected Result: Left moves the content block to the left side (47.5rem wide on desktop) and Left align aligns its text and CTAs to the left edge.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: On desktop a 47.5rem wide content block sits on the left of the banner with its eyebrow, title, description and CTAs left aligned; the right side of wide.svg stays free.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. wide.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 9 — Verify

Action: On the live page check: Check 768 px and 1440 px on the preview.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 14 — Horizontal Alignment "Center" (default)

Reproduces the screenshot `screenshots/hero-align-center.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: wide.svg fills the banner behind the white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Manufacturing; **Title** (C) = Reimagine your operations; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Manufacturing', 'Reimagine your operations' and the description appear centred over the image.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Primary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services, **CTA view** (J) = Secondary.

Expected Result: Two CTAs appear in one row below the description: 'Talk to our experts' as a filled Primary button and 'Explore our services' as an outline Secondary button.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The eyebrow 'Manufacturing', the title 'Reimagine your operations', the description and the two CTAs centred horizontally, with centred text.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. wide.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 8 — Verify

Action: On the live page check: The block has class align-center and is centred at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 15 — Horizontal Alignment "Right"

Reproduces the screenshot `screenshots/hero-align-right.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: wide.svg fills the banner behind the white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Manufacturing; **Title** (C) = Reimagine your operations; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Manufacturing', 'Reimagine your operations' and the description appear centred over the image.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Primary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services, **CTA view** (J) = Secondary.

Expected Result: Two CTAs appear in one row below the description: 'Talk to our experts' as a filled Primary button and 'Explore our services' as an outline Secondary button.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **Horizontal Alignment** (K) = Right; **Text Alignment** (L) = Right align.

Expected Result: Right moves the content block to the right side (47.5rem on desktop) and Right align aligns its text and CTAs to the right edge.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: On desktop the 47.5rem content block sits on the right of the banner with right-aligned eyebrow, title, description and CTAs; the left side of wide.svg stays free.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. wide.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 9 — Verify

Action: On the live page check: Check 375 px and 1440 px on the preview.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 16 — Text Alignment "Left align"

Reproduces the screenshot `screenshots/hero-text-left.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Icon** (A) = Select the asset square-3.svg (/en/media/square-3.svg); **Hero Image Path** (B) = Select the asset photo-2.svg (/en/media/photo-2.svg).

Expected Result: The square-3 icon appears above the content and photo-2.svg fills the banner behind the white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = Manufacturing; **Title** (D) = Reimagine your operations; **Description** (E) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Manufacturing', 'Reimagine your operations' and the description appear centred over the image.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (F) = Talk to our experts, **CTA Link** (G) = Select the page or enter /en/contact, **CTA view** (H) = Primary; **CTA List** › Item 2: **CTA Title** (I) = Explore our services, **CTA Link** (J) = Select the page or enter /en/services, **CTA view** (K) = Secondary.

Expected Result: Two CTAs appear in one row below the description: 'Talk to our experts' as a filled Primary button and 'Explore our services' as an outline Secondary button.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **Text Alignment** (L) = Left align.

Expected Result: Left align moves the icon, eyebrow, title, description and CTA row to the left edge of the centred content block.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Inside the centred content block the icon, the eyebrow, the title, the description and the CTA row all start at the left edge of the block.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-2.svg and square-3.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 9 — Verify

Action: On the live page check: At 1440 px the block position and text alignment match the design.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 17 — Text Alignment "Center align" (default)

Reproduces the screenshot `screenshots/hero-text-center.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Icon** (A) = Select the asset square-3.svg (/en/media/square-3.svg); **Hero Image Path** (B) = Select the asset photo-2.svg (/en/media/photo-2.svg).

Expected Result: The square-3 icon appears above the content and photo-2.svg fills the banner behind the white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = Manufacturing; **Title** (D) = Reimagine your operations; **Description** (E) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Manufacturing', 'Reimagine your operations' and the description appear centred under the icon.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (F) = Talk to our experts, **CTA Link** (G) = Select the page or enter /en/contact, **CTA view** (H) = Primary; **CTA List** › Item 2: **CTA Title** (I) = Explore our services, **CTA Link** (J) = Select the page or enter /en/services, **CTA view** (K) = Secondary.

Expected Result: Two CTAs appear in one row below the description: 'Talk to our experts' as a filled Primary button and 'Explore our services' as an outline Secondary button.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The icon, the eyebrow 'Manufacturing', the title 'Reimagine your operations', the description and the CTA row all centred inside the content block.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-2.svg and square-3.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 8 — Verify

Action: On the live page check: The block has class text-center and the icon, text and CTAs are centred on the preview.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 18 — Text Alignment "Right align"

Reproduces the screenshot `screenshots/hero-text-right.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Icon** (A) = Select the asset square-3.svg (/en/media/square-3.svg); **Hero Image Path** (B) = Select the asset photo-2.svg (/en/media/photo-2.svg).

Expected Result: The square-3 icon appears above the content and photo-2.svg fills the banner behind the white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (C) = Manufacturing; **Title** (D) = Reimagine your operations; **Description** (E) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Manufacturing', 'Reimagine your operations' and the description appear centred over the image.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (F) = Talk to our experts, **CTA Link** (G) = Select the page or enter /en/contact, **CTA view** (H) = Primary; **CTA List** › Item 2: **CTA Title** (I) = Explore our services, **CTA Link** (J) = Select the page or enter /en/services, **CTA view** (K) = Secondary.

Expected Result: Two CTAs appear in one row below the description: 'Talk to our experts' as a filled Primary button and 'Explore our services' as an outline Secondary button.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **Text Alignment** (L) = Right align.

Expected Result: Right align moves the icon, text and CTAs to the right edge of the content block.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Inside the centred content block the icon, the eyebrow, the title, the description and the CTAs line up at the right edge.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-2.svg and square-3.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it. Style options are block classes saved with the page, so no other publish step is needed.

Step 9 — Verify

Action: On the live page check: The live block has class text-right and the icon, text and CTAs align right.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 19 — Motion Type "None" (default)

Reproduces the screenshot `screenshots/hero-motion-none.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-4.svg (/en/media/photo-4.svg).

Expected Result: photo-4.svg fills the banner, at first behind the default white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Cloud; **Title** (C) = Accelerate your growth; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: The eyebrow 'Cloud', the title 'Accelerate your growth' and the description appear centred over the photograph.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Secondary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services.

Expected Result: 'Talk to our experts' appears as an outline Secondary button and 'Explore our services' (no CTA view) as a text link with a right arrow.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (J) = Dark blue.

Expected Result: Dark blue replaces the white overlay with 80 % navy and switches the title, the description and both CTAs to white.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: photo-4.svg under the 80 % navy overlay with the brand-blue eyebrow 'Cloud', the white title 'Accelerate your growth', the 50 % white description, a white-outline 'Talk to our experts' button and a white 'Explore our services' text link, all visible at once.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page, where the motion can be checked; Publish to Live copies it to aem.live. photo-4.svg must be published with the page. Motion Type is a block class saved with the page.

Step 9 — Verify

Action: On the live page check: On aem.live the block has no motion-fade class and the content shows immediately.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 20 — Motion Type "Fade in"

Reproduces the screenshot `screenshots/hero-motion-fade.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-4.svg (/en/media/photo-4.svg).

Expected Result: photo-4.svg fills the banner, at first behind the default white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Cloud; **Title** (C) = Accelerate your growth; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: The eyebrow 'Cloud', the title 'Accelerate your growth' and the description appear centred over the photograph.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Secondary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services; **Motion Type** (J) = Fade in.

Expected Result: 'Talk to our experts' (Secondary) and 'Explore our services' (text link) appear below the description; choosing Fade in changes nothing on the canvas, because motion never plays in edit mode.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (K) = Dark blue.

Expected Result: Dark blue replaces the white overlay with 80 % navy and switches the title, the description and both CTAs to white.

Step 7 — Preview

Action: Action: Scroll the Hero into view; the frame shows the fade-in about 250 ms into the 800 ms animation.

Expected Result: When the Hero scrolls into view the content fades in over 800 ms; the frame shows it about 250 ms in, half transparent.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A frame about 250 ms into the 800 ms animation: photo-4.svg and the navy overlay fully visible, the eyebrow 'Cloud', the title 'Accelerate your growth', the description and the two CTAs half transparent.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page, where the motion can be checked; Publish to Live copies it to aem.live. photo-4.svg must be published with the page. Motion Type is a block class saved with the page.

Step 10 — Verify

Action: On the live page check: Reload the preview: the content is visible and the block has no motion-ready class.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 21 — Motion Type "Slide up"

Reproduces the screenshot `screenshots/hero-motion-slide.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-4.svg (/en/media/photo-4.svg).

Expected Result: photo-4.svg fills the banner, at first behind the default white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Cloud; **Title** (C) = Accelerate your growth; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: The eyebrow 'Cloud', the title 'Accelerate your growth' and the description appear centred over the photograph.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Secondary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services; **Motion Type** (J) = Slide up.

Expected Result: 'Talk to our experts' (Secondary) and 'Explore our services' (text link) appear below the description; choosing Slide up changes nothing on the canvas, because motion never plays in edit mode.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (K) = Dark blue.

Expected Result: Dark blue replaces the white overlay with 80 % navy and switches the title, the description and both CTAs to white.

Step 7 — Preview

Action: Action: Scroll the Hero into view; the frame shows the slide-up about 300 ms into the 800 ms animation.

Expected Result: When the Hero scrolls into view the content rises 2rem while fading in over 800 ms; the frame shows it about 300 ms in.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A frame about 300 ms into the 800 ms animation: the content block slightly below its final position and partly transparent over the static photograph and navy overlay.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page, where the motion can be checked; Publish to Live copies it to aem.live. photo-4.svg must be published with the page. Motion Type is a block class saved with the page.

Step 10 — Verify

Action: On the live page check: Scroll the preview: the content slides up once and stays visible.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 22 — Motion Type "Zoom (image)"

Reproduces the screenshot `screenshots/hero-motion-zoom.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-4.svg (/en/media/photo-4.svg).

Expected Result: photo-4.svg fills the banner, at first behind the default white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Cloud; **Title** (C) = Accelerate your growth; **Description** (D) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: The eyebrow 'Cloud', the title 'Accelerate your growth' and the description appear centred over the photograph.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (E) = Talk to our experts, **CTA Link** (F) = Select the page or enter /en/contact, **CTA view** (G) = Secondary; **CTA List** › Item 2: **CTA Title** (H) = Explore our services, **CTA Link** (I) = Select the page or enter /en/services; **Motion Type** (J) = Zoom (image).

Expected Result: 'Talk to our experts' (Secondary) and 'Explore our services' (text link) appear below the description; choosing Zoom (image) changes nothing on the canvas, because motion never plays in edit mode.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (K) = Dark blue.

Expected Result: Dark blue replaces the white overlay with 80 % navy and switches the title, the description and both CTAs to white.

Step 7 — Preview

Action: Action: Scroll the Hero into view; the frame shows the zoom about 300 ms into the 1600 ms animation.

Expected Result: When the Hero scrolls into view the photograph settles from a slight zoom over 1600 ms; the frame shows it about 300 ms in, the text static.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A frame about 300 ms into the 1600 ms animation: photo-4.svg slightly enlarged behind the navy overlay, while the eyebrow, title, description and CTAs are fully visible and static.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page, where the motion can be checked; Publish to Live copies it to aem.live. photo-4.svg must be published with the page. Motion Type is a block class saved with the page.

Step 10 — Verify

Action: On the live page check: Scrolled into view, the image settles from a slight zoom over 1.6 seconds.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 23 — CTA View "Default" (text link with arrow)

Reproduces the screenshot `screenshots/hero-cta-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-3.svg (/en/media/photo-3.svg).

Expected Result: photo-3.svg fills the banner behind the default white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (B) = Building on belief.

Expected Result: The title 'Building on belief' appears centred; no eyebrow or description is set in this example.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (C) = Explore our services, **CTA Link** (D) = Select the page or enter /en/services.

Expected Result: 'Explore our services' appears below the title as a text link with a right arrow, without border or fill.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Below the title, the CTA 'Explore our services' as dark text with a trailing right arrow, with no border or fill.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. photo-3.svg must be published with the page, and the CTA target /en/services must be published too.

Step 8 — Verify

Action: On the live page check: On preview the link sits in the hero-ctas row with the tertiary arrow style.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 24 — CTA View "Primary"

Reproduces the screenshot `screenshots/hero-cta-primary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-3.svg (/en/media/photo-3.svg).

Expected Result: photo-3.svg fills the banner behind the default white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (B) = Building on belief.

Expected Result: The title 'Building on belief' appears centred; no eyebrow or description is set in this example.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (C) = Talk to our experts, **CTA Link** (D) = Select the page or enter /en/contact, **CTA view** (E) = Primary.

Expected Result: 'Talk to our experts' appears below the title as a filled, pill-shaped Primary button with a right arrow.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Below the title, a pill-shaped filled black button 'Talk to our experts' with white text and a right arrow.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. photo-3.svg must be published with the page, and the contact page /en/contact must be published too.

Step 8 — Verify

Action: On the live page check: On preview the link has the classes button primary.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 25 — CTA View "Secondary"

Reproduces the screenshot `screenshots/hero-cta-secondary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-3.svg (/en/media/photo-3.svg).

Expected Result: photo-3.svg fills the banner behind the default white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (B) = Building on belief.

Expected Result: The title 'Building on belief' appears centred; no eyebrow or description is set in this example.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (C) = Explore our services, **CTA Link** (D) = Select the page or enter /en/services, **CTA view** (E) = Secondary.

Expected Result: 'Explore our services' appears below the title as an outline Secondary button, dark on the default white overlay.

Step 6 — Fill in Hero › Style

Action: Select **Hero** in the content tree and open the **Style** tab of the properties panel. Enter: **BG Color** (F) = Dark blue.

Expected Result: Dark blue adds the navy overlay and switches the title and the outline button to white.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Below the white title, a pill-shaped outline button 'Explore our services' with a white border, white text and a right arrow on the navy overlay.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. photo-3.svg must be published with the page, and the CTA target /en/services must be published too.

Step 9 — Verify

Action: On the live page check: Hover and Tab to the button on the preview: the hover and focus states stay readable on navy.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 26 — CTA Arrow "Right" (default)

Reproduces the screenshot `screenshots/hero-cta-arrow-right.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-3.svg (/en/media/photo-3.svg).

Expected Result: photo-3.svg fills the banner behind the default white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (B) = Building on belief.

Expected Result: The title 'Building on belief' appears centred; no eyebrow or description is set in this example.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (C) = Explore our services, **CTA Link** (D) = Select the page or enter /en/services, **CTA Arrow** (E) = Right.

Expected Result: 'Explore our services' appears below the title as a text link with a right-pointing arrow.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Below the title, the text CTA 'Explore our services' with a right-pointing arrow after the text.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. photo-3.svg must be published with the page, and the CTA target /en/services must be published too.

Step 8 — Verify

Action: On the live page check: On preview the arrow points right and the link has no hero-cta-down class.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 27 — CTA Arrow "Down" (in-page link)

Reproduces the screenshot `screenshots/hero-cta-arrow-down.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-3.svg (/en/media/photo-3.svg).

Expected Result: photo-3.svg fills the banner behind the default white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (B) = Building on belief.

Expected Result: The title 'Building on belief' appears centred; no eyebrow or description is set in this example.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (C) = Discover our story, **CTA Link** (D) = Select the page or enter #anchor-our-story, **CTA Arrow** (E) = Down.

Expected Result: 'Discover our story' appears below the title as a text link with a down-pointing arrow.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Below the title, the text CTA 'Discover our story' with a down-pointing arrow after the text.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. photo-3.svg must be published with the page; the target block with Anchor ID anchor-our-story is on the same page, so no other page is involved.

Step 8 — Verify

Action: On the live page check: `document.getElementById('anchor-our-story')` returns the block and the CTA scrolls to it.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 28 — CTA Link Type "Open in New Window"

Reproduces the screenshot `screenshots/hero-cta-new-window.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-3.svg (/en/media/photo-3.svg).

Expected Result: photo-3.svg fills the banner behind the default white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (B) = Building on belief.

Expected Result: The title 'Building on belief' appears centred; no eyebrow or description is set in this example.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (C) = Read the full report, **CTA Link** (D) = Select the page or enter https://www.example.com/reports/ai-outlook-2026.pdf, **CTA Link Type** (E) = Open in New Window, **CTA view** (F) = Primary.

Expected Result: 'Read the full report' appears below the title as a filled Primary button; Open in New Window shows no visible change.

Step 6 — Preview

Action: Action: Hover the CTA; it opens the report in a new tab (target="_blank").

Expected Result: Hovering the button shows the external report URL in the status bar; clicking it opens the PDF in a new tab.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Below the title, the filled Primary button 'Read the full report' in its hover state, with the browser status bar showing the external report URL.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live. photo-3.svg must be published with the page; the external PDF on www.example.com is not an AEM page and is not published by AEM.

Step 9 — Verify

Action: On the live page check: On preview the button opens the PDF in a new tab and the link has target _blank.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 29 — Title Heading Level "H2" (secondary hero)

Reproduces the screenshot `screenshots/hero-title-h2.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Hero

Action: Select the section in the content tree, choose **Add (+)** and pick **Hero**.

Expected Result: An empty Hero is added to the section with the template defaults Vertical Alignment Middle, Horizontal Alignment Center, Text Alignment Center align and Title heading level H1.

Step 3 — Fill in Hero › Image

Action: Select **Hero** in the content tree and open the **Image** tab of the properties panel. Enter: **Hero Image Path** (A) = Select the asset photo-8.svg (/en/media/photo-8.svg).

Expected Result: photo-8.svg fills the banner behind the white overlay.

Step 4 — Fill in Hero › Content

Action: Select **Hero** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (B) = Industries; **Title** (C) = Industries we serve; **Title heading level** (D) = H2; **Description** (E) = Strategy, technology and operations working together for measurable outcomes.

Expected Result: 'Industries' and 'Industries we serve' appear centred; choosing H2 changes nothing visible on the canvas.

Step 5 — Fill in Hero › Links

Action: Select **Hero** in the content tree and open the **Links** tab of the properties panel. Enter: **CTA List** › Item 1: **CTA Title** (F) = Explore industries, **CTA Link** (G) = Select the page or enter /en/industries, **CTA view** (H) = Primary.

Expected Result: One Primary button 'Explore industries', linking to /en/industries, appears below the description.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Identical to an H1 hero: photo-8.svg under the white overlay, the centred eyebrow, the title 'Industries we serve' at 4rem on desktop, the description and the 'Explore industries' button; only the accessibility tree shows heading level 2.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to Preview shows the Hero on main–tcs-corp–sradha-tcs.aem.page; Publish to Live copies it to aem.live, served by the CDN. photo-8.svg must be published with the page (referenced assets selected in the Publish dialog), otherwise the hero renders without it.

Step 8 — Verify

Action: On the live page check: `document.querySelectorAll('h1').length` returns 1 on the preview page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.10.6 Authorable Field Specification

The Hero model `hero` has 31 fields (excluding the five tab separators): 26 block fields and 5 fields per CTA List item. No field is marked required in the model, so every "Mandatory" value below is "No (not enforced)" unless stated otherwise; "Recommended" marks editorial guidance. Fields named `classes` or `classes_*` are stored as block classes (options), not as content.

Block model `hero` — Image tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Icon (`content_icon`)	reference (asset)	No	No	Empty	Small brand or topic icon above the eyebrow	Square icon, SVG or PNG; optional	None	`/content/dam/tcs/icons/ai.svg`
Icon Image Alt Text (`content_iconAlt`)	text	No	No	Empty	Text alternative of the icon	Leave empty if decorative	None	Artificial intelligence
Hero Image type (`classes_media`)	select	No	No	Default ("")	Image or Lottie animation	Lotto only with a `.json` file	Options: Default, Lotto	Lotto
Hero Image Path (`image`)	reference (asset)	No (Recommended)	No	Empty	The background image or animation	Landscape image, or Lottie `.json` for Lotto	None	`/content/dam/tcs/hero/home.jpg`
Hero Image alt text (`imageAlt`)	text	No	No	Empty	Text alternative of the image / animation	Describe meaningful media; empty if decorative	None	Engineers reviewing a digital twin
Hero View (`classes`)	select	No	No	Default ("")	Cover or contained image	Contained for illustrations	Options: Default, Contained image	Contained image

Block model `hero` — Content tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Eyebrow (`content_eyebrow`)	text	No	No	Empty	Short context line above the title	Max. about 40 characters (Recommended); only shown with a title	None	Enterprise AI
Title (`content_title`)	text	No (Recommended)	No	Empty	The headline of the hero and page	About 60 characters or less (Recommended)	None	Building on belief
Title heading level (`content_titleType`)	select	No	No	H1	Semantic heading level of the title	H1 for the first hero, H2 for others	Options: H1, H2	H1
Description (`content_description`)	richtext	No	No	Empty	Supporting text below the title	1–2 short paragraphs, about 200 characters (Recommended)	None	We help enterprises transform with AI-led services.

Block model `hero` — Links tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
CTA List (`ctas`)	container (composite multifield)	No	Yes	No items	The hero's calls to action	1–2 CTAs (Recommended); see the item table	None	Contact us; Our services
Motion Type (`classes_motion`)	select	No	No	None ("")	Entrance animation	Use sparingly; none on most pages	Options: None, Fade in, Slide up, Zoom (image)	Fade in

Block model `hero` — Style tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Vertical Alignment (`classes_alignment`)	select	No	No	Middle (`align-middle`)	Vertical position of the content	Keep the image subject visible	Options: Top, Middle, Bottom	Bottom
Horizontal Alignment (`classes_horizontal`)	select	No	No	Center (`align-center`)	Horizontal position of the content (desktop)	Combine with a matching Text Alignment	Options: Left, Center, Right	Left
Text Alignment (`classes_textAlignment`)	select	No	No	Center align (`text-center`)	Alignment of icon, text and CTAs	Left for long descriptions	Options: Left align, Center align, Right align	Left align
BG Color (`classes_background`)	select	No	No	Default ("")	Overlay and text colours	Dark options for white text	Options: Default, Light no overlay, Dark blue, Dark blue (subtle), Black	Dark blue

Block model `hero` — Additional tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Anchor ID (`classes_anchor`)	text	No	No	Empty	ID for in-page links to the block	Unique on the page, starts with `anchor-`	Enforced regExp `^anchor-[a-z0-9][a-z0-9-]*$` ("Start with anchor-, then lowercase letters, digits and hyphens.")	anchor-home-hero
Hide block (`classes_hideblock`)	boolean	No	No	false	Temporarily hide the block	Turn off before go-live	None	false
Padding left (`classes_paddingleft`)	select	No	No	Default ("")	Extra left padding	Only when the design needs it	Options: Default, 0, space-100 … space-3000	pl-600
Padding right (`classes_paddingright`)	select	No	No	Default ("")	Extra right padding	As above	Options: Default, 0, space-100 … space-3000	pr-600
Padding top (`classes_paddingtop`)	select	No	No	Default ("")	Overrides the hero's top padding	As above	Options: Default, 0, space-100 … space-3000	pt-1600
Padding bottom (`classes_paddingbottom`)	select	No	No	Default ("")	Overrides the hero's bottom padding	As above	Options: Default, 0, space-100 … space-3000	pb-1600
Margin left (`classes_marginleft`)	select	No	No	Default ("")	Left margin of the block	Rarely needed for a full-width hero	Options: Default, 0, space-100 … space-3000	ml-0
Margin right (`classes_marginright`)	select	No	No	Default ("")	Right margin of the block	As above	Options: Default, 0, space-100 … space-3000	mr-0
Margin top (`classes_margintop`)	select	No	No	Default ("")	Space above the block	As above	Options: Default, 0, space-100 … space-3000	mt-0
Margin bottom (`classes_marginbottom`)	select	No	No	Default ("")	Space below the block	As above	Options: Default, 0, space-100 … space-3000	mb-1000

Item model — CTA List item (fields of the `ctas` container)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
CTA Title (`ctaText`)	text	No (Recommended)	No	Empty	Visible text of the CTA	Verb first, 2–4 words, about 25 characters (Recommended)	None	Contact us
CTA Link (`cta`)	aem-content	Yes in practice (an item without a link is not rendered)	No	Empty	Target page or URL	AEM page, external URL or `#anchor-…`	None in the model; items without a link are dropped by the code	`/content/tcs-corp/us/en/contact-us`
CTA Link Type (`ctaTarget`)	select	No	No	Default ("")	Same or new window	New window for external sites / documents	Options: Default, Open in New Win-	new-window

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
							dow (`new-window`)	
CTA view (`ctaType`)	select	No	No	Default (“”)	Text link, primary or secondary button	One Primary per hero	Options: Default, Primary, Secondary	primary
CTA Arrow (`ctaArrow`)	select	No	No	Right (`right`)	Arrow direction	Down for links within the page	Options: Right, Down	down

Field details

- **Icon (`content_icon`)** — Purpose: a small icon above the eyebrow. Allowed Values: one image asset (SVG, PNG, JPEG, WebP). Character Limits: not applicable. Business Rules: only the first picture before the title that stands alone (no text in the same paragraph) becomes the icon; it is shown at 2.5rem (3rem from 900 px) with `object-fit: contain`. Dependency Rules: part of the content group (`content_`), rendered in the content cell. Visibility Rules: always visible in the dialog. Sample Content: `/content/dam/tcs/icons/cloud.svg`.
- **Icon Image Alt Text (`content_iconAlt`)** — Purpose: alt text of the icon. Allowed Values: plain text. Character Limits: Recommended up to 60 characters. Business Rules: empty means a decorative icon. Dependency Rules: only meaningful with an Icon. Visibility Rules: always visible. Sample Content: Cloud services.
- **Hero Image type (`classes_media`)** — Purpose: chooses image or Lottie animation. Allowed Values: Default (“”), Lotto (`lottie`). Character Limits: not applicable. Business Rules: Lotto plays the animation only when Hero Image Path is a `.json` file; Default with a `.json` file shows no media. Dependency Rules: requires Hero Image Path. Visibility Rules: always visible. Sample Content: Lotto.
- **Hero Image Path (`image`)** — Purpose: the background image or animation. Allowed Values: one asset; an image, or a Lottie JSON file (`.json`) for Lotto. Character Limits: not applicable. Business Rules: the image of a first-section hero is loaded eagerly with `fetchpriority="high"`; without it the hero has no overlay. Dependency Rules: Hero Image type, Hero View, BG Color. Visibility Rules: always visible. Sample Content: `/content/dam/tcs/hero/home-hero.jpg` or `/content/dam/tcs/lottie/ai-waves.json`.
- **Hero Image alt text (`imageAlt`)** — Purpose: text alternative of the image or animation. Allowed Values: plain text. Character Limits: Recommended up to 125 characters. Business Rules: for an image it becomes the `alt`; for a Lottie animation the code reads it from the link’s `title` and, when present, gives the animation `role="img"` and `aria-label`; when empty the animation is `aria-hidden`. Dependency Rules: Hero Image Path. Visibility Rules: always visible. Sample Content: A data centre corridor with glowing servers.
- **Hero View (`classes`)** — Purpose: fill (cover) or contain the image. Allowed Values: Default (“”), Contained image (`media-contained`). Character Limits: not applicable. Business Rules: Contained image shows the whole image centred with 1.5rem padding. Dependency Rules: Hero Image Path. Visibility Rules: always visible. Sample Content: Contained image.
- **Eyebrow (`content_eyebrow`)** — Purpose: short kicker above the title. Allowed Values: plain text. Character Limits: Recommended up to 40 characters. Business Rules: the element before the title becomes the eyebrow (class `hero-eyebrow`); without a Title the eyebrow text is shown as part of the description instead. Dependency Rules: Title. Visibility Rules: always visible. Sample Content: Artificial Intelligence.
- **Title (`content_title`)** — Purpose: the headline. Allowed Values: plain text. Character Limits: Recommended up to 60 characters (display size 4rem on desktop). Business Rules: rendered as the heading of Title heading level with class `hero-title`; it is also the component title (`dc:title`) in the data layer. Dependency Rules: Title heading level. Visibility Rules: always visible. Sample Content: Building on belief.

