Expected Result: A two-column Teaser slide (image left, text right) at full width, and the centred previous arrow, three dots and next arrow 2rem below.

Step 16 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the slides are part of its HTML (no fragment), so Publish to Preview updates aem.page and Publish to Live aem.live; the control labels come from the locale's placeholders sheet, a separate publish step.

Step 17 — Verify

Action: On the live page check: One Teaser is visible with previous, three dots and next below it.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.24.6 Authorable Field Specification

Model `gen-carousel` (Gen Carousel section)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Tab: Content	tab	—	—	—	Carousel options	—	—	—
Style (`style`)	select	No (preset)	No	Default (`gen-carousel-section`)	Marks the section as a carousel	Leave on Default	One option: Default = `gen-carousel-section`	gen-carousel-section
Navigation (`carouselNavigation`)	select	No	No	Manual (`manual`)	How slides change	Manual unless rotation is required	Manual / Auto / Manual and Auto; unknown values → Manual (code)	manual-auto
Autoplay interval (seconds) (`carouselInterval`)	number	No	No	5	Seconds per slide	5 to 10 seconds for reading time	Enforced in the dialog: min 2, max 30; code: minimum 2, empty / invalid → 5	7
Tab: Additional	tab	—	—	—	Block options	See note	—	—
Anchor ID (`classes_anchor`)	text	No	No	empty	Anchor (see note)	Not effective here	Enforced: regExp `^anchor-[a-z0-9][a-z0-9-]*$`	anchor-highlights
Hide block (`classes_hideblock`)	boolean	No	No	false	Hide (see note)	Not effective here	None	false

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Padding left (`classes_paddingleft`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	pl-0
Padding right (`classes_paddingright`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	pr-0
Padding top (`classes_paddingtop`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	pt-0
Padding bottom (`classes_paddingbottom`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	pb-0
Margin left (`classes_marginleft`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	ml-0
Margin right (`classes_marginright`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	mr-0
Margin top (`classes_margintop`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	mt-0
Margin bottom (`classes_marginbottom`)	select	No	No	Default	Spacing (see note)	Not effective here	One of 15 options	mb-0

> **Important:** The Gen Carousel is a section. The Additional options are applied only to `.block` elements (`decorators/block-options-decorator.js`, `styles/styles.css`), and `buildCarouselSections` copies only Navigation and Autoplay interval to the synthetic `gen-carousel` block. The Additional tab of the Gen Carousel therefore has no effect on the page (as of this handover) [To be confirmed: whether AEM delivers `classes_*` section fields at all — owner: development team]. The Hero and Teaser slides have their own Additional tab, which does apply to them.

The slide items are Hero and Teaser blocks with their own models (see their chapters).

Field details

- **Style**
  - Purpose: the section class `gen-carousel-section` that `buildCarouselSections` looks for.
  - Allowed Values: Default (`gen-carousel-section`). Character Limits: not applicable.
  - Business Rules: without it the section shows its Heroes / Teasers one below another.
  - Dependency Rules: required for Navigation and interval to take effect.
  - Visibility Rules: always visible. Sample Content: Default.
- **Navigation**
  - Purpose: Manual: previous / next buttons, dots and swipe; Auto: slides advance on their own with a pause button; Manual and Auto: both (model description).
  - Allowed Values: `manual`, `auto`, `manual-auto`. Character Limits: not applicable.
  - Business Rules: becomes a class on the carousel block; a missing or unknown value is treated as Manual.
  - Dependency Rules: controls the visibility of Autoplay interval.
  - Visibility Rules: always visible. Sample Content: Manual and Auto.
- **Autoplay interval (seconds)**
  - Purpose: time each slide is shown before the next one appears.
  - Allowed Values: numbers 2 to 30 (dialog). Character Limits: not applicable.
  - Business Rules: read from the section's `data-carouselinterval`; `Number(value) || 5`; values below 2 are raised to 2 in code; there is no upper limit in code (30 is enforced by the dialog only).

  - Dependency Rules: used only when Navigation is Auto or Manual and Auto.
  - Visibility Rules: `condition {"!==": [{"var": "carouselNavigation"}, "manual"]}` — shown only when Navigation is not Manual.
  - Sample Content: 7.
- **Anchor ID / Hide block / Padding (4) / Margin (4)**
  - Purpose and Allowed Values: the common block options (Anchor ID `anchor-…`; Hide block on / off; spacing selects with 15 options: Default; 0 (none); 0.25rem (space-100); 0.5rem (space-200); 0.75rem (space-300); 1rem (space-400); 1.25rem (space-500); 1.5rem (space-600); 2rem (space-800); 2.5rem (space-1000); 3rem (space-1200); 4rem (space-1600); 5rem (space-2000); 6rem (space-2400); 7.5rem (space-3000)).
  - Character Limits: Anchor ID none enforced.
  - Business Rules: not effective on this section (see the note above).
  - Dependency Rules: none. Visibility Rules: always visible. Sample Content: defaults.

6.24.7 Field Annotation Mapping

Marker	Field	Purpose
A	Gen Carousel section (Style, Navigation, Autoplay interval, Additional)	Carousel options
B	Slide (Hero / Teaser block and its own fields)	Slide content
C	Previous / next (generated, Manual modes)	Navigation
D	Dots (generated)	Direct slide selection and position
E	Pause / play (generated, Auto modes)	Stops / resumes autoplay

6.24.8 Component Specification

Attribute	Value
Component Name	Gen Carousel (`gen-carousel`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`scripts/scripts.js`, `decorators/button-decorator.js`, `decorators/icon-button-decorator.js`, `decorators/data-layer-decorator.js`, `utils/analytics.js`, `utils/environment.js`, `utils/viewport.js`, `utils/ids.js`, `utils/placeholders.js`, Hero, Teaser, icons
Component Type	Container section (synthetic block whose children are slides)
Supported Variants	Navigation: Manual, Auto, Manual and Auto; single slide; Hero / Teaser slides
Supported Templates	Any page (typically home and landing pages)
Supported Metadata	None
Supported Tags	None
Supported Personalization	None; `cmp:show` per slide (with position) is available for future Adobe Target / Journey Optimizer use (not implemented)
Caching Considerations	Part of the page HTML (Edge Delivery CDN); no sheets or index read; placeholders sheet loaded once per page
Performance Considerations	Loaded with its section (often the first: the first slide's image is the LCP candidate); all slide blocks are decorated with the section; no extra requests apart from placeholders and icons; autoplay timers stop off screen and in hidden tabs

Attribute	Value
Accessibility Compliance	WCAG 2.1 AA: region with `aria-roledescription` "carousel" and label; slides as groups "slide" labelled "n of total"; pause control (2.2.2); labelled controls (4.1.2); `aria-current` on dots; `inert` hidden slides (2.4.3); polite live region when not playing; reduced motion (starts paused, no smooth scroll); 1.5rem dot hit area
SEO Compliance	All slides in the page HTML; slide headings follow the Hero / Teaser models

6.24.9 Input Model

- **Content Inputs:** the section's children (Hero / Teaser blocks), each a slide.
- **Metadata Inputs:** none. **Tags Inputs:** none.
- **Page Context Inputs:** Universal Editor edit mode; reduced-motion preference; visibility of the carousel and of the browser tab; pointer and focus position; editor selection (`aue:ui-select`); locale (placeholders).
- **Query Inputs:** none.
- **Manual Inputs:** Navigation, Autoplay interval; slide content.

Authored HTML of the section (illustrative; the section properties arrive as data attributes):

```
<div data-aue-model="gen-carousel" data-style="gen-carousel-section"
  data-carouselnavigation="manual-auto" data-carouselinterval="7">
  <div class="hero">...</div>
  <div class="hero">...</div>
  <div class="teaser">...</div>
</div>
```

6.24.10 Output Model

Rendered Output

- `div.section.gen-carousel-section.gen-carousel-container` > `div.gen-carousel-wrapper` > `div.gen-carousel.block.{navigation}` (`role="region"`, `aria-roledescription`, `aria-label`, `data-interval`)
  - `div.gen-carousel-slides` (`id="gen-carousel-{n}-slides"`, `aria-live`)
    - `div.gen-carousel-slide` per slide (`id`, `data-cmp-id`, `role="group"`, `aria-roledescription="slide"`, `aria-label="{n} of {total}"`, `inert` when not current outside edit mode; `gen-carousel-slide-active` on the current one) containing the Hero / Teaser wrapper.
  - `div.gen-carousel-controls` (from two slides): `button.gen-carousel-toggle` (Auto modes), `button.gen-carousel-prev`, `ul.gen-carousel-dots` > `li` > `button.gen-carousel-dot` (`aria-label`, `aria-controls`, `aria-current`), `button.gen-carousel-next` (Manual modes).

Generated HTML

```
<div class="gen-carousel manual-auto block" data-interval="7" role="region"
  aria-roledescription="carousel" aria-label="Carousel">
  <div class="gen-carousel-slides" id="gen-carousel-1-slides" aria-live="off">
    <div class="gen-carousel-slide gen-carousel-slide-active" id="gen-carousel-1-slide-1"
      data-cmp-id="gen-carousel-1-slide-1" role="group" aria-roledescription="slide"
      aria-label="1 of 3"><div class="hero-wrapper">...</div></div>
    <div class="gen-carousel-slide" id="gen-carousel-1-slide-2" inert ...>...</div>
  </div>
  <div class="gen-carousel-controls">
    <button class="gen-carousel-toggle button secondary" aria-label="Pause slides"
      data-cmp-interaction="pause" aria-controls="gen-carousel-1-slides"></button>
    <button class="gen-carousel-prev button secondary" aria-label="Previous slide"
      data-cmp-interaction="previous"></button>
```

```
    <ul class="gen-carousel-dots">
      <li><button class="gen-carousel-dot" aria-label="Show slide 1 of 3"
        aria-controls="gen-carousel-1-slide-1" aria-current="true"></button></li>
    </ul>
    <button class="gen-carousel-next button secondary" aria-label="Next slide"
      data-cmp-interaction="next"></button>
  </div>
</div>
```

Generated JSON: none. **Generated Metadata:** none.

Analytics Tracking

- Component state: the carousel block as `tcs-corp/components/gen-carousel` (id `gen-carousel-{n}`); the Hero / Teaser blocks with the carousel as `parentId`.
- Every change of slide (buttons, dots, keyboard, swipe, autoplay, editor selection) pushes `cmp:show` for the slide (not for the first slide on load):

```
{
  "event": "cmp:show",
  "eventInfo": { "path": "component.gen-carousel-1-slide-2", "position": 2 }
}
```

- Control clicks push `cmp:click` on the carousel component with `interaction` `previous`, `next` or `pause` (the pause / play button, both states), `button` for dots, and `dc:title` from the `aria-label`:

```
{
  "event": "cmp:click",
  "eventInfo": {
    "path": "component.gen-carousel-1",
    "interaction": "next",
    "dc:title": "Next slide",
    "xdm:linkType": "other",
    "breakpoint": "mobile"
  }
}
```

- CTA clicks inside a slide are attributed to the Hero / Teaser block.

Personalization Output: none. **Search Index Output:** none.

Target Personalization Output: None in the block today. Every slide change pushes cmp:show with the slide id and position, available for future Adobe Target or Journey Optimizer use (not implemented).

6.24.11 Business Rules

1. A section becomes a carousel only with the style `gen-carousel-section`, once per section.
2. Navigation and Autoplay interval move from the section data attributes to the carousel block (class and `data-interval`).
3. Every child of the carousel block is a slide, whatever it contains.
4. Navigation: the first of `manual`, `auto`, `manual-auto` found in the classes, else Manual; Manual modes have previous / next and swipe, Auto modes autoplay and the pause button.
5. Interval: `data-interval` seconds, else 5; at least 2 seconds.
6. Fewer than two slides: no controls, no autoplay, the slide is active.
7. Dots are always shown from two slides; in Auto mode they are the only navigation besides pause / play.
8. Previous / next wrap around; a button or dot click restarts the autoplay interval.

9. ArrowLeft / ArrowRight move the slide only when focus is on the controls (widgets inside slides keep their keys); focus then moves to the current dot.
10. Swipe / scroll: the slide at least 60% visible in the track becomes current.
11. Autoplay runs only when Navigation includes Auto and the visitor has not paused it, and pauses while: the pointer is over the slides; keyboard focus (`:focus-visible`) is inside the carousel, except on the pause / play button; less than 25% of the carousel is visible; the browser tab is hidden; Universal Editor is in edit mode; the block is removed.
12. Reduced motion: autoplay starts paused; slide scrolling is instant instead of smooth; dot transitions are off.
13. Pause / play label and icon switch between "Pause slides" (pause icon) and "Play slides" (play icon).
14. Live region: `aria-live="off"` while playing, `"polite"` otherwise.
15. Non-current slides are `inert` (not focusable) except in edit mode.
16. Universal Editor: selecting a component inside a slide shows that slide.
17. A slide change pushes `cmp:show` with the slide id and its 1-based position; the initial slide does not.
18. Auto-only carousels cannot be swiped (`overflow-x: hidden`).
19. Region label: an existing `aria-label`, else "Carousel" (no authorable label field).
20. Allowed slide blocks: Hero and Teaser (filter `gen-carousel`).
21. Additional tab options of the section are not applied.
22. The block logs nothing to the console.

6.24.12 Author Best Practices

- **Recommended Content Length:** 2 to 5 slides; one message per slide with a short heading (up to about 60 characters) and one primary CTA (Recommended).
- **Image Dimensions:** follow the Hero / Teaser image rules; slides are full content width (up to 120rem in full-width sections), so use landscape images of at least 2000px width for Heroes; keep important image areas away from the edges for mobile cropping; use the same aspect ratio on all slides so heights stay consistent.
- **CTA Writing Guidelines:** one action per slide, verb first ("Explore our AI services"); distinct CTAs across slides.
- **Accessibility Guidelines:** prefer Manual; for Auto use at least 5 seconds; provide image alternative texts; one h1 on the page.
- **SEO Guidelines:** put the most important message on slide 1 (it is the only one most visitors see and the LCP element).
- **Metadata Guidelines:** not applicable.
- **Taxonomy Guidelines:** not applicable.
- **Localization Guidelines:** translate each slide; check that translated headings fit the Hero layout on mobile; control labels ("Previous slide", "Show slide {n} of {total}", …) and role descriptions ("carousel", "slide") are translated in the locale's placeholders sheet (keys `carouselRole`, `carousel`, `slideRole`, `slideOf`, `showSlide`, `pauseSlides`, `playSlides`, `previousSlide`, `nextSlide`; keep the `{n}` and `{total}` variables).

6.24.13 Troubleshooting Guide

Issue 1 — Slides appear one below another

Symptoms: No carousel; Heroes are stacked.

Root Cause: The section is not a Gen Carousel (style `gen-carousel-section` missing), or the script failed.

Diagnosis Steps: Inspect the section class and look for `div.gen-carousel-wrapper`; check the console.

Resolution Steps: Add a Gen Carousel section and move the blocks into it.

Validation Steps: One slide visible with controls.

Preventive Measures: Always start from the Gen Carousel component.

Issue 2 — No controls are shown
Symptoms: A single slide without arrows or dots.

Root Cause: Only one slide in the section.

Diagnosis Steps: Count the blocks in the section.

Resolution Steps: Add slides or replace the carousel with the Hero itself.

Validation Steps: Controls appear from two slides.

Preventive Measures: Plan at least two slides.

Issue 3 — Autoplay does not run
Symptoms: Slides do not advance.

Root Cause: Navigation is Manual; the visitor paused it; reduced motion is on; the pointer is over the slides; keyboard focus is inside; the carousel is mostly off screen; edit mode in Universal Editor.

Diagnosis Steps: Check the block class (`auto` / `manual-auto`) and the pause / play label; check the OS reduced-motion setting; test in Preview or on `.aem.page`.

Resolution Steps: Set Navigation to Auto or Manual and Auto; select Play.

Validation Steps: Slides advance after the interval.

Preventive Measures: Test autoplay outside edit mode.

Issue 4 — The interval is not the configured value
Symptoms: Slides change faster or slower than expected.

Root Cause: The value is missing or invalid (5 seconds used) or below 2 (2 seconds used); user interaction restarts the interval.

Diagnosis Steps: Inspect `data-interval` on the carousel block.

Resolution Steps: Enter a value between 2 and 30 and publish.

Validation Steps: Measured interval matches.

Preventive Measures: Use whole seconds within the range.

Issue 5 — Swipe does not work on mobile
Symptoms: Touch swipe does nothing.

Root Cause: Navigation is Auto (swipe disabled by design).

Diagnosis Steps: Check the `auto` class.

Resolution Steps: Use Manual and Auto if swipe is required.

Validation Steps: Swipe changes the slide.

Preventive Measures: Choose the mode with the design team.

Issue 6 — An empty slide / dot appears
Symptoms: A dot leads to a blank slide.

Root Cause: A slide block has Hide block on (its content is hidden but it still counts as a slide), or a block in the section has no content.

Diagnosis Steps: Check each Hero / Teaser's Additional tab and content.

Resolution Steps: Delete or move the block instead of hiding it; complete its content.

Validation Steps: Every dot shows content.

Preventive Measures: Do not use Hide block for slides.

Issue 7 — Spacing / Hide block of the carousel has no effect
Symptoms: Additional options on the Gen Carousel do nothing.

Root Cause: The options are not applied to sections.

Diagnosis Steps: Inspect the section and carousel block for the classes.

Resolution Steps: Adjust the slides' own options, or delete / move the carousel.

Validation Steps: Expected result on the page.

Preventive Measures: Follow 6.24.6.

Issue 8 — Too many cmp:show events
Symptoms: Analytics records many slide views.

Root Cause: Autoplay pushes `cmp:show` at every automatic change; swipes or smooth scrolls across several slides may report intermediate slides.

Diagnosis Steps: Inspect `window.adobeDataLayer` while autoplay runs.

Resolution Steps: Filter on interactions (`cmp:click` with `previous` / `next`) or on time in Adobe Tags rules once implemented.

Validation Steps: Reports match the intended definition of a slide view.

Preventive Measures: Agree the analytics definition with the analytics team [To be confirmed: analytics owner].

6.24.14 Support Runbook
Monitoring Requirements

- Core Web Vitals (LCP of the first slide, CLS) for pages with a carousel in the first section.
- Once Adobe Tags is embedded, `cmp:show` per slide position and `cmp:click` per control.
- [To be confirmed: monitoring tool and thresholds — owner: AMS lead].

Logs

- Browser console: no messages from the block; module errors `failed to load block gen-carousel` or of the slide blocks (`scripts/aem.js`).
- Admin API status of the page; AEM author logs for publication errors.
- Placeholders: `/{locale}/placeholders.json` request (labels fall back to English if it fails).

Common Errors

Error	Likely cause	First action
Stacked slides	Not a Gen Carousel section	Check `gen-carousel-section`
No controls	One slide	Add slides
No autoplay	Manual / paused / reduced motion / edit mode	Check mode and Play
No swipe	Auto mode	Use Manual and Auto
Blank slide	Hidden or empty block	Remove / fill it
English labels on a localised page	Placeholder keys missing	Add keys to the locale's sheet
Additional options ignored	Section-based component	Use slide options

Escalation Matrix

Level	Who	What they check
L1	Author support	Section type, Navigation, interval, slide count and content, publication
L2	AMS / site admin	Page status (Admin API), placeholders sheet publication, CDN cache, RUM
L3	Development team	`gen-carousel.js` / `.css`, `buildCarouselSections`, Hero / Teaser compatibility, data layer
L4	Adobe Support	Universal Editor and Edge Delivery platform issues

Recovery Procedures: restore and republish the page; switch Navigation to Manual to stop rotation; revert code on `main`.

Health Checks: `document.querySelectorAll('.gen-carousel-slide').length` equals the number of slides; exactly one slide has `gen-carousel-slide-active`; next / previous and dots change `aria-current`; `cmp:show` appears on change.

Operational Procedures: content changes via author → preview → publish; translation of control labels via the placeholders sheet per locale; code changes via PR with preview link and `npm run lint`.

Known Limitations

- Only Hero and Teaser slides; one slide visible at a time (no multi-item view).
- No authorable carousel label (always "Carousel" from the placeholders sheet).
- No Width Type, background or Additional options on the section.
- Auto-only carousels cannot be swiped.
- Autoplay pushes a `cmp:show` per automatic change.
- No slide counter text or thumbnails; no per-slide interval.

6.24.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
Slides appear one below another	Blocks were added to a standard section	Add a Gen Carousel section and move the blocks into it
No controls are shown	Only one slide in the section	Add a second slide or use the Hero directly
Autoplay does not run	Navigation is Manual, paused, reduced motion, or edit mode	Set an Auto mode and test in Preview
The interval is 5 instead of the value entered	Autoplay interval empty or invalid	Enter a whole number from 2 to 30
Swipe does not work	Navigation is Auto	Use Manual and Auto
An empty slide and dot	A slide has Hide block on or no content	Delete or complete the slide
Several H1 headings on the page	Every Hero left at heading level H1	Use H2 from slide 2 on
Spacing or Hide block on the carousel do nothing	Additional options are not applied to the section (F-22)	Use the slides' options

6.24.16 Author Quick Reference Guide

Mandatory Fields

- Style Default (gen-carousel-section) — needed for the section to become a carousel (pre-set)
- At least two Hero or Teaser blocks — needed for controls and rotation

Recommended Fields

- Navigation — Manual unless rotation is required
- Autoplay interval (seconds) — at least 5 in Auto modes
- Title heading level H2 on every Hero after the first
- Hero Image alt text / Image alt text on every slide

Optional Fields

- Additional tab — has no effect on this section (F-22)
- The slides' own Additional options — apply inside each slide

Authoring Checklist

1. Add the Gen Carousel at page level (main), not inside a section
2. Choose Navigation before adding slides
3. Set Autoplay interval (seconds) 2 to 30 for Auto modes
4. Add two to five Hero or Teaser blocks as slides
5. One message and one primary CTA per slide
6. Put the key message on slide 1
7. Order the slides by dragging them in the content tree
8. Delete slides instead of using Hide block

Pre-Publish Checklist

1. Test arrows, dots, swipe and arrow keys in Preview
2. In Auto modes check the slides advance after the interval and Pause stops them
3. Check only one H1 on the page
4. Check alt text on every slide image
5. Test at 375 px, 768 px and 1440 px

Post-Publish Validation Checklist

1. Open the page on aem.live and check slide 1 and its image load
2. Check window.adobeDataLayer shows cmp:show with position on slide changes
3. Check control labels are translated on localised pages
4. Check the first slide image does not slow LCP
5. Recheck the carousel after reordering or removing slides

6.24.17 Component Execution Example

Business example: Mixed Hero and Teaser carousel on the English site.

Example Values Entered:

Field	Value
Component (Page › Add (+))	Gen Carousel
Navigation (Gen Carousel › Content)	Manual and Auto
Autoplay interval (seconds) (Gen Carousel › Content)	7
Component (Section › Add (+))	Hero
Hero Image Path (Hero › Image)	Select the asset wide.svg (/en/media/wide.svg)
Eyebrow (Hero › Content)	Enterprise AI
Title (Hero › Content)	Building on belief

Field	Value
Description (Hero › Content)	AI-led services that help enterprises grow with confidence.
CTA Title (Hero › Links › CTA List › Item 1)	Explore AI services
CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services/ai
CTA view (Hero › Links › CTA List › Item 1)	Primary
BG Color (Hero › Style)	Dark blue
Component (Section › Add (+))	Teaser
Eyebrow (Teaser › Content)	Case study
Title (Teaser › Content)	A digital core for a European bank
Description (Teaser › Content)	A cloud-native core banking platform launched new products in weeks instead of months.
Image (Teaser › Image)	Select the asset photo-4.svg (/en/media/photo-4.svg)
Image alt text (Teaser › Image)	Bank employees reviewing a digital dashboard
Primary CTA Title (Teaser › Links)	Read the story
Primary CTA Link (Teaser › Links)	Select the page or enter /en/insights/agentic-bank
Component (Section › Add (+))	Hero
Hero Image Path (Hero › Image)	Select the asset photo-2.svg (/en/media/photo-2.svg)
Eyebrow (Hero › Content)	Cloud
Title (Hero › Content)	Modernise on any cloud
Title heading level (Hero › Content)	H2
Description (Hero › Content)	Migrate, modernise and run your workloads with a partner you trust.
CTA Title (Hero › Links › CTA List › Item 1)	Discover cloud services
CTA Link (Hero › Links › CTA List › Item 1)	Select the page or enter /en/services/cloud
CTA view (Hero › Links › CTA List › Item 1)	Primary
BG Color (Hero › Style)	Dark blue
Mode (Universal Editor)	Edit; select the Teaser (slide 2) in the content tree

All other fields keep their default values.

Rendered Result:

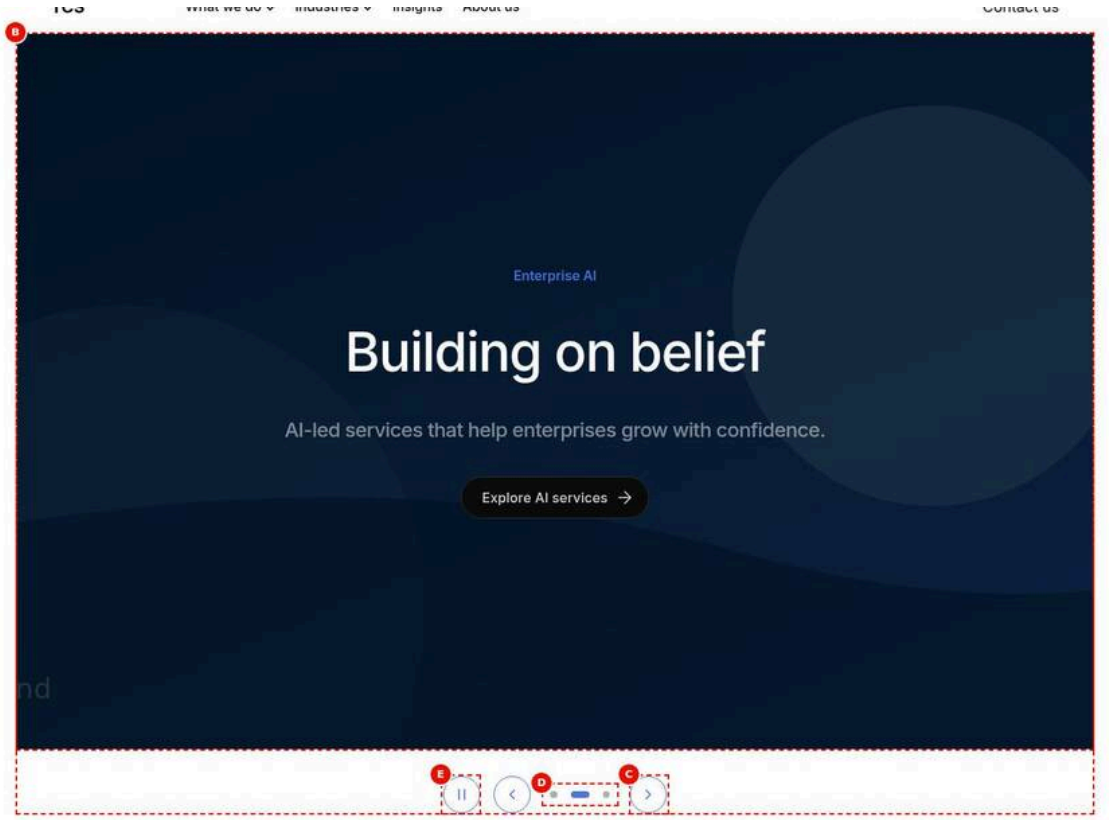

Figure 54: Execution example — Universal Editor edit mode at 1440 px: a Gen Carousel of Hero, Teaser, Hero showing slide 2, the Teaser A digital core for a European bank, because it is selected; letters A (carousel), B (current slide), C (next button), D (dots) and E (pause button). (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/gen-carousel-authoring-view.jpg)

Author Notes

- The Gen Carousel section is added at page level with Navigation Manual and Auto and a 7-second interval.
- Slides 1 and 3 are Heroes (Building on belief, Modernise on any cloud as H2); slide 2 is the Teaser A digital core for a European bank.
- Selecting the Teaser in the content tree scrolls the canvas to slide 2 for editing.
- Rotation is checked in Preview mode, as autoplay never runs in edit mode.

Business Notes

- Three messages share one slot: enterprise AI, a banking case study and cloud.
- Visitors can pause, go back or skip at any time, which meets WCAG 2.2.2.
- Slide 1 is the message most visitors see and the LCP element.

Technical Notes

- buildCarouselSections in scripts.js wraps the section content in a synthetic gen-carousel block with class manual-auto and data-interval 7.
- Each child becomes div.gen-carousel-slide (role group, label n of total); non-current slides are inert outside edit mode.
- Controls are built from two slides: pause / play, previous, dots, next, with aria-controls on the track.
- aue:ui-select scrolls to the selected slide; slide changes push cmp:show with position.

TCS Corporate Website — Project Handover

Volume 10 of 13 — Components 6.25–6.26: Table, Separator

Date: October 14, 2026

Adobe

Table of Contents

Part 6 — Component Library (continued) 3
6.25 Table Block 3
6.26 Separator Block 104

Part 6 — Component Library (continued)

> **Note:** This is volume 10 of 13 of the TCS Corporate Website project handover (version 2.0). Volume 1 holds the document control, the audience guide and the conventions.

6.25 Table Block

The Table block presents structured, comparable information (rows and columns) as a native, accessible HTML `<table>`. It is based on the Edge Delivery Services Block Collection table (`blocks/table/table.js`, `table.css`, `_table.json`) and adapted for TCS: the first row is the column header row unless **No Header** is chosen, the first column can be row headers (**First Column Header**), the heading directly before the table names it, and a table wider than its container scrolls inside a labelled region that keyboard users can focus.

6.25.1 Component Purpose

Business Objective: Give authors a simple, accessible way to publish tabular data (facts, comparisons, schedules, specifications) that is readable on every device, understood by screen readers and indexable by search engines, without custom code or images of tables.

Business Use Cases:

- Service or offering comparisons (for example capability by region, feature by plan).
- Financial or results summaries in press releases and investor-related pages (quarter, revenue, growth).
- Event agendas and schedules (time, session, speaker).
- Office or contact directories (city, address, phone), when a Location List is not required.
- Specifications, eligibility criteria and glossaries (term in the first column, definition in the others).

When To Use:

- The content is genuinely two-dimensional: each value is meaningful in relation to a row and a column.
- Up to five columns of short values (the model offers 1 to 5 columns per row).
- The data must remain text (searchable, translatable, accessible), not an image.

When Not To Use:

- For page layout or to place content side by side (use Columns or the section layout).
- For a single list of items (use a bulleted list in default content, or the List / Cards blocks).
- For more than five columns: the model has no 6+ column row type (Not implemented as of this handover).
- For data that needs sorting, filtering, pagination or merged cells (colspan / rowspan): Not implemented (as of this handover).
- For content that is maintained in a spreadsheet and changes often: consider the Table List block where applicable, or a data sheet, rather than retyping values.

Dependencies:

Type	Dependency	Use
Code	`scripts/scripts.js` `moveInstrumentation`	Keeps Universal Editor instrumentation on the rendered rows and cells
Code	`utils/ids.js` `uniqueId`	Generates an id for the heading before the table (`table-title-1`, …) when it has none

Type	Dependency	Use
Code	`utils/placeholders.js getPlaceholders`	Loads the fallback region label `table` ("Table")
Code	`decorators/block-options-decorator.js`	Additional tab (Anchor ID, Hide block, padding, margin)
Code	`decorators/data-layer-decorator.js`	Component state and `cmp:click` events for links in cells
Code	`decorators/content-buttons-decorator.js`	Standalone links in a cell paragraph become link buttons (runs on the whole page before blocks)
Browser API	`ResizeObserver`	Detects when the table is wider than its container
Sheet	`/{locale}/placeholders.json`	Key `table` (scroll region label when there is no heading before the table)
Model	`models/_section.json`	Allows the Table in sections (filter `section`)

Related Components: Table List block (`blocks/table-list`, a different block for list-style tabular data), Separator (to divide a table from following content), Columns (layout, not data), List / Cards (collections of items).

Applicable Templates: Any page. The block is allowed in every section (`section` filter), so it can be used on home, article, blog, press-release and standard content pages.

Supported Content Types: Rich text in every cell: paragraphs, bold / italic, links, lists and line breaks. Images in cells are not part of the design (Recommended: text only).

Business Problem Solved

Comparisons, results, agendas and facts were published as images or forced into layout blocks, which screen readers, search engines and translators cannot use. The Table block gives authors a native, accessible HTML table with header rows, row headers, stripes or borders, up to five columns and an automatic keyboard-operable scroll region for narrow screens.

Supported Taxonomy

None: the Table has no tag field and reads no page tags or taxonomy (Supported Tags: None); tag the page as usual.

6.25.2 Visual Overview

Figure 1: Desktop rendering — At 1440 px: the H2 Quarterly results above a full-width 4-column table, the header row Quarter, Revenue, Growth, Margin in semibold with a 2px dark rule below, and four body rows Q1 FY26 to Q4 FY26 separated by light 1px rules, text 1.125rem. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/table-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	At 1440 px: the H2 Quarterly results above a full-width 4-column table, the header row Quarter, Revenue, Growth, Margin in semibold with a 2px dark rule below, and four body rows Q1 FY26 to Q4 FY26 separated by light 1px rules, text 1.125rem.
Business Context	A results page or press release presents quarterly revenue, growth and margin as comparable figures that stay text, not an image.
Author Objective	Add a 4-column Table with a header row and four quarters below the heading Quarterly results.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Quarterly results	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

W	Column4 (Row 5)	25.9%	No (Recommended: fill)	Fourth cell	Value	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A full-width table with left- and top-aligned text, a semibold header row on a 2px dark rule and four data rows divided by light grey 1px rules.
- **Rendering behaviour:** From 900 px the text is 1.125rem with 0.75rem by 1rem cell padding; the table spans the section content width and fits, so no scroll region is set.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- Row 1 is the column header row (thead, th scope col) because No Header is not selected.
- Columns 4 Columns must be chosen before adding Rows; each Row then has Column1 to Column4.
- The H2 Quarterly results is the last default content before the table, so it names the table.
- Write units in the header or values consistently (USD 7.4 bn, 4.2%); the block does not format numbers.

Common Authoring Mistakes

Error	Root Cause	Resolution
The first quarter row looks like a header	The header Row was added after the data rows	Drag the Quarter, Revenue, Growth, Margin Row to the top in the content tree
Template text Column3 on the page	A new Row was not fully edited	Replace every pre-filled Column text before publishing
The table is announced as Table	Another element sits between the heading and the table	Place the H2 Quarterly results directly before the Table

Troubleshooting

- **Symptoms:** Add (+) on the Table offers Rows with only Column1.
- **Cause:** Columns was left at its default 1 Column (filter table) when the first Rows were added.
- **Resolution:** Set Columns to 4 Columns, delete the one-column Rows and add new Rows for the quarters.
- **Verification Steps:** A new Row shows Column1 to Column4 in the properties panel and all rows have four cells.

Desktop (≥ 1200px): The table spans the full width of its section content (`width: 100%`). From 900px the text size is `--body-font-size-m` (1.125rem). Cells have 0.75rem vertical and 1rem horizontal padding (`--space-300` / `--space-400`), text is left aligned and top aligned. Header cells (`th`) are semibold. The header row has a 2px bottom border in `--color-border-neutral` (slate 900, #303030); each body row has a 1px bottom border in `--color-border-default` (grey 200, #e6e6e6). Paragraphs inside cells have no margin; a second paragraph in a data cell is spaced 0.25rem below the first.

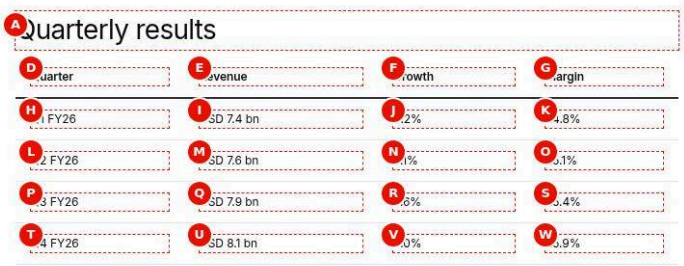

Figure 2: Tablet rendering — At 768 px: the H2 Quarterly results and the same 4-column table (Quarter, Revenue, Growth, Margin; Q1 FY26 to Q4 FY26) still fitting the content width, with the smaller 0.75rem text used below 900 px. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/table-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	At 768 px: the H2 Quarterly results and the same 4-column table (Quarter, Revenue, Growth, Margin; Q1 FY26 to Q4 FY26) still fitting the content width, with the smaller 0.75rem text used below 900 px.
Business Context	Investors on tablets read the quarterly figures without zooming or scrolling sideways.
Author Objective	Check the quarterly results table at tablet width.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)

S	Column4 (Row 4)	25.4%	No (Recommended: fill)	Fourth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
T	Column1 (Row 5)	Q4 FY26	No (Recommended: fill)	The cell value	Replace the template text	None in the model
U	Column2 (Row 5)	USD 8.1 bn	No (Recommended: fill)	Second cell	Value	None
V	Column3 (Row 5)	6.0%	No (Recommended: fill)	Third cell	Value	None
W	Column4 (Row 5)	25.9%	No (Recommended: fill)	Fourth cell	Value	None
—	Screen width (Preview)	768 px (tablet; at 1024 px the text is 1.125rem as on desktop)	—	Check on the preview (not stored in the content)	768 px (tablet; at 1024 px the text is 1.125rem as on desktop)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The four columns shrink to the content width with smaller text; header row semibold on a 2px dark rule, light row separators.
- **Rendering behaviour:** Between 600 and 899 px the text is 0.75rem (–body-font-size-s), from 900 px (for example 1024 px) 1.125rem as on desktop; columns shrink and long words wrap, and the table scrolls only if it cannot shrink further.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- The layout does not stack or turn into cards on smaller screens; rows and columns stay.
- Text size switches at 900 px: 0.75rem below, 1.125rem from 900 px.
- Short values (Q1 FY26, 4.2%) keep four columns readable without a scroll region.
- The scroll region switches on only while the table is wider than the block.

Common Authoring Mistakes

Error	Root Cause	Resolution
The table scrolls sideways on tablets	Long unbreakable values or URLs in cells	Shorten values and use link text instead of URLs
Different number formats per row	Values typed as 7.4bn, USD 7.6 bn and so on	Use one format, e.g. USD 7.4 bn, in every row

Troubleshooting

- **Symptoms:** At 768 px the whole page can be dragged sideways next to the table.

- **Cause:** A large Margin left or right in the Table's Additional tab, or a long URL in a cell, pushes beyond the section.
- **Resolution:** Remove the left and right margins and replace long URLs with descriptive link text, then publish.
- **Verification Steps:** At 768 px only the table area can scroll, or it fits without scrolling.

Tablet (600–1199px): Same layout. Between 600px and 899px the text size is `--body-font-size-s` (0.75rem); from 900px it is 1.125rem. Columns shrink to fit; long words wrap. If the content cannot shrink further (long unbreakable values, many columns), the table becomes horizontally scrollable inside the block (`overflow-x: auto`) and the block becomes a focusable region (see Variation 12).

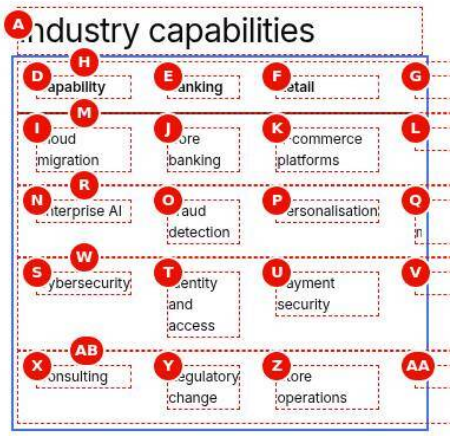

Figure 3: Mobile rendering — At 390 px: the H2 Industry capabilities and a 5-column table wider than the screen, showing its first columns with the rest reachable by horizontal scrolling, and a 2px brand-blue focus outline around the block after pressing Tab. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/table-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	At 390 px: the H2 Industry capabilities and a 5-column table wider than the screen, showing its first columns with the rest reachable by horizontal scrolling, and a 2px brand-blue focus outline around the block after pressing Tab.
Business Context	Visitors on phones compare capabilities across four industries in one table without the page breaking its layout.
Author Objective	Check the 5-column table scrolls inside the block and can be focused by keyboard on a phone.

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The table at 0.75rem text cut at the right edge of the block, the page itself not scrolling, and the brand outline 0.25rem around the focused block.
- **Rendering behaviour:** A ResizeObserver detects scrollWidth greater than clientWidth + 1 and sets tabindex 0, role region and aria-label Industry capabilities on the block; the block scrolls horizontally (overflow-x auto).
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- The scroll region is automatic, not an author option, and is removed again when the table fits.
- The region label is the heading before the table, Industry capabilities, else Table (placeholder table).
- Keyboard users focus the region with Tab and scroll it with the arrow keys.

- The first column is not sticky while scrolling (Not implemented (as of this handover)).

Common Authoring Mistakes

Error	Root Cause	Resolution
The scroll region is announced as Table	No heading directly before the block	Put the H2 Industry capabilities directly above the Table
Visitors miss the right-hand columns	Most important data placed in Column4 and Column5	Put the key comparison in the first columns
Too much scrolling on phones	Long cell values in all five columns	Keep values short, or split into two tables

Troubleshooting

- **Symptoms:** At 390 px Tab skips the table and its hidden columns cannot be reached by keyboard.
- **Cause:** The table fits after a content change, or a script error stopped the ResizeObserver, so no tabindex was set.
- **Resolution:** Check the console for errors and escalate to development; if the table fits, nothing needs reaching.
- **Verification Steps:** The block has tabindex 0, role region and aria-label Industry capabilities while it scrolls.

Mobile (< 600px): No stacking or card layout: the table keeps its rows and columns. Text is 0.75rem. Tables with three or more columns usually exceed the viewport and scroll horizontally within the block; the page itself never scrolls sideways. When the table scrolls, the block gets `tabindex="0"`, `role="region"` and an `aria-label`, and shows a 2px `--color-border-brand` outline (offset 0.25rem) when focused with the keyboard.

6.25.3 Component Variations

The Table has two option groups in the **Options** multiselect (Border: Striped, Bordered; Header: No Header, First Column Header), a **Columns** select (1–5 columns, which decides the row type authors can add) and one automatic behaviour (scroll region). Options in the multiselect can be combined.

Variation 1 — Standard (header row)

Variation Name: Standard table with a column header row (no option selected).

Business Purpose: The default for most data: the first row names the columns.

Visual Example:

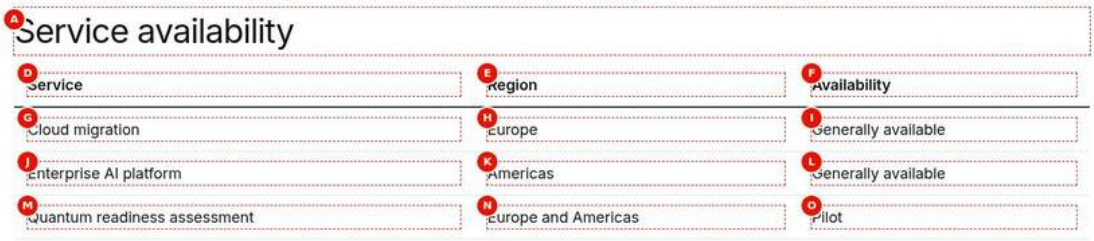

Figure 4: Variation example — At 1440 px: the H2 Service availability above a 3-column table with the semibold header row Service, Region, Availability on a 2px dark rule and three body rows (Cloud migration, Enterprise AI platform, Quantum readiness assessment) with light separators. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-standard.jpg)

Screenshot Details — Variation example

Item	Detail

Item	Detail
Screenshot Purpose	Variation example
Screen Description	At 1440 px: the H2 Service availability above a 3-column table with the semibold header row Service, Region, Availability on a 2px dark rule and three body rows (Cloud migration, Enterprise AI platform, Quantum readiness assessment) with light separators.
Business Context	A services page shows where each offering is available, the most common table format with titled columns.
Author Objective	Add a standard 3-column Table with a header row and no options.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Service availability	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Table	Yes	Adds the Table to the page	Select the section in the content tree, choose Add (+) and pick Table	Only components the section allows (section filter)
(C)	Columns (Table › Content)	3 Columns	No	Decides which Row type can be added	Choose before adding Rows	Enforced: option list (1–5 Columns)
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
D	Column1 (Row 1)	Service	No (Recommended: fill)	The cell value	Replace the template text	None in the model
E	Column2 (Row 1)	Region	No (Recommended: fill)	Second cell	Value	None
F	Column3 (Row 1)	Availability	No (Recommended: fill)	Third cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
G	Column1 (Row 2)	Cloud migration	No (Recommended: fill)	The cell value	Replace the template text	None in the model
H	Column2 (Row 2)	Europe	No (Recommended: fill)	Second cell	Value	None
I	Column3 (Row 2)	Generally available	No (Recommended: fill)	Third cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
J	Column1 (Row 3)	Enterprise AI platform	No (Recommended: fill)	The cell value	Replace the template text	None in the model
K	Column2 (Row 3)	Americas	No (Recommended: fill)	Second cell	Value	None
L	Column3 (Row 3)	Generally available	No (Recommended: fill)	Third cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
M	Column1 (Row 4)	Quantum readiness assessment	No (Recommended: fill)	The cell value	Replace the template text	None in the model
N	Column2 (Row 4)	Europe and Americas	No (Recommended: fill)	Second cell	Value	None
O	Column3 (Row 4)	Pilot	No (Recommended: fill)	Third cell	Value	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A full-width table: header cells semibold, body cells regular, left aligned, rows divided by light grey 1px rules.

- **Rendering behaviour:** Row 1 renders in thead with th scope col cells, the other rows in tbody with td cells; text 1.125rem from 900 px.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- Options left empty gives the standard style: header row, no stripes, no cell borders.
- Every cell of the first Row becomes a column header.
- Never leave a header cell empty; each column needs its title.
- Use the Table for real tabular data, not to place content side by side.

Common Authoring Mistakes

Error	Root Cause	Resolution
The header row is missing	No Header selected by mistake in Options	Clear No Header in Options
Rows end early	Columns changed after Rows were added, mixing Row types	Recreate the short Rows as 3-column Rows
Region text is inconsistent	Europe and Americas typed differently in rows	Use the same wording in every row

Troubleshooting

- **Symptoms:** The row Cloud migration shows in semibold as if it were the header.
- **Cause:** The Service, Region, Availability Row was deleted or moved down, so the first remaining Row is treated as header.
- **Resolution:** Add or move the header Row to the top of the Table in the content tree.
- **Verification Steps:** Preview shows Service, Region, Availability as the header and Cloud migration in regular weight.

Use Cases: Comparisons, results tables, schedules.

Authoring Guidelines: Leave **Options** empty. Select the **Columns** count, then add Rows; the first Row holds the column titles.

Business Rules: The first row is always treated as the header row unless No Header is selected. Every cell of the first row becomes a column header.

Rendering Rules: Row 1 is rendered in `<thead>` with `<th scope="col">` cells; all other rows in `<tbody>` with `<td>` cells.

Responsive Behaviour: Desktop: full width, 1.125rem text. Tablet: 0.75rem text below 900px, 1.125rem from 900px; scrolls if too wide. Mobile: 0.75rem text; scrolls horizontally if too wide.

SEO Impact: A native `<table>` with `<th>` header cells is understood by search engines as structured tabular content.

Accessibility Compliance: WCAG 1.3.1 (Info and Relationships): `scope="col"` associates every data cell with its column header; screen readers announce the header when moving across cells.

Variation 2 — No Header

Variation Name: No Header (`no-header` class).

Business Purpose: Tables whose first row is data, not titles (for example a simple list of key facts in two columns).

Visual Example:

Figure 5: Variation example — At 1440 px: the H2 Key facts above a 2-column table without a header row: four rows Founded 1968, Headquarters Mumbai, India, Employees More than 600,000 and Countries 55, all in regular weight, with a 2px dark rule above the first row. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-no-header.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/table-no-header.jpg`
Screenshot Purpose	Variation example
Screen Description	At 1440 px: the H2 Key facts above a 2-column table without a header row: four rows Founded 1968, Headquarters Mumbai, India, Employees More than 600,000 and Countries 55, all in regular weight, with a 2px dark rule above the first row.
Business Context	A company profile lists key facts as label and value pairs where a column header would only repeat the obvious.
Author Objective	Add a 2-column Table and select No Header so every Row is data.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Key facts	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Table	Yes	Adds the Table to the page	Select the section in the content tree, choose Add (+) and pick Table	Only components the section allows (section filter)
(C)	Columns (Table › Content)	2 Columns	No	Decides which Row type can be added	Choose before adding Rows	Enforced: option list (1–5 Columns)
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
D	Column1 (Row 1)	Founded	No (Rec-om-mended: fill)	The cell value	Replace the tem-plate text	None in the model
E	Column2 (Row 1)	1968	No (Rec-om-mended: fill)	Second cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
F	Column1 (Row 2)	Headquarters	No (Rec-om-mended: fill)	The cell value	Replace the tem-plate text	None in the model
G	Column2 (Row 2)	Mumbai, India	No (Rec-om-mended: fill)	Second cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
H	Column1 (Row 3)	Employees	No (Rec-om-mended: fill)	The cell value	Replace the tem-plate text	None in the model
I	Column2 (Row 3)	More than 600,000	No (Rec-om-mended: fill)	Second cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
J	Column1 (Row 4)	Countries	No (Rec-om-mended: fill)	The cell value	Replace the tem-plate text	None in the model
K	Column2 (Row 4)	55	No (Rec-om-mended: fill)	Second cell	Value	None
(L)	Options (Table › Content)	No Header	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A two-column fact table starting with a 2px dark top rule, regular-weight text in every cell and light separators between rows.
- **Rendering behaviour:** Class no-header: no thead is output, all rows render in tbody with td cells and CSS draws the 2px –color-border-neutral top border on the first row.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- No Header removes the header row: no Row is treated as column titles.
- Without headers, screen readers cannot announce column context.
- For label and value tables prefer No Header with First Column Header (row headers).
- Options are combinable; Striped and Bordered work with No Header.

Common Authoring Mistakes

Error	Root Cause	Resolution
Labels are not announced with values	Only No Header selected for a key / value table	Also select First Column Header
A title row appears as data	A Row with column titles kept at the top while No Header is on	Delete the title Row or clear No Header

Troubleshooting

- **Symptoms:** Founded and 1968 still render in semibold with a thick rule below.
- **Cause:** No Header was not saved in Options, so the first Row is still the header row.
- **Resolution:** Select the Table, open Options, choose No Header in the Header group and publish.
- **Verification Steps:** The table has no thead and the first row has the 2px rule above it.

Use Cases: Fact sheets, key / value lists where a header would repeat the obvious.

Authoring Guidelines: In **Options**, select **No Header** (Header group).

Business Rules: No row is treated as a header; the table has no `<thead>`.

Rendering Rules: All rows render in `<tbody>` with `<td>` cells. CSS draws a 2px `--color-border-neutral` top border on the first body row, so the table still has a clear start.

Responsive Behaviour: Same as Standard on all breakpoints.

SEO Impact: Neutral; content is plain table data.

Accessibility Compliance: Without headers, screen readers cannot announce column context. Use only when the data is self-explanatory; prefer First Column Header with No Header (Variation 4) for key / value tables (WCAG 1.3.1).

Variation 3 — First Column Header

Variation Name: First Column Header (`row-header` class) with the header row.

Business Purpose: Matrices in which both the column titles and the first column (row titles) give context, for example "Capability × Region".

Visual Example:

Figure 6: Variation example — At 1440 px: the H2 Capabilities by region above a 4-column matrix: the header row Capability, Europe, Americas, Asia Pacific and, in each body row, the first cell (Cloud operations, Enterprise AI, Cyber defence centre) in semibold as the row title, values Available, Pilot or Planned. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-first-column-header.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/table-first-column-header.jpg`
Screenshot Purpose	Variation example
Screen Description	At 1440 px: the H2 Capabilities by region above a 4-column matrix: the header row Capability, Europe, Americas, Asia Pacific and, in each body row, the first cell (Cloud operations, Enterprise AI, Cyber defence centre) in semibold as the row title, values Available, Pilot or Planned.
Business Context	A capabilities page shows which services run in which region, where both the region columns and the capability rows give context.
Author Objective	Add a 4-column Table with a header row and First Column Header for row titles.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Capabilities by region	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Table	Yes	Adds the Table to the page	Select the section in the content tree, choose Add (+) and pick Table	Only components the section allows (section filter)
(C)	Columns (Table › Content)	4 Columns	No	Decides which Row type can be added	Choose before adding Rows	Enforced: option list (1–5 Columns)
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Column1 (Row 1)	Capability	No (Recommended: fill)	The cell value	Replace the template text	None in the model
E	Column2 (Row 1)	Europe	No (Recommended: fill)	Second cell	Value	None
F	Column3 (Row 1)	Americas	No (Recommended: fill)	Third cell	Value	None
G	Column4 (Row 1)	Asia Pacific	No (Recommended: fill)	Fourth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
H	Column1 (Row 2)	Cloud operations	No (Recommended: fill)	The cell value	Replace the template text	None in the model
I	Column2 (Row 2)	Available	No (Recommended: fill)	Second cell	Value	None
J	Column3 (Row 2)	Available	No (Recommended: fill)	Third cell	Value	None
K	Column4 (Row 2)	Available	No (Recommended: fill)	Fourth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
L	Column1 (Row 3)	Enterprise AI	No (Recommended: fill)	The cell value	Replace the template text	None in the model
M	Column2 (Row 3)	Available	No (Recommended: fill)	Second cell	Value	None
N	Column3 (Row 3)	Available	No (Recommended: fill)	Third cell	Value	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
O	Column4 (Row 3)	Pilot	No (Recommended: fill)	Fourth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
P	Column1 (Row 4)	Cyber defence centre	No (Recommended: fill)	The cell value	Replace the template text	None in the model
Q	Column2 (Row 4)	Available	No (Recommended: fill)	Second cell	Value	None
R	Column3 (Row 4)	Planned	No (Recommended: fill)	Third cell	Value	None
S	Column4 (Row 4)	Available	No (Recommended: fill)	Fourth cell	Value	None
(T)	Options (Table › Content)	First Column Header	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A matrix with a semibold header row on a 2px dark rule and semibold row titles in the first column; other cells regular weight.
- **Rendering behaviour:** Class row-header: header row cells th scope col; in each body row the first cell becomes th scope row (semibold, text-align start) and the others td.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- First Column Header makes the first cell of every body row a row header.
- The top-left cell Capability stays a column header.
- Put the row titles in Column1 of every Row.
- Screen readers announce both the row header and the column header for each value.

Common Authoring Mistakes

Error	Root Cause	Resolution
The row titles are not bold	First Column Header not selected	Select First Column Header in Options

Error	Root Cause	Resolution
Values appear as row headers	Row titles typed in Column2 instead of Column1	Move the capability names into Column1

Troubleshooting

- **Symptoms:** Screen readers read Available without saying which capability it belongs to.
- **Cause:** First Column Header is missing, so Cloud operations and the other names are plain td cells.
- **Resolution:** Select First Column Header in the Header group of Options and publish.
- **Verification Steps:** In developer tools the first cell of each body row is th scope row.

Use Cases: Feature matrices, specification tables, pricing or plan comparisons.

Authoring Guidelines: In **Options**, select **First Column Header** (Header group). Put the row titles in the first column (Column1).

Business Rules: The first cell of every body row becomes a row header. The top-left cell of the header row stays a column header.

Rendering Rules: Header row: `<th scope="col">` cells. Body rows: first cell `<th scope="row">` (semibold, `text-align: start`), other cells `<td>`.

Responsive Behaviour: Same as Standard; when the table scrolls on small screens the row header scrolls with the row (it is not sticky: Not implemented as of this handover).

SEO Impact: Positive: explicit row and column headers describe the data relationships.

Accessibility Compliance: WCAG 1.3.1: screen readers announce both the row header and the column header for each data cell.

Variation 4 — Row headers only (No Header + First Column Header)

Variation Name: No Header combined with First Column Header (`no-header row-header`).

Business Purpose: Key / value tables where the first column is the label and there is no column title row (for example “Founded | 1968”, “Headquarters | Mumbai”).

Visual Example:

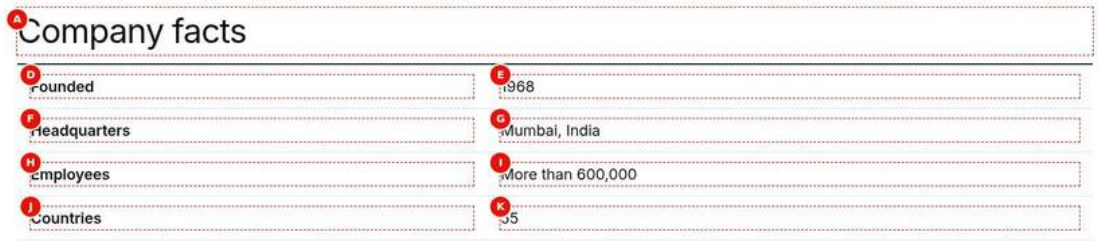

Figure 7: Variation example — At 1440 px: the H2 Company facts above a 2-column table without a header row and with a 2px dark rule above the first row; the labels Founded, Headquarters, Employees and Countries in semibold, the values 1968, Mumbai, India, More than 600,000 and 55 in regular weight. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-row-headers-only.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/table-row-headers-only.jpg`
Screenshot Purpose	Variation example

Item	Detail
Screen Description	At 1440 px: the H2 Company facts above a 2-column table without a header row and with a 2px dark rule above the first row; the labels Founded, Headquarters, Employees and Countries in semibold, the values 1968, Mumbai, India, More than 600,000 and 55 in regular weight.
Business Context	A company facts box pairs each label with its value so the information is read correctly by every visitor and screen reader.
Author Objective	Combine No Header and First Column Header for a 2-column key / value table.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Company facts	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Table	Yes	Adds the Table to the page	Select the section in the content tree, choose Add (+) and pick Table	Only components the section allows (section filter)
(C)	Columns (Table › Content)	2 Columns	No	Decides which Row type can be added	Choose before adding Rows	Enforced: option list (1–5 Columns)
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
D	Column1 (Row 1)	Founded	No (Recommended: fill)	The cell value	Replace the template text	None in the model
E	Column2 (Row 1)	1968	No (Recommended: fill)	Second cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
F	Column1 (Row 2)	Headquarters	No (Recommended: fill)	The cell value	Replace the template text	None in the model
G	Column2 (Row 2)	Mumbai, India	No (Recom-	Second cell	Value	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			mended: fill)			
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
H	Column1 (Row 3)	Employees	No (Recommended: fill)	The cell value	Replace the template text	None in the model
I	Column2 (Row 3)	More than 600,000	No (Recommended: fill)	Second cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
J	Column1 (Row 4)	Countries	No (Recommended: fill)	The cell value	Replace the template text	None in the model
K	Column2 (Row 4)	55	No (Recommended: fill)	Second cell	Value	None
(L)	Options (Table › Content)	No Header; First Column Header	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A two-column table starting with a 2px dark rule; the left column of labels in semibold, the right column of values in regular weight, light separators.
- **Rendering behaviour:** Classes no-header row-header: no thead; every row is in tbody with th scope row as its first cell and td for the value; the top border comes from the No Header style.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- No Header and First Column Header can be combined; the Header group allows both.
- Every row is data and its first cell labels the value.
- Each value is associated with its row label for screen readers (WCAG 1.3.1).
- Use this combination instead of No Header alone for key / value facts.

Common Authoring Mistakes

Error	Root Cause	Resolution
Labels and values look alike	Only No Header selected	Also select First Column Header
Founded appears as a column header	No Header not selected	Select No Header too

Troubleshooting

- **Symptoms:** Founded and 1968 form a header row with a thick rule below.
- **Cause:** Only First Column Header was selected; without No Header the first Row is still the column header row.
- **Resolution:** Add No Header to Options, keeping First Column Header, and publish.
- **Verification Steps:** The table has no thead and each row starts with a th scope row label.

Use Cases: Company facts, contact details, document properties.

Authoring Guidelines: In **Options**, select both **No Header** and **First Column Header**.

Business Rules: No column header row; the first cell of every row is a row header.

Rendering Rules: No `<thead>`; every row in `<tbody>` with `<th scope="row">` as first cell; top border of the first row from the No Header style.

Responsive Behaviour: Same as Standard.

SEO Impact: Positive: labelled values.

Accessibility Compliance: WCAG 1.3.1: each value is associated with its row label.

Variation 5 — Striped

Variation Name: Striped (`striped` class).

Business Purpose: Improves readability of long or wide tables by shading alternate rows.

Visual Example:

Figure 8: Variation example — At 1440 px: the H2 Our offices above a 3-column table with the header row Office, Region, Focus and eight body rows from Amsterdam to Toronto; the 1st, 3rd, 5th and 7th body rows (Amsterdam, Frankfurt, Madrid, Paris) on a light grey background. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-striped.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/table-striped.jpg`

Item	Detail
Screenshot Purpose	Variation example
Screen Description	At 1440 px: the H2 Our offices above a 3-column table with the header row Office, Region, Focus and eight body rows from Amsterdam to Toronto; the 1st, 3rd, 5th and 7th body rows (Amsterdam, Frankfurt, Madrid, Paris) on a light grey background.
Business Context	A locations page lists offices with their region and industry focus; alternate shading keeps a long list readable.
Author Objective	Add a 3-column Table of eight offices with the Striped option.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Our offices	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Table	Yes	Adds the Table to the page	Select the section in the content tree, choose Add (+) and pick Table	Only components the section allows (section filter)
(C)	Columns (Table › Content)	3 Columns	No	Decides which Row type can be added	Choose before adding Rows	Enforced: option list (1–5 Columns)
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
D	Column1 (Row 1)	Office	No (Recommended: fill)	The cell value	Replace the template text	None in the model
E	Column2 (Row 1)	Region	No (Recommended: fill)	Second cell	Value	None
F	Column3 (Row 1)	Focus	No (Recommended: fill)	Third cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows

AC	Column2 (Row 9)	Americas	No (Recommended: fill)	Second cell	Value	None
AD	Column3 (Row 9)	Public services	No (Recommended: fill)	Third cell	Value	None
(AE)	Options (Table › Content)	Striped	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A table with a white header row and alternate light grey (#f5f5f5) body rows, starting with the first body row, plus the light row separators.
- **Rendering behaviour:** Class striped: tbody tr:nth-child(odd) gets –color-bg-secondary; the header row is never shaded; with No Header the first row of the table would be shaded.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- Only body rows are striped, starting with the first body row Amsterdam.
- Striped can be combined with Bordered and with either Header option.
- Stripes are a visual aid only; the text contrast stays that of the default text colour.
- Keep tables to about 20 rows; split longer office lists by region under separate headings.

Common Authoring Mistakes

Error	Root Cause	Resolution
Stripes start on the wrong row	No Header also selected, shading the first data row	Expected with No Header; clear it if the first Row holds titles
Offices are out of order	Rows added in the wrong sequence	Drag the Rows in the content tree into alphabetical order

Troubleshooting

- **Symptoms:** The office rows show no grey stripes on aem.page.
- **Cause:** Striped was not saved in Options, or the page was not republished after selecting it.
- **Resolution:** Select the Table, choose Striped in the Border group of Options and publish the page.
- **Verification Steps:** The block has the class striped and Amsterdam, Frankfurt, Madrid and Paris rows are grey.

Use Cases: Long schedules, results tables, directories.

Authoring Guidelines: In **Options**, select **Striped** (Border group). Can be combined with Bordered and with either Header option.

Business Rules: Only body rows are striped; the header row is never shaded.

Rendering Rules: `tbody tr:nth-child(odd)` gets `--color-bg-secondary` (grey 100, #f5f5f5). With No Header the first row of the table is shaded.

Responsive Behaviour: Same on all breakpoints.

SEO Impact: None (visual only).

Accessibility Compliance: Stripes are a visual aid only; the text contrast stays that of `--color-text-default` on a very light background (WCAG 1.4.3 met by the token colours).

Variation 6 — Bordered

Variation Name: Bordered (`bordered` class).

Business Purpose: A grid look for dense numeric data where each cell must be visually separated.

Visual Example:

Figure 9: Variation example — At 1440 px: the H2 Revenue share by region above a 5-column numeric table, the header row Region, FY22, FY23, FY24, FY25 and four rows (Europe, North America, Asia Pacific, Rest of world) with percentages, a 1px light grey border around every cell. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-bordered.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/table-bordered.jpg`
Screenshot Purpose	Variation example
Screen Description	At 1440 px: the H2 Revenue share by region above a 5-column numeric table, the header row Region, FY22, FY23, FY24, FY25 and four rows (Europe, North America, Asia Pacific, Rest of world) with percentages, a 1px light grey border around every cell.
Business Context	An investor page shows revenue share per region over four fiscal years, where each figure must be visually separated.
Author Objective	Add a 5-column Table with the Bordered option for dense percentages.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Revenue share by region	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Table	Yes	Adds the Table to the page	Select the section in the content tree, choose Add (+) and pick Table	Only components the section allows (section filter)

—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
S	Column1 (Row 4)	Asia Pacific	No (Recommended: fill)	The cell value	Replace the template text	None in the model
T	Column2 (Row 4)	9.6%	No (Recommended: fill)	Second cell	Value	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
U	Column3 (Row 4)	9.8%	No (Recommended: fill)	Third cell	Value	None
V	Column4 (Row 4)	9.9%	No (Recommended: fill)	Fourth cell	Value	None
W	Column5 (Row 4)	10.1%	No (Recommended: fill)	Fifth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
X	Column1 (Row 5)	Rest of world	No (Recommended: fill)	The cell value	Replace the template text	None in the model
Y	Column2 (Row 5)	9.1%	No (Recommended: fill)	Second cell	Value	None
Z	Column3 (Row 5)	8.8%	No (Recommended: fill)	Third cell	Value	None
AA	Column4 (Row 5)	8.5%	No (Recommended: fill)	Fourth cell	Value	None
AB	Column5 (Row 5)	8.2%	No (Recommended: fill)	Fifth cell	Value	None
(AC)	Options (Table › Content)	Bordered	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A grid table: every header and body cell framed by a 1px light grey border, the header row semibold, figures such as 31.2% and 50.1% in regular weight.
- **Rendering behaviour:** Class bordered: every th and td gets a 1px –color-border-default border while the standard row rules remain; at 1440 px the five short columns fit without scrolling.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- Bordered applies to header and body cells alike.
- Bordered can be combined with Striped and either Header option.
- Five is the maximum number of columns: no wider Row type exists.
- Keep the decimal format consistent (31.2%) so columns compare at a glance.

Common Authoring Mistakes

Error	Root Cause	Resolution
A sixth fiscal year cannot be added	The model has no 6-column Row	Split the years into two tables or drop the oldest year
Percentages do not add up per column	A value mistyped in one row	Check each FY column sums to 100%

Troubleshooting

- **Symptoms:** The cells show no borders, only the row separators.
- **Cause:** Bordered was not selected in Options; Striped from the same Border group was chosen instead.
- **Resolution:** Select Bordered in the Border group of Options (clear Striped if not wanted) and publish.
- **Verification Steps:** Every cell has a 1px grey border in Preview and the block has the class bordered.

Use Cases: Financial figures, specification grids.

Authoring Guidelines: In **Options**, select **Bordered**. Can be combined with Striped.

Business Rules: Applies to header and body cells.

Rendering Rules: Every `th` and `td` gets a 1px `--color-border-default` border (grey 200). The row borders of the standard style remain.

Responsive Behaviour: Same on all breakpoints.

SEO Impact: None.

Accessibility Compliance: Visual only; borders are not needed to understand the data.

Variation 7 — 1 Column

Variation Name: Columns: 1 Column (filter `table`, row model `table-row`).

Business Purpose: A single-column list with a header (rarely needed).

Visual Example:

Figure 10: Variation example — At 1440 px: the H2 What we offer above a one-column table with the semibold header cell Offerings and four rows Consulting, Cloud, Cybersecurity and Enterprise AI separated by light rules. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-1-column.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/table-1-column.jpg`

Item	Detail
Screenshot Purpose	Variation example
Screen Description	At 1440 px: the H2 What we offer above a one-column table with the semibold header cell Offerings and four rows Consulting, Cloud, Cybersecurity and Enterprise AI separated by light rules.
Business Context	A short titled list of offerings where table semantics are wanted, a rare case.
Author Objective	Add a Table with the default 1 Column and five one-cell Rows.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	What we offer	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Table	Yes	Adds the Table to the page	Select the section in the content tree, choose Add (+) and pick Table	Only components the section allows (section filter)
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
C	Column1 (Row 1)	Offerings	No (Recommended: fill)	The cell value	Replace the template text	None in the model
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
D	Column1 (Row 2)	Consulting	No (Recommended: fill)	The cell value	Replace the template text	None in the model
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
E	Column1 (Row 3)	Cloud	No (Recommended: fill)	The cell value	Replace the template text	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
F	Column1 (Row 4)	Cybersecurity	No (Recommended: fill)	The cell value	Replace the template text	None in the model
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
G	Column1 (Row 5)	Enterprise AI	No (Recommended: fill)	The cell value	Replace the template text	None in the model

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A full-width single column: the header Offerings in semibold on a 2px dark rule and four regular-weight rows below.
- **Rendering behaviour:** With the default Columns 1 Column (filter table) each Row (model table-row) renders one cell; the table never scrolls in practice.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- 1 Column is the default, so Columns needs no change for this example.
- Only Rows with one field, Column1, can be added while 1 Column is selected.
- Row 1, Offerings, is the column header.
- For a simple list a bulleted list in default content is usually the better choice.

Common Authoring Mistakes

Error	Root Cause	Resolution
Rows have only one field when two were needed	Columns left at the default 1 Column	Choose the column count before adding Rows
A list is marked up as a table	Table used for a simple list of offerings	Use a bulleted list in a Text component

Troubleshooting

- **Symptoms:** After changing Columns to 2 Columns the existing rows still have one cell.
- **Cause:** Changing Columns affects only Rows added afterwards; existing table-row Rows keep one column.
- **Resolution:** Delete the one-column Rows and add new Rows of the new type, copying the values.
- **Verification Steps:** Every Row in the properties panel shows the same number of Column fields.

Use Cases: A titled list where table semantics are wanted (Recommended: prefer a list in default content).

Authoring Guidelines: Set **Columns** to **1 Column** (the default) before adding Rows. Each Row has one field, Column1.

Business Rules: The block accepts only `Row` items of model `table-row` while this option is selected.

Rendering Rules: Each row renders one cell.

Responsive Behaviour: Never scrolls in practice; full width.

SEO Impact: Neutral.

Accessibility Compliance: As Standard.

Variation 8 — 2 Columns

Variation Name: Columns: 2 Columns (filter `table-2-columns`, row model `table-col-2`).

Business Purpose: Key / value or term / definition tables.

Visual Example:

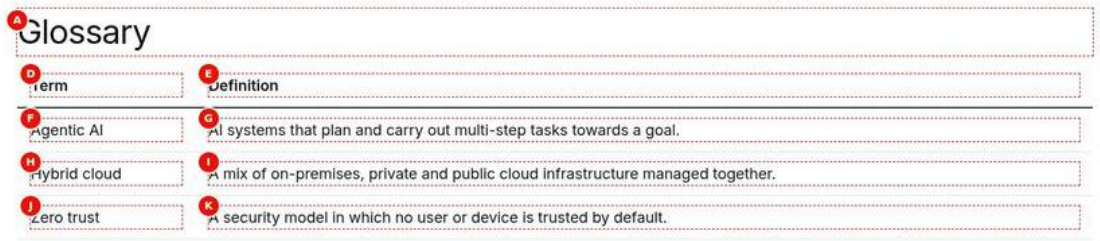

Figure 11: Variation example — At 1440 px: the H2 Glossary above a 2-column table with the header row Term, Definition and three rows defining Agentic AI, Hybrid cloud and Zero trust in full sentences. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-2-columns.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/table-2-columns.jpg`
Screenshot Purpose	Variation example
Screen Description	At 1440 px: the H2 Glossary above a 2-column table with the header row Term, Definition and three rows defining Agentic AI, Hybrid cloud and Zero trust in full sentences.
Business Context	An insights page explains technical terms in a glossary that readers scan by term.
Author Objective	Add a 2-column Table of terms and definitions with a header row.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Glossary	Recommended (an empty Title renders an empty	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
			heading or nothing)			
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Table	Yes	Adds the Table to the page	Select the section in the content tree, choose Add (+) and pick Table	Only components the section allows (section filter)
(C)	Columns (Table › Content)	2 Columns	No	Decides which Row type can be added	Choose before adding Rows	Enforced: option list (1–5 Columns)
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
D	Column1 (Row 1)	Term	No (Recommended: fill)	The cell value	Replace the template text	None in the model
E	Column2 (Row 1)	Definition	No (Recommended: fill)	Second cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
F	Column1 (Row 2)	Agentic AI	No (Recommended: fill)	The cell value	Replace the template text	None in the model
G	Column2 (Row 2)	AI systems that plan and carry out multi-step tasks towards a goal.	No (Recommended: fill)	Second cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
H	Column1 (Row 3)	Hybrid cloud	No (Recommended: fill)	The cell value	Replace the template text	None in the model
I	Column2 (Row 3)	A mix of on-premises, private and public cloud infrastructure managed together.	No (Recommended: fill)	Second cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
J	Column1 (Row 4)	Zero trust	No (Recom-	The cell value	Replace the template text	None in the model

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
			mended: fill)			
K	Column2 (Row 4)	A security model in which no user or device is trusted by default.	No (Rec-om-mended: fill)	Second cell	Value	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A two-column table with semibold Term and Definition headers on a 2px dark rule, short terms on the left and longer definitions wrapping on the right.
- **Rendering behaviour:** Columns 2 Columns uses filter table-2-columns and Row model table-col-2; each row renders two cells and the definitions wrap within their column.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- Only table-col-2 Rows can be added while 2 Columns is selected.
- Row 1 Term, Definition is the header row.
- Data cells are recommended up to about 80 characters; the definitions here are close to that limit.
- Consider First Column Header so each definition is announced with its term.

Common Authoring Mistakes

Error	Root Cause	Resolution
Definitions run very long	Paragraph-length explanations in Column2	Keep definitions to one sentence and link to an article for more
Terms are not alphabetical	Rows added in random order	Drag the Rows into alphabetical order in the content tree

Troubleshooting

- **Symptoms:** A definition cell shows as a button instead of text.
- **Cause:** The cell paragraph contains only a link, which the content buttons decorator turns into a link button.
- **Resolution:** Add text around the link in the same paragraph, or remove bold or italic from the link.
- **Verification Steps:** Preview shows the definition as text with an inline link.

Use Cases: Glossaries, facts, contact lists.

Authoring Guidelines: Set **Columns** to **2 Columns** before adding Rows; each Row has Column1 and Column2.

Business Rules: Only `table-col-2` rows can be added while this option is selected.

Rendering Rules: Two cells per row.

Responsive Behaviour: Fits on all breakpoints unless values are very long.

SEO Impact: Neutral.

Accessibility Compliance: As Standard; combine with First Column Header for key / value data.

Variation 9 — 3 Columns

Variation Name: Columns: 3 Columns (filter `table-3-columns`, row model `table-col-3`).

Business Purpose: Typical comparisons and schedules.

Visual Example:

Figure 12: Variation example — At 1440 px: the H2 Agenda above a 3-column table with the header row Time, Session, Speaker and three rows: 09:00 Welcome and keynote with Anita Rao, 10:00 Modernising the core on hybrid cloud with Marcus Khan, 11:15 Panel: security by design with Sara Lee. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-3-columns.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/table-3-columns.jpg`
Screenshot Purpose	Variation example
Screen Description	At 1440 px: the H2 Agenda above a 3-column table with the header row Time, Session, Speaker and three rows: 09:00 Welcome and keynote with Anita Rao, 10:00 Modernising the core on hybrid cloud with Marcus Khan, 11:15 Panel: security by design with Sara Lee.
Business Context	An event page shows the programme as a schedule that attendees scan by time and speaker.
Author Objective	Add a 3-column agenda Table with a header row.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)

N	Column2 (Row 4)	Panel: security by design	No (Recommended: fill)	Second cell	Value	None
O	Column3 (Row 4)	Sara Lee	No (Recommended: fill)	Third cell	Value	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A three-column table with semibold Time, Session and Speaker headers on a 2px dark rule and three agenda rows with light separators.
- **Rendering behaviour:** Columns 3 Columns uses filter table-3-columns and Row model table-col-3; it fits on tablet and desktop and may scroll on mobile with long session titles.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- Only table-col-3 Rows can be added while 3 Columns is selected.
- Row 1 Time, Session, Speaker is the header row.
- Use one time format (09:00) in every row; the block does not format times.
- Add rows in chronological order; the table keeps the authored order.

Common Authoring Mistakes

Error	Root Cause	Resolution
Sessions appear out of order	Rows added in the wrong sequence	Drag the Rows into time order in the content tree
Times in different formats	9am and 10:00 mixed	Use 09:00 format throughout

Troubleshooting

- **Symptoms:** The speaker column is empty in one row.
- **Cause:** Column3 of that Row was cleared instead of replacing the template text.
- **Resolution:** Select the Row and enter the speaker in Column3, then publish.
- **Verification Steps:** Every agenda row shows a time, a session and a speaker.

Use Cases: Agendas, simple comparisons.

Authoring Guidelines: Set **Columns** to **3 Columns**; each Row has Column1–Column3.

Business Rules: Only `table-col-3` rows can be added while selected.

Rendering Rules: Three cells per row.

Responsive Behaviour: Usually fits on tablet and desktop; may scroll on mobile with long values.

SEO Impact: Neutral.

Accessibility Compliance: As Standard.

Variation 10 — 4 Columns

Variation Name: Columns: 4 Columns (filter `table-4-columns`, row model `table-col-4`).

Business Purpose: Results and multi-attribute comparisons.

Visual Example:

Figure 13: Variation example — At 1440 px: the H2 Quarterly results above a 4-column table, the header row Quarter, Revenue, Growth, Margin in semibold and four body rows Q1 FY26 to Q4 FY26 with revenue, growth and margin figures. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-4-columns.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/table-4-columns.jpg`
Screenshot Purpose	Variation example
Screen Description	At 1440 px: the H2 Quarterly results above a 4-column table, the header row Quarter, Revenue, Growth, Margin in semibold and four body rows Q1 FY26 to Q4 FY26 with revenue, growth and margin figures.
Business Context	A results page compares four attributes per quarter in one table.
Author Objective	Add a 4-column Table with a header row and four data rows.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Quarterly results	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Table	Yes	Adds the Table to the page	Select the section in the content tree, choose Add (+) and pick Table	Only components the section allows (section filter)
(C)	Columns (Table › Content)	4 Columns	No	Decides which Row type can be added	Choose before adding Rows	Enforced: option list (1–5 Columns)
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
D	Column1 (Row 1)	Quarter	No (Recommended: fill)	The cell value	Replace the template text	None in the model
E	Column2 (Row 1)	Revenue	No (Recommended: fill)	Second cell	Value	None
F	Column3 (Row 1)	Growth	No (Recommended: fill)	Third cell	Value	None
G	Column4 (Row 1)	Margin	No (Recommended: fill)	Fourth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
H	Column1 (Row 2)	Q1 FY26	No (Recommended: fill)	The cell value	Replace the template text	None in the model
I	Column2 (Row 2)	USD 7.4 bn	No (Recommended: fill)	Second cell	Value	None
J	Column3 (Row 2)	4.2%	No (Recommended: fill)	Third cell	Value	None
K	Column4 (Row 2)	24.8%	No (Recommended: fill)	Fourth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
L	Column1 (Row 3)	Q2 FY26	No (Recommended: fill)	The cell value	Replace the template text	None in the model
M	Column2 (Row 3)	USD 7.6 bn	No (Recommended: fill)	Second cell	Value	None
N	Column3 (Row 3)	5.1%	No (Recommended: fill)	Third cell	Value	None
O	Column4 (Row 3)	25.1%	No (Recommended: fill)	Fourth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
P	Column1 (Row 4)	Q3 FY26	No (Recommended: fill)	The cell value	Replace the template text	None in the model
Q	Column2 (Row 4)	USD 7.9 bn	No (Recommended: fill)	Second cell	Value	None
R	Column3 (Row 4)	5.6%	No (Recommended: fill)	Third cell	Value	None
S	Column4 (Row 4)	25.4%	No (Recommended: fill)	Fourth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
T	Column1 (Row 5)	Q4 FY26	No (Recommended: fill)	The cell value	Replace the template text	None in the model
U	Column2 (Row 5)	USD 8.1 bn	No (Recommended: fill)	Second cell	Value	None
V	Column3 (Row 5)	6.0%	No (Recommended: fill)	Third cell	Value	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
W	Column4 (Row 5)	25.9%	No (Recommended: fill)	Fourth cell	Value	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A full-width four-column table with the semibold header on a 2px dark rule and four data rows divided by light rules.
- **Rendering behaviour:** Columns 4 Columns uses filter table-4-columns and Row model table-col-4; on desktop it fits, on mobile expect horizontal scrolling in the focusable region.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- Only table-col-4 Rows can be added while 4 Columns is selected.
- Row 1 Quarter, Revenue, Growth, Margin is the header row.
- The heading Quarterly results directly before the table names it.
- Changing Columns later does not convert existing Rows.

Common Authoring Mistakes

Error	Root Cause	Resolution
Ragged rows	Columns changed after some Rows were added	Recreate the short Rows as 4-column Rows
Quarter figures not verified	Values copied from a draft report	Check the figures with the content owner before publishing

Troubleshooting

- **Symptoms:** Some quarter rows have only three cells and the rules do not line up.
- **Cause:** Rows were added while Columns was 3 Columns, then Columns was changed to 4 Columns.
- **Resolution:** Delete the 3-cell Rows, add new Rows with Columns 4 Columns and re-enter the values.
- **Verification Steps:** All five rows have four cells in Preview.

Use Cases: Quarterly figures, office directories.

Authoring Guidelines: Set **Columns** to **4 Columns**; each Row has Column1–Column4.

Business Rules: Only `table-col-4` rows can be added while selected.

Rendering Rules: Four cells per row.

Responsive Behaviour: Expect horizontal scrolling on mobile.

SEO Impact: Neutral.

Accessibility Compliance: As Standard; the scroll region (Variation 12) keeps it operable by keyboard.

Variation 11 — 5 Columns

Variation Name: Columns: 5 Columns (filter `table-5-columns`, row model `table-col-5`).

Business Purpose: The widest supported table.

Visual Example:

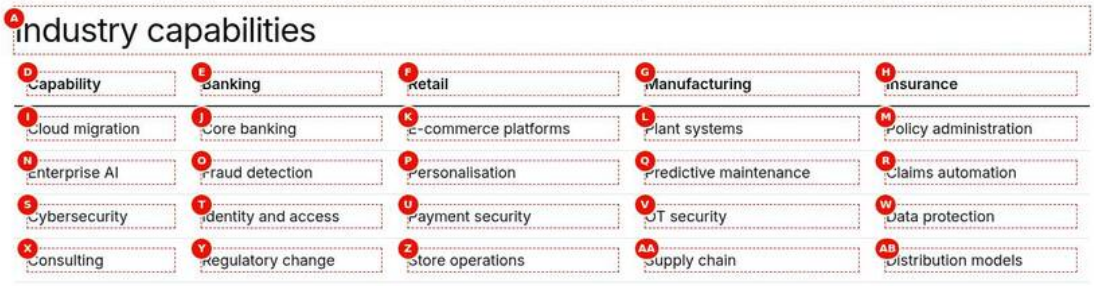

Figure 14: Variation example — At 1440 px: the H2 Industry capabilities above a 5-column table, the header row Capability, Banking, Retail, Manufacturing, Insurance and four rows (Cloud migration, Enterprise AI, Cybersecurity, Consulting), fitting the desktop width without scrolling. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-5-columns.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/table-5-columns.jpg`
Screenshot Purpose	Variation example
Screen Description	At 1440 px: the H2 Industry capabilities above a 5-column table, the header row Capability, Banking, Retail, Manufacturing, Insurance and four rows (Cloud migration, Enterprise AI, Cybersecurity, Consulting), fitting the desktop width without scrolling.
Business Context	An industries page compares four capabilities across four industries, the widest table the model supports.
Author Objective	Add a 5-column comparison Table with a header row.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Industry capabilities	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Table	Yes	Adds the Table to the page	Select the section in the content tree, choose Add (+) and pick Table	Only components the section allows (section filter)
(C)	Columns (Table › Content)	5 Columns	No	Decides which Row type can be added	Choose before adding Rows	Enforced: option list (1–5 Columns)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
D	Column1 (Row 1)	Capability	No (Recommended: fill)	The cell value	Replace the template text	None in the model
E	Column2 (Row 1)	Banking	No (Recommended: fill)	Second cell	Value	None
F	Column3 (Row 1)	Retail	No (Recommended: fill)	Third cell	Value	None
G	Column4 (Row 1)	Manufacturing	No (Recommended: fill)	Fourth cell	Value	None
H	Column5 (Row 1)	Insurance	No (Recommended: fill)	Fifth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
I	Column1 (Row 2)	Cloud migration	No (Recommended: fill)	The cell value	Replace the template text	None in the model
J	Column2 (Row 2)	Core banking	No (Recommended: fill)	Second cell	Value	None
K	Column3 (Row 2)	E-commerce platforms	No (Recommended: fill)	Third cell	Value	None
L	Column4 (Row 2)	Plant systems	No (Recommended: fill)	Fourth cell	Value	None
M	Column5 (Row 2)	Policy administration	No (Recommended: fill)	Fifth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
N	Column1 (Row 3)	Enterprise AI	No (Recommended: fill)	The cell value	Replace the template text	None in the model
O	Column2 (Row 3)	Fraud detection	No (Recommended: fill)	Second cell	Value	None
P	Column3 (Row 3)	Personalisation	No (Recommended: fill)	Third cell	Value	None
Q	Column4 (Row 3)	Predictive maintenance	No (Recommended: fill)	Fourth cell	Value	None
R	Column5 (Row 3)	Claims automation	No (Recommended: fill)	Fifth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
S	Column1 (Row 4)	Cybersecurity	No (Recommended: fill)	The cell value	Replace the template text	None in the model
T	Column2 (Row 4)	Identity and access	No (Recommended: fill)	Second cell	Value	None
U	Column3 (Row 4)	Payment security	No (Recommended: fill)	Third cell	Value	None
V	Column4 (Row 4)	OT security	No (Recommended: fill)	Fourth cell	Value	None
W	Column5 (Row 4)	Data protection	No (Recommended: fill)	Fifth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
X	Column1 (Row 5)	Consulting	No (Recommended: fill)	The cell value	Replace the template text	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
Y	Column2 (Row 5)	Regulatory change	No (Recommended: fill)	Second cell	Value	None
Z	Column3 (Row 5)	Store operations	No (Recommended: fill)	Third cell	Value	None
AA	Column4 (Row 5)	Supply chain	No (Recommended: fill)	Fourth cell	Value	None
AB	Column5 (Row 5)	Distribution models	No (Recommended: fill)	Fifth cell	Value	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A full-width five-column table with semibold industry headers on a 2px dark rule and four capability rows with light separators.
- **Rendering behaviour:** Columns 5 Columns uses filter table-5-columns and Row model table-col-5; at 1440 px it fits, while on mobile (see the scroll region shot) it scrolls inside the block.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- Five columns is the maximum; there is no wider Row type.
- Only table-col-5 Rows can be added while 5 Columns is selected.
- Keep values short to limit scrolling on mobile.
- Consider First Column Header so capabilities become row titles.

Common Authoring Mistakes

Error	Root Cause	Resolution
A sixth industry cannot be added	The model stops at 5 columns	Split the comparison into two tables
The table scrolls a lot on phones	Long values such as Policy administration in every column	Shorten values where possible

Troubleshooting

- **Symptoms:** On phones visitors do not notice the Insurance column.
- **Cause:** The 5-column table is wider than the screen and scrolls inside the block.
- **Resolution:** Put the most important columns first, keep the heading before the table and shorten long values.
- **Verification Steps:** At 390 px the region is focusable and scrolls to show Insurance.

Use Cases: Plan or capability comparisons with five attributes.

Authoring Guidelines: Set **Columns** to **5 Columns**; each Row has Column1–Column5.

Business Rules: Five is the maximum: there is no wider row model.

Rendering Rules: Five cells per row.

Responsive Behaviour: Scrolls horizontally on mobile and possibly on tablet.

SEO Impact: Neutral.

Accessibility Compliance: As Standard; keep values short to limit scrolling.

Variation 12 — Scroll region (automatic)

Variation Name: Scrollable table region (applied automatically, not an author option).

Business Purpose: Tables wider than the screen remain usable without breaking the page layout.

Visual Example:

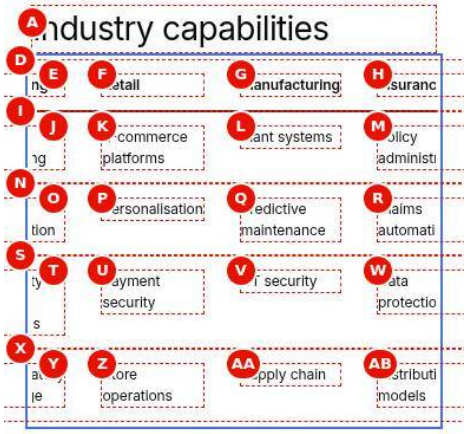

Figure 15: Variation example — At 390 px: the H2 Industry capabilities and the 5-column table scrolled sideways inside the block to its middle columns, with the 2px brand-blue focus outline around the block after pressing Tab; the page itself does not scroll. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/table-scroll-region.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/table-scroll-region.jpg`
Screenshot Purpose	Variation example
Screen Description	At 390 px: the H2 Industry capabilities and the 5-column table scrolled sideways inside the block to its middle columns, with the 2px brand-blue focus outline around the block after pressing Tab; the page itself does not scroll.
Business Context	Wide comparison tables stay usable on phones without breaking the page layout, by touch and by keyboard.
Author Objective	Check the automatic scroll region of a 5-column table on a phone.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Title (Title)	Industry capabilities	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Table	Yes	Adds the Table to the page	Select the section in the content tree, choose Add (+) and pick Table	Only components the section allows (section filter)
(C)	Columns (Table › Content)	5 Columns	No	Decides which Row type can be added	Choose before adding Rows	Enforced: option list (1–5 Columns)
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
D	Column1 (Row 1)	Capability	No (Recommended: fill)	The cell value	Replace the template text	None in the model
E	Column2 (Row 1)	Banking	No (Recommended: fill)	Second cell	Value	None
F	Column3 (Row 1)	Retail	No (Recommended: fill)	Third cell	Value	None
G	Column4 (Row 1)	Manufacturing	No (Recommended: fill)	Fourth cell	Value	None
H	Column5 (Row 1)	Insurance	No (Recommended: fill)	Fifth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
I	Column1 (Row 2)	Cloud migration	No (Recommended: fill)	The cell value	Replace the template text	None in the model
J	Column2 (Row 2)	Core banking	No (Recommended: fill)	Second cell	Value	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
K	Column3 (Row 2)	E-commerce platforms	No (Recommended: fill)	Third cell	Value	None
L	Column4 (Row 2)	Plant systems	No (Recommended: fill)	Fourth cell	Value	None
M	Column5 (Row 2)	Policy administration	No (Recommended: fill)	Fifth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
N	Column1 (Row 3)	Enterprise AI	No (Recommended: fill)	The cell value	Replace the template text	None in the model
O	Column2 (Row 3)	Fraud detection	No (Recommended: fill)	Second cell	Value	None
P	Column3 (Row 3)	Personalisation	No (Recommended: fill)	Third cell	Value	None
Q	Column4 (Row 3)	Predictive maintenance	No (Recommended: fill)	Fourth cell	Value	None
R	Column5 (Row 3)	Claims automation	No (Recommended: fill)	Fifth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
S	Column1 (Row 4)	Cybersecurity	No (Recommended: fill)	The cell value	Replace the template text	None in the model
T	Column2 (Row 4)	Identity and access	No (Recommended: fill)	Second cell	Value	None
U	Column3 (Row 4)	Payment security	No (Recommended: fill)	Third cell	Value	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
V	Column4 (Row 4)	OT security	No (Recommended: fill)	Fourth cell	Value	None
W	Column5 (Row 4)	Data protection	No (Recommended: fill)	Fifth cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
X	Column1 (Row 5)	Consulting	No (Recommended: fill)	The cell value	Replace the template text	None in the model
Y	Column2 (Row 5)	Regulatory change	No (Recommended: fill)	Second cell	Value	None
Z	Column3 (Row 5)	Store operations	No (Recommended: fill)	Third cell	Value	None
AA	Column4 (Row 5)	Supply chain	No (Recommended: fill)	Fourth cell	Value	None
AB	Column5 (Row 5)	Distribution models	No (Recommended: fill)	Fifth cell	Value	None
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—
—	Action (Preview)	Scroll the table to the right, then press Tab until the table is focused	—	Check on the preview (not stored in the content)	Scroll the table to the right, then press Tab until the table is focused	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The table shifted to the left inside its block, showing the middle columns at 0.75rem text, and the brand outline offset 0.25rem around the focused block.
- **Rendering behaviour:** While scrollWidth exceeds clientWidth + 1 the block has tabindex 0, role region and aria-label Industry capabilities; when it fits again (e.g. after rotating the device) these attributes are removed.
- **Publishing behaviour:** Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Business Rules

- The scroll region is applied automatically; there is nothing to set.
- Its name is the heading directly before the table, else Table from the placeholders sheet.
- Arrow keys scroll the focused region (WCAG 2.1.1); the focus outline is visible (WCAG 2.4.7).
- Place an H2 to H4 heading directly before the table so the region is named.

Common Authoring Mistakes

Error	Root Cause	Resolution
The region is announced as Table	A Text or image sits between heading and table	Make the heading the last element before the Table
The page scrolls sideways too	Large left or right margins in the Additional tab	Remove the margins
Heading in another section	The H2 was placed in the previous section	Move the heading into the Table's section

Troubleshooting

- **Symptoms:** After Tab the focused region is announced as Table, not Industry capabilities.
- **Cause:** The heading is not the last default content element directly before the Table, so no heading is found.
- **Resolution:** Move the Title Industry capabilities directly above the Table in the same section and publish.
- **Verification Steps:** The block has aria-label Industry capabilities and the table aria-labelledby the heading id.

Use Cases: Any table whose content is wider than its container.

Authoring Guidelines: Nothing to set. Place a heading (H2–H4) directly before the table so the region gets a meaningful name.

Business Rules: The region is turned on only while `scrollWidth > clientWidth + 1`; it is turned off again when the table fits (for example after rotating the device).

Rendering Rules: A `ResizeObserver` on the block sets `tabindex="0"`, `role="region"` and `aria-label` (the text of the heading before the table, else the placeholder `table`, default "Table") while the table overflows, and removes them when it fits.

Responsive Behaviour: Typically active on mobile for 3+ columns; rarely on desktop.

SEO Impact: None.

Accessibility Compliance: WCAG 2.1.1 (Keyboard): keyboard users can focus the region and scroll it with the arrow keys; WCAG 2.4.7 (Focus Visible): 2px brand outline; WCAG 4.1.2: the region has a name; WCAG 1.4.10 (Reflow) exception for data tables that need two-dimensional layout.

6.25.4 Authoring Experience

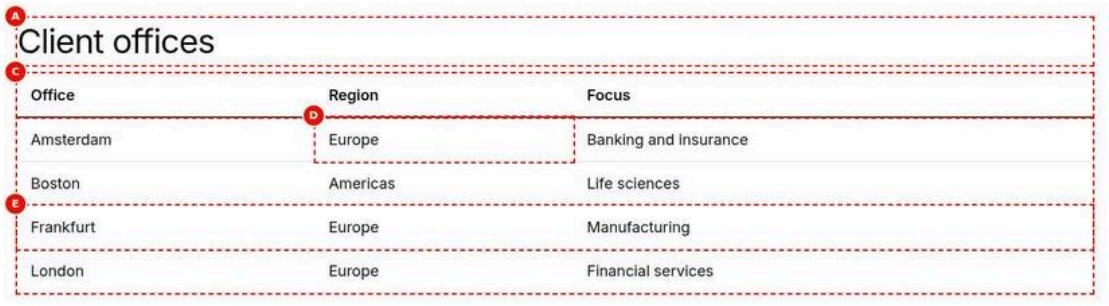

Figure 16: Universal Editor canvas — Universal Editor edit mode at 1440 px: the H2 Client offices (A) above a 3-column Table (B) with the header row Office, Region, Focus (C) and four body rows Amsterdam to London, the second row hovered; D marks a cell, E a body Row. F, the Add (+) of the Table in the content tree, is not on the canvas. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/table-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/table-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	Universal Editor edit mode at 1440 px: the H2 Client offices (A) above a 3-column Table (B) with the header row Office, Region, Focus (C) and four body rows Amsterdam to London, the second row hovered; D marks a cell, E a body Row. F, the Add (+) of the Table in the content tree, is not on the canvas.
Business Context	Authors maintaining office lists need to know which canvas element is the block, a Row or a cell, and where new Rows are added.
Author Objective	Select the Table in the content tree and identify its Rows and cells for editing.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
—	Title (Title)	Client offices	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
—	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

—	Column3 (Row 2)	Banking and insurance	No (Recommended: fill)	Third cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
—	Column1 (Row 3)	Boston	No (Recommended: fill)	The cell value	Replace the template text	None in the model
—	Column2 (Row 3)	Americas	No (Recommended: fill)	Second cell	Value	None
—	Column3 (Row 3)	Life sciences	No (Recommended: fill)	Third cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
—	Column1 (Row 4)	Frankfurt	No (Rec-om-mended: fill)	The cell value	Replace the tem-plate text	None in the model
—	Column2 (Row 4)	Europe	No (Rec-om-mended: fill)	Second cell	Value	None
—	Column3 (Row 4)	Manufacturing	No (Rec-om-mended: fill)	Third cell	Value	None
—	Item (Content tree › Table › Add (+))	Row	Yes	Adds a Row to the Table	Select the Table in the content tree, choose Add (+) and pick Row	Only the item types the Table allows
—	Column1 (Row 5)	London	No (Rec-om-mended: fill)	The cell value	Replace the tem-plate text	None in the model
—	Column2 (Row 5)	Europe	No (Rec-om-mended: fill)	Second cell	Value	None
—	Column3 (Row 5)	Financial services	No (Rec-om-mended: fill)	Third cell	Value	None
—	Mode (Universal Editor)	Edit; select the Table in the content tree (F, the Add (+) of the Table in the content tree, is not on the canvas)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The heading and the table in the editor canvas with letters A to E on the heading, block, header row, a cell and a body row; the hovered row outlined.
- **Rendering behaviour:** moveInstrumentation keeps the editor attributes on each tr and td, so Rows and cells stay selectable and cells editable in place after the block becomes a table.
- **Publishing behaviour:** Panel and in-place edits save to AEM at once; Publish sends the page to aem.page or aem.live. The table has no separate assets, so only the page needs publishing.

Business Rules

- A = the heading before the block; it names the table but is not part of the Table.
- B = the Table block: Options, Columns and the Additional tab.
- C = the first Row, the header row unless No Header is selected.
- D = a cell (Column1 to Column3), rich text editable in place; E = a body Row.
- F = Add (+) in the content tree, adding a Row of the type chosen in Columns.

Common Authoring Mistakes

Error	Root Cause	Resolution
Cannot find where to add a Row	Looking for an Add control on the canvas	Use Add (+) on the Table in the content tree (F)
Edited the heading inside the Table	The heading is default content, outside the block	Select the Title component above the table
Template text Column2 left in a new Row	New Rows are pre-filled	Replace each pre-filled cell

Troubleshooting

- **Symptoms:** Selecting a cell on the canvas does not open its Row in the properties panel.
- **Cause:** The editor instrumentation was not moved after a script error, so the canvas cell is not linked to the Row.
- **Resolution:** Select the Row in the content tree instead and edit its Column fields; report the error to development.
- **Verification Steps:** Selecting the Row highlights it on the canvas and the panel shows Column1 to Column3.

Annotations:

- A = Heading in default content directly before the block (names the table; not part of the block)
- B = The Table block (select it to open the block properties: Options, Columns, Additional tab)
- C = The first Row (header row unless No Header is selected)
- D = A cell of a Row (Column1 … Column5, rich text, editable in place)
- E = A body Row (select to edit its columns in the properties panel)
- F = The “Add” (+) control of the block in the content tree, which adds a Row of the type chosen in Columns

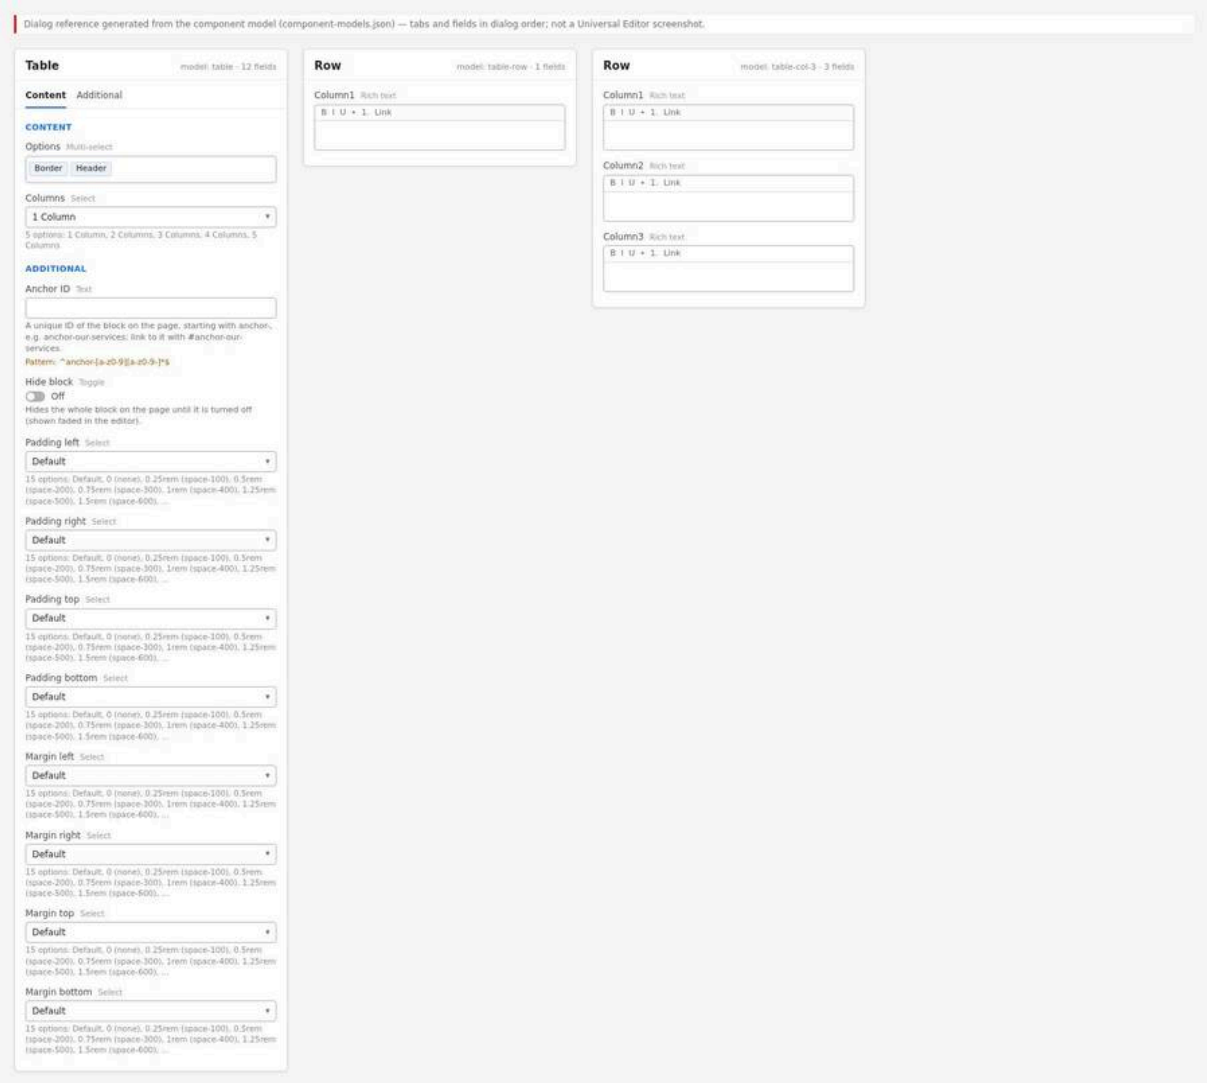

Figure 17: Properties panel — The properties panel of the selected Table showing the Content tab (Options multiselect with Border and Header groups, Columns select) and the Additional tab. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/table-properties-panel.jpg)

Properties panel, block (model `table`):

- **Content tab: Options** (multiselect: Border group Striped, Bordered; Header group No Header, First Column Header) and **Columns** (select: 1 Column, 2 Columns, 3 Columns, 4 Columns, 5 Columns), which decides which Row type the block accepts.
- **Additional tab:** Anchor ID, Hide block, Padding left / right / top / bottom, Margin left / right / top / bottom.

Properties panel, Row (models `table-row`, `table-col-2` … `table-col-5`): one rich-text field per column, labelled Column1 … Column5. A new Row is pre-filled with the text "Column1", "Column2", … (the template defaults), which authors replace.

6.25.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites, select the page and choose **Edit** (Universal Editor opens), or open the page from the Universal Editor start screen.

Expected Result: The page renders in the editor canvas in edit mode.

Steps — Authoring step: The page opened in Universal Editor in edit mode.

Step	Where	Field / control	Value / action
1	AEM Sites › /content/tcs-corp/us/en	Select the page	The page that gets the table
2	AEM Sites toolbar	Edit	Opens the page in Universal Editor (edit mode)

Step 2 — Add a heading for the table

Action: In the section where the table goes, add a Text / Title component with a heading (for example H2 "Quarterly results") as the last default content element before the table.

Expected Result: The heading shows directly above the place where the table will be.

Steps — Authoring step: A heading added in the section, selected in the canvas.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section › Add (+)	Title
2	Title › properties	Title	Quarterly results
3	Title › properties	Title Type	h2

Step 3 — Add the Table block

Action: Select the section in the content tree, choose **Add** (+) and select **Table**.

Expected Result: An empty Table block appears below the heading.

Steps — Authoring step: The Add component menu with Table highlighted, and the new empty Table in the content tree.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section with the heading
2	Universal Editor › Content tree	Section › Add (+)	Table
3	Universal Editor › Content tree	Section	The new, empty Table is listed below the Title

Step 4 — Choose the number of columns

Action: With the Table selected, in the properties panel **Content** tab choose **Columns** (for example "3 Columns"). Do this before adding Rows.

Expected Result: The block now accepts Rows with three fields.

Steps — Authoring step: The Columns select open with "3 Columns" chosen.

Step	Where	Field / control	Value / action
1	Table › Content	Columns	Open the select: 1 Column, 2 Columns, 3 Columns, 4 Columns, 5 Columns
2	Table › Content	Columns	3 Columns

Step 5 — Choose the options

Action: In **Options**, select the styles you need: Striped and / or Bordered, and No Header and / or First Column Header.

Expected Result: The canvas updates with the selected styles once rows exist.

Steps — Authoring step: The Options multiselect with Striped and First Column Header selected.

Step	Where	Field / control	Value / action
1	Table › Content	Options	Open the multiselect: Border (Striped, Bordered), Header (No Header, First Column Header)
2	Table › Content	Options	Striped; First Column Header

Step 6 — Add the header row

Action: Select the Table in the content tree, choose **Add** (+) and select **Row**. Replace the pre-filled "Column1", "Column2", "Column3" with the column titles.

Expected Result: The first row renders as the semibold header row (unless No Header).

Steps — Authoring step: The first Row edited in place with three column titles.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Table › Add (+)	Row
2	Row 1 (in place on the canvas)	Column1	Office (replaces "Column1")
3	Row 1 (in place on the canvas)	Column2	Region (replaces "Column2")
4	Row 1 (in place on the canvas)	Column3	Focus (replaces "Column3")

Step 7 — Add the data rows

Action: Add one Row per line of data and type the values in each column, in place or in the properties panel. Use **Duplicate** on a Row to copy one, and drag Rows in the content tree to reorder them.

Expected Result: Rows appear in order; with Striped, odd body rows are shaded.

Steps — Authoring step: Several data Rows in the content tree and rendered in the canvas.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Table › Add (+)	Row
2	Row 2	Column1 / Column2 / Column3	Amsterdam / Europe / Banking and insurance
3	Universal Editor › Content tree	Row 2 › Duplicate	Row 3
4	Row 3	Column1 / Column2 / Column3	Boston / Americas / Life sciences
5	Universal Editor › Content tree	Table › Add (+)	Row
6	Row 4	Column1 / Column2 / Column3	Frankfurt / Europe / Manufacturing
7	Universal Editor › Content tree	Rows	Drag to reorder if needed

Step 8 — Fill the Additional tab (optional)

Action: On the **Additional** tab set an Anchor ID (for example `anchor-results`) if other pages link to the table, and spacing if the design requires it.

Expected Result: The values are accepted; an invalid Anchor ID shows "Start with anchor-, then lower-case letters, digits and hyphens."

Steps — Authoring step: The Additional tab with Anchor ID anchor-results and Margin bottom 2rem.

Step	Where	Field / control	Value / action
1	Table › Additional	Anchor ID	anchor-results
2	Table › Additional	Margin bottom	2rem (space-800)

Step 9 — Preview

Action: Switch Universal Editor to **Preview** mode, then resize the editor / use the device emulation to check mobile width.

Expected Result: The table renders without editor outlines; on narrow widths it scrolls horizontally inside the block.

Steps — Authoring step: The table in preview mode at mobile width with a horizontal scroll.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	Universal Editor toolbar	Device emulation	Mobile (about 390 px)
3	Canvas	Table	Scroll horizontally inside the table

Step 10 — Validate and publish

Action: Run the Validation Process checklist below, then choose **Publish** in Universal Editor (or Quick Publish in AEM Sites).

Expected Result: The table is visible on the live site after publishing.

Steps — Authoring step: The Publish dialog of Universal Editor for the page.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Open the Publish dialog
2	Publish dialog	Destination	Publish to Live
3	Publish dialog	Publish	Confirm

Preview Process

1. In Universal Editor use **Preview** mode to see the page without editing outlines.
2. To check the Edge Delivery preview, open the page on `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}` after it has been previewed (publishing to preview from AEM, or AEM Sidekick **Preview**).
3. Check the table at desktop, tablet (768px) and mobile (390px) widths.

Publishing Process

1. Publish the page from Universal Editor (**Publish**) or AEM Sites (Quick Publish / Manage Publication).
2. The live page `https://main--tcs-corp--sradha-tcs.aem.live/{locale}/{path}` updates once the Edge Delivery CDN cache is refreshed (normally immediately after publishing).
3. A table has no separate assets; only the page needs publishing.

Validation Process

- ☐ A heading directly precedes the table (last element of the default content above it).
- ☐ The first row contains column titles (or No Header is selected deliberately).
- ☐ No Row still contains the template text "Column1", "Column2", …
- ☐ Every Row has the same number of columns (rows of different types are not mixed).
- ☐ With First Column Header, the first column holds the row labels.
- ☐ No empty header cells.
- ☐ At 390px width the table scrolls inside the block and the page does not scroll sideways.
- ☐ Tab key focuses the scrolling table (outline visible) and arrow keys scroll it.
- ☐ Links in cells work and have meaningful text.
- ☐ Anchor ID (if set) starts with `anchor-` and `#anchor-…` links jump to the table.
- ☐ Hide block is off (unless intended).

Rollback Process

1. In AEM Sites open the page's **Version History** (Timeline / Versions) and restore the previous version, or undo the changes in Universal Editor before publishing.
2. Republish the page.
3. To remove the table temporarily without deleting it, turn on **Hide block** (Additional tab) and publish; turn it off later to restore it.

The walkthroughs below repeat the steps above for each variation of chapter 6.25.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Standard (header row)

Reproduces the screenshot `screenshots/table-standard.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Service availability; **Title Type** (B) = h2.

Expected Result: The H2 Service availability shows directly above the table and later names it (aria-labelledby).

Step 4 — Add the Table

Action: Select the section in the content tree, choose **Add (+)** and pick **Table**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 5 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (C) = 3 Columns.

Expected Result: Columns is set to 3 Columns, so Add (+) on the Table now offers Rows with 3 column fields.

Step 6 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 7 — Fill in Row 1

Action: Select **Row 1** in the content tree and enter in the properties panel: **Column1** (D) = Service; **Column2** (E) = Region; **Column3** (F) = Availability.

Expected Result: Row 1 becomes the header row Service, Region, Availability in semibold.

Step 8 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 9 — Fill in Row 2

Action: Select **Row 2** in the content tree and enter in the properties panel: **Column1** (G) = Cloud migration; **Column2** (H) = Europe; **Column3** (I) = Generally available.

Expected Result: The row Cloud migration, Europe, Generally available appears below the header.

Step 10 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 11 — Fill in Row 3

Action: Select **Row 3** in the content tree and enter in the properties panel: **Column1** (J) = Enterprise AI platform; **Column2** (K) = Americas; **Column3** (L) = Generally available.

Expected Result: The row Enterprise AI platform, Americas, Generally available follows.

Step 12 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 13 — Fill in Row 4

Action: Select **Row 4** in the content tree and enter in the properties panel: **Column1** (M) = Quantum readiness assessment; **Column2** (N) = Europe and Americas; **Column3** (O) = Pilot.

Expected Result: The last row Quantum readiness assessment, Europe and Americas, Pilot completes the table.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A full-width table: header cells semibold, body cells regular, left aligned, rows divided by light grey 1px rules.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Step 16 — Verify

Action: On the live page check: Preview shows Service, Region, Availability as the header and Cloud migration in regular weight.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — No Header

Reproduces the screenshot `screenshots/table-no-header.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Key facts; **Title Type** (B) = h2.

Expected Result: The H2 Key facts shows directly above the table and later names it (aria-labelledby).

Step 4 — Add the Table

Action: Select the section in the content tree, choose **Add (+)** and pick **Table**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 5 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (C) = 2 Columns.

Expected Result: Columns 2 Columns and Options No Header are set, so every Row will render as data.

Step 6 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 and Column2 pre-filled with the template text Column1 and so on, which is then replaced.

Step 7 — Fill in Row 1

Action: Select **Row 1** in the content tree and enter in the properties panel: **Column1** (D) = Founded; **Column2** (E) = 1968.

Expected Result: The row Founded and 1968 is the first row of the table, with a 2px dark rule above it.

Step 8 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 and Column2 pre-filled with the template text Column1 and so on, which is then replaced.

Step 9 — Fill in Row 2

Action: Select **Row 2** in the content tree and enter in the properties panel: **Column1** (F) = Headquarters; **Column2** (G) = Mumbai, India.

Expected Result: The row Headquarters and Mumbai, India follows.

Step 10 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 and Column2 pre-filled with the template text Column1 and so on, which is then replaced.

Step 11 — Fill in Row 3

Action: Select **Row 3** in the content tree and enter in the properties panel: **Column1** (H) = Employees; **Column2** (I) = More than 600,000.

Expected Result: The row Employees and More than 600,000 follows.

Step 12 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 and Column2 pre-filled with the template text Column1 and so on, which is then replaced.

Step 13 — Fill in Row 4

Action: Select **Row 4** in the content tree and enter in the properties panel: **Column1** (J) = Countries; **Column2** (K) = 55.

Expected Result: The last row Countries and 55 completes the table.

Step 14 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Options** (L) = No Header.

Expected Result: Columns 2 Columns and Options No Header are set, so every Row will render as data.

Step 15 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A two-column fact table starting with a 2px dark top rule, regular-weight text in every cell and light separators between rows.

Step 16 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Step 17 — Verify

Action: On the live page check: The table has no thead and the first row has the 2px rule above it.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — First Column Header

Reproduces the screenshot `screenshots/table-first-column-header.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Capabilities by region; **Title Type** (B) = h2.

Expected Result: The H2 Capabilities by region shows directly above the table and later names it (aria-labelledby).

Step 4 — Add the Table

Action: Select the section in the content tree, choose **Add (+)** and pick **Table**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 5 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (C) = 4 Columns.

Expected Result: Columns 4 Columns and Options First Column Header are set, so Column1 becomes the row title.

Step 6 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column4 pre-filled with the template text Column1 and so on, which is then replaced.

Step 7 — Fill in Row 1

Action: Select **Row 1** in the content tree and enter in the properties panel: **Column1** (D) = Capability; **Column2** (E) = Europe; **Column3** (F) = Americas; **Column4** (G) = Asia Pacific.

Expected Result: Row 1 becomes the header row Capability, Europe, Americas, Asia Pacific.

Step 8 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column4 pre-filled with the template text Column1 and so on, which is then replaced.

Step 9 — Fill in Row 2

Action: Select **Row 2** in the content tree and enter in the properties panel: **Column1** (H) = Cloud operations; **Column2** (I) = Available; **Column3** (J) = Available; **Column4** (K) = Available.

Expected Result: The row Cloud operations with Available in all three regions appears, Cloud operations in semibold.

Step 10 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column4 pre-filled with the template text Column1 and so on, which is then replaced.

Step 11 — Fill in Row 3

Action: Select **Row 3** in the content tree and enter in the properties panel: **Column1** (L) = Enterprise AI; **Column2** (M) = Available; **Column3** (N) = Available; **Column4** (O) = Pilot.

Expected Result: The row Enterprise AI with Available, Available and Pilot follows, the title in semibold.

Step 12 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column4 pre-filled with the template text Column1 and so on, which is then replaced.

Step 13 — Fill in Row 4

Action: Select **Row 4** in the content tree and enter in the properties panel: **Column1** (P) = Cyber defence centre; **Column2** (Q) = Available; **Column3** (R) = Planned; **Column4** (S) = Available.

Expected Result: The row Cyber defence centre with Available, Planned and Available completes the matrix.

Step 14 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Options** (T) = First Column Header.

Expected Result: Columns 4 Columns and Options First Column Header are set, so Column1 becomes the row title.

Step 15 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A matrix with a semibold header row on a 2px dark rule and semibold row titles in the first column; other cells regular weight.

Step 16 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Step 17 — Verify

Action: On the live page check: In developer tools the first cell of each body row is th scope row.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Row headers only (No Header + First Column Header)

Reproduces the screenshot `screenshots/table-row-headers-only.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Company facts; **Title Type** (B) = h2.

Expected Result: The H2 Company facts shows directly above the table and later names it (aria-labelledby).

Step 4 — Add the Table

Action: Select the section in the content tree, choose **Add (+)** and pick **Table**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 5 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (C) = 2 Columns.

Expected Result: Columns 2 Columns and Options No Header plus First Column Header are set.

Step 6 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 and Column2 pre-filled with the template text Column1 and so on, which is then replaced.

Step 7 — Fill in Row 1

Action: Select **Row 1** in the content tree and enter in the properties panel: **Column1** (D) = Founded; **Column2** (E) = 1968.

Expected Result: The row Founded and 1968 is the first row of the table, with a 2px dark rule above it; Founded in semibold.

Step 8 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 and Column2 pre-filled with the template text Column1 and so on, which is then replaced.

Step 9 — Fill in Row 2

Action: Select **Row 2** in the content tree and enter in the properties panel: **Column1** (F) = Headquarters; **Column2** (G) = Mumbai, India.

Expected Result: The row Headquarters and Mumbai, India follows, the label in semibold.

Step 10 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 and Column2 pre-filled with the template text Column1 and so on, which is then replaced.

Step 11 — Fill in Row 3

Action: Select **Row 3** in the content tree and enter in the properties panel: **Column1** (H) = Employees; **Column2** (I) = More than 600,000.

Expected Result: The row Employees and More than 600,000 follows, the label in semibold.

Step 12 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 and Column2 pre-filled with the template text Column1 and so on, which is then replaced.

Step 13 — Fill in Row 4

Action: Select **Row 4** in the content tree and enter in the properties panel: **Column1** (J) = Countries; **Column2** (K) = 55.

Expected Result: The last row Countries and 55 completes the table, the label in semibold.

Step 14 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Options** (L) = No Header; First Column Header.

Expected Result: Columns 2 Columns and Options No Header plus First Column Header are set.

Step 15 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A two-column table starting with a 2px dark rule; the left column of labels in semibold, the right column of values in regular weight, light separators.

Step 16 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Step 17 — Verify

Action: On the live page check: The table has no thead and each row starts with a th scope row label.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Striped

Reproduces the screenshot `screenshots/table-striped.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Our offices; **Title Type** (B) = h2.

Expected Result: The H2 Our offices shows directly above the table and later names it (aria-labelledby).

Step 4 — Add the Table

Action: Select the section in the content tree, choose **Add (+)** and pick **Table**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 5 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (C) = 3 Columns.

Expected Result: Columns 3 Columns and Options Striped are set; odd body rows will be shaded.

Step 6 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 7 — Fill in Row 1

Action: Select **Row 1** in the content tree and enter in the properties panel: **Column1** (D) = Office; **Column2** (E) = Region; **Column3** (F) = Focus.

Expected Result: Row 1 becomes the header row: Office, Region and Focus in semibold.

Step 8 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 9 — Fill in Row 2

Action: Select **Row 2** in the content tree and enter in the properties panel: **Column1** (G) = Amsterdam; **Column2** (H) = Europe; **Column3** (I) = Banking and insurance.

Expected Result: The row Amsterdam, Europe, Banking and insurance appears below the header.

Step 10 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 11 — Fill in Row 3

Action: Select **Row 3** in the content tree and enter in the properties panel: **Column1** (J) = Boston; **Column2** (K) = Americas; **Column3** (L) = Life sciences.

Expected Result: The row Boston, Americas, Life sciences follows.

Step 12 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 13 — Fill in Row 4

Action: Select **Row 4** in the content tree and enter in the properties panel: **Column1** (M) = Frankfurt; **Column2** (N) = Europe; **Column3** (O) = Manufacturing.

Expected Result: The row Frankfurt, Europe, Manufacturing follows.

Step 14 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 15 — Fill in Row 5

Action: Select **Row 5** in the content tree and enter in the properties panel: **Column1** (P) = London; **Column2** (Q) = Europe; **Column3** (R) = Financial services.

Expected Result: The row London, Europe, Financial services follows.

Step 16 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 17 — Fill in Row 6

Action: Select **Row 6** in the content tree and enter in the properties panel: **Column1** (S) = Madrid; **Column2** (T) = Europe; **Column3** (U) = Retail.

Expected Result: The row Madrid, Europe, Retail follows.

Step 18 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 19 — Fill in Row 7

Action: Select **Row 7** in the content tree and enter in the properties panel: **Column1** (V) = New York; **Column2** (W) = Americas; **Column3** (X) = Capital markets.

Expected Result: The row New York, Americas, Capital markets follows.

Step 20 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 21 — Fill in Row 8

Action: Select **Row 8** in the content tree and enter in the properties panel: **Column1** (Y) = Paris; **Column2** (Z) = Europe; **Column3** (AA) = Energy and utilities.

Expected Result: The row Paris, Europe, Energy and utilities follows.

Step 22 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 23 — Fill in Row 9

Action: Select **Row 9** in the content tree and enter in the properties panel: **Column1** (AB) = Toronto; **Column2** (AC) = Americas; **Column3** (AD) = Public services.

Expected Result: The last row Toronto, Americas, Public services completes the table.

Step 24 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Options** (AE) = Striped.

Expected Result: Columns 3 Columns and Options Striped are set; odd body rows will be shaded.

Step 25 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A table with a white header row and alternate light grey (#f5f5f5) body rows, starting with the first body row, plus the light row separators.

Step 26 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Step 27 — Verify

Action: On the live page check: The block has the class striped and Amsterdam, Frankfurt, Madrid and Paris rows are grey.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Bordered

Reproduces the screenshot `screenshots/table-bordered.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Revenue share by region; **Title Type** (B) = h2.

Expected Result: The H2 Revenue share by region shows directly above the table and later names it (aria-labelledby).

Step 4 — Add the Table

Action: Select the section in the content tree, choose **Add (+)** and pick **Table**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 5 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (C) = 5 Columns.

Expected Result: Columns 5 Columns and Options Bordered are set; every cell will be framed.

Step 6 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 7 — Fill in Row 1

Action: Select **Row 1** in the content tree and enter in the properties panel: **Column1** (D) = Region; **Column2** (E) = FY22; **Column3** (F) = FY23; **Column4** (G) = FY24; **Column5** (H) = FY25.

Expected Result: Row 1 becomes the header row Region, FY22, FY23, FY24, FY25.

Step 8 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 9 — Fill in Row 2

Action: Select **Row 2** in the content tree and enter in the properties panel: **Column1** (I) = Europe; **Column2** (J) = 31.2%; **Column3** (K) = 31.8%; **Column4** (L) = 32.4%; **Column5** (M) = 33.0%.

Expected Result: The row Europe with 31.2%, 31.8%, 32.4% and 33.0% appears in bordered cells.

Step 10 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 11 — Fill in Row 3

Action: Select **Row 3** in the content tree and enter in the properties panel: **Column1** (N) = North America; **Column2** (O) = 50.1%; **Column3** (P) = 49.6%; **Column4** (Q) = 49.2%; **Column5** (R) = 48.7%.

Expected Result: The row North America with 50.1%, 49.6%, 49.2% and 48.7% follows.

Step 12 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 13 — Fill in Row 4

Action: Select **Row 4** in the content tree and enter in the properties panel: **Column1** (S) = Asia Pacific; **Column2** (T) = 9.6%; **Column3** (U) = 9.8%; **Column4** (V) = 9.9%; **Column5** (W) = 10.1%.

Expected Result: The row Asia Pacific with 9.6%, 9.8%, 9.9% and 10.1% follows.

Step 14 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 15 — Fill in Row 5

Action: Select **Row 5** in the content tree and enter in the properties panel: **Column1** (X) = Rest of world; **Column2** (Y) = 9.1%; **Column3** (Z) = 8.8%; **Column4** (AA) = 8.5%; **Column5** (AB) = 8.2%.

Expected Result: The last row Rest of world with 9.1%, 8.8%, 8.5% and 8.2% completes the table.

Step 16 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Options** (AC) = Bordered.

Expected Result: Columns 5 Columns and Options Bordered are set; every cell will be framed.

Step 17 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A grid table: every header and body cell framed by a 1px light grey border, the header row semibold, figures such as 31.2% and 50.1% in regular weight.

Step 18 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Step 19 — Verify

Action: On the live page check: Every cell has a 1px grey border in Preview and the block has the class bordered.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — 1 Column

Reproduces the screenshot `screenshots/table-1-column.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = What we offer; **Title Type** (B) = h2.

Expected Result: The H2 What we offer shows directly above the table and later names it (aria-labelledby).

Step 4 — Add the Table

Action: Select the section in the content tree, choose **Add (+)** and pick **Table**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 5 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a one-cell Row pre-filled with Column1, as Columns stays at the default 1 Column.

Step 6 — Fill in Row 1

Action: Select **Row 1** in the content tree and enter in the properties panel: **Column1** (C) = Offerings.

Expected Result: Row 1 becomes the header cell Offerings in semibold.

Step 7 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a one-cell Row pre-filled with Column1, as Columns stays at the default 1 Column.

Step 8 — Fill in Row 2

Action: Select **Row 2** in the content tree and enter in the properties panel: **Column1** (D) = Consulting.

Expected Result: The row Consulting appears below the header.

Step 9 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a one-cell Row pre-filled with Column1, as Columns stays at the default 1 Column.

Step 10 — Fill in Row 3

Action: Select **Row 3** in the content tree and enter in the properties panel: **Column1** (E) = Cloud.

Expected Result: The row Cloud follows.

Step 11 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a one-cell Row pre-filled with Column1, as Columns stays at the default 1 Column.

Step 12 — Fill in Row 4

Action: Select **Row 4** in the content tree and enter in the properties panel: **Column1** (F) = Cybersecurity.

Expected Result: The row Cybersecurity follows.

Step 13 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a one-cell Row pre-filled with Column1, as Columns stays at the default 1 Column.

Step 14 — Fill in Row 5

Action: Select **Row 5** in the content tree and enter in the properties panel: **Column1** (G) = Enterprise AI.

Expected Result: The last row Enterprise AI completes the list.

Step 15 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A full-width single column: the header Offerings in semibold on a 2px dark rule and four regular-weight rows below.

Step 16 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Step 17 — Verify

Action: On the live page check: Every Row in the properties panel shows the same number of Column fields.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — 2 Columns

Reproduces the screenshot `screenshots/table-2-columns.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Glossary; **Title Type** (B) = h2.

Expected Result: The H2 Glossary shows directly above the table and later names it (aria-labelledby).

Step 4 — Add the Table

Action: Select the section in the content tree, choose **Add (+)** and pick **Table**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 5 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (C) = 2 Columns.

Expected Result: Columns is set to 2 Columns, so Add (+) on the Table now offers Rows with 2 column fields.

Step 6 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 and Column2 pre-filled with the template text Column1 and so on, which is then replaced.

Step 7 — Fill in Row 1

Action: Select **Row 1** in the content tree and enter in the properties panel: **Column1** (D) = Term; **Column2** (E) = Definition.

Expected Result: Row 1 becomes the header row Term, Definition in semibold.

Step 8 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 and Column2 pre-filled with the template text Column1 and so on, which is then replaced.

Step 9 — Fill in Row 2

Action: Select **Row 2** in the content tree and enter in the properties panel: **Column1** (F) = Agentic AI; **Column2** (G) = AI systems that plan and carry out multi-step tasks towards a goal.

Expected Result: The row Agentic AI with its definition appears below the header.

Step 10 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 and Column2 pre-filled with the template text Column1 and so on, which is then replaced.

Step 11 — Fill in Row 3

Action: Select **Row 3** in the content tree and enter in the properties panel: **Column1** (H) = Hybrid cloud; **Column2** (I) = A mix of on-premises, private and public cloud infrastructure managed together.

Expected Result: The row Hybrid cloud with its definition follows.

Step 12 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 and Column2 pre-filled with the template text Column1 and so on, which is then replaced.

Step 13 — Fill in Row 4

Action: Select **Row 4** in the content tree and enter in the properties panel: **Column1** (J) = Zero trust; **Column2** (K) = A security model in which no user or device is trusted by default.

Expected Result: The last row Zero trust with its definition completes the glossary.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A two-column table with semibold Term and Definition headers on a 2px dark rule, short terms on the left and longer definitions wrapping on the right.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Step 16 — Verify

Action: On the live page check: Preview shows the definition as text with an inline link.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — 3 Columns

Reproduces the screenshot `screenshots/table-3-columns.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Agenda; **Title Type** (B) = h2.

Expected Result: The H2 Agenda shows directly above the table and later names it (aria-labelledby).

Step 4 — Add the Table

Action: Select the section in the content tree, choose **Add (+)** and pick **Table**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 5 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (C) = 3 Columns.

Expected Result: Columns is set to 3 Columns, so Add (+) on the Table now offers Rows with 3 column fields.

Step 6 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 7 — Fill in Row 1

Action: Select **Row 1** in the content tree and enter in the properties panel: **Column1** (D) = Time; **Column2** (E) = Session; **Column3** (F) = Speaker.

Expected Result: Row 1 becomes the header row Time, Session, Speaker in semibold.

Step 8 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 9 — Fill in Row 2

Action: Select **Row 2** in the content tree and enter in the properties panel: **Column1** (G) = 09:00; **Column2** (H) = Welcome and keynote: the AI-first enterprise; **Column3** (I) = Anita Rao.

Expected Result: The row 09:00, Welcome and keynote: the AI-first enterprise, Anita Rao appears.

Step 10 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 11 — Fill in Row 3

Action: Select **Row 3** in the content tree and enter in the properties panel: **Column1** (J) = 10:00; **Column2** (K) = Modernising the core on hybrid cloud; **Column3** (L) = Marcus Khan.

Expected Result: The row 10:00, Modernising the core on hybrid cloud, Marcus Khan follows.

Step 12 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column3 pre-filled with the template text Column1 and so on, which is then replaced.

Step 13 — Fill in Row 4

Action: Select **Row 4** in the content tree and enter in the properties panel: **Column1** (M) = 11:15; **Column2** (N) = Panel: security by design; **Column3** (O) = Sara Lee.

Expected Result: The last row 11:15, Panel: security by design, Sara Lee completes the agenda.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A three-column table with semibold Time, Session and Speaker headers on a 2px dark rule and three agenda rows with light separators.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Step 16 — Verify

Action: On the live page check: Every agenda row shows a time, a session and a speaker.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 10 — 4 Columns

Reproduces the screenshot `screenshots/table-4-columns.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Quarterly results; **Title Type** (B) = h2.

Expected Result: The H2 Quarterly results shows directly above the table and later names it (aria-labelledby).

Step 4 — Add the Table

Action: Select the section in the content tree, choose **Add (+)** and pick **Table**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 5 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (C) = 4 Columns.

Expected Result: Columns is set to 4 Columns, so Add (+) on the Table now offers Rows with 4 column fields.

Step 6 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column4 pre-filled with the template text Column1 and so on, which is then replaced.

Step 7 — Fill in Row 1

Action: Select **Row 1** in the content tree and enter in the properties panel: **Column1** (D) = Quarter; **Column2** (E) = Revenue; **Column3** (F) = Growth; **Column4** (G) = Margin.

Expected Result: Row 1 becomes the header row: Quarter, Revenue, Growth and Margin in semibold with a 2px dark rule below.

Step 8 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column4 pre-filled with the template text Column1 and so on, which is then replaced.

Step 9 — Fill in Row 2

Action: Select **Row 2** in the content tree and enter in the properties panel: **Column1** (H) = Q1 FY26; **Column2** (I) = USD 7.4 bn; **Column3** (J) = 4.2%; **Column4** (K) = 24.8%.

Expected Result: The body row Q1 FY26, USD 7.4 bn, 4.2% and 24.8% appears below the header.

Step 10 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column4 pre-filled with the template text Column1 and so on, which is then replaced.

Step 11 — Fill in Row 3

Action: Select **Row 3** in the content tree and enter in the properties panel: **Column1** (L) = Q2 FY26; **Column2** (M) = USD 7.6 bn; **Column3** (N) = 5.1%; **Column4** (O) = 25.1%.

Expected Result: The row Q2 FY26, USD 7.6 bn, 5.1% and 25.1% follows with a light 1px separator.

Step 12 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column4 pre-filled with the template text Column1 and so on, which is then replaced.

Step 13 — Fill in Row 4

Action: Select **Row 4** in the content tree and enter in the properties panel: **Column1** (P) = Q3 FY26; **Column2** (Q) = USD 7.9 bn; **Column3** (R) = 5.6%; **Column4** (S) = 25.4%.

Expected Result: The row Q3 FY26, USD 7.9 bn, 5.6% and 25.4% follows.

Step 14 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column4 pre-filled with the template text Column1 and so on, which is then replaced.

Step 15 — Fill in Row 5

Action: Select **Row 5** in the content tree and enter in the properties panel: **Column1** (T) = Q4 FY26; **Column2** (U) = USD 8.1 bn; **Column3** (V) = 6.0%; **Column4** (W) = 25.9%.

Expected Result: The last row Q4 FY26, USD 8.1 bn, 6.0% and 25.9% completes the table.

Step 16 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A full-width four-column table with the semibold header on a 2px dark rule and four data rows divided by light rules.

Step 17 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Step 18 — Verify

Action: On the live page check: All five rows have four cells in Preview.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 11 — 5 Columns

Reproduces the screenshot `screenshots/table-5-columns.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Industry capabilities; **Title Type** (B) = h2.

Expected Result: The H2 Industry capabilities shows directly above the table and later names it (aria-labelledby).

Step 4 — Add the Table

Action: Select the section in the content tree, choose **Add (+)** and pick **Table**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 5 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (C) = 5 Columns.

Expected Result: Columns is set to 5 Columns, so Add (+) on the Table now offers Rows with 5 column fields.

Step 6 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 7 — Fill in Row 1

Action: Select **Row 1** in the content tree and enter in the properties panel: **Column1** (D) = Capability; **Column2** (E) = Banking; **Column3** (F) = Retail; **Column4** (G) = Manufacturing; **Column5** (H) = Insurance.

Expected Result: Row 1 becomes the header row: Capability, Banking, Retail, Manufacturing and Insurance in semibold.

Step 8 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 9 — Fill in Row 2

Action: Select **Row 2** in the content tree and enter in the properties panel: **Column1** (I) = Cloud migration; **Column2** (J) = Core banking; **Column3** (K) = E-commerce platforms; **Column4** (L) = Plant systems; **Column5** (M) = Policy administration.

Expected Result: The row Cloud migration, Core banking, E-commerce platforms, Plant systems and Policy administration appears.

Step 10 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 11 — Fill in Row 3

Action: Select **Row 3** in the content tree and enter in the properties panel: **Column1** (N) = Enterprise AI; **Column2** (O) = Fraud detection; **Column3** (P) = Personalisation; **Column4** (Q) = Predictive maintenance; **Column5** (R) = Claims automation.

Expected Result: The row Enterprise AI, Fraud detection, Personalisation, Predictive maintenance and Claims automation follows.

Step 12 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 13 — Fill in Row 4

Action: Select **Row 4** in the content tree and enter in the properties panel: **Column1** (S) = Cybersecurity; **Column2** (T) = Identity and access; **Column3** (U) = Payment security; **Column4** (V) = OT security; **Column5** (W) = Data protection.

Expected Result: The row Cybersecurity, Identity and access, Payment security, OT security and Data protection follows.

Step 14 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 15 — Fill in Row 5

Action: Select **Row 5** in the content tree and enter in the properties panel: **Column1** (X) = Consulting; **Column2** (Y) = Regulatory change; **Column3** (Z) = Store operations; **Column4** (AA) = Supply chain; **Column5** (AB) = Distribution models.

Expected Result: The last row Consulting, Regulatory change, Store operations, Supply chain and Distribution models completes the table.

Step 16 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A full-width five-column table with semibold industry headers on a 2px dark rule and four capability rows with light separators.