- **Title heading level (`content_titleType`)** — Purpose: H1 or H2. Allowed Values: `h1`, `h2`. Character Limits: not applicable. Business Rules: default H1 (model and template); no visual difference. Dependency Rules: Title. Visibility Rules: always visible. Sample Content: h2.
- **Description (`content_description`)** — Purpose: supporting text. Allowed Values: rich text (paragraphs, bold, italic, links, lists). Character Limits: Recommended up to 200 characters. Business Rules: everything after the title (and anything before it that is not the icon or eyebrow) goes into `div.hero-description`; paragraphs are separated by 1rem. Dependency Rules: none. Visibility Rules: always visible. Sample Content: Our AI-led services help enterprises grow with resilience.
- **CTA List (`ctas`)** — Purpose: the calls to action. Allowed Values: any number of items. Character Limits: see the item fields. Business Rules: items without a link are dropped; the CTAs render in one wrapping row; if no item has a link the CTA row is omitted. Dependency Rules: none. Visibility Rules: always visible. Sample Content: two items “Contact us” (Primary) and “Our services” (Secondary).
- **Motion Type (`classes_motion`)** — Purpose: entrance animation. Allowed Values: None (“”), Fade in (`motion-fade`), Slide up (`motion-slide`), Zoom (image) (`motion-zoom`). Character Limits: not applicable. Business Rules: plays once when 10 % of the hero is visible; disabled in Universal Editor edit mode and for reduced motion. Dependency Rules: Zoom needs media. Visibility Rules: always visible. Sample Content: Fade in.
- **Vertical Alignment (`classes_alignment`)** — Purpose: vertical content position. Allowed Values: `align-top`, `align-middle`, `align-bottom`. Character Limits: not applicable. Business Rules: default Middle. Dependency Rules: none. Visibility Rules: always visible. Sample Content: align-bottom.
- **Horizontal Alignment (`classes_horizontal`)** — Purpose: horizontal content position. Allowed Values: `align-left`, `align-center`, `align-right`. Character Limits: not applicable. Business Rules: default Center; Left / Right limit the content to 47.5rem from 900 px; without a Text Alignment the text follows the position. Dependency Rules: Text Alignment. Visibility Rules: always visible. Sample Content: align-left.
- **Text Alignment (`classes_textAlignment`)** — Purpose: alignment inside the content block. Allowed Values: `text-left`, `text-center`, `text-right`. Character Limits: not applicable. Business Rules: default Center align; overrides the alignment implied by Horizontal Alignment. Dependency Rules: none. Visibility Rules: always visible. Sample Content: text-left.
- **BG Color (`classes_background`)** — Purpose: overlay and text colours. Allowed Values: Default (“”), `bg-light`, `bg-dark`, `bg-dark-subtle`, `bg-black`. Character Limits: not applicable. Business Rules: overlay only with media; dark options switch title, description and Default / Secondary CTAs to white. Dependency Rules: Hero Image Path. Visibility Rules: always visible. Sample Content: bg-dark.
- **Anchor ID (`classes_anchor`)** — Purpose: makes the block the target of `#anchor-…` links. Allowed Values: `anchor-` followed by lower-case letters, digits and hyphens. Character Limits: Enforced pattern; no length limit (Recommended up to 40 characters). Business Rules: becomes the block `id` (a duplicate on the same page gets `-2`, `-3`, …) and the component id in the data layer. Dependency Rules: none. Visibility Rules: always visible. Sample Content: anchor-home-hero.
- **Hide block (`classes_hideblock`)** — Purpose: hide the block without deleting it. Allowed Values: on / off. Character Limits: not applicable. Business Rules: hidden on preview and live (`display: none`, its wrapper too); faded with a dashed outline in edit mode. Dependency Rules: none. Visibility Rules: always visible. Sample Content: off.
- **Padding left (`classes_paddingleft`)** — Purpose: left padding from the spacing tokens. Allowed Values: Default, `pl-0`, `pl-100` (0.25rem), `pl-200` (0.5rem), `pl-300` (0.75rem), `pl-400` (1rem), `pl-500` (1.25rem), `pl-600` (1.5rem), `pl-800` (2rem), `pl-1000` (2.5rem), `pl-1200` (3rem), `pl-1600` (4rem), `pl-2000` (5rem), `pl-2400` (6rem), `pl-3000` (7.5rem). Character Limits: not applicable. Business Rules: overrides the hero’s own padding at every breakpoint. Dependency Rules: none. Visibility Rules: always visible. Sample Content: pl-1000.
- **Padding right (`classes_paddingright`)** — As Padding left with `pr-*` values. Sample Content: pr-1000.
- **Padding top (`classes_paddingtop`)** — As Padding left with `pt-*` values; replaces the hero’s 4rem / 7.5rem top padding. Sample Content: pt-2000.
- **Padding bottom (`classes_paddingbottom`)** — As Padding left with `pb-*` values. Sample Content: pb-2000.

- **Margin left (`classes_marginleft`)** — Purpose: left margin from the spacing tokens. Allowed Values: Default, `ml-0` … `ml-3000` (same 14 token steps). Business Rules: a margin makes the full-width hero narrower than the viewport. Dependency Rules: none. Visibility Rules: always visible. Sample Content: ml-0.
- **Margin right (`classes_marginright`)** — As Margin left with `mr-*` values.
- **Margin top (`classes_margintop`)** — As Margin left with `mt-*` values. Sample Content: mt-0.
- **Margin bottom (`classes_marginbottom`)** — As Margin left with `mb-*` values. Sample Content: mb-1000.
- **CTA Title (`ctaText`)** — Purpose: CTA text. Allowed Values: plain text. Character Limits: Recommended up to 25 characters (buttons do not wrap their text). Business Rules: becomes the link text. Dependency Rules: CTA Link. Visibility Rules: always visible. Sample Content: Contact us.
- **CTA Link (`cta`)** — Purpose: the target. Allowed Values: AEM page, external URL, `#anchor`. Character Limits: not applicable. Business Rules: an item without a link is not rendered; a link starting with `#` without an arrow value points down. Dependency Rules: none. Visibility Rules: always visible. Sample Content: `/content/tcs-corp/us/en/contact-us`.
- **CTA Link Type (`ctaTarget`)** — Purpose: open in a new window. Allowed Values: Default (""), `new-window`. Business Rules: `new-window` sets `target="_blank"` and `rel="noopener noreferrer"`. Dependency Rules: CTA Link. Visibility Rules: always visible. Sample Content: new-window.
- **CTA view (`ctaType`)** — Purpose: CTA style. Allowed Values: Default (""), `primary`, `secondary`. Business Rules: delivered as bold (primary) or italic (secondary) formatting of the link; Default renders as a tertiary text link with an arrow. Dependency Rules: none. Visibility Rules: always visible. Sample Content: primary.
- **CTA Arrow (`ctaArrow`)** — Purpose: arrow direction. Allowed Values: `right`, `down`. Business Rules: default right; `down` adds `hero-cta-down`. Dependency Rules: none. Visibility Rules: always visible. Sample Content: down.

6.10.7 Field Annotation Mapping

Marker	Field	Purpose
A	Hero block (Style tab: Vertical Alignment, Horizontal Alignment, Text Alignment, BG Color; Links tab: Motion Type; Additional tab)	Block options that position and colour the hero
B	Hero Image type, Hero Image Path, Hero Image alt text, Hero View	The background image or Lottie animation
C	Icon, Icon Image Alt Text	The small icon above the eyebrow
D	Eyebrow	The short line above the title
E	Title, Title heading level	The headline (H1 / H2)
F	Description	The supporting rich text
G	CTA List (CTA Title, CTA Link, CTA Link Type, CTA view, CTA Arrow)	The calls to action

6.10.8 Component Specification

Attribute	Value
Component Name	Hero (`hero`; Universal Editor title "Hero")
Version	1.0
Owner	[To be confirmed: product owner — owner: Digital Marketing]; technical owner: development team
Dependencies	`decorators/animation-decorator.js`, `decorators/button-decorator.js`, `decorators/icon-button-decorator.js`, `decorators/link-decorator.js`, `utils/buttons.js`, `utils/links.js`, `utils/multifield.js`, `utils/environment.js`, `utils/viewport.js`, `utils/media.js`, `utils/lottie.js`, `utils/placeholders.js`, `scripts/scripts.js`, `scripts/lib/lottie/lottie_light.min.js`, `styles/styles.css`

Attribute	Value
Component Type	Block (resource type `core/franklin/components/block/v1/block`, model `hero`); the CTA List is a composite multifield inside the block, not a separate item component
Supported Variants	Image type Default / Lotto; Hero View Default / Contained image; BG Color Default / Light no overlay / Dark blue / Dark blue (subtle) / Black; Vertical Top / Middle / Bottom; Horizontal Left / Center / Right; Text Left / Center / Right; Motion None / Fade in / Slide up / Zoom; CTA view Default / Primary / Secondary; CTA Arrow Right / Down; CTA Link Type Default / New window; Title H1 / H2
Supported Templates	Any page; allowed in Section and Gen Carousel; Home template removes the first section's top spacing
Supported Metadata	None read by the block (page metadata is not used)
Supported Tags	None (the Hero has no tag field)
Supported Personalization	None in the block; the block is in the data layer (`tcs-corp/components/hero`) so Adobe Target could target it once Adobe Tags is added (Not implemented (as of this handover))
Caching Considerations	Rendered client-side from the page HTML cached by the Edge Delivery CDN; the Lottie player and `.json` file are cached as static resources; placeholders are fetched once per page (`/{locale}/placeholders.json`) only when a Lottie toggle is created
Performance Considerations	In the first section the block loads in the eager phase; its image gets `loading="eager"` and `fetchpriority="high"` (LCP). The Lottie player loads only when the hero is within 200 px of the viewport and the browser is idle; the animation pauses off screen. Motion uses CSS animations only
Accessibility Compliance	WCAG 2.1 AA: heading level selectable (1.3.1, 2.4.6); alt text for image, icon and animation (1.1.1); Lottie pause / play button with localised labels (2.2.2); reduced motion respected for motion and animation (2.3.3); white text and CTA colour switch on dark backgrounds (1.4.3); keyboard-reachable CTAs and toggle (2.1.1); no automatic new-window hint (author must state it)
SEO Compliance	One H1 per page when used as the first hero; title and description are server-delivered HTML (crawlable); image alt text indexable; optimised LCP image; CTAs are crawlable `<a href>` links

6.10.9 Input Model

Content Inputs: icon, eyebrow, title, title heading level, description (content group `content_`), hero image or Lottie file with its alt text, CTA List items.

Metadata Inputs: none.

Tags Inputs: none.

Page Context Inputs: whether the block is in the first section of `main` (eager image loading); Universal Editor edit mode (`html.adobe-ue-edit`, disables motion); the visitor's `prefers-reduced-motion` setting; the page's locale (placeholders for the animation toggle).

Query Inputs: none (no query index or sheet besides placeholders).

Manual Inputs: all fields are manual; the block options arrive as block classes.

Authored HTML received from AEM (rows can arrive in any order; the code sorts them into the content, media and CTA cells):

```
<div class="hero lottie align-bottom align-left text-left bg-dark motion-fade">
  <div><div>
    <p><picture><img src="./media_1a2b.svg" alt="Cloud services"></picture></p>
    <p>Enterprise AI</p>
    <h1>Building on belief</h1>
    <p>Our AI-led services help enterprises grow with resilience.</p>
  </div></div>
  <div><div>
    <p><a href="/content/dam/tcs/lottie/ai-waves.json"
```

```
      title="Animated waves of data">/content/dam/tcs/lottie/ai-waves.json</a></p>
  </div></div>
  <div><div>
    <p><strong><a href="/en/contact-us">Contact us</a></strong></p>
    <p>right</p>
    <hr>
    <p><em><a href="https://example.com/ai-report.pdf">AI report (PDF)</a></em></p>
    <p>new-window</p>
    <p>right</p>
    <hr>
    <p><a href="#anchor-our-story">Discover our story</a></p>
    <p>down</p>
  </div></div>
</div>
```

6.10.10 Output Model

Rendered Output

`hero.js` replaces the authored rows with at most two children; the block keeps its option classes and gets `hero-has-media` when there is media.

- `div.hero` (+ option classes, `hero-has-media`, and at runtime `motion-ready`, `is-visible`)
  - `div.hero-media` (only with media) containing the `<picture>`, or `div.hero-animation` (Lotto)
  - `div.hero-content`
    - `div.hero-icon` with the icon `<picture>` (optional)
    - `p.hero-eyebrow` (optional; only when there is a title)
    - `h1.hero-title` or `h2.hero-title` (optional)
    - `div.hero-description` (optional)
    - `div.hero-ctas` with `a.button.primary|secondary|tertiary` (optional; `hero-cta-down` on down-arrow links; `target="_blank"` on new-window links)
  - `button.animation-toggle.button.icon-button.secondary` (Lotto only; appended to the block)

Universal Editor instrumentation (`data-aue-*`, `data-richtext-*`) is moved from the authored cells to `hero-media`, `hero-content` and `hero-ctas`, so in-place editing keeps working.

Generated HTML

```
<div class="hero align-middle align-center text-center bg-dark hero-has-media block"
  data-block-name="hero" data-block-status="loaded" data-cmp-id="hero-1">
  <div class="hero-media">
    <picture><img src="./media_9f8e.jpg?width=2000" alt="" loading="eager"
      fetchpriority="high"></picture>
  </div>
  <div class="hero-content">
    <p class="hero-eyebrow">Enterprise AI</p>
    <h1 class="hero-title">Building on belief</h1>
    <div class="hero-description"><p>Our AI-led services help enterprises grow.</p></div>
    <div class="hero-ctas">
      <a href="/en/contact-us" title="Contact us" class="button primary">Contact us</a>
      <a href="#anchor-our-story" title="Discover our story"
        class="button tertiary hero-cta-down">Discover our story</a>
    </div>
  </div>
</div>
```

With Lotto, the media and the toggle look like this:

```
<div class="hero-media">
  <div class="hero-animation" role="img" aria-label="Animated waves of data">
    <svg><!-- rendered by the Lottie player --></svg>
  </div>
</div>
<button type="button" class="animation-toggle button secondary icon-button"
  aria-label="Pause animation" title="Pause animation"
  style="--icon-url: url('/icons/pause.svg')" data-cmp-interaction="animation"></button>
```

Generated JSON: none (the block produces no JSON).

Generated Metadata: none (the block does not write page metadata or `<head>` tags).

Analytics Tracking

The data layer decorator adds the block to `window.adobeDataLayer` once it is decorated, and tracks clicks on its links and buttons. The component id is the Anchor ID when set, else `hero-{n}` in page order.

```
{
  "component": {
    "hero-1": {
      "@type": "tcs-corp/components/hero",
      "parentId": "page-1x2y3z",
      "dc:title": "Building on belief"
    }
  }
}
```

A click on a CTA:

```
{
  "event": "cmp:click",
  "eventInfo": {
    "path": "component.hero-1",
    "interaction": "link",
    "dc:title": "Contact us",
    "xdm:linkURL": "https://main--tcs-corp--sradha-tcs.aem.live/en/contact-us",
    "xdm:linkType": "other",
    "breakpoint": "desktop"
  }
}
```

`xdm:linkType` is `exit` for links to another origin and `download` for file links (PDF, DOCX, XLSX, PPTX, ZIP, CSV, TXT, MP3, MP4). A click on the Lottie pause / play button is a `cmp:click` with `"interaction": "animation"` and `dc:title` "Pause animation" (or "Play animation", the label at the time of the click). The Lottie animation is not an HTML media element, so no `cmp:media` events are sent. No tag manager reads the data layer yet (Adobe Tags / Web SDK are integration-ready, not implemented).

Personalization Output: none (no personalization marker or Target mbox).

Search Index Output: none. The query index (`helix-query.yaml`) only reads `<head>` metadata, so Hero content is not indexed in `/query-index.json`; the Hero HTML is crawlable by search engines as part of the page.

Target Personalization Output: None in the block today: no personalisation marker or Target mbox. The Hero is in the data layer as tcs-corp/components/hero (id = Anchor ID or hero-n, dc:title = the title) with cmp:click for its CTAs, so Adobe Target could address it once Adobe Tags is added (Not implemented (as of this handover)).

6.10.11 Business Rules

1. Rows are sorted by content, not position: a cell with only one picture (and no text), or only one `.json` link, is the media; a cell with only links (plus `new-window`, `right`, `down` values) and no heading is the CTA List; the first other cell is the content and any further cells are appended to it.
2. The media check runs first, so a cell with only a `.json` link is never read as a CTA List.
3. Lotto plays only when the block has class `lottie` and the media link ends in `.json` (query string or hash allowed).
4. With Lotto and an image, the image is shown (fallback).
5. With Default and a `.json` link, no media is rendered and the hero shows without media.
6. The Lottie label comes from the link's `title` when it differs from the link text; else the animation is decorative (`aria-hidden="true"`).
7. The Lottie toggle is appended to the block (outside `hero-media`) so it is above the overlay and the content; it is placed at the bottom right (`inset` 1rem).
8. Lottie: loop on; SVG renderer; `preserveAspectRatio` "xMidYMid meet"; starts paused on frame 0 for reduced motion; plays when visible and pauses when off screen; the player loads once per page, within 200 px of the viewport, in browser idle time (or after 200 ms where `requestIdleCallback` is missing).
9. A hero image in the first section of `main` gets `loading="eager"` and `fetchpriority="high"`.
10. Without media, `hero-has-media` is not set and no overlay is drawn.
11. Content order: icon, eyebrow, title, description, CTAs, regardless of the authored order of the description elements.
12. The icon is the first stand-alone picture before the heading (a paragraph with only a picture); only one icon is used; other pictures go to the description.
13. The eyebrow is the first non-icon element before the heading; it exists only when there is a heading; without a heading every element (except the icon) goes into the description.
14. The description container is omitted when empty.
15. CTA view: Primary and Secondary stay; anything else (Default) becomes tertiary (text + arrow).
16. CTA Arrow Down, or no arrow value and a link starting with `#`, adds `hero-cta-down`.
17. `new-window` sets `target="_blank"` and `rel="noopener noreferrer"`; no new-tab hint is added.
18. CTA items without a link are dropped; the CTA row is omitted when no CTA remains.
19. Motion Type applies only with a motion class, outside Universal Editor edit mode and without reduced motion; then `motion-ready` hides Fade / Slide content until 10 % of the hero is visible, when `is-visible` plays the animation once.
20. Motion CSS is also guarded by `@media (prefers-reduced-motion: no-preference)` and `:root:not(.adobe-ue-edit)`.
21. Horizontal Alignment Left / Right also aligns the text when no Text Alignment class is present (backwards compatibility); new Heroes get Text Alignment Center from the template.
22. From 900 px, Left / Right limit the content block to 47.5rem; below 900 px the content is full width.
23. Dark BG Colors switch the title to white, the description to 50 % white (medium weight), Secondary CTAs to white outline and Default CTAs to white (light blue on hover); the eyebrow stays brand blue.
24. The section wrapper of a Hero is full width without padding (`.hero-container .hero-wrapper`).
25. Additional tab: Anchor ID must match `^anchor-[a-z0-9][a-z0-9-]*$` (enforced in the dialog) and becomes the block id (unique, `-2`, `-3` suffixes); Hide block hides it outside edit mode; padding / margin classes override the hero's own spacing.
26. Error handling: a Lottie load failure logs `failed to play the Lottie animation` in the console and leaves the media box empty; the rest of the hero renders. Missing placeholders fall back to English labels.

6.10.12 Author Best Practices

Recommended Content Length

Element	Recommended	Why
Eyebrow	Up to 40 characters, one line	Kicker, not a sentence
Title	Up to 60 characters (2 lines on desktop)	Display size 4rem desktop, 2.5rem mobile
Description	Up to 200 characters, 1–2 paragraphs	Readability over images
CTA Title	2–4 words, up to 25 characters	Buttons do not wrap their text
Number of CTAs	1–2 (maximum 3)	Clear primary action
Alt text	Up to 125 characters	Concise screen-reader description

Image Dimensions

- Cover image (Hero View Default): landscape, at least 1920 × 1080 px (16:9), ideally 2400 px wide; the box is at least 850 px tall on desktop and 560 px on mobile, cropped around the centre (`object-fit: cover`), so keep the subject in the central area and away from where the text sits.
- Contained image: the whole image is shown inside the hero minus 1.5rem padding; a transparent PNG or SVG illustration, around 1600 px wide.
- Icon: square, at least 96 × 96 px (displayed at 40–48 px), SVG preferred.
- Lottie: a Lottie JSON exported for the SVG renderer, ideally under 500 KB; its own aspect ratio is kept ("meet"), so design it for a wide (16:9) frame.

CTA Writing Guidelines

- Start with a verb and say what happens: "Contact us", "Explore our services".
- One Primary CTA; a Secondary or Default CTA for the alternative.
- Use Arrow Down only for links to the same page (`#anchor-…`).
- For new-window links, say so in the text when it matters ("(PDF)", "(opens LinkedIn)").

Accessibility Guidelines

- Exactly one H1 per page; heading level H2 for every other Hero.
- Alt text for meaningful images and animations; empty for decorative ones.
- Check contrast: use a darker overlay (Dark blue instead of Dark blue (subtle)) when the image is bright; avoid Light, no overlay over busy images.
- Keep motion optional; avoid combining a Lottie background with Slide up / Zoom.
- Make link text meaningful out of context (no "Click here").

SEO Guidelines

- Put the main keyword in the H1 title; keep it consistent with the page's Title / meta title.
- Use real text, not text baked into the image.
- Optimise image weight in AEM Assets; Edge Delivery serves optimised renditions.

Metadata Guidelines: the Hero does not read page metadata. Set the page Title, Description and the SEO columns of the metadata sheet separately (they are not derived from the Hero).

Taxonomy Guidelines: the Hero has no tags; tag the page itself in its page properties.

Localization Guidelines

- Every locale site has its own Hero content; translate the eyebrow, title, description, CTA titles and alt texts, and link CTAs to the same-locale pages (`/de-de/...`).
- Allow 30 % more length for German, French and Dutch titles and CTAs; check that buttons still fit on mobile.
- The pause / play labels come from the locale's placeholders sheet (keys `pauseAnimation`, `playAnimation`); add translated texts to each locale's `placeholders`.
- Lottie animations with embedded text must be produced per language.

6.10.13 Troubleshooting Guide

Issue 1 — The Lottie animation does not play

Symptoms: The hero shows no background (or a static image) although a `.json` file was selected.

Root Cause: Hero Image type is Default (a `.json` file is then not rendered); or the file is not a valid Lottie JSON; or the player failed to load; or the visitor prefers reduced motion (the animation then starts paused on its first frame).

Diagnosis Steps: Check the Image tab (Hero Image type = Lotto?); inspect the block in the browser: does it have class `lottie` and a `div.hero-animation` with an `<svg>`? Look for `failed to play the Lottie animation` in the console; check the Network tab for `lottie_light.min.js` and the `.json` request (status 200?); check the OS reduced-motion setting.

Resolution Steps: Set Hero Image type to Lotto; re-export the animation as Lottie JSON for the SVG renderer (the light player does not support expressions); publish the asset; press Play on the toggle if reduced motion is on.

Validation Steps: Reload the preview page; the animation plays and the toggle switches between Pause and Play.

Preventive Measures: Test every new Lottie file on a block-library page first; keep the validation checklist.

Issue 2 — The title or CTAs are not visible on page load

Symptoms: The content appears only after scrolling or after a delay, or stays invisible.

Root Cause: Motion Type Fade in / Slide up hides the content (`motion-ready`) until 10 % of the hero is visible; if a script error stops the observer, it stays hidden.

Diagnosis Steps: Inspect the block classes: `motion-ready` without `is-visible`? Check the console for errors.

Resolution Steps: Set Motion Type to None for first-section heroes if the delay is not wanted; report script errors to L3.

Validation Steps: Reload the page; the content is visible immediately (None) or after the 800 ms animation.

Preventive Measures: Use motion only where it adds value; keep LCP heroes static.

Issue 3 — The image is cropped badly on mobile

Symptoms: On phones the subject of the image is cut off or hidden behind the text.

Root Cause: Hero View Default crops the image to fill a tall 35rem box around the centre.

Diagnosis Steps: View the page at 375 px; compare the image composition with the crop.

Resolution Steps: Choose an image with a centred subject; move the content with Vertical / Horizontal Alignment; or use Hero View Contained image for illustrations.

Validation Steps: Check 375 px, 768 px and 1440 px widths.

Preventive Measures: Brief photographers / designers on the safe central area.

Issue 4 — Two H1 headings on the page

Symptoms: SEO audit or accessibility tool reports multiple H1s.

Root Cause: The Hero title is H1 (default) while another Hero, a Page Header (article, blog, press-release templates) or an authored H1 also exists.

Diagnosis Steps: Run an accessibility / SEO checker or search the DOM for `h1`.

Resolution Steps: Set Title heading level to H2 on every Hero except the page's main one; on templated pages use the Page Header for the H1.

Validation Steps: Exactly one `h1` in the DOM.

Preventive Measures: Validation checklist item "exactly one H1".

Issue 5 — A CTA is missing or shows as plain text
Symptoms: Fewer CTAs than authored; or the CTA text appears inside the description.

Root Cause: The item has no CTA Link (dropped); or the CTA cell contains other text, so it is read as content.

Diagnosis Steps: Open each CTA List item and check CTA Link; inspect the authored HTML (`.plain.html` of the page) for the CTA row.

Resolution Steps: Fill CTA Link for every item; remove stray text from the CTA items.

Validation Steps: All CTAs show in the `hero-ctas` row with the right view.

Preventive Measures: Always fill CTA Title and CTA Link together.

Issue 6 — Text is hard to read over the image
Symptoms: Low contrast between text and background; accessibility checker flags contrast.

Root Cause: BG Color Light, no overlay over a dark / busy image; Dark blue (subtle) over a bright image; brand-blue eyebrow or 50 % white description on dark backgrounds.

Diagnosis Steps: Measure contrast with a contrast checker at the text position.

Resolution Steps: Choose Default (white overlay) or Dark blue / Black; replace the image; move the content to a calmer area.

Validation Steps: Contrast of at least 4.5:1 for body text, 3:1 for the large title.

Preventive Measures: Pair BG Colors with suitable images in the design system guidance.

Issue 7 — The CTA arrow points down for a normal link
Symptoms: A CTA to another page shows a down arrow.

Root Cause: CTA Arrow is Down, or the item has no arrow value and the link starts with `#`.

Diagnosis Steps: Open the item and check CTA Arrow and CTA Link.

Resolution Steps: Set CTA Arrow to Right.

Validation Steps: The arrow points right in preview.

Preventive Measures: Use Down only for in-page anchors.

Issue 8 — The hero is missing on the published page
Symptoms: The hero shows in the editor (faded) but not on preview / live.

Root Cause: Hide block is on.

Diagnosis Steps: Additional tab: Hide block; the block has class `hideblock`.

Resolution Steps: Turn Hide block off and publish.

Validation Steps: The hero renders on the live URL.

Preventive Measures: Review the Additional tab before publishing.

6.10.14 Support Runbook
Monitoring Requirements

- Core Web Vitals of pages that open with a Hero (LCP is usually the hero image): PageSpeed Insights or real-user monitoring ([To be confirmed: RUM / monitoring tool — owner: site admin]).
- Periodic visual checks of the home pages of all 13 locales.
- Availability of the Lottie player (`/scripts/lib/lottie/lottie_light.min.js`) and Lottie assets.

Logs

- Browser console: `failed to play the Lottie animation` (with the error) from `decorators/animation-decorator.js`; `failed to load template {name}` from `scripts.js` (not Hero-specific). The Hero itself logs nothing else.
- Admin API: preview / publish status of the page and assets (`https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`), visible in AEM Sidekick.
- AEM author: publication and replication logs in AEM as a Cloud Service (Cloud Manager log download) for publish failures.

Common Errors

Error	Likely cause	Fix
No background shown	Default type with a `.json` file; or asset not published	Set Lotto or choose an image; publish the asset
Console "failed to play the Lottie animation"	Invalid JSON, 404, unsupported Lottie features	Re-export / republish the file
Content invisible until scroll	Motion Type Fade / Slide	Use None for first-section heroes
Two H1s	Default H1 with a Page Header or second hero	Use H2
CTA missing	Item without CTA Link	Fill CTA Link
Anchor ID rejected	Does not match `anchor-…` pattern	Use lower-case `anchor-name`
Hero not visible live	Hide block on	Turn off and publish

Escalation Matrix

Level	Who	Checks
L1	Author support / content team lead	Dialog values (image type, alt text, CTAs, Hide block), asset publication, page preview vs live, checklist above
L2	AMS / site admin	Page and asset publish status in Sidekick / admin API, CDN cache (purge by republishing), placeholders sheet published, browser console errors
L3	Development team	`blocks/hero/*`, animation decorator, Lottie player, CSS regressions, Code Sync status of `main`, reproduction on a feature branch
L4	Adobe Support	Edge Delivery Services delivery or AEM as a Cloud Service / Universal Editor platform incidents

Recovery Procedures

1. Content error: restore the previous page version in AEM and publish.
2. Broken asset: replace or restore the asset in AEM Assets and republish the page.
3. Lottie failure: switch Hero Image type to Default and select a fallback image; publish.
4. Code regression: revert the offending commit on `main`; verify on `main--tcs-corp--sradha-tcs.aem.page`.
5. Emergency: Hide block on and publish while the fix is prepared.

Health Checks

- `curl -s https://main--tcs-corp--sradha-tcs.aem.live/en.plain.html` (or the page path) returns the hero rows.
- The home page of each locale renders the hero with no console errors.
- PageSpeed Insights LCP under 2.5 s for the home pages.
- The Lottie player URL returns 200.

Operational Procedures

- New hero design options are added by the development team in `_hero.json`, followed by `npm run build:json`, `npm run lint` and a pull request with a preview link.
- Placeholder labels (`pauseAnimation`, `playAnimation`) are maintained in each locale's placeholders sheet.
- Use the locale block-library pages to validate Hero variations after code changes.

Known Limitations

- No video background (Not implemented (as of this handover)).
- One media item only; no separate mobile / desktop image (art direction) field.
- No automatic "opens in a new tab" hint for new-window CTAs.
- The Lottie light player does not support After Effects expressions.
- Motion Type Fade / Slide briefly hides first-section content, which can affect perceived LCP.
- The eyebrow colour does not change on dark backgrounds.
- Horizontal Alignment only shows as a block position from 900 px.
- Without a title, the eyebrow is treated as description text.

6.10.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
The hero shows no background although a .json file was selected	Hero Image type left on Default	Set Hero Image type to Lotto
Two H1 headings on the page	Title heading level left on H1 for a second Hero or on a page with a Page Header	Set H2 on every Hero except the main one
A CTA is missing on the page	CTA Link of the item left empty	Fill CTA Link for every CTA List item
CTAs show as text in the description	Extra text in a CTA List item, so the cell is read as content	Keep only CTA Title, CTA Link and options in each item
An in-page CTA shows a right arrow	CTA Arrow kept its pre-selected Right	Set CTA Arrow to Down for #anchor links
The block moved left but the text is centred	Text Alignment kept the pre-selected Center align	Set Text Alignment to Left align
Text unreadable over the image	Light, no overlay with a busy image, or Dark blue (subtle) with a bright one	Choose Default, Dark blue or Black, or a calmer image
The headline appears late on page load	Motion Type Fade in or Slide up on the first-section Hero	Set Motion Type to None
The Hero is missing on preview and live	Hide block switched on	Turn Hide block off and publish

6.10.16 Author Quick Reference Guide

Mandatory Fields

- Title: not required in the model, but needed for a heading; without it the eyebrow falls into the description
- CTA Link (each CTA List item): not required in the model, but an item without a link is not rendered

Recommended Fields

- Hero Image Path: the photograph, illustration or Lottie .json; without it the Hero is text-only with no overlay
- Hero Image alt text: describe meaningful images and animations, leave empty for decorative ones
- Title heading level: H1 for the first Hero of the page, H2 for all others
- Description: one or two short paragraphs, about 200 characters
- CTA Title: verb first, 2 to 4 words, about 25 characters
- CTA view: one Primary per Hero, Secondary or Default for the alternative

Optional Fields

- Icon and Icon Image Alt Text: a small square icon above the eyebrow
- Eyebrow: a kicker of up to about 40 characters, shown only with a Title
- Hero Image type: Lotto for a Lottie .json file
- Hero View: Contained image for illustrations and charts
- CTA Link Type: Open in New Window for external sites and documents
- CTA Arrow: Down for #anchor links on the same page
- Motion Type: Fade in, Slide up or Zoom (image)
- Vertical Alignment, Horizontal Alignment and Text Alignment
- BG Color: Default, Light no overlay, Dark blue, Dark blue (subtle), Black
- Additional tab: Anchor ID, Hide block, Padding and Margin

Authoring Checklist

1. Put the main Hero in the page's first section so its image loads eagerly as the LCP element
2. Use H1 for the first Hero and H2 for every other Hero and on pages with a Page Header
3. Choose Hero Image type Lotto only with a Lottie .json file; with Default select an image
4. Use Hero View Contained image for illustrations and charts, Default for photographs
5. Add one Primary CTA and at most one or two further CTAs; fill CTA Title and CTA Link together
6. Set CTA Arrow to Down for #anchor links; it is pre-set to Right
7. Combine Horizontal Alignment Left or Right with the matching Text Alignment; Center align is pre-selected
8. Pick the BG Color for the image: Default or Light no overlay for dark text, Dark blue, Dark blue (subtle) or Black for white text
9. Keep Motion Type None on the opening Hero unless an entrance animation is wanted

Pre-Publish Checklist

1. Check the Hero on aem.page at 375, 768 and 1440 px
2. Confirm exactly one H1 on the page
3. Check alt texts: meaningful media described, decorative media empty
4. Check text contrast over the image, especially the eyebrow and description on dark BG Colors
5. Click every CTA: correct target, view and arrow; new-window CTAs open a new tab and say so in their text
6. For Lotto: the animation plays and the pause / play button works with the keyboard
7. Hide block is off and the Anchor ID, if any, is unique

Post-Publish Validation Checklist

1. Open the page on aem.live with the cache disabled and check that the hero image or animation loads
2. Check that new assets (image, icon, .json) were published with the page
3. Run PageSpeed Insights on the live URL; the hero image should be the LCP element
4. Check the browser console for 'failed to play the Lottie animation'
5. Check that CTA clicks appear as cmp:click in window.adobeDataLayer
6. Repeat the checks on every locale copy whose Hero changed

6.10.17 Component Execution Example

Business example: Annual report 2026 banner with a contained chart.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Hero
Hero Image Path (Hero › Image)	Select the asset chart.svg (/en/media/chart.svg)

Field	Value
Hero Image alt text (Hero › Image)	Bar chart of the revenue growth index, 2020 to 2026
Hero View (Hero › Image)	Contained image
Eyebrow (Hero › Content)	Annual report 2026
Title (Hero › Content)	Growth you can measure
Description (Hero › Content)	Strategy, technology and operations working together for measurable out-comes.
CTA Title (Hero › Links › CTA List › Item 1)	Read the report
CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/insights/annual-report
CTA view (Hero › Links › CTA List › Item 1)	Primary
Vertical Alignment (Hero › Style)	Top
BG Color (Hero › Style)	Light, no overlay

All other fields keep their default values.

Rendered Result:

Figure 35: Execution example — The Hero at 1440 px: the bar chart chart.svg shown whole and centred with no overlay (Contained image, Light, no overlay); at the top, centred, the eyebrow 'Annual report 2026', the H1 'Growth you can measure', the description and one Primary button 'Read the report'. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/hero-contained-image.jpg)

Author Notes

- Image tab: select chart.svg, enter the alt text and set Hero View to Contained image.
- Content tab: eyebrow 'Annual report 2026', title 'Growth you can measure' at the default H1, one-sentence description.
- Links tab: one CTA 'Read the report' to /en/insights/annual-report with CTA view Primary.

- Style tab: Vertical Alignment Top and BG Color Light, no overlay; Horizontal and Text Alignment keep Center.

Business Notes

- The chart must stay whole, so cropping (Hero View Default) is not acceptable for this banner.
- One Primary CTA routes visitors straight to the report.
- The headline states the message; the figures belong in the page text, not only in the image.

Technical Notes

- `media-contained` turns div.hero-media into a centred flex box with 1.5rem padding and object-fit: contain.
- `bg-light` makes the overlay transparent; the text keeps the default dark colours.
- `align-top` sets justify-content: flex-start; the template still adds align-center and text-center.
- In the first section the image gets loading eager and fetchpriority high.

TCS Corporate Website — Project Handover

Volume 4 of 13 — Component 6.11: Teaser

Date: October 14, 2026

Adobe

Table of Contents

Part 6 — Component Library (continued) 3
6.11 Teaser Block 3

Part 6 — Component Library (continued)

> **Note:** This is volume 4 of 13 of the TCS Corporate Website project handover (version 2.0). Volume 1 holds the document control, the audience guide and the conventions.

6.11 Teaser Block

The Teaser is the site's most versatile content block: a title with optional eyebrow, tags, date, reading time, page actions, author, description, image or Lottie animation, statistics, links and a short description, presented in one of four layouts — Image & Text, Text split, Background image and Card — with many style options. It implements the TCS.com Design System Figma frames "Text & Image", "2 Slot Section", "Text Section - 2 Columns", "Secondary Page Header", "Careers", "Media Coverage", "Media Kit" (Card) and the article header elements of "L3 Header" (Text split).

Source files: `blocks/teaser/teaser.js`, `blocks/teaser/teaser.css`, `blocks/teaser/_teaser.json`. The Teaser is a **key-value block**: Universal Editor stores one row per property (property name | value), and the code reads the rows by name.

6.11.1 Component Purpose

Business Objective

Present a focused message — a service, an insight, a statistic-led story, a career call or a media resource — with a consistent, design-system look, and lead the visitor to the next page through clear links, while letting authors build many approved Figma variations from one component instead of maintaining several near-identical blocks.

Business Use Cases

- Image & Text promotion of a service, industry or capability, with the image left or right.
- Two-column text sections (Text split): title left, text, chart, stats and links right.
- Statistic-led sections ("40 % cost reduction") with the Stats tab.
- Secondary page headers of landing pages (Top spacing "Page header", large title).
- Article-style header (Figma "L3 Header"): eyebrow, tags, date, reading time, listen / download / share actions and author.
- Careers call to action without image (centred text).
- Full-width banners with a background image under a dark overlay (Background image).
- Media kit / media coverage cards with an image behind the text (Card).
- Link lists ("List" link style) for related resources.
- Animated (Lottie) illustrations beside the text (Image type Lotto).
- A slide of a Gen Carousel section.

When To Use

- For any single message that combines a heading with text, media, stats or links inside the page flow.
- When the design is one of the Teaser's Figma variations.

When Not To Use

- For the first, full-height banner of a landing page: use the Hero.
- For article, blog and press-release page headers built from page metadata: use the Page Header (added automatically by those templates).
- For lists of several items (cards, pages, people): use Cards, List or Filter List.
- For quotes and testimonials: use the Quote or Testimonial block.

- For video: use the Video or Embed block (the Teaser has no video media type; Not implemented (as of this handover)).

Dependencies

Type	Dependency	Used for
Core	`scripts/aem.js` `toClassName`; `scripts/scripts.js` `moveInstrumentation`	Normalising values; keeping Universal Editor instrumentation
Decorator	`decorators/a11y-decorator.js` `hideVisually`	Hide Title (visually hidden, kept for screen readers)
Decorator	`decorators/animation-decorator.js` `createAnimation`	Lotto image type and its pause / play button
Decorator	`decorators/article-meta-decorator.js` `buildPublished`, `buildReadingTime`, `buildPageActions`, `buildAuthorLockup`	Date, reading time, listen / download / share, author
Decorator	`decorators/date-decorator.js` (through article meta) and `utils/dates.js`	`<time>` element and date formats
Decorator	`decorators/button-decorator.js`, `decorators/icon-button-decorator.js`	Buttons, text links, icon buttons
Decorator	`decorators/content-decorator.js` `fromCell`	Moving eyebrow, description, author texts into the output
Decorator	`decorators/heading-decorator.js` `buildHeading`	Title with Title Type (H1–H6)
Decorator	`decorators/image-decorator.js` `pictureOf`	Image and author image with alt text
Decorator	`decorators/link-decorator.js` `setLinkTarget`	New-window links in List style
Decorator	`decorators/stats-decorator.js` `buildStats`	Stats as a description list
Decorator	`decorators/tag-decorator.js` `buildTagList`	Tag list
Util	`utils/properties.js` `readProperties`, `textOf`, `isOn`, `optionOf`	Reading the key-value rows
Util	`utils/links.js` `NEW_WINDOW`, `linkOf`, `readLinkItems`; `utils/multifield.js`	Links, Links multifield, Stats multifield
Util	`utils/media.js` `isAnimation`; `utils/lottie.js`	Lottie recognition and player
Util	`utils/placeholders.js` `getPlaceholders`	UI labels
Util	`utils/tags.js` `readTagValues`; `utils/taxonomy.js` `resolveTags`; `utils/site.js`	Tag IDs and their localised labels
Util	`utils/ids.js` `uniqueId` (through article meta)	Unique id of the share status message
Sheet	`/{locale}/placeholders.json`	Keys `minRead` ("{n} min read"), `listenToThisPage`, `downloadThisPage`, `shareThisPage`, `linkCopied`, `pauseAnimation`, `playAnimation`
Sheet	`/{locale}/taxonomy.json`	Tag titles (the locale's language sheet when translated)
Data source	AEM Assets	Image, Lottie `.json`, author image
Data source	AEM tags	Tags field
Icons	`arrow-right.svg`, `arrow-up-right.svg`, `headphones.svg`, `download.svg`, `share.svg`, `pause.svg`, `play.svg`	Links, actions, animation toggle

Related Components

- Hero: full-height opening banner (shares the Lotto image type and animation decorator).
- Page Header: metadata-driven article header (shares the article meta decorator: date, reading time, actions, author).
- Cards and List: card collections (the List / Cards "Display as teaser" option is a card presentation, not this block).
- Testimonial: shares the Stats decorator.
- Gen Carousel section: can rotate Teasers as slides.
- Button component and Separator: often placed around Teasers.

Applicable Templates

Any page (home, article, blog, press-release or no template). Allowed in every Section and in Gen Carousel sections (filters `section` and `gen-carousel`).

Supported Content Types

- Text (eyebrow, title, labels), rich text (description, short description, stats).
- Image (JPEG, PNG, WebP, SVG) or Lottie JSON animation (Image type Lotto).
- Author image.
- Links: AEM pages, external URLs, anchors; a listen (audio) link.
- AEM tags.
- Date (date-time picker) and reading time.
- Not supported: video, several images, carousels inside the teaser.

Business Problem Solved

The TCS.com design system has many single-message frames (Text & Image, 2 Slot Section, Text Section - 2 Columns, Secondary Page Header, Careers, Media Coverage, Media Kit, the L3 Header elements). Building a block per frame would multiply code and authoring training; the Teaser covers them with one key-value block whose Layout, image, style and link options let authors assemble the approved variations themselves, with consistent type, colours, accessibility and data-layer tracking on all 13 locale sites.

Supported Taxonomy

The Tags field (AEM tag picker, shown only with Display Tags on) takes tag IDs such as tcs-corp:topic/ai; labels come from /{locale}/taxonomy.json (the locale's language sheet when translated), else a label derived from the ID. Tags are display only: they are not written to page metadata, not indexed and not used by List or Filter List.

6.11.2 Visual Overview

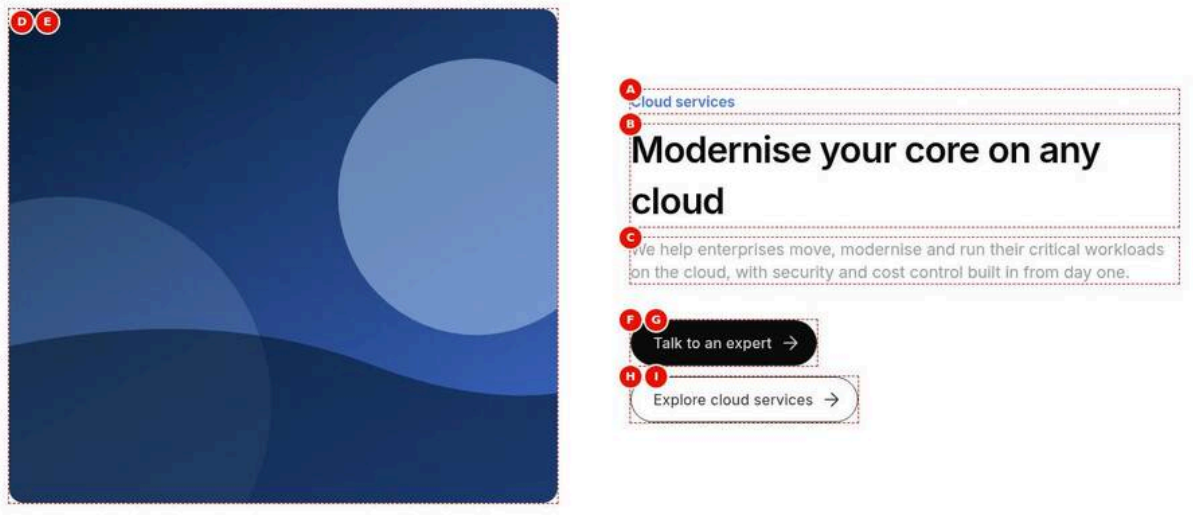

Figure 1: Desktop rendering — An Image & Text teaser at 1440 px: the rounded 10:9 image photo-1 on the left; the brand-blue eyebrow Cloud services, the semibold title Modernise your core on any cloud, the grey description and the buttons Talk to an expert (primary) above Explore cloud services (secondary) on the right, vertically centred against the image. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/teaser-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	An Image & Text teaser at 1440 px: the rounded 10:9 image photo-1 on the left; the brand-blue eyebrow Cloud services, the semibold title Modernise your core on any cloud, the grey description and the buttons Talk to an expert (primary) above Explore cloud services (secondary) on the right, vertically centred against the image.
Business Context	The reference Image & Text teaser of the English site promoting cloud services: the photograph introduces the offer and the two CTAs lead to the contact page and the cloud services page.
Author Objective	Add an Image & Text teaser with an image on the left, eyebrow, title, description and two CTAs, keeping every Style option at its default.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Modernise your core on any cloud	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Engineers reviewing a cloud architecture	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
H	Secondary CTA Title (Teaser › Links)	Explore cloud services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
I	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services/cloud	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** At 1440 px two equal columns: the rounded 10:9 photo-1 image on the left; on the right the brand-blue eyebrow "Cloud services", the semibold title "Modernise your core on any cloud", the grey description and "Talk to an expert" (black) above "Explore cloud services" (outline), vertically centred against the image.
- **Rendering behaviour:** From 900 px the block is a two-column grid with a 5rem gap; the image is cropped to 10:9 with object-fit cover, the title is 2.5rem and the description 1.125rem. Below 900 px the teaser becomes one column with the image above the text.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-1.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- No field is required in the model: the image column exists only because Image holds photo-1.svg (the block then gets teaser-has-media).
- Primary CTA Link Style and Secondary CTA Link Style keep their defaults Primary Button and Secondary Button.
- The title is an H2 (Title Type default); H1 only when this teaser opens a page without a Hero or Page Header.
- Image alt text "Engineers reviewing a cloud architecture" describes the photograph; leave it empty only for decorative images.
- Image ratio Default crops the photograph to 10:9, so keep the subject away from the edges.

Common Authoring Mistakes

Error	Root Cause	Resolution
"Talk to an expert" is missing on the page	The CTA title was entered but its link field left empty; a CTA without a link is skipped	Select the page or enter /en/contact in the matching CTA Link field
The teaser shows centred text without the picture	Image left empty, Hide Image on, or the asset not selected from AEM Assets	Select photo-1.svg in Image and keep Hide Image off
The page ends up with two H1 headings	Title Type set to H1 on a teaser below a Hero or Page Header	Keep Title Type H2 for teasers in the page flow and use Title size to make the title bigger

Troubleshooting

- **Symptoms:** The left image column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-1.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-1.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the left image column shows the picture.

Desktop (900 px and wider)

- Image & Text with an image: two equal columns (`repeat(2, minmax(0, 1fr))`) with a 5rem gap; the image left (or right), 10:9, 1rem rounded corners; the text vertically centred.
- Text split: the kicker (eyebrow, tags, date, actions) across the top, then two equal columns with a 1.5rem gap: title and author left, description, image, stats, links and short description right (3rem between them).
- Background image: at least 48.75rem tall, 7.5rem / 5rem padding, centred text (maximum 37.5rem wide) in white over the image and a 60 % dark overlay.
- Card: at least 35.625rem tall, 2.5rem padding, 1rem radius, header at the top and links at the bottom, white text over the image and a 70 % black overlay.
- With a BG Color (Grey, Dark, Dark green) the teaser becomes a panel with 7.5rem / 5rem padding.
- Type: title 2.5rem (Image & Text with image) or 3rem (other layouts); description 1.125rem (1.5rem in Text split); eyebrow 1rem; stat values 6rem.

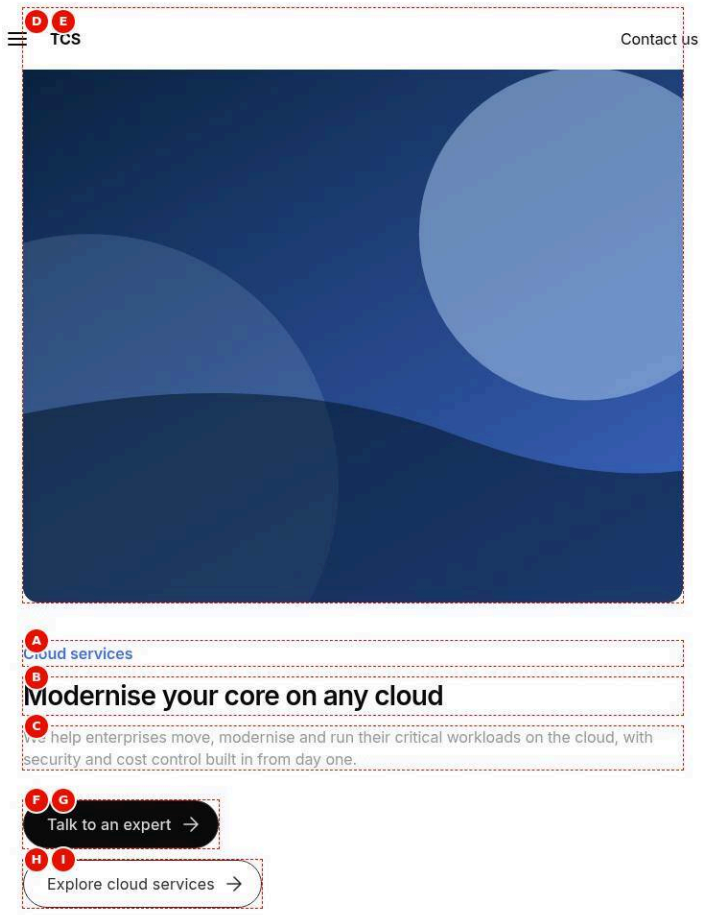

Figure 2: Tablet rendering — The same cloud services teaser at 768 px in one column: the rounded 10:9 image photo-1 full width on top, then the eyebrow Cloud services, the title Modernise your core on any cloud, the description and the stacked buttons Talk to an expert and Explore cloud services. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/teaser-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same cloud services teaser at 768 px in one column: the rounded 10:9 image photo-1 full width on top, then the eyebrow Cloud services, the title Modernise your core on any cloud, the description and the stacked buttons Talk to an expert and Explore cloud services.
Business Context	The same cloud services teaser checked at tablet width, where many visitors on iPads and small laptops in portrait see the single-column version of the Image & Text layout.
Author Objective	Check the Image & Text teaser at 768 px: one column with the image above the text and the two CTAs stacked.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Modernise your core on any cloud	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Engineers reviewing a cloud architecture	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
H	Secondary CTA Title (Teaser › Links)	Explore cloud services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
I	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services/cloud	No	Secondary CTA target	Page or URL	Shown only with Multiple links off
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** At 768 px the photo-1 image spans the full content width at 10:9 with rounded corners; below it the eyebrow "Cloud services", the title, the grey description and the two stacked buttons, all left aligned.
- **Rendering behaviour:** Between 600 px and 899 px the teaser uses the mobile layout (one column, 2.5rem gap, title 1.75rem, description 1rem) with the tablet section padding; from 900 px it switches to two columns.
- **Publishing behaviour:** Nothing extra is published for tablet: the same page and photo-1.svg serve every width. Publish to Preview, check the aem.page page in responsive mode at 768 px, then Publish to Live.

Business Rules

- Below 900 px the image is always above the text for Image & Text unless Image position (mobile) is Bottom.
- Image position Right would have no effect at 768 px; it applies only from 900 px.
- The 10:9 crop is the same at every width, so the image becomes taller as the column widens.
- From 900 px to 1199 px the desktop two-column layout already applies.

Common Authoring Mistakes

Error	Root Cause	Resolution
The author expects the image beside the text on a tablet	The two-column layout starts at 900 px, not at 600 px	Accept the stacked layout below 900 px or check the design at 1024 px
The image is below the text on the tablet	Image position (mobile) set to Bottom	Set Image position (mobile) back to Default

Troubleshooting

- **Symptoms:** At "768 px" the preview still shows the image and text side by side.
- **Cause:** The browser window or device emulation is actually 900 px or wider (for example a landscape tablet preset or page zoom).
- **Resolution:** Set the responsive mode width to exactly 768 px with zoom at 100 % and reload the aem.page page.
- **Verification Steps:** The image appears full width above the eyebrow and the two buttons are stacked under the description.

Tablet (600 px to 1199 px)

- 600 px to 899 px: the mobile layout (one column) with tablet section padding; type at mobile sizes.
- 900 px to 1199 px: the desktop layout (two columns, desktop type sizes).

Figure 3: Mobile rendering — The cloud services teaser at 375 px: the rounded 10:9 image photo-1 on top, then the eyebrow Cloud services, the title Modernise your core on any cloud over two lines, the description and the stacked buttons Talk to an expert and Explore cloud services. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/teaser-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The cloud services teaser at 375 px: the rounded 10:9 image photo-1 on top, then the eyebrow Cloud services, the title Modernise your core on any cloud over two lines, the description and the stacked buttons Talk to an expert and Explore cloud services.
Business Context	The cloud services teaser on a phone, the most common way visitors reach service pages from search and social links.
Author Objective	Check the Image & Text teaser at 375 px: image on top, then the text and the two CTAs.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Modernise your core on any cloud	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Engineers reviewing a cloud architecture	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
H	Secondary CTA Title (Teaser › Links)	Explore cloud services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
I	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services/cloud	No	Secondary CTA target	Page or URL	Shown only with Multiple links off
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** At 375 px the rounded 10:9 photo-1 image fills the width; under it the brand-blue eyebrow, the title "Modernise your core on any cloud" over two lines, the grey description and the "Talk to an expert" and "Explore cloud services" buttons at their natural width.
- **Rendering behaviour:** Below 600 px the teaser is one column with a 2.5rem gap, title 1.75rem and description 1rem; buttons keep their text on one line and are stacked, left aligned.
- **Publishing behaviour:** The phone uses the same published page and photo-1.svg; Publish to Preview and check the aem.page page at 375 px before Publish to Live.

Business Rules

- Image position (mobile) Default keeps the image above the text; choose Bottom to lead with the message.
- CTA titles should stay within about 25 characters because buttons do not wrap at 375 px.
- Keep the title under 70 characters so it does not run to many lines on a phone.
- The Image alt text is read before the heading on mobile, because the image comes first in the DOM.

Common Authoring Mistakes

Error	Root Cause	Resolution
A button runs past the screen edge	A CTA title far longer than 25 characters, which a button does not wrap	Shorten the Primary CTA Title or Secondary CTA Title
The image appears after the buttons	Image position (mobile) set to Bottom	Set Image position (mobile) to Default

Troubleshooting

- **Symptoms:** On a 375 px phone the "Explore cloud services" button is cut off at the right edge.
- **Cause:** The Secondary CTA Title was lengthened and buttons keep their text on one line.
- **Resolution:** Shorten the Secondary CTA Title (about 25 characters) and publish the page again.
- **Verification Steps:** At 375 px in responsive mode both buttons fit inside the content width.