Step 17 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Step 18 — Verify

Action: On the live page check: At 390 px the region is focusable and scrolls to show Insurance.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 12 — Scroll region (automatic)

Reproduces the screenshot `screenshots/table-scroll-region.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Industry capabilities; **Title Type** (B) = h2.

Expected Result: The H2 Industry capabilities shows directly above the table and later names it (aria-labelledby).

Step 4 — Add the Table

Action: Select the section in the content tree, choose **Add (+)** and pick **Table**.

Expected Result: A Title and then a Table are added to the section; the empty Table shows nothing until Rows exist.

Step 5 — Fill in Table › Content

Action: Select **Table** in the content tree and open the **Content** tab of the properties panel. Enter: **Columns** (C) = 5 Columns.

Expected Result: Columns is set to 5 Columns, so Add (+) on the Table now offers Rows with 5 column fields.

Step 6 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 7 — Fill in Row 1

Action: Select **Row 1** in the content tree and enter in the properties panel: **Column1** (D) = Capability; **Column2** (E) = Banking; **Column3** (F) = Retail; **Column4** (G) = Manufacturing; **Column5** (H) = Insurance.

Expected Result: Row 1 becomes the header row: Capability, Banking, Retail, Manufacturing and Insurance in semibold.

Step 8 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 9 — Fill in Row 2

Action: Select **Row 2** in the content tree and enter in the properties panel: **Column1** (I) = Cloud migration; **Column2** (J) = Core banking; **Column3** (K) = E-commerce platforms; **Column4** (L) = Plant systems; **Column5** (M) = Policy administration.

Expected Result: The row Cloud migration, Core banking, E-commerce platforms, Plant systems and Policy administration appears.

Step 10 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 11 — Fill in Row 3

Action: Select **Row 3** in the content tree and enter in the properties panel: **Column1** (N) = Enterprise AI; **Column2** (O) = Fraud detection; **Column3** (P) = Personalisation; **Column4** (Q) = Predictive maintenance; **Column5** (R) = Claims automation.

Expected Result: The row Enterprise AI, Fraud detection, Personalisation, Predictive maintenance and Claims automation follows.

Step 12 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 13 — Fill in Row 4

Action: Select **Row 4** in the content tree and enter in the properties panel: **Column1** (S) = Cybersecurity; **Column2** (T) = Identity and access; **Column3** (U) = Payment security; **Column4** (V) = OT security; **Column5** (W) = Data protection.

Expected Result: The row Cybersecurity, Identity and access, Payment security, OT security and Data protection follows.

Step 14 — Add a Row

Action: Select the Table in the content tree, choose **Add (+)** and pick **Row**.

Expected Result: Each Add (+) › Row adds a Row with Column1 to Column5 pre-filled with the template text Column1 and so on, which is then replaced.

Step 15 — Fill in Row 5

Action: Select **Row 5** in the content tree and enter in the properties panel: **Column1** (X) = Consulting; **Column2** (Y) = Regulatory change; **Column3** (Z) = Store operations; **Column4** (AA) = Supply chain; **Column5** (AB) = Distribution models.

Expected Result: The last row Consulting, Regulatory change, Store operations, Supply chain and Distribution models completes the table.

Step 16 — Preview

Action: Screen width: 390 px (mobile).

Expected Result: At 390 px the table scrolls sideways inside the block; after Tab the block shows the brand focus outline.

Step 17 — Preview

Action: Action: Scroll the table to the right, then press Tab until the table is focused.

Expected Result: At 390 px the table scrolls sideways inside the block; after Tab the block shows the brand focus outline.

Step 18 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The table shifted to the left inside its block, showing the middle columns at 0.75rem text, and the brand outline offset 0.25rem around the focused block.

Step 19 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish the page: the table is part of its HTML with no fragment or sheet, so Publish to Preview updates aem.page and Publish to Live aem.live; the fallback region label Table comes from the placeholders sheet, a separate publish step.

Step 20 — Verify

Action: On the live page check: The block has aria-label Industry capabilities and the table aria-labelledby the heading id.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.25.6 Authorable Field Specification

Model `table` (the block)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Options (`classes`) — Content tab	Multiselect (grouped)	No	Yes	None	Visual and header options	Border group: Striped, Bordered; Header group: No Header, First Column Header	Enforced: option list	Striped; First Column Header
Columns (`filter`) — Content tab	Select	No	No	1 Column (`table`)	Decides which Row type can be added	Choose before adding Rows	Enforced: option list (1–5 Columns)	3 Columns
Anchor ID (`classes_anchor`) — Additional tab	Text	No	No	Empty	Target for `#anchor-…` links	Start with `anchor-`; unique on the page	Enforced: regExp `^anchor-[a-z0-9][a-z0-9-]*$`; duplicates get `-2`, `-3` in code	anchor-results
Hide block (`classes_hideblock`) — Additional tab	Boolean	No	No	Off	Hide the block without deleting it	Use temporarily	—	Off
Padding left (`classes_paddingleft`) — Additional tab	Select	No	No	Default	Extra inner space on the left	Use spacing tokens only	Enforced: option list	1rem (space-400)
Padding right (`classes_paddingright`) — Additional tab	Select	No	No	Default	Extra inner space on the right	As above	Enforced: option list	1rem (space-400)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Padding top (`classes_paddingtop`) — Additional tab	Select	No	No	Default	Extra inner space above	As above	Enforced: option list	0 (none)
Padding bottom (`classes_paddingbottom`) — Additional tab	Select	No	No	Default	Extra inner space below	As above	Enforced: option list	0 (none)
Margin left (`classes_marginleft`) — Additional tab	Select	No	No	Default	Outer space on the left	As above	Enforced: option list	Default
Margin right (`classes_marginright`) — Additional tab	Select	No	No	Default	Outer space on the right	As above	Enforced: option list	Default
Margin top (`classes_margintop`) — Additional tab	Select	No	No	Default	Outer space above	As above	Enforced: option list	1.5rem (space-600)
Margin bottom (`classes_marginbottom`) — Additional tab	Select	No	No	Default	Outer space below	As above	Enforced: option list	2rem (space-800)

Model `table-row` (Row, 1 column)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Column1 (`column1text`)	Rich text	No (Recommended: fill)	No	“Column1” (template text of a new Row)	The cell value	Replace the template text	None in the model	Cloud services

Model `table-col-2` (Row, 2 columns)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Column1 (`column1text`)	Rich text	No (Recommended: fill)	No	“Column1”	First cell (row label with First Column Header)	Short label	None	Founded
Column2 (`column2text`)	Rich text	No (Recommended: fill)	No	“Column2”	Second cell	Value	None	1968

Model `table-col-3` (Row, 3 columns)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Column1 (`column1text`)	Rich text	No (Recommended: fill)	No	“Column1”	First cell	Short label or value	None	09:00
Column2 (`column2text`)	Rich text	No (Recommended: fill)	No	“Column2”	Second cell	Value	None	Keynote
Column3 (`column3text`)	Rich text	No (Recommended: fill)	No	“Column3”	Third cell	Value	None	CEO

Model `table-col-4` (Row, 4 columns)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Column1 (`column1text`)	Rich text	No (Recommended: fill)	No	"Column1"	First cell	Short label	None	Q1 FY27
Column2 (`column2text`)	Rich text	No (Recommended: fill)	No	"Column2"	Second cell	Value	None	[To be confirmed: figure — owner: content owner]
Column3 (`column3text`)	Rich text	No (Recommended: fill)	No	"Column3"	Third cell	Value	None	5.2%
Column4 (`column4text`)	Rich text	No (Recommended: fill)	No	"Column4"	Fourth cell	Value	None	24.1%

Model `table-col-5` (Row, 5 columns)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Column1 (`column1text`)	Rich text	No (Recommended: fill)	No	"Column1"	First cell	Short label	None	Mumbai
Column2 (`column2text`)	Rich text	No (Recommended: fill)	No	"Column2"	Second cell	Value	None	India
Column3 (`column3text`)	Rich text	No (Recommended: fill)	No	"Column3"	Third cell	Value	None	Headquarters
Column4 (`column4text`)	Rich text	No (Recommended: fill)	No	"Column4"	Fourth cell	Value	None	+91 …
Column5 (`column5text`)	Rich text	No (Recommended: fill)	No	"Column5"	Fifth cell	Value	None	Open

Field details

- **Options (`classes`)** — Purpose: style and header behaviour. Allowed Values: `striped`, `bordered`, `no-header`, `row-header` (any combination). Character Limits: n/a. Business Rules: options are added as block classes; No Header removes the `<thead>`; First Column Header makes the first cell of each body row a row header. Dependency Rules: Striped with No Header shades the first row; none. Visibility Rules: always visible (no `condition`). Sample Content: Striped + First Column Header.
- **Columns (`filter`)** — Purpose: chooses the Row type the block accepts (`table` → Row with 1 column, `table-2-columns` … `table-5-columns`). Allowed Values: 1–5 Columns. Character Limits: n/a. Business Rules: changing it later does not convert existing Rows; Rows already added keep their column count. Dependency Rules: decides the item model for new Rows. Visibility Rules: always visible. Sample Content: 4 Columns.
- **Anchor ID (`classes_anchor`)** — Purpose: a stable id for links (`#anchor-results`). Allowed Values: `anchor-` followed by lower-case letters, digits and hyphens. Character Limits: none enforced (Recommended: under 40 characters). Business Rules: becomes the block's `id`; if the id is already used on the page, `-2`, `-3`, … is appended; also used as the data layer component id. Dependency Rules: none. Visibility Rules: always visible. Sample Content: `anchor-results`.
- **Hide block (`classes_hideblock`)** — Purpose: hide the block on the published page. Allowed Values: on / off. Business Rules: hidden with `display: none` (also its wrapper) outside edit mode; shown at 45% opacity with a dashed outline in Universal Editor edit mode. Visibility Rules: always visible. Sample Content: off.
- **Padding left / right / top / bottom (`classes_padding*`)** — Purpose: inner spacing from the spacing tokens. Allowed Values: Default (none), 0 (none), 0.25rem (space-100), 0.5rem (space-200), 0.75rem (space-300), 1rem (space-400), 1.25rem (space-500), 1.5rem (space-600), 2rem (space-800), 2.5rem (space-1000), 3rem

(space-1200), 4rem (space-1600), 5rem (space-2000), 6rem (space-2400), 7.5rem (space-3000); classes `pl-*`, `pr-*`, `pt-*`, `pb-*`. Business Rules: the same value on every breakpoint; styled by `styles/styles.css` (`main .section .block.pl-400`, …). Visibility Rules: always visible. Sample Content: Default.

- **Margin left / right / top / bottom (`classes_margin*`)** — Purpose: outer spacing. Allowed Values: as padding; classes `ml-*`, `mr-*`, `mt-*`, `mb-*`. Business Rules: same on every breakpoint. Visibility Rules: always visible. Sample Content: Margin bottom 2rem.
- **Column1 … Column5 (`column{n}text`)** — Purpose: the cell content. Allowed Values: rich text. Character Limits: none enforced; Recommended: header cells up to 30 characters, data cells up to 80 characters. Business Rules: content is moved into the `<th>` / `<td>` as authored; a paragraph containing only a link is turned into a link button by the content buttons decorator (bold link: primary button). Dependency Rules: the cell type (header / data) depends on the row position and the Options. Visibility Rules: always visible. Sample Content: "Revenue (USD bn)".

6.25.7 Field Annotation Mapping

Marker	Field	Purpose
A	Heading (default content, outside the block)	Names the table (`aria-labelledby`) and the scroll region
B	Table block: Options, Columns, Additional tab fields	Block-level styles, row type and spacing
C	First Row: Column1 … ColumnN	Column headers (unless No Header)
D	Cell: Column{n} (`column{n}text`)	The value of one cell
E	Body Row: Column1 … ColumnN	One line of data (first cell a row header with First Column Header)
F	Add (+) Row	Adds a Row of the type selected in Columns

6.25.8 Component Specification

Attribute	Value
Component Name	Table (`blocks/table`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`scripts/scripts.js` (moveInstrumentation); `utils/ids.js`; `utils/placeholders.js`; block options, data layer and content buttons decorators; ResizeObserver
Component Type	Container block (block with Row items)
Supported Variants	Standard; No Header; First Column Header; No Header + First Column Header; Striped; Bordered; 1–5 Columns; automatic scroll region
Supported Templates	Any page (all templates; any section)
Supported Metadata	None (the block reads no page metadata)
Supported Tags	None
Supported Personalization	None in code; future personalisation via the data layer and Adobe Target (not implemented)
Caching Considerations	Rendered from the page HTML, cached by the Edge Delivery CDN with the page; the placeholders sheet is fetched once per page and cached in memory; no other data is fetched
Performance Considerations	Small JS and CSS loaded only when the block is on the page; eager if in the first section, else lazy; no images; one ResizeObserver per table; no layout shift (rendered once)

Attribute	Value
Accessibility Compliance	Native table semantics; `scope="col"` / `scope="row"`; `aria-labelledby` to the heading before it; focusable named scroll region with visible focus (WCAG 1.3.1, 2.1.1, 2.4.7, 4.1.2)
SEO Compliance	Real `<table>`, `<thead>`, `<th>` markup in the DOM; the text stays crawlable; no images of text

6.25.9 Input Model

Content Inputs: The block's Rows, each with 1–5 rich-text cells.

Metadata Inputs: None.

Tags Inputs: None.

Page Context Inputs: The heading directly before the block (the last child of the preceding `.default-content-wrapper`, or a heading that is the preceding sibling of the block wrapper); the locale (for the placeholders sheet).

Query Inputs: None (no query index or sheet besides placeholders).

Manual Inputs: Options (classes), Columns (filter), Additional tab classes.

Authored HTML received from AEM (example, 3 columns, Striped + First Column Header):

```
<div class="table striped row-header">
  <div>
    <div><p>Office</p></div>
    <div><p>Country</p></div>
    <div><p>Type</p></div>
  </div>
  <div>
    <div><p>Mumbai</p></div>
    <div><p>India</p></div>
    <div><p>Headquarters</p></div>
  </div>
</div>
```

6.25.10 Output Model

Rendered Output: The block content is replaced by one `<table>`: optional `<thead>` with the first row (`<th scope="col">`), a `<tbody>` with the other rows (`<td>`, or `<th scope="row">` as first cell with First Column Header). The table gets `aria-labelledby` pointing to the heading before it (which receives an id `table-title-N` if it has none). When the table overflows, the block (`div.table.block`) gets `tabindex="0"`, `role="region"` and `aria-label`.

Generated HTML (example):

```
<h2 id="table-title-1">Our offices</h2>
<div class="table-wrapper">
  <div class="table striped row-header block" data-block-name="table"
       tabindex="0" role="region" aria-label="Our offices">
    <table aria-labelledby="table-title-1">
      <thead><tr><th scope="col">Office</th><th scope="col">Country</th>
        <th scope="col">Type</th></tr></thead>
      <tbody><tr><th scope="row">Mumbai</th><td>India</td><td>Headquarters</td></tr></
tbody>
    </table>
  </div>
</div>
```

Generated JSON: None.

Generated Metadata: None.

Analytics Tracking: Generic data layer handling (`decorators/data-layer-decorator.js`):

```
{ "component": { "table-1": { "@type": "tcs-corp/components/table",
  "parentId": "page-1x2y3z" } } }
```

`dc:title` is added only if a heading is inside the block (normally it is left out). The component id is the Anchor ID when set, else `table-{n}`. Clicks on links in cells push:

```
{ "event": "cmp:click", "eventInfo": { "path": "component.table-1", "interaction": "link",
  "dc:title": "Annual report", "xdm:linkURL": "https://…/report.pdf",
  "xdm:linkType": "download", "breakpoint": "mobile" } }
```

Personalization Output: None.

Search Index Output: The query index (`helix-query.yaml`) indexes page metadata columns, not table content; the table text is part of the page HTML for external search engines.

Target Personalization Output: None in code; the table is in the data layer as tcs-corp/components/table and clicks on links in cells push cmp:click, available for future personalisation with Adobe Target (not implemented).

6.25.11 Business Rules

1. Every child row of the block becomes a table row, in authored order.
2. The first row is the header row (`<thead>`, `<th scope="col">`) unless the `no-header` class is set.
3. With `row-header`, the first cell of every body row is `<th scope="row">`; in the header row the first cell stays a column header.
4. `no-header` and `row-header` can be combined; Striped and Bordered can be combined with everything.
5. Without a header row no `<thead>` is output; the first body row gets a 2px top border.
6. The number of cells per row is whatever the Row type delivers; the code does not pad rows or add colspans, so rows of different Row types produce ragged rows.
7. Cell content is moved as authored (rich text kept); editor instrumentation is moved to the new `<tr>` / `<td>` / `<th>` so in-place editing keeps working.
8. The heading before the table is found only if it is the last element of the immediately preceding default content wrapper (or the immediately preceding sibling of the block wrapper). If found and without an id, it gets `table-title-N`; the table gets `aria-labelledby`.
9. The scroll region is applied only while the content overflows (`scrollWidth > clientWidth + 1`) and removed when it fits; its label is the heading text, else the placeholder `table` (fallback "Table").
10. Empty block (no Rows): an empty `<table>` with an empty `<tbody>` is rendered (nothing visible).
11. Columns is limited to 1–5; a new Row is pre-filled with "Column1" … "ColumnN".
12. Changing Columns affects only Rows added afterwards.
13. Links alone in a cell paragraph are converted to link buttons by the content buttons decorator before the block is decorated (bold → primary button, italic → secondary, per the button options).
14. Additional tab: Anchor ID becomes the id (de-duplicated); Hide block hides it outside edit mode; padding / margin classes apply the spacing tokens on all breakpoints.
15. Text size: `--body-font-size-s` below 900px, `--body-font-size-m` from 900px.

6.25.12 Author Best Practices

Recommended Content Length: Up to 5 columns (maximum) and Recommended up to about 20 rows per table; header cells Recommended ≤ 30 characters; data cells Recommended ≤ 80 characters; split long tables by topic under separate headings.

Image Dimensions: Not applicable; images are not part of the table design (Recommended: no images in cells).

CTA Writing Guidelines: Links in cells should describe the target ("Download the annual report (PDF)"), not "Click here". Avoid buttons in cells; keep links inline in text where possible.

Accessibility Guidelines: Always place a descriptive heading directly before the table; use a header row (avoid No Header unless the data is obvious); use First Column Header for row labels; never leave header cells empty; don't use the table for layout; avoid merged meaning across cells; write units in the header ("Revenue (USD bn)").

SEO Guidelines: Use real text, not images of tables; give the heading before the table the key topic words; keep numbers and labels consistent with the page text.

Metadata Guidelines: No block metadata; ensure the page's Title and Description describe the data's topic.

Taxonomy Guidelines: Not applicable to the block; tag the page as usual.

Localization Guidelines: Translate all cell text in each locale; check that translated text (German, French) does not make the table much wider; adapt number and date formats to the locale (the block doesn't format them); the region label fallback comes from each locale's placeholders sheet (key `table`).

6.25.13 Troubleshooting Guide

Issue 1 — The first row of data is shown as a header

Symptoms: The first data row appears semibold with a thick rule below it.

Root Cause: The first row is always the header unless No Header is selected.

Diagnosis Steps: Select the block; check Options for No Header.

Resolution Steps: Either add a header Row at the top (and move it first in the content tree) or select No Header.

Validation Steps: Preview: the first row has normal weight (No Header) or column titles.

Preventive Measures: Always author the header Row first.

Issue 2 — "Add" offers only one-column Rows

Symptoms: New Rows have only Column1.

Root Cause: Columns is set to 1 Column (default filter `table`).

Diagnosis Steps: Select the block; check the Columns value.

Resolution Steps: Set Columns to the needed count; delete the one-column Rows and add new ones.

Validation Steps: A new Row shows Column1 … ColumnN in the properties panel.

Preventive Measures: Choose Columns before adding Rows.

Issue 3 — Ragged rows (some rows have fewer cells)

Symptoms: Some rows end early; borders and stripes don't line up.

Root Cause: Rows of different Row types (column counts) are mixed after Columns was changed.

Diagnosis Steps: Select each Row and count its fields in the properties panel.

Resolution Steps: Recreate the short Rows with the correct type and copy the values over.

Validation Steps: All rows have the same number of cells in preview.

Preventive Measures: Don't change Columns once Rows exist.

Issue 4 — Text "Column1", "Column2" visible on the page

Symptoms: Template text appears in published cells.

Root Cause: A new Row is pre-filled with the template values and wasn't edited.

Diagnosis Steps: Search the page preview for "Column".

Resolution Steps: Replace or clear the text in those cells.

Validation Steps: No template text in preview.

Preventive Measures: Validation checklist before publishing.

Issue 5 — The page scrolls sideways on mobile

Symptoms: The whole page can be dragged horizontally.

Root Cause: Normally prevented by `overflow-x: auto` on the block; a wide element inside a cell (for example a very long URL in a link button, or a margin from the Additional tab) or custom spacing can push beyond the section.

Diagnosis Steps: Inspect the page in the browser's device mode; find the element exceeding the viewport.

Resolution Steps: Shorten long unbreakable text (use link text instead of URLs), remove large left / right margins from the Additional tab.

Validation Steps: At 390px only the table scrolls.

Preventive Measures: Use descriptive link text; keep cell values short.

Issue 6 — Screen readers announce "Table" instead of the table's title

Symptoms: The scroll region or the table is announced without the expected name.

Root Cause: No heading is directly before the block (another element, or a heading in a different section), so no `aria-labelledby` and the fallback label "Table" are used.

Diagnosis Steps: In DevTools, check that the `<table>` has `aria-labelledby`; check what precedes the block wrapper.

Resolution Steps: Put the heading as the last default content element right before the table in the same section.

Validation Steps: `aria-labelledby` present; region label equals the heading text.

Preventive Measures: Always add a heading before a table.

Issue 7 — A link in a cell looks like a button

Symptoms: A cell link renders as a link button or a filled button.

Root Cause: The content buttons decorator turns a link that is alone in its paragraph into a link button (bold / italic links into buttons).

Diagnosis Steps: Check the cell's rich text: is the link the only content of the paragraph, or bold / italic?

Resolution Steps: Add text around the link in the same paragraph, or remove bold / italic.

Validation Steps: The link renders inline.

Preventive Measures: Write links inside sentences in table cells.

6.25.14 Support Runbook

Monitoring Requirements

- No runtime service; monitor page availability and Core Web Vitals (RUM / PageSpeed Insights) of pages with large tables.
- Check the placeholders sheet of each locale is published (`/{locale}/placeholders.json`).

Logs

- Browser console: the block emits no messages of its own. A failure would appear as an error in `table.js` (for example in very old browsers without `ResizeObserver`).
- Admin API / AEM Sidekick: preview and publish status of the page (`admin.hlx.page` status).
- AEM author: replication / publication logs for the page.

Common Errors

Error	Likely cause	Fix
Header row missing	No Header selected	Remove No Header
Ragged rows	Mixed Row types	Recreate Rows with one type
Template text published	New Rows not edited	Replace “ColumnN”
No table name	No heading before the block	Add a heading directly before
Table not visible	Hide block on	Turn off Hide block
Anchor link not jumping	Anchor ID invalid or duplicated (−2 suffix)	Fix the ID; update links

Escalation Matrix

Level	Who	Checks
L1	Author support	Options, Columns, Row types, template text, heading before table, Hide block, page published
L2	AMS / site admin	Preview vs live HTML (`.plain.html`), CDN cache, placeholders sheet published, publication logs
L3	Development team	`table.js` / `table.css` behaviour, console errors, browser support, code changes in `main`
L4	Adobe Support	Edge Delivery delivery or Universal Editor platform issues (rendering of Rows, instrumentation)

Recovery Procedures

1. Restore the previous page version in AEM and republish.
2. If a code change broke tables, revert the commit on `main` (code sync redeploys automatically) and verify on `main--tcs-corp--sradha-tcs.aem.page`.
3. Hide the block temporarily (Hide block) while fixing the content.

Health Checks

- Open a page with a table on desktop and mobile; check header semantics in the accessibility tree (DevTools > Accessibility).
- Confirm `aria-labelledby` and the region attributes on overflow.

Operational Procedures

- New column counts (6+) require a new Row model and filter in `_table.json` and `npm run build:json` (development task).
- Placeholder text for `table` is maintained per locale in the placeholders sheet.

Known Limitations

- Maximum 5 columns; no merged cells (colspan / rowspan), no sorting, filtering, captions (`<caption>`), column alignment options or sticky headers / first column.
- No responsive stacked layout: wide tables scroll horizontally.
- Changing Columns does not convert existing Rows.
- Only the heading immediately before the table names it.

6.25.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
The first data row is shown as a header	The first Row is always the header unless No Header	Add a header Row first or select No Header
Add offers only one-column Rows	Columns left at 1 Column	Set Columns, then add new Rows
Ragged rows	Columns changed after Rows existed	Recreate short Rows with the right type
Template text Column1 on the page	New Rows are pre-filled and were not edited	Replace or clear the text
The page scrolls sideways on mobile	Long URLs in cells or large left / right margins	Use link text and remove the margins
Screen readers announce Table	No heading directly before the block	Put the heading last before the Table in the same section
A link in a cell looks like a button	The link is alone in its paragraph	Add text around the link or remove bold / italic
Values not announced with their labels	Key / value table without First Column Header	Select First Column Header

6.25.16 Author Quick Reference Guide

Mandatory Fields

- At least one Row — needed for anything to render (an empty Table shows nothing)
- Columns — must be chosen before adding Rows (not required in the model; default 1 Column)

Recommended Fields

- A heading directly before the table — names the table and the scroll region
- Row 1 with column titles — the header row unless No Header
- Options First Column Header — for row labels and key / value tables

Optional Fields

- Options Striped — shades odd body rows
- Options Bordered — borders around every cell
- Options No Header — first Row is data
- Anchor ID — anchor- id for # links
- Hide block — hides the table without deleting it
- Padding and Margin left, right, top, bottom — spacing tokens

Authoring Checklist

1. Add a Title with a heading directly before the table
2. Add Table and set Columns before adding Rows
3. Add the header Row first, then one Row per line of data

4. Replace all pre-filled Column1 to ColumnN text
5. Use Options for stripes, borders and header behaviour
6. Keep up to five columns and about 20 rows
7. Keep header cells up to 30 and data cells up to 80 characters
8. Use the same Row type in every row

Pre-Publish Checklist

1. Check no template text Column1, Column2 remains
2. Check every row has the same number of cells
3. Check at 390 px the table scrolls inside the block only
4. Tab to the scrolling table and check the outline and arrow-key scrolling
5. Check links in cells work and have meaningful text

Post-Publish Validation Checklist

1. Open the page on aem.live and check the table renders
2. Check the table has aria-labelledby pointing to the heading
3. Check #anchor links jump to the table if an Anchor ID is set
4. Check Hide block is off unless intended
5. Check localised versions do not widen the table too much

6.25.17 Component Execution Example

Business example: Office list on the English site.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Title
Title (Title)	Our offices
Title Type (Title)	h2
Component (Section › Add (+))	Table
Columns (Table › Content)	3 Columns
Item (Content tree › Table › Add (+))	Row
Column1 (Row 1)	Office
Column2 (Row 1)	Region
Column3 (Row 1)	Focus
Item (Content tree › Table › Add (+))	Row
Column1 (Row 2)	Amsterdam
Column2 (Row 2)	Europe
Column3 (Row 2)	Banking and insurance
Item (Content tree › Table › Add (+))	Row
Column1 (Row 3)	Boston
Column2 (Row 3)	Americas
Column3 (Row 3)	Life sciences

Field	Value
Item (Content tree › Table › Add (+))	Row
Column1 (Row 4)	Frankfurt
Column2 (Row 4)	Europe
Column3 (Row 4)	Manufacturing
Item (Content tree › Table › Add (+))	Row
Column1 (Row 5)	London
Column2 (Row 5)	Europe
Column3 (Row 5)	Financial services
Item (Content tree › Table › Add (+))	Row
Column1 (Row 6)	Madrid
Column2 (Row 6)	Europe
Column3 (Row 6)	Retail
Item (Content tree › Table › Add (+))	Row
Column1 (Row 7)	New York
Column2 (Row 7)	Americas
Column3 (Row 7)	Capital markets
Item (Content tree › Table › Add (+))	Row
Column1 (Row 8)	Paris
Column2 (Row 8)	Europe
Column3 (Row 8)	Energy and utilities
Item (Content tree › Table › Add (+))	Row
Column1 (Row 9)	Toronto
Column2 (Row 9)	Americas
Column3 (Row 9)	Public services
Options (Table › Content)	Striped

All other fields keep their default values.

Rendered Result:

Figure 18: Execution example — At 1440 px: the H2 Our offices above a 3-column table with the header row Office, Region, Focus and eight body rows from Amsterdam to Toronto; the 1st, 3rd, 5th and 7th body rows (Amsterdam, Frankfurt, Madrid, Paris) on a light grey background. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/table-striped.jpg)

Author Notes

- The Title Our offices (h2) is placed directly before the Table so it names the table.
- Columns 3 Columns is chosen before the first Row is added; Options is set to Striped.
- Row 1 Office, Region, Focus is the header; eight office Rows follow in alphabetical order.
- All pre-filled Column1 to Column3 texts are replaced before publishing.

Business Notes

- Visitors scan eight offices by region and focus in one readable list.
- The data stays text: searchable, translatable and readable by screen readers.
- Alternate shading helps reading across the three columns.

Technical Notes

- decorate() builds a table: Row 1 in thead with th scope col, the rest in tbody.
- The class striped shades tbody tr:nth-child(odd) with –color-bg-secondary.
- The heading before the block gets an id table-title-N and the table aria-labelledby.
- A ResizeObserver sets tabindex, role region and aria-label only while the table overflows.

6.26 Separator Block

The Separator is the Edge Delivery Services implementation of the AEM Core Components Separator: a horizontal division between pieces of content, rendered as one native `<hr>` element, with design-system variants, themes, widths, alignment, decorations, spacing, per-breakpoint (desktop / tablet / mobile) settings, an optional animation, print control and optional Adobe Client Data Layer state. Files: `blocks/separator/separator.js`, `separator-config.js` (normalisation of the settings, unit tested in `test/separator/separator-config.test.mjs`), `separator.css`, `_separator.json` and `README.md`. It is a key-value block: every dialog field arrives as a `name | value` row.

6.26.1 Component Purpose

Business Objective: Structure long pages visually and semantically with a consistent, design-system-controlled divider that authors can configure without CSS, that is accessible (semantic thematic break or purely decorative) and that never breaks the layout on any device.

Business Use Cases:

- Separate two stories, chapters or topics on a long article page (a semantic thematic break).
- Add a light visual rule below a section introduction (decorative).
- Add a short brand-coloured accent under a title (Branded, 25%, Start).
- Divide columns or content areas on desktop only (hidden on tablet / mobile).
- Add controlled vertical space only (Line style None), without a visible line.
- Create edge-to-edge dividers in a section (Full width / Full bleed).

When To Use:

- The topic changes within a section (Accessibility mode **Semantic**).
- A visual division between related content helps scanning (**Decorative**, the default).

When Not To Use:

- Only to add space when section spacing is enough (or use Line style None deliberately).
- To separate items of a list, cards or table rows (those blocks have their own dividers).
- Several separators in a row.
- As a heading replacement: a separator does not name the next section.

Dependencies:

Type	Dependency	Use
Code	`blocks/separator/separator-config.js`	Normalises properties (controlled lists, defaults, presets, legacy values) and builds the block classes; validation warnings; data layer entry
Code	`utils/properties.js` (`readProperties`, `textOf`)	Reads the key-value rows
Code	`utils/environment.js` (`isEditing`, `prefersReducedMotion`)	Editor notes; reduced-motion handling of the animation
Code	`utils/ids.js` (`uniqueId`)	Generated ids `separator-1`, `separator-2`, …; duplicate suffixes
Code	`utils/placeholders.js`	Editor note texts
Code	`utils/analytics.js` (`pushComponents`)	Data layer state when Analytics is on
Code	`decorators/block-options-decorator.js`	Additional tab (Anchor ID, Hide block, padding, margin)
Browser API	`IntersectionObserver`	Animate on view (only when an animation is set)
Sheet	`/{locale}/placeholders.json`	Keys `separatorHidden`, `separatorInvisible` (editor only)
Styles	`styles/styles.css` tokens	`--color-border-*`, `--slate-*`, `--brand-*`, `--white-*`, `--black-*`, `--border-width-*`, `--space-*`, `--content-max-width`, `--section-padding-inline`
Model	`models/_section.json`	Allows the Separator in sections

Related Components: Section (spacing, and the `dark` / `brand` section styles that Theme Auto follows), Table, Cards / List (own dividers), Anchor List (in-page navigation by Anchor ID).

Applicable Templates: Any page (home, article, blog, press-release, standard pages), in any section.

Supported Content Types: No content of its own: the separator renders no text, links or images on the published page. An `<hr>` authored inside the block is reused.

Business Problem Solved

Long corporate pages need consistent dividers between topics, but hand-made rules or empty paragraphs gave inconsistent colours, widths and spacing, were invisible or noisy for screen readers and broke on mobile. The Separator gives authors one native hr with design-system variants, themes, widths, spacing and per-device settings, without CSS, and lets them choose between a decorative rule and a semantic thematic break.

Supported Taxonomy

None: the Separator has no tag field and reads no page tags or taxonomy (Supported Tags: None).

6.26.2 Visual Overview

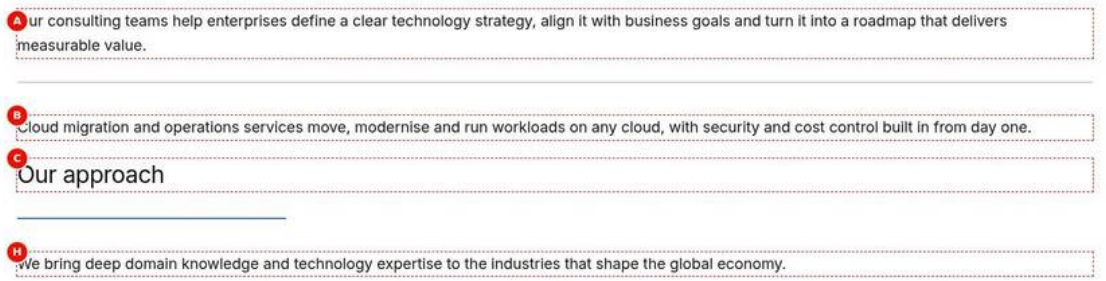

Figure 19: Desktop rendering — The section at 1440 px: a paragraph, a Default separator (solid 1px slate 400 line across the 1280 px content width), a second paragraph, the H3 Our approach, a Branded separator (2px brand 500 line, 25% wide, at the start edge) below the heading, and the last paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/separator-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The section at 1440 px: a paragraph, a Default separator (solid 1px slate 400 line across the 1280 px content width), a second paragraph, the H3 Our approach, a Branded separator (2px brand 500 line, 25% wide, at the start edge) below the heading, and the last paragraph.
Business Context	An article or service page that needs a neutral break between two service paragraphs and a short brand accent under a sub-heading, without any custom CSS.
Author Objective	Add a Default separator between two paragraphs and a Branded 25% start-aligned separator directly under the Our approach heading.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
		dustries that shape the global econ-omy.				

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin light-grey rule across the full content width with 1.5rem space above and below; under Our approach a short, thicker brand-blue line that starts at the left content edge.
- **Rendering behaviour:** From 1200 px the desktop rules apply: the Default line is 100% of the content width, capped at 90rem by Respect content maximum width; the Branded line is 25% of the same width, positioned by Alignment Start (the right edge in right-to-left languages).
- **Publishing behaviour:** The separator has no assets of its own: Publish in Universal Editor sends the page to preview (aem.page) or live (aem.live) and both separators appear with the page. Nothing else needs publishing.

Business Rules

- A new Separator is Decorative, Default, Theme Auto, 100% wide and centred with 1.5rem space above and below.
- Branded presets a solid medium (2px) line in the primary colour; Separator width 25% overrides only the preset width.
- Alignment Start and End are logical values: they follow the reading direction of the page.
- Both separators stay decorative (aria-hidden): the H3 Our approach, not the line, names the next part.

Common Authoring Mistakes

Error	Root Cause	Resolution
The branded accent spans the whole width	Separator width left on As the variant, so the Branded preset width 100% applies	Set Appearance > Separator width to 25% and Alignment to Start
The accent is centred under the left-aligned heading	Alignment left on its default Center	Choose Alignment Start on the Appear-ance tab
The accent sits far below the heading	Default 1.5rem top spacing plus the heading's bottom margin	Set Desktop top spacing to None or XS on the Spacing tab

Troubleshooting

- **Symptoms:** The second separator shows as a thin grey line instead of a short blue accent.
- **Cause:** Separator variant was not saved as Branded (still Default), so the default preset with colour default and width 100% applies.
- **Resolution:** Select the separator, set General > Separator variant to Branded and Appearance > Separator width to 25%, then publish again.
- **Verification Steps:** On aem.page at 1440 px the block has the classes variant-branded and width-25-percent and the line is blue and short.

Desktop (≥ 1200px): The block is a flex row; the line (`.separator-line` containing the `<hr class="separator-rule">`) is centred by default (`justify-content` from Alignment). Default look: a solid 1px (`--border-width-100`) line in the default palette colour (`--color-border-neutral-tertiary`, slate 400 #b2b2b2) at 100% of the content

width, capped at `--content-max-width` (90rem) because Respect content maximum width is on by default. Space above and below is padding of 1.5rem (`--space-600`, "24px"). Settings prefixed "Desktop" apply only here.

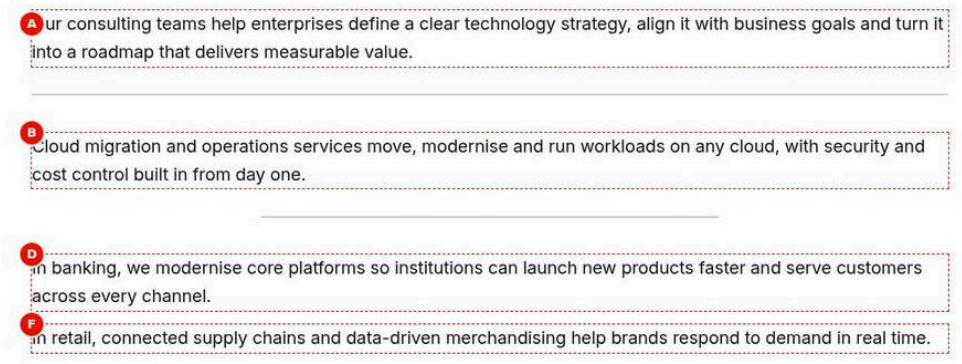

Figure 20: Tablet rendering — The section at 1024 px: four paragraphs; a full-width thin grey separator after the first, a separator at 50% of the content width, centred, after the second, and no separator between the third and fourth paragraphs because Show on tablet is off. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/separator-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The section at 1024 px: four paragraphs; a full-width thin grey separator after the first, a separator at 50% of the content width, centred, after the second, and no separator between the third and fourth paragraphs because Show on tablet is off.
Business Context	A long industry overview read on tablets, where one divider should be shorter in the tablet range and another is not wanted there at all.
Author Objective	Set one separator to Tablet width 50% and turn Show on tablet off for another, then check both at 1024 px.

Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The first line spans the content width; the second is half as long and centred; between the banking and retail paragraphs there is no line and no extra 1.5rem space.
- **Rendering behaviour:** Tablet values apply only from 600 to 1199 px: at 1024 px the second line is 50% wide and the third separator is display: none; at 1440 px and 390 px both show at 100%.
- **Publishing behaviour:** Publish sends the page to preview or live; the responsive settings are CSS classes on the block, so all widths are served from the same published page with no extra step.

Business Rules

- Tablet width overrides the Appearance width only between 600 and 1199 px; As Appearance keeps the Appearance value.
- Show on tablet off removes the separator and its spacing in the tablet range only, also from the accessibility tree.
- The editor canvas shows the settings of the current editor width; check other ranges in Preview.
- A partial tablet width is centred unless Tablet alignment or Alignment says otherwise.

Common Authoring Mistakes

Error	Root Cause	Resolution
The 50% width also appears on desktop	Separator width 50% set on the Appear-ance tab instead of Tablet width	Reset Appearance width to As the variant and set Responsive > Tablet width to 50%
The hidden separator still shows on the tablet	The tablet is wider than 1199 px (desktop range) in landscape	Use Show on desktop as well or check the device width against the 600 to 1199 px range

Troubleshooting

- **Symptoms:** At 1024 px the third separator is still visible between the banking and retail paragraphs.
- **Cause:** Show on tablet was not saved as off, or the toggle was changed on another separator.
- **Resolution:** Select the third separator, open the Responsive tab, turn Show on tablet off and publish the page.
- **Verification Steps:** At 1024 px the block has the class hide-tablet and no line appears; at 1440 px it is visible.

Tablet (600–1199px): Same rendering; Tablet width / thickness / alignment / spacing overrides and Show on tablet apply only in this range (`@media (600px <= width < 1200px)`). Full bleed adds 2 × `--section-padding-inline` (2.5rem each side at this size).

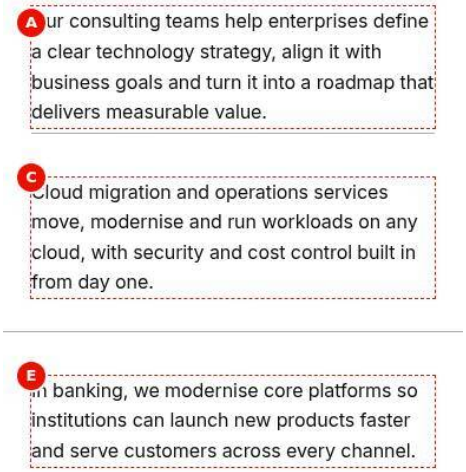

Figure 21: Mobile rendering — The section at 390 px: a thin grey separator directly under the first paragraph (Mobile top spacing None), the second paragraph, then a thin grey full-bleed separator touching both screen edges, and the banking paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/separator-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The section at 390 px: a thin grey separator directly under the first paragraph (Mobile top spacing None), the second paragraph, then a thin grey full-bleed separator touching both screen edges, and the banking paragraph.
Business Context	A mobile reading flow where one divider must sit tight under a paragraph and another should run edge to edge across the phone screen.
Author Objective	Remove the top spacing of one separator on mobile and make another separator full bleed, then check both at 390 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree,	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Separator	
(B)	Mobile top spacing (Separator › Spacing)	None	No	Space above < 600px	—	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(D)	Separator width (Separator › Appearance)	Full bleed (section edge to edge)	No	Share of the content width	Use with Alignment	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.	No	Card text	1–3 sentences; lists and links allowed	None
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The first line follows the paragraph with only the paragraph's own margin above it; the second line runs the full 390 px from screen edge to screen edge without horizontal scrolling.
- **Rendering behaviour:** Below 600 px Mobile top spacing None sets the top padding to 0; Full bleed adds the 1.5rem section padding on both sides with negative margins, so the line reaches the screen edges.
- **Publishing behaviour:** Publish sends the page to preview or live; the mobile settings are CSS classes delivered with the page, with nothing else to publish.

Business Rules

- Mobile top spacing applies only below 600 px; tablet and desktop keep the default 1.5rem.
- Full bleed widens the line by the section's inline padding on each side and never overflows the page.
- Separator width Full bleed on the Appearance tab applies on all breakpoints unless a breakpoint width overrides it.
- None removes only the separator's own padding; the paragraph's margin above remains.

Common Authoring Mistakes

Error	Root Cause	Resolution
The first line still has a gap above it on the phone	Desktop top spacing set to None instead of Mobile top spacing	Set Spacing > Mobile top spacing to None
The full-bleed line stops at the content edge	Separator width set to 100% or Auto instead of Full bleed, or Stretch to container width on	Choose Full bleed (section edge to edge) and leave Stretch off
The page scrolls sideways on the phone	Additional tab margin left or right added to the full-bleed separator	Reset the Additional margins to Default

Troubleshooting

- **Symptoms:** At 390 px the full-bleed line stops 1.5rem short of both screen edges.
- **Cause:** Stretch to container width is on, which sets the width to 100% and removes the negative margins of the bleed.
- **Resolution:** Open Advanced, turn Stretch to container width off and publish the page.
- **Verification Steps:** At 390 px the line touches both edges and the page has no horizontal scrollbar.

Mobile (< 600px): Same rendering with Mobile overrides and Show on mobile (`@media (width < 600px)`). Full bleed extends by the mobile section padding (1.5rem each side) so it reaches the screen edges without causing horizontal scrolling. All responsive behaviour is CSS; the script reads the settings once and adds no resize listeners.

6.26.3 Component Variations

Each variation below is a distinct presentation or behaviour the author can select. Settings combine: Variant sets line style, thickness, colour and width together, and any Appearance field other than "As the variant" overrides that part of the preset.

Variation 1 — Decorative (default accessibility mode)

Variation Name: Accessibility mode: Decorative (visual only) — class `decorative`.

Business Purpose: A visual division that assistive technologies ignore.

Visual Example:

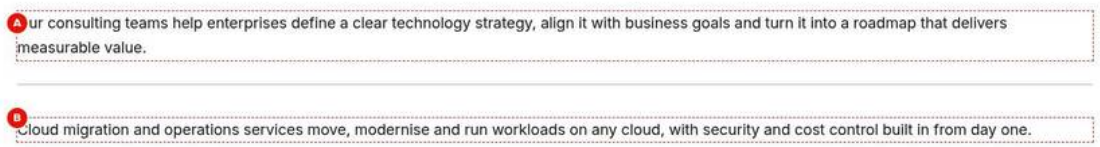

Figure 22: Variation example — The section at 1440 px: the consulting paragraph, a Default Decorative separator (solid 1px slate 400 line across the content width with 1.5rem above and below) and the cloud migration paragraph. The image shows only the page; no accessibility tree is visible. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-decorative.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-decorative.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the consulting paragraph, a Default Decorative separator (solid 1px slate 400 line across the content width with 1.5rem above and below) and the cloud migration paragraph. The image shows only the page; no accessibility tree is visible.
Business Context	Two related service paragraphs where a light visual rule helps scanning but carries no meaning for screen-reader users.
Author Objective	Add a separator with the default Decorative accessibility mode between two related paragraphs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
B	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** A thin light-grey line across the content width between the two paragraphs, centred, with equal space above and below.
- **Rendering behaviour:** The line is `div.separator-line` with `aria-hidden="true"` around `hr.separator-rule`; the look is identical on desktop, tablet and mobile, only the content width changes.
- **Publishing behaviour:** Publish sends the page to preview or live; the decorative separator has no assets or sheets to publish.

Business Rules

- Decorative is the default and the fallback for an empty or unknown Accessibility mode.
- A decorative line is hidden from assistive technologies with aria-hidden on the line wrapper.
- Accessible label is hidden in the dialog and ignored in Decorative mode.
- Use Decorative between related content; switch to Semantic only where the topic changes.

Common Authoring Mistakes

Error	Root Cause	Resolution
Screen readers announce a separator between related paragraphs	Accessibility mode set to Semantic	Set General > Accessibility mode to Decorative (visual only)
The Accessible label typed earlier is lost	The label field only exists in Semantic mode and is ignored in Decorative	Use Semantic if the break needs a name, otherwise leave it empty

Troubleshooting

- **Symptoms:** The line is barely visible between the two paragraphs on a bright screen.
- **Cause:** The default colour is slate 400 (#b2b2b2), a light grey chosen for decorative lines.
- **Resolution:** Choose Separator variant Strong or Background contrast High if the line must be clearly perceivable.
- **Verification Steps:** Preview the page at 1440 px and check the line is distinct; the class color-strong or contrast-high is on the block.

Use Cases: Rules between related content blocks, visual rhythm in a section.

Authoring Guidelines: General tab > Accessibility mode = Decorative (visual only) (the default for a new block).

Business Rules: Default when the field is empty or unknown. Accessible label is ignored (and hidden in the dialog).

Rendering Rules: `<div class="separator-line" aria-hidden="true"><hr class="separator-rule"></div>`.

Responsive Behaviour: Same markup on all breakpoints; appearance per the other settings.

SEO Impact: None; an `<hr>` carries no ranking value.

Accessibility Compliance: WCAG 1.3.1: purely visual content is hidden from assistive technology so it does not add noise.

Variation 2 — Semantic (thematic break)

Variation Name: Accessibility mode: Semantic (a thematic break) — class `semantic`.

Business Purpose: Marks a real change of topic for screen-reader users, as the `<hr>` element intends.

Visual Example:

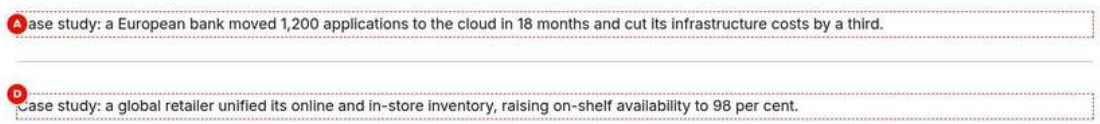

Figure 23: Variation example — The section at 1440 px: the case study about a European bank, a Default separator in Semantic mode (a thin slate 400 line, visually identical to a decorative one), and the case study about a global retailer. The accessible name End of the story is in the markup, not visible. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-semantic.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-semantic.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the case study about a European bank, a Default separator in Semantic mode (a thin slate 400 line, visually identical to a decorative one), and the case study about a global retailer. The accessible name End of the story is in the markup, not visible.
Business Context	A case-study page with two separate stories, where screen-reader users need to hear that one story ends and the next begins.
Author Objective	Mark the change between two case studies as a semantic thematic break named End of the story.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Case study: a European bank moved 1,200 applications to the cloud in 18 months and cut its infrastructure costs by a third.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Accessibility mode (Separator › General)	Semantic (a thematic break)	No	Semantic break or visual only	Semantic for topic changes	Enforced: option list
(C)	Accessible label (Separator › General)	End of the story	No	Names a semantic break	Short phrase	Enforced in code: trimmed, max 120 characters; shown only when Semantic
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	Case study: a global retailer unified its online and in-store inventory, raising on-shelf availability to 98 per cent.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin light-grey line across the content width between the two case-study paragraphs; nothing distinguishes it visually from a decorative separator.
- **Rendering behaviour:** The `hr.separator-rule` is exposed with `aria-label="End of the story"` and no aria-hidden; on every breakpoint where it shows, screen readers announce a separator, most of them with the label.
- **Publishing behaviour:** Publish sends the page to preview or live with the label in the HTML. On translated pages the label must be translated in each locale's copy of the page.

Business Rules

- Semantic exposes the native hr as a thematic break; use it only where the topic changes.
- Accessible label appears only in Semantic mode; it is trimmed and cut to 120 characters in code.
- An empty label gives an unnamed separator, which is still valid.
- Semantic with Line style None shows an editor warning: a break that nobody sees.

Common Authoring Mistakes

Error	Root Cause	Resolution
The Accessible label field is missing in the dialog	Accessibility mode is still Decorative	Choose Semantic (a thematic break) first; the label field then appears
The label is read cut off	Label longer than 120 characters	Keep it short, for example End of the story (recommended up to 60 characters)
Every divider on the page is announced	Semantic chosen for decorative rules too	Use Semantic only between the stories and Decorative elsewhere

Troubleshooting

- **Symptoms:** A screen reader passes the break without announcing End of the story.
- **Cause:** Some screen readers announce the separator but not its aria-label, a known limitation in the README.
- **Resolution:** Keep the label, and add a visible heading for the next story so the change of topic is conveyed in text as well.
- **Verification Steps:** Inspect the hr in the browser's accessibility tree: role separator with the name End of the story.

Use Cases: Between two stories, before an appendix, between chapters.

Authoring Guidelines: General tab > Accessibility mode = Semantic; optionally fill Accessible label (appears only in Semantic mode), for example "End of the case study".

Business Rules: The Accessible label is trimmed and cut to 120 characters (Enforced in code); an empty label means an unnamed separator.

Rendering Rules: `<div class="separator-line"><hr class="separator-rule" aria-label="…"></div>` (no `aria-hidden`; `aria-label` only when a label is set).

Responsive Behaviour: Same on all breakpoints; if hidden on a breakpoint (Show on … off) it is removed from the accessibility tree there too (`display: none`).

SEO Impact: Neutral; semantically correct HTML.

Accessibility Compliance: WCAG 1.3.1 (the structure is conveyed programmatically); the label names the break; most screen readers read it, not all (README known limitation).

Variation 3 — Spacing only (Decorative + Line style None)

Variation Name: Spacing only — Decorative with Line style None (class `line-none`).

Business Purpose: Adds controlled vertical space with no visible line.

Visual Example:

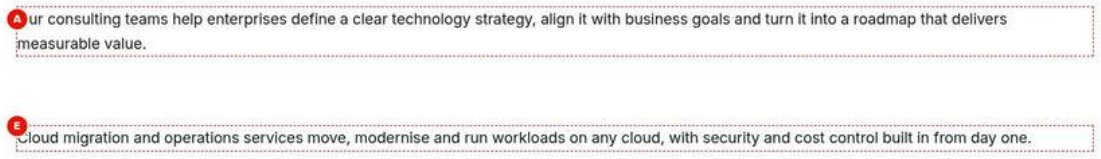

Figure 24: Variation example — The section at 1440 px: the consulting paragraph, a gap of 4rem (Desktop top spacing XL, bottom None) with no line, and the cloud migration paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-spacing-only.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-spacing-only.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the consulting paragraph, a gap of 4rem (Desktop top spacing XL, bottom None) with no line, and the cloud migration paragraph.
Business Context	A page where one block needs extra breathing room before the next paragraph and section spacing is not enough, without a visible rule.
Author Objective	Add a spacing-only separator with Line style None, 4rem above and no space below on desktop.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Line style (Separator › Appearance)	None (spacing only)	No	Solid, dashed, dotted, gradient, none	Override only if needed	Enforced: option list
(C)	Desktop top spacing (Separator › Spacing)	XL (64px)	No	Space above ≥ 1200px	—	Enforced: option list
(D)	Desktop bottom spacing (Separator › Spacing)	None	No	Space below ≥ 1200px	—	Enforced: option list

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two paragraphs separated by a larger empty gap; no line, no decoration.
- **Rendering behaviour:** A decorative separator with Line style None renders no hr, only its padding: 4rem top and 0 bottom from 1200 px; tablet and mobile keep the default 1.5rem top and bottom.
- **Publishing behaviour:** Publish sends the page to preview or live; the empty block is delivered with the page and nothing else is published.

Business Rules

- Decorative plus Line style None renders no hr at all, only the spacing.
- Decorations are not rendered without a visible line.
- Desktop spacing applies from 1200 px only; set the tablet and mobile values separately.
- Do not combine Line style None with Semantic: the editor warns about an invisible break.

Common Authoring Mistakes

Error	Root Cause	Resolution
The editor shows Semantic separator without a line	Accessibility mode Semantic with Line style None	Switch Accessibility mode to Decorative
The gap is large only on desktop	Only the Desktop spacing fields set	Set Tablet and Mobile top spacing as well if the gap is needed there
The gap does not change	Use section padding is on, which removes all own spacing	Turn Use section padding off

Troubleshooting

- **Symptoms:** The gap between the paragraphs is the same as before the change.
- **Cause:** The editor or preview is narrower than 1200 px, so the desktop values do not apply, or Additional Padding top overrides them.
- **Resolution:** Preview at 1440 px, and reset Additional > Padding top to Default.
- **Verification Steps:** The block has the classes line-none and desktop-top-xl and the gap is 4rem at 1440 px.

Use Cases: Extra breathing room before a call to action where section spacing is too small.

Authoring Guidelines: Accessibility mode = Decorative; Appearance > Line style = None (spacing only); set the top / bottom spacing on the Spacing tab (for example Desktop top spacing XL).

Business Rules: No `<hr>` is rendered for a decorative separator with Line style None; decorations are not rendered either. Semantic + None renders an invisible `<hr>` and shows the editor warning "Semantic separator without a line: screen readers announce a break nobody sees" (placeholder `separatorInvisible`).

Rendering Rules: The block keeps only its padding (default 1.5rem top and bottom); no child elements (except the editor note in edit mode, for semantic + none).

Responsive Behaviour: Spacing per breakpoint from the Spacing tab.

SEO Impact: None.

Accessibility Compliance: Nothing is exposed to assistive technology (decorative). Avoid Semantic + None (an announced break that nobody sees).

Variation 4 — Variant: Default

Variation Name: Separator variant: Default (`variant-default`).

Business Purpose: The standard neutral rule.

Visual Example:

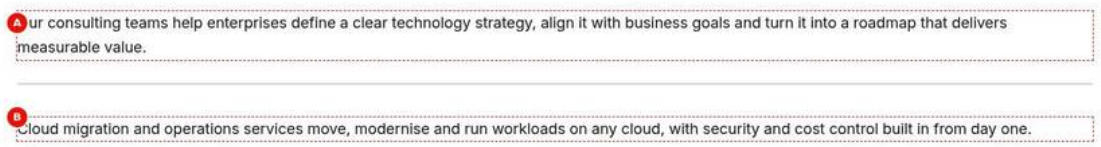

Figure 25: Variation example — The section at 1440 px: the consulting paragraph, a Default separator (solid 1px slate 400 #b2b2b2 line, 100% of the content width, centred) and the cloud migration paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-variant-default.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-variant-default.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the consulting paragraph, a Default separator (solid 1px slate 400 #b2b2b2 line, 100% of the content width, centred) and the cloud migration paragraph.
Business Context	The standard neutral divider used between most content on the corporate site.
Author Objective	Add a separator with all default settings between two paragraphs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that deliv-	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		ers measurable value.				
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
B	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** A solid thin light-grey line across the full content width, with 1.5rem space above and below.
- **Rendering behaviour:** Classes variant-default line-solid thickness-thin color-default width-100-percent; the line is capped at 90rem and looks the same on every breakpoint at the available content width.
- **Publishing behaviour:** Publish sends the page to preview or live; the separator has no assets of its own.

Business Rules

- Default presets solid, thin (1px), colour default and width 100%.
- Default is also the fallback for an empty or unknown Separator variant.
- The default colour resolves through Theme: slate 400 on light backgrounds.
- Keep the Appearance fields on As the variant to let the preset decide.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line looks heavier than other dividers	Line thickness or Line colour overridden on the Appearance tab	Reset them to As the variant
The line is hard to see	Default is a light decorative grey by design	Use Strong or Background contrast High where the line matters

Troubleshooting

- **Symptoms:** The separator renders much wider than the paragraphs on a very wide screen.
- **Cause:** Respect content maximum width was turned off, so the line is no longer capped at 90rem.
- **Resolution:** Turn Advanced > Respect content maximum width back on and publish.
- **Verification Steps:** The block has the class respect-max and the line is at most 90rem wide.

Use Cases: Most dividers.

Authoring Guidelines: General tab > Separator variant = Default; leave Appearance fields on "As the variant".

Business Rules: Preset: line style solid, thickness thin, colour default, width 100%. Also the fallback for an empty or unknown variant.

Rendering Rules: Classes `variant-default line-solid thickness-thin color-default width-100-percent`; colour `--separator-default` of the active palette.

Responsive Behaviour: Identical on all breakpoints unless overridden on the Responsive tab.

SEO Impact: None.

Accessibility Compliance: As per the chosen Accessibility mode. The default colour on white is a light grey; it is decorative, so WCAG 1.4.11 (non-text contrast) does not require 3:1 for it; use Strong or High contrast where the line must be perceivable.

Variation 5 — Variant: Subtle

Variation Name: Separator variant: Subtle (`variant-subtle`).

Business Purpose: A very light rule that barely interrupts the reading flow.

Visual Example:

Figure 26: Variation example — The section at 1440 px: the H2 Industries we serve, the introduction paragraph, a Subtle separator (solid 1px very light grey 200 #e6e6e6 line across the content width) and the banking paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-variant-subtle.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-variant-subtle.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the H2 Industries we serve, the introduction paragraph, a Subtle separator (solid 1px very light grey 200 #e6e6e6 line across the content width) and the banking paragraph.
Business Context	An industries overview where the introduction should be set off from the first industry with a rule that barely interrupts the reading flow.
Author Objective	Add a Subtle separator between a section introduction and the first industry paragraph.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Industries we serve	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	We bring deep domain knowledge and technology expertise to the industries that shape the global economy.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(D)	Separator variant (Separator › General)	Subtle	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A very faint grey line across the content width under the introduction, with 1.5rem space above and below.
- **Rendering behaviour:** color-subtle uses –color-border-default (grey 200) on light backgrounds, slate 800 with Theme Dark and brand 300 with Theme Brand; the same on all breakpoints.
- **Publishing behaviour:** Publish sends the page to preview or live; nothing else is published for the separator.

Business Rules

- Subtle presets solid, thin, colour subtle, 100% width.
- Its low contrast is intended for decorative use only.
- Keep it Decorative; a semantic break should be perceivable (Strong).
- The H2 Industries we serve names the section, not the separator.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line disappears on the Highlight section	Grey 200 is close to the light grey section background	Use Default or Strong in Highlight sections
The line is too faint for a chapter break	Subtle used for a major break	Use Strong, optionally in Semantic mode

Troubleshooting

- **Symptoms:** No line is visible under the introduction on some screens.
- **Cause:** The grey 200 line has very low contrast against white, especially on bright or low-quality displays.
- **Resolution:** Change the variant to Default, or set Background contrast High if the break must stay visible.
- **Verification Steps:** Preview at 1440 px and 390 px and check the line is visible on the target screens.

Use Cases: Under introductions, between closely related paragraphs.

Authoring Guidelines: Separator variant = Subtle.

Business Rules: Preset: solid, thin, colour subtle, 100%.

Rendering Rules: `color-subtle` → `--separator-subtle` (light palette: `--color-border-default`, grey 200 #e6e6e6; dark: slate 800; brand: brand 300).

Responsive Behaviour: Identical on all breakpoints unless overridden.

SEO Impact: None.

Accessibility Compliance: Low contrast by design; use only decoratively.

Variation 6 — Variant: Strong

Variation Name: Separator variant: Strong (`variant-strong`).

Business Purpose: A clearly visible, heavier rule for major breaks.

Visual Example:

Figure 27: Variation example — The section at 1440 px: the H3 Banking and its paragraph, a Strong separator (solid 2px slate 900 #303030 line across the content width), then the H3 Retail and its paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-variant-strong.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-variant-strong.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the H3 Banking and its paragraph, a Strong separator (solid 2px slate 900 #303030 line across the content width), then the H3 Retail and its paragraph.
Business Context	An industries page with one chapter per industry, where a clearly visible rule marks the end of one industry and the start of the next.
Author Objective	Separate the Banking and Retail chapters with a Strong separator.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Banking	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(D)	Separator variant (Separator › General)	Strong	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
E	Title (Title)	Retail	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(F)	Title Type (Title)	h3	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
G	Text (Text)	In retail, connected supply chains and data-driven mer-	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
		chandising help brands respond to demand in real time.				

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A dark near-black 2px line across the content width between the banking paragraph and the Retail heading, with 1.5rem space above and below.
- **Rendering behaviour:** thickness-medium (0.125rem) and color-strong (slate 900 on light, slate 200 with Theme Dark, brand 600 with Theme Brand); identical on all breakpoints unless a breakpoint thickness overrides it.
- **Publishing behaviour:** Publish sends the page to preview or live; the separator has nothing else to publish.

Business Rules

- Strong presets solid, medium (2px), colour strong, 100% width.
- The strong colour meets 3:1 non-text contrast on white.
- For a real change of topic combine Strong with Accessibility mode Semantic.
- Mobile thickness Thin can soften it on phones without changing desktop.

Common Authoring Mistakes

Error	Root Cause	Resolution
The Strong line is thin on the phone	Mobile thickness set to Thin on the Re-sponsive tab	Set Mobile thickness to As Appearance
The line appears faded	Line opacity below 100%	Set Appearance > Line opacity to 100%

Troubleshooting

- **Symptoms:** The line between Banking and Retail is grey and thin like a default separator.
- **Cause:** Separator variant was left on Default, or Line thickness and Line colour override the Strong preset.
- **Resolution:** Set Separator variant Strong and reset Line thickness and Line colour to As the variant.
- **Verification Steps:** The block has the classes variant-strong thickness-medium color-strong on aem.page.

Use Cases: Chapter breaks, the end of a main article before related content.

Authoring Guidelines: Separator variant = Strong (often with Semantic mode).

Business Rules: Preset: solid, medium (2px), colour strong, 100%.

Rendering Rules: `thickness-medium` → `--border-width-200` (0.125rem); `color-strong` → `--color-border-neutral` (slate 900 #303030) on light, slate 200 on dark, brand 600 on brand.

Responsive Behaviour: Identical unless overridden (for example Mobile thickness Thin).

SEO Impact: None.

Accessibility Compliance: High contrast line (meets 3:1 non-text contrast on white).

Variation 7 — Variant: Inset

Variation Name: Separator variant: Inset (`variant-inset`).

Business Purpose: A rule that stops short of both edges of its area.

Visual Example:

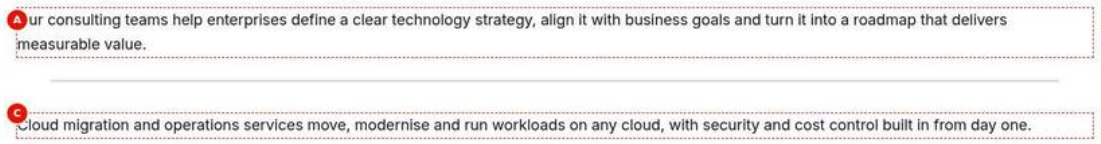

Figure 28: Variation example — The section at 1440 px: the consulting paragraph, an Inset separator (solid 1px slate 400 line that stops 2.5rem short of the left and right content edges) and the cloud migration paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-variant-inset.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-variant-inset.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the consulting paragraph, an Inset separator (solid 1px slate 400 line that stops 2.5rem short of the left and right content edges) and the cloud migration paragraph.
Business Context	A content area where the divider should not touch the edges of the text column, for a lighter framed look.
Author Objective	Add an Inset separator between two paragraphs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Separator variant (Separator › General)	Inset	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Cloud migration and operations services move, mod-	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
		ernise and run workloads on any cloud, with security and cost control built in from day one.				

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin light-grey line that is 5rem shorter than the paragraphs, centred, with 1.5rem space above and below.
- **Rendering behaviour:** variant-inset sets a 2.5rem (–space-1000) inline padding on the line wrapper, the same on all breakpoints; start and end decorations would sit at the inset.
- **Publishing behaviour:** Publish sends the page to preview or live; no assets are involved.

Business Rules

- Inset presets solid, thin, colour default and 100% width plus a 2.5rem inset on each side.
- The inset does not change per breakpoint, so on a 390 px phone the line is 5rem shorter than the content.
- Width and Alignment still apply to the inset line.
- Start and end decorations move inwards with the inset.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line touches the edges	Variant left on Default	Choose Separator variant Inset
The line is very short on mobile	Inset combined with a partial width such as 50%	Use 100% width with Inset, or the Default variant with a partial width

Troubleshooting

- **Symptoms:** The inset line still runs edge to edge.
- **Cause:** Stretch to container width is on or a custom width setting hides the effect; or the variant did not save.
- **Resolution:** Check General > Separator variant is Inset and turn Stretch to container width off.
- **Verification Steps:** The block has the class variant-inset and the line starts 2.5rem inside the paragraph edge.

Use Cases: Dividers inside content areas that should not touch the edges.

Authoring Guidelines: Separator variant = Inset.

Business Rules: Preset: solid, thin, default colour, 100%; plus an inline inset.

Rendering Rules: `variant-inset` sets `--separator-inset: var(--space-1000)` (2.5rem) as inline padding of `.separator-line`; start / end decorations are positioned at the inset.

Responsive Behaviour: The 2.5rem inset is the same on all breakpoints.

SEO Impact: None.

Accessibility Compliance: As per mode.

Variation 8 — Variant: Full width

Variation Name: Separator variant: Full width (`variant-full-width`).

Business Purpose: An edge-to-edge divider across the whole section.

Visual Example:

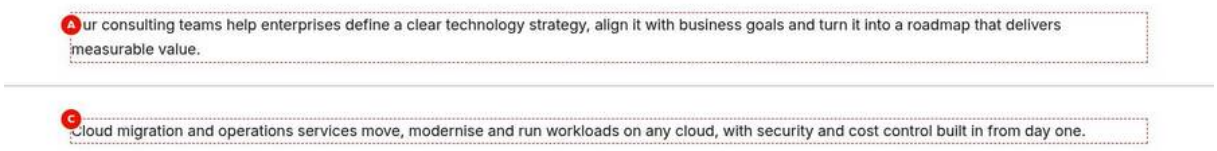

Figure 29: Variation example — The section at 1440 px: the consulting paragraph, a Full width separator (solid 1px slate 400 line that extends over the 5rem section padding on both sides to the full 1440 px) and the cloud migration paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-variant-full-width.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-variant-full-width.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the consulting paragraph, a Full width separator (solid 1px slate 400 line that extends over the 5rem section padding on both sides to the full 1440 px) and the cloud migration paragraph.
Business Context	A page that needs a strong structural break running across the whole section rather than only the text column.
Author Objective	Add a Full width separator that runs edge to edge across the section.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Separator variant (Separator › General)	Full width	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin light-grey line wider than the paragraphs, reaching the left and right edges of the section.
- **Rendering behaviour:** The Full width preset uses width full bleed: 100% plus 2 x the section inline padding (1.5rem mobile, 2.5rem tablet, 5rem desktop) with negative margins; at 1440 px it is capped at 90rem by Respect content maximum width.
- **Publishing behaviour:** Publish sends the page to preview or live; nothing else needs publishing.

Business Rules

- Full width presets solid, thin, colour default and width Full bleed.
- The bleed covers the section's side padding but never makes the page scroll sideways.
- Respect content maximum width (on) still caps the line at 90rem; turn it off for true edge to edge on wider screens.
- Choosing Separator width Auto turns it back into a 100% content-width line.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line stops at the content edge after a change	Separator width set to Auto (as the variant), which renders 100%	Choose As the variant or Full bleed (section edge to edge)
On a 2560 px screen the line does not reach the edges	Respect content maximum width caps it at 90rem	Turn Advanced > Respect content maximum width off

Troubleshooting

- **Symptoms:** The Full width separator is no wider than the paragraphs.
- **Cause:** Stretch to container width is on, which sets the width to 100% and removes the bleed margins.
- **Resolution:** Turn Advanced > Stretch to container width off and publish.
- **Verification Steps:** The block has the class width-full-bleed without stretch and the line covers the section padding at 1440 px.

Use Cases: Strong page structure, dividing full-width sections' content.

Authoring Guidelines: Separator variant = Full width. To let it reach beyond 90rem on very wide screens, also turn off Advanced > Respect content maximum width.

Business Rules: Preset: solid, thin, default colour, width Full bleed.

Rendering Rules: `width-full-bleed` sets `--separator-bleed: 1`: the line's width is `100% + 2 × --section-padding-inline` with matching negative inline margins, so it covers the section padding but never overflows the page.

Responsive Behaviour: The bleed follows the section padding: 1.5rem (mobile), 2.5rem (tablet), 5rem (desktop) each side.

SEO Impact: None.

Accessibility Compliance: As per mode.

Variation 9 — Variant: Dotted

Variation Name: Separator variant: Dotted (`variant-dotted`).

Business Purpose: A lighter, informal break.

Visual Example:

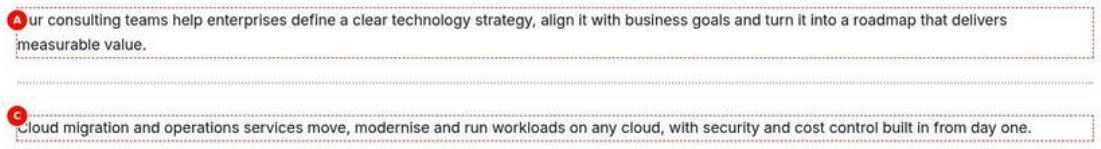

Figure 30: Variation example — The section at 1440 px: the consulting paragraph, a Dotted separator (a 2px dotted slate 400 line across the content width) and the cloud migration paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-variant-dotted.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-variant-dotted.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the consulting paragraph, a Dotted separator (a 2px dotted slate 400 line across the content width) and the cloud migration paragraph.
Business Context	A less formal page area, for example before footnotes, where a lighter dotted break suits better than a solid rule.
Author Objective	Add a Dotted separator between two paragraphs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Separator variant (Separator › General)	Dotted	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A row of small grey dots across the content width with 1.5rem space above and below.
- **Rendering behaviour:** line-dotted sets the border style of the hr to dotted at medium thickness (0.125rem); identical on all breakpoints unless overridden.
- **Publishing behaviour:** Publish sends the page to preview or live; nothing else is published.

Business Rules

- Dotted presets dotted, medium (2px), colour default, 100% width.
- The dot size follows the thickness: Thin gives very fine dots.
- Line colour and opacity overrides apply to the dots.
- Use it decoratively; a dotted line is not a strong break.

Common Authoring Mistakes

Error	Root Cause	Resolution
The dots are hardly visible	Line thickness overridden to Thin or opacity lowered	Reset Line thickness to As the variant and opacity to 100%
A solid line shows instead of dots	Line style overridden to Solid on the Appearance tab	Reset Line style to As the variant

Troubleshooting

- **Symptoms:** The separator renders as a solid line.
- **Cause:** Line style on the Appearance tab is set to Solid, which overrides the Dotted preset.
- **Resolution:** Set Appearance > Line style to As the variant (or Dotted) and publish.
- **Verification Steps:** The block has the class line-dotted on aem.page and the line shows dots.

Use Cases: Between informal content items, footnotes.

Authoring Guidelines: Separator variant = Dotted.

Business Rules: Preset: dotted, medium, default colour, 100%.

Rendering Rules: `line-dotted` sets `--separator-style: dotted` on the `border-block-start` of the `<hr>`.

Responsive Behaviour: Identical unless overridden.

SEO Impact: None.

Accessibility Compliance: As per mode.

Variation 10 — Variant: Dashed

Variation Name: Separator variant: Dashed (`variant-dashed`).

Business Purpose: A dashed break, e.g. for "continued" or optional content.

Visual Example:

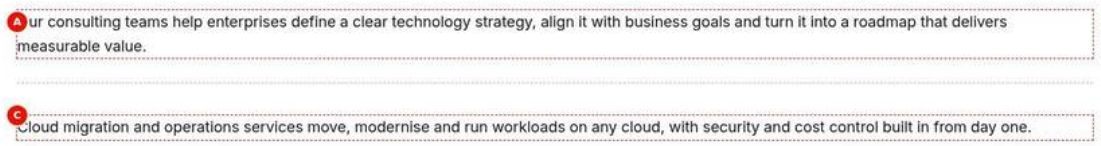

Figure 31: Variation example — The section at 1440 px: the consulting paragraph, a Dashed separator (a 1px dashed slate 400 line across the content width) and the cloud migration paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-variant-dashed.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-variant-dashed.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the consulting paragraph, a Dashed separator (a 1px dashed slate 400 line across the content width) and the cloud migration paragraph.
Business Context	A page that marks optional or supplementary content, for example a continued story, with a dashed break.
Author Objective	Add a Dashed separator between two paragraphs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Separator variant (Separator › General)	Dashed	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin dashed light-grey line across the content width with 1.5rem space above and below.
- **Rendering behaviour:** line-dashed sets the hr's border style to dashed at thin thickness (0.0625rem); the same on all breakpoints unless overridden.
- **Publishing behaviour:** Publish sends the page to preview or live; the separator needs no other publish step.

Business Rules

- Dashed presets dashed, thin (1px), colour default, 100% width.
- Dash length is drawn by the browser from the thickness; it is not configurable.
- Line thickness Medium or Thick makes the dashes heavier.
- Use it for supplementary content, not for the main chapter breaks.

Common Authoring Mistakes

Error	Root Cause	Resolution
The dashes look like a solid line on a phone	Thin 1px dashes on a high-density screen	Set Line thickness Medium for a clearer dash
A dotted line appears instead	Separator variant Dotted chosen	Choose Separator variant Dashed

Troubleshooting

- **Symptoms:** The separator is solid instead of dashed.
- **Cause:** Line style Solid on the Appearance tab overrides the Dashed preset.
- **Resolution:** Reset Appearance > Line style to As the variant and publish.
- **Verification Steps:** The block has the class line-dashed and the line shows dashes at 1440 px.

Use Cases: Before optional / supplementary content.

Authoring Guidelines: Separator variant = Dashed.

Business Rules: Preset: dashed, thin, default colour, 100%.

Rendering Rules: `line-dashed` → `--separator-style: dashed`.

Responsive Behaviour: Identical unless overridden.

SEO Impact: None.

Accessibility Compliance: As per mode.

Variation 11 — Variant: Gradient

Variation Name: Separator variant: Gradient (`variant-gradient`).

Business Purpose: A soft brand line that fades out at both ends.

Visual Example:

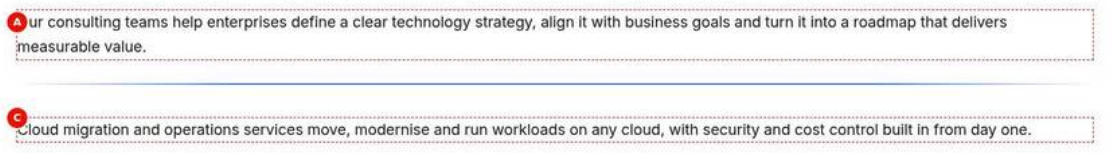

Figure 32: Variation example — The section at 1440 px: the consulting paragraph, a Gradient separator (a 2px brand 500 blue line across the content width that fades to transparent at both ends) and the cloud migration paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-variant-gradient.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-variant-gradient.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the consulting paragraph, a Gradient separator (a 2px brand 500 blue line across the content width that fades to transparent at both ends) and the cloud migration paragraph.
Business Context	A campaign or premium page where a soft brand line below an introduction looks more refined than a hard rule.
Author Objective	Add a Gradient separator between two paragraphs.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Separator variant (Separator › General)	Gradient	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A brand-blue line, full colour in the middle 60% and fading out towards the left and right ends.
- **Rendering behaviour:** line-gradient draws the hr without border, 0.125rem high, with a linear-gradient from transparent to the colour at 20% and 80% and back to transparent; in Windows high contrast it becomes CanvasText.
- **Publishing behaviour:** Publish sends the page to preview or live; no assets or sheets are involved.

Business Rules

- Gradient presets line style gradient, medium (2px), colour primary, 100% width.
- Line colour overrides change the gradient colour, for example Accent.
- The faded ends make a short width look shorter still; prefer 50% or more.
- Forced-colours mode shows the full line in the system text colour.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line is solid blue without fading	Separator variant Branded chosen instead of Gradient	Choose Separator variant Gradient
The gradient line is almost invisible	Line opacity 25% or Subtle colour combined with the fade	Use opacity 100% and the primary colour

Troubleshooting

- **Symptoms:** The gradient separator renders as a solid grey line.
- **Cause:** Line style on the Appearance tab is set to Solid, which replaces the gradient, and Line colour Default replaces the brand colour.
- **Resolution:** Reset Line style and Line colour to As the variant and publish.
- **Verification Steps:** The block has the classes line-gradient color-primary and the line fades at both ends.

Use Cases: Premium / campaign pages, below hero-like intros.

Authoring Guidelines: Separator variant = Gradient.

Business Rules: Preset: gradient, medium, colour primary, 100%.

Rendering Rules: `line-gradient`: the `<hr>` has no border; its height is the thickness and its background is `linear-gradient(90deg, transparent, colour 20%, colour 80%, transparent)`. In forced-colours mode the background becomes `CanvasText`.

Responsive Behaviour: Identical unless overridden.

SEO Impact: None.

Accessibility Compliance: Visible in Windows high contrast (forced colours) thanks to the `CanvasText` fallback.

Variation 12 — Variant: Branded

Variation Name: Separator variant: Branded (`variant-branded`).

Business Purpose: A solid brand-colour accent.

Visual Example:

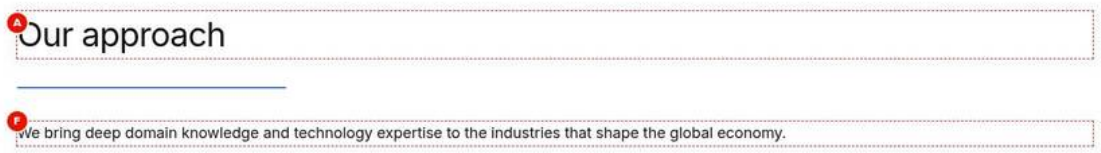

Figure 33: Variation example — The section at 1440 px: the H2 Our approach, directly below it a Branded separator (solid 2px brand 500 #4673db line, 25% of the content width, at the start edge) and the industries paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-variant-branded.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-variant-branded.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the H2 Our approach, directly below it a Branded separator (solid 2px brand 500 #4673db line, 25% of the content width, at the start edge) and the industries paragraph.
Business Context	A section opening where a short brand-coloured accent under the heading gives the corporate look without an image.
Author Objective	Add a Branded separator at 25% width aligned to the start under the Our approach heading.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Our approach	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(C)	Separator variant (Separator › General)	Branded	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
(D)	Separator width (Separator › Appearance)	25%	No	Share of the content width	Use with Alignment	Enforced: option list
(E)	Alignment (Separator › Appearance)	Start	No	Position of partial widths	Start / End follow reading direction	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
F	Text (Text)	We bring deep domain knowledge and technology expertise to the industries that shape the global economy.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A short, 2px brand-blue line under the left-aligned heading, followed by the paragraph; 1.5rem space above and below the line.
- **Rendering behaviour:** color-primary resolves to brand 500 on light backgrounds (brand 300 with Theme Dark); the 25% width and start alignment apply on all breakpoints, so on a 390 px phone the line is about 86 px long.
- **Publishing behaviour:** Publish sends the page to preview or live; the separator has nothing else to publish.

Business Rules

- Branded presets solid, medium (2px), colour primary, 100% width; 25% and Start are overrides.
- Start aligns with the heading in left-to-right and right-to-left languages alike.
- Keep it Decorative: the H2 names the section.
- For less space under the heading, set Desktop top spacing to None.

Common Authoring Mistakes

Error	Root Cause	Resolution
The accent is centred under a left-aligned heading	Alignment left on Center	Set Appearance > Alignment to Start
The accent becomes a full-width blue line	Separator width not set to 25%	Set Appearance > Separator width to 25%

Error	Root Cause	Resolution
The accent is a long way below the heading	Default 1.5rem top spacing	Set Desktop top spacing to None or XS

Troubleshooting

- **Symptoms:** The accent is short but grey instead of blue.
- **Cause:** Line colour is overridden (for example Default) or Background contrast High replaces the primary colour with the strong colour.
- **Resolution:** Reset Line colour to As the variant and Background contrast to Standard, then publish.
- **Verification Steps:** The block has the class color-primary and no contrast-high; the line is brand blue.

Use Cases: Accent under titles (with 25%, Start), branded section breaks.

Authoring Guidelines: Separator variant = Branded; typically Width 25% and Alignment Start.

Business Rules: Preset: solid, medium, colour primary, 100%.

Rendering Rules: `color-primary` → `--color-border-brand` (brand 500 #4673db) on light; brand 300 on dark; brand 500 on brand.

Responsive Behaviour: Identical unless overridden.

SEO Impact: None.

Accessibility Compliance: Decorative accent normally (Decorative mode).

Variation 13 — Variant: Custom

Variation Name: Separator variant: Custom (only the Appearance settings) (`variant-custom-design`).

Business Purpose: Full control over the look via the Appearance tab.

Visual Example:

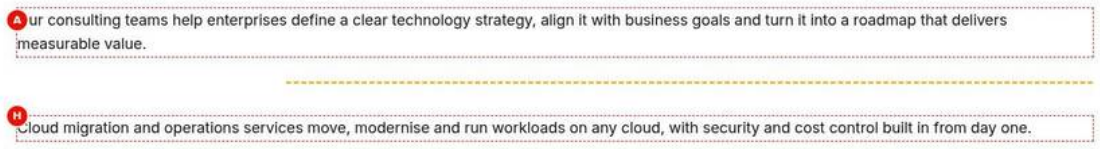

Figure 34: Variation example — The section at 1440 px: the consulting paragraph, a Custom separator (a 3px dashed accent-yellow #e8b931 line, 75% of the content width, aligned to the end) and the cloud migration paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-variant-custom.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-variant-custom.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the consulting paragraph, a Custom separator (a 3px dashed accent-yellow #e8b931 line, 75% of the content width, aligned to the end) and the cloud migration paragraph.
Business Context	A campaign layout that needs a divider not covered by any preset, built only from the Appearance settings.
Author Objective	Build a separator from the Appearance settings: dashed, thick, accent colour, 75% wide and end aligned.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Separator variant (Separator › General)	Custom (only the Appearance settings)	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
(C)	Line style (Separator › Appearance)	Dashed	No	Solid, dashed, dotted, gradient, none	Override only if needed	Enforced: option list
(D)	Line thickness (Separator › Appearance)	Thick (3px)	No	1px / 2px / 3px	—	Enforced: option list
(E)	Line colour (Separator › Appearance)	Accent	No	Palette colour	—	Enforced: option list
(F)	Separator width (Separator › Appearance)	75%	No	Share of the content width	Use with Alignment	Enforced: option list
(G)	Alignment (Separator › Appearance)	End	No	Position of partial widths	Start / End follow reading direction	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
H	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thick yellow dashed line covering three quarters of the content width, flush with the right content edge.

- **Rendering behaviour:** Classes variant-custom-design line-dashed thickness-thick color-accent width-75-percent align-end; the accent colour is warning 500 in all themes and the settings apply on every breakpoint.
- **Publishing behaviour:** Publish sends the page to preview or live; there is nothing else to publish.

Business Rules

- Custom presets the Default values (solid, thin, default, 100%) for every Appearance field left on As the variant.
- End alignment follows the reading direction: right in English, left in right-to-left languages.
- Contrast is the author's responsibility; yellow on white is decorative only.
- Only the listed options can be chosen; no free colours or CSS.

Common Authoring Mistakes

Error	Root Cause	Resolution
Only the colour changes, the line stays solid and thin	Line style and Line thickness left on As the variant	Set Line style Dashed and Line thickness Thick explicitly
The line sits on the left	Alignment left on Center or set to Start	Set Alignment End
The yellow line is too faint on white	Accent colour has low contrast	Use Strong or a darker colour for meaningful breaks

Troubleshooting

- **Symptoms:** The custom line shows yellow but solid and 1px.
- **Cause:** Line style and Line thickness were not saved, so the Custom preset (solid, thin) applies.
- **Resolution:** Set Appearance > Line style Dashed and Line thickness Thick (3px), then publish.
- **Verification Steps:** The block has the classes line-dashed and thickness-thick and the line is a thick dashed yellow rule.

Use Cases: Cases not covered by a preset.

Authoring Guidelines: Separator variant = Custom; set Line style, Line thickness, Line colour and Separator width explicitly.

Business Rules: Its preset equals Default (solid, thin, default, 100%) for any Appearance field left on "As the variant".

Rendering Rules: Classes from the Appearance values.

Responsive Behaviour: As set.

SEO Impact: None.

Accessibility Compliance: Author responsibility for contrast (prefer Strong / High contrast for meaningful lines).

Variation 14 — Theme: Auto (as the section)

Variation Name: Theme Auto (`theme-auto`, default).

Business Purpose: The palette follows the section background automatically.

Visual Example:

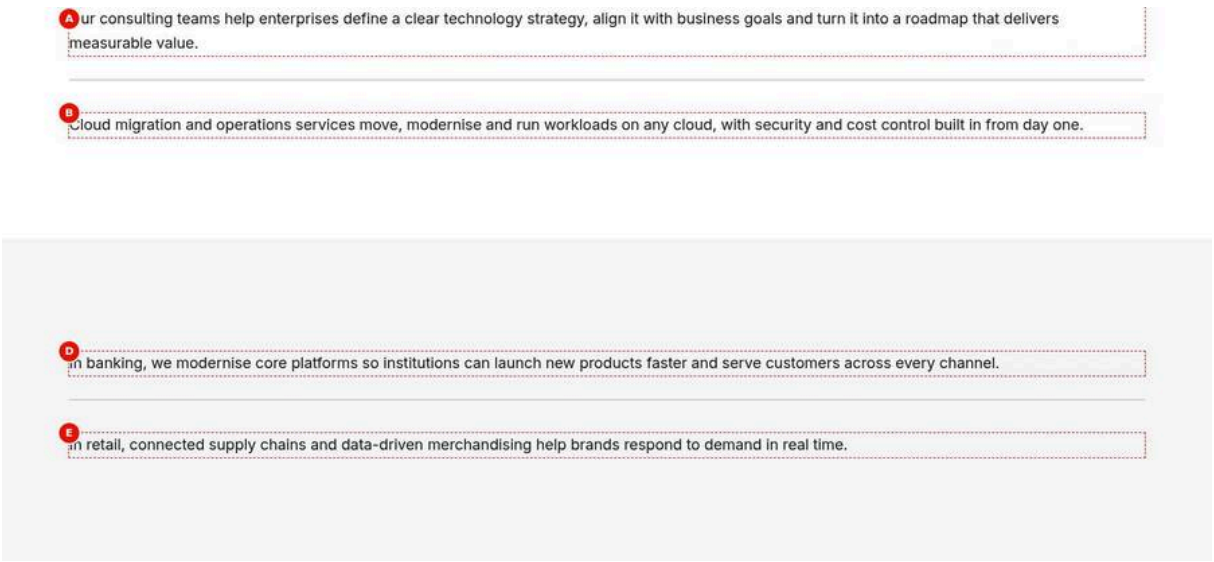

Figure 35: Variation example — The page at 1440 px: a white section with two paragraphs and a Default separator between them, followed by a Highlight section (light grey background) with the same Default separator between two paragraphs; both lines are the same slate 400 grey. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-theme-auto.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-theme-auto.jpg`
Screenshot Purpose	Variation example
Screen Description	The page at 1440 px: a white section with two paragraphs and a Default separator between them, followed by a Highlight section (light grey background) with the same Default separator between two paragraphs; both lines are the same slate 400 grey.
Business Context	Standard pages mix white and Highlight sections; the same separator should be usable in both without changing its settings.
Author Objective	Use Theme Auto for separators in a white section and in a Highlight section and compare them.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
B	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None
(C)	Style (Section properties)	Highlight	No	Background style of the band	Choose Highlight for a grey band	Enforced: options list (Highlight)
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	In retail, connected supply chains and data-driven merchandising help brands respond to demand in real time.	No	Card text	1–3 sentences; lists and links allowed	None
—	Check (Preview)	The same Default separator: slate 400 in the white section, and in the Highlight section below	—	Check on the preview (not stored in the content)	The same Default separator: slate 400 in the white section, and in the Highlight section below	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two identical thin grey lines, one on white and one on the light grey Highlight background.
- **Rendering behaviour:** Theme Auto switches palettes only inside .section.dark or .section.brand; Highlight is neither, so both lines use the light palette (slate 400) on all breakpoints.
- **Publishing behaviour:** Publish sends the page, including both sections and their Style, to preview or live; no separate publish step.

Business Rules

- Theme Auto is the default and follows only the dark and brand section classes.
- The Section dialog offers only Highlight, so Auto always uses the light palette in authored sections (finding F-21).
- Highlight does not change the separator colour.
- On background images set the Theme explicitly.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line is too faint on the Highlight section	Highlight grey reduces the contrast of slate 400	Set Background contrast High or variant Strong
The line does not adapt to a dark background image	Auto ignores background images	Set Theme Dark background explicitly

Troubleshooting

- **Symptoms:** The separator in a dark-looking section is still light grey.
- **Cause:** The section gets its dark look from a background image, not from a dark section class, so Auto keeps the light palette.
- **Resolution:** Set the separator's Theme to Dark background (or Brand background) and publish.
- **Verification Steps:** The block has the class theme-dark and the line uses the dark palette.

Use Cases: All separators on standard sections.

Authoring Guidelines: General tab > Theme = Auto (default).

Business Rules: Uses the dark palette inside `.section.dark` and the brand palette inside `.section.brand`, else the light palette. Note: the Section dialog's Style currently offers only **Highlight**; the `dark` and `brand` section classes exist in the site CSS but are not selectable in the section model as of this handover, so Auto resolves to the light palette in authored sections ([To be confirmed: whether dark / brand section styles will be added — owner: product owner]).

Rendering Rules: `.section.dark .separator.theme-auto` / `.section.brand .separator.theme-auto` redefine the palette variables.

Responsive Behaviour: Same on all breakpoints.

SEO Impact: None.

Accessibility Compliance: Keeps the line visible against dark / brand backgrounds.

Variation 15 — Theme: Light background

Variation Name: Theme Light (`theme-light`).

Business Purpose: Forces the light palette, for example on a light background image.

Visual Example:

Figure 36: Variation example — The section at 1440 px on the light.svg background image: two paragraphs with a separator between them using Theme Light background, a thin slate 400 line across the content width. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-theme-light.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-theme-light.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px on the light.svg background image: two paragraphs with a separator between them using Theme Light background, a thin slate 400 line across the content width.
Business Context	A section with a light background image where the separator must keep the light palette whatever section class is applied.
Author Objective	Force the light palette on a separator placed on a light section background image.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Background Image (Section properties)	Select the asset light.svg (/en/media/light.svg)	No	Image behind the section	Wide, high-resolution image; important subject in the centre	None
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
B	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Theme (Separator › General)	Light background	No	Palette for the background	Auto unless on an image	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin grey line between the paragraphs over the pale background image, with 1.5rem space above and below.
- **Rendering behaviour:** theme-light never switches to the dark or brand palette; Default resolves to slate 400 on every breakpoint.
- **Publishing behaviour:** Publish sends the page to preview or live; the background image asset must be published in AEM Assets so the section background shows.

Business Rules

- Theme Light always uses the light palette: default slate 400, strong slate 900, primary brand 500.
- A background image does not change the palette by itself.
- Check the line colour against the lightest and darkest parts of the image.
- Use Background contrast High if the image is busy.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line disappears on part of the image	The image has light and dark areas	Use Background contrast High or a calmer image
The background image does not show	The asset is not published	Publish light.svg in AEM Assets and republish the page

Troubleshooting

- **Symptoms:** The section shows a plain white background behind the separator on aem.live.
- **Cause:** The section's Background Image asset is not published, so only the line and paragraphs render.
- **Resolution:** Publish the asset in AEM Assets and publish the page again.
- **Verification Steps:** The image request returns 200 on aem.live and the line shows on the image.

Use Cases: Sections whose background image is light.

Authoring Guidelines: Theme = Light background.

Business Rules: Never switches to the dark / brand palette.

Rendering Rules: Light palette: default slate 400, subtle grey 200, neutral slate 600, strong slate 900, primary brand 500, secondary brand 300, accent warning 500 (#e8b931), inverse white 70%.

Responsive Behaviour: Same on all breakpoints.

SEO Impact: None.

Accessibility Compliance: Choose a colour with enough contrast against the image.

Variation 16 — Theme: Dark background

Variation Name: Theme Dark (`theme-dark`).

Business Purpose: Palette for dark backgrounds (images or dark sections).

Visual Example:

Figure 37: Variation example — The section at 1440 px on the dark photo-1.svg background image: a Strong separator with Theme Dark background, a 2px light grey (slate 200 #e3e3e3) line across the content width with 4rem above and below. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-theme-dark.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-theme-dark.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px on the dark photo-1.svg background image: a Strong separator with Theme Dark background, a 2px light grey (slate 200 #e3e3e3) line across the content width with 4rem above and below.
Business Context	A section on a dark background image where a standard dark line would vanish and the separator needs the light-on-dark palette.
Author Objective	Use a Strong separator with Theme Dark background and XL spacing on a dark background image.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Background Image (Section properties)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Image behind the section	Wide, high-resolution image; important subject in the centre	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Separator variant (Separator › General)	Strong	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
(C)	Theme (Separator › General)	Dark background	No	Palette for the background	Auto unless on an image	Enforced: option list
(D)	Desktop top spacing (Separator › Spacing)	XL (64px)	No	Space above ≥ 1200px	—	Enforced: option list
(E)	Desktop bottom spacing (Separator › Spacing)	XL (64px)	No	Space below ≥ 1200px	—	Enforced: option list
(F)	Style (Section properties)	No Dark section style is offered (Style lists only Highlight): the background is the section's Background Image, and the separator's Theme is set explicitly	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A clearly visible light grey 2px line across the dark image, with generous space above and below.
- **Rendering behaviour:** theme-dark switches the palette (strong slate 200, default slate 600, primary brand 300); Desktop top and bottom XL give 4rem padding from 1200 px, tablet and mobile keep 1.5rem.
- **Publishing behaviour:** Publish sends the page to preview or live; the photo-1.svg background asset must be published in AEM Assets.

Business Rules

- Theme Dark uses the dark palette regardless of the section.
- No Dark section style is offered (Style lists only Highlight): the background is the section's Background Image (finding F-21).
- Strong on Dark resolves to slate 200, a light line for dark backgrounds.
- XL spacing applies on desktop only; set tablet and mobile spacing separately.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line is dark and invisible on the photo	Theme left on Auto, which ignores background images	Set Theme to Dark background
The spacing is large only on desktop	Only Desktop top and bottom spacing set	Also set Tablet and Mobile spacing if needed

Troubleshooting

- **Symptoms:** The separator cannot be seen on the dark image.

- **Cause:** Theme Auto or Light is used, so Strong resolves to slate 900, a dark line on a dark image.
- **Resolution:** Set General > Theme to Dark background and publish the page.
- **Verification Steps:** The block has the class theme-dark and the line is light grey on the image at 1440 px.

Use Cases: Sections with a dark background image.

Authoring Guidelines: Theme = Dark background.

Business Rules: Uses the dark palette regardless of the section.

Rendering Rules: Dark palette: default slate 600, subtle slate 800, neutral slate 500, strong slate 200, primary brand 300, secondary brand 400, inverse black 70%; accent unchanged.

Responsive Behaviour: Same on all breakpoints.

SEO Impact: None.

Accessibility Compliance: Lighter lines for dark backgrounds.

Variation 17 — Theme: Brand background

Variation Name: Theme Brand (`theme-brand`).

Business Purpose: Palette for brand-coloured backgrounds.

Visual Example:

Figure 38: Variation example — The section at 1440 px on the light.svg background image: two paragraphs with a Default separator in Theme Brand background between them, a thin brand 500 blue line across the content width. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-theme-brand.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-theme-brand.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px on the light.svg background image: two paragraphs with a Default separator in Theme Brand background between them, a thin brand 500 blue line across the content width.
Business Context	Campaign sections with brand-coloured backgrounds need a palette where even the default line is in the brand colour.
Author Objective	Use Theme Brand background on a Default separator placed on a section background image.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Background Image (Section properties)	Select the asset light.svg (/en/media/light.svg)	No	Image behind the section	Wide, high-resolution image; important subject in the centre	None
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
B	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(C)	Theme (Separator › General)	Brand background	No	Palette for the background	Auto unless on an image	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None
(E)	Style (Section properties)	No Brand section style is offered (Style lists only Highlight): the background is the section's Background Image, and the separator's Theme is set explicitly	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin brand-blue line between the paragraphs over the background image, with 1.5rem space above and below.

- **Rendering behaviour:** theme-brand redefines the palette: default brand 500, subtle brand 300, strong brand 600, inverse white; the same on all breakpoints.
- **Publishing behaviour:** Publish sends the page to preview or live; the light.svg background asset must be published in AEM Assets.

Business Rules

- Theme Brand uses the brand palette regardless of the section.
- No Brand section style is offered (Style lists only Highlight): the background comes from the section's Background Image.
- In the brand palette the Default colour is brand 500, not grey.
- Use Strong (brand 600) for meaningful breaks on brand backgrounds.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line is grey instead of blue	Theme left on Auto	Set Theme to Brand background
The blue line blends into a blue back-ground	Default brand 500 on a similar blue	Choose variant Strong for the darker brand 600

Troubleshooting

- **Symptoms:** The separator stays grey on the brand-styled section.
- **Cause:** Theme Auto only follows a .section.brand class, which the Section dialog cannot set as of this handover.
- **Resolution:** Set General > Theme to Brand background and publish.
- **Verification Steps:** The block has the class theme-brand and the line is brand blue.

Use Cases: Campaign sections with brand backgrounds.

Authoring Guidelines: Theme = Brand background.

Business Rules: Uses the brand palette regardless of the section.

Rendering Rules: Brand palette: default brand 500, subtle brand 300, neutral slate 600, strong brand 600 (#011627), primary brand 500, secondary brand 400, inverse white.

Responsive Behaviour: Same on all breakpoints.

SEO Impact: None.

Accessibility Compliance: Choose Strong for meaningful lines on brand backgrounds.

Variation 18 — High background contrast

Variation Name: Background contrast: High (stronger line) (`contrast-high`).

Business Purpose: Keeps the line visible on busy or tinted backgrounds.

Visual Example:

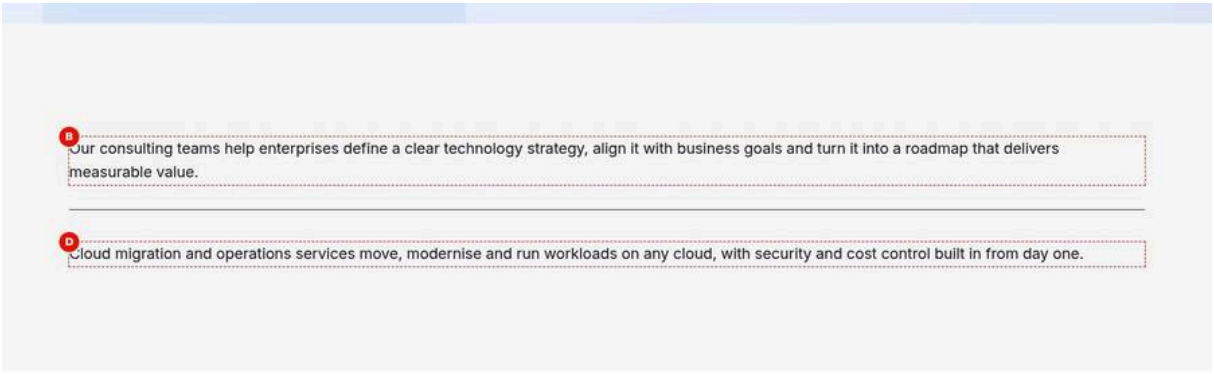

Figure 39: Variation example — A Highlight section (light grey background) at 1440 px: two paragraphs with a separator in Background contrast High between them, a thin slate 900 #303030 line instead of the default slate 400. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-contrast-high.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-contrast-high.jpg`
Screenshot Purpose	Variation example
Screen Description	A Highlight section (light grey background) at 1440 px: two paragraphs with a separator in Background contrast High between them, a thin slate 900 #303030 line instead of the default slate 400.
Business Context	Tinted Highlight sections reduce the contrast of the default grey line; the break between the paragraphs must remain clearly visible.
Author Objective	Make a separator on a Highlight section clearly visible with Background contrast High.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Style (Section properties)	Highlight	No	Background style of the band	Choose Highlight for a grey band	Enforced: options list (Highlight)
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
B	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Background contrast (Separator › Appearance)	High (stronger line)	No	Stronger line on busy backgrounds	High on images / tints	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin dark line across the content width on the light grey background, with 1.5rem space above and below.
- **Rendering behaviour:** contrast-high sets the line colour to the palette's strong colour (slate 900 here), overriding Line colour; thickness stays thin and the rule is the same on all breakpoints.
- **Publishing behaviour:** Publish sends the page with the section Style to preview or live; nothing else is needed.

Business Rules

- Background contrast High replaces the Line colour with the palette's strong colour.
- It does not change the thickness: combine with Medium if a heavier line is needed.
- It follows the Theme: slate 200 with Dark, brand 600 with Brand.
- Use it for meaningful (semantic) lines on tinted or image backgrounds.

Common Authoring Mistakes

Error	Root Cause	Resolution
The chosen Line colour Primary is ignored	Background contrast High overrides any Line colour	Set Background contrast Standard to use Primary
The line is still faint	Line opacity below 100%	Set Line opacity to 100%

Troubleshooting

- **Symptoms:** The separator on the Highlight section is still light grey.
- **Cause:** Background contrast is still Standard, so the default slate 400 applies.
- **Resolution:** Set Appearance > Background contrast to High (stronger line) and publish.
- **Verification Steps:** The block has the class contrast-high and the line is dark on the grey background.

Use Cases: Background images, Highlight sections.

Authoring Guidelines: Appearance > Background contrast = High (stronger line).

Business Rules: Overrides the Line colour: the line uses the palette's strong colour.

Rendering Rules: `.separator.contrast-high { --separator-color: var(--separator-strong) }` (declared after the colour classes, so it wins).

Responsive Behaviour: Same on all breakpoints.

SEO Impact: None.

Accessibility Compliance: Supports WCAG 1.4.11 for meaningful (semantic) lines.

Variation 19 — Line opacity

Variation Name: Line opacity 25% / 50% / 75% (`opacity-25`, `opacity-50`, `opacity-75`; 100% default).

Business Purpose: Softens any line colour.

Visual Example:

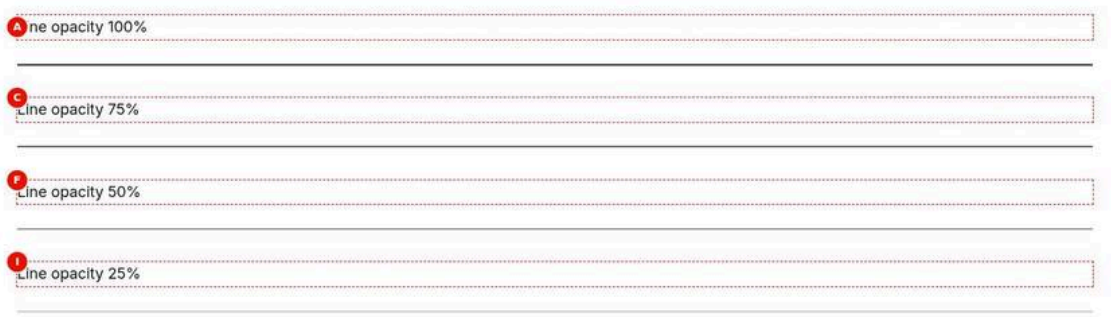

Figure 40: Variation example — The section at 1440 px: four paragraphs, each followed by a Strong separator (2px slate 900 line across the content width) at Line opacity 100%, 75%, 50% and 25%, getting lighter from top to bottom. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-opacity.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-opacity.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: four paragraphs, each followed by a Strong separator (2px slate 900 line across the content width) at Line opacity 100%, 75%, 50% and 25%, getting lighter from top to bottom.
Business Context	A brand or strong line can be too heavy in some layouts; opacity softens it while keeping the variant's colour.
Author Objective	Compare Strong separators at 100%, 75%, 50% and 25% Line opacity.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Line opacity 100%	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree,	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Separator	
(B)	Separator variant (Separator › General)	Strong	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Line opacity 75%	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(D)	Separator variant (Separator › General)	Strong	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
(E)	Line opacity (Separator › Appearance)	75%	No	Softens the line	Keep 100% for meaningful lines	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
F	Text (Text)	Line opacity 50%	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(G)	Separator variant (Separator › General)	Strong	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
(H)	Line opacity (Separator › Appearance)	50%	No	Softens the line	Keep 100% for meaningful lines	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
I	Text (Text)	Line opacity 25%	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(J)	Separator variant (Separator › General)	Strong	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
(K)	Line opacity (Separator › Appearance)	25%	No	Softens the line	Keep 100% for meaningful lines	Enforced: option list

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Four dark 2px lines of decreasing strength: the last one at 25% is a pale grey.
- **Rendering behaviour:** opacity-75, opacity-50 and opacity-25 set the opacity of the whole line wrapper, including decorations; printing always uses opacity 1. The same on all breakpoints.
- **Publishing behaviour:** Publish sends the page to preview or live; no other publish steps.

Business Rules

- Line opacity defaults to 100%; unknown values fall back to 100.
- Opacity applies to the line and its decorations together.
- Lower opacity lowers contrast: keep meaningful lines at 100%.
- Printed separators are always fully opaque.

Common Authoring Mistakes

Error	Root Cause	Resolution
A semantic break becomes almost invisible	Line opacity 25% on a meaningful line	Keep semantic lines at 100% opacity
Decorations look faded too	Opacity applies to the whole line	Accept the faded decoration or keep 100%

Troubleshooting

- **Symptoms:** All four lines look the same.
- **Cause:** Line opacity was set on one separator only, or not saved, so the others keep 100%.
- **Resolution:** Select each separator and set Appearance > Line opacity 75%, 50% and 25% respectively, then publish.
- **Verification Steps:** The blocks have the classes opacity-75, opacity-50 and opacity-25 in that order.

Use Cases: Fine-tuning of brand or strong lines.

Authoring Guidelines: Appearance > Line opacity.

Business Rules: Applies to the whole line including decorations; unknown values fall back to 100.

Rendering Rules: `--separator-opacity` on `.separator-line` (0.25 / 0.5 / 0.75 / 1). Print always uses opacity 1.

Responsive Behaviour: Same on all breakpoints.

SEO Impact: None.

Accessibility Compliance: Lower opacity reduces contrast; keep meaningful lines at 100%.

Variation 20 — Partial width (25% / 50% / 75%)

Variation Name: Separator width 25%, 50% or 75% (`width-25-percent`, …).

Business Purpose: Short accent lines or centred dividers.

Visual Example:

Figure 41: Variation example — The section at 1440 px: three paragraphs, each followed by a thin slate 400 separator, centred, at 25%, 50% and 75% of the content width (about 320, 640 and 960 px). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-partial-width.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-partial-width.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: three paragraphs, each followed by a thin slate 400 separator, centred, at 25%, 50% and 75% of the content width (about 320, 640 and 960 px).
Business Context	Pages that want short centred dividers instead of full-width rules, for a lighter rhythm between paragraphs.
Author Objective	Add separators at 25%, 50% and 75% width and compare them.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Separator width 25%	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Separator width (Separator › Appearance)	25%	No	Share of the content width	Use with Alignment	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Separator width 50%	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(D)	Separator width (Separator › Appearance)	50%	No	Share of the content width	Use with Alignment	Enforced: option list

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	Separator width 75%	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(F)	Separator width (Separator › Appearance)	75%	No	Share of the content width	Use with Alignment	Enforced: option list

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Three centred grey lines of increasing length, each with 1.5rem above and below.
- **Rendering behaviour:** width-25-percent, width-50-percent and width-75-percent set the share of the block's content width; Alignment Center (default) centres them; per-breakpoint widths can change them.
- **Publishing behaviour:** Publish sends the page to preview or live; nothing else is published.

Business Rules

- The percentage is of the content width of the separator's container, not of the screen.
- Alignment (Start, Center, End) positions partial widths; Center is the default.
- Width can be changed per breakpoint on the Responsive tab.
- Stretch to container width would override all three widths.

Common Authoring Mistakes

Error	Root Cause	Resolution
All three lines are full width	Stretch to container width is on	Turn Advanced > Stretch to container width off
A 25% line is too short on the phone	The same percentage applies on mobile	Set Mobile width to 50% or 100%

Troubleshooting

- **Symptoms:** The 75% line is shorter than expected on a wide screen.
- **Cause:** Maximum width (for example Medium 640px) caps the line below 75% of the content width.
- **Resolution:** Set Appearance > Maximum width to None and publish.
- **Verification Steps:** At 1440 px the line measures 75% of the paragraph width.

Use Cases: Accent under a title (25%), light division under an intro (50%).

Authoring Guidelines: Appearance > Separator width = 25%, 50% or 75%; set Alignment (Start, Center, End).

Business Rules: The share is of the content width of the block's container. Alignment applies to partial widths; Start and End follow the reading direction (right-to-left languages too).

Rendering Rules: `--separator-width: 25% / 50% / 75%`; `align-start | center | end` sets `justify-content` (logical values).

Responsive Behaviour: Can be changed per breakpoint on the Responsive tab.

SEO Impact: None.

Accessibility Compliance: Visual only.

Variation 21 — Content width

Variation Name: Separator width: Content width (`width-content-width`).

Business Purpose: Full width, but never wider than the site's content width.

Visual Example:

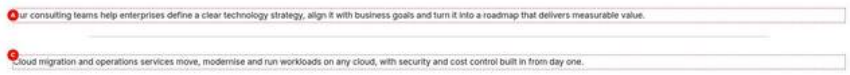

Figure 42: Variation example — A full-width section at 2560 px: two paragraphs with a separator in Separator width Content width between them; the thin slate 400 line is capped at 90rem (1440 px) and centred, narrower than the section's 110rem content area. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-content-width.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-content-width.jpg`
Screenshot Purpose	Variation example
Screen Description	A full-width section at 2560 px: two paragraphs with a separator in Separator width Content width between them; the thin slate 400 line is capped at 90rem (1440 px) and centred, narrower than the section's 110rem content area.
Business Context	On very wide screens a full-width section can be wider than the site's content width; the divider should stay at the content width.
Author Objective	Cap a full-width separator at the site's content width and check it on a 2560 px screen.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Separator width (Separator › Appearance)	Content width	No	Share of the content width	Use with Alignment	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None
—	Screen width (Preview)	2560 px (very wide desktop)	—	Check on the preview (not stored in the content)	2560 px (very wide desktop)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A centred thin grey line of 1440 px on a 2560 px screen, with empty space on both sides.
- **Rendering behaviour:** width-content-width keeps 100% width capped by –content-max-width (90rem); below 90rem of available width it looks like 100%. Respect content maximum width (on) applies the same cap to 100% lines.
- **Publishing behaviour:** Publish sends the page to preview or live; no assets or sheets are involved.

Business Rules

- Content width is 100% of the container, never wider than 90rem.
- The section content area is at most 120rem minus the 5rem side padding on desktop.
- With Respect content maximum width on (default), 100% is capped the same way.
- Use Full bleed with Respect content maximum width off for edge to edge.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line is no different from 100%	Respect content maximum width on already caps 100% at 90rem	Expected; Content width matters when Respect content maximum width is off
The line spans the whole wide screen	Width Full bleed with Respect content maximum width off	Choose Content width

Troubleshooting

- **Symptoms:** On a 2560 px monitor the line is wider than the text column.
- **Cause:** Separator width is 100% or Full bleed and Respect content maximum width is off.
- **Resolution:** Set Appearance > Separator width to Content width and publish.
- **Verification Steps:** At 2560 px the line measures 1440 px and is centred.

Use Cases: Full-width sections on very wide screens.

Authoring Guidelines: Appearance > Separator width = Content width.

Business Rules: 100% width capped at `--content-max-width` (90rem).

Rendering Rules: `--separator-width: 100%`, `--separator-cap: var(--content-max-width)`.

Responsive Behaviour: Identical below 90rem of available width.

SEO Impact: None.

Accessibility Compliance: Visual only.

Variation 22 — Full bleed width

Variation Name: Separator width: Full bleed (section edge to edge) (`width-full-bleed`).

Business Purpose: Edge-to-edge line with any variant.

Visual Example:

Figure 43: Variation example — The section at 390 px: two paragraphs with a Branded separator between them in Separator width Full bleed and Respect content maximum width off; the 2px brand 500 line runs across the full 390 px, over the 1.5rem section padding on both sides. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-full-bleed.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-full-bleed.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 390 px: two paragraphs with a Branded separator between them in Separator width Full bleed and Respect content maximum width off; the 2px brand 500 line runs across the full 390 px, over the 1.5rem section padding on both sides.
Business Context	A strong brand division on mobile pages, where the line should run from screen edge to screen edge rather than stop at the text column.
Author Objective	Make a Branded separator run edge to edge on a phone with Full bleed and no maximum width cap.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Manda-tory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Sec-tion › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Separator variant (Separator › General)	Branded	No	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list
(C)	Separator width (Separator › Appearance)	Full bleed (section edge to edge)	No	Share of the content width	Use with Alignment	Enforced: option list
(D)	Respect content maximum width (Separator › Advanced)	Off	No	Cap at 90rem	Off only for true edge-to-edge on wide screens	—
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A brand-blue 2px line touching both screen edges between the two paragraphs, without horizontal scrolling.
- **Rendering behaviour:** width-full-bleed adds 2 x the section inline padding (1.5rem mobile, 2.5rem tablet, 5rem desktop) with negative margins; with Respect content maximum width off the line is not capped at 90rem on very wide screens.
- **Publishing behaviour:** Publish sends the page to preview or live; nothing else needs publishing.

Business Rules

- Full bleed works with any variant; here Branded gives the colour and thickness.

- The bleed equals the section's side padding, so it never causes horizontal scrolling.
- Respect content maximum width off is only needed for edge to edge beyond 90rem.
- A breakpoint width other than Full bleed removes the bleed in that range.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line stops at the text column on mobile	Mobile width set to 100% on the Responsive tab	Set Mobile width to As Appearance or Full bleed
The page scrolls sideways	Additional tab margins added to the separator	Reset the Additional margins to Default
The line ignores the bleed	Stretch to container width is on	Turn Stretch to container width off

Troubleshooting

- **Symptoms:** At 390 px the blue line leaves a 1.5rem gap at both screen edges.
- **Cause:** Separator width was saved as 100% or Auto, or Stretch to container width removes the bleed.
- **Resolution:** Set Appearance > Separator width to Full bleed (section edge to edge), turn Stretch off and publish.
- **Verification Steps:** The block has the class width-full-bleed and the line touches both edges at 390 px.

Use Cases: Strong section divisions on mobile and desktop.

Authoring Guidelines: Appearance > Separator width = Full bleed; turn off Respect content maximum width to exceed 90rem on very wide screens.

Business Rules: Same mechanics as the Full width variant (Variation 8).

Rendering Rules: `--separator-bleed: 1` (width plus the section's inline padding on both sides, negative margins).

Responsive Behaviour: Bleed 1.5rem / 2.5rem / 5rem per side on mobile / tablet / desktop.

SEO Impact: None.

Accessibility Compliance: Visual only.

Variation 23 — Maximum width

Variation Name: Maximum width Small / Medium / Large / Extra large / Content container (`max-small` 20rem, `max-medium` 40rem, `max-large` 60rem, `max-extra-large` 80rem, `max-content-container` 90rem).

Business Purpose: Caps the line length regardless of the percentage width.

Visual Example:

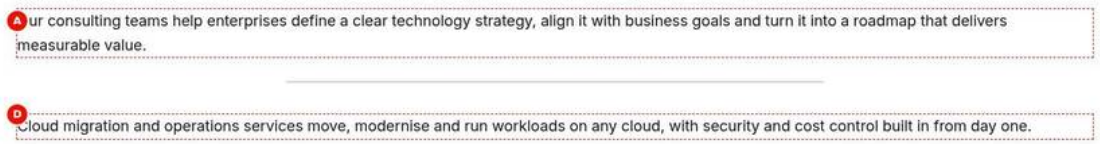

Figure 44: Variation example — The section at 1440 px: two paragraphs with a separator at Separator width 100% and Maximum width Medium (640px) between them; the thin slate 400 line is 40rem long and centred. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-max-width.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-max-width.jpg`

Item	Detail
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: two paragraphs with a separator at Separator width 100% and Maximum width Medium (640px) between them; the thin slate 400 line is 40rem long and centred.
Business Context	On wide desktop layouts a full-percentage divider can be too long; a fixed cap keeps dividers a consistent length.
Author Objective	Cap a 100% separator at 40rem with Maximum width Medium.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Separator width (Separator › Appearance)	100%	No	Share of the content width	Use with Alignment	Enforced: option list
(C)	Maximum width (Separator › Appearance)	Medium (640px)	No	Caps the line length	—	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A centred thin grey line of 640 px between paragraphs that span the full 1280 px content width.

- **Rendering behaviour:** max-medium sets the line's max-width to 40rem; the effective cap is the smallest of Maximum width, Content width and Respect content maximum width; on a 390 px phone the 100% width (342 px) is shorter than the cap.
- **Publishing behaviour:** Publish sends the page to preview or live; there is nothing else to publish.

Business Rules

- Maximum width options are Small 20rem, Medium 40rem, Large 60rem, Extra large 80rem and Content container 90rem.
- The cap applies on every breakpoint; on small screens the percentage usually wins.
- Alignment positions the capped line (Center by default).
- Stretch to container width still respects the cap.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line is longer than 640 px	Maximum width left on None	Set Appearance > Maximum width to Medium (640px)
The capped line sits at the left	Alignment set to Start	Set Alignment Center

Troubleshooting

- **Symptoms:** The separator still spans the full content width.
- **Cause:** Maximum width was not saved, so max-none applies.
- **Resolution:** Set Maximum width to Medium (640px) and publish the page.
- **Verification Steps:** The block has the class max-medium and the line is 40rem wide at 1440 px.

Use Cases: Consistent short dividers on wide screens.

Authoring Guidelines: Appearance > Maximum width (labels show px: 320 / 640 / 960 / 1280px).

Business Rules: The line's max-width is the minimum of Maximum width, the Content width cap and the Respect content maximum width limit.

Rendering Rules: `max-width: min(--separator-max, --separator-cap, --separator-limit).`

Responsive Behaviour: The cap is the same on all breakpoints; on small screens the percentage width usually wins.

SEO Impact: None.

Accessibility Compliance: Visual only.

Variation 24 — Stretch to container width

Variation Name: Stretch to container width (`stretch`).

Business Purpose: Forces the line to fill its container on every breakpoint.

Visual Example:

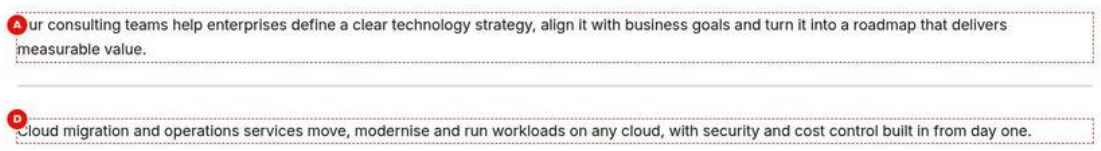

Figure 45: Variation example — The section at 1440 px: two paragraphs with a separator between them whose Separator width is 25% but Stretch to container width is on, so the thin slate 400 line fills the full content width. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-stretch.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-stretch.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: two paragraphs with a separator between them whose Separator width is 25% but Stretch to container width is on, so the thin slate 400 line fills the full content width.
Business Context	Stretch is a quick way to make a separator full width on every breakpoint without changing each inherited width field.
Author Objective	Show that Stretch to container width overrides a 25% width.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Separator width (Separator › Appearance)	25%	No	Share of the content width	Use with Alignment	Enforced: option list
(C)	Stretch to container width (Separator › Advanced)	On	No	Fill the container always	—	—
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin grey line across the full content width, as if no width had been set.
- **Rendering behaviour:** The stretch class sets the line to 100% with no negative margins on all breakpoints, ignoring the width, the breakpoint widths and full bleed; Maximum width caps still apply.
- **Publishing behaviour:** Publish sends the page to preview or live; no other publish step.

Business Rules

- Stretch to container width overrides Separator width and Desktop, Tablet and Mobile width.
- It also removes the Full bleed extension.
- Maximum width and Respect content maximum width still cap the line.
- Default is off; turn it on only when the line must always fill its container.

Common Authoring Mistakes

Error	Root Cause	Resolution
The 25% setting has no effect	Stretch to container width is on	Turn Stretch off if a partial width is wanted
Full bleed stopped working	Stretch removes the bleed margins	Turn Stretch off for full-bleed separators

Troubleshooting

- **Symptoms:** An author sets width 25% but the line stays full width.
- **Cause:** Advanced > Stretch to container width is on and overrides every width.
- **Resolution:** Turn Stretch to container width off and publish.
- **Verification Steps:** The block no longer has the class stretch and the line is 25% wide.

Use Cases: Overriding widths inherited from a variant without changing each width field.

Authoring Guidelines: Advanced > Stretch to container width = on.

Business Rules: Ignores width, per-breakpoint widths and full bleed (width 100%, no negative margins). The maximum width caps still apply.

Rendering Rules: `.separator.stretch .separator-line { width: 100%; margin-inline: 0 }`.

Responsive Behaviour: 100% on all breakpoints.

SEO Impact: None.

Accessibility Compliance: Visual only.

Variation 25 — Dot decoration

Variation Name: Decoration: Dot (start, center and / or end) (`separator-decoration-dot`).

Business Purpose: A round ornament on the line.

Visual Example:

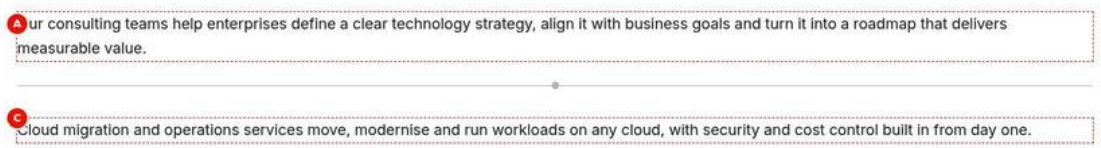

Figure 46: Variation example — The section at 1440 px: two paragraphs with a Default separator between them carrying a Center decoration Dot, a 0.5625rem slate 400 circle centred on the thin line. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-decoration-dot.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-decoration-dot.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: two paragraphs with a Default separator between them carrying a Center decoration Dot, a 0.5625rem slate 400 circle centred on the thin line.
Business Context	A decorative chapter break where a small ornament on the line gives a more editorial look than a plain rule.
Author Objective	Add a dot at the centre of a separator line.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Center decoration (Separator › Appearance)	Dot	No	Shape at the centre	Visual only	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin grey line across the content width with a small grey dot in the middle.
- **Rendering behaviour:** A span.separator-decoration-center with the dot shape (round) in the line colour, size thickness x 3 + 0.375rem, vertically centred; aria-hidden, CanvasText in forced colours.

- **Publishing behaviour:** Publish sends the page to preview or live; decorations are generated by code and need no assets.

Business Rules

- Decorations render only with a visible line, not with Line style None.
- The dot uses the line colour and opacity.
- Its size follows the thickness: 0.5625rem thin, 0.75rem medium, 0.9375rem thick.
- Decorations are hidden from assistive technologies.

Common Authoring Mistakes

Error	Root Cause	Resolution
The dot does not appear	Line style None (spacing only) chosen	Choose a visible line style
The dot is not centred on a short line	Alignment Start or End moves the whole line, and the dot stays at its centre	Use Alignment Center for a centred ornament

Troubleshooting

- **Symptoms:** The separator shows a line but no dot.
- **Cause:** Center decoration was not saved as Dot, or the dot was set as Start or End decoration.
- **Resolution:** Set Appearance > Center decoration Dot and publish.
- **Verification Steps:** The block has the class decorated and contains a span with separator-decoration-center.

Use Cases: Decorative chapter breaks.

Authoring Guidelines: Appearance > Start / Center / End decoration = Dot.

Business Rules: Decorations render only when the line is visible (not with Line style None); the block gets the `decorated` class.

Rendering Rules: `<span class="separator-decoration separator-decoration-{position} separator-decoration-dot" aria-hidden="true">`, a circle in the line colour, size `thickness × 3 + 0.375rem` (thin: 0.5625rem; medium: 0.75rem; thick: 0.9375rem), vertically centred on the line.

Responsive Behaviour: Scales with the (per-breakpoint) thickness.

SEO Impact: None.

Accessibility Compliance: Hidden from assistive technology; forced colours: `CanvasText`.

Variation 26 — Square decoration

Variation Name: Decoration: Square (`separator-decoration-square`).

Business Purpose: A square ornament.

Visual Example:

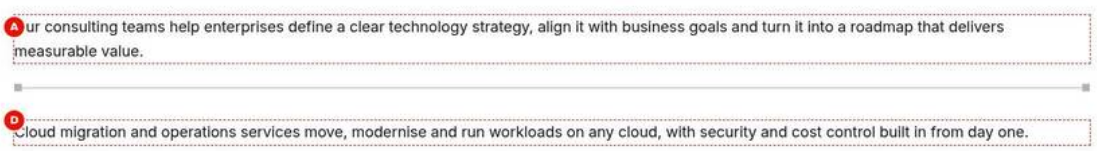

Figure 47: Variation example — The section at 1440 px: two paragraphs with a Default separator between them carrying Start decoration Square and End decoration Square, small slate 400 squares at both ends of the thin line. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-decoration-square.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-decoration-square.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: two paragraphs with a Default separator between them carrying Start decoration Square and End decoration Square, small slate 400 squares at both ends of the thin line.
Business Context	A structured, technical design accent where the line's ends are marked with square ornaments.
Author Objective	Add square decorations at the start and the end of a separator line.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Start decoration (Separator › Appearance)	Square	No	Shape at the start	Visual only	Enforced: option list
(C)	End decoration (Separator › Appearance)	Square	No	Shape at the end	Visual only	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin grey line across the content width with a small grey square at each end.
- **Rendering behaviour:** Two spans (separator-decoration-start and -end, square shape, no radius) positioned at the line's inline start and end; size 0.5625rem for a thin line; RTL-aware.
- **Publishing behaviour:** Publish sends the page to preview or live; decorations need no assets.

Business Rules

- Start and End follow the reading direction.
- With Inset, the end decorations sit at the 2.5rem inset.
- Decorations need a visible line.
- Squares use the line colour, so a High contrast line darkens them too.

Common Authoring Mistakes

Error	Root Cause	Resolution
Only one square appears	End decoration left on None	Set both Start decoration and End decoration to Square
The squares are tiny on a phone	Thin line gives the smallest size	Set Line thickness Medium for larger ornaments

Troubleshooting

- **Symptoms:** The squares are missing on the published page.
- **Cause:** Line style was changed to None, which removes the line and all decorations.
- **Resolution:** Set Line style back to As the variant or Solid and publish.
- **Verification Steps:** The block contains two separator-decoration spans with the square class.

Use Cases: Technical / structured design accents.

Authoring Guidelines: Start / Center / End decoration = Square.

Business Rules: As Dot.

Rendering Rules: Same span with the square shape (no radius).

Responsive Behaviour: Scales with the thickness.

SEO Impact: None.

Accessibility Compliance: `aria-hidden="true"`.

Variation 27 — Diamond decoration

Variation Name: Decoration: Diamond (`separator-decoration-diamond`).

Business Purpose: A diamond ornament (for example a decorated chapter break).

Visual Example:

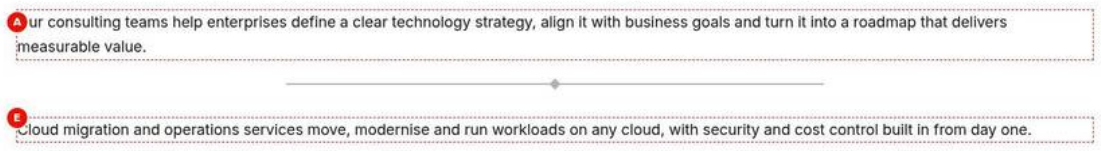

Figure 48: Variation example — The section at 1440 px: two paragraphs with a separator between them at Line thickness Medium (2px), Separator width 50% (640 px, centred) and Center decoration Diamond, a 0.75rem rotated square at the middle of the line. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-decoration-diamond.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-decoration-diamond.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: two paragraphs with a separator between them at Line thickness Medium (2px), Separator width 50% (640 px, centred) and Center decoration Diamond, a 0.75rem rotated square at the middle of the line.
Business Context	A decorated chapter break, as in the README example, where a diamond on a shorter medium line marks a major change.
Author Objective	Add a medium 50% separator with a diamond at its centre.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Line thickness (Separator › Appearance)	Medium (2px)	No	1px / 2px / 3px	—	Enforced: option list
(C)	Separator width (Separator › Appearance)	50%	No	Share of the content width	Use with Alignment	Enforced: option list
(D)	Center decoration (Separator › Appearance)	Diamond	No	Shape at the centre	Visual only	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A centred 2px grey line of half the content width with a small grey diamond in the middle.
- **Rendering behaviour:** The centre span is a square rotated 45 degrees and scaled to 0.8, sized thickness x 3 + 0.375rem (0.75rem for medium); it scales with any per-breakpoint thickness.
- **Publishing behaviour:** Publish sends the page to preview or live; no assets are needed.

Business Rules

- Line thickness Medium overrides the Default preset's thin line and enlarges the diamond.
- Width 50% keeps the diamond at the centre of the shorter line.
- For a real chapter break combine it with Accessibility mode Semantic.
- The diamond is aria-hidden and visual only.

Common Authoring Mistakes

Error	Root Cause	Resolution
The diamond looks like a square	Square chosen instead of Diamond	Set Center decoration Diamond
The diamond is very small	Line thickness left thin	Set Line thickness Medium (2px)

Troubleshooting

- **Symptoms:** The diamond appears off-centre on the line.
- **Cause:** It was set as Start or End decoration instead of Center decoration.
- **Resolution:** Reset Start and End decoration to None and set Center decoration Diamond, then publish.
- **Verification Steps:** The block contains one span with separator-decoration-center separator-decoration-diamond.

Use Cases: "A decorated chapter break: Semantic, Medium, 50%, Center decoration Diamond" (README example).

Authoring Guidelines: Center decoration = Diamond (or start / end).

Business Rules: As Dot.

Rendering Rules: Square rotated 45° and scaled to 0.8.

Responsive Behaviour: Scales with the thickness.

SEO Impact: None.

Accessibility Compliance: `aria-hidden="true"`.

Variation 28 — Hidden on desktop

Variation Name: Show on desktop off (`hide-desktop`).

Business Purpose: A divider needed only on smaller screens (for example where columns stack).

Visual Example:

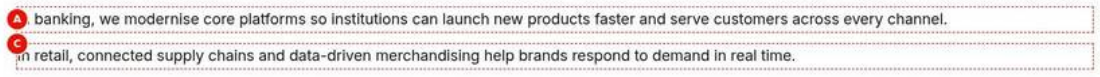

Figure 49: Variation example — The section at 1440 px: the two paragraphs follow each other with no separator and no extra space between them, because the separator's Show on desktop is off. The screenshot shows only the desktop width. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-hidden-desktop.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-hidden-desktop.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the two paragraphs follow each other with no separator and no extra space between them, because the separator's Show on desktop is off. The screenshot shows only the desktop width.
Business Context	A divider needed only where content stacks on smaller screens, for example between columns that sit side by side on desktop.
Author Objective	Hide a separator from 1200 px while keeping it on tablet and mobile.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Show on desktop (Separator › Responsive)	Off	No	Visibility ≥ 1200px	—	—
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	In retail, connected supply chains and data-driven merchandising help brands respond to demand in real time.	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Screen width (Preview)	1440 px (desktop)	—	Check on the preview (not stored in the content)	1440 px (desktop)	—
—	Check (Preview)	No separator between the paragraphs; at 390 px (mobile) and 1024 px (tablet) it shows	—	Check on the preview (not stored in the content)	No separator between the paragraphs; at 390 px (mobile) and 1024 px (tablet) it shows	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** No line and no separator spacing between the paragraphs at desktop width.
- **Rendering behaviour:** hide-desktop sets display: none from 1200 px; at 1024 px and 390 px the line shows with its default 1.5rem spacing.
- **Publishing behaviour:** Publish sends the page to preview or live; the same HTML serves all widths.

Business Rules

- Show on desktop off hides the separator and its spacing from 1200 px.
- It is also removed from the accessibility tree there.
- Tablet (600 to 1199 px) and mobile keep the separator.
- The editor at desktop width shows it hidden; check other widths in Preview.

Common Authoring Mistakes

Error	Root Cause	Resolution
The separator disappears on all devices	All three Show toggles turned off	Turn Show on tablet and Show on mobile back on
The separator is missing in the editor	The editor canvas is at desktop width	Expected; check Preview at 1024 px or 390 px

Troubleshooting

- **Symptoms:** The separator still shows on a desktop monitor.
- **Cause:** The browser window is narrower than 1200 px, which is the tablet range.
- **Resolution:** Widen the window to 1200 px or more, or also turn Show on tablet off if it should be hidden there.
- **Verification Steps:** At 1440 px the block has hide-desktop and is not displayed.

Use Cases: Separating stacked columns on mobile / tablet.

Authoring Guidelines: Responsive > Show on desktop = off.

Business Rules: Hidden from 1200px; the spacing disappears too.

Rendering Rules: `@media (width >= 1200px) { .separator.hide-desktop { display: none } }`.

Responsive Behaviour: Visible on tablet and mobile only.

SEO Impact: None.

Accessibility Compliance: Removed from the accessibility tree where hidden.

Variation 29 — Hidden on tablet

Variation Name: Show on tablet off (`hide-tablet`).

Business Purpose: Remove a divider in the tablet range.

Visual Example:

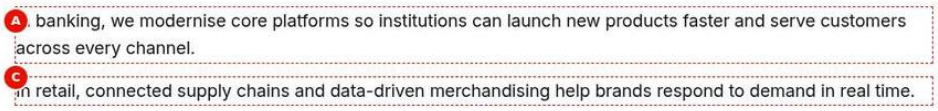

Figure 50: Variation example — The section at 1024 px: the two paragraphs follow each other without a separator, because Show on tablet is off. The screenshot shows only the tablet width. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-hidden-tablet.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-hidden-tablet.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1024 px: the two paragraphs follow each other without a separator, because Show on tablet is off. The screenshot shows only the tablet width.
Business Context	Tablet layouts that look crowded with an extra divider, while desktop and mobile keep it.
Author Objective	Hide a separator in the tablet range only.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Show on tablet (Separator › Responsive)	Off	No	Visibility 600–1199px	—	—
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	In retail, connected supply chains and data-driven mer-	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		chandising help brands respond to demand in real time.				
—	Screen width (Preview)	1024 px (tablet)	—	Check on the preview (not stored in the content)	1024 px (tablet)	—
—	Check (Preview)	No separator between the paragraphs; at 1440 px (desktop) and 390 px (mobile) it shows	—	Check on the preview (not stored in the content)	No separator between the paragraphs; at 1440 px (desktop) and 390 px (mobile) it shows	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** No line and no separator spacing between the paragraphs at 1024 px.
- **Rendering behaviour:** hide-tablet sets display: none from 600 to 1199 px; at 1440 px and 390 px the line shows with 1.5rem spacing.
- **Publishing behaviour:** Publish sends the page to preview or live; the same page serves all ranges.

Business Rules

- Show on tablet off hides the separator between 600 and 1199 px.
- Desktop from 1200 px and mobile below 600 px keep it.
- A landscape tablet wider than 1199 px is in the desktop range.
- Hidden separators are removed from the accessibility tree in that range.

Common Authoring Mistakes

Error	Root Cause	Resolution
The separator still shows on a landscape tablet	The device width is 1200 px or more	Also turn Show on desktop off if needed
The separator is hidden on phones too	Show on mobile turned off as well	Turn Show on mobile back on

Troubleshooting

- **Symptoms:** At 1024 px the separator is still visible.
- **Cause:** Show on tablet was not saved as off.
- **Resolution:** Open the Responsive tab, turn Show on tablet off and publish.
- **Verification Steps:** The block has the class hide-tablet and no line shows at 1024 px.

Use Cases: Layouts that look crowded on tablet.

Authoring Guidelines: Responsive > Show on tablet = off.

Business Rules: Hidden from 600px to 1199px.

Rendering Rules: `display: none` in `@media (600px <= width < 1200px)`.

Responsive Behaviour: Visible on desktop and mobile.

SEO Impact: None.

Accessibility Compliance: Removed where hidden.

Variation 30 — Hidden on mobile

Variation Name: Show on mobile off (`hide-mobile`).

Business Purpose: A desktop / tablet-only divider (for example between two columns).

Visual Example:

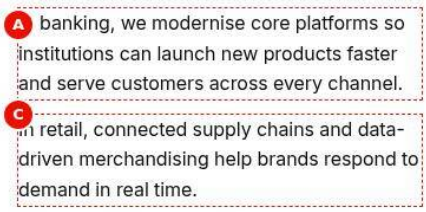

Figure 51: Variation example — The section at 390 px: the two paragraphs follow each other without a separator, because Show on mobile is off. The screenshot shows only the mobile width. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-hidden-mobile.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-hidden-mobile.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 390 px: the two paragraphs follow each other without a separator, because Show on mobile is off. The screenshot shows only the mobile width.
Business Context	A desktop and tablet divider, for example between two columns, that is not wanted when the content stacks on phones.
Author Objective	Hide a separator below 600 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Show on mobile (Separator › Responsive)	Off	No	Visibility < 600px	—	—

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	In retail, connected supply chains and data-driven merchandising help brands respond to demand in real time.	No	Card text	1–3 sentences; lists and links allowed	None
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—
—	Check (Preview)	No separator between the paragraphs; at 1440 px (desktop) and 1024 px (tablet) it shows	—	Check on the preview (not stored in the content)	No separator between the paragraphs; at 1440 px (desktop) and 1024 px (tablet) it shows	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** No line and no separator spacing between the two paragraphs on the phone.
- **Rendering behaviour:** hide-mobile sets display: none below 600 px; at 1024 px and 1440 px the line shows with 1.5rem spacing.
- **Publishing behaviour:** Publish sends the page to preview or live; no further steps.

Business Rules

- Show on mobile off hides the separator below 600 px.
- Tablet and desktop keep it.
- In the data layer, xdm:visibility then lists desktop,tablet (when Analytics is on).
- Check the result in Preview at 390 px; the editor canvas shows its own width.

Common Authoring Mistakes

Error	Root Cause	Resolution
The separator is gone everywhere	All three Show toggles off	Turn Show on desktop and tablet back on
The extra gap remains on mobile	Spacing comes from the paragraphs, not the separator	Adjust the surrounding content spacing

Troubleshooting

- **Symptoms:** The separator still shows on a phone.
- **Cause:** Show on mobile was not saved as off, or the phone is in landscape at 600 px or wider.
- **Resolution:** Turn Show on mobile off, publish, and test in portrait at 390 px.
- **Verification Steps:** The block has hide-mobile and is not displayed at 390 px.

Use Cases: "A desktop-only divider of two columns: Show on tablet / mobile off" (README).

Authoring Guidelines: Responsive > Show on mobile = off.

Business Rules: Hidden below 600px.

Rendering Rules: `display: none` in `@media (width < 600px)`.

Responsive Behaviour: Visible on desktop and tablet.

SEO Impact: None.

Accessibility Compliance: Removed where hidden.

Variation 31 — Hidden on all devices

Variation Name: Show on desktop, tablet and mobile all off (`hide-desktop hide-tablet hide-mobile hidden-all`).

Business Purpose: Temporarily removing a separator while keeping its settings (normally not recommended; Hide block on the Additional tab does the same more clearly).

Visual Example:

Figure 52: Variation example — Universal Editor edit mode at 1440 px: between the two paragraphs a dashed outline box containing the thin line and the small grey note Separator hidden on all devices. Preview and the published page show nothing there. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-hidden-all.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-hidden-all.jpg`
Screenshot Purpose	Variation example
Screen Description	Universal Editor edit mode at 1440 px: between the two paragraphs a dashed outline box containing the thin line and the small grey note Separator hidden on all devices. Preview and the published page show nothing there.
Business Context	A separator temporarily switched off on every device must stay selectable in the editor so an author can find and restore it.
Author Objective	Turn all three Show toggles off and see how the hidden separator appears in edit mode.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	In banking, we modernise core platforms so institutions can launch new products faster and serve cus-	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		tomers across every channel.				
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Show on desktop (Separator › Responsive)	Off	No	Visibility ≥ 1200px	—	—
(C)	Show on tablet (Separator › Responsive)	Off	No	Visibility 600–1199px	—	—
(D)	Show on mobile (Separator › Responsive)	Off	No	Visibility < 600px	—	—
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	In retail, connected supply chains and data-driven merchandising help brands respond to demand in real time.	No	Card text	1–3 sentences; lists and links allowed	None
(F)	Mode (Universal Editor)	Edit (the dashed box and note show only here; Preview and the published page show nothing)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** In edit mode only: a dashed outline around the separator with the centred note Separator hidden on all devices under the line.
- **Rendering behaviour:** hidden-all sets display: none on the site; in edit mode (.adobe-ue-edit) the block is shown with a dashed outline and the note from placeholder separatorHidden.
- **Publishing behaviour:** Publish sends the page to preview or live, where the separator renders nothing. The note text comes from the locale's placeholders sheet, which is published separately.

Business Rules

- With Show on desktop, tablet and mobile all off the separator renders nothing on the site.
- The editor note appears only in Universal Editor edit mode, never on aem.page or aem.live.
- Hide block on the Additional tab is the clearer way to hide a block temporarily.
- xdm:visibility is none in the data layer when Analytics is on.

Common Authoring Mistakes

Error	Root Cause	Resolution
Authors cannot find the separator on the page	All Show toggles off	Select the dashed box in edit mode and turn the needed toggles on
The note shows the key separatorHidden or English text	Placeholder missing in the locale's sheet	Add separatorHidden to the placeholders sheet and publish it

Troubleshooting

- **Symptoms:** The separator is missing on the live page although the author expected a line.
- **Cause:** All three Show on toggles are off, which hides the separator on every device.
- **Resolution:** Open the separator in edit mode (the dashed box), turn Show on desktop, tablet and mobile on, and publish.
- **Verification Steps:** The note disappears in edit mode and the line shows in Preview at all widths.

Use Cases: Temporary removal.

Authoring Guidelines: Turn off all three Show on … toggles.

Business Rules: Nothing on the page; in Universal Editor edit mode the block stays visible with a dashed outline and the note from placeholder `separatorHidden` ("Separator hidden on all devices").

Rendering Rules: `.separator.hidden-all { display: none }`; `.adobe-ue-edit .separator.hidden-all { display: block; outline: 1px dashed }`; the note is `<p class="separator-editor-note">`.

Responsive Behaviour: Hidden everywhere.

SEO Impact: None.

Accessibility Compliance: Not exposed.

Variation 32 — Desktop overrides (width, thickness, alignment)

Variation Name: Desktop width / Desktop thickness / Desktop alignment (`desktop-width-*`, `desktop-thickness-*`, `desktop-align-*`).

Business Purpose: A different look on large screens.

Visual Example:

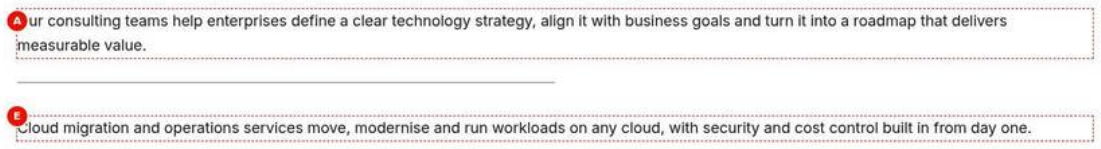

Figure 53: Variation example — The section at 1440 px: two paragraphs with a separator between them using Desktop width 50%, Desktop thickness Medium (2px) and Desktop alignment Start; the slate 400 line is 640 px long at the start edge. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-desktop-overrides.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-desktop-overrides.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: two paragraphs with a separator between them using Desktop width 50%, Desktop thickness Medium (2px) and Desktop alignment Start; the slate 400 line is 640 px long at the start edge.

Item	Detail
Business Context	A shorter, heavier accent line on wide screens while phones keep a simple full-width thin rule.
Author Objective	Override width, thickness and alignment for desktop only.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Desktop width (Separator › Responsive)	50%	No	Width ≥ 1200px	—	Enforced: option list
(C)	Desktop thickness (Separator › Responsive)	Medium (2px)	No	Thickness ≥ 1200px	—	Enforced: option list
(D)	Desktop alignment (Separator › Responsive)	Start	No	Alignment ≥ 1200px	—	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None
—	Screen width (Preview)	1440 px (desktop)	—	Check on the preview (not stored in the content)	1440 px (desktop)	—
—	Check (Preview)	At 390 px (mobile) the same separator is 100% wide and thin	—	Check on the preview (not stored in the content)	At 390 px (mobile) the same separator is 100% wide and thin	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 2px grey line half the content width, starting at the left content edge, with 1.5rem space above and below.
- **Rendering behaviour:** desktop-width-50-percent, desktop-thickness-medium and desktop-align-start apply from 1200 px only; at 390 px the same separator is 100% wide, thin and centred.
- **Publishing behaviour:** Publish sends the page to preview or live; the breakpoint classes are in the published HTML.

Business Rules

- Desktop values apply from 1200 px; As Appearance keeps the Appearance value.
- Tablet and mobile keep the Appearance values unless they have their own overrides.
- A desktop width other than Full bleed removes the bleed on desktop.
- Desktop alignment Start follows the reading direction.

Common Authoring Mistakes

Error	Root Cause	Resolution
The 50% line also shows on phones	Width set on the Appearance tab	Use Responsive > Desktop width instead
No change visible on a laptop	The window is under 1200 px wide	Check at 1200 px or wider

Troubleshooting

- **Symptoms:** At 1440 px the line is still full width and thin.
- **Cause:** The Desktop fields were left on As Appearance, or Stretch to container width is on.
- **Resolution:** Set Desktop width 50%, Desktop thickness Medium and Desktop alignment Start, turn Stretch off and publish.
- **Verification Steps:** The block has desktop-width-50-percent desktop-thickness-medium desktop-align-start.

Use Cases: Shorter accent lines on wide screens.

Authoring Guidelines: Responsive tab: Desktop width (As Appearance, Auto, 25%, 50%, 75%, 100%, Content width, Full bleed), Desktop thickness (As Appearance, Thin, Medium, Thick), Desktop alignment (As Appearance, Start, Center, End).

Business Rules: "As Appearance" (`inherit`) keeps the Appearance value; a breakpoint width other than Full bleed removes the bleed.

Rendering Rules: Classes set the custom properties inside `@media (width >= 1200px)`.

Responsive Behaviour: Applies from 1200px only.

SEO Impact: None.

Accessibility Compliance: Visual only.

Variation 33 — Tablet overrides (width, thickness, alignment)

Variation Name: Tablet width / thickness / alignment (`tablet-width-*`, `tablet-thickness-*`, `tablet-align-*`).

Business Purpose: A different look in the tablet range.

Visual Example:

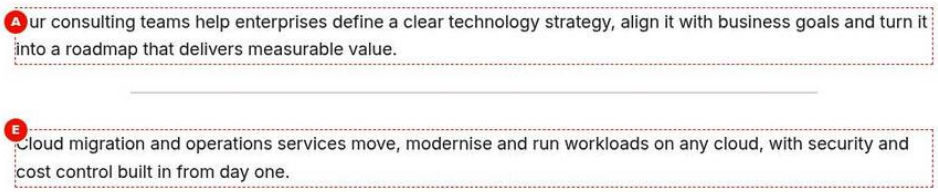

Figure 54: Variation example — The section at 1024 px: two paragraphs with a separator between them using Tablet width 75% and Tablet alignment Center; the thin slate 400 line is about 708 px long and centred. Desktop width 50% applies only from 1200 px. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-tablet-overrides.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-tablet-overrides.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1024 px: two paragraphs with a separator between them using Tablet width 75% and Tablet alignment Center; the thin slate 400 line is about 708 px long and centred. Desktop width 50% applies only from 1200 px.
Business Context	Tablet layouts often need an intermediate divider length between the short desktop accent and the full-width mobile rule.
Author Objective	Give a separator a 75% centred width on tablet while desktop uses 50%.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Desktop width (Separator › Responsive)	50%	No	Width ≥ 1200px	—	Enforced: option list
(C)	Tablet width (Separator › Responsive)	75%	No	Width 600–1199px	—	Enforced: option list
(D)	Tablet alignment (Separator › Responsive)	Center	No	Alignment 600–1199px	—	Enforced: option list

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None
—	Screen width (Preview)	1024 px (tablet)	—	Check on the preview (not stored in the content)	1024 px (tablet)	—
—	Check (Preview)	At 1440 px (desktop) the same separator is 50% wide	—	Check on the preview (not stored in the content)	At 1440 px (desktop) the same separator is 50% wide	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A centred thin grey line three quarters of the content width at 1024 px.
- **Rendering behaviour:** tablet-width-75-percent and tablet-align-center apply from 600 to 1199 px; desktop-width-50-percent applies from 1200 px; mobile keeps 100%.
- **Publishing behaviour:** Publish sends the page to preview or live; all breakpoint classes are in the page HTML.

Business Rules

- Tablet values apply only between 600 and 1199 px.
- Each breakpoint override is independent: Desktop width does not affect tablet.
- Tablet alignment Center keeps the line centred whatever the Appearance alignment.
- Mobile keeps the Appearance width (100%) here.

Common Authoring Mistakes

Error	Root Cause	Resolution
The tablet shows the 50% desktop width	Tablet width left on As Appearance and the tablet is 1200 px or wider	Set Tablet width and check the device width
The line is at the start on tablet	Appearance alignment Start inherited	Set Tablet alignment Center

Troubleshooting

- **Symptoms:** At 1024 px the line is full width instead of 75%.
- **Cause:** Tablet width was not saved, so in the tablet range the Appearance width (100% from the Default preset) applies; Desktop width 50% only applies from 1200 px.
- **Resolution:** Set Responsive > Tablet width 75% and publish.
- **Verification Steps:** The block has tablet-width-75-percent and the line is 75% wide at 1024 px.

Use Cases: Intermediate widths for tablet layouts.

Authoring Guidelines: Responsive tab: Tablet width, Tablet thickness, Tablet alignment.

Business Rules: As desktop overrides.

Rendering Rules: Inside `@media (600px <= width < 1200px)`.

Responsive Behaviour: 600–1199px only.

SEO Impact: None.

Accessibility Compliance: Visual only.

Variation 34 — Mobile overrides (width, thickness, alignment)

Variation Name: Mobile width / thickness / alignment (`mobile-width-*`, `mobile-thickness-*`, `mobile-align-*`).

Business Purpose: A different look on phones.

Visual Example:

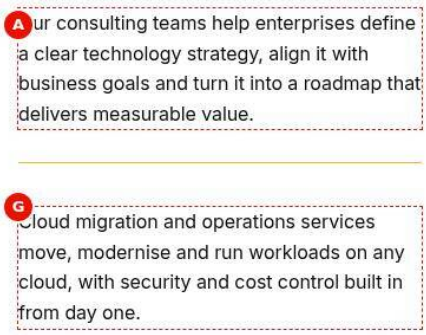

Figure 55: Variation example — The section at 390 px: two paragraphs with a separator between them that is a 1px accent-yellow line at 100% of the content width, from Mobile width 100% and Mobile thickness Thin overriding the Appearance values 25% and Medium. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-mobile-overrides.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-mobile-overrides.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 390 px: two paragraphs with a separator between them that is a 1px accent-yellow line at 100% of the content width, from Mobile width 100% and Mobile thickness Thin overriding the Appearance values 25% and Medium.
Business Context	A short heavy accent works on desktop but looks lost on phones, where a full-width thin line reads better.
Author Objective	Keep a 25% medium accent line on larger screens and make it 100% thin on mobile.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)

		egy, align it with business goals and turn it into a roadmap that delivers measurable value.				
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Line thickness (Separator › Appearance)	Medium (2px)	No	1px / 2px / 3px	—	Enforced: option list
(C)	Line colour (Separator › Appearance)	Accent	No	Palette colour	—	Enforced: option list
(D)	Separator width (Separator › Appearance)	25%	No	Share of the content width	Use with Alignment	Enforced: option list
(E)	Mobile width (Separator › Responsive)	100%	No	Width < 600px	—	Enforced: option list
(F)	Mobile thickness (Separator › Responsive)	Thin (1px)	No	Thickness < 600px	—	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
G	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—
—	Check (Preview)	At 1440 px (desktop) the same separator is a 25% medium accent line	—	Check on the preview (not stored in the content)	At 1440 px (desktop) the same separator is a 25% medium accent line	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin yellow line across the full content width of the phone, with 1.5rem space above and below.

- **Rendering behaviour:** Below 600 px mobile-width-100-percent and mobile-thickness-thin override width-25-percent and thickness-medium; at 1440 px the line is a 25% medium accent line.
- **Publishing behaviour:** Publish sends the page to preview or live; nothing else needs publishing.

Business Rules

- Mobile values apply below 600 px only.
- Line colour Accent (warning 500) is not overridable per breakpoint and applies everywhere.
- The Appearance width and thickness stay in force on tablet and desktop.
- Yellow on white is decorative only; contrast is low.

Common Authoring Mistakes

Error	Root Cause	Resolution
The phone still shows a short line	Mobile width left on As Appearance	Set Mobile width 100%
The line is thick on the phone	Mobile thickness not set	Set Mobile thickness Thin (1px)

Troubleshooting

- **Symptoms:** At 390 px the line is a short 25% accent.
- **Cause:** Mobile width was not saved, so the Appearance width 25% applies on mobile too.
- **Resolution:** Set Responsive > Mobile width 100% and publish.
- **Verification Steps:** The block has mobile-width-100-percent and the line is full width at 390 px.

Use Cases: Full-width lines on small screens.

Authoring Guidelines: Responsive tab: Mobile width, Mobile thickness, Mobile alignment.

Business Rules: As desktop overrides.

Rendering Rules: Inside `@media (width < 600px)`.

Responsive Behaviour: Below 600px only.

SEO Impact: None.

Accessibility Compliance: Visual only.

Variation 35 — Desktop spacing

Variation Name: Desktop top / bottom spacing (`desktop-top-*`, `desktop-bottom-*`).

Business Purpose: Vertical space around the line on large screens.

Visual Example:

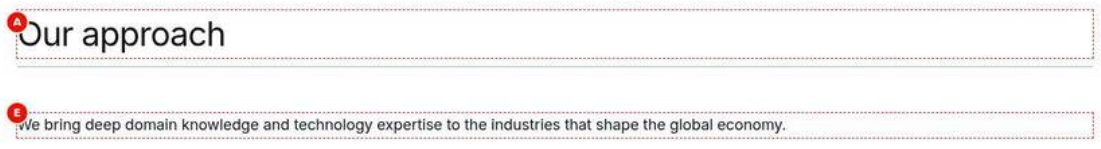

Figure 56: Variation example — The section at 1440 px: the H2 Our approach, directly below it a thin slate 400 full-width separator with Desktop top spacing None, then 2.5rem (Large) of space and the paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-desktop-spacing.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-desktop-spacing.jpg`

Item	Detail
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: the H2 Our approach, directly below it a thin slate 400 full-width separator with Desktop top spacing None, then 2.5rem (Large) of space and the paragraph.
Business Context	A separator under a heading should sit close to the heading and leave more room before the text, as in the README brand accent example.
Author Objective	Remove the space above a separator and set Large space below it on desktop.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Our approach	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(C)	Desktop top spacing (Separator › Spacing)	None	No	Space above ≥ 1200px	—	Enforced: option list
(D)	Desktop bottom spacing (Separator › Spacing)	Large (40px)	No	Space below ≥ 1200px	—	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	We bring deep domain knowledge and technology expertise to the industries that shape the global economy.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The line follows the heading with only the heading's own bottom margin; a larger gap separates it from the paragraph below.
- **Rendering behaviour:** desktop-top-none and desktop-bottom-large set the block's top padding to 0 and bottom padding to 2.5rem (–space-1000) from 1200 px; tablet and mobile keep 1.5rem both sides.
- **Publishing behaviour:** Publish sends the page to preview or live; nothing else needs publishing.

Business Rules

- Spacing options: Default 1.5rem, None 0, 2XS 0.25rem, XS 0.5rem, Small 1rem, Medium 1.5rem, Large 2.5rem, XL 4rem, 2XL 5rem.
- Spacing is padding, so it never collapses with the heading's margin.
- Desktop values apply from 1200 px only.
- Additional Padding top or bottom would replace these values on that side.

Common Authoring Mistakes

Error	Root Cause	Resolution
The gap under the heading remains	The heading's own bottom margin is outside the separator	Expected; None removes only the separator's padding
The spacing is unchanged on a tablet	Only Desktop spacing set	Set Tablet top and bottom spacing too

Troubleshooting

- **Symptoms:** The spacing settings have no visible effect.
- **Cause:** Use section padding is on, or Additional > Padding top or bottom overrides the Spacing tab.
- **Resolution:** Turn Use section padding off and reset the Additional padding to Default, then publish.
- **Verification Steps:** At 1440 px the block has desktop-top-none desktop-bottom-large and the gaps change.

Use Cases: "A brand accent under a title: Desktop top spacing None" (README).

Authoring Guidelines: Spacing tab: Desktop top spacing, Desktop bottom spacing (Default, None, 2XS 4px, XS 8px, Small 16px, Medium 24px, Large 40px, XL 64px, 2XL 80px).

Business Rules: Default = 1.5rem (24px); values map to `--space-100` (0.25rem), `--space-200` (0.5rem), `--space-400` (1rem), `--space-600` (1.5rem), `--space-1000` (2.5rem), `--space-1600` (4rem), `--space-2000` (5rem); None = 0. Spacing is padding, so it does not collapse with neighbouring margins.

Rendering Rules: `--separator-space-top` / `--separator-space-bottom` inside `@media (width >= 1200px)`.

Responsive Behaviour: Desktop only; tablet and mobile keep their own values.

SEO Impact: None.

Accessibility Compliance: Visual only.

Variation 36 — Tablet spacing

Variation Name: Tablet top / bottom spacing (`tablet-top-*`, `tablet-bottom-*`).

Business Purpose: Vertical space in the tablet range.

Visual Example:

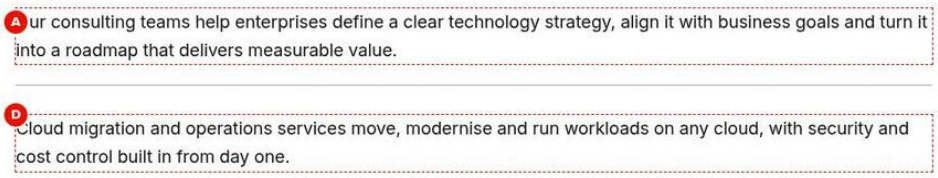

Figure 57: Variation example — The section at 1024 px: two paragraphs with a thin slate 400 full-width separator between them and Tablet top and bottom spacing Small, 1rem above and below the line. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-tablet-spacing.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-tablet-spacing.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1024 px: two paragraphs with a thin slate 400 full-width separator between them and Tablet top and bottom spacing Small, 1rem above and below the line.
Business Context	Tablet pages benefit from a tighter rhythm than desktop, so the space around dividers is reduced in that range.
Author Objective	Reduce the space around a separator to 1rem in the tablet range.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Tablet top spacing (Separator › Spacing)	Small (16px)	No	Space above 600–1199px	—	Enforced: option list
(C)	Tablet bottom spacing (Separator › Spacing)	Small (16px)	No	Space below 600–1199px	—	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None
—	Screen width (Preview)	1024 px (tablet)	—	Check on the preview (not stored in the content)	1024 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin grey line with less space above and below than the default, between the two paragraphs.
- **Rendering behaviour:** tablet-top-small and tablet-bottom-small set 1rem (–space-400) padding from 600 to 1199 px; desktop and mobile keep 1.5rem.
- **Publishing behaviour:** Publish sends the page to preview or live; no other publish step.

Business Rules

- Tablet spacing applies only between 600 and 1199 px.
- Each breakpoint has its own top and bottom value.
- Labels show px; the CSS uses the equivalent rem tokens.
- Use section padding on would ignore all six spacing fields.

Common Authoring Mistakes

Error	Root Cause	Resolution
The spacing changes on desktop too	Desktop spacing fields changed instead of Tablet	Set Tablet top and bottom spacing
No change in the editor	The editor canvas is at desktop width	Check in Preview at 1024 px

Troubleshooting

- **Symptoms:** At 1024 px the gaps are still 1.5rem.
- **Cause:** Tablet top and bottom spacing were not saved, or Use section padding is on.
- **Resolution:** Set both Tablet spacing fields to Small (16px), check Use section padding is off, and publish.
- **Verification Steps:** The block has tablet-top-small tablet-bottom-small and the gaps are 1rem at 1024 px.

Use Cases: Tighter rhythm on tablet.

Authoring Guidelines: Spacing tab: Tablet top spacing, Tablet bottom spacing.

Business Rules: As desktop spacing.

Rendering Rules: Inside `@media (600px <= width < 1200px)`.

Responsive Behaviour: 600–1199px only.

SEO Impact: None.

Accessibility Compliance: Visual only.

Variation 37 — Mobile spacing

Variation Name: Mobile top / bottom spacing (`mobile-top-*`, `mobile-bottom-*`).

Business Purpose: Vertical space on phones.

Visual Example:

Figure 58: Variation example — The section at 390 px: two paragraphs with a thin slate 400 full-width separator between them and Mobile top and bottom spacing XS, 0.5rem above and below the line. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-mobile-spacing.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-mobile-spacing.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 390 px: two paragraphs with a thin slate 400 full-width separator between them and Mobile top and bottom spacing XS, 0.5rem above and below the line.
Business Context	On phones every pixel of height counts; dividers need less whitespace than on desktop.
Author Objective	Reduce the space around a separator to 0.5rem on mobile.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Mobile top spacing (Separator › Spacing)	XS (8px)	No	Space above < 600px	—	Enforced: option list
(C)	Mobile bottom spacing (Separator › Spacing)	XS (8px)	No	Space below < 600px	—	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
D	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin grey line close to both paragraphs, with only small gaps above and below.
- **Rendering behaviour:** mobile-top-xs and mobile-bottom-xs set 0.5rem (–space-200) padding below 600 px; tablet and desktop keep 1.5rem.
- **Publishing behaviour:** Publish sends the page to preview or live; nothing else is needed.

Business Rules

- Mobile spacing applies only below 600 px.
- XS is 0.5rem; None removes the separator's own spacing completely.
- Paragraph margins still add to the visible gap.
- Check the result in Preview at 390 px.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line touches the text	Mobile spacing set to None with paragraphs without margins	Use XS or Small
The phone still shows large gaps	Additional Padding top or bottom set	Reset the Additional padding to Default

Troubleshooting

- **Symptoms:** At 390 px the gaps around the line are still 1.5rem.
- **Cause:** Mobile spacing fields were not saved, or Additional Padding top and bottom override them.
- **Resolution:** Set Mobile top and bottom spacing XS (8px), reset the Additional padding, and publish.
- **Verification Steps:** The block has mobile-top-xs mobile-bottom-xs and the gaps are 0.5rem at 390 px.

Use Cases: Less whitespace on small screens.

Authoring Guidelines: Spacing tab: Mobile top spacing, Mobile bottom spacing.

Business Rules: As desktop spacing.

Rendering Rules: Inside `@media (width < 600px)`.

Responsive Behaviour: Below 600px only.

SEO Impact: None.

Accessibility Compliance: Visual only.

Variation 38 — Use section padding

Variation Name: Use section padding (`section-padding`).

Business Purpose: Avoids doubled spacing when the section already provides it.

Visual Example:

Figure 59: Variation example — A Highlight section (light grey background) at 1440 px: a thin slate 400 full-width separator as the first element with Use section padding on, so the line sits directly at the top of the section content, followed by the H2 Industries we serve and the paragraph. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-section-padding.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-section-padding.jpg`
Screenshot Purpose	Variation example
Screen Description	A Highlight section (light grey background) at 1440 px: a thin slate 400 full-width separator as the first element with Use section padding on, so the line sits directly at the top of the section content, followed by the H2 Industries we serve and the paragraph.
Business Context	A separator at the start of a padded section would add its own 1.5rem on top of the section padding; the section's spacing should be used alone.
Author Objective	Place a separator at the top of a Highlight section without extra spacing of its own.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Style (Section properties)	Highlight	No	Background style of the band	Choose Highlight for a grey band	Enforced: options list (Highlight)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Use section padding (Separator › Spacing)	On	No	No own spacing	On at the edges of padded sections	—
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
C	Title (Title)	Industries we serve	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(D)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
E	Text (Text)	We bring deep domain knowledge and technology expertise to the industries that shape the global economy.	No	Card text	1–3 sentences; lists and links allowed	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** On the light grey background the line starts right below the section's top padding, then the heading and the paragraph follow.
- **Rendering behaviour:** section-padding sets the separator's padding-block to 0 on all breakpoints; the section's own padding (7.5rem at 1440 px for Highlight) provides the space.
- **Publishing behaviour:** Publish sends the page with the section Style to preview or live; nothing else is published.

Business Rules

- Use section padding removes the separator's top and bottom spacing on all breakpoints.
- All six spacing selects are ignored while it is on.
- Use it for separators at the start or end of a padded section.
- The line still follows Theme Auto, which keeps the light palette on Highlight.

Common Authoring Mistakes

Error	Root Cause	Resolution
The Spacing tab values are ignored	Use section padding is on	Turn it off to use the spacing selects
The gap at the top of the section is doubled	Use section padding off on a first separator	Turn Use section padding on

Troubleshooting

- **Symptoms:** There is a large gap between the section top and the line.
- **Cause:** Use section padding is off, so the separator's 1.5rem adds to the section padding.
- **Resolution:** Turn Spacing > Use section padding on and publish.
- **Verification Steps:** The block has the class section-padding and no padding of its own.

Use Cases: A separator as the first or last element of a padded section.

Authoring Guidelines: Spacing tab > Use section padding = on.

Business Rules: Removes the separator's own top and bottom spacing on all breakpoints; all six spacing selects are then ignored.

Rendering Rules: `.separator.section-padding { padding-block: 0 }`.

Responsive Behaviour: All breakpoints.

SEO Impact: None.

Accessibility Compliance: Visual only.

Variation 39 — Animate on view: Fade

Variation Name: Animate on view = Fade (`animate-fade`).

Business Purpose: A gentle reveal as the user scrolls.

Visual Example:

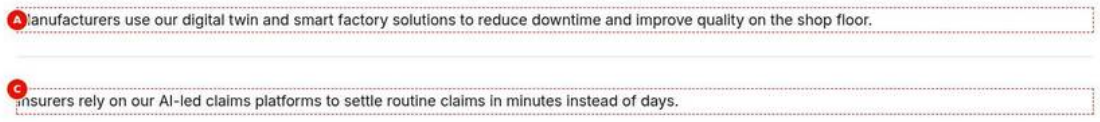

Figure 60: Variation example — The section at 1440 px: two paragraphs with a separator with Animate on view Fade between them, captured half-way through the fade, the thin slate 400 line at reduced opacity. A single frame is shown. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-animate-fade.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-animate-fade.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: two paragraphs with a separator with Animate on view Fade between them, captured half-way through the fade, the thin slate 400 line at reduced opacity. A single frame is shown.
Business Context	Storytelling pages where dividers appear gently as the reader scrolls.
Author Objective	Make a separator fade in once when it scrolls into view.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Manufacturers use our digital twin and smart factory solutions to reduce downtime and improve quality on the shop floor.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Animate on view (Separator › Advanced)	Fade	No	One-off reveal	Use sparingly	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Insurers rely on our AI-led claims platforms to settle routine claims in minutes instead of days.	No	Card text	1–3 sentences; lists and links allowed	None
—	Action (Preview)	Scroll the separator into view	—	Check on the preview (not stored in the content)	Scroll the separator into view	—
—	Check (Preview)	The line fades in once (the screenshot shows it halfway)	—	Check on the preview (not stored in the content)	The line fades in once (the screenshot shows it halfway)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A thin grey line that is partly transparent in the screenshot and fully visible at the end of the 0.6s fade.
- **Rendering behaviour:** The script adds animate-ready (opacity 0); an IntersectionObserver adds is-visible when 10% of the block is in view, fading to opacity 1 in 0.6s ease-out, once per page view.
- **Publishing behaviour:** Publish sends the page to preview or live; check the fade in Preview or on aem.page by scrolling the separator into view.

Business Rules

- The fade runs once, when 10% of the separator is visible.
- Reduced motion fallback Show immediately (default) shows the line without animation for visitors who prefer reduced motion.
- The hidden start state exists only after the script ran, so a script failure never hides the line.

- Without IntersectionObserver the line simply shows.

Common Authoring Mistakes

Error	Root Cause	Resolution
The fade cannot be seen	The separator is already in view on load and fades immediately	Test with the separator below the fold
The line never animates on one device	The device prefers reduced motion with Show immediately	Expected behaviour; choose Short fade if a fade is wanted

Troubleshooting

- **Symptoms:** The line appears at once without fading.
- **Cause:** The operating system's reduced-motion setting is on and the fallback is Show immediately.
- **Resolution:** Expected; test with reduced motion off, or set Reduced motion fallback Short fade.
- **Verification Steps:** With reduced motion off, scrolling the separator into view fades the line in once.

Use Cases: Storytelling pages.

Authoring Guidelines: Advanced > Animate on view = Fade; Reduced motion fallback (shown only when an animation is set): Show immediately or Short fade.

Business Rules: Runs once, when 10% of the block is in view; for visitors who prefer reduced motion: Show immediately = no animation, Short fade = fade only. The hidden start state only exists after the script added `animate-ready`, so a script failure never hides the line.

Rendering Rules: `animate-ready` → line opacity 0; `is-visible` added by an IntersectionObserver (threshold 0.1) → opacity 1 with a 0.6s ease-out transition.

Responsive Behaviour: Same on all breakpoints.

SEO Impact: None.

Accessibility Compliance: Respects the visitor's reduced-motion preference (good practice aligned with WCAG 2.3.3, an AAA criterion); the one-off 0.6s animation is not affected by WCAG 2.2.2. Implemented via `prefers-reduced-motion`.

Variation 40 — Animate on view: Draw from start

Variation Name: Animate on view = Draw from start (`animate-draw-from-start`).

Business Purpose: The line "draws" itself from the start edge.

Visual Example:

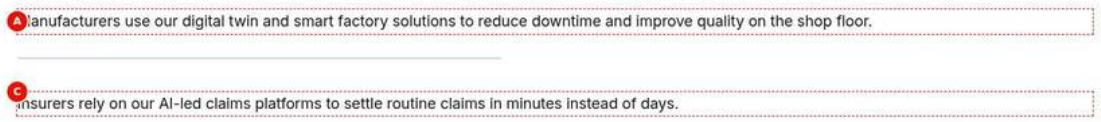

Figure 61: Variation example — The section at 1440 px: two paragraphs with a separator with Animate on view Draw from start between them, captured half-way: the thin slate 400 line has grown from the left edge to about 45% of its length. A single frame is shown. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-animate-draw-start.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-animate-draw-start.jpg`

Item	Detail
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: two paragraphs with a separator with Animate on view Draw from start between them, captured half-way: the thin slate 400 line has grown from the left edge to about 45% of its length. A single frame is shown.
Business Context	Chapter starts on long pages where a line drawing itself from the start edge adds emphasis.
Author Objective	Make a separator draw itself from the start edge when it scrolls into view.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Manufacturers use our digital twin and smart factory solutions to reduce downtime and improve quality on the shop floor.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Animate on view (Separator › Advanced)	Draw from start	No	One-off reveal	Use sparingly	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Insurers rely on our AI-led claims platforms to settle routine claims in minutes instead of days.	No	Card text	1–3 sentences; lists and links allowed	None
—	Action (Preview)	Scroll the separator into view	—	Check on the preview (not stored in the content)	Scroll the separator into view	—
—	Check (Preview)	The line grows from the left edge (the screenshot shows it half-way)	—	Check on the preview (not stored in the content)	The line grows from the left edge (the screenshot shows it half-way)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A grey line partly drawn from the left; it reaches its full width at the end of the 0.6s animation.

- **Rendering behaviour:** The start state is scaleX(0) with the origin left (right on right-to-left pages); is-visible animates it to full length in 0.6s, once; with reduced motion and Short fade it only fades.
- **Publishing behaviour:** Publish sends the page to preview or live; the animation is CSS and needs no assets.

Business Rules

- Draw from start follows the reading direction (:dir(rtl) draws from the right).
- It runs once when 10% of the block is in view.
- Reduced motion fallback Show immediately skips the animation; Short fade only fades.
- Do not rely on the animation to convey meaning.

Common Authoring Mistakes

Error	Root Cause	Resolution
The line draws from the centre	Draw from center chosen	Set Animate on view Draw from start
The animation plays in the editor only at load	Animations run once per page view	Reload Preview and scroll to the separator

Troubleshooting

- **Symptoms:** The line shows fully without drawing.
- **Cause:** The separator was in view on load, or the visitor prefers reduced motion with Show immediately.
- **Resolution:** Place the separator below the fold for testing and turn reduced motion off on the test device.
- **Verification Steps:** The block gets animate-ready then is-visible and the line grows from the left.

Use Cases: Emphasis at chapter starts.

Authoring Guidelines: Animate on view = Draw from start; set the Reduced motion fallback.

Business Rules: As Fade; with reduced motion and Short fade, it only fades.

Rendering Rules: Start state `transform: scaleX(0)`, origin left (right in right-to-left pages, `:dir(rtl)`), animated to full width in 0.6s.

Responsive Behaviour: Same on all breakpoints.

SEO Impact: None.

Accessibility Compliance: Respects reduced motion.

Variation 41 — Animate on view: Draw from center

Variation Name: Animate on view = Draw from center (`animate-draw-from-center`).

Business Purpose: The line grows outwards from the centre.

Visual Example:

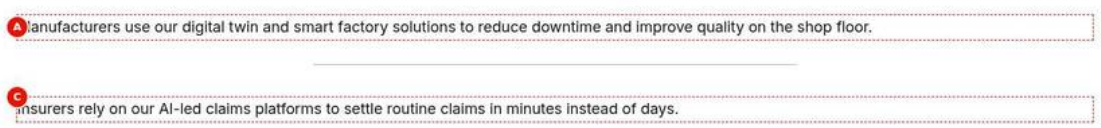

Figure 62: Variation example — The section at 1440 px: two paragraphs with a separator with Animate on view Draw from center between them, captured half-way: the thin slate 400 line has grown from its centre to about 45% of its length. A single frame is shown. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-animate-draw-center.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-animate-draw-center.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: two paragraphs with a separator with Animate on view Draw from center between them, captured half-way: the thin slate 400 line has grown from its centre to about 45% of its length. A single frame is shown.
Business Context	Centred, symmetrical layouts where a divider growing outwards from the middle suits the design.
Author Objective	Make a separator grow from its centre to both ends when it scrolls into view.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Manufacturers use our digital twin and smart factory solutions to reduce downtime and improve quality on the shop floor.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Animate on view (Separator › Advanced)	Draw from center	No	One-off reveal	Use sparingly	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Insurers rely on our AI-led claims platforms to settle routine claims in minutes instead of days.	No	Card text	1–3 sentences; lists and links allowed	None
—	Action (Preview)	Scroll the separator into view	—	Check on the preview (not stored in the content)	Scroll the separator into view	—
—	Check (Preview)	The line grows from its centre to both ends (the screenshot shows it half-way)	—	Check on the preview (not stored in the content)	The line grows from its centre to both ends (the screenshot shows it half-way)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A short centred grey line growing equally to both sides until it reaches full width after 0.6s.
- **Rendering behaviour:** Start state scaleX(0) with the default centre origin; is-visible animates it to full width in 0.6s, once per page view; reduced motion follows the fallback.
- **Publishing behaviour:** Publish sends the page to preview or live; no assets are involved.

Business Rules

- Draw from center grows the line symmetrically from the middle.
- It runs once, at 10% visibility.
- With reduced motion: Show immediately shows the line; Short fade fades it.
- Use animations sparingly, not on every separator.

Common Authoring Mistakes

Error	Root Cause	Resolution
Several separators animate at once	Animation set on every separator of the page	Keep animation for key chapter breaks
The Reduced motion fallback field is missing	Animate on view is None	Choose an animation first; the field then appears

Troubleshooting

- **Symptoms:** The line is invisible and never appears.
- **Cause:** A script error after animate-ready was added, or a CSS override keeps the start state.
- **Resolution:** Check the console with ?debug=separator and escalate to development if is-visible is never added.
- **Verification Steps:** After scrolling, the block has is-visible and the line is fully drawn.

Use Cases: Centred, symmetrical layouts.

Authoring Guidelines: Animate on view = Draw from center.

Business Rules: As Fade.

Rendering Rules: `scaleX(0)` with the default centre origin, animated to full width.

Responsive Behaviour: Same on all breakpoints.

SEO Impact: None.

Accessibility Compliance: Respects reduced motion.

Variation 42 — Hide when printed

Variation Name: Print = Hide when printed (`print-hide`).

Business Purpose: Screen-only dividers don't waste paper.

Visual Example:

Steps — Variation example: The browser print preview of a page without the separator.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Separator
2	Separator › Advanced	Print	Hide when printed
3	Universal Editor toolbar	Publish	Publish to Live
4	Browser (published page)	File › Print (Ctrl+P / Cmd+P)	Open the print preview
5	Print preview	Check	The paragraphs follow each other without the separator

Use Cases: Decorative separators on pages that are often printed (press releases).

Authoring Guidelines: Advanced > Print = Hide when printed.

Business Rules: Default is Show when printed; printed lines are always fully opaque and not animated.

Rendering Rules: `@media print { .separator.print-hide { display: none } }`.

Responsive Behaviour: Print only.

SEO Impact: None.

Accessibility Compliance: Not applicable.

Variation 43 — Analytics enabled

Variation Name: Analytics on (data attribute `data-analytics="custom"`).

Business Purpose: Lets analytics see that a specific separator was rendered (rarely needed).

Visual Example:

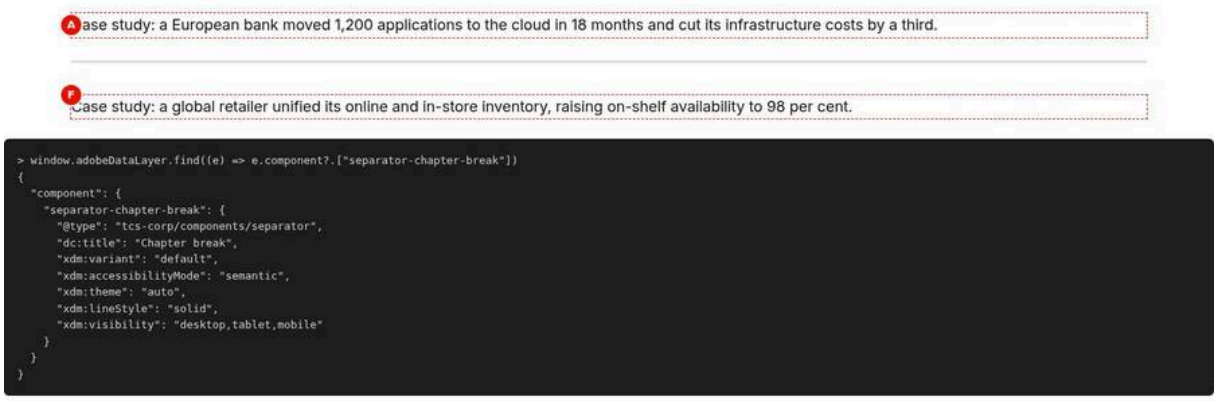

Figure 63: Variation example — The section at 1440 px: two paragraphs with a semantic default separator between them, and below a dark console panel showing the data layer entry for separator-chapter-break: @type tcs-corp/components/separator, dc:title Chapter break, xdm:variant default, xdm:accessibilityMode semantic, xdm:theme auto, xdm:lineStyle solid, xdm:visibility desktop,tablet,mobile. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/separator-analytics.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/separator-analytics.jpg`
Screenshot Purpose	Variation example
Screen Description	The section at 1440 px: two paragraphs with a semantic default separator between them, and below a dark console panel showing the data layer entry for separator-chapter-break: @type tcs-corp/components/separator, dc:title Chapter break, xdm:variant default, xdm:accessibilityMode semantic, xdm:theme auto, xdm:lineStyle solid, xdm:visibility desktop,tablet,mobile.
Business Context	Design or A/B tests sometimes need to know which separator configuration was rendered on a page, with a stable id for reporting.
Author Objective	Turn on Analytics for a semantic separator with a fixed Component ID and an Analytics label, and check its data layer entry.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
A	Text (Text)	Case study: a European bank moved 1,200 applications to the cloud in 18 months and cut its infrastructure costs by a third.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
(B)	Component ID (Separator › General)	separator-chapter-break	No	Stable id for links, CSS, analytics, tests	Leave empty unless needed	Enforced: regExp `^[A-Za-z][A-Za-z0-9_-]*$`; code lower-cases and sanitises; duplicates suffixed
(C)	Accessibility mode (Separator › General)	Semantic (a thematic break)	No	Semantic break or visual only	Semantic for topic changes	Enforced: option list
(D)	Analytics (Separator › Advanced)	On	No	Data layer state	Only when analysts ask	—
(E)	Analytics label (Separator › Advanced)	Chapter break	No	`dc:title` in the data layer	Short, English, stable	Enforced in code: trimmed, max 120 characters; shown only when Analytics on
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
F	Text (Text)	Case study: a global retailer unified its online and in-store inventory, raising on-shelf availability to 98 per cent.	No	Card text	1–3 sentences; lists and links allowed	None
(G)	Command (Browser DevTools › Console)	window.adobeDataLayer (the separator's component entry is shown below the content in the screenshot)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The page shows a normal thin grey line; the console panel below it lists the separator's component entry.

- **Rendering behaviour:** Analytics on sets data-analytics custom and pushes one component state entry keyed by the Component ID; no events are pushed because a separator has no interactions.
- **Publishing behaviour:** Publish sends the page to preview or live with the settings in the HTML. No tag manager is loaded yet (finding F-06), so the entry stays in window.adobeDataLayer until Adobe Tags is added.

Business Rules

- Analytics is off by default (data-analytics off: no tracking at all, not even generic state).
- The Component ID is lower-cased and sanitised; a duplicate gets a numeric suffix.
- The Analytics label becomes dc:title, trimmed and cut to 120 characters.
- xdm:visibility lists the breakpoints the separator shows on, or none.

Common Authoring Mistakes

Error	Root Cause	Resolution
The separator is missing in the data layer	Analytics left off	Turn Advanced > Analytics on
The id in the data layer differs from the authored one	Upper case or spaces in Component ID, or a duplicate id	Use a unique lower-case id such as separator-chapter-break
The Analytics label field is missing	It only appears when Analytics is on	Turn Analytics on first

Troubleshooting

- **Symptoms:** window.adobeDataLayer has no entry for separator-chapter-break.
- **Cause:** Analytics was not saved as on, or the id was suffixed because another element already uses it.
- **Resolution:** Turn Analytics on, check the Component ID is unique on the page, and publish; use ?debug=separator to see duplicate warnings.
- **Verification Steps:** In the console, window.adobeDataLayer contains a component entry for separator-chapter-break with dc:title Chapter break.

Use Cases: A/B or design tests that need the separator's configuration in the data layer.

Authoring Guidelines: Advanced > Analytics = on; optionally Analytics label (shown only when Analytics is on).

Business Rules: Off by default (`data-analytics="off"`: no tracking). On: one component state entry; no events (a separator has no interactions). The label is trimmed and cut to 120 characters (Enforced in code).

Rendering Rules: No visual change.

Responsive Behaviour: Not applicable; `xdm:visibility` lists the breakpoints it shows on.

SEO Impact: None.

Accessibility Compliance: Not applicable.

6.26.4 Authoring Experience

Figure 64: Universal Editor canvas — An annotated edit-mode view at 1440 px (not a Universal Editor screenshot): a 50% separator with a centre diamond (A block, B rule, C decoration) between two paragraphs, and below it a separator hidden on all devices shown as a dashed box with the note Separator hidden on all devices (D). (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/separator-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/separator-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	An annotated edit-mode view at 1440 px (not a Universal Editor screenshot): a 50% separator with a centre diamond (A block, B rule, C decoration) between two paragraphs, and below it a separator hidden on all devices shown as a dashed box with the note Separator hidden on all devices (D).
Business Context	Authors need to recognise the parts of a separator in the editor, including separators that are hidden on the site but must stay selectable.
Author Objective	Identify the separator block, its rule, its decoration and the editor note in edit mode.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
—	Separator width (Separator › Appearance)	50%	No	Share of the content width	Use with Alignment	Enforced: option list

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Center decoration (Separator › Appearance)	Diamond	No	Shape at the centre	Visual only	Enforced: option list
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Separator	Yes	Adds the Separator to the page	Select the section in the content tree, choose Add (+) and pick Separator	Only components the section allows (section filter)
—	Show on desktop (Separator › Responsive)	Off	No	Visibility ≥ 1200px	—	—
—	Show on tablet (Separator › Responsive)	Off	No	Visibility 600–1199px	—	—
—	Show on mobile (Separator › Responsive)	Off	No	Visibility < 600px	—	—
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.	No	Card text	1–3 sentences; lists and links allowed	None
—	Mode (Universal Editor)	Edit; select the first separator (A) to open its properties	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** A centred half-width grey line with a small diamond; further down a dashed outline with the line and a small grey note under it.
- **Rendering behaviour:** In edit mode the hidden-all separator is displayed with a dashed outline and the separatorHidden note; on the site it is display: none and the first separator renders as a 50% line with its diamond.

- **Publishing behaviour:** Publish sends the page to preview or live: the first separator shows, the second renders nothing, and the note never appears outside edit mode.

Business Rules

- Select the block (A) to open its properties; the line (B) is styled by variant, theme and Appearance.
- Decorations (C) are visual only and need a visible line.
- The editor note (D) appears only in edit mode, when all devices are off or Semantic has no line.
- Hidden separators stay selectable thanks to the dashed placeholder.

Common Authoring Mistakes

Error	Root Cause	Resolution
The hidden separator cannot be selected	Hide block on, not the Show toggles	Use the content tree to select it or turn Hide block off
An author deletes the dashed box thinking it is an error	The note looks like an error message	Turn the Show toggles on instead if the separator is needed

Troubleshooting

- **Symptoms:** The dashed box with the note appears in edit mode on a separator that should be visible.
- **Cause:** Show on desktop, tablet and mobile are all off.
- **Resolution:** Select the box, open the Responsive tab, turn on the needed Show toggles and publish.
- **Verification Steps:** The note disappears and the line shows in Preview.

Annotations:

- A = The Separator block (the line and its top / bottom spacing; select it to open its properties)
- B = The rule (`<hr>`), styled by the variant, theme and Appearance settings
- C = A decoration (start / center / end), when set
- D = The editor note (“Separator hidden on all devices” or “Semantic separator without a line: …”), shown only in edit mode when a warning applies
- E = The block entry “Separator” in the content tree

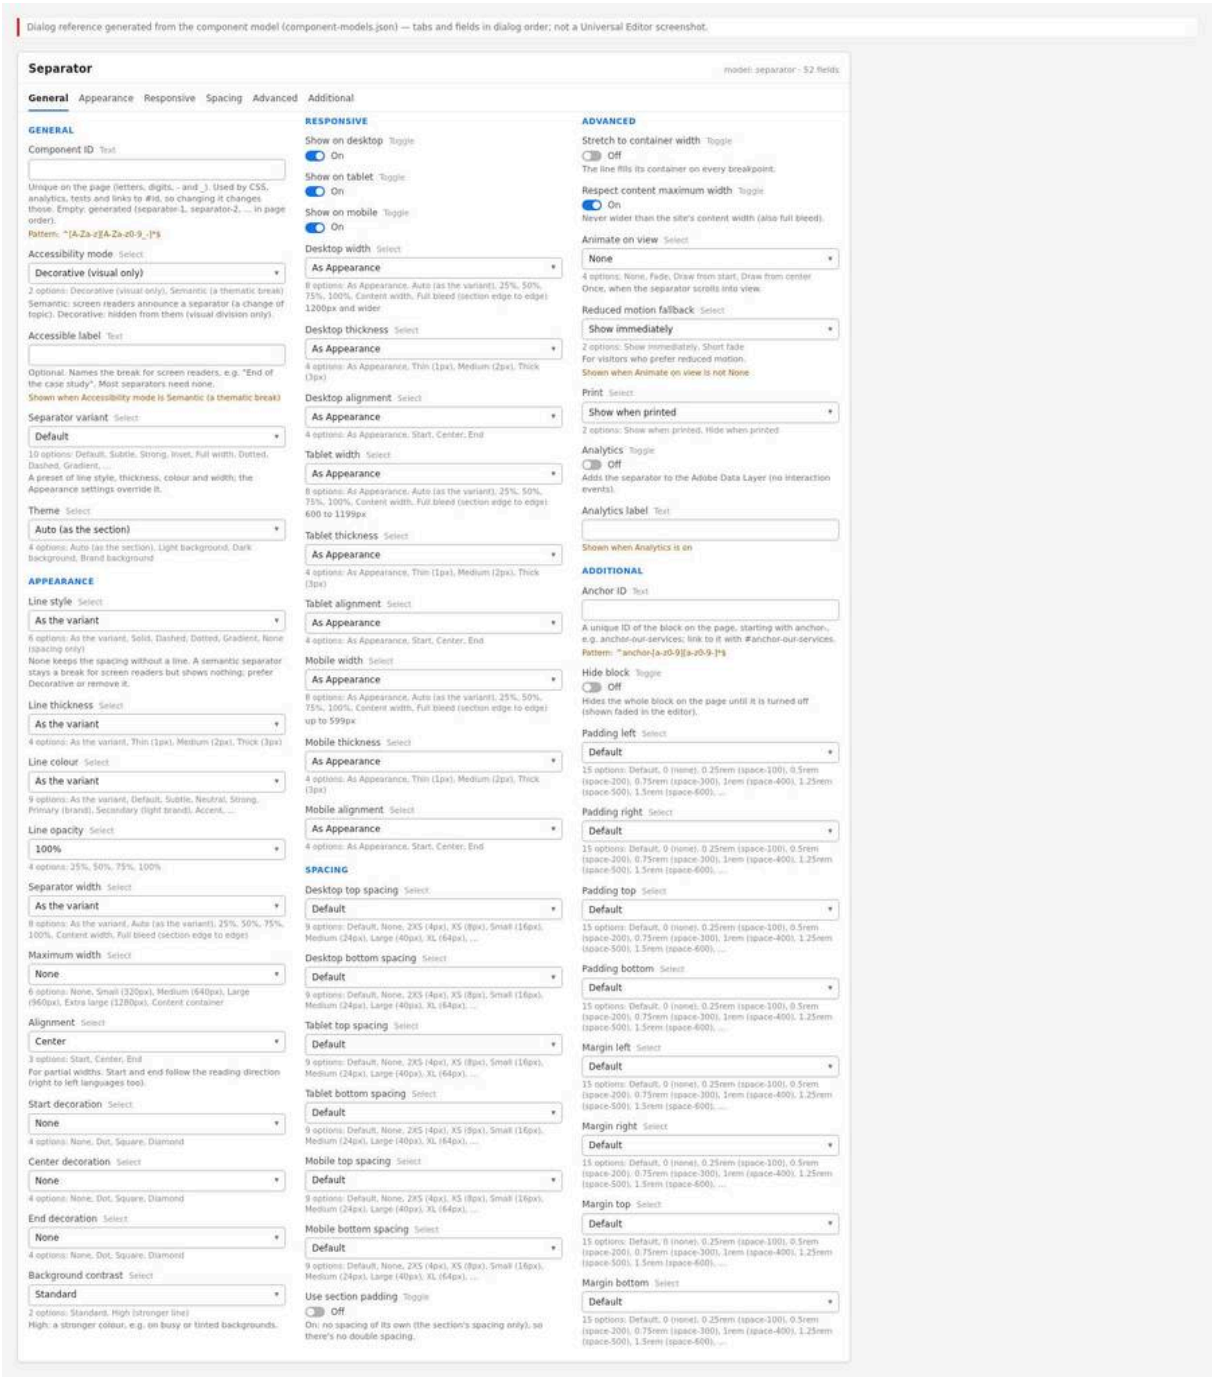

Figure 65: Properties panel — The properties panel of a selected Separator with its tabs General, Appearance, Responsive, Spacing, Advanced and Additional; the General tab open. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/separator-properties-panel.jpg)

Properties panel tabs:

- **General:** Component ID; Accessibility mode; Accessible label (only when Semantic); Separator variant; Theme.
- **Appearance:** Line style; Line thickness; Line colour; Line opacity; Separator width; Maximum width; Alignment; Start decoration; Center decoration; End decoration; Background contrast.
- **Responsive:** Show on desktop; Show on tablet; Show on mobile; Desktop width (help “1200px and wider”); Desktop thickness; Desktop alignment; Tablet width (“600 to 1199px”); Tablet thickness; Tablet alignment; Mobile width (“up to 599px”); Mobile thickness; Mobile alignment.

- **Spacing:** Desktop / Tablet / Mobile top spacing and bottom spacing; Use section padding.
- **Advanced:** Stretch to container width; Respect content maximum width; Animate on view; Reduced motion fallback (only when an animation is set); Print; Analytics; Analytics label (only when Analytics is on).
- **Additional:** Anchor ID; Hide block; Padding left / right / top / bottom; Margin left / right / top / bottom.

6.26.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: Open the page from AEM Sites with **Edit**.

Expected Result: The page is shown in the editor in edit mode.

Steps — Authoring step: The page open in Universal Editor.

Step	Where	Field / control	Value / action
1	AEM Sites › Pages	Select	The page, e.g. /content/tcs-corp/us/en/insights
2	AEM Sites toolbar	Edit	The page opens in Universal Editor (edit mode)

Step 2 — Add the Separator

Action: Select the section (or the component after which the separator goes), choose **Add** (+) and select **Separator**.

Expected Result: A Default, Decorative, centred, thin full-width line appears with 1.5rem space above and below.

Steps — Authoring step: The Add menu with Separator, and the new separator in the canvas.

Step	Where	Field / control	Value / action
1	Universal Editor › Canvas	Select	The section (or the component after which the separator goes)
2	Universal Editor › Content tree	Section › Add (+)	Separator
3	Universal Editor › Canvas	Check	A thin grey full-width line with 1.5rem space above and below

Step 3 — General tab

Action: Choose the Accessibility mode (Semantic for a change of topic, else Decorative); for Semantic, optionally type an Accessible label. Choose a Separator variant and a Theme (Auto unless the background is an image). Leave Component ID empty unless analytics, tests or links need a fixed id.

Expected Result: The canvas updates with the preset look.

Steps — Authoring step: The General tab with Semantic mode and the Accessible label field visible.

Step	Where	Field / control	Value / action
1	Separator › General	Accessibility mode	Semantic (a thematic break)
2	Separator › General	Accessible label	End of the story
3	Separator › General	Separator variant	Default
4	Separator › General	Theme	Auto (as the section)
5	Separator › General	Component ID	Leave empty

Step 4 — Appearance tab (optional)

Action: Override parts of the preset: Line style, thickness, colour, opacity, width, maximum width, alignment, decorations and background contrast. Keep "As the variant" for what the preset should decide.

Expected Result: The line changes accordingly.

Steps — Authoring step: The Appearance tab with Width 25%, Alignment Start and Center decoration Diamond.

Step	Where	Field / control	Value / action
1	Separator › Appearance	Separator width	25%
2	Separator › Appearance	Alignment	Start
3	Separator › Appearance	Center decoration	Diamond
4	Separator › Appearance	Line style / Line thickness / Line colour	As the variant

Step 5 — Responsive tab (optional)

Action: Turn devices on / off and set per-device width, thickness and alignment ("As Appearance" keeps the Appearance value).

Expected Result: The editor shows the setting of the current editor width; check other widths in Preview.

Steps — Authoring step: The Responsive tab with Show on mobile off and Desktop width 50%.

Step	Where	Field / control	Value / action
1	Separator › Responsive	Show on mobile	Off
2	Separator › Responsive	Desktop width	50%

Step 6 — Spacing tab (optional)

Action: Choose top and bottom spacing per device, or turn on Use section padding.

Expected Result: The space around the line changes.

Steps — Authoring step: The Spacing tab with Desktop top spacing None.

Step	Where	Field / control	Value / action
1	Separator › Spacing	Desktop top spacing	None

Step 7 — Advanced tab (optional)

Action: Set Stretch to container width, Respect content maximum width, Animate on view and its Reduced motion fallback, Print, and Analytics (with an Analytics label).

Expected Result: Settings saved; animation is visible only when scrolling the page in Preview / on the site.

Steps — Authoring step: The Advanced tab with Animate on view Draw from start and the Reduced motion fallback field visible.

Step	Where	Field / control	Value / action
1	Separator › Advanced	Animate on view	Draw from start
2	Separator › Advanced	Reduced motion fallback	Show immediately

Step 8 — Additional tab (optional)

Action: Set an Anchor ID (only if there is no Component ID; Component ID takes precedence), Hide block, padding or margin.

Expected Result: Values accepted; an invalid Anchor ID shows the validation message.

Steps — Authoring step: The Additional tab of the separator.

Step	Where	Field / control	Value / action
1	Separator › Additional	Anchor ID	anchor-end-of-story (only when Component ID is empty)
2	Separator › Additional	Hide block	Off
3	Separator › Additional	Padding / Margin	Default

Step 9 — Preview

Action: Switch to **Preview** and check desktop, tablet and mobile widths, and the animation by scrolling.

Expected Result: The separator renders per breakpoint; editor notes are not shown in Preview.

Steps — Authoring step: Preview mode at mobile width.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	Universal Editor toolbar	Emulator	Mobile
3	Preview	Action	Scroll the page to check the separator and its animation
4	Preview	Check	Show on mobile is off: no separator at mobile width

Step 10 — Validate and publish

Action: Run the Validation Process checklist, then **Publish**.

Expected Result: The separator is live.

Steps — Authoring step: The Publish dialog.

Step	Where	Field / control	Value / action
1	Validation Process	Checklist	Run the checklist of 6.26
2	Universal Editor toolbar	Publish	Publish to Live
3	Publish dialog	Publish	Confirm

Preview Process

1. Universal Editor Preview mode (no editor notes, no hidden-everywhere placeholder).
2. Edge Delivery preview `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}`; append `?debug=separator` to log each separator's configuration and warnings to the browser console (`[separator]` debug messages).
3. Check at 390px, 1024px and 1440px; check print preview if Print is set.

Publishing Process

Publish the page from Universal Editor or AEM Sites; the live URL `https://main--tcs-corp--sradha-tcs.aem.live/{locale}/{path}` updates after publication. The block has no assets of its own.

Validation Process

- ☐ Semantic only where the topic changes; Decorative otherwise.
- ☐ No Semantic separator with Line style None (no editor warning visible).
- ☐ Not hidden on all devices (no "Separator hidden on all devices" note).

- ☐ Theme matches the background (Auto for standard sections; Light / Dark / Brand on images).
- ☐ The line is visible enough where it matters (Strong or High contrast).
- ☐ Spacing is not doubled with section padding (use Use section padding where needed).
- ☐ No horizontal page scrolling at 390px (Full bleed is designed not to overflow).
- ☐ Animation (if any) plays once; with reduced motion the line is visible immediately.
- ☐ Component ID (if set) is unique and lower-case (the code lower-cases it).
- ☐ Not several separators in a row.

Rollback Process

1. Restore the previous page version in AEM (Version History) and republish.
2. Or delete the separator / turn on Hide block and publish.
3. If analytics rules depend on the Component ID, restore the previous ID.

The walkthroughs below repeat the steps above for each variation of chapter 6.26.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Decorative (default accessibility mode)

Reproduces the screenshot `screenshots/separator-decorative.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a second Text component are added; the separator shows a thin grey line between them.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The consulting and cloud migration paragraphs appear above and below the line.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text component, a Separator and a second Text component are added; the separator shows a thin grey line between them.

Step 5 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a second Text component are added; the separator shows a thin grey line between them.

Step 6 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (B) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The consulting and cloud migration paragraphs appear above and below the line.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin light-grey line across the content width between the two paragraphs, centred, with equal space above and below.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the decorative separator has no assets or sheets to publish.

Step 9 — Verify

Action: On the live page check: Preview the page at 1440 px and check the line is distinct; the class color-strong or contrast-high is on the block.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Semantic (thematic break)

Reproduces the screenshot `screenshots/separator-semantic.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a second Text component are added; the separator shows a thin grey line between the two stories.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Case study: a European bank moved 1,200 applications to the cloud in 18 months and cut its infrastructure costs by a third.

Expected Result: The bank and retailer case-study paragraphs appear above and below the line.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text component, a Separator and a second Text component are added; the separator shows a thin grey line between the two stories.

Step 5 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Accessibility mode** (B) = Semantic (a thematic break); **Accessible label** (C) = End of the story.

Expected Result: Accessibility mode Semantic shows the Accessible label field; End of the story is entered there and the canvas does not change.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a second Text component are added; the separator shows a thin grey line between the two stories.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = Case study: a global retailer unified its online and in-store inventory, raising on-shelf availability to 98 per cent.

Expected Result: The bank and retailer case-study paragraphs appear above and below the line.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin light-grey line across the content width between the two case-study paragraphs; nothing distinguishes it visually from a decorative separator.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live with the label in the HTML. On translated pages the label must be translated in each locale's copy of the page.

Step 10 — Verify

Action: On the live page check: Inspect the hr in the browser's accessibility tree: role separator with the name End of the story.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Spacing only (Decorative + Line style None)

Reproduces the screenshot `screenshots/separator-spacing-only.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator first shows the default thin line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The consulting and cloud migration paragraphs appear around the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text component, a Separator and a Text component are added; the separator first shows the default thin line.

Step 5 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Line style** (B) = None (spacing only).

Expected Result: Line style None (spacing only) removes the line; only the empty space remains.

Step 6 — Fill in Separator › Spacing

Action: Select **Separator** in the content tree and open the **Spacing** tab of the properties panel. Enter: **Desktop top spacing** (C) = XL (64px); **Desktop bottom spacing** (D) = None.

Expected Result: Desktop top spacing XL and bottom None make a 4rem gap above and none below at desktop width.

Step 7 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator first shows the default thin line.

Step 8 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The consulting and cloud migration paragraphs appear around the separator.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two paragraphs separated by a larger empty gap; no line, no decoration.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the empty block is delivered with the page and nothing else is published.

Step 11 — Verify

Action: On the live page check: The block has the classes line-none and desktop-top-xl and the gap is 4rem at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Variant: Default

Reproduces the screenshot `screenshots/separator-variant-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator with all defaults and a Text component are added; the thin grey line appears between the paragraphs.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The consulting and cloud migration paragraphs appear above and below the line.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text component, a Separator with all defaults and a Text component are added; the thin grey line appears between the paragraphs.

Step 5 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator with all defaults and a Text component are added; the thin grey line appears between the paragraphs.

Step 6 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (B) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The consulting and cloud migration paragraphs appear above and below the line.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A solid thin light-grey line across the full content width, with 1.5rem space above and below.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the separator has no assets of its own.

Step 9 — Verify

Action: On the live page check: The block has the class respect-max and the line is at most 90rem wide.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Variant: Subtle

Reproduces the screenshot `screenshots/separator-variant-subtle.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title, a Text, a Separator and another Text are added in order; the separator shows the default line.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Industries we serve; **Title Type** (B) = h2.

Expected Result: Industries we serve appears as the H2 heading of the section.

Step 4 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Title, a Text, a Separator and another Text are added in order; the separator shows the default line.

Step 5 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = We bring deep domain knowledge and technology expertise to the industries that shape the global economy.

Expected Result: The introduction and the banking paragraph appear above and below the separator.

Step 6 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Title, a Text, a Separator and another Text are added in order; the separator shows the default line.

Step 7 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (D) = Subtle.

Expected Result: Separator variant Subtle lightens the line to a very pale grey.

Step 8 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Title, a Text, a Separator and another Text are added in order; the separator shows the default line.

Step 9 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.

Expected Result: The introduction and the banking paragraph appear above and below the separator.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A very faint grey line across the content width under the introduction, with 1.5rem space above and below.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; nothing else is published for the separator.

Step 12 — Verify

Action: On the live page check: Preview at 1440 px and 390 px and check the line is visible on the target screens.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Variant: Strong

Reproduces the screenshot `screenshots/separator-variant-strong.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title, a Text, a Separator, a Title and a Text are added in order; the separator first shows the default line.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Banking; **Title Type** (B) = h3.

Expected Result: Banking and Retail appear as H3 headings of the two chapters.

Step 4 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Title, a Text, a Separator, a Title and a Text are added in order; the separator first shows the default line.

Step 5 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.

Expected Result: The banking and retail paragraphs appear under their headings.

Step 6 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Title, a Text, a Separator, a Title and a Text are added in order; the separator first shows the default line.

Step 7 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (D) = Strong.

Expected Result: Separator variant Strong turns the line dark and 2px thick.

Step 8 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title, a Text, a Separator, a Title and a Text are added in order; the separator first shows the default line.

Step 9 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (E) = Retail; **Title Type** (F) = h3.

Expected Result: Banking and Retail appear as H3 headings of the two chapters.

Step 10 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Title, a Text, a Separator, a Title and a Text are added in order; the separator first shows the default line.

Step 11 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (G) = In retail, connected supply chains and data-driven merchandising help brands respond to demand in real time.

Expected Result: The banking and retail paragraphs appear under their headings.

Step 12 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A dark near-black 2px line across the content width between the banking paragraph and the Retail heading, with 1.5rem space above and below.

Step 13 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the separator has nothing else to publish.

Step 14 — Verify

Action: On the live page check: The block has the classes variant-strong thickness-medium color-strong on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Variant: Inset

Reproduces the screenshot `screenshots/separator-variant-inset.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a full-width line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The consulting and cloud migration paragraphs appear around the line.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a full-width line.

Step 5 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (B) = Inset.

Expected Result: Separator variant Inset pulls the line in by 2.5rem from both content edges.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a full-width line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The consulting and cloud migration paragraphs appear around the line.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin light-grey line that is 5rem shorter than the paragraphs, centred, with 1.5rem space above and below.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; no assets are involved.

Step 10 — Verify

Action: On the live page check: The block has the class variant-inset and the line starts 2.5rem inside the paragraph edge.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — Variant: Full width

Reproduces the screenshot `screenshots/separator-variant-full-width.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a content-width line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The consulting and cloud migration paragraphs appear around the line.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a content-width line.

Step 5 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (B) = Full width.

Expected Result: Separator variant Full width extends the line across the section padding on both sides.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a content-width line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The consulting and cloud migration paragraphs appear around the line.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin light-grey line wider than the paragraphs, reaching the left and right edges of the section.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; nothing else needs publishing.

Step 10 — Verify

Action: On the live page check: The block has the class width-full-bleed without stretch and the line covers the section padding at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — Variant: Dotted

Reproduces the screenshot `screenshots/separator-variant-dotted.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a solid line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The consulting and cloud migration paragraphs appear around the line.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a solid line.

Step 5 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (B) = Dotted.

Expected Result: Separator variant Dotted turns the line into a 2px dotted rule.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a solid line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The consulting and cloud migration paragraphs appear around the line.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A row of small grey dots across the content width with 1.5rem space above and below.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; nothing else is published.

Step 10 — Verify

Action: On the live page check: The block has the class line-dotted on aem.page and the line shows dots.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 10 — Variant: Dashed

Reproduces the screenshot `screenshots/separator-variant-dashed.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a solid line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The consulting and cloud migration paragraphs appear around the line.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a solid line.

Step 5 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (B) = Dashed.

Expected Result: Separator variant Dashed turns the line into a thin dashed rule.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a solid line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The consulting and cloud migration paragraphs appear around the line.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin dashed light-grey line across the content width with 1.5rem space above and below.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the separator needs no other publish step.

Step 10 — Verify

Action: On the live page check: The block has the class line-dashed and the line shows dashes at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 11 — Variant: Gradient

Reproduces the screenshot `screenshots/separator-variant-gradient.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a solid grey line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The consulting and cloud migration paragraphs appear around the line.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a solid grey line.

Step 5 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (B) = Gradient.

Expected Result: Separator variant Gradient turns the line into a 2px brand-blue line fading out at both ends.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows a solid grey line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The consulting and cloud migration paragraphs appear around the line.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A brand-blue line, full colour in the middle 60% and fading out towards the left and right ends.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; no assets or sheets are involved.

Step 10 — Verify

Action: On the live page check: The block has the classes line-gradient color-primary and the line fades at both ends.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 12 — Variant: Branded

Reproduces the screenshot `screenshots/separator-variant-branded.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title, a Separator and a Text component are added; the separator shows a thin grey full-width line.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Our approach; **Title Type** (B) = h2.

Expected Result: Our approach appears as an H2 heading above the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Title, a Separator and a Text component are added; the separator shows a thin grey full-width line.

Step 5 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (C) = Branded.

Expected Result: Separator variant Branded turns the line brand blue and 2px thick.

Step 6 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Separator width** (D) = 25%; **Alignment** (E) = Start.

Expected Result: Separator width 25% and Alignment Start make it a short accent at the start edge under the heading.

Step 7 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Title, a Separator and a Text component are added; the separator shows a thin grey full-width line.

Step 8 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (F) = We bring deep domain knowledge and technology expertise to the industries that shape the global economy.

Expected Result: The industries paragraph appears below the accent.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A short, 2px brand-blue line under the left-aligned heading, followed by the paragraph; 1.5rem space above and below the line.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the separator has nothing else to publish.

Step 11 — Verify

Action: On the live page check: The block has the class color-primary and no contrast-high; the line is brand blue.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 13 — Variant: Custom

Reproduces the screenshot `screenshots/separator-variant-custom.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows the default line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The consulting and cloud migration paragraphs appear around the line.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows the default line.

Step 5 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (B) = Custom (only the Appearance settings).

Expected Result: Separator variant Custom (only the Appearance settings) keeps the default look until the Appearance fields are set.

Step 6 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Line style** (C) = Dashed; **Line thickness** (D) = Thick (3px); **Line colour** (E) = Accent; **Separator width** (F) = 75%; **Alignment** (G) = End.

Expected Result: Dashed, Thick (3px), Accent, 75% and End turn the line into a thick yellow dashed rule at the right.

Step 7 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text component, a Separator and a Text component are added; the separator shows the default line.

Step 8 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (H) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The consulting and cloud migration paragraphs appear around the line.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thick yellow dashed line covering three quarters of the content width, flush with the right content edge.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; there is nothing else to publish.

Step 11 — Verify

Action: On the live page check: The block has the classes line-dashed and thickness-thick and the line is a thick dashed yellow rule.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 14 — Theme: Auto (as the section)

Reproduces the screenshot `screenshots/separator-theme-auto.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: In each of the two sections a Text, a Separator and a Text are added; each separator shows a thin grey line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below each separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: In each of the two sections a Text, a Separator and a Text are added; each separator shows a thin grey line.

Step 5 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: In each of the two sections a Text, a Separator and a Text are added; each separator shows a thin grey line.

Step 6 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (B) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below each separator.

Step 7 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Style** (C) = Highlight.

Expected Result: Style Highlight gives the second section a light grey background; its separator keeps the same grey.

Step 8 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: In each of the two sections a Text, a Separator and a Text are added; each separator shows a thin grey line.

Step 9 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.

Expected Result: The paragraphs appear above and below each separator.

Step 10 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: In each of the two sections a Text, a Separator and a Text are added; each separator shows a thin grey line.

Step 11 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: In each of the two sections a Text, a Separator and a Text are added; each separator shows a thin grey line.

Step 12 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = In retail, connected supply chains and data-driven merchandising help brands respond to demand in real time.

Expected Result: The paragraphs appear above and below each separator.

Step 13 — Preview

Action: Check: The same Default separator: slate 400 in the white section, and in the Highlight section below.

Expected Result: Both separators show the same slate 400 line, on white and on the Highlight background.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two identical thin grey lines, one on white and one on the light grey Highlight background.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page, including both sections and their Style, to preview or live; no separate publish step.

Step 16 — Verify

Action: On the live page check: The block has the class theme-dark and the line uses the dark palette.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 15 — Theme: Light background

Reproduces the screenshot `screenshots/separator-theme-light.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Background Image** (A) = Select the asset light.svg (/en/media/light.svg).

Expected Result: Background Image light.svg puts a pale background image behind the section.

Step 3 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added on the image background; the separator shows a grey line.

Step 4 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (B) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator over the image.

Step 5 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added on the image background; the separator shows a grey line.

Step 6 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Theme** (C) = Light background.

Expected Result: Theme Light background keeps the light palette; the line stays slate 400.

Step 7 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added on the image background; the separator shows a grey line.

Step 8 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator over the image.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin grey line between the paragraphs over the pale background image, with 1.5rem space above and below.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the background image asset must be published in AEM Assets so the section background shows.

Step 11 — Verify

Action: On the live page check: The image request returns 200 on aem.live and the line shows on the image.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 16 — Theme: Dark background

Reproduces the screenshot `screenshots/separator-theme-dark.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Background Image** (A) = Select the asset photo-1.svg (/en/media/photo-1.svg).

Expected Result: Background Image photo-1.svg sets a dark photograph; Style offers no Dark option, so the background comes only from the image.

Step 3 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Separator is added to the section; its default line is barely visible on the dark image.

Step 4 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (B) = Strong; **Theme** (C) = Dark background.

Expected Result: Variant Strong and Theme Dark background turn it into a light grey 2px line.

Step 5 — Fill in Separator › Spacing

Action: Select **Separator** in the content tree and open the **Spacing** tab of the properties panel. Enter: **Desktop top spacing** (D) = XL (64px); **Desktop bottom spacing** (E) = XL (64px).

Expected Result: Desktop top and bottom spacing XL (64px) give 4rem of space above and below the line.

Step 6 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Style** (F) = No Dark section style is offered (Style lists only Highlight): the background is the section's Background Image, and the separator's Theme is set explicitly.

Expected Result: Background Image photo-1.svg sets a dark photograph; Style offers no Dark option, so the background comes only from the image.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A clearly visible light grey 2px line across the dark image, with generous space above and below.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the photo-1.svg background asset must be published in AEM Assets.

Step 9 — Verify

Action: On the live page check: The block has the class theme-dark and the line is light grey on the image at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 17 — Theme: Brand background

Reproduces the screenshot `screenshots/separator-theme-brand.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Background Image** (A) = Select the asset light.svg (/en/media/light.svg).

Expected Result: Background Image light.svg sets the section background; Style offers no Brand option.

Step 3 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a grey line.

Step 4 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (B) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator over the background.

Step 5 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a grey line.

Step 6 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Theme** (C) = Brand background.

Expected Result: Theme Brand background turns the default line brand blue.

Step 7 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a grey line.

Step 8 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator over the background.

Step 9 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Style** (E) = No Brand section style is offered (Style lists only Highlight): the background is the section's Background Image, and the separator's Theme is set explicitly.

Expected Result: Background Image light.svg sets the section background; Style offers no Brand option.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin brand-blue line between the paragraphs over the background image, with 1.5rem space above and below.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the light.svg background asset must be published in AEM Assets.

Step 12 — Verify

Action: On the live page check: The block has the class theme-brand and the line is brand blue.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 18 — High background contrast

Reproduces the screenshot `screenshots/separator-contrast-high.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Style** (A) = Highlight.

Expected Result: Style Highlight gives the section a light grey background.

Step 3 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a light grey line on the grey background.

Step 4 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (B) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator.

Step 5 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a light grey line on the grey background.

Step 6 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Background contrast** (C) = High (stronger line).

Expected Result: Background contrast High (stronger line) darkens the line to slate 900.

Step 7 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a light grey line on the grey background.

Step 8 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin dark line across the content width on the light grey background, with 1.5rem space above and below.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page with the section Style to preview or live; nothing else is needed.

Step 11 — Verify

Action: On the live page check: The block has the class contrast-high and the line is dark on the grey background.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 19 — Line opacity

Reproduces the screenshot `screenshots/separator-opacity.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Four Text and four Separator components are added alternately; each separator shows a default line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Line opacity 100%.

Expected Result: The four paragraphs appear, each followed by a separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: Four Text and four Separator components are added alternately; each separator shows a default line.

Step 5 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (B) = Strong.

Expected Result: Separator variant Strong turns each line dark and 2px thick.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Four Text and four Separator components are added alternately; each separator shows a default line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Line opacity 75%.

Expected Result: The four paragraphs appear, each followed by a separator.

Step 8 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: Four Text and four Separator components are added alternately; each separator shows a default line.

Step 9 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (D) = Strong.

Expected Result: Separator variant Strong turns each line dark and 2px thick.

Step 10 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Line opacity** (E) = 75%.

Expected Result: Line opacity 75%, 50% and 25% make the second, third and fourth lines progressively lighter.

Step 11 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Four Text and four Separator components are added alternately; each separator shows a default line.

Step 12 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (F) = Line opacity 50%.

Expected Result: The four paragraphs appear, each followed by a separator.

Step 13 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: Four Text and four Separator components are added alternately; each separator shows a default line.

Step 14 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (G) = Strong.

Expected Result: Separator variant Strong turns each line dark and 2px thick.

Step 15 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Line opacity** (H) = 50%.

Expected Result: Line opacity 75%, 50% and 25% make the second, third and fourth lines progressively lighter.

Step 16 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Four Text and four Separator components are added alternately; each separator shows a default line.

Step 17 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (I) = Line opacity 25%.

Expected Result: The four paragraphs appear, each followed by a separator.

Step 18 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: Four Text and four Separator components are added alternately; each separator shows a default line.

Step 19 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (J) = Strong.

Expected Result: Separator variant Strong turns each line dark and 2px thick.

Step 20 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Line opacity** (K) = 25%.

Expected Result: Line opacity 75%, 50% and 25% make the second, third and fourth lines progressively lighter.

Step 21 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Four dark 2px lines of decreasing strength: the last one at 25% is a pale grey.

Step 22 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; no other publish steps.

Step 23 — Verify

Action: On the live page check: The blocks have the classes opacity-75, opacity-50 and opacity-25 in that order.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 20 — Partial width (25% / 50% / 75%)

Reproduces the screenshot `screenshots/separator-partial-width.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Text and three Separator components are added alternately; each separator shows a full-width line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Separator width 25%.

Expected Result: The paragraphs appear above each separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: Three Text and three Separator components are added alternately; each separator shows a full-width line.

Step 5 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Separator width** (B) = 25%.

Expected Result: Separator width 25%, 50% and 75% shorten the three lines, centred under their paragraphs.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Text and three Separator components are added alternately; each separator shows a full-width line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Separator width 50%.

Expected Result: The paragraphs appear above each separator.

Step 8 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: Three Text and three Separator components are added alternately; each separator shows a full-width line.

Step 9 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Separator width** (D) = 50%.

Expected Result: Separator width 25%, 50% and 75% shorten the three lines, centred under their paragraphs.

Step 10 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: Three Text and three Separator components are added alternately; each separator shows a full-width line.

Step 11 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = Separator width 75%.

Expected Result: The paragraphs appear above each separator.

Step 12 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: Three Text and three Separator components are added alternately; each separator shows a full-width line.

Step 13 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Separator width** (F) = 75%.

Expected Result: Separator width 25%, 50% and 75% shorten the three lines, centred under their paragraphs.

Step 14 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Three centred grey lines of increasing length, each with 1.5rem above and below.

Step 15 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; nothing else is published.

Step 16 — Verify

Action: On the live page check: At 1440 px the line measures 75% of the paragraph width.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 21 — Content width

Reproduces the screenshot `screenshots/separator-content-width.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 5 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Separator width** (B) = Content width.

Expected Result: Separator width Content width caps the line at 90rem; at normal editor widths nothing changes.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Screen width: 2560 px (very wide desktop).

Expected Result: At 2560 px the line stops at 1440 px, centred in the wide section.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A centred thin grey line of 1440 px on a 2560 px screen, with empty space on both sides.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; no assets or sheets are involved.

Step 11 — Verify

Action: On the live page check: At 2560 px the line measures 1440 px and is centred.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 22 — Full bleed width

Reproduces the screenshot `screenshots/separator-full-bleed.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin grey line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin grey line.

Step 5 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Separator variant** (B) = Branded.

Expected Result: Separator variant Branded turns the line brand blue and 2px thick.

Step 6 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Separator width** (C) = Full bleed (section edge to edge).

Expected Result: Full bleed (section edge to edge) extends the line over the section padding.

Step 7 — Fill in Separator › Advanced

Action: Select **Separator** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Respect content maximum width** (D) = Off.

Expected Result: Respect content maximum width Off removes the 90rem cap; the canvas shows no change at normal widths.

Step 8 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin grey line.

Step 9 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator.

Step 10 — Preview

Action: Screen width: 390 px (mobile).

Expected Result: At 390 px the blue line touches both screen edges.

Step 11 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A brand-blue 2px line touching both screen edges between the two paragraphs, without horizontal scrolling.

Step 12 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; nothing else needs publishing.

Step 13 — Verify

Action: On the live page check: The block has the class width-full-bleed and the line touches both edges at 390 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 23 — Maximum width

Reproduces the screenshot `screenshots/separator-max-width.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width line.

Step 5 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Separator width** (B) = 100%; **Maximum width** (C) = Medium (640px).

Expected Result: Separator width 100% with Maximum width Medium (640px) shortens the line to 640 px, centred.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A centred thin grey line of 640 px between paragraphs that span the full 1280 px content width.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; there is nothing else to publish.

Step 10 — Verify

Action: On the live page check: The block has the class max-medium and the line is 40rem wide at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 24 — Stretch to container width

Reproduces the screenshot `screenshots/separator-stretch.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width line.

Step 5 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Separator width** (B) = 25%.

Expected Result: Separator width 25% shortens the line to a quarter, centred.

Step 6 — Fill in Separator › Advanced

Action: Select **Separator** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Stretch to container width** (C) = On.

Expected Result: Stretch to container width On makes the line full width again.

Step 7 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width line.

Step 8 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin grey line across the full content width, as if no width had been set.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; no other publish step.

Step 11 — Verify

Action: On the live page check: The block no longer has the class stretch and the line is 25% wide.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 25 — Dot decoration

Reproduces the screenshot `screenshots/separator-decoration-dot.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a plain line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a plain line.

Step 5 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Center decoration** (B) = Dot.

Expected Result: Center decoration Dot places a small grey circle at the middle of the line.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a plain line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin grey line across the content width with a small grey dot in the middle.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; decorations are generated by code and need no assets.

Step 10 — Verify

Action: On the live page check: The block has the class decorated and contains a span with separator-decoration-center.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 26 — Square decoration

Reproduces the screenshot `screenshots/separator-decoration-square.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a plain line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a plain line.

Step 5 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Start decoration** (B) = Square; **End decoration** (C) = Square.

Expected Result: Start and End decoration Square add a small square at each end of the line.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a plain line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin grey line across the content width with a small grey square at each end.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; decorations need no assets.

Step 10 — Verify

Action: On the live page check: The block contains two separator-decoration spans with the square class.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 27 — Diamond decoration

Reproduces the screenshot `screenshots/separator-decoration-diamond.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a plain full-width line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a plain full-width line.

Step 5 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Line thickness** (B) = Medium (2px); **Separator width** (C) = 50%; **Center decoration** (D) = Diamond.

Expected Result: Medium (2px), 50% and Center decoration Diamond make a shorter, thicker line with a diamond at its centre.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a plain full-width line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A centred 2px grey line of half the content width with a small grey diamond in the middle.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; no assets are needed.

Step 10 — Verify

Action: On the live page check: The block contains one span with separator-decoration-center separator-decoration-diamond.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 28 — Hidden on desktop

Reproduces the screenshot `screenshots/separator-hidden-desktop.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 5 — Fill in Separator › Responsive

Action: Select **Separator** in the content tree and open the **Responsive** tab of the properties panel. Enter: **Show on desktop** (B) = Off.

Expected Result: Show on desktop Off hides the separator at desktop width, also in the editor canvas.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = In retail, connected supply chains and data-driven merchandising help brands respond to demand in real time.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Screen width: 1440 px (desktop).

Expected Result: At 1440 px there is no separator between the paragraphs; at 390 px and 1024 px it shows.

Step 9 — Preview

Action: Check: No separator between the paragraphs; at 390 px (mobile) and 1024 px (tablet) it shows.

Expected Result: At 1440 px there is no separator between the paragraphs; at 390 px and 1024 px it shows.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: No line and no separator spacing between the paragraphs at desktop width.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the same HTML serves all widths.

Step 12 — Verify

Action: On the live page check: At 1440 px the block has hide-desktop and is not displayed.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 29 — Hidden on tablet

Reproduces the screenshot `screenshots/separator-hidden-tablet.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 5 — Fill in Separator › Responsive

Action: Select **Separator** in the content tree and open the **Responsive** tab of the properties panel. Enter: **Show on tablet** (B) = Off.

Expected Result: Show on tablet Off hides the separator in the tablet range; the editor at desktop width still shows it.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = In retail, connected supply chains and data-driven merchandising help brands respond to demand in real time.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Screen width: 1024 px (tablet).

Expected Result: At 1024 px there is no separator between the paragraphs; at 1440 px and 390 px it shows.

Step 9 — Preview

Action: Check: No separator between the paragraphs; at 1440 px (desktop) and 390 px (mobile) it shows.

Expected Result: At 1024 px there is no separator between the paragraphs; at 1440 px and 390 px it shows.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: No line and no separator spacing between the paragraphs at 1024 px.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the same page serves all ranges.

Step 12 — Verify

Action: On the live page check: The block has the class hide-tablet and no line shows at 1024 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 30 — Hidden on mobile

Reproduces the screenshot `screenshots/separator-hidden-mobile.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 5 — Fill in Separator › Responsive

Action: Select **Separator** in the content tree and open the **Responsive** tab of the properties panel. Enter: **Show on mobile** (B) = Off.

Expected Result: Show on mobile Off hides the separator at phone widths; the canvas at desktop width still shows it.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = In retail, connected supply chains and data-driven merchandising help brands respond to demand in real time.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Screen width: 390 px (mobile).

Expected Result: At 390 px there is no separator between the paragraphs; at 1440 px and 1024 px it shows.

Step 9 — Preview

Action: Check: No separator between the paragraphs; at 1440 px (desktop) and 1024 px (tablet) it shows.

Expected Result: At 390 px there is no separator between the paragraphs; at 1440 px and 1024 px it shows.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: No line and no separator spacing between the two paragraphs on the phone.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; no further steps.

Step 12 — Verify

Action: On the live page check: The block has hide-mobile and is not displayed at 390 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 31 — Hidden on all devices

Reproduces the screenshot `screenshots/separator-hidden-all.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = In banking, we modernise core platforms so institutions can launch new products faster and serve customers across every channel.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 5 — Fill in Separator › Responsive

Action: Select **Separator** in the content tree and open the **Responsive** tab of the properties panel. Enter: **Show on desktop** (B) = Off; **Show on tablet** (C) = Off; **Show on mobile** (D) = Off.

Expected Result: With Show on desktop, tablet and mobile Off the separator gets a dashed outline and the note Separator hidden on all devices.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = In retail, connected supply chains and data-driven merchandising help brands respond to demand in real time.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Fill in Universal Editor

Action: Select **Universal Editor** in the content tree and enter in the properties panel: **Mode** (F) = Edit (the dashed box and note show only here; Preview and the published page show nothing).

Expected Result: In Edit mode the dashed box and note are visible; in Preview and on the published page nothing shows.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: In edit mode only: a dashed outline around the separator with the centred note Separator hidden on all devices under the line.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live, where the separator renders nothing. The note text comes from the locale's placeholders sheet, which is published separately.

Step 11 — Verify

Action: On the live page check: The note disappears in edit mode and the line shows in Preview at all widths.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 32 — Desktop overrides (width, thickness, alignment)

Reproduces the screenshot `screenshots/separator-desktop-overrides.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width thin line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width thin line.

Step 5 — Fill in Separator › Responsive

Action: Select **Separator** in the content tree and open the **Responsive** tab of the properties panel. Enter: **Desktop width** (B) = 50%; **Desktop thickness** (C) = Medium (2px); **Desktop alignment** (D) = Start.

Expected Result: Desktop width 50%, Desktop thickness Medium (2px) and Desktop alignment Start shorten and thicken the line at the start on desktop.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width thin line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Screen width: 1440 px (desktop).

Expected Result: At 1440 px the line is 50%, 2px and at the start; at 390 px it is 100% and thin.

Step 9 — Preview

Action: Check: At 390 px (mobile) the same separator is 100% wide and thin.

Expected Result: At 1440 px the line is 50%, 2px and at the start; at 390 px it is 100% and thin.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 2px grey line half the content width, starting at the left content edge, with 1.5rem space above and below.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the breakpoint classes are in the published HTML.

Step 12 — Verify

Action: On the live page check: The block has desktop-width-50-percent desktop-thickness-medium desktop-align-start.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 33 — Tablet overrides (width, thickness, alignment)

Reproduces the screenshot `screenshots/separator-tablet-overrides.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width thin line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width thin line.

Step 5 — Fill in Separator › Responsive

Action: Select **Separator** in the content tree and open the **Responsive** tab of the properties panel. Enter: **Desktop width** (B) = 50%; **Tablet width** (C) = 75%; **Tablet alignment** (D) = Center.

Expected Result: Desktop width 50%, Tablet width 75% and Tablet alignment Center set different lengths for desktop and tablet.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width thin line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Screen width: 1024 px (tablet).

Expected Result: At 1024 px the line is 75% wide and centred; at 1440 px it is 50%.

Step 9 — Preview

Action: Check: At 1440 px (desktop) the same separator is 50% wide.

Expected Result: At 1024 px the line is 75% wide and centred; at 1440 px it is 50%.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A centred thin grey line three quarters of the content width at 1024 px.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; all breakpoint classes are in the page HTML.

Step 12 — Verify

Action: On the live page check: The block has tablet-width-75-percent and the line is 75% wide at 1024 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 34 — Mobile overrides (width, thickness, alignment)

Reproduces the screenshot `screenshots/separator-mobile-overrides.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width thin line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width thin line.

Step 5 — Fill in Separator › Appearance

Action: Select **Separator** in the content tree and open the **Appearance** tab of the properties panel. Enter: **Line thickness** (B) = Medium (2px); **Line colour** (C) = Accent; **Separator width** (D) = 25%.

Expected Result: Medium (2px), Accent and 25% turn the line into a short thick yellow accent.

Step 6 — Fill in Separator › Responsive

Action: Select **Separator** in the content tree and open the **Responsive** tab of the properties panel. Enter: **Mobile width** (E) = 100%; **Mobile thickness** (F) = Thin (1px).

Expected Result: Mobile width 100% and Mobile thickness Thin (1px) make it full width and thin on phones only.

Step 7 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a full-width thin line.

Step 8 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (G) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator.

Step 9 — Preview

Action: Screen width: 390 px (mobile).

Expected Result: At 390 px the line is full width and thin; at 1440 px it is a 25% medium accent.

Step 10 — Preview

Action: Check: At 1440 px (desktop) the same separator is a 25% medium accent line.

Expected Result: At 390 px the line is full width and thin; at 1440 px it is a 25% medium accent.

Step 11 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin yellow line across the full content width of the phone, with 1.5rem space above and below.

Step 12 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; nothing else needs publishing.

Step 13 — Verify

Action: On the live page check: The block has mobile-width-100-percent and the line is full width at 390 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 35 — Desktop spacing

Reproduces the screenshot `screenshots/separator-desktop-spacing.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title, a Separator and a Text are added; the separator shows a line with 1.5rem above and below.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Our approach; **Title Type** (B) = h2.

Expected Result: Our approach appears as an H2 heading above the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Title, a Separator and a Text are added; the separator shows a line with 1.5rem above and below.

Step 5 — Fill in Separator › Spacing

Action: Select **Separator** in the content tree and open the **Spacing** tab of the properties panel. Enter: **Desktop top spacing** (C) = None; **Desktop bottom spacing** (D) = Large (40px).

Expected Result: Desktop top spacing None and bottom spacing Large (40px) move the line up to the heading and add space below.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Title, a Separator and a Text are added; the separator shows a line with 1.5rem above and below.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = We bring deep domain knowledge and technology expertise to the industries that shape the global economy.

Expected Result: The paragraph appears 2.5rem below the line.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The line follows the heading with only the heading's own bottom margin; a larger gap separates it from the paragraph below.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; nothing else needs publishing.

Step 10 — Verify

Action: On the live page check: At 1440 px the block has desktop-top-none desktop-bottom-large and the gaps change.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 36 — Tablet spacing

Reproduces the screenshot `screenshots/separator-tablet-spacing.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a line with default spacing.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a line with default spacing.

Step 5 — Fill in Separator › Spacing

Action: Select **Separator** in the content tree and open the **Spacing** tab of the properties panel. Enter: **Tablet top spacing** (B) = Small (16px); **Tablet bottom spacing** (C) = Small (16px).

Expected Result: Tablet top and bottom spacing Small (16px) reduce the gaps in the tablet range; the desktop canvas does not change.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a line with default spacing.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Screen width: 1024 px (tablet).

Expected Result: At 1024 px the line has 1rem of space above and below.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin grey line with less space above and below than the default, between the two paragraphs.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; no other publish step.

Step 11 — Verify

Action: On the live page check: The block has tablet-top-small tablet-bottom-small and the gaps are 1rem at 1024 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 37 — Mobile spacing

Reproduces the screenshot `screenshots/separator-mobile-spacing.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a line with default spacing.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a line with default spacing.

Step 5 — Fill in Separator › Spacing

Action: Select **Separator** in the content tree and open the **Spacing** tab of the properties panel. Enter: **Mobile top spacing** (B) = XS (8px); **Mobile bottom spacing** (C) = XS (8px).

Expected Result: Mobile top and bottom spacing XS (8px) reduce the gaps at phone widths; the desktop canvas does not change.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a line with default spacing.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (D) = Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Screen width: 390 px (mobile).

Expected Result: At 390 px the line has 0.5rem of space above and below.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin grey line close to both paragraphs, with only small gaps above and below.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; nothing else is needed.

Step 11 — Verify

Action: On the live page check: The block has mobile-top-xs mobile-bottom-xs and the gaps are 0.5rem at 390 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 38 — Use section padding

Reproduces the screenshot `screenshots/separator-section-padding.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Section properties

Action: Select the section in the content tree, open its properties and enter: **Style** (A) = Highlight.

Expected Result: Style Highlight gives the section a light grey background and its own padding.

Step 3 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Separator, a Title and a Text are added; the separator is the first element of the section.

Step 4 — Fill in Separator › Spacing

Action: Select **Separator** in the content tree and open the **Spacing** tab of the properties panel. Enter: **Use section padding** (B) = On.

Expected Result: Use section padding On removes the space above and below the line.

Step 5 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Separator, a Title and a Text are added; the separator is the first element of the section.

Step 6 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (C) = Industries we serve; **Title Type** (D) = h2.

Expected Result: Industries we serve appears as an H2 below the line.

Step 7 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Separator, a Title and a Text are added; the separator is the first element of the section.

Step 8 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (E) = We bring deep domain knowledge and technology expertise to the industries that shape the global economy.

Expected Result: The paragraph appears under the heading.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: On the light grey background the line starts right below the section's top padding, then the heading and the paragraph follow.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page with the section Style to preview or live; nothing else is published.

Step 11 — Verify

Action: On the live page check: The block has the class section-padding and no padding of its own.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 39 — Animate on view: Fade

Reproduces the screenshot `screenshots/separator-animate-fade.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Manufacturers use our digital twin and smart factory solutions to reduce downtime and improve quality on the shop floor.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 5 — Fill in Separator › Advanced

Action: Select **Separator** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Animate on view** (B) = Fade.

Expected Result: Animate on view Fade shows the Reduced motion fallback field; the canvas line stays visible.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Insurers rely on our AI-led claims platforms to settle routine claims in minutes instead of days.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Action: Scroll the separator into view.

Expected Result: Scrolling the separator into view fades the line in once; the screenshot shows it half-way.

Step 9 — Preview

Action: Check: The line fades in once (the screenshot shows it half-way).

Expected Result: Scrolling the separator into view fades the line in once; the screenshot shows it half-way.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A thin grey line that is partly transparent in the screenshot and fully visible at the end of the 0.6s fade.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; check the fade in Preview or on aem.page by scrolling the separator into view.

Step 12 — Verify

Action: On the live page check: With reduced motion off, scrolling the separator into view fades the line in once.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 40 — Animate on view: Draw from start

Reproduces the screenshot `screenshots/separator-animate-draw-start.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Manufacturers use our digital twin and smart factory solutions to reduce downtime and improve quality on the shop floor.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 5 — Fill in Separator › Advanced

Action: Select **Separator** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Animate on view** (B) = Draw from start.

Expected Result: Animate on view Draw from start shows the Reduced motion fallback field; the canvas line stays visible.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Insurers rely on our AI-led claims platforms to settle routine claims in minutes instead of days.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Action: Scroll the separator into view.

Expected Result: Scrolling the separator into view grows the line from the left edge; the screenshot shows it half-way.

Step 9 — Preview

Action: Check: The line grows from the left edge (the screenshot shows it half-way).

Expected Result: Scrolling the separator into view grows the line from the left edge; the screenshot shows it half-way.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A grey line partly drawn from the left; it reaches its full width at the end of the 0.6s animation.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the animation is CSS and needs no assets.

Step 12 — Verify

Action: On the live page check: The block gets animate-ready then is-visible and the line grows from the left.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 41 — Animate on view: Draw from center

Reproduces the screenshot `screenshots/separator-animate-draw-center.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Manufacturers use our digital twin and smart factory solutions to reduce downtime and improve quality on the shop floor.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 5 — Fill in Separator › Advanced

Action: Select **Separator** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Animate on view** (B) = Draw from center.

Expected Result: Animate on view Draw from center shows the Reduced motion fallback field; the canvas line stays visible.

Step 6 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 7 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Insurers rely on our AI-led claims platforms to settle routine claims in minutes instead of days.

Expected Result: The paragraphs appear above and below the separator.

Step 8 — Preview

Action: Action: Scroll the separator into view.

Expected Result: Scrolling the separator into view grows the line from its centre; the screenshot shows it half-way.

Step 9 — Preview

Action: Check: The line grows from its centre to both ends (the screenshot shows it half-way).

Expected Result: Scrolling the separator into view grows the line from its centre; the screenshot shows it half-way.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A short centred grey line growing equally to both sides until it reaches full width after 0.6s.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; no assets are involved.

Step 12 — Verify

Action: On the live page check: After scrolling, the block has is-visible and the line is fully drawn.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 43 — Analytics enabled

Reproduces the screenshot `screenshots/separator-analytics.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 3 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (A) = Case study: a European bank moved 1,200 applications to the cloud in 18 months and cut its infrastructure costs by a third.

Expected Result: The paragraphs appear above and below the separator.

Step 4 — Add the Separator

Action: Select the section in the content tree, choose **Add (+)** and pick **Separator**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 5 — Fill in Separator › General

Action: Select **Separator** in the content tree and open the **General** tab of the properties panel. Enter: **Component ID** (B) = separator-chapter-break; **Accessibility mode** (C) = Semantic (a thematic break).

Expected Result: Component ID separator-chapter-break and Accessibility mode Semantic are set; the line looks unchanged.

Step 6 — Fill in Separator › Advanced

Action: Select **Separator** in the content tree and open the **Advanced** tab of the properties panel. Enter: **Analytics** (D) = On; **Analytics label** (E) = Chapter break.

Expected Result: Analytics On shows the Analytics label field, where Chapter break is entered.

Step 7 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Text, a Separator and a Text are added; the separator shows a thin line.

Step 8 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (F) = Case study: a global retailer unified its online and in-store inventory, raising on-shelf availability to 98 per cent.

Expected Result: The paragraphs appear above and below the separator.

Step 9 — Fill in Browser DevTools › Console

Action: Select **Browser DevTools** in the content tree and open the **Console** tab of the properties panel. Enter: **Command** (G) = window.adobeDataLayer (the separator's component entry is shown below the content in the screenshot).

Expected Result: window.adobeDataLayer shows the separator's component entry with its variant, mode, theme, line style and visibility.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The page shows a normal thin grey line; the console panel below it lists the separator's component entry.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live with the settings in the HTML. No tag manager is loaded yet (finding F-06), so the entry stays in window.adobeDataLayer until Adobe Tags is added.

Step 12 — Verify

Action: On the live page check: In the console, window.adobeDataLayer contains a component entry for separator-chapter-break with dc:title Chapter break.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.26.6 Authorable Field Specification

Model `separator` (key-value block)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Component ID (`componentId`) — General	Text	No	No	Empty (generated `separator-N`)	Stable id for links, CSS, analytics, tests	Leave empty unless needed	Enforced: regExp `^[A-Za-z][A-Za-z0-9_-]*$`; code lower-cases and sanitises; duplicates suffixed	story-end

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Accessibility mode (`accessibilityMode`) — General	Select	No	No	Decorative	Semantic break or visual only	Semantic for topic changes	Enforced: option list	semantic
Accessible label (`accessibleLabel`) — General	Text	No	No	Empty	Names a semantic break	Short phrase	Enforced in code: trimmed, max 120 characters; shown only when Semantic	End of the case study
Separator variant (`variant`) — General	Select	No	No	Default	Preset of style, thickness, colour, width	Pick the closest preset	Enforced: option list	branded
Theme (`theme`) — General	Select	No	No	Auto (as the section)	Palette for the background	Auto unless on an image	Enforced: option list	auto
Line style (`lineStyle`) — Appearance	Select	No	No	As the variant	Solid, dashed, dotted, gradient, none	Override only if needed	Enforced: option list	dashed
Line thickness (`lineThickness`) — Appearance	Select	No	No	As the variant	1px / 2px / 3px	—	Enforced: option list	medium
Line colour (`lineColor`) — Appearance	Select	No	No	As the variant	Palette colour	—	Enforced: option list	primary
Line opacity (`lineOpacity`) — Appearance	Select	No	No	100%	Softens the line	Keep 100% for meaningful lines	Enforced: option list	50
Separator width (`width`) — Appearance	Select	No	No	As the variant	Share of the content width	Use with Alignment	Enforced: option list	25-percent
Maximum width (`maxWidth`) — Appearance	Select	No	No	None	Caps the line length	—	Enforced: option list	medium
Alignment (`alignment`) — Appearance	Select	No	No	Center	Position of partial widths	Start / End follow reading direction	Enforced: option list	start
Start decoration (`startDecoration`) — Appearance	Select	No	No	None	Shape at the start	Visual only	Enforced: option list	dot
Center decoration (`centerDecoration`) — Appearance	Select	No	No	None	Shape at the centre	Visual only	Enforced: option list	diamond
End decoration (`endDecoration`) — Appearance	Select	No	No	None	Shape at the end	Visual only	Enforced: option list	dot
Background contrast (`contrastMode`) — Appearance	Select	No	No	Standard	Stronger line on busy backgrounds	High on images / tints	Enforced: option list	high
Show on desktop (`showDesktop`) — Responsive	Boolean	No	No	On	Visibility ≥ 1200px	—	—	on

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Show on tablet (`showTablet`) — Responsive	Boolean	No	No	On	Visibility 600–1199px	—	—	on
Show on mobile (`showMobile`) — Responsive	Boolean	No	No	On	Visibility < 600px	—	—	off
Desktop width (`desktopWidth`) — Responsive	Select	No	No	As Appearance	Width ≥ 1200px	—	Enforced: option list	50-percent
Desktop thickness (`desktopThickness`) — Responsive	Select	No	No	As Appearance	Thickness ≥ 1200px	—	Enforced: option list	medium
Desktop alignment (`desktopAlignment`) — Responsive	Select	No	No	As Appearance	Alignment ≥ 1200px	—	Enforced: option list	start
Tablet width (`tabletWidth`) — Responsive	Select	No	No	As Appearance	Width 600–1199px	—	Enforced: option list	75-percent
Tablet thickness (`tabletThickness`) — Responsive	Select	No	No	As Appearance	Thickness 600–1199px	—	Enforced: option list	thin
Tablet alignment (`tabletAlignment`) — Responsive	Select	No	No	As Appearance	Alignment 600–1199px	—	Enforced: option list	center
Mobile width (`mobileWidth`) — Responsive	Select	No	No	As Appearance	Width < 600px	—	Enforced: option list	100-percent
Mobile thickness (`mobileThickness`) — Responsive	Select	No	No	As Appearance	Thickness < 600px	—	Enforced: option list	thin
Mobile alignment (`mobileAlignment`) — Responsive	Select	No	No	As Appearance	Alignment < 600px	—	Enforced: option list	center
Desktop top spacing (`desktopTopSpacing`) — Spacing	Select	No	No	Default (1.5rem)	Space above ≥ 1200px	—	Enforced: option list	none
Desktop bottom spacing (`desktopBottomSpacing`) — Spacing	Select	No	No	Default (1.5rem)	Space below ≥ 1200px	—	Enforced: option list	large
Tablet top spacing (`tabletTopSpacing`) — Spacing	Select	No	No	Default (1.5rem)	Space above 600–1199px	—	Enforced: option list	small
Tablet bottom spacing (`tabletBottomSpacing`) — Spacing	Select	No	No	Default (1.5rem)	Space below 600–1199px	—	Enforced: option list	small
Mobile top spacing (`mobileTopSpacing`) — Spacing	Select	No	No	Default (1.5rem)	Space above < 600px	—	Enforced: option list	xs
Mobile bottom spacing (`mobileBottomSpacing`) — Spacing	Select	No	No	Default (1.5rem)	Space below < 600px	—	Enforced: option list	xs

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Use section padding (`useSectionPadding`) — Spacing	Boolean	No	No	Off	No own spacing	On at the edges of padded sections	—	off
Stretch to container width (`stretchToContainer`) — Advanced	Boolean	No	No	Off	Fill the container always	—	—	off
Respect content maximum width (`respectMaxWidth`) — Advanced	Boolean	No	No	On	Cap at 90rem	Off only for true edge-to-edge on wide screens	—	on
Animate on view (`animateOnView`) — Advanced	Select	No	No	None	One-off reveal	Use sparingly	Enforced: option list	fade
Reduced motion fallback (`reducedMotionFallback`) — Advanced	Select	No	No	Show immediately	Behaviour for reduced motion	Show immediately recommended	Enforced: option list; shown only when Animate on view ≠ None	static
Print (`printVisibility`) — Advanced	Select	No	No	Show when printed	Print visibility	Hide for screen-only dividers	Enforced: option list	hide
Analytics (`analyticsEnabled`) — Advanced	Boolean	No	No	Off	Data layer state	Only when analysts ask	—	off
Analytics label (`analyticsLabel`) — Advanced	Text	No	No	Empty	`dc:title` in the data layer	Short, English, stable	Enforced in code: trimmed, max 120 characters; shown only when Analytics on	Story break
Anchor ID (`classes_anchor`) — Additional	Text	No	No	Empty	`#anchor-…` target (if no Component ID)	Start with anchor-	Enforced: regExp `^anchor-[a-z0-9][a-z0-9-]*$`	anchor-chapter-2
Hide block (`classes_hideblock`) — Additional	Boolean	No	No	Off	Hide without deleting	—	—	off
Padding left (`classes_paddingleft`) — Additional	Select	No	No	Default	Inner space left	Tokens only	Enforced: option list	Default
Padding right (`classes_paddingright`) — Additional	Select	No	No	Default	Inner space right	Tokens only	Enforced: option list	Default
Padding top (`classes_paddingtop`) — Additional	Select	No	No	Default	Inner space top (overrides the Spacing tab top value)	Prefer the Spacing tab	Enforced: option list	Default
Padding bottom (`classes_paddingbottom`) — Additional	Select	No	No	Default	Inner space bottom (overrides the Spacing tab bottom value)	Prefer the Spacing tab	Enforced: option list	Default

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Margin left (`classes_marginleft`) — Additional	Select	No	No	Default	Outer space left	—	Enforced: option list	Default
Margin right (`classes_marginright`) — Additional	Select	No	No	Default	Outer space right	—	Enforced: option list	Default
Margin top (`classes_margintop`) — Additional	Select	No	No	Default	Outer space top	—	Enforced: option list	Default
Margin bottom (`classes_marginbottom`) — Additional	Select	No	No	Default	Outer space bottom	—	Enforced: option list	Default

Field details

- **Component ID** — Purpose: the block's `id`. Allowed Values: starts with a letter; letters, digits, `-`, `_`. Character Limits: none enforced (Recommended ≤ 40). Business Rules: the code lower-cases it, replaces other characters with `-`, trims leading / trailing `-` / `_`, and prefixes `separator-` if it does not start with a letter; if the id is already on the page, a suffix is added (`story-end-1`, …). Empty: the Anchor ID if set, else `separator-1`, `separator-2`, … in page order. Dependency Rules: takes precedence over the Anchor ID. Visibility Rules: always. Sample: `story-end`.
- **Accessibility mode** — Allowed Values: `decorative`, `semantic`. Business Rules: decorative hides the line from assistive technology; semantic exposes the `<hr>`. Visibility: always. Sample: Semantic.
- **Accessible label** — Character Limits: 120 (Enforced by truncation in code). Visibility Rules: `condition accessibilityMode === "semantic"`. Business Rules: ignored in Decorative mode. Sample: "End of the case study".
- **Separator variant** — Allowed Values: default, subtle, strong, inset, full-width, dotted, dashed, gradient, branded, custom-design. Business Rules: presets — Default solid/thin/default/ 100%; Subtle solid/thin/subtle/100%; Strong solid/medium/strong/100%; Inset solid/thin/default/ 100% + 2.5rem inset; Full width solid/thin/default/full bleed; Dotted dotted/medium/default/100%; Dashed dashed/thin/default/100%; Gradient gradient/medium/primary/100%; Branded solid/medium/ primary/100%; Custom solid/thin/default/100%. Unknown values → Default.
- **Theme** — Allowed Values: auto, light, dark, brand. Business Rules: Auto follows `.section.dark` / `.section.brand` (not selectable in the section dialog as of this handover). Sample: Auto.
- **Line style** — Allowed Values: As the variant (empty), solid, dashed, dotted, gradient, none. Business Rules: None + Decorative renders no `<hr>` (spacing only); None + Semantic triggers the editor warning. The dialog help text explains this. Sample: Dashed.
- **Line thickness** — Allowed Values: As the variant, thin (1px, 0.0625rem), medium (2px, 0.125rem), thick (3px, 0.1875rem).
- **Line colour** — Allowed Values: As the variant, default, subtle, neutral, strong, primary (brand), secondary (light brand), accent, inverse (on dark). Business Rules: resolved through the active theme palette; overridden by High contrast.
- **Line opacity** — Allowed Values: 25, 50, 75, 100 (%). Default 100.
- **Separator width** — Allowed Values: As the variant, auto, 25-percent, 50-percent, 75-percent, 100-percent, content-width, full-bleed. Business Rules: legacy values such as "50%" are accepted by the code. Note: "Auto (as the variant)" renders as 100% of the content width (class `width-auto`); to keep the variant's own width (for example Full width's full bleed) choose "As the variant".

- **Maximum width** — Allowed Values: none, small (20rem / 320px), medium (40rem / 640px), large (60rem / 960px), extra-large (80rem / 1280px), content-container (90rem).
- **Alignment** — Allowed Values: start, center, end. Default center. Logical (RTL aware).
- **Start / Center / End decoration** — Allowed Values: none, dot, square, diamond. Business Rules: not rendered without a visible line.
- **Background contrast** — Allowed Values: standard, high. High uses the palette's strong colour.
- **Show on desktop / tablet / mobile** — Booleans, default on (template and code default). Business Rules: all three off = hidden everywhere (editor placeholder and note).
- **Desktop / Tablet / Mobile width** — Allowed Values: As Appearance (`inherit`) plus the widths. Business Rules: apply only in their range; help text shows the range.
- **Desktop / Tablet / Mobile thickness** — Allowed Values: As Appearance, thin, medium, thick.
- **Desktop / Tablet / Mobile alignment** — Allowed Values: As Appearance, start, center, end.
- **Top / bottom spacing (6 fields)** — Allowed Values: default (1.5rem), none (0), 2xs (0.25rem), xs (0.5rem), small (1rem), medium (1.5rem), large (2.5rem), xl (4rem), 2xl (5rem). Labels show px equivalents. Business Rules: padding of the block; ignored when Use section padding is on; the Additional tab's Padding top / bottom override them.
- **Use section padding** — Boolean, default off. Removes all own vertical spacing.
- **Stretch to container width** — Boolean, default off. Line always 100%, no bleed.
- **Respect content maximum width** — Boolean, default on. Caps at `--content-max-width` (90rem), also for full bleed.
- **Animate on view** — Allowed Values: none, fade, draw-from-start, draw-from-center. Once per page view, threshold 10% visible.
- **Reduced motion fallback** — Allowed Values: static (Show immediately), fade (Short fade). Visibility Rules: `condition animateOnView !== "none"`.
- **Print** — Allowed Values: show, hide.
- **Analytics** — Boolean, default off. On: data layer state entry; off: `data-analytics="off"`.
- **Analytics label** — Character Limits: 120 (Enforced by truncation). Visibility Rules: `condition analyticsEnabled === true`.
- **Additional tab fields** — as described for every block: Anchor ID regExp `^anchor-[a-z0-9][a-z0-9-]*$` (message "Start with anchor-, then lower-case letters, digits and hyphens."), de-duplicated with `-2`, `-3`; Hide block hides outside edit mode; padding / margin options Default, 0, 0.25rem, 0.5rem, 0.75rem, 1rem, 1.25rem, 1.5rem, 2rem, 2.5rem, 3rem, 4rem, 5rem, 6rem, 7.5rem (`--space-*` tokens). Business Rule specific to the Separator: Additional Padding top / bottom (`pt-*`, `pb-*`, higher specificity) replace the separator's own spacing on that side.

6.26.7 Field Annotation Mapping

Marker	Field	Purpose
A	Separator block (all tabs)	Select to configure; spacing from the Spacing tab
B	Variant, Theme, Line style / thickness / colour / opacity, Width, Maximum width, Alignment, Background contrast; Responsive overrides	The look of the rule
C	Start / Center / End decoration	Ornaments on the line
D	Show on desktop / tablet / mobile; Accessibility mode + Line style	Trigger the editor notes (hidden everywhere; invisible semantic break)
E	Content tree entry	Selecting, moving, deleting the block

6.26.8 Component Specification

Attribute	Value
Component Name	Separator (`blocks/separator`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	`separator-config.js`; utils properties, environment, ids, placeholders, analytics; block options decorator; IntersectionObserver (animation only)
Component Type	Block (key-value, no items)
Supported Variants	10 variants; 4 themes; 2 accessibility modes; line styles incl. none; widths, max widths, alignment, decorations, contrast, opacity; per-breakpoint visibility, width, thickness, alignment and spacing; animations; print; analytics
Supported Templates	Any page, any section
Supported Metadata	None
Supported Tags	None
Supported Personalization	None; its state can be in the data layer (Analytics on) for future Adobe Target / Analytics use
Caching Considerations	Rendered from page HTML cached by the Edge Delivery CDN; placeholders fetched only in Universal Editor edit mode when a warning exists
Performance Considerations	No images or network calls on the live site; no resize listeners (CSS only); IntersectionObserver only with an animation (not for reduced motion with Show immediately); eager in the first section, else lazy; no layout shift (padding fixed by classes)
Accessibility Compliance	Semantic `<hr>` or `aria-hidden` decoration; optional accessible name; decorations hidden; reduced motion respected; forced-colours support (`CanvasText`); RTL-aware alignment and draw origin
SEO Compliance	Native `<hr>`; no hidden text; no impact on ranking

6.26.9 Input Model

Content Inputs: None besides the settings; an `<hr>` authored in the block is reused (other rows ignored).

Metadata Inputs: None.

Tags Inputs: None.

Page Context Inputs: The section classes (`dark`, `brand`) for Theme Auto; the reading direction (`:dir(rtl)`) for alignment and draw-from-start; the viewport width (CSS media queries); `prefers-reduced-motion`; Universal Editor edit mode (`html.adobe-ue-edit`); the URL query `?debug=separator`.

Query Inputs: None.

Manual Inputs: All dialog fields, delivered as key-value rows; the Additional tab fields as block classes.

Authored HTML received from AEM (example, abridged):

```
<div class="separator anchor-chapter-2">
  <div><div>accessibilityMode</div><div>semantic</div></div>
  <div><div>accessibleLabel</div><div>End of the case study</div></div>
  <div><div>variant</div><div>branded</div></div>
  <div><div>width</div><div>25-percent</div></div>
  <div><div>alignment</div><div>start</div></div>
  <div><div>showMobile</div><div>false</div></div>
</div>
```

Keys are matched case- and separator-insensitively (`accessibilityMode` → `accessibilitymode`); values are matched case-insensitively, spaces / underscores become hyphens, "50%" becomes `50-percent`, and booleans accept true / yes / on / 1 / y and false / no / off / 0 / n. Any unknown value falls back to its default.

6.26.10 Output Model

Rendered Output: The rows are replaced by `div.separator-line` containing `hr.separator-rule` and optional `span.separator-decoration` elements, plus (edit mode only, with a warning) `p.separator-editor-note`. The block gets its id and classes: mode, `variant-*`, `theme-*`, `line-*`, `thickness-*`, `color-*`, `opacity-*`, `width-*`, `max-*`, `align-*`, and when applicable `contrast-high`, `section-padding`, `stretch`, `respect-max`, `print-hide`, `decorated`, `hide-{bp}`, `{bp}-width-*`, `{bp}-thickness-*`, `{bp}-align-*`, `{bp}-top-*`, `{bp}-bottom-*`, `hidden-all`, `animate-*`, `motion-*`, and at runtime `animate-ready`, `reduced-motion`, `is-visible`. Data attributes: `data-separator-ready="true"`, `data-analytics="off|custom"`.

Generated HTML (example: Semantic, Branded, 25%, Start, hidden on mobile):

```
<div class="separator anchor-chapter-2 block semantic variant-branded theme-auto line-
solid
  thickness-medium color-primary opacity-100 width-25-percent max-none align-start
  respect-max hide-mobile" id="anchor-chapter-2" data-separator-ready="true"
  data-analytics="off">
  <div class="separator-line">
    <hr class="separator-rule" aria-label="End of the case study">
  </div>
</div>
```

Generated JSON: None.

Generated Metadata: None.

Analytics Tracking: The generic data layer decorator skips the separator (it always has a `data-analytics` attribute). With Analytics on, the separator pushes its own state:

```
{ "component": { "story-end": {
  "@type": "tcs-corp/components/separator", "dc:title": "Story break",
  "xdm:variant": "branded", "xdm:accessibilityMode": "semantic", "xdm:theme": "auto",
  "xdm:lineStyle": "solid", "xdm:visibility": "desktop,tablet" } } }
```

`xdm:visibility` is `none` when hidden everywhere. No events are pushed (no interactions).

Personalization Output: None.

Search Index Output: None (not indexed; no text).

Target Personalization Output: None: Supported Personalization is None. With Analytics on, the separator's state (tcs-corp/components/separator, variant, mode, theme, line style, visibility) is in window.adobeDataLayer for future Adobe Target or Analytics use; no tag manager is loaded yet (F-06). Not implemented (as of this handover).

6.26.11 Business Rules

1. The block decorates once (`data-separator-ready`).
2. Only two-cell rows are read as properties; an authored `<hr>` is reused (its attributes other than class removed); extra `<hr>` elements and other content are dropped.
3. Every value comes from a controlled list; unknown values fall back to defaults: mode decorative, variant default, theme auto, opacity 100, max width none, alignment center, decorations none, contrast standard, show on all devices, responsive values inherit, spacing default, use section padding off, stretch off, respect max width on, animation none, reduced motion fallback static, print show, analytics off.

4. Line style, thickness, colour and width fall back to the variant preset when empty ("As the variant").
5. Accessible label is used only in Semantic mode and cut to 120 characters; Analytics label is cut to 120 characters.
6. Id: sanitised Component ID; if already used on the page, a numeric suffix; empty → the Anchor ID (Additional tab) if present, else `separator-N`. A Component ID replaces the Anchor ID.
7. Decorative + Line style None → no `<hr>` (spacing only). Semantic always renders an `<hr>`.
8. Decorations render only when the line style is not None.
9. Warnings (edit mode only, from placeholders): hidden on all devices (`separatorHidden`); semantic without a line (`separatorInvisible`). Never on the published page.
10. Hidden on all devices: `display: none` on the site, dashed placeholder in the editor.
11. Responsive values apply only within their breakpoint range; "inherit" keeps the Appearance value; breakpoint widths other than Full bleed reset the bleed.
12. High contrast overrides the Line colour.
13. Stretch to container overrides all widths and bleed; maximum width caps still apply.
14. Use section padding removes all own vertical spacing (all breakpoints).
15. Respect content maximum width (default on) caps the line at 90rem including full bleed.
16. Animation: once, at 10% visibility; not prepared at all if IntersectionObserver is missing or for reduced motion with Show immediately; with reduced motion and Short fade only opacity animates; errors remove `animate-ready` so the line is never left hidden.
17. Print: shown (opacity 1, no transform) unless Hide when printed.
18. Forced colours: line, gradient and decorations use `CanvasText`.
19. Analytics: off → `data-analytics="off"` (no tracking, not even generic state); on → `data-analytics="custom"` and one state entry; errors never affect rendering.
20. `?debug=separator` logs the configuration, warnings and duplicate Component IDs via `console.debug`.

6.26.12 Author Best Practices

Recommended Content Length: Accessible label Recommended ≤ 60 characters (Enforced maximum 120); Analytics label Recommended ≤ 40 characters (Enforced maximum 120).

Image Dimensions: Not applicable (no images).

CTA Writing Guidelines: Not applicable (no links or buttons).

Accessibility Guidelines: Use Semantic only for real topic changes; give important breaks an Accessible label; never use Semantic with Line style None; keep meaningful lines at Strong colour or High contrast and 100% opacity; prefer Show immediately as the reduced motion fallback; do not use separators instead of headings.

SEO Guidelines: No SEO effect; structure the page with headings, not separators.

Metadata Guidelines: None.

Taxonomy Guidelines: None.

Localization Guidelines: Translate the Accessible label per locale; keep the Analytics label and Component ID identical across locales (stable for reporting); Start / End alignment adapts automatically to right-to-left languages; editor note texts come from each locale's placeholders sheet.

6.26.13 Troubleshooting Guide

Issue 1 — The separator doesn't appear on the page

Symptoms: Nothing visible on the published page.

Root Cause: All Show on … toggles off, Hide block on, Decorative + Line style None, or very low opacity / subtle colour on a light background.

Diagnosis Steps: Open the block in Universal Editor edit mode: a dashed placeholder with "Separator hidden on all devices" means all devices are off; check Hide block; check Line style; use `?debug=separator` on preview.

Resolution Steps: Turn on the needed devices, turn off Hide block, choose a visible line style / colour.

Validation Steps: The line shows in Preview at all intended widths.

Preventive Measures: Validation checklist.

Issue 2 — Editor warning "Semantic separator without a line"

Symptoms: A note under the separator in edit mode.

Root Cause: Accessibility mode Semantic with Line style None (screen readers announce an invisible break).

Diagnosis Steps: Check General > Accessibility mode and Appearance > Line style.

Resolution Steps: Switch to Decorative (spacing only) or choose a visible line style.

Validation Steps: The note disappears.

Preventive Measures: Use Decorative for spacing-only separators.

Issue 3 — Theme Auto doesn't adapt to a dark background

Symptoms: A light-palette line on a dark background image.

Root Cause: Auto follows only `.section.dark` / `.section.brand`; a background image doesn't change the palette, and the section dialog has no dark / brand style as of this handover.

Diagnosis Steps: Inspect the section's classes.

Resolution Steps: Set Theme to Dark (or Brand) explicitly; consider High contrast.

Validation Steps: The line is visible on the image.

Preventive Measures: Choose the theme explicitly on image backgrounds.

Issue 4 — Double spacing around the separator

Symptoms: Large gaps above / below.

Root Cause: The separator's 1.5rem default spacing adds to section spacing or block margins.

Diagnosis Steps: Inspect padding of `.separator` and neighbouring margins.

Resolution Steps: Turn on Use section padding, or set top / bottom spacing to None / smaller per device.

Validation Steps: Gaps match the design at each breakpoint.

Preventive Measures: Use section spacing as the primary rhythm.

Issue 5 — Spacing settings have no effect

Symptoms: Changing Desktop top spacing doesn't change the gap.

Root Cause: Use section padding is on, or the Additional tab Padding top / bottom override the separator's spacing, or the editor is not at desktop width (desktop values apply ≥ 1200px).

Diagnosis Steps: Check Spacing > Use section padding, Additional > Padding top / bottom, and the editor width.

Resolution Steps: Turn off Use section padding / reset the Additional padding to Default; preview at the right width.

Validation Steps: The gap changes at the intended breakpoint.

Preventive Measures: Use only the Spacing tab for vertical space of separators.

Issue 6 — Width "Auto" doesn't keep the Full width look

Symptoms: A Full width variant becomes content-width after choosing "Auto (as the variant)".

Root Cause: `auto` renders as 100% (class `width-auto`), not the variant's preset; only the empty value "As the variant" uses the preset.

Diagnosis Steps: Check Appearance > Separator width and the block class `width-auto`.

Resolution Steps: Choose "As the variant" or "Full bleed".

Validation Steps: The line bleeds to the section edges.

Preventive Measures: Use "As the variant" to keep presets.

Issue 7 — Anchor links to the separator break

Symptoms: `#anchor-…` links don't jump.

Root Cause: A Component ID is set (it replaces the Anchor ID), or the Component ID was lower-cased / suffixed because of a duplicate.

Diagnosis Steps: Inspect the block's `id`; check `?debug=separator` for "component id … is used twice".

Resolution Steps: Link to the actual id, or clear the Component ID to use the Anchor ID; make ids unique.

Validation Steps: The link scrolls to the separator.

Preventive Measures: Use one id mechanism; keep ids lower-case and unique.

Issue 8 — Animation doesn't play

Symptoms: The line just appears.

Root Cause: The visitor prefers reduced motion (fallback Show immediately), the separator was already in view when loaded (it animates immediately once), or the browser lacks IntersectionObserver.

Diagnosis Steps: Check the OS reduced-motion setting; check classes `animate-ready` / `is-visible`.

Resolution Steps: Expected behaviour for reduced motion; test with reduced motion off and the separator below the fold.

Validation Steps: The animation plays when scrolling into view.

Preventive Measures: Don't rely on animation to convey meaning.

6.26.14 Support Runbook

Monitoring Requirements

- No runtime service. Monitor visual regressions after CSS / token changes and the unit tests (`npm test`, `test/separator/separator-config.test.mjs`) in CI.
- If Analytics is used, verify the data layer entries in Adobe Tags once Tags is implemented.

Logs

- Browser console: `[separator]` debug messages only with `?debug=separator` (configuration, warnings, duplicate Component ID). No errors are logged in normal operation; analytics errors are swallowed.
- Admin API / AEM Sidekick: page preview / publish status.
- AEM author: publication logs.

Common Errors

Error	Likely cause	Fix
Invisible separator	All devices off / Hide block / Line style None	Re-enable / choose a line
Editor note "Semantic separator without a line"	Semantic + None	Decorative or visible line

Error	Likely cause	Fix
Wrong colour on dark image	Theme Auto	Theme Dark / Brand, High contrast
Double spacing	Own spacing + section spacing	Use section padding / None
Id differs from authored	Lower-casing, sanitising, duplicate suffix	Use lower-case unique ids
Not in data layer	Analytics off (default)	Turn on Analytics
Validation error on Component ID	Starts with a digit or has spaces	Start with a letter; use - / _

Escalation Matrix

Level	Who	Checks
L1	Author support	Mode, line style, devices, theme, spacing, Hide block, Component / Anchor ID; editor notes
L2	AMS / site admin	`?debug=separator` output, preview vs live HTML, CDN cache, placeholders sheet
L3	Development team	`separator-config.js` normalisation, CSS classes, unit tests, browser support
L4	Adobe Support	Universal Editor key-value rendering, Edge Delivery delivery issues

Recovery Procedures

1. Restore the previous page version and republish.
2. For code regressions, revert the commit on `main`; run `npm test` to confirm the configuration logic.
3. Temporarily hide the separator with Hide block.

Health Checks

- Check a page with separators at 390 / 1024 / 1440px; verify no horizontal page scroll.
- Check the accessibility tree: decorative separators hidden, semantic ones exposed with label.
- Check forced-colours (Windows high contrast) and print preview.

Operational Procedures

- A new variant is an extension: add a preset to `VARIANT_PRESETS` in `separator-config.js`, the option in `_separator.json`, its CSS class, run `npm run build:json` and `npm test`.
- Maintain `separatorHidden` and `separatorInvisible` in each locale's placeholders sheet.

Known Limitations

- Visual presentation uses site tokens until the Figma designs are applied (README).
- No brand-icon decoration (needs an approved icon asset); dot, square and diamond only.
- No free-form CSS classes or colours (controlled options only).
- An Accessible label is read as the separator's name by most screen readers, not all.
- Theme Auto depends on `dark` / `brand` section classes that the section dialog doesn't offer as of this handover.
- Width "Auto (as the variant)" renders 100%, not the variant's preset width.
- Dialog labels show px values (for example "XL (64px)"); the CSS uses the equivalent rem tokens.

6.26.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
The separator does not appear on the page	All Show toggles off, Hide block on, or Decorative with Line style None	Turn the needed devices on, turn Hide block off or choose a visible line style

Error	Root Cause	Resolution
Editor note Semantic separator without a line	Semantic mode with Line style None	Switch to Decorative or choose a visible line style
Light line on a dark background image	Theme Auto ignores background images	Set Theme Dark background or Brand background
Double spacing around the separator	The 1.5rem default adds to the section spacing	Turn Use section padding on or set spacing to None
Spacing settings have no effect	Use section padding on, Additional Padding override, or wrong preview width	Turn Use section padding off, reset Additional padding, preview at the right width
Full width variant loses its bleed	Separator width set to Auto, which renders 100%	Choose As the variant or Full bleed
Anchor link to the separator does not jump	A Component ID replaces the Anchor ID or was suffixed as duplicate	Link to the actual id or clear the Component ID
Partial width ignored	Stretch to container width is on	Turn Stretch to container width off
Animation does not play	Reduced motion with Show immediately, or already in view on load	Expected; test below the fold with reduced motion off

6.26.16 Author Quick Reference Guide

Mandatory Fields

- None: no field is required in the model; a Separator with all defaults renders a Decorative, Default, centred full-width line

Recommended Fields

- Accessibility mode: Semantic only where the topic changes, else Decorative
- Accessible label: a short name such as End of the story for semantic breaks
- Separator variant: the preset closest to the design (Default, Strong, Branded, …)
- Theme: Dark background or Brand background on background images, as Auto ignores images
- Desktop, Tablet and Mobile top and bottom spacing, or Use section padding at section edges

Optional Fields

- Component ID: only for analytics, tests or links; lower-case and unique
- Line style, Line thickness, Line colour, Line opacity, Separator width, Maximum width, Alignment
- Start, Center and End decoration; Background contrast
- Show on desktop, tablet and mobile; Desktop, Tablet and Mobile width, thickness and alignment
- Stretch to container width, Respect content maximum width, Animate on view, Reduced motion fallback, Print
- Analytics and Analytics label
- Additional tab: Anchor ID, Hide block, padding and margins

Authoring Checklist

1. Add the Separator from Add (+) in the section, after the component it follows
2. Choose Accessibility mode first: Semantic for a change of topic, Decorative otherwise
3. Pick a Separator variant and leave Appearance fields on As the variant unless an override is needed
4. Use Separator width As the variant, not Auto, to keep a variant's preset width
5. Set Theme explicitly on sections with a background image
6. Use the Responsive tab for per-device width, thickness, alignment and visibility
7. Use the Spacing tab for vertical space; avoid Additional Padding top and bottom on separators
8. Never use several separators in a row or a separator instead of a heading

Pre-Publish Checklist

1. Preview at 390 px, 1024 px and 1440 px
2. No editor note Separator hidden on all devices or Semantic separator without a line remains
3. The line is visible on its background (Strong or Background contrast High where it matters)
4. Spacing is not doubled with section padding
5. No horizontal scrolling at 390 px with Full bleed separators
6. Animations play once when scrolled into view; reduced motion shows the line
7. A Component ID, if set, is unique and lower-case

Post-Publish Validation Checklist

1. Open the page on aem.live and check each separator at the three widths
2. Check semantic separators in the accessibility tree with their label
3. Check anchor links to separators jump to the right place
4. If Analytics is on, check window.adobeDataLayer for the separator's entry
5. Check the print preview where Print is set to Hide when printed
6. Ask L2 to check ?debug=separator output if a separator looks wrong

6.26.17 Component Execution Example

Business example: Service page with a neutral break and a brand accent.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Text
Text (Text)	Our consulting teams help enterprises define a clear technology strategy, align it with business goals and turn it into a roadmap that delivers measurable value.
Component (Section › Add (+))	Separator
Component (Section › Add (+))	Text
Text (Text)	Cloud migration and operations services move, modernise and run workloads on any cloud, with security and cost control built in from day one.
Component (Section › Add (+))	Title
Title (Title)	Our approach
Title Type (Title)	h3
Component (Section › Add (+))	Separator
Separator variant (Separator › General)	Branded
Separator width (Separator › Appearance)	25%
Alignment (Separator › Appearance)	Start
Component (Section › Add (+))	Text
Text (Text)	We bring deep domain knowledge and technology expertise to the industries that shape the global economy.

All other fields keep their default values.