Mobile (below 600 px)

- One column with a 2.5rem gap; Image & Text shows the image above the text (Image position (mobile) Bottom moves it below); Image position Right has no effect below 900 px.
- Text split: everything in one column in the order kicker, title, author, description, image, stats, links, short description (Image position (mobile) Top moves the image to the top of the text part, Bottom to the end).
- Background image: at least 35rem tall, 5rem / 1.5rem padding. Card: at least 25rem tall, 1.5rem padding.
- BG Color panels: 2.5rem / 1.5rem padding.
- Type: title 1.75rem (Image & Text with image) or 2rem; description 1rem; stat values 2.75rem.

6.11.3 Component Variations

All variations below combine: a teaser has one Layout, one BG Color, and any combination of the image, style and link options. Options that do not apply to the chosen Layout are hidden in the dialog (model `condition`) or have no effect, as noted.

Variation 1 — Layout "Image & Text", image left (default)

Variation Name: Layout "Image & Text" (no layout class) with Image position "Left".

Business Purpose: The classic promotion: image beside the text (Figma "Text & Image").

Visual Example:

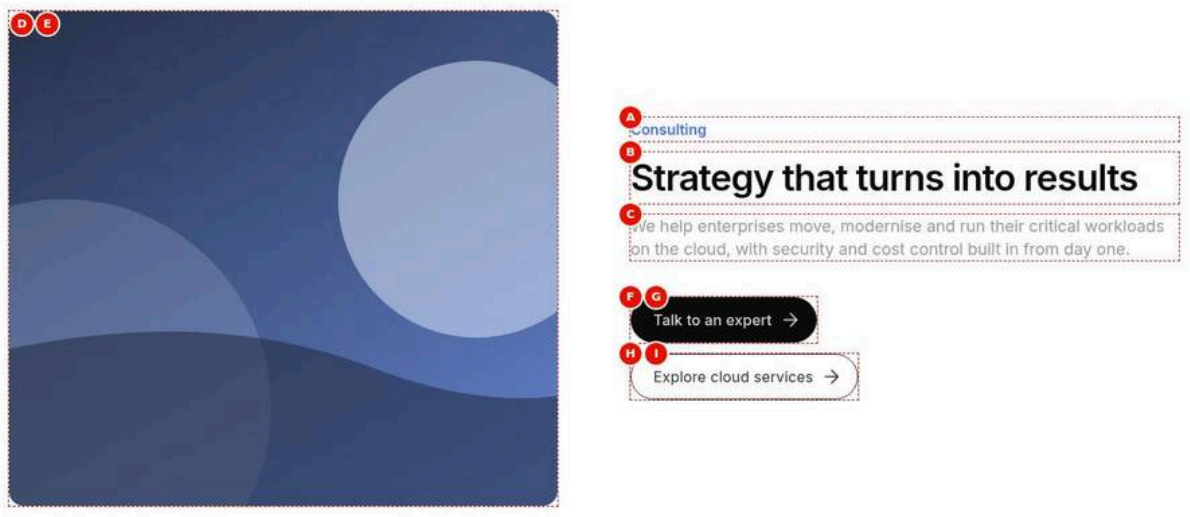

Figure 4: Image & Text, image left — An Image & Text teaser at 1440 px: the rounded 10:9 image photo-2 (consultants in a workshop) on the left; the brand-blue eyebrow Consulting, the semibold title Strategy that turns into results, the description and the buttons Talk to an expert and Explore cloud services on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-image-text-left.jpg)

Screenshot Details — Image & Text, image left

Item	Detail
Screenshot Name	`screenshots/teaser-image-text-left.jpg`
Screenshot Purpose	Image & Text, image left
Screen Description	An Image & Text teaser at 1440 px: the rounded 10:9 image photo-2 (consultants in a workshop) on the left; the brand-blue eyebrow Consulting, the semibold title Strategy that turns into results, the description and the buttons Talk to an expert and Explore cloud services on the right.
Business Context	A consulting promotion on a services page: the workshop photograph on the left sets the scene and the CTAs lead to an expert conversation or the cloud services page.
Author Objective	Add an Image & Text teaser with the image on the left (Image position default) for the consulting message.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Consulting	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Strategy that turns into results	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost con-	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		trol built in from day one.				
D	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
H	Secondary CTA Title (Teaser › Links)	Explore cloud services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
I	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services/cloud	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** The rounded 10:9 photo-2 image (consultants in a workshop) fills the left half; on the right the eyebrow "Consulting", the title "Strategy that turns into results", the description and the two stacked buttons.
- **Rendering behaviour:** div.teaser-media is the first grid item and div.teaser-content the second; from 900 px they form two equal columns with a 5rem gap and the text vertically centred; below 900 px the image stacks above the text.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Image position Left is the default; no Image position row is needed.
- In a sequence of teasers, give the next one Image position Right for a zig-zag rhythm.
- Image alt text "Consultants in a workshop" describes the picture for screen readers.
- The CTAs keep their default styles: Primary Button, then Secondary Button.

Common Authoring Mistakes

Error	Root Cause	Resolution
The image appears on the right	Image position set to Right or a copied teaser carrying the legacy image-right class	Set Image position to Left; remove the image-right class if present
The teaser shows centred text without the picture	Image left empty, Hide Image on, or the asset not selected from AEM Assets	Select photo-2.svg in Image and keep Hide Image off

Troubleshooting

- **Symptoms:** The left column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-2.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-2.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.

- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Use Cases: Service and industry promotions, "about us" sections.

Authoring Guidelines: Style tab: Layout = Image & Text; Image tab: choose an Image, Image position = Left (default).

Business Rules: The block gets `teaser-has-media` only when an image (or animation) is rendered; Hide Image or an empty Image gives Variation 3.

Rendering Rules: `div.teaser-media` is the first grid item, `div.teaser-content` the second; image 10:9, radius 1rem, `object-fit: cover`; grid `align-items: center`.

Responsive Behaviour: Desktop (900 px+): two equal columns, 5rem gap. Tablet below 900 px and mobile: one column, image above the text, 2.5rem gap.

SEO Impact: Title as a heading (default H2), image with alt text, crawlable links.

Accessibility Compliance: Reading order is image then text in the DOM; alt text per WCAG 1.1.1; heading level selectable (1.3.1).

Variation 2 — Layout "Image & Text", image right

Variation Name: Image position "Right" (class `image-right`).

Business Purpose: Alternate the image side between consecutive teasers for rhythm.

Visual Example:

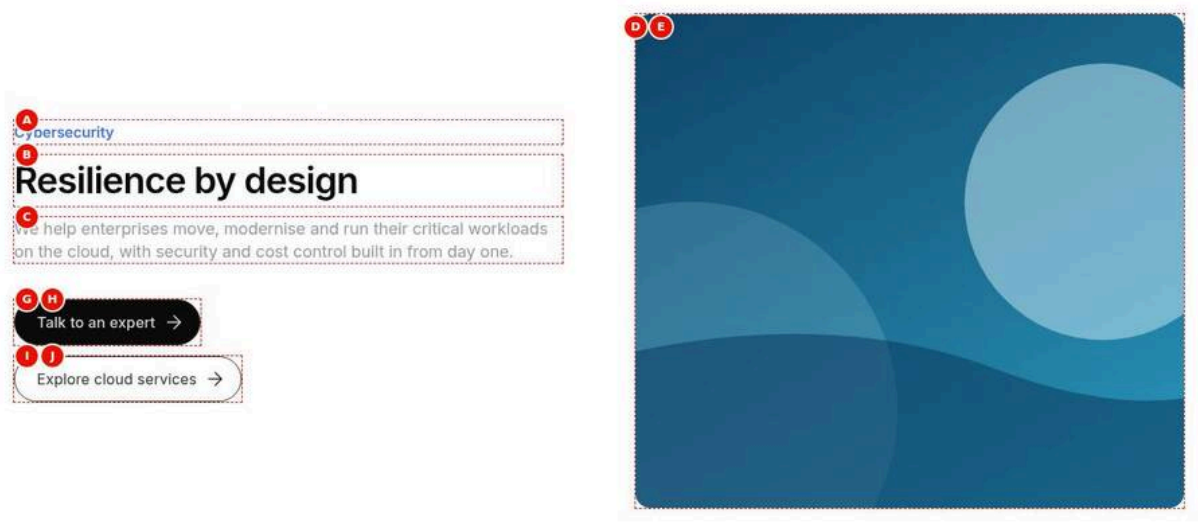

Figure 5: Image & Text, image right — An Image & Text teaser at 1440 px with Image position Right: on the left the eyebrow Cybersecurity, the title Resilience by design, the description and the buttons Talk to an expert and Explore cloud services; on the right the rounded 10:9 image photo-3. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-image-text-right.jpg)

Screenshot Details — Image & Text, image right

Item	Detail
Screenshot Name	`screenshots/teaser-image-text-right.jpg`
Screenshot Purpose	Image & Text, image right

Item	Detail
Screen Description	An Image & Text teaser at 1440 px with Image position Right: on the left the eyebrow Cybersecurity, the title Resilience by design, the description and the buttons Talk to an expert and Explore cloud services; on the right the rounded 10:9 image photo-3.
Business Context	A cybersecurity promotion placed after an image-left teaser, so the page alternates image sides and reads as a zig-zag sequence.
Author Objective	Add an Image & Text teaser and set Image position to Right so the photograph sits on the right on desktop.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cybersecurity	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Resilience by design	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	A security operations centre	No	Alt text / animation label	Empty if decorative	None
(F)	Image position (Teaser › Image)	Right	No	Image side (desktop)	Alternate in sequences	Options: Left, Right; shown only for Layout Image & Text
G	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
I	Secondary CTA Title (Teaser › Links)	Explore cloud services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
J	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services/cloud	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The text column is on the left: eyebrow “Cybersecurity”, title “Resilience by design”, description and the two stacked buttons; the rounded 10:9 photo-3 image of a security operations centre fills the right half.
- **Rendering behaviour:** The block gets image-right; from 900 px .teaser-has-media.image-right .teaser-media gets order 2. Below 900 px the image stays above the text; the DOM order (image first) is unchanged.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-3.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Image position is shown only for Layout Image & Text and applies only when an image is rendered.
- Right affects desktop widths (900 px and wider) only; on phones the image is still on top unless Image position (mobile) is Bottom.
- Screen readers still meet the image before the text, as the change is visual only.
- Alt text “A security operations centre” describes the photograph.

Common Authoring Mistakes

Error	Root Cause	Resolution
The Image position field cannot be found	Layout is Text split, Background image or Card, which hide the field	Set Layout to Image & Text in the Style tab
The image is still on the left on a tablet	The tablet is narrower than 900 px, where Right has no effect	Check at 900 px or wider; this is expected below 900 px

Troubleshooting

- **Symptoms:** The photograph stays on the left on the desktop preview although Image position shows Right.
- **Cause:** The change was saved but the page was not published to Preview again, or the browser shows a cached version.
- **Resolution:** Publish the page to Preview again and reload aem.page with the cache disabled.
- **Verification Steps:** At 1440 px the image is in the right column and the block element has the class image-right.

Use Cases: Zig-zag sequences of teasers.

Authoring Guidelines: Layout = Image & Text; Image tab: Image position = Right (the field is shown only for the Image & Text layout).

Business Rules: Applied only for Image & Text with media; ignored for other layouts. An existing `image-right` block class is also honoured.

Rendering Rules: From 900 px `.teaser-has-media.image-right .teaser-media { order: 2 }`.

Responsive Behaviour: Desktop: image right. Tablet below 900 px / mobile: the image stays above the text (unless Image position (mobile) Bottom).

SEO Impact: None beyond Variation 1.

Accessibility Compliance: Visual order differs from the DOM order (image first) only visually; the reading order stays logical.

Variation 3 — Layout “Image & Text” without image (centred)

Variation Name: Image & Text with no Image or with Hide Image on (Figma “Careers”).

Business Purpose: A centred text call to action.

Visual Example:

Figure 6: Centred text teaser — An Image & Text teaser without an image at 1440 px, centred in a 37.5rem column: the eyebrow Careers, the title Build the future with us at 3rem, the description and the buttons Search jobs (primary) above Life at TCS (secondary). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-image-text-no-image.jpg)

Screenshot Details — Centred text teaser

Item	Detail
Screenshot Name	`screenshots/teaser-image-text-no-image.jpg`
Screenshot Purpose	Centred text teaser
Screen Description	An Image & Text teaser without an image at 1440 px, centred in a 37.5rem column: the eyebrow Careers, the title Build the future with us at 3rem, the description and the buttons Search jobs (primary) above Life at TCS (secondary).
Business Context	A careers call to action at the end of a page (Figma "Careers"): a short centred message with a route to job search and to life at TCS.
Author Objective	Add an Image & Text teaser without an image so that the eyebrow, title, description and CTAs are centred.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Careers	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Build the future with us	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Join a global team of technologists and consultants solving problems that matter for the world's leading businesses.	No	Main text	Up to 300 characters (Recommended)	None
D	Primary CTA Title (Teaser › Links)	Search jobs	No	Primary CTA text	Verb first	Shown only with Multiple links off
E	Primary CTA Link (Teaser › Links)	Select the page or enter /en/careers	No	Primary CTA target	Page or URL	Shown only with Multiple links off

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
F	Secondary CTA Title (Teaser › Links)	Life at TCS	No	Secondary CTA text	Verb first	Shown only with Multiple links off
G	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** A centred column at most 37.5rem wide: the brand-blue eyebrow "Careers", the large title "Build the future with us", the grey description and the "Search jobs" (black) and "Life at TCS" (outline) buttons centred one above the other.
- **Rendering behaviour:** Without media the block has no teaser-has-media, so .teaser-content is centred (max 37.5rem) and the title uses heading XXL: 3rem from 900 px, 2rem below. The look is the same at every width.
- **Publishing behaviour:** Only the page is published (no asset). Publish to Preview, check /en/careers and /en/about resolve, then Publish to Live.

Business Rules

- An Image & Text teaser without Image (or with Hide Image on) is centred unless Text alignment is Left or Right.
- The title is larger than in the image variant (3rem instead of 2.5rem on desktop).
- Keep centred text short: the description here is a single sentence.
- Hide Image keeps an asset reference for later while showing this centred look.

Common Authoring Mistakes

Error	Root Cause	Resolution
A photograph still appears	The teaser was copied from an image teaser and its Image is still set	Clear Image or turn Hide Image on
The text is left aligned instead of centred	Text alignment set to Left	Set Text alignment to Layout default

Troubleshooting

- **Symptoms:** The careers teaser shows an image column although none was intended.
- **Cause:** The teaser was duplicated from an image teaser and the Image field still references a picture.
- **Resolution:** Clear the Image field or turn Hide Image on in the Image tab, then publish the page.
- **Verification Steps:** The block has no teaser-has-media class and the text is centred in a 37.5rem column.

Use Cases: Careers calls to action, newsletter sign-up prompts, section intros.

Authoring Guidelines: Layout = Image & Text; leave Image empty or turn Hide Image on.

Business Rules: Without media the content is centred (unless Text alignment Left or Right); the title uses the larger size (3rem desktop).

Rendering Rules: `.teaser:not(.no-image, .teaser-has-media, .card, .text-left, .text-right) .teaser-content` is 100 % wide, max 37.5rem, centred; kicker, tags, heading row and author are centred; links are centred.

Responsive Behaviour: Centred on all breakpoints.

SEO Impact: Text only.

Accessibility Compliance: Keep centred text short.

Variation 4 — Layout "Text split"

Variation Name: Layout "Text split (title left, text right)" (class `no-image`).

Business Purpose: A two-column text section: the title on the left, the content on the right (Figma "2 Slot Section", "Text Section - 2 Columns", "L3 Header").

Visual Example:

Figure 7: Text split — A Text split teaser at 1440 px: across the top the eyebrow Insights and the grey uppercase tags ARTIFICIAL INTELLIGENCE, BANKING and REPORT; the regular-weight title Turning enterprise data into decisions on the left; the description and the text links Read the report and Explore data and analytics on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-text-split.jpg)

Screenshot Details — Text split

Item	Detail
Screenshot Name	`screenshots/teaser-text-split.jpg`
Screenshot Purpose	Text split
Screen Description	A Text split teaser at 1440 px: across the top the eyebrow Insights and the grey uppercase tags ARTIFICIAL INTELLIGENCE, BANKING and REPORT; the regular-weight title Turning enterprise data into decisions on the left; the description and the text links Read the report and Explore data and analytics on the right.
Business Context	An insights section introduction (Figma "2 Slot Section"): the topic tags and a large title on the left frame the research, the description and two text links on the right lead to the report.
Author Objective	Add a Text split teaser with tags and two text links in Multiple links mode.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Turning enterprise data into decisions	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.				
(D)	Display Tags (Teaser › Content)	On	No	Show the tags	On to show Tags	None
E	Tags (Teaser › Content)	Add the tags tcs-corp:topic/ai, tcs-corp:industry/banking, tcs-corp:content-type/report	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
(F)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(G)	Multiple links (Teaser › Links)	On	No	List of links instead of two CTAs	On for 3+ links	None
H	CTA Title (Teaser › Links › Links › Item 1)	Read the report	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
I	CTA Link (Teaser › Links › Links › Item 1)	Select the page or enter /en/insights	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
J	CTA Title (Teaser › Links › Links › Item 2)	Explore data and analytics	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
K	CTA Link (Teaser › Links › Links › Item 2)	Select the page or enter /en/services/consulting	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Across the top the eyebrow "Insights" and the grey uppercase tags ARTIFICIAL INTELLIGENCE, BANKING and REPORT separated by bars; below, the regular-weight title "Turning enterprise data into decisions" on the left and on the right the 1.5rem description with "Read the report" and "Explore data and analytics" as text links with arrows.
- **Rendering behaviour:** From 900 px .teaser-content is a grid with areas kicker kicker / heading body, two equal columns 1.5rem apart and 2.5rem below the kicker; title 3rem regular. Below 900 px one column: kicker, title, description, links.
- **Publishing behaviour:** Publish the page to Preview, then Live. The tag labels come from /en/taxonomy.json, which must itself be published; the links appear as soon as the page is published.

Business Rules

- Tags render only with Display Tags on; the Tags field is hidden until it is on.
- Multiple links On hides and ignores the Primary / Secondary CTA fields.
- Both Links items have no CTA Link Style, so they render as Text links (tertiary buttons with an arrow).
- Layout Text split hides Image position; Text alignment Center has no effect here (finding F-18, open).
- Tags are display only: they are not page tags and do not feed List or Filter List.

Common Authoring Mistakes

Error	Root Cause	Resolution
A tag reads "AI" instead of "ARTIFICIAL INTELLIGENCE"	The tag IDs are missing from the locale taxonomy or the taxonomy is not published	Add the tags to /en/taxonomy and publish it
The links do not appear	Multiple links On but the two links typed into the hidden Primary / Secondary CTA fields	Add the two items in the Links multifield
The tags field cannot be found	Display Tags is off, which hides Tags	Turn Display Tags on first

Troubleshooting

- **Symptoms:** The first tag reads "AI" (derived from the ID) instead of "ARTIFICIAL INTELLIGENCE".
- **Cause:** tcs-corp:topic/ai has no title in /en/taxonomy.json or the taxonomy page was not published, so the label is derived from the ID.
- **Resolution:** Add the tag and its title to the en taxonomy page and publish it; republish the page if needed.
- **Verification Steps:** Open /en/taxonomy.json on aem.live and find the tag; reload the page and the localised label shows.

Use Cases: Section introductions, article headers with meta, statistics sections.

Authoring Guidelines: Style tab: Layout = Text split.

Business Rules: An image is placed in the right column (Variation 5), not beside the text. Image position is hidden; Image ratio and Image corners remain visible. Text alignment Center has no effect in this layout.

Rendering Rules: `.teaser.no-image`: block `align-items: start`; text colour default (black), title heading XXL at regular weight, description body L; from 900 px `.teaser-content` is a grid with areas `kicker kicker` / `heading body`; `.teaser-header` uses `display: contents`.

Responsive Behaviour: Desktop: two columns (1.5rem gap), kicker above both with 2.5rem below. Tablet below 900 px / mobile: single column.

SEO Impact: The title heading precedes the body in the DOM (good structure).

Accessibility Compliance: DOM order kicker → title → author → body is the reading order.

Variation 5 — Layout "Text split" with an image in the text column

Variation Name: Text split with an Image (e.g. a chart).

Business Purpose: Show a chart, diagram or picture inside the right-hand text column.

Visual Example:

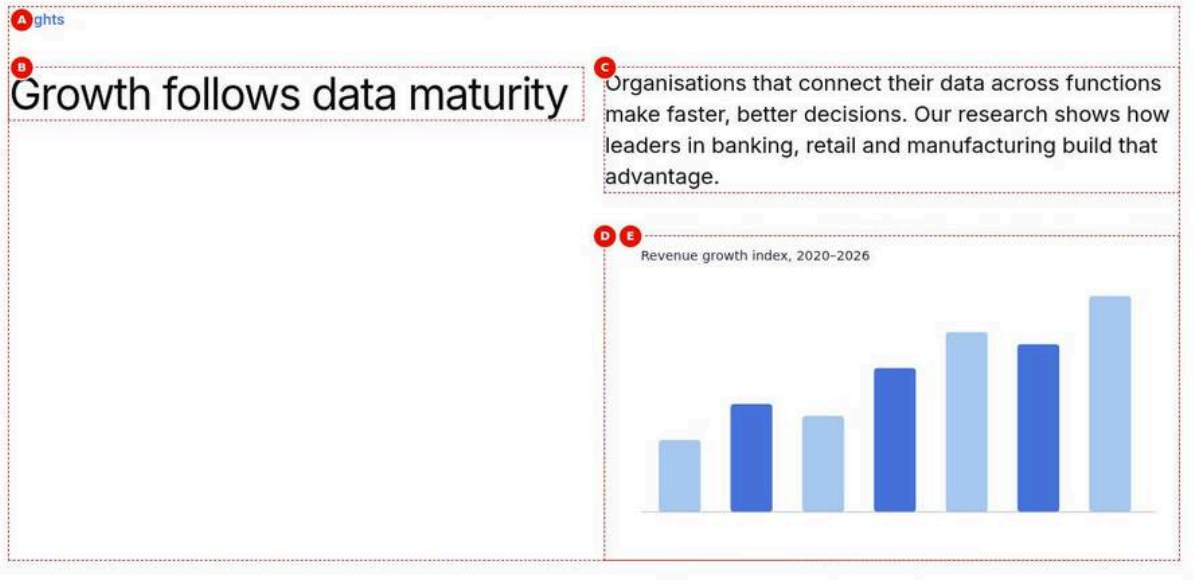

Figure 8: Text split with a chart — A Text split teaser at 1440 px: the eyebrow Insights and the regular-weight title Growth follows data maturity on the left; on the right the description and below it the bar chart chart.svg (Revenue growth index, 2020–2026) shown whole with square corners. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-text-split-image.jpg)

Screenshot Details — Text split with a chart

Item	Detail
Screenshot Name	`screenshots/teaser-text-split-image.jpg`
Screenshot Purpose	Text split with a chart
Screen Description	A Text split teaser at 1440 px: the eyebrow Insights and the regular-weight title Growth follows data maturity on the left; on the right the description and below it the bar chart chart.svg (Revenue growth index, 2020–2026) shown whole with square corners.
Business Context	A research highlight on an insights page: the claim on the left and a revenue growth chart in the right-hand text column give readers the evidence at a glance.
Author Objective	Add a Text split teaser with a chart image (chart.svg) in the right column below the description.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Growth follows data maturity	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better decisions. Our re-	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		search shows how leaders in banking, retail and manufacturing build that advantage.				
D	Image (Teaser › Image)	Select the asset chart.svg (/en/media/chart.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Bar chart: the revenue growth index rises from 120 in 2020 to 360 in 2026	No	Alt text / animation label	Empty if decorative	None
(F)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The eyebrow "Insights" above the regular-weight title "Growth follows data maturity" on the left; on the right the description and below it the bar chart "Revenue growth index, 2020–2026" shown whole, without rounded corners.
- **Rendering behaviour:** In Text split the media is placed inside div.teaser-body after the description; the image keeps its own proportion (aspect-ratio auto) and square corners unless Image ratio is Portrait or Square. Below 900 px it stays in the text order.
- **Publishing behaviour:** Publish chart.svg in AEM Assets together with the page, then Publish to Preview and Live; the SVG is served as uploaded (no rendition), so it must already be optimised.

Business Rules

- The image comes after the description and before any stats and links.
- Image ratio Default shows the chart uncropped in Text split; Portrait or Square would crop it.
- Images in Text split always have square corners; Image corners Rounded has no effect.
- The alt text "Bar chart: the revenue growth index rises from 120 in 2020 to 360 in 2026" carries the data; state the key figures in the description too.

Common Authoring Mistakes

Error	Root Cause	Resolution
The chart is cut off at the sides	Image ratio set to Portrait (8:9) or Square (1:1), which crop with object-fit cover	Set Image ratio to Default or Original
The chart appears beside the text instead of in the column	Layout left on Image & Text	Set Layout to Text split in the Style tab
Screen reader users miss the figures	Image alt text empty for a chart that carries information	Describe the trend and the key values in Image alt text

Troubleshooting

- **Symptoms:** Only the top part of the bar chart is visible in the right column.
- **Cause:** Image ratio Portrait (8:9) or Square (1:1) is set, which crops the chart to that proportion.

- **Resolution:** Set Image ratio to Default (original proportion in Text split) and publish the page.
- **Verification Steps:** The whole chart including its title and baseline is visible at 1440 px and 375 px.

Use Cases: Research highlights with a chart, product diagrams.

Authoring Guidelines: Layout = Text split; Image tab: Image (and alt text); optional Image ratio.

Business Rules: The image comes right after the description (before stats and links); it is shown whole (no crop) unless Image ratio is Portrait or Square; corners are always square for images.

Rendering Rules: `div.teaser-media` inside `div.teaser-body`; `.teaser.no-image .teaser-media img { border-radius: 0 }` and `aspect-ratio: auto` unless `ratio-8-9` / `ratio-1-1`.

Responsive Behaviour: In the right column on desktop; in the single column on mobile, in the text order (or top / bottom with Image position (mobile)).

SEO Impact: Chart images need descriptive alt text (they carry information).

Accessibility Compliance: Complex charts need the key figures in the description too (WCAG 1.1.1).

Variation 6 — Layout "Background image"

Variation Name: Layout "Background image" (class `background`).

Business Purpose: A full-width banner inside the page with the image behind centred text.