Rendered Result:

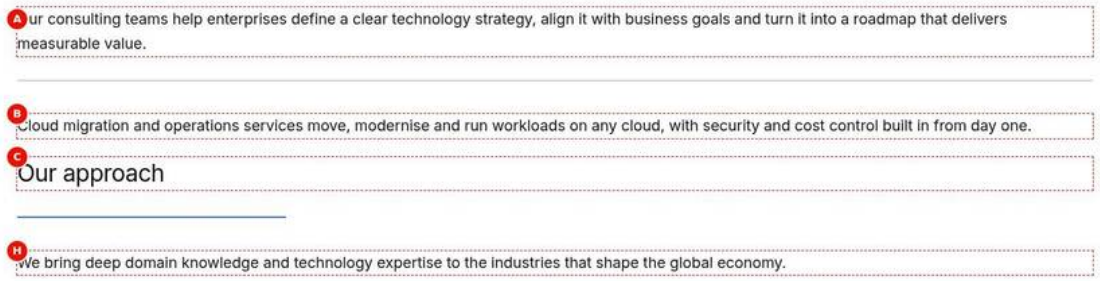

Figure 66: Execution example — The section at 1440 px: a paragraph, a Default separator (solid 1px slate 400 line across the 1280 px content width), a second paragraph, the H3 Our approach, a Branded separator (2px brand 500 line, 25% wide, at the start edge) below the heading, and the last paragraph. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/separator-desktop-view.jpg)

Author Notes

- The first separator keeps all defaults: Decorative, Default, Auto, 100%, centred
- The second uses Separator variant Branded with Separator width 25% and Alignment Start
- The H3 Our approach names the part; the separators stay decorative
- Preview at 1024 px and 390 px to confirm both lines on smaller screens

Business Notes

- Neutral dividers make the long service description easier to scan
- The brand accent under the heading carries the corporate look without an image
- Both separators use site tokens, so a design change updates every page

Technical Notes

- Key-value block: each dialog field arrives as a row and becomes a block class
- Classes variant-branded color-primary thickness-medium width-25-percent align-start on the second block
- Decorative lines are aria-hidden; the hr is native and has no text
- All responsive behaviour is CSS with breakpoints at 600 px and 1200 px

TCS Corporate Website — Project Handover

Volume 11 of 13 — Components 6.27–6.29: Embed, Video, Form Variations

Date: October 14, 2026

Adobe

Table of Contents

Part 6 — Component Library (continued) 3
6.27 Embed Block 3
6.28 Video Block 33
6.29 Form Variations Block 136

Part 6 — Component Library (continued)

> **Note:** This is volume 11 of 13 of the TCS Corporate Website project handover (version 2.0). Volume 1 holds the document control, the audience guide and the conventions.

6.27 Embed Block

The Embed block places third-party content from a URL on the page: YouTube and Vimeo videos, Twitter / X posts, or any other URL as a generic iframe. It is based on the Edge Delivery Services Block Collection embed (`blocks/embed/embed.js`, `embed.css`, `_embed.json`), adapted so that players are built with DOM APIs by the media decorator (no authored URL in HTML strings), the Play button comes from the button decorator, frames are named from the placeholders, and keyboard focus moves into the player after Play. Without a placeholder image the embed loads when it scrolls into view; with a placeholder image it loads only when the visitor selects Play (click-to-load).

6.27.1 Component Purpose

Business Objective: Let authors include video and social content hosted on external platforms with minimal performance cost (lazy or click-to-load) and accessible naming.

Business Use Cases:

- A YouTube video of a keynote, customer story or product demo on a campaign or article page.
- A Vimeo-hosted brand film.
- An official TCS post on Twitter / X embedded in a press release or news page.
- An approved third-party widget or page shown in an iframe (for example an interactive report), where the provider allows framing.

When To Use:

- The content is hosted on YouTube, Vimeo or Twitter / X, or is an iframe-able URL.
- A simple embed without playback options is enough.

When Not To Use:

- For videos stored in AEM Assets (MP4 / WebM), background videos, captions files, autoplay, pop-up playback or privacy-enhanced YouTube: use the **Video** block (6.28), which supports these options. The Embed block always uses `www.youtube.com` (not the privacy-enhanced `youtube-nocookie.com` host).
- For providers not listed (Instagram, LinkedIn, Facebook posts): no dedicated handler (Not implemented as of this handover); a generic iframe of such URLs is usually blocked by the provider.
- For forms or content requiring interaction tracking (interactions inside iframes are not visible to the site's data layer).

Dependencies:

Type	Dependency	Use
Code	`decorators/media-decorator.js` (`createFrame`, `createYoutubeFrame`, `createVimeoFrame`)	Builds the iframes
Code	`utils/media.js` (`isYoutube`, `isVimeo`, `youtubeEmbedUrl`, `vimeoEmbedUrl`)	Recognises providers and builds player URLs

Type	Dependency	Use
Code	`decorators/icon-button-decorator.js` (`createIconButton`)	Play button (primary icon button, icon `icons/play.svg`)
Code	`utils/viewport.js` (`onVisible`)	Loads the embed when it enters the viewport
Code	`utils/placeholders.js`	Labels `play`, `contentFrom`
Code	`scripts/aem.js` (`loadScript`)	Loads the Twitter widget script
Code	`decorators/block-options-decorator.js`, `decorators/data-layer-decorator.js`	Additional tab; data layer
Third party	`https://platform.twitter.com/widgets.js`	Renders Twitter / X posts
Third party	`www.youtube.com/embed/…`, `player.vimeo.com/video/…`	Video players
Sheet	`/{locale}/placeholders.json`	Keys `play` ("Play"), `contentFrom` ("Content from {source}")
Model	`models/_section.json`	Allows the Embed in sections

Related Components: Video block (richer video options), Modal (used by the Video block's pop-up), Hero / Teaser (Lottie animations, not embeds).

Applicable Templates: Any page (home, article, blog, press-release, standard pages), in any section.

Supported Content Types: YouTube (watch, `youtu.be`, `/embed/`, `/shorts/`, `/live/` URLs); Vimeo (`vimeo.com/{id}`); Twitter / X post URLs (`twitter.com`, `x.com`, with or without `www.`); any other `https` URL as an iframe; an optional placeholder image from AEM Assets.

Business Problem Solved

Pages need videos and posts hosted on YouTube, Vimeo or X and approved partner pages, but pasting provider embed code is unsafe, heavy and inaccessible. The Embed builds the player from a URL with DOM APIs, names the frame, loads it only when visible or after Play on a branded placeholder image, and moves keyboard focus into the player.

Supported Taxonomy

None: the Embed has no tag field and reads no page tags or taxonomy (Supported Tags: None).

6.27.2 Visual Overview

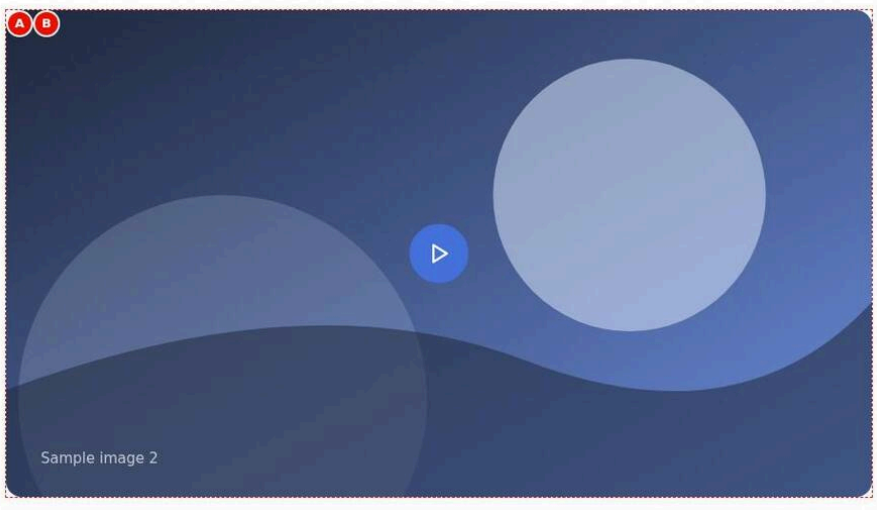

Figure 1: Desktop rendering — The Embed at 1440 px: the placeholder image photo-2.svg in a 16:9 frame 900 px wide (56.25rem), centred, with 1rem rounded corners, and the round primary Play button in its centre. The YouTube player is not loaded yet. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/embed-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/embed-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Embed at 1440 px: the placeholder image photo-2.svg in a 16:9 frame 900 px wide (56.25rem), centred, with 1rem rounded corners, and the round primary Play button in its centre. The YouTube player is not loaded yet.
Business Context	A campaign or article page that shows a YouTube video of how enterprises scale AI, without loading YouTube until the visitor wants to watch.
Author Objective	Add an Embed with a YouTube URI, a placeholder image and its alt text for click-to-load.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Embed	Yes	Adds the Embed to the page	Select the section in the content tree, choose Add (+) and pick Embed	Only components the section allows (section filter)
A	Placeholder Image (Embed › Content)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Click-to-load preview image	16:9, from AEM Assets	None in the model
B	Placeholder Image Alt Text (Embed › Content)	Video: how enterprises scale AI with confidence	No	Alt text of the placeholder	Describe the image	None
(C)	URI (Embed › Content)	https://www.youtube.com/watch?v=Xk3pQ7vT9mA	No (block renders nothing without it)	Address of the content	Full https URL	None in the model; the code needs a link

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 16:9 image with rounded corners centred in the section and a round brand-blue Play button over its middle.
- **Rendering behaviour:** The block is centred with max-width 56.25rem; the image covers the 16:9 area (object-fit: cover) and the Play button is a 2.75rem primary icon button scaled x1.4. Nothing from youtube.com loads until Play.
- **Publishing behaviour:** Publish sends the page to preview or live; the placeholder asset photo-2.svg must be published in AEM Assets. The YouTube player is fetched by the visitor's browser after Play.

Business Rules

- With a Placeholder Image the embed loads only when the visitor selects Play.
- YouTube is recognised from youtube.com or youtu.be; the id comes from watch?v=Xk3pQ7vT9mA.
- After Play the iframe is www.youtube.com/embed/Xk3pQ7vT9mA?rel=0 with autoplay, titled Content from youtube.com.
- The alt text Video: how enterprises scale AI with confidence describes the placeholder image.

Common Authoring Mistakes

Error	Root Cause	Resolution
The block renders nothing	URI empty or not delivered as a link	Paste the full https URL into URI
Faces in the placeholder are cut off	The image is not 16:9 and is cropped by object-fit cover	Use a 16:9 image with the subject centred
The YouTube player starts with sound or shows its own play button	The block sends muted=1, which YouTube ignores (finding F-26)	Expected; use the Video block for controlled playback

Troubleshooting

- **Symptoms:** The Play button shows on a grey area without the image on aem.live.
- **Cause:** The placeholder asset photo-2.svg is not published, so the image request fails.
- **Resolution:** Publish the asset in AEM Assets and publish the page again.
- **Verification Steps:** The image request returns 200 on aem.live and the placeholder shows under the Play button.

Desktop (≥ 1200px): The block is centred with a maximum width of 56.25rem (900px). Video and iframe embeds are 16:9 (`aspect-ratio: 16 / 9`) with 1rem rounded corners (`--radius-l`) and the iframe filling the frame without a border. With a placeholder image, the image covers the 16:9 area (`object-fit: cover`) and the Play button (a primary icon button, 2.75rem, scaled ×1.4) is centred on it. Twitter / X posts are centred and take the height the widget renders.

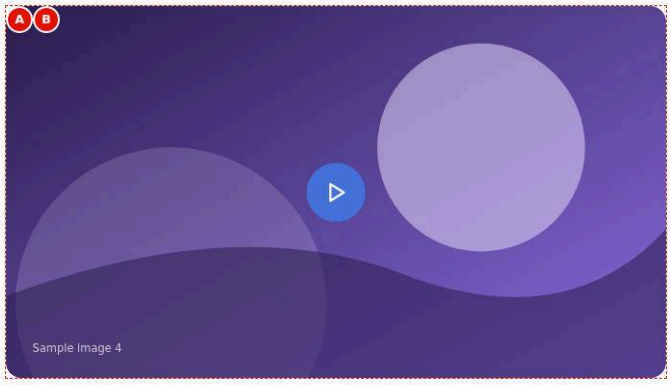

Figure 2: Tablet rendering — The Embed at 768 px: the placeholder image photo-4.svg at the full content width (about 688 px) in a 16:9 frame with rounded corners and the Play button centred; the Vimeo player loads only after Play. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/embed-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/embed-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The Embed at 768 px: the placeholder image photo-4.svg at the full content width (about 688 px) in a 16:9 frame with rounded corners and the Play button centred; the Vimeo player loads only after Play.
Business Context	A brand film hosted on Vimeo about cloud migration in practice, shown on a tablet-sized screen.
Author Objective	Embed a Vimeo video with a placeholder image and check it at 768 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Embed	Yes	Adds the Embed to the page	Select the section in the content tree, choose Add (+) and pick Embed	Only components the section allows (section filter)
A	Placeholder Image (Embed › Content)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No	Click-to-load preview image	16:9, from AEM Assets	None in the model
B	Placeholder Image Alt Text (Embed › Content)	Video: cloud migration in practice	No	Alt text of the placeholder	Describe the image	None
(C)	URI (Embed › Content)	https://vimeo.com/824517390	No (block renders nothing without it)	Address of the content	Full https URL	None in the model; the code needs a link
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—
—	Note (Preview)	Shown with its placeholder image: the Vimeo player it-	—	Check on the preview (not stored in the content)	Shown with its placeholder image: the Vimeo player it-	—

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		self loads only after Play			self loads only after Play	

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 16:9 rounded image filling the content width with the round Play button over its middle.
- **Rendering behaviour:** Below 900 px of available width the embed fills the content width and keeps 16:9; embed.css has no breakpoint rules. After Play the iframe is player.vimeo.com/video/824517390 with autoplay and muted.
- **Publishing behaviour:** Publish sends the page to preview or live; photo-4.svg must be published in AEM Assets. Vimeo content is loaded by the visitor's browser after Play.

Business Rules

- Vimeo is recognised from vimeo.com; the id is the first path segment (824517390).
- Only vimeo.com/{id} URLs work; channel, showcase or private-hash URLs give a wrong player URL (finding F-26).
- The frame is titled Content from vimeo.com from the contentFrom placeholder.
- The placeholder keeps the page free of Vimeo requests until Play.

Common Authoring Mistakes

Error	Root Cause	Resolution
Vimeo shows Sorry, this video does not exist	A showcase or player.vimeo.com URL was pasted	Use https://vimeo.com/824517390
The alt text describes the video platform	Alt text written as Vimeo video	Describe the image, for example Video: cloud migration in practice

Troubleshooting

- **Symptoms:** After Play the Vimeo frame shows an error.
- **Cause:** The URI is not in the form vimeo.com/{id}, so the first path segment is not the video id.
- **Resolution:** Replace the URI with the canonical https://vimeo.com/{numeric id} and publish.
- **Verification Steps:** The iframe src is player.vimeo.com/video/824517390 and the video plays.

Tablet (600–1199px): Same layout; below 900px of available width the embed fills the content width and keeps 16:9. There are no breakpoint-specific rules in `embed.css`.

Figure 3: Mobile rendering — The Embed at 390 px: the placeholder image photo-2.svg at the full content width (about 342 px) in a 16:9 frame with rounded corners and the Play button centred. No X post is part of this example. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/embed-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/embed-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The Embed at 390 px: the placeholder image photo-2.svg at the full content width (about 342 px) in a 16:9 frame with rounded corners and the Play button centred. No X post is part of this example.
Business Context	Mobile visitors see the YouTube video about scaling AI as a light image first and load the player only if they want to watch.
Author Objective	Check the YouTube embed with its placeholder image at 390 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Embed	Yes	Adds the Embed to the page	Select the section in the content tree, choose Add (+) and pick Embed	Only components the section allows (section filter)
A	Placeholder Image (Embed › Content)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Click-to-load preview image	16:9, from AEM Assets	None in the model
B	Placeholder Image Alt Text (Embed › Content)	Video: how enterprises scale AI with confidence	No	Alt text of the placeholder	Describe the image	None
(C)	URI (Embed › Content)	https://www.youtube.com/watch?v=Xk3pQ7vT9mA	No (block renders nothing without it)	Address of the content	Full https URL	None in the model; the code needs a link
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A compact 16:9 rounded image across the phone's content width with the round Play button in the middle.
- **Rendering behaviour:** The same layout at full content width; the Play button stays centred and scaled x1.4; the page does not shift because the 16:9 area is fixed.
- **Publishing behaviour:** Publish sends the page to preview or live; the placeholder asset must be published. The image is delivered optimised by Edge Delivery.

Business Rules

- The embed has no mobile-specific rules; it fills the content width below 900 px.
- The Play button is a native button with the accessible name Play.
- After Play, keyboard focus moves into the YouTube iframe.
- Mobile browsers may block autoplay; the YouTube player then shows its own play button.

Common Authoring Mistakes

Error	Root Cause	Resolution
Two taps are needed on the phone	Mobile autoplay policies block playback after the first tap	Expected; tap the player's own button
The page scrolls sideways	Additional margin left or right set on the Embed	Reset the Additional margins to Default

Troubleshooting

- **Symptoms:** On the phone, Play replaces the image but the video does not start.
- **Cause:** The browser blocks autoplay; the block sends muted=1, which YouTube does not recognise as mute (F-26).
- **Resolution:** Expected behaviour; the visitor taps the YouTube play button. For muted autoplay control use the Video block.
- **Verification Steps:** The YouTube player is shown in the 16:9 frame and plays after its own button is tapped.

Mobile (< 600px): Same layout at full content width. Before an embed without placeholder loads, the block reserves a 16:9 area to avoid layout shift (`.embed:not(.embed-is-loaded, :has(.embed-placeholder))`).

6.27.3 Component Variations

The provider is chosen automatically from the URI; the placeholder image switches the block to click-to-load.

Variation 1 — YouTube

Variation Name: YouTube embed (`embed-youtube` class after loading).

Business Purpose: Show a YouTube video in the page.

Visual Example:

Steps — Variation example: A YouTube player in a 16:9 rounded frame, centred, 900px wide.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Embed
2	Embed › Content	URI	https://www.youtube.com/watch?v=Xk3pQ7vT9mA
3	Preview	Check	The YouTube player loads when the block scrolls into view: a 16:9 rounded frame, centred, 900 px wide

Use Cases: Keynotes, customer stories, product videos published on the TCS YouTube channel.

Authoring Guidelines: Paste a YouTube URL into **URI** (for example `https://www.youtube.com/watch?v=VIDEO_ID` or `https://youtu.be/VIDEO_ID`); leave Placeholder Image empty for lazy loading, or set it for click-to-load (Variation 5).

Business Rules: Recognised when the URL contains `youtube.com` or `youtu.be`. The video id comes from `youtu.be/{id}`, `/embed/{id}`, `/shorts/{id}`, `/live/{id}` or `?v={id}`. Other URL parameters (for example a start time `t=`) are not carried over.

Rendering Rules: `div.embed-frame > iframe` with `src` `https://www.youtube.com/embed/{id}?rel=0`, `title` "Content from youtube.com" (placeholder `contentFrom`), `loading="lazy"`, `allow="autoplay; fullscreen; picture-in-picture; encrypted-media; accelerometer; gyroscope"`, `allowfullscreen`. Loaded when the block enters the viewport.

Responsive Behaviour: 16:9 at max 900px on desktop; full content width on tablet / mobile.

SEO Impact: The video is in a third-party iframe; its content isn't part of the page's text. Describe the video in the surrounding text for search engines.

Accessibility Compliance: The iframe has a title (WCAG 4.1.2); captions and keyboard control come from the YouTube player (WCAG 1.2.2 depends on captions on YouTube).

Variation 2 — Vimeo

Variation Name: Vimeo embed (`embed-vimeo`).

Business Purpose: Show a Vimeo-hosted video.

Visual Example:

Steps — Variation example: A Vimeo player in a 16:9 rounded frame.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Embed
2	Embed › Content	URI	https://vimeo.com/824517390
3	Preview	Check	The Vimeo player in a 16:9 rounded frame

Use Cases: Brand films hosted on Vimeo.

Authoring Guidelines: Paste `https://vimeo.com/{id}` into URI.

Business Rules: Recognised when the URL contains `vimeo.com`. The video id is the first path segment of the URL, so only `vimeo.com/{id}` URLs work; channel, showcase, private-hash or `player.vimeo.com/video/{id}` URLs produce a wrong player URL.

Rendering Rules: iframe `src` `https://player.vimeo.com/video/{id}`, title "Content from vimeo.com", `allow="autoplay; fullscreen; picture-in-picture; encrypted-media"`, lazy.

Responsive Behaviour: As YouTube.

SEO Impact: As YouTube.

Accessibility Compliance: Iframe title; captions and controls from the Vimeo player.

Variation 3 — Twitter / X post

Variation Name: Twitter / X embed (`embed-twitter`).

Business Purpose: Show an official social post with its native rendering.

Visual Example:

Steps — Variation example: An embedded X post centred in the content column, with the post's own card design.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Embed
2	Embed › Content	URI	https://x.com/example/status/1780000000000000000
3	Preview	Check	The X post, centred in the content column, in the post's own card design

Use Cases: Press releases and news quoting an official post.

Authoring Guidelines: Paste the post URL (`https://x.com/{account}/status/{id}` or `https://twitter.com/...`) into URI.

Business Rules: Recognised when the host is `twitter.com`, `x.com`, `www.twitter.com` or `www.x.com`. `x.com` URLs are rewritten to `twitter.com` for the widget. The widget script `https://platform.twitter.com/widgets.js` is loaded (once per page) when the embed loads.

Rendering Rules: `<blockquote class="twitter-tweet"><a href="…">…URL…</a></blockquote>`; the widget replaces it with its own iframe (`.twitter-tweet-rendered`, centred). If the script does not load (blocked, offline), the post's URL remains as a link.

Responsive Behaviour: Width and height from the widget; centred on all breakpoints.

SEO Impact: The fallback link is in the HTML; the rendered post is third-party content.

Accessibility Compliance: The fallback is a real link; the widget's accessibility is provided by the platform. Third-party cookies may be set by the platform (see Known Limitations).

Variation 4 — Generic iframe

Variation Name: Generic iframe (no provider class).

Business Purpose: Embed any other URL that allows framing.

Visual Example:

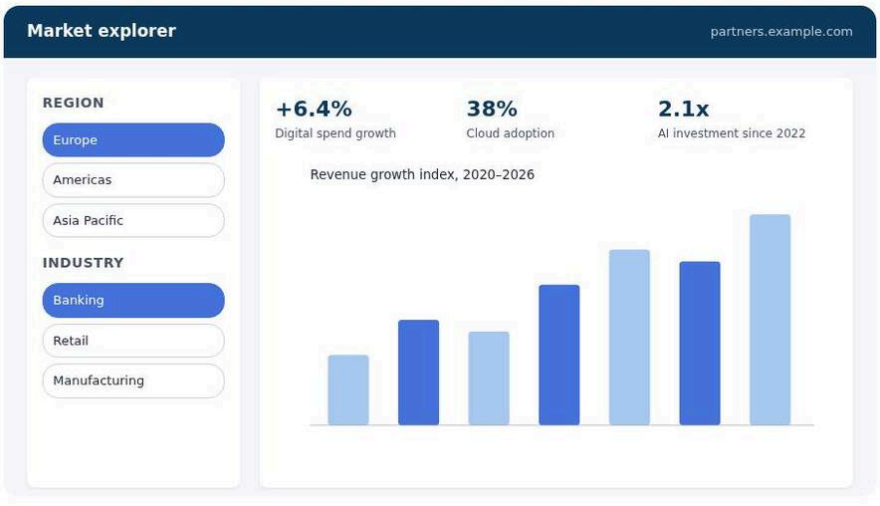

Figure 4: Variation example — The Embed at 1440 px: a 16:9 iframe 900 px wide with rounded corners showing a partner's Market explorer page with Region and Industry filters and the figures +6.4% digital spend growth, 38% cloud adoption and 2.1x AI investment since 2022. The capture uses a local stand-in page for the partner URL. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/embed-generic-iframe.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/embed-generic-iframe.jpg`
Screenshot Purpose	Variation example
Screen Description	The Embed at 1440 px: a 16:9 iframe 900 px wide with rounded corners showing a partner's Market explorer page with Region and Industry filters and the figures +6.4% digital spend growth, 38% cloud adoption and 2.1x AI investment since 2022. The capture uses a local stand-in page for the partner URL.
Business Context	An insights page that shows an approved interactive partner report directly in the page instead of linking away.
Author Objective	Embed a partner page by its URL as a generic iframe.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Embed	Yes	Adds the Embed to the page	Select the section in the content tree, choose Add (+) and pick Embed	Only components the section allows (section filter)
(A)	URI (Embed › Content)	https://partners.example.com/market-explorer	No (block renders nothing without it)	Address of the content	Full https URL	None in the model; the code needs a link

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A rounded 16:9 frame centred in the section with the framed Market explorer page inside it.
- **Rendering behaviour:** Without a placeholder the iframe is created when the block enters the viewport; src is the URL, title Content from partners.example.com, loading lazy, allow encrypted-media, allowfullscreen; always 16:9 and cropped or letterboxed if the page needs more.
- **Publishing behaviour:** Publish sends the page to preview or live; the framed page is served by the partner, so it must allow framing and use https.

Business Rules

- Any URL not recognised as YouTube, Vimeo or Twitter / X becomes a generic iframe.
- There is no domain allow-list in code: [To be confirmed: approved embed domains — owner: site admin / security].
- The partner must allow framing (no X-Frame-Options deny or frame-ancestors block).
- The frame is always 16:9; there is no height option.

Common Authoring Mistakes

Error	Root Cause	Resolution
The frame shows refused to connect	The partner forbids framing	Use the provider's embed URL or link to the page instead
The frame stays blank	An http URL on an https page (mixed content)	Use the https URL
The report is cut off at the bottom	The page needs more height than 16:9	Ask the partner for a 16:9 embed view

Troubleshooting

- **Symptoms:** The iframe shows the browser's refused to connect page.
- **Cause:** partners.example.com sends X-Frame-Options or a frame-ancestors policy that forbids framing on the TCS domain.
- **Resolution:** Ask the partner to allow framing or provide an embeddable URL; otherwise replace the Embed with a link.
- **Verification Steps:** The console shows no X-Frame-Options or CSP error and the Market explorer displays in the frame.

Use Cases: Approved interactive content, maps or reports from partners.

Authoring Guidelines: Paste the URL into URI. Confirm with the provider that the page may be framed.

Business Rules: Any URL not recognised as YouTube, Vimeo or Twitter / X. There is no allow-list of domains in code: governance of which URLs are embedded is editorial ([To be confirmed: approved embed domains — owner: site admin / security]).

Rendering Rules: `div.embed-frame > iframe` with `src` = the URL, `title` "Content from {host}", `loading="lazy"`, `allow="encrypted-media"`, `allowfullscreen`. The frame is always 16:9.

Responsive Behaviour: 16:9 frame; the framed page must be responsive itself.

SEO Impact: The framed content is not part of the page.

Accessibility Compliance: Iframe title from the host name; the framed page's own accessibility is the provider's responsibility. Content that needs another aspect ratio is cropped or letterboxed.

Variation 5 — Placeholder image with Play (click-to-load)

Variation Name: Placeholder image with Play button (`.embed-placeholder`).

Business Purpose: Better performance and privacy: nothing from the provider loads until the visitor chooses Play; a branded image replaces the provider's preview.

Visual Example:

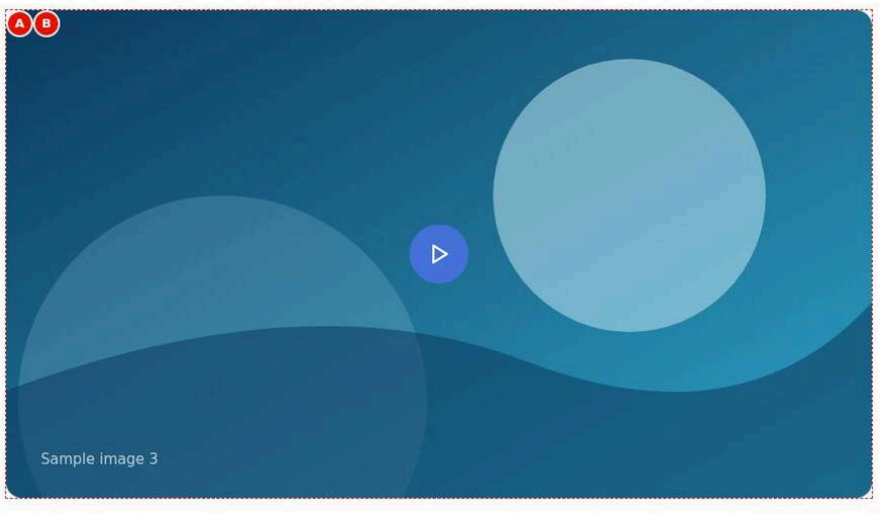

Figure 5: Variation example — The Embed at 1440 px: the placeholder image photo-3.svg in a centred 900 px 16:9 frame with rounded corners and the round primary Play button in the centre. Only the state before Play is shown; the YouTube player is not in the screenshot. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/embed-placeholder-play.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/embed-placeholder-play.jpg`
Screenshot Purpose	Variation example
Screen Description	The Embed at 1440 px: the placeholder image photo-3.svg in a centred 900 px 16:9 frame with rounded corners and the round primary Play button in the centre. Only the state before Play is shown; the YouTube player is not in the screenshot.
Business Context	A page with several videos keeps loading fast and free of YouTube requests by showing a branded image until the visitor chooses Play.
Author Objective	Set up click-to-load for a YouTube video with a placeholder image and test Play.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Embed	Yes	Adds the Embed to the page	Select the section in the content tree, choose Add (+) and pick Embed	Only components the section allows (section filter)
A	Placeholder Image (Embed › Content)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No	Click-to-load preview image	16:9, from AEM Assets	None in the model
B	Placeholder Image Alt Text (Embed › Content)	Video: building resilient supply chains	No	Alt text of the placeholder	Describe the image	None
(C)	URI (Embed › Content)	https://www.youtube.com/watch?v=Xk3pQ7vT9mA	No (block renders nothing without it)	Address of the content	Full https URL	None in the model; the code needs a link
—	Check (Preview)	Selecting Play replaces the image with the YouTube player (needs the network; not in the screenshot)	—	Check on the preview (not stored in the content)	Selecting Play replaces the image with the YouTube player (needs the network; not in the screenshot)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A rounded 16:9 image about supply chains with a large round Play button in the middle.
- **Rendering behaviour:** Before Play: div.embed-placeholder with the picture and button.embed-placeholder-play (aria-label Play). On Play the placeholder is replaced by the YouTube iframe with autoplay parameters, the block gets embed-is-loaded and focus moves into the iframe.
- **Publishing behaviour:** Publish sends the page to preview or live; photo-3.svg must be published in AEM Assets. Play clicks are pushed to the data layer as cmp:click with interaction play.

Business Rules

- The provider loads only after Play, which helps performance and privacy.
- The Play label comes from the placeholder play; translate it per locale.
- Keyboard users reach Play with Tab and start it with Enter; focus then moves into the player.
- The embed loads only once (embed-is-loaded guard).

Common Authoring Mistakes

Error	Root Cause	Resolution
The video loads without Play	No Placeholder Image set	Select a Placeholder Image to switch to click-to-load
Screen readers read a file name	Placeholder Image Alt Text left empty for an informative image	Enter Video: building resilient supply chains
The Play button reads in English on a German page	play missing in the locale's placeholders sheet	Add play to the sheet and publish it

Troubleshooting

- **Symptoms:** Selecting Play shows YouTube Video unavailable.
- **Cause:** The video is private or embedding is disabled by the owner, or the id could not be read from the URL.
- **Resolution:** Use a watch?v= or youtu.be URL of a public video and ask the channel owner to allow embedding.
- **Verification Steps:** Opening https://www.youtube.com/embed/Xk3pQ7vT9mA in a browser plays the video, and Play on the page loads it.

Use Cases: Above-the-fold videos, pages with several videos, campaign pages with branded thumbnails.

Authoring Guidelines: Set **Placeholder Image** (from AEM Assets) and **Placeholder Image Alt Text** (describe the image, or leave empty if it is decorative), plus the URI.

Business Rules: The provider content loads only on Play; YouTube and Vimeo are requested with `autoplay=1` and `muted=1` (Vimeo's mute parameter; YouTube's own parameter is `mute`, so YouTube ignores it, and browsers that block autoplay with sound will show the YouTube play button instead). Twitter / X and generic iframes ignore autoplay. After loading, keyboard focus moves to the iframe (or the post link).

Rendering Rules: `div.embed-placeholder` (grid, 16:9, rounded) with the `<picture>` covering it and `button.embed-placeholder-play` (primary icon button, `aria-label` "Play" from placeholder `play`, `data-cmp-interaction="play"`). On click, the placeholder is replaced by the embed and the block gets `embed-is-loaded`.

Responsive Behaviour: 16:9 image at max 900px; full width on tablet / mobile; the Play button stays centred.

SEO Impact: The image is in the page HTML (with alt text if set); faster pages benefit Core Web Vitals.

Accessibility Compliance: The Play button is a native `<button>` with an accessible name (WCAG 4.1.2, 2.1.1); focus moves into the player after loading (WCAG 2.4.3); alt text on the image (WCAG 1.1.1).

6.27.4 Authoring Experience

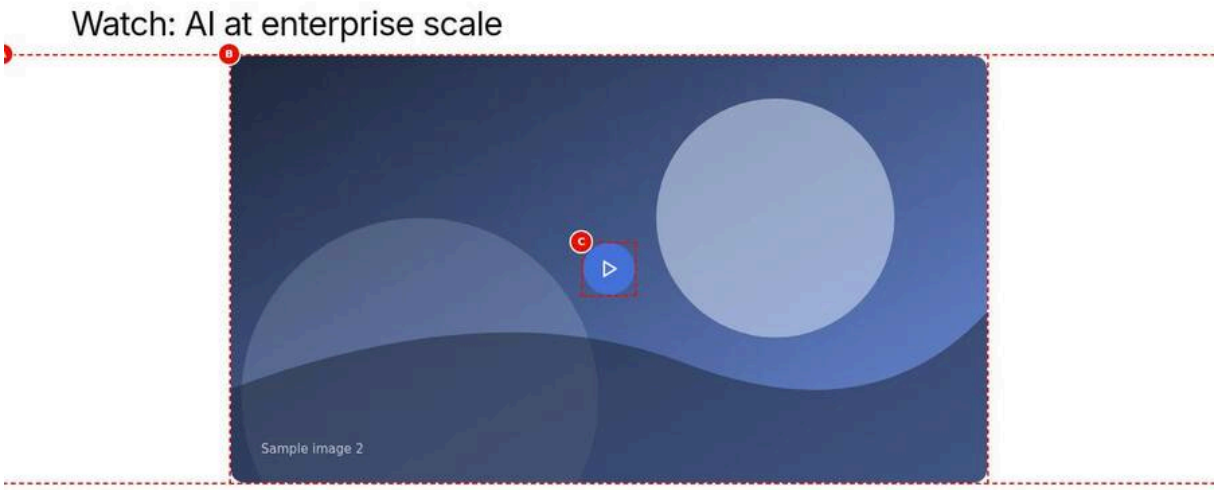

Figure 6: Universal Editor canvas — An annotated edit-mode view at 1440 px (not a Universal Editor screenshot): the H2 Watch: AI at enterprise scale above the Embed block (A) with the placeholder image photo-2.svg (B) and the generated Play button (C) centred on it. No properties panel is shown. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/embed-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/embed-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	An annotated edit-mode view at 1440 px (not a Universal Editor screenshot): the H2 Watch: AI at enterprise scale above the Embed block (A) with the placeholder image photo-2.svg (B) and the generated Play button (C) centred on it. No properties panel is shown.
Business Context	Authors need to see which parts of the Embed they author (image, alt text, URI) and which are generated (the Play button).
Author Objective	Identify the Embed block, its placeholder image and the generated Play button in edit mode.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
—	Title (Title)	Watch: AI at enterprise scale	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
—	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Embed	Yes	Adds the Embed to the page	Select the section in the content tree, choose Add (+) and pick Embed	Only components the section allows (section filter)
—	Placeholder Image (Embed › Content)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Click-to-load preview image	16:9, from AEM Assets	None in the model
—	Placeholder Image Alt Text (Embed › Content)	Video: how enterprises scale AI with confidence	No	Alt text of the placeholder	Describe the image	None
—	URI (Embed › Content)	https://www.youtube.com/watch?v=Xk3pQ7vT9mA	No (block renders nothing without it)	Address of the content	Full https URL	None in the model; the code needs a link
—	Mode (Universal Editor)	Edit; select the Embed block (A) to open its properties on the Content tab	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** A heading above a rounded 16:9 image with a round Play button; letters A to C mark the block, the image and the button.
- **Rendering behaviour:** In edit mode the block renders like on the site: the placeholder with the Play button; the player is not loaded until Play is selected in Preview.
- **Publishing behaviour:** Publish sends the page to preview or live; the referenced image must be published too. The heading is part of the page and publishes with it.

Business Rules

- Select the block (A) to open the Content tab with Placeholder Image, Placeholder Image Alt Text and URI.
- The image (B) is the Placeholder Image with its alt text.
- The Play button (C) is generated; its label comes from the placeholders sheet.
- A heading such as Watch: AI at enterprise scale names the video for all visitors.

Common Authoring Mistakes

Error	Root Cause	Resolution
Authors look for a Play label field	The Play button is generated	Change the label in the placeholders sheet (key play)
The block shows nothing in the editor	URI empty	Enter the full YouTube URL in URI

Troubleshooting

- **Symptoms:** The selected Embed shows an empty area in the editor.
- **Cause:** The URI field is empty or holds text that is not delivered as a link, so the block clears itself.
- **Resolution:** Paste the full https URL into URI and check the page's .plain.html has an a href in the embed.
- **Verification Steps:** The placeholder with the Play button appears in edit mode and Preview.

Annotations:

- A = The Embed block (select it to edit its fields)
- B = The placeholder image (Placeholder Image, with its alt text)

- C = The Play button (generated, not authorable; label from the placeholders sheet)
- D = The player area (the embed loaded from the URI after Play, or on scroll without a placeholder)

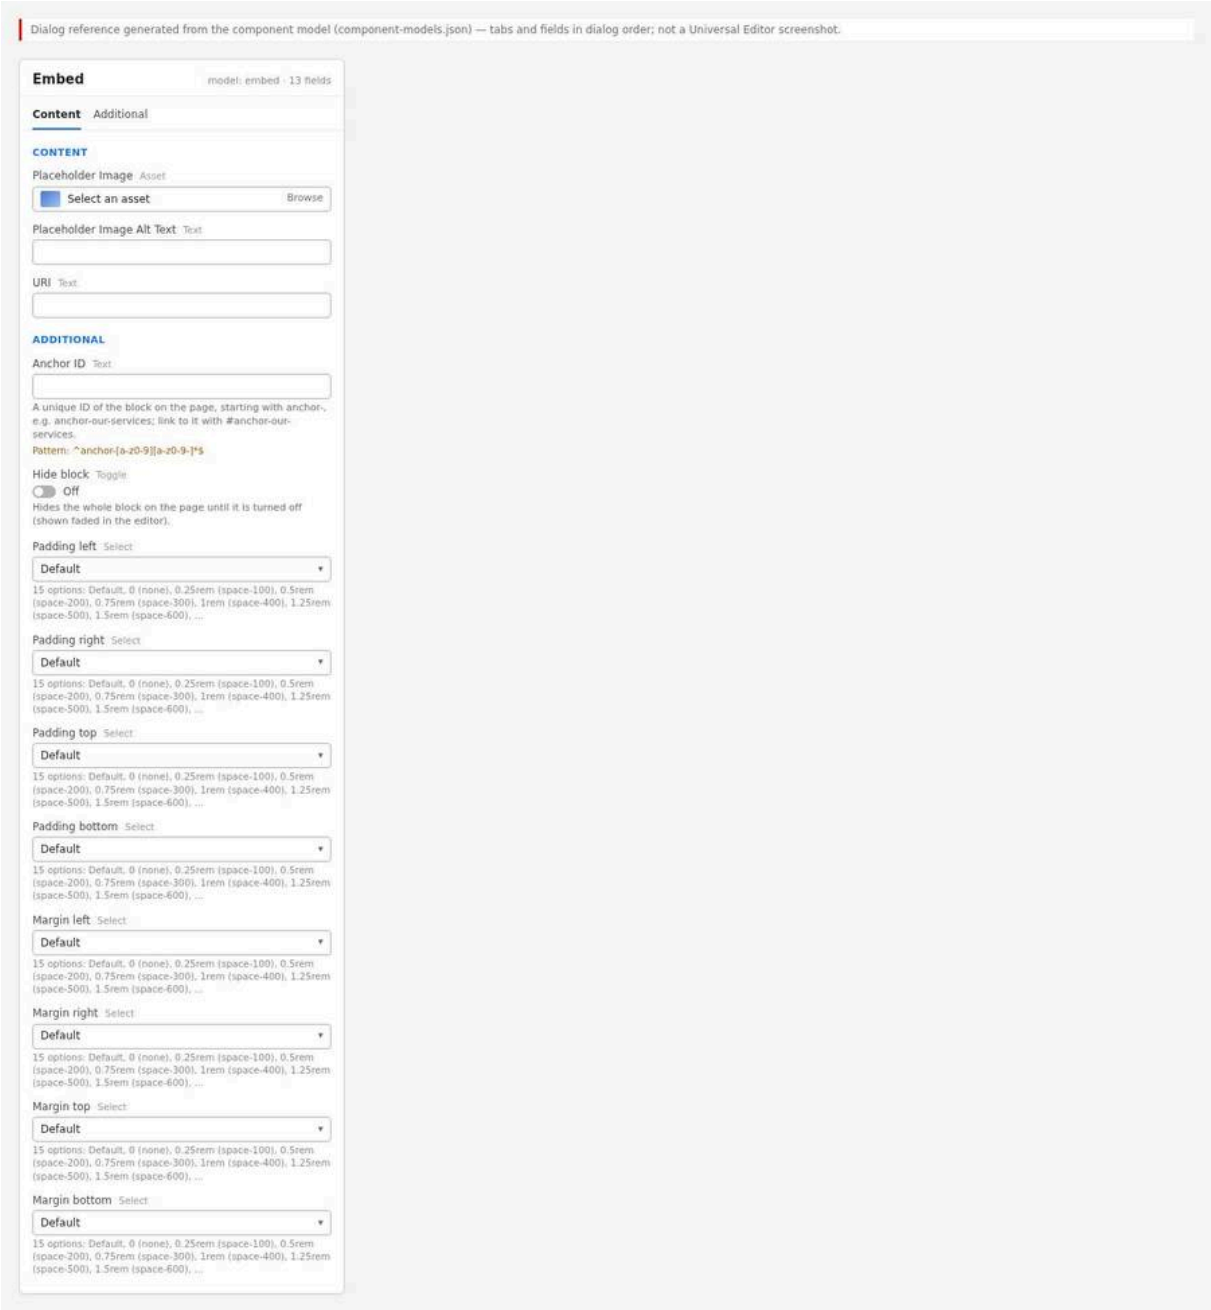

Figure 7: Properties panel — The Embed properties panel: Content tab with Placeholder Image, Placeholder Image Alt Text and URI; the Additional tab. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/embed-properties-panel.jpg)

Properties panel tabs:

- **Content:** Placeholder Image (asset picker, single image); Placeholder Image Alt Text (text); URI (text: the URL of the video, post or page).
- **Additional:** Anchor ID; Hide block; Padding left / right / top / bottom; Margin left / right / top / bottom.

6.27.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: Open the page with **Edit** from AEM Sites.

Expected Result: The page is in edit mode.

Steps — Authoring step: The page open in Universal Editor.

Step	Where	Field / control	Value / action
1	AEM Sites › Pages	Select	The page, e.g. /content/tcs-corp/us/en/insights
2	AEM Sites toolbar	Edit	The page opens in Universal Editor (edit mode)

Step 2 — Add the Embed block

Action: Select the section, choose **Add** (+), select **Embed**.

Expected Result: An empty Embed block is added (nothing renders until a URI is set).

Steps — Authoring step: The Add menu with Embed, and the empty block in the content tree.

Step	Where	Field / control	Value / action
1	Universal Editor › Canvas	Select	The section
2	Universal Editor › Content tree	Section › Add (+)	Embed
3	Universal Editor › Content tree	Check	An empty Embed entry in the section (nothing renders until a URI is set)

Step 3 — Enter the URI

Action: In the Content tab, paste the full URL (starting with `https://`) into **URI**.

Expected Result: After saving, the embed renders in the canvas when visible (or the placeholder shows if an image is set).

Steps — Authoring step: The URI field with a YouTube URL.

Step	Where	Field / control	Value / action
1	Embed › Content	URI	https://www.youtube.com/watch?v=Xk3pQ7vT9mA

Step 4 — Add a placeholder image (optional, recommended for videos)

Action: Choose **Placeholder Image** from AEM Assets (16:9 recommended) and type the **Placeholder Image Alt Text** (or leave it empty if the image is decorative and the surrounding text names the video).

Expected Result: The image shows with the Play button.

Steps — Authoring step: The asset picker and the rendered placeholder with the Play button.

Step	Where	Field / control	Value / action
1	Embed › Content	Placeholder Image	Select the asset photo-2.svg (16:9) in the asset picker
2	Embed › Content	Placeholder Image Alt Text	Video: how enterprises scale AI with confidence
3	Universal Editor › Canvas	Check	The image shows with the round Play button

Step 5 — Additional tab (optional)

Action: Set an Anchor ID, Hide block or spacing if required.

Expected Result: Values accepted.

Steps — Authoring step: The Additional tab of the Embed block.

Step	Where	Field / control	Value / action
1	Embed › Additional	Anchor ID	anchor-ai-video (optional)
2	Embed › Additional	Hide block	Off
3	Embed › Additional	Padding / Margin	Default

Step 6 — Preview and test playback

Action: Switch to **Preview**; select Play (if a placeholder is used) and check playback; check mobile width.

Expected Result: The player loads and plays; the page doesn't shift while loading.

Steps — Authoring step: The video playing in preview mode after Play.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	Preview	Play	Select Play on the placeholder image (or Tab to it and press Enter)
3	Preview	Check	The YouTube player loads in place and plays; the page does not shift
4	Universal Editor toolbar	Emulator	Mobile (check the mobile width)

Step 7 — Validate and publish

Action: Run the Validation Process checklist, then **Publish** the page (and make sure the placeholder image asset is published with it).

Expected Result: The embed works on the live site.

Steps — Authoring step: The Publish dialog listing the page and its referenced image.

Step	Where	Field / control	Value / action
1	Validation Process	Checklist	Run the checklist of 6.27
2	Universal Editor toolbar	Publish	Publish to Live
3	Publish dialog	References	Keep the placeholder image asset (photo-2.svg) selected
4	Publish dialog	Publish	Confirm

Preview Process

1. Universal Editor **Preview** mode; test Play and keyboard use (Tab to Play, Enter).
2. Edge Delivery preview `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}`.
3. Check `{path}.plain.html` if the block renders nothing: the URI must arrive as a link (`<a>`).

Publishing Process

Publish the page; the placeholder image is delivered through Edge Delivery media optimisation. Third-party content is fetched by the visitor's browser from the provider.

Validation Process

- ☐ URI is a full `https://` URL of the intended provider.
- ☐ YouTube URL contains the video id (`watch?v=`, `youtu.be/`, `/shorts/`, `/live/`, `/embed/`).
- ☐ Vimeo URL has the form `vimeo.com/{id}`.
- ☐ The video has captions on its platform (YouTube / Vimeo).

- ☐ Placeholder image is 16:9 and has alt text (or is intentionally decorative).
- ☐ Play button works with mouse and keyboard; focus moves into the player.
- ☐ Generic iframe URL is approved and allows framing (no “refused to connect”).
- ☐ Surrounding text names / describes the embedded content.
- ☐ No horizontal page scroll at 390px.

Rollback Process

1. Restore the previous page version and republish, or
2. turn on Hide block and publish, or
3. replace the URI with the previous URL.

The walkthroughs below repeat the steps above for each variation of chapter 6.27.3, from opening the page to publishing; the values are those of the variation’s screenshot.

Walkthrough — Variation 4 — Generic iframe

Reproduces the screenshot `screenshots/embed-generic-iframe.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Embed

Action: Select the section in the content tree, choose **Add (+)** and pick **Embed**.

Expected Result: An empty Embed block is added; nothing renders until a URI is set.

Step 3 — Fill in Embed › Content

Action: Select **Embed** in the content tree and open the **Content** tab of the properties panel. Enter: **URI** (A) = https://partners.example.com/market-explorer.

Expected Result: The URI https://partners.example.com/market-explorer makes the block load the page in a 16:9 iframe once it scrolls into view.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A rounded 16:9 frame centred in the section with the framed Market explorer page inside it.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; the framed page is served by the partner, so it must allow framing and use https.

Step 6 — Verify

Action: On the live page check: The console shows no X-Frame-Options or CSP error and the Market explorer displays in the frame.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Placeholder image with Play (click-to-load)

Reproduces the screenshot `screenshots/embed-placeholder-play.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Embed

Action: Select the section in the content tree, choose **Add (+)** and pick **Embed**.

Expected Result: An empty Embed block is added; nothing renders until a URI is set.

Step 3 — Fill in Embed › Content

Action: Select **Embed** in the content tree and open the **Content** tab of the properties panel. Enter: **Placeholder Image** (A) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Placeholder Image Alt Text** (B) = Video: building resilient supply chains; **URI** (C) = https://www.youtube.com/watch?v=Xk3pQ7vT9mA.

Expected Result: The placeholder image, its alt text and the YouTube URI show the image with the Play button.

Step 4 — Preview

Action: Check: Selecting Play replaces the image with the YouTube player (needs the network; not in the screenshot).

Expected Result: Selecting Play replaces the image with the YouTube player (needs the network; not in the screenshot).

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A rounded 16:9 image about supply chains with a large round Play button in the middle.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to preview or live; photo-3.svg must be published in AEM Assets. Play clicks are pushed to the data layer as cmp:click with interaction play.

Step 7 — Verify

Action: On the live page check: Opening https://www.youtube.com/embed/Xk3pQ7vT9mA in a browser plays the video, and Play on the page loads it.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.27.6 Authorable Field Specification

Model `embed`

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Placeholder Image (`embed_placeholder`) — Content	Reference	No	No	Empty	Click-to-load preview image	16:9, from	None in the model	/content/dam/tcs-corp/video-thumb.jpg

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
	(image)					AEM Assets		
Placeholder Image Alt Text (`embed_placeholderAlt`) — Content	Text	No	No	Empty	Alt text of the placeholder	Describe the image	None	Keynote speaker on stage
URI (`embed_uri`) — Content	Text	No (block renders nothing without it)	No	Empty	Address of the content	Full https URL	None in the model; the code needs a link	https://www.youtube.com/watch?v=VIDEO_ID
Anchor ID (`classes_anchor`) — Additional	Text	No	No	Empty	`#anchor-…` target	Start with anchor-	Enforced: regExp `^anchor-[a-z0-9][a-z0-9-]*$`	anchor-keynote
Hide block (`classes_hideblock`) — Additional	Boolean	No	No	Off	Hide without deleting	—	—	off
Padding left (`classes_paddingleft`) — Additional	Select	No	No	Default	Inner space left	Tokens	Enforced: option list	Default
Padding right (`classes_paddingright`) — Additional	Select	No	No	Default	Inner space right	Tokens	Enforced: option list	Default
Padding top (`classes_paddingtop`) — Additional	Select	No	No	Default	Inner space top	Tokens	Enforced: option list	Default
Padding bottom (`classes_paddingbottom`) — Additional	Select	No	No	Default	Inner space bottom	Tokens	Enforced: option list	Default
Margin left (`classes_marginleft`) — Additional	Select	No	No	Default	Outer space left (replaces the centring auto margin)	Avoid unless intended	Enforced: option list	Default
Margin right (`classes_marginright`) — Additional	Select	No	No	Default	Outer space right (replaces the centring auto margin)	Avoid unless intended	Enforced: option list	Default
Margin top (`classes_margintop`) — Additional	Select	No	No	Default	Outer space top	Tokens	Enforced: option list	2rem (space-800)
Margin bottom (`classes_marginbottom`) — Additional	Select	No	No	Default	Outer space bottom	Tokens	Enforced: option list	2rem (space-800)

Field details

- **Placeholder Image** — Purpose: switches the block to click-to-load and shows a branded image. Allowed Values: one image from AEM Assets. Character Limits: n/a. Business Rules: the first `<picture>` in the block is used; it is displayed with `object-fit: cover` in 16:9. Dependency Rules: requires a URI (without URI nothing renders). Visibility Rules: always. Sample: a 1920 × 1080 still of the video.
- **Placeholder Image Alt Text** — Purpose: describes the image. Allowed Values: text. Character Limits: none enforced; Recommended ≤ 125 characters. Business Rules: written into the image's alt by AEM's field collapsing (`…Alt` suffix); the block code doesn't change it. Dependency: only meaningful with a Placeholder Image. Visibility: always. Sample: "TCS CEO presenting at the AI summit".
- **URI** — Purpose: the content to embed. Allowed Values: a URL; the block reads the first link (`<a href>`) in the block, so the value must be delivered as a link (paste a full URL). Character Limits: none. Business Rules: provider detection — YouTube (`youtube.com`, `youtu.be` in the URL), Vimeo (`vimeo.com` in the URL), Twitter / X (host `twitter.com` / `x.com`, optionally `www.`), otherwise generic iframe. Visibility: always. Sample: `https://vimeo.com/123456789`.
- **Additional tab fields** — Anchor ID (regExp `^anchor-[a-z0-9][a-z0-9-]*$`, de-duplicated `-2`, `-3`), Hide block (hidden outside edit mode, faded in edit mode), Padding / Margin (Default, 0, 0.25rem … 7.5rem `--space-*` tokens, same on all breakpoints). Note: the block is centred with `margin: 0 auto`; Margin left / right replace that side's auto margin, so the block is no longer centred.

6.27.7 Field Annotation Mapping

Marker	Field	Purpose
A	Embed block (all fields)	Selection and Additional tab
B	Placeholder Image + Placeholder Image Alt Text	Click-to-load image
C	(generated) Play button	Starts loading; label from placeholder `play`
D	URI	The embedded content

6.27.8 Component Specification

Attribute	Value
Component Name	Embed (`blocks/embed`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	Media decorator, media utils, icon button decorator, viewport utils, placeholders, `loadScript`; third-party YouTube, Vimeo, Twitter / X
Component Type	Block (single cell of grouped fields)
Supported Variants	YouTube; Vimeo; Twitter / X; generic iframe; placeholder with Play
Supported Templates	Any page, any section
Supported Metadata	None
Supported Tags	None
Supported Personalization	None; Play clicks are in the data layer for future Adobe Analytics / Target use
Caching Considerations	Page HTML and placeholder image cached by the Edge Delivery CDN; third-party players are cached by their providers; the Twitter script is loaded once per page

Attribute	Value
Performance Considerations	No provider request until the block is in the viewport (no placeholder) or until Play (placeholder); iframes `loading="lazy"`; 16:9 reserved space avoids layout shift; a placeholder image in the first section can be the LCP element
Accessibility Compliance	Iframe `title` "Content from {host}"; native Play `<button>` with accessible name; focus moved into the player; alt text for the placeholder; captions depend on the platform
SEO Compliance	Embedded content isn't page text; provide a textual description near the embed

6.27.9 Input Model

Content Inputs: URI (link), optional placeholder image (picture with alt).

Metadata Inputs: None.

Tags Inputs: None.

Page Context Inputs: The locale (placeholders), visibility in the viewport.

Query Inputs: None.

Manual Inputs: Additional tab classes.

Authored HTML received from AEM (example):

```
<div class="embed">
  <div>
    <div>
      <picture><img src="./media_1a2b.jpg?width=750" alt="Keynote speaker on stage"></
picture>
      <p><a href="https://www.youtube.com/watch?v=VIDEO_ID">
        https://www.youtube.com/watch?v=VIDEO_ID</a></p>
    </div>
  </div>
</div>
```

6.27.10 Output Model

Rendered Output: Before loading: `div.embed-placeholder` (picture + `button.embed-placeholder-play`) or an empty block reserving 16:9. After loading: `div.embed-frame > iframe` (YouTube, Vimeo, generic) or `blockquote.twitter-tweet` (Twitter / X); the block gets `embed-is-loaded` and `embed-youtube` / `embed-vimeo` / `embed-twitter`.

Generated HTML (YouTube after Play):

```
<div class="embed block embed-youtube embed-is-loaded" data-block-name="embed">
  <div class="embed-frame">
    <iframe src="https://www.youtube.com/embed/VIDEO_ID?rel=0&amp;muted=1&amp;autoplay=1"
      title="Content from youtube.com" loading="lazy" allowfullscreen
      allow="autoplay; fullscreen; picture-in-picture; encrypted-media; accelerometer;
      gyroscope">
    </iframe>
  </div>
</div>
```

Generated JSON: None.

Generated Metadata: None.

Analytics Tracking: Component state (generic): `{ "component": { "embed-1": { "@type": "tcs-corp/components/embed", "parentId": "page-…" } } }` (id = Anchor ID if set). Play click:

```
{ "event": "cmp:click", "eventInfo": { "path": "component.embed-1",
  "interaction": "play", "dc:title": "Play", "xdm:linkType": "other",
  "breakpoint": "desktop" } }
```

Interactions inside the third-party iframes (play / pause in the YouTube player, clicks in a post) are not visible to the page and are not tracked. A click on the Twitter fallback link (before the widget renders) is tracked as `cmp:click` with `xdm:linkType` `exit`.

Personalization Output: None.

Search Index Output: None (the query index stores page metadata, not embeds).

Target Personalization Output: None: Supported Personalization is None. Play clicks are in the data layer (cmp:click, interaction play) for future Adobe Analytics or Target use; no tag manager is loaded yet (F-06). Not implemented (as of this handover).

6.27.11 Business Rules

1. The block reads the first `<picture>` (placeholder) and the first `<a>` (URI) and clears its content.
2. No link → the block stays empty (nothing renders, also in the editor).
3. Provider detection order: YouTube (`youtube.com` / `youtu.be` anywhere in the URL), Vimeo (`vimeo.com` anywhere in the URL), Twitter / X (host match), else generic iframe.
4. With a placeholder: the embed loads only after Play, with autoplay parameters for YouTube / Vimeo (`muted=1`, `autoplay=1`), and focus moves into the loaded iframe / link.
5. Without a placeholder: the embed loads once the block enters the viewport (IntersectionObserver, no margin), without autoplay.
6. The embed loads only once (`embed-is-loaded` guard).
7. Iframe title: placeholder `contentFrom` "Content from {source}", source = host name without `www.`.
8. YouTube: `https://www.youtube.com/embed/{id}?rel=0` (+ autoplay parameters); no privacy host; other URL parameters dropped; unrecognised URL shapes use the URL path on www.youtube.com.
9. Vimeo: `https://player.vimeo.com/video/{first path segment}`.
10. Twitter / X: `x.com` rewritten to `twitter.com`; widget script loaded; the link stays as the fallback.
11. Generic iframe: `allow="encrypted-media"`, `allowfullscreen`, lazy, 16:9.
12. Before loading (no placeholder), the block reserves 16:9 space; after loading, Twitter posts take the widget's height.
13. The block is centred with max width 56.25rem; Additional margin left / right override the centring.
14. Additional tab rules (Anchor ID, Hide block, spacing) as for every block.

6.27.12 Author Best Practices

Recommended Content Length: Placeholder alt text Recommended ≤ 125 characters; add a heading and a one- or two-sentence description near the embed.

Image Dimensions: Placeholder image 16:9 (the area is 16:9, `object-fit: cover`), Recommended at least 1800 × 1012px for the 900px maximum width on high-density screens (for example 1920 × 1080); keep the subject centred because edges may be cropped.

CTA Writing Guidelines: The Play label is generic ("Play"); name the video in the heading or text before the block so the context is clear.

Accessibility Guidelines: Ensure captions on YouTube / Vimeo; provide a transcript link in the text where the video carries important information (or use the Video block's Transcript field); write alt text describing the placeholder image; don't embed autoplaying third-party content without a placeholder.

SEO Guidelines: Describe the video in page text (title, key points); use the official video URL; avoid embedding the same video several times on a page.

Metadata Guidelines: None at block level.

Taxonomy Guidelines: None.

Localization Guidelines: Use locale-appropriate videos or videos with captions in the locale's language; translate the alt text; "Play" and "Content from {source}" are translated in each locale's placeholders sheet (keep the `{source}` variable).

6.27.13 Troubleshooting Guide

Issue 1 — The block renders nothing

Symptoms: Empty space or nothing where the embed should be.

Root Cause: No URI, or the URI is not delivered as a link (`<a>`) in the block HTML.

Diagnosis Steps: Check the URI field; open `{page}.plain.html` on the preview host and look for an `<a href>` inside `div.embed`.

Resolution Steps: Paste the complete URL starting with `https://`; republish.

Validation Steps: The embed or placeholder renders.

Preventive Measures: Always paste full URLs.

Issue 2 — "Video unavailable" in the YouTube player

Symptoms: The YouTube frame loads with an error.

Root Cause: The video id could not be extracted (unsupported URL shape, playlist URL), the video is private, or embedding is disabled by the owner.

Diagnosis Steps: Inspect the iframe `src`; open the URL `https://www.youtube.com/embed/{id}` in a browser.

Resolution Steps: Use a `watch?v=` or `youtu.be/` URL; ask the channel owner to allow embedding.

Validation Steps: The video plays.

Preventive Measures: Test embeds in preview before publishing.

Issue 3 — Vimeo shows "Sorry, this video does not exist"

Symptoms: Vimeo error inside the frame.

Root Cause: The URL is not `vimeo.com/{id}` (for example a channel, showcase, `player.vimeo.com` or private-hash URL), so the first path segment is not the id.

Diagnosis Steps: Inspect the iframe `src` (`player.vimeo.com/video/{segment}`).

Resolution Steps: Use `https://vimeo.com/{numeric id}`; for unlisted videos, consider the Video block or ask development (private hash not supported).

Validation Steps: The video plays.

Preventive Measures: Use canonical Vimeo URLs.

Issue 4 — Twitter / X post shows only a link

Symptoms: A plain URL instead of the post card.

Root Cause: `platform.twitter.com/widgets.js` blocked (content blocker, consent tool, network policy) or the post was deleted / is protected.

Diagnosis Steps: Browser DevTools > Network: check the widgets.js request; open the post URL.

Resolution Steps: Confirm the post is public; check consent / CSP settings with the site admin.

Validation Steps: The post card renders.

Preventive Measures: Use screenshots plus link for critical posts if the widget may be blocked.

Issue 5 — Generic iframe "refused to connect"

Symptoms: Browser error page inside the frame.

Root Cause: The target site forbids framing (`X-Frame-Options` / `frame-ancestors`) or the URL is `http://` on an `https` page (mixed content).

Diagnosis Steps: Console messages about X-Frame-Options / Content-Security-Policy / mixed content.

Resolution Steps: Use an embeddable URL from the provider (often an "embed" link) over https, or link to the content instead.

Validation Steps: The framed page displays.

Preventive Measures: Check embeddability before authoring.

Issue 6 — YouTube video starts with sound or doesn't start after Play

Symptoms: After Play, the player shows its own play button, or plays with sound.

Root Cause: The block requests autoplay with `muted=1`, which YouTube ignores (its parameter is `mute`); browser autoplay policies then decide.

Diagnosis Steps: Inspect the iframe `src` parameters; test in different browsers.

Resolution Steps: Expected behaviour; for precise control (muted, controls, start / end), use the Video block.

Validation Steps: Video plays after one or two clicks.

Preventive Measures: Use the Video block for videos needing playback control.

Issue 7 — Placeholder image cropped badly

Symptoms: Faces or text cut off.

Root Cause: The image isn't 16:9; it is cropped by `object-fit: cover`.

Diagnosis Steps: Check the asset's dimensions.

Resolution Steps: Use a 16:9 rendition with the subject centred.

Validation Steps: The image displays fully at all widths.

Preventive Measures: Prepare 16:9 thumbnails.

6.27.14 Support Runbook

Monitoring Requirements

- Availability of third-party providers (YouTube, Vimeo, X) affects the block; no internal monitoring exists.
- Core Web Vitals of pages with embeds (CLS should be ~0 thanks to the reserved area).

Logs

- Browser console: the block logs nothing itself; errors come from third-party frames (CSP, X-Frame-Options, mixed content, widget errors).

- Network panel: requests to `youtube.com`, `player.vimeo.com`, `platform.twitter.com`.
- Admin API / Sidekick: page status; AEM author: publication logs of the page and placeholder image.

Common Errors

Error	Likely cause	Fix
Empty block	No / non-link URI	Full https URL
YouTube “Video unavailable”	Wrong id / embedding disabled	Correct URL / owner setting
Vimeo “does not exist”	Non-canonical Vimeo URL	`vimeo.com/{id}`
Post shows link only	Widget script blocked	Check consent / CSP
Refused to connect	Framing forbidden / http	Embeddable https URL
Broken placeholder image	Asset not published	Publish the asset

Escalation Matrix

Level	Who	Checks
L1	Author support	URI format, provider permissions, placeholder image and alt, Hide block, page / asset published
L2	AMS / site admin	`.plain.html` markup, CDN cache, CSP / consent tooling, blocked third-party domains
L3	Development team	`embed.js`, media utils (id parsing), media decorator, console errors
L4	Adobe Support	Edge Delivery delivery or Universal Editor issues; third-party provider support for their platforms

Recovery Procedures

1. Replace or remove the URI; restore the previous page version.
2. Hide the block while a provider is unavailable.
3. Revert code changes on `main` if a regression is identified.

Health Checks

- Load a page with each provider type; check the iframe `title`, the Play button and focus behaviour.
- Check that no provider request happens before Play (placeholder) in the Network panel.

Operational Procedures

- New providers require a new entry in the `EMBEDS` list of `embed.js` (development task).
- Translate `play` and `contentFrom` in each locale’s placeholders sheet.

Known Limitations

- No privacy-enhanced YouTube host and no consent integration (third-party cookies may be set when the embed loads) — [To be confirmed: consent management requirement — owner: privacy / legal].
- No start time, playlist or other YouTube URL parameters; Vimeo only `vimeo.com/{id}`.
- No dedicated handlers for Instagram, LinkedIn, Facebook, TikTok (Not implemented as of this handover).
- Generic iframes are always 16:9; no height or aspect ratio option.
- No domain allow-list for generic iframes.
- Interactions inside iframes are not tracked in the data layer.

6.27.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
The block renders nothing	URI empty or not delivered as a link	Paste the full https URL into URI and check .plain.html
YouTube Video unavailable	Unsupported URL shape, private video or embedding disabled	Use watch?v= or youtu.be of a public, embeddable video
Vimeo says the video does not exist	Not a vimeo.com/{id} URL	Use https://vimeo.com/{numeric id}
X post shows only a link	widgets.js blocked or the post is protected or deleted	Check the post is public and the consent or CSP settings
Generic iframe refused to connect	The site forbids framing or uses http	Use an embeddable https URL or link instead
Placeholder image cropped badly	The image is not 16:9	Use a 16:9 rendition with the subject centred
The video starts with sound or needs a second click	muted=1 is ignored by YouTube and autoplay policies apply	Expected; use the Video block for playback control
The embed is no longer centred	Additional Margin left or right replaces the auto margin	Reset the margins to Default

6.27.16 Author Quick Reference Guide

Mandatory Fields

- URI: not required in the model, but needed to render; without a link the block renders nothing

Recommended Fields

- Placeholder Image: a 16:9 image from AEM Assets to switch to click-to-load
- Placeholder Image Alt Text: describes the image, for example Video: how enterprises scale AI with confidence
- A Title or Text before the block that names and describes the video

Optional Fields

- Anchor ID: anchor- followed by lower-case letters, digits and hyphens
- Hide block: hides the Embed without deleting it
- Padding and Margin: spacing tokens; Margin left or right removes the centring

Authoring Checklist

1. Add the Embed from Add (+) in the section
2. Paste the full https URL into URI: youtube.com/watch?v= or youtu.be, vimeo.com/{id}, an X post or an embeddable page
3. Set a 16:9 Placeholder Image for videos, with the subject centred
4. Write Placeholder Image Alt Text describing the image
5. Put a heading and a short description of the video before the block
6. Confirm with the partner that a generic iframe URL may be framed
7. Use the Video block for AEM Assets videos, captions files, autoplay or privacy-enhanced YouTube

Pre-Publish Checklist

1. Preview at 390 px, 768 px and 1440 px
2. Select Play with mouse and keyboard; focus moves into the player
3. The video plays and has captions on its platform
4. The generic iframe shows its page without refused to connect
5. No horizontal scrolling at 390 px
6. The placeholder image asset is published

Post-Publish Validation Checklist

1. Open the page on aem.live and play the video
2. Check the placeholder image loads (request 200)
3. Check in the Network panel that no provider request happens before Play
4. Check X posts render as cards and not only as links
5. Check the Play click in window.adobeDataLayer if analytics is in scope

6.27.17 Component Execution Example

Business example: Keynote video with a branded placeholder.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Title
Title (Title)	Watch: AI at enterprise scale
Title Type (Title)	h2
Component (Section › Add (+))	Embed
Placeholder Image (Embed › Content)	Select the asset photo-2.svg (/en/media/photo-2.svg)
Placeholder Image Alt Text (Embed › Content)	Video: how enterprises scale AI with confidence
URI (Embed › Content)	https://www.youtube.com/watch?v=Xk3pQ7vT9mA
Mode (Universal Editor)	Edit; select the Embed block (A) to open its properties on the Content tab

All other fields keep their default values.

Rendered Result:

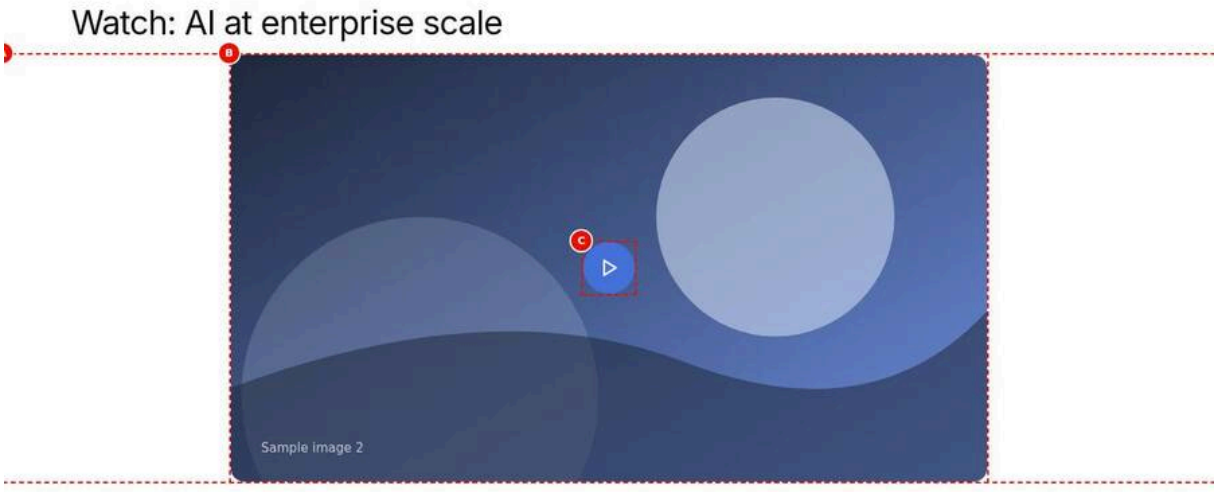

Figure 8: Execution example — An annotated edit-mode view at 1440 px (not a Universal Editor screenshot): the H2 Watch: AI at enterprise scale above the Embed block (A) with the placeholder image photo-2.svg (B) and the generated Play button (C) centred on it. No properties panel is shown. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/embed-authoring-view.jpg)

Author Notes

- The H2 Watch: AI at enterprise scale names the video before the block
- URI holds the YouTube watch URL; Placeholder Image photo-2.svg switches to click-to-load

- The alt text describes the image; the Play button is generated
- Test Play in Preview; the player is not loaded in the editor canvas

Business Notes

- The page stays fast: YouTube loads only for visitors who choose Play
- A branded image replaces YouTube's own thumbnail
- No YouTube cookies are set before Play; privacy-enhanced YouTube is not used (F-26)

Technical Notes

- The block reads the first picture and the first link and clears itself
- After Play the iframe is www.youtube.com/embed/Xk3pQ7vT9mA?rel=0 with muted=1 and autoplay=1, titled Content from youtube.com
- YouTube ignores muted=1 (it expects mute), an open finding F-26
- 16:9, max 56.25rem, centred; the Play click is pushed as cmp:click with interaction play

---

6.28 Video Block

The Video block plays a video file from AEM Assets (MP4, WebM) in a native HTML5 `<video>` player, or a YouTube or Vimeo video in the provider's player, with authorable playback (play button on a poster image, autoplay when in view, background video), sound, loop, controls, start and end times, pop-up playback, pause when out of view, WebVTT captions, caption text, transcript link, aspect ratio, size, alignment, rounded corners and a privacy-enhanced mode. It is based on the Edge Delivery Services Block Collection video block (`blocks/video/video.js`, `video.css`, `_video.json`) and is a key-value block. The model has 38 entries: 6 tabs (Video, Playback, Captions, Display, Privacy, Additional) and 32 fields. Videos never autoplay for visitors who prefer reduced motion; a video that plays on its own without controls always gets a pause / stop button (WCAG 2.2.2).

6.28.1 Component Purpose

Business Objective: Present brand, product and thought-leadership videos with full control over playback, accessibility (captions, transcript, names, pause control), privacy and performance (poster first, load on demand), from AEM Assets or YouTube / Vimeo.

Business Use Cases:

- A product or service explainer video with a branded poster and play button.
- A decorative, silent, looping background video (for example an ambient office scene).
- A keynote from YouTube played in a pop-up dialog over the page.
- A muted autoplay teaser that starts when scrolled into view.
- A vertical (9:16) social-style clip or a square (1:1) video.
- A captioned corporate film hosted in AEM Assets with a transcript link.

When To Use:

- Any video that needs more than a simple embed: AEM Assets files, captions, transcript, pop-up, autoplay / background, start / end times, privacy mode, sizes and aspect ratios.

When Not To Use:

- Social posts (Twitter / X) or arbitrary iframes: use the Embed block (6.27).
- Lottie animations: use the Lotto (Lottie) image type of Hero / Teaser.
- Very large uncompressed video files: provide web-optimised MP4 / WebM renditions (see 6.28.12).

Dependencies:

Type	Dependency	Use
Code	`decorators/media-decorator.js` (`createVideoElement`, `createYoutubeFrame`, `createVimeoFrame`)	Builds the players
Code	`utils/media.js` (`isYoutube`, `isVimeo`, `youtubeId`, `videoType`)	Provider detection, ids, MIME type
Code	`decorators/icon-button-decorator.js`, `decorators/button-decorator.js`	Play button, pause / stop toggle
Code	`decorators/content-decorator.js` (`fromCell`)	Caption with editor instrumentation
Code	`decorators/image-decorator.js` (`pictureOf`)	Poster image with alt text
Code	`utils/properties.js`, `utils/links.js`	Reading key-value fields and links
Code	`utils/environment.js` (`prefersReducedMotion`)	No autoplay for reduced motion
Code	`utils/viewport.js` (`onVisible`, `watchVisibility`)	Load when visible; pause off screen
Code	`utils/site.js` (`getLocale`)	Default captions language
Code	`utils/placeholders.js`	UI labels
Code	`blocks/modal/modal.js` (`createModal`, loaded on demand)	Play in a Pop-up
Code	Block options and data layer decorators	Additional tab; `cmp:media`, `cmp:click`
Content	AEM Assets (`/content/dam/tcs-corp/...`, published via `paths.json` includes)	Video files, poster, captions (.vtt), transcript documents
Third party	`www.youtube-nocookie.com` / `www.youtube.com`, `player.vimeo.com`	Provider players
Sheet	`/{locale}/placeholders.json`	`video`, `playVideo`, `playVideoTitle`, `pauseVideo`, `stopVideo`, `readTheTranscript`; modal: `dialog`, `close`
Model	`models/_section.json`	Allows the Video in sections

Related Components: Embed (simple third-party embeds), Modal (pop-up), Hero / Teaser (media in larger compositions), Separator.

Applicable Templates: Any page (home, article, blog, press-release, standard), any section.

Supported Content Types: MP4 and WebM files (any file URL; the MIME type is derived from the extension), YouTube URLs (watch, `youtu.be`, `/embed/`, `/shorts/`, `/live/`), Vimeo URLs (`vimeo.com/{id}`), poster image, WebVTT captions, transcript page or document, rich-text caption.

Business Problem Solved

Videos were placed as bare embeds or links, without posters, captions, transcripts or a way to stop moving content, and every YouTube embed set cookies on page load. The Video block plays AEM Assets files, YouTube and Vimeo from one dialog with a poster-first Play button (no player until requested), autoplay and background modes that are always muted, pausable and switched off for reduced motion, WebVTT captions, a transcript link, privacy-enhanced players and fixed aspect ratios that prevent layout shift.

Supported Taxonomy

None: the Video block has no tag field and reads no page tags or taxonomy. Video, poster and captions assets can be tagged in AEM Assets as per DAM governance, but the block does not use those tags.

6.28.2 Visual Overview

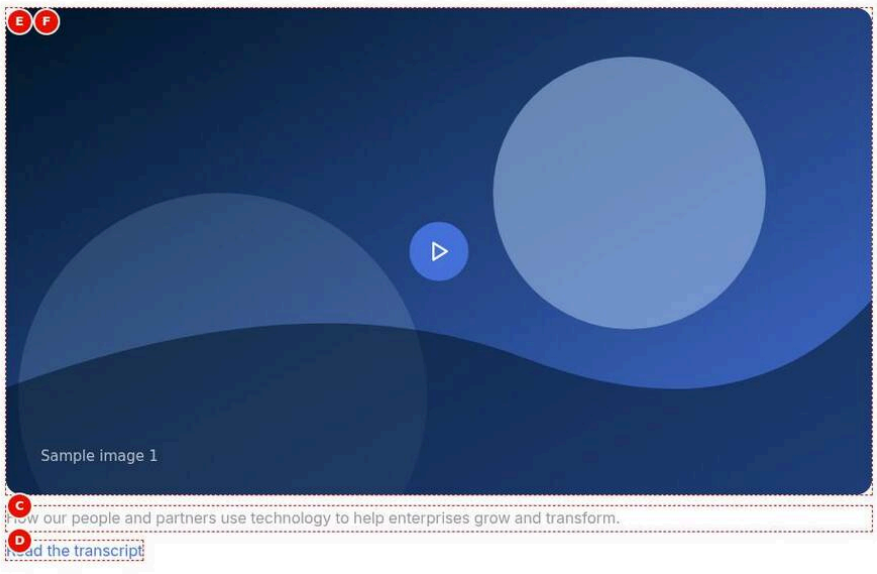

Figure 9: Desktop rendering — The Video block at 1440 px: a Large (900 px) 16:9 media area, centred, with 1rem rounded corners, showing the poster photo-1.svg and the round brand-blue Play button in the centre; below it the grey caption How our people and partners use technology to help enterprises grow and transform. and the link Read the transcript. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/video-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Video block at 1440 px: a Large (900 px) 16:9 media area, centred, with 1rem rounded corners, showing the poster photo-1.svg and the round brand-blue Play button in the centre; below it the grey caption How our people and partners use technology to help enterprises grow and transform. and the link Read the transcript.
Business Context	The brand film on the English About page: visitors see a branded poster first and choose to start the film, with a caption and a transcript for those who cannot or do not want to watch.
Author Objective	Add a Video from AEM Assets with a Title, a Caption, a Transcript link and a Poster Image with alt text, keeping Playback on Play button.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Caption (Video › Video)	How our people and partners use technology to help enterprises grow and transform.	No	Text below the video	One or two sentences	None
D	Transcript (Video › Video)	Select the page or enter /en/about/brand-film-transcript	No	Link to a transcript	Page or PDF	None
E	Poster Image (Video › Video)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
F	Poster Image Alt Text (Video › Video)	Engineers collaborating in a modern office	No	Alt text of the poster	Describe, or leave empty if decorative	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 900 px wide rounded 16:9 poster with a centred Play button; the Title Building on belief: the TCS brand film is not shown but names the button (Play video: Building on belief: the TCS brand film); the caption in small grey text and the Read the transcript link sit below.
- **Rendering behaviour:** No player is built until Play is pressed; then the native video element is added with autoplay and sound, hidden until it can play, and the poster gives way. Below 900 px of content width the video fills the column; the 16:9 area is reserved so the page does not shift.
- **Publishing behaviour:** Publish in Universal Editor sends the page to aem.page (preview) or aem.live (live). The MP4 and the poster are AEM Assets and must be published with the page (Manage Publication with references); the transcript page /en/about/brand-film-transcript is a separate page and must be published itself.

Business Rules

- Video is the only required field; without it the block is emptied and nothing renders.
- Title is not displayed; it is the player's accessible name and the Play button label Play video: {Title}.
- The transcript link shows Read the transcript (placeholder readTheTranscript) because the authored link text is a path.
- The caption is shown only when it has text and uses –color-text-secondary (#999, about 2.8:1, below WCAG AA, finding F-27 open).
- Size Large (56.25rem), Aspect Ratio 16:9, Alignment Center and Rounded Corners on are the defaults and need no change.

Common Authoring Mistakes

Error	Root Cause	Resolution
The caption is used as the video heading	The headline was entered in Caption, which renders as small grey text	Put a heading above the block as a Title component; keep Caption for one or two sentences of context
The link below the video reads as a raw URL	None; the code replaces path-like link text	Nothing to fix; to use a specific text enter it as the link text of Transcript, not a URL
The poster appears without a description for screen readers	Poster Image Alt Text left empty	Enter a short description of the poster, e.g. Engineers collaborating in a modern office

Troubleshooting

- **Symptoms:** The Play button works on aem.page but on aem.live the area stays black after pressing Play.
- **Cause:** The MP4 /content/dam/tcs-corp/videos/tcs-brand-film.mp4 was not published, so the request returns 404.
- **Resolution:** Publish the asset in AEM Assets (or the page with its references) and republish the page.
- **Verification Steps:** Open the MP4 URL on the live host (200), then press Play on aem.live: the film plays in place of the poster.

Desktop (≥ 1200px): The block's maximum width depends on Size (Large 56.25rem default, Medium 40rem, Small 26.25rem, Full width none) and its position on Alignment (centre default; left / right for sizes other than full width). The media area keeps the chosen aspect ratio (default 16:9), has a black background (`--color-bg-neutral`), clips its content and has rounded corners (1rem, `--radius-l`) unless Rounded Corners is off. The poster covers the area with the Play button (primary icon button, scaled ×1.4) centred. Video files fill the area (`object-fit: cover`). Below: caption (0.75rem top margin, `--color-text-secondary`, small body size) and the transcript link (0.5rem top margin, small body size).

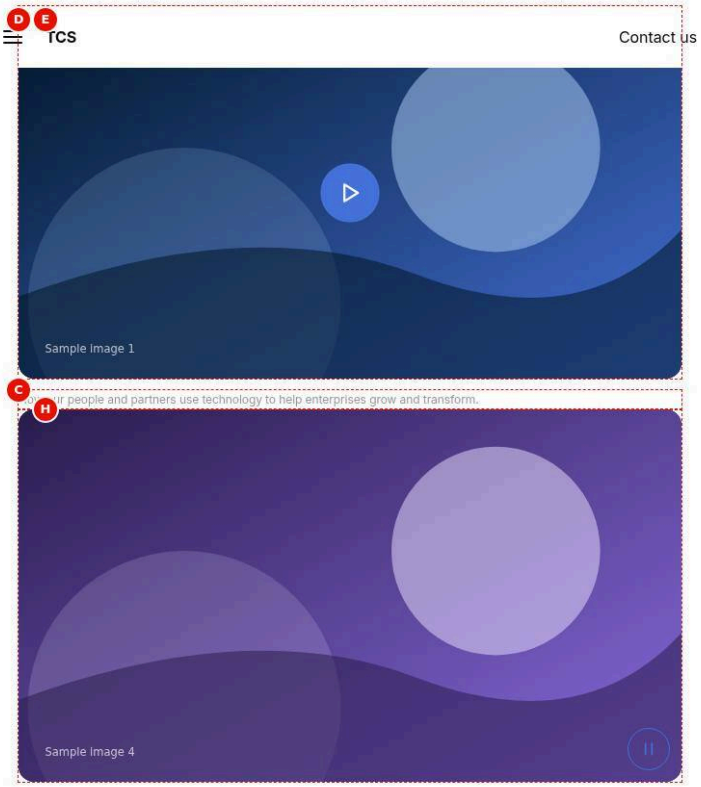

Figure 10: Tablet rendering — Two Video blocks at 768 px: the brand film poster photo-1.svg with the Play button filling the content width, its caption below; then the full-width background video Innovation hub ambience showing its poster photo-4.svg with the round pause button in the bottom-right corner. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/video-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	Two Video blocks at 768 px: the brand film poster photo-1.svg with the Play button filling the content width, its caption below; then the full-width background video Innovation hub ambience showing its poster photo-4.svg with the round pause button in the bottom-right corner.
Business Context	A tablet visitor on a section that combines a click-to-play brand film with a decorative ambient video; the check is that both keep their aspect ratio when the column is narrower than 900 px.
Author Objective	Add a click-to-play Video with caption and poster, and a full-width Background video with a poster, then check them at 768 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Caption (Video › Video)	How our people and partners use technology to help enterprises grow and transform.	No	Text below the video	One or two sentences	None
D	Poster Image (Video › Video)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
E	Poster Image Alt Text (Video › Video)	Engineers collaborating in a modern office	No	Alt text of the poster	Describe, or leave empty if decorative	None
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(F)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(G)	Title (Video › Video)	Innovation hub ambience	No (Recommended)	Accessible name; Play label	Describe the video	None
H	Poster Image (Video › Video)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
(I)	Playback (Video › Playback)	Background video (autoplay, muted, loop, no controls)	No	How the video starts	Play button for most videos	Enforced: option list
(J)	Size (Video › Display)	Full width	No	Maximum width	—	Enforced: option list
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The first video fills the column at 16:9 with the centred Play button and the grey caption below; the second, also 16:9 and rounded, shows only its poster and the pause toggle; no transcript link because Transcript is not set.

- **Rendering behaviour:** video.css has no breakpoint rules: both videos take the content width because it is below their maximum (Large 56.25rem, Full width none). The background video is built when it scrolls into view, muted, looping, without controls and with aria-hidden; its poster stays until the file can play.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and both posters must be published as assets. The pause button label (Pause video) comes from the locale's placeholders sheet, which is published separately.

Business Rules

- Background video always plays muted and looping without controls, whatever Muted, Loop and Show Player Controls say.
- A background video always gets the pause / play toggle (WCAG 2.2.2).
- The background poster needs no alt text: the player is hidden from assistive technology as decorative.
- Below the Size maximum the video fills the content width; the aspect ratio is kept at every width.

Common Authoring Mistakes

Error	Root Cause	Resolution
The ambient video plays with sound	Not possible: Background video is always muted	Use Play button playback if the audio matters
The background video shows only a black area on tablets	No Poster Image, and the file has not loaded yet	Always set a Poster Image for background videos
Controls were expected on the background video	Background video never shows controls	Choose Autoplay when in view with Show Player Controls on instead

Troubleshooting

- **Symptoms:** On the tablet the background video does not move; only its poster and the pause button show.
- **Cause:** The device has Reduce motion on (then Playback is treated as Play button), or the file is not published or still loading.
- **Resolution:** Expected with reduced motion; otherwise publish the MP4 and check the Network panel for the file request.
- **Verification Steps:** With reduced motion off, scroll the block into view on aem.page: the poster gives way to the looping video.

Tablet (600–1199px): Same rules; when the content width is less than the Size maximum, the video fills the content width. There are no breakpoint-specific rules in `video.css`; the body font size of caption and transcript steps up at 900px (global tokens).

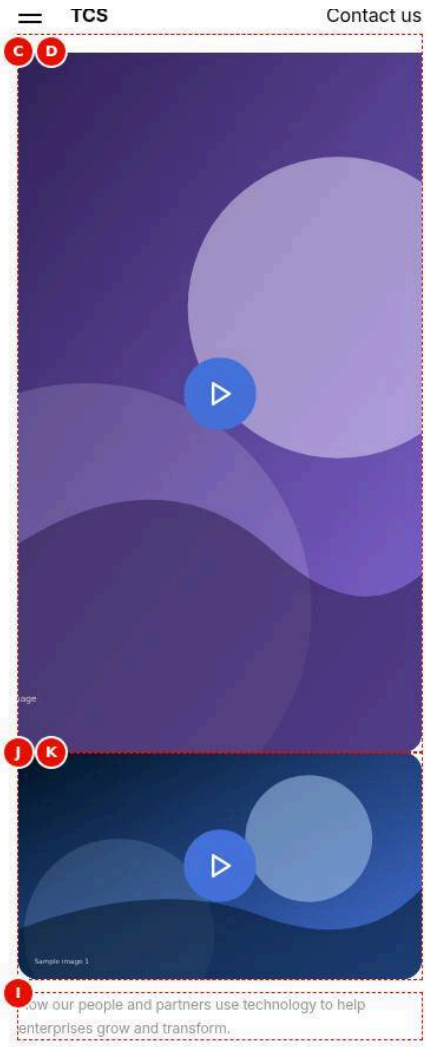

Figure 11: Mobile rendering — Two Video blocks at 390 px: a 9:16 vertical video Client story in 60 seconds (poster tall.svg, Size Small) filling the content width with the Play button, partly under the sticky header; below it the 16:9 brand film poster with the Play button and the grey caption. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/video-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	Two Video blocks at 390 px: a 9:16 vertical video Client story in 60 seconds (poster tall.svg, Size Small) filling the content width with the Play button, partly under the sticky header; below it the 16:9 brand film poster with the Play button and the grey caption.
Business Context	A mobile visitor scrolling a client story section: a vertical social-style clip and the brand film must both fit the phone width without layout shift.
Author Objective	Add a 9:16 Size Small Video with a poster and a 16:9 Video with a caption, then check them at 390 px.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Client story in 60 seconds	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset tall.svg (/en/media/tall.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
D	Poster Image Alt Text (Video › Video)	Consultant presenting to a client team	No	Alt text of the poster	Describe, or leave empty if decorative	None
(E)	Aspect Ratio (Video › Display)	9:16 (vertical)	No	Shape of the media area	Match the video	Enforced: option list
(F)	Size (Video › Display)	Small (420px)	No	Maximum width	—	Enforced: option list
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(G)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(H)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
I	Caption (Video › Video)	How our people and partners use technology to help enterprises grow and transform.	No	Text below the video	One or two sentences	None
J	Poster Image (Video › Video)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
K	Poster Image Alt Text (Video › Video)	Engineers collaborating in a modern office	No	Alt text of the poster	Describe, or leave empty if decorative	None
—	Screen width (Preview)	390 px (mobile)	—	Check on the preview (not stored in the content)	390 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A tall purple vertical poster with the centred Play button spanning the column, followed directly by the rounded 16:9 brand film poster with its Play button and the two-line grey caption.
- **Rendering behaviour:** At 390 px the content width is below Small (26.25rem), so both fill the column; the 9:16 area becomes about 1.8 times as tall as it is wide. Video files play inline (playsinline), not in the phone's full-screen player.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and the posters tall.svg and photo-1.svg must be published as assets.

Business Rules

- Aspect Ratio 9:16 keeps the vertical shape at every width; limit it with Size Small (or Medium).
- Size Small sets a 420 px maximum; on phones the column is narrower, so the video fills it.
- The poster is cropped to the chosen ratio (object-fit: cover); use a vertical poster for 9:16.
- Without a Transcript no link is shown; the caption is still rendered.

Common Authoring Mistakes

Error	Root Cause	Resolution
The vertical video fills most of the desktop screen	Aspect Ratio 9:16 left on Size Large	Set Size to Small (420px) for 9:16 videos
The vertical poster shows a cropped landscape image	A 16:9 poster was used with Aspect Ratio 9:16	Use a poster in the same ratio, e.g. 1080 x 1920
The two videos touch each other	Both blocks are in one section with no spacing set	Use Margin top on the Additional tab, or place the videos in separate sections

Troubleshooting

- **Symptoms:** On the phone the vertical video is taller than the screen.
- **Cause:** At full content width a 9:16 area is about 1.8 times its width; Size has no effect below 420 px.
- **Resolution:** Expected for 9:16; keep important content of the poster in its centre or use 1:1 for mobile-first clips.
- **Verification Steps:** Preview at 390 px and check the Play button and poster subject are visible without scrolling far.

Mobile (< 600px): Full content width for all sizes; aspect ratio kept (a 9:16 video becomes tall: limit its Size to Small or Medium). Video files play inline (`playsinline`), not in the phone's full-screen player, unless the visitor chooses full screen.

6.28.3 Component Variations

Variation 1 — Video file from AEM Assets

Variation Name: Video source: file (native `<video>` player).

Business Purpose: Self-hosted brand videos without third-party players or cookies.

Visual Example:

Steps — Variation example: A native HTML5 video player with browser controls (play, timeline, volume, captions, full screen) inside the rounded 16:9 area.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	Select the asset or page /content/dam/tcs-corp/videos/tcs-brand-film.mp4

Step	Where	Field / control	Value / action
3	Video › Video	Title	Building on belief: the TCS brand film
4	Video › Playback	Show Player Controls	On (default, keep)
5	Preview	Action	Scroll to the video: the native player shows play, timeline, volume, captions and full screen controls

Use Cases: Corporate films, product demos, captioned content.

Authoring Guidelines: Video tab > **Video**: select an MP4 or WebM file from AEM Assets.

Business Rules: Any URL not recognised as YouTube or Vimeo is played as a file; the MIME type is `video/{extension}` (`video/mp4`, `video/webm`). The asset must be published (AEM Assets under `/content/dam/tcs-corp/` is included in `paths.json`).

Rendering Rules: `<video>` with `controls` (unless off / background), `controlslist="nodownload"`, right-click menu suppressed, `playsinline`, `preload="metadata"` (or `auto` when autoplaying), `poster` from the Poster Image, `aria-label` = Title, `<source src="…#t=start,end" type="video/mp4">` and an optional captions `<track>`.

Responsive Behaviour: Fills the media area (`object-fit: cover`) on all breakpoints.

SEO Impact: The file URL is in the DOM after decoration; no video structured data is generated (Not implemented as of this handover).

Accessibility Compliance: Native keyboard-operable controls; accessible name from Title; captions track (WCAG 1.2.2) when provided; Download option hidden.

Variation 2 — YouTube

Variation Name: Video source: YouTube (`iframe` in `div.video-frame`).

Business Purpose: Play videos published on the TCS YouTube channel.

Visual Example:

Steps — Variation example: The YouTube player inside the rounded 16:9 area, privacy-enhanced (youtube-nocookie.com).

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	https://www.youtube.com/watch?v={video ID}
3	Video › Video	Title	TCS keynote: the future of enterprise AI
4	Video › Privacy	Privacy-enhanced Mode	On (default, keep)
5	Preview	Result	The YouTube player (www.youtube-nocookie.com) fills the rounded 16:9 area

Use Cases: Keynotes, campaigns, interviews.

Authoring Guidelines: Video tab > **Video**: paste the YouTube URL.

Business Rules: Recognised when the URL contains `youtube.com` or `youtu.be`. Player parameters: `rel=0`, `autoplay` 0 / 1, `mute` 0 / 1, `controls` 0 / 1, `playsinline=1`; Loop adds `loop=1&playlist={id}`; background adds `disablekb=1`; Start At / End At add `start` / `end` (whole seconds). Privacy-enhanced Mode (default on) uses `www.youtube-nocookie.com`. Captions file fields are ignored (use YouTube's captions).

Rendering Rules: `div.video-frame > iframe` with `title` = Title, lazy, `allow="autoplay; fullscreen; picture-in-picture; encrypted-media; accelerometer; gyroscope"`, `allowfullscreen`.

Responsive Behaviour: Frame fills the media area; YouTube letterboxes inside it.

SEO Impact: Third-party iframe; describe the video in text.

Accessibility Compliance: Iframe title; captions and controls from YouTube.

Variation 3 — Vimeo

Variation Name: Video source: Vimeo.

Business Purpose: Play Vimeo-hosted videos.

Visual Example:

Steps — Variation example: The Vimeo player in the rounded media area.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	https://vimeo.com/{video ID}
3	Video › Video	Title	Brand film on Vimeo
4	Preview	Result	The Vimeo player fills the rounded media area

Use Cases: Brand films hosted on Vimeo.

Authoring Guidelines: Paste `https://vimeo.com/{id}` into **Video**.

Business Rules: Recognised when the URL contains `vimeo.com`; the id is the first path segment. Parameters: `autoplay`, `muted`, `loop`, `controls` (0 / 1), `playsinline=1`; `background=1` for background videos; `dnt=1` (do not track) with Privacy-enhanced Mode; Start At as `#t={seconds}s`. End At is not applied to Vimeo (Not implemented as of this handover).

Rendering Rules: `div.video-frame > iframe` (`player.vimeo.com/video/{id}`), title = Title, `allow="autoplay; fullscreen; picture-in-picture; encrypted-media"`.

Responsive Behaviour: As YouTube.

SEO Impact: As YouTube.

Accessibility Compliance: Iframe title; captions and controls from Vimeo.

Variation 4 — Play button on the poster image (inline)

Variation Name: Playback = Play button (on the poster image), with a Poster Image (`placeholder` class).

Business Purpose: Fast page (no player until requested) with a branded first impression.

Visual Example:

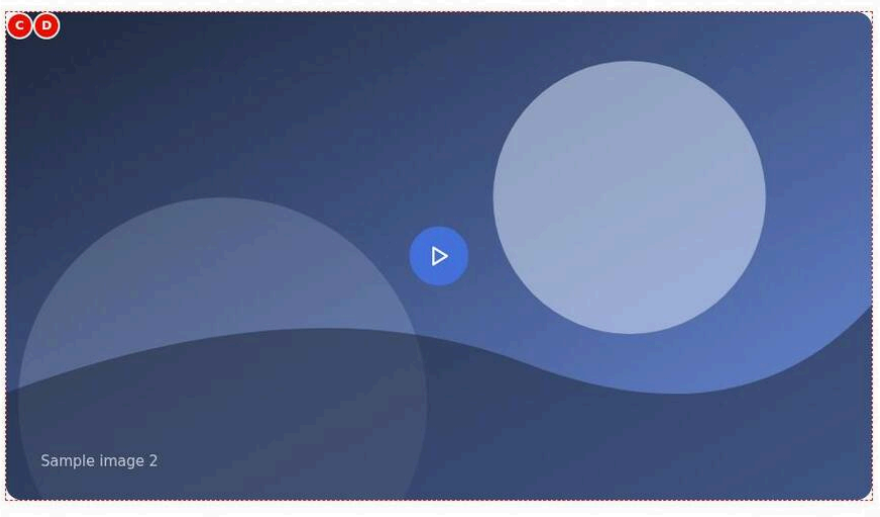

Figure 12: Variation example — The Video block at 1440 px: a Large 16:9 rounded media area with the poster photo-2.svg (data centre corridor) and the round brand-blue Play button in the centre; no caption or transcript. The second state, the film playing in place after Play, is not captured. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-play-button-poster.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-play-button-poster.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px: a Large 16:9 rounded media area with the poster photo-2.svg (data centre corridor) and the round brand-blue Play button in the centre; no caption or transcript. The second state, the film playing in place after Play, is not captured.
Business Context	A service page explainer that should not cost page speed: the poster is the first impression and the player is only loaded when the visitor asks for it.
Author Objective	Add a Video with a Title and a Poster Image with alt text, keeping Playback on Play button (on the poster image).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No (Recommended)	Image before playback	Same ratio as the video	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Poster Image Alt Text (Video › Video)	Data centre corridor with server racks	No	Alt text of the poster	Describe, or leave empty if decorative	None
(E)	Playback (Video › Playback)	Play button (on the poster image) (default, keep)	No	—	—	None
—	Action (Preview)	Press Play: the video plays in place of the poster (second frame, not captured)	—	Check on the preview (not stored in the content)	Press Play: the video plays in place of the poster (second frame, not captured)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 900 px wide rounded poster with the centred Play button (primary icon button scaled 1.4 times); nothing below the media area.
- **Rendering behaviour:** Only the poster and the button are rendered; pressing Play builds the native player with autoplay and sound (Muted off), keeps it hidden until it can play, then hides the poster and moves keyboard focus into the player.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and photo-2.svg must be published as assets. The button labels come from the locale's placeholders sheet (playVideoTitle).

Business Rules

- Play button is the default Playback; with a Poster Image the block gets the placeholder class and shows poster plus button.
- The button is labelled Play video: Building on belief: the TCS brand film from the Title.
- After Play the video plays with sound unless Muted is on, because the visitor started it.
- The poster alt text Data centre corridor with server racks is read out on the poster image.

Common Authoring Mistakes

Error	Root Cause	Resolution
The button only says Play video	Title left empty, so it falls back to Video	Enter a Title; the button reads Play video: {Title}
The poster is cut off at the sides	The poster's ratio differs from Aspect Ratio 16:9	Use a 16:9 poster such as 1920 x 1080
The page shows the browser's own player instead of the poster	Poster Image left empty	Select a Poster Image to get the poster with the Play button

Troubleshooting

- **Symptoms:** Pressing Play hides nothing; the poster stays and the video never appears.
- **Cause:** The player is kept hidden until the file can play; the MP4 returns 404 or is not a supported format.
- **Resolution:** Publish the asset or select a web-optimised MP4 / WebM rendition; republish the page.
- **Verification Steps:** Press Play on aem.page: the poster disappears, the film plays and focus is on the player.

Use Cases: Most content videos.

Authoring Guidelines: Playback = Play button (default); set Poster Image and its alt text.

Business Rules: On Play, the player is built with autoplay; it plays with sound unless Muted is on (the visitor started it). Keyboard focus moves into the player once it can play / has loaded.

Rendering Rules: `div.video-placeholder` (poster picture + `button.video-placeholder-play`, label "Play video: {Title}" from `playVideoTitle`, or "Play video" without a Title). The player is appended behind the poster and hidden until it can play (`data-embed-loaded="false"`), then the poster is hidden (`data-embed-loaded="true"`).

Responsive Behaviour: Same on all breakpoints.

SEO Impact: Poster image in the page; good for Core Web Vitals.

Accessibility Compliance: Native button with a descriptive name; focus management (WCAG 2.4.3); poster alt text (WCAG 1.1.1).

Variation 5 — Click to play without a poster

Variation Name: Playback = Play button, no Poster Image, no pop-up.

Business Purpose: The provider's / browser's own player with its first frame and play button.

Visual Example:

Steps — Variation example: A native video player showing the first frame and its own play control (or the YouTube thumbnail).

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	Select the asset or page /content/dam/tcs-corp/videos/tcs-brand-film.mp4
3	Video › Video	Title	Building on belief: the TCS brand film
4	Video › Video	Poster Image	Leave empty
5	Video › Playback	Play in a Pop-up	Off (default, keep)
6	Preview	Result	The native player shows the first frame and its own play control

Use Cases: Quick additions where no poster exists.

Authoring Guidelines: Playback = Play button; leave Poster Image empty; Play in a Pop-up off.

Business Rules: The player loads when the block enters the viewport, without autoplay; Muted, Loop, controls and times apply.

Rendering Rules: `video-media` contains only the player (no `placeholder` class).

Responsive Behaviour: Same on all breakpoints.

SEO Impact: Neutral.

Accessibility Compliance: Player's native controls.

Variation 6 — Play in a Pop-up

Variation Name: Play in a Pop-up (modal dialog).

Business Purpose: Large, focused viewing without leaving the page.

Visual Example:

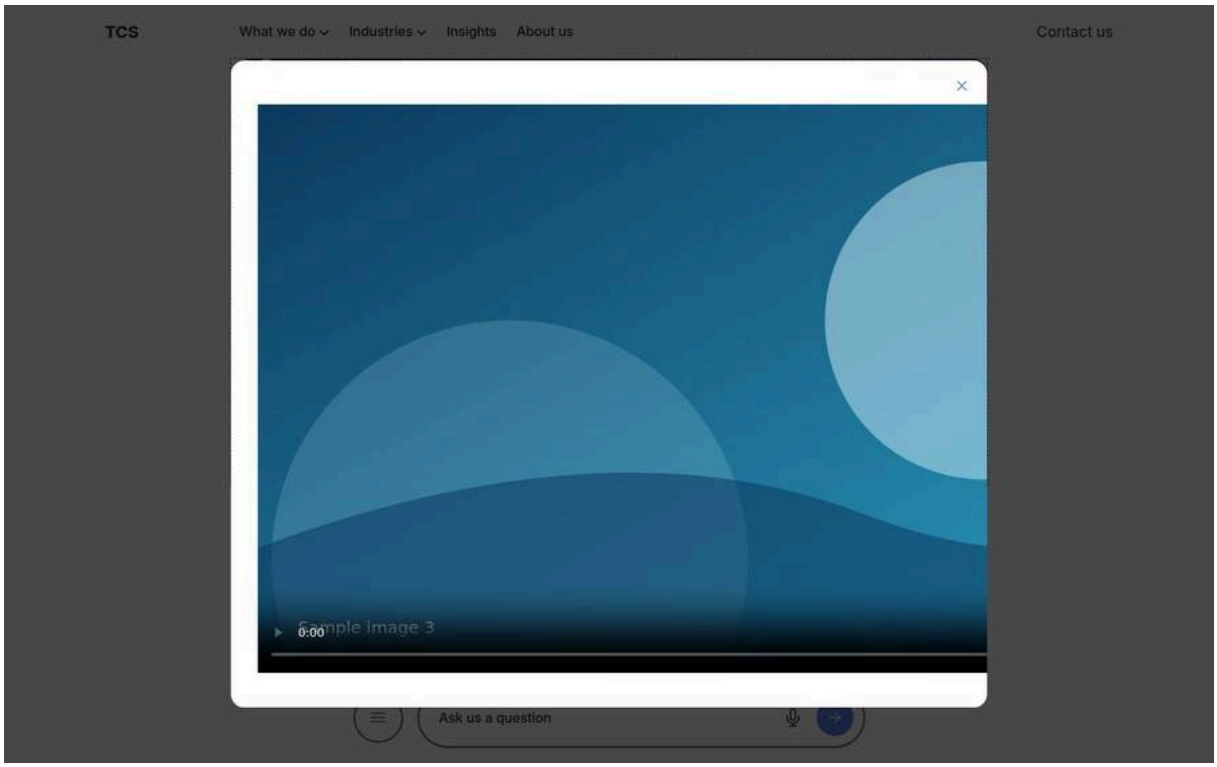

Figure 13: Variation example — The page at 1440 px after pressing Play on a Video with Play in a Pop-up on: the page dimmed behind a white dialog with the Close (x) button at the top right and the native player showing the poster photo-3.svg and its controls; the player is clipped at the dialog's right edge. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-popup.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-popup.jpg`
Screenshot Purpose	Variation example
Screen Description	The page at 1440 px after pressing Play on a Video with Play in a Pop-up on: the page dimmed behind a white dialog with the Close (x) button at the top right and the native player showing the poster photo-3.svg and its controls; the player is clipped at the dialog's right edge.
Business Context	A keynote teaser in a compact layout: the poster stays small on the page and the film opens large over the page without leaving it.
Author Objective	Add a Video with a poster and alt text and turn on Play in a Pop-up.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
D	Poster Image Alt Text (Video › Video)	Team reviewing a cloud migration plan	No	Alt text of the poster	Describe, or leave empty if decorative	None
(E)	Play in a Pop-up (Video › Playback)	On	No	Play in a dialog	With Play button playback	—
—	Action (Preview)	Press the Play button on the poster	—	Check on the preview (not stored in the content)	Press the Play button on the poster	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A dark backdrop over the header and page, a white rounded dialog, a close icon and the video player with play button, time 0:00 and timeline.
- **Rendering behaviour:** Play loads the Modal block on demand and opens a native dialog with the player autoplaying with sound (Muted off), sized min(90vw, 75rem, 80vh x ratio). Close, Esc or a backdrop click removes the dialog and the video and returns focus to the Play button.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and photo-3.svg must be published as assets; the dialog labels dialog and close come from the published placeholders sheet.

Business Rules

- Play in a Pop-up works only with Playback = Play button; it is ignored for autoplay and background.
- Without a poster the media area shows only the Play button on a black background.
- Closing the dialog stops the video; it starts again from Start At when reopened.
- Opening and closing push cmp:show and cmp:hide to the data layer.

Common Authoring Mistakes

Error	Root Cause	Resolution
The pop-up never opens	Playback is Autoplay or Background video	Set Playback to Play button (on the poster image)
The pop-up shows a black area with only a Play button on the page	Poster Image left empty	Add a Poster Image

Troubleshooting

- **Symptoms:** The player in the dialog is cut off at the right edge.
- **Cause:** The player width (up to 75rem) is wider than the dialog's content area at 1440 px.
- **Resolution:** Report to development (modal and video.css sizing); meanwhile check the video is still playable.
- **Verification Steps:** Open the pop-up on aem.page at 1440 px and check the whole player, including its right-hand controls, is visible.

Use Cases: Teaser images that open a keynote; compact layouts.

Authoring Guidelines: Playback = Play button; Playback tab > **Play in a Pop-up** = on; recommended with a Poster Image.

Business Rules: Only with Playback = Play button (ignored for autoplay / background). The play button opens a dialog (the Modal block is loaded on demand) with the player autoplaying (sound unless Muted). Closing the dialog (Close button, Esc, click on the backdrop) removes it and stops the video; focus returns to the Play button. Without a poster, the black media area shows only the Play button.

Rendering Rules: `dialog` with `aria-label` "Dialog" (placeholder `dialog`), Close button (placeholder `close`), `div.video-modal-player` sized `min(90vw, 75rem, 80vh × aspect ratio)` with the chosen aspect ratio.

Responsive Behaviour: The player scales to the viewport (90% width, max 75rem, height ≤ 80vh).

SEO Impact: Neutral.

Accessibility Compliance: Native `<dialog>` (focus trapped by the browser, Esc closes); focus returned on close; data layer `cmp:show` / `cmp:hide`.

Variation 7 — Autoplay when in view (with controls)

Variation Name: Playback = Autoplay when in view (muted), Show Player Controls on.

Business Purpose: Attract attention with motion while letting visitors control playback.

Visual Example:

Steps — Variation example: A muted video playing as the section scrolls into view, with native controls visible.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	Select the asset or page /content/dam/tcs-corp/videos/tcs-brand-film.mp4
3	Video › Video	Title	Building on belief: the TCS brand film
4	Video › Playback	Playback	Autoplay when in view (muted)
5	Video › Playback	Show Player Controls	On (default, keep)
6	Preview	Action	Scroll the video into view: it starts muted with the native controls

Use Cases: Product teasers, highlight reels.

Authoring Guidelines: Playback = Autoplay when in view; keep Show Player Controls on.

Business Rules: Starts muted (always, regardless of Muted) when the block enters the viewport; the poster (if any) shows without a play button until the video can play. For video files, Pause When Out of View (default on) pauses it off screen and resumes it when back (unless the visitor paused it). Reduced motion → behaves as Play button.

Rendering Rules: Player with autoplay, muted, controls; no toggle (controls allow pausing).

Responsive Behaviour: Same on all breakpoints.

SEO Impact: Neutral; preload `auto` for files increases data usage.

Accessibility Compliance: WCAG 2.2.2: visible controls allow pause; no sound without user action (WCAG 1.4.2).

Variation 8 — Autoplay without controls (with playback toggle)

Variation Name: Playback = Autoplay when in view, Show Player Controls off.

Business Purpose: A clean, controls-free autoplaying video that still can be paused.

Visual Example:

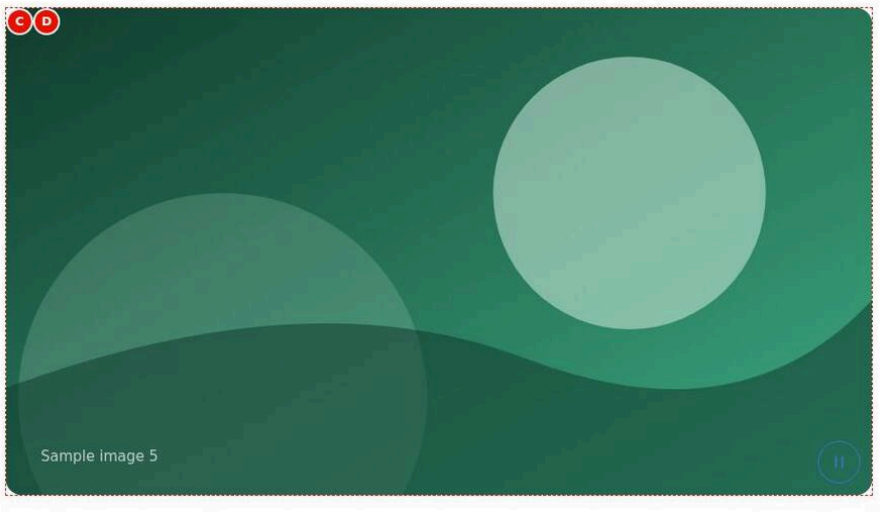

Figure 14: Variation example — The Video block at 1440 px: a Large 16:9 rounded media area showing the poster photo-5.svg (wind turbines) without a Play button, and the round pause button in the bottom-right corner; in the capture the poster is still shown, not the playing video. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-autoplay-no-controls.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-autoplay-no-controls.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px: a Large 16:9 rounded media area showing the poster photo-5.svg (wind turbines) without a Play button, and the round pause button in the bottom-right corner; in the capture the poster is still shown, not the playing video.
Business Context	A sustainability story section where the motion of a short clip draws attention without player chrome, while visitors can still stop it.
Author Objective	Add a Video that autoplays muted when scrolled into view, without player controls, with a poster and its alt text.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Poster Image (Video › Video)	Select the asset photo-5.svg (/en/media/photo-5.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
D	Poster Image Alt Text (Video › Video)	Wind turbines monitored by a digital twin	No	Alt text of the poster	Describe, or leave empty if decorative	None
(E)	Playback (Video › Playback)	Autoplay when in view (muted)	No	How the video starts	Play button for most videos	Enforced: option list
(F)	Show Player Controls (Video › Playback)	Off	No	Player controls	Keep on except for design-led autoplay	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The rounded 900 px poster with no centre button and a small round secondary pause icon button 0.75rem from the bottom and right edges.
- **Rendering behaviour:** When the block enters the viewport the player is built muted and autoplaying without controls; the poster shows until the file can play. Because controls are off a toggle is added (Pause video / Play video for files), and the file pauses when scrolled away (Pause When Out of View, default on).
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and photo-5.svg must be published as assets; the toggle labels pauseVideo and playVideo come from the published placeholders sheet.

Business Rules

- Autoplay when in view always starts muted, whatever Muted says.
- Show Player Controls off adds the pause / play toggle; with controls on there is no toggle.
- With Reduce motion on the visitor sees the poster with a Play button instead (no autoplay).
- Pause When Out of View resumes the file only if scrolling, not the visitor, paused it.

Common Authoring Mistakes

Error	Root Cause	Resolution
The clip autoplays for some visitors and not for others	Visitors with Reduce motion get Play button playback by design	Expected; make sure the poster is meaningful
Visitors cannot unmute the clip	Controls are off, and autoplay is always muted	Turn Show Player Controls on if the audio matters
The poster flashes away and leaves a black area	No poster for a slow-loading file	Keep a Poster Image so the area is not empty while loading

Troubleshooting

- **Symptoms:** The poster stays and the clip never starts, although the pause button shows.
- **Cause:** The file cannot play (not published, 404, or an unsupported format), or the browser blocked autoplay in power saving mode.
- **Resolution:** Publish the MP4 and use an H.264 MP4 rendition; check the console for a rejected play() promise.
- **Verification Steps:** Scroll the block into view on aem.page with Reduce motion off: the poster gives way and the clip plays muted.

Use Cases: Visual storytelling sections.

Authoring Guidelines: Playback = Autoplay when in view; Show Player Controls = off.

Business Rules: A pause / play toggle is added (files: "Pause video" / "Play video"; YouTube / Vimeo: "Stop video" removes the frame, "Play video" rebuilds it and restarts from the start time).

Rendering Rules: `button.video-toggle` (secondary icon button, `pause` / `play` icon, `data-cmp-interaction="playback"`), positioned 0.75rem from the bottom and inline end.

Responsive Behaviour: Toggle in the same corner on all breakpoints (left corner in right-to-left pages, logical positioning).

SEO Impact: Neutral.

Accessibility Compliance: WCAG 2.2.2 (Pause, Stop, Hide) met by the toggle; its label updates with the state.

Variation 9 — Background video

Variation Name: Playback = Background video (autoplay, muted, loop, no controls).

Business Purpose: A decorative, ambient moving image.

Visual Example:

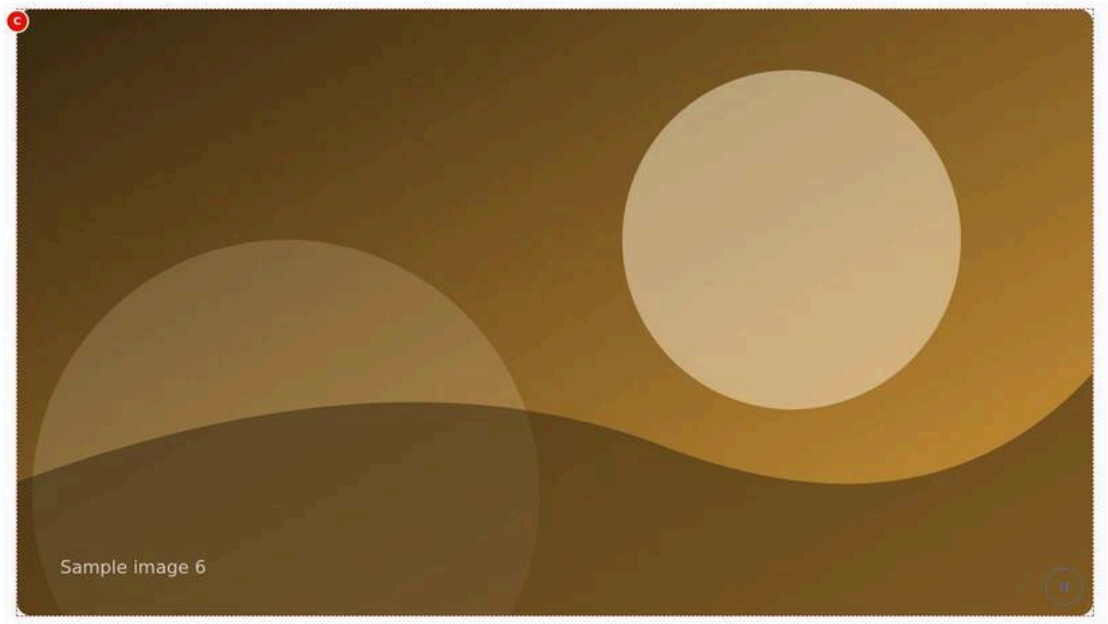

Figure 15: Variation example — The Video block at 1440 px in Size Full width: a rounded 16:9 area across the section's full content width (1280 px) showing the poster photo-6.svg (Sample image 6) with only the round pause button in the bottom-right corner. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-background.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-background.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px in Size Full width: a rounded 16:9 area across the section's full content width (1280 px) showing the poster photo-6.svg (Sample image 6) with only the round pause button in the bottom-right corner.
Business Context	The opening of a campus campaign page, where a silent looping ambient video sets the atmosphere without competing with the content.

Item	Detail
Author Objective	Add a Background video, Size Full width, with the Title Campus ambience and a Poster Image.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Campus ambience	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset photo-6.svg (/en/media/photo-6.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
(D)	Playback (Video › Playback)	Background video (autoplay, muted, loop, no controls)	No	How the video starts	Play button for most videos	Enforced: option list
(E)	Size (Video › Display)	Full width	No	Maximum width	—	Enforced: option list

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A wide rounded 16:9 poster spanning the content width, no Play button, no caption, and the small pause icon button in the corner.
- **Rendering behaviour:** Built when in view: muted, looping, autoplaying, without controls, aria-hidden and out of the tab order for iframes; a pause / play toggle is always added. The poster shows until the file can play; the file pauses off screen with Pause When Out of View.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and photo-6.svg must be published as assets. Keep the file short and small, as it is loaded automatically for every visitor.

Business Rules

- Background video overrides Muted, Loop and Show Player Controls: always muted, looping and without controls.
- The player is decorative (aria-hidden), so the Title Campus ambience is not announced and no poster alt text is needed.
- Size Full width removes the maximum width; Alignment has no effect.
- Reduce motion turns it into a poster with a Play button.

Common Authoring Mistakes

Error	Root Cause	Resolution
Important information is placed only in the background video	The player is hidden from assistive technology	Put the message in page text; keep the video decorative
The page loads slowly on mobile	A long or high-bitrate file is downloaded automatically	Use a short (about 30 seconds) web-optimised loop
Corners are rounded although an edge-to-edge look was wanted	Rounded Corners defaults to on	Turn Rounded Corners off on the Display tab

Troubleshooting

- **Symptoms:** The pause button is hard to see on the dark poster.
- **Cause:** The toggle is a secondary icon button with a thin brand-blue outline on the video.
- **Resolution:** Choose a poster and video with a lighter bottom-right corner; a darker toggle style is a development change.
- **Verification Steps:** Check on aem.page that the pause button is visible and toggles to Play video when pressed.

Use Cases: Atmosphere at the top of campaign pages.

Authoring Guidelines: Playback = Background video; usually Size Full width; set a Poster Image.

Business Rules: Always muted, looping, without controls (Show Player Controls and Muted / Loop are overridden); the player is hidden from assistive technology (`aria-hidden="true"`; iframes `tabindex="-1"`); a pause / stop toggle is always added; YouTube adds `disablekb=1`, Vimeo `background=1`. Files pause off screen with Pause When Out of View. Reduced motion → behaves as Play button.

Rendering Rules: As Variation 8 plus `aria-hidden`.

Responsive Behaviour: Same on all breakpoints; consider data usage on mobile.

SEO Impact: None (decorative).

Accessibility Compliance: Decorative (hidden), pausable (WCAG 2.2.2), no sound.

Variation 10 — Muted

Variation Name: Muted = on.

Business Purpose: Start without sound even when the visitor presses Play.

Visual Example:

Steps — Variation example: A video playing after Play with the volume control showing muted.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	Select the asset or page /content/dam/tcs-corp/videos/tcs-brand-film.mp4
3	Video › Video	Title	Building on belief: the TCS brand film
4	Video › Video	Poster Image	Select the asset photo-1.svg (/en/media/photo-1.svg)
5	Video › Playback	Muted	On
6	Preview	Action	Press Play: the video plays with the volume control showing muted

Use Cases: Videos without important audio; office environments.

Authoring Guidelines: Playback tab > Muted = on.

Business Rules: Default off. Always on for autoplay and background (help text: "always on for autoplay and background videos").

Rendering Rules: Files: `muted` property and attribute; YouTube `mute=1`; Vimeo `muted=1`.

Responsive Behaviour: All breakpoints.

SEO Impact: None.

Accessibility Compliance: Visitors can unmute via controls (if shown).

Variation 11 — Loop

Variation Name: Loop = on.

Business Purpose: Repeat short clips.

Visual Example:

Steps — Variation example: A short clip restarting at its end (two frames).

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	Select the asset or page /content/dam/tcs-corp/videos/tcs-brand-film.mp4
3	Video › Video	Title	Product loop
4	Video › Playback	Loop	On
5	Preview	Action	Play the clip to its end: it restarts from the beginning

Use Cases: Short product loops.

Authoring Guidelines: Playback tab > Loop = on.

Business Rules: Default off; always on for background.

Rendering Rules: Files `loop`; YouTube `loop=1&playlist={id}`; Vimeo `loop=1`.

Responsive Behaviour: All breakpoints.

SEO Impact: None.

Accessibility Compliance: Looping content that plays on its own must be pausable (controls or toggle are provided).

Variation 12 — Start At / End At

Variation Name: Start At (seconds) / End At (seconds).

Business Purpose: Play an excerpt of a longer video.

Visual Example:

Steps — Variation example: A player whose timeline starts at 0:30 after Play.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	Select the asset or page /content/dam/tcs-corp/videos/tcs-brand-film.mp4
3	Video › Video	Title	Building on belief: the TCS brand film
4	Video › Playback	Start At (seconds)	30

Step	Where	Field / control	Value / action
5	Video › Playback	End At (seconds)	90
6	Preview	Action	Press Play: the timeline starts at 0:30 and stops at 1:30

Use Cases: Highlighting one answer in an interview.

Authoring Guidelines: Playback tab > Start At (e.g. 30), End At (e.g. 90).

Business Rules: Empty → 0 (from the start / to the end); negative or non-numeric values → 0. YouTube: whole seconds (`start`, `end`); Vimeo: start only (`#t=30s`); files: media fragment `#t=30,90`. End before Start is not validated.

Rendering Rules: As above.

Responsive Behaviour: All breakpoints.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 13 — Pause When Out of View

Variation Name: Pause When Out of View (default on).

Business Purpose: Saves CPU / battery and avoids distraction.

Visual Example:

Steps — Variation example: An autoplaying video paused after scrolling away, resuming when scrolled back.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	Select the asset or page /content/dam/tcs-corp/videos/tcs-brand-film.mp4
3	Video › Video	Title	Building on belief: the TCS brand film
4	Video › Playback	Playback	Autoplay when in view (muted)
5	Video › Playback	Pause When Out of View	On (default, keep)
6	Preview	Action	Scroll the playing video out of view (it pauses), then back (it resumes)

Use Cases: Autoplay and background video files.

Authoring Guidelines: Playback tab > Pause When Out of View on (default) / off.

Business Rules: Only for video files in Autoplay or Background mode; resumes only if it was paused by scrolling (not by the visitor). Not applied to YouTube / Vimeo.

Rendering Rules: `watchVisibility` IntersectionObserver on the `<video>`.

Responsive Behaviour: All breakpoints.

SEO Impact: None.

Accessibility Compliance: Reduces motion off screen.

Variation 14 — Captions (WebVTT)

Variation Name: Captions File (WebVTT) with language and name.

Business Purpose: Accessible, translatable subtitles for self-hosted videos.

Visual Example:

Steps — Variation example: A native player showing subtitles and the captions menu listing “English”.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	Select the asset or page /content/dam/tcs-corp/videos/tcs-brand-film.mp4
3	Video › Video	Title	Building on belief: the TCS brand film
4	Video › Captions	Captions File (WebVTT)	Select the asset or page /content/dam/tcs-corp/videos/tcs-brand-film-en.vtt
5	Video › Captions	Captions Language	en
6	Video › Captions	Captions Name	English
7	Preview	Action	Play the video and open the captions menu of the player: “English” is listed and subtitles show

Use Cases: Every video file with speech.

Authoring Guidelines: Captions tab: Captions File (WebVTT) (a `.vtt` from AEM Assets), Captions Language (e.g. `en`, `de`, `ja`), Captions Name (e.g. “English”).

Business Rules: Only for video files (YouTube / Vimeo use their own captions). Language defaults to the page’s language (for example `de` on `/de-de`); name defaults to the language code. One track; it is the default track.

Rendering Rules: `<track kind="captions" src="…" srclang="en" label="English" default>`.

Responsive Behaviour: Rendered by the browser.

SEO Impact: None directly (captions aren’t indexed from the track); provide a transcript.

Accessibility Compliance: WCAG 1.2.2 (Captions, Prerecorded).

Variation 15 — Caption text and Transcript link

Variation Name: Caption (rich text) and Transcript (link) below the video.

Business Purpose: Context and a text alternative.

Visual Example:

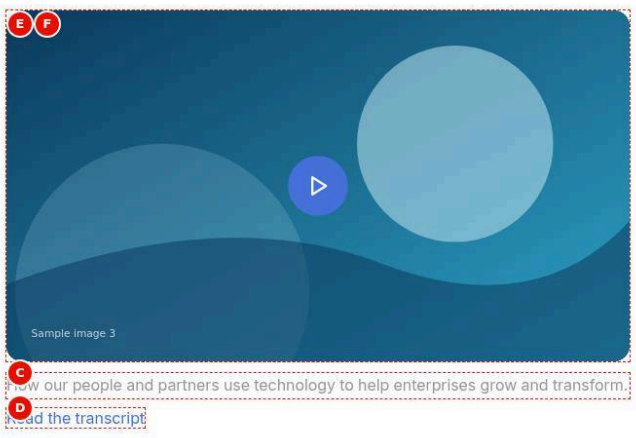

Figure 16: Variation example — The Video block at 1440 px in Size Medium (640 px): the rounded 16:9 poster photo-3.svg with the Play button, then the grey caption How our people and partners use technology to help enterprises grow and transform. and the blue link Read the transcript. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-caption-transcript.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-caption-transcript.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px in Size Medium (640 px): the rounded 16:9 poster photo-3.svg with the Play button, then the grey caption How our people and partners use technology to help enterprises grow and transform. and the blue link Read the transcript.
Business Context	A corporate film that carries information, so the page gives context in a caption and a text alternative through a transcript page.
Author Objective	Add a Medium Video with a Caption, a Transcript link to /en/about/brand-film-transcript and a poster with alt text.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Caption (Video › Video)	How our people and partners use technology to help enterprises grow and transform.	No	Text below the video	One or two sentences	None
D	Transcript (Video › Video)	Select the page or enter /en/about/brand-film-transcript	No	Link to a transcript	Page or PDF	None
E	Poster Image (Video › Video)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
F	Poster Image Alt Text (Video › Video)	Team reviewing a cloud migration plan	No	Alt text of the poster	Describe, or leave empty if decorative	None
(G)	Size (Video › Display)	Medium (640px)	No	Maximum width	—	Enforced: option list

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 640 px centred rounded poster with the Play button; 0.75rem below it the small grey caption; 0.5rem below that the small blue Read the transcript link.
- **Rendering behaviour:** The caption is a div.video-caption after the media area and the transcript a paragraph with a.video-transcript; both are always visible, before and after Play. Text uses the small body size, stepping up at 900 px.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the transcript page is a separate page and must be published too, or the link returns 404; the MP4 and poster are published as assets.

Business Rules

- Caption is rendered only when it has text.
- The transcript link text is the authored link text, unless it looks like a URL or path, then Read the transcript.
- Size Medium limits the block to 40rem and centres it (Alignment Center).
- The caption colour (#999) is below WCAG AA contrast (F-27, open).

Common Authoring Mistakes

Error	Root Cause	Resolution
The transcript link leads to a 404 page	The transcript page was not published	Publish /en/about/brand-film-transcript, then recheck the link
The caption is long and wraps over many lines	Full descriptions entered in Caption	Keep Caption to about 200 characters; put details on the transcript page
A captions track was expected from the Transcript	Transcript is a link only	Add a WebVTT file on the Captions tab for subtitles

Troubleshooting

- **Symptoms:** The caption does not appear below the video.
- **Cause:** The Caption field contains only empty paragraphs or whitespace, so it has no text.
- **Resolution:** Enter the caption text in Caption and save; republish the page.
- **Verification Steps:** On aem.page the grey caption shows directly below the media area.

Use Cases: Interviews, keynotes, any video with information.

Authoring Guidelines: Video tab: Caption (rich text); Transcript (select a page or document).

Business Rules: Caption shown only if it has text. Transcript link text: the authored link text, unless it looks like a URL or path, then "Read the transcript" (placeholder `readTheTranscript`).

Rendering Rules: `div.video-caption` after the media; `<p><a class="video-transcript">` after the caption.

Responsive Behaviour: Text wraps; small body size (steps up at 900px).

SEO Impact: Positive: caption and transcript are indexable text / links.

Accessibility Compliance: WCAG 1.2.1 / 1.2.3 (text alternative / media alternative) via transcript.

Variation 16 — Aspect ratio 16:9 (widescreen)

Variation Name: Aspect Ratio = 16:9 (default).

Business Purpose: Standard widescreen video.

Visual Example:

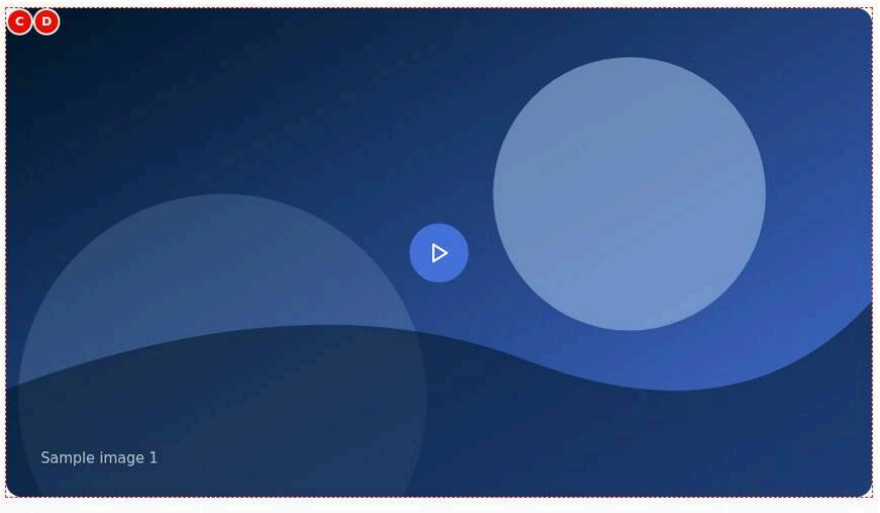

Figure 17: Variation example — The Video block at 1440 px: the default 16:9 widescreen media area, 900 px wide (Size Large), rounded, with the poster photo-1.svg and the centred Play button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-ratio-16-9.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-ratio-16-9.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px: the default 16:9 widescreen media area, 900 px wide (Size Large), rounded, with the poster photo-1.svg and the centred Play button.
Business Context	A standard widescreen film on a content page; the default ratio matches most corporate video renditions.
Author Objective	Add a Video with a Title and a 16:9 poster, keeping Aspect Ratio on 16:9 (widescreen).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
D	Poster Image Alt Text (Video › Video)	Engineers collaborating in a modern office	No	Alt text of the poster	Describe, or leave empty if decorative	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(E)	Aspect Ratio (Video › Display)	16:9 (widescreen) (default, keep)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 900 x 506 px rounded poster area with the Play button in its centre.
- **Rendering behaviour:** The block sets –video-aspect-ratio: 16 / 9 and the media area keeps it at all widths, reserving the space before the player loads (no layout shift).
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and photo-1.svg must be published as assets.

Business Rules

- 16:9 is the default and the fallback for unknown values.
- Choose the ratio of the video file; files are cropped to fill the area (object-fit: cover).
- The poster is cropped the same way; use a 16:9 poster such as 1920 x 1080.
- YouTube and Vimeo letterbox inside the frame instead of cropping.

Common Authoring Mistakes

Error	Root Cause	Resolution
The top and bottom of a 4:3 film are cut off	16:9 kept for a 4:3 file	Set Aspect Ratio to the file's ratio
The poster subject is cropped	A square or vertical poster in a 16:9 area	Use a poster in the same ratio

Troubleshooting

- **Symptoms:** Black bars appear above and below a YouTube video.
- **Cause:** The YouTube video is not 16:9; providers letterbox inside the frame.
- **Resolution:** Set Aspect Ratio to the video's own ratio.
- **Verification Steps:** On aem.page the provider player fills the area without bars.

Use Cases: Most videos.

Authoring Guidelines: Display tab > Aspect Ratio = 16:9 (widescreen).

Business Rules: Also the fallback for unknown values.

Rendering Rules: `--video-aspect-ratio: 16 / 9` on the block; media area `aspect-ratio`.

Responsive Behaviour: Kept at all widths.

SEO Impact: None.

Accessibility Compliance: Reserved space prevents layout shift.

Variation 17 — Aspect ratio 4:3

Variation Name: Aspect Ratio = 4:3.

Business Purpose: Legacy or presentation-format videos.

Visual Example:

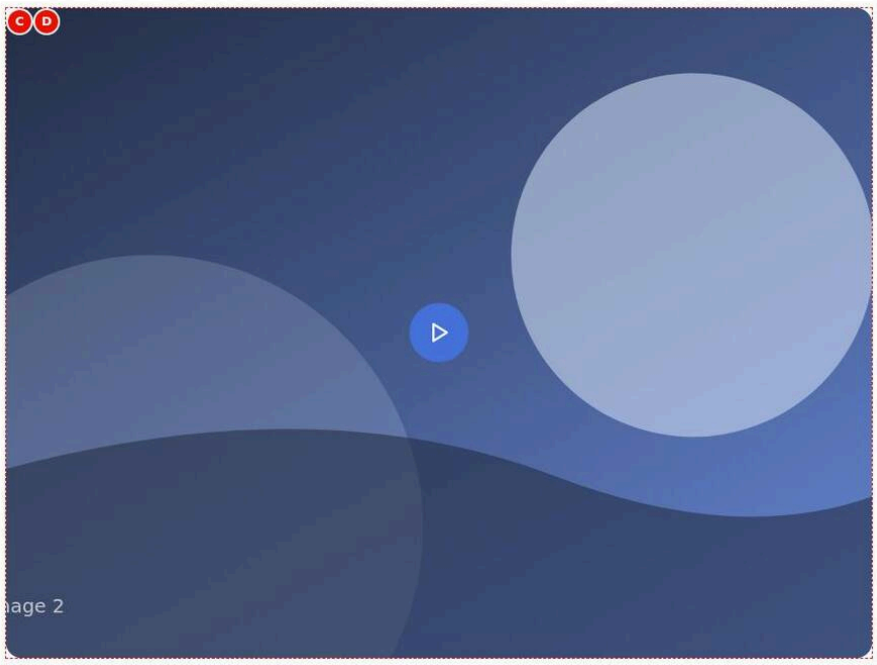

Figure 18: Variation example — The Video block at 1440 px: a 4:3 media area, 900 px wide (Size Large), rounded, with the poster photo-2.svg cropped to fill it and the centred Play button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-ratio-4-3.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-ratio-4-3.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px: a 4:3 media area, 900 px wide (Size Large), rounded, with the poster photo-2.svg cropped to fill it and the centred Play button.
Business Context	Archive footage or a slide recording in the older presentation format on a content page.
Author Objective	Add a Video with a poster and set Aspect Ratio to 4:3.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Poster Image (Video › Video)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
D	Poster Image Alt Text (Video › Video)	Data centre corridor with server racks	No	Alt text of the poster	Describe, or leave empty if decorative	None
(E)	Aspect Ratio (Video › Display)	4:3	No	Shape of the media area	Match the video	Enforced: option list

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A taller rounded 900 x 675 px poster area; the sides of the 16:9 sample poster are cropped (its label is cut at the left edge), with the Play button centred.
- **Rendering behaviour:** The block sets –video-aspect-ratio: 4 / 3; files and posters fill the area with object-fit: cover, so content outside 4:3 is cropped.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and photo-2.svg must be published as assets.