Visual Example:

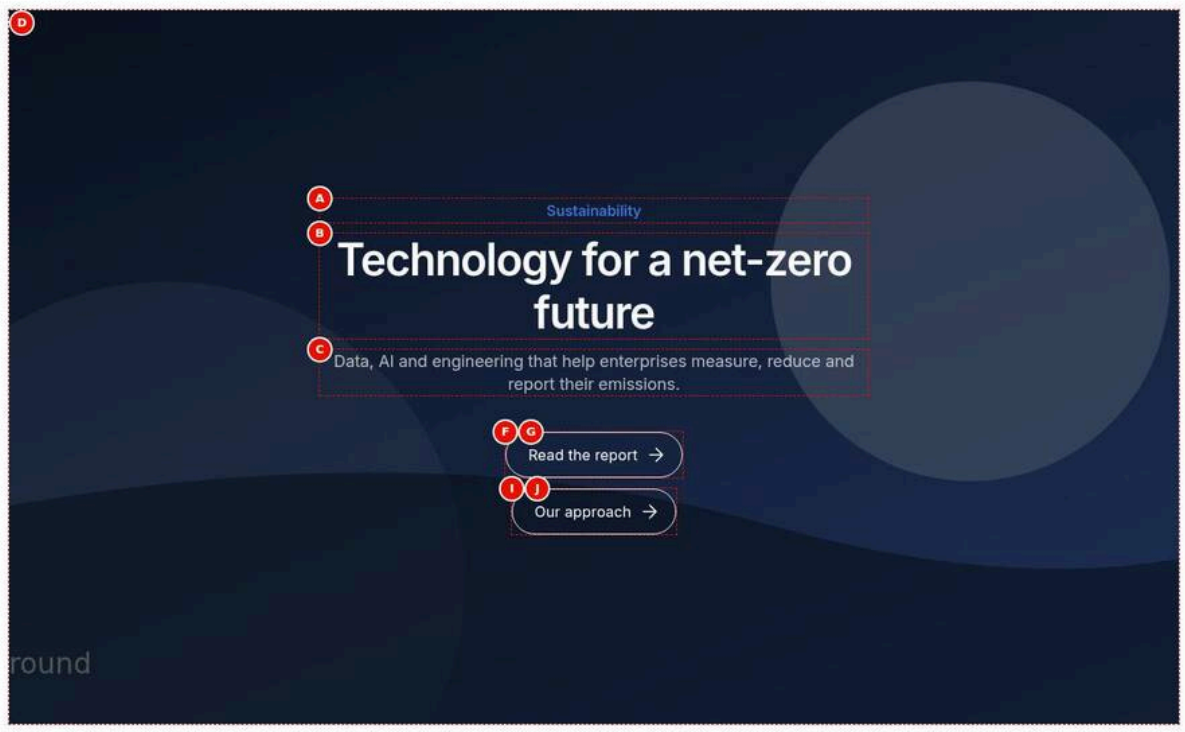

Figure 9: Background image teaser — A Background image teaser at 1440 px: wide.svg under a dark 60 % overlay with the centred brand-blue eyebrow Sustainability, the white title Technology for a net-zero future, the description and the white outline buttons Read the report and Our approach, stacked. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-background-image.jpg)

Screenshot Details — Background image teaser

Item	Detail
Screenshot Name	`screenshots/teaser-background-image.jpg`

Item	Detail
Screenshot Purpose	Background image teaser
Screen Description	A Background image teaser at 1440 px: wide.svg under a dark 60 % overlay with the centred brand-blue eyebrow Sustainability, the white title Technology for a net-zero future, the description and the white outline buttons Read the report and Our approach, stacked.
Business Context	A mid-page sustainability campaign banner: a wide brand image under a dark overlay makes the statement stand out and both CTAs lead to the report and the approach page.
Author Objective	Add a Background image teaser with a wide image, centred white text and two white outline buttons.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Sustainability	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Technology for a net-zero future	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Data, AI and engineering that help enterprises measure, reduce and report their emissions.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset wide.svg (/en/media/wide.svg)	No	Image or animation	See Layout for placement	None
(E)	Layout (Teaser › Style)	Background image	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
F	Primary CTA Title (Teaser › Links)	Read the report	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/insights	No	Primary CTA target	Page or URL	Shown only with Multiple links off
(H)	Primary CTA Link Style (Teaser › Links)	Secondary Button	No	Primary CTA style	Keep Primary	Options: Text link, List, Primary Button, Secondary Button; shown only with Multiple links off
I	Secondary CTA Title (Teaser › Links)	Our approach	No	Secondary CTA text	Verb first	Shown only with Multiple links off
J	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (E), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The wide.svg image covers the banner under a 60 % dark overlay; centred on it the brand-blue eyebrow "Sustainability", the white 3rem title "Technology for a net-zero future", the 70 % white description and the white outline buttons "Read the report" and "Our approach" stacked.
- **Rendering behaviour:** The block is a centred flex column at least 48.75rem high with 7.5rem / 5rem padding from 900 px (35rem, 5rem / 1.5rem below); the media is absolute behind the overlay and cropped to cover with no radius.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; wide.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Primary CTA Link Style is set to Secondary Button so both CTAs are white outlines; the Primary Button keeps its black fill on the overlay.
- Image position, Image ratio and Image corners are hidden for Background image; the image always covers the banner.
- No Image alt text is entered, so the background picture is decorative (alt="").
- Text is white or 70 % white whatever BG Color; BG Color Dark only darkens the overlay to 80 %.
- Top spacing has no effect in this layout (finding F-18, open).

Common Authoring Mistakes

Error	Root Cause	Resolution
White text on a plain grey box	No Image selected or wide.svg not published, so the overlay sits on the white page	Select and publish an image, or use BG Color Dark / Dark green with Image & Text
A dark button is hard to see on the overlay	Primary CTA Link Style left on Primary Button	Set Primary CTA Link Style to Secondary Button

Troubleshooting

- **Symptoms:** The banner shows white text on a grey box with no picture (chapter Issue 4).
- **Cause:** wide.svg is not published, or the Image was cleared, so only the 60 % overlay over the white page remains.
- **Resolution:** Publish wide.svg in AEM Assets, re-select it in Image if needed and publish the page.
- **Verification Steps:** The image is visible behind the overlay at 1440 px and 375 px and the white title is readable.

Use Cases: Mid-page campaign banners, section breaks with a statement.

Authoring Guidelines: Style tab: Layout = Background image; Image tab: Image.

Business Rules: Image position, Image ratio and Image corners are hidden. Text colours are white / 70 % white whatever the BG Color. Top spacing has no effect (the layout's padding wins).

Rendering Rules: Flex column, centred, `min-height` 35rem (48.75rem from 900 px); media absolute behind (`z-index: -2`, cover, no radius); overlay `::before` `rgb(12 12 13 / 60%)` (80 % with BG Color Dark, dark green 80 % with Dark green).

Responsive Behaviour: Desktop: 48.75rem high, padding 7.5rem / 5rem. Tablet below 900 px / mobile: 35rem high, padding 5rem / 1.5rem.

SEO Impact: The image is still an `<img>` with alt text.

Accessibility Compliance: White text over the overlay; verify contrast with bright images.

Variation 7 — Layout "Card"

Variation Name: Layout "Card" (class `card`).

Business Purpose: A rounded card with an image behind its text and links at the bottom (Figma "Media Kit").

Visual Example:

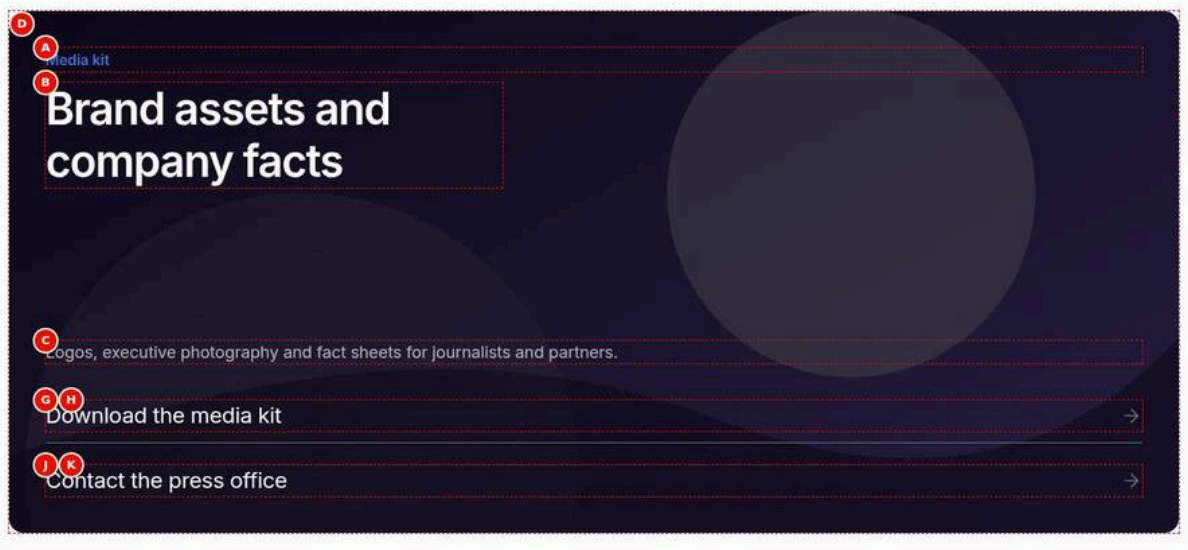

Figure 10: Card teaser — A Card teaser at 1440 px: a rounded card with photo-4 under a 70 % black overlay; the eyebrow Media kit and the white title Brand assets and company facts top left; at the bottom the description and the List rows Download the media kit and Contact the press office with a divider and right arrows. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-card.jpg)

Screenshot Details — Card teaser

Item	Detail
Screenshot Name	`screenshots/teaser-card.jpg`
Screenshot Purpose	Card teaser
Screen Description	A Card teaser at 1440 px: a rounded card with photo-4 under a 70 % black overlay; the eyebrow Media kit and the white title Brand assets and company facts top left; at the bottom the description and the List rows Download the media kit and Contact the press office with a divider and right arrows.
Business Context	A media kit card in the newsroom (Figma "Media Kit"): journalists and partners find brand assets and the press office contact in one compact tile.
Author Objective	Add a Card teaser with an image behind the text and two List-style links at the bottom.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Media kit	No	Kicker above the title	Up to 40 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Title (Teaser › Content)	Brand assets and company facts	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Logos, executive photography and fact sheets for journalists and partners.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No	Image or animation	See Layout for placement	None
(E)	Layout (Teaser › Style)	Card	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(F)	Multiple links (Teaser › Links)	On	No	List of links instead of two CTAs	On for 3+ links	None
G	CTA Title (Teaser › Links › Links › Item 1)	Download the media kit	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
H	CTA Link (Teaser › Links › Links › Item 1)	Select the page or enter /en/media-kit	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(I)	CTA Link Style (Teaser › Links › Links › Item 1)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
J	CTA Title (Teaser › Links › Links › Item 2)	Contact the press office	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
K	CTA Link (Teaser › Links › Links › Item 2)	Select the page or enter /en/contact	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(L)	CTA Link Style (Teaser › Links › Links › Item 2)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (E), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A rounded card with photo-4 under a 70 % black overlay: the brand-blue eyebrow "Media kit" and the white title "Brand assets and company facts" at the top left; at the bottom the description and two full-width rows "Download the media kit" and "Contact the press office", divided by a grey line, each with a right arrow.

- **Rendering behaviour:** Flex column with 1rem radius, at least 35.625rem high with 2.5rem padding from 900 px (25rem and 1.5rem below); .teaser-content stretches so the header stays at the top and the body at the bottom; the title is at most 31.25rem wide.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-4.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Both Links items use CTA Link Style List, so they share one ul with a #767676 divider on the dark card.
- The Card overlay is always black 70 %, whatever BG Color is chosen.
- Image position, Image ratio and Image corners are hidden; the image always covers the card.
- Text is left aligned by default; keep Vertical alignment on Layout default so the header stays at the top.
- No Image alt text: the background picture is decorative.

Common Authoring Mistakes

Error	Root Cause	Resolution
The links show as small text links instead of rows	CTA Link Style left on Text link in the Links items	Set CTA Link Style to List in each item
The card is grey with unreadable text	No Image or photo-4.svg not published	Select and publish an image for the card
The card content no longer spreads from top to bottom	Vertical alignment set to Top or Bottom	Set Vertical alignment back to Layout default

Troubleshooting

- **Symptoms:** "Download the media kit" and "Contact the press office" appear as short text links with no dividers.
- **Cause:** The CTA Link Style of the Links items is Text link (empty), so no List rows are built.
- **Resolution:** Open each Links item, set CTA Link Style to List and publish the page.
- **Verification Steps:** Both links render as full-width rows inside ul.teaser-link-list with a divider between them.

Use Cases: Media kit downloads, media coverage, side-by-side cards in Columns.

Authoring Guidelines: Style tab: Layout = Card; Image tab: Image.

Business Rules: Image position, Image ratio and Image corners are hidden. Text is left aligned by default; the overlay is always black 70 %; Top spacing has no effect.

Rendering Rules: Flex column, `min-height` 25rem (35.625rem from 900 px), radius 1rem, padding 1.5rem (2.5rem); `.teaser-content` stretches (`flex: 1`, `justify-content: space-between`) so the header is at the top and the body at the bottom; title max 31.25rem.

Responsive Behaviour: Desktop: 35.625rem minimum height. Tablet below 900 px / mobile: 25rem.

SEO Impact: As Variation 6.

Accessibility Compliance: As Variation 6.

Variation 8 — Image type "Lotto" (Lottie animation)

Variation Name: Image type "Lotto" (`imageFormat` = `lottie`).

Business Purpose: An animated illustration instead of a still image.

Visual Example:

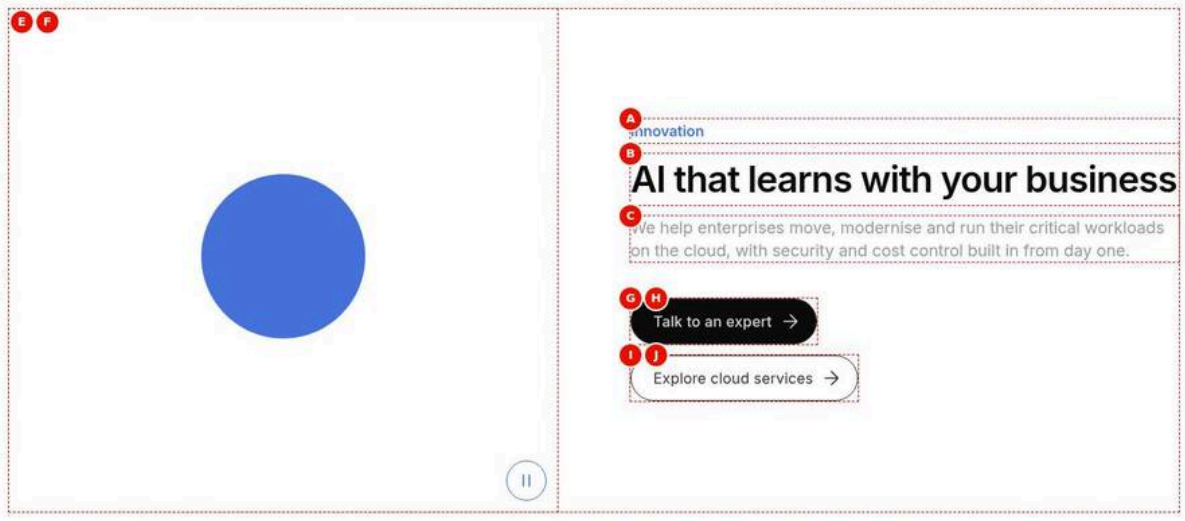

Figure 11: Lottie teaser — An Image & Text teaser at 1440 px with Image type Lotto: the Lottie animation.json (a blue shape) contained in the left media box with a round pause button at its bottom right; on the right the eyebrow Innovation, the title AI that learns with your business, the description and the buttons Talk to an expert and Explore cloud services. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-lotto-animation.jpg)

Screenshot Details — Lottie teaser

Item	Detail
Screenshot Name	`screenshots/teaser-lotto-animation.jpg`
Screenshot Purpose	Lottie teaser
Screen Description	An Image & Text teaser at 1440 px with Image type Lotto: the Lottie animation.json (a blue shape) contained in the left media box with a round pause button at its bottom right; on the right the eyebrow Innovation, the title AI that learns with your business, the description and the buttons Talk to an expert and Explore cloud services.
Business Context	An innovation story on an AI page: a looping Lottie illustration of connected data points replaces the still photograph to show movement and intelligence.
Author Objective	Add an Image & Text teaser with Image type Lotto and the Lottie file animation.json as the image, named by its alt text.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Innovation	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	AI that learns with your business	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their criti-	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		cal workloads on the cloud, with security and cost control built in from day one.				
(D)	Image type (Teaser › Image)	Lotto	No	Picture or Lottie	Lotto only with `.json`	Options: Default, Lotto
E	Image (Teaser › Image)	Select the asset animation.json (/en/media/animation.json)	No	Image or animation	See Layout for placement	None
F	Image alt text (Teaser › Image)	Animated illustration of connected data points	No	Alt text / animation label	Empty if decorative	None
G	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
I	Secondary CTA Title (Teaser › Links)	Explore cloud services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
J	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services/cloud	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The left column plays the animation.json Lottie (a blue shape) contained in the 10:9 media box, with a round pause button at its bottom right; the right column shows the eyebrow "Innovation", the title "AI that learns with your business", the description and the two buttons.
- **Rendering behaviour:** The player loads when the teaser comes within 200px of the viewport, in idle time; the animation loops, pauses off screen and starts paused on its first frame for reduced motion; beside the text it is contained ("xMidYMid meet").
- **Publishing behaviour:** Publish animation.json in AEM Assets with the page, then Publish to Preview and Live; the Pause / Play labels come from the published /en/placeholders.json (pauseAnimation, playAnimation).

Business Rules

- Lotto plays only when Image is a .json file; with Image type Default a .json file shows no media.
- The animation is named by the Image alt text, which Universal Editor stores as the image link title; teaser.js reads both (finding F-46, fixed in 1.4).
- The pause / play button (WCAG 2.2.2) is always added; do not cover it with other content.
- Image ratio Original has no effect on an animation; it keeps 10:9 or the Portrait / Square ratio.
- Without Image alt text the animation is aria-hidden (decorative).

Common Authoring Mistakes

Error	Root Cause	Resolution
The image column is empty and the text is centred	Image type left on Default with a .json file	Set Image type to Lotto
The animation does not play and the console shows "failed to play the Lottie animation"	animation.json is invalid, uses unsupported expressions or is not published	Re-export the Lottie for the SVG renderer and publish it
Screen readers skip the animation	Image alt text left empty	Enter "Animated illustration of connected data points" in Image alt text

Troubleshooting

- **Symptoms:** The left column stays empty on aem.live and the console logs "failed to play the Lottie animation".
- **Cause:** animation.json was not published from AEM Assets (404) or is not a valid Lottie file for the light SVG player.
- **Resolution:** Publish animation.json (re-export it without After Effects expressions if needed) and publish the page again.
- **Verification Steps:** The .json request returns 200, the animation loops and the pause button toggles it to Play animation.

Use Cases: Innovation stories, explainer graphics.

Authoring Guidelines: Image tab: Image type = Lotto; Image = the Lottie `.json` file; Image alt text = description (or empty if decorative).

Business Rules: Only with Lotto and a `.json` link; with Default and a `.json` file no media is shown. The animation loops, starts paused for reduced motion and pauses off screen. Behind the text (Background image, Card) it covers its box ("xMidYMid slice"); otherwise it is contained ("xMidYMid meet").

Rendering Rules: `div.teaser-media` holds `div.teaser-animation` and the `button.animation-toggle` (bottom right, 0.75rem from the edges); the animation uses the Image ratio (10:9 by default; Original does not change an animation) and rounded corners.

Responsive Behaviour: As the image of the chosen layout.

SEO Impact: Not indexable; use text for key messages.

Accessibility Compliance: Pause / play button (WCAG 2.2.2), labels from placeholders; `role="img"` + `aria-label` with alt text, else `aria-hidden`.

Variation 9 — Image position (mobile) "Default"

Variation Name: Image position (mobile) "Default" (no class).

Business Purpose: The natural order on small screens.

Visual Example:

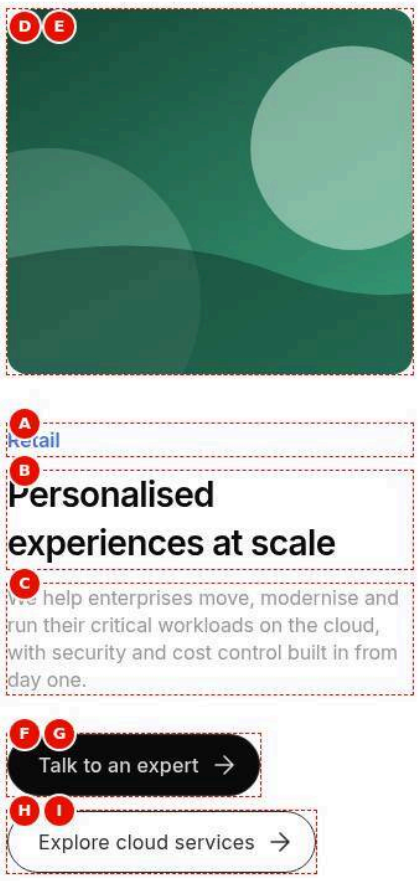

Figure 12: Default mobile image position — An Image & Text teaser at 375 px with Image position (mobile) Default: the rounded 10:9 image photo-5 on top, then the eyebrow Retail, the title Personalised experiences at scale, the description and the stacked buttons Talk to an expert and Explore cloud services. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-mobile-image-default.jpg)

Screenshot Details — Default mobile image position

Item	Detail
Screenshot Name	`screenshots/teaser-mobile-image-default.jpg`
Screenshot Purpose	Default mobile image position
Screen Description	An Image & Text teaser at 375 px with Image position (mobile) Default: the rounded 10:9 image photo-5 on top, then the eyebrow Retail, the title Personalised experiences at scale, the description and the stacked buttons Talk to an expert and Explore cloud services.
Business Context	A retail industry teaser viewed on a phone, where the image leads the story by default.
Author Objective	Keep Image position (mobile) on Default and check at 375 px that the image is above the text.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Eyebrow (Teaser › Content)	Retail	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Personalised experiences at scale	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-5.svg (/en/media/photo-5.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	A retail analytics dashboard	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
H	Secondary CTA Title (Teaser › Links)	Explore cloud services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
I	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services/cloud	No	Secondary CTA target	Page or URL	Shown only with Multiple links off
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** At 375 px the rounded 10:9 photo-5 retail dashboard image is on top; below it the eyebrow "Retail", the title "Personalised experiences at scale", the description and the two stacked buttons.
- **Rendering behaviour:** Default adds no class: the media is the first child of the block, so below 900 px it is above the text in DOM order; from 900 px the image is beside the text on the left.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-5.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Default puts the image above the text for Image & Text; for Text split the image stays after the description.
- Image position (mobile) applies below 900 px only.
- Visual order equals DOM order, so screen readers meet the image alt text "A retail analytics dashboard" first.

Common Authoring Mistakes

Error	Root Cause	Resolution
The image appears at the bottom on phones	Image position (mobile) set to Bottom	Set Image position (mobile) to Default
The teaser shows centred text without the picture	Image left empty, Hide Image on, or the asset not selected from AEM Assets	Select photo-5.svg in Image and keep Hide Image off

Troubleshooting

- **Symptoms:** The top of the mobile teaser is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-5.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-5.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the top of the mobile teaser shows the picture.

Use Cases: Most teasers.

Authoring Guidelines: Image tab: Image position (mobile) = Default.

Business Rules: Image & Text: image above the text; Text split: image in the text order (after the description).

Rendering Rules: DOM order.

Responsive Behaviour: Applies below 900 px only.

SEO Impact: None.

Accessibility Compliance: Visual order equals DOM order.

Variation 10 — Image position (mobile) "Top"

Variation Name: Image position (mobile) "Top" (class `mobile-image-top`).

Business Purpose: Lead with the image on phones.

Visual Example:

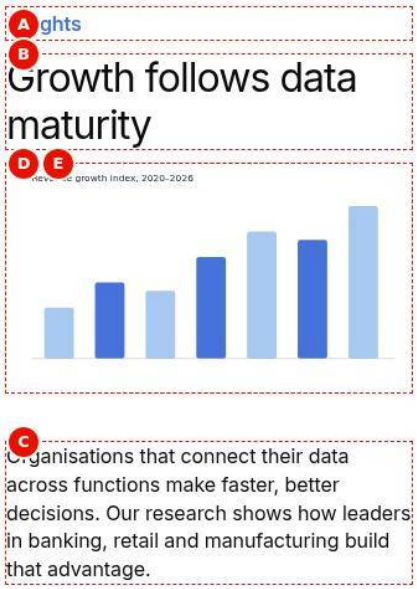

Figure 13: Mobile image on top — A Text split teaser at 375 px with Image position (mobile) Top: the eyebrow Insights, the title Growth follows data maturity, then the bar chart chart.svg, then the description Organisations that connect their data across functions… (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-mobile-image-top.jpg)

Screenshot Details — Mobile image on top

Item	Detail
Screenshot Name	`screenshots/teaser-mobile-image-top.jpg`
Screenshot Purpose	Mobile image on top
Screen Description	A Text split teaser at 375 px with Image position (mobile) Top: the eyebrow Insights, the title Growth follows data maturity, then the bar chart chart.svg, then the description Organisations that connect their data across functions…
Business Context	A data maturity research highlight whose chart is the strongest argument, so on phones the chart is shown right after the title instead of after the long description.
Author Objective	Set Image position (mobile) to Top on a Text split teaser with a chart and check it at 375 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Growth follows data maturity	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Organisations that connect their data across functions	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		make faster, better decisions. Our research shows how leaders in banking, retail and manufacturing build that advantage.				
D	Image (Teaser › Image)	Select the asset chart.svg (/en/media/chart.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Bar chart: the revenue growth index rises from 120 in 2020 to 360 in 2026	No	Alt text / animation label	Empty if decorative	None
(F)	Image position (mobile) (Teaser › Image)	Top	No	Image order below 900 px	Bottom to lead with text	Options: Default, Top, Bottom
(G)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 375 px: the eyebrow "Insights", the title "Growth follows data maturity", then the uncropped bar chart, then the description "Organisations that connect their data…".
- **Rendering behaviour:** .teaser.no-image.mobile-image-top .teaser-media gets order –1 inside the body below 900 px; from 900 px the order is reset and the chart is back after the description in the right column.
- **Publishing behaviour:** Publish chart.svg with the page, then Publish to Preview and Live; nothing else is needed for the mobile order, which is pure CSS.

Business Rules

- For Text split, Top moves the image to the top of the text part, below the title, not above the title.
- For Image & Text, Top is the same as Default (the image is already first).
- The reordering is visual: screen readers still read the description before the chart.
- Applies below 900 px only.

Common Authoring Mistakes

Error	Root Cause	Resolution
The chart is expected above the title	Top only reorders inside the body of a Text split teaser	Accept the order or use Layout Image & Text, where the image is above all text on mobile
Nothing changes on mobile	Layout is Image & Text, where Top equals Default	Use Top only with Text split, or Bottom to move the image

Troubleshooting

- **Symptoms:** At 375 px the chart still appears after the description.
- **Cause:** The page was checked wider than 900 px, or Image position (mobile) was saved as Default.
- **Resolution:** Set Image position (mobile) to Top, publish to Preview and check in responsive mode at 375 px.
- **Verification Steps:** The block has the class mobile-image-top and the chart appears between the title and the description.

Use Cases: Text split teasers whose image should be seen first on mobile.

Authoring Guidelines: Image tab: Image position (mobile) = Top.

Business Rules: For Image & Text this equals Default (the image is already first); for Text split the image moves to the top of the body (below the title).

Rendering Rules: `.teaser.no-image.mobile-image-top .teaser-media { order: -1 }`; reset to `order: 0` from 900 px.

Responsive Behaviour: Below 900 px only.

SEO Impact: None.

Accessibility Compliance: Visual reordering only; DOM order unchanged.

Variation 11 — Image position (mobile) "Bottom"

Variation Name: Image position (mobile) "Bottom" (class `mobile-image-bottom`).

Business Purpose: Lead with the text on phones.

Visual Example:

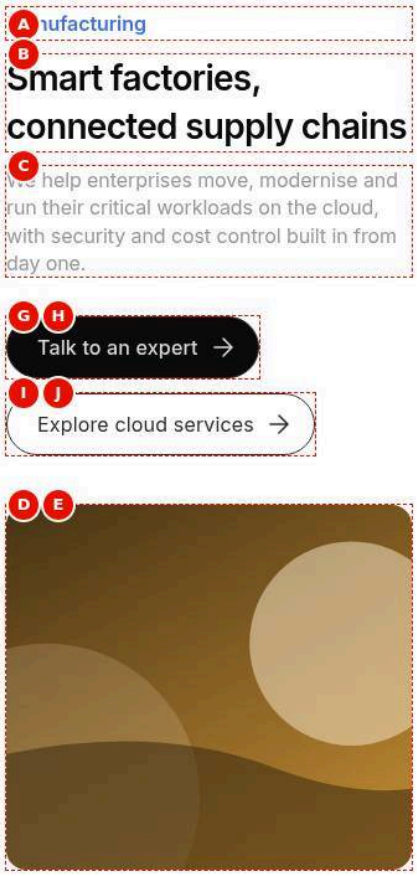

Figure 14: Mobile image at the bottom — An Image & Text teaser at 375 px with Image position (mobile) Bottom: the eyebrow Manufacturing, the title Smart factories, connected supply chains, the description and the stacked buttons Talk to an expert and Explore cloud services, then the rounded image photo-6 below the buttons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-mobile-image-bottom.jpg)

Screenshot Details — Mobile image at the bottom

Item	Detail
Screenshot Name	`screenshots/teaser-mobile-image-bottom.jpg`
Screenshot Purpose	Mobile image at the bottom
Screen Description	An Image & Text teaser at 375 px with Image position (mobile) Bottom: the eyebrow Manufacturing, the title Smart factories, connected supply chains, the description and the stacked buttons Talk to an expert and Explore cloud services, then the rounded image photo-6 below the buttons.
Business Context	A manufacturing teaser where the message and the CTAs matter more than the factory photograph, so phones show the text first.
Author Objective	Set Image position (mobile) to Bottom so the photograph comes after the buttons on phones.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree,	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Teaser	
A	Eyebrow (Teaser › Content)	Manufacturing	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Smart factories, connected supply chains	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-6.svg (/en/media/photo-6.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	A modern factory floor	No	Alt text / animation label	Empty if decorative	None
(F)	Image position (mobile) (Teaser › Image)	Bottom	No	Image order below 900 px	Bottom to lead with text	Options: Default, Top, Bottom
G	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
I	Secondary CTA Title (Teaser › Links)	Explore cloud services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
J	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services/cloud	No	Secondary CTA target	Page or URL	Shown only with Multiple links off
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** At 375 px: the eyebrow "Manufacturing", the title "Smart factories, connected supply chains", the description and the two buttons, then the rounded 10:9 photo-6 factory floor image at the bottom.
- **Rendering behaviour:** .teaser.mobile-image-bottom .teaser-media gets order 2 below 900 px; from 900 px the order is reset and the image is beside the text on the left again.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-6.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- For Image & Text the image moves after the text; for Text split to the end of the body.
- Only below 900 px; desktop keeps Image position Left or Right.
- The DOM order is unchanged, so screen readers still read the image first.

Common Authoring Mistakes

Error	Root Cause	Resolution
The image is also at the bottom expected on desktop	Image position (mobile) affects only widths below 900 px	Use Image position Right for desktop placement
No change is visible in the editor	The editor canvas is wider than 900 px	Check the aem.page preview at 375 px

Troubleshooting

- **Symptoms:** The bottom of the mobile teaser is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-6.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-6.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the bottom of the mobile teaser shows the picture.

Use Cases: Teasers where the message matters more than the picture.

Authoring Guidelines: Image tab: Image position (mobile) = Bottom.

Business Rules: Image & Text: image after the text; Text split: image at the end of the body.

Rendering Rules: `.teaser.mobile-image-bottom .teaser-media { order: 2 }`; reset from 900 px.

Responsive Behaviour: Below 900 px only.

SEO Impact: None.

Accessibility Compliance: Visual reordering only.

Variation 12 — Image ratio "Default (10:9)"

Variation Name: Image ratio "Default (10:9)" (no class).

Business Purpose: The standard design-system image proportion.

Visual Example:

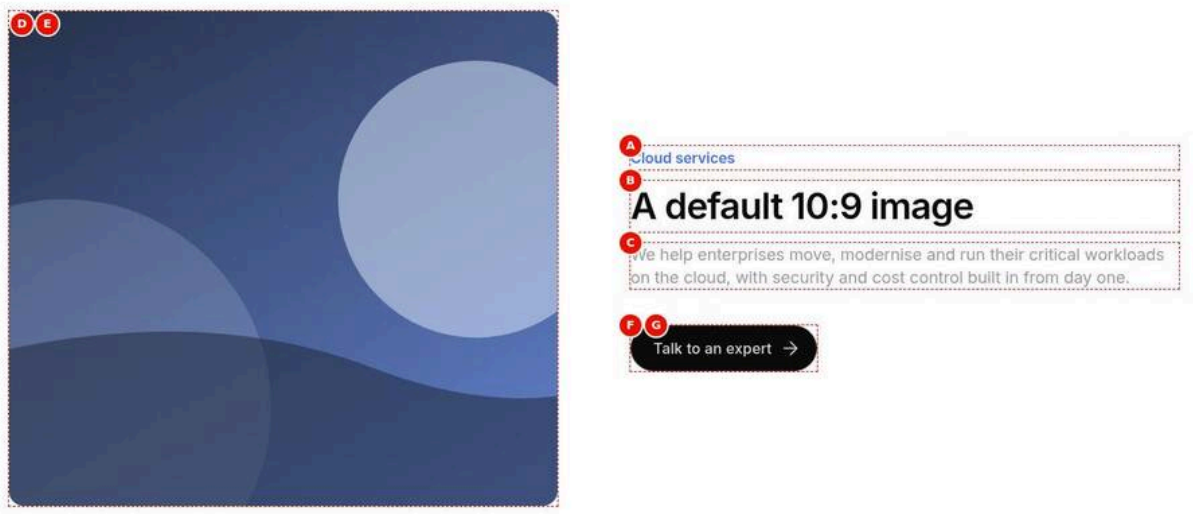

Figure 15: 10:9 image — An Image & Text teaser at 1440 px: the image photo-2 cropped to 10:9 with rounded corners on the left; the brand-blue eyebrow Cloud services, the semibold title A default 10:9 image, the description and the button Talk to an expert on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-ratio-10-9.jpg)

Screenshot Details — 10:9 image

Item	Detail
Screenshot Name	`screenshots/teaser-ratio-10-9.jpg`
Screenshot Purpose	10:9 image
Screen Description	An Image & Text teaser at 1440 px: the image photo-2 cropped to 10:9 with rounded corners on the left; the brand-blue eyebrow Cloud services, the semibold title A default 10:9 image, the description and the button Talk to an expert on the right.
Business Context	The standard design-system image proportion for an Image & Text promotion, used on most service and industry teasers.
Author Objective	Add an Image & Text teaser and keep Image ratio on Default (10:9).

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	A default 10:9 image	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost con-	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		trol built in from day one.				
D	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** The photo-2 workshop image is shown slightly wider than tall (10:9) with 1rem rounded corners on the left; on the right the eyebrow, the title "A default 10:9 image", the description and one black "Talk to an expert" button.
- **Rendering behaviour:** aspect-ratio 10 / 9 with object-fit cover crops the image to fill the box at every width; the column width sets the size (half the content width from 900 px, full width below).
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Default (10:9) needs no class; Image ratio is shown for Image & Text and Text split only.
- Upload about 1200 x 1080 px so the crop loses little.
- In Text split the same Default value shows the image at its original proportion instead.

Common Authoring Mistakes

Error	Root Cause	Resolution
The subject is cut off	The photograph is much wider than 10:9 and gets cropped	Recompose the image to 10:9 or choose Image ratio Original
"Talk to an expert" is missing on the page	The CTA title was entered but its link field left empty; a CTA without a link is skipped	Select the page or enter /en/contact in the matching CTA Link field

Troubleshooting

- **Symptoms:** The image column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-2.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-2.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the image column shows the picture.

Use Cases: Most Image & Text teasers.

Authoring Guidelines: Image tab: Image ratio = Default (shown for Image & Text and Text split).

Business Rules: In Text split, Default shows the image at its original proportion.

Rendering Rules: `aspect-ratio: 10 / 9`, `object-fit: cover` (crops).

Responsive Behaviour: Same proportion at every width.

SEO Impact: None.

Accessibility Compliance: Cropping must not remove information from the image.

Variation 13 — Image ratio "Portrait (8:9)"

Variation Name: Image ratio "Portrait (8:9)" (class `ratio-8-9`).

Business Purpose: A taller image, e.g. for people photography.

Visual Example:

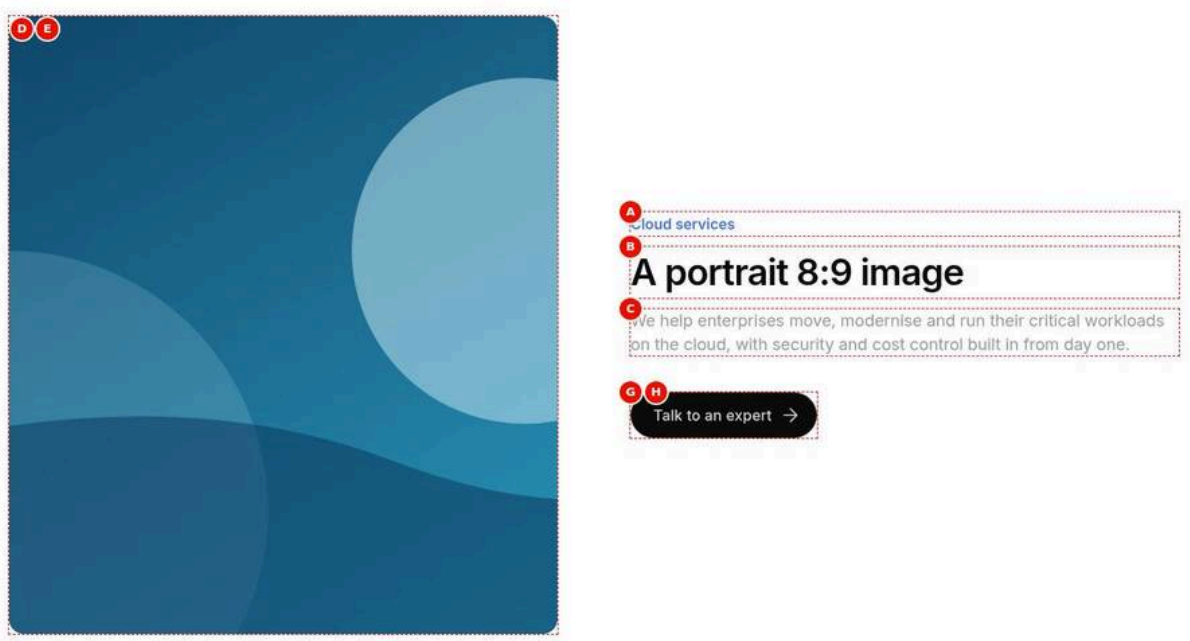

Figure 16: 8:9 image — An Image & Text teaser at 1440 px: the image photo-3 cropped to a taller 8:9 portrait on the left; the brand-blue eyebrow Cloud services, the semibold title A portrait 8:9 image, the description and the button Talk to an expert on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-ratio-8-9.jpg)

Screenshot Details — 8:9 image

Item	Detail
Screenshot Name	`screenshots/teaser-ratio-8-9.jpg`
Screenshot Purpose	8:9 image
Screen Description	An Image & Text teaser at 1440 px: the image photo-3 cropped to a taller 8:9 portrait on the left; the brand-blue eyebrow Cloud services, the semibold title A portrait 8:9 image, the description and the button Talk to an expert on the right.
Business Context	A taller image proportion for people and leadership teasers, where a portrait crop suits the subject better than the default.
Author Objective	Set Image ratio to Portrait (8:9) on an Image & Text teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	A portrait 8:9 image	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	A security operations centre	No	Alt text / animation label	Empty if decorative	None
(F)	Image ratio (Teaser › Image)	Portrait (8:9)	No	Image proportion	Portrait for people	Options: Default (10:9), Portrait (8:9), Square (1:1), Original; shown for Image & Text and Text split
G	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The photo-3 image is slightly taller than wide (8:9) with rounded corners on the left; the eyebrow, the title "A portrait 8:9 image", the description and the "Talk to an expert" button are centred vertically beside it.
- **Rendering behaviour:** The block gets ratio-8-9 and the image aspect-ratio 8 / 9 with object-fit cover at every width; animations use the same ratio.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-3.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Portrait applies to images and Lottie animations, in Image & Text and Text split.
- Upload about 1200 x 1350 px for this ratio.
- Image ratio is hidden for Background image and Card, which always cover their box.

Common Authoring Mistakes

Error	Root Cause	Resolution
Heads or faces are cut off	A landscape photograph cropped to 8:9	Use a portrait source image or keep Default
The Image ratio field is missing	Layout is Background image or Card	Use Image & Text or Text split

Troubleshooting

- **Symptoms:** The image column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-3.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-3.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the image column shows the picture.

Use Cases: Portraits, leadership teasers.

Authoring Guidelines: Image ratio = Portrait (8:9).

Business Rules: Applies to images and animations, also in Text split.

Rendering Rules: `aspect-ratio: 8 / 9`.

Responsive Behaviour: Same proportion at every width.

SEO Impact: None.

Accessibility Compliance: As Variation 12.

Variation 14 — Image ratio "Square (1:1)"

Variation Name: Image ratio "Square (1:1)" (class `ratio-1-1`).

Business Purpose: A square image.

Visual Example:

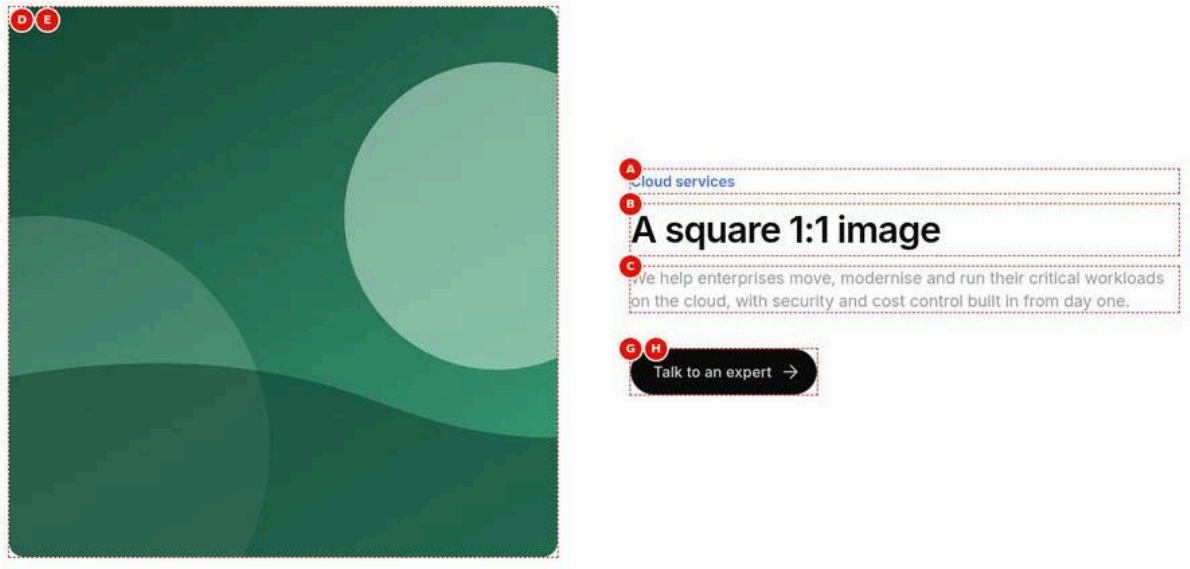

Figure 17: Square image — An Image & Text teaser at 1440 px: the image photo-5 as a rounded square (1:1) on the left; the brand-blue eyebrow Cloud services, the semibold title A square 1:1 image, the description and the button Talk to an expert on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-ratio-1-1.jpg)

Screenshot Details — Square image

Item	Detail
Screenshot Name	`screenshots/teaser-ratio-1-1.jpg`
Screenshot Purpose	Square image
Screen Description	An Image & Text teaser at 1440 px: the image photo-5 as a rounded square (1:1) on the left; the brand-blue eyebrow Cloud services, the semibold title A square 1:1 image, the description and the button Talk to an expert on the right.
Business Context	A square image for logos, illustrations or social-style pictures in an Image & Text teaser.
Author Objective	Set Image ratio to Square (1:1) on an Image & Text teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	A square 1:1 image	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost con-	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		trol built in from day one.				
D	Image (Teaser › Image)	Select the asset photo-5.svg (/en/media/photo-5.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	A retail analytics dashboard	No	Alt text / animation label	Empty if decorative	None
(F)	Image ratio (Teaser › Image)	Square (1:1)	No	Image proportion	Portrait for people	Options: Default (10:9), Portrait (8:9), Square (1:1), Original; shown for Image & Text and Text split
G	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The photo-5 image is a rounded square on the left; the eyebrow "Cloud services", the title "A square 1:1 image", the description and the "Talk to an expert" button sit beside it, vertically centred.
- **Rendering behaviour:** The block gets ratio-1-1 and the image aspect-ratio 1 with object-fit cover at every width.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-5.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Square applies to images and animations, in Image & Text and Text split.
- Upload about 1200 x 1200 px.
- A wide photograph loses its sides in a square crop; check that nothing important is cut.

Common Authoring Mistakes

Error	Root Cause	Resolution
The sides of the picture are missing	A 16:9 photograph cropped to 1:1	Use a square source image or Image ratio Original
The teaser shows centred text without the picture	Image left empty, Hide Image on, or the asset not selected from AEM Assets	Select photo-5.svg in Image and keep Hide Image off

Troubleshooting

- **Symptoms:** The image column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-5.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-5.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.

- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the image column shows the picture.

Use Cases: Logos, icons-as-illustration, social-style imagery.

Authoring Guidelines: Image ratio = Square (1:1).

Business Rules: Applies to images and animations, also in Text split.

Rendering Rules: `aspect-ratio: 1`.

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: As Variation 12.

Variation 15 — Image ratio "Original"

Variation Name: Image ratio "Original" (class `ratio-original`).

Business Purpose: Show the image uncropped.

Visual Example:

Figure 18: Original ratio — An Image & Text teaser at 1440 px: the wide image photo-6 uncropped at its own 16:9 proportion on the left; the brand-blue eyebrow Cloud services, the semibold title The image in its original ratio, the description and the button Talk to an expert vertically centred on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-ratio-original.jpg)

Screenshot Details — Original ratio

Item	Detail
Screenshot Name	`screenshots/teaser-ratio-original.jpg`
Screenshot Purpose	Original ratio
Screen Description	An Image & Text teaser at 1440 px: the wide image photo-6 uncropped at its own 16:9 proportion on the left; the brand-blue eyebrow Cloud services, the semibold title The image in its original ratio, the description and the button Talk to an expert vertically centred on the right.
Business Context	An uncropped image for diagrams, screenshots and wide photographs where any crop would remove information.
Author Objective	Set Image ratio to Original so the photograph keeps its own 16:9 proportion.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	The image in its original ratio	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-6.svg (/en/media/photo-6.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	A modern factory floor	No	Alt text / animation label	Empty if decorative	None
(F)	Image ratio (Teaser › Image)	Original	No	Image proportion	Portrait for people	Options: Default (10:9), Portrait (8:9), Square (1:1), Original; shown for Image & Text and Text split
G	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The wide photo-6 image is shown uncropped at 16:9 with rounded corners on the left, lower than the default box; the text "The image in its original ratio", the description and the button are vertically centred beside it.
- **Rendering behaviour:** The block gets ratio-original and .teaser-media img aspect-ratio auto, so the height follows the image; a Lottie animation would keep 10:9.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-6.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Original affects pictures only; animations ignore it (finding F-18, open).
- Use it for diagrams and screenshots that must be seen whole.
- Teasers next to each other with Original images of different proportions will not line up.

Common Authoring Mistakes

Error	Root Cause	Resolution
A Lottie animation is still 10:9	Image ratio Original does not apply to animations	Use Portrait or Square, or design the animation at 10:9
The image looks small beside long text	A very wide original leaves a short box	Use Default (10:9) or shorten the description

Troubleshooting

- **Symptoms:** The image column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-6.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-6.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the image column shows the picture.

Use Cases: Diagrams, screenshots, charts.

Authoring Guidelines: Image ratio = Original.

Business Rules: Affects images only; an animation keeps 10:9.

Rendering Rules: `.teaser.ratio-original .teaser-media img { aspect-ratio: auto }`.

Responsive Behaviour: The height follows the image's proportion.

SEO Impact: None.

Accessibility Compliance: No information lost through cropping.

Variation 16 — Image corners "Rounded" (default)

Variation Name: Image corners "Rounded" (no class).

Business Purpose: The design system's soft image corners.

Visual Example:

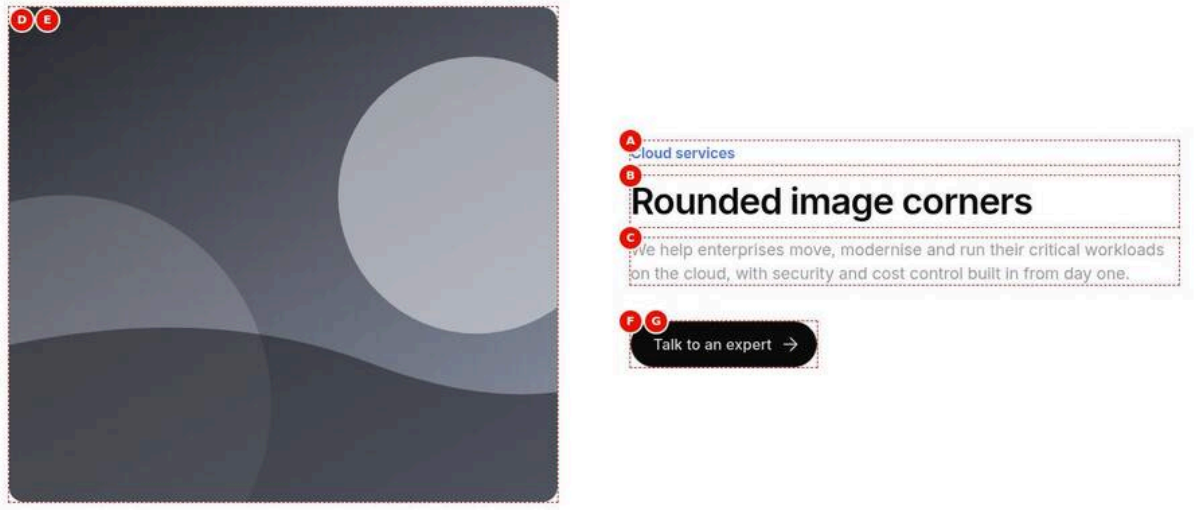

Figure 19: Rounded corners — An Image & Text teaser at 1440 px: the image photo-7 at 10:9 with 1rem rounded corners on the left; the brand-blue eyebrow Cloud services, the semibold title Rounded image corners, the description and the button Talk to an expert on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-corners-rounded.jpg)

Screenshot Details — Rounded corners

Item	Detail
Screenshot Name	`screenshots/teaser-corners-rounded.jpg`
Screenshot Purpose	Rounded corners
Screen Description	An Image & Text teaser at 1440 px: the image photo-7 at 10:9 with 1rem rounded corners on the left; the brand-blue eyebrow Cloud services, the semibold title Rounded image corners, the description and the button Talk to an expert on the right.
Business Context	The design system's default soft image corners on an Image & Text teaser about cloud services.
Author Objective	Keep Image corners on Rounded (default) for the photo-7 image.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Rounded image corners	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Image (Teaser › Image)	Select the asset photo-7.svg (/en/media/photo-7.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	A team in a modern office	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** The photo-7 office team image on the left has 1rem rounded corners at 10:9; on the right the eyebrow, the title "Rounded image corners", the description and the "Talk to an expert" button.
- **Rendering behaviour:** border-radius var(–radius-l) (1rem) is applied to the image (or animation) at every width; no class is added.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-7.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Rounded is the default; Image corners is shown for Image & Text and Text split.
- In Text split images are always square-cornered, whatever this field says.
- Alt text "A team in a modern office" describes the picture.

Common Authoring Mistakes

Error	Root Cause	Resolution
The corners are square	Image corners set to Square, or Layout Text split	Set Image corners to Rounded and use Image & Text
The teaser shows centred text without the picture	Image left empty, Hide Image on, or the asset not selected from AEM Assets	Select photo-7.svg in Image and keep Hide Image off

Troubleshooting

- **Symptoms:** The image column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-7.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-7.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the image column shows the picture.

Use Cases: Default.

Authoring Guidelines: Image corners = Rounded (shown for Image & Text and Text split).

Business Rules: In Text split images are always square-cornered (the layout overrides it).

Rendering Rules: `border-radius: var(--radius-l)` (1rem).

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: None.

Variation 17 — Image corners "Square"

Variation Name: Image corners "Square" (class `square`).

Business Purpose: Sharp-edged images for technical or editorial looks.

Visual Example:

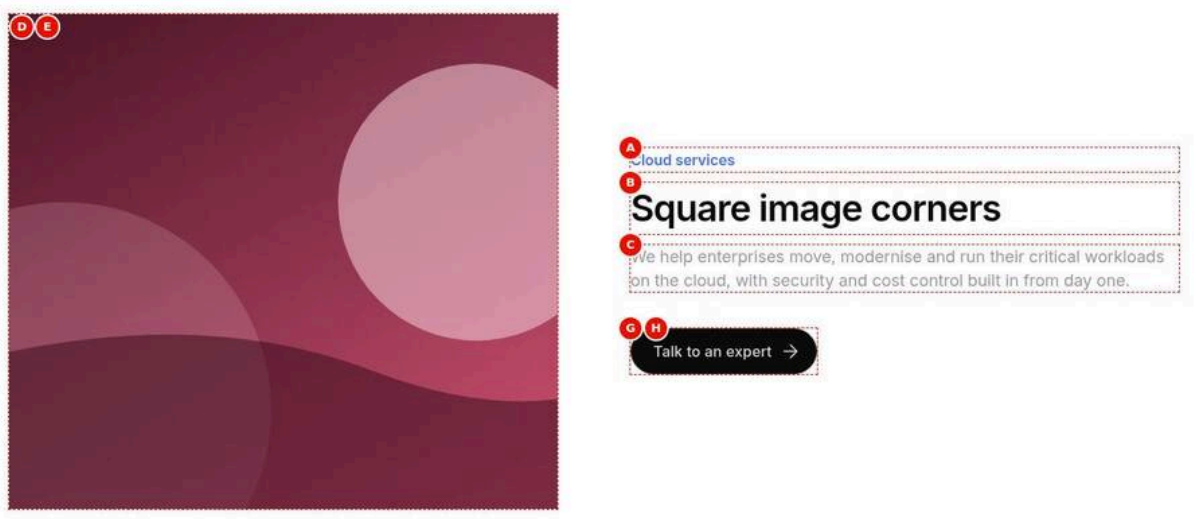

Figure 20: Square corners — An Image & Text teaser at 1440 px: the image photo-8 at 10:9 with sharp square corners on the left; the brand-blue eyebrow Cloud services, the semibold title Square image corners, the description and the button Talk to an expert on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-corners-square.jpg)

Screenshot Details — Square corners

Item	Detail
Screenshot Name	`screenshots/teaser-corners-square.jpg`
Screenshot Purpose	Square corners
Screen Description	An Image & Text teaser at 1440 px: the image photo-8 at 10:9 with sharp square corners on the left; the brand-blue eyebrow Cloud services, the semibold title Square image corners, the description and the button Talk to an expert on the right.
Business Context	Sharp-edged images for technical or editorial looks, here a city skyline beside a cloud services message.
Author Objective	Set Image corners to Square on an Image & Text teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Title (Teaser › Content)	Square image corners	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-8.svg (/en/media/photo-8.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	A city skyline at dusk	No	Alt text / animation label	Empty if decorative	None
(F)	Image corners (Teaser › Image)	Square	No	Corner style	Square for diagrams	Options: Rounded, Square; shown for Image & Text and Text split
G	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The photo-8 city skyline image on the left has sharp 90-degree corners at 10:9; the eyebrow, the title "Square image corners", the description and the button sit beside it.
- **Rendering behaviour:** The block gets the class square and .teaser-media img / .teaser-animation get border-radius 0 at every width.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-8.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Square applies to images and animations.
- Hidden for Background image and Card, which have no image radius anyway.
- Alt text "A city skyline at dusk" describes the picture.

Common Authoring Mistakes

Error	Root Cause	Resolution
The Image corners field is missing	Layout is Background image or Card	Use Image & Text or Text split
The corners stay rounded	The value was not saved or the page not republished	Set Square again and publish the page

Troubleshooting

- **Symptoms:** The image column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-8.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-8.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the image column shows the picture.

Use Cases: Diagrams, editorial photos.

Authoring Guidelines: Image corners = Square.

Business Rules: Applies to images and animations.

Rendering Rules: `.teaser.square .teaser-media :is(img, .teaser-animation) { border-radius: 0 }`.

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: None.

Variation 18 — BG Color "Default"

Variation Name: BG Color "Default" (no class).

Business Purpose: The teaser sits directly on the section background without a panel.