Business Rules

- Choose the ratio of the video itself; a 16:9 file in a 4:3 area loses its sides.
- The poster is cropped the same way: use a 4:3 poster such as 1600 x 1200.
- The ratio is kept at all widths.
- Size Large (900 px) makes a 4:3 video 675 px tall; consider Medium.

Common Authoring Mistakes

Error	Root Cause	Resolution
The poster's left and right edges are cut off	A 16:9 poster used with Aspect Ratio 4:3	Use a 4:3 poster
The video pushes the following content far down	4:3 at Size Large is 675 px tall	Use Size Medium (640px)

Troubleshooting

- **Symptoms:** People at the edges of the film are cut off after Play.
- **Cause:** The file is 16:9 but Aspect Ratio is 4:3 (object-fit: cover crops it).
- **Resolution:** Set Aspect Ratio back to 16:9, or use a 4:3 rendition.
- **Verification Steps:** Play the video on aem.page and check the full frame is visible.

Use Cases: Archive footage, slide recordings.

Authoring Guidelines: Aspect Ratio = 4:3.

Business Rules: Choose the ratio of the video itself: files are cropped to fill the area (`object-fit: cover`).

Rendering Rules: `--video-aspect-ratio: 4 / 3`.

Responsive Behaviour: Kept at all widths.

SEO Impact: None.

Accessibility Compliance: As 16:9.

Variation 18 — Aspect ratio 1:1 (square)

Variation Name: Aspect Ratio = 1:1 (square).

Business Purpose: Square social-style videos.

Visual Example:

Figure 19: Variation example — The Video block at 1440 px: a square 1:1 media area, Size Medium (640 px), centred in the section, rounded, with the poster square-1.svg and the centred Play button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-ratio-1-1.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-ratio-1-1.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px: a square 1:1 media area, Size Medium (640 px), centred in the section, rounded, with the poster square-1.svg and the centred Play button.
Business Context	A square social cut-down reused on a product page, presented at a moderate size so it does not dominate the section.
Author Objective	Add a Video with a square poster, Aspect Ratio 1:1 (square) and Size Medium (640px).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset square-1.svg (/en/media/square-1.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
D	Poster Image Alt Text (Video › Video)	Product designer sketching an app screen	No	Alt text of the poster	Describe, or leave empty if decorative	None
(E)	Aspect Ratio (Video › Display)	1:1 (square)	No	Shape of the media area	Match the video	Enforced: option list
(F)	Size (Video › Display)	Medium (640px)	No	Maximum width	—	Enforced: option list

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 640 x 640 px rounded square poster centred in the section with the Play button in the middle.
- **Rendering behaviour:** The block sets –video-aspect-ratio: 1 / 1 and a 40rem maximum width; below 640 px of content width it fills the column and stays square, so it becomes tall on phones.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and square-1.svg must be published as assets.

Business Rules

- Size Medium or Small is recommended for 1:1 videos.
- Use a square poster such as 1200 x 1200; others are cropped.
- Alignment Center (default) centres the 640 px block in the section.
- The poster alt text Product designer sketching an app screen describes the poster.

Common Authoring Mistakes

Error	Root Cause	Resolution
The square video fills the whole screen height	1:1 left at Size Large or Full width	Use Size Medium or Small
A widescreen file shows only its middle	Aspect Ratio 1:1 set for a 16:9 file	Use 1:1 only for square renditions

Troubleshooting

- **Symptoms:** The square video is not centred but sticks to one side.
- **Cause:** Margin left or Margin right is set on the Additional tab; margins override Alignment.
- **Resolution:** Clear Margin left / right, keep Alignment Center.
- **Verification Steps:** On aem.page the 640 px square is centred in the section.

Use Cases: Social cut-downs.

Authoring Guidelines: Aspect Ratio = 1:1; Size Medium or Small recommended.

Business Rules: As 4:3.

Rendering Rules: `--video-aspect-ratio: 1 / 1`.

Responsive Behaviour: Kept; becomes tall on mobile at full width.

SEO Impact: None.

Accessibility Compliance: As 16:9.

Variation 19 — Aspect ratio 21:9 (cinema)

Variation Name: Aspect Ratio = 21:9 (cinema).

Business Purpose: Cinematic, wide banners.

Visual Example:

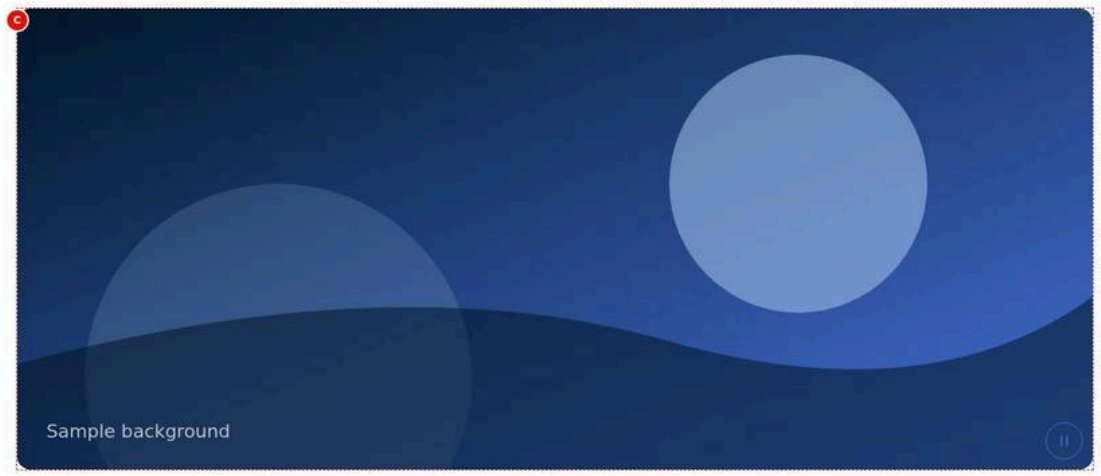

Figure 20: Variation example — The Video block at 1440 px: a shallow 21:9 cinema-format background video at Full width across the section's content width, rounded, showing the poster wide.svg with only the pause button in the bottom-right corner. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-ratio-21-9.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-ratio-21-9.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px: a shallow 21:9 cinema-format background video at Full width across the section's content width, rounded, showing the poster wide.svg with only the pause button in the bottom-right corner.
Business Context	A cinematic ambient banner at the top of a campaign page, where a wide, shallow strip of motion sets the mood above the content.
Author Objective	Add a Background video with the Title Campus ambience, Aspect Ratio 21:9 (cinema) and Size Full width.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Campus ambience	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset wide.svg (/en/media/wide.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
(D)	Playback (Video › Playback)	Background video (autoplay, muted, loop, no controls)	No	How the video starts	Play button for most videos	Enforced: option list
(E)	Aspect Ratio (Video › Display)	21:9 (cinema)	No	Shape of the media area	Match the video	Enforced: option list
(F)	Size (Video › Display)	Full width	No	Maximum width	—	Enforced: option list

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A wide, low rounded poster (about 1280 x 549 px) without a Play button, and the round pause icon button in its corner.
- **Rendering behaviour:** The block sets –video-aspect-ratio: 21 / 9 and no maximum width; the background video starts muted and looping when in view, aria-hidden, with the toggle. On mobile the strip becomes very shallow.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and wide.svg must be published as assets.

Business Rules

- Background video is always muted, looping and without controls; a pause toggle is always added.
- 21:9 crops a 16:9 file at top and bottom; use a 21:9 rendition and poster (e.g. 2520 x 1080).
- Size Full width ignores Alignment.
- No poster alt text is needed: the background player is decorative.

Common Authoring Mistakes

Error	Root Cause	Resolution
Heads of people in the video are cut off	A 16:9 file shown at 21:9	Frame the subject in the centre band or use a 21:9 rendition
The banner is too shallow on phones	21:9 at the phone width is only about 150 px tall	Accept it for decoration, or use 16:9

Troubleshooting

- **Symptoms:** The 21:9 strip shows a play button instead of moving.
- **Cause:** The visitor has Reduce motion on, so Playback is treated as Play button.
- **Resolution:** Expected; keep a meaningful wide poster.

- **Verification Steps:** With Reduce motion off on the test device, the strip plays muted when scrolled into view.

Use Cases: Background videos at the top of a page.

Authoring Guidelines: Aspect Ratio = 21:9; often Size Full width.

Business Rules: As 4:3.

Rendering Rules: `--video-aspect-ratio: 21 / 9`.

Responsive Behaviour: Kept; shallow on mobile.

SEO Impact: None.

Accessibility Compliance: As 16:9.

Variation 20 — Aspect ratio 9:16 (vertical)

Variation Name: Aspect Ratio = 9:16 (vertical).

Business Purpose: Vertical / short-form videos.

Visual Example:

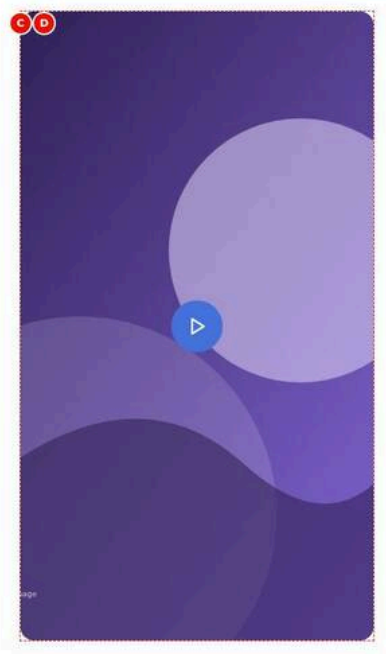

Figure 21: Variation example — The Video block at 1440 px: a vertical 9:16 media area, Size Small (420 px), centred in the section, rounded, with the poster tall.svg and the centred Play button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-ratio-9-16.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-ratio-9-16.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px: a vertical 9:16 media area, Size Small (420 px), centred in the section, rounded, with the poster tall.svg and the centred Play button.
Business Context	A 60-second client story produced for social channels, shown in its vertical format on a case study page.
Author Objective	Add a Video Client story in 60 seconds with a vertical poster, Aspect Ratio 9:16 (vertical) and Size Small (420px).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Client story in 60 seconds	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset tall.svg (/en/media/tall.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
D	Poster Image Alt Text (Video › Video)	Consultant presenting to a client team	No	Alt text of the poster	Describe, or leave empty if decorative	None
(E)	Aspect Ratio (Video › Display)	9:16 (vertical)	No	Shape of the media area	Match the video	Enforced: option list
(F)	Size (Video › Display)	Small (420px)	No	Maximum width	—	Enforced: option list

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A narrow, tall rounded poster (420 x 747 px) centred in the section with the Play button in the middle.
- **Rendering behaviour:** The block sets –video-aspect-ratio: 9 / 16 and a 26.25rem maximum width; on phones it fills the column and becomes very tall.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and tall.svg must be published as assets.

Business Rules

- Use Size Small for 9:16; larger sizes become taller than the screen.
- Use a vertical poster such as 1080 x 1920.
- YouTube Shorts URLs (/shorts/) are recognised as YouTube.
- Alignment Center (default) centres the 420 px block.

Common Authoring Mistakes

Error	Root Cause	Resolution
The vertical video is cut off at the bottom of the screen	9:16 at Size Large is 1600 px tall	Set Size to Small (420px)
The poster shows only a narrow slice of a landscape image	A 16:9 poster with Aspect Ratio 9:16	Use a vertical poster

Troubleshooting

- **Symptoms:** A YouTube Short shows black bars around a small picture.
- **Cause:** Aspect Ratio is still 16:9, so the vertical video is letterboxed inside a wide frame.
- **Resolution:** Set Aspect Ratio to 9:16 (vertical) and Size Small.
- **Verification Steps:** On aem.page the Short fills the narrow vertical area.

Use Cases: YouTube Shorts, social clips.

Authoring Guidelines: Aspect Ratio = 9:16; Size Small recommended.

Business Rules: As 4:3.

Rendering Rules: `--video-aspect-ratio: 9 / 16`.

Responsive Behaviour: Very tall at full width; limit with Size Small (26.25rem).

SEO Impact: None.

Accessibility Compliance: As 16:9.

Variation 21 — Size Full width

Variation Name: Size = Full width (`video-size-full`).

Business Purpose: Maximum impact.

Visual Example:

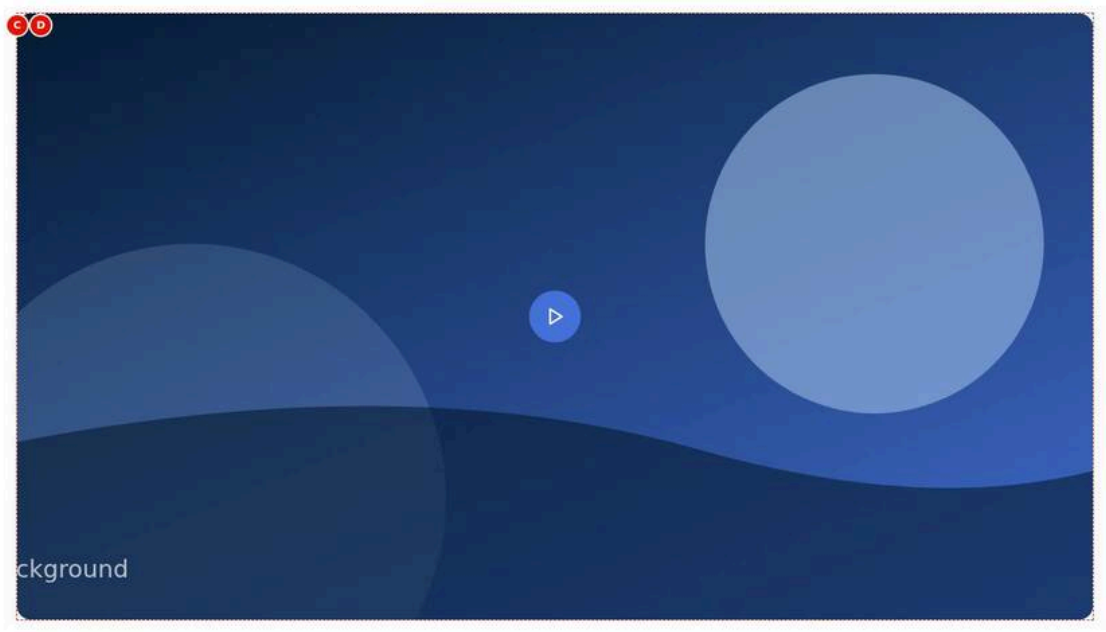

Figure 22: Variation example — The Video block at 1440 px in Size Full width: a rounded 16:9 media area across the section's full content width (1280 px), showing the poster wide.svg with the centred Play button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-size-full.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-size-full.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px in Size Full width: a rounded 16:9 media area across the section's full content width (1280 px), showing the poster wide.svg with the centred Play button.
Business Context	A hero-like brand film on a landing page section, given maximum impact by using the whole content width.

Item	Detail
Author Objective	Add a Video with a poster and alt text and set Size to Full width.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset wide.svg (/en/media/wide.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
D	Poster Image Alt Text (Video › Video)	Aerial view of a technology campus	No	Alt text of the poster	Describe, or leave empty if decorative	None
(E)	Size (Video › Display)	Full width	No	Maximum width	—	Enforced: option list

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 1280 x 720 px rounded poster with the Play button in the centre; the wide poster is cropped at its sides to 16:9.
- **Rendering behaviour:** Size Full width sets –video-max-width: none, so the block always takes the section's content width at every breakpoint; the media area keeps 16:9.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and wide.svg must be published as assets.

Business Rules

- Full width means the section's content width, not the browser width (sections are limited to 90rem with side padding).
- Alignment has no effect at Full width.
- A 16:9 video at 1280 px is 720 px tall; it may fill most of a laptop screen.
- Play button playback still applies: no player loads until Play.

Common Authoring Mistakes

Error	Root Cause	Resolution
The video does not reach the browser edges	Full width is limited to the section's content width	Expected; edge-to-edge layouts are not supported by the block

Error	Root Cause	Resolution
Alignment Left has no effect	Alignment applies only to sizes other than Full width	Choose Large, Medium or Small to align

Troubleshooting

- **Symptoms:** The poster looks blurred at full width.
- **Cause:** The poster rendition is smaller than the 1280 px display width.
- **Resolution:** Select a poster of at least 1920 x 1080.
- **Verification Steps:** On aem.page at 1440 px the poster looks sharp.

Use Cases: Background videos, hero-like videos.

Authoring Guidelines: Display tab > Size = Full width.

Business Rules: Alignment has no effect.

Rendering Rules: `--video-max-width: none`.

Responsive Behaviour: Always the full content width.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 22 — Size Large (900px)

Variation Name: Size = Large (`video-size-large`, default).

Business Purpose: Standard content video.

Visual Example:

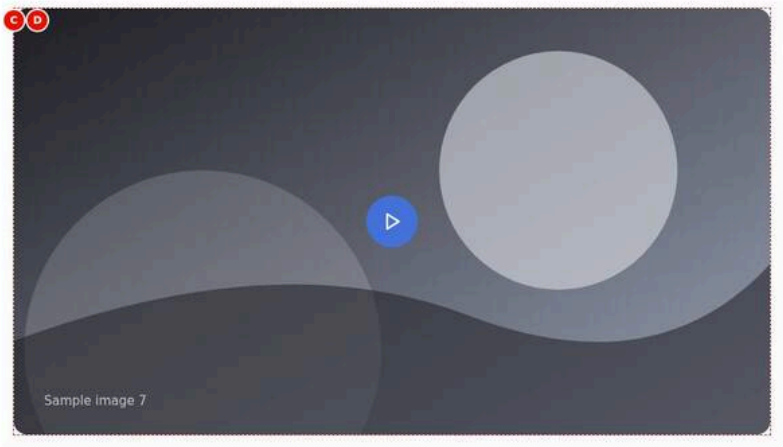

Figure 23: Variation example — The Video block at 1440 px with the default Size Large (900 px): a rounded 16:9 poster photo-7.svg with the centred Play button, centred in the section with white space on both sides. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-size-large.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-size-large.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px with the default Size Large (900 px): a rounded 16:9 poster photo-7.svg with the centred Play button, centred in the section with white space on both sides.

Item	Detail
Business Context	A standard content video in an article or service page, the size used for most videos.
Author Objective	Add a Video with a poster and alt text, keeping Size on Large (900px).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset photo-7.svg (/en/media/photo-7.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
D	Poster Image Alt Text (Video › Video)	Operations centre with large displays	No	Alt text of the poster	Describe, or leave empty if decorative	None
(E)	Size (Video › Display)	Large (900px) (default, keep)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 900 x 506 px rounded grey-toned poster with the Play button, centred in the 1280 px section.
- **Rendering behaviour:** Size Large sets a 56.25rem maximum width; below 900 px of content width (tablet and mobile) the video fills the column.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and photo-7.svg must be published as assets.

Business Rules

- Large is the default and the fallback for unknown size values.
- Alignment Center (default) centres the block; Left / Right move it within the section.
- The poster alt text Operations centre with large displays describes the poster.
- The 16:9 area is reserved before loading, so there is no layout shift.

Common Authoring Mistakes

Error	Root Cause	Resolution
The video looks smaller than the text column on tablets	None; below 900 px it fills the column	Nothing to fix
Large was chosen for a 9:16 clip	A vertical video at 900 px is 1600 px tall	Use Small for vertical videos

Troubleshooting

- **Symptoms:** The video is narrower than 900 px on a wide desktop.
- **Cause:** Padding left / right set on the Additional tab reduces the block's content width.
- **Resolution:** Clear the padding values on the Additional tab.
- **Verification Steps:** On aem.page at 1440 px the media area measures 900 px wide.

Use Cases: Most videos.

Authoring Guidelines: Size = Large (900px).

Business Rules: Default and fallback.

Rendering Rules: Max width 56.25rem.

Responsive Behaviour: Full width below 900px of content width.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 23 — Size Medium (640px)

Variation Name: Size = Medium (`video-size-medium`).

Business Purpose: Secondary videos.

Visual Example:

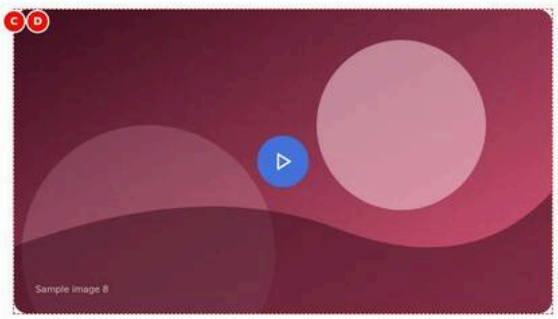

Figure 24: Variation example — The Video block at 1440 px in Size Medium (640 px): a rounded 16:9 poster photo-8.svg (red tones) with the centred Play button, centred in the section. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-size-medium.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-size-medium.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px in Size Medium (640 px): a rounded 16:9 poster photo-8.svg (red tones) with the centred Play button, centred in the section.
Business Context	A supporting clip within an article, kept smaller so it sits with the text rather than dominating the page.
Author Objective	Add a Video with a poster and alt text and set Size to Medium (640px).

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset photo-8.svg (/en/media/photo-8.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
D	Poster Image Alt Text (Video › Video)	Retail analytics dashboard on a tablet	No	Alt text of the poster	Describe, or leave empty if decorative	None
(E)	Size (Video › Display)	Medium (640px)	No	Maximum width	—	Enforced: option list

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 640 x 360 px rounded poster with the Play button, centred with wide white margins.
- **Rendering behaviour:** Size Medium sets a 40rem maximum width; on mobile the video fills the column; the ratio is kept.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and photo-8.svg must be published as assets.

Business Rules

- Medium works with Alignment (Center by default).
- Margin left / right on the Additional tab override Alignment.
- The poster alt text Retail analytics dashboard on a tablet describes the poster.
- Below 640 px of content width the video fills the column.

Common Authoring Mistakes

Error	Root Cause	Resolution
The video and the text around it are not aligned	Medium video centred under left-aligned text	Set Alignment to Left to line it up with the text
The video should sit beside the text	The block does not wrap text	Use the Columns block for side-by-side layouts

Troubleshooting

- **Symptoms:** The Medium video renders at 900 px.
- **Cause:** The Size change was not saved, or the page was not republished after the change.
- **Resolution:** Set Size to Medium (640px) again and publish the page.

- **Verification Steps:** On aem.page the block has the class video-size-medium and is 640 px wide.

Use Cases: Supporting clips in articles.

Authoring Guidelines: Size = Medium (640px).

Business Rules: Works with Alignment.

Rendering Rules: Max width 40rem.

Responsive Behaviour: Full width on mobile.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 24 — Size Small (420px)

Variation Name: Size = Small (`video-size-small`).

Business Purpose: Compact or vertical videos.

Visual Example:

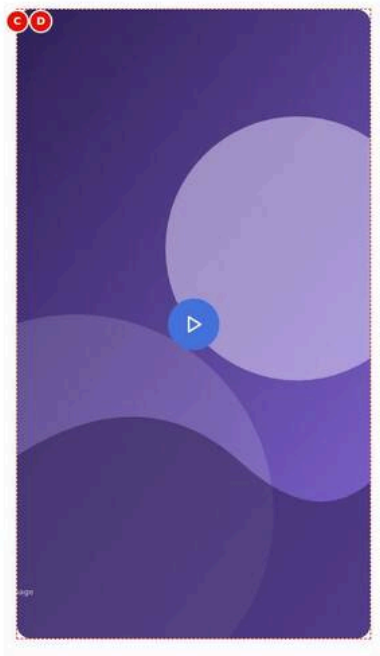

Figure 25: Variation example — The Video block at 1440 px in Size Small (420 px), Aspect Ratio 9:16 and Alignment Left: a tall rounded vertical poster tall.svg with the Play button at the left edge of the section's content. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-size-small.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-size-small.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px in Size Small (420 px), Aspect Ratio 9:16 and Alignment Left: a tall rounded vertical poster tall.svg with the Play button at the left edge of the section's content.
Business Context	A vertical client story clip placed at the start of the column, as in editorial layouts where media lines up with the text.
Author Objective	Add a vertical Video, Size Small (420px), Aspect Ratio 9:16 (vertical), aligned Left.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Client story in 60 seconds	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset tall.svg (/en/media/tall.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
D	Poster Image Alt Text (Video › Video)	Consultant presenting to a client team	No	Alt text of the poster	Describe, or leave empty if decorative	None
(E)	Aspect Ratio (Video › Display)	9:16 (vertical)	No	Shape of the media area	Match the video	Enforced: option list
(F)	Size (Video › Display)	Small (420px)	No	Maximum width	—	Enforced: option list
(G)	Alignment (Video › Display)	Left	No	Horizontal position	For sizes other than Full width	Enforced: option list

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 420 x 747 px rounded vertical poster with the Play button, at the left of the section, with empty space to its right.
- **Rendering behaviour:** Size Small sets a 26.25rem maximum width and Left sets margin-inline: 0 auto (in right-to-left pages it aligns to the start side); below 420 px of content width it fills the column.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and tall.svg must be published as assets.

Business Rules

- Small is recommended for 9:16 and 1:1 videos.
- Alignment Left uses logical margins: start side, so the right in right-to-left pages.
- Text is not wrapped around the video; the space beside it stays empty.
- The poster alt text Consultant presenting to a client team describes the poster.

Common Authoring Mistakes

Error	Root Cause	Resolution
Text was expected to flow beside the video	The Video block does not float	Use the Columns block to put text beside a video
The video is centred instead of left	Alignment left on Center	Set Alignment to Left

Troubleshooting

- **Symptoms:** On a phone the vertical video is centred and fills the column, not on the left.
- **Cause:** The content width is below 420 px, so the Small video fills it; Alignment has no visible effect.
- **Resolution:** Expected behaviour; nothing to change for phones.
- **Verification Steps:** Preview at 390 px and at 1440 px: full column on the phone, left-aligned 420 px on desktop.

Use Cases: 9:16 and 1:1 clips.

Authoring Guidelines: Size = Small (420px).

Business Rules: Works with Alignment.

Rendering Rules: Max width 26.25rem.

Responsive Behaviour: Full width only below 420px of content width.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 25 — Alignment Center

Variation Name: Alignment = Center (`video-align-center`, default).

Business Purpose: Balanced layout.

Visual Example:

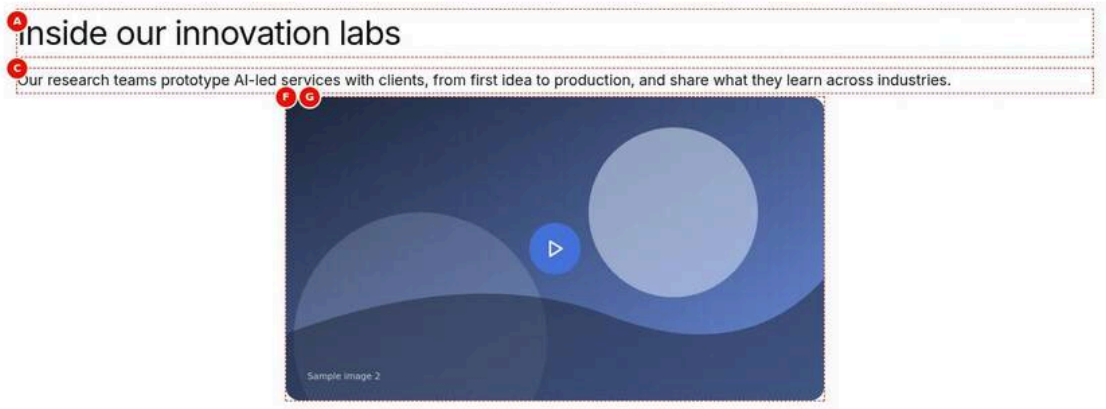

Figure 26: Variation example — A section at 1440 px: the H2 Inside our innovation labs and a line of body text, left-aligned, and below them a Size Medium (640 px) 16:9 Video with the poster photo-2.svg and Play button, centred in the section. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-align-center.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-align-center.jpg`
Screenshot Purpose	Variation example
Screen Description	A section at 1440 px: the H2 Inside our innovation labs and a line of body text, left-aligned, and below them a Size Medium (640 px) 16:9 Video with the poster photo-2.svg and Play button, centred in the section.
Business Context	An innovation lab section where a heading and short introduction lead into a supporting video placed in the middle of the column.
Author Objective	Add a Title, a Text and a Medium Video below them, keeping Alignment on Center.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Inside our innovation labs	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Our research teams prototype AI-led services with clients, from first idea to production, and share what they learn across industries.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(D)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(E)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
F	Poster Image (Video › Video)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
G	Poster Image Alt Text (Video › Video)	Data centre corridor with server racks	No	Alt text of the poster	Describe, or leave empty if decorative	None
(H)	Size (Video › Display)	Medium (640px)	No	Maximum width	—	Enforced: option list
(I)	Alignment (Video › Display)	Center (default, keep)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The left-aligned heading and paragraph, then the 640 x 360 px rounded poster with the Play button centred under them.
- **Rendering behaviour:** Alignment Center keeps margin: 0 auto, visible because the Medium video is narrower than the 1280 px section; on mobile the video fills the column.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the Title and Text are part of the page; the MP4 and photo-2.svg must be published as assets.

Business Rules

- Center is the default Alignment and the fallback for unknown values.
- Alignment applies only to sizes other than Full width.
- The Title component's H2 is the heading of the section; the Video's Title is not displayed.
- Margin left / right on the Additional tab override Alignment.

Common Authoring Mistakes

Error	Root Cause	Resolution
The video heading is missing on the page	The heading was entered in the Video's Title field	Add a Title component above the Video for a visible heading
The centred video looks detached from the left-aligned text	Center kept under left-aligned text	Use Alignment Left to line up with the text

Troubleshooting

- **Symptoms:** The video is not centred but at the left.
- **Cause:** Margin right is set on the Additional tab, which overrides the centring margins.
- **Resolution:** Clear Margin left / right.
- **Verification Steps:** On aem.page the 640 px video has equal space on both sides.

Use Cases: Default.

Authoring Guidelines: Display tab > Alignment = Center.

Business Rules: For sizes other than Full width.

Rendering Rules: `margin: 0 auto`.

Responsive Behaviour: Visible only when the video is narrower than the content.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 26 — Alignment Left

Variation Name: Alignment = Left (`video-align-left`).

Business Purpose: Align with left-aligned text.

Visual Example:

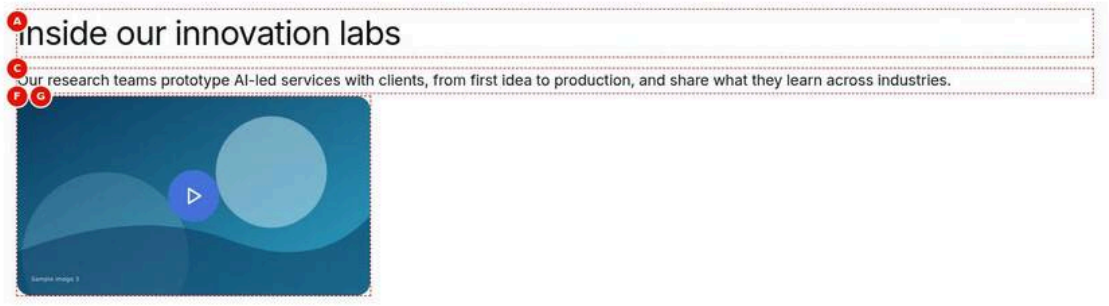

Figure 27: Variation example — A section at 1440 px: the H2 Inside our innovation labs and body text, then a Size Small (420 px) 16:9 Video with the poster photo-3.svg and Play button aligned with the left edge of the text. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-align-left.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-align-left.jpg`
Screenshot Purpose	Variation example
Screen Description	A section at 1440 px: the H2 Inside our innovation labs and body text, then a Size Small (420 px) 16:9 Video with the poster photo-3.svg and Play button aligned with the left edge of the text.
Business Context	An editorial layout where the video lines up with the start of the text column above it.
Author Objective	Add a Title, a Text and a Small Video below them with Alignment Left.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Inside our innovation labs	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Our research teams prototype AI-led services with clients, from first idea to production, and share what they learn across industries.	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(D)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(E)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
F	Poster Image (Video › Video)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
G	Poster Image Alt Text (Video › Video)	Team reviewing a cloud migration plan	No	Alt text of the poster	Describe, or leave empty if decorative	None
(H)	Size (Video › Display)	Small (420px)	No	Maximum width	—	Enforced: option list
(I)	Alignment (Video › Display)	Left	No	Horizontal position	For sizes other than Full width	Enforced: option list

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The heading and paragraph, then a 420 x 236 px rounded poster with the Play button at the left, empty space to the right.
- **Rendering behaviour:** Alignment Left sets margin-inline: 0 auto (start side); below 420 px of content width the video fills the column.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and photo-3.svg must be published as assets.

Business Rules

- Left aligns to the start side; in right-to-left pages that is the right.
- Alignment applies only to Large, Medium and Small.
- The poster alt text Team reviewing a cloud migration plan describes the poster.
- Text does not wrap beside the video.

Common Authoring Mistakes

Error	Root Cause	Resolution
The small video leaves a large gap to its right	Small and Left chosen for a wide section	Accept it, or use Columns for text beside the video
Left alignment shows centred	Size is Full width, where Alignment has no effect	Choose Small, Medium or Large

Troubleshooting

- **Symptoms:** The video starts a little right of the text edge.
- **Cause:** Margin left or Padding left is set on the Additional tab.
- **Resolution:** Clear Margin left and Padding left.
- **Verification Steps:** On aem.page the video's left edge lines up with the heading.

Use Cases: Editorial layouts.

Authoring Guidelines: Alignment = Left.

Business Rules: For sizes other than Full width; uses logical margins, so in right-to-left pages "Left" aligns to the start (right) side.

Rendering Rules: `margin-inline: 0 auto`.

Responsive Behaviour: As above.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 27 — Alignment Right

Variation Name: Alignment = Right (`video-align-right`).

Business Purpose: Align to the end of the column.

Visual Example:

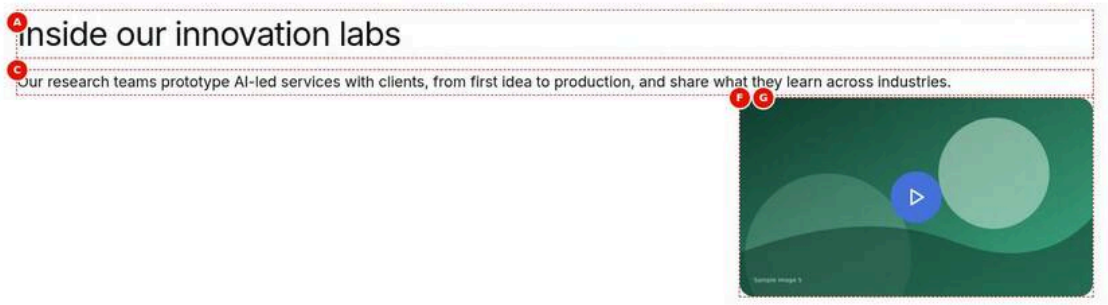

Figure 28: Variation example — A section at 1440 px: the H2 Inside our innovation labs and body text, then a Size Small (420 px) 16:9 Video with the poster photo-5.svg (green) and Play button aligned to the right edge of the section's content. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-align-right.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-align-right.jpg`
Screenshot Purpose	Variation example
Screen Description	A section at 1440 px: the H2 Inside our innovation labs and body text, then a Size Small (420 px) 16:9 Video with the poster photo-5.svg (green) and Play button aligned to the right edge of the section's content.
Business Context	An editorial layout where the supporting video is placed at the end of the column, balancing left-aligned text.
Author Objective	Add a Title, a Text and a Small Video below them with Alignment Right.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Inside our innovation labs	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Our research teams prototype AI-led services with clients, from first idea to production, and share what they learn across industries.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(D)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(E)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
F	Poster Image (Video › Video)	Select the asset photo-5.svg (/en/media/photo-5.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
G	Poster Image Alt Text (Video › Video)	Wind turbines monitored by a digital twin	No	Alt text of the poster	Describe, or leave empty if decorative	None
(H)	Size (Video › Display)	Small (420px)	No	Maximum width	—	Enforced: option list
(I)	Alignment (Video › Display)	Right	No	Horizontal position	For sizes other than Full width	Enforced: option list

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The heading and paragraph on the left, then a 420 x 236 px rounded poster with the Play button at the right edge.
- **Rendering behaviour:** Alignment Right sets margin-inline: auto 0 (end side); below 420 px of content width the video fills the column.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and photo-5.svg must be published as assets.

Business Rules

- Right aligns to the end side; in right-to-left pages that is the left.
- Alignment applies only to Large, Medium and Small.
- The poster alt text Wind turbines monitored by a digital twin describes the poster.
- Margin right on the Additional tab moves the video in from the edge and overrides the alignment margin.

Common Authoring Mistakes

Error	Root Cause	Resolution
The right-aligned video is far from the text it illustrates	Text left, video right in one column	Use Center or Left, or Columns for a side-by-side layout
Alignment Right has no effect	Size is Full width	Choose Small, Medium or Large

Troubleshooting

- **Symptoms:** The video sits at the left in a right-to-left locale preview.
- **Cause:** Alignment uses logical margins: Right means the end side, the left in right-to-left pages.
- **Resolution:** Expected; choose Left if the video must be on the right in right-to-left pages.
- **Verification Steps:** Check the page in its locale on aem.page.

Use Cases: Editorial layouts.

Authoring Guidelines: Alignment = Right.

Business Rules: As Left (logical: end side).

Rendering Rules: `margin-inline: auto 0`.

Responsive Behaviour: As above.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 28 — Rounded corners

Variation Name: Rounded Corners = on (`video-rounded`, default).

Business Purpose: Site design language (1rem radius).

Visual Example:

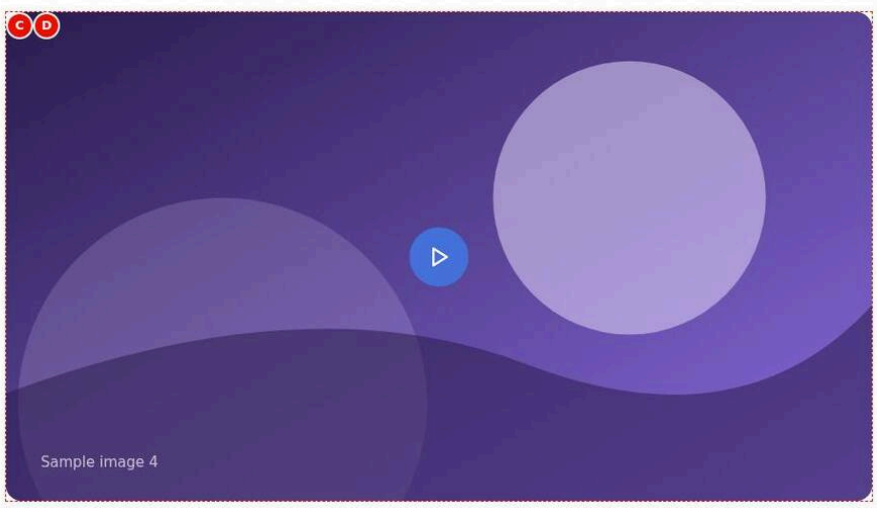

Figure 29: Variation example — The Video block at 1440 px: a Large 16:9 poster photo-4.svg (purple) with the centred Play button and the default 1rem rounded corners. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-rounded.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-rounded.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px: a Large 16:9 poster photo-4.svg (purple) with the centred Play button and the default 1rem rounded corners.
Business Context	A standard content video following the site's design language of softly rounded media.
Author Objective	Add a Video with a poster and alt text, keeping Rounded Corners on.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset photo-4.svg (/en/media/photo-4.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
D	Poster Image Alt Text (Video › Video)	Developers pair programming	No	Alt text of the poster	Describe, or leave empty if decorative	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(E)	Rounded Corners (Video › Display)	On (default, keep)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 900 x 506 px poster with 1rem (16 px) rounded corners and the Play button.
- **Rendering behaviour:** Rounded Corners on adds the class video-rounded, which sets –video-radius: var(–radius-l) on the media area; the poster and player are clipped to it at all breakpoints.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and photo-4.svg must be published as assets.

Business Rules

- Rounded Corners is on by default.
- The radius applies to the media area only; caption and transcript are below it.
- The radius is the same on all breakpoints.
- The poster alt text Developers pair programming describes the poster.

Common Authoring Mistakes

Error	Root Cause	Resolution
Corners appear square in the YouTube player	None; the media area clips the frame to the radius	Nothing to fix; check the page was republished
Square corners were wanted for an edge-to-edge layout	Rounded Corners left on	Turn Rounded Corners off

Troubleshooting

- **Symptoms:** The corners are square on the published page.
- **Cause:** Rounded Corners was turned off on the Display tab, or the page was not republished after turning it back on.
- **Resolution:** Turn Rounded Corners on and republish.
- **Verification Steps:** On aem.page the block has the class video-rounded.

Use Cases: Default.

Authoring Guidelines: Display tab > Rounded Corners on.

Business Rules: Default on.

Rendering Rules: `--video-radius: var(--radius-l)` on the media area.

Responsive Behaviour: Same radius on all breakpoints.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 29 — Square corners

Variation Name: Rounded Corners = off.

Business Purpose: Edge-to-edge or technical layouts.

Visual Example:

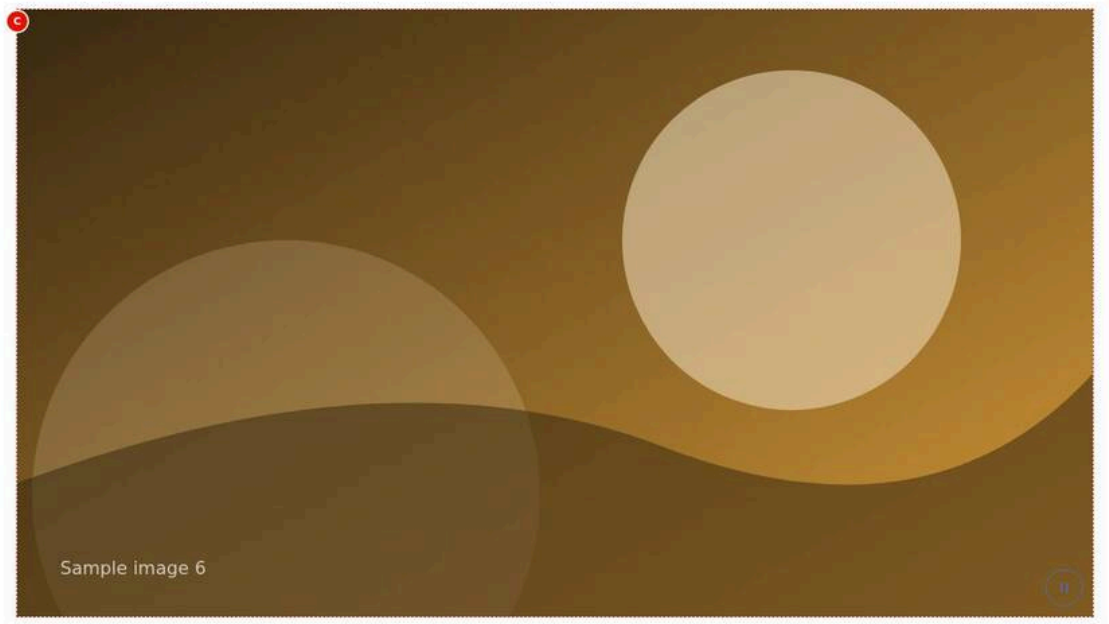

Figure 30: Variation example — The Video block at 1440 px: a full-width 16:9 background video with square corners across the section's content width, showing the poster photo-6.svg and the pause button in the bottom-right corner. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-square-corners.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-square-corners.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px: a full-width 16:9 background video with square corners across the section's content width, showing the poster photo-6.svg and the pause button in the bottom-right corner.
Business Context	An ambient campus video at the top of a campaign section, with square edges for a technical, edge-to-edge look.
Author Objective	Add a Background video, Size Full width, with Rounded Corners off.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Campus ambience	No (Recommended)	Accessible name; Play label	Describe the video	None

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Poster Image (Video › Video)	Select the asset photo-6.svg (/en/media/photo-6.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
(D)	Playback (Video › Playback)	Background video (autoplay, muted, loop, no controls)	No	How the video starts	Play button for most videos	Enforced: option list
(E)	Size (Video › Display)	Full width	No	Maximum width	—	Enforced: option list
(F)	Rounded Corners (Video › Display)	Off	No	1rem radius	—	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 1280 x 720 px poster with square corners, no Play button and the round pause toggle in the corner.
- **Rendering behaviour:** Without video-rounded the media area keeps –video-radius: 0. The background video starts muted and looping when in view, aria-hidden, with the toggle; the poster shows until the file can play.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the MP4 and photo-6.svg must be published as assets.

Business Rules

- Rounded Corners off gives square corners on all breakpoints.
- Background video is always muted, looping and without controls, with a pause toggle.
- Size Full width ignores Alignment.
- No poster alt text is needed for the decorative background player.

Common Authoring Mistakes

Error	Root Cause	Resolution
The square video still has a gap to the browser edges	Full width is the section's content width	Expected; the block does not go edge to edge
Rounded Corners off was expected to affect the caption	The radius applies only to the media area	Nothing to fix

Troubleshooting

- **Symptoms:** Corners stay rounded after turning the option off.
- **Cause:** The page was not republished, or the cached version is still served.
- **Resolution:** Publish the page again and reload without cache.
- **Verification Steps:** On aem.page the block has no video-rounded class and square corners.

Use Cases: Full-width background videos.

Authoring Guidelines: Rounded Corners off.

Business Rules: —

Rendering Rules: `--video-radius: 0`.

Responsive Behaviour: All breakpoints.

SEO Impact: None.

Accessibility Compliance: None specific.

Variation 30 — Privacy-enhanced mode on

Variation Name: Privacy-enhanced Mode = on (default).

Business Purpose: Reduce tracking by video providers.

Visual Example:

Steps — Variation example: DevTools showing the iframe src on www.youtube-nocookie.com.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	https://www.youtube.com/watch?v={video ID}
3	Video › Video	Title	TCS keynote: the future of enterprise AI
4	Video › Privacy	Privacy-enhanced Mode	On (default, keep)
5	Preview › Developer tools (Elements)	Inspect	The iframe in div.video-frame: src starts with https://www.youtube-nocookie.com/embed/

Use Cases: Default for all YouTube / Vimeo videos.

Authoring Guidelines: Privacy tab > Privacy-enhanced Mode on.

Business Rules: YouTube: `www.youtube-nocookie.com` (no cookies until the video plays, per the help text); Vimeo: `dnt=1`. No effect on files.

Rendering Rules: Player URL host / parameter.

Responsive Behaviour: n/a.

SEO Impact: None.

Accessibility Compliance: n/a. Privacy: supports data-protection requirements; consent management is not implemented ([To be confirmed: consent requirements — owner: privacy / legal]).

Variation 31 — Privacy-enhanced mode off

Variation Name: Privacy-enhanced Mode = off.

Business Purpose: Standard player behaviour (for example when YouTube features need the regular host).

Visual Example:

Steps — Variation example: DevTools showing the iframe src on www.youtube.com.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	https://www.youtube.com/watch?v={video ID}
3	Video › Video	Title	TCS keynote: the future of enterprise AI
4	Video › Privacy	Privacy-enhanced Mode	Off
5	Preview › Developer tools (Elements)	Inspect	The iframe in div.video-frame: src starts with https://www.youtube.com/embed/

Use Cases: Exceptions approved by privacy owners.

Authoring Guidelines: Privacy-enhanced Mode off.

Business Rules: YouTube `www.youtube.com`; Vimeo without `dnt`.

Rendering Rules: As above.

Responsive Behaviour: n/a.

SEO Impact: None.

Accessibility Compliance: n/a.

Variation 32 — Reduced motion (automatic)

Variation Name: Reduced motion fallback (not an author option).

Business Purpose: Respect visitors who ask the system to reduce motion.

Visual Example:

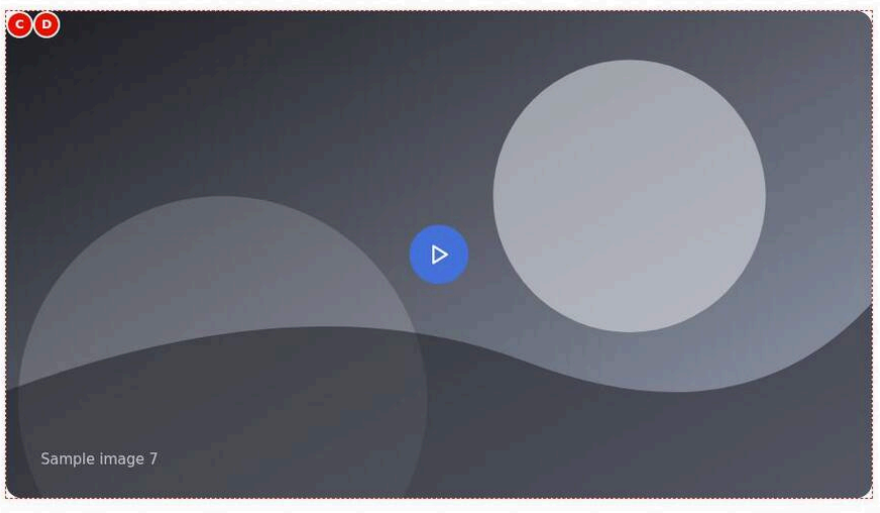

Figure 31: Variation example — The Video block at 1440 px, set to Background video, as seen with the operating system's Reduce motion on: a Large 16:9 rounded poster photo-7.svg with the centred Play button instead of a playing video. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-reduced-motion.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-reduced-motion.jpg`
Screenshot Purpose	Variation example
Screen Description	The Video block at 1440 px, set to Background video, as seen with the operating system's Reduce motion on: a Large 16:9 rounded poster photo-7.svg with the centred Play button instead of a playing video.
Business Context	Visitors who asked their system to reduce motion must not get moving video on their own; the same block still offers the video on request.
Author Objective	See how a Background video with a poster renders for a visitor with Reduce motion on.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
(A)	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
(B)	Title (Video › Video)	Campus ambience	No (Recommended)	Accessible name; Play label	Describe the video	None
C	Poster Image (Video › Video)	Select the asset photo-7.svg (/en/media/photo-7.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
D	Poster Image Alt Text (Video › Video)	Operations centre with large displays	No	Alt text of the poster	Describe, or leave empty if decorative	None
(E)	Playback (Video › Playback)	Background video (autoplay, muted, loop, no controls)	No	How the video starts	Play button for most videos	Enforced: option list
(F)	Reduce motion (operating system setting) (Visitor's device)	On	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The rounded 900 px poster with the brand-blue Play button, no pause toggle, exactly like Play button playback.
- **Rendering behaviour:** prefersReducedMotion() turns the Playback into Play button: with a poster the poster and Play button show. Play then builds a normal player with controls and sound (Muted and Loop as set, both off here); without a poster the player loads without autoplay.
- **Publishing behaviour:** Nothing to publish beyond the page and its assets; the behaviour depends only on the visitor's device setting.

Business Rules

- Reduced motion is automatic; there is no author option.
- Always set a Poster Image for autoplay and background videos so this view looks meaningful.
- The poster alt text Operations centre with large displays is read out in this view.
- The Title Campus ambience names the Play button (Play video: Campus ambience).

Common Authoring Mistakes

Error	Root Cause	Resolution
Testers report the background video is broken	Their device has Reduce motion on	Expected; test with the setting off
A black area with only a Play button shows	No Poster Image on the background video	Add a Poster Image

Troubleshooting

- **Symptoms:** The background video never moves on one tester's laptop.
- **Cause:** Reduce motion (or Remove animations) is on in the operating system.
- **Resolution:** Expected behaviour; turn the setting off to test autoplay.
- **Verification Steps:** With the setting off, reload the page: the poster gives way to the playing video and the pause toggle shows.

Use Cases: All autoplay and background videos.

Authoring Guidelines: Nothing to set; always provide a Poster Image for autoplay / background videos so the reduced-motion view looks good.

Business Rules: With `prefers-reduced-motion: reduce`, Playback is treated as Play button (with a poster or pop-up: poster + Play; else the player without autoplay).

Rendering Rules: As Variations 4–6.

Responsive Behaviour: All breakpoints.

SEO Impact: None.

Accessibility Compliance: WCAG 2.2.2 / 2.3.3 good practice.

Variation 33 — Blocks authored with an earlier model (compatibility)

Variation Name: Legacy Video blocks (link + picture + "autoplay" option, or one row per field).

Business Purpose: Existing pages keep working after the model became key-value.

Visual Example:

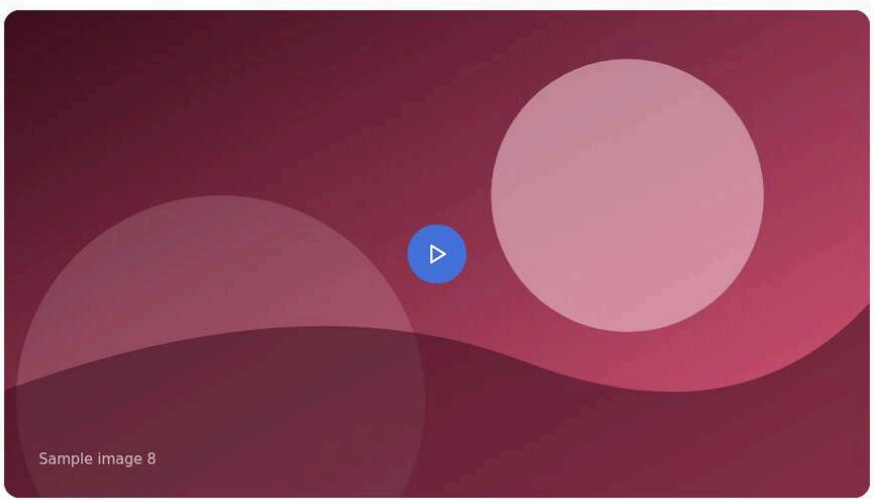

Figure 32: Variation example — A Video block authored with the earlier model at 1440 px: a Large 16:9 rounded poster photo-8.svg (red tones) with the centred Play button, rendered like the current Play button playback. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/video-legacy.jpg)

Screenshot Details — Variation example

Item	Detail
Screenshot Name	`screenshots/video-legacy.jpg`
Screenshot Purpose	Variation example
Screen Description	A Video block authored with the earlier model at 1440 px: a Large 16:9 rounded poster photo-8.svg (red tones) with the centred Play button, rendered like the current Play button playback.

Item	Detail
Business Context	Pages created before the Video model became key-value keep working, so existing content does not need to be re-authored after the upgrade.
Author Objective	Confirm an existing Video block (link, placeholder image, no Auto Play option) renders correctly without re-authoring.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Component (Existing page (block created before the current model))	Video	No	—	—	None
(B)	Video (Video (earlier model))	Select the asset /content/dam/tcs-corp/videos/tcs-brand-film.mp4	No	—	—	None
(C)	Options (Video (earlier model))	none (Auto Play not selected)	No	—	—	None
(D)	Placeholder Image (Video (earlier model))	Select the asset photo-8.svg (/en/media/photo-8.svg)	No	—	—	None
(E)	Placeholder Image Alt Text (Video (earlier model))	Retail analytics dashboard on a tablet	No	—	—	None
—	Result (Preview)	Renders as Playback = Play button with the poster (no re-authoring needed)	—	Check on the preview (not stored in the content)	Renders as Playback = Play button with the poster (no re-authoring needed)	—

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The same poster with Play button as a current block: 900 px, 16:9, rounded, centred.
- **Rendering behaviour:** With no uri property the first link is the video and the first picture the poster; without the autoplay class Playback is Play button. Display options take the current defaults (16:9, Large, Center, rounded), and Title falls back to Video.
- **Publishing behaviour:** Nothing changes on publish; re-opening and saving the block in Universal Editor moves it to the current fields, after which it must be published again.

Business Rules

- No uri property: the first link is the video and the first picture the poster.
- The earlier Auto Play option (autoplay class) becomes Background video; without it, Play button.
- Blocks saved one row per field are read by position when the Playback row is click, autoplay or background.
- The Play button reads Play video, because the earlier model had no Title.

Common Authoring Mistakes

Error	Root Cause	Resolution
An old block autoplays muted and loops unexpectedly	Auto Play was selected in the earlier model and now means Background video	Re-open the block, choose the Playback wanted and save
Caption or transcript cannot be added to an old block	The earlier model has no such fields in the delivered content	Re-open and save the block to use the current fields

Troubleshooting

- **Symptoms:** An old Video block shows nothing after the upgrade.
- **Cause:** Its content has neither a link nor a uri row, for example the link was removed.
- **Resolution:** Open the block and select the video in Video; save and publish.
- **Verification Steps:** On aem.page the poster and Play button render.

Use Cases: Pages created before the current model.

Authoring Guidelines: Re-open and save the block to move to the current fields when convenient.

Business Rules: If no `uri` property exists: the first link is the video, the first picture the poster, and an `autoplay` block class means Background video (else Play button). Blocks delivered as one row per field (in dialog order) are read positionally when the Playback row holds click / autoplay / background.

Rendering Rules: As the current model.

Responsive Behaviour: As the current model.

SEO Impact: None.

Accessibility Compliance: As the current model (Title defaults to "Video").

6.28.4 Authoring Experience

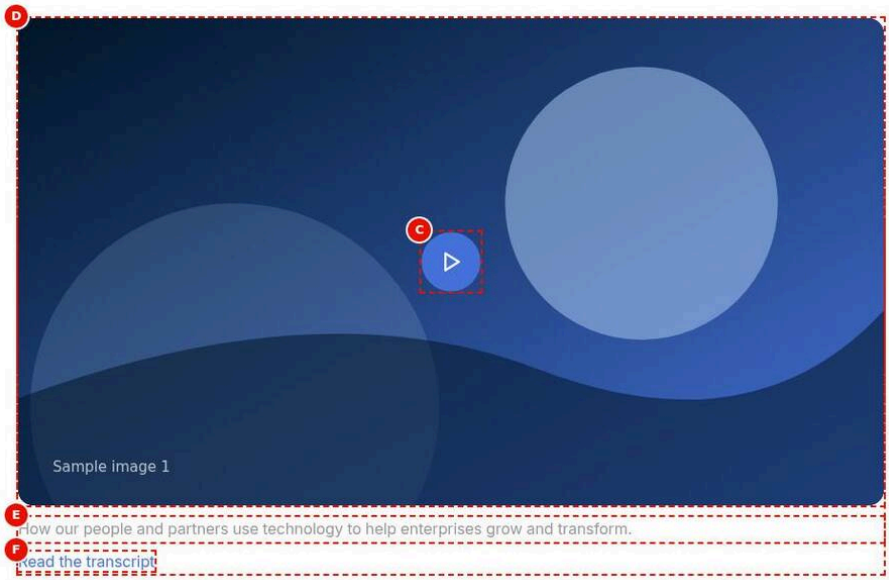

Figure 33: Universal Editor canvas — The Video block in Universal Editor edit mode at 1440 px with sample content: the poster photo-1.svg, the Play button (C), the media area (D), the caption (E) and the Read the transcript link (F), outlined with red dashed boxes; markers A, B and G are not drawn. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/video-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/video-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	The Video block in Universal Editor edit mode at 1440 px with sample content: the poster photo-1.svg, the Play button (C), the media area (D), the caption (E) and the Read the transcript link (F), outlined with red dashed boxes; markers A, B and G are not drawn.
Business Context	Authors editing the brand film on the English About page select the block on the canvas to open its properties.
Author Objective	Select the Video block in edit mode and see which canvas parts come from which fields.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Video	Yes	Adds the Video to the page	Select the section in the content tree, choose Add (+) and pick Video	Only components the section allows (section filter)
—	Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4	Yes	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it
—	Title (Video › Video)	Building on belief: the TCS brand film	No (Recommended)	Accessible name; Play label	Describe the video	None
—	Caption (Video › Video)	How our people and partners use technology to help enterprises grow and transform.	No	Text below the video	One or two sentences	None
—	Transcript (Video › Video)	Select the page or enter /en/about/brand-film-transcript	No	Link to a transcript	Page or PDF	None
—	Poster Image (Video › Video)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No (Recommended)	Image before playback	Same ratio as the video	None
—	Poster Image Alt Text (Video › Video)	Engineers collaborating in a modern office	No	Alt text of the poster	Describe, or leave empty if decorative	None
—	Mode (Universal Editor)	Edit; select the Video block (properties panel on the Video tab)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The rounded 16:9 poster with the Play button, the grey caption and the transcript link, each with a lettered red marker.
- **Rendering behaviour:** In the editor the caption keeps its rich-text instrumentation (fromCell) so it can be edited; the Play button and the transcript text are generated by the code and cannot be edited on the canvas.

- **Publishing behaviour:** Edits are saved to the page in AEM; Publish sends it to aem.page or aem.live. The poster, video and transcript page are published separately as assets and page.

Business Rules

- Select the block to open its properties on the Video tab; all tabs are always visible (no conditions).
- Fields that do not apply to the source or playback are ignored by the code, not hidden.
- The Play button label and the transcript link text are generated, not authored.
- Video is required in the dialog.

Common Authoring Mistakes

Error	Root Cause	Resolution
The author tries to type over the Play button label	The button is generated from the Title	Change the Title field instead
Captions file set but not visible in the editor	Captions only show in the player after Play	Preview and play the video to check captions

Troubleshooting

- **Symptoms:** On the canvas the media area is black with only the Play button; no poster shows.
- **Cause:** Poster Image is empty (only Poster Image Alt Text was filled) or the selected asset was moved or deleted.
- **Resolution:** Select the asset again in Poster Image on the Video tab and save.
- **Verification Steps:** The canvas shows the poster photo-1.svg behind the Play button and Preview shows the same.

Annotations:

- A = The Video block (select to open its properties)
- B = The poster image (Poster Image + Poster Image Alt Text)
- C = The Play button (generated; its label uses the Title)
- D = The media area (shows the player after Play / when in view; aspect ratio, size, alignment and corners from the Display tab)
- E = The caption (Caption, rich text)
- F = The transcript link (Transcript)
- G = The pause / stop toggle (generated for autoplay without controls and background videos)

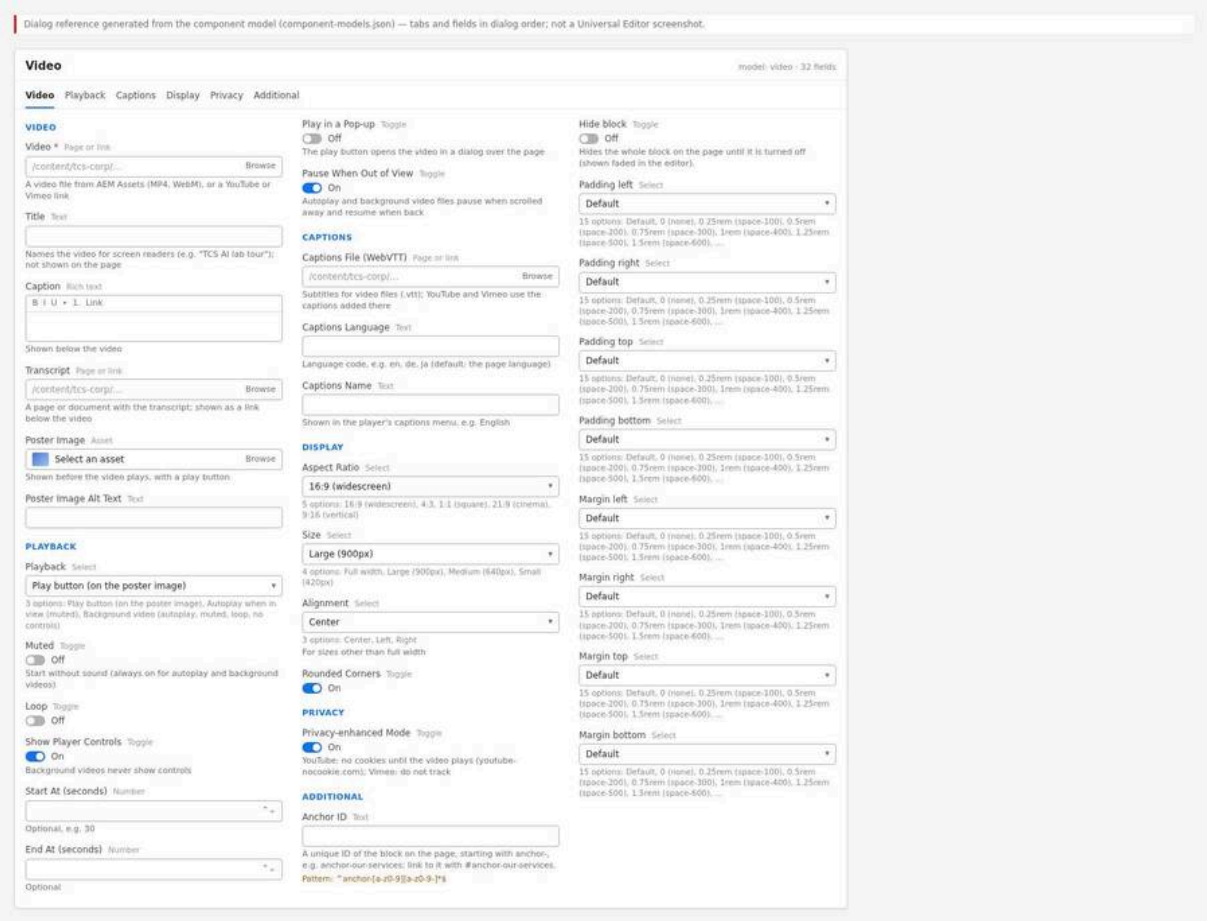

Figure 34: Properties panel — The Video properties panel with its tabs Video, Playback, Captions, Display, Privacy and Additional. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/video-properties-panel.jpg)

Properties panel tabs:

- **Video:** Video (required: asset or link); Title; Caption (rich text); Transcript (page or document); Poster Image; Poster Image Alt Text.
- **Playback:** Playback (Play button (on the poster image) / Autoplay when in view (muted) / Background video (autoplay, muted, loop, no controls)); Muted; Loop; Show Player Controls; Start At (seconds); End At (seconds); Play in a Pop-up; Pause When Out of View.
- **Captions:** Captions File (WebVTT); Captions Language; Captions Name.
- **Display:** Aspect Ratio (16:9, 4:3, 1:1, 21:9, 9:16); Size (Full width, Large (900px), Medium (640px), Small (420px)); Alignment (Center, Left, Right); Rounded Corners.
- **Privacy:** Privacy-enhanced Mode.
- **Additional:** Anchor ID; Hide block; Padding left / right / top / bottom; Margin left / right / top / bottom.

None of the fields has a `condition`: all are always visible; fields that don't apply to the chosen source or playback are ignored by the code (see Field details).

6.28.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: Open the page with **Edit** from AEM Sites.

Expected Result: The page is in edit mode.

Steps — Authoring step: The page open in Universal Editor.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	/content/tcs-corp/us/en › the page
2	AEM Sites console	Select the page	Check the page card
3	AEM Sites toolbar	Edit	Opens the page in Universal Editor (edit mode)

Step 2 — Upload or locate the assets

Action: In AEM Assets, upload the web-optimised video (MP4 / WebM), the poster image and, for files, the `.vtt` captions under `/content/dam/tcs-corp/…` (skip for YouTube / Vimeo except the poster).

Expected Result: The assets are available in the asset picker.

Steps — Authoring step: AEM Assets folder with the MP4, the poster JPG and the VTT file.

Step	Where	Field / control	Value / action
1	AEM Assets › Files	Navigate	/content/dam/tcs-corp/videos
2	AEM Assets toolbar	Upload	tcs-brand-film.mp4 (web-optimised MP4 or WebM)
3	AEM Assets toolbar	Upload	tcs-brand-film-poster.jpg (poster image)
4	AEM Assets toolbar	Upload	tcs-brand-film-en.vtt (captions, video files only)

Step 3 — Add the Video block

Action: Select the section, choose **Add** (+), select **Video**.

Expected Result: A Video block with defaults (Play button, controls on, 16:9, Large, Center, rounded, privacy on) is added; nothing renders until Video is set.

Steps — Authoring step: The Add menu with Video and the new block in the content tree.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section
2	Universal Editor › Content tree	Section › Add (+)	Video
3	Universal Editor › Content tree	New item	Video (with the defaults: Play button, controls on, 16:9, Large, Center, rounded, privacy on)

Step 4 — Video tab

Action: Set **Video** (pick the asset or paste the YouTube / Vimeo URL); type a **Title** (names the video for screen readers); optionally a **Caption** and a **Transcript**; choose a **Poster Image** and its **Alt Text**.

Expected Result: The poster with the Play button renders (or the player, without poster).

Steps — Authoring step: The Video tab filled in.

Step	Where	Field / control	Value / action
1	Video › Video	Video	Select the asset /content/dam/tcs-corp/videos/tcs-brand-film.mp4 (or paste the YouTube / Vimeo URL)
2	Video › Video	Title	Building on belief: the TCS brand film
3	Video › Video	Caption	How our people and partners use technology to help enterprises grow and transform.

Step	Where	Field / control	Value / action
4	Video › Video	Transcript	Select the page /en/about/brand-film-transcript
5	Video › Video	Poster Image	Select the asset tcs-brand-film-poster.jpg
6	Video › Video	Poster Image Alt Text	Engineers collaborating in a modern office

Step 5 — Playback tab

Action: Choose **Playback**; set Muted, Loop, Show Player Controls, Start At / End At, Play in a Pop-up and Pause When Out of View as needed.

Expected Result: Settings saved; autoplay behaviour is visible in Preview.

Steps — Authoring step: The Playback tab with Playback set to Background video.

Step	Where	Field / control	Value / action
1	Video › Playback	Playback	Background video (autoplay, muted, loop, no controls)
2	Video › Playback	Muted	Off (always on for background videos)
3	Video › Playback	Loop	Off (always on for background videos)
4	Video › Playback	Show Player Controls	On (ignored for background videos)
5	Video › Playback	Start At (seconds) / End At (seconds)	Leave empty
6	Video › Playback	Play in a Pop-up	Off
7	Video › Playback	Pause When Out of View	On

Step 6 — Captions tab (video files)

Action: Select the **Captions File (WebVTT)**; enter **Captions Language** (e.g. `en`) and **Captions Name** (e.g. "English").

Expected Result: The captions option appears in the native player.

Steps — Authoring step: The Captions tab filled in.

Step	Where	Field / control	Value / action
1	Video › Captions	Captions File (WebVTT)	Select the asset /content/dam/tcs-corp/videos/tcs-brand-film-en.vtt
2	Video › Captions	Captions Language	en
3	Video › Captions	Captions Name	English

Step 7 — Display tab

Action: Choose **Aspect Ratio** (match the video), **Size**, **Alignment** and **Rounded Corners**.

Expected Result: The media area changes shape and size.

Steps — Authoring step: The Display tab with 9:16 and Small.

Step	Where	Field / control	Value / action
1	Video › Display	Aspect Ratio	9:16 (vertical)
2	Video › Display	Size	Small (420px)
3	Video › Display	Alignment	Center

Step	Where	Field / control	Value / action
4	Video › Display	Rounded Corners	On

Step 8 — Privacy tab

Action: Keep **Privacy-enhanced Mode** on unless an exception is approved.

Expected Result: YouTube uses youtube-nocookie.com; Vimeo gets do-not-track.

Steps — Authoring step: The Privacy tab.

Step	Where	Field / control	Value / action
1	Video › Privacy	Privacy-enhanced Mode	On (keep, unless an exception is approved)

Step 9 — Additional tab (optional)

Action: Set Anchor ID, Hide block, padding or margin.

Expected Result: Values accepted.

Steps — Authoring step: The Additional tab.

Step	Where	Field / control	Value / action
1	Video › Additional	Anchor ID	anchor-brand-film
2	Video › Additional	Hide block	Off
3	Video › Additional	Padding / Margin	Default

Step 10 — Preview and test

Action: Switch to **Preview**; play the video with mouse and keyboard; test the pop-up, the pause toggle, captions; check mobile width.

Expected Result: Playback works as configured.

Steps — Authoring step: The video playing in preview with captions on.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode
2	Preview	Play button	Click (or Tab to it and press Enter)
3	Preview › Player	Captions	Turn on English
4	Preview	Screen width	Check at mobile width

Step 11 — Validate and publish

Action: Run the Validation Process checklist; **Publish** the page together with the referenced assets (video, poster, captions, transcript).

Expected Result: The video plays on the live site.

Steps — Authoring step: The Publish dialog listing the page and its referenced assets.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Open the Publish dialog

Step	Where	Field / control	Value / action
2	Publish dialog	Items	The page and its references: tcs-brand-film.mp4, tcs-brand-film-poster.jpg, tcs-brand-film-en.vtt, the transcript page
3	Publish dialog	Destination	Publish to Live
4	Publish dialog	Publish	Confirm

Preview Process

1. Universal Editor **Preview** mode.
2. Edge Delivery preview `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}`; check that the video file URL loads (Network panel) — assets must be published / previewed with the page.
3. Test with the OS reduced-motion setting on (autoplay / background become Play button).

Publishing Process

Publish the page and its referenced assets from Universal Editor / AEM Sites (Manage Publication lists references). AEM Assets under `/content/dam/tcs-corp/` are delivered at their own path (included in `paths.json`).

Validation Process

- ☐ Video set (required) and playing in preview on desktop and mobile.
- ☐ Title set (descriptive, not "Video").
- ☐ Poster image set (mandatory in practice for autoplay / background and pop-up) with alt text or intentionally decorative.
- ☐ Aspect Ratio matches the video (no unwanted cropping of files).
- ☐ Video files have a WebVTT captions file with correct language; YouTube / Vimeo have captions on the platform.
- ☐ Transcript provided for videos with important information.
- ☐ Autoplay / background videos are muted and show the pause / stop toggle (or controls).
- ☐ Start At / End At correct (End after Start; End not available for Vimeo).
- ☐ Privacy-enhanced Mode on (unless an approved exception).
- ☐ Pop-up opens, plays, closes with Esc / Close, and focus returns.
- ☐ Assets published.

Rollback Process

1. Restore the previous page version and republish.
2. Turn on Hide block while fixing.
3. Replace the asset with the previous version in AEM Assets (asset versioning) and republish the asset.

The walkthroughs below repeat the steps above for each variation of chapter 6.28.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 4 — Play button on the poster image (inline)

Reproduces the screenshot `screenshots/video-play-button-poster.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Building on belief: the TCS brand film; **Poster Image** (C) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Poster Image Alt Text** (D) = Data centre corridor with server racks.

Expected Result: The poster photo-2.svg fills the 16:9 area with the Play button in its centre.

Step 4 — Fill in Video › Playback

Action: Select **Video** in the content tree and open the **Playback** tab of the properties panel. Enter: **Playback** (E) = Play button (on the poster image) (default, keep).

Expected Result: Playback stays on Play button (on the poster image); the canvas does not change.

Step 5 — Preview

Action: Action: Press Play: the video plays in place of the poster (second frame, not captured).

Expected Result: Pressing Play replaces the poster with the playing film and moves focus into the player.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 900 px wide rounded poster with the centred Play button (primary icon button scaled 1.4 times); nothing below the media area.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and photo-2.svg must be published as assets. The button labels come from the locale's placeholders sheet (playVideoTitle).

Step 8 — Verify

Action: On the live page check: Press Play on aem.page: the poster disappears, the film plays and focus is on the player.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Play in a Pop-up

Reproduces the screenshot `screenshots/video-popup.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Building on belief: the TCS brand film; **Poster Image** (C) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Poster Image Alt Text** (D) = Team reviewing a cloud migration plan.

Expected Result: The poster photo-3.svg appears with the Play button.

Step 4 — Fill in Video › Playback

Action: Select **Video** in the content tree and open the **Playback** tab of the properties panel. Enter: **Play in a Pop-up** (E) = On.

Expected Result: Play in a Pop-up on does not change the canvas; the poster and Play button stay.

Step 5 — Preview

Action: Action: Press the Play button on the poster.

Expected Result: Pressing Play dims the page and opens the dialog with the playing video and a Close button.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A dark backdrop over the header and page, a white rounded dialog, a close icon and the video player with play button, time 0:00 and timeline.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and photo-3.svg must be published as assets; the dialog labels dialog and close come from the published placeholders sheet.

Step 8 — Verify

Action: On the live page check: Open the pop-up on aem.page at 1440 px and check the whole player, including its right-hand controls, is visible.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — Autoplay without controls (with playback toggle)

Reproduces the screenshot `screenshots/video-autoplay-no-controls.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Building on belief: the TCS brand

film; **Poster Image** (C) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Poster Image Alt Text** (D) = Wind turbines monitored by a digital twin.

Expected Result: The poster photo-5.svg appears with the centred Play button.

Step 4 — Fill in Video › Playback

Action: Select **Video** in the content tree and open the **Playback** tab of the properties panel. Enter: **Playback** (E) = Autoplay when in view (muted); **Show Player Controls** (F) = Off.

Expected Result: The Play button disappears; the round pause toggle appears in the bottom-right corner and the clip starts muted when in view.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The rounded 900 px poster with no centre button and a small round secondary pause icon button 0.75rem from the bottom and right edges.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and photo-5.svg must be published as assets; the toggle labels pauseVideo and playVideo come from the published placeholders sheet.

Step 7 — Verify

Action: On the live page check: Scroll the block into view on aem.page with Reduce motion off: the poster gives way and the clip plays muted.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — Background video

Reproduces the screenshot `screenshots/video-background.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Campus ambience; **Poster Image** (C) = Select the asset photo-6.svg (/en/media/photo-6.svg).

Expected Result: The poster photo-6.svg appears with the centred Play button at the default 900 px size.

Step 4 — Fill in Video › Playback

Action: Select **Video** in the content tree and open the **Playback** tab of the properties panel. Enter: **Playback** (D) = Background video (autoplay, muted, loop, no controls).

Expected Result: The Play button is replaced by the pause toggle in the corner and the video starts muted and looping when in view.

Step 5 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Size** (E) = Full width.

Expected Result: Size Full width widens the video to the section's whole content width.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A wide rounded 16:9 poster spanning the content width, no Play button, no caption, and the small pause icon button in the corner.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and photo-6.svg must be published as assets. Keep the file short and small, as it is loaded automatically for every visitor.

Step 8 — Verify

Action: On the live page check: Check on aem.page that the pause button is visible and toggles to Play video when pressed.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 15 — Caption text and Transcript link

Reproduces the screenshot `screenshots/video-caption-transcript.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Building on belief: the TCS brand film; **Caption** (C) = How our people and partners use technology to help enterprises grow and transform; **Transcript** (D) = Select the page or enter /en/about/brand-film-transcript; **Poster Image** (E) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Poster Image Alt Text** (F) = Team reviewing a cloud migration plan.

Expected Result: The poster with the Play button appears at 900 px with the grey caption and the Read the transcript link below.

Step 4 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Size** (G) = Medium (640px).

Expected Result: Size Medium narrows the block to 640 px, centred, with the caption and link below it.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 640 px centred rounded poster with the Play button; 0.75rem below it the small grey caption; 0.5rem below that the small blue Read the transcript link.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the transcript page is a separate page and must be published too, or the link returns 404; the MP4 and poster are published as assets.

Step 7 — Verify

Action: On the live page check: On aem.page the grey caption shows directly below the media area.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 16 — Aspect ratio 16:9 (widescreen)

Reproduces the screenshot `screenshots/video-ratio-16-9.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Building on belief: the TCS brand film; **Poster Image** (C) = Select the asset photo-1.svg (/en/media/photo-1.svg); **Poster Image Alt Text** (D) = Engineers collaborating in a modern office.

Expected Result: The poster photo-1.svg appears in a 16:9 area with the Play button.

Step 4 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Aspect Ratio** (E) = 16:9 (widescreen) (default, keep).

Expected Result: Aspect Ratio stays on 16:9 (widescreen); the area keeps its 16:9 shape.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 900 x 506 px rounded poster area with the Play button in its centre.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and photo-1.svg must be published as assets.

Step 7 — Verify

Action: On the live page check: On aem.page the provider player fills the area without bars.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 17 — Aspect ratio 4:3

Reproduces the screenshot `screenshots/video-ratio-4-3.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Building on belief: the TCS brand film; **Poster Image** (C) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Poster Image Alt Text** (D) = Data centre corridor with server racks.

Expected Result: The poster photo-2.svg appears in the default 16:9 area with the Play button.

Step 4 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Aspect Ratio** (E) = 4:3.

Expected Result: The area becomes 4:3, taller at the same 900 px width, and the poster is cropped at the sides.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A taller rounded 900 x 675 px poster area; the sides of the 16:9 sample poster are cropped (its label is cut at the left edge), with the Play button centred.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and photo-2.svg must be published as assets.

Step 7 — Verify

Action: On the live page check: Play the video on aem.page and check the full frame is visible.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 18 — Aspect ratio 1:1 (square)

Reproduces the screenshot `screenshots/video-ratio-1-1.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Building on belief: the TCS brand film; **Poster Image** (C) = Select the asset square-1.svg (/en/media/square-1.svg); **Poster Image Alt Text** (D) = Product designer sketching an app screen.

Expected Result: The poster square-1.svg appears in a 900 px 16:9 area, cropped, with the Play button.

Step 4 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Aspect Ratio** (E) = 1:1 (square); **Size** (F) = Medium (640px).

Expected Result: The area becomes a 640 px square, centred, showing the whole square poster.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 640 x 640 px rounded square poster centred in the section with the Play button in the middle.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and square-1.svg must be published as assets.

Step 7 — Verify

Action: On the live page check: On aem.page the 640 px square is centred in the section.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 19 — Aspect ratio 21:9 (cinema)

Reproduces the screenshot `screenshots/video-ratio-21-9.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Campus ambience; **Poster Image** (C) = Select the asset wide.svg (/en/media/wide.svg).

Expected Result: The poster wide.svg appears in a 900 px 16:9 area with the Play button.

Step 4 — Fill in Video › Playback

Action: Select **Video** in the content tree and open the **Playback** tab of the properties panel. Enter: **Playback** (D) = Background video (autoplay, muted, loop, no controls).

Expected Result: The Play button is replaced by the pause toggle in the corner; the video starts muted when in view.

Step 5 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Aspect Ratio** (E) = 21:9 (cinema); **Size** (F) = Full width.

Expected Result: The video spans the content width as a shallow 21:9 strip.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A wide, low rounded poster (about 1280 x 549 px) without a Play button, and the round pause icon button in its corner.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and wide.svg must be published as assets.

Step 8 — Verify

Action: On the live page check: With Reduce motion off on the test device, the strip plays muted when scrolled into view.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 20 — Aspect ratio 9:16 (vertical)

Reproduces the screenshot `screenshots/video-ratio-9-16.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Client story in 60 seconds; **Poster Image** (C) = Select the asset tall.svg (/en/media/tall.svg); **Poster Image Alt Text** (D) = Consultant presenting to a client team.

Expected Result: The poster tall.svg appears cropped in a 900 px 16:9 area with the Play button.

Step 4 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Aspect Ratio** (E) = 9:16 (vertical); **Size** (F) = Small (420px).

Expected Result: The area becomes a 420 px wide vertical 9:16 rectangle, centred, showing the whole vertical poster.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A narrow, tall rounded poster (420 x 747 px) centred in the section with the Play button in the middle.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and tall.svg must be published as assets.

Step 7 — Verify

Action: On the live page check: On aem.page the Short fills the narrow vertical area.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 21 — Size Full width

Reproduces the screenshot `screenshots/video-size-full.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Building on belief: the TCS brand film; **Poster Image** (C) = Select the asset wide.svg (/en/media/wide.svg); **Poster Image Alt Text** (D) = Aerial view of a technology campus.

Expected Result: The poster wide.svg appears in a 900 px 16:9 area with the Play button.

Step 4 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Size** (E) = Full width.

Expected Result: Size Full width widens the video to the section's whole content width.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 1280 x 720 px rounded poster with the Play button in the centre; the wide poster is cropped at its sides to 16:9.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and wide.svg must be published as assets.

Step 7 — Verify

Action: On the live page check: On aem.page at 1440 px the poster looks sharp.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 22 — Size Large (900px)

Reproduces the screenshot `screenshots/video-size-large.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Building on belief: the TCS brand film; **Poster Image** (C) = Select the asset photo-7.svg (/en/media/photo-7.svg); **Poster Image Alt Text** (D) = Operations centre with large displays.

Expected Result: The poster photo-7.svg appears 900 px wide at 16:9 with the Play button.

Step 4 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Size** (E) = Large (900px) (default, keep).

Expected Result: Size stays Large (900px); the canvas does not change.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 900 x 506 px rounded grey-toned poster with the Play button, centred in the 1280 px section.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and photo-7.svg must be published as assets.

Step 7 — Verify

Action: On the live page check: On aem.page at 1440 px the media area measures 900 px wide.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 23 — Size Medium (640px)

Reproduces the screenshot `screenshots/video-size-medium.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Building on belief: the TCS brand film; **Poster Image** (C) = Select the asset photo-8.svg (/en/media/photo-8.svg); **Poster Image Alt Text** (D) = Retail analytics dashboard on a tablet.

Expected Result: The poster photo-8.svg appears 900 px wide with the Play button.

Step 4 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Size** (E) = Medium (640px).

Expected Result: The video narrows to 640 px and stays centred.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 640 x 360 px rounded poster with the Play button, centred with wide white margins.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and photo-8.svg must be published as assets.

Step 7 — Verify

Action: On the live page check: On aem.page the block has the class video-size-medium and is 640 px wide.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 24 — Size Small (420px)

Reproduces the screenshot `screenshots/video-size-small.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Client story in 60 seconds; **Poster Image** (C) = Select the asset tall.svg (/en/media/tall.svg); **Poster Image Alt Text** (D) = Consultant presenting to a client team.

Expected Result: The poster tall.svg appears cropped in a 900 px 16:9 area with the Play button.

Step 4 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Aspect Ratio** (E) = 9:16 (vertical); **Size** (F) = Small (420px); **Alignment** (G) = Left.

Expected Result: The video becomes a 420 px vertical 9:16 area at the left of the section.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 420 x 747 px rounded vertical poster with the Play button, at the left of the section, with empty space to its right.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and tall.svg must be published as assets.

Step 7 — Verify

Action: On the live page check: Preview at 390 px and at 1440 px: full column on the phone, left-aligned 420 px on desktop.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 25 — Alignment Center

Reproduces the screenshot `screenshots/video-align-center.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title, a Text and a Video are added to the section one after the other.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Inside our innovation labs; **Title Type** (B) = h2.

Expected Result: The H2 Inside our innovation labs appears at the top of the section.

Step 4 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Title, a Text and a Video are added to the section one after the other.

Step 5 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Our research teams prototype AI-led services with clients, from first idea to production, and share what they learn across industries.

Expected Result: The paragraph about the research teams appears below the heading.

Step 6 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: A Title, a Text and a Video are added to the section one after the other.

Step 7 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (D) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (E) = Building on belief: the TCS brand film; **Poster Image** (F) = Select the asset photo-2.svg (/en/media/photo-2.svg); **Poster Image Alt Text** (G) = Data centre corridor with server racks.

Expected Result: The poster photo-2.svg appears 900 px wide with the Play button under the text.

Step 8 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Size** (H) = Medium (640px); **Alignment** (I) = Center (default, keep).

Expected Result: Size Medium narrows the video to 640 px; Alignment stays Center, so it is centred.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The left-aligned heading and paragraph, then the 640 x 360 px rounded poster with the Play button centred under them.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the Title and Text are part of the page; the MP4 and photo-2.svg must be published as assets.

Step 11 — Verify

Action: On the live page check: On aem.page the 640 px video has equal space on both sides.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 26 — Alignment Left

Reproduces the screenshot `screenshots/video-align-left.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title, a Text and a Video are added to the section.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Inside our innovation labs; **Title Type** (B) = h2.

Expected Result: The H2 Inside our innovation labs appears at the top of the section.

Step 4 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Title, a Text and a Video are added to the section.

Step 5 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Our research teams prototype AI-led services with clients, from first idea to production, and share what they learn across industries.

Expected Result: The paragraph appears below the heading.

Step 6 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: A Title, a Text and a Video are added to the section.

Step 7 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (D) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (E) = Building on belief: the TCS brand film; **Poster Image** (F) = Select the asset photo-3.svg (/en/media/photo-3.svg); **Poster Image Alt Text** (G) = Team reviewing a cloud migration plan.

Expected Result: The poster photo-3.svg appears 900 px wide, centred, with the Play button.

Step 8 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Size** (H) = Small (420px); **Alignment** (I) = Left.

Expected Result: The video shrinks to 420 px and moves to the left edge of the content.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The heading and paragraph, then a 420 x 236 px rounded poster with the Play button at the left, empty space to the right.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and photo-3.svg must be published as assets.

Step 11 — Verify

Action: On the live page check: On aem.page the video's left edge lines up with the heading.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 27 — Alignment Right

Reproduces the screenshot `screenshots/video-align-right.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Title

Action: Select the section in the content tree, choose **Add (+)** and pick **Title**.

Expected Result: A Title, a Text and a Video are added to the section.

Step 3 — Fill in Title

Action: Select **Title** in the content tree and enter in the properties panel: **Title** (A) = Inside our innovation labs; **Title Type** (B) = h2.

Expected Result: The H2 Inside our innovation labs appears at the top of the section.

Step 4 — Add the Text

Action: Select the section in the content tree, choose **Add (+)** and pick **Text**.

Expected Result: A Title, a Text and a Video are added to the section.

Step 5 — Fill in Text

Action: Select **Text** in the content tree and enter in the properties panel: **Text** (C) = Our research teams prototype AI-led services with clients, from first idea to production, and share what they learn across industries.

Expected Result: The paragraph appears below the heading.

Step 6 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: A Title, a Text and a Video are added to the section.

Step 7 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (D) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (E) = Building on belief: the TCS brand

film; **Poster Image** (F) = Select the asset photo-5.svg (/en/media/photo-5.svg); **Poster Image Alt Text** (G) = Wind turbines monitored by a digital twin.

Expected Result: The poster photo-5.svg appears 900 px wide, centred, with the Play button.

Step 8 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Size** (H) = Small (420px); **Alignment** (I) = Right.

Expected Result: The video shrinks to 420 px and moves to the right edge of the content.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The heading and paragraph on the left, then a 420 x 236 px rounded poster with the Play button at the right edge.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and photo-5.svg must be published as assets.

Step 11 — Verify

Action: On the live page check: Check the page in its locale on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 28 — Rounded corners

Reproduces the screenshot `screenshots/video-rounded.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Building on belief: the TCS brand film; **Poster Image** (C) = Select the asset photo-4.svg (/en/media/photo-4.svg); **Poster Image Alt Text** (D) = Developers pair programming.

Expected Result: The poster photo-4.svg appears with the Play button and rounded corners.

Step 4 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Rounded Corners** (E) = On (default, keep).

Expected Result: Rounded Corners stays on; the corners keep their 1rem radius.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 900 x 506 px poster with 1rem (16 px) rounded corners and the Play button.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and photo-4.svg must be published as assets.

Step 7 — Verify

Action: On the live page check: On aem.page the block has the class video-rounded.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 29 — Square corners

Reproduces the screenshot `screenshots/video-square-corners.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Campus ambience; **Poster Image** (C) = Select the asset photo-6.svg (/en/media/photo-6.svg).

Expected Result: The poster photo-6.svg appears with the Play button at 900 px.

Step 4 — Fill in Video › Playback

Action: Select **Video** in the content tree and open the **Playback** tab of the properties panel. Enter: **Playback** (D) = Background video (autoplay, muted, loop, no controls).

Expected Result: The Play button is replaced by the pause toggle; the video plays muted and looping when in view.

Step 5 — Fill in Video › Display

Action: Select **Video** in the content tree and open the **Display** tab of the properties panel. Enter: **Size** (E) = Full width; **Rounded Corners** (F) = Off.

Expected Result: The video spans the content width and its corners become square.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 1280 x 720 px poster with square corners, no Play button and the round pause toggle in the corner.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the MP4 and photo-6.svg must be published as assets.

Step 8 — Verify

Action: On the live page check: On aem.page the block has no video-rounded class and square corners.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 32 — Reduced motion (automatic)

Reproduces the screenshot `screenshots/video-reduced-motion.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Video

Action: Select the section in the content tree, choose **Add (+)** and pick **Video**.

Expected Result: An empty Video block is added to the section.

Step 3 — Fill in Video › Video

Action: Select **Video** in the content tree and open the **Video** tab of the properties panel. Enter: **Video** (A) = Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Title** (B) = Campus ambience; **Poster Image** (C) = Select the asset photo-7.svg (/en/media/photo-7.svg); **Poster Image Alt Text** (D) = Operations centre with large displays.

Expected Result: The poster photo-7.svg appears with the Play button.

Step 4 — Fill in Video › Playback

Action: Select **Video** in the content tree and open the **Playback** tab of the properties panel. Enter: **Playback** (E) = Background video (autoplay, muted, loop, no controls).

Expected Result: With Background video the Play button gives way to the pause toggle on a normal device.

Step 5 — Fill in Visitor's device

Action: Select **Visitor's device** in the content tree and enter in the properties panel: **Reduce motion (operating system setting)** (F) = On.

Expected Result: With Reduce motion on, the poster and Play button return and the video does not start by itself.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The rounded 900 px poster with the brand-blue Play button, no pause toggle, exactly like Play button playback.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Nothing to publish beyond the page and its assets; the behaviour depends only on the visitor's device setting.

Step 8 — Verify

Action: On the live page check: With the setting off, reload the page: the poster gives way to the playing video and the pause toggle shows.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 33 — Blocks authored with an earlier model (compatibility)

Reproduces the screenshot `screenshots/video-legacy.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in Existing page (block created before the current model)

Action: Select **Existing page (block created before the current model)** in the content tree and enter in the properties panel: **Component** (A) = Video.

Expected Result: The existing page shows the Video block as before, without any change by the author.

Step 3 — Fill in Video (earlier model)

Action: Select **Video (earlier model)** in the content tree and enter in the properties panel: **Video** (B) = Select the asset /content/dam/tcs-corp/videos/tcs-brand-film.mp4; **Options** (C) = none (Auto Play not selected); **Placeholder Image** (D) = Select the asset photo-8.svg (/en/media/photo-8.svg); **Placeholder Image Alt Text** (E) = Retail analytics dashboard on a tablet.

Expected Result: The block holds a video link, a placeholder image with alt text and no Auto Play option.

Step 4 — Preview

Action: Result: Renders as Playback = Play button with the poster (no re-authoring needed).

Expected Result: The poster photo-8.svg renders with the Play button, as Playback = Play button.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The same poster with Play button as a current block: 900 px, 16:9, rounded, centred.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Nothing changes on publish; re-opening and saving the block in Universal Editor moves it to the current fields, after which it must be published again.

Step 7 — Verify

Action: On the live page check: On aem.page the poster and Play button render.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.28.6 Authorable Field Specification

Model `video` (key-value block)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Video (`uri`) — Video	AEM content (asset / link)	Yes	No	Empty	The video	MP4 / WebM asset, or YouTube / Vimeo URL	Enforced: `required` in the model; nothing renders without it	/content/dam/tcs-corp/videos/ai-lab.mp4
Title (`label`) — Video	Text	No (Recommended)	No	Empty → "Video"	Accessible name; Play label	Describe the video	None	TCS AI lab tour
Caption (`caption`) — Video	Rich text	No	No	Empty	Text below the video	One or two sentences	None	Inside the TCS AI lab in Pune.
Transcript (`transcript`) — Video	AEM content (page / document)	No	No	Empty	Link to a transcript	Page or PDF	None	/content/tcs-corp/us/en/ai-lab-transcript
Poster Image (`placeholder_image`) — Video	Reference (image)	No (Recommended)	No	Empty	Image before playback	Same ratio as the video	None	/content/dam/tcs-corp/videos/ai-lab-poster.jpg
Poster Image Alt Text (`placeholder_imageAlt`) — Video	Text	No	No	Empty	Alt text of the poster	Describe, or leave empty if decorative	None	Engineers at a robotics bench
Playback (`playback`) — Playback	Select	No	No	Play button (`click`)	How the video starts	Play button for most videos	Enforced: option list	background
Muted (`muted`) — Playback	Boolean	No	No	Off	Start without sound	Always on for autoplay / background	—	off
Loop (`loop`) — Playback	Boolean	No	No	Off	Repeat	Short clips only	—	off
Show Player Controls (`controls`) — Playback	Boolean	No	No	On	Player controls	Keep on except for design-led autoplay	—	on
Start At (seconds) (`startTime`) — Playback	Number	No	No	Empty (0)	Start position	Whole seconds	Model: number; code: negative / invalid → 0	30
End At (seconds) (`endTime`) — Playback	Number	No	No	Empty (to the end)	End position	After Start; not for Vimeo	Model: number; code: negative / invalid → 0 (no end)	90
Play in a Pop-up (`openInModal`) — Playback	Boolean	No	No	Off	Play in a dialog	With Play button playback	—	on

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Pause When Out of View (`pauseOffscreen`) — Playback	Boolean	No	No	On	Pause autoplay / background files off screen	Keep on	—	on
Captions File (WebVTT) (`captions`) — Captions	AEM content (.vtt)	No (Recommended for files with speech)	No	Empty	Subtitles for files	`.vtt` from AEM Assets	None	/content/dam/tcs-corp/videos/ai-lab-en.vtt
Captions Language (`captionsLanguage`) — Captions	Text	No	No	Empty → page language	`srclang` of the track	ISO code (en, de, ja)	None	en
Captions Name (`captionsLabel`) — Captions	Text	No	No	Empty → the language code	Name in the captions menu	Language name in that language	None	English
Aspect Ratio (`aspectRatio`) — Display	Select	No	No	16:9	Shape of the media area	Match the video	Enforced: option list	9-16
Size (`size`) — Display	Select	No	No	Large (900px)	Maximum width	—	Enforced: option list	medium
Alignment (`alignment`) — Display	Select	No	No	Center	Horizontal position	For sizes other than Full width	Enforced: option list	left
Rounded Corners (`rounded`) — Display	Boolean	No	No	On	1rem radius	—	—	on
Privacy-enhanced Mode (`privacyMode`) — Privacy	Boolean	No	No	On	youtube-nocookie / Vimeo dnt	Keep on	—	on
Anchor ID (`classes_anchor`) — Additional	Text	No	No	Empty	`#anchor-…` target	Start with anchor-	Enforced: regExp `^anchor-[a-z0-9][a-z0-9-]*$`	anchor-lab-tour
Hide block (`classes_hideblock`) — Additional	Boolean	No	No	Off	Hide without deleting	—	—	off
Padding left (`classes_paddingleft`) — Additional	Select	No	No	Default	Inner space left	Tokens	Enforced: option list	Default
Padding right (`classes_paddingright`) — Additional	Select	No	No	Default	Inner space right	Tokens	Enforced: option list	Default
Padding top (`classes_paddingtop`) — Additional	Select	No	No	Default	Inner space top	Tokens	Enforced: option list	Default

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Padding bottom (`classes_paddingbottom`) — Additional	Select	No	No	Default	Inner space bottom	Tokens	Enforced: option list	Default
Margin left (`classes_marginleft`) — Additional	Select	No	No	Default	Outer space left (overrides alignment margins)	Avoid; use Alignment	Enforced: option list	Default
Margin right (`classes_marginright`) — Additional	Select	No	No	Default	Outer space right (overrides alignment margins)	Avoid; use Alignment	Enforced: option list	Default
Margin top (`classes_margintop`) — Additional	Select	No	No	Default	Outer space top	Tokens	Enforced: option list	2rem (space-800)
Margin bottom (`classes_marginbottom`) — Additional	Select	No	No	Default	Outer space bottom	Tokens	Enforced: option list	2rem (space-800)

Field details

- **Video (`uri`)** — Purpose: the video source. Allowed Values: an AEM Assets video (MP4 / WebM) or a YouTube / Vimeo URL. Character Limits: n/a. Business Rules: YouTube if the URL contains `youtube.com` / `youtu.be`; Vimeo if it contains `vimeo.com`; otherwise a file. Dependency Rules: decides which other fields apply (captions only for files; End At not for Vimeo). Visibility: always; `required: true` (Enforced). Sample: `https://youtu.be/VIDEO_ID`.
- **Title (`label`)** — Purpose: accessible name (`aria-label` on `<video>`, `title` on iframes) and the Play button label ("Play video: {Title}"). Not shown on the page. Character Limits: none enforced; Recommended ≤ 80. Business Rules: empty → placeholder `video` ("Video") and Play label "Play video". Sample: "TCS AI lab tour".
- **Caption (`caption`)** — Purpose: visible text below the video. Allowed Values: rich text. Character Limits: none; Recommended ≤ 200. Business Rules: rendered only if it has text; keeps editor instrumentation. Sample: "Inside the TCS AI lab."
- **Transcript (`transcript`)** — Purpose: text alternative. Allowed Values: page or document link. Business Rules: link text = the authored text unless it starts with `http(s):` or `/`, then "Read the transcript" (placeholder `readTheTranscript`). Sample: a transcript page.
- **Poster Image (`placeholder_image`)** — Purpose: image before playback; for files also the `<video poster>`. Business Rules: with Play button playback it shows the Play button; with autoplay / background it shows (without button) until the video can play; empty alt text marks it decorative. Sample: a 1920 × 1080 still.
- **Poster Image Alt Text (`placeholder_imageAlt`)** — Purpose: alt text. Character Limits: Recommended ≤ 125. Business Rules: applied by the image decorator (`pictureOf`); empty → `alt=""`.
- **Playback (`playback`)** — Allowed Values: `click`, `autoplay`, `background`. Business Rules: reduced motion forces `click`; also read from block classes (legacy). Default click.
- **Muted** — Boolean, default off; forced on for autoplay and background.
- **Loop** — Boolean, default off; forced on for background.
- **Show Player Controls** — Boolean, default on; forced off for background; off with autoplay adds the pause / stop toggle.
- **Start At / End At** — Numbers (seconds), parsed with `parseFloat`, minimum 0; YouTube uses whole seconds; Vimeo start only; files as media fragment. No validation that End > Start.
- **Play in a Pop-up** — Boolean, default off; only with Play button playback.

- **Pause When Out of View** — Boolean, default on; only video files in autoplay / background.
- **Captions File / Language / Name** — files only; language default = page language (from the locale: `en`, `de`, `fr`, `es`, `pt`, `nl`, `sv`, `da`, `no`, `zh`, `ja`, `ko`); name default = the language code; one default captions track.
- **Aspect Ratio** — `16-9`, `4-3`, `1-1`, `21-9`, `9-16`; unknown → 16:9; also read from block classes (legacy).
- **Size** — `full`, `large`, `medium`, `small`; unknown → large.
- **Alignment** — `center`, `left`, `right`; unknown → center; help text "For sizes other than full width".
- **Rounded Corners** — Boolean, default on.
- **Privacy-enhanced Mode** — Boolean, default on.
- **Additional tab fields** — Anchor ID (regExp, de-duplicated), Hide block, Padding / Margin (`--space-*` tokens). Margin left / right replace the alignment margins of the block.

6.28.7 Field Annotation Mapping

Marker	Field	Purpose
A	Video block (all tabs)	Selection and configuration
B	Poster Image + Poster Image Alt Text	Image before playback
C	(generated) Play button; Title	Starts playback; label "Play video: {Title}"
D	Video (`uri`); Display tab; Playback tab	The player, its shape and behaviour
E	Caption	Text below the video
F	Transcript	Transcript link
G	(generated) pause / stop toggle; Playback + Show Player Controls	WCAG 2.2.2 control

6.28.8 Component Specification

Attribute	Value
Component Name	Video (`blocks/video`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	Media, icon button, button, content and image decorators; properties, links, media, environment, viewport, site and placeholders utils; Modal block (on demand); YouTube / Vimeo players
Component Type	Block (key-value)
Supported Variants	File / YouTube / Vimeo; Play button (with / without poster), pop-up, autoplay (with / without controls), background; muted, loop, start / end, pause off screen; captions; caption and transcript; 5 aspect ratios; 4 sizes; 3 alignments; rounded / square; privacy on / off
Supported Templates	Any page, any section
Supported Metadata	None (page language used as the captions default)
Supported Tags	None
Supported Personalization	None; `cmp:media` / `cmp:click` data layer events available for future Adobe Analytics / Target
Caching Considerations	Page HTML and assets cached by the Edge Delivery CDN; video files served from AEM Assets delivery path; placeholders loaded once per page
Performance Considerations	No player until in view or until Play; `preload="metadata"` for click-to-play files; reserved aspect-ratio area (no CLS); Modal code loaded only on demand; a poster in the first section may be the LCP image; background / autoplay files use `preload="auto"` (bandwidth)

Attribute	Value
Accessibility Compliance	Accessible names (Title); native button controls with labels; focus management; WCAG 2.2.2 pause / stop toggle; background videos hidden from assistive technology; captions track; transcript link; reduced motion respected; no download control
SEO Compliance	Caption and transcript are indexable; no VideoObject structured data (Not implemented as of this handover)

6.28.9 Input Model

Content Inputs: Video URL (asset path or link), Title, Caption, Transcript, Poster Image + alt, Captions file, language and name.

Metadata Inputs: None directly; the locale (from the URL) provides the default captions language.

Tags Inputs: None.

Page Context Inputs: Viewport visibility; `prefers-reduced-motion`; page locale.

Query Inputs: None.

Manual Inputs: Playback, Display and Privacy settings; Additional tab classes.

Authored HTML received from AEM (example, key-value rows, abridged):

```
<div class="video">
  <div><div>uri</div>
    <div><a href="/content/dam/tcs-corp/videos/ai-lab.mp4">ai-lab.mp4</a></div></div>
  <div><div>label</div><div>TCS AI lab tour</div></div>
  <div><div>placeholder</div>
    <div><picture><img src="./media_9f.jpg" alt="Lab"></picture></div></div>
  <div><div>playback</div><div>click</div></div>
  <div><div>aspectRatio</div><div>16-9</div></div>
  <div><div>size</div><div>large</div></div>
</div>
```

The poster fields `placeholder_image` / `placeholder_imageAlt` are an element group: they arrive as one `placeholder` row with the alt text on the image (separately keyed `placeholder_image` / `placeholder_imageAlt` rows are read too). Keys are matched case- and separator-insensitively. Blocks authored with the earlier model (a link and a picture) or delivered as one row per field are also read (Variation 33).

6.28.10 Output Model

Rendered Output: The block gets `video-size-{size}`, `video-align-{alignment}`, optionally `video-rounded` and `placeholder`, the custom property `--video-aspect-ratio` and `data-embed-loaded` (`false` → `true` when the player can play). Content: `div.video-media` (poster `div.video-placeholder` with `button.video-placeholder-play`, the player `<video>` or `div.video-frame > iframe`, and optionally `button.video-toggle`), then `div.video-caption` and `<p><a class="video-transcript"></a></p>`.

Generated HTML (file, Play button, after Play):

```
<div class="video block video-size-large video-align-center video-rounded placeholder"
  style="--video-aspect-ratio: 16 / 9;" data-embed-loaded="true">
  <div class="video-media">
    <div class="video-placeholder"><picture>…</picture>
      <button class="video-placeholder-play button primary icon-button"
        aria-label="Play video: TCS AI lab tour" title="Play video: TCS AI lab tour"></
button>
```

```
    </div>
    <video controls controlslist="nodownload" playsinline preload="auto" autoplay
      aria-label="TCS AI lab tour" poster="…/media_9f.jpg">
      <source src="/content/dam/tcs-corp/videos/ai-lab.mp4" type="video/mp4">
      <track kind="captions" src="…/ai-lab-en.vtt" srclang="en" label="English" default>
    </video>
  </div>
  <div class="video-caption">Inside the TCS AI lab.</div>
  <p><a class="video-transcript" href="/en/ai-lab-transcript">Read the transcript</a></p>
</div>
```

Generated JSON: None.

Generated Metadata: None.

Analytics Tracking:

- Component state (generic): `{ "component": { "video-1": { "@type": "tcs-corp/components/video", "parentId": "page-…" } } }` (id = Anchor ID if set).
- Play button: `cmp:click` with `interaction` `button` and `dc:title` "Play video: …".
- Pause / stop toggle: `cmp:click` with `interaction` `playback`.
- Video files: `cmp:media` on play, pause and ended (not for muted, looping videos without controls, i.e. background videos):

```
{ "event": "cmp:media", "eventInfo": { "path": "component.video-1",
  "interaction": "play", "xdm:mediaURL": "https://…/ai-lab.mp4", "position": 0 } }
```

- Pop-up: `cmp:show` (`interaction` `dialog`) when opened and `cmp:hide` when closed, on the modal component; media events inside the dialog are attributed to the modal block.
- YouTube / Vimeo: player interactions inside the iframe are not tracked.

Personalization Output: None.

Search Index Output: None (the query index indexes page metadata only).

Target Personalization Output: None in the block today. The block is in the Adobe Client Data Layer as tcs-corp/components/video; native video files push cmp:media (play, pause, ended) and the toggle and pop-up are described with data-cmp-interaction and cmp:show / cmp:hide, so Adobe Target could use them once Adobe Tags is installed (Not implemented (as of this handover)). YouTube and Vimeo player interactions are not tracked.

6.28.11 Business Rules

1. No Video (`uri`, or a link for legacy blocks) → the block is emptied and nothing renders.
2. Source detection: YouTube (`youtube.com` / `youtu.be`), Vimeo (`vimeo.com`), else a file with MIME type `video/{extension}`.
3. Title empty → "Video" (placeholder `video`); Play label "Play video" without a Title, else "Play video: {Title}" (`playVideoTitle`).
4. Reduced motion → Playback treated as Play button.
5. Play button with a poster or the pop-up → poster with Play button; click builds the player with autoplay (sound unless Muted) or opens the pop-up.
6. Play button without poster and without pop-up → the player loads when visible, without autoplay.
7. Autoplay / background → the poster (if any) without button until the video can play; the player loads when visible, always muted, autoplaying.
8. Background → loop, muted, no controls, `aria-hidden`, iframe not focusable, toggle always.
9. Autoplay with controls off → toggle; with controls on → no toggle.

10. Toggle: files pause / play; YouTube / Vimeo frames are removed (stop) and rebuilt (play, restarting at Start At); labels `pauseVideo`, `stopVideo`, `playVideo`.
11. Pause When Out of View (default on) only for files in autoplay / background; resumes only if paused by scrolling.
12. Start / End: `max(0, parseFloat(value))`; YouTube whole seconds (`start`, `end`); Vimeo start only (`#t=Ns`); files media fragment `#t=start,end`.
13. YouTube Loop needs `playlist={id}` (added automatically).
14. Privacy (default on): YouTube `youtube-nocookie.com`; Vimeo `dnt=1`.
15. Captions only for files; one default track; language default from the page locale; label default = language.
16. Transcript text replaced by "Read the transcript" when it looks like a URL / path.
17. Caption rendered only if it has text.
18. Poster stays visible until the player can play (`canplay` for files, iframe `load`), then is hidden; until then the player is hidden.
19. After Play, focus moves into the player.
20. Pop-up: Modal loaded on demand; closing removes the dialog (and the video); focus returns.
21. Files: no download control (`controlslist="nodownload"`), context menu suppressed, `playsinline`, `preload` `metadata` / `auto`.
22. Aspect ratio unknown → 16:9; size unknown → large; alignment unknown → center.
23. Legacy model: no `uri` property → first link and picture; `autoplay` class → background.
24. Additional tab rules as for every block; Margin left / right override Alignment.

6.28.12 Author Best Practices

Recommended Content Length: Title ≤ 80 characters; Caption ≤ 200 characters; poster alt text ≤ 125 characters; background videos Recommended ≤ 30 seconds and loop seamlessly.

Image Dimensions: Poster in the same aspect ratio as the chosen Aspect Ratio (it is cropped with `object-fit: cover`): 16:9 e.g. 1920 × 1080; 4:3 e.g. 1600 × 1200; 1:1 e.g. 1200 × 1200; 21:9 e.g. 2520 × 1080; 9:16 e.g. 1080 × 1920. Video files: web-optimised H.264 MP4 (or WebM), resolution matched to the Size (Large 900px → 1080p is ample); keep files small ([To be confirmed: maximum asset size for delivery — owner: AEM administrator]).

CTA Writing Guidelines: The Play button is generated; give the video a clear Title so the button reads "Play video: {Title}". Transcript link text: "Read the transcript" or a specific text (not a URL).

Accessibility Guidelines: Always set a Title; provide captions (WebVTT for files, platform captions for YouTube / Vimeo); provide a transcript for informative videos; avoid autoplay with sound (not possible by design); keep controls on unless the toggle is enough; set posters for autoplay / background videos so reduced-motion visitors see a meaningful image; note the caption text colour (`--color-text-secondary`, #999 on white, about 2.8:1 contrast) is below the WCAG AA 4.5:1 minimum for small text ([To be confirmed: design review of the caption colour — owner: design]).

SEO Guidelines: Describe the video in the page text and Caption; link a transcript page; use descriptive file names for assets.

Metadata Guidelines: None at block level.

Taxonomy Guidelines: Tag the video assets in AEM Assets as per DAM governance; the block does not read tags.

Localization Guidelines: Provide a captions file per locale (Captions Language and Name in that language), localised poster images if they contain text, translated Title, Caption and transcript; UI labels come from each locale's placeholders sheet (`video`, `playVideo`, `playVideoTitle` with `{title}`, `pauseVideo`, `stopVideo`, `readTheTranscript`, `dialog`, `close`).

6.28.13 Troubleshooting Guide

Issue 1 — Nothing renders
Symptoms: The block area is empty.

Root Cause: Video (`uri`) empty or not delivered as a link / path.

Diagnosis Steps: Check the Video field; open `{page}.plain.html` and look for the `uri` row.

Resolution Steps: Select the asset or paste the URL; republish.

Validation Steps: Poster or player renders.

Preventive Measures: Video is required in the dialog; fill it first.

Issue 2 — Video file doesn't play on the live site (404)
Symptoms: Black area; Network panel shows 404 for the MP4.

Root Cause: The asset isn't published, or was moved / renamed after authoring.

Diagnosis Steps: Open the file URL directly; check its publication status in AEM Assets.

Resolution Steps: Publish the asset (Manage Publication with references); re-select moved assets.

Validation Steps: The URL returns the video; playback works.

Preventive Measures: Publish pages with their references.

Issue 3 — Autoplay video doesn't start
Symptoms: Poster stays; no motion.

Root Cause: The visitor prefers reduced motion (by design → Play button), the block isn't in view yet, or the browser blocked autoplay (power saving).

Diagnosis Steps: Check the OS reduced-motion setting; scroll the block into view; check the console for play() promise rejections.

Resolution Steps: Expected for reduced motion; ensure the poster is meaningful.

Validation Steps: Plays with reduced motion off.

Preventive Measures: Never rely on autoplay for essential information.

Issue 4 — The video is cropped
Symptoms: Edges of the picture are cut off.

Root Cause: Aspect Ratio doesn't match the file (files use `object-fit: cover`).

Diagnosis Steps: Compare the file's dimensions with the Aspect Ratio.

Resolution Steps: Set the matching Aspect Ratio.

Validation Steps: The full frame is visible.

Preventive Measures: Check the ratio when authoring.

Issue 5 — Captions don't show
Symptoms: No CC option in the native player.

Root Cause: The source is YouTube / Vimeo (captions file ignored), the VTT isn't published, or the file isn't valid WebVTT.

Diagnosis Steps: Check the source type; open the `.vtt` URL; validate it starts with `WEBVTT`.

Resolution Steps: Upload captions to YouTube / Vimeo, or publish / fix the VTT.

Validation Steps: Captions appear and are labelled correctly.

Preventive Measures: Test captions in preview.

Issue 6 — End At doesn't stop a Vimeo video

Symptoms: The Vimeo video plays to the end.

Root Cause: End At is not applied to Vimeo (only YouTube and files).

Diagnosis Steps: Check the source.

Resolution Steps: Edit the video on Vimeo, or host the excerpt as a file.

Validation Steps: Playback stops at the intended time.

Preventive Measures: Use End At only with YouTube or files.

Issue 7 — Pop-up doesn't open

Symptoms: Play does nothing, or the dialog is empty.

Root Cause: Playback isn't Play button (pop-up ignored for autoplay / background), the Modal code failed to load, or the source URL is wrong.

Diagnosis Steps: Check Playback; console / Network for `blocks/modal/modal.js` and `modal.css`.

Resolution Steps: Set Playback to Play button; escalate loading errors to development.

Validation Steps: Dialog opens and plays; Esc closes it.

Preventive Measures: Test pop-ups in preview.

Issue 8 — Vimeo / YouTube shows an error

Symptoms: "Video unavailable" / "does not exist".

Root Cause: Unsupported URL shape (Vimeo id must be the first path segment), private video, embedding disabled.

Diagnosis Steps: Inspect the iframe `src`.

Resolution Steps: Use `vimeo.com/{id}` / a YouTube watch or share URL; allow embedding.

Validation Steps: The player loads.

Preventive Measures: Use canonical URLs.

6.28.14 Support Runbook

Monitoring Requirements

- Asset availability (video, poster, VTT) on the live host; Core Web Vitals (LCP of posters, data usage of autoplay / background videos).
- Once Adobe Tags is implemented, `cmp:media` events can feed video reporting.

Logs

- Browser console: the block logs nothing itself; autoplay rejections are caught silently; errors may come from the Modal import or third-party players.
- Network panel: video file, VTT, poster requests; youtube-nocookie.com / player.vimeo.com.
- Admin API / Sidekick: page and asset status; AEM author: publication logs, asset processing.

Common Errors

Error	Likely cause	Fix
Empty block	No Video	Fill Video
404 on MP4 / VTT	Asset not published	Publish references
No autoplay	Reduced motion / browser policy	Expected; set a poster
Cropped video	Wrong Aspect Ratio	Match the ratio
No captions	YouTube / Vimeo source or bad VTT	Platform captions / fix VTT
Vimeo end ignored	Not supported	Edit on Vimeo / use file
Pop-up not opening	Playback not Play button	Set Play button

Escalation Matrix

Level	Who	Checks
L1	Author support	Video, Title, poster, playback settings, aspect ratio, captions, publication of page and assets, Hide block
L2	AMS / site admin	Asset delivery (`/content/dam/tcs-corp/` in `paths.json` includes), CDN cache, file sizes and formats, CSP for third-party players
L3	Development team	`video.js`, media decorator / utils, Modal block, console errors
L4	Adobe Support	AEM Assets delivery, Edge Delivery, Universal Editor issues

Recovery Procedures

1. Restore the previous page version; republish with references.
2. Restore the previous asset version in AEM Assets and republish it.
3. Hide the block (Hide block) during an outage of a provider.
4. Revert code changes on `main` if a regression is identified.

Health Checks

- Play one file, one YouTube and one Vimeo video on a test page (desktop and mobile).
- Check the pause toggle and `aria-hidden` on a background video.
- Check the pop-up opens, plays and closes with focus returned.
- With reduced motion on, check autoplay videos show the Play button.

Operational Procedures

- Maintain the video placeholders (`video`, `playVideo`, `playVideoTitle`, `pauseVideo`, `stopVideo`, `readTheTranscript`) and modal placeholders (`dialog`, `close`) in each locale's placeholders sheet.
- Follow DAM governance for video renditions and captions files.

Known Limitations

- One captions track per video; no audio description track.
- End At not supported for Vimeo; Vimeo URLs must be `vimeo.com/{id}`.
- The YouTube / Vimeo stop toggle restarts the video when played again.
- No VideoObject structured data, no chapters, no playlists.
- No consent management for third-party players ([To be confirmed: consent requirements — owner: privacy / legal]).
- Files are cropped to the chosen aspect ratio (`object-fit: cover`).
- Caption text colour contrast below AA (see 6.28.12).

- Interactions inside YouTube / Vimeo players aren't tracked.

6.28.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
Nothing renders where the video should be	Video left empty	Select the asset or paste the URL in Video and republish
The video plays on aem.page but not on aem.live	The MP4 asset is not published	Publish the asset with the page's references
The Play button says only Play video	Title left empty	Enter a Title
The picture is cropped at the edges	Aspect Ratio does not match the file (object-fit: cover)	Set the file's ratio and use a poster in the same ratio
The vertical video is taller than the screen	9:16 at Size Large	Use Size Small (420px)
The pop-up does not open	Playback is Autoplay or Background video	Set Playback to Play button (on the poster image)
No captions in a YouTube video	The Captions File field is ignored for YouTube and Vimeo	Add captions on YouTube or Vimeo
End At does not stop a Vimeo video	End At is not applied to Vimeo	Edit the video on Vimeo or host the excerpt as a file
Autoplay does not start for some testers	Reduce motion is on, so Playback becomes Play button	Expected; keep a meaningful poster
The caption is hard to read	The caption colour #999 is below WCAG AA (F-27, open)	Keep key information in page text until the colour is fixed

6.28.16 Author Quick Reference Guide

Mandatory Fields

- Video — required in the model: an MP4 / WebM from AEM Assets, or a YouTube or Vimeo URL; without it the block renders nothing

Recommended Fields

- Title — names the player and the Play button (Play video: {Title}); falls back to Video
- Poster Image — the first impression for Play button playback, and the reduced-motion view of autoplay and background videos
- Poster Image Alt Text — describes the poster (not needed for background videos)
- Captions File (WebVTT) — subtitles for video files with speech (WCAG 1.2.2)
- Transcript — a page or document with the text alternative for informative videos

Optional Fields

- Caption — short rich text below the video
- Playback — Play button (default), Autoplay when in view (muted) or Background video
- Muted, Loop, Show Player Controls — playback details (overridden for background)
- Start At / End At (seconds) — an excerpt; End At not applied to Vimeo
- Play in a Pop-up — opens the video in a dialog (Play button playback only)
- Pause When Out of View — video files in autoplay and background modes
- Captions Language, Captions Name — default to the page language
- Aspect Ratio, Size, Alignment, Rounded Corners — Display tab

- Privacy-enhanced Mode — on by default for YouTube and Vimeo
- Anchor ID, Hide block, Padding and Margin — Additional tab

Authoring Checklist

1. Select the video in Video first; paste YouTube or Vimeo URLs as watch, share or vimeo.com/{id} links
2. Always enter a Title so the Play button and player have a meaningful name
3. Set Aspect Ratio to the ratio of the file and use a poster in the same ratio
4. Use Size Small for 9:16 and Medium or Small for 1:1 videos
5. Use Background video only for decorative clips; put information in page text
6. Set a Poster Image for every autoplay and background video
7. Use Play in a Pop-up only with Playback = Play button
8. Add a WebVTT file and a Transcript for videos with speech

Pre-Publish Checklist

1. Preview on aem.page at 1440, 768 and 390 px and check size, ratio and alignment
2. Press Play and check the video plays in place (or in the pop-up) with sound unless Muted
3. Check autoplay and background videos show the pause toggle and that it works
4. Check captions in the player's captions menu for video files
5. Check the transcript link opens the published transcript page
6. Publish the MP4, poster and VTT assets with the page (Manage Publication with references)
7. Check the placeholder keys video, playVideo, playVideoTitle, pauseVideo, stopVideo and readTheTranscript exist in the locale sheet

Post-Publish Validation Checklist

1. Open the page on aem.live and check the poster and the Play button load
2. Play the video on the live host; the MP4 and VTT requests must return 200
3. Check a YouTube video loads from www.youtube-nocookie.com when Privacy-enhanced Mode is on
4. Turn on Reduce motion on a test device and check autoplay videos show the Play button
5. Check the pop-up opens, closes with Esc and returns focus to the Play button
6. Check the page's Core Web Vitals (poster LCP, no layout shift)

6.28.17 Component Execution Example

Business example: Brand film on the English About page.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Video
Video (Video › Video)	Select the page or enter /content/dam/tcs-corp/videos/tcs-brand-film.mp4
Title (Video › Video)	Building on belief: the TCS brand film
Caption (Video › Video)	How our people and partners use technology to help enterprises grow and transform.
Transcript (Video › Video)	Select the page or enter /en/about/brand-film-transcript
Poster Image (Video › Video)	Select the asset photo-1.svg (/en/media/photo-1.svg)
Poster Image Alt Text (Video › Video)	Engineers collaborating in a modern office

All other fields keep their default values.

Rendered Result:

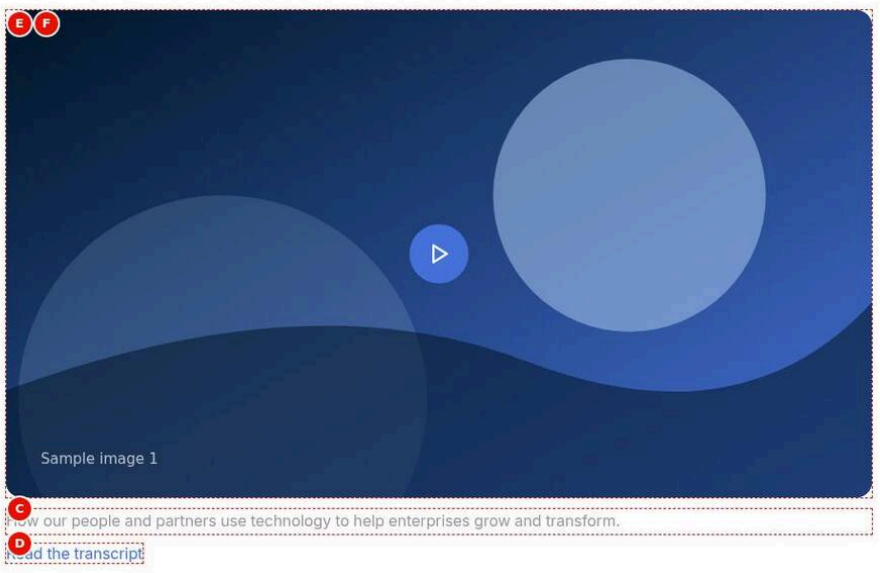

Figure 35: Execution example — The Video block at 1440 px: a Large (900 px) 16:9 media area, centred, with 1rem rounded corners, showing the poster photo-1.svg and the round brand-blue Play button in the centre; below it the grey caption How our people and partners use technology to help enterprises grow and transform. and the link Read the transcript. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/video-desktop-view.jpg)

Author Notes

- Video points to /content/dam/tcs-corp/videos/tcs-brand-film.mp4; Playback stays on Play button
- Title Building on belief: the TCS brand film names the Play button and the player
- Caption gives one line of context; Transcript links /en/about/brand-film-transcript, shown as Read the transcript
- Poster Image photo-1.svg with the alt text Engineers collaborating in a modern office

Business Notes

- Visitors see a branded poster first and choose to watch, keeping the page fast
- The caption and transcript serve visitors who cannot or do not want to play the film
- The film is self-hosted, so no third-party player or cookies are involved

Technical Notes

- No player is built until Play; then a native video element with autoplay and sound replaces the poster on canplay
- Defaults apply: Large (56.25rem), 16:9, centred, rounded (–radius-l), controls on
- The poster is read from the grouped placeholder cell with its alt text (F-44 fixed in 1.4)
- cmp:media events are pushed for play, pause and ended of the file

6.29 Form Variations Block

The Form Variations block builds an accessible, validated web form from child field items that authors add in Universal Editor: text inputs (Text, Email, Tel), dropdowns, a textarea with a character counter, a consent checkbox, contact cards and one or more submit buttons. Fields, contact cards and buttons can be made conditional ("Show only if dropdown value equals"), so one form can route visitors, for example by region, to the right contact. The block lives in `blocks/form-variations/` (`form-variations.js`, `form-variations.css`, `_form-variations.json`).

> **Important:** there is **no submit endpoint**. A valid submit dispatches a bubbling `form-variations:submit` DOM event on the block with the form data, resets the form and shows the success message "Thank you, your details were sent." The data is **not** sent anywhere unless a script on the page listens for that event and forwards it. Any connection to Salesforce, Marketo, an email service or an API is Not implemented (as of this handover). [To be confirmed: form back end — owner: product owner / solution architect]

6.29.1 Component Purpose

Business Objective: Let authors create contact, enquiry and feedback forms without developer involvement, with consistent TCS styling, built-in client-side validation, WCAG 2.1 AA accessibility (labels, inline errors, live status message, input purpose) and conditional content that routes visitors to the right regional contact.

Business Use Cases:

- "Contact us" / "Talk to an expert" enquiry forms (name, email, company, message, consent).
- Regional enquiry routing: a Region dropdown that reveals the matching regional contact card (name, emails, phone numbers) and, optionally, region-specific fields or submit buttons.
- Sector- or topic-specific questions: a dropdown that reveals extra fields only for one value (for example "Other" reveals a free-text field).
- Feedback forms (textarea with a character limit and live counter).
- Newsletter or event-interest capture (email plus a mandatory consent checkbox) — subject to the back end being connected.

When To Use:

- A form with up to a few dozen simple fields (text, email, phone, dropdown, long text, single consent checkbox).
- When contact details must change with a visitor's choice (contact cards).
- When the data is handled by a script listening for `form-variations:submit` (once a back end integration exists).

When Not To Use:

- When the data must actually reach a system today: Not implemented (as of this handover); use a plain email link or contact card until the back end is connected.
- File uploads, date pickers, radio-button groups, multi-select lists, number fields, multiple checkboxes as a group, multi-step (wizard) forms, CAPTCHA, server-side validation: Not implemented (as of this handover).
- For site search or "Ask us a question" experiences (use the Conversation Canvas, 6.30).
- For content that needs no input (use Teaser, Cards or default content).

Dependencies:

Type	Dependency	Use
Code	`scripts/scripts.js moveInstrumentation`	Keeps Universal Editor instrumentation on the rendered fields, labels, options and buttons
Code	`decorators/button-decorator.js decorateButton`	Styles the submit button as a primary button (view `button`, type `primary`)
Code	`decorators/content-decorator.js fromCell`	Moves the rich-text Form Description into `.form-variations-description`
Code	`decorators/heading-decorator.js buildHeading`	Builds the form title as an h2 (or the heading level found in the cell)
Code	`utils/environment.js isInEditor`	Detects Universal Editor (edit and preview mode): conditional items stay visible

Type	Dependency	Use
Code	`utils/properties.js` `textOf`	Reads trimmed cell text
Code	`utils/ids.js` `createIdFactory`, `uniqueId`	Unique ids per form instance (`form-variations-1-firstname`, …)
Code	`utils/placeholders.js` `getPlaceholders`, `fillPlaceholder`	UI text (errors, success, required note, select prompt) with English fallbacks
Code	`decorators/block-options-decorator.js`	Additional tab: Anchor ID becomes the block id; Hide block, padding and margin classes
Code	`decorators/data-layer-decorator.js`	Component state, `cmp:click` on the submit button, `cmp:submit` with field names
Styles	`styles/styles.css`	Design tokens, primary button styles, `.hideblock`, spacing classes
Data	Locale placeholders sheet / `{locale}/placeholders.json`	Keys `fieldRequired`, `fieldEmail`, `fieldFormat`, `fieldTooLong`, `selectAnOption`, `send`, `shownWhenValue`, `requiredNote`, `formSuccess`
Data	None other	The block reads no data sheet, query index, metadata or taxonomy
Back end	None	No endpoint; `form-variations:submit` event only

Related Components: Modal (can show a page that contains a form in a pop-up), Fragment (reuse one form on many pages by placing it on a reference page), Conversation Canvas (6.30, the search / question entry point, not a data-capture form), Page Header and Teaser (CTAs that link to the page or anchor holding the form; use the form's Anchor ID).

Applicable Templates: Any page. The block is in the section filter (`models/_section.json`), so it can be added to any section of home, article, blog, press-release or generic pages. No template adds it automatically.

Supported Content Types: Contact and enquiry pages, landing pages, campaign pages, event pages, career or partner interest pages. The block does not read the page's `content-type` metadata; it works the same on every content type.

Business Problem Solved

Authors needed contact, enquiry and feedback forms without developer work, with consistent TCS styling, accessible labels and errors, and a way to route visitors to the right regional contact. Form Variations builds the form from child items (text, email and phone inputs, dropdowns, a textarea with a counter, a consent checkbox, contact cards and submit buttons) with client-side validation and conditional items; however the data is not sent anywhere yet, as there is no submit endpoint (F-01, open).

Supported Taxonomy

None: the block has no tag field and reads no page tags, taxonomy, metadata or sheets. Region or sector values are plain comma-separated Options text, not AEM tags.

6.29.2 Visual Overview

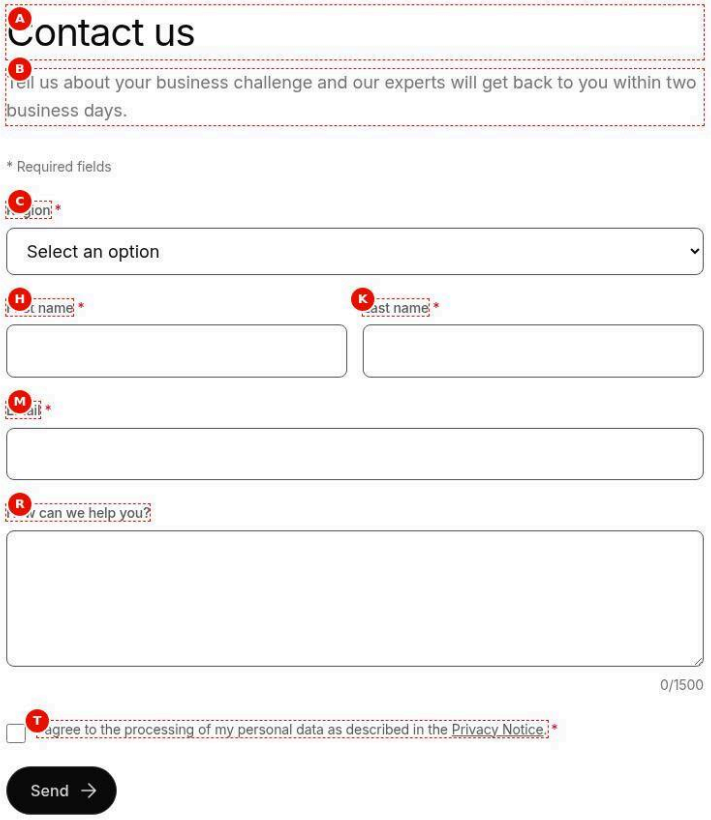

Figure 36: Desktop rendering — The Form Variations block at 1280 px, Default theme, 45rem wide: the H2 Contact us and its grey description, the note * Required fields, the Region dropdown on Select an option, First name and Last name side by side, Email, the How can we help you? textarea with the counter 0/1500, the consent checkbox with the underlined Privacy Notice link and the black Send button with an arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/form-variations-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	The Form Variations block at 1280 px, Default theme, 45rem wide: the H2 Contact us and its grey description, the note * Required fields, the Region dropdown on Select an option, First name and Last name side by side, Email, the How can we help you? textarea with the counter 0/1500, the consent checkbox with the underlined Privacy Notice link and the black Send button with an arrow.
Business Context	The enquiry form of the English Contact us page, where prospects describe a business challenge and choose their region so the request can be routed.
Author Objective	Build a contact form with a title, a description, a mandatory Region dropdown, three mandatory text inputs, a message textarea, a mandatory consent checkbox and a Send button.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)
A	Form Title / Heading (Form Variations › Content)	Contact us	No	Names the form (h2) and labels it for screen readers	Short, action-oriented title	None in the model; no title means no header and no accessible name for the form
B	Form Description (Form Variations › Content)	Tell us about your business challenge and our experts will get back to you within two business days.	No	Explains the purpose of the form	One or two sentences; links allowed	None; shown only when it has text
—	Item (Content tree › Form Variations › Add (+))	Dropdown / Select Field	Yes	Adds a Dropdown / Select Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Dropdown / Select Field	Only the item types the Form Variations allows
C	Dropdown Name / ID (Dropdown / Select Field 1)	region	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
(D)	Dropdown Label (Dropdown / Select Field 1)	Region	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(E)	Mandatory Field (*) (Dropdown / Select Field 1)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on
(F)	Options (Dropdown / Select Field 1)	Asia Pacific, Europe, India, North America	No	The choices (text = value)	Separate with commas; no commas inside an option	Split on commas, trimmed, empty entries dropped
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
(G)	Field Name / ID (Text Input Field 2)	firstName	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
H	Field Label (Text Input Field 2)	First name	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(I)	Mandatory Field (*) (Text Input Field 2)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on

R	Field Label (Textarea Field 5)	How can we help you?	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Item (Content tree › Form Variations › Add (+))	Consent Checkbox Field	Yes	Adds a Consent Checkbox Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Consent Checkbox Field	Only the item types the Form Variations allows
(S)	Checkbox Name / ID (Consent Checkbox Field 6)	consent	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
T	Consent Text / Disclaimer (Consent Checkbox Field 6)	I agree to the processing of my personal data as de-	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		scribed in the Privacy Notice (link / en/privacy-notice).				
(U)	Mandatory Field (*) (Consent Checkbox Field 6)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on
—	Item (Content tree › Form Variations › Add (+))	Submit Button	Yes	Adds a Submit Button to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Submit Button	Only the item types the Form Variations allows
—	Screen width (Preview)	1280 px (desktop)	—	Check on the preview (not stored in the content)	1280 px (desktop)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A centred 720 px light form: heading and description, the small grey required note, labelled inputs with red asterisks on the mandatory ones, the two name fields in one row, a four-row textarea with a right-aligned counter, the consent row and the left-aligned primary button.
- **Rendering behaviour:** At 900 px and above the form is a two-column grid: firstName and lastName contain name, so they are half width; every other item spans both columns. The textarea limit is the default 1500. Validation runs only on Send; errors appear under the fields.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; error, prompt and success texts come from the locale's placeholders sheet, a separate publish step. The submitted data is not sent anywhere: there is no endpoint (F-01, open, P1).