Visual Example:

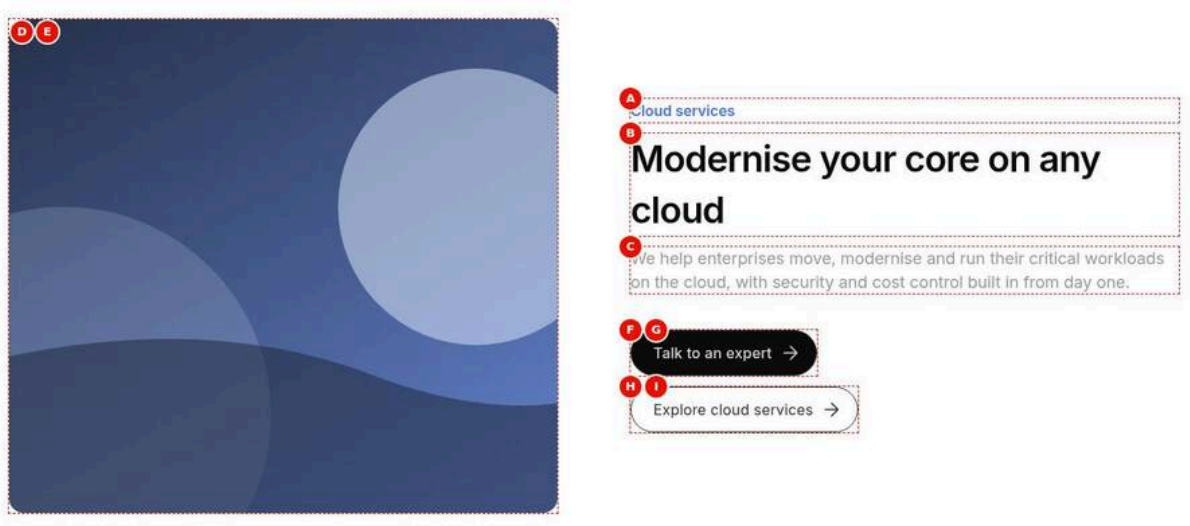

Figure 21: No background colour — An Image & Text teaser at 1440 px: on the white page without a panel, the rounded 10:9 image photo-2 on the left; the brand-blue eyebrow Cloud services, the semibold title Modernise your core on any cloud, the description and the buttons Talk to an expert and Explore cloud services on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-bg-default.jpg)

Screenshot Details — No background colour

Item	Detail
Screenshot Name	`screenshots/teaser-bg-default.jpg`
Screenshot Purpose	No background colour

Item	Detail
Screen Description	An Image & Text teaser at 1440 px: on the white page without a panel, the rounded 10:9 image photo-2 on the left; the brand-blue eyebrow Cloud services, the semibold title Modernise your core on any cloud, the description and the buttons Talk to an expert and Explore cloud services on the right.
Business Context	The usual Image & Text promotion placed directly on the white section background, without a coloured panel.
Author Objective	Keep BG Color on Default so the teaser sits on the section background without panel padding.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Modernise your core on any cloud	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
H	Secondary CTA Title (Teaser › Links)	Explore cloud services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
I	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services/cloud	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** On the white page the rounded 10:9 photo-2 image is on the left; the eyebrow "Cloud services", the title "Modernise your core on any cloud", the grey description and the two stacked buttons on the right, with no extra padding around the block.
- **Rendering behaviour:** No bg-* class: only the section padding applies; text is dark (title default colour, description secondary grey).

- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-2.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Default adds no panel padding; Grey, Dark and Dark green add 2.5rem / 1.5rem (7.5rem / 5rem from 900 px).
- Background image and Card keep their own overlay and padding whatever BG Color says.
- Use a section background instead when several blocks share the same colour.

Common Authoring Mistakes

Error	Root Cause	Resolution
The teaser seems to touch the neighbouring content	Default has no padding of its own	Use the Additional tab Margin top / bottom or a section style
"Explore cloud services" is missing on the page	The CTA title was entered but its link field left empty; a CTA without a link is skipped	Select the page or enter /en/services/cloud in the matching CTA Link field

Troubleshooting

- **Symptoms:** The left column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-2.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-2.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Use Cases: Most teasers.

Authoring Guidelines: Style tab: BG Color = Default.

Business Rules: No panel padding; Background image and Card keep their own overlay and padding.

Rendering Rules: No `bg-*` class.

Responsive Behaviour: Not applicable.

SEO Impact: None.

Accessibility Compliance: Dark text on white.

Variation 19 — BG Color "Grey"

Variation Name: BG Color "Grey" (class `bg-grey`).

Business Purpose: A light grey panel to separate the teaser from neighbouring content.

Visual Example:

Figure 22: Grey panel — A Text split teaser at 1440 px on a padded light grey panel: the eyebrow Insights above, the regular-weight title Turning enterprise data into decisions on the left, the description and the text link Read the report on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-bg-grey.jpg)

Screenshot Details — Grey panel

Item	Detail
Screenshot Name	`screenshots/teaser-bg-grey.jpg`
Screenshot Purpose	Grey panel
Screen Description	A Text split teaser at 1440 px on a padded light grey panel: the eyebrow Insights above, the regular-weight title Turning enterprise data into decisions on the left, the description and the text link Read the report on the right.
Business Context	An insights panel separated from neighbouring white content by a light grey background, typical in alternating sections.
Author Objective	Add a Text split teaser with BG Color Grey and one text link.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Insights	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Turning enterprise data into decisions	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Organisations that connect their data across functions make faster, better decisions. Our research shows how leaders in banking,	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		retail and manufacturing build that advantage.				
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(E)	BG Color (Teaser › Style)	Grey	No	Panel colour	Dark for contrast sections	Options: Default, Grey, Dark, Dark green
(F)	Multiple links (Teaser › Links)	On	No	List of links instead of two CTAs	On for 3+ links	None
G	CTA Title (Teaser › Links › Links › Item 1)	Read the report	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
H	CTA Link (Teaser › Links › Links › Item 1)	Select the page or enter /en/insights	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A light grey panel with generous padding: the eyebrow "Insights" above, the regular-weight title "Turning enterprise data into decisions" on the left, the 1.5rem description and the text link "Read the report" with an arrow on the right.
- **Rendering behaviour:** bg-grey sets background var(–color-bg-secondary) and padding 2.5rem / 1.5rem, 7.5rem / 5rem from 900 px; text stays dark.
- **Publishing behaviour:** Only the page is published (no asset). Publish to Preview, check /en/insights opens from the link, then Publish to Live.

Business Rules

- The Links item has no CTA Link Style, so "Read the report" is a Text link.
- Grey keeps dark text and dark buttons; no colour override is applied.
- Additional tab Padding values override the panel padding at every breakpoint.

Common Authoring Mistakes

Error	Root Cause	Resolution
The grey panel is too tight or too loose	Padding top / bottom from the Additional tab overrides the panel padding	Reset Padding to Default
"Read the report" shows as a button	CTA Link Style set to Primary or Secondary Button	Set CTA Link Style to Text link

Troubleshooting

- **Symptoms:** The grey background is missing on the published page.
- **Cause:** BG Color was saved as Default, or the page was not republished after the change.

- **Resolution:** Set BG Color to Grey in the Style tab and publish the page to Preview and Live.
- **Verification Steps:** The block has the class bg-grey and a light grey panel with padding shows at 1440 px.

Use Cases: Alternating sections, stats panels.

Authoring Guidelines: BG Color = Grey.

Business Rules: Adds panel padding; text stays dark.

Rendering Rules: `background-color: var(--color-bg-secondary);` padding 2.5rem / 1.5rem (7.5rem / 5rem from 900 px).

Responsive Behaviour: Padding grows at 900 px.

SEO Impact: None.

Accessibility Compliance: Dark text on light grey meets AA.

Variation 20 — BG Color "Dark"

Variation Name: BG Color "Dark" (class `bg-dark`).

Business Purpose: A black panel with white text.

Visual Example:

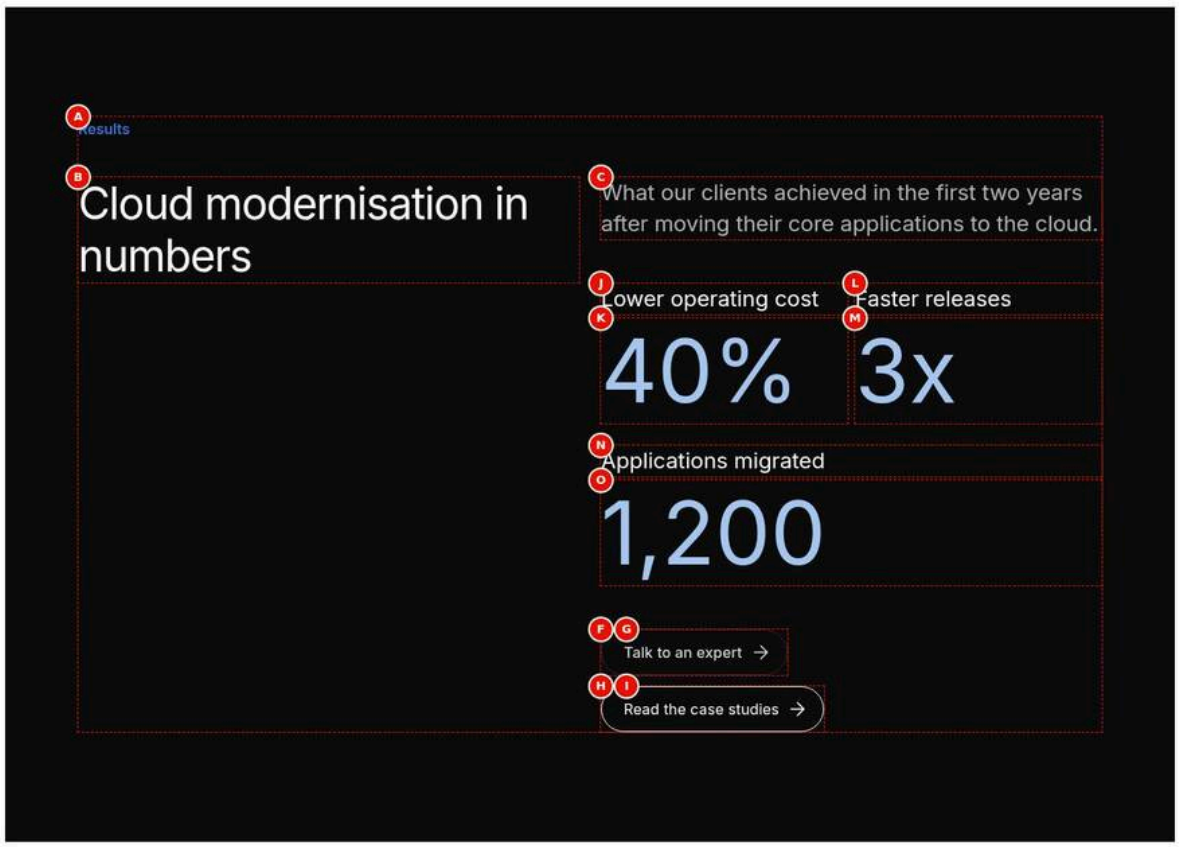

Figure 23: Dark panel — A Text split teaser at 1440 px on a near-black panel: the eyebrow Results and the white title Cloud modernisation in numbers on the left; on the right the description, the stats Lower operating cost 40%, Faster releases 3x and Applications migrated 1,200 in light blue, then Talk to an expert as a black button barely visible on the panel and the white outline Read the case studies. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-bg-dark.jpg)

Screenshot Details — Dark panel

Item	Detail
Screenshot Name	`screenshots/teaser-bg-dark.jpg`
Screenshot Purpose	Dark panel
Screen Description	A Text split teaser at 1440 px on a near-black panel: the eyebrow Results and the white title Cloud modernisation in numbers on the left; on the right the description, the stats Lower operating cost 40%, Faster releases 3x and Applications migrated 1,200 in light blue, then Talk to an expert as a black button barely visible on the panel and the white outline Read the case studies.
Business Context	A results section of a cloud case study: three headline numbers on a near-black panel prove the message before the CTAs.
Author Objective	Add a Text split teaser on BG Color Dark with two CTAs and three stats.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Results	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Cloud modernisation in numbers	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	What our clients achieved in the first two years after moving their core applications to the cloud.	No	Main text	Up to 300 characters (Recommended)	None
(D)	Layout (Teaser › Style)	Text split (title left, text right)	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(E)	BG Color (Teaser › Style)	Dark	No	Panel colour	Dark for contrast sections	Options: Default, Grey, Dark, Dark green
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
H	Secondary CTA Title (Teaser › Links)	Read the case studies	No	Secondary CTA text	Verb first	Shown only with Multiple links off
I	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/insights	No	Secondary CTA target	Page or URL	Shown only with Multiple links off
J	Stats Title (Teaser › Stats › Stats › Item 1)	Lower operating cost	No (Recommended)	What the number measures	Short label	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
K	Stats Value (Teaser › Stats › Stats › Item 1)	40%	No (Recommended)	The number	A single line, e.g. 40%	None (single line is guidance; the last element of the item is used as the value)
L	Stats Title (Teaser › Stats › Stats › Item 2)	Faster releases	No (Recommended)	What the number measures	Short label	None
M	Stats Value (Teaser › Stats › Stats › Item 2)	3x	No (Recommended)	The number	A single line, e.g. 40%	None (single line is guidance; the last element of the item is used as the value)
N	Stats Title (Teaser › Stats › Stats › Item 3)	Applications migrated	No (Recommended)	What the number measures	Short label	None
O	Stats Value (Teaser › Stats › Stats › Item 3)	1,200	No (Recommended)	The number	A single line, e.g. 40%	None (single line is guidance; the last element of the item is used as the value)

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A near-black panel: the eyebrow "Results" and the white title "Cloud modernisation in numbers" on the left; on the right the 70 % white description, the stats Lower operating cost 40%, Faster releases 3x and Applications migrated 1,200 with light-blue values, then "Talk to an expert" and the white outline "Read the case studies".
- **Rendering behaviour:** bg-dark sets #0c0c0d with panel padding (7.5rem / 5rem from 900 px); text white, body 70 % white, stat values –brand-300 at 6rem from 900 px (2.75rem below), wrapping one per row on phones.
- **Publishing behaviour:** Only the page is published. Publish to Preview, check both CTA targets and the stats at 375 px, then Publish to Live.

Business Rules

- Stats render after the description and before the links; each value must be a single line.
- On Dark the Secondary Button turns white outline; the Primary Button keeps its black fill and nearly disappears on #0c0c0d, so prefer Secondary Button or Text link here.
- Stat values up to about 6 characters avoid overflow at 6rem.
- BG Color Dark switches the title, stat labels, Secondary Buttons and text links to white; the Primary Button is not recoloured.

Common Authoring Mistakes

Error	Root Cause	Resolution
"Talk to an expert" is hard to see	Primary Button on the Dark panel has no light variant	Set Primary CTA Link Style to Secondary Button
A stat label shows as the large value	Stats Value left empty, so the last line of the title becomes the value	Enter 40%, 3x and 1,200 in Stats Value

Troubleshooting

- **Symptoms:** The "Talk to an expert" button is barely visible on the dark panel.
- **Cause:** The Primary Button is black and teaser.css has no Dark-panel style for it (only Secondary and Text link turn white).
- **Resolution:** Set Primary CTA Link Style to Secondary Button (or Text link) and publish the page.
- **Verification Steps:** Both CTAs show a white outline or white text on the dark panel at 1440 px and 375 px.

Use Cases: Statement sections, stats on dark.

Authoring Guidelines: BG Color = Dark.

Business Rules: Text white, body / meta text 70 % white, stat values light blue (`--brand-300`), list dividers `#767676`; Secondary buttons white outline; with Background image the overlay is 80 %.

Rendering Rules: `background-color: var(--color-bg-neutral)` (`#0c0c0d`), panel padding.

Responsive Behaviour: As Grey.

SEO Impact: None.

Accessibility Compliance: White on near-black meets AA; check 70 % white small text.

Variation 21 — BG Color "Dark green"

Variation Name: BG Color "Dark green" (class `bg-dark-green`).

Business Purpose: A dark green brand panel.

Visual Example:

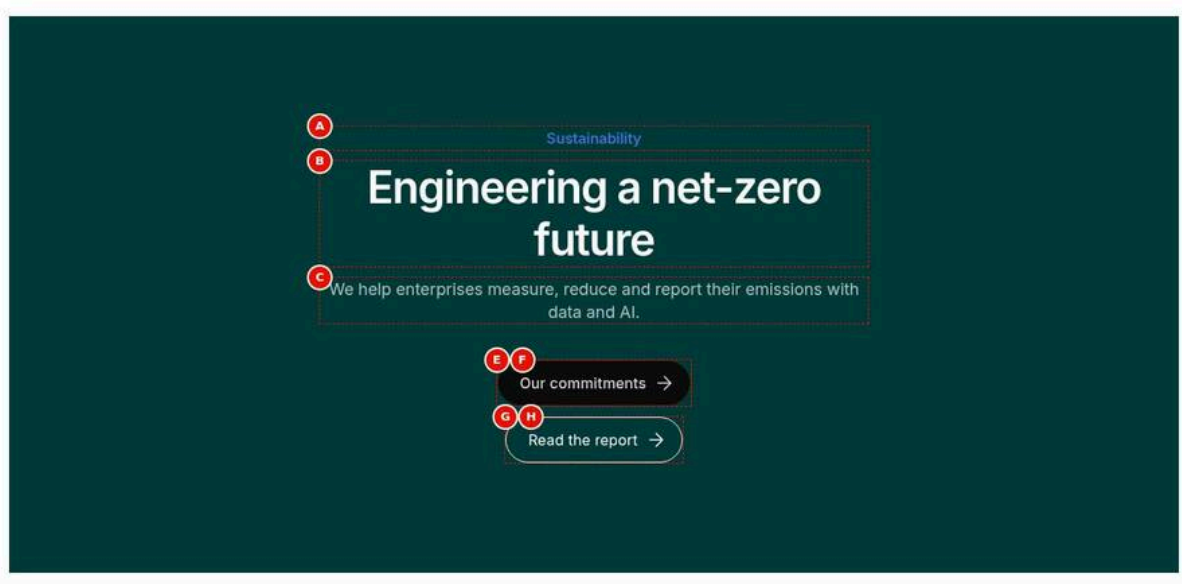

Figure 24: Dark green panel — A teaser without an image at 1440 px on a dark green panel, centred: the brand-blue eyebrow Sustainability, the white title Engineering a net-zero future, the description and the buttons Our commitments (black) above Read the report (white outline). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-bg-dark-green.jpg)

Screenshot Details — Dark green panel

Item	Detail
Screenshot Name	`screenshots/teaser-bg-dark-green.jpg`
Screenshot Purpose	Dark green panel

Item	Detail
Screen Description	A teaser without an image at 1440 px on a dark green panel, centred: the brand-blue eyebrow Sustainability, the white title Engineering a net-zero future, the description and the buttons Our commitments (black) above Read the report (white outline).
Business Context	A sustainability statement on a dark green brand panel, used for ESG and net-zero themes.
Author Objective	Add an Image & Text teaser without an image on BG Color Dark green with two CTAs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Sustainability	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Engineering a net-zero future	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises measure, reduce and report their emissions with data and AI.	No	Main text	Up to 300 characters (Recommended)	None
(D)	BG Color (Teaser › Style)	Dark green	No	Panel colour	Dark for contrast sections	Options: Default, Grey, Dark, Dark green
E	Primary CTA Title (Teaser › Links)	Our commitments	No	Primary CTA text	Verb first	Shown only with Multiple links off
F	Primary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Primary CTA target	Page or URL	Shown only with Multiple links off
G	Secondary CTA Title (Teaser › Links)	Read the report	No	Secondary CTA text	Verb first	Shown only with Multiple links off
H	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/insights	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A dark green (#003b39) panel with centred content: the brand-blue eyebrow "Sustainability", the white title "Engineering a net-zero future", the 70 % white description and "Our commitments" above the white outline "Read the report".
- **Rendering behaviour:** bg-dark-green sets #003b39 with panel padding; with no image the content is centred in a 37.5rem column and the title uses 3rem from 900 px (2rem below).
- **Publishing behaviour:** Only the page is published. Publish to Preview, check /en/about and /en/insights, then Publish to Live.

Business Rules

- Dark green behaves like Dark: white title, 70 % white text, white outline Secondary Button.
- The Primary Button “Our commitments” stays black on the green panel; check that it is distinguishable.
- The brand-blue eyebrow is not recoloured on dark panels; check its contrast against #003b39.
- With Background image this colour would give a green 80 % overlay instead.

Common Authoring Mistakes

Error	Root Cause	Resolution
The eyebrow is hard to read	Brand blue on dark green has low contrast	Shorten or drop the eyebrow, or use Eyebrow style Label
The panel is grey instead of green	BG Color set to Grey	Set BG Color to Dark green

Troubleshooting

- **Symptoms:** The text is dark and unreadable on the green panel.
- **Cause:** The colour was applied through a section style instead of BG Color, so the teaser keeps its dark text colours.
- **Resolution:** Set BG Color to Dark green in the teaser’s Style tab and remove the section colour.
- **Verification Steps:** The block has the class bg-dark-green and the title renders white.

Use Cases: Sustainability and ESG themes.

Authoring Guidelines: BG Color = Dark green.

Business Rules: As Dark; with Background image the overlay is green `rgb(0 59 57 / 80%)`.

Rendering Rules: `background-color: #003b39`, panel padding.

Responsive Behaviour: As Grey.

SEO Impact: None.

Accessibility Compliance: As Dark.

Variation 22 — Text alignment “Layout default”

Variation Name: Text alignment “Layout default” (no class).

Business Purpose: Each layout’s designed alignment.

Visual Example:

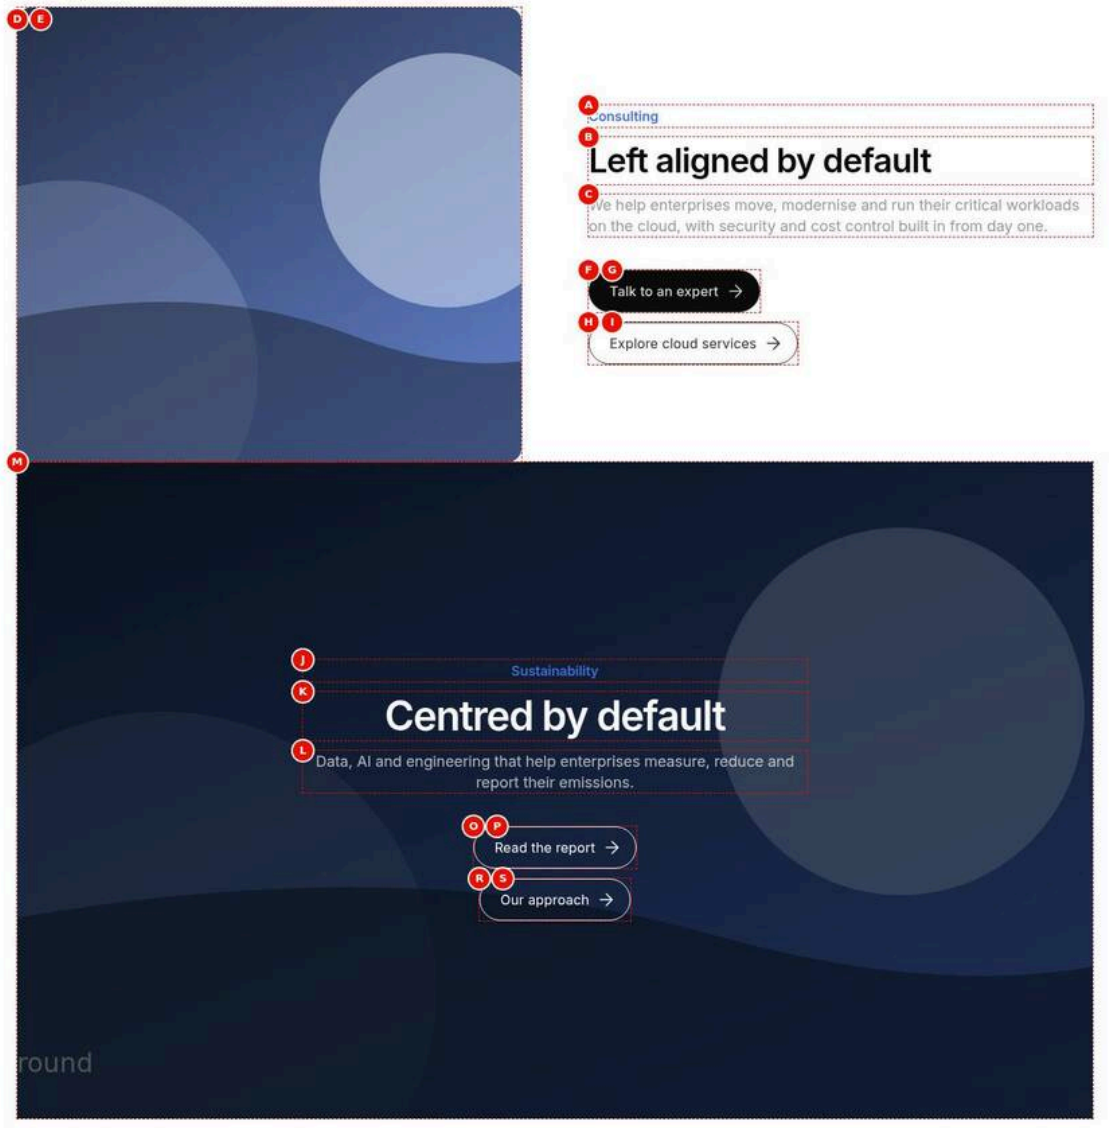

Figure 25: Layout default alignment — Two teasers at 1440 px stacked one above the other: first an Image & Text teaser with photo-2 on the left and the left-aligned title Left aligned by default with two buttons; below it a Background image teaser with wide.svg and the centred eyebrow Sustainability, title Centred by default and the white outline buttons Read the report and Our approach. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-text-layout-default.jpg)

Screenshot Details — Layout default alignment

Item	Detail
Screenshot Name	`screenshots/teaser-text-layout-default.jpg`
Screenshot Purpose	Layout default alignment
Screen Description	Two teasers at 1440 px stacked one above the other: first an Image & Text teaser with photo-2 on the left and the left-aligned title Left aligned by default with two buttons; below it a Background image teaser with wide.svg and the centred eyebrow Sustainability, title Centred by default and the white outline buttons Read the report and Our approach.
Business Context	Two teasers on one page showing each layout's designed alignment: the consulting promotion left aligned beside its image and the sustainability banner centred over its background image.

Item	Detail
Author Objective	Add an Image & Text teaser and a Background image teaser and keep Text alignment on Layout default for both.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Consulting	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Left aligned by default	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	Consultants in a workshop	No	Alt text / animation label	Empty if decorative	None
F	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
G	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
H	Secondary CTA Title (Teaser › Links)	Explore cloud services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
I	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services/cloud	No	Secondary CTA target	Page or URL	Shown only with Multiple links off
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
J	Eyebrow (Teaser › Content)	Sustainability	No	Kicker above the title	Up to 40 characters (Recommended)	None
K	Title (Teaser › Content)	Centred by default	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
L	Description (Teaser › Content)	Data, AI and engineering that help enterprises measure, reduce and re-	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		port their emissions.				
M	Image (Teaser › Image)	Select the asset wide.svg (/en/media/wide.svg)	No	Image or animation	See Layout for placement	None
(N)	Layout (Teaser › Style)	Background image	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
O	Primary CTA Title (Teaser › Links)	Read the report	No	Primary CTA text	Verb first	Shown only with Multiple links off
P	Primary CTA Link (Teaser › Links)	Select the page or enter /en/insights	No	Primary CTA target	Page or URL	Shown only with Multiple links off
(Q)	Primary CTA Link Style (Teaser › Links)	Secondary Button	No	Primary CTA style	Keep Primary	Options: Text link, List, Primary Button, Secondary Button; shown only with Multiple links off
R	Secondary CTA Title (Teaser › Links)	Our approach	No	Secondary CTA text	Verb first	Shown only with Multiple links off
S	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (N), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Top: photo-2 on the left and the left-aligned "Left aligned by default" text with two buttons on the right. Below it: the wide.svg Background image banner with the centred eyebrow, the white title "Centred by default", the description and two white outline buttons.
- **Rendering behaviour:** Layout default adds no class: Image & Text with media, Text split and Card are left aligned; Background image and Image & Text without media centre the content in a 37.5rem column.
- **Publishing behaviour:** Publish photo-2.svg and wide.svg in AEM Assets with the page, then Publish to Preview and Live; both teasers are part of the same page publish.