Business Rules

- There is no submit endpoint; a valid Send only dispatches the form-variations:submit event and shows Thank you, your details were sent. (F-01).
- Text Input names containing name are half width on desktop; there is no width field.
- The * Required fields note appears because at least one field is mandatory.
- Field Name / ID is the submitted key (region, firstName, lastName, email, message, consent).
- The Submit Button has no label set, so it shows the placeholder send (Send).

Common Authoring Mistakes

Error	Root Cause	Resolution
The form is published on a live contact page and enquiries are lost	No back end is connected; the success message still shows	Do not publish forms for live data capture until development connects a back end
Email sits next to First name	The email field was named emailName or similar, which contains name	Use a name without name, e.g. email
The Region dropdown accepts no choice	Mandatory on and the visitor left Select an option	Expected; the field shows This field is required. until a region is chosen

Troubleshooting

- **Symptoms:** Visitors see Thank you, your details were sent. but the sales team receives nothing.

- **Cause:** By design the block has no submit endpoint; it only dispatches form-variations:submit on the page.
- **Resolution:** Hide or unpublish the form, or route visitors to a contact card or email link, until development adds a back end.
- **Verification Steps:** After the integration, submit a test enquiry on aem.page and confirm it arrives in the target system.

Desktop (>= 900 px, including >= 1200 px): The block is centred with a maximum width of 45rem (720 px) in the Default theme. A header (title, `h2`, and the description in the muted text colour) sits above the form with 2rem space below it. The form is a two-column CSS grid (gap 1.5rem vertical, 1rem horizontal). Text input fields whose **Field Name / ID** contains "name" (`half-width`) take one column, so "firstName" and "lastName" sit side by side; all other items (`full-width`) span both columns. Labels use the label font size, medium weight, secondary neutral colour; a red asterisk follows mandatory labels. Inputs are full width, 0.75rem/1rem padding, 1 px tertiary border, 0.5rem radius; focus shows a 2 px brand outline. The textarea is at least 7.5rem tall and resizable vertically, with a right-aligned "n/limit" counter. The consent checkbox (1.25rem) sits left of its small consent text. Contact cards have a top divider, the contact name in the brand colour (heading size M) and a vertical list of mail and phone links. The submit button is the site primary button (black, white text, trailing arrow), left-aligned. The status message appears below the form in the brand colour after a successful submit.

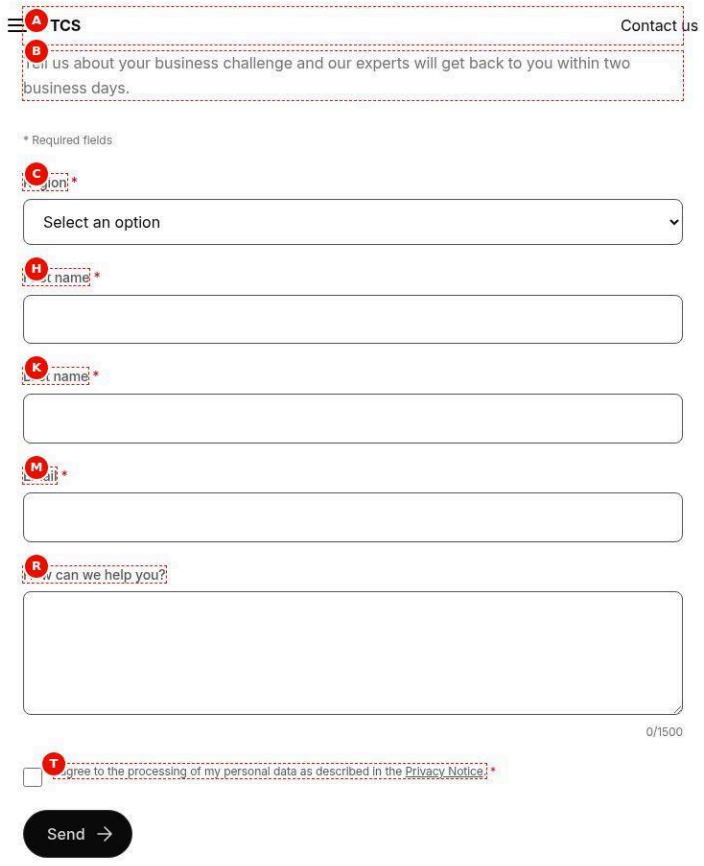

Figure 37: Tablet rendering — The same Contact us form at 768 px: title, description, * Required fields, Region, then First name, Last name and Email each on their own full-width row, the textarea with 0/1500 below it, the consent checkbox and the left-aligned Send button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-tablet-view.jpg)

T	Consent Text / Disclaimer (Consent Checkbox Field 6)	I agree to the processing of my personal data as described in the Privacy Notice (link / en/privacy-notice).	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(U)	Mandatory Field (*) (Consent Checkbox Field 6)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on
—	Item (Content tree › Form Variations › Add (+))	Submit Button	Yes	Adds a Submit Button to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Submit Button	Only the item types the Form Variations allows
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A single column of full-width labelled inputs under the heading and description, with the counter right-aligned under the textarea and the black Send button.
- **Rendering behaviour:** Below 900 px the grid has one column, so the half-width name fields are full width; the block stays limited to 45rem and centred. The form's only breakpoints are 600 px and 900 px.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; placeholders are a separate publish step; no data is sent on submit (F-01, open).

Business Rules

- Half-width applies only at 900 px and above; on tablets every item is full width.
- The tab and reading order follow the item order in the content tree.
- Mandatory fields show a red asterisk that is hidden from screen readers; the required state is native.
- Errors appear under each field on Send, and focus moves to the first invalid field.

Common Authoring Mistakes

Error	Root Cause	Resolution
The name fields were expected side by side on tablets	Half width starts at 900 px	Expected behaviour
The tab order jumps around	Items were added in an illogical order in the content tree	Reorder the items in the content tree

Troubleshooting

- **Symptoms:** On the tablet the consent text wraps into a narrow column beside the checkbox.
- **Cause:** The consent row places the 1.25rem checkbox and the label side by side at every width.
- **Resolution:** Keep the consent text short and put details on the linked Privacy Notice page.
- **Verification Steps:** Preview at 768 px and 375 px and check the text reads well next to the box.

Tablet (600–899 px): One column: every item, including half-width name fields, is full width. The block is still limited to 45rem and centred. In the Dark theme the panel padding grows to 3rem top/bottom and 2.5rem left/right. Between 900 and 1199 px the desktop two-column grid already applies (the form's only breakpoints are 600 px and 900 px).

Figure 38: Mobile rendering — The Contact us form at 375 px after a successful Send: single column, every field empty again (reset), the consent text wrapped beside the checkbox, the Send button and below it the blue message Thank you, your details were sent.; the sticky header covers the description in the capture. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(S)	Checkbox Name / ID (Consent Checkbox Field 6)	consent	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
T	Consent Text / Disclaimer (Consent Checkbox Field 6)	I agree to the processing of my personal data as described in the Privacy Notice (link / en/privacy-notice).	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(U)	Mandatory Field (*) (Consent Checkbox Field 6)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on
—	Item (Content tree › Form Variations › Add (+))	Submit Button	Yes	Adds a Submit Button to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Submit Button	Only the item types the Form Variations allows
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—
—	Action (Preview)	Select Region Europe, type First name Anita, Last name Rao, Email anita.rao@example.com, check the consent box, press Send	—	Check on the preview (not stored in the content)	Select Region Europe, type First name Anita, Last name Rao, Email anita.rao@example.com, check the consent box, press Send	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (D), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A one-column form with full-width controls, the counter back at 0/1500, the unchecked consent box and the brand-blue status message under the Send button.
- **Rendering behaviour:** On Send the visible fields are validated; being valid, the form-variations:submit event is dispatched with the data, the form is reset, conditional items re-evaluated and the role=status message receives focus so it is announced.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live. The success text is the placeholder formSuccess; the data is not sent to any system (F-01, open, P1).

Business Rules

- The success message appears for every valid submit, although nothing is sent (F-01).
- The form is reset after a valid submit; the status message is cleared on the next input.
- The data layer receives cmp:submit with the field names only, never the values.
- The consent box submits true only when checked; unchecked boxes are left out of the data.

Common Authoring Mistakes

Error	Root Cause	Resolution
Visitors submit twice because the fields are empty again	The form resets after a valid submit	Expected; the status message confirms the submission

Error	Root Cause	Resolution
Testers believe the form works end to end	The success message does not prove delivery	Check the receiving system once a back end exists

Troubleshooting

- **Symptoms:** Pressing Send shows no success message and the page jumps up to the Region dropdown.
- **Cause:** Region is mandatory and still on Select an option; validation focuses the first invalid field and shows This field is required.
- **Resolution:** Choose a region (here Europe) and press Send again.
- **Verification Steps:** After a valid submit the fields are cleared and Thank you, your details were sent. appears under the button.

Mobile (< 600 px): One column (`grid-template-columns: minmax(0, 1fr)`), full-width controls, the same font sizes as on tablet. In the Dark theme the panel has 2.5rem top/bottom and 1.5rem left/right padding with a 1rem radius.

6.29.3 Component Variations

The block has one author-selectable style option (**Theme**: Default / Dark). The other variations below are layout and behaviour modes produced by the item types and their settings. Each is described separately.

Variation 1 — Default theme

Variation Name: Default (Theme = Default, no class).

Business Purpose: The standard light form for content pages, sitting on the page background.

Visual Example:

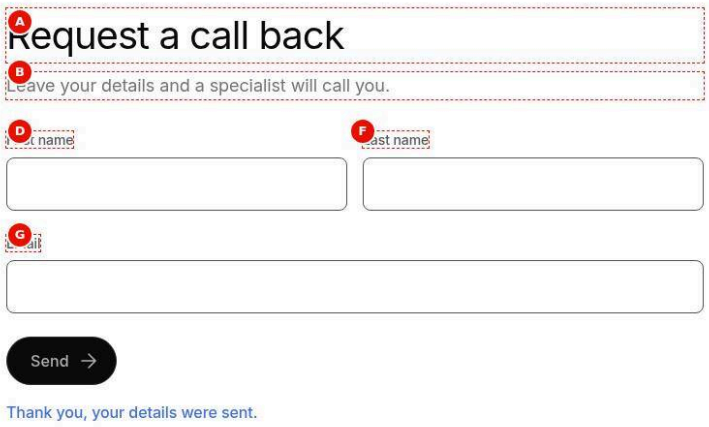

Figure 39: Default theme — A Default theme form at 1280 px: the H2 Request a call back, the description Leave your details and a specialist will call you., First name and Last name side by side, Email, the black Send button and, after Send, the blue message Thank you, your details were sent. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-default-theme.jpg)

Screenshot Details — Default theme

Item	Detail
Screenshot Name	`screenshots/form-variations-default-theme.jpg`
Screenshot Purpose	Default theme

Item	Detail
Screen Description	A Default theme form at 1280 px: the H2 Request a call back, the description Leave your details and a specialist will call you., First name and Last name side by side, Email, the black Send button and, after Send, the blue message Thank you, your details were sent.
Business Context	A call-back request in a service page section, using the standard light form on the white page background.
Author Objective	Add a short call-back form with three optional text inputs and a Send button, keeping Theme on Default.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)
A	Form Title / Heading (Form Variations › Content)	Request a call back	No	Names the form (h2) and labels it for screen readers	Short, action-oriented title	None in the model; no title means no header and no accessible name for the form
B	Form Description (Form Variations › Content)	Leave your details and a specialist will call you.	No	Explains the purpose of the form	One or two sentences; links allowed	None; shown only when it has text
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
(C)	Field Name / ID (Text Input Field 1)	firstName	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains “name” = half width	Required in the dialog; code fallback `text`
D	Field Label (Text Input Field 1)	First name	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
(E)	Field Name / ID (Text Input Field 2)	lastName	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains “name” = half width	Required in the dialog; code fallback `text`
F	Field Label (Text Input Field 2)	Last name	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
G	Field Name / ID (Text Input Field 3)	email	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
(H)	Field Label (Text Input Field 3)	Email	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(I)	Input Type (Text Input Field 3)	Email	No	Input type and keyboard	Email for emails, Tel for phones	Options: Text (`text`), Email (`email`), Tel (`tel`); unknown = text
—	Item (Content tree › Form Variations › Add (+))	Submit Button	Yes	Adds a Submit Button to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Submit Button	Only the item types the Form Variations allows
(J)	Theme (Form Variations › Content)	Default (default, keep)	No	—	—	None
—	Action (Preview)	Type Email anita.rao@example.com and press Send	—	Check on the preview (not stored in the content)	Type Email anita.rao@example.com and press Send	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Dark text on white, grey-bordered inputs with 0.5rem radius, the two name inputs in one row, the black primary button with arrow and the brand-blue status line below.
- **Rendering behaviour:** Default adds no class: the block is limited to 45rem and centred; inputs use the default background and tertiary border; no * Required fields note because no field is mandatory. Pressing Send with valid input resets the form and shows the status message.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the status text comes from the published placeholders sheet; no data is delivered (F-01, open).

Business Rules

- Theme Default is the model default and adds no class.
- No field is mandatory, so there is no required note and an empty form can be sent.
- The Email input still checks the address format when it is filled.
- The error colour #c8102e is hard-coded (no error token yet) and always comes with error text.

Common Authoring Mistakes

Error	Root Cause	Resolution
Empty call-back requests are accepted	No field has Mandatory Field (*) on	Turn Mandatory on for the fields the specialist needs
The form looks lost on a grey section	Default theme inputs use the page background colour	Use a white section, or Theme Dark for a framed panel

Troubleshooting

- **Symptoms:** Send shows the success message although the form is empty.
- **Cause:** No field is mandatory, so the empty form is valid.
- **Resolution:** Set Mandatory Field (*) on First name and Email at least.
- **Verification Steps:** Press Send on the empty form on aem.page: This field is required. appears under the mandatory fields.

Use Cases: Contact pages, enquiry sections in articles and landing pages.

Authoring Guidelines: In the block's **Content** tab leave **Theme** on **Default**.

Business Rules: Default is the model default (`value: ""`); no class is added.

Rendering Rules: Block max width 45rem, centred (`margin-inline: auto`); text colour `--color-text-default`; inputs on `--color-bg-default` with `--color-border-tertiary` borders; error colour `#c8102e` (hard-coded, there is no error colour token yet).

Responsive Behaviour: Desktop (>= 900 px): two-column grid with half-width name fields. Tablet (600–899 px): one column. Mobile (< 600 px): one column.

SEO Impact: The form title is an `h2`, contributing to the page outline; form controls are not indexed content. No structured data is generated.

Accessibility Compliance: Labels linked with `for`/`id`; required marked by the native `required` attribute (the visual asterisk is `aria-hidden` and explained once by "* Required fields"); the red error colour (`#c8102e` on white) is used together with error text, never colour alone (WCAG 1.4.1).

Variation 2 — Dark theme

Variation Name: Dark (Theme = Dark, class `dark`).

Business Purpose: A high-contrast, framed form panel that stands out on a light page, for campaign or conversion sections.

Visual Example:

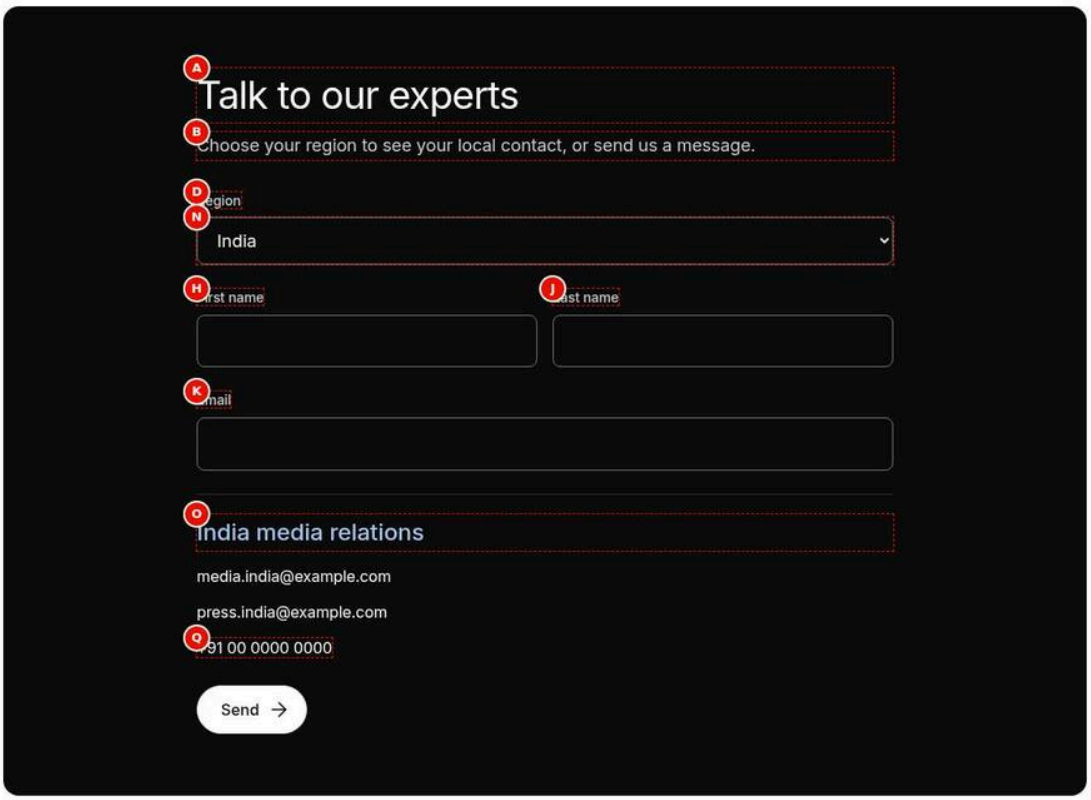

Figure 40: Dark theme — A Dark theme form at 1280 px: a black panel with 1rem rounded corners across the section, the content centred at 45rem: the white H2 Talk to our experts, the description, Region set to India, First name and Last name side by side, Email, a divider, the India media relations card in light blue with two email addresses and +91 00 0000 0000, and the white Send button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-dark-theme.jpg)

Screenshot Details — Dark theme

Item	Detail
Screenshot Name	`screenshots/form-variations-dark-theme.jpg`
Screenshot Purpose	Dark theme
Screen Description	A Dark theme form at 1280 px: a black panel with 1rem rounded corners across the section, the content centred at 45rem: the white H2 Talk to our experts, the description, Region set to India, First name and Last name side by side, Email, a divider, the India media relations card in light blue with two email addresses and +91 00 0000 0000, and the white Send button.
Business Context	A Talk to our experts panel at the end of a campaign page that stands out from the light page and shows the visitor's regional contact as soon as a region is chosen.
Author Objective	Add a Dark theme form with a Region dropdown, three text inputs, an India contact card and a Send button.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Form Title / Heading (Form Variations › Content)	Talk to our experts	No	Names the form (h2) and labels it for screen readers	Short, action-oriented title	None in the model; no title means no header and no accessible name for the form
B	Form Description (Form Variations › Content)	Choose your region to see your local contact, or send us a message.	No	Explains the purpose of the form	One or two sentences; links allowed	None; shown only when it has text
(C)	Theme (Form Variations › Content)	Dark	No	Light or dark presentation	Dark for framed conversion panels	Options: Default (`""`), Dark (`dark`)
—	Item (Content tree › Form Variations › Add (+))	Dropdown / Select Field	Yes	Adds a Dropdown / Select Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Dropdown / Select Field	Only the item types the Form Variations allows
D	Dropdown Name / ID (Dropdown / Select Field 1)	region	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains “name” = half width	Required in the dialog; code fallback `text`
(E)	Dropdown Label (Dropdown / Select Field 1)	Region	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(F)	Options (Dropdown / Select Field 1)	Asia Pacific, Europe, India, North America	No	The choices (text = value)	Separate with commas; no commas inside an option	Split on commas, trimmed, empty entries dropped
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
(G)	Field Name / ID (Text Input Field 2)	firstName	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains “name” = half width	Required in the dialog; code fallback `text`
H	Field Label (Text Input Field 2)	First name	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
(I)	Field Name / ID (Text Input Field 3)	lastName	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains “name” = half width	Required in the dialog; code fallback `text`
J	Field Label (Text Input Field 3)	Last name	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
K	Field Name / ID (Text Input Field 4)	email	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
(L)	Field Label (Text Input Field 4)	Email	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(M)	Input Type (Text Input Field 4)	Email	No	Input type and keyboard	Email for emails, Tel for phones	Options: Text (`text`), Email (`email`), Tel (`tel`); unknown = text
—	Item (Content tree › Form Variations › Add (+))	Contact Card Output	Yes	Adds a Contact Card Output to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Contact Card Output	Only the item types the Form Variations allows
N	Show when dropdown value equals (Contact Card Output 5)	India	Yes (dialog)	The value that shows the card	Exact option text	Required in the dialog; one value
O	Contact Name (Contact Card Output 5)	India media relations	Yes (dialog)	Name shown in brand colour	Person or team name	Required in the dialog
(P)	Emails (Contact Card Output 5)	media.india@example.com, press.india@example.com	No	`mailto:` links	Business addresses only	Split on commas; no format check
Q	Phones (Contact Card Output 5)	+91 00 0000 0000	No	`tel:` links	International format with +	Split on commas; link keeps digits and + only
—	Item (Content tree › Form Variations › Add (+))	Submit Button	Yes	Adds a Submit Button to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Submit Button	Only the item types the Form Variations allows
—	Action (Preview)	Select Region India	—	Check on the preview (not stored in the content)	Select Region India	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** White text and transparent inputs with light borders on black; the contact name in the light brand colour, the contact links in white, and the inverted white primary button with dark text.

- **Rendering behaviour:** Theme Dark adds the class dark: the block loses its width limit, each child is limited to 45rem and centred, with 4rem panel padding at 900 px and above. The contact card is hidden until a dropdown has the value India.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the contact details are published with the page and can be crawled once shown, so use approved business contacts only.

Business Rules

- A Contact Card Output is always conditional: it shows only when a dropdown value equals its Show when dropdown value equals.
- Emails become mailto: links and phones tel: links (only digits and + kept in the link).
- Dark theme inverts the primary button to white with dark text.
- Contrast of the light overlay text and the error colour #ff6b6b is [To be confirmed: contrast audit of the Dark theme — owner: accessibility lead].

Common Authoring Mistakes

Error	Root Cause	Resolution
The India card never appears	Show when dropdown value equals is India region but the option is India	Copy the exact option text, e.g. India
Both cards are visible in the editor	Universal Editor keeps conditional items visible with a note	Check the behaviour on aem.page
A personal mobile number is published	Contact cards are public page content	Use approved business contact data only

Troubleshooting

- **Symptoms:** Selecting India shows no contact card on aem.page.
- **Cause:** The card's value differs from the option text (spelling or extra words); the comparison is trimmed and case-insensitive only.
- **Resolution:** Set Show when dropdown value equals to exactly India and publish.
- **Verification Steps:** On aem.page select India: the divider and India media relations card appear below Email.

Use Cases: "Get in touch" end-of-page panels, campaign landing pages, event registration interest sections.

Authoring Guidelines: In the **Content** tab set **Theme** to **Dark**.

Business Rules: Class `dark` on the block. The block's width limit is removed (`max-width: none`) and moved to its children (each direct child max 45rem, centred).

Rendering Rules: Background `--color-bg-neutral` (black), text `--color-text-on-neutral`, 1rem radius (`--radius-l`). Labels and muted text use `--color-text-light-overlay`; inputs have a transparent background with `--color-border-neutral-secondary` borders; dropdown options use a `--grey-900` background. Error colour `#ff6b6b`. The primary button is inverted (white background, dark text; hover `--color-bg-secondary-hover`). Contact name and status message use `--color-bg-brand-secondary`.

Responsive Behaviour: Desktop (>= 900 px): panel padding 4rem on all sides, two-column grid. Tablet (600–899 px): padding 3rem / 2.5rem, one column. Mobile (< 600 px): padding 2.5rem / 1.5rem, one column.

SEO Impact: None beyond Variation 1.

Accessibility Compliance: Same structure as Default. Contrast of the light overlay text and the `#ff6b6b` error colour on black should be verified with the final design tokens during the accessibility audit ([To be confirmed: contrast audit of the Dark theme — owner: accessibility lead]).

Variation 3 — Two-column layout with half-width name fields

Variation Name: Half-width fields (automatic, class `half-width`).

Business Purpose: Shorter, more scannable forms on desktop by placing First name and Last name side by side, matching the TCS design.

Visual Example:

Figure 41: Half-width name fields — A Default theme form at 1280 px: the H2 Subscribe to our insights, First name and Last name side by side in two columns, a full-width Email input below them and the black Subscribe button with an arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-half-width.jpg)

Screenshot Details — Half-width name fields

Item	Detail
Screenshot Name	`screenshots/form-variations-half-width.jpg`
Screenshot Purpose	Half-width name fields
Screen Description	A Default theme form at 1280 px: the H2 Subscribe to our insights, First name and Last name side by side in two columns, a full-width Email input below them and the black Subscribe button with an arrow.
Business Context	A newsletter sign-up on an insights page where a compact two-column name row keeps the form short.
Author Objective	Add a form with firstName and lastName text inputs side by side, an Email input and a Subscribe button.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)
A	Form Title / Heading (Form Variations › Content)	Subscribe to our insights	No	Names the form (h2) and labels it for screen readers	Short, action-oriented title	None in the model; no title means no header and no accessible name for the form
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
(B)	Field Name / ID (Text Input Field 1)	firstName	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Field Label (Text Input Field 1)	First name	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
(D)	Field Name / ID (Text Input Field 2)	lastName	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
E	Field Label (Text Input Field 2)	Last name	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
F	Field Name / ID (Text Input Field 3)	email	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
(G)	Field Label (Text Input Field 3)	Email	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(H)	Input Type (Text Input Field 3)	Email	No	Input type and keyboard	Email for emails, Tel for phones	Options: Text (`text`), Email (`email`), Tel (`tel`); unknown = text
—	Item (Content tree › Form Variations › Add (+))	Submit Button	Yes	Adds a Submit Button to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Submit Button	Only the item types the Form Variations allows
I	Button Label (Submit Button 4)	Subscribe	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two equal 352 px inputs in one row, the 720 px Email input under them and the left-aligned Subscribe button; no required note.
- **Rendering behaviour:** At 900 px and above firstName and lastName contain name, so they get half-width and fill the two grid columns in source order; email gets full-width. Below 900 px all three stack.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; no subscription is created because there is no back end (F-01, open).

Business Rules

- Width is automatic: a Text Input Field whose Field Name / ID contains name (any case) is half width.
- Names such as companyName or username also become half width.
- Place two half-width fields one after the other so they pair up.
- A mandatory field adds the * Required fields note, which takes one grid column and can push a following half-width field out of its pair (F-32, open).

Common Authoring Mistakes

Error	Root Cause	Resolution
Last name drops to its own row	A mandatory field adds the required note as the first grid item, beside First name	Start the form with a full-width item, or ask development to span the note (F-32)
Company sits half width next to Email	The field was named companyName	Rename it company

Troubleshooting

- **Symptoms:** First name sits next to * Required fields and Last name moves to the next row.
- **Cause:** The note is the first grid item and occupies one column at 900 px and above (F-32).
- **Resolution:** Put a full-width item such as Email or a dropdown first.
- **Verification Steps:** On aem.page at 1280 px First name and Last name share one row.

Use Cases: First / last name pairs; any pair of short text inputs.

Authoring Guidelines: Add two **Text Input Field** items whose **Field Name / ID** contains the letters "name" (any case), for example `firstName` and `lastName`, one after the other. There is no explicit width field.

Business Rules: Enforced by code: a Text Input Field whose name includes "name" (case-insensitive) gets `half-width`; every other item gets `full-width`. This also applies to names such as `companyName` or `username`, which therefore become half width too. Dropdowns, textareas, checkboxes, contact cards and buttons are always full width.

Rendering Rules: At >= 900 px `.form-variations-group.full-width` spans `1 / -1`; half-width groups take one of the two grid columns in source order.

Responsive Behaviour: Desktop (>= 900 px): side by side. Tablet and mobile: stacked, full width.

SEO Impact: None.

Accessibility Compliance: Reading and tab order follow the source order (left, then right), so the visual order and the focus order match (WCAG 1.3.2, 2.4.3).

> **Note:** when the form has any mandatory field, the "* Required fields" note is the first grid item and, at >= 900 px, occupies one column. A half-width field that directly follows it therefore sits next to the note, and its partner field moves to the next row (checked with the repository CSS at 1280 px). Start the form with a full-width item (for example Email or a dropdown) or ask the development team to make the note span both columns.

Variation 4 — Single-column (full-width) layout

Variation Name: Full-width fields (automatic, class `full-width`).

Business Purpose: A simple single-column form, easiest to complete on every device.

Visual Example:

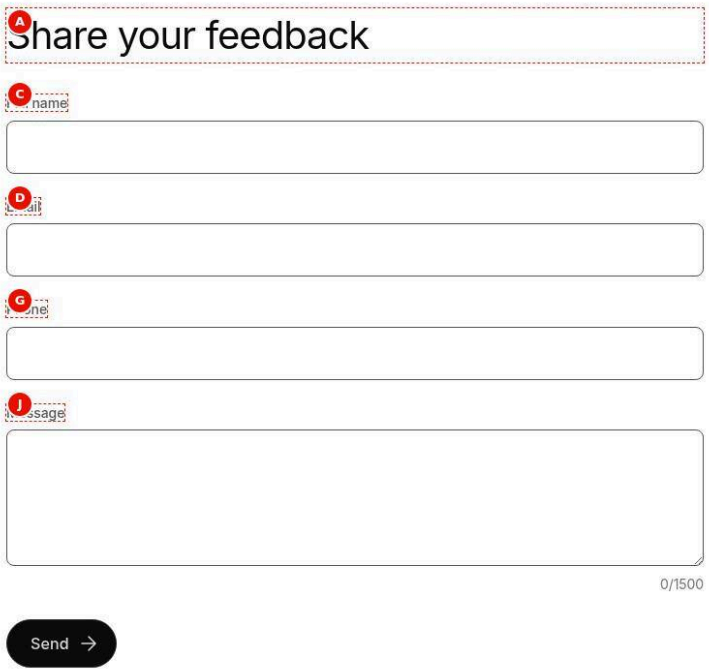

Figure 42: Single-column form — A Default theme form at 1280 px: the H2 Share your feedback and four full-width fields one below the other, Full name, Email, Phone and the Message textarea with the counter 0/1500, then the black Send button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-full-width.jpg)

Screenshot Details — Single-column form

Item	Detail
Screenshot Name	`screenshots/form-variations-full-width.jpg`
Screenshot Purpose	Single-column form
Screen Description	A Default theme form at 1280 px: the H2 Share your feedback and four full-width fields one below the other, Full name, Email, Phone and the Message textarea with the counter 0/1500, then the black Send button.
Business Context	A feedback form on a service page that is easiest to complete as a single column on every device.
Author Objective	Add a single-column feedback form whose field names avoid name: contactPerson, email, phone and message.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)
A	Form Title / Heading (Form Variations › Content)	Share your feedback	No	Names the form (h2) and labels it for screen readers	Short, action-oriented title	None in the model; no title means no header and no accessible name for the form

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
(B)	Field Name / ID (Text Input Field 1)	contactPerson	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
C	Field Label (Text Input Field 1)	Full name	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
D	Field Name / ID (Text Input Field 2)	email	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
(E)	Field Label (Text Input Field 2)	Email	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(F)	Input Type (Text Input Field 2)	Email	No	Input type and keyboard	Email for emails, Tel for phones	Options: Text (`text`), Email (`email`), Tel (`tel`); unknown = text
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
G	Field Name / ID (Text Input Field 3)	phone	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
(H)	Field Label (Text Input Field 3)	Phone	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(I)	Input Type (Text Input Field 3)	Tel	No	Input type and keyboard	Email for emails, Tel for phones	Options: Text (`text`), Email (`email`), Tel (`tel`); unknown = text
—	Item (Content tree › Form Variations › Add (+))	Textarea Field	Yes	Adds a Textarea Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Textarea Field	Only the item types the Form Variations allows
J	Field Name / ID (Textarea Field 4)	message	Yes (dialog)	Key of the value in the submitted data;	camelCase, unique in the form; con-	Required in the dialog; code fallback `text`

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
				drives width and autocomplete	tains "name" = half width	
(K)	Field Label (Textarea Field 4)	Message	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Item (Content tree › Form Variations › Add (+))	Submit Button	Yes	Adds a Submit Button to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Submit Button	Only the item types the Form Variations allows

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 720 px column of labelled inputs with no pairing, the four-row textarea with its counter and the left-aligned Send button.
- **Rendering behaviour:** contactPerson, email and phone do not contain name, so every item gets full-width and spans both grid columns at 900 px and above; the layout is the same at all widths.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the feedback is not delivered anywhere (F-01, open).

Business Rules

- The label Full name is free text; only the Field Name / ID decides the width.
- contactPerson avoids name, so the field is full width; fullName would be half width.
- Phone with Input Type Tel gets no format check, only Mandatory if set.
- The textarea limit is the default 1500.

Common Authoring Mistakes

Error	Root Cause	Resolution
Full name sits alone in half a row	The field was named fullName, which contains name	Use a name without name, e.g. contactPerson
Invalid phone numbers are accepted	Tel inputs are not validated	Expected; ask development for a pattern if needed

Troubleshooting

- **Symptoms:** The Full name field takes only half the width on desktop.
- **Cause:** Its Field Name / ID contains name.
- **Resolution:** Rename the field, e.g. contactPerson, and check that the receiving system expects the new key.
- **Verification Steps:** On aem.page at 1280 px the field spans the full 720 px.

Use Cases: Short forms, feedback forms, forms with a single "fullName" field.

Authoring Guidelines: Use field names that do not contain "name" (for example `email`, `phone`, `message`), or a single text field such as `fullname` placed where it can stand alone.

Business Rules: Every non-"name" item is `full-width`. A lone half-width field still takes only one column on desktop, leaving the other column empty.

Rendering Rules: Grid item spanning both columns at >= 900 px.

Responsive Behaviour: Full width at every breakpoint.

SEO Impact: None.

Accessibility Compliance: Single-column forms are the most robust for zoom (WCAG 1.4.10 reflow) and screen magnifiers.

Variation 5 — Text input, input type Text

Variation Name: Text Input Field, Input Type = Text (`type="text"`).

Business Purpose: Free short text such as names, company, job title, city.

Visual Example:

Figure 43: Text input — A form at 1280 px with a single mandatory Text input: the note * Required fields, the label Company with a red asterisk and an empty full-width single-line input. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-input-text.jpg)

Screenshot Details — Text input

Item	Detail
Screenshot Name	`screenshots/form-variations-input-text.jpg`
Screenshot Purpose	Text input
Screen Description	A form at 1280 px with a single mandatory Text input: the note * Required fields, the label Company with a red asterisk and an empty full-width single-line input.
Business Context	A company field in an enquiry form, so the team knows which organisation the request comes from.
Author Objective	Add a mandatory Text Input Field named company with the label Company.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
A	Field Name / ID (Text Input Field 1)	company	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
(B)	Field Label (Text Input Field 1)	Company	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Mandatory Field (*) (Text Input Field 1)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A small grey required note, the medium-weight label Company followed by a red asterisk and a grey-bordered input below it.
- **Rendering behaviour:** The input is type text with autocomplete organization (from the name company) and the native required attribute; the full-width group spans both columns.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the required note text is the placeholder requiredNote.

Business Rules

- Input Type defaults to Text; unknown values also become text.
- The autocomplete hint comes from the name: company gives organization.
- Only Mandatory Field (*) on makes the field required; the asterisk is hidden from screen readers.
- This example has no Submit Button item; add one so visitors have a button to send the form.

Common Authoring Mistakes

Error	Root Cause	Resolution
The browser does not suggest the company	The name has no recognised pattern, e.g. employer	Use company or organisation
The form has no button	No Submit Button item was added	Add a Submit Button item at the end

Troubleshooting

- **Symptoms:** The label shows company in lower case instead of Company.
- **Cause:** Field Label is empty, so the Field Name / ID is used as the label.
- **Resolution:** Enter Company in Field Label.
- **Verification Steps:** On aem.page the label reads Company with the asterisk.

Use Cases: First name, last name, company, job title, country, city, postal code.

Authoring Guidelines: Add **Text Input Field**; set **Field Name / ID** (for example `company`), **Field Label** ("Company"), **Input Type** = Text, and **Mandatory Field** as needed.

Business Rules: Input Type defaults to Text (template `inputKind: text`). Any unknown value also falls back to `text`. The browser autocomplete hint is derived from the name (see 6.29.11).

Rendering Rules: `<input class="form-variations-control" type="text">` inside a `.form-variations-group.field-text` with a `<label>`; `autocomplete` set when the name matches first/given, last/surname/family, name/full name, company/organisation, job/designation/ position, country, city/town, zip/postal/post code.

Responsive Behaviour: Half or full width on desktop (Variation 3/4); full width on tablet and mobile.

SEO Impact: None.

Accessibility Compliance: Visible label linked to the input; `autocomplete` identifies the input purpose (WCAG 1.3.5); required state exposed by the native attribute.

Variation 6 — Text input, input type Email

Variation Name: Text Input Field, Input Type = Email (`type="email"`).

Business Purpose: Collect a valid email address with browser and code validation.

Visual Example:

Figure 44: Email input with error — A form at 1280 px after Send with an invalid address: * Required fields, the label Business email with an asterisk, the input with anita.rao.example.com and a red border, the red error Enter a valid email address. below it and the black Send button. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-input-email.jpg)

Screenshot Details — Email input with error

Item	Detail
Screenshot Name	`screenshots/form-variations-input-email.jpg`
Screenshot Purpose	Email input with error
Screen Description	A form at 1280 px after Send with an invalid address: * Required fields, the label Business email with an asterisk, the input with anita.rao.example.com and a red border, the red error Enter a valid email address. below it and the black Send button.
Business Context	A business email field in an enquiry form, where a mistyped address would make the enquiry unanswerable.
Author Objective	Add a mandatory Email input and see the error when an address without @ is submitted.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
A	Field Name / ID (Text Input Field 1)	email	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
(B)	Field Label (Text Input Field 1)	Business email	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Input Type (Text Input Field 1)	Email	No	Input type and keyboard	Email for emails, Tel for phones	Options: Text (`text`), Email (`email`), Tel (`tel`); unknown = text
(D)	Mandatory Field (*) (Text Input Field 1)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on
—	Item (Content tree › Form Variations › Add (+))	Submit Button	Yes	Adds a Submit Button to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Submit Button	Only the item types the Form Variations allows
—	Action (Preview)	Type anita.rao.example.com in Business email and press Send	—	Check on the preview (not stored in the content)	Type anita.rao.example.com in Business email and press Send	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The red-bordered input with the typed value, the small red medium-weight error text under it and the Send button.
- **Rendering behaviour:** On Send the browser's email check fails, so the field gets aria-invalid=true, the error p linked with aria-describedby and focus; the error disappears as soon as the value becomes valid while typing.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the error text is the placeholder fieldEmail, published with the placeholders sheet.

Business Rules

- Validation runs only on Send; the native browser messages are turned off.
- Input Type Email checks the format only; it does not verify the mailbox or block free-mail domains.
- An empty mandatory email shows This field is required. instead.
- Autocomplete is always email for Email inputs.

Common Authoring Mistakes

Error	Root Cause	Resolution
The address format is not checked	Input Type left on Text	Set Input Type to Email
The error text is in English on /de-de/	fieldEmail is missing in the German placeholders sheet	Add the translation and publish the sheet

Troubleshooting

- **Symptoms:** A valid business address is rejected.
- **Cause:** A space or a non-standard character was typed or pasted into the field.
- **Resolution:** Remove the spaces; the browser's standard check accepts name@domain addresses.
- **Verification Steps:** Enter anita.rao@example.com and press Send: the error disappears and the form is sent.

Use Cases: Business email, contact email.

Authoring Guidelines: Set **Input Type** = Email and a name such as `email`.

Business Rules: Enforced on submit: an invalid address shows "Enter a valid email address." (placeholder `fieldEmail`); empty and mandatory shows "This field is required." (`fieldRequired`). Autocomplete is always `email`. The format check is the browser's standard email check (it does not verify that the mailbox exists or block free-mail domains).

Rendering Rules: `<input type="email" autocomplete="email">`; mobile keyboards show the email layout.

Responsive Behaviour: As Variation 5.

SEO Impact: None.

Accessibility Compliance: Error text is linked with `aria-describedby` and the field gets `aria-invalid="true"` (WCAG 3.3.1); focus moves to the first invalid field.

Variation 7 — Text input, input type Tel

Variation Name: Text Input Field, Input Type = Tel (`type="tel"`).

Business Purpose: Collect a phone number with the telephone keypad on mobile devices.

Visual Example:

Figure 45: Phone input — A form at 375 px with a mandatory Tel input: * Required fields, the label Phone number with a red asterisk and the full-width input focused with the 2 px brand-blue outline; the telephone keypad that opens on the phone is not part of the capture. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-input-tel.jpg)

Screenshot Details — Phone input

Item	Detail
Screenshot Name	`screenshots/form-variations-input-tel.jpg`
Screenshot Purpose	Phone input
Screen Description	A form at 375 px with a mandatory Tel input: * Required fields, the label Phone number with a red asterisk and the full-width input focused with the 2 px brand-blue outline; the telephone keypad that opens on the phone is not part of the capture.
Business Context	A phone number field for call-back requests, where mobile visitors should get the numeric telephone keypad.
Author Objective	Add a mandatory Text Input Field named phone with Input Type Tel.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
A	Field Name / ID (Text Input Field 1)	phone	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
(B)	Field Label (Text Input Field 1)	Phone number	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(C)	Input Type (Text Input Field 1)	Tel	No	Input type and keyboard	Email for emails, Tel for phones	Options: Text (`text`), Email (`email`), Tel (`tel`); unknown = text
(D)	Mandatory Field (*) (Text Input Field 1)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—
—	Action (Preview (phone))	Tap Phone number: the telephone keypad opens (the keypad itself is not part of the capture)	—	Check on the preview (not stored in the content)	Tap Phone number: the telephone keypad opens (the keypad itself is not part of the capture)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The small grey note, the label with asterisk and a focused input with a blue outline across the phone width.
- **Rendering behaviour:** The input is type tel with autocomplete tel, so phones open the telephone keypad and can offer the visitor's number; no pattern or length check is applied.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; nothing else to publish for this field.

Business Rules

- Input Type Tel gives the telephone keypad on mobile devices and autocomplete tel.
- Phone numbers are not validated for format or length; only Mandatory is enforced.
- An empty mandatory phone shows This field is required. on Send.
- The name phone also matches the tel autocomplete pattern.

Common Authoring Mistakes

Error	Root Cause	Resolution
The letter keyboard opens for the phone number	Input Type left on Text	Set Input Type to Tel
Letters are accepted as a phone number	Tel inputs have no format check	Expected; ask development for a pattern if the back end needs one

Troubleshooting

- **Symptoms:** On the phone the full keyboard opens instead of the keypad.
- **Cause:** Input Type is Text, or the change was not published.
- **Resolution:** Set Input Type to Tel and publish the page.
- **Verification Steps:** On aem.page, tap Phone number on a phone: the telephone keypad opens.

Use Cases: Phone or mobile number.

Authoring Guidelines: Set **Input Type** = Tel and a name such as `phone`.

Business Rules: No format or length validation is applied to phone numbers (browsers do not validate `type="tel"`, and the block sets no pattern); only Mandatory is enforced. Autocomplete is `tel`.

Rendering Rules: `<input type="tel" autocomplete="tel">`.

Responsive Behaviour: As Variation 5.

SEO Impact: None.

Accessibility Compliance: Same as Variation 5.

Variation 8 — Dropdown / Select field

Variation Name: Dropdown / Select Field (`field-select`).

Business Purpose: Let the visitor choose one value from a fixed list; the chosen value also drives conditional fields and contact cards.

Visual Example:

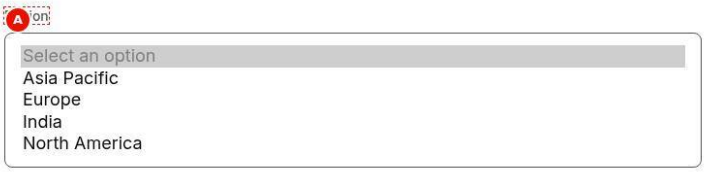

Figure 46: Dropdown field — A form at 1280 px with the Region dropdown open: the native list shows the greyed prompt Select an option and the options Asia Pacific, Europe, India and North America; the label has no asterisk because the field is optional. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-dropdown.jpg)

Screenshot Details — Dropdown field

Item	Detail
Screenshot Name	`screenshots/form-variations-dropdown.jpg`
Screenshot Purpose	Dropdown field
Screen Description	A form at 1280 px with the Region dropdown open: the native list shows the greyed prompt Select an option and the options Asia Pacific, Europe, India and North America; the label has no asterisk because the field is optional.
Business Context	A region choice in an enquiry form, used both as submitted data and to reveal regional contact cards or fields.
Author Objective	Add a Dropdown / Select Field named region with four comma-separated options.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)
—	Item (Content tree › Form Variations › Add (+))	Dropdown / Select Field	Yes	Adds a Dropdown / Select Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Dropdown / Select Field	Only the item types the Form Variations allows
A	Dropdown Name / ID (Dropdown / Select Field 1)	region	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
(B)	Dropdown Label (Dropdown / Select Field 1)	Region	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(C)	Options (Dropdown / Select Field 1)	Asia Pacific, Europe, India, North America	No	The choices (text = value)	Separate with commas; no commas inside an option	Split on commas, trimmed, empty entries dropped
—	Action (Preview)	Open the Region dropdown	—	Check on the preview (not stored in the content)	Open the Region dropdown	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A full-width native select with the browser's arrow, opened to show the disabled prompt and the four options in authored order.
- **Rendering behaviour:** Options are split on commas and trimmed; the option text is also the submitted value. The prompt Select an option (placeholder selectAnOption) is added first, disabled and pre-selected, with an empty value.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the prompt text comes from the published placeholders sheet.

Business Rules

- An option cannot contain a comma; empty entries are dropped.
- The prompt cannot be chosen again once an option is selected.
- A mandatory dropdown left on the prompt fails with This field is required.
- Conditional items and contact cards compare their value with the selected option text, trimmed and case-insensitively.

Common Authoring Mistakes

Error	Root Cause	Resolution
An option Asia, Pacific splits into two	A comma inside the option text	Write the option without a comma, e.g. Asia Pacific

Error	Root Cause	Resolution
Options appear as one long entry	Options separated by semicolons or line breaks	Separate options with commas

Troubleshooting

- **Symptoms:** The dropdown shows the condition text as an option.
- **Cause:** Item cells are read by position; a never-saved field shifted the cells (O-18).
- **Resolution:** Open the item in Universal Editor, set every field (toggle Mandatory on and off) and save.
- **Verification Steps:** On aem.page the dropdown lists only Asia Pacific, Europe, India and North America.

Use Cases: Sector, region, country, topic of enquiry, "How did you hear about us?".

Authoring Guidelines: Add **Dropdown / Select Field**; set **Dropdown Name / ID** (`region`), **Dropdown Label** ("Region"), **Options** as a comma-separated list ("Asia Pacific, Europe, India, North America"), **Mandatory Field** as needed.

Business Rules: Options are split on commas and trimmed; empty entries are dropped; an option cannot contain a comma. The option text is also the submitted value. A disabled, pre-selected first option "Select an option" (placeholder `selectAnOption`) is always added; it has an empty value, so a mandatory dropdown left on it fails with "This field is required.". The dropdown has no Show-only-if limit on how many conditions refer to it.

Rendering Rules: Native `<select class="form-variations-control">` with the browser's own arrow (`appearance: auto`), full width.

Responsive Behaviour: Full width at all breakpoints; the native picker is used on mobile.

SEO Impact: None.

Accessibility Compliance: Native select (fully keyboard and screen reader accessible), visible label; the prompt option cannot be re-selected.

Variation 9 — Textarea with character counter

Variation Name: Textarea Field (`field-textarea`).

Business Purpose: Longer free-text messages with a visible character limit.

Visual Example:

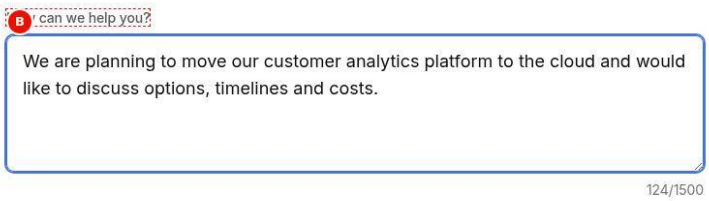

Figure 47: Textarea with counter — A form at 1280 px with the textarea How can we help you? focused (brand outline), holding the typed text We are planning to move our customer analytics platform to the cloud and would like to discuss options, timelines and costs. and the counter 124/1500 right-aligned below it. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-textarea.jpg)

Screenshot Details — Textarea with counter

Item	Detail
Screenshot Name	`screenshots/form-variations-textarea.jpg`
Screenshot Purpose	Textarea with counter

Item	Detail
Screen Description	A form at 1280 px with the textarea How can we help you? focused (brand outline), holding the typed text We are planning to move our customer analytics platform to the cloud and would like to discuss options, timelines and costs. and the counter 124/1500 right-aligned below it.
Business Context	The free-text part of an enquiry, where prospects describe their project in their own words within a limit the team can handle.
Author Objective	Add a Textarea Field named message with the default 1500 character limit.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)
—	Item (Content tree › Form Variations › Add (+))	Textarea Field	Yes	Adds a Textarea Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Textarea Field	Only the item types the Form Variations allows
(A)	Field Name / ID (Textarea Field 1)	message	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
B	Field Label (Textarea Field 1)	How can we help you?	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Action (Preview)	Type in the textarea: "We are planning to move our customer analytics platform to the cloud and would like to discuss options, timelines and costs."	—	Check on the preview (not stored in the content)	Type in the textarea: "We are planning to move our customer analytics platform to the cloud and would like to discuss options, timelines and costs."	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A four-row, vertically resizable textarea with two lines of text and the small grey counter at its bottom right.
- **Rendering behaviour:** The textarea has maxlength 1500 (Max Character Limit default) and rows 4, at least 7.5rem tall; the counter updates on every input and after a reset and is the textarea's description (aria-describedby).
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the typed text is not sent anywhere (F-01, open).

Business Rules

- The limit is the authored number when it is a positive whole number, else 1500.
- The browser stops typing at the limit.

- The counter shows {typed}/{limit} and is not re-announced on every keystroke.
- The textarea is always full width.

Common Authoring Mistakes

Error	Root Cause	Resolution
The counter shows /1500 although 500 was wanted	Max Character Limit left at 1500 or entered as text	Enter 500 as a whole number
Long messages are cut off	A low limit, e.g. 100	Choose a limit that fits the expected answers

Troubleshooting

- **Symptoms:** Visitors cannot type more although the message is incomplete.
- **Cause:** The maxlength limit from Max Character Limit is reached.
- **Resolution:** Raise Max Character Limit, e.g. to 1500, and publish.
- **Verification Steps:** On aem.page the counter shows the new limit after the slash.

Use Cases: Message, feedback, project description.

Authoring Guidelines: Add **Textarea Field**; set **Field Name / ID** (`message`), **Field Label**, **Max Character Limit** (default 1500), **Mandatory Field** as needed.

Business Rules: Enforced: the browser stops typing at the limit (`maxlength`). The limit is the authored number when it is a positive whole number, else 1500. The counter shows "{typed}/{limit}" and updates on every input and after a reset.

Rendering Rules: `<textarea rows="4" maxlength="…">`, minimum height 7.5rem, vertical resize only; counter `.form-variations-counter` (extra small, muted) linked with `aria-describedby`.

Responsive Behaviour: Full width at every breakpoint.

SEO Impact: None.

Accessibility Compliance: The counter is the textarea's description, so screen readers announce the limit; it is not a live region, so the count is not re-announced on every keystroke.

Variation 10 — Consent checkbox

Variation Name: Consent Checkbox Field (`field-checkbox`).

Business Purpose: Capture explicit consent (privacy notice, marketing opt-in) with authorable rich text including links.

Visual Example:

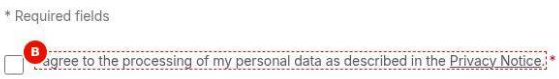

Figure 48: Consent checkbox — A form at 1280 px with a mandatory consent checkbox: * Required fields, then a 1.25rem checkbox followed by the small text I agree to the processing of my personal data as described in the Privacy Notice, with Privacy Notice underlined as a link, and a red asterisk. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-consent-checkbox.jpg)

Screenshot Details — Consent checkbox

Item	Detail
Screenshot Name	`screenshots/form-variations-consent-checkbox.jpg`

Item	Detail
Screenshot Purpose	Consent checkbox
Screen Description	A form at 1280 px with a mandatory consent checkbox: * Required fields, then a 1.25rem checkbox followed by the small text I agree to the processing of my personal data as described in the Privacy Notice, with Privacy Notice underlined as a link, and a red asterisk.
Business Context	The privacy acknowledgement of an enquiry form, required before personal data can be processed.
Author Objective	Add a mandatory Consent Checkbox Field named consent with rich-text consent including a Privacy Notice link.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)
—	Item (Content tree › Form Variations › Add (+))	Consent Checkbox Field	Yes	Adds a Consent Checkbox Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Consent Checkbox Field	Only the item types the Form Variations allows
(A)	Checkbox Name / ID (Consent Checkbox Field 1)	consent	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains “name” = half width	Required in the dialog; code fallback `text`
B	Consent Text / Disclaimer (Consent Checkbox Field 1)	I agree to the processing of my personal data as described in the Privacy Notice (link / en/privacy-notice).	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(C)	Mandatory Field (*) (Consent Checkbox Field 1)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on

All other fields keep their default values. Each callout letter marks the field’s output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The checkbox on the left and the wrapped small consent text on its right, the link underlined in the text colour and the asterisk after the last word.
- **Rendering behaviour:** The whole consent text is the checkbox’s label, so clicking it toggles the box (a click on the link opens the link). Checked, the field submits consent=true; unchecked it is left out of the data.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the linked Privacy Notice page must be published itself.

Business Rules

- Mandatory and unchecked shows This field is required. on Send.
- The error appears in the same row, to the right of the consent text, not below it (F-32, open).
- If the consent text is empty, the name consent is shown as the label.

- Checked, the box submits consent=true; an unchecked box is not included in the data at all.

Common Authoring Mistakes

Error	Root Cause	Resolution
Visitors can send without consenting	Mandatory Field (*) left off	Turn Mandatory on for the consent box
The link opens instead of ticking the box	Links inside the label navigate	Keep the link short and descriptive; visitors tick the box itself

Troubleshooting

- **Symptoms:** The required error appears beside the consent text, squeezing it.
- **Cause:** The checkbox row does not wrap, so the error is placed in the same row (F-32).
- **Resolution:** Keep the consent text short; the layout fix is a development change.
- **Verification Steps:** Press Send with the box unticked on aem.page and check the error is readable.

Use Cases: Privacy notice acknowledgement, marketing opt-in, terms acceptance.

Authoring Guidelines: Add **Consent Checkbox Field**; set **Checkbox Name / ID** (`consent`), **Consent Text / Disclaimer** (rich text, links allowed), **Mandatory Field** on for a required acknowledgement.

Business Rules: Submitted value is `"true"` when checked; an unchecked box is not included in the data at all. Mandatory and unchecked shows "This field is required.". If the consent text is empty, the name is shown as the label.

Rendering Rules: Row layout: 1.25rem checkbox (brand accent colour) then the label with the rich text kept (`.form-variations-consent`, last paragraph inline so the asterisk follows the text); links in the text are underlined and inherit the text colour.

Responsive Behaviour: Same row layout at all breakpoints; the text wraps.

SEO Impact: Links in the consent text are normal links (crawlable).

Accessibility Compliance: The whole text is the checkbox's label (clicking it toggles the box). Placing links inside a label is allowed but means a click on the link navigates rather than toggling; keep link text descriptive.

> **Note:** an inline error on the checkbox is placed in the same row, to the right of the consent text, not below it (the row has no wrapping; checked with the repository CSS). It is still announced through `aria-describedby`.

Variation 11 — Conditional fields ("Show only if dropdown value equals")

Variation Name: Conditional item (`data-depends-on`).

Business Purpose: Ask only relevant questions: show extra fields, buttons or text for one dropdown answer.

Visual Example:

Figure 49: Conditional field shown — A form at 1280 px after choosing Other: * Required fields, the mandatory Sector dropdown set to Other and, below it, the newly shown mandatory text input Please specify your sector. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-conditional-fields.jpg)

Screenshot Details — Conditional field shown

Item	Detail
Screenshot Name	`screenshots/form-variations-conditional-fields.jpg`
Screenshot Purpose	Conditional field shown
Screen Description	A form at 1280 px after choosing Other: * Required fields, the mandatory Sector dropdown set to Other and, below it, the newly shown mandatory text input Please specify your sector.
Business Context	A sector question in an enquiry form that asks for a free-text sector only when none of the listed sectors fits.
Author Objective	Add a mandatory Sector dropdown and a mandatory text input that shows only when Sector is Other.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)
—	Item (Content tree › Form Variations › Add (+))	Dropdown / Select Field	Yes	Adds a Dropdown / Select Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Dropdown / Select Field	Only the item types the Form Variations allows
A	Dropdown Name / ID (Dropdown / Select Field 1)	sector	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
B	Dropdown Label (Dropdown / Select Field 1)	Sector	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(C)	Mandatory Field (*) (Dropdown / Select Field 1)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on
(D)	Options (Dropdown / Select Field 1)	Banking, Retail, Manufacturing, Other	No	The choices (text = value)	Separate with commas; no commas inside an option	Split on commas, trimmed, empty entries dropped

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
(E)	Field Name / ID (Text Input Field 2)	sectorOther	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
(F)	Field Label (Text Input Field 2)	Please specify your sector	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(G)	Mandatory Field (*) (Text Input Field 2)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on
H	Show only if dropdown value equals (Text Input Field 2)	Other	No	Conditional display	Exact option text; empty = always shown	One value, case-insensitive match
—	Action (Preview)	Select Sector Other: "Please specify your sector" appears	—	Check on the preview (not stored in the content)	Select Sector Other: "Please specify your sector" appears	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The Sector dropdown showing Other and the full-width input Please specify your sector with its asterisk directly under it.
- **Rendering behaviour:** The input group has data-depends-on Other and is hidden and disabled until any enabled dropdown of the form has the value Other; then it is shown, enabled and required. The check runs on load, on every dropdown change and after a reset.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; in Universal Editor the conditional input is always visible with a dashed border and a note.

Business Rules

- One value per item: a comma-separated list is treated as one value and will not match.
- The comparison is trimmed and case-insensitive.
- Hidden items are not validated, not required and not submitted, so sectorOther is only required when shown.
- Place the conditional item directly after its dropdown; no announcement is made when it appears.

Common Authoring Mistakes

Error	Root Cause	Resolution
The specify field never appears	Show only if dropdown value equals is Others while the option is Other	Copy the exact option text Other
Visitors who chose Other are not asked to specify	Mandatory Field (*) left off on the conditional input	Turn Mandatory on; it applies only while the field is shown
The field shows for two sectors only in one case	Retail, Other entered as the condition	Add a second conditional item per value

Troubleshooting

- **Symptoms:** In Universal Editor both the dropdown and Please specify your sector are always visible.
- **Cause:** The editor keeps conditional items visible with the note Shown when a dropdown value is Other.
- **Resolution:** Expected; test the condition on aem.page.
- **Verification Steps:** On aem.page the input appears only after selecting Other.

Use Cases: "Other — please specify"; region-specific consent texts; a different submit button per region; extra questions for one sector.

Authoring Guidelines: On a Text, Dropdown, Textarea, Checkbox or Submit item, type the exact dropdown option text in **Show only if dropdown value equals** (for example `Other`). Leave it empty to always show the item.

Business Rules: Enforced by code: the item is visible when **any** dropdown of the same form currently has that value (compared trimmed and case-insensitively). One value per item only (a comma-separated list is treated as one value and will not match). Hidden items are disabled: they are not validated, not required and not submitted. Conditions can chain (a conditional dropdown can control further items); the code repeats the check until nothing changes. A hidden dropdown's value does not count. In Universal Editor (edit and preview mode) every conditional item stays visible with an italic note "Shown when a dropdown value is"{value}"" and a dashed border.

Rendering Rules: `hidden` attribute on the group (`display: none`); evaluated on load, on every dropdown `change` and after a successful submit (reset).

Responsive Behaviour: Same at every breakpoint.

SEO Impact: None.

Accessibility Compliance: Hidden items are removed from the accessibility tree; newly shown items appear after the dropdown in reading order. No announcement is made when items appear (Recommended: place conditional items directly after their dropdown).

Variation 12 — Contact card output (region routing)

Variation Name: Contact Card Output (`contact-card`).

Business Purpose: Show the right contact person and their email addresses and phone numbers for the visitor's selection, without submitting anything.

Visual Example:

Figure 50: Contact card shown for a region — A form at 1280 px with Region set to India: below the dropdown, after a thin divider, the contact name India media relations in brand blue and the links media.india@example.com, press.india@example.com and +91 00 0000 0000 listed vertically; the Europe card stays hidden. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-contact-card.jpg)

Screenshot Details — Contact card shown for a region

Item	Detail
Screenshot Name	`screenshots/form-variations-contact-card.jpg`
Screenshot Purpose	Contact card shown for a region

Item	Detail
Screen Description	A form at 1280 px with Region set to India: below the dropdown, after a thin divider, the contact name India media relations in brand blue and the links media.india@example.com, press.india@example.com and +91 00 0000 0000 listed vertically; the Europe card stays hidden.
Business Context	Media enquiries routed by region: journalists choose their region and immediately see the right press office without submitting anything.
Author Objective	Add a Region dropdown and two Contact Card Output items, one for India and one for Europe.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)
—	Item (Content tree › Form Variations › Add (+))	Dropdown / Select Field	Yes	Adds a Dropdown / Select Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Dropdown / Select Field	Only the item types the Form Variations allows
A	Dropdown Name / ID (Dropdown / Select Field 1)	region	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains “name” = half width	Required in the dialog; code fallback `text`
(B)	Dropdown Label (Dropdown / Select Field 1)	Region	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(C)	Options (Dropdown / Select Field 1)	Asia Pacific, Europe, India, North America	No	The choices (text = value)	Separate with commas; no commas inside an option	Split on commas, trimmed, empty entries dropped
—	Item (Content tree › Form Variations › Add (+))	Contact Card Output	Yes	Adds a Contact Card Output to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Contact Card Output	Only the item types the Form Variations allows
D	Show when dropdown value equals (Contact Card Output 2)	India	Yes (dialog)	The value that shows the card	Exact option text	Required in the dialog; one value
E	Contact Name (Contact Card Output 2)	India media relations	Yes (dialog)	Name shown in brand colour	Person or team name	Required in the dialog
(F)	Emails (Contact Card Output 2)	media.india@example.com, press.india@example.com	No	`mailto:` links	Business addresses only	Split on commas; no format check
G	Phones (Contact Card Output 2)	+91 00 0000 0000	No	`tel:` links	International format with +	Split on commas; link keeps digits and + only
—	Item (Content tree › Form Variations › Add (+))	Contact Card Output	Yes	Adds a Contact Card Output to the Form Variations	Select the Form Variations in the content tree,	Only the item types the Form Variations allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
					choose Add (+) and pick Contact Card Output	
(H)	Show when dropdown value equals (Contact Card Output 3)	Europe	Yes (dialog)	The value that shows the card	Exact option text	Required in the dialog; one value
I	Contact Name (Contact Card Output 3)	Europe media relations	Yes (dialog)	Name shown in brand colour	Person or team name	Required in the dialog
(J)	Emails (Contact Card Output 3)	media.europe@example.com	No	`mailto:` links	Business addresses only	Split on commas; no format check
(K)	Phones (Contact Card Output 3)	+44 20 7946 0000	No	`tel:` links	International format with +	Split on commas; link keeps digits and + only
—	Action (Preview)	Select Region India: the India contact card appears	—	Check on the preview (not stored in the content)	Select Region India: the India contact card appears	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The Region dropdown on India, a divider line, the brand-coloured name at heading size M and three plain links that underline on hover.
- **Rendering behaviour:** Each card is hidden until a dropdown value equals its Show when dropdown value equals; emails become mailto: links and the phone a tel: link with only digits and + kept (tel:+910000000000), the visible text as typed.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the contact details are page content, crawlable once shown, so only approved business contacts belong here.

Business Rules

- Show when dropdown value equals is mandatory: a contact card is always conditional.
- Several cards may share a value; all of them are shown.
- Emails and Phones are comma-separated and not validated.
- The contact name is a paragraph, not a heading; the card submits nothing.

Common Authoring Mistakes

Error	Root Cause	Resolution
The Europe card never shows	The card value is Europe region while the option text is Europe	Use exactly the option text Europe
The phone link dials a wrong number	Extension text such as ext 12 was typed in Phones	Enter only the number; digits and + form the link

Troubleshooting

- **Symptoms:** The email link opens nothing on the visitor's laptop.
- **Cause:** mailto: links need an email program configured on the device.
- **Resolution:** Expected; the address is visible so visitors can copy it.

- **Verification Steps:** On aem.page click media.india@example.com on a device with a mail client: a new message opens.

Use Cases: Regional media, sales or partner contacts; office contacts per country.

Authoring Guidelines: Add **Contact Card Output**; set **Show when dropdown value equals** (mandatory, e.g. `India`), **Contact Name**, **Emails** and **Phones** (comma-separated).

Business Rules: A contact card is always conditional (its region is its condition); with no matching dropdown value it is hidden. Emails become `mailto:` links; phones become `tel:` links with every character except digits and `+` removed from the link (the visible text is kept as typed). No email or phone format validation. Several cards can share a value (all are shown).

Rendering Rules: `.form-variations-group.form-variations-contact-card.full-width` with a top divider, `p.form-variations-contact-name` (brand colour, heading size M, medium weight), and a `ul.form-variations-contact-links` of `li.form-variations-contact-email` / `-phone` links.

Responsive Behaviour: Full width at every breakpoint.

SEO Impact: Contact names, emails and phone numbers are in the page HTML (hidden until selected); they can be crawled. Publish only business contact data approved for the web.

Accessibility Compliance: Real links (keyboard operable); the name is a paragraph, not a heading. The card has no content of its own to submit.

Variation 13 — Submit button (always shown or conditional)

Variation Name: Submit Button (`field-submit`).

Business Purpose: Submits the form; can be shown for one dropdown value only (for example a region-specific call to action).

Visual Example:

Figure 51: Submit button and success message — A form at 1280 px after a valid Send: the label Email above an empty input (reset), the black primary Send button with a trailing arrow, and below the form the brand-blue message Thank you, your details were sent. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/form-variations-submit-button.jpg)

Screenshot Details — Submit button and success message

Item	Detail
Screenshot Name	`screenshots/form-variations-submit-button.jpg`
Screenshot Purpose	Submit button and success message
Screen Description	A form at 1280 px after a valid Send: the label Email above an empty input (reset), the black primary Send button with a trailing arrow, and below the form the brand-blue message Thank you, your details were sent.
Business Context	The final step of a short email sign-up, where the visitor needs confirmation that the request was accepted.
Author Objective	Add an Email input and a Submit Button with the default label, then send a valid address.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
A	Field Name / ID (Text Input Field 1)	email	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
(B)	Field Label (Text Input Field 1)	Email	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
(C)	Input Type (Text Input Field 1)	Email	No	Input type and keyboard	Email for emails, Tel for phones	Options: Text (`text`), Email (`email`), Tel (`tel`); unknown = text
—	Item (Content tree › Form Variations › Add (+))	Submit Button	Yes	Adds a Submit Button to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Submit Button	Only the item types the Form Variations allows
—	Action (Preview)	Type Email anita.rao@example.com and press Send	—	Check on the preview (not stored in the content)	Type Email anita.rao@example.com and press Send	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The left-aligned primary button at its content width and the medium-weight status line in the brand colour under the form.
- **Rendering behaviour:** The button is type submit, styled by the button decorator (primary, arrow). A valid submit dispatches form-variations:submit, resets the form and fills the role=status message, which receives focus so it is announced.
- **Publishing behaviour:** Publish sends the page to aem.page or aem.live; the labels send and formSuccess come from the published placeholders sheet; no data reaches any system (F-01, open, P1).

Business Rules

- An empty Button Label falls back to the placeholder send (Send); the model default is Send.
- Several Submit Buttons are allowed; each submits the whole form.
- If every Submit Button is conditional and no matching value is selected, there is no button.
- cmp:submit is pushed on every submit attempt, including invalid ones.

Common Authoring Mistakes

Error	Root Cause	Resolution
Analytics counts more submits than enquiries	cmp:submit is pushed for invalid attempts too	Combine with a success signal once implemented
The form has no visible button	The only Submit Button has a Show only if dropdown value equals	Add an unconditional Submit Button or clear the condition

Troubleshooting

- **Symptoms:** The success message appears but no confirmation email arrives.
- **Cause:** There is no submit endpoint; the message only confirms the client-side validation (F-01).
- **Resolution:** Escalate to development to connect a back end before live use.
- **Verification Steps:** After the integration, a test submission on aem.page reaches the target system.

Use Cases: “Send”, “Submit enquiry”, “Request a call back”.

Authoring Guidelines: Add **Submit Button**; set **Button Label** (default “Send”); optionally **Show only if dropdown value equals**.

Business Rules: Empty label falls back to the placeholder `send` (“Send”). Several submit buttons are allowed; each submits the whole form. If every submit button is conditional and no matching value is selected, the visitor has no button to submit with. After a valid submit the form is reset, so a conditional button may disappear; focus then moves to the status message.

Rendering Rules: `<button type="submit" class="button primary">` from the button decorator (trailing arrow icon); in the Dark theme inverted to white. Left-aligned (`align-items: flex-start`).

Responsive Behaviour: Same at every breakpoint; the button keeps its content width.

SEO Impact: None.

Accessibility Compliance: Native button; the success message is a `role="status"` live region that also receives focus (`tabindex="-1"`), so it is announced (WCAG 4.1.3).

6.29.4 Authoring Experience

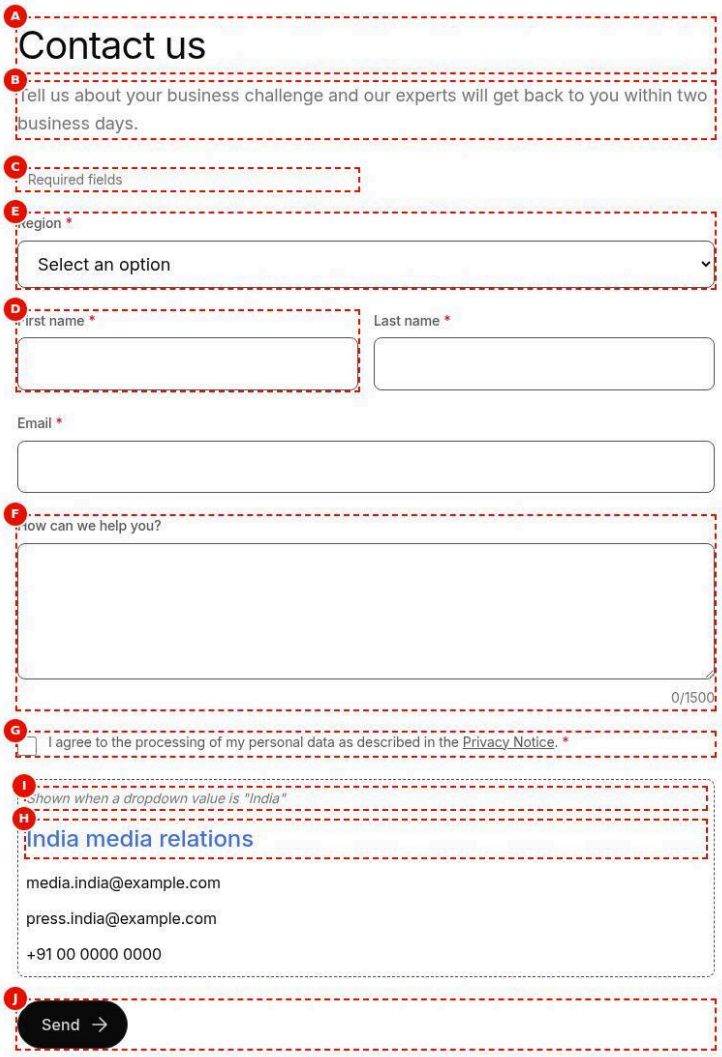

Figure 52: Universal Editor canvas — The Contact us form in Universal Editor edit mode at 1280 px with sample content and red dashed markers A to J: title, description, required note (one column wide), First name, Region, the textarea, the consent row, the India contact card with its italic condition note in a dashed box, and the Send button. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/form-variations-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/form-variations-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	The Contact us form in Universal Editor edit mode at 1280 px with sample content and red dashed markers A to J: title, description, required note (one column wide), First name, Region, the textarea, the consent row, the India contact card with its italic condition note in a dashed box, and the Send button.
Business Context	Authors maintaining the Contact us form select the block and its items in the content tree to edit labels, options and conditions.
Author Objective	Select the Form Variations block in edit mode and identify which items render which parts of the form.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Form Variations	Yes	Adds the Form Variations to the page	Select the section in the content tree, choose Add (+) and pick Form Variations	Only components the section allows (section filter)
—	Form Title / Heading (Form Variations › Content)	Contact us	No	Names the form (h2) and labels it for screen readers	Short, action-oriented title	None in the model; no title means no header and no accessible name for the form
—	Form Description (Form Variations › Content)	Tell us about your business challenge and our experts will get back to you within two business days.	No	Explains the purpose of the form	One or two sentences; links allowed	None; shown only when it has text
—	Item (Content tree › Form Variations › Add (+))	Dropdown / Select Field	Yes	Adds a Dropdown / Select Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Dropdown / Select Field	Only the item types the Form Variations allows
—	Dropdown Name / ID (Dropdown / Select Field 1)	region	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
—	Dropdown Label (Dropdown / Select Field 1)	Region	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Mandatory Field (*) (Dropdown / Select Field 1)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on
—	Options (Dropdown / Select Field 1)	Asia Pacific, Europe, India, North America	No	The choices (text = value)	Separate with commas; no commas inside an option	Split on commas, trimmed, empty entries dropped
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
—	Field Name / ID (Text Input Field 2)	firstName	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
—	Field Label (Text Input Field 2)	First name	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Mandatory Field (*) (Text Input Field 2)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Field Name / ID (Text Input Field 3)	lastName	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
—	Field Label (Text Input Field 3)	Last name	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Mandatory Field (*) (Text Input Field 3)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on
—	Item (Content tree › Form Variations › Add (+))	Text Input Field	Yes	Adds a Text Input Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Text Input Field	Only the item types the Form Variations allows
—	Field Name / ID (Text Input Field 4)	email	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
—	Field Label (Text Input Field 4)	Email	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Input Type (Text Input Field 4)	Email	No	Input type and keyboard	Email for emails, Tel for phones	Options: Text (`text`), Email (`email`), Tel (`tel`); unknown = text
—	Mandatory Field (*) (Text Input Field 4)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on
—	Item (Content tree › Form Variations › Add (+))	Textarea Field	Yes	Adds a Textarea Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Textarea Field	Only the item types the Form Variations allows
—	Field Name / ID (Textarea Field 5)	message	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
—	Field Label (Textarea Field 5)	How can we help you?	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name
—	Item (Content tree › Form Variations › Add (+))	Consent Checkbox Field	Yes	Adds a Consent Checkbox Field to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Consent Checkbox Field	Only the item types the Form Variations allows
—	Checkbox Name / ID (Consent Checkbox Field 6)	consent	Yes (dialog)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains "name" = half width	Required in the dialog; code fallback `text`
—	Consent Text / Disclaimer (Consent Checkbox Field 6)	I agree to the processing of my personal data as de-	Yes (dialog)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		scribed in the Privacy Notice (link / en/privacy-notice).				
—	Mandatory Field (*) (Consent Checkbox Field 6)	On	No	Makes the field required	Only what is truly needed	Only `true` turns it on
—	Item (Content tree › Form Variations › Add (+))	Contact Card Output	Yes	Adds a Contact Card Output to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Contact Card Output	Only the item types the Form Variations allows
—	Show when dropdown value equals (Contact Card Output 7)	India	Yes (dialog)	The value that shows the card	Exact option text	Required in the dialog; one value
—	Contact Name (Contact Card Output 7)	India media relations	Yes (dialog)	Name shown in brand colour	Person or team name	Required in the dialog

—	Item (Content tree › Form Variations › Add (+))	Submit Button	Yes	Adds a Submit Button to the Form Variations	Select the Form Variations in the content tree, choose Add (+) and pick Submit Button	Only the item types the Form Variations allows
—	Mode (Universal Editor)	Edit; select the Form Variations block (content tree shows its items)	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The full form with every item visible, including the India card that is hidden on the live page, each part outlined and lettered.
- **Rendering behaviour:** In the editor every conditional item stays visible with Shown when a dropdown value is India and a dashed border, so it can be selected; on aem.page the card shows only after selecting India.
- **Publishing behaviour:** Edits are saved in AEM; Publish sends the page to aem.page or aem.live. Placeholder texts are maintained and published in the locale's placeholders sheet.

Business Rules

- Items are added only from the content tree under the block; the filter allows the six item types.
- The Field type of each item is read-only and decides how the item renders.
- Item fields are read by position; set every field once and save so no cell is missing (O-18).
- The required note C and the condition note I are generated and cannot be edited.

Common Authoring Mistakes

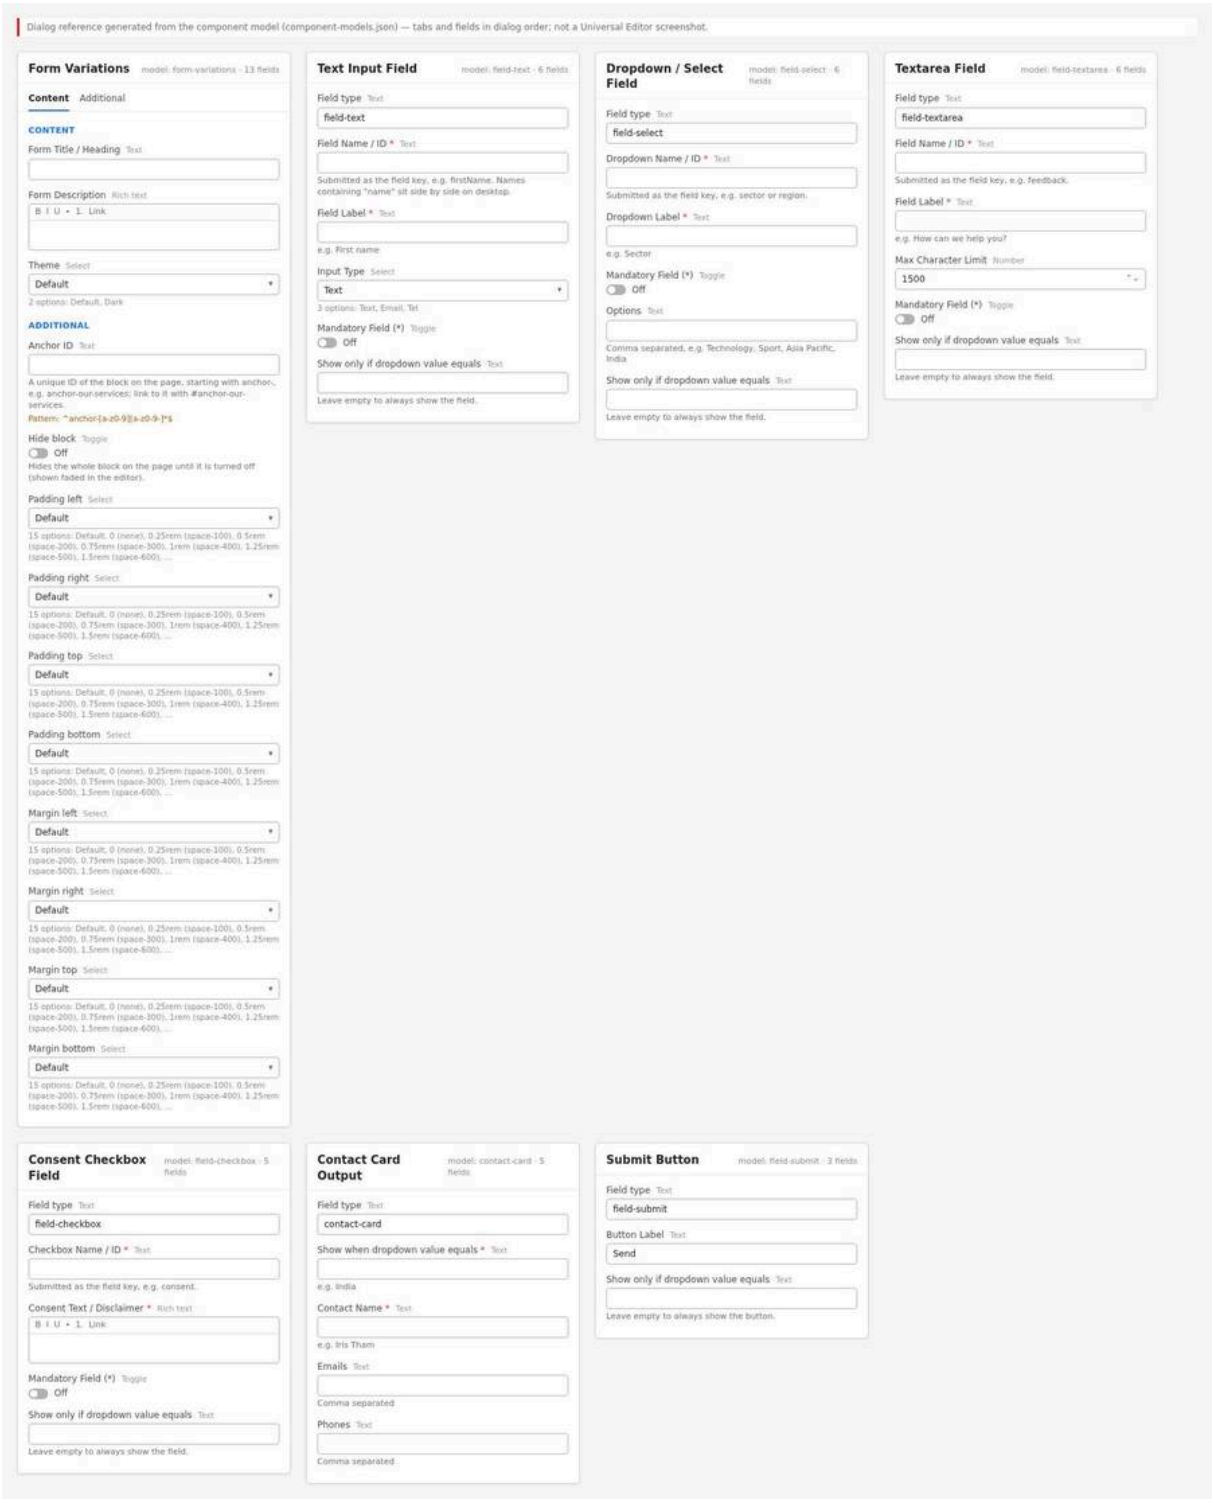
Error	Root Cause	Resolution
The contact card looks always visible to the author	The editor shows conditional items on purpose	Check the condition on aem.page
An item was added outside the block	A component was added to the section instead of the block	Add items from the content tree under Form Variations

Troubleshooting

- **Symptoms:** A newly added field shows wrong values, e.g. its label as the type.
- **Cause:** Never-saved fields leave cells missing, so the positional reading shifts (O-18).
- **Resolution:** Open the item, set each field (toggle Mandatory on and off) and save.
- **Verification Steps:** The canvas shows the label, input and asterisk as authored.

Annotations:

- A = Form Title / Heading (block property, rendered as the `h2`)
- B = Form Description (rich text)
- C = "* Required fields" note (generated when any field is mandatory; not editable)
- D = Text Input Field item (label, input; half width when the name contains "name")
- E = Dropdown / Select Field item (label, options)
- F = Textarea Field item (label, textarea, counter)
- G = Consent Checkbox Field item (consent rich text)
- H = Contact Card Output item (contact name, emails, phones)
- I = Condition note on a conditional item ("Shown when a dropdown value is"India""; editor only)
- J = Submit Button item (button label)



> Additional tabs, and, side by side, the panel of a Text Input Field item.

Block properties panel:

- **Content** tab: **Form Title / Heading** (text), **Form Description** (rich text), **Theme** (select: Default, Dark).
- **Additional** tab: **Anchor ID** (text, validated `^anchor-[a-z0-9][a-z0-9-]*$`), **Hide block** (toggle), **Padding left / right / top / bottom** and **Margin left / right / top / bottom** (selects: Default, 0 (none), 0.25rem … 7.5rem from the spacing tokens).

Item properties panels (no tabs):

- **Text Input Field:** Field type (read-only `field-text`), Field Name / ID, *Field Label*, Input Type (Text, Email, Tel), Mandatory Field (*), Show only if dropdown value equals.
- **Dropdown / Select Field:** Field type (read-only `field-select`), Dropdown Name / ID, *Dropdown Label*, Mandatory Field (*), Options, Show only if dropdown value equals.
- **Textarea Field:** Field type (read-only `field-textarea`), Field Name / ID, *Field Label*, Max Character Limit (number, 1500), Mandatory Field (*), Show only if dropdown value equals.
- **Consent Checkbox Field:** Field type (read-only `field-checkbox`), Checkbox Name / ID, *Consent Text / Disclaimer* (rich text), Mandatory Field (*), Show only if dropdown value equals.
- **Contact Card Output:** Field type (read-only `contact-card`), Show when dropdown value equals, *Contact Name*, Emails, Phones.
- **Submit Button:** Field type (read-only `field-submit`), Button Label ("Send"), Show only if dropdown value equals.

(* = required in the dialog.) The **Add** menu of the block offers exactly these six item types (filter `form-variations`).

6.29.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose **Edit** to open it in Universal Editor.

Expected Result: The page opens in the Universal Editor canvas in edit mode.

Steps — Open the page: AEM Sites console with the page selected and the Edit action highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	/content/tcs-corp/us/en
2	AEM Sites console	Select the page	Check the contact page card
3	AEM Sites toolbar	Edit	Opens the page in Universal Editor (edit mode)

Step 2 — Add the Form Variations block

Action: Select the section that should hold the form, choose **Add** (+) and pick **Form Variations**.

Expected Result: An empty Form Variations block appears; the properties panel shows the Content tab.

Steps — Add the block: The Add menu of a section with "Form Variations" highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section for the form
2	Universal Editor › Content tree	Section › Add (+)	Form Variations

Step 3 — Fill the Content tab

Action: Type the **Form Title / Heading** (for example "Contact us"), add an optional **Form Description** (rich text; links allowed), and choose the **Theme** (Default or Dark).

Expected Result: The title appears as a heading and the description below it; Dark shows the black panel.

Steps — Content tab: Content tab with Form Title "Contact us", a description and Theme = Dark.

Step	Where	Field / control	Value / action
1	Form Variations › Content	Form Title / Heading	Contact us

Step	Where	Field / control	Value / action
2	Form Variations › Content	Form Description	Tell us about your business challenge and our experts will get back to you within two business days.
3	Form Variations › Content	Theme	Dark

Step 4 — Fill the Additional tab (optional)

Action: Open **Additional**. Set an **Anchor ID** such as `anchor-contact-form` if CTAs should jump to the form; adjust padding or margin only when the design requires it; leave **Hide block** off.

Expected Result: The block gets the id `anchor-contact-form` on the page (links `#anchor-contact-form` scroll to it); spacing classes are applied.

Steps — Additional tab: Additional tab with Anchor ID "anchor-contact-form" and default spacing.

Step	Where	Field / control	Value / action
1	Form Variations › Additional	Anchor ID	anchor-contact-form
2	Form Variations › Additional	Hide block	Off
3	Form Variations › Additional	Padding / Margin (all)	Default

Step 5 — Add text input fields

Action: With the block selected, choose **Add** > **Text Input Field**. Set **Field Name / ID** (`firstName`), **Field Label** ("First name"), **Input Type** (Text), **Mandatory Field** on. Repeat for `lastName`, `email` (Input Type Email), `company`, `phone` (Input Type Tel).

Expected Result: Each field appears with its label; mandatory fields show a red asterisk; "* Required fields" appears at the top of the form; first and last name sit side by side on desktop.

Steps — Text fields added: Canvas with First name, Last name, Email and Phone fields and the Text Input Field panel open.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree › Form Variations › Add (+)	Item	Text Input Field
2	Text Input Field 1	Field Name / ID	firstName
3	Text Input Field 1	Field Label	First name
4	Text Input Field 1	Input Type	Text (default)
5	Text Input Field 1	Mandatory Field (*)	On
6	Universal Editor › Content tree › Form Variations › Add (+)	Item	Text Input Field (repeat)
7	Text Input Fields 2–4	Field Name / ID, Field Label, Input Type, Mandatory Field (*)	lastName, Last name, Text, On; email, Email, Email, On; phone, Phone, Tel, Off

Step 6 — Add a dropdown

Action: Add > **Dropdown / Select Field**. Set **Dropdown Name / ID** (`region`), **Dropdown Label** ("Region"), **Options** ("Asia Pacific, Europe, India, North America"), and **Mandatory Field** as needed.

Expected Result: A dropdown with the prompt "Select an option" and the four options.

Steps — Dropdown added: Dropdown item panel with the comma-separated Options field filled.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree › Form Variations › Add (+)	Item	Dropdown / Select Field
2	Dropdown / Select Field	Dropdown Name / ID	region
3	Dropdown / Select Field	Dropdown Label	Region
4	Dropdown / Select Field	Mandatory Field (*)	On
5	Dropdown / Select Field	Options	Asia Pacific, Europe, India, North America

Step 7 — Add a textarea

Action: Add > **Textarea Field**. Set **Field Name / ID** (`message`), **Field Label** ("How can we help you?"), **Max Character Limit** (keep 1500 or set another positive number).

Expected Result: A four-row textarea with the counter "0/1500".

Steps — Textarea added: Textarea with its counter and the panel showing Max Character Limit 1500.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree › Form Variations › Add (+)	Item	Textarea Field
2	Textarea Field	Field Name / ID	message
3	Textarea Field	Field Label	How can we help you?
4	Textarea Field	Max Character Limit	1500 (default)

Step 8 — Add the consent checkbox

Action: Add > **Consent Checkbox Field**. Set **Checkbox Name / ID** (`consent`), write the **Consent Text / Disclaimer** with a link to the locale's privacy notice, and turn **Mandatory Field** on if consent is required.

Expected Result: A checkbox with the consent text and link.

Steps — Consent added: Consent checkbox with rich-text disclaimer and a linked Privacy Notice.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree › Form Variations › Add (+)	Item	Consent Checkbox Field
2	Consent Checkbox Field	Checkbox Name / ID	consent
3	Consent Checkbox Field	Consent Text / Disclaimer	I agree to the processing of my personal data as described in the Privacy Notice.
4	Consent Checkbox Field › Rich text toolbar	Link	Select "Privacy Notice" and link it to /en/privacy-notice
5	Consent Checkbox Field	Mandatory Field (*)	On

Step 9 — Add contact cards (optional)

Action: Add > **Contact Card Output** once per dropdown value. Set **Show when dropdown value equals** to the exact option text (`India`), **Contact Name**, **Emails** and **Phones** (comma-separated).

Expected Result: In the editor every card is visible with the note “Shown when a dropdown value is”India”“; on the published page it appears only when India is selected.

Steps — Contact cards added: Two contact cards with dashed borders and their condition notes.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree › Form Variations › Add (+)	Item	Contact Card Output
2	Contact Card Output 1	Show when dropdown value equals	India
3	Contact Card Output 1	Contact Name	India media relations
4	Contact Card Output 1	Emails	media.india@example.com, press.india@example.com
5	Contact Card Output 1	Phones	+91 00 0000 0000
6	Universal Editor › Content tree › Form Variations › Add (+)	Item	Contact Card Output
7	Contact Card Output 2	Show when dropdown value equals	Europe
8	Contact Card Output 2	Contact Name	Europe media relations

Step 10 — Make fields conditional (optional)

Action: On any Text, Dropdown, Textarea, Checkbox or Submit item, type the dropdown value in **Show only if dropdown value equals** (for example `Other`).

Expected Result: The item shows a dashed border and condition note in the editor.

Steps — Conditional item: A text field panel with “Show only if dropdown value equals” set to “Other”.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree › Form Variations › Add (+)	Item	Text Input Field
2	Text Input Field	Field Name / ID	sectorOther
3	Text Input Field	Field Label	Please specify your sector
4	Text Input Field	Show only if dropdown value equals	Other

Step 11 — Add the submit button

Action: Add > **Submit Button**. Keep or change the **Button Label** (“Send”).

Expected Result: A black primary button with an arrow at the end of the form.

Steps — Submit button added: The Submit Button item selected with its Button Label panel.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree › Form Variations › Add (+)	Item	Submit Button
2	Submit Button	Button Label	Send (default, keep or change)

Step	Where	Field / control	Value / action
3	Submit Button	Show only if dropdown value equals	Leave empty (always shown)

Step 12 — Order the items

Action: In the content tree, drag the items into the visible order: dropdowns before the items that depend on them, the submit button last. Start with a full-width item if the first fields are half-width name fields (see the note in Variation 3).

Expected Result: The canvas shows the items in the new order.

Steps — Reorder items: Content tree with the form items being dragged into order.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree › Form Variations	Drag	Region (Dropdown / Select Field) first
2	Universal Editor › Content tree › Form Variations	Drag	First name, Last name, Email, Phone next
3	Universal Editor › Content tree › Form Variations	Drag	Contact cards directly after the Region dropdown
4	Universal Editor › Content tree › Form Variations	Drag	Message, Consent, then Submit Button last

Step 13 — Preview

Action: Switch Universal Editor to **Preview**, then open the page preview (`https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{page}`) with AEM Sidekick or the publish-to-preview action.

Expected Result: In the Universal Editor preview, conditional items are still visible (the page is still instrumented). On the `.aem.page` preview, conditional items are hidden until their value is selected.

Steps — Preview: The form on the aem.page preview with conditional fields hidden.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview mode (conditional items still visible)
2	AEM Sidekick	Preview	Open https://main–tcs-corp–sradha-tcs.aem.page/en/contact
3	.aem.page preview	Check	Conditional items and contact cards are hidden until their value is selected

Step 14 — Test the form

Action: On the `.aem.page` preview: submit empty; enter an invalid email; select each dropdown value; type up to the textarea limit; finally submit a complete form.

Expected Result: Inline errors appear under the invalid fields and focus moves to the first; conditional items and contact cards appear per value; a valid submit resets the form and shows "Thank you, your details were sent.".

Steps — Test validation: Form with inline errors under First name and Email after an empty submit.

Step	Where	Field / control	Value / action
1	.aem.page preview	Send	Press with every field empty: errors under First name, Email and the other mandatory fields

Step	Where	Field / control	Value / action
2	.aem.page preview	Email	Type anita.rao.example.com and press Send: "Enter a valid email address."
3	.aem.page preview	Region	Select each value: the matching contact card appears
4	.aem.page preview	How can we help you?	Type up to the limit: the counter stops at 1500/1500
5	.aem.page preview	Send	Complete the form and press Send: "Thank you, your details were sent."

Step 15 — Publish

Action: In Universal Editor choose **Publish** (or use AEM Sites / Sidekick) to publish the page to live.

Expected Result: The form is live at `https://main--tcs-corp--sradha-tcs.aem.live/{locale}/{page}` (production domain: [To be confirmed: production domain and CDN]).

Steps — Publish: The Universal Editor Publish dialog with the page selected.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Open the Publish dialog
2	Publish dialog	Items	The page
3	Publish dialog	Destination	Publish to Live
4	Publish dialog	Publish	Confirm

Preview Process

1. Save all item changes in Universal Editor (changes save automatically on field blur).
2. Publish to preview and open the `.aem.page` URL; hard-refresh to bypass the browser cache.
3. Check the form on desktop (>= 900 px), tablet (600–899 px) and mobile (< 600 px) widths.
4. Remember that conditional items are always visible inside Universal Editor; judge the conditional behaviour only on `.aem.page` / `.aem.live`.

Publishing Process

1. Confirm with the development team that a listener for `form-variations:submit` exists on the page or site, or that the business accepts that submissions are not stored ([To be confirmed: form back end — owner: product owner]).
2. Publish the page; if the form sits on a fragment / reference page, publish that page too.
3. Publish the locale's placeholders sheet if UI texts were translated or changed.
4. Verify the live URL once the CDN cache has refreshed.

Validation Process

- ☐ Every item has a unique, meaningful **Name / ID** (camelCase, no spaces), e.g. `email`.
- ☐ Every field has a visible label; consent text is complete and links to the locale's privacy notice.
- ☐ Mandatory fields are marked and an empty submit shows "This field is required." under each.
- ☐ Email fields use Input Type Email; an invalid address shows "Enter a valid email address.".
- ☐ Dropdown options are spelled exactly like the conditions that refer to them.
- ☐ Each condition shows its items on `.aem.page` only for its value; hidden fields are not required.
- ☐ Contact cards show correct names, working `mailto:` and `tel:` links.
- ☐ Textarea counter shows the intended limit.
- ☐ At least one submit button is visible in every state of the form.

- ☐ A valid submit shows the success message and resets the form.
- ☐ Half-width name fields line up as intended on desktop (see Variation 3 note).
- ☐ UI texts appear in the locale's language (placeholders sheet).
- ☐ The business has confirmed where submissions go (no back end by default).

Rollback Process

1. To remove a faulty form quickly, turn on **Hide block** (Additional tab) and publish: the block and its wrapper are hidden on the site and shown faded in the editor.
2. To restore an earlier version, use AEM **Timeline / Versions** on the page, restore the version and republish.
3. To take the page offline, **Unpublish** it in AEM Sites (consider a redirect in the locale's redirects sheet and the redirect mechanism, see Part 4).
4. Code issues are rolled back by the development team by reverting the commit on `main` (Edge Delivery Code Sync deploys the revert).

The walkthroughs below repeat the steps above for each variation of chapter 6.29.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Default theme

Reproduces the screenshot `screenshots/form-variations-default-theme.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Form Variations

Action: Select the section in the content tree, choose **Add (+)** and pick **Form Variations**.

Expected Result: An empty Form Variations block is added to the section.

Step 3 — Fill in Form Variations › Content

Action: Select **Form Variations** in the content tree and open the **Content** tab of the properties panel. Enter: **Form Title / Heading** (A) = Request a call back; **Form Description** (B) = Leave your details and a specialist will call you.

Expected Result: The H2 Request a call back and the description appear; Theme stays Default, so the form is light.

Step 4 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: The four items appear in the content tree and on the canvas.

Step 5 — Fill in Text Input Field 1

Action: Select **Text Input Field 1** in the content tree and enter in the properties panel: **Field Name / ID** (C) = firstName; **Field Label** (D) = First name.

Expected Result: The First name input appears in the left column.

Step 6 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: The four items appear in the content tree and on the canvas.

Step 7 — Fill in Text Input Field 2

Action: Select **Text Input Field 2** in the content tree and enter in the properties panel: **Field Name / ID** (E) = lastName; **Field Label** (F) = Last name.

Expected Result: The Last name input appears beside it.

Step 8 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: The four items appear in the content tree and on the canvas.

Step 9 — Fill in Text Input Field 3

Action: Select **Text Input Field 3** in the content tree and enter in the properties panel: **Field Name / ID** (G) = email; **Field Label** (H) = Email; **Input Type** (I) = Email.

Expected Result: The full-width Email input appears below the names.

Step 10 — Add a Submit Button

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Submit Button**.

Expected Result: The four items appear in the content tree and on the canvas.

Step 11 — Fill in Form Variations › Content

Action: Select **Form Variations** in the content tree and open the **Content** tab of the properties panel. Enter: **Theme** (J) = Default (default, keep).

Expected Result: The H2 Request a call back and the description appear; Theme stays Default, so the form is light.

Step 12 — Preview

Action: Action: Type Email anita.rao@example.com and press Send.

Expected Result: After typing the email and pressing Send the form is cleared and Thank you, your details were sent. appears.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Dark text on white, grey-bordered inputs with 0.5rem radius, the two name inputs in one row, the black primary button with arrow and the brand-blue status line below.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the status text comes from the published placeholders sheet; no data is delivered (F-01, open).

Step 15 — Verify

Action: On the live page check: Press Send on the empty form on aem.page: This field is required. appears under the mandatory fields.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Dark theme

Reproduces the screenshot `screenshots/form-variations-dark-theme.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Form Variations

Action: Select the section in the content tree, choose **Add (+)** and pick **Form Variations**.

Expected Result: An empty Form Variations block is added to the section.

Step 3 — Fill in Form Variations › Content

Action: Select **Form Variations** in the content tree and open the **Content** tab of the properties panel. Enter: **Form Title / Heading** (A) = Talk to our experts; **Form Description** (B) = Choose your region to see your local contact, or send us a message; **Theme** (C) = Dark.

Expected Result: The title and description appear and Theme Dark turns the block into a black rounded panel.

Step 4 — Add a Dropdown / Select Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Dropdown / Select Field**.

Expected Result: The six items appear in the content tree and on the canvas.

Step 5 — Fill in Dropdown / Select Field 1

Action: Select **Dropdown / Select Field 1** in the content tree and enter in the properties panel: **Dropdown Name / ID** (D) = region; **Dropdown Label** (E) = Region; **Options** (F) = Asia Pacific, Europe, India, North America.

Expected Result: The Region dropdown appears on Select an option, with dark option backgrounds.

Step 6 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: The six items appear in the content tree and on the canvas.

Step 7 — Fill in Text Input Field 2

Action: Select **Text Input Field 2** in the content tree and enter in the properties panel: **Field Name / ID** (G) = firstName; **Field Label** (H) = First name.

Expected Result: The First name input appears in the left column.

Step 8 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: The six items appear in the content tree and on the canvas.

Step 9 — Fill in Text Input Field 3

Action: Select **Text Input Field 3** in the content tree and enter in the properties panel: **Field Name / ID** (I) = lastName; **Field Label** (J) = Last name.

Expected Result: The Last name input appears beside it.

Step 10 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: The six items appear in the content tree and on the canvas.

Step 11 — Fill in Text Input Field 4

Action: Select **Text Input Field 4** in the content tree and enter in the properties panel: **Field Name / ID** (K) = email; **Field Label** (L) = Email; **Input Type** (M) = Email.

Expected Result: The full-width Email input appears.

Step 12 — Add a Contact Card Output

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Contact Card Output**.

Expected Result: The six items appear in the content tree and on the canvas.

Step 13 — Fill in Contact Card Output 5

Action: Select **Contact Card Output 5** in the content tree and enter in the properties panel: **Show when dropdown value equals** (N) = India; **Contact Name** (O) = India media relations; **Emails** (P) = media.india@example.com, press.india@example.com; **Phones** (Q) = +91 00 0000 0000.

Expected Result: In the editor the India card shows with the note Shown when a dropdown value is India and a dashed border.

Step 14 — Add a Submit Button

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Submit Button**.

Expected Result: The six items appear in the content tree and on the canvas.

Step 15 — Preview

Action: Action: Select Region India.

Expected Result: Selecting India reveals the India media relations card above the white Send button.

Step 16 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: White text and transparent inputs with light borders on black; the contact name in the light brand colour, the contact links in white, and the inverted white primary button with dark text.

Step 17 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the contact details are published with the page and can be crawled once shown, so use approved business contacts only.

Step 18 — Verify

Action: On the live page check: On aem.page select India: the divider and India media relations card appear below Email.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Two-column layout with half-width name fields

Reproduces the screenshot `screenshots/form-variations-half-width.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Form Variations

Action: Select the section in the content tree, choose **Add (+)** and pick **Form Variations**.

Expected Result: An empty Form Variations block is added to the section.

Step 3 — Fill in Form Variations › Content

Action: Select **Form Variations** in the content tree and open the **Content** tab of the properties panel. Enter: **Form Title / Heading** (A) = Subscribe to our insights.

Expected Result: The H2 Subscribe to our insights appears above the form.

Step 4 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: The four items appear in the content tree and on the canvas.

Step 5 — Fill in Text Input Field 1

Action: Select **Text Input Field 1** in the content tree and enter in the properties panel: **Field Name / ID** (B) = firstName; **Field Label** (C) = First name.

Expected Result: The First name input appears in the left column.

Step 6 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: The four items appear in the content tree and on the canvas.

Step 7 — Fill in Text Input Field 2

Action: Select **Text Input Field 2** in the content tree and enter in the properties panel: **Field Name / ID** (D) = lastName; **Field Label** (E) = Last name.

Expected Result: The Last name input appears beside it in the right column.

Step 8 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: The four items appear in the content tree and on the canvas.

Step 9 — Fill in Text Input Field 3

Action: Select **Text Input Field 3** in the content tree and enter in the properties panel: **Field Name / ID** (F) = email; **Field Label** (G) = Email; **Input Type** (H) = Email.

Expected Result: The full-width Email input appears below the names.

Step 10 — Add a Submit Button

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Submit Button**.

Expected Result: The four items appear in the content tree and on the canvas.

Step 11 — Fill in Submit Button 4

Action: Select **Submit Button 4** in the content tree and enter in the properties panel: **Button Label** (I) = Subscribe.

Expected Result: The button label changes from Send to Subscribe.

Step 12 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two equal 352 px inputs in one row, the 720 px Email input under them and the left-aligned Subscribe button; no required note.

Step 13 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; no subscription is created because there is no back end (F-01, open).

Step 14 — Verify

Action: On the live page check: On aem.page at 1280 px First name and Last name share one row.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Single-column (full-width) layout

Reproduces the screenshot `screenshots/form-variations-full-width.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Form Variations

Action: Select the section in the content tree, choose **Add (+)** and pick **Form Variations**.

Expected Result: An empty Form Variations block is added to the section.

Step 3 — Fill in Form Variations › Content

Action: Select **Form Variations** in the content tree and open the **Content** tab of the properties panel. Enter: **Form Title / Heading** (A) = Share your feedback.

Expected Result: The H2 Share your feedback appears above the form.

Step 4 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: The five items appear in the content tree and on the canvas.

Step 5 — Fill in Text Input Field 1

Action: Select **Text Input Field 1** in the content tree and enter in the properties panel: **Field Name / ID** (B) = contactPerson; **Field Label** (C) = Full name.

Expected Result: The Full name input appears across the full width.

Step 6 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: The five items appear in the content tree and on the canvas.

Step 7 — Fill in Text Input Field 2

Action: Select **Text Input Field 2** in the content tree and enter in the properties panel: **Field Name / ID** (D) = email; **Field Label** (E) = Email; **Input Type** (F) = Email.

Expected Result: The full-width Email input appears.

Step 8 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: The five items appear in the content tree and on the canvas.

Step 9 — Fill in Text Input Field 3

Action: Select **Text Input Field 3** in the content tree and enter in the properties panel: **Field Name / ID** (G) = phone; **Field Label** (H) = Phone; **Input Type** (I) = Tel.

Expected Result: The full-width Phone input appears.

Step 10 — Add a Textarea Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Textarea Field**.

Expected Result: The five items appear in the content tree and on the canvas.

Step 11 — Fill in Textarea Field 4

Action: Select **Textarea Field 4** in the content tree and enter in the properties panel: **Field Name / ID** (J) = message; **Field Label** (K) = Message.

Expected Result: The Message textarea appears with the counter 0/1500.

Step 12 — Add a Submit Button

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Submit Button**.

Expected Result: The five items appear in the content tree and on the canvas.

Step 13 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 720 px column of labelled inputs with no pairing, the four-row textarea with its counter and the left-aligned Send button.

Step 14 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the feedback is not delivered anywhere (F-01, open).

Step 15 — Verify

Action: On the live page check: On aem.page at 1280 px the field spans the full 720 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Text input, input type Text

Reproduces the screenshot `screenshots/form-variations-input-text.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Form Variations

Action: Select the section in the content tree, choose **Add (+)** and pick **Form Variations**.

Expected Result: An empty Form Variations block is added to the section.

Step 3 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: A Text Input Field item appears in the content tree and an input on the canvas.

Step 4 — Fill in Text Input Field 1

Action: Select **Text Input Field 1** in the content tree and enter in the properties panel: **Field Name / ID** (A) = company; **Field Label** (B) = Company; **Mandatory Field (*)** (C) = On.

Expected Result: The label Company with a red asterisk and the * Required fields note appear.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A small grey required note, the medium-weight label Company followed by a red asterisk and a grey-bordered input below it.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the required note text is the placeholder requiredNote.

Step 7 — Verify

Action: On the live page check: On aem.page the label reads Company with the asterisk.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Text input, input type Email

Reproduces the screenshot `screenshots/form-variations-input-email.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Form Variations

Action: Select the section in the content tree, choose **Add (+)** and pick **Form Variations**.

Expected Result: An empty Form Variations block is added to the section.

Step 3 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: A Text Input Field and a Submit Button appear in the content tree and on the canvas.

Step 4 — Fill in Text Input Field 1

Action: Select **Text Input Field 1** in the content tree and enter in the properties panel: **Field Name / ID** (A) = email; **Field Label** (B) = Business email; **Input Type** (C) = Email; **Mandatory Field (*)** (D) = On.

Expected Result: The mandatory Business email input appears with the * Required fields note.

Step 5 — Add a Submit Button

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Submit Button**.

Expected Result: A Text Input Field and a Submit Button appear in the content tree and on the canvas.

Step 6 — Preview

Action: Action: Type anita.rao.example.com in Business email and press Send.

Expected Result: Sending anita.rao.example.com shows the red border and Enter a valid email address. below the field.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The red-bordered input with the typed value, the small red medium-weight error text under it and the Send button.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the error text is the placeholder fieldEmail, published with the placeholders sheet.

Step 9 — Verify

Action: On the live page check: Enter anita.rao@example.com and press Send: the error disappears and the form is sent.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — Text input, input type Tel

Reproduces the screenshot `screenshots/form-variations-input-tel.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Form Variations

Action: Select the section in the content tree, choose **Add (+)** and pick **Form Variations**.

Expected Result: An empty Form Variations block is added to the section.

Step 3 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: A Text Input Field item appears in the content tree and an input on the canvas.

Step 4 — Fill in Text Input Field 1

Action: Select **Text Input Field 1** in the content tree and enter in the properties panel: **Field Name / ID** (A) = phone; **Field Label** (B) = Phone number; **Input Type** (C) = Tel; **Mandatory Field (*)** (D) = On.

Expected Result: The mandatory Phone number input appears with the * Required fields note.

Step 5 — Preview

Action: Screen width: 375 px (mobile).

Expected Result: At 375 px the input fills the phone width.

Step 6 — Preview (phone)

Action: Action: Tap Phone number: the telephone keypad opens (the keypad itself is not part of the capture).

Expected Result: Tapping Phone number focuses it with the blue outline and opens the telephone keypad.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The small grey note, the label with asterisk and a focused input with a blue outline across the phone width.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; nothing else to publish for this field.

Step 9 — Verify

Action: On the live page check: On aem.page, tap Phone number on a phone: the telephone keypad opens.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — Dropdown / Select field

Reproduces the screenshot `screenshots/form-variations-dropdown.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Form Variations

Action: Select the section in the content tree, choose **Add (+)** and pick **Form Variations**.

Expected Result: An empty Form Variations block is added to the section.

Step 3 — Add a Dropdown / Select Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Dropdown / Select Field**.

Expected Result: A Dropdown / Select Field item appears in the content tree and a select on the canvas.

Step 4 — Fill in Dropdown / Select Field 1

Action: Select **Dropdown / Select Field 1** in the content tree and enter in the properties panel: **Dropdown Name / ID** (A) = region; **Dropdown Label** (B) = Region; **Options** (C) = Asia Pacific, Europe, India, North America.

Expected Result: The Region label and a dropdown on Select an option appear.

Step 5 — Preview

Action: Action: Open the Region dropdown.

Expected Result: Opening the dropdown shows the prompt and the four regions.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A full-width native select with the browser's arrow, opened to show the disabled prompt and the four options in authored order.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the prompt text comes from the published placeholders sheet.

Step 8 — Verify

Action: On the live page check: On aem.page the dropdown lists only Asia Pacific, Europe, India and North America.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — Textarea with character counter

Reproduces the screenshot `screenshots/form-variations-textarea.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Form Variations

Action: Select the section in the content tree, choose **Add (+)** and pick **Form Variations**.

Expected Result: An empty Form Variations block is added to the section.

Step 3 — Add a Textarea Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Textarea Field**.

Expected Result: A Textarea Field item appears in the content tree and on the canvas.

Step 4 — Fill in Textarea Field 1

Action: Select **Textarea Field 1** in the content tree and enter in the properties panel: **Field Name / ID** (A) = message; **Field Label** (B) = How can we help you?.

Expected Result: The label How can we help you? and an empty textarea with the counter 0/1500 appear.

Step 5 — Preview

Action: Action: Type in the textarea: "We are planning to move our customer analytics platform to the cloud and would like to discuss options, timelines and costs.".

Expected Result: Typing the sample message updates the counter to 124/1500.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A four-row, vertically resizable textarea with two lines of text and the small grey counter at its bottom right.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the typed text is not sent anywhere (F-01, open).

Step 8 — Verify

Action: On the live page check: On aem.page the counter shows the new limit after the slash.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 10 — Consent checkbox

Reproduces the screenshot `screenshots/form-variations-consent-checkbox.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Form Variations

Action: Select the section in the content tree, choose **Add (+)** and pick **Form Variations**.

Expected Result: An empty Form Variations block is added to the section.

Step 3 — Add a Consent Checkbox Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Consent Checkbox Field**.

Expected Result: A Consent Checkbox Field item appears in the content tree and on the canvas.

Step 4 — Fill in Consent Checkbox Field 1

Action: Select **Consent Checkbox Field 1** in the content tree and enter in the properties panel: **Checkbox Name / ID** (A) = consent; **Consent Text / Disclaimer** (B) = I agree to the processing of my personal data as described in the Privacy Notice (link /en/privacy-notice); **Mandatory Field (*)** (C) = On.

Expected Result: The checkbox with the consent text, the Privacy Notice link, a red asterisk and the * Required fields note appear.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The checkbox on the left and the wrapped small consent text on its right, the link underlined in the text colour and the asterisk after the last word.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the linked Privacy Notice page must be published itself.

Step 7 — Verify

Action: On the live page check: Press Send with the box unticked on aem.page and check the error is readable.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 11 — Conditional fields ("Show only if dropdown value equals")

Reproduces the screenshot `screenshots/form-variations-conditional-fields.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Form Variations

Action: Select the section in the content tree, choose **Add (+)** and pick **Form Variations**.

Expected Result: An empty Form Variations block is added to the section.

Step 3 — Add a Dropdown / Select Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Dropdown / Select Field**.

Expected Result: A Dropdown / Select Field and a Text Input Field appear in the content tree and on the canvas.

Step 4 — Fill in Dropdown / Select Field 1

Action: Select **Dropdown / Select Field 1** in the content tree and enter in the properties panel: **Dropdown Name / ID** (A) = sector; **Dropdown Label** (B) = Sector; **Mandatory Field (*) **(C) = On;** Options** (D) = Banking, Retail, Manufacturing, Other.

Expected Result: The mandatory Sector dropdown with Banking, Retail, Manufacturing and Other appears with the * Required fields note.

Step 5 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: A Dropdown / Select Field and a Text Input Field appear in the content tree and on the canvas.

Step 6 — Fill in Text Input Field 2

Action: Select **Text Input Field 2** in the content tree and enter in the properties panel: **Field Name / ID** (E) = sectorOther; **Field Label** (F) = Please specify your sector; **Mandatory Field (*) **(G) = On;** Show only if dropdown value equals** (H) = Other.

Expected Result: In the editor the input shows with a dashed border and the note Shown when a dropdown value is Other.

Step 7 — Preview

Action: Action: Select Sector Other: “Please specify your sector” appears.

Expected Result: Choosing Other in Sector reveals the mandatory Please specify your sector input.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The Sector dropdown showing Other and the full-width input Please specify your sector with its asterisk directly under it.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; in Universal Editor the conditional input is always visible with a dashed border and a note.

Step 10 — Verify

Action: On the live page check: On aem.page the input appears only after selecting Other.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 12 — Contact card output (region routing)

Reproduces the screenshot `screenshots/form-variations-contact-card.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Form Variations

Action: Select the section in the content tree, choose **Add (+)** and pick **Form Variations**.

Expected Result: An empty Form Variations block is added to the section.

Step 3 — Add a Dropdown / Select Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Dropdown / Select Field**.

Expected Result: The dropdown and two Contact Card Output items appear in the content tree.

Step 4 — Fill in Dropdown / Select Field 1

Action: Select **Dropdown / Select Field 1** in the content tree and enter in the properties panel: **Dropdown Name / ID** (A) = region; **Dropdown Label** (B) = Region; **Options** (C) = Asia Pacific, Europe, India, North America.

Expected Result: The Region dropdown with Asia Pacific, Europe, India and North America appears.

Step 5 — Add a Contact Card Output

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Contact Card Output**.

Expected Result: The dropdown and two Contact Card Output items appear in the content tree.

Step 6 — Fill in Contact Card Output 2

Action: Select **Contact Card Output 2** in the content tree and enter in the properties panel: **Show when dropdown value equals** (D) = India; **Contact Name** (E) = India media relations; **Emails** (F) = media.india@example.com, press.india@example.com; **Phones** (G) = +91 00 0000 0000.

Expected Result: In the editor the India media relations card appears with the note Shown when a dropdown value is India.

Step 7 — Add a Contact Card Output

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Contact Card Output**.

Expected Result: The dropdown and two Contact Card Output items appear in the content tree.

Step 8 — Fill in Contact Card Output 3

Action: Select **Contact Card Output 3** in the content tree and enter in the properties panel: **Show when dropdown value equals** (H) = Europe; **Contact Name** (I) = Europe media relations; **Emails** (J) = media.europe@example.com; **Phones** (K) = +44 20 7946 0000.

Expected Result: The Europe media relations card with its email and +44 20 7946 0000 appears below, also with its note.

Step 9 — Preview

Action: Action: Select Region India: the India contact card appears.

Expected Result: Choosing India shows only the India card below the dropdown.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The Region dropdown on India, a divider line, the brand-coloured name at heading size M and three plain links that underline on hover.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the contact details are page content, crawlable once shown, so only approved business contacts belong here.

Step 12 — Verify

Action: On the live page check: On aem.page click media.india@example.com on a device with a mail client: a new message opens.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 13 — Submit button (always shown or conditional)

Reproduces the screenshot `screenshots/form-variations-submit-button.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Form Variations

Action: Select the section in the content tree, choose **Add (+)** and pick **Form Variations**.

Expected Result: An empty Form Variations block is added to the section.

Step 3 — Add a Text Input Field

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Text Input Field**.

Expected Result: A Text Input Field and a Submit Button appear in the content tree and on the canvas.

Step 4 — Fill in Text Input Field 1

Action: Select **Text Input Field 1** in the content tree and enter in the properties panel: **Field Name / ID** (A) = email; **Field Label** (B) = Email; **Input Type** (C) = Email.

Expected Result: The Email input appears above the black Send button.

Step 5 — Add a Submit Button

Action: Select the Form Variations in the content tree, choose **Add (+)** and pick **Submit Button**.

Expected Result: A Text Input Field and a Submit Button appear in the content tree and on the canvas.

Step 6 — Preview

Action: Action: Type Email anita.rao@example.com and press Send.

Expected Result: Sending anita.rao@example.com clears the field and shows Thank you, your details were sent. below the form.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The left-aligned primary button at its content width and the medium-weight status line in the brand colour under the form.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the page to aem.page or aem.live; the labels send and formSuccess come from the published placeholders sheet; no data reaches any system (F-01, open, P1).

Step 9 — Verify

Action: On the live page check: After the integration, a test submission on aem.page reaches the target system.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.29.6 Authorable Field Specification

Block model `form-variations` — Content tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Form Title / Heading (`formHeading`)	text	No	No	(empty)	Names the form (h2) and labels it for screen readers	Short, action-oriented title	None in the model; no title means no header and no accessible name for the form	Contact us
Form Description (`formDescription`)	rich-text	No	No	(empty)	Explains the purpose of the form	One or two sentences; links allowed	None; shown only when it has text	Tell us about your project and our experts will get back to you.
Theme (`classes`)	select	No	No	Default (`""`)	Light or dark presentation	Dark for framed conversion panels	Options: Default (`""`), Dark (`dark`)	Dark

Block model `form-variations` — Additional tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Anchor ID (`classes_anchor`)	text	No	No	(empty)	Makes the block a jump target (`#anchor-…`)	Unique per page, starts with `anchor-`	Enforced regExp `^anchor-[a-z0-9][a-z0-9-]*$`; message “Start with anchor-, then lower-case letters, digits and hyphens.”; duplicates get `-2`, `-3` in code	anchor-contact-form
Hide block (`classes_hideblock`)	boolean	No	No	false	Temporarily hides the block	Use for staged launches or quick rollback	None	false
Padding left (`classes_paddingleft`)	select	No	No	Default (`""`)	Extra inner space on the left	Only when the design requires it	15 options: Default, `pl-0`, `pl-100` … `pl-3000`	pl-400

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Padding right (`classes_paddingRight`)	select	No	No	Default (`""`)	Extra inner space on the right	As above	Default, `pr-0` … `pr-3000`	pr-400
Padding top (`classes_paddingTop`)	select	No	No	Default (`""`)	Extra inner space above	As above	Default, `pt-0` … `pt-3000`	pt-800
Padding bottom (`classes_paddingBottom`)	select	No	No	Default (`""`)	Extra inner space below	As above	Default, `pb-0` … `pb-3000`	pb-800
Margin left (`classes_marginLeft`)	select	No	No	Default (`""`)	Outer space on the left	Rarely needed (the block is centred)	Default, `ml-0` … `ml-3000`	ml-0
Margin right (`classes_marginRight`)	select	No	No	Default (`""`)	Outer space on the right	Rarely needed	Default, `mr-0` … `mr-3000`	mr-0
Margin top (`classes_marginTop`)	select	No	No	Default (`""`)	Outer space above	To separate from previous content	Default, `mt-0` … `mt-3000`	mt-1200
Margin bottom (`classes_marginBottom`)	select	No	No	Default (`""`)	Outer space below	To separate from following content	Default, `mb-0` … `mb-3000`	mb-1200

The 15 spacing options of every padding / margin select are: Default (`""`), 0 (none) (`-0`), 0.25rem space-100 (`-100`), 0.5rem space-200 (`-200`), 0.75rem space-300 (`-300`), 1rem space-400 (`-400`), 1.25rem space-500 (`-500`), 1.5rem space-600 (`-600`), 2rem space-800 (`-800`), 2.5rem space-1000 (`-1000`), 3rem space-1200 (`-1200`), 4rem space-1600 (`-1600`), 5rem space-2000 (`-2000`), 6rem space-2400 (`-2400`), 7.5rem space-3000 (`-3000`), each prefixed with `pl`, `pr`, `pt`, `pb`, `ml`, `mr`, `mt` or `mb`.

Item model `field-text` — Text Input Field

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Field type (`classes`)	text, read-only	—	No	`field-text`	Identifies the item type (first cell)	Do not change	Read-only	field-text
Field Name / ID (`name`)	text	Yes (dialog)	No	(empty)	Key of the value in the submitted data; drives width and autocomplete	camelCase, unique in the form; contains “name” = half width	Required in the dialog; code fallback `text`	firstName
Field Label (`label`)	text	Yes (dialog)	No	(empty)	Visible label	Short noun phrase	Required in the dialog; code fallback = the name	First name
Input Type (`inputKind`)	select	No	No	Text (`text`)	Input type and keyboard	Email for emails, Tel for phones	Options: Text (`text`), Email (`email`), Tel (`tel`); unknown = text	email
Mandatory Field (*) (`required`)	boolean	No	No	false	Makes the field required	Only what is truly needed	Only `true` turns it on	true

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Show only if dropdown value equals (`dependsOn`)	text	No	No	(empty)	Conditional display	Exact option text; empty = always shown	One value, case-insensitive match	Other

Item model `field-select` — Dropdown / Select Field

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Field type (`classes`)	text, read-only	—	No	`field-select`	Item type	Do not change	Read-only	field-select
Dropdown Name / ID (`name`)	text	Yes (dialog)	No	(empty)	Data key	camelCase, unique	Required in the dialog; fallback `select`	region
Dropdown Label (`label`)	text	Yes (dialog)	No	(empty)	Visible label	Short noun	Required in the dialog; fallback = name	Region
Mandatory Field (*) (`required`)	boolean	No	No	false	Requires a choice	On when the choice routes the enquiry	Only `true` turns it on	true
Options (`options`)	text	No	Comma-separated list	(empty)	The choices (text = value)	Separate with commas; no commas inside an option	Split on commas, trimmed, empty entries dropped	Asia Pacific, Europe, India, North America
Show only if dropdown value equals (`dependsOn`)	text	No	No	(empty)	Conditional display (chained dropdowns)	Exact value of another dropdown	One value	Other

Item model `field-textarea` — Textarea Field

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Field type (`classes`)	text, read-only	—	No	`field-textarea`	Item type	Do not change	Read-only	field-textarea
Field Name / ID (`name`)	text	Yes (dialog)	No	(empty)	Data key	camelCase	Required in the dialog; fallback `message`	message
Field Label (`label`)	text	Yes (dialog)	No	(empty)	Visible label	A question works well	Required in the dialog; fallback = name	How can we help you?
Max Character Limit (`maxLength`)	number	No	No	1500	Maximum characters	Keep 1500 unless the receiving system needs less	Positive whole number, else 1500 (code); enforced in the browser via `maxlength`	1000
Mandatory Field (*) (`required`)	boolean	No	No	false	Requires text	—	Only `true`	false

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Show only if dropdown value equals (`dependsOn`)	text	No	No	(empty)	Conditional display	Exact option text	One value	Other

Item model `field-checkbox` — Consent Checkbox Field

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Field type (`classes`)	text, read-only	—	No	`field-checkbox`	Item type	Do not change	Read-only	field-checkbox
Checkbox Name / ID (`name`)	text	Yes (dialog)	No	(empty)	Data key	e.g. consent, marketingOptIn	Required in the dialog; fallback `consent`	consent
Consent Text / Disclaimer (`label`)	rich-text	Yes (dialog)	No	(empty)	The consent wording, with links	Approved legal wording per locale	Required in the dialog; fallback = name	I agree to the processing of my data as described in the Privacy Notice.
Mandatory Field (*) (`required`)	boolean	No	No	false	Requires the box to be checked	On for required acknowledgements; off for optional marketing opt-ins	Only `true`	true
Show only if dropdown value equals (`dependsOn`)	text	No	No	(empty)	Region-specific consent	Exact option text	One value	Europe

Item model `contact-card` — Contact Card Output

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Field type (`classes`)	text, read-only	—	No	`contact-card`	Item type	Do not change	Read-only	contact-card
Show when dropdown value equals (`region`)	text	Yes (dialog)	No	(empty)	The value that shows the card	Exact option text	Required in the dialog; one value	India
Contact Name (`contactName`)	text	Yes (dialog)	No	(empty)	Name shown in brand colour	Person or team name	Required in the dialog	Iris Tham
Emails (`emails`)	text	No	Comma-separated list	(empty)	`mailto:` links	Business addresses only	Split on commas; no format check	media.india@example.com
Phones (`phones`)	text	No	Comma-separated list	(empty)	`tel:` links	International format with +	Split on commas; link keeps digits and + only	+91 00 0000 0000

Item model `field-submit` — Submit Button

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Field type (`classes`)	text, read-only	—	No	`field-submit`	Item type	Do not change	Read-only	field-submit
Button Label (`label`)	text	No	No	Send	Button text	Verb, 1–3 words	Empty = placeholder `send` ("Send")	Submit enquiry
Show only if drop-down value equals (`dependsOn`)	text	No	No	(empty)	Conditional button	Ensure some button is always visible	One value	North America

> **Note:** the example email and phone values above are illustrative formats, not verified TCS contacts.

Field details

- **Form Title / Heading** — Purpose: the form's heading and accessible name (`aria-labelledby`). Allowed values: plain text. Character limits: none enforced; Recommended up to 60 characters. Business rules: rendered as `h2` (or the heading level present in the cell); id `form-variations-{n}-title`. Dependency rules: none. Visibility rules: no model condition; the header is omitted when title and description are empty. Sample: "Contact us".
- **Form Description** — Purpose: context and expectations (response time, privacy). Allowed values: rich text (paragraphs, bold, italic, links, lists). Character limits: none enforced; Recommended up to 300 characters. Business rules: shown only when it contains text; rich text kept. Dependency rules: none. Visibility rules: none. Sample: "Tell us about your project."
- **Theme** — Purpose: Default or Dark presentation. Allowed values: Default (`""`), Dark (`dark`). Character limits: n/a. Business rules: becomes a block class. Dependency rules: none. Visibility rules: none. Sample: Dark.
- **Anchor ID** — Purpose: jump target. Allowed values: `anchor-` followed by lower-case letters, digits and hyphens. Character limits: none enforced; Recommended up to 40. Business rules: Enforced pattern in the dialog; the block-options decorator sets it as the block id, adding `-2`, `-3` … if the id is already used on the page. Dependency rules: none. Visibility rules: none. Sample: `anchor-contact-form`.
- **Hide block** — Purpose: hide without deleting. Allowed values: on / off. Business rules: hidden on the site and in Universal Editor preview; shown at 45% opacity with a dashed outline in edit mode; applies inside `main` only. Dependency / visibility rules: none. Sample: off.
- **Padding left / right / top / bottom** — Purpose: extra inner spacing from the spacing tokens. Allowed values: the 15 options listed above. Business rules: classes `main .section .block.p?-{token}` outrank the block's own spacing; apply inside `main` only. Dependency / visibility rules: none. Sample: Padding top 2rem (`pt-800`).
- **Margin left / right / top / bottom** — Purpose: outer spacing from the tokens. Allowed values: the 15 options. Business rules: as padding; a left / right margin overrides the block's automatic centring (`margin-inline: auto`). Dependency / visibility rules: none. Sample: Margin bottom 3rem (`mb-1200`).
- **Field type (all items)** — Purpose: the item type the code reads from the first cell (or the Universal Editor model). Allowed values: fixed per item. Business rules: read-only; rows whose type is not one of the six types are ignored (before the first item they are block properties). Dependency / visibility rules: none.
- **Field Name / ID (text, textarea, checkbox) and Dropdown Name / ID** — Purpose: the key in the submitted data, the base of the element id and, for text inputs, the width and autocomplete hint. Allowed values: any text; Recommended camelCase letters and digits. Character limits: Recommended up to 40. Business rules: two fields with the same name are submitted as an array; for Text Input Fields "name" anywhere in the name gives half width. Dependency rules: none. Visibility rules: none. Sample: `email`.

- **Field Label / Dropdown Label** — Purpose: visible label. Allowed values: plain text. Character limits: Recommended up to 40. Business rules: a red `*` is appended when mandatory. Sample: “Business email”.
- **Input Type** — Purpose: `text`, `email` or `tel` input. Allowed values: Text, Email, Tel. Business rules: Email adds format validation and `autocomplete="email"`; Tel adds `autocomplete="tel"` and no validation. Sample: Email.
- **Mandatory Field (*)** — Purpose: required input. Allowed values: on / off. Business rules: only the value `true` counts; a hidden conditional field is never required. Sample: on.
- **Show only if dropdown value equals / Show when dropdown value equals** — Purpose: conditional display. Allowed values: one dropdown option text. Character limits: n/a. Business rules: case-insensitive, trimmed exact match against the current value of any enabled dropdown in the same form. Dependency rules: requires a dropdown with that option in the same block. Visibility rules (model): none — the field is always shown in the dialog; the condition is evaluated by the code at runtime. Sample: “India”.
- **Options** — Purpose: dropdown choices. Allowed values: comma-separated text. Character limits: none enforced. Business rules: the text is the value; a disabled “Select an option” prompt is added first. Sample: “Technology, Sport, Asia Pacific, India” (the dialog’s own example).
- **Max Character Limit** — Purpose: textarea limit. Allowed values: whole numbers > 0. Business rules: invalid or empty values fall back to 1500; enforced by `maxlength`. Sample: 1500.
- **Consent Text / Disclaimer** — Purpose: consent wording. Allowed values: rich text with links. Character limits: Recommended up to 400. Business rules: markup kept; last paragraph inline. Sample: “I agree to the Privacy Notice.”
- **Contact Name** — Purpose: name on the card. Character limits: Recommended up to 50. Sample: “Iris Tham” (the dialog’s example).
- **Emails / Phones** — Purpose: contact links. Allowed values: comma-separated addresses / numbers. Business rules: no validation; `tel:` links keep digits and `+`. Sample: “+65 0000 0000” (illustrative).
- **Button Label** — Purpose: submit text. Character limits: Recommended up to 25. Business rules: empty = “Send” (placeholder `send`). Sample: “Send”.

6.29.7 Field Annotation Mapping

Marker	Field	Purpose
A	Form Title / Heading (`formHeading`)	Form heading (h2) and accessible name of the form
B	Form Description (`formDescription`)	Introductory rich text under the title
C	(generated) “* Required fields” note	Explains the asterisk; placeholder `requiredNote`; not authorable in the block
D	Text Input Field: Field Label, Field Name / ID, Input Type, Mandatory	Single-line input
E	Dropdown / Select Field: Dropdown Label, Options	Choice list that also drives conditions
F	Textarea Field: Field Label, Max Character Limit	Long text with counter
G	Consent Checkbox Field: Consent Text / Disclaimer	Consent checkbox label
H	Contact Card Output: Contact Name, Emails, Phones, Show when dropdown value equals	Conditional contact details
I	Show only if dropdown value equals (any item)	Editor-only condition note; condition evaluated on the site
J	Submit Button: Button Label	Submits the form

6.29.8 Component Specification

Attribute	Value
Component Name	Form Variations (`form-variations`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	scripts.js `moveInstrumentation`; button, content, heading, block-options and data-layer decorators; utils environment, properties, ids, placeholders; locale placeholders sheet
Component Type	Container block with six item types (`field-text`, `field-select`, `field-textarea`, `field-checkbox`, `contact-card`, `field-submit`)
Supported Variants	Theme Default / Dark; half-width and full-width layout; input types Text / Email / Tel; conditional items; contact cards
Supported Templates	Any page (allowed in every section)
Supported Metadata	None read
Supported Tags	None
Supported Personalization	None. Future: data layer (`cmp:submit`) can feed Adobe Target / Journey Optimizer once Adobe Tags is installed (not implemented)
Caching Considerations	Page HTML cached by the Edge Delivery CDN; the placeholders sheet is fetched once per page view (in-memory promise); no form data is cached
Performance Considerations	Block JS/CSS loaded when its section loads (eager only if in the first section); no images, no third-party scripts; waits for the placeholders sheet before rendering
Accessibility Compliance	Labels with `for`; native `required`; `aria-invalid` and `aria-describedby` errors; focus to first error; `role="status"` success message that receives focus; `autocomplete` per input purpose (1.3.5); asterisk `aria-hidden` and explained once; visible focus outline
SEO Compliance	One h2; no structured data; contact card text present in HTML; form submits nowhere (no crawlable endpoint)

6.29.9 Input Model

Content Inputs: Form Title, Form Description (block properties: the first rows before any item), and the item rows: each starts with its type cell followed by its fields in model order.

Metadata Inputs: None.

Tags Inputs: None.

Page Context Inputs: Universal Editor detection (`data-aue-resource` on an ancestor) keeps conditional items visible; the locale (from the URL) selects the placeholders sheet.

Query Inputs: None (no query index, no sheets other than placeholders).

Manual Inputs: Everything is authored manually in the dialog.

Authored HTML received from AEM (simplified):

```
<div class="form-variations dark">
  <div><div><p>Contact us</p></div></div>
  <div><div><p>Tell us about your project.</p></div></div>
  <div>
    <div>field-text</div><div>firstName</div><div>First name</div>
    <div>text</div><div>true</div><div></div>
  </div>
```

```
  <div>
    <div>field-select</div><div>region</div><div>Region</div>
    <div>true</div><div>Asia Pacific, Europe, India</div><div></div>
  </div>
  <div>
    <div>contact-card</div><div>India</div><div>Iris Tham</div>
    <div>contact@example.com</div><div>+91 00 0000 0000</div>
  </div>
  <div><div>field-submit</div><div>Send</div><div></div></div>
</div>
```

> **Note:** the code reads item cells **by position** (it does not use `utils/cells.js`). If a field in the middle of an item was never saved and AEM leaves its cell out, the following values shift (for example a Dropdown's condition could be read as its options). Open each item and set its fields, including the toggles, before publishing. [To be confirmed: whether AEM omits never-set item fields for this model — owner: development team]

6.29.10 Output Model

Rendered Output: The block is replaced by up to three children: `.form-variations-header` (title and description, omitted when both are empty), the `form.form-variations-form` (`novalidate`, `aria-labelledby` = title id) and `p.form-variations-status` (`role="status"`, `tabindex="-1"`). In the form: the optional `p.form-variations-required-note`, then one `.form-variations-group` per item with the type class (`field-text`, `field-select`, `field-textarea`, `field-checkbox`, `form-variations-contact-card`, `field-submit`) and `half-width` / `full-width`; conditional groups carry `data-depends-on` and `hidden` when not matched. Errors are added on submit as `p.form-variations-error` inside the group.

Generated HTML (simplified, after an invalid submit):

```
<div class="form-variations block" data-block-name="form-variations">
  <div class="form-variations-header">
    <h2 class="form-variations-title" id="form-variations-1-title">Contact us</h2>
  </div>
  <form class="form-variations-form" novalidate aria-labelledby="form-variations-1-title">
    <p class="form-variations-required-note">* Required fields</p>
    <div class="form-variations-group field-text full-width">
      <label class="form-variations-label" for="form-variations-1-email">
        <span>Business email</span>
        <span class="form-variations-required" aria-hidden="true">*</span>
      </label>
      <input class="form-variations-control" type="email" id="form-variations-1-email"
        name="email" autocomplete="email" required data-required="true"
        aria-invalid="true" aria-describedby="form-variations-1-email-error">
      <p class="form-variations-error" id="form-variations-1-email-error">
        Enter a valid email address.</p>
    </div>
    <div class="form-variations-group form-variations-contact-card full-width"
      data-depends-on="India" hidden>
      <p class="form-variations-contact-name">Iris Tham</p>
      <ul class="form-variations-contact-links">
        <li class="form-variations-contact-email">
          <a href="mailto:contact@example.com">contact@example.com</a></li>
      </ul>
    </div>
    <div class="form-variations-group field-submit full-width">
```

```
      <button type="submit" class="button primary">Send</button>
    </div>
  </form>
  <p class="form-variations-status" role="status" tabindex="-1"></p>
</div>
```

Generated JSON: No JSON is sent to a server. A valid submit dispatches:

```
// fired on the block element, bubbles to document
new CustomEvent('form-variations:submit', {
  bubbles: true,
  detail: {
    data: {
      firstName: 'Asha', lastName: 'Rao', email: 'asha@example.com',
      region: 'India', message: 'We need help with...', consent: 'true',
    },
  },
});
```

Values are strings; repeated names become arrays; hidden (disabled) conditional fields and unchecked checkboxes are absent. A future integration listens for it, for example:

```
document.addEventListener('form-variations:submit', (e) => {
  // e.target is the .form-variations block; e.detail.data holds the values
  // send to the agreed back end here (not implemented as of this handover)
});
```

Generated Metadata: None.

Analytics Tracking (Adobe Client Data Layer):

- Component state (lazy phase, once): `{ component: { 'form-variations-1': { '@type': 'tcs-corp/components/form-variations', parentId: 'page-…', 'dc:title': 'Contact us' } } }` (the id is the Anchor ID when set).
- `cmp:click` on the submit button (and on contact-card links: `xdm:linkType` `exit` for `mailto:` / `tel:` links, because their origin differs from the site):

```
{ "event": "cmp:click", "eventInfo": { "path": "component.form-variations-1",
  "interaction": "button", "dc:title": "Send", "xdm:linkType": "other",
  "breakpoint": "desktop" } }
```

- `cmp:submit` with the field **names only** (never values):

```
{ "event": "cmp:submit", "eventInfo": { "path": "component.form-variations-1",
  "dc:title": "form-variations",
  "fields": ["firstName", "lastName", "email", "region", "message", "consent"] } }
```

> **Important:** the data layer listens to `submit` in the capture phase, before the block's own validation. `cmp:submit` is therefore pushed on **every submit attempt, including invalid ones**, and `fields` lists all named controls, including hidden conditional fields. `dc:title` is the block name because the form has no `aria-label` or id. Analytics rules for "successful leads" must not rely on `cmp:submit` alone; a success signal (for example a data-layer push from the future `form-variations:submit` handler) is Not implemented (as of this handover).

Personalization Output: None.

Search Index Output: None. The query index (`helix-query.yaml`) indexes page metadata only; form fields are not indexed.

Target Personalization Output: None in the block today. The block is in the Adobe Client Data Layer as tcs-corp/components/form-variations; the submit button pushes cmp:click and every submit attempt cmp:submit with the form id and field names (no values), which Adobe Target could use once Adobe Tags is installed (Not implemented (as of this handover)). The selected region or sector is not stored or used for personalisation.

6.29.11 Business Rules

1. Rows are read in order; rows before the first item are block properties: the first is the Form Title, the second the Form Description. Rows after the first item that are not items are ignored.
2. An item's type is the text of its first cell when it is one of the six types, else its Universal Editor model (`data-aue-model`); rows of unknown type are not rendered.
3. Item cells are read by position in model order (type cell excluded).
4. Name fallbacks when empty: Text `text`, Dropdown `select`, Textarea `message`, Checkbox `consent`. Label fallback: the name.
5. Element ids are `form-variations-{n}-{name}` (lower-cased, hyphenated, de-duplicated with `-2`, `-3`); `{n}` is the form's instance number on the page.
6. Text Input Field width: half width when the name contains "name" (any case), else full width; all other items are full width. Two columns only at >= 900 px.
7. Input Type: `text`, `email` or `tel`; anything else becomes `text`.
8. Autocomplete: Email type `email`; Tel type `tel`; otherwise by name pattern — first/given `given-name`; last/surname/family `family-name`; `name` / `fullname` / `full-name` / `full_name` / `full name` `name`; e-mail/email `email`; phone/mobile/tel `tel`; company/organisation/organization `organization`; job/designation/position `organization-title`; country `country-name`; city/town `address-level2`; zip/postal/ postcode `postal-code`. First match wins in that order; no match = no attribute.
9. Mandatory: only the value `true` (case-insensitive) makes a field required.
10. Dropdown options: comma-separated, trimmed, empty entries dropped; a disabled, pre-selected "Select an option" prompt with an empty value comes first.
11. Textarea limit: the authored number if > 0, else 1500; enforced with `maxlength`; counter "{length}/{limit}" updates on input and after reset.
12. Checkbox value is `"true"`; unchecked boxes are not submitted. Empty consent text shows the name.
13. Contact cards: the region value is the condition; emails `mailto:`, phones `tel:` with only digits and `+` in the link; no list when both are empty.
14. Submit label fallback: placeholder `send` ("Send"); primary button style.
15. Conditional items: shown when any enabled dropdown of the same form has the item's value (trimmed, case-insensitive); hidden items are `hidden`, their controls `disabled` and not required; re-evaluated on dropdown change and after reset; repeated until stable for chained conditions.
16. Editor-only: inside Universal Editor (edit and preview), all conditional items stay visible and enabled with the note "Shown when a dropdown value is"{value}"" (placeholder `shownWhenValue`) and a dashed border.
17. "* Required fields" (placeholder `requiredNote`) is added at the top of the form when any field is mandatory (including conditional ones).
18. Validation runs on submit only (the native validation UI is turned off with `novalidate`): every enabled input, select and textarea is checked; errors appear in the field's group; the first invalid field receives focus.
19. Error messages: missing value `fieldRequired` "This field is required."; invalid email `fieldEmail` "Enter a valid email address."; other type / pattern mismatch `fieldFormat` "Enter a valid value."; too long `fieldTooLong` "This text is too long."; anything else the browser's own message.
20. An error is removed as soon as the field becomes valid while typing (`input` event), or on the next submit.

21. On a valid submit: the `form-variations:submit` event is dispatched with `{ data }`, the form is reset, counters and conditional visibility are updated, the status shows `formSuccess` "Thank you, your details were sent." and receives focus. The message is shown whether or not any listener handled the data.
22. The status message is cleared on the next input or submit.
23. No submit endpoint, no network request, no storage of form data, no spam protection.
24. Placeholders: texts come from the locale's placeholders sheet; missing or empty keys use the English fallbacks above; the block waits for the sheet before rendering.
25. The form is labelled by the title only when a title exists.
26. Additional tab: Anchor ID becomes the block id (unique on the page); Hide block hides the block and its wrapper outside edit mode; spacing classes apply inside `main`.

6.29.12 Author Best Practices

Recommended Content Length: Title up to 60 characters; description up to 300; labels up to 40; consent text up to 400; button label 1–3 words (up to 25 characters); 3–8 fields for lead forms (each extra field lowers completion). All Recommended, not enforced.

Image Dimensions: Not applicable — the block has no image fields.

CTA Writing Guidelines: Use a specific verb on the submit button ("Send enquiry", "Request a call back"), not "Click here". Keep one primary action; avoid several visible submit buttons unless each is conditional.

Accessibility Guidelines: Give every field a clear visible label (do not rely on the description); mark only genuinely required fields; use Input Type Email / Tel so the right keyboard and autocomplete apply; use names that match the autocomplete patterns (`firstName`, `lastName`, `email`, `phone`, `company`, `jobTitle`, `country`, `city`, `postalCode`); place conditional items directly after the dropdown that controls them; write descriptive link text in the consent text.

SEO Guidelines: Use a meaningful title (it is an `h2` in the page outline); keep the page's main `h1` in the Page Header; do not put essential content only inside contact cards (hidden until selected).

Metadata Guidelines: The block reads no metadata. Set the page's own title and description for the contact page as usual.

Taxonomy Guidelines: Not applicable; dropdown options are free text, not tags. Keep option wording consistent with the taxonomy where the values must match a downstream system.

Localization Guidelines: Author labels, options, consent text and contact cards in each locale's copy of the page. Translate the UI keys (`fieldRequired`, `fieldEmail`, `fieldFormat`, `fieldTooLong`, `selectAnOption`, `send`, `shownWhenValue`, `requiredNote`, `formSuccess`) in each locale's placeholders sheet. Keep **Field Name / ID** values identical across locales (they are data keys, not visible text), and remember that conditions must match the **translated** option text of that locale.

6.29.13 Troubleshooting Guide

Issue 1 — Visitors see "Thank you" but nobody receives the submission

Symptoms: The success message appears; no email, CRM record or log entry exists.

Root Cause: By design there is no submit endpoint; the block only dispatches `form-variations:submit`.

Diagnosis Steps: In the browser console run `document.addEventListener('form-variations:submit', (e) => console.log(e.detail))` and submit; the data is logged. Check `scripts/delayed.js` and the site code for a listener (none exists as of this handover).

Resolution Steps: Do not use the form for live data capture until the development team adds the agreed integration ([To be confirmed: form back end — owner: solution architect]). Meanwhile show a contact card or an email link.

Validation Steps: After an integration, submit a test entry on `.aem.page` and confirm it in the target system.

Preventive Measures: Include "back end connected?" in the publishing checklist.

Issue 2 — A conditional field or contact card never appears

Symptoms: Selecting the dropdown value does not show the item on `.aem.page`.

Root Cause: The condition text differs from the option text (spelling, extra words, a comma-separated list), or the controlling dropdown is itself hidden.

Diagnosis Steps: Compare **Show only if dropdown value equals** with the option exactly; inspect the group's `data-depends-on` attribute in the browser's developer tools.

Resolution Steps: Copy the option text into the condition; use one value per item (add a second item for a second value).

Validation Steps: Re-test on `.aem.page` for every option.

Preventive Measures: Keep a list of options and their dependent items per form.

Issue 3 — All conditional fields are visible

Symptoms: Every contact card and conditional field shows at once.

Root Cause: The page is viewed in Universal Editor (edit or preview mode), where conditional items stay visible on purpose.

Diagnosis Steps: Check whether the URL is the AEM author / Universal Editor URL; look for the italic condition notes.

Resolution Steps: Test on `https://main--tcs-corp--sradha-tcs.aem.page/…` instead.

Validation Steps: On `.aem.page` only unconditional items show initially.

Preventive Measures: Train authors that conditional behaviour is visible only outside the editor.

Issue 4 — The form cannot be submitted (no button)

Symptoms: No Send button is visible.

Root Cause: Every Submit Button item has a condition and no matching value is selected, or no Submit Button item exists.

Diagnosis Steps: Check the submit items for **Show only if dropdown value equals**.

Resolution Steps: Add an unconditional Submit Button or clear the condition.

Validation Steps: A button is visible before and after selecting each value.

Preventive Measures: Validation checklist item "at least one button always visible".

Issue 5 — Fields are misaligned on desktop

Symptoms: "First name" sits next to "* Required fields" and "Last name" drops to the next row; or a lone field takes only half the width; or a "companyName" field is half width.

Root Cause: Width is automatic: Text Input names containing "name" are half width, and the required note occupies one grid column at >= 900 px.

Diagnosis Steps: Check the field names; check whether the first item is half width.

Resolution Steps: Put a full-width item first or pair half-width fields; rename fields that should be full width (for example `company` instead of `companyName`). A permanent fix for the note is a CSS change by the development team.

Validation Steps: View at 1280 px and 900 px.

Preventive Measures: Follow the naming guidance in 6.29.12.

Issue 6 — Values appear in the wrong field (options show the condition text, etc.)

Symptoms: A dropdown shows its condition as an option, or a checkbox is unexpectedly mandatory.

Root Cause: Item cells are read by position; a missing cell for a never-saved field shifts the later values (see the note in 6.29.9).

Diagnosis Steps: Open `{page}.plain.html` on `.aem.page` and count the cells of the item row.

Resolution Steps: Open the item in Universal Editor, set every field (toggle Mandatory on and off if needed) and republish.

Validation Steps: The item row has one cell per field; the field renders correctly.

Preventive Measures: Report to the development team so the block can use `utils/cells.js`.

Issue 7 — Error or button texts are in English on a translated site

Symptoms: "This field is required." on `/de-de/`.

Root Cause: The key is missing or empty in the locale's placeholders sheet, or the sheet is not published.

Diagnosis Steps: Open `/{locale}/placeholders.json` and look for the key.

Resolution Steps: Add the key and translation; publish the sheet.

Validation Steps: Reload the page; the translated text appears.

Preventive Measures: Copy all form keys when creating a new locale's sheet.

Issue 8 — Analytics shows more "submits" than real enquiries

Symptoms: `cmp:submit` counts exceed successful submissions.

Root Cause: `cmp:submit` is pushed on every submit attempt, including invalid ones (capture listener before validation).

Diagnosis Steps: In the console, inspect `window.adobeDataLayer` after an empty submit.

Resolution Steps: Analytics rules should combine with a success signal once implemented; the development team can add one in the submit handler.

Validation Steps: An invalid submit no longer counts as a lead in reports.

Preventive Measures: Document the event semantics in the analytics solution design.

6.29.14 Support Runbook

Monitoring Requirements

- No server-side monitoring exists (no endpoint). Monitor page availability of the form pages (`.aem.live` URL returns 200) and, once Adobe Tags is installed, `cmp:submit` volumes.
- After any integration is built: monitor the integration's error rate and delivery ([To be confirmed: monitoring tool and SLA — owner: AMS lead]).

Logs

- Browser console: the block emits **no** console messages of its own. JavaScript errors in the console (for example a failed `form-variations.js` load) indicate code problems.

- Network: `/{locale}/placeholders.json` (200 expected; a 404 only means English fallbacks).
- Admin API: preview / publish status of the page via AEM Sidekick or `https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`.
- Author logs: AEM author publication logs (replication) for the page.

Common Errors

Error	Cause	Fix
Success message but no data received	No back end (by design)	Connect an integration; meanwhile use contact cards
"This field is required." on a hidden field	Not possible on the site (hidden fields are disabled); in the editor all fields are visible and enabled	Test on `.aem.page`
Conditional item never shows	Condition text does not match option	Match spelling exactly, one value per item
No submit button	All buttons conditional	Add an unconditional button
English UI texts on a locale	Placeholder key missing	Add keys to the locale's placeholders sheet
Form empty on the site but fine in the editor	Item rows lack their type cell (type read from the editor model only)	Re-save items; escalate to development
Duplicate id warnings in audits	Two fields with the same name in one form	Use unique names

Escalation Matrix

Level	Who	Checks
L1	Author support / content lead	Field names, labels, conditions, options spelling, button presence, placeholders translations, publish status
L2	AMS / site admin	Page and placeholders sheet published, `.aem.live` reachable, CDN cache, Sidekick status, user permissions
L3	Development team	Console errors, `form-variations.js` behaviour, cell order in `.plain.html`, data-layer events, any back-end listener
Adobe Support	Adobe	Edge Delivery delivery or Universal Editor platform issues (rendering of item rows, publishing failures)

Recovery Procedures

1. Faulty form on a live page: turn on **Hide block**, publish (immediate mitigation).
2. Wrong content: restore the previous page version in AEM and republish.
3. Code regression: development team reverts the commit on `main`; verify on `.aem.page`.
4. After recovery, purge or wait for the CDN cache and re-run the validation checklist.

Health Checks

- Load each form page on `.aem.live`: form renders, no console errors.
- Submit empty: inline errors appear; submit valid: success message appears.
- Select each dropdown value: correct conditional items and contact cards.
- Check `window.adobeDataLayer` contains the component entry and `cmp:submit`.

Operational Procedures

- New form: follow 6.29.5; get legal approval of consent text per locale.
- New locale: copy the form keys to the new placeholders sheet.

- Back-end integration (future): the development team adds a listener for `form-variations:submit` (for example in a block-independent script) and a success data-layer event; update this runbook.

Known Limitations

- No submit endpoint, storage, email notification, CRM/marketing automation connection, spam protection or server-side validation (Not implemented as of this handover).
- The success message is shown even if nothing handled the data.
- `cmp:submit` fires on invalid attempts and lists hidden field names.
- No radio groups, multi-select, file upload, date, number or multi-step forms.
- One value per condition; conditions match any dropdown in the form, not a specific one.
- No phone format validation.
- Width is derived from field names (no width field); the required note takes one grid column at >= 900 px; the checkbox error sits beside the consent text.
- Item cells are read by position.
- Error colours are hard-coded (`#c8102e`, `#ff6b6b`), not tokens.

6.29.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
Visitors see Thank you but nobody receives the enquiry	There is no submit endpoint (F-01)	Do not use the form for live capture until development connects a back end
A conditional field or contact card never appears	The condition text differs from the option text	Copy the exact option text; one value per item
All conditional items are visible	The page is viewed in Universal Editor	Test on aem.page
No Send button is visible	Every Submit Button is conditional and no value is selected	Add an unconditional Submit Button
First name sits next to * Required fields	The note takes one grid column (F-32)	Start the form with a full-width item
Company or Full name is half width	The Field Name / ID contains name	Rename the field, e.g. company or contactPerson
A dropdown shows its condition as an option	A never-saved field shifted the positional cells (O-18)	Set every field of the item and save
Error texts are English on /de-de/	Keys missing in the German placeholders sheet	Add the translations and publish the sheet
The email format is not checked	Input Type left on Text	Set Input Type to Email
Analytics counts more submits than enquiries	cmp:submit is pushed for invalid attempts too	Combine with a success signal once implemented

6.29.16 Author Quick Reference Guide

Mandatory Fields

- At least one item — the form is built only from child items
- Field Name / ID (and Dropdown / Checkbox Name / ID) — required in each item model; the submitted key
- Field Label / Dropdown Label — required in the model; without it the name is shown
- Consent Text / Disclaimer — required for a Consent Checkbox Field
- Show when dropdown value equals and Contact Name — required for a Contact Card Output
- A Submit Button item — needed so visitors have a button to send the form

Recommended Fields

- Form Title / Heading — the h2 that labels the form
- Form Description — one or two sentences on what happens after sending
- Mandatory Field (*) — on for the fields the team needs
- Input Type — Email for addresses, Tel for phone numbers
- Options — comma-separated, the exact text used by conditions

Optional Fields

- Theme — Default or Dark
- Max Character Limit — the textarea limit (default 1500)
- Show only if dropdown value equals — conditional fields and buttons
- Emails, Phones — comma-separated contact card links
- Button Label — default Send
- Anchor ID, Hide block, Padding and Margin — Additional tab

Authoring Checklist

1. Do not publish the form for live data capture until a back end is connected (F-01)
2. Add items from the content tree under the block, in the order visitors should fill them
3. Name text inputs firstName / lastName to pair them; avoid name in other field names
4. Start the form with a full-width item when any field is mandatory (F-32)
5. Copy dropdown option text exactly into Show only if dropdown value equals and contact card values
6. Set every item field once and save, so positional reading is not shifted (O-18)
7. Use one value per conditional item; add another item for a second value
8. Publish only approved business contact data in contact cards

Pre-Publish Checklist

1. Test on aem.page, not in Universal Editor, where conditional items are always visible
2. Press Send on the empty form and check every mandatory field shows This field is required.
3. Enter an address without @ and check Enter a valid email address.
4. Select each dropdown value and check the matching fields and contact cards appear
5. Check the layout at 1280, 768 and 375 px
6. Check the placeholder keys fieldRequired, fieldEmail, fieldFormat, fieldTooLong, selectAnOption, send, requiredNote and formSuccess in the locale sheet
7. Confirm with the product owner where the data goes (F-01)

Post-Publish Validation Checklist

1. Open the page on aem.live and complete the form once
2. Check the success message Thank you, your details were sent. appears and the form resets
3. Check the submission arrives in the receiving system, once one is connected
4. Check mailto: and tel: links of contact cards on a phone
5. Check cmp:submit events in the data layer carry field names only

6.29.17 Component Execution Example

Business example: Contact us form with regional contact card on the English site.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Form Variations

Field	Value
Form Title / Heading (Form Variations › Content)	Contact us
Form Description (Form Variations › Content)	Tell us about your business challenge and our experts will get back to you within two business days.
Item (Content tree › Form Variations › Add (+))	Dropdown / Select Field
Dropdown Name / ID (Dropdown / Select Field 1)	region
Dropdown Label (Dropdown / Select Field 1)	Region
Mandatory Field (*) (Dropdown / Select Field 1)	On
Options (Dropdown / Select Field 1)	Asia Pacific, Europe, India, North America
Item (Content tree › Form Variations › Add (+))	Text Input Field
Field Name / ID (Text Input Field 2)	firstName
Field Label (Text Input Field 2)	First name
Mandatory Field (*) (Text Input Field 2)	On
Item (Content tree › Form Variations › Add (+))	Text Input Field
Field Name / ID (Text Input Field 3)	lastName
Field Label (Text Input Field 3)	Last name
Mandatory Field (*) (Text Input Field 3)	On
Item (Content tree › Form Variations › Add (+))	Text Input Field
Field Name / ID (Text Input Field 4)	email
Field Label (Text Input Field 4)	Email
Input Type (Text Input Field 4)	Email
Mandatory Field (*) (Text Input Field 4)	On
Item (Content tree › Form Variations › Add (+))	Textarea Field
Field Name / ID (Textarea Field 5)	message
Field Label (Textarea Field 5)	How can we help you?
Item (Content tree › Form Variations › Add (+))	Consent Checkbox Field
Checkbox Name / ID (Consent Checkbox Field 6)	consent
Consent Text / Disclaimer (Consent Checkbox Field 6)	I agree to the processing of my personal data as described in the Privacy Notice (link /en/privacy-notice).
Mandatory Field (*) (Consent Checkbox Field 6)	On
Item (Content tree › Form Variations › Add (+))	Contact Card Output
Show when dropdown value equals (Contact Card Output 7)	India
Contact Name (Contact Card Output 7)	India media relations
Emails (Contact Card Output 7)	media.india@example.com, press.india@example.com
Phones (Contact Card Output 7)	+91 00 0000 0000
Item (Content tree › Form Variations › Add (+))	Submit Button

Field	Value
Mode (Universal Editor)	Edit; select the Form Variations block (content tree shows its items)

All other fields keep their default values.

Rendered Result:

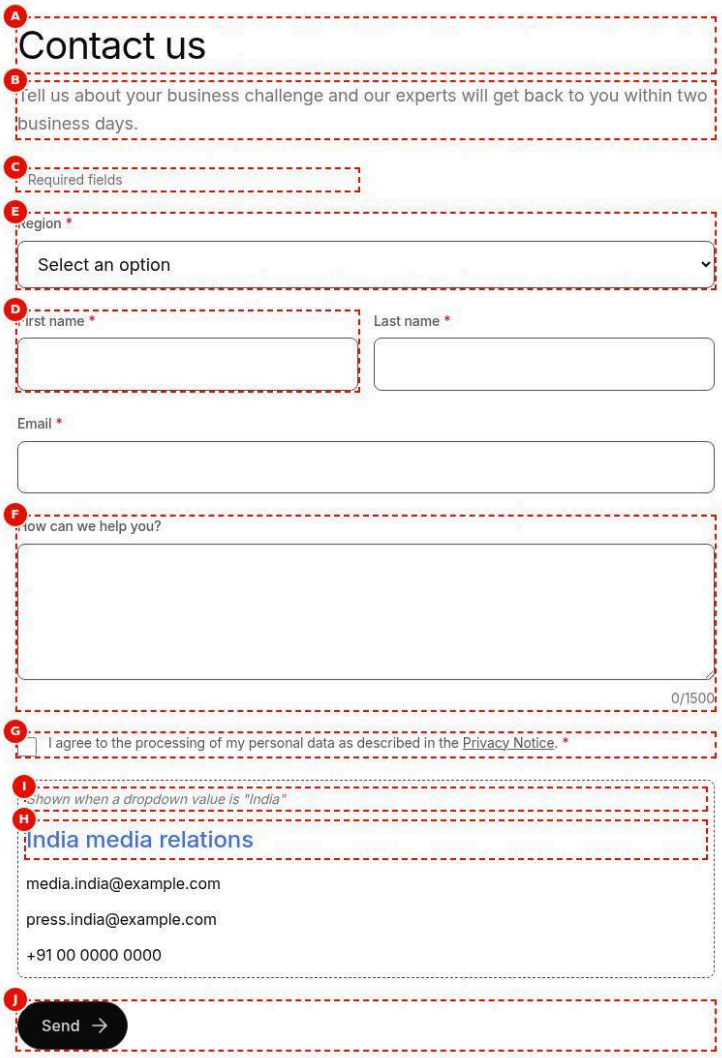


Figure 53: Execution example — The Contact us form in Universal Editor edit mode at 1280 px with sample content and red dashed markers A to J: title, description, required note (one column wide), First name, Region, the textarea, the consent row, the India contact card with its italic condition note in a dashed box, and the Send button. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/form-variations-authoring-view.jpg)

Author Notes

- Form Title / Heading Contact us and a Form Description sit on the block's Content tab
- Eight items in order: Region dropdown, First name, Last name, Email, textarea, consent, India contact card, Submit Button
- Region, the names, Email and consent are mandatory, so the * Required fields note appears
- The India card has Show when dropdown value equals India and is shown in the editor with its condition note

Business Notes

- Prospects describe their challenge and choose a region in one form

- Choosing India shows the India media relations contacts at once, without sending anything
- Submissions are not delivered until a back end is connected (F-01, P1)

Technical Notes

- Item rows are read by position after the type cell; the first rows are the block properties
- firstName and lastName contain name, so they are half width in the two-column grid at 900 px and above
- Validation runs on submit (novalidate) with errors linked by aria-describedby; focus moves to the first invalid field
- A valid submit dispatches form-variations:submit with the data, resets the form and focuses the role=status message

> **Note:** This is volume 12 of 13 of the TCS Corporate Website project handover (version 2.0). Volume 1 holds the document control, the audience guide and the conventions.

6.30 Conversation Canvas Block

The Conversation Canvas is the TCS "ask us a question" entry point: an optional icon, eyebrow, title and text, a search row (round menu button with a pop-up site menu, a search field with voice input and a submit icon button) and an optional list of buttons. It has three styles: **Default**, **Secondary** (with a filter-tag list filled by script) and **Primary (sticky)**, a dock that floats at the bottom of the viewport with the search pill and, on desktop, a pill-based site navigation built from the query index. The block lives in `blocks/conversation-canvas/` (`conversation-canvas.js`, `.css`, `_conversation-canvas.json`) and is also used inside the site footer (the Footer's **Conversation Canvas Page**).

> **Important:** no search or conversational (AI) service is connected. Submitting a query dispatches a bubbling `conversation-canvas:search` DOM event with `{ detail: { query } }` on the block; nothing else happens unless a script on the page listens for it. Suggestions and filter tags can be supplied by scripts through `setConversationCanvasSuggestions()` and `setConversationCanvasFilters()`; no such script exists as of this handover. [To be confirmed: search / conversational back end — owner: product owner / solution architect]

6.30.1 Component Purpose

Business Objective: Give every page a consistent, prominent invitation to ask a question or search, plus quick access to the site structure, ready to be connected to a search or conversational service without changing the authored content.

Business Use Cases:

- Hero-like "How can we help?" panel on home and landing pages (Default style).
- Topic exploration panel with filter tags supplied by a personalisation or search service (Secondary style).
- A persistent floating search and section navigation dock that follows the visitor down the page until the footer (Primary (sticky) style).
- The "Ask us a question" area at the top of the site footer (footer canvas page).
- Entry point for a future AI assistant: suggestions and the search event are the integration points.

When To Use:

- When the page should invite free-text questions or searches.
- When visitors need quick navigation through a section of the site (menu from the query index).
- At most one Primary (sticky) canvas per page.

When Not To Use:

- To collect personal data (use Form Variations, 6.29).
- As the only route to content while no search service is connected: the query goes nowhere.
- As a replacement for the site header navigation (the header remains the main navigation; on mobile the Primary dock shows only the search pill).
- Several canvases on one page (only one can float; repeated search rows confuse visitors).

Dependencies:

Type	Dependency	Use
Code	`scripts/aem.js` `toClassName`	Normalises the BG Style value into a class
Code	`scripts/scripts.js` `moveInstrumentation`	Keeps editor instrumentation on button items
Code	`decorators/responsive-image-decorator.js` `buildImage`	Builds background, icon and audio images from URLs (site media optimized)
Code	`decorators/a11y-decorator.js` `hideVisually`	Visually hidden label of the search input
Code	`decorators/button-decorator.js` `createButton`	Button List items
Code	`decorators/icon-button-decorator.js` `createIconButton`	Search submit icon button (arrow-right)
Code	`utils/buttons.js`	Button views, types, alignments and `readButtonOptions`
Code	`utils/properties.js` `normalizeKey`, `textOf`	Reads the key-value property rows
Code	`utils/query-index.js` `getPages`	Pages of the current locale for the menu and dock navigation
Code	`utils/site.js` `getLocale`	Default menu root (the locale root, e.g. `/de-de`)
Code	`utils/urls.js` `toSitePath`	Converts the Menu root path (AEM path) to the published path
Code	`utils/metadata.js` `getPageTags`	The page's tags as default suggestions (Primary)
Code	`utils/taxonomy.js` `resolveTags`	Tag labels for the suggestions from the locale's taxonomy
Code	`utils/ids.js` `uniqueId`	Ids per instance (`conversation-canvas-1-q`, `-menu`, `-nav`, `-panel`)
Code	`utils/placeholders.js`	UI text with English fallbacks
Code	`decorators/block-options-decorator.js`, `decorators/data-layer-decorator.js`	Additional tab; data layer (`cmp:click`, `cmp:search`)
Data	`/query-index.json` (`helix-query.yaml`)	`path` and `title` of pages for the menu / navigation
Data	`/{locale}/taxonomy.json`	Suggestion labels
Data	`/{locale}/placeholders.json`	Keys `menu`, `back`, `noPagesFound`, `siteNavigation`, `suggestions`, `searchPlaceholder`, `searchByVoice`, `submit`
Browser	Web Speech API (`SpeechRecognition` / `webkitSpeechRecognition`)	Voice input, only where supported
Icons	`icons/menu.svg`, `mic.svg`, `arrow-right.svg`, `arrow-left.svg`, `chevron-down.svg`	CSS masks and the submit icon
Item model	`models/_button.json` `button`	Conversation Canvas Button items

Related Components: Footer (see the Header / Footer chapter: the Footer block's Conversation Canvas Page loads a page with this block as a fragment), Header (main navigation), List and Filter List (also use the query index), Form Variations (data capture), Teaser / Hero (other hero-like entry points).

Applicable Templates: Any page (the block is in the section filter). Typical: home and landing pages (Default / Secondary), any page (Primary), and the footer reference page (`references/footer-conversation-canvas` in the English sample content).

Supported Content Types: All; the block does not read `content-type`. The Primary dock reads the page's tags (suggestions) and its position in the site tree.

Business Problem Solved

TCS pages had no consistent, authorable place that invites visitors to ask a question in their own words and offers quick routes into the site structure. The Conversation Canvas gives pages and the footer one ask-us panel (Default, Secondary) or a floating search and section dock (Primary (sticky)), built from the query index, that a search or conversational service can later use through the conversation-canvas:search event without re-authoring.

Supported Taxonomy

The block has no tag field. Only the Primary (sticky) style reads the page's tags (article:tag, else the tags metadata) and shows them as suggestion pills on pages without sub-pages, labelled from /{locale}/taxonomy.json (labels derived from the tag ID when untranslated). Secondary filter tags come from a script, not from the taxonomy.

6.30.2 Visual Overview

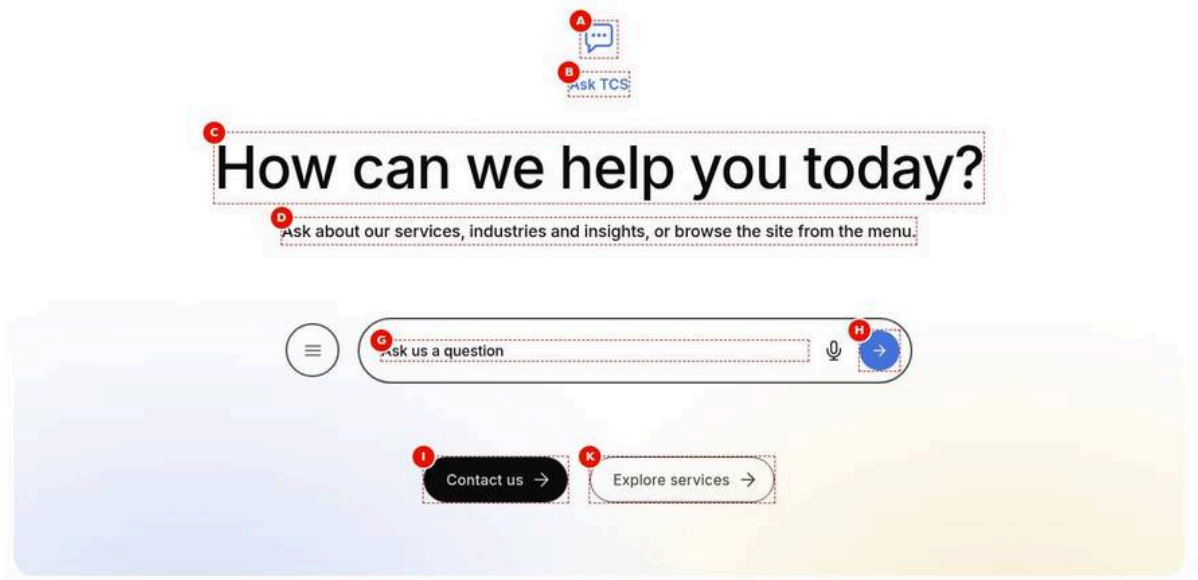

Figure 1: Desktop rendering — The Default canvas at 1440 px: a white rounded panel with blue and yellow glows at the bottom, the chat icon, the eyebrow Ask TCS, the h2 How can we help you today?, the intro text, the search row (round menu button, pill field Ask us a question with microphone and blue arrow) and the buttons Contact us (primary) and Explore services (secondary), all centred. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-desktop-view.jpg`
Screenshot Purpose	Desktop rendering

Item	Detail
Screen Description	The Default canvas at 1440 px: a white rounded panel with blue and yellow glows at the bottom, the chat icon, the eyebrow Ask TCS, the h2 How can we help you today?, the intro text, the search row (round menu button, pill field Ask us a question with microphone and blue arrow) and the buttons Contact us (primary) and Explore services (secondary), all centred.
Business Context	The opening ask-us panel of the English home or help page: visitors type a question, browse the site menu or go straight to contact or services.
Author Objective	Add a Default Conversation Canvas with icon, eyebrow, title, text, a two-level site menu and two buttons.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Icon (Conversation Canvas › Content)	Select the asset chat-icon.svg (/en/shots/g11/chat-icon.svg)	No	Small icon above the eyebrow	SVG or PNG, square	Single asset; shown at 2.5rem; not used by Primary
B	Eyebrow (Conversation Canvas › Content)	Ask TCS	No	Small label above the title	1–4 words	Plain text; dialog placeholder “Infrastructure to Intelligence”; not used by Primary
C	Title (Conversation Canvas › Content)	How can we help you today?	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder “Statistic”; not used by Primary
D	Text (Conversation Canvas › Content)	Ask about our services, industries and insights, or browse the site from the menu.	No	Supporting text	1–2 sentences	Rich text kept; not used by Primary
(E)	Menu root path (Conversation Canvas › Content)	Select the page or enter /content/tcs-corp/us/en	No	Root of the menu / navigation tree	A page in the same locale	Converted to the published path; empty = `getLocale().root` (e.g. `/en`)
(F)	Menu depth (Conversation Canvas › Content)	2	No	Levels below the root	1 for sections only, 2–3 for deeper menus	Enforced in the dialog: min 1, max 3; code: invalid = 1, minimum 1
G	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder “Ask us a question”
H	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as “Submit” or “Ask”	Plain text; dialog placeholder “Submit”
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button	Select the Conversation Canvas in the content tree,	Only the item types the Conversation Canvas allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
				to the Conversation Canvas	choose Add (+) and pick Conversation Canvas Button	
I	Link (Conversation Canvas Button 1)	Select the page or enter /en/contact	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
(J)	Text (Conversation Canvas Button 1)	Contact us	No	Visible text / accessible name	Action verb + object	None
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
K	Link (Conversation Canvas Button 2)	Select the page or enter /en/services	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
(L)	Text (Conversation Canvas Button 2)	Explore services	No	Visible text / accessible name	Action verb + object	None
(M)	Type (Conversation Canvas Button 2)	Secondary	No	Emphasis	One primary per canvas	Options: Primary, Secondary, Tertiary; condition: shown when Views is empty, Button or Icon

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (E), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A centred column on the 1.25rem-rounded panel: the 2.5rem chat icon, the eyebrow in brand blue, the 4rem title, the 1.125rem text, the search row up to 42.875rem wide and two pill buttons side by side, 1.5rem apart.
- **Rendering behaviour:** From 1200 px the panel has 7.5rem top and 5rem side and bottom padding and a 5rem content gap. The menu (pages below /en, two levels) is built from the query index the first time the menu button is opened and opens above the search row.
- **Publishing behaviour:** Publish to preview shows the canvas on aem.page and Publish to live copies it to aem.live. The menu reads /query-index.json, so pages appear in it only once published and indexed; the placeholders sheet (menu, submit, searchByVoice) is published separately.

Business Rules

- The title is always an h2; keep the page h1 in the Page Header above the canvas.
- Icon Alt Text is left empty, so the chat icon is decorative (alt="").
- Menu root path /content/tcs-corp/us/en is converted to /en; Menu depth 2 lists the sections and their subpages.
- Button 1 has no Type, so it renders as Primary; Button 2 is Secondary; Alignment is ignored because the buttons are always centred.

- Submitting a question only dispatches the conversation-canvas:search event; no search service is connected (Not implemented (as of this handover)).

Common Authoring Mistakes

Error	Root Cause	Resolution
The menu shows No pages found	The menu was opened inside Universal Editor, where /query-index.json is not available	Check the menu on aem.page after publishing
Screen readers announce the icon by its file name	Icon Alt Text filled with chat-icon.svg	Leave Icon Alt Text empty for the decorative chat icon
Both buttons look the same	Type left on Primary for Explore services	Set Conversation Canvas Button 2 Type to Secondary

Troubleshooting

- **Symptoms:** The menu button opens a list that only reads No pages found.
- **Cause:** No published, indexed pages exist below /en, or the Menu root path points to another locale.
- **Resolution:** Publish the section pages under /content/tcs-corp/us/en and keep the Menu root path in the page's own locale.
- **Verification Steps:** Open the page on aem.page, click the menu button and check that the sections and their sub-pages are listed.

Desktop (>= 1200 px): A rounded (1.25rem) panel with centred text and 7.5rem top / 5rem side and bottom padding (Secondary: 10rem / 5rem). Without a background image two soft radial glows (blue and yellow) are drawn at the bottom (`::before`). Content is a centred column (max 80rem, gap 5rem; Secondary 2.5rem): icon 2.5rem, eyebrow 1rem semibold in brand colour, title 4rem medium (Bigger 5rem, Medium 2.5rem), text 1.125rem medium (max 50.75rem). The search row is up to 42.875rem wide: a 3.6875rem round outlined menu button and a pill-shaped field (2 px dark outline, translucent white, brand border on focus) containing the input, the microphone button (where supported) and the arrow submit icon button. The pop-up menu opens **above** the search row (min 15rem, max 22.5rem wide, max 60 % of the viewport height, scrolls). Buttons are centred, wrapping, 1.5rem apart. The Primary dock is described in Variation 3.

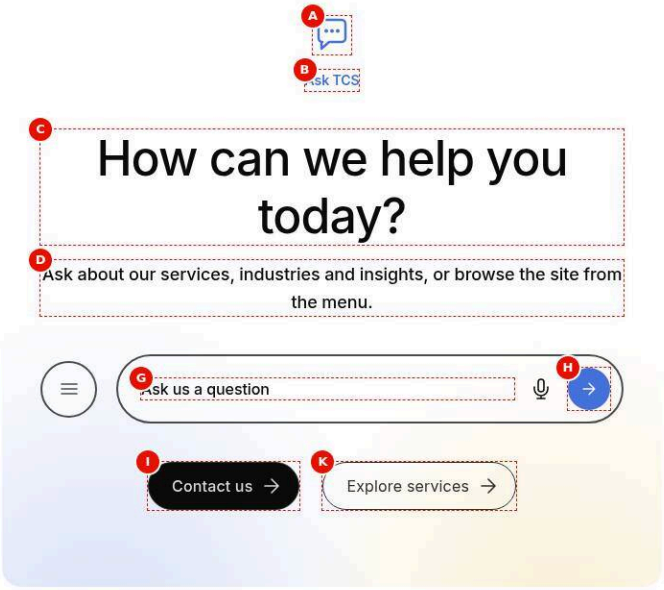

Figure 2: Tablet rendering — The same Default canvas at 768 px: chat icon, Ask TCS, the title How can we help you today? on two lines at 3.125rem, the intro text on two lines, the search row filling the width with menu button, microphone and arrow, and Contact us and Explore services side by side. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same Default canvas at 768 px: chat icon, Ask TCS, the title How can we help you today? on two lines at 3.125rem, the intro text on two lines, the search row filling the width with menu button, microphone and arrow, and Contact us and Explore services side by side.
Business Context	The home page canvas checked on a tablet, where visitors often browse portrait and use the menu instead of the header.
Author Objective	Check that the Default canvas with icon, eyebrow, title, text, menu and two buttons reads well at tablet width.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Icon (Conversation Canvas › Content)	Select the asset chat-icon.svg (/en/shots/g11/chat-icon.svg)	No	Small icon above the eyebrow	SVG or PNG, square	Single asset; shown at 2.5rem; not used by Primary

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
B	Eyebrow (Conversation Canvas › Content)	Ask TCS	No	Small label above the title	1–4 words	Plain text; dialog placeholder "Infrastructure to Intelligence"; not used by Primary
C	Title (Conversation Canvas › Content)	How can we help you today?	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder "Statistic"; not used by Primary
D	Text (Conversation Canvas › Content)	Ask about our services, industries and insights, or browse the site from the menu.	No	Supporting text	1–2 sentences	Rich text kept; not used by Primary
(E)	Menu root path (Conversation Canvas › Content)	Select the page or enter /content/tcs-corp/us/en	No	Root of the menu / navigation tree	A page in the same locale	Converted to the published path; empty = `getLocale().root` (e.g. `/en`)
(F)	Menu depth (Conversation Canvas › Content)	2	No	Levels below the root	1 for sections only, 2–3 for deeper menus	Enforced in the dialog: min 1, max 3; code: invalid = 1, minimum 1
G	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder "Ask us a question"
H	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
I	Link (Conversation Canvas Button 1)	Select the page or enter /en/contact	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
(J)	Text (Conversation Canvas Button 1)	Contact us	No	Visible text / accessible name	Action verb + object	None
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
K	Link (Conversation Canvas Button 2)	Select the page or enter /en/services	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
(L)	Text (Conversation Canvas Button 2)	Explore services	No	Visible text / accessible name	Action verb + object	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(M)	Type (Conversation Canvas Button 2)	Secondary	No	Emphasis	One primary per canvas	Options: Primary, Secondary, Tertiary; condition: shown when Views is empty, Button or Icon
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (E), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The centred column and the glows are kept; the title wraps to two lines, the search row is full width up to 42.875rem and both buttons stay on one row.
- **Rendering behaviour:** Between 600 and 1199 px the panel has 5rem top and bottom and 2.5rem side padding, a 2.5rem content gap, a 0.875rem eyebrow and 1.125rem text; the search row has a 1.25rem gap and the field 0.75rem / 1.5rem padding.
- **Publishing behaviour:** Nothing is published per breakpoint: the same page published to aem.page or aem.live renders the tablet layout from CSS. Check it in the preview before publishing to live.

Business Rules

- The tablet layout comes from the block CSS; there is no tablet-specific field.
- Long titles wrap; keep Title under about 60 characters so it stays on two lines here.
- The menu button and the microphone stay visible at this width (the microphone only where the browser supports speech input).
- A Primary dock on the same page would switch to its desktop form only from 900 px.

Common Authoring Mistakes

Error	Root Cause	Resolution
The title breaks into three or more lines	A long sentence entered in Title	Shorten Title and move detail into Text
The buttons wrap onto two lines	Long button texts such as full sentences	Keep button Text to about 25 characters

Troubleshooting

- **Symptoms:** At 768 px the search field is too narrow and the watermark is cut off.
- **Cause:** A long Search bar water mark that doesn't fit next to the microphone and arrow buttons.
- **Resolution:** Shorten Search bar water mark to about 40 characters, for example Ask us a question.
- **Verification Steps:** Resize the aem.page preview to 768 px and check that the whole watermark is visible.

Tablet (600–1199 px): Padding 5rem top/bottom, 2.5rem sides; content gap 2.5rem; eyebrow 0.875rem; title 3.125rem (Bigger 4rem, Medium 2rem); text 1.125rem; search row gap 1.25rem; the field has 0.75rem / 1.5rem padding. The Primary dock shows its desktop form from 900 px.

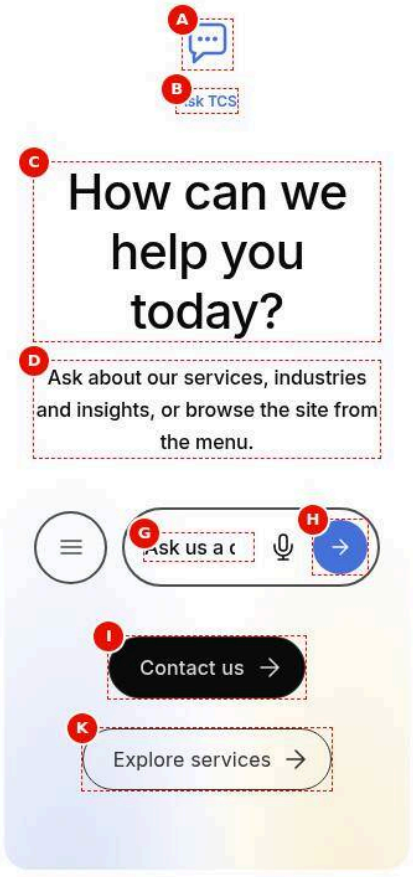

Figure 3: Mobile rendering — The same Default canvas at 375 px: chat icon, Ask TCS, the 2.5rem title How can we help you today? on three lines, the intro text, the round menu button beside a narrow search pill with microphone and arrow, and the buttons Contact us and Explore services stacked below each other. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-mobile-view.jpg`
Screenshot Purpose	Mobile rendering
Screen Description	The same Default canvas at 375 px: chat icon, Ask TCS, the 2.5rem title How can we help you today? on three lines, the intro text, the round menu button beside a narrow search pill with microphone and arrow, and the buttons Contact us and Explore services stacked below each other.
Business Context	The home page canvas on a phone, where the question field is the quickest route into the site for mobile visitors.
Author Objective	Check that the Default canvas stays usable at mobile width.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Icon (Conversation Canvas › Content)	Select the asset chat-icon.svg (/en/shots/g11/chat-icon.svg)	No	Small icon above the eyebrow	SVG or PNG, square	Single asset; shown at 2.5rem; not used by Primary
B	Eyebrow (Conversation Canvas › Content)	Ask TCS	No	Small label above the title	1–4 words	Plain text; dialog placeholder “Infrastructure to Intelligence”; not used by Primary
C	Title (Conversation Canvas › Content)	How can we help you today?	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder “Statistic”; not used by Primary
D	Text (Conversation Canvas › Content)	Ask about our services, industries and insights, or browse the site from the menu.	No	Supporting text	1–2 sentences	Rich text kept; not used by Primary
(E)	Menu root path (Conversation Canvas › Content)	Select the page or enter /content/tcs-corp/us/en	No	Root of the menu / navigation tree	A page in the same locale	Converted to the published path; empty = `getLocale().root` (e.g. `/en`)
(F)	Menu depth (Conversation Canvas › Content)	2	No	Levels below the root	1 for sections only, 2–3 for deeper menus	Enforced in the dialog: min 1, max 3; code: invalid = 1, minimum 1
G	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder “Ask us a question”
H	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as “Submit” or “Ask”	Plain text; dialog placeholder “Submit”
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
I	Link (Conversation Canvas Button 1)	Select the page or enter /en/contact	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
(J)	Text (Conversation Canvas Button 1)	Contact us	No	Visible text / accessible name	Action verb + object	None
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button	Select the Conversation Canvas in the content tree,	Only the item types the Conversation Canvas allows

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
				to the Conversation Canvas	choose Add (+) and pick Conversation Canvas Button	
K	Link (Conversation Canvas Button 2)	Select the page or enter /en/services	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
(L)	Text (Conversation Canvas Button 2)	Explore services	No	Visible text / accessible name	Action verb + object	None
(M)	Type (Conversation Canvas Button 2)	Secondary	No	Emphasis	One primary per canvas	Options: Primary, Secondary, Tertiary; condition: shown when Views is empty, Button or Icon
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (E), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A compact panel with the centred column: smaller eyebrow and title, the menu button and the search pill on one row, the two buttons wrapped onto separate lines.
- **Rendering behaviour:** Below 600 px the panel has 4rem top and bottom and 1.5rem side padding, a 2.5rem gap, a 0.75rem eyebrow, 1rem text and a 0.75rem gap in the search row; the buttons wrap. The menu button stays visible here (it is hidden on mobile only in the footer canvas).
- **Publishing behaviour:** The mobile layout is CSS only: the published page renders it on aem.page and aem.live without separate content. Test the menu on a phone-width preview before publishing to live.

Business Rules

- Keep Search bar water mark short (about 40 characters): the pill is narrow beside the menu button and the two icon buttons.
- The pop-up menu opens above the search row, at most 22.5rem wide and 60 % of the viewport high, and scrolls.
- The buttons keep their order: Contact us first, Explore services second.
- The search row floats at the bottom of the screen once it is scrolled above the viewport.

Common Authoring Mistakes

Error	Root Cause	Resolution
The watermark is cut off on phones	A long Search bar water mark	Use a short invitation such as Ask us a question
The menu covers the title when opened	Expected behaviour: it opens above the search row	Close it with Escape, a click outside or by tabbing away

Troubleshooting

- **Symptoms:** On a phone the menu opens partly off screen above the search row.
- **Cause:** The canvas sits at the very top of the viewport, so the menu above the row has little room.

- **Resolution:** Scroll the canvas down a little or place a Page Header above it; the menu scrolls within 60 % of the viewport.
- **Verification Steps:** Open the menu at 375 px on aem.page and check that all entries can be scrolled to.

Mobile (< 600 px): Padding 4rem top/bottom, 1.5rem sides; content gap 2.5rem; eyebrow 0.75rem; title 2.5rem (Bigger 2.75rem, Medium 1.75rem); text 1rem; search row gap 0.75rem. The menu button stays visible in the block (it is hidden on mobile only in the footer canvas). The Primary dock shows only the search pill (no menu button, no navigation).

6.30.3 Component Variations

Variation 1 — Default style

Variation Name: Default (Canvas Style = Default, no style class).

Business Purpose: A prominent in-page “ask or search” panel.

Visual Example:

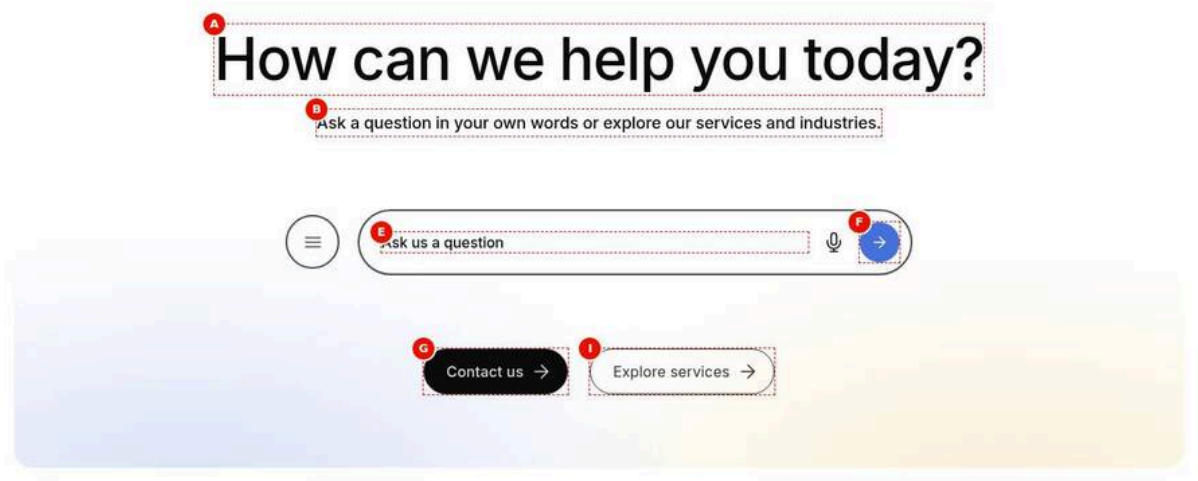

Figure 4: Default style — The Default canvas at 1440 px without icon or eyebrow: the h2 How can we help you today?, the text Ask a question in your own words or explore our services and industries., the search row and the buttons Contact us (primary) and Explore services (secondary) on a white panel with blue (left) and yellow (right) glows. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-default.jpg)

Screenshot Details — Default style

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-default.jpg`
Screenshot Purpose	Default style
Screen Description	The Default canvas at 1440 px without icon or eyebrow: the h2 How can we help you today?, the text Ask a question in your own words or explore our services and industries., the search row and the buttons Contact us (primary) and Explore services (secondary) on a white panel with blue (left) and yellow (right) glows.
Business Context	A help or contact hub where the question field and two routes (contact, services) are the main entry points.
Author Objective	Add a Default canvas with title, text, a two-level menu and two buttons.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Title (Conversation Canvas › Content)	How can we help you today?	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder "Statistic"; not used by Primary
B	Text (Conversation Canvas › Content)	Ask a question in your own words or explore our services and industries.	No	Supporting text	1–2 sentences	Rich text kept; not used by Primary
(C)	Menu root path (Conversation Canvas › Content)	Select the page or enter /content/tcs-corp/us/en	No	Root of the menu / navigation tree	A page in the same locale	Converted to the published path; empty = `getLocale().root` (e.g. `/en`)
(D)	Menu depth (Conversation Canvas › Content)	2	No	Levels below the root	1 for sections only, 2–3 for deeper menus	Enforced in the dialog: min 1, max 3; code: invalid = 1, minimum 1
E	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder "Ask us a question"
F	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
G	Link (Conversation Canvas Button 1)	Select the page or enter /en/contact	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
(H)	Text (Conversation Canvas Button 1)	Contact us	No	Visible text / accessible name	Action verb + object	None
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
I	Link (Conversation Canvas Button 2)	Select the page or enter /en/services	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
(J)	Text (Conversation Canvas Button 2)	Explore services	No	Visible text / accessible name	Action verb + object	None

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(K)	Type (Conversation Canvas Button 2)	Secondary	No	Emphasis	One primary per canvas	Options: Primary, Secondary, Tertiary; condition: shown when Views is empty, Button or Icon

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A rounded white panel with soft radial glows at the bottom; title, text, search row and the two pill buttons in one centred column.
- **Rendering behaviour:** Canvas Style Default adds no style class; the block gets conversation-canvas-bg-default. Without icon or eyebrow the title starts the intro with no extra space above it. The menu loads on first open.
- **Publishing behaviour:** Publish to preview (aem.page), then to live (aem.live). Menu entries come from the query index after the pages below /en are published; the button targets /en/contact and /en/services must be published too.

Business Rules

- Canvas Style is left on Default: no style class, glows drawn by the block's ::before.
- Intro elements render only when filled: here only the title and the text.
- The search row is always rendered and floats at the bottom once scrolled past (Variation 17).
- Button 1 keeps the default Type Primary; only one primary button per canvas.

Common Authoring Mistakes

Error	Root Cause	Resolution
The canvas floats over the page unexpectedly	Every Default canvas's search row floats once scrolled past	Use only one canvas per page; there is no setting to switch floating off
Explore services leads to a 404	The target page /en/services is not published	Publish the linked page or select an existing one
The title appears in bold body text	Title left empty and the question typed into Text	Enter the question in Title; Text is for one supporting sentence

Troubleshooting

- **Symptoms:** Typing a question and pressing Enter does nothing.
- **Cause:** By design: no search service is connected; the block only dispatches conversation-canvas:search.
- **Resolution:** Tell stakeholders the limitation; the development team connects a listener ([To be confirmed: search / conversational back end]).
- **Verification Steps:** In the console, listen for conversation-canvas:search, submit a question and check that the query is logged.

Use Cases: Home page, landing pages, help / contact hubs.

Authoring Guidelines: Leave **Canvas Style** on **Default**; fill Eyebrow, Title, Text, Menu and Search bar fields; add buttons with **Add** > **Conversation Canvas Button**.

Business Rules: Intro elements render only when they have a value. The search row is always rendered. The menu loads the site tree the first time it is opened. When the search row is scrolled out of view above the viewport, it floats at the bottom (Variation 17).

Rendering Rules: `.conversation-canvas.conversation-canvas-bg-default` with `.conversation-canvas-content > .conversation-canvas-intro`, `.conversation-canvas-search-slot > .conversation-canvas-search`, `ul.conversation-canvas-buttons`.

Responsive Behaviour: Desktop (>= 1200 px): 7.5rem / 5rem padding, 4rem title. Tablet (600–1199 px): 5rem / 2.5rem, 3.125rem title. Mobile (< 600 px): 4rem / 1.5rem, 2.5rem title.

SEO Impact: The title is an `h2`; text and button links are crawlable. The menu links are built only when opened (not in the initial HTML).

Accessibility Compliance: Search input with a visually hidden label (the placeholder text); menu button with `aria-label`, `aria-controls`, `aria-expanded`; menu is a `nav` with `aria-label`; Escape closes the menu and returns focus to the button; clicking or tabbing outside closes it.

Variation 2 — Secondary style

Variation Name: Secondary (Canvas Style = Secondary, class `secondary`).

Business Purpose: An exploration panel with filter tags that a script can supply (for example popular topics from a personalisation or search service).

Visual Example:

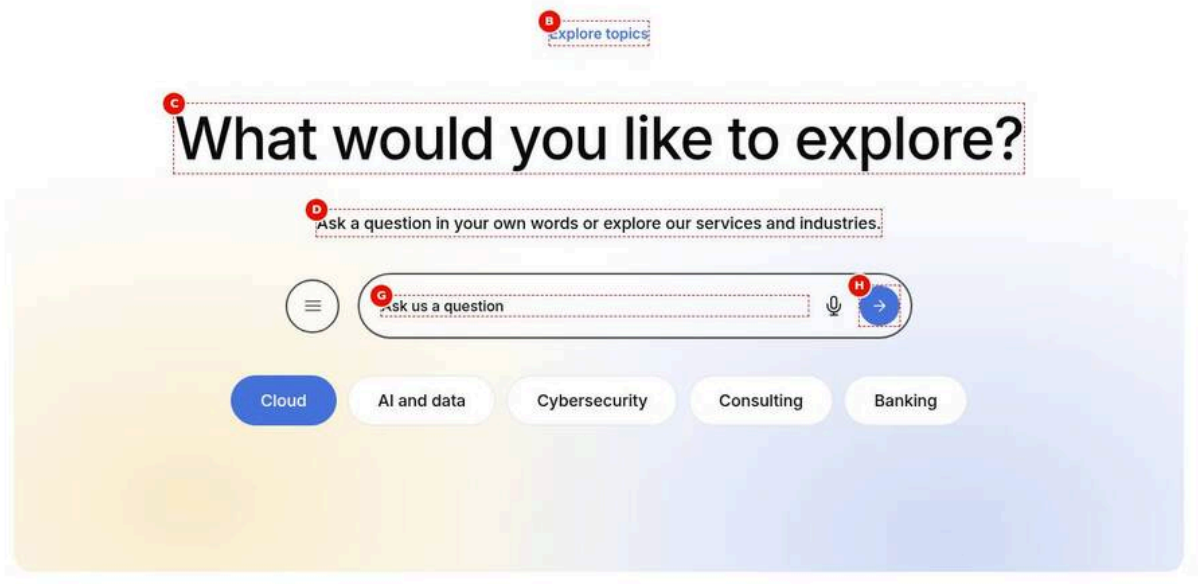

Figure 5: Secondary style — The Secondary canvas at 1440 px: the eyebrow Explore topics, the h2 What would you like to explore?, the text, the search row and five script-supplied filter pills: Cloud (active, filled brand blue), AI and data, Cybersecurity, Consulting and Banking, on a panel with a yellow glow left and a blue glow right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-secondary.jpg)

Screenshot Details — Secondary style

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-secondary.jpg`
Screenshot Purpose	Secondary style
Screen Description	The Secondary canvas at 1440 px: the eyebrow Explore topics, the h2 What would you like to explore?, the text, the search row and five script-supplied filter pills: Cloud (active, filled brand blue), AI and data, Cybersecurity, Consulting and Banking, on a panel with a yellow glow left and a blue glow right.
Business Context	A services or topic hub where a personalisation or search service suggests topics below the question field.
Author Objective	Add a Secondary canvas whose filter tags the development team fills by script.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
(A)	Canvas Style (Conversation Canvas › Content)	Secondary	No	Chooses Default, Primary (sticky) or Secondary	One Primary per page	Options: Default (`""`), Primary (sticky) (`primary`), Secondary (`secondary`)
B	Eyebrow (Conversation Canvas › Content)	Explore topics	No	Small label above the title	1–4 words	Plain text; dialog placeholder “Infrastructure to Intelligence”; not used by Primary
C	Title (Conversation Canvas › Content)	What would you like to explore?	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder “Statistic”; not used by Primary
D	Text (Conversation Canvas › Content)	Ask a question in your own words or explore our services and industries.	No	Supporting text	1–2 sentences	Rich text kept; not used by Primary
(E)	Menu root path (Conversation Canvas › Content)	Select the page or enter /content/tcs-corp/us/en	No	Root of the menu / navigation tree	A page in the same locale	Converted to the published path; empty = `getLocale().root` (e.g. `/en`)
(F)	Menu depth (Conversation Canvas › Content)	2	No	Levels below the root	1 for sections only, 2–3 for deeper menus	Enforced in the dialog: min 1, max 3; code: invalid = 1, minimum 1
G	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder “Ask us a question”
H	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as “Submit” or “Ask”	Plain text; dialog placeholder “Submit”

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	setConversationCanvasFilters(block, tags) (Page script (development team))	Filter tags: Cloud (active) (link /en/services/cloud), AI and data (link /en/services/ai), Cybersecurity (link /en/services/cybersecurity), Consulting (link /en/services/consulting), Banking (link /en/industries/banking); filter tags can't be authored	—	Check on the preview (not stored in the content)	Filter tags: Cloud (active) (link /en/services/cloud), AI and data (link /en/services/ai), Cybersecurity (link /en/services/cybersecurity), Consulting (link /en/services/consulting), Banking (link /en/industries/banking); filter tags can't be authored	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Larger top space, the intro elements 2.5rem apart, the search row and below it a centred, wrapping row of pill tags up to 56.25rem wide, the active one in brand blue.
- **Rendering behaviour:** From 1200 px the Secondary panel has 10rem top and 5rem side padding and a 2.5rem content gap. The filter list is hidden while empty; here setConversationCanvasFilters filled it after load with links, Cloud marked aria-current="true".
- **Publishing behaviour:** Publish sends the canvas to aem.page and aem.live; the filter tags are not page content and appear only where the page script runs, which is deployed with the code, not published with the page.

Business Rules

- Filter tags cannot be authored; only setConversationCanvasFilters(block, tags) fills them, and no such script exists as of this handover.
- Tags with a link render as a.tag.tag-filter; tags without one render as toggle buttons with aria-pressed that get no behaviour from the block.
- Each tag carries data-cmp-interaction="filter" and data-cmp-value (its label) for the data layer.
- Canvas Style Secondary adds the class secondary: swapped glows, larger top padding and 2.5rem gaps in the intro.

Common Authoring Mistakes

Error	Root Cause	Resolution
No filter pills appear	Secondary chosen but no script supplies the tags	Agree the integration with the development team; filters are script-only
Topics typed into Text expecting pills	Text is rich text below the title, not a tag list	Keep Text to one sentence; the topics come from the script
A floating dock was expected	Secondary chosen instead of Primary (sticky)	Choose the Canvas Style that matches the placement

Troubleshooting

- **Symptoms:** The Secondary canvas shows the search row but no filter pills.
- **Cause:** The filter list stays empty and hidden until a script calls setConversationCanvasFilters.
- **Resolution:** Ask the development team to add the script or connect the personalisation service for this page.

- **Verification Steps:** Reload the page on aem.page and check that ul.conversation-canvas-filters contains the pills.

Use Cases: Topic or industry hubs, insights landing pages.

Authoring Guidelines: Set **Canvas Style** = **Secondary**. Filter tags cannot be authored; they are supplied by code.

Business Rules: An empty `ul.conversation-canvas-filters` (`aria-label` "Suggestions") is added after the search row and hidden while empty. `setConversationCanvasFilters(block, tags)` fills it with `{ label, href?, active? }` items: with `href` a link `a.tag.tag-filter` (`aria-current="true"` when active), without `href` a `button` with `aria-pressed`. The buttons get no click behaviour from the block; the calling script must add it. Each tag carries `data-cmp-interaction="filter"` and `data-cmp-value` (label) for analytics.

Rendering Rules: Different glow positions; intro gap 2.5rem; at >= 1200 px padding 10rem / 5rem and content gap 2.5rem. Filters wrap, centred, gap 0.75rem, max 56.25rem.

Responsive Behaviour: Desktop (>= 1200 px): 10rem / 5rem padding. Tablet: 5rem / 2.5rem. Mobile: 4rem / 1.5rem.

SEO Impact: Filter tags are added by script after load (not in the initial HTML).

Accessibility Compliance: Filter list labelled; active state conveyed by `aria-current` / `aria-pressed` and colour.

```
import { setConversationCanvasFilters }
  from '/blocks/conversation-canvas/conversation-canvas.js';

const block = document.querySelector('.conversation-canvas.secondary');
setConversationCanvasFilters(block, [
  { label: 'Cloud', href: '/en/what-we-do/services/cloud', active: true },
  { label: 'AI' },
]);
```

Variation 3 — Primary (sticky) dock

Variation Name: Primary (sticky) (Canvas Style = Primary (sticky), class `primary`).

Business Purpose: A persistent floating search pill and, on desktop, contextual section navigation that stays available while the visitor scrolls.

Visual Example:

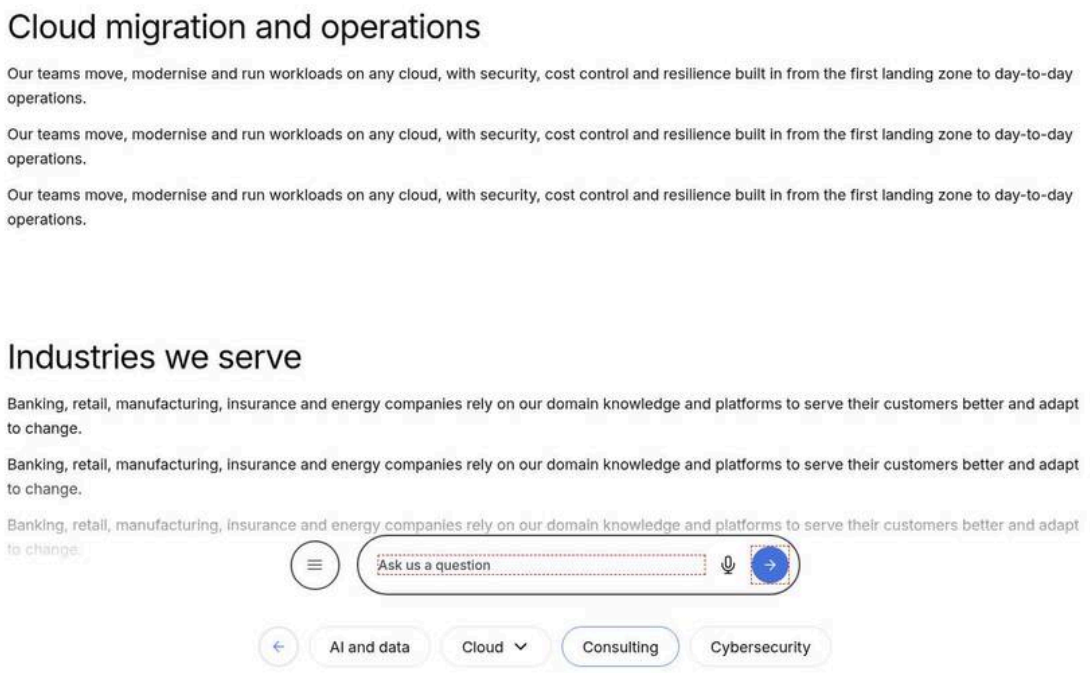

Figure 6: Primary (sticky) dock on desktop — The bottom of /en/services/consulting at 1440 px, scrolled down: the Primary dock floats over a white fade with the round menu button and the search pill Ask us a question (microphone, blue arrow) and, below it, the pills Back (arrow), AI and data, Cloud (with chevron), Consulting (current, blue outline) and Cybersecurity. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-primary-dock.jpg)

Screenshot Details — Primary (sticky) dock on desktop

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-primary-dock.jpg`
Screenshot Purpose	Primary (sticky) dock on desktop
Screen Description	The bottom of /en/services/consulting at 1440 px, scrolled down: the Primary dock floats over a white fade with the round menu button and the search pill Ask us a question (microphone, blue arrow) and, below it, the pills Back (arrow), AI and data, Cloud (with chevron), Consulting (current, blue outline) and Cybersecurity.
Business Context	A long services page where search and the Services section navigation should stay within reach while the visitor reads.
Author Objective	Add a Primary (sticky) canvas in its own section with the menu root /en and Menu depth 3.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Canvas Style (Conversation Canvas › Content)	Primary (sticky)	No	Chooses Default, Primary (sticky) or Secondary	One Primary per page	Options: Default (`""`), Primary (sticky) (`primary`), Secondary (`secondary`)
(B)	Menu root path (Conversation Canvas › Content)	Select the page or enter /content/tcs-corp/us/en	No	Root of the menu / navigation tree	A page in the same locale	Converted to the published path; empty = `getLocale().root` (e.g. `/en`)
(C)	Menu depth (Conversation Canvas › Content)	3	No	Levels below the root	1 for sections only, 2–3 for deeper menus	Enforced in the dialog: min 1, max 3; code: invalid = 1, minimum 1
D	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder “Ask us a question”
E	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as “Submit” or “Ask”	Plain text; dialog placeholder “Submit”
—	Page (Preview)	A page without sub-pages below the menu root, e.g. /en/services/consulting (no Tags): the dock shows its parent section Services	—	Check on the preview (not stored in the content)	A page without sub-pages below the menu root, e.g. /en/services/consulting (no Tags): the dock shows its parent section Services	—
—	Action (Preview)	Scroll down the page (the footer out of view): the dock floats at the bottom	—	Check on the preview (not stored in the content)	Scroll down the page (the footer out of view): the dock floats at the bottom	—
—	Screen width (Preview)	1440 px (desktop; the navigation pills and the menu button show from 900 px)	—	Check on the preview (not stored in the content)	1440 px (desktop; the navigation pills and the menu button show from 900 px)	—

All other fields keep their default values. Each callout letter marks the field’s output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A fixed bar at the bottom of the viewport: the page text fades out behind a white gradient, the search row is up to 37.9375rem wide and the 3rem pills sit centred below it.
- **Rendering behaviour:** The dock fades and slides in (0.3 s) while no footer and no in-place canvas search row is in view, and is inert otherwise. From 900 px it shows the menu button and pills, below 900 px only the search pill. Consulting has no sub-pages or tags, so its parent’s section Services is shown.
- **Publishing behaviour:** Publish to aem.page and aem.live; the pills are built from /query-index.json, so new service pages appear after they are published and indexed. Pill labels come from og:title with any suffix after a vertical bar removed.

Business Rules

- Only the dock renders: Eyebrow, Title, Text, Icon, Background image and buttons are ignored in this style.
- At most one Primary canvas per page, in a section of its own, which then gets no margin or padding.
- Menu depth 3 lets the sub-pages of /en/services/cloud make Cloud a toggle pill that opens a panel in place of the search row.
- Back goes up one level (Services to the top-level sections); the menu button switches between the full menu and this view (aria-pressed).
- If the page had tags, suggestion pills would replace the sibling pills on this leaf page.

Common Authoring Mistakes

Error	Root Cause	Resolution
The dock never appears	The page is short, so the footer is always in view, or another canvas's search row is in view	Use Primary on long pages only, with one canvas per page
The pills show the top-level sections instead of Services	The current page is deeper than Menu depth or outside the Menu root path	Raise Menu depth (maximum 3) or change the root
The authored title and buttons are missing	Primary ignores the intro fields and button items	Use Default or Secondary for an in-page panel
Extra empty space at the end of the page	Padding or margin set on the Additional tab of the Primary canvas	Leave spacing on Default for the Primary style

Troubleshooting

- **Symptoms:** Scrolling down the page shows no dock at the bottom.
- **Cause:** The footer or a Default / Secondary canvas's search row is in view, so the dock stays hidden and inert.
- **Resolution:** Remove the other canvas from the page or use the Primary canvas on a longer page.
- **Verification Steps:** On aem.page scroll down: the dock fades in, and it hides again when the footer comes into view.

Use Cases: Long content pages, section landing pages, articles that should keep search and navigation in reach.

Authoring Guidelines: Set **Canvas Style** = **Primary (sticky)**. Set **Menu root path** (default: the locale's Home) and **Menu depth** (1–3) and the **Search bar** fields. Eyebrow, Title, Text, Icon, Background image and buttons are **not rendered** in this style. Place it in its own section (that section then gets no margin or padding).

Business Rules:

- Only the dock is rendered; it is fixed to the bottom of the viewport and is visible (and reachable by keyboard) only while floating: when no footer is in view, no Default / Secondary canvas's search row is in view in its place, and no canvas registered before it (higher on the page) is already floating. Otherwise it is hidden and `inert`.
- The site tree loads immediately from the query index (pages below the root, up to the depth), together with the page's tag labels (suggestions).
- The navigation shows one of three views, chosen from the current page's place in the tree:

Current page	Default view	Pills
The menu root (Home) or a page not in the tree	Root	Links to the top-level sections
A page with sub-pages	Section	Its sub-pages; sub-pages that have their own children are toggle pills that open a panel
A page without sub-pages, with suggestions	Suggestions	One button per suggestion (page tags or script-supplied); clicking one searches for it
A page without sub-pages, no suggestions	Parent's section (root if the parent is Home)	Its siblings

- A **Back** button (arrow-left, `aria-label` "Back") appears in every view except Root and goes up one level (suggestions to the parent's section, a section to its parent's section, then Root).
- The **menu button**: when the default view is Root, it shows / hides the navigation (`aria-expanded`); otherwise it switches between the full menu (Root) and the default view (`aria-pressed`).
- Toggle pills (section view) open a panel listing the sub-pages **in place of the search row**; 6 or more sub-pages use two balanced columns (wider panel). Escape or a click outside closes the panel and returns focus to its pill.
- Pills for the current page or its ancestors are outlined in blue (`aria-current="page"` for the page itself, `"true"` for ancestors).
- Page titles in pills and panel drop anything after a `|` (e.g. "Cloud | TCS" shows "Cloud").
- `setConversationCanvasSuggestions(block, [...])` replaces the suggestions (for example prompts from a personalisation service) and re-renders; suggestion text has surrounding quotes stripped before it is submitted.

Rendering Rules: `.conversation-canvas.primary > .conversation-canvas-dock` containing `.conversation-canvas-nav-panel`, `.conversation-canvas-search` (menu toggle and form) and `nav.conversation-canvas-nav` (`aria-label` "Site"). The block wrapper is `display: contents`. The dock fades and slides in (0.3 s; no transition with reduced motion).

Responsive Behaviour: Desktop and tablet >= 900 px: 5rem top padding over a white gradient fade, search row up to 37.9375rem with the menu button, navigation pills (3rem tall, 1.125rem text, blue `#4e84ff` active border) and the panel. Below 900 px: only the search pill (up to 21.25rem wide, grey translucent, blurred), no menu button, navigation or panel (the site header provides navigation).

SEO Impact: Navigation links are created by script after the query index loads; they are not in the initial HTML. No heading is rendered.

Accessibility Compliance: Hidden dock is `inert` (not focusable, not announced); `nav` with label; current page marked with `aria-current`; panel toggles with `aria-expanded` and `aria-controls`; Escape closes the panel. The panel container has an `aria-label` but no role (Known limitation).

```
import { setConversationCanvasSuggestions }
  from '/blocks/conversation-canvas/conversation-canvas.js';

const dock = document.querySelector('.conversation-canvas.primary');
setConversationCanvasSuggestions(dock, ['"What is agentic AI?"', 'Cloud migration']);
```

Variation 4 — Title Type: Default

Variation Name: Title Type = Default (no class).

Business Purpose: Standard title size for the canvas.

Visual Example:

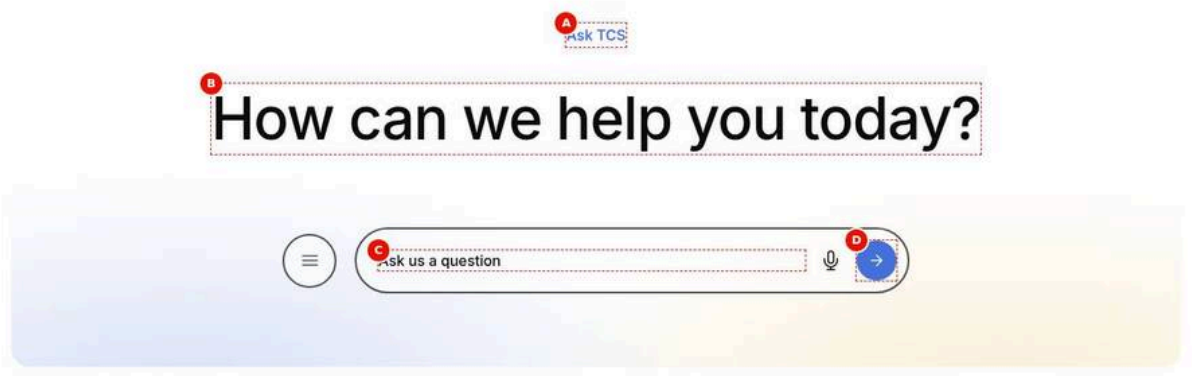

Figure 7: Default title size — A Default canvas at 1440 px with the eyebrow Ask TCS, the h2 How can we help you today? at 4rem and the search row (menu button, Ask us a question field with microphone and blue arrow); no text or buttons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-title-default.jpg)

Screenshot Details — Default title size

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-title-default.jpg`
Screenshot Purpose	Default title size
Screen Description	A Default canvas at 1440 px with the eyebrow Ask TCS, the h2 How can we help you today? at 4rem and the search row (menu button, Ask us a question field with microphone and blue arrow); no text or buttons.
Business Context	A compact canvas lower on a landing page, where the standard title size balances the question against the surrounding content.
Author Objective	Add a canvas with an eyebrow and a title at the Default title size.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Eyebrow (Conversation Canvas › Content)	Ask TCS	No	Small label above the title	1–4 words	Plain text; dialog placeholder "Infrastructure to Intelligence"; not used by Primary
B	Title (Conversation Canvas › Content)	How can we help you today?	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder "Statistic"; not used by Primary
C	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder "Ask us a question"

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** The blue Ask TCS eyebrow, 1.5rem of extra space, the 4rem medium-weight title and the search row centred on the glowing panel.
- **Rendering behaviour:** Title Type Default adds no class: the title is 2.5rem below 600 px, 3.125rem from 600 px and 4rem from 1200 px, line height 1.2, with letter-spacing scaled to each size.
- **Publishing behaviour:** Publish to preview shows the canvas on aem.page and Publish to live on aem.live; the title is part of the page HTML and needs no other publish step.

Business Rules

- The title is always an h2; Title Type only changes its size.
- Text and button items are empty, so they are not rendered.
- The eyebrow is plain text in brand colour; keep it to 1–4 words such as Ask TCS.
- The title is plain text: formatting typed into it is not kept.

Common Authoring Mistakes

Error	Root Cause	Resolution
The title wraps to three lines	A full sentence entered in Title	Keep Title under about 60 characters and put detail in Text
The eyebrow appears as part of the title	Ask TCS typed into Title	Enter Ask TCS in Eyebrow

Troubleshooting

- **Symptoms:** An accessibility check reports a wrong heading order around the canvas.
- **Cause:** The canvas title is fixed at h2 and sits above the page's h1 or inside an h3 context.
- **Resolution:** Keep the Page Header h1 above the canvas, or move the canvas to where an h2 fits the outline.
- **Verification Steps:** Check the heading outline of the page on aem.page with a browser accessibility tool.

Use Cases: Most canvases.

Authoring Guidelines: Leave **Title Type** on **Default**.

Business Rules: The title is always an `h2`; Title Type changes only its size.

Rendering Rules: 2.5rem / line height 1.2 / –0.05rem letter-spacing (mobile); 3.125rem / –0.0625rem (>= 600 px); 4rem / -0.08rem (>= 1200 px). 1.5rem extra space after an icon or eyebrow.

Responsive Behaviour: As above per breakpoint.

SEO Impact: One `h2`.

Accessibility Compliance: Heading level is fixed at 2; check the page outline (Page Header `h1` above it).

Variation 5 — Title Type: Bigger

Variation Name: Title Type = Bigger Title (class `conversation-canvas-title-bigger`).

Business Purpose: A hero-scale statement title.

Visual Example:

Figure 8: Bigger title — A Default canvas at 1440 px with the eyebrow Ask TCS and the h2 Building on belief at 5rem (Title Type Bigger Title) above the search row; no text or buttons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-title-bigger.jpg)

Screenshot Details — Bigger title

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-title-bigger.jpg`
Screenshot Purpose	Bigger title
Screen Description	A Default canvas at 1440 px with the eyebrow Ask TCS and the h2 Building on belief at 5rem (Title Type Bigger Title) above the search row; no text or buttons.
Business Context	A home or campaign page where a short brand statement opens the ask-us panel.
Author Objective	Add a canvas with a short statement title at the Bigger Title size.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Eyebrow (Conversation Canvas › Content)	Ask TCS	No	Small label above the title	1–4 words	Plain text; dialog placeholder “Infrastructure to Intelligence”; not used by Primary
B	Title (Conversation Canvas › Content)	Building on belief	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder “Statistic”; not used by Primary
(C)	Title Type (Conversation Canvas › Content)	Bigger Title	No	Title size	Bigger for hero use, Medium lower on the page	Options: Default (`""`), Bigger Title (`bigger`), Medium Title (`medium`)

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
D	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder "Ask us a question"
E	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The short title in large medium-weight type dominates the panel; the eyebrow and the search row are unchanged.
- **Rendering behaviour:** Bigger Title adds conversation-canvas-title-bigger: 2.75rem below 600 px, 4rem from 600 px, 5rem from 1200 px, letter-spacing –0.03 of the size.
- **Publishing behaviour:** Publish to preview (aem.page) and to live (aem.live); Title Type is a class on the block and needs no other publish step.

Business Rules

- Bigger Title suits short statements of up to about 40 characters, such as Building on belief.
- The title stays an h2; Bigger Title does not make it the page heading.
- Title Type has no effect in the Primary (sticky) style, which renders no title.

Common Authoring Mistakes

Error	Root Cause	Resolution
A long question breaks into many lines on phones	Bigger Title used for a full sentence	Shorten the title or use Title Type Default
The canvas is expected to be the page h1	Bigger Title only changes the size	Keep the h1 in the Page Header

Troubleshooting

- **Symptoms:** At 375 px the title wraps almost word by word.
- **Cause:** The title is longer than about 40 characters for Bigger Title.
- **Resolution:** Shorten the title or switch Title Type to Default.
- **Verification Steps:** Preview the page at 375 px and at 1440 px on aem.page.

Use Cases: Home page canvas, campaign pages.

Authoring Guidelines: Set **Title Type** = **Bigger Title**; keep the title short (up to about 40 characters).

Business Rules: Class only; still an `h2`.

Rendering Rules: 2.75rem / –0.0825rem (mobile); 4rem / –0.12rem (>= 600 px); 5rem / –0.15rem (>= 1200 px).

Responsive Behaviour: As above.

SEO Impact: None beyond the `h2`.

Accessibility Compliance: Large text; ensure it reflows at 400 % zoom (short titles).

Variation 6 — Title Type: Medium

Variation Name: Title Type = Medium Title (class `conversation-canvas-title-medium`).

Business Purpose: A smaller title for secondary placements (for example lower on the page).

Visual Example:

Figure 9: Medium title — A Default canvas at 1440 px with the eyebrow Ask TCS and the h2 Questions about our services? Ask us directly. at 2.5rem with line height 1.4 (Title Type Medium Title) above the search row; no text or buttons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-title-medium.jpg)

Screenshot Details — Medium title

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-title-medium.jpg`
Screenshot Purpose	Medium title
Screen Description	A Default canvas at 1440 px with the eyebrow Ask TCS and the h2 Questions about our services? Ask us directly. at 2.5rem with line height 1.4 (Title Type Medium Title) above the search row; no text or buttons.
Business Context	A mid-page or footer-adjacent canvas where a longer question must not compete with the page's main heading.
Author Objective	Add a canvas with a longer question title at the Medium Title size.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Eyebrow (Conversation Canvas › Content)	Ask TCS	No	Small label above the title	1–4 words	Plain text; dialog placeholder "Infrastructure to Intelligence"; not used by Primary
B	Title (Conversation Canvas › Content)	Questions about our services? Ask us directly.	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder "Statistic"; not used by Primary

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(C)	Title Type (Conversation Canvas › Content)	Medium Title	No	Title size	Bigger for hero use, Medium lower on the page	Options: Default (`""`), Bigger Title (`bigger`), Medium Title (`medium`)
D	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder "Ask us a question"
E	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A modest one-line title under the blue eyebrow, with the search row below it in the same centred column.
- **Rendering behaviour:** Medium Title adds conversation-canvas-title-medium: 1.75rem below 600 px, 2rem from 600 px, 2.5rem from 1200 px, line height 1.4 at every size.
- **Publishing behaviour:** Publish to preview (aem.page) and to live (aem.live); the size is a block class and needs no separate publish step.

Business Rules

- Medium Title suits longer questions such as Questions about our services? Ask us directly.
- The title stays an h2; only its size and line height change.
- Title Type is ignored in the Primary (sticky) style.

Common Authoring Mistakes

Error	Root Cause	Resolution
The canvas looks weaker than the section headings around it	Medium Title used for the main page canvas	Use Default or Bigger Title for the main canvas of the page
Two sentences in Title read like body text	Supporting copy entered in Title	Keep the question in Title and move the rest to Text

Troubleshooting

- **Symptoms:** The title shows at the default 4rem instead of the medium size.
- **Cause:** Title Type was left on Default or the change was not published.
- **Resolution:** Set Title Type to Medium Title and publish the page again.
- **Verification Steps:** On aem.page check that the block has the class conversation-canvas-title-medium and a 2.5rem title at 1440 px.

Use Cases: Mid-page canvases, footer-adjacent panels.

Authoring Guidelines: Set **Title Type** = **Medium Title**.

Business Rules: Class only; still an `h2`.

Rendering Rules: 1.75rem / line height 1.4 / −0.0438rem (mobile); 2rem / −0.05rem (>= 600 px); 2.5rem / −0.0625rem (>= 1200 px).

Responsive Behaviour: As above.

SEO Impact: None beyond the `h2`.

Accessibility Compliance: As Variation 4.

Variation 7 — BG Style: Default (glow)

Variation Name: BG Style = Default (class `conversation-canvas-bg-default`), no background image.

Business Purpose: The brand's soft gradient look without an image.

Visual Example:

Figure 10: Default background glow — A Default canvas at 1440 px with the h2 Ask us a question, the text Ask a question in your own words or explore our services and industries. and the search row on a white panel with a blue glow rising from the bottom left and a yellow glow from the bottom right. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-bg-default.jpg)

Screenshot Details — Default background glow

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-bg-default.jpg`
Screenshot Purpose	Default background glow
Screen Description	A Default canvas at 1440 px with the h2 Ask us a question, the text Ask a question in your own words or explore our services and industries. and the search row on a white panel with a blue glow rising from the bottom left and a yellow glow from the bottom right.
Business Context	Any canvas without photography, where the brand gradient gives the panel its look.
Author Objective	Add a canvas with BG Style Default and no background image to get the brand glow.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Title (Conversation Canvas › Content)	Ask us a question	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder "Statis-

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
						tic"; not used by Primary
B	Text (Conversation Canvas › Content)	Ask a question in your own words or explore our services and industries.	No	Supporting text	1–2 sentences	Rich text kept; not used by Primary
C	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder "Ask us a question"
D	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"

All other fields keep their default values. Each callout letter marks the field's output on the screenshot.

Expected Page Output

- **Visual output:** A rounded white panel with two soft radial glows at its bottom edge behind the centred title, text and search row.
- **Rendering behaviour:** The glows are the block's ::before: two radial gradients (blue rgb(70 115 219 / 22%), yellow rgb(232 185 49 / 22%)) that scale with the panel at every breakpoint.
- **Publishing behaviour:** Publish to preview and live; the glow is CSS and needs no asset. Nothing else has to be published.

Business Rules

- BG Style has one option, Default; it adds the class conversation-canvas-bg-default, which has no CSS of its own today.
- The glow shows only while BG Background Image is empty.
- Text renders as rich text with its paragraph margins removed, up to 50.75rem wide.

Common Authoring Mistakes

Error	Root Cause	Resolution
The glow is missing	An image was selected in BG Background Image	Clear BG Background Image to get the glow
Authors look for other BG Style options	BG Style has only Default (F-33 open)	Leave BG Style on Default

Troubleshooting

- **Symptoms:** The canvas shows a flat white panel without glows.
- **Cause:** The page shows an old cached version, or a background image was set and removed without publishing.
- **Resolution:** Check that BG Background Image is empty and publish the page again.
- **Verification Steps:** On aem.page the block has no conversation-canvas-has-background class and the glows are visible.

Use Cases: Any canvas without photography.

Authoring Guidelines: Leave **BG Style** = **Default** (the only option) and **BG Background Image** empty.

Business Rules: BG Style has one option; the class `conversation-canvas-bg-{value}` is always added (`default` when empty) but has no CSS of its own today — it is a hook for future styles.

Rendering Rules: `::before` with two radial gradients (blue `rgb(70 115 219 / 22%)`, yellow `rgb(232 185 49 / 22%)`; Secondary 25 % with swapped positions) on `--color-bg-default`.

Responsive Behaviour: The glow scales with the panel at every breakpoint.

SEO Impact: None.

Accessibility Compliance: Decorative; text contrast is on the white background.

Variation 8 — Background image

Variation Name: BG Background Image set (class `conversation-canvas-has-background`).

Business Purpose: A photographic or illustrated canvas.

Visual Example:

Figure 11: Background image — A Default canvas at 1440 px with the light abstract image light.svg (pale blue panel with large white and blue circles) filling the rounded panel behind the h2 Ask us a question, the text and the search row; no glow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-background-image.jpg)

Screenshot Details — Background image

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-background-image.jpg`
Screenshot Purpose	Background image
Screen Description	A Default canvas at 1440 px with the light abstract image light.svg (pale blue panel with large white and blue circles) filling the rounded panel behind the h2 Ask us a question, the text and the search row; no glow.
Business Context	A campaign or event canvas where an illustration replaces the standard glow.
Author Objective	Add a canvas with a decorative background image behind its title, text and search row.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	BG Background Image (Conversation Canvas › Content)	Select the asset light.svg (/en/media/light.svg)	No	Decorative background image	Light, low-detail image	Single asset; not used by Primary
B	Title (Conversation Canvas › Content)	Ask us a question	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder “Statistic”; not used by Primary
C	Text (Conversation Canvas › Content)	Ask a question in your own words or explore our services and industries.	No	Supporting text	1–2 sentences	Rich text kept; not used by Primary
D	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder “Ask us a question”
E	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as “Submit” or “Ask”	Plain text; dialog placeholder “Submit”

All other fields keep their default values. Each callout letter marks the field’s output on the screenshot.

Expected Page Output

- **Visual output:** The image covers the whole panel, clipped to the 1.25rem corners; dark text and the outlined search row sit on top of it.
- **Rendering behaviour:** The block gets conversation-canvas-has-background, which removes the glow; the image is placed absolutely behind the content with object-fit cover. Site media is optimised to a responsive picture; other URLs such as this SVG are used as is with lazy loading, even in the first section.
- **Publishing behaviour:** The asset light.svg must be published in AEM Assets before or with the page; then Publish to preview and live shows it on aem.page and aem.live.

Business Rules

- The background image is decorative: alt=“” unless the asset already carries alt text.
- Choose a light, low-detail image: the text stays dark and the code adds no overlay.
- The image replaces the glow; it is not rendered in the Primary (sticky) style.
- Cropping changes with the panel height, so keep the important part of the image centred.

Common Authoring Mistakes

Error	Root Cause	Resolution
The title is hard to read	A dark or busy image behind the dark text	Pick a light image and check 4.5:1 contrast
The image is missing on aem.live	The asset is not published	Publish light.svg in AEM Assets and republish the page
The image appears cut off	Important content at the image edges	Use an image with its focus in the centre

Troubleshooting

- **Symptoms:** The panel shows neither the image nor the glow.
- **Cause:** The image URL returns 404 because the asset isn’t published, while the has-background class already hides the glow.
- **Resolution:** Publish the asset, re-select it in BG Background Image and publish the page.
- **Verification Steps:** On aem.page check that the image request returns 200 and the image fills the panel.

Use Cases: Campaign or event canvases.

Authoring Guidelines: Pick an image in **BG Background Image** from AEM Assets. Choose a light, low-contrast image (the text colour stays dark).

Business Rules: The image is decorative (`alt=""` unless the asset already has one); the glow is removed. Site media (`/media_` URLs) is optimized to a responsive `<picture>`; other URLs are used as is with `loading="lazy"`. Not rendered in the Primary style.

Rendering Rules: `.conversation-canvas-background` absolutely positioned behind the content, `object-fit: cover`, clipped to the 1.25rem radius.

Responsive Behaviour: Covers the panel at every breakpoint; cropping changes with the panel height.

SEO Impact: Decorative image, no alt text value for SEO.

Accessibility Compliance: Verify text contrast (WCAG 1.4.3, 4.5:1) over the image; the code does not add an overlay.

Variation 9 — Search button icon type: Primary

Variation Name: Search bar button icon type = Primary.

Business Purpose: The default, most prominent submit button.

Visual Example:

Figure 12: Primary search button — The search row of a canvas at 1440 px, cropped: the round menu button and the pill field Ask us a question with the microphone and a filled brand-blue round arrow button (Search bar button icon type Primary). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-search-primary.jpg)

Screenshot Details — Primary search button

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-search-primary.jpg`
Screenshot Purpose	Primary search button
Screen Description	The search row of a canvas at 1440 px, cropped: the round menu button and the pill field Ask us a question with the microphone and a filled brand-blue round arrow button (Search bar button icon type Primary).
Business Context	The standard look of the submit button on most canvases.
Author Objective	Keep the default Primary submit button with the hover text Submit.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Title (Conversation Canvas › Content)	Ask us a question	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder "Statistic"; not used by Primary

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(B)	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder "Ask us a question"
C	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 2.75rem round button with a brand-blue fill and a white arrow at the right end of the pill; the microphone sits to its left.
- **Rendering behaviour:** The submit is an icon button from the button decorator (button.button.icon-button.primary, arrow-right icon); it takes the brand hover colour and the same size at every breakpoint.
- **Publishing behaviour:** Publish to preview and live; the hover text is page content, while the fallback label Submit comes from the placeholders sheet (key submit), published separately.

Business Rules

- Primary is the default Search bar button icon type; unknown values also fall back to primary.
- The hover text Submit becomes the button's aria-label and title tooltip.
- An empty hover text uses the placeholder submit (Submit in English).
- An empty question does nothing; a filled one dispatches conversation-canvas:search.

Common Authoring Mistakes

Error	Root Cause	Resolution
The tooltip shows a test word	A test value in Search bar button icon type hover text (as in the English footer sample, F-33)	Enter Submit or clear the field
Screen readers announce the button as arrow	Hover text filled with an icon name	Use a verb such as Submit or Ask

Troubleshooting

- **Symptoms:** Hovering the arrow shows an unexpected word.
- **Cause:** Search bar button icon type hover text holds a test value.
- **Resolution:** Set the hover text to Submit (or clear it) and publish the page or the footer canvas page.
- **Verification Steps:** On aem.page hover the arrow: the tooltip and the accessible name read Submit.

Use Cases: Most canvases.

Authoring Guidelines: Search bar > **Search bar button icon type** = **Primary** (default).

Business Rules: Icon button (arrow-right) of type primary; its accessible name and tooltip is **Search bar button icon type hover text**, else "Submit".

Rendering Rules: `button.button.icon-button.primary` (2.75rem, brand background, white icon; hover brand-hover).

Responsive Behaviour: Same size at every breakpoint.

SEO Impact: None.

Accessibility Compliance: `aria-label` and `title` from the hover text; visible focus style.

Variation 10 — Search button icon type: Secondary

Variation Name: Search bar button icon type = Secondary.

Business Purpose: A lighter, outlined submit button.

Visual Example:

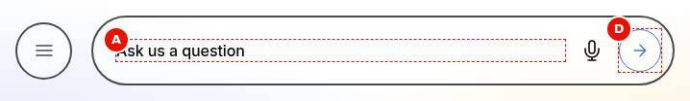

Figure 13: Secondary search button — The search row of a canvas at 1440 px, cropped: the round menu button and the pill field Ask us a question with the microphone and a round arrow button with a brand-blue outline and no fill (Search bar button icon type Secondary). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-search-secondary.jpg)

Screenshot Details — Secondary search button

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-search-secondary.jpg`
Screenshot Purpose	Secondary search button
Screen Description	The search row of a canvas at 1440 px, cropped: the round menu button and the pill field Ask us a question with the microphone and a round arrow button with a brand-blue outline and no fill (Search bar button icon type Secondary).
Business Context	A canvas on a background image or a busy page where a filled submit button would be too heavy.
Author Objective	Set the submit button to the outlined Secondary type.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Title (Conversation Canvas › Content)	Ask us a question	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder “Statistic”; not used by Primary
(B)	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder “Ask us a question”
(C)	Search bar button icon type (Conversation Canvas › Content)	Secondary	No	Submit button style	Primary unless the design asks otherwise	Options: Primary, Secondary, Tertiary; unknown = primary
D	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as “Submit” or “Ask”	Plain text; dialog placeholder “Submit”

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 2.75rem round outlined button with a brand-blue arrow on the translucent pill.
- **Rendering behaviour:** button.button.icon-button.secondary: brand border, transparent background, brand icon; it takes the secondary hover colours and keeps its size at every breakpoint.
- **Publishing behaviour:** Publish to preview and live; the button type is page content and needs no other publish step.

Business Rules

- Search bar button icon type Secondary only changes the style; label and behaviour are as Primary.
- The hover text Submit is the accessible name and tooltip.
- The type applies in every Canvas Style, including the Primary dock.

Common Authoring Mistakes

Error	Root Cause	Resolution
The button looks disabled	Secondary on a light image with low contrast	Use Primary on light backgrounds with little contrast
The setting seems ignored	The value was changed but the page was not published	Publish the page and reload aem.page

Troubleshooting

- **Symptoms:** The submit stays filled blue after choosing Secondary.
- **Cause:** The preview still shows the cached published version.
- **Resolution:** Publish the page again to preview and reload it.
- **Verification Steps:** On aem.page the submit button has the classes icon-button secondary.

Use Cases: Canvases on image backgrounds where a filled button is too heavy.

Authoring Guidelines: Set **Search bar button icon type** = **Secondary**.

Business Rules: As Variation 9 with type secondary.

Rendering Rules: `icon-button.secondary`: brand border, transparent background, brand icon; hover secondary brand colours.

Responsive Behaviour: Same at every breakpoint.

SEO Impact: None.

Accessibility Compliance: As Variation 9.

Variation 11 — Search button icon type: Tertiary

Variation Name: Search bar button icon type = Tertiary.

Business Purpose: A minimal icon-only submit.

Visual Example:

Figure 14: Tertiary search button — The search row of a canvas at 1440 px, cropped: the round menu button and the pill field Ask us a question with the microphone and a plain brand-blue arrow without fill or border (Search bar button icon type Tertiary). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-search-tertiary.jpg)

Screenshot Details — Tertiary search button

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-search-tertiary.jpg`
Screenshot Purpose	Tertiary search button
Screen Description	The search row of a canvas at 1440 px, cropped: the round menu button and the pill field Ask us a question with the microphone and a plain brand-blue arrow without fill or border (Search bar button icon type Tertiary).
Business Context	A minimal canvas design where the submit is only an arrow inside the field.
Author Objective	Set the submit button to the icon-only Tertiary type.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Title (Conversation Canvas › Content)	Ask us a question	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder "Statistic"; not used by Primary
(B)	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder "Ask us a question"
(C)	Search bar button icon type (Conversation Canvas › Content)	Tertiary	No	Submit button style	Primary unless the design asks otherwise	Options: Primary, Secondary, Tertiary; unknown = primary
D	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Only a brand-blue arrow at the right end of the pill, next to the microphone.
- **Rendering behaviour:** button.button.icon-button.tertiary: brand icon colour only, no fill or border; same size at every breakpoint. The focus outline marks the otherwise invisible button boundary.
- **Publishing behaviour:** Publish to preview and live; no other publish step is needed.

Business Rules

- Tertiary keeps the accessible name and tooltip from the hover text Submit.
- Any value other than Primary, Secondary or Tertiary falls back to primary.
- The button boundary is barely visible, so keep the focus outline intact in custom CSS.

Common Authoring Mistakes

Error	Root Cause	Resolution
Visitors don't find the submit	Tertiary used where the arrow is the only cue	Use Primary when the canvas is the page's main entry point
The arrow is unreadable on the background image	Tertiary blue arrow on a blue image area	Use Primary or a lighter image

Troubleshooting

- **Symptoms:** Keyboard users can't see which control has focus at the end of the field.
- **Cause:** The Tertiary button has no fill or border and a custom style removed its focus outline.
- **Resolution:** Ask the development team to restore the focus-visible style, or use the Primary type.
- **Verification Steps:** Tab through the search row on aem.page and check that the arrow shows a visible focus outline.

Use Cases: Minimal designs.

Authoring Guidelines: Set **Search bar button icon type** = **Tertiary**.

Business Rules: As Variation 9 with type tertiary; any unknown value falls back to primary.

Rendering Rules: `icon-button.tertiary`: brand icon colour only.

Responsive Behaviour: Same at every breakpoint.

SEO Impact: None.

Accessibility Compliance: As Variation 9; the button boundary is less visible, so the focus outline is important.

Variation 12 — Voice input with the default microphone

Variation Name: Audio button, default icon (class `conversation-canvas-audio-default`).

Business Purpose: Let visitors dictate their question.

Visual Example:

Figure 15: Voice input — The search row of a canvas at 1440 px, cropped: the menu button and the pill Ask us a question with the default microphone button in its listening state (brand blue with a round outline, aria-pressed="true") next to the filled blue arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-voice-default.jpg)

Screenshot Details — Voice input

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-voice-default.jpg`
Screenshot Purpose	Voice input

Item	Detail
Screen Description	The search row of a canvas at 1440 px, cropped: the menu button and the pill Ask us a question with the default microphone button in its listening state (brand blue with a round outline, aria-pressed="true") next to the filled blue arrow.
Business Context	Visitors on phones or with motor impairments dictate their question instead of typing it.
Author Objective	Keep the default microphone and name the voice button Search by voice.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Title (Conversation Canvas › Content)	Ask us a question	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder "Statistic"; not used by Primary
(B)	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder "Ask us a question"
C	Search bar audio icon alt text (Conversation Canvas › Content)	Search by voice	No	Accessible name of the voice button	Describe the action	Plain text
D	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"
—	Browser (Preview)	One with the Web Speech API (e.g. Chrome, Edge, Safari); the audio button is hidden elsewhere	—	Check on the preview (not stored in the content)	One with the Web Speech API (e.g. Chrome, Edge, Safari); the audio button is hidden elsewhere	—
—	Action (Preview)	Click the microphone button (listening: brand blue with an outline)	—	Check on the preview (not stored in the content)	Click the microphone button (listening: brand blue with an outline)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A 2rem round microphone button with a 1.5rem mic icon; while listening it turns brand blue with a 2 px outline.
- **Rendering behaviour:** The button shows only where the browser has the Web Speech API (for example Chrome, Edge, Safari) and is hidden elsewhere (for example Firefox). Recognition uses the page language (html lang, else en); the first result fills the field and focuses it without submitting.
- **Publishing behaviour:** Publish to preview and live; the fallback name Search by voice comes from the placeholders sheet (key searchByVoice), published separately per locale.

Business Rules

- Since version 1.4 the voice button is named by the audio icon's alt text (collapsed into the image); a separate alt row is read too.
- Without a Search bar audio icon the name falls back to the placeholder searchByVoice, also Search by voice. [To be confirmed: whether the alt text is delivered without an icon image]
- A second click stops listening; the end of speech or an error resets the button.
- Browsers may send the audio to the vendor's speech service ([To be confirmed: privacy review of voice input — owner: data protection officer]).

Common Authoring Mistakes

Error	Root Cause	Resolution
The microphone is missing in testing	Tested in Firefox, which has no Web Speech API	Test in Chrome, Edge or Safari
Speaking fills the field but nothing happens	By design the result is not submitted	Press Enter or the arrow after speaking
Dictation is recognised in English on a German page	The page's html lang is wrong	Check the page language metadata of the locale

Troubleshooting

- **Symptoms:** The microphone button doesn't appear in the search row.
- **Cause:** The browser does not support SpeechRecognition or webkitSpeechRecognition.
- **Resolution:** None needed: test in a supporting browser such as Chrome.
- **Verification Steps:** Open aem.page in Chrome, click the microphone, allow access and check that it turns blue and fills the field.

Use Cases: All canvases (automatic).

Authoring Guidelines: Leave **Search bar audio icon** empty; optionally set **Search bar audio icon alt text** (the button's name, default "Search by voice").

Business Rules: Shown only where the browser supports the Web Speech API (for example Chromium-based browsers and Safari); hidden elsewhere (for example Firefox). A click starts recognition in the page language (`<html lang>`, else `en`); the first result is written into the field and the field is focused — the query is **not** submitted automatically. A second click stops listening. Errors or the end of speech reset the button. Browsers may process the audio with the vendor's online speech service (privacy statement review recommended: [To be confirmed: privacy review of voice input — owner: data protection officer]).

Rendering Rules: 2rem round button with a 1.5rem `mic.svg` mask; `aria-pressed="true"` while listening (brand colour and outline).

Responsive Behaviour: Same at every breakpoint.

SEO Impact: None.

Accessibility Compliance: Toggle button with `aria-label` and `aria-pressed`; the browser asks for microphone permission.

Variation 13 — Voice input with a custom audio icon

Variation Name: Audio button with **Search bar audio icon** set.

Business Purpose: Brand-specific microphone artwork.

Visual Example:

Figure 16: Custom audio icon — The search row of a canvas at 1440 px, cropped: the menu button and the pill Ask us a question with the custom audio icon audio-icon.svg (five blue sound bars, 1.5rem) in place of the microphone, next to the filled blue arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-voice-custom-icon.jpg)

Screenshot Details — Custom audio icon

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-voice-custom-icon.jpg`
Screenshot Purpose	Custom audio icon
Screen Description	The search row of a canvas at 1440 px, cropped: the menu button and the pill Ask us a question with the custom audio icon audio-icon.svg (five blue sound bars, 1.5rem) in place of the microphone, next to the filled blue arrow.
Business Context	A campaign canvas whose icon set includes its own voice artwork.
Author Objective	Replace the default microphone with a custom audio icon and name the button Search by voice.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Title (Conversation Canvas › Content)	Ask us a question	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder "Statistic"; not used by Primary
(B)	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder "Ask us a question"
C	Search bar audio icon (Conversation Canvas › Content)	Select the asset audio-icon.svg (/en/shots/g11/audio-icon.svg)	No	Custom microphone image	24 x 24 icon	Single asset
D	Search bar audio icon alt text (Conversation Canvas › Content)	Search by voice	No	Accessible name of the voice button	Describe the action	Plain text
E	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"
—	Browser (Preview)	One with the Web Speech API (e.g. Chrome, Edge, Safari); the audio button is hidden elsewhere	—	Check on the preview (not stored in the content)	One with the Web Speech API (e.g. Chrome, Edge, Safari); the audio button is hidden elsewhere	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The blue sound-bar icon sits inside the 2rem round audio button at the right of the field, before the arrow.
- **Rendering behaviour:** The image is placed as an img inside the audio button at 1.5rem with alt=""; the button's aria-label is the icon's alt text Search by voice. It shows only in browsers with the Web Speech API; while listening only the outline changes, not the icon colour.
- **Publishing behaviour:** Publish audio-icon.svg in AEM Assets with the page; then Publish to preview and live shows it on aem.page and aem.live.

Business Rules

- Search bar audio icon alt text collapses into the icon image and names the button (F-45 fixed in 1.4); the icon itself is decorative.
- Use a square SVG or PNG; it renders at 1.5rem (24 px).
- Same browser support rules as the default microphone: hidden where speech input is unsupported.
- An empty alt text gives the button the placeholder name Search by voice.

Common Authoring Mistakes

Error	Root Cause	Resolution
Screen readers read Five blue bars for the voice button	The alt text describes the picture, but it names the button	Describe the action instead: Search by voice
The custom icon doesn't change colour while listening	Images don't follow the pressed colour; only the outline does	Use an icon that reads well in both states
The icon is missing on aem.live	audio-icon.svg isn't published	Publish the asset and republish the page

Troubleshooting

- **Symptoms:** The default microphone shows instead of the custom icon.
- **Cause:** Search bar audio icon is empty or its asset can't be loaded.
- **Resolution:** Select audio-icon.svg in Search bar audio icon, publish the asset and the page.
- **Verification Steps:** On aem.page in Chrome the audio button contains the sound-bar image and is named Search by voice.

Use Cases: Campaigns with their own icon set.

Authoring Guidelines: Pick an SVG or PNG in **Search bar audio icon**; set **Search bar audio icon alt text** to describe the action ("Search by voice").

Business Rules: The image is decorative (`alt=""`); the button's name is the alt text field. Same browser support rules as Variation 12.

Rendering Rules: `<img>` 1.5rem inside the audio button.

Responsive Behaviour: Same at every breakpoint.

SEO Impact: None.

Accessibility Compliance: As Variation 12; the icon colour does not follow the pressed state (only the outline does).

Variation 14 — Canvas button, Views = Button

Variation Name: Conversation Canvas Button with **Views** = Button.

Business Purpose: Calls to action below the search row.

Visual Example:

Figure 17: Button items — A Default canvas at 1440 px with the h2 Ask us a question, the search row and two centred pill buttons below it: a black primary Contact us and an outlined secondary Explore services, each with a trailing arrow. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-button-view.jpg)

Screenshot Details — Button items

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-button-view.jpg`
Screenshot Purpose	Button items
Screen Description	A Default canvas at 1440 px with the h2 Ask us a question, the search row and two centred pill buttons below it: a black primary Contact us and an outlined secondary Explore services, each with a trailing arrow.
Business Context	A canvas that offers direct routes next to the question field, such as contacting TCS or browsing its services.
Author Objective	Add two Conversation Canvas Button items with Views Button, one Primary and one Secondary.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Title (Conversation Canvas › Content)	Ask us a question	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder “Statistic”; not used by Primary
B	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder “Ask us a question”

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
D	Link (Conversation Canvas Button 1)	Select the page or enter /en/contact	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
(E)	Text (Conversation Canvas Button 1)	Contact us	No	Visible text / accessible name	Action verb + object	None
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
F	Link (Conversation Canvas Button 2)	Select the page or enter /en/services	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
(G)	Text (Conversation Canvas Button 2)	Explore services	No	Visible text / accessible name	Action verb + object	None
(H)	Type (Conversation Canvas Button 2)	Secondary	No	Emphasis	One primary per canvas	Options: Primary, Secondary, Tertiary; condition: shown when Views is empty, Button or Icon

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (E), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two pill buttons 1.5rem apart, centred under the search row: the primary filled black with white text, the secondary outlined with dark text.
- **Rendering behaviour:** Each item becomes li > a.button.{type} from the button decorator inside ul.conversation-canvas-buttons; the buttons wrap and stay centred at every breakpoint (in the footer canvas they stack on mobile).
- **Publishing behaviour:** Publish to preview and live; the linked pages /en/contact and /en/services are separate pages and must be published themselves, or the buttons lead to a 404.

Business Rules

- Views defaults to Button and Type to Primary; Type is shown for Button and Icon (model condition).
- Alignment has no effect here: the buttons are always centred (F-33 open).
- A Title equal to the Text is dropped; items without a Link are ignored.
- Buttons are not rendered in the Primary (sticky) style.

- Use one primary button per canvas, as with Contact us here.

Common Authoring Mistakes

Error	Root Cause	Resolution
Alignment Left has no effect	The canvas always centres its buttons	Leave Alignment as it is
A button item doesn't appear	Link left empty	Select the page in Link, for example /en/contact
Two black buttons side by side	Type left on Primary for both items	Set the second item's Type to Secondary

Troubleshooting

- **Symptoms:** The buttons are visible in the editor but missing on aem.page.
- **Cause:** The Canvas Style was switched to Primary (sticky), which ignores button items.
- **Resolution:** Set Canvas Style back to Default or Secondary and publish the page.
- **Verification Steps:** On aem.page check that ul.conversation-canvas-buttons holds Contact us and Explore services.

Use Cases: "Contact us", "Explore our services".

Authoring Guidelines: Add > **Conversation Canvas Button**; set **Link**, **Text**, optional **Title**, **Views** = Button, **Type** (Primary / Secondary / Tertiary).

Business Rules: The Type field is shown when Views is Button or Icon (model condition). **Alignment** has no effect here (buttons are always centred). A Title equal to the text is dropped. Rows without a link are ignored. Not rendered in the Primary style.

Rendering Rules: `ul.conversation-canvas-buttons > li > a.button.{type}` from the button decorator.

Responsive Behaviour: Wrap and centre at every breakpoint (in the footer canvas they stack in a column on mobile).

SEO Impact: Crawlable links; use descriptive text.

Accessibility Compliance: Real links; the title attribute is a tooltip only.

Variation 15 — Canvas button, Views = Icon

Variation Name: Conversation Canvas Button with **Views** = Icon.

Business Purpose: Compact icon-only action (for example a search or arrow shortcut).

Visual Example:

Figure 18: Icon button item — A Default canvas at 1440 px with the h2 Ask us a question, the search row and below it one round brand-blue icon button with a white chevron-right (Views Icon, Icon Chevron right); its text Explore our services is not visible. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-icon-view.jpg)

Screenshot Details — Icon button item

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-icon-view.jpg`
Screenshot Purpose	Icon button item
Screen Description	A Default canvas at 1440 px with the h2 Ask us a question, the search row and below it one round brand-blue icon button with a white chevron-right (Views Icon, Icon Chevron right); its text Explore our services is not visible.
Business Context	A compact shortcut below the search row where the context makes a visible label unnecessary.
Author Objective	Add one Conversation Canvas Button shown as an icon-only button.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Title (Conversation Canvas › Content)	Ask us a question	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder “Statistic”; not used by Primary
B	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder “Ask us a question”
C	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as “Submit” or “Ask”	Plain text; dialog placeholder “Submit”

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
D	Link (Conversation Canvas Button 1)	Select the page or enter /en/services	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
(E)	Text (Conversation Canvas Button 1)	Explore our services	No	Visible text / accessible name	Action verb + object	None
(F)	Views (Conversation Canvas Button 1)	Icon	No	Button, icon-only or text link	Button for CTAs	Options: Button, Icon, Link
(G)	Icon (Conversation Canvas Button 1)	Chevron right	No	Icon of the Icon view	—	Options: Arrow right, Chevron right, Chevron down, Search; condition: shown when Views = Icon

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (E), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A single round filled brand-blue button with a white chevron, centred under the search row.
- **Rendering behaviour:** Rendered as a.button.icon-button.primary with the chevron as a CSS mask; the text Explore our services stays in the HTML, visually hidden, and becomes the aria-label and title tooltip.
- **Publishing behaviour:** Publish to preview and live; the target /en/services must be published itself. Icons are part of the code (icons folder), so nothing else is published.

Business Rules

- The Icon field shows only when Views is Icon; its options are Arrow right, Chevron right, Chevron down and Search.
- Type is not set, so the icon button renders as Primary.
- The Text is the button's accessible name and tooltip; write it as the action, such as Explore our services.
- Use an icon-only button only where the surrounding content explains where it leads.

Common Authoring Mistakes

Error	Root Cause	Resolution
Visitors don't understand the round button	Icon view used for the main call to action	Use Views Button for important routes
Screen readers announce a web address	Text left empty, so the URL becomes the name	Enter Text, for example Explore our services
No icon shows in the button	Views Icon chosen without an Icon value	Select an Icon such as Chevron right

Troubleshooting

- **Symptoms:** The icon button appears as a text button with the words Explore our services.
- **Cause:** Views was left on Button, so the Icon field was ignored.

- **Resolution:** Set Views to Icon, choose Chevron right in Icon and publish.
- **Verification Steps:** On aem.page the link has the class icon-button and the aria-label Explore our services.

Use Cases: Secondary shortcuts.

Authoring Guidelines: Set **Views** = Icon, choose **Icon** (Arrow right, Chevron right, Chevron down, Search) and **Type**; the **Text** becomes the accessible name.

Business Rules: The Icon field is shown only when Views is Icon (model condition).

Rendering Rules: `a.button.icon-button.{type}` with the icon as a CSS mask; the text is kept for screen readers.

Responsive Behaviour: Same at every breakpoint.

SEO Impact: The link text stays in the HTML (hidden with CSS) and becomes the `aria-label`.

Accessibility Compliance: `aria-label` and title from the text.

Variation 16 — Canvas button, Views = Link

Variation Name: Conversation Canvas Button with **Views** = Link.

Business Purpose: A low-emphasis text link.

Visual Example:

Figure 19: Link item — A Default canvas at 1440 px with the h2 Ask us a question, the search row and below it the centred text link View all FAQs with a trailing chevron (Views Link). (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-link-view.jpg)

Screenshot Details — Link item

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-link-view.jpg`
Screenshot Purpose	Link item
Screen Description	A Default canvas at 1440 px with the h2 Ask us a question, the search row and below it the centred text link View all FAQs with a trailing chevron (Views Link).
Business Context	A low-emphasis route below the question field, such as the FAQ page for visitors who prefer to browse answers.
Author Objective	Add one Conversation Canvas Button shown as a text link.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Title (Conversation Canvas › Content)	Ask us a question	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder "Statistic"; not used by Primary
B	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder "Ask us a question"
C	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
D	Link (Conversation Canvas Button 1)	Select the page or enter /en/about/faqs	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
(E)	Text (Conversation Canvas Button 1)	View all FAQs	No	Visible text / accessible name	Action verb + object	None
(F)	Views (Conversation Canvas Button 1)	Link	No	Button, icon-only or text link	Button for CTAs	Options: Button, Icon, Link

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (E), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A small dark text link with a chevron, centred below the search row, without a button shape.
- **Rendering behaviour:** Rendered as a.link-button with no type class; the chevron and hover style come from the site's link-button styles at every breakpoint.
- **Publishing behaviour:** Publish to preview and live; the FAQ page /en/about/faqs must be published itself.

Business Rules

- With Views Link the Type and Icon fields are hidden and not used.
- Write link text that names the destination, such as View all FAQs.
- The link is a real, crawlable a element in the page HTML.

Common Authoring Mistakes

Error	Root Cause	Resolution
The link looks like a button	Views left on Button	Set Views to Link
The link reads Click here	Unspecific Text	Name the destination: View all FAQs

Troubleshooting

- **Symptoms:** View all FAQs leads to a 404 page.
- **Cause:** The page /en/about/faqs is not published or the Link points to a moved page.
- **Resolution:** Re-select the FAQ page in Link and publish it and the canvas page.
- **Verification Steps:** Click View all FAQs on aem.page and check that the FAQ page opens.

Use Cases: "View all FAQs", "Browse topics".

Authoring Guidelines: Set **Views** = Link (Type and Icon are hidden).

Business Rules: Rendered as a link button (no type).

Rendering Rules: `a.link-button`.

Responsive Behaviour: Same at every breakpoint.

SEO Impact: Crawlable link.

Accessibility Compliance: Underline / chevron convey a link.

Variation 17 — Floating search row (Default and Secondary)

Variation Name: Floating search row (class `conversation-canvas-floating` on the row).

Business Purpose: Keep the search reachable after the visitor scrolls past the canvas.

Visual Example:

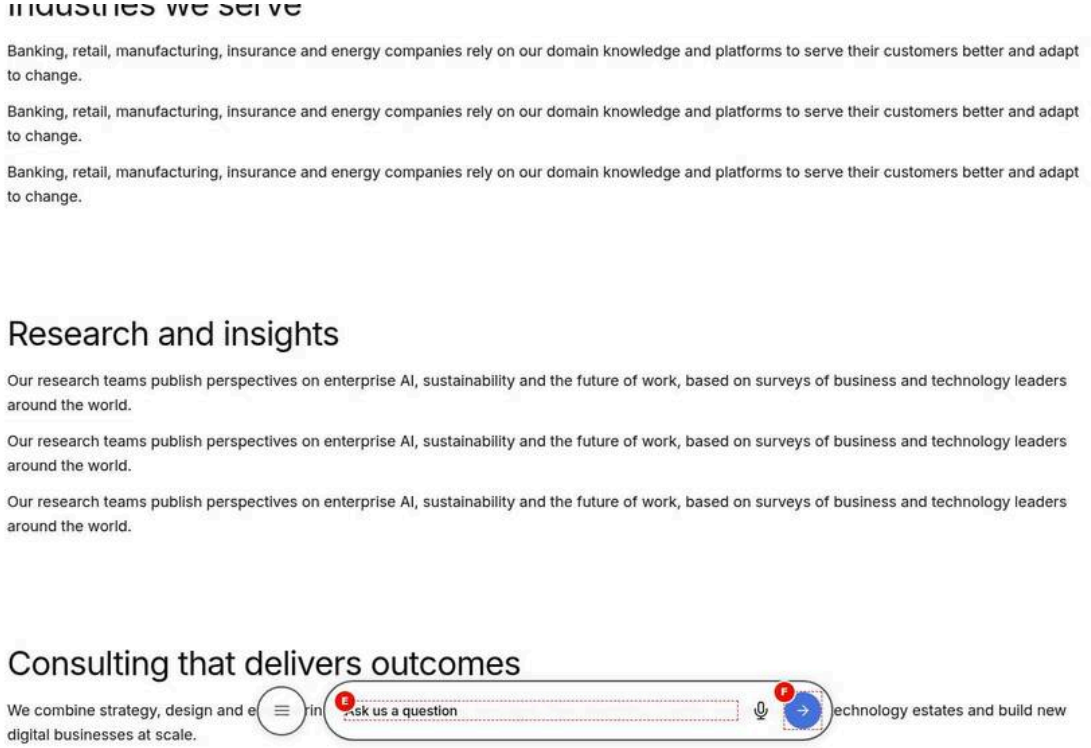

Figure 20: Floating search row — The floating-row page at 1440 px scrolled past its canvas: the sections Industries we serve, Research and insights and Consulting that delivers outcomes, with the canvas's menu button and Ask us a question pill (microphone, blue arrow) floating centred 1.5rem above the viewport bottom, translucent white with shadow and blur. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-floating-row.jpg)

Screenshot Details — Floating search row

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-floating-row.jpg`
Screenshot Purpose	Floating search row
Screen Description	The floating-row page at 1440 px scrolled past its canvas: the sections Industries we serve, Research and insights and Consulting that delivers outcomes, with the canvas's menu button and Ask us a question pill (microphone, blue arrow) floating centred 1.5rem above the viewport bottom, translucent white with shadow and blur.
Business Context	A long landing page where the question field stays in reach after the visitor has scrolled past the canvas at the top.
Author Objective	Add a Default canvas at the top of a long page and check that its search row floats when scrolled past.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
A	Title (Conversation Canvas › Content)	How can we help you today?	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder "Statistic"; not used by Primary
B	Text (Conversation Canvas › Content)	Ask a question in your own words or explore our services and industries.	No	Supporting text	1–2 sentences	Rich text kept; not used by Primary
(C)	Menu root path (Conversation Canvas › Content)	Select the page or enter /content/tcs-corp/us/en	No	Root of the menu / navigation tree	A page in the same locale	Converted to the published path; empty = `getLocale().root` (e.g. `/en`)
(D)	Menu depth (Conversation Canvas › Content)	2	No	Levels below the root	1 for sections only, 2–3 for deeper menus	Enforced in the dialog: min 1, max 3; code: invalid = 1, minimum 1
E	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder "Ask us a question"
F	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
G	Link (Conversation Canvas Button 1)	Select the page or enter /en/contact	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(H)	Text (Conversation Canvas Button 1)	Contact us	No	Visible text / accessible name	Action verb + object	None
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
I	Link (Conversation Canvas Button 2)	Select the page or enter /en/services	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
(J)	Text (Conversation Canvas Button 2)	Explore services	No	Visible text / accessible name	Action verb + object	None
(K)	Type (Conversation Canvas Button 2)	Secondary	No	Emphasis	One primary per canvas	Options: Primary, Secondary, Tertiary; condition: shown when Views is empty, Button or Icon
—	Action (Preview)	Scroll down past the canvas (the footer out of view): its search row floats at the bottom	—	Check on the preview (not stored in the content)	Scroll down past the canvas (the footer out of view): its search row floats at the bottom	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (C), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Only the search row floats over the page text; the canvas's title, text and buttons scroll away with the page.
- **Rendering behaviour:** When its place is above the viewport and no other in-place canvas row is visible, the row gets conversation-canvas-floating: fixed, bottom 1.5rem, width min(42.875rem, 100vw - 3rem), a 0.3 s float-in (none with reduced motion). Its place keeps its height, so the page doesn't jump.
- **Publishing behaviour:** Floating is code behaviour: publishing the page to aem.page and aem.live is enough. It can only be checked in the preview, not while editing.

Business Rules

- There is no setting: every Default and Secondary canvas's search row floats once scrolled past.
- At most one canvas floats per page: the first registered (highest) one that qualifies.
- While the footer canvas or another canvas's search row is in view in its place, no row floats.
- The floating row is the same element, so the focus order is kept and the menu still opens above it.

Common Authoring Mistakes

Error	Root Cause	Resolution
The floating row covers text at the bottom of the screen	Expected floating behaviour of every Default canvas	Leave enough space at the end of sections; use one canvas per page
The lower of two canvases was expected to float	The first registered canvas wins	Keep only one Default or Secondary canvas on the page

Error	Root Cause	Resolution
A Primary dock and a floating row compete	Primary and Default canvases on the same page	Use either a Primary canvas or a Default canvas, not both

Troubleshooting

- **Symptoms:** The search row stays in place and never floats after scrolling past the canvas.
- **Cause:** Another canvas's search row, for example in the footer, is in view, or the page is too short to scroll past.
- **Resolution:** Remove the extra canvas or test on a longer page.
- **Verification Steps:** Scroll down on aem.page: the row gets conversation-canvas-floating and returns to its place when scrolled back up.

Use Cases: Automatic for every Default / Secondary canvas.

Authoring Guidelines: No setting. To avoid it, do not place a canvas high on very long pages or use only one canvas per page.

Business Rules: Across all canvases on a page at most one floats: the first registered canvas that qualifies. A Default / Secondary row floats when its place has scrolled above the viewport and no other Default / Secondary row is visible in place (for example the footer canvas). The row's place keeps its height, so the page does not jump. Positions are updated on scroll, resize and body size changes.

Rendering Rules: `position: fixed; bottom: 1.5rem;` centred, width `min(42.875rem, 100vw - 3rem)`, 90 % white with blur and shadow, 0.3 s float-in animation (off with reduced motion).

Responsive Behaviour: Same at every breakpoint (narrower on mobile).

SEO Impact: None.

Accessibility Compliance: The floating row keeps its focus order (it is the same element); the menu opens above it.

Variation 18 — Footer canvas placement

Variation Name: Conversation Canvas in the footer (inside `.footer-canvas`).

Business Purpose: The "Ask us a question" area at the top of the site footer, shared by all pages that use the footer.

Visual Example:

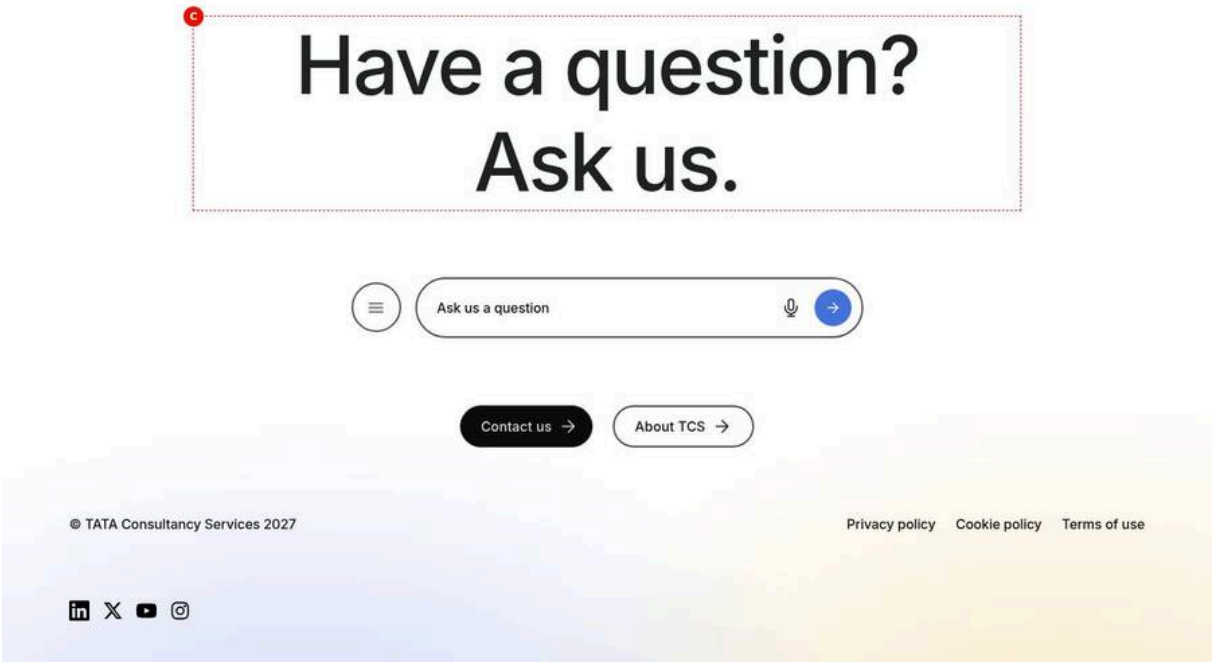

Figure 21: Footer canvas — The site footer at 1440 px: the h2 Have a question? Ask us. at 6rem on two lines, the search row (menu button, Ask us a question, microphone, arrow; 38.0625rem wide), Contact us (primary) and About TCS (secondary) side by side, then © TATA Consultancy Services 2027 with Privacy policy, Cookie policy and Terms of use, and the LinkedIn, X, YouTube and Instagram icons. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/conversation-canvas-footer.jpg)

Screenshot Details — Footer canvas

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-footer.jpg`
Screenshot Purpose	Footer canvas
Screen Description	The site footer at 1440 px: the h2 Have a question? Ask us. at 6rem on two lines, the search row (menu button, Ask us a question, microphone, arrow; 38.0625rem wide), Contact us (primary) and About TCS (secondary) side by side, then © TATA Consultancy Services 2027 with Privacy policy, Cookie policy and Terms of use, and the LinkedIn, X, YouTube and Instagram icons.
Business Context	The ask-us area at the top of the footer, shared by every English page that uses the locale's footer.
Author Objective	Create the footer canvas reference page and select it in the Footer block's Conversation Canvas Page.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Create › Page (AEM Sites › /content/tcs-corp/us/en/references)	footer-conversation-canvas	No	—	—	None
(B)	Component (footer-conversation-canvas › Section › Add (+))	Conversation Canvas	No	—	—	None

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
C	Title (Conversation Canvas › Content)	Have a question? Ask us.	No	—	—	None
(D)	Menu root path / Menu depth (Conversation Canvas › Content › Menu)	Select the page or enter /content/tcs-corp/us/en; 2	No	—	—	None
(E)	Search bar water mark / button icon type hover text (Conversation Canvas › Content › Search bar)	Ask us a question; Submit	No	—	—	None
(F)	Link, Text, Views, Type (Conversation Canvas Button 1 / 2)	/en/contact, Contact us, Button, Primary; /en/about, About TCS, Button, Secondary	No	—	—	None
—	Conversation Canvas Page / Copyright Text / Link List (references/footer › Footer › Content)	Select the page or enter /content/tcs-corp/us/en/references/footer-conversation-canvas; © TATA Consultancy Services 2027; Privacy policy, Cookie policy, Terms of use	—	Check on the preview (not stored in the content)	Select the page or enter /content/tcs-corp/us/en/references/footer-conversation-canvas; © TATA Consultancy Services 2027; Privacy policy, Cookie policy, Terms of use	—
(G)	Footer (Page properties)	Leave empty: the locale's references/footer is used (inherited)	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The canvas sits without its own panel, glow or padding on the footer's glow; title, search row and buttons are centred above the copyright and links bar and the social icons.
- **Rendering behaviour:** The Footer loads the canvas page as a fragment into .footer-canvas. Title 3.25rem below 600 px and 6rem from 600 px, balanced; the menu button is hidden below 600 px; the buttons stack on mobile and sit in a row from 600 px.
- **Publishing behaviour:** references/footer-conversation-canvas and references/footer are separate pages and must both be published; pages using the footer then show it without being republished. The Social Links sheet is published separately.

Business Rules

- The canvas on the reference page uses the Default style; the footer removes its surface, glow and padding.
- Additional tab spacing and Hide block don't apply in the footer (they are scoped to main).
- While the footer canvas is in view no other canvas floats, and a Primary dock hides when the footer appears.
- Copyright Text supports {year} for the current year; the hard-coded 2027 of this example must be changed by hand.
- Leave a content page's Footer property empty to inherit the locale's references/footer.

Common Authoring Mistakes

Error	Root Cause	Resolution
The footer shows no ask-us area	The canvas page isn't published or Conversation Canvas Page is empty	Publish references/footer-conversation-canvas and select it in the Footer
The arrow tooltip reads sradha	Test value in the English footer canvas sample (F-33)	Set the hover text to Submit and publish the canvas page
Spacing set on the footer canvas has no effect	Additional tab options apply only inside main	Ask the development team to adjust the footer CSS
The copyright year is out of date	The year typed as a number	Write © Tata Consultancy Services {year}

Troubleshooting

- **Symptoms:** Pages show the copyright and links bar but no Have a question? Ask us. area.
- **Cause:** The Footer's Conversation Canvas Page is empty or points to an unpublished page, so the fragment loads nothing.
- **Resolution:** Select references/footer-conversation-canvas in the Footer block and publish both pages.
- **Verification Steps:** Open any English page on aem.page, scroll to the footer and check the title, search row and buttons.

Use Cases: Site-wide footer entry point.

Authoring Guidelines: Create a page in the locale's `references/` folder (the English sample is `references/footer-conversation-canvas`) with a Default-style canvas; select it in the Footer block's **Conversation Canvas Page** on the footer page; publish both.

Business Rules: The footer loads the page as a fragment and removes the canvas surface, glow and padding; the menu button is hidden below 600 px (`--footer-menu-display`). Additional tab spacing and Hide block do not apply here (they are scoped to `main`). While the footer canvas is in view, no other canvas floats.

Rendering Rules: Footer CSS overrides title size (3.25rem, max 20rem, balanced), gaps and search widths (see the Footer chapter).

Responsive Behaviour: Mobile: no menu button, buttons stacked; >= 600 px: menu button shown; >= 1200 px: footer desktop sizes.

SEO Impact: The footer canvas text appears on every page using that footer.

Accessibility Compliance: As Default; the title is an `h2` inside `footer`.