Business Rules

- Layout default means left for Image & Text with an image, Text split and Card.
- Layout default means centred for Background image and for Image & Text without an image.
- The second teaser sets Primary CTA Link Style to Secondary Button so both of its buttons are white outlines.
- The two teasers are in one section and stack vertically; each has its own Style tab.

Common Authoring Mistakes

Error	Root Cause	Resolution
The banner text is left aligned	Text alignment set to Left on the Background image teaser	Set Text alignment to Layout default

Error	Root Cause	Resolution
The style of one teaser changes the other	Editing the wrong teaser in the content tree	Select the intended Teaser in the content tree before opening the Style tab

Troubleshooting

- **Symptoms:** The banner of the second teaser is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** wide.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish wide.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the banner of the second teaser shows the picture.

Use Cases: Default.

Authoring Guidelines: Style tab: Text alignment = Layout default.

Business Rules: Left for Image & Text with image, Text split and Card; centred for Background image and Image & Text without image.

Rendering Rules: No class.

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: None.

Variation 23 — Text alignment "Left"

Variation Name: Text alignment "Left" (class `text-left`).

Business Purpose: Force left alignment in layouts that centre by default.

Visual Example:

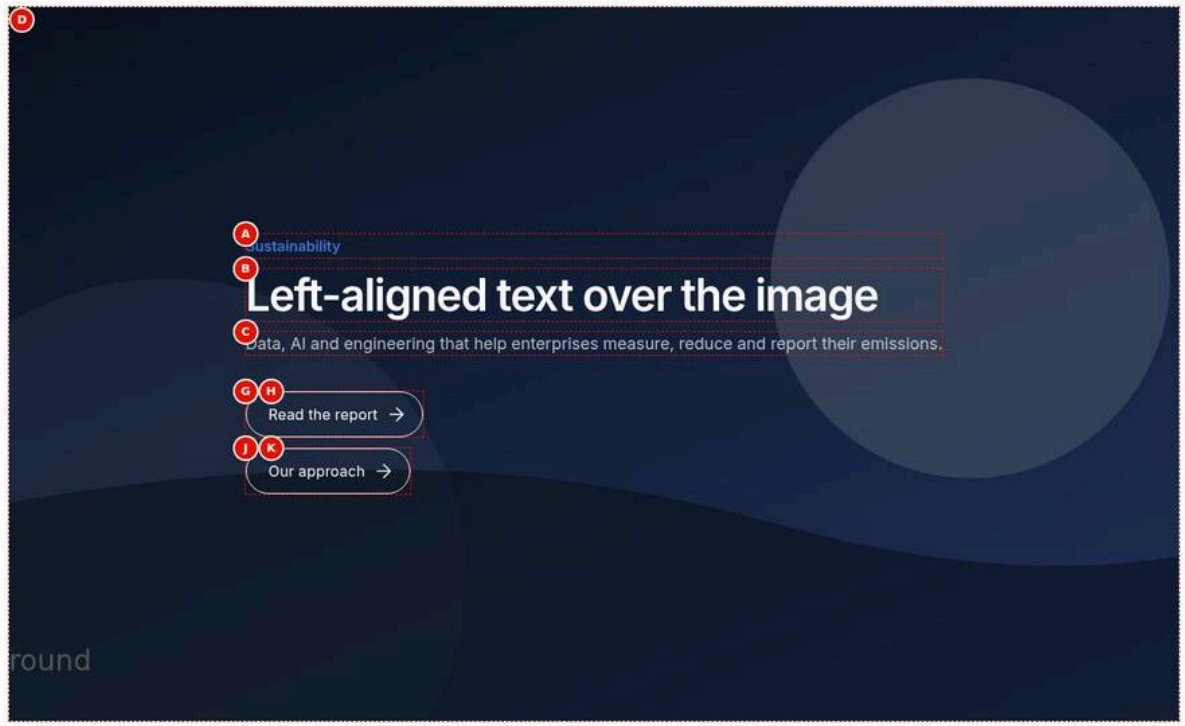

Figure 26: Left-aligned text — A Background image teaser at 1440 px with Text alignment Left: wide.svg under the dark overlay; the eyebrow Sustainability, the white title Left-aligned text over the image, the description and the white outline buttons Read the report and Our approach are left aligned within a text block that stays centred in the banner. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-text-left.jpg)

Screenshot Details — Left-aligned text

Item	Detail
Screenshot Name	`screenshots/teaser-text-left.jpg`
Screenshot Purpose	Left-aligned text
Screen Description	A Background image teaser at 1440 px with Text alignment Left: wide.svg under the dark overlay; the eyebrow Sustainability, the white title Left-aligned text over the image, the description and the white outline buttons Read the report and Our approach are left aligned within a text block that stays centred in the banner.
Business Context	A sustainability banner with a longer statement, where left-aligned text reads more easily than the centred default of the Background image layout.
Author Objective	Set Text alignment to Left on a Background image teaser.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Sustainability	No	Kicker above the title	Up to 40 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Title (Teaser › Content)	Left-aligned text over the image	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Data, AI and engineering that help enterprises measure, reduce and report their emissions.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset wide.svg (/en/media/wide.svg)	No	Image or animation	See Layout for placement	None
(E)	Layout (Teaser › Style)	Background image	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(F)	Text alignment (Teaser › Style)	Left	No	Text alignment	Layout default in most cases	Options: Layout default, Left, Center, Right
G	Primary CTA Title (Teaser › Links)	Read the report	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/insights	No	Primary CTA target	Page or URL	Shown only with Multiple links off
(I)	Primary CTA Link Style (Teaser › Links)	Secondary Button	No	Primary CTA style	Keep Primary	Options: Text link, List, Primary Button, Secondary Button; shown only with Multiple links off
J	Secondary CTA Title (Teaser › Links)	Our approach	No	Secondary CTA text	Verb first	Shown only with Multiple links off
K	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/about	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (E), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The wide.svg banner under the dark overlay; the eyebrow "Sustainability", the white title "Left-aligned text over the image", the description and the two white outline buttons are left aligned within a text block that sits in the middle of the banner.
- **Rendering behaviour:** text-left removes the centred 37.5rem column and sets text-align start; the Background image flex column still centres the text block itself horizontally and vertically, so the text starts left of centre rather than at the banner edge.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; wide.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Left only changes the layouts that centre by default (Background image, Image & Text without image).
- The 37.5rem maximum width no longer applies, so the title can run wider.
- Combine with Vertical alignment to move the text block up or down; there is no option to pin it to the left edge.
- Both CTAs use white outline buttons (Primary CTA Link Style Secondary Button).

Common Authoring Mistakes

Error	Root Cause	Resolution
The text block is not at the left edge of the banner	Text alignment aligns the lines, while the Background image layout centres the block	Accept the centred block or use Layout Card, which is left aligned at the edge
The title becomes a very long single line	Text alignment Left lifts the 37.5rem limit	Shorten the title or set Title size Medium (40px)

Troubleshooting

- **Symptoms:** The text is still centred line by line after choosing Left.
- **Cause:** Text alignment was set on another teaser of the page or the change was not published.
- **Resolution:** Select this Background image teaser, set Text alignment to Left and publish the page.
- **Verification Steps:** The block has the class text-left and each line of the title and description starts at the same left position.

Use Cases: Long text in Background image or no-image teasers.

Authoring Guidelines: Text alignment = Left.

Business Rules: Removes the centred 37.5rem column of the centring layouts.

Rendering Rules: `text-align: start` on content and heading row.

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: Improves readability of long text.

Variation 24 — Text alignment "Center"

Variation Name: Text alignment "Center" (class `text-center`).

Business Purpose: Centre the text, including in Image & Text and Card.

Visual Example:

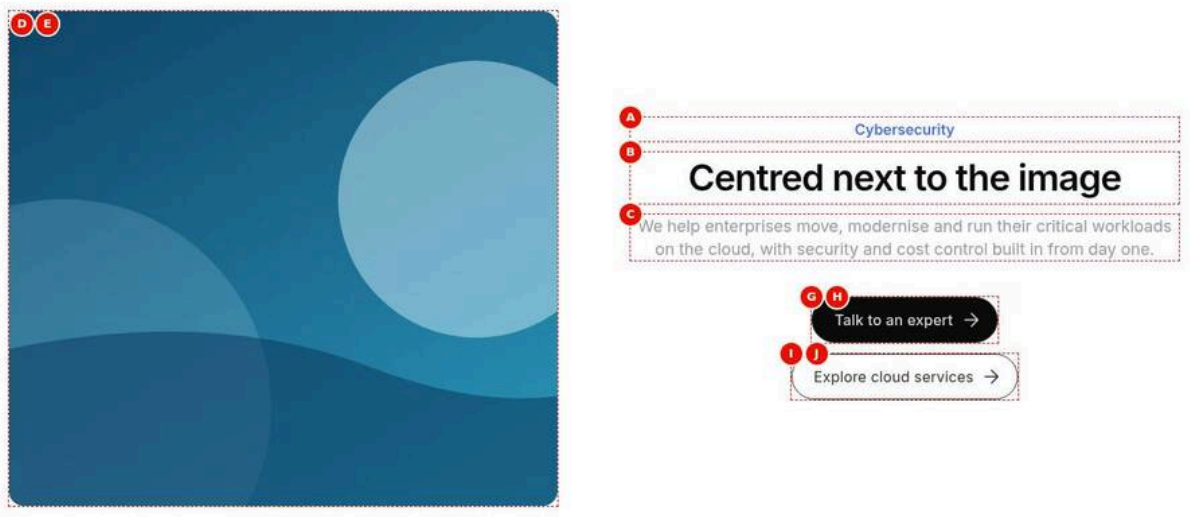

Figure 27: Centred text — An Image & Text teaser at 1440 px with Text alignment Center: the rounded image photo-3 on the left; in the right column the eyebrow Cybersecurity, the title Centred next to the image, the description and the buttons Talk to an expert and Explore cloud services, all centred. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-text-center.jpg)

Screenshot Details — Centred text

Item	Detail
Screenshot Name	`screenshots/teaser-text-center.jpg`
Screenshot Purpose	Centred text
Screen Description	An Image & Text teaser at 1440 px with Text alignment Center: the rounded image photo-3 on the left; in the right column the eyebrow Cybersecurity, the title Centred next to the image, the description and the buttons Talk to an expert and Explore cloud services, all centred.
Business Context	A short cybersecurity promotion where the text column is centred next to the image for a more balanced, poster-like look.
Author Objective	Set Text alignment to Center on an Image & Text teaser with an image.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cybersecurity	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Centred next to the image	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost con-	No	Main text	Up to 300 characters (Recommended)	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		trol built in from day one.				
D	Image (Teaser › Image)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	A security operations centre	No	Alt text / animation label	Empty if decorative	None
(F)	Text alignment (Teaser › Style)	Center	No	Text alignment	Layout default in most cases	Options: Layout default, Left, Center, Right
G	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
I	Secondary CTA Title (Teaser › Links)	Explore cloud services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
J	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services/cloud	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** photo-3 on the left at 10:9; in the right column the eyebrow "Cybersecurity", the title "Centred next to the image", the description and the two stacked buttons, all centred within the column.
- **Rendering behaviour:** text-center centres the kicker, heading row, author and links; with an image beside the text the column keeps its full width (no 37.5rem limit). Below 900 px the centred text sits under the image.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-3.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Center has no effect in Text split (finding F-18, open).
- With an image the text column is not narrowed; without one it is limited to 37.5rem.
- Keep centred text short: one or two sentences of description.

Common Authoring Mistakes

Error	Root Cause	Resolution
Centring has no visible effect	Layout is Text split, where Center is ignored	Use Image & Text or Card for centred text
The long description is hard to read	Several paragraphs centred	Shorten the description or use Layout default

Troubleshooting

- **Symptoms:** The left column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.

- **Cause:** photo-3.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-3.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Use Cases: Short promotional teasers.

Authoring Guidelines: Text alignment = Center.

Business Rules: No effect in Text split. With an image beside the text the column is not limited in width.

Rendering Rules: `.teaser.text-center:not(.no-image) .teaser-content` centred (max 37.5rem, none with media); kicker, tags, heading row, author and links centred.

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: Keep centred text short.

Variation 25 — Text alignment "Right"

Variation Name: Text alignment "Right" (class `text-right`).

Business Purpose: Right-aligned text.

Visual Example:

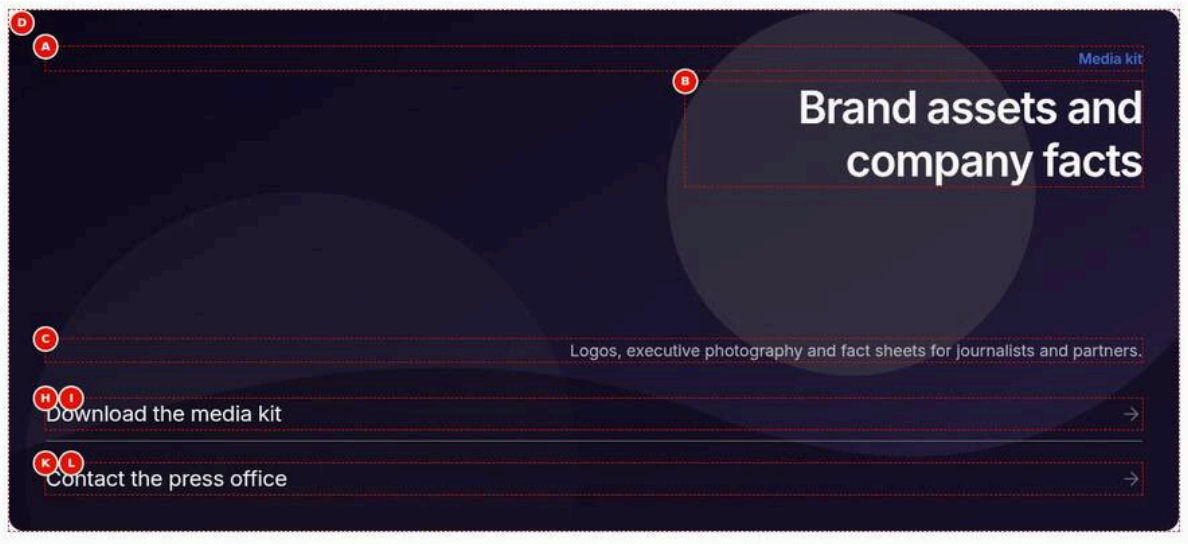

Figure 28: Right-aligned text — A Card teaser at 1440 px with Text alignment Right: photo-4 under a dark overlay; the eyebrow Media kit, the title Brand assets and company facts and the description aligned right; the List rows Download the media kit and Contact the press office stay full width with their labels on the left and arrows on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-text-right.jpg)

Screenshot Details — Right-aligned text

Item	Detail
Screenshot Name	`screenshots/teaser-text-right.jpg`
Screenshot Purpose	Right-aligned text

Item	Detail
Screen Description	A Card teaser at 1440 px with Text alignment Right: photo-4 under a dark overlay; the eyebrow Media kit, the title Brand assets and company facts and the description aligned right; the List rows Download the media kit and Contact the press office stay full width with their labels on the left and arrows on the right.
Business Context	A media kit card with a right-aligned header, a special design used when the card sits on the right of a two-column row.
Author Objective	Set Text alignment to Right on a Card teaser with two List links.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Media kit	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Brand assets and company facts	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	Logos, executive photography and fact sheets for journalists and partners.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No	Image or animation	See Layout for placement	None
(E)	Layout (Teaser › Style)	Card	No	Overall layout	Choose first	Options: Image & Text, Text split, Background image, Card
(F)	Text alignment (Teaser › Style)	Right	No	Text alignment	Layout default in most cases	Options: Layout default, Left, Center, Right
(G)	Multiple links (Teaser › Links)	On	No	List of links instead of two CTAs	On for 3+ links	None
H	CTA Title (Teaser › Links › Links › Item 1)	Download the media kit	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None
I	CTA Link (Teaser › Links › Links › Item 1)	Select the page or enter /en/media-kit	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(J)	CTA Link Style (Teaser › Links › Links › Item 1)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button
K	CTA Title (Teaser › Links › Links › Item 2)	Contact the press office	No (Recommended)	Link text	Descriptive, up to 60 characters for List rows	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
L	CTA Link (Teaser › Links › Links › Item 2)	Select the page or enter /en/contact	Yes in practice (items without a link are dropped)	Link target	Page, URL or anchor	None in the model
(M)	CTA Link Style (Teaser › Links › Links › Item 2)	List	No	Link style	List for resource lists	Options: Text link, List, Primary Button, Secondary Button

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (E), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The dark rounded Card with photo-4 behind the overlay: the eyebrow "Media kit", the title "Brand assets and company facts" and the description aligned to the right; the List rows "Download the media kit" and "Contact the press office" stay full width with the label on the left and the arrow on the right.
- **Rendering behaviour:** text-right sets text-align end and flex-end on the kicker, heading row and author; the List rows are full-width flex rows, so their labels stay at the start.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; photo-4.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Right applies to every layout, including Text split.
- Full-width List rows do not move: only headings, text and buttons align right.
- Avoid right alignment for long text in left-to-right languages.
- Both Links items use CTA Link Style List.

Common Authoring Mistakes

Error	Root Cause	Resolution
The List links stay left aligned	List rows always span the full width	Use Text link or button styles if the links must align right
The card shows no picture	photo-4.svg not published	Publish the asset and the page

Troubleshooting

- **Symptoms:** The card background is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** photo-4.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish photo-4.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the card background shows the picture.

Use Cases: Special designs; rarely needed in left-to-right languages.

Authoring Guidelines: Text alignment = Right.

Business Rules: Applies to every layout, including Text split.

Rendering Rules: `text-align: end`; kicker, meta, tags, heading row and author `justify-content: flex-end`; links `align-items: flex-end`.

Responsive Behaviour: Same at every width.

SEO Impact: None.

Accessibility Compliance: Avoid for long text.

Variation 26 — Vertical alignment "Layout default"

Variation Name: Vertical alignment "Layout default" (no class).

Business Purpose: Each layout's designed vertical alignment.

Visual Example:

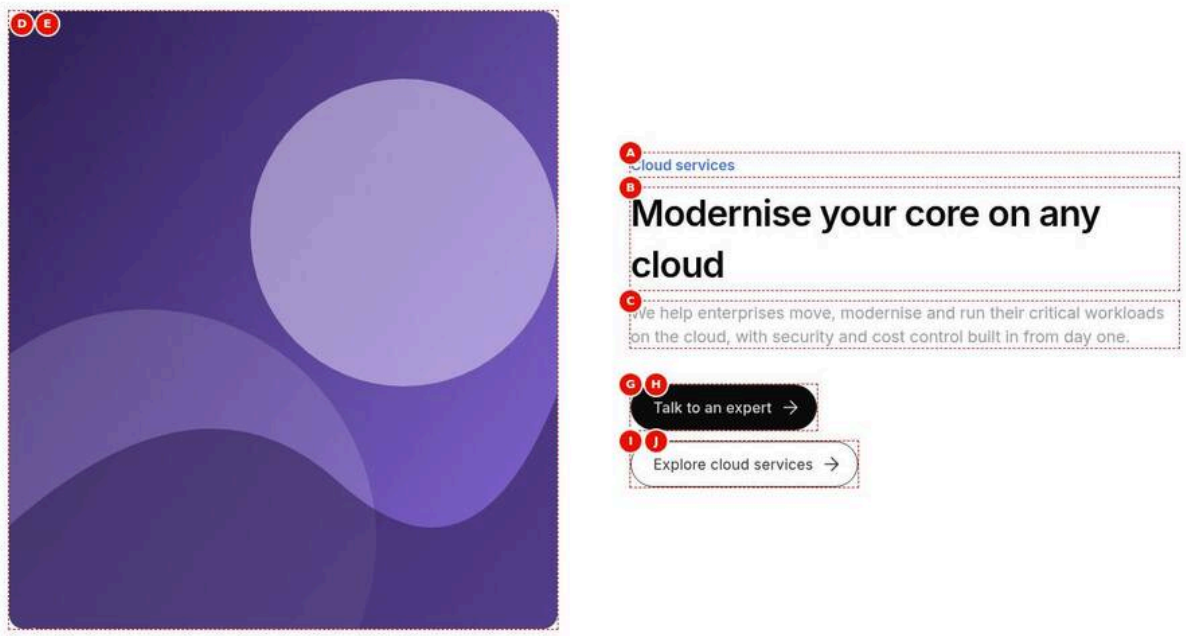

Figure 29: Layout default vertical alignment — An Image & Text teaser at 1440 px: the tall image tall.svg at 8:9 on the left; the brand-blue eyebrow Cloud services, the semibold title Modernise your core on any cloud, the description and the two buttons vertically centred against the image on the right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-valign-default.jpg)

Screenshot Details — Layout default vertical alignment

Item	Detail
Screenshot Name	`screenshots/teaser-valign-default.jpg`
Screenshot Purpose	Layout default vertical alignment
Screen Description	An Image & Text teaser at 1440 px: the tall image tall.svg at 8:9 on the left; the brand-blue eyebrow Cloud services, the semibold title Modernise your core on any cloud, the description and the two buttons vertically centred against the image on the right.
Business Context	A cloud services promotion next to a tall portrait image, where the text is centred vertically against the picture as designed.
Author Objective	Keep Vertical alignment on Layout default for an Image & Text teaser with a Portrait (8:9) image.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Modernise your core on any cloud	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their critical workloads on the cloud, with security and cost control built in from day one.	No	Main text	Up to 300 characters (Recommended)	None
D	Image (Teaser › Image)	Select the asset tall.svg (/en/media/tall.svg)	No	Image or animation	See Layout for placement	None
E	Image alt text (Teaser › Image)	A team in a modern office	No	Alt text / animation label	Empty if decorative	None
(F)	Image ratio (Teaser › Image)	Portrait (8:9)	No	Image proportion	Portrait for people	Options: Default (10:9), Portrait (8:9), Square (1:1), Original; shown for Image & Text and Text split
G	Primary CTA Title (Teaser › Links)	Talk to an expert	No	Primary CTA text	Verb first	Shown only with Multiple links off
H	Primary CTA Link (Teaser › Links)	Select the page or enter /en/contact	No	Primary CTA target	Page or URL	Shown only with Multiple links off
I	Secondary CTA Title (Teaser › Links)	Explore cloud services	No	Secondary CTA text	Verb first	Shown only with Multiple links off
J	Secondary CTA Link (Teaser › Links)	Select the page or enter /en/services/cloud	No	Secondary CTA target	Page or URL	Shown only with Multiple links off

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (F), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The tall.svg office image at 8:9 on the left; on the right the eyebrow "Cloud services", the title "Modernise your core on any cloud", the description and the two buttons in the vertical middle of the image height.
- **Rendering behaviour:** No class: the grid uses align-items center, visible from 900 px where the columns are side by side; below 900 px the text follows the image.
- **Publishing behaviour:** Publish to Preview shows the teaser on aem.page and Publish to Live on aem.live; tall.svg is a separate asset that must be published from AEM Assets as well, or the published page shows no image.

Business Rules

- Layout default is centre for Image & Text and Background image, top for Text split.
- Card keeps its header at the top and its body at the bottom.
- The effect is visible only where two columns exist (900 px and wider) and in Background image.

Common Authoring Mistakes

Error	Root Cause	Resolution
The text starts at the top of the image	Vertical alignment set to Top	Set Vertical alignment to Layout default
The teaser shows centred text without the picture	Image left empty, Hide Image on, or the asset not selected from AEM Assets	Select tall.svg in Image and keep Hide Image off

Troubleshooting

- **Symptoms:** The left column is empty or shows a broken image on aem.page / aem.live while Universal Editor shows it.
- **Cause:** tall.svg was not published from AEM Assets, so the reference in the published page returns 404.
- **Resolution:** Publish tall.svg in AEM Assets (or select it in the page's Publish dialog) and publish the page again.
- **Verification Steps:** Reload the published page with the cache disabled; the image request returns 200 and the left column shows the picture.

Use Cases: Default.

Authoring Guidelines: Style tab: Vertical alignment = Layout default.

Business Rules: Centre for Image & Text and Background image; top for Text split; Card keeps the header at the top and the body at the bottom.

Rendering Rules: No class.

Responsive Behaviour: Visible where two columns exist (900 px+) and in Background image.

SEO Impact: None.

Accessibility Compliance: None.

Variation 27 — Vertical alignment "Top"

Variation Name: Vertical alignment "Top" (class `valign-top`).

Business Purpose: Align the text with the top of the image, or put Background image text at the top.

Visual Example:

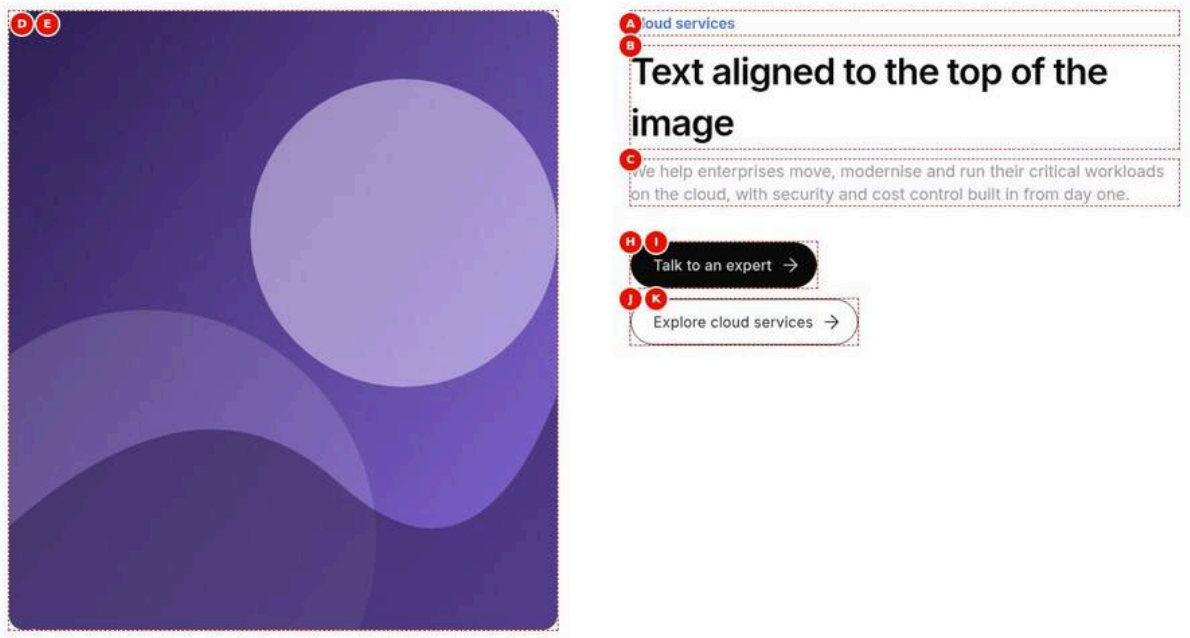

Figure 30: Top alignment — An Image & Text teaser at 1440 px: the tall image tall.svg at 8:9 on the left; the brand-blue eyebrow Cloud services, the semibold title Text aligned to the top of the image, the description and the two buttons on the right, with the eyebrow level with the top edge of the image. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/teaser-valign-top.jpg)

Screenshot Details — Top alignment

Item	Detail
Screenshot Name	`screenshots/teaser-valign-top.jpg`
Screenshot Purpose	Top alignment
Screen Description	An Image & Text teaser at 1440 px: the tall image tall.svg at 8:9 on the left; the brand-blue eyebrow Cloud services, the semibold title Text aligned to the top of the image, the description and the two buttons on the right, with the eyebrow level with the top edge of the image.
Business Context	A cloud services teaser with a tall image, where the eyebrow should line up with the top edge of the picture.
Author Objective	Set Vertical alignment to Top on an Image & Text teaser with a Portrait (8:9) image.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
A	Eyebrow (Teaser › Content)	Cloud services	No	Kicker above the title	Up to 40 characters (Recommended)	None
B	Title (Teaser › Content)	Text aligned to the top of the image	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
C	Description (Teaser › Content)	We help enterprises move, modernise and run their criti-	No	Main text	Up to 300 characters (Recommended)	None