6.30.4 Authoring Experience

Figure 22: Universal Editor canvas — An annotated editor-mode preview at 1440 px (not a Universal Editor screenshot) of the Default canvas with chat icon, Ask TCS, How can we help you today?, text, search row, Contact us and Explore services, with markers A (block) to I (buttons) on icon, eyebrow, title, text, menu button, search field and submit button. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/conversation-canvas-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/conversation-canvas-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	An annotated editor-mode preview at 1440 px (not a Universal Editor screenshot) of the Default canvas with chat icon, Ask TCS, How can we help you today?, text, search row, Contact us and Explore services, with markers A (block) to I (buttons) on icon, eyebrow, title, text, menu button, search field and submit button.
Business Context	The reference view authors use to match the canvas elements on the page with the fields of the properties panel.
Author Objective	Select the canvas in Universal Editor and relate each element to its field.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Conversation Canvas	Yes	Adds the Conversation Canvas to the page	Select the section in the content tree, choose Add (+) and pick Conversation Canvas	Only components the section allows (section filter)
—	Icon (Conversation Canvas › Content)	Select the asset chat-icon.svg (/en/shots/g11/chat-icon.svg)	No	Small icon above the eyebrow	SVG or PNG, square	Single asset; shown at 2.5rem; not used by Primary

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Eyebrow (Conversation Canvas › Content)	Ask TCS	No	Small label above the title	1–4 words	Plain text; dialog placeholder "Infrastructure to Intelligence"; not used by Primary
—	Title (Conversation Canvas › Content)	How can we help you today?	No	Main heading (h2)	Short question or promise	Plain text; dialog placeholder "Statistic"; not used by Primary
—	Text (Conversation Canvas › Content)	Ask about our services, industries and insights, or browse the site from the menu.	No	Supporting text	1–2 sentences	Rich text kept; not used by Primary
—	Menu root path (Conversation Canvas › Content)	Select the page or enter /content/tcs-corp/us/en	No	Root of the menu / navigation tree	A page in the same locale	Converted to the published path; empty = `getLocale().root` (e.g. `/en`)
—	Menu depth (Conversation Canvas › Content)	2	No	Levels below the root	1 for sections only, 2–3 for deeper menus	Enforced in the dialog: min 1, max 3; code: invalid = 1, minimum 1
—	Search bar water mark (Conversation Canvas › Content)	Ask us a question	No	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder "Ask us a question"
—	Search bar button icon type hover text (Conversation Canvas › Content)	Submit	No	Accessible name and tooltip of the submit button	A verb such as "Submit" or "Ask"	Plain text; dialog placeholder "Submit"
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
—	Link (Conversation Canvas Button 1)	Select the page or enter /en/contact	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
—	Text (Conversation Canvas Button 1)	Contact us	No	Visible text / accessible name	Action verb + object	None
—	Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button	Yes	Adds a Conversation Canvas Button to the Conversation Canvas	Select the Conversation Canvas in the content tree, choose Add (+) and pick Conversation Canvas Button	Only the item types the Conversation Canvas allows
—	Link (Conversation Canvas Button 2)	Select the page or enter /en/services	No (a row without a link is ignored)	Destination	Page picker or URL	Required in practice: rows without `a[href]` are skipped
—	Text (Conversation Canvas Button 2)	Explore services	No	Visible text / accessible name	Action verb + object	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Type (Conversation Canvas Button 2)	Secondary	No	Emphasis	One primary per canvas	Options: Primary, Secondary, Tertiary; condition: shown when Views is empty, Button or Icon
—	Select (Universal Editor)	The Conversation Canvas block on the canvas	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** The canvas outlined as selected, red letter markers on the panel (A), icon (B), eyebrow (C), title (D), text (E), menu button (F), search field (G), submit button (H) and button list (I).
- **Rendering behaviour:** In the editor the canvas renders as on the page, but the menu shows No pages found because /query-index.json isn't available there; the Primary dock only appears when scrolling in the preview.
- **Publishing behaviour:** Editing saves to AEM at once; visitors see changes only after Publish to preview (aem.page) or live (aem.live).

Business Rules

- A = BG Background Image or the default glow; B = Icon with Icon Alt Text; C = Eyebrow; D = Title with Title Type.
- E = Text; F = Menu root path and Menu depth; G = Search bar water mark.
- H = the audio and submit buttons (Search bar audio icon and alt text, button icon type and hover text); I = Conversation Canvas Button items.
- The dialog shows every field for every Canvas Style; fields the chosen style doesn't use are ignored.

Common Authoring Mistakes

Error	Root Cause	Resolution
The menu is judged broken in the editor	No query index inside Universal Editor	Check the menu on aem.page
Fields filled for a Primary canvas don't show	Primary ignores intro fields and buttons	Use Default or Secondary for an in-page panel

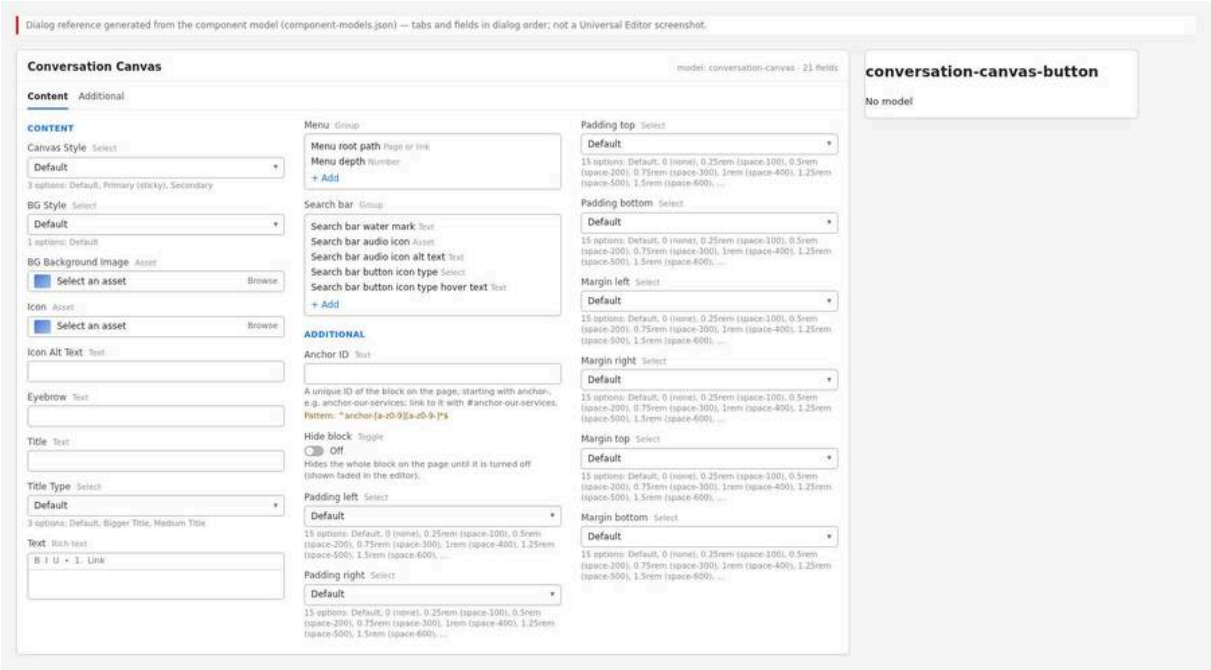
Troubleshooting

- **Symptoms:** Clicking the canvas selects the section instead of the block.
- **Cause:** The click landed on the section padding outside the rounded panel.
- **Resolution:** Select Conversation Canvas in the content tree instead.
- **Verification Steps:** The properties panel shows the Content tab with Canvas Style and the Menu and Search bar groups.

Annotations:

- A = Background (BG Background Image or the default glow)
- B = Icon (with Icon Alt Text)
- C = Eyebrow
- D = Title (size from Title Type)
- E = Text (rich text)
- F = Menu button (menu from Menu root path / Menu depth)
- G = Search field (Search bar water mark)

- H = Audio button (Search bar audio icon / alt text) and submit icon button (button icon type / hover text)
- I = Conversation Canvas Button items



> texts, collapsible Menu and Search bar groups) and the Additional tab.

Content tab: Canvas Style (Default, Primary (sticky), Secondary); BG Style (Default); BG Background Image (asset picker); Icon (asset picker); Icon Alt Text; Eyebrow (placeholder text "Infrastructure to Intelligence"); Title (placeholder "Statistic"); Title Type (Default, Bigger Title, Medium Title); Text (rich text); **Menu** group (collapsible): Menu root path (page picker), Menu depth (number 1–3, default 1); **Search bar** group (collapsible): Search bar water mark (placeholder "Ask us a question"), Search bar audio icon (asset picker), Search bar audio icon alt text, Search bar button icon type (Primary, Secondary, Tertiary), Search bar button icon type hover text (placeholder "Submit").

Additional tab: Anchor ID, Hide block, Padding left / right / top / bottom, Margin left / right / top / bottom.

Conversation Canvas Button item (model `button`): Link (page picker / URL), Text, Title, Views (Button, Icon, Link), Type (Primary, Secondary, Tertiary; shown for Button and Icon), Icon (Arrow right, Chevron right, Chevron down, Search; shown for Icon), Alignment (Left, Center, Right; not used by this block).

> **Note:** the dialog shows every field for every Canvas Style (there are no model `conditions` on the block fields); fields not used by the chosen style are ignored (see 6.30.6).

6.30.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: In AEM Sites open the page (for example under `/content/tcs-corp/us/en`) and choose **Edit**.

Expected Result: The page opens in Universal Editor.

Steps — Open the page: AEM Sites console with the page selected and Edit highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate to	/content/tcs-corp/us/en and the page to edit

Step	Where	Field / control	Value / action
2	AEM Sites console	Select	The page (check its thumbnail or row)
3	AEM Sites console toolbar	Edit	The page opens in Universal Editor

Step 2 — Add the block

Action: Select a section, choose **Add** (+) > **Conversation Canvas**. For the Primary style, add a new section for it.

Expected Result: A canvas with an empty search row appears.

Steps — Add the block: Section Add menu with "Conversation Canvas" highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section for the canvas
2	Universal Editor › Content tree	Section › Add (+)	Conversation Canvas
3	Universal Editor › Content tree	Main › Add (+)	Section (only for the Primary (sticky) style: a section of its own, then add the canvas to it)

Step 3 — Choose the style and background

Action: In **Content** choose **Canvas Style**; keep **BG Style** = Default; optionally pick a **BG Background Image**.

Expected Result: The panel changes to the chosen style; Primary shows only the dock (visible when scrolling, see Step 9).

Steps — Style: Canvas Style select open with Default, Primary (sticky), Secondary.

Step	Where	Field / control	Value / action
1	Conversation Canvas › Content	Canvas Style	Default (or Primary (sticky), Secondary)
2	Conversation Canvas › Content	BG Style	Default
3	Conversation Canvas › Content	BG Background Image	Optional: select an asset, e.g. light.svg (/en/media/light.svg)

Step 4 — Fill the intro

Action: Pick an **Icon** and enter **Icon Alt Text** (empty for a decorative icon); enter **Eyebrow**, **Title**, **Title Type** and **Text**.

Expected Result: The intro appears centred above the search row.

Steps — Intro fields: Canvas with icon, eyebrow, title and text filled.

Step	Where	Field / control	Value / action
1	Conversation Canvas › Content	Icon	Select the asset chat-icon.svg (/en/shots/g11/chat-icon.svg)
2	Conversation Canvas › Content	Icon Alt Text	Leave empty (decorative icon)
3	Conversation Canvas › Content	Eyebrow	Ask TCS
4	Conversation Canvas › Content	Title	How can we help you today?

Step	Where	Field / control	Value / action
5	Conversation Canvas › Content	Title Type	Default
6	Conversation Canvas › Content	Text	Ask about our services, industries and insights, or browse the site from the menu.

Step 5 — Configure the menu

Action: Open the **Menu** group; select the **Menu root path** page (leave empty for the locale Home) and set **Menu depth** (1–3).

Expected Result: On the published page the menu lists the pages below the root.

Steps — Menu settings: Menu group with root path /content/tcs-corp/us/en and depth 2.

Step	Where	Field / control	Value / action
1	Conversation Canvas › Content	Menu	Expand the group
2	Conversation Canvas › Content › Menu	Menu root path	Select the page /content/tcs-corp/us/en (or leave empty for the locale Home)
3	Conversation Canvas › Content › Menu	Menu depth	2

Step 6 — Configure the search bar

Action: Open **Search bar**: water mark text, optional audio icon and its alt text, button icon type and hover text.

Expected Result: The field shows the water mark; the arrow button's tooltip shows the hover text.

Steps — Search bar settings: Search bar group with water mark "Ask us a question" and hover text "Submit".

Step	Where	Field / control	Value / action
1	Conversation Canvas › Content	Search bar	Expand the group
2	Conversation Canvas › Content › Search bar	Search bar water mark	Ask us a question
3	Conversation Canvas › Content › Search bar	Search bar audio icon	Leave empty (default microphone)
4	Conversation Canvas › Content › Search bar	Search bar audio icon alt text	Search by voice
5	Conversation Canvas › Content › Search bar	Search bar button icon type	Primary
6	Conversation Canvas › Content › Search bar	Search bar button icon type hover text	Submit

Step 7 — Add buttons

Action: With the block selected, **Add** > **Conversation Canvas Button**; set Link, Text, Views, Type (and Icon for the Icon view). Repeat as needed.

Expected Result: Buttons appear centred below the search row (not in Primary).

Steps — Buttons: Two button items in the content tree and on the canvas.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Conversation Canvas › Add (+)	Conversation Canvas Button
2	Conversation Canvas Button 1	Link / Text	/en/contact; Contact us
3	Conversation Canvas Button 1	Views / Type	Button; Primary
4	Universal Editor › Content tree	Conversation Canvas › Add (+)	Conversation Canvas Button
5	Conversation Canvas Button 2	Link / Text	/en/services; Explore services
6	Conversation Canvas Button 2	Views / Type	Button; Secondary

Step 8 — Fill the Additional tab (optional)

Action: Set an **Anchor ID** if links should jump to the canvas; leave spacing on Default for the Primary style.

Expected Result: The block id is set on the page.

Steps — Additional tab: Additional tab with Anchor ID “anchor-ask-us”.

Step	Where	Field / control	Value / action
1	Conversation Canvas › Additional	Anchor ID	anchor-ask-us
2	Conversation Canvas › Additional	Padding / Margin	Leave on Default (always for the Primary (sticky) style)

Step 9 — Preview

Action: Publish to preview and open `https://main--tcs-corp--sradha-tcs.aem.page/{path}`. Open the menu, scroll down and up, and resize below and above 900 px.

Expected Result: The menu lists pages (the query index is not available inside the editor, where it may show “No pages found”); the search row floats after scrolling past it; a Primary dock appears while the footer is out of view.

Steps — Preview: Preview page with the menu open above the search row.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Publish to Preview
2	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/{path}
3	Preview › Conversation Canvas	Menu button	Click: the menu opens above the search row
4	Preview	Scroll	Down past the canvas and back up: the search row floats, then returns to its place
5	Preview	Window width	Resize below and above 900 px (Primary dock: search pill only / with menu button and navigation)

Step 10 — Validate the search hand-off

Action: Type a question and press Enter; in the browser console, a listener for `conversation-canvas:search` (development team) receives the query.

Expected Result: No navigation happens (no search service); the event carries the query.

Steps — Search event: Browser console showing the conversation-canvas:search event detail.

Step	Where	Field / control	Value / action
1	Browser developer tools › Console	Enter	document.addEventListener('conversation-canvas:search', (e) => console.log(e.detail))
2	Preview › Conversation Canvas	Search field	Type: How do you migrate to the cloud?
3	Preview › Conversation Canvas	Keyboard	Press Enter
4	Browser developer tools › Console	Result	{ query: "How do you migrate to the cloud?" } is logged; the page does not navigate

Step 11 — Publish

Action: Publish the page (and the footer and canvas reference pages if changed).

Expected Result: The canvas is live on `.aem.live`.

Steps — Publish: Universal Editor Publish dialog.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Publish to Live
2	Publish dialog	Items	The page (plus references/footer and references/footer-conversation-canvas if changed)
3	Publish dialog	Publish	Confirm

Preview Process

1. Publish to preview; open the `.aem.page` URL (the menu and dock need `/query-index.json`, which is not served inside Universal Editor).
2. Check desktop (>= 1200 px), tablet (600–1199 px; the Primary dock switches at 900 px) and mobile (< 600 px).
3. Scroll to the footer: the floating row or dock must hide when the footer appears.

Publishing Process

1. Publish the page; newly published pages appear in the menu only after the query index has been updated for them (automatic on publish).
2. For the footer canvas, publish the canvas reference page and the footer page.
3. Publish the taxonomy and placeholders sheets if suggestion labels or UI texts changed.

Validation Process

- ☐ Style is correct; at most one Primary canvas on the page.
- ☐ Title is concise; Title Type suits the placement; only one `h1` on the page (the canvas title is an `h2`).
- ☐ Icon alt text set only if the icon conveys meaning.
- ☐ Background image keeps the dark text readable (4.5:1).
- ☐ Menu root path is in the same locale; Menu depth 1–3; the menu lists the expected pages.
- ☐ Water mark and hover text are meaningful and localised (no test values).
- ☐ Buttons have descriptive text and working links.
- ☐ Primary: dock appears on scroll, hides at the footer; desktop pills reflect the page's place; Back works; panels open and close with Escape.
- ☐ Voice button appears in supporting browsers and fills the field.
- ☐ Stakeholders know that queries are not answered until a search service is connected.

Rollback Process

1. Turn on **Hide block** and publish (inside `main`; for the footer canvas, clear the Footer's Conversation Canvas Page or unpublish the canvas page).
2. Restore a previous page version in AEM and republish.
3. Code issues: the development team reverts the commit on `main`.

The walkthroughs below repeat the steps above for each variation of chapter 6.30.3, from opening the page to publishing; the values are those of the variation's screenshot.

Walkthrough — Variation 1 — Default style

Reproduces the screenshot `screenshots/conversation-canvas-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with only its search row: the menu button and the Ask us a question field.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = How can we help you today?; **Text** (B) = Ask a question in your own words or explore our services and industries; **Menu root path** (C) = Select the page or enter /content/tcs-corp/us/en; **Menu depth** (D) = 2; **Search bar water mark** (E) = Ask us a question; **Search bar button icon type hover text** (F) = Submit.

Expected Result: The title and the text appear centred above the search row; the field shows the Ask us a question watermark.

Step 4 — Add a Conversation Canvas Button

Action: Select the Conversation Canvas in the content tree, choose **Add (+)** and pick **Conversation Canvas Button**.

Expected Result: A Conversation Canvas Button item is added under the canvas in the content tree.

Step 5 — Fill in Conversation Canvas Button 1

Action: Select **Conversation Canvas Button 1** in the content tree and enter in the properties panel: **Link** (G) = Select the page or enter /en/contact; **Text** (H) = Contact us.

Expected Result: A black primary Contact us button appears centred below the search row.

Step 6 — Add a Conversation Canvas Button

Action: Select the Conversation Canvas in the content tree, choose **Add (+)** and pick **Conversation Canvas Button**.

Expected Result: A Conversation Canvas Button item is added under the canvas in the content tree.

Step 7 — Fill in Conversation Canvas Button 2

Action: Select **Conversation Canvas Button 2** in the content tree and enter in the properties panel: **Link** (I) = Select the page or enter /en/services; **Text** (J) = Explore services; **Type** (K) = Secondary.

Expected Result: An outlined secondary Explore services button appears next to Contact us.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A rounded white panel with soft radial glows at the bottom; title, text, search row and the two pill buttons in one centred column.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to preview (aem.page), then to live (aem.live). Menu entries come from the query index after the pages below /en are published; the button targets /en/contact and /en/services must be published too.

Step 10 — Verify

Action: On the live page check: In the console, listen for conversation-canvas:search, submit a question and check that the query is logged.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 2 — Secondary style

Reproduces the screenshot `screenshots/conversation-canvas-secondary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty canvas appears in the section with only its search row.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Canvas Style** (A) = Secondary; **Eyebrow** (B) = Explore topics; **Title** (C) = What would you like to explore?; **Text** (D) = Ask a question in your own words or explore our services and industries; **Menu root path** (E) = Select the page or enter /content/tcs-corp/us/en; **Menu depth** (F) = 2; **Search bar water mark** (G) = Ask us a question; **Search bar button icon type hover text** (H) = Submit.

Expected Result: Canvas Style Secondary swaps the glows and enlarges the top padding; Explore topics, the title and the text appear above the search row.

Step 4 — Page script (development team)

Action: setConversationCanvasFilters(block, tags): Filter tags: Cloud (active) (link /en/services/cloud), AI and data (link /en/services/ai), Cybersecurity (link /en/services/cybersecurity), Consulting (link /en/services/consulting), Banking (link /en/industries/banking); filter tags can't be authored.

Expected Result: Once the script runs, five filter pills appear below the search row, with Cloud filled in brand blue.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Larger top space, the intro elements 2.5rem apart, the search row and below it a centred, wrapping row of pill tags up to 56.25rem wide, the active one in brand blue.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish sends the canvas to aem.page and aem.live; the filter tags are not page content and appear only where the page script runs, which is deployed with the code, not published with the page.

Step 7 — Verify

Action: On the live page check: Reload the page on aem.page and check that ul.conversation-canvas-filters contains the pills.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 3 — Primary (sticky) dock

Reproduces the screenshot `screenshots/conversation-canvas-primary-dock.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty canvas is added; for the Primary style it sits in a new section of its own.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Canvas Style** (A) = Primary (sticky); **Menu root path** (B) = Select the page or enter /content/tcs-corp/us/en; **Menu depth** (C) = 3; **Search bar water mark** (D) = Ask us a question; **Search bar button icon type hover text** (E) = Submit.

Expected Result: With Canvas Style Primary (sticky) the panel leaves the page flow; only the hidden dock with the Ask us a question pill remains.

Step 4 — Preview

Action: Page: A page without sub-pages below the menu root, e.g. /en/services/consulting (no Tags): the dock shows its parent section Services.

Expected Result: On /en/services/consulting, scrolled down at 1440 px, the dock floats with the Services pills and Consulting outlined in blue.

Step 5 — Preview

Action: Action: Scroll down the page (the footer out of view): the dock floats at the bottom.

Expected Result: On /en/services/consulting, scrolled down at 1440 px, the dock floats with the Services pills and Consulting outlined in blue.

Step 6 — Preview

Action: Screen width: 1440 px (desktop; the navigation pills and the menu button show from 900 px).

Expected Result: On /en/services/consulting, scrolled down at 1440 px, the dock floats with the Services pills and Consulting outlined in blue.

Step 7 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A fixed bar at the bottom of the viewport: the page text fades out behind a white gradient, the search row is up to 37.9375rem wide and the 3rem pills sit centred below it.

Step 8 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to aem.page and aem.live; the pills are built from /query-index.json, so new service pages appear after they are published and indexed. Pill labels come from og:title with any suffix after a vertical bar removed.

Step 9 — Verify

Action: On the live page check: On aem.page scroll down: the dock fades in, and it hides again when the footer comes into view.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 4 — Title Type: Default

Reproduces the screenshot `screenshots/conversation-canvas-title-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with only its search row.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Ask TCS; **Title** (B) = How can we help you today?; **Search bar water mark** (C) = Ask us a question; **Search bar button icon type hover text** (D) = Submit.

Expected Result: Ask TCS and How can we help you today? appear centred above the search row at the default title size.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The blue Ask TCS eyebrow, 1.5rem of extra space, the 4rem medium-weight title and the search row centred on the glowing panel.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to preview shows the canvas on aem.page and Publish to live on aem.live; the title is part of the page HTML and needs no other publish step.

Step 6 — Verify

Action: On the live page check: Check the heading outline of the page on aem.page with a browser accessibility tool.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 5 — Title Type: Bigger

Reproduces the screenshot `screenshots/conversation-canvas-title-bigger.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with only its search row.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Ask TCS; **Title** (B) = Building on belief; **Title Type** (C) = Bigger Title; **Search bar water mark** (D) = Ask us a question; **Search bar button icon type hover text** (E) = Submit.

Expected Result: Building on belief appears under Ask TCS at the bigger title size, above the search row.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The short title in large medium-weight type dominates the panel; the eyebrow and the search row are unchanged.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to preview (aem.page) and to live (aem.live); Title Type is a class on the block and needs no other publish step.

Step 6 — Verify

Action: On the live page check: Preview the page at 375 px and at 1440 px on aem.page.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 6 — Title Type: Medium

Reproduces the screenshot `screenshots/conversation-canvas-title-medium.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with only its search row.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Eyebrow** (A) = Ask TCS; **Title** (B) = Questions about our services? Ask us directly; **Title Type** (C) = Medium Title; **Search bar water mark** (D) = Ask us a question; **Search bar button icon type hover text** (E) = Submit.

Expected Result: Ask TCS and the question appear above the search row at the medium title size.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A modest one-line title under the blue eyebrow, with the search row below it in the same centred column.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to preview (aem.page) and to live (aem.live); the size is a block class and needs no separate publish step.

Step 6 — Verify

Action: On the live page check: On aem.page check that the block has the class conversation-canvas-title-medium and a 2.5rem title at 1440 px.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 7 — BG Style: Default (glow)

Reproduces the screenshot `screenshots/conversation-canvas-bg-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with its search row on the glowing panel.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Ask us a question; **Text** (B) = Ask a question in your own words or explore our services and industries; **Search bar water mark** (C) = Ask us a question; **Search bar button icon type hover text** (D) = Submit.

Expected Result: Ask us a question and the text appear centred above the search row over the blue and yellow glows.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A rounded white panel with two soft radial glows at its bottom edge behind the centred title, text and search row.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to preview and live; the glow is CSS and needs no asset. Nothing else has to be published.

Step 6 — Verify

Action: On the live page check: On aem.page the block has no conversation-canvas-has-background class and the glows are visible.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 8 — Background image

Reproduces the screenshot `screenshots/conversation-canvas-background-image.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with its search row on the glowing panel.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **BG Background Image** (A) = Select the asset light.svg (/en/media/light.svg); **Title** (B) = Ask us a question; **Text** (C) = Ask a question in your own words or explore our services and industries; **Search bar water mark** (D) = Ask us a question; **Search bar button icon type hover text** (E) = Submit.

Expected Result: light.svg fills the panel instead of the glow, with the title, the text and the search row on top.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The image covers the whole panel, clipped to the 1.25rem corners; dark text and the outlined search row sit on top of it.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: The asset light.svg must be published in AEM Assets before or with the page; then Publish to preview and live shows it on aem.page and aem.live.

Step 6 — Verify

Action: On the live page check: On aem.page check that the image request returns 200 and the image fills the panel.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 9 — Search button icon type: Primary

Reproduces the screenshot `screenshots/conversation-canvas-search-primary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with its search row.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Ask us a question; **Search bar water mark** (B) = Ask us a question; **Search bar button icon type hover text** (C) = Submit.

Expected Result: The title appears and the search row ends with a filled blue arrow button whose tooltip reads Submit.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 2.75rem round button with a brand-blue fill and a white arrow at the right end of the pill; the microphone sits to its left.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to preview and live; the hover text is page content, while the fallback label Submit comes from the placeholders sheet (key submit), published separately.

Step 6 — Verify

Action: On the live page check: On aem.page hover the arrow: the tooltip and the accessible name read Submit.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 10 — Search button icon type: Secondary

Reproduces the screenshot `screenshots/conversation-canvas-search-secondary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with its search row.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Ask us a question; **Search bar water mark** (B) = Ask us a question; **Search bar button icon type** (C) = Secondary; **Search bar button icon type hover text** (D) = Submit.

Expected Result: The submit button at the end of the pill becomes a round brand-blue outline with a blue arrow.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 2.75rem round outlined button with a brand-blue arrow on the translucent pill.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to preview and live; the button type is page content and needs no other publish step.

Step 6 — Verify

Action: On the live page check: On aem.page the submit button has the classes icon-button secondary.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 11 — Search button icon type: Tertiary

Reproduces the screenshot `screenshots/conversation-canvas-search-tertiary.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with its search row.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Ask us a question; **Search bar water mark** (B) = Ask us a question; **Search bar button icon type** (C) = Tertiary; **Search bar button icon type hover text** (D) = Submit.

Expected Result: The submit at the end of the pill becomes a plain blue arrow without fill or border.

Step 4 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Only a brand-blue arrow at the right end of the pill, next to the microphone.

Step 5 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to preview and live; no other publish step is needed.

Step 6 — Verify

Action: On the live page check: Tab through the search row on aem.page and check that the arrow shows a visible focus outline.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 12 — Voice input with the default microphone

Reproduces the screenshot `screenshots/conversation-canvas-voice-default.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with its search row and the default microphone.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Ask us a question; **Search bar water mark** (B) = Ask us a question; **Search bar audio icon alt text** (C) = Search by voice; **Search bar button icon type hover text** (D) = Submit.

Expected Result: The title appears above the row; the microphone keeps its default icon and is named Search by voice.

Step 4 — Preview

Action: Browser: One with the Web Speech API (e.g. Chrome, Edge, Safari); the audio button is hidden elsewhere.

Expected Result: In Chrome a click on the microphone turns it brand blue with an outline while it listens.

Step 5 — Preview

Action: Action: Click the microphone button (listening: brand blue with an outline).

Expected Result: In Chrome a click on the microphone turns it brand blue with an outline while it listens.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A 2rem round microphone button with a 1.5rem mic icon; while listening it turns brand blue with a 2 px outline.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to preview and live; the fallback name Search by voice comes from the placeholders sheet (key searchByVoice), published separately per locale.

Step 8 — Verify

Action: On the live page check: Open aem.page in Chrome, click the microphone, allow access and check that it turns blue and fills the field.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 13 — Voice input with a custom audio icon

Reproduces the screenshot `screenshots/conversation-canvas-voice-custom-icon.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with its search row and the default microphone.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Ask us a question; **Search bar water mark** (B) = Ask us a question; **Search bar audio icon** (C) = Select the asset audio-icon.svg (/en/shots/g11/audio-icon.svg); **Search bar audio icon alt text** (D) = Search by voice; **Search bar button icon type hover text** (E) = Submit.

Expected Result: The sound-bar icon replaces the microphone in the field; the button is named Search by voice.

Step 4 — Preview

Action: Browser: One with the Web Speech API (e.g. Chrome, Edge, Safari); the audio button is hidden elsewhere.

Expected Result: In a browser with the Web Speech API the custom audio button is visible next to the arrow.

Step 5 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The blue sound-bar icon sits inside the 2rem round audio button at the right of the field, before the arrow.

Step 6 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish audio-icon.svg in AEM Assets with the page; then Publish to preview and live shows it on aem.page and aem.live.

Step 7 — Verify

Action: On the live page check: On aem.page in Chrome the audio button contains the sound-bar image and is named Search by voice.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 14 — Canvas button, Views = Button

Reproduces the screenshot `screenshots/conversation-canvas-button-view.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with only its search row.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Ask us a question; **Search bar water mark** (B) = Ask us a question; **Search bar button icon type hover text** (C) = Submit.

Expected Result: Ask us a question appears as the title above the search row.

Step 4 — Add a Conversation Canvas Button

Action: Select the Conversation Canvas in the content tree, choose **Add (+)** and pick **Conversation Canvas Button**.

Expected Result: A Conversation Canvas Button item is added under the canvas in the content tree.

Step 5 — Fill in Conversation Canvas Button 1

Action: Select **Conversation Canvas Button 1** in the content tree and enter in the properties panel: **Link** (D) = Select the page or enter /en/contact; **Text** (E) = Contact us.

Expected Result: A black primary Contact us button with a trailing arrow appears below the search row.

Step 6 — Add a Conversation Canvas Button

Action: Select the Conversation Canvas in the content tree, choose **Add (+)** and pick **Conversation Canvas Button**.

Expected Result: A Conversation Canvas Button item is added under the canvas in the content tree.

Step 7 — Fill in Conversation Canvas Button 2

Action: Select **Conversation Canvas Button 2** in the content tree and enter in the properties panel: **Link** (F) = Select the page or enter /en/services; **Text** (G) = Explore services; **Type** (H) = Secondary.

Expected Result: An outlined secondary Explore services button appears next to Contact us.

Step 8 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Two pill buttons 1.5rem apart, centred under the search row: the primary filled black with white text, the secondary outlined with dark text.

Step 9 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to preview and live; the linked pages /en/contact and /en/services are separate pages and must be published themselves, or the buttons lead to a 404.

Step 10 — Verify

Action: On the live page check: On aem.page check that ul.conversation-canvas-buttons holds Contact us and Explore services.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 15 — Canvas button, Views = Icon

Reproduces the screenshot `screenshots/conversation-canvas-icon-view.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with only its search row.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Ask us a question; **Search bar water mark** (B) = Ask us a question; **Search bar button icon type hover text** (C) = Submit.

Expected Result: Ask us a question appears as the title above the search row.

Step 4 — Add a Conversation Canvas Button

Action: Select the Conversation Canvas in the content tree, choose **Add (+)** and pick **Conversation Canvas Button**.

Expected Result: A Conversation Canvas Button item is added under the canvas in the content tree.

Step 5 — Fill in Conversation Canvas Button 1

Action: Select **Conversation Canvas Button 1** in the content tree and enter in the properties panel: **Link** (D) = Select the page or enter /en/services; **Text** (E) = Explore our services; **Views** (F) = Icon; **Icon** (G) = Chevron right.

Expected Result: A round blue button with a white chevron appears below the search row, named Explore our services.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A single round filled brand-blue button with a white chevron, centred under the search row.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to preview and live; the target /en/services must be published itself. Icons are part of the code (icons folder), so nothing else is published.

Step 8 — Verify

Action: On the live page check: On aem.page the link has the class icon-button and the aria-label Explore our services.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 16 — Canvas button, Views = Link

Reproduces the screenshot `screenshots/conversation-canvas-link-view.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with only its search row.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = Ask us a question; **Search bar water mark** (B) = Ask us a question; **Search bar button icon type hover text** (C) = Submit.

Expected Result: Ask us a question appears as the title above the search row.

Step 4 — Add a Conversation Canvas Button

Action: Select the Conversation Canvas in the content tree, choose **Add (+)** and pick **Conversation Canvas Button**.

Expected Result: A Conversation Canvas Button item is added under the canvas in the content tree.

Step 5 — Fill in Conversation Canvas Button 1

Action: Select **Conversation Canvas Button 1** in the content tree and enter in the properties panel: **Link** (D) = Select the page or enter /en/about/faqs; **Text** (E) = View all FAQs; **Views** (F) = Link.

Expected Result: The text link View all FAQs with a chevron appears centred below the search row.

Step 6 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: A small dark text link with a chevron, centred below the search row, without a button shape.

Step 7 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Publish to preview and live; the FAQ page /en/about/faqs must be published itself.

Step 8 — Verify

Action: On the live page check: Click View all FAQs on aem.page and check that the FAQ page opens.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 17 — Floating search row (Default and Secondary)

Reproduces the screenshot `screenshots/conversation-canvas-floating-row.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Add the Conversation Canvas

Action: Select the section in the content tree, choose **Add (+)** and pick **Conversation Canvas**.

Expected Result: An empty Default canvas appears with only its search row.

Step 3 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (A) = How can we help you today?; **Text** (B) = Ask a question in your own words or explore our services and

industries; **Menu root path** (C) = Select the page or enter /content/tcs-corp/us/en; **Menu depth** (D) = 2; **Search bar water mark** (E) = Ask us a question; **Search bar button icon type hover text** (F) = Submit.

Expected Result: The title and the text appear centred above the search row.

Step 4 — Add a Conversation Canvas Button

Action: Select the Conversation Canvas in the content tree, choose **Add (+)** and pick **Conversation Canvas Button**.

Expected Result: A Conversation Canvas Button item is added under the canvas in the content tree.

Step 5 — Fill in Conversation Canvas Button 1

Action: Select **Conversation Canvas Button 1** in the content tree and enter in the properties panel: **Link** (G) = Select the page or enter /en/contact; **Text** (H) = Contact us.

Expected Result: A black primary Contact us button appears below the search row.

Step 6 — Add a Conversation Canvas Button

Action: Select the Conversation Canvas in the content tree, choose **Add (+)** and pick **Conversation Canvas Button**.

Expected Result: A Conversation Canvas Button item is added under the canvas in the content tree.

Step 7 — Fill in Conversation Canvas Button 2

Action: Select **Conversation Canvas Button 2** in the content tree and enter in the properties panel: **Link** (I) = Select the page or enter /en/services; **Text** (J) = Explore services; **Type** (K) = Secondary.

Expected Result: An outlined secondary Explore services button appears next to Contact us.

Step 8 — Preview

Action: Action: Scroll down past the canvas (the footer out of view): its search row floats at the bottom.

Expected Result: After scrolling past the canvas, its search row floats centred at the bottom of the viewport.

Step 9 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: Only the search row floats over the page text; the canvas's title, text and buttons scroll away with the page.

Step 10 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: Floating is code behaviour: publishing the page to aem.page and aem.live is enough. It can only be checked in the preview, not while editing.

Step 11 — Verify

Action: On the live page check: Scroll down on aem.page: the row gets conversation-canvas-floating and returns to its place when scrolled back up.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

Walkthrough — Variation 18 — Footer canvas placement

Reproduces the screenshot `screenshots/conversation-canvas-footer.jpg` of this variation. The Field Entry Table under the screenshot lists every value with its rules.

Step 1 — Open the page

Action: In AEM Sites, open the locale site (for example `/content/tcs-corp/us/en`), select the page and choose Edit; the page opens in Universal Editor.

Expected Result: The page renders on the canvas with the content tree and the properties panel.

Step 2 — Fill in AEM Sites › /content/tcs-corp/us/en/references

Action: Select **AEM Sites** in the content tree and open the **/content/tcs-corp/us/en/references** tab of the properties panel. Enter: **Create › Page** (A) = footer-conversation-canvas.

Expected Result: The new page footer-conversation-canvas appears in the references folder of the English site.

Step 3 — Fill in footer-conversation-canvas › Section › Add (+)

Action: Select **footer-conversation-canvas** in the content tree and open the **Section › Add (+)** tab of the properties panel. Enter: **Component** (B) = Conversation Canvas.

Expected Result: An empty Default canvas with its search row appears on the reference page.

Step 4 — Fill in Conversation Canvas › Content

Action: Select **Conversation Canvas** in the content tree and open the **Content** tab of the properties panel. Enter: **Title** (C) = Have a question? Ask us.

Expected Result: Have a question? Ask us. appears as the canvas title on the reference page.

Step 5 — Fill in Conversation Canvas › Content › Menu

Action: Select **Conversation Canvas** in the content tree and open the **Content › Menu** tab of the properties panel. Enter: **Menu root path / Menu depth** (D) = Select the page or enter /content/tcs-corp/us/en; 2.

Expected Result: The menu is set to the pages below /en, two levels deep; it shows when the menu button is opened.

Step 6 — Fill in Conversation Canvas › Content › Search bar

Action: Select **Conversation Canvas** in the content tree and open the **Content › Search bar** tab of the properties panel. Enter: **Search bar water mark / button icon type hover text** (E) = Ask us a question; Submit.

Expected Result: The field shows Ask us a question and the arrow's tooltip reads Submit.

Step 7 — Fill in Conversation Canvas Button 1 / 2

Action: Select **Conversation Canvas Button 1 / 2** in the content tree and enter in the properties panel: **Link, Text, Views, Type** (F) = /en/contact, Contact us, Button, Primary; /en/about, About TCS, Button, Secondary.

Expected Result: Contact us (primary) and About TCS (secondary) appear below the search row.

Step 8 — references/footer › Footer › Content

Action: Conversation Canvas Page / Copyright Text / Link List: Select the page or enter /content/tcs-corp/us/en/references/footer-conversation-canvas; © TATA Consultancy Services 2027; Privacy policy, Cookie policy, Terms of use.

Expected Result: On the footer page the canvas appears above the copyright text and the three policy links.

Step 9 — Fill in Page properties

Action: Open the page properties of the page (Universal Editor › Page properties) and enter: **Footer** (G) = Leave empty: the locale's references/footer is used (inherited).

Expected Result: With Footer left empty the page inherits references/footer and shows the canvas in its footer.

Step 10 — Preview

Action: Choose **Preview** in the Universal Editor toolbar (or open the page on aem.page) and compare it with the screenshot.

Expected Result: The canvas sits without its own panel, glow or padding on the footer's glow; title, search row and buttons are centred above the copyright and links bar and the social icons.

Step 11 — Publish

Action: Choose **Publish** › Publish to Live (with the referenced pages, fragments and assets that are not yet published).

Expected Result: references/footer-conversation-canvas and references/footer are separate pages and must both be published; pages using the footer then show it without being republished. The Social Links sheet is published separately.

Step 12 — Verify

Action: On the live page check: Open any English page on aem.page, scroll to the footer and check the title, search row and buttons.

Expected Result: The page matches the screenshot; nothing in the Troubleshooting case above applies.

6.30.6 Authorable Field Specification

Block model `conversation-canvas` — Content tab (a key-value block: each field is one `name | value` row)

Field Name	Field Type	Mandatory	Multi-Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Canvas Style (`classes`)	select	No	No	Default (`""`)	Chooses Default, Primary (sticky) or Secondary	One Primary per page	Options: Default (`""`), Primary (sticky) (`primary`), Secondary (`secondary`)	primary
BG Style (`bgStyle`)	select	No	No	Default (`default`)	Background style hook	Leave Default	One option: Default (`default`); becomes class `conversation-canvas-bg-default`	default
BG Background Image (`backgroundImage`)	reference (asset)	No	No	(empty)	Decorative background image	Light, low-detail image	Single asset; not used by Primary	/content/dam/tcs/canvas-bg.jpg
Icon (`icon`)	reference (asset)	No	No	(empty)	Small icon above the eyebrow	SVG or PNG, square	Single asset; shown at 2.5rem; not used by Primary	/content/dam/tcs/icons/spark.svg
Icon Alt Text (`iconAlt`)	text	No	No	(empty)	Alternative text of the icon	Empty when decorative	None	(empty)
Eyebrow (`eyebrow`)	text	No	No	(empty)	Small label above the title	1–4 words	Plain text; dialog placeholder "Infrastructure to Intelligence"; not used by Primary	Infrastructure to Intelligence
Title (`title`)	text	No	No	(empty)	Main heading (h2)	Short question or promise	Plain text; dialog placeholder "Statistic"; not used by Primary	How can we help you today?
Title Type (`titleSize`)	select	No	No	Default (`""`)	Title size	Bigger for hero use, Medium lower on the page	Options: Default (`""`), Bigger Title (`bigger`), Medium Title (`medium`)	bigger
Text (`text`)	rich-text	No	No	(empty)	Supporting text	1–2 sentences	Rich text kept; not used by Primary	Ask about our services,

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
								industries or insights.
Menu root path (`menuRootPath`, group Menu)	aem-content	No	No	(empty = locale Home)	Root of the menu / navigation tree	A page in the same locale	Converted to the published path; empty = `getLocale().root` (e.g. `/en`)	/content/tcs-corp/us/en
Menu depth (`menuDepth`, group Menu)	number	No	No	1	Levels below the root	1 for sections only, 2–3 for deeper menus	Enforced in the dialog: min 1, max 3; code: invalid = 1, minimum 1	2
Search bar watermark (`searchPlaceholder`, group Search bar)	text	No	No	(empty = placeholder `searchPlaceholder`)	Placeholder and hidden label of the search field	A short invitation	Plain text; dialog placeholder “Ask us a question”	Ask us a question
Search bar audio icon (`searchAudioIcon`)	reference (asset)	No	No	(empty = mic icon)	Custom microphone image	24 x 24 icon	Single asset	/content/dam/tcs/icons/mic.svg
Search bar audio icon alt text (`searchAudioIconAlt`)	text	No	No	(empty = placeholder `searchByVoice`)	Accessible name of the voice button	Describe the action	Plain text	Search by voice
Search bar button icon type (`searchButtonStyle`)	select	No	No	Primary (`primary`)	Submit button style	Primary unless the design asks otherwise	Options: Primary, Secondary, Tertiary; unknown = primary	primary
Search bar button icon type hover text (`searchButtonLabel`)	text	No	No	(empty = placeholder `submit`)	Accessible name and tooltip of the submit button	A verb such as “Submit” or “Ask”	Plain text; dialog placeholder “Submit”	Submit

Block model `conversation-canvas` — Additional tab

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Anchor ID (`classes_anchor`)	text	No	No	(empty)	Jump target	Unique, starts with `anchor-`	Enforced regExp `^anchor-[a-z0-9][a-z0-9-]*$`	anchor-ask-us
Hide block (`classes_hideblock`)	boolean	No	No	false	Hide without deleting	Quick rollback	None; applies inside `main`	false
Padding left (`classes_paddingleft`)	select	No	No	Default	Inner space left	Avoid on Primary	Default, `pl-0` … `pl-3000` (15 options)	pl-0
Padding right (`classes_paddingright`)	select	No	No	Default	Inner space right	Avoid on Primary	Default, `pr-0` … `pr-3000`	pr-0
Padding top (`classes_paddingtop`)	select	No	No	Default	Inner space top	Avoid on Primary	Default, `pt-0` … `pt-3000`	pt-1600

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Padding bottom (`classes_paddingbottom`)	select	No	No	Default	Inner space bottom	Avoid on Primary	Default, `pb-0` … `pb-3000`	pb-1600
Margin left (`classes_marginleft`)	select	No	No	Default	Outer space left	Rarely needed	Default, `ml-0` … `ml-3000`	ml-0
Margin right (`classes_marginright`)	select	No	No	Default	Outer space right	Rarely needed	Default, `mr-0` … `mr-3000`	mr-0
Margin top (`classes_margintop`)	select	No	No	Default	Outer space top	Separate from previous block	Default, `mt-0` … `mt-3000`	mt-1200
Margin bottom (`classes_marginbottom`)	select	No	No	Default	Outer space bottom	Separate from next block	Default, `mb-0` … `mb-3000`	mb-1200

The spacing options are the same 15 values as in 6.29.6 (Default, 0, 0.25rem … 7.5rem from `--space-100` … `--space-3000`).

Item model `button` — Conversation Canvas Button (`models/_button.json`)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Link (`link`)	aem-content	No (a row without a link is ignored)	No	(empty)	Destination	Page picker or URL	Required in practice: rows without a `[href]` are skipped	/content/tcs-corp/us/en/contact-us
Text (`linkText`)	text	No	No	(empty = the URL)	Visible text / accessible name	Action verb + object	None	Contact us
Title (`linkTitle`)	text	No	No	(empty)	Tooltip	Only if it adds information	Dropped when equal to the text	Talk to our experts
Views (`buttonView`)	select	No	No	Button (`button`)	Button, icon-only or text link	Button for CTAs	Options: Button, Icon, Link	button
Type (`linkType`)	select	No	No	Primary (`primary`)	Emphasis	One primary per canvas	Options: Primary, Secondary, Tertiary; condition: shown when Views is empty, Button or Icon	secondary
Icon (`buttonIcon`)	select	No	No	(none)	Icon of the Icon view	—	Options: Arrow right, Chevron right, Chevron down, Search; condition: shown when Views = Icon	arrow-right
Alignment (`buttonAlignment`)	select	No	No	Left (`left`)	Alignment (not used by this block)	Leave as is	Options: Left, Center, Right; ignored, buttons are centred	left

Fields used per style

Field	Default	Secondary	Primary (sticky)
BG Background Image, Icon, Icon Alt Text, Eyebrow, Title, Title Type, Text	Used	Used	Ignored
Menu root path, Menu depth	Pop-up menu	Pop-up menu	Dock navigation
Search bar fields	Used	Used	Used
Conversation Canvas Button items	Used	Used	Ignored
Filter tags (script only)	—	`setConversationCanvasFilters`	
Suggestions (page tags or script)	—	—	`setConversationCanvasSuggestions`

Field details

- **Canvas Style** — Purpose: behaviour and layout mode. Allowed values: Default, Primary (sticky), Secondary. Character limits: n/a. Business rules: Primary renders only the dock; Secondary adds the filter list. Dependency rules: Primary ignores intro and buttons. Visibility rules: no model condition. Sample: Default.
- **BG Style** — Purpose: future background variants. Allowed values: Default only. Business rules: class `conversation-canvas-bg-default` (no CSS yet). Sample: default.
- **BG Background Image** — Purpose: decorative background. Allowed values: one image asset (or a URL). Business rules: replaces the glow; optimized when served as site media; `alt=""`. Dependency: not used in Primary. Sample: a light abstract image.
- **Icon** — Purpose: small visual cue. Allowed values: one image. Business rules: 2.5rem, `object-fit: contain`. Dependency: alt from Icon Alt Text. Sample: a spark icon.
- **Icon Alt Text** — Purpose: text alternative. Character limits: Recommended up to 80. Business rules: applied only when not empty; else the icon is decorative. Sample: empty.
- **Eyebrow** — Purpose: context label. Character limits: Recommended up to 40. Business rules: plain text paragraph in brand colour. Sample: “Infrastructure to Intelligence”.
- **Title** — Purpose: main heading. Character limits: Recommended up to 60 (Bigger: up to 40). Business rules: always `h2`, plain text (formatting is not kept). Sample: “How can we help you today?”.
- **Title Type** — Purpose: size. Allowed values: Default, Bigger Title, Medium Title. Business rules: class `conversation-canvas-title-{bigger|medium}`. Sample: Default.
- **Text** — Purpose: supporting copy. Character limits: Recommended up to 200. Business rules: rich text moved as is, margins removed, max width 50.75rem. Sample: one sentence.
- **Menu root path** — Purpose: tree root. Allowed values: a page of the same locale. Business rules: AEM path converted with `toSitePath` (for example `/content/tcs-corp/us/en` to `/en`); pages are read from the query index filtered to the **current** locale, so a root in another locale gives “No pages found”. Sample: `/content/tcs-corp/us/en/what-we-do`.
- **Menu depth** — Purpose: levels below the root. Allowed values: 1–3 (Enforced in the dialog). Business rules: pages deeper than the depth are not listed; a page whose parent is not in the index is skipped. Sample: 2.
- **Search bar water mark** — Purpose: input placeholder and its hidden label. Character limits: Recommended up to 40 (the field is narrow on mobile). Business rules: empty = “Ask us a question” (`searchPlaceholder`). Sample: “Ask us a question”.
- **Search bar audio icon / alt text** — Purpose: voice button artwork and name. Business rules: alt text empty = “Search by voice” (`searchByVoice`); the image itself is decorative. Sample: empty (default mic).
- **Search bar button icon type** — Purpose: submit style. Allowed values: Primary, Secondary, Tertiary. Sample: Primary.
- **Search bar button icon type hover text** — Purpose: submit accessible name and tooltip. Character limits: Recommended up to 20. Business rules: empty = “Submit” (`submit`). Sample: “Submit”.

- **Anchor ID, Hide block, Padding, Margin** — as described in 6.29.6; in the Primary style, padding or margin only add empty space (the dock is fixed and takes no room) and should stay Default; inside the footer these options have no effect.
- **Button item fields** — Link (destination; required in practice), Text (Recommended up to 25 characters), Title (tooltip), Views, Type (condition: Views empty / Button / Icon), Icon (condition: Views = Icon), Alignment (no effect in this block).

6.30.7 Field Annotation Mapping

Marker	Field	Purpose
A	BG Background Image (`backgroundImage`) / BG Style	Background image or default glow
B	Icon (`icon`), Icon Alt Text (`iconAlt`)	Small icon above the eyebrow
C	Eyebrow (`eyebrow`)	Context label
D	Title (`title`), Title Type (`titleSize`)	Main h2 heading and its size
E	Text (`text`)	Supporting rich text
F	Menu root path (`menuRootPath`), Menu depth (`menuDepth`)	Menu button and pop-up menu / dock navigation
G	Search bar water mark (`searchPlaceholder`)	Search field placeholder and label
H	Search bar audio icon / alt text; button icon type / hover text	Voice and submit buttons
I	Conversation Canvas Button items (`button` model)	Calls to action

6.30.8 Component Specification

Attribute	Value
Component Name	Conversation Canvas (`conversation-canvas`)
Version	1.0
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	aem.js, scripts.js; responsive-image, a11y, button, icon-button, block-options, data-layer decorators; utils buttons, properties, query-index, site, urls, metadata, taxonomy, ids, placeholders; query index, taxonomy and placeholders sheets; Web Speech API
Component Type	Container block (key-value properties) with `button` items (Conversation Canvas Button)
Supported Variants	Canvas Style Default / Secondary / Primary (sticky); Title Type Default / Bigger / Medium; BG glow or image; search button Primary / Secondary / Tertiary; voice input; button views Button / Icon / Link; footer placement
Supported Templates	Any page; the footer canvas reference page
Supported Metadata	Page tags (`article:tag` meta, else `tags` metadata) for Primary suggestions; query index `path` and `title` (og:title)
Supported Tags	Page tags, labelled from `/{locale}/taxonomy.json` (Primary suggestions)
Supported Personalization	Script APIs `setConversationCanvasSuggestions` and `setConversationCanvasFilters` for a personalisation service (none connected); data layer `cmp:search` for Adobe Target / Journey Optimizer in future (Adobe Tags not installed)
Caching Considerations	Page HTML cached by the CDN; `/query-index.json` fetched in pages of 500 rows once per page view and cached in memory; taxonomy and placeholders loaded once per page view; menu changes appear after the query index updates on publish

Attribute	Value
Performance Considerations	Default / Secondary: the query index loads only when the menu is first opened; Primary: loads the index and taxonomy at decoration; images use `createOptimizedPicture` with lazy loading (a background image in the first section is not eager); listeners on scroll (passive, one animation frame per update), resize and a body ResizeObserver, shared by all canvases
Accessibility Compliance	Hidden label on the search input; labelled menu toggle with `aria-expanded` / `aria-controls`; labelled `nav`; Escape and click-outside close; `aria-pressed` voice and menu toggles; `aria-current` on the current page; hidden dock `inert`; reduced-motion support; icon buttons with `aria-label` and title
SEO Compliance	One h2 (not in Primary); menu and dock links are created by script; buttons are crawlable links; no structured data

6.30.9 Input Model

Content Inputs: Key-value property rows (`name | value`) for every set field (empty fields are omitted), plus one row per Conversation Canvas Button (a link and its option cells). If no row has a known key, the code falls back to one property per single-cell row in model order.

Metadata Inputs: The page's tags (`meta[property="article:tag"]`, else the `tags` meta) for Primary suggestions.

Tags Inputs: Tag IDs resolved to labels via `/{locale}/taxonomy.json`; unknown IDs are labelled from the ID.

Page Context Inputs: `window.location.pathname` (locale, current page in the tree), the document language (voice recognition), viewport position of the footer and other canvases, and the editor context for the query index (empty inside Universal Editor).

Query Inputs: `/query-index.json` rows of the current locale (`path`, `title`), filtered to the menu root and depth, sorted by level and path.

Manual Inputs: All dialog fields; scripts may add suggestions and filter tags.

Authored HTML received from AEM (the English footer canvas sample, `content/en/references/footer-conversation-canvas.plain.html`, simplified):

```
<div class="conversation-canvas">
  <div><div>bgStyle</div><div>default</div></div>
  <div><div>menuRootPath</div><div><a href="/en/">/content/tcs-corp/us/en</a></div></div>
  <div><div>menuDepth</div><div>2</div></div>
  <div><div>searchPlaceholder</div><div>Ask us a question</div></div>
  <div><div>searchButtonStyle</div><div>primary</div></div>
  <div><div>searchButtonLabel</div><div>sradha</div></div>
</div>
```

> **Warning:** in this sample the **Search bar button icon type hover text** is "sradha", a test value that becomes the submit button's accessible name and tooltip. [To be confirmed: the live English footer canvas uses a real label such as "Submit" — owner: content lead]

6.30.10 Output Model

Rendered Output (Default / Secondary): The block keeps its classes and gets `conversation-canvas-bg-{style}`, optional `conversation-canvas-title-{size}` and `conversation-canvas-has-background`. Children: optional `.conversation-canvas-background`, then `.conversation-canvas-content` with `.conversation-canvas-intro` (`.conversation-canvas-icon`, `p.conversation-canvas-eyebrow`, `h2.conversation-canvas-title`, `.conversation-canvas-text`), `.conversation-canvas-search-slot > .conversation-canvas-search`

(menu toggle, `nav.conversation-canvas-menu`, `form.conversation-canvas-search-form`), `ul.conversation-canvas-filters` (Secondary) and `ul.conversation-canvas-buttons`.

Rendered Output (Primary): Only `.conversation-canvas-dock` with `.conversation-canvas-nav-panel`, `.conversation-canvas-search` (menu toggle, form) and `nav.conversation-canvas-nav > ul.conversation-canvas-nav-list`.

Generated HTML (Default, simplified, menu opened):

```
<div class="conversation-canvas block conversation-canvas-bg-default"
  data-block-name="conversation-canvas">
  <div class="conversation-canvas-content">
    <div class="conversation-canvas-intro">
      <p class="conversation-canvas-eyebrow">Infrastructure to Intelligence</p>
      <h2 class="conversation-canvas-title">How can we help you today?</h2>
    </div>
    <div class="conversation-canvas-search-slot">
      <div class="conversation-canvas-search">
        <button type="button" class="conversation-canvas-menu-toggle" aria-label="Menu"
          aria-controls="conversation-canvas-1-menu" aria-expanded="true"></button>
        <nav class="conversation-canvas-menu" id="conversation-canvas-1-menu"
          aria-label="Menu">
          <ul><li><a href="/en/what-we-do">What we do</a><ul>…</ul></li></ul>
        </nav>
        <form class="conversation-canvas-search-form">
          <label class="visually-hidden" for="conversation-canvas-1-q">
            Ask us a question</label>
          <input type="search" name="q" id="conversation-canvas-1-q"
            placeholder="Ask us a question" autocomplete="off">
          <button type="button"
            class="conversation-canvas-audio conversation-canvas-audio-default"
            aria-label="Search by voice" aria-pressed="false"></button>
          <button type="submit" class="button primary icon-button" aria-label="Submit"
            title="Submit"></button>
        </form>
      </div>
    </div>
    <ul class="conversation-canvas-buttons">
      <li><a href="/en/contact-us" class="button primary">Contact us</a></li>
    </ul>
  </div>
</div>
```

Generated HTML (Primary, section view, simplified):

```
<div class="conversation-canvas block primary conversation-canvas-bg-default">
  <div class="conversation-canvas-dock conversation-canvas-floating">
    <div class="conversation-canvas-nav-panel" id="conversation-canvas-1-panel" hidden></
div>
    <div class="conversation-canvas-search">
      <button type="button" class="conversation-canvas-menu-toggle" aria-label="Menu"
        aria-controls="conversation-canvas-1-nav" aria-pressed="false"></button>
      <form class="conversation-canvas-search-form">…</form>
    </div>
    <nav class="conversation-canvas-nav" id="conversation-canvas-1-nav" aria-label="Site">
      <ul class="conversation-canvas-nav-list">
        <li><button type="button" class="conversation-canvas-nav-back"
          aria-label="Back"></button></li>
        <li><button type="button" class="conversation-canvas-nav-item
```

```
          conversation-canvas-nav-toggle" aria-expanded="false"
          aria-controls="conversation-canvas-1-panel">Services</button></li>
        <li><a class="conversation-canvas-nav-item conversation-canvas-nav-current"
          href="/en/what-we-do/industries" aria-current="page">Industries</a></li>
      </ul>
    </nav>
  </div>
</div>
```

Generated JSON / events: No JSON is requested from a service. A non-empty submit (Enter, the arrow button, or a suggestion pill) dispatches:

```
new CustomEvent('conversation-canvas:search', {
  bubbles: true,
  detail: { query: 'How do you support cloud migration?' },
});
```

A future search integration listens for it:

```
document.addEventListener('conversation-canvas:search', (e) => {
  const { query } = e.detail; // e.target is the canvas block
  // open the search / assistant experience here (not implemented as of this handover)
});
```

Public functions exported by `conversation-canvas.js`:

Function	Arguments	Effect
`setConversationCanvasSuggestions(block, suggestions)`	Primary block; array of strings	Replaces the suggestion pills (shown on pages without sub-pages) and re-renders
`setConversationCanvasFilters(block, tags)`	Secondary block; array of `{ label, href?, active? }`	Renders filter tags (links or toggle buttons); no-op on other styles

Generated Metadata: None.

Analytics Tracking (Adobe Client Data Layer):

- Component state (once): `{ component: { 'conversation-canvas-1': { '@type': 'tcs-corp/components/conversation-canvas', parentId: 'page-…', 'dc:title': 'How can we help you today?' } } }` (no `dc:title` for Primary, which has no heading). Footer canvases are added in the delayed phase.
- `cmp:click` for the menu toggle ("Menu"), menu and pill links (`interaction: link`, `xdm:linkURL`), Back, toggles, voice, submit and suggestion buttons (`interaction: button`), canvas buttons, and filter tags (`interaction: filter`, `value` = label).
- `cmp:search` on every submit of the search form:

```
{ "event": "cmp:search", "eventInfo": { "path": "component.conversation-canvas-1",
  "xdm:searchTerm": "How do you support cloud migration?" } }
```

> **Note:** `cmp:search` is pushed even when the field is empty (`xdm:searchTerm: ""`), because the data layer listens before the block ignores empty queries; the term is trimmed and cut to 100 characters. Visitors may type personal

> data into a free-text question; the analytics design should review whether search terms may be collected ([To be confirmed: privacy review of search term tracking — owner: data protection officer]).

Personalization Output: None by default. Script-supplied suggestions and filters are the intended personalization outputs.

Search Index Output: The block is not indexed; it reads `/query-index.json`. Its own text (title, text, buttons) is part of the page HTML.

Target Personalization Output: Not implemented (as of this handover): no personalisation or search service is connected. The intended outputs are setConversationCanvasSuggestions (Primary suggestion pills) and setConversationCanvasFilters (Secondary filter tags); the data layer cmp:search and cmp:click events are ready for Adobe Target or Journey Optimizer once Adobe Tags is installed.

6.30.11 Business Rules

1. Properties are read from two-cell rows whose key (normalised: lower-case, no separators) is a known field; other rows with a link are button items; if no keyed row exists, single-cell rows are mapped to the fields in model order (Canvas Style excluded).
2. Canvas Style: `primary` or `secondary` (from the row or the block classes); anything else is Default.
3. BG Style adds `conversation-canvas-bg-{value}` (`default` when empty).
4. Title Type `bigger` / `medium` adds a size class; anything else is Default.
5. Primary renders only the dock; intro, background, buttons and filters are not rendered.
6. Images: `<picture>` / `<img>` in the cell is used, else the cell's link or text is built into an image (site `/media_` URLs optimized, others lazy `<img>`); the background is decorative; the icon takes Icon Alt Text when set.
7. Eyebrow, title (always `h2`) and text render only when not empty; the intro is omitted when empty.
8. Search: input `type="search"`, `name="q"`, `autocomplete="off"`; placeholder and hidden label = water mark, else `searchPlaceholder` ("Ask us a question").
9. Submit icon button: arrow-right, type from Search bar button icon type (unknown = primary), label = hover text, else `submit` ("Submit").
10. A submit with an empty (trimmed) query does nothing in the block; a non-empty one dispatches `conversation-canvas:search` with `{ query }`. No navigation or request.
11. Voice: shown only if `SpeechRecognition` / `webkitSpeechRecognition` exists; language = `<html lang>` or `en`; first result fills the field and focuses it; click again to stop; `aria-pressed` reflects listening; start errors reset it.
12. Menu root: the Menu root path converted to a published path, else the locale root; depth = the Menu depth, minimum 1 (dialog 1–3).
13. Tree: query-index pages of the current locale under the root, levels 1..depth, sorted by level then path; pages whose parent is not in the index are skipped; titles fall back to the last path segment with hyphens as spaces; an index error gives an empty tree.
14. Default / Secondary menu: loaded on first open; nested lists by level; empty tree shows `noPagesFound` ("No pages found"); closes on Escape (focus back to the button), outside click or focus leaving the row.
15. The pop-up menu titles are shown in full; dock pills and panel links drop text after `|`.
16. Primary views: Root on the menu root or when the page is not in the tree; Section for a page with subpages; Suggestions for a leaf page when suggestions exist; otherwise the parent's section (Root if the parent is the root).
17. Primary suggestions: the page's tag labels, unless a script set suggestions first; `setConversationCanvasSuggestions` replaces them. Clicking a suggestion strips surrounding straight or curly quotes, fills the field and submits.

18. Primary toggles: only in Section view; sub-pages with children become toggles; the panel replaces the search row on desktop; 6+ items use two balanced columns.
19. Primary menu button: on Root-default pages it shows / hides the navigation (`aria-expanded`); elsewhere it switches between Root and the default view (`aria-pressed`).
20. Primary Back: suggestions to parent section; section to its parent section; then Root.
21. Floating: at most one canvas floats; Primary floats while no footer and no in-place Default / Secondary search row is in view; Default / Secondary rows float after scrolling past their place; the first registered qualifying canvas wins; a non-floating dock is `inert`.
22. Primary on < 900 px: search pill only; >= 900 px: menu button, navigation and panel.
23. Secondary filter list: empty and hidden until `setConversationCanvasFilters` fills it; links when `href`, otherwise toggle buttons without behaviour.
24. Button items: link required; view / type / icon from the item's option cells or link formatting, defaults button / primary; alignment ignored; title dropped when equal to the text.
25. Placeholders keys with English fallbacks: `menu`, `back`, `noPagesFound`, `siteNavigation` ("Site"), `suggestions`, `searchPlaceholder`, `searchByVoice`, `submit`.
26. Additional tab applies in `main` only (not in the footer); spacing on Primary only adds empty space.

6.30.12 Author Best Practices

Recommended Content Length: Eyebrow up to 40 characters; title up to 60 (Bigger up to 40); text up to 200; water mark up to 40; hover text up to 20; button text up to 25; 1–3 buttons. All Recommended.

Image Dimensions: Background: landscape, at least 1920 x 1080 for full-width panels (rendered with `object-fit: cover`, so keep important content centred; the panel height varies with the content). Icon: square (rendered 2.5rem / 40 px; supply at least 80 x 80 or SVG). Audio icon: square, rendered 1.5rem / 24 px (SVG preferred). There is no fixed aspect ratio in the CSS.

CTA Writing Guidelines: Use clear verbs ("Contact us", "Explore services"); one primary button; use the Title only to add information; keep the water mark inviting ("Ask us a question").

Accessibility Guidelines: Leave Icon Alt Text empty for decorative icons; keep text readable over background images; make the hover text meaningful (it is the submit button's name); avoid more than one canvas per page; check that the canvas title fits the page's heading order.

SEO Guidelines: The title is an `h2`; keep the page `h1` in the Page Header. Do not rely on the menu or dock for internal linking (script-generated); keep important links in content or buttons.

Metadata Guidelines: For good Primary pills, give pages concise `og:title` values (anything after `|` is dropped in the dock) and correct tags (suggestions).

Taxonomy Guidelines: Tags used as suggestions should have translated titles in each locale's taxonomy; otherwise ID-derived labels are shown.

Localization Guidelines: Author the water mark, alt texts, hover text and buttons per locale; point the Menu root path to a page of the same locale; translate the canvas placeholder keys in each locale's placeholders sheet; voice input uses the page language (`<html lang>`).

6.30.13 Troubleshooting Guide

Issue 1 — Pressing Enter or the arrow does nothing

Symptoms: The query stays in the field; no results.

Root Cause: By design: no search service; only `conversation-canvas:search` is dispatched.

Diagnosis Steps: In the console add a listener for `conversation-canvas:search` and submit; check `window.adobeDataLayer` for `cmp:search`.

Resolution Steps: Connect a search or assistant integration (development, [To be confirmed: search back end]).

Validation Steps: After integration, a query opens the results experience.

Preventive Measures: Communicate the limitation to stakeholders before launch.

Issue 2 — The menu shows "No pages found"

Symptoms: The pop-up menu or dock navigation is empty.

Root Cause: Viewed inside Universal Editor (no query index), Menu root path in another locale, pages not yet indexed, or intermediate pages missing from the index (their children are skipped).

Diagnosis Steps: Open `/query-index.json` on `.aem.page` and look for the root's child paths; check the root path's locale.

Resolution Steps: Test on `.aem.page`; use a root in the same locale; publish missing parent pages; check the `helix-query.yaml` exclusions.

Validation Steps: The menu lists the expected pages.

Preventive Measures: Keep a published page at every folder level.

Issue 3 — The Primary dock never appears

Symptoms: No floating bar while scrolling.

Root Cause: The footer is always in view (short page); another canvas's search row is in view or floating first; Hide block is on; the page is narrow and the dock shows only the search pill.

Diagnosis Steps: Scroll on a long page; check for other canvases; inspect the dock for `conversation-canvas-floating`.

Resolution Steps: Use Primary on long pages only; keep one canvas per page.

Validation Steps: The dock fades in after scrolling and hides at the footer.

Preventive Measures: Validation checklist (one Primary per page).

Issue 4 — Dock pills show the wrong level or titles with "| TCS"

Symptoms: Unexpected pills, or long titles.

Root Cause: The current page is not in the tree (deeper than the Menu depth or outside the root), so Root is shown; titles come from `og:title`; only text after `|` is removed.

Diagnosis Steps: Compare the URL with the root and depth; check the page's `og:title`.

Resolution Steps: Increase Menu depth (max 3) or change the root; shorten titles.

Validation Steps: Reload: the expected view and labels appear.

Preventive Measures: Plan root / depth with the information architecture.

Issue 5 — The microphone button is missing

Symptoms: No voice button.

Root Cause: The browser does not support the Web Speech API (for example Firefox).

Diagnosis Steps: Check `window.SpeechRecognition || window.webkitSpeechRecognition` in the console.

Resolution Steps: None needed; test in a supporting browser.

Validation Steps: The button appears in Chrome or Edge.

Preventive Measures: Document supported browsers for stakeholders.

Issue 6 — Voice input fills the field but does not search
Symptoms: The spoken text appears; nothing else happens.

Root Cause: By design the result is not auto-submitted; the visitor presses Enter or the arrow.

Diagnosis Steps: Observe that the field receives focus after speaking.

Resolution Steps: None (or change the behaviour in code on request).

Validation Steps: Pressing Enter dispatches the search event.

Preventive Measures: Mention in user guidance if needed.

Issue 7 — The submit button tooltip shows an odd word
Symptoms: Hovering the arrow shows a test word (for example "sradha" in the English footer sample).

Root Cause: Search bar button icon type hover text contains a test value.

Diagnosis Steps: Open the canvas (or the footer canvas reference page) and check the field.

Resolution Steps: Set a real label ("Submit") or clear it to use the placeholder; publish.

Validation Steps: Tooltip and screen reader name read "Submit".

Preventive Measures: Review test values before go-live.

Issue 8 — Filter tags or suggestions never show
Symptoms: Secondary shows no filters; Primary shows no suggestion pills.

Root Cause: Filters are script-only (no script supplies them); suggestions need page tags or a script, and only appear on pages without sub-pages.

Diagnosis Steps: Check the page's tags; check whether the page has sub-pages in the tree.

Resolution Steps: Tag the page or implement the supplying script (development).

Validation Steps: Pills appear on a tagged leaf page.

Preventive Measures: Agree the personalisation integration before relying on these features.

6.30.14 Support Runbook

Monitoring Requirements
- Availability of `/query-index.json` (the menu and dock depend on it) and of the locale's `taxonomy.json` and `placeholders.json`.
- Once Adobe Tags is installed: `cmp:search` volumes and top terms (subject to privacy review).

Logs
- Browser console: the block emits no messages of its own; index or taxonomy failures are swallowed (empty menu / labels). Check the Network tab for `/query-index.json?offset=0&limit=500` (200 expected) and the taxonomy / placeholders sheets.
- Admin API / Sidekick: preview and publish status of the page, the footer and the canvas reference page; index status of pages.
- AEM author logs: publication of the pages.

Common Errors

Error	Cause	Fix
Search does nothing	No search service (by design)	Integrate a listener for `conversation-canvas:search`

Error	Cause	Fix
"No pages found"	Editor context, wrong locale root, unindexed pages	Test on `.aem.page`; fix root; publish pages
Dock not visible	Short page, other canvas, Hide block	Use on long pages; one canvas
Intro or buttons missing	Canvas Style is Primary	Use Default or Secondary
Voice button missing	Unsupported browser	Use Chrome / Edge / Safari
English UI labels on a locale	Placeholder keys missing	Add keys to the locale sheet
Test word as button tooltip	Hover text test value	Correct the field

Escalation Matrix

Level	Who	Checks
L1	Author support / content lead	Style, fields, root path locale, depth, test values, tags, publish status
L2	AMS / site admin	Query index content and freshness, sheet publication, CDN cache, footer configuration
L3	Development team	Console / network errors, floating logic, tree building, data layer, integrations for search, suggestions and filters
Adobe Support	Adobe	Query index generation, Edge Delivery delivery or Universal Editor platform issues

Recovery Procedures

1. Faulty canvas in a page: Hide block and publish; or restore a page version.
2. Faulty footer canvas: clear the Footer's Conversation Canvas Page (or fix the reference page) and publish the footer page.
3. Empty menus across the site: check and re-index (`/query-index.json`) via the Admin API with the site admin.
4. Code regression: revert on `main`.

Health Checks

- On `.aem.live`: canvas renders; menu lists pages; search submit dispatches the event; dock appears on scroll on a long page and hides at the footer; voice button works in Chrome.
- `window.adobeDataLayer` contains the component entry and `cmp:search` after a query.

Operational Procedures

- New section of the site: publish it so it appears in menus and dock pills after indexing.
- New locale: translate the canvas placeholder keys; create the footer canvas reference page.
- Search integration (future): add a listener for `conversation-canvas:search`, optionally call the two exported functions; update this runbook.

Known Limitations

- No search or conversational service; empty queries are ignored by the block but still tracked as `cmp:search` with an empty term.
- Filters and suggestions require scripts (none exist); filter buttons have no behaviour.
- Menu and dock exclude nothing beyond the query index exclusions (for example `hide-in-nav` and `robots` are not checked); depth max 3 in the dialog.
- Menus are built from the current locale's index only; the index is not available in the editor.
- BG Style has one option and no styles.

- Button Alignment is ignored.
- Hide block and spacing do not apply in the footer; spacing on Primary adds empty space.
- The pop-up menu titles keep the "| …" suffix (only the dock removes it).
- The dock panel has an `aria-label` without a landmark role.
- With unkeyed (single-cell) property rows, a row containing a link (for example the menu root) is read as a button item; authored content from Universal Editor uses keyed rows, so this affects only hand-made markup.
- Background images load lazily even in the first section (possible LCP impact).

6.30.15 Common Authoring Mistakes

The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
The menu shows No pages found	Opened inside Universal Editor, or Menu root path in another locale, or pages not indexed	Check on aem.page, use a root in the same locale and publish the pages
Title, text and buttons are missing	Canvas Style is Primary (sticky), which renders only the dock	Use Default or Secondary for an in-page panel
The Primary dock never appears	Short page with the footer always in view, or another canvas's search row in view	Use Primary on long pages with no other canvas
Submitting a question does nothing	By design: only the conversation-canvas:search event is dispatched	Connect a search integration (development team)
The submit tooltip shows a test word	Test value in Search bar button icon type hover text (sradha in the English footer sample, F-33)	Enter Submit or clear the field and publish
No microphone button	Browser without the Web Speech API, for example Firefox	Test in Chrome, Edge or Safari
Secondary shows no filter pills	Filter tags are script-only and no script exists	Agree the integration with the development team
Dock pills show the top-level sections on a deep page	The page is deeper than Menu depth or outside the root	Raise Menu depth (maximum 3) or change the root
Alignment or BG Style changes have no visible effect	Both options are not used by the block (F-33 open)	Leave them on their defaults
Background image makes the title unreadable	Dark or busy image behind dark text, no overlay	Choose a light, low-detail image and check 4.5:1 contrast

6.30.16 Author Quick Reference Guide

Mandatory Fields

- Link (Conversation Canvas Button) — not required in the model, but an item without a link is not rendered
- No block field is required in the model: the search row always renders, even when every field is empty

Recommended Fields

- Title — the h2 question or promise; the canvas has no heading without it (not used by Primary)
- Search bar water mark — placeholder and hidden label of the field; empty uses the placeholder searchPlaceholder
- Search bar button icon type hover text — the submit button's name and tooltip, for example Submit
- Menu root path — a page of the same locale; empty uses the locale Home
- Menu depth — 1 to 3 levels; 2 for a section menu, 3 for the Primary dock with toggle pills
- Text (Conversation Canvas Button) — the visible label and accessible name, up to about 25 characters

Optional Fields

- Canvas Style — Default, Primary (sticky) or Secondary
- BG Style — one option, Default
- BG Background Image — light decorative image instead of the glow
- Icon and Icon Alt Text — alt text only when the icon conveys meaning
- Eyebrow — 1 to 4 words above the title
- Title Type — Default, Bigger Title or Medium Title
- Text — one or two supporting sentences
- Search bar audio icon and Search bar audio icon alt text — custom voice artwork and the button's name
- Search bar button icon type — Primary, Secondary or Tertiary
- Views, Type, Icon and Title (Conversation Canvas Button)
- Anchor ID, Hide block, Padding and Margin (Additional tab; leave spacing on Default for Primary)

Authoring Checklist

1. Use at most one canvas per page, and at most one Primary (sticky) canvas
2. Put a Primary (sticky) canvas in a section of its own; it ignores intro fields and buttons
3. Keep the Page Header h1 above the canvas: the canvas title is always an h2
4. Point Menu root path to a page of the same locale and set Menu depth to 1–3
5. Write the water mark, hover text and button texts in the page's language
6. Leave Icon Alt Text empty for decorative icons; set Search bar audio icon alt text to the action (Search by voice)
7. Choose light background images: the text stays dark and no overlay is added
8. Use one primary button; Alignment has no effect in this block
9. Don't promise answers: queries are not answered until a search service is connected

Pre-Publish Checklist

1. Preview on aem.page: the menu needs /query-index.json, which the editor doesn't serve
2. Open the menu and check that it lists the expected pages and not No pages found
3. Check desktop (1200 px and wider), tablet (600–1199 px, Primary switches at 900 px) and mobile (below 600 px)
4. Scroll past the canvas: the search row floats; scroll to the footer: the row or dock hides
5. Check the hover text and water mark for test values such as sradha
6. Check text contrast over the background image (4.5:1)
7. Test voice input in Chrome, Edge or Safari

Post-Publish Validation Checklist

1. Open the page on aem.live and check the canvas, menu and buttons
2. Check that new pages appear in the menu or dock after the query index has been updated
3. Publish references/footer-conversation-canvas and references/footer when the footer canvas changed
4. Publish the placeholders and taxonomy sheets when UI texts or suggestion labels changed
5. Submit a question and check window.adobeDataLayer for cmp:search
6. Check that the linked button targets are published (no 404)

6.30.17 Component Execution Example

Business example: Ask-us panel on the English home page.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Conversation Canvas
Icon (Conversation Canvas › Content)	Select the asset chat-icon.svg (/en/shots/g11/chat-icon.svg)
Eyebrow (Conversation Canvas › Content)	Ask TCS
Title (Conversation Canvas › Content)	How can we help you today?
Text (Conversation Canvas › Content)	Ask about our services, industries and insights, or browse the site from the menu.
Menu root path (Conversation Canvas › Content)	Select the page or enter /content/tcs-corp/us/en
Menu depth (Conversation Canvas › Content)	2
Search bar water mark (Conversation Canvas › Content)	Ask us a question
Search bar button icon type hover text (Conversation Canvas › Content)	Submit
Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button
Link (Conversation Canvas Button 1)	Select the page or enter /en/contact
Text (Conversation Canvas Button 1)	Contact us
Item (Content tree › Conversation Canvas › Add (+))	Conversation Canvas Button
Link (Conversation Canvas Button 2)	Select the page or enter /en/services
Text (Conversation Canvas Button 2)	Explore services
Type (Conversation Canvas Button 2)	Secondary

All other fields keep their default values.

Rendered Result:

Figure 23: Execution example — The Default canvas at 1440 px: a white rounded panel with blue and yellow glows at the bottom, the chat icon, the eyebrow Ask TCS, the h2 How can we help you today?, the intro text, the search row (round menu button, pill field Ask us a question with microphone and blue arrow) and the buttons Contact us (primary) and Explore services (secondary), all centred. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/conversation-canvas-desktop-view.jpg)

Author Notes

- Canvas Style stays Default; the chat icon is decorative, so Icon Alt Text stays empty.
- Ask TCS, How can we help you today? and one sentence of text form the intro above the search row.
- Menu root path /content/tcs-corp/us/en with Menu depth 2 gives a menu of the English sections and their sub-pages.
- Two button items: Contact us (Type left on Primary) and Explore services (Type Secondary).

Business Notes

- The panel invites free-text questions and offers contact and services as direct routes.
- No search or conversational service is connected: queries are not answered yet ([To be confirmed: search / conversational back end — owner: product owner / solution architect]).
- Search terms may contain personal data; their tracking awaits a privacy review ([To be confirmed: privacy review of search term tracking — owner: data protection officer]).

Technical Notes

- decorate() builds .conversation-canvas-content with the intro, the search slot and ul.conversation-canvas-buttons; the title is an h2.
- The menu is built from getPages() (query index of the current locale) on first open, filtered to /en and two levels.
- Submit dispatches conversation-canvas:search with { query }; the data layer pushes cmp:search for every submit, even empty ones (F-03 open).
- The search row registers for floating: it becomes fixed at the bottom once scrolled past and no other in-place row is in view.

6.31 Interactive Dashboard Block

The Interactive Dashboard block is a **placeholder** reserved for a future interactive data dashboard. Its design, content model and logic have not been defined yet. As of this handover the block renders **nothing** on the site; in Universal Editor edit mode it shows a dashed, selectable box labelled "Interactive Dashboard (placeholder)". The block lives in `blocks/interactive-dashboard/` (`interactive-dashboard.js`, 13 lines; `interactive-dashboard.css`, 19 lines; `_interactive-dashboard.json`, which has only the Additional tab).

> **Important:** do not use this block on live pages. Charts, data sources, filters, data refresh and any interactivity are Not implemented (as of this handover). [To be confirmed: dashboard requirements, data source and design — owner: product owner]

6.31.1 Component Purpose

Business Objective: Reserve a component name and a place in the section filter for a future dashboard (for example interactive figures or KPIs), so that the authoring palette, the data layer and the Additional options are already in place when it is built. [To be confirmed: business objective and KPIs of the dashboard — owner: product owner]

Business Use Cases: None today. Possible future use cases are not specified in the code or the repository ([To be confirmed: use cases — owner: product owner]).

When To Use: Only on test or block-library pages, to reserve a position for the future dashboard in a draft layout.

When Not To Use: On any published page: it shows nothing to visitors and may leave an empty section.

Dependencies:

Type	Dependency	Use
Code	`blocks/interactive-dashboard/interactive-dashboard.js`	Empties the block and sets `data-placeholder="Interactive Dashboard"`
Code	`blocks/interactive-dashboard/interactive-dashboard.css`	Hides the empty block; shows the labelled box in edit mode
Code	`decorators/block-options-decorator.js`	Additional tab: Anchor ID becomes the block id; Hide block / spacing classes
Code	`decorators/data-layer-decorator.js`	Adds the block to the data layer like any block
Styles	`styles/styles.css`	Tokens used by the placeholder box; `.hideblock` and spacing classes
Data	None	No sheets, query index, metadata, taxonomy or placeholders

Related Components: Table and Table List (tabular data available today), Cards / List (statistic-style cards), Embed (an external dashboard could be embedded where the Embed block supports the provider).

Applicable Templates: Technically any page (the block is in the section filter); not used by any template.

Supported Content Types: Not applicable (placeholder).

Business Problem Solved

A future interactive data dashboard (for example KPIs from the annual report) needs a component name, a place in the section filter, the Additional options and a data layer entry before its design and logic exist. The Interactive Dashboard block reserves this: it renders nothing for visitors and a labelled placeholder box in the editor. Charts,

data sources and interactivity are Not implemented (as of this handover) [To be confirmed: dashboard requirements, data source and design — owner: product owner].

Supported Taxonomy

None: the placeholder has no tag field and reads no page tags, taxonomy, metadata, sheets or placeholders.

6.31.2 Visual Overview

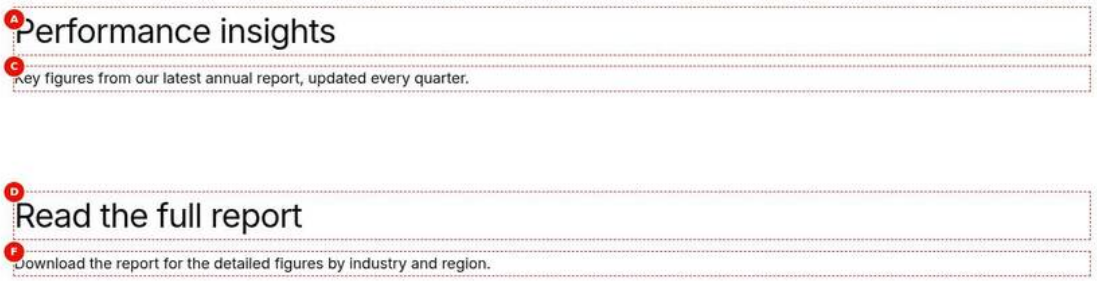


Figure 24: Desktop rendering — A page on aem.page at 1440 px: the H2 Performance insights with the line Key figures from our latest annual report, updated every quarter., empty space where the Interactive Dashboard section is, then the H2 Read the full report and its line about downloading the report. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/interactive-dashboard-desktop-view.jpg)

Screenshot Details — Desktop rendering

Item	Detail
Screenshot Name	`screenshots/interactive-dashboard-desktop-view.jpg`
Screenshot Purpose	Desktop rendering
Screen Description	A page on aem.page at 1440 px: the H2 Performance insights with the line Key figures from our latest annual report, updated every quarter., empty space where the Interactive Dashboard section is, then the H2 Read the full report and its line about downloading the report.
Business Context	A draft annual report page where a position is reserved for a future interactive KPI dashboard between the introduction and the report download.
Author Objective	Place the Interactive Dashboard placeholder in its own section between two Title and Text sections and check that visitors see nothing.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Performance insights	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Key figures from our latest annual report, updated every quarter.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Interactive Dashboard	Yes	Adds the Interactive Dashboard to the page	Select the section in the content tree, choose Add (+) and pick Interactive Dashboard	Only components the section allows (section filter)
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
D	Title (Title)	Read the full report	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(E)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
F	Text (Text)	Download the report for the detailed figures by industry and region.	No	Card text	1–3 sentences; lists and links allowed	None
—	Result (Preview (.aem.page))	Nothing renders between the two sections (the block is empty and hidden)	—	Check on the preview (not stored in the content)	Nothing renders between the two sections (the block is empty and hidden)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two short heading-and-text groups separated only by blank space; no dashboard, box or label appears.
- **Rendering behaviour:** The code empties the block and sets data-placeholder; .interactive-dashboard:empty is display: none, so nothing renders at any width. The wrapper and section remain, so the section's own spacing shows as a gap.
- **Publishing behaviour:** Publishing is not recommended: the block shows nothing on aem.page or aem.live and can leave an empty gap. Remove it before publishing a live page.

Business Rules

- The block is a placeholder: charts, data sources, filters and interactivity are Not implemented (as of this handover).
- Do not use the block on live pages; keep it to test or block-library pages.
- Any content in the block is removed by the code.
- A section containing only this block appears as empty space.

Common Authoring Mistakes

Error	Root Cause	Resolution
A gap appears between Performance insights and Read the full report	The block sits in its own section, whose padding remains	Delete the block and its section before publishing
Authors expect to enter KPI figures	The block has no Content tab, only Additional	Use Table or Cards for figures today

Troubleshooting

- **Symptoms:** The live page shows an unexplained blank band between two sections.
- **Cause:** An Interactive Dashboard block, empty and hidden, keeps its section and wrapper spacing.
- **Resolution:** Delete the block (and the empty section) in Universal Editor and republish the page.
- **Verification Steps:** On aem.live the two sections follow each other with the normal section spacing.

Desktop (>= 1200 px): Nothing is rendered: the block is empty and `display: none` (`.interactive-dashboard:empty`). Its wrapper and section remain, so a section containing only this block appears as empty space (the section's padding / margin).

Figure 25: Tablet rendering — The same draft page at 768 px: Performance insights with its line, blank space where the hidden Interactive Dashboard section is, then Read the full report and its line; no dashboard is visible. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/interactive-dashboard-tablet-view.jpg)

Screenshot Details — Tablet rendering

Item	Detail
Screenshot Name	`screenshots/interactive-dashboard-tablet-view.jpg`
Screenshot Purpose	Tablet rendering
Screen Description	The same draft page at 768 px: Performance insights with its line, blank space where the hidden Interactive Dashboard section is, then Read the full report and its line; no dashboard is visible.
Business Context	A tablet check of the draft annual report page to confirm the reserved dashboard position is invisible to visitors.
Author Objective	Check at 768 px that the Interactive Dashboard placeholder renders nothing.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Performance insights	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Key figures from our latest annual report, updated every quarter.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Interactive Dashboard	Yes	Adds the Interactive Dashboard to the page	Select the section in the content tree, choose Add (+) and pick Interactive Dashboard	Only components the section allows (section filter)
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
D	Title (Title)	Read the full report	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(E)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
F	Text (Text)	Download the report for the detailed figures by industry and region.	No	Card text	1–3 sentences; lists and links allowed	None
—	Screen width (Preview)	768 px (tablet)	—	Check on the preview (not stored in the content)	768 px (tablet)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The two heading-and-text groups with only white space between them.
- **Rendering behaviour:** The block CSS has no breakpoints: the empty block is display: none at every width; only the section spacing remains.
- **Publishing behaviour:** Not recommended for live pages; if the page must be published, check the section leaves no visible gap.

Business Rules

- Nothing renders on tablets, as on desktop and mobile.
- Padding and margin from the Additional tab have no visible effect on the hidden block.
- Hide block additionally hides the wrapper outside edit mode.
- The block is still listed in the data layer like any block.

Common Authoring Mistakes

Error	Root Cause	Resolution
Margin settings were used to close the gap	The block itself is not displayed, so its margins have no effect	Remove the block or its section
The empty band is reported as a layout bug	The block is a placeholder by design	Remove it from pages that are published

Troubleshooting

- **Symptoms:** On the tablet the gap between the sections is larger than elsewhere.
- **Cause:** The section holding only the hidden block keeps its padding.
- **Resolution:** Delete the section with the block, or turn Hide block on so the wrapper is hidden too.
- **Verification Steps:** Preview at 768 px: the gap matches the normal section spacing.

Tablet (600–1199 px): Same as desktop: nothing rendered; there are no breakpoints in the block CSS.

Figure 26: Mobile rendering — The draft page at 375 px: the H2 Performance insights and Key figures from our latest annual report, updated every quarter., then directly the H2 Read the full report and Download the report for the detailed figures by industry and region.; no dashboard appears. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/interactive-dashboard-mobile-view.jpg)

Screenshot Details — Mobile rendering

Item	Detail

Item	Detail
Screenshot Purpose	Mobile rendering
Screen Description	The draft page at 375 px: the H2 Performance insights and Key figures from our latest annual report, updated every quarter., then directly the H2 Read the full report and Download the report for the detailed figures by industry and region.; no dashboard appears.
Business Context	A mobile check of the draft annual report page, where an empty band would be most noticeable.
Author Objective	Check at 375 px that the Interactive Dashboard placeholder renders nothing.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Performance insights	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Key figures from our latest annual report, updated every quarter.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Interactive Dashboard	Yes	Adds the Interactive Dashboard to the page	Select the section in the content tree, choose Add (+) and pick Interactive Dashboard	Only components the section allows (section filter)
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
D	Title (Title)	Read the full report	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(E)	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
F	Text (Text)	Download the report for the detailed figures by industry and region.	No	Card text	1–3 sentences; lists and links allowed	None
—	Screen width (Preview)	375 px (mobile)	—	Check on the preview (not stored in the content)	375 px (mobile)	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** Two heading-and-text groups stacked in one column with section spacing between them.
- **Rendering behaviour:** Same as desktop and tablet: the emptied block is display: none; no breakpoint changes it.
- **Publishing behaviour:** Not recommended for live pages; remove the block before publishing.

Business Rules

- Nothing renders on mobile.
- The block reads no sheets, query index, metadata, taxonomy or placeholders.
- An Anchor ID link to the block does not scroll, because the block is hidden.
- Dashboard requirements are [To be confirmed: dashboard requirements, data source and design — owner: product owner].

Common Authoring Mistakes

Error	Root Cause	Resolution
A CTA links to #anchor-dashboard and does nothing	The anchored block is hidden	Do not link to the placeholder
The block was added to a site-global template page	Every page copied from the template gets an invisible block	Remove it from the template page

Troubleshooting

- **Symptoms:** A Teaser CTA to the dashboard anchor does not move the page.
- **Cause:** The Interactive Dashboard has the Anchor ID but is display: none.
- **Resolution:** Remove the link or point it to visible content such as the Read the full report section.
- **Verification Steps:** Tap the CTA on aem.page at 375 px: the page scrolls to the visible target.

Mobile (< 600 px): Same: nothing rendered.

6.31.3 Component Variations

The block has no style, layout or content options. Its two rendering modes depend on where it is viewed.

Variation 1 — Editor placeholder (Universal Editor edit mode)

Variation Name: Placeholder box (`html.adobe-ue-edit`).

Business Purpose: Let authors see, select, move or delete the reserved block.

Visual Example:

Steps — Editor placeholder: Universal Editor canvas with a dashed, rounded grey box at least 10rem tall, centred text “Interactive Dashboard (placeholder)”.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Interactive Dashboard
2	Universal Editor	Mode	Edit
3	Universal Editor canvas	Result	Dashed, rounded grey box (at least 10rem tall) with “Interactive Dashboard (placeholder)”

Use Cases: Draft layouts, block library pages.

Authoring Guidelines: Add the block; nothing can be configured except the Additional tab.

Business Rules: Shown only in Universal Editor **edit** mode (class `adobe-ue-edit` on `<html>`). Any authored content in the block is removed by the code.

Rendering Rules: `display: grid; place-items: center; min-height: 10rem;` dashed 2 px border (`--color-border-secondary`), 1rem radius, secondary text colour, body font size M; text from `attr(data-placeholder)` + ” (placeholder)” via `::before`.

Responsive Behaviour: The box fills the section width at every breakpoint; no breakpoints.

SEO Impact: None (editor only).

Accessibility Compliance: Editor-only visual; the label is CSS-generated content (not part of the published DOM text).

Variation 2 — Published and preview rendering (empty)

Variation Name: Empty block (`.interactive-dashboard:empty { display: none; }`).

Business Purpose: Ensure visitors never see an unfinished component.

Visual Example:

Steps — Published rendering: The `.aem.page` page with developer tools open, showing the empty `div.interactive-dashboard` with `display: none` and `data-placeholder`.

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Interactive Dashboard
2	AEM Sidekick	Preview	Open the page on .aem.page
3	Browser developer tools › Elements	Inspect	div.interactive-dashboard: empty, data-placeholder=“Interactive Dashboard”, display: none

Use Cases: Applies automatically on `.aem.page`, `.aem.live` and in Universal Editor preview mode.

Authoring Guidelines: None.

Business Rules: The block is emptied and hidden. Hide block, padding and margin have no visible effect (the block is not displayed).

Rendering Rules: Empty `div` with `data-placeholder="Interactive Dashboard"`.

Responsive Behaviour: Hidden at every breakpoint.

SEO Impact: None (no content).

Accessibility Compliance: Not exposed to assistive technology (`display: none`).

6.31.4 Authoring Experience

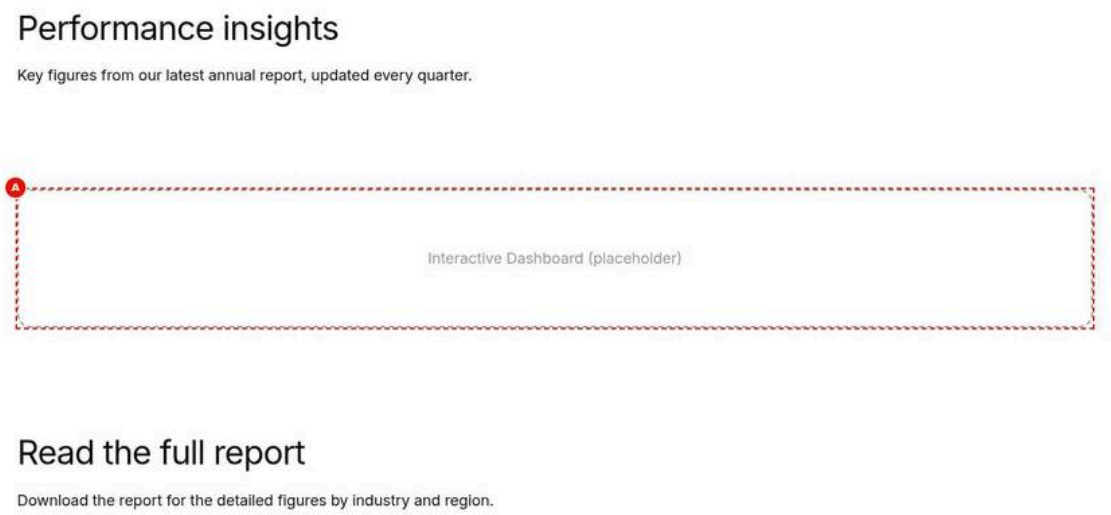

Figure 27: Universal Editor canvas — The draft page in Universal Editor edit mode at 1440 px: Performance insights and its line, then a dashed, rounded grey box with the centred text Interactive Dashboard (placeholder) and marker A, then Read the full report and its line. (Annotated preview in editor mode with sample content; letters as in the annotations list, not a Universal Editor screenshot; file screenshots/interactive-dashboard-authoring-view.jpg)

Screenshot Details — Universal Editor canvas

Item	Detail
Screenshot Name	`screenshots/interactive-dashboard-authoring-view.jpg`
Screenshot Purpose	Universal Editor canvas
Screen Description	The draft page in Universal Editor edit mode at 1440 px: Performance insights and its line, then a dashed, rounded grey box with the centred text Interactive Dashboard (placeholder) and marker A, then Read the full report and its line.
Business Context	Authors arranging the draft annual report page see the reserved dashboard position and can select, move or delete it.
Author Objective	Select the Interactive Dashboard block in edit mode and see its placeholder box and properties.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
—	Title (Title)	Performance insights	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	Key figures from our latest annual report, updated every quarter.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Interactive Dashboard	Yes	Adds the Interactive Dashboard to the page	Select the section in the content tree, choose Add (+) and pick Interactive Dashboard	Only components the section allows (section filter)
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
—	Title (Title)	Read the full report	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
—	Title Type (Title)	h2	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
—	Text (Text)	Download the report for the detailed figures by industry and region.	No	Card text	1–3 sentences; lists and links allowed	None
—	Mode (Universal Editor)	Edit; select the Interactive Dashboard block	No	—	—	None

All other fields keep their default values. The letters on this annotated preview follow the chapter's Annotations list.

Expected Page Output

- **Visual output:** A 10rem tall dashed box with a 1rem radius across the section width, the grey label centred, between the two text groups.
- **Rendering behaviour:** Only with the adobe-ue-edit class (edit mode) the empty block is shown as a grid with a dashed 2 px border and the label from data-placeholder plus (placeholder) via ::before; in preview mode it is hidden.
- **Publishing behaviour:** Edits are saved in AEM; publishing the page is not recommended while the block is on it.

Business Rules

- The properties panel has only the Additional tab: Anchor ID, Hide block, padding and margin.
- There is no Content tab and no Add menu for child items.
- The label is CSS-generated, hard-coded English, not from the placeholders sheet.
- With Hide block on, the placeholder is shown faded in edit mode.

Common Authoring Mistakes

Error	Root Cause	Resolution
The author looks for fields to configure the dashboard	The model has only the Additional tab	Nothing to configure; the dashboard is Not implemented (as of this handover)
The box is visible in the editor, so the author expects it live	The box is editor-only	Check aem.page: nothing is shown there

Troubleshooting

- **Symptoms:** The placeholder box disappears when switching the editor to Preview.
- **Cause:** The box is shown only in edit mode (adobe-ue-edit); preview mode renders the hidden block.
- **Resolution:** Expected; switch back to Edit to select the block.
- **Verification Steps:** In Edit mode the dashed box with Interactive Dashboard (placeholder) is selectable again.

Annotations:

- A = The placeholder box (the block itself; it has no authorable elements on the canvas)

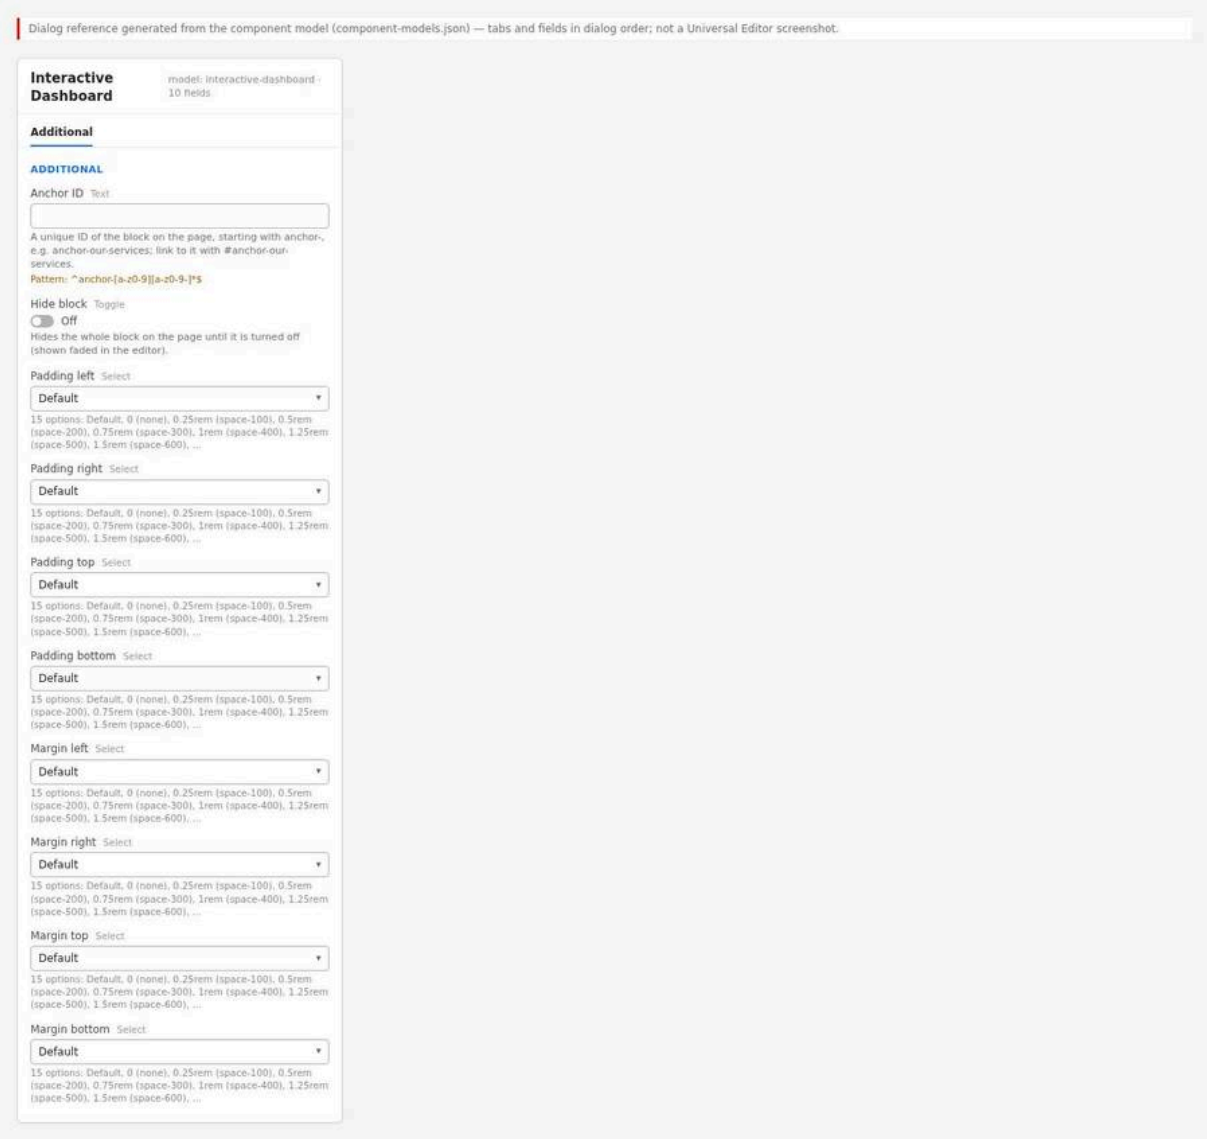

Figure 28: Properties panel — Properties panel of the block showing only the Additional tab. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/interactive-dashboard-properties-panel.jpg)

Properties panel: One tab, **Additional**: Anchor ID (text, validated `^anchor-[a-z0-9][a-z0-9-]*$`), Hide block (toggle), Padding left / right / top / bottom and Margin left / right / top / bottom (selects with the 15 spacing options). There is no Content tab and no **Add** menu for child items (the block has no filter).

6.31.5 Authoring Guide

Step 1 — Open the page in Universal Editor

Action: Open a test or block-library page in Universal Editor.

Expected Result: The page opens in edit mode.

Steps — Open the page: AEM Sites console with a block-library page selected and Edit highlighted.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	/content/tcs-corp/us/en/block-library
2	AEM Sites console	Select the page	Check the block-library page card

Step	Where	Field / control	Value / action
3	AEM Sites toolbar	Edit	Opens the page in Universal Editor (edit mode)

Step 2 — Add the block

Action: Select a section, **Add** (+) > **Interactive Dashboard**.

Expected Result: The dashed "Interactive Dashboard (placeholder)" box appears.

Steps — Add the block: Section Add menu with "Interactive Dashboard" highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Section	Select the section
2	Universal Editor › Content tree	Section › Add (+)	Interactive Dashboard

Step 3 — Fill the Additional tab (optional)

Action: Set an Anchor ID if the reserved position must be addressable later; leave the other options on their defaults.

Expected Result: The block id is set; no visible change on the site.

Steps — Additional tab: Additional tab with Anchor ID "anchor-dashboard".

Step	Where	Field / control	Value / action
1	Interactive Dashboard › Additional	Anchor ID	anchor-dashboard
2	Interactive Dashboard › Additional	Hide block / Padding / Margin	Keep the defaults

Step 4 — Preview

Action: Switch to Preview or open the `.aem.page` URL.

Expected Result: Nothing is shown where the block is.

Steps — Preview: The preview page without any dashboard content.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Preview	Switch to Preview (or open the .aem.page URL)
2	Preview	Check	Nothing shows where the block is; no unwanted gap

Step 5 — Do not publish to live

Action: Remove the block (or keep it only on unpublished block-library pages) before publishing a live page.

Expected Result: No empty section on the live page.

Steps — Remove before publishing: The block selected with the Delete action highlighted.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Interactive Dashboard	Select the block
2	Universal Editor toolbar	Delete	Remove the block before publishing a live page

Preview Process
Preview shows nothing for this block; confirm only that the surrounding layout has no unwanted gap.

Publishing Process
Not recommended. If a page containing the block must be published, confirm that the section does not leave visible empty space.

Validation Process
- ☐ The block is not on any live page (search the locale sites for it before go-live).
- ☐ If present on a draft, its section has other content or no visible gap.
- ☐ No Anchor ID links point to it from live content.

Rollback Process
Delete the block from the page and republish, or restore the previous page version.

6.31.6 Authorable Field Specification
Block model `interactive-dashboard` — Additional tab (the only tab)

Field Name	Field Type	Mandatory	Multi Value	Default Value	Business Purpose	Author Guidance	Validation Rules	Example Value
Anchor ID (`classes_anchor`)	text	No	No	(empty)	Id for future # links	Starts with `anchor-`	Enforced regExp `^anchor-[a-z0-9][a-z0-9-]*$`; message "Start with anchor-, then lowercase letters, digits and hyphens."; duplicates get `-2`, `-3`	anchor-dashboard
Hide block (`classes_hideblock`)	boolean	No	No	false	Hides the block and its wrapper	Not needed (already hidden)	None	false
Padding left (`classes_paddingleft`)	select	No	No	Default	Inner space left	Leave Default	Default, `pl-0` … `pl-3000` (15 options)	(Default)
Padding right (`classes_paddingright`)	select	No	No	Default	Inner space right	Leave Default	Default, `pr-0` … `pr-3000`	(Default)
Padding top (`classes_paddingtop`)	select	No	No	Default	Inner space top	Leave Default	Default, `pt-0` … `pt-3000`	(Default)
Padding bottom (`classes_paddingbottom`)	select	No	No	Default	Inner space bottom	Leave Default	Default, `pb-0` … `pb-3000`	(Default)
Margin left (`classes_marginleft`)	select	No	No	Default	Outer space left	Leave Default	Default, `ml-0` … `ml-3000`	(Default)
Margin right (`classes_marginright`)	select	No	No	Default	Outer space right	Leave Default	Default, `mr-0` … `mr-3000`	(Default)
Margin top (`classes_margintop`)	select	No	No	Default	Outer space top	Leave Default	Default, `mt-0` … `mt-3000`	(Default)
Margin bottom (`classes_marginbottom`)	select	No	No	Default	Outer space bottom	Leave Default	Default, `mb-0` … `mb-3000`	(Default)

The spacing options are the 15 values listed in 6.29.6.

Field details

- **Anchor ID** — Purpose: block id. Allowed values: `anchor-` + lower-case letters, digits, hyphens. Character limits: none enforced (Recommended up to 40). Business rules: set as the id by the block-options decorator; a link to it does not scroll, because the block is hidden. Dependency / visibility rules: none. Sample: `anchor-dashboard`.
- **Hide block** — Purpose: hide. Business rules: on the site the block is already hidden; the option additionally hides the wrapper (removing a possible wrapper gap) outside edit mode; in edit mode the placeholder is shown faded. Sample: off.
- **Padding left / right / top / bottom, Margin left / right / top / bottom** — Purpose: spacing. Allowed values: the 15 options. Business rules: visible only on the editor placeholder (the published block is `display: none`). Sample: Default.

There are no content fields and no item models.

6.31.7 Field Annotation Mapping

Marker	Field	Purpose
A	(block, no field)	The editor placeholder box; select it to reach the Additional tab

6.31.8 Component Specification

Attribute	Value
Component Name	Interactive Dashboard (`interactive-dashboard`)
Version	1.0 (placeholder)
Owner	[To be confirmed: product owner]; technical owner: development team
Dependencies	block-options and data-layer decorators; `styles/styles.css` tokens
Component Type	Block (placeholder; no items)
Supported Variants	None (editor placeholder; empty on the site)
Supported Templates	Any page technically; not recommended on live pages
Supported Metadata	None
Supported Tags	None
Supported Personalization	None
Caching Considerations	Only the page HTML (CDN); no data is loaded
Performance Considerations	Negligible: the block's JS and CSS are loaded when its section loads (two small files)
Accessibility Compliance	Not exposed on the site (`display: none`); future implementation must meet WCAG 2.1 AA (text alternatives for charts, keyboard operation, non-colour encoding)
SEO Compliance	No content

6.31.9 Input Model

Content Inputs: None (any rows are discarded).

Metadata Inputs: None.

Tags Inputs: None.

Page Context Inputs: Universal Editor edit mode (`html.adobe-ue-edit`) for the placeholder.

Query Inputs: None.

Manual Inputs: Additional tab only (as block classes).

Authored HTML received from AEM (simplified):

```
<div class="interactive-dashboard anchor-dashboard"></div>
```

6.31.10 Output Model

Rendered Output: The same `div`, emptied, with `data-placeholder="Interactive Dashboard"`; the block-options decorator turns an `anchor-…` class into its id.

Generated HTML:

```
<div class="interactive-dashboard anchor-dashboard block" id="anchor-dashboard"
  data-block-name="interactive-dashboard" data-block-status="loaded"
  data-placeholder="Interactive Dashboard"></div>
```

Generated JSON: None.

Generated Metadata: None.

Analytics Tracking: The data layer still adds a component entry (lazy phase):

```
{ "component": { "anchor-dashboard": {
  "@type": "tcs-corp/components/interactive-dashboard", "parentId": "page-…" } } }
```

No events (nothing to click).

Personalization Output: None.

Search Index Output: None.

Target Personalization Output: None. The empty block is added to the Adobe Client Data Layer as tcs-corp/components/interactive-dashboard like any block, but it has no content or interactions to personalise or track (Not implemented (as of this handover)).

6.31.11 Business Rules

1. The block removes all of its children (`block.replaceChildren()`); authored content is never shown.
2. It sets `data-placeholder="Interactive Dashboard"`.
3. On the site and in Universal Editor preview mode the empty block is `display: none`.
4. In Universal Editor edit mode it is a dashed box, at least 10rem tall, labelled "Interactive Dashboard (placeholder)" (the label text is fixed in CSS / JS, not a placeholder key, and is not translated).
5. The model has only the Additional tab; there is no filter, so no child items can be added.
6. The Anchor ID becomes the block id (unique on the page); links to it do not scroll.
7. Hide block hides the block's wrapper too (outside edit mode); in edit mode the placeholder is faded with a dashed outline.
8. The block is added to the data layer like any other block.

6.31.12 Author Best Practices

Recommended Content Length: Not applicable.

Image Dimensions: Not applicable.

CTA Writing Guidelines: Not applicable.

Accessibility Guidelines: Do not reference the block from live content (for example "see the dashboard below").

SEO Guidelines: Do not publish pages that rely on the dashboard for content.

Metadata Guidelines: Not applicable.

Taxonomy Guidelines: Not applicable.

Localization Guidelines: Not applicable; the placeholder label is English and editor-only.

6.31.13 Troubleshooting Guide

Issue 1 — The dashboard does not appear on the published page
Symptoms: Nothing is visible where the block was added.

Root Cause: By design: the block is a placeholder and renders nothing.

Diagnosis Steps: Inspect the page: an empty `div.interactive-dashboard` with `data-placeholder`.

Resolution Steps: Remove the block; use Table, Cards or Embed for current needs.

Validation Steps: The page shows the intended alternative content.

Preventive Measures: Communicate the block's status to authors (the Authoring Guide lists it as a placeholder).

Issue 2 — The placeholder box is not visible in Universal Editor
Symptoms: The block cannot be found on the canvas.

Root Cause: Universal Editor is in Preview mode (the box is shown only in edit mode).

Diagnosis Steps: Check the editor mode toggle.

Resolution Steps: Switch to edit mode, or select the block in the content tree.

Validation Steps: The dashed box appears.

Preventive Measures: Use the content tree to locate hidden or empty blocks.

Issue 3 — Authored text disappears
Symptoms: Content pasted into the block is gone.

Root Cause: The code empties the block; the model has no content fields.

Diagnosis Steps: Check the model: only the Additional tab.

Resolution Steps: Place content in other blocks or default content.

Validation Steps: Content shows in the chosen block.

Preventive Measures: Do not use the placeholder for content.

Issue 4 — An empty gap appears on the page
Symptoms: Extra white space in a section.

Root Cause: The section (or its wrapper) remains with its own spacing although the block is hidden.

Diagnosis Steps: Inspect the section containing the block.

Resolution Steps: Delete the block, or turn on Hide block (hides the wrapper), or remove the empty section.

Validation Steps: The gap is gone on `.aem.page`.

Preventive Measures: Validation checklist in 6.31.5.

Issue 5 — A link to the dashboard anchor does not scroll
Symptoms: `#anchor-dashboard` links do nothing.

Root Cause: The target exists but is `display: none`.

Diagnosis Steps: Check the target id in the page.

Resolution Steps: Remove such links until the dashboard exists.

Validation Steps: No links to the anchor remain.

Preventive Measures: Do not link to placeholder blocks.

Issue 6 — Analytics reports an "interactive-dashboard" component

Symptoms: The data layer contains a component entry for the dashboard.

Root Cause: Every block is tracked, including empty ones.

Diagnosis Steps: Inspect `window.adobeDataLayer`.

Resolution Steps: Remove the block from the page; or ignore the component type in reports.

Validation Steps: The entry no longer appears.

Preventive Measures: Keep the placeholder off live pages.

6.31.14 Support Runbook

Monitoring Requirements

None. Optionally check before releases that no live page contains the block (search the AEM content or the published HTML for `interactive-dashboard`).

Logs

The block emits no console messages and makes no requests. Admin API / Sidekick status and AEM author publication logs apply as for any page.

Common Errors

Error	Cause	Fix
Nothing on the page	Placeholder by design	Remove the block
Box missing in the editor	Preview mode	Switch to edit mode
Empty gap	Section remains	Delete the block or section; Hide block
Anchor link does nothing	Target hidden	Remove the link

Escalation Matrix

Level	Who	Checks
L1	Author support / content lead	Block present on live pages? Remove it
L2	AMS / site admin	Publish status; content audit for the block
L3	Development team	Future implementation (requirements, data source, design)
Adobe Support	Adobe	Not expected (no platform features used beyond standard blocks)

Recovery Procedures

Delete the block and republish, or restore a previous page version.

Health Checks

Not applicable beyond confirming that live pages do not include the block.

Operational Procedures
When the dashboard is commissioned: define requirements, data source and design ([To be confirmed — owner: product owner]); the development team replaces the placeholder code and model and updates this chapter.

Known Limitations
- Placeholder only: no content model, no rendering, no data, no interactivity (Not implemented as of this handover).
- The editor label is fixed English text.
- The block is still tracked in the data layer and its section may leave empty space.

6.31.15 Common Authoring Mistakes
The mistakes seen most often with this component (each screenshot above also lists the mistakes of its example).

Error	Root Cause	Resolution
A blank band appears on the live page	The block's section keeps its spacing	Delete the block and its section and republish
Authors look for dashboard fields	The model has only the Additional tab	Nothing to configure; the dashboard is Not implemented (as of this handover)
The box shows in the editor but not on aem.page	The placeholder is editor-only by design	Expected behaviour
A link to #anchor-dashboard does not scroll	The anchored block is display: none	Link to visible content instead
Padding or margin settings change nothing on the site	The block is not displayed	Remove the block, or Hide block to hide the wrapper
Content pasted into the block disappears	The code removes any content of the block	Use another block for the content

6.31.16 Author Quick Reference Guide
Mandatory Fields
- None: every field has a default or is optional.

Recommended Fields
- None — keep the block off live pages; it renders nothing

Optional Fields
- Anchor ID — reserves an id for future links (a link to it does not scroll today)
- Hide block — also hides the wrapper outside edit mode
- Padding left / right / top / bottom — visible only on the editor placeholder
- Margin left / right / top / bottom — visible only on the editor placeholder

Authoring Checklist
1. Use the block only on test or block-library pages
2. Add it from a section's Add (+) menu; the dashed Interactive Dashboard (placeholder) box appears
3. Do not expect fields: the model has only the Additional tab
4. Do not add it to site-global templates
5. Use Table, Table List or Cards for figures that must be shown today
6. Remove the block before publishing a live page

Pre-Publish Checklist

1. Search the locale pages for the block before go-live
2. Preview on aem.page and check the section leaves no unwanted gap
3. Check no CTA or Anchor List links point to its Anchor ID
4. If the block must stay on a draft, turn Hide block on
5. Delete an otherwise empty section that holds only the block

Post-Publish Validation Checklist

1. Open the page on aem.live and check no blank band appears
2. Check the data layer lists no unexpected interactive-dashboard component on live pages
3. If a gap appears, delete the block and republish the page
4. Restore the previous page version if removing the block broke the layout
5. Report dashboard requests to the product owner for requirements

6.31.17 Component Execution Example

Business example: Reserved dashboard position on a draft annual report page.

Example Values Entered:

Field	Value
Component (Section › Add (+))	Title
Title (Title)	Performance insights
Title Type (Title)	h2
Component (Section › Add (+))	Text
Text (Text)	Key figures from our latest annual report, updated every quarter.
Component (Section › Add (+))	Interactive Dashboard
Component (Section › Add (+))	Title
Title (Title)	Read the full report
Title Type (Title)	h2
Component (Section › Add (+))	Text
Text (Text)	Download the report for the detailed figures by industry and region.

All other fields keep their default values.

Rendered Result:

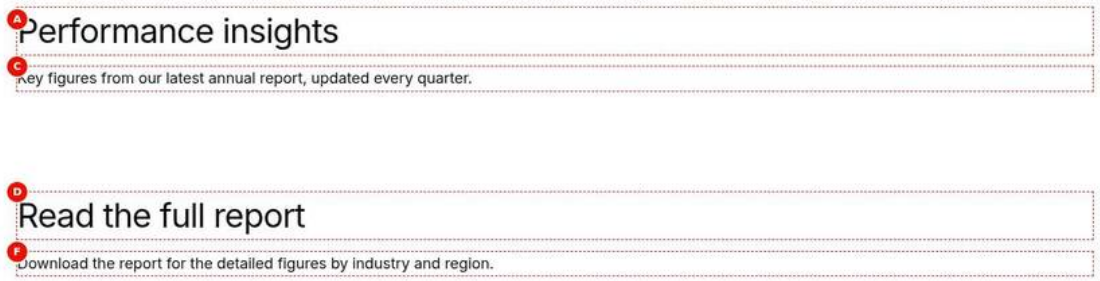

Figure 29: Execution example — A page on aem.page at 1440 px: the H2 Performance insights with the line Key figures from our latest annual report, updated every quarter., empty space where the Interactive Dashboard section is, then the H2 Read the full report and its line about downloading the report. (Sample content on the preview; callout letters as in the Field Entry Table of this screenshot; file screenshots/interactive-dashboard-desktop-view.jpg)

Author Notes

- The block is added in its own section between Performance insights and Read the full report
- There are no fields to fill; only the Additional tab exists
- In edit mode the position shows as a dashed Interactive Dashboard (placeholder) box

Business Notes

- The page layout can be drafted before the dashboard is designed
- Visitors see nothing, so the page must not be published with the block
- Requirements are [To be confirmed: dashboard requirements, data source and design — owner: product owner]

Technical Notes

- decorate() empties the block and sets data-placeholder to Interactive Dashboard
- .interactive-dashboard:empty is display: none; only .adobe-ue-edit shows the 10rem dashed box
- The wrapper and section remain, so a section with only this block becomes empty space

Part 7 — Taxonomy Documentation

This part describes how tags (the taxonomy) are structured, published, resolved into labels and used by the TCS Corporate Website. It covers the AEM side (the Tagging console, the taxonomy page per locale) and the Edge Delivery side (the published `taxonomy.json`, the query index, the blocks that read tags and the Adobe Client Data Layer).

> **Note:** Everything in this part was checked against the code in the `main` branch (`utils/taxonomy.js`, `utils/tags.js`, `utils/metadata.js`, `utils/query-index.js`, `blocks/list/list-data.js`, `blocks/filter-list/filter-list.js`, `blocks/teaser/teaser.js`, `blocks/page-header/page-header.js`, `blocks/cards/cards.js`, `blocks/conversation-canvas/conversation-canvas.js`, `decorators/tag-decorator.js`, `decorators/card-list-decorator.js`, `decorators/data-layer-decorator.js`, `helix-query.yaml`, `paths.json`) and, where stated, against the published site on 13 October 2026.

7.1 Taxonomy Structure

7.1.1 AEM Tags and Tag IDs

Tags are created and maintained in AEM as a Cloud Service, in the **Tagging** console (Tools → General → Tagging). Every tag has:

Property	Description	Example
Namespace	The top level of a tag tree. Its ID ends with a colon.	`tcs-corp:`
Tag ID	The namespace, a colon and the tag's path below the namespace. This is the value stored on pages and in block fields.	`tcs-corp:industry/banking`
Title	The label shown to visitors. Can be translated per language in AEM (tag localisation).	`Banking`
Path	The repository location of the tag (below `/content/cq:tags`).	`/content/cq:tags/tcs-corp/industry/banking`
Description	Optional text for authors (not used by the site code).	`Banking and financial services`

The website code works **only with tag IDs** and turns them into labels at runtime. Universal Editor also stores tag IDs: every tag field in the block models is an `aem-tag` field, which saves the selected tag IDs (for example `tcs-corp:region/europe`) in the component's properties.

Tag fields that exist in the component models (verified in `blocks/*/_*.json`):

Component	Field (name)	Model file	Multi value	Visible when
Teaser	Tags (`tags`)	`blocks/teaser/_teaser.json`	Yes	Display Tags is on
List	Tags (`tags`)	`blocks/list/_list.json`	Yes	List source = Tagged pages (`tags`)
List Item	Tags (`tags`), "Overrides the page tags."	`blocks/list/_list.json`	Yes	Always

Component	Field (name)	Model file	Multi value	Visible when
Card (Cards block)	Tags (`tags`)	`blocks/cards/_cards.json`	Yes	Always
Filter List	Primary filter category (`primaryCategory`)	`blocks/filter-list/_filter-list.json`	No	Always (Filters tab)
Filter List	Primary filter tags → Tag Id (`tagId`)	`blocks/filter-list/_filter-list.json`	Container, multi	Always (Filters tab)
Filter List	Advanced filter categories → Taxonomy root (`taxonomyRoot`)	`blocks/filter-list/_filter-list.json`	Container, multi	Always (Advanced tab)

> **Note:** None of the `aem-tag` fields restricts the tag picker to a namespace or root path: authors can pick any tag of any namespace. Keeping to the agreed namespaces is a governance rule (see 7.4), not something the editor enforces.

The **page tags** are not a field of the Universal Editor page properties model (`models/_page.json` has Title, Description, Keywords, Page Type, Navigation, Footer and 404 Page only). Page tags are set either in the standard AEM page properties (Sites console → Properties → Basic → Tags, stored as `cq:tags`) or in a `tags` column of the locale's bulk metadata sheet. See 7.8.1 for how the code reads them and an open point about the published meta name.

7.1.2 Namespaces in Use

Two sets of tag IDs appear in the project, and they are not the same:

Where	Namespace and tags	Status
Published taxonomy `/en/taxonomy.json` (checked 13 October 2026)	`tcs-corp:` (title "TCS Corp") with three trees: `tcs-corp:content-type` (Case Study, Article, Blog, Press Release, Whitepaper, Research, Webinar, Event), `tcs-corp:industry` (no child tags yet), `tcs-corp:region` (Americas, Europe, Asia Pacific, Middle East Africa)	The real taxonomy in AEM
Code comments, field descriptions and unit tests	`tcs:` — `tcs:industry`, `tcs-corp:industry/banking`, `tcs-corp:topic/ai`, `tcs-corp:topic/ai/genai`, `tcs-corp:topic/cloud`, `tcs-corp:topic/cloud`, `tcs-corp:topic/artificial-intelligence`	Illustrative examples only (test fixtures in `test/list/fixtures.mjs`, descriptions such as "A tag root, e.g. tcs:industry")

The published `tcs-corp:` tree (16 rows) is:

```
tcs-corp:                              TCS Corp
├── tcs-corp:content-type              Content Type
│   ├── tcs-corp:content-type/article       Article
│   ├── tcs-corp:content-type/blog          Blog
│   ├── tcs-corp:content-type/case-study    Case Study
│   ├── tcs-corp:content-type/event         Event
│   ├── tcs-corp:content-type/press-release Press Release
│   ├── tcs-corp:content-type/research      Research
│   ├── tcs-corp:content-type/webinar       Webinar
│   └── tcs-corp:content-type/whitepaper    Whitepaper
├── tcs-corp:industry                  Industry          (no child tags yet)
└── tcs-corp:region                    Region
    ├── tcs-corp:region/americas            Americas
```

```
    ├── tcs-corp:region/asia-pacific          Asia Pacific
    ├── tcs-corp:region/europe                Europe
    └── tcs-corp:region/middle-east-africa    Middle East Africa
```

> **Important:** When an author follows a field description literally (for example types `tcs:industry` as a Filter List Primary filter category), nothing matches, because the real namespace is `tcs-corp:`. Always pick tags with the tag picker instead of typing IDs.

The code is namespace-agnostic. A value is treated as a tag ID when:

- `utils/taxonomy.js` `resolveTags`: it contains a colon or a slash (`/[:/]/`);
- `blocks/filter-list/filter-list.js` `isTagId`: it matches `^[\w-]+:[\w/-]*$` (namespace of letters, digits, _ or -, a colon, then an optional path), so `tcs-corp:industry/banking` and the bare namespace `tcs-corp:` both qualify.

7.1.3 The Taxonomy Page and /{locale}/taxonomy.json

AEM exposes tag titles to Edge Delivery Services through a **taxonomy page**: a page created from the AEM *Taxonomy* template whose page properties select the tags or namespaces to include. The page content is generated by AEM from the selected tags and is read-only. When published, it is delivered as a spreadsheet JSON with the columns `tag` and `title`.

Each of the 13 locale sites has its own taxonomy page at `/content/tcs-corp/{country}/{language}/taxonomy`. `paths.json` (generated by `npm run build:paths` from `LOCALES` in `utils/site.js`) maps each of them to a JSON resource:

AEM taxonomy page	Published as
/content/tcs-corp/us/en/taxonomy	/en/taxonomy.json
/content/tcs-corp/de/de-de/taxonomy	/de-de/taxonomy.json
/content/tcs-corp/fr/fr-fr/taxonomy	/fr-fr/taxonomy.json
/content/tcs-corp/ca/fr-ca/taxonomy	/fr-ca/taxonomy.json
/content/tcs-corp/es/es-es/taxonomy	/es-es/taxonomy.json
/content/tcs-corp/pt/pt-pt/taxonomy	/pt-pt/taxonomy.json
/content/tcs-corp/nl/nl-nl/taxonomy	/nl-nl/taxonomy.json
/content/tcs-corp/se/sv-se/taxonomy	/sv-se/taxonomy.json
/content/tcs-corp/dk/da-dk/taxonomy	/da-dk/taxonomy.json
/content/tcs-corp/no/no-no/taxonomy	/no-no/taxonomy.json
/content/tcs-corp/cn/zh-cn/taxonomy	/zh-cn/taxonomy.json
/content/tcs-corp/jp/ja-jp/taxonomy	/ja-jp/taxonomy.json
/content/tcs-corp/kr/ko-kr/taxonomy	/ko-kr/taxonomy.json

A published taxonomy row looks like this (from `/en/taxonomy.json`):

```
{
  "total": 16,
```

```
  "offset": 0,
  "limit": 16,
  "data": [
    { "tag": "tcs-corp:", "title": "TCS Corp" },
    { "tag": "tcs-corp:region", "title": "Region" },
    { "tag": "tcs-corp:region/europe", "title": "Europe" }
  ],
  "columns": ["tag", "title"],
  ":type": "sheet"
}
```

> **Note:** On 13 October 2026 only `/en/taxonomy.json` was published; the other 12 locale taxonomy URLs returned 404. Until a locale's taxonomy page is published, its pages show labels derived from the tag IDs (see 7.1.4). [To be confirmed: publication of the 12 remaining locale taxonomy pages — owner: content operations lead]

Steps — Configuring a locale taxonomy page: AEM Sites console, page properties of `/content/tcs-corp/us/en/taxonomy`, with the Tags field listing the `tcs-corp:` namespace (or the `content-type`, `industry` and `region` trees) that the taxonomy publishes.

Step	Where	Field / control	Value / action
1	AEM Sites console	Select	/content/tcs-corp/us/en/taxonomy
2	AEM Sites console toolbar	Properties	Open Page Properties
3	Page Properties › Basic	Tags	TCS Corp (tcs-corp:), or the Content Type, Industry and Region trees
4	Page Properties	Save & Close	Save, then Quick Publish the taxonomy page

7.1.4 How Tag Labels Are Resolved

Labels are resolved in the browser by `utils/taxonomy.js` and `utils/tags.js`:

```
tag values (IDs or titles)
   |  e.g. from the page head, a block field or the query index
   v
resolveTags(values)                                    utils/taxonomy.js
   |
   +-- loadTaxonomy()  -> fetch {locale root}/taxonomy.json   (once per page view)
   |      rows of the language sheet (multi-sheet) or the only sheet
   |      Map: tag ID (trimmed) -> title (trimmed)
   |
   +-- for each value:
         1. Map has a non-empty title       -> { id, label: title }
         2. value contains ":" or "/"       -> parseTag(value)        utils/tags.js
              last path segment, "-" and "_" become spaces, first letter upper case
              tcs-corp:industry/financial-services -> "Financial services"
         3. otherwise (an authored title)   -> { id: value, label: value }
```

Precise behaviour (from the code):

1. `loadTaxonomy()` fetches `localeSheetPath('taxonomy')`, that is `{root}/taxonomy.json` of the current locale (`/de-de/taxonomy.json` on a German page; `/en/taxonomy.json` on pages outside a locale, such as

drafts). The request is made **once per page view**: the promise is kept in a module variable and shared by every block on the page.
2. Rows without a `tag` value are ignored. Tag IDs and titles are trimmed.
3. A non-OK response (404, 500) or a network error gives an **empty map** — the page still renders, with ID-derived labels. No error is shown to the visitor.
4. A taxonomy row with an empty `title` counts as missing (the ID-derived label is used).
5. `parseTag` uses only the **last segment** of the ID: `tcs-corp:content-type/case-study` becomes "Case study" (sentence case, not the AEM title "Case Study"). A bare namespace (`tcs-corp:`) gives an empty label.
6. Values that contain neither `:` nor `/` are treated as titles typed by an author and shown as typed.
7. The Filter List keeps a second fallback: `labels.get(tag) || taxonomy.get(tag) || tag`. The List and Cards use `labels.get(tag) || tag`. Because `resolveTags` always returns a label, these fallbacks only apply in edge cases (for example an empty ID-derived label).

7.1.5 Language Sheets and Fallbacks

When tag titles are translated in AEM, the taxonomy JSON can contain one sheet per language (a multi-sheet JSON, `":type": "multi-sheet"`). `utils/site.js` `sheetRows(json, sheet)` picks:

1. the sheet named after the locale's **ISO 639-1 language** (`getLocale().language`: `en`, `de`, `fr`, `es`, `pt`, `nl`, `sv`, `da`, `no`, `zh`, `ja`, `ko`) — `fr-fr` and `fr-ca` both use `fr`;
2. else the sheet named `default`;
3. else the first sheet listed in `:names`.

For a single-sheet JSON (the current state of `/en/taxonomy.json`) its `data` rows are used.

Situation	Label shown
Tag in the locale's taxonomy, title present (language sheet or single sheet)	The taxonomy title, e.g. "Asia Pacific"
Multi-sheet taxonomy without the language sheet	The `default` sheet's title, else the first sheet's
Tag not in the taxonomy (not included in the taxonomy page, or deleted)	ID-derived label, e.g. "Middle east africa"
Taxonomy JSON not published (404) or not reachable	ID-derived label for every tag
Authored text without `:` or `/`	The text as authored

> **Note:** The code requests `taxonomy.json` without a `sheet` parameter and relies on the response containing the language sheets. The aem.live documentation describes reading a language with `?sheet={language}`. When translated tag titles are introduced, check the published JSON of a locale taxonomy page: if it returns only one sheet, the translated titles will not be picked up. [To be confirmed: shape of a translated taxonomy JSON — owner: development team]

> **Tip:** Because each locale has its own taxonomy page, a locale can also show translated labels by publishing a taxonomy whose single sheet already holds the titles of its language. [To be confirmed: which approach AEM produces for this site — owner: development team]

7.1.6 Reading Tag Values from Fields

`utils/tags.js` `readTagValues(cell)` reads a multi-value tag property as Universal Editor renders it: the text of each `<li>` when the values are a list, else the cell text split on commas. Values are trimmed and empty values

dropped. The result is the list of tag IDs **as authored** (no validation, no de-duplication). `readTags(cell)` returns them with ID-derived labels (no taxonomy lookup); it is exported but not used by any block today.

Page tags are read by `utils/metadata.js` `getPageTags()`: the `content` of every `<meta property="article:tag">` in the page head, else a comma-separated `<meta name="tags">`; trimmed, empty values removed, **de-duplicated**.

7.2 Tag Hierarchy

7.2.1 The Hierarchy Model

AEM tags form trees: a namespace contains tags, which can contain child tags to any depth. The tag ID encodes the hierarchy as a path: `tcs-corp:region/europe` is a child of `tcs-corp:region`, which is a child of the namespace `tcs-corp:`. The code derives parent-child relationships **only from the ID string** — it never reads the AEM tag tree, the taxonomy order or tag properties.

7.2.2 Child Tags Match Parent Filters (hasTag)

The List and the Filter List both use the same rule (two identical implementations):

```
// blocks/list/list-data.js (exported, unit tested)
export const hasTag = (tags, tag) => tags.some((id) => id === tag ||
id.startsWith(`${tag}/`));

// blocks/filter-list/filter-list.js
const hasTag = (page, tag) => page.tags.some((id) => id === tag || id.startsWith(`${tag}/
`));
```

A page matches a filter tag when it carries the tag itself **or any descendant** of it, at any depth. The comparison is exact and case-sensitive on the ID; the slash boundary prevents partial matches (`tcs-corp:region/europe` does not match `tcs-corp:region/euro`).

Filter tag	Page tag	Match?	Why
`tcs-corp:region`	`tcs-corp:region/europe`	Yes	Child tag
`tcs-corp:industry`	`tcs-corp:industry/banking/retail`	Yes	Grandchild tag (any depth)
`tcs-corp:region/europe`	`tcs-corp:region`	No	A parent does not match a child filter
`tcs-corp:region/europe`	`tcs-corp:region/europe`	Yes	Same tag
`tcs-corp:region/euro`	`tcs-corp:region/europe`	No	Not a path boundary
`tcs-corp:content-type`	`tcs-corp:region/europe`	No	Different tree
`tcs-corp:`	`tcs-corp:region/europe`	No	`tcs-corp:/` is not a prefix of `tcs-corp:region/…`; a namespace alone matches only pages tagged with the bare namespace

> **Warning:** Selecting a bare namespace (for example `tcs-corp:`) as a List tag or a Filter List Primary filter tag does **not** match the tags below it, because the code looks for `tcs-corp:/`. Use a tag tree root such as `tcs-corp:region` instead.

7.2.3 Where the Hierarchy Is Used

Feature	Rule	Code
List, source Tagged pages, Match = Any	A page matches when it has at least one of the List's tags or a descendant of one	`applyTagMatching` in `blocks/list/list-data.js`
List, source Tagged pages, Match = All	A page matches when, for every List tag, it has that tag or a descendant	`applyTagMatching`
Filter List pills (single select)	Pages with the selected pill's tag or a descendant	`matches()` in `filter-list.js`
Filter List pills (Allow multi select on)	Pages that match **every** selected pill (AND)	`matches()`
Filter List Advanced filter options, Filter logic AND / OR	Pages with every / any checked option tag or a descendant	`matches()`
Filter List pills from Primary filter category	The pills are all descendants (any depth) of the category used by the listed pages: tags that start with `{category}/`	`used(root)` in `filter-list.js`
Filter List Advanced filter category options	The options are the descendants of the Taxonomy root used by the listed pages, sorted by label	`used(root)`

The unit tests (`test/list/list-data.test.mjs`, fixtures in `test/list/fixtures.mjs`) confirm the behaviour: `tcs-corp:topic/ai` matches a page tagged `tcs-corp:topic/ai/genai`; "all" of `tcs-corp:topic/ai` and `tcs-corp:topic/cloud` matches only the page carrying both; a page with `hide-in-nav = yes` is never listed even if its tags match; no tags, or tags with no matches, give no cards.

7.3 Business Taxonomy

7.3.1 Current State

The only namespace published is `tcs-corp:` with the trees `content-type`, `industry` (empty) and `region` (see 7.1.2). No topic, service or audience tags exist yet.

> **Note:** "Content type" exists twice in the implementation: as a **tag tree** (`tcs-corp:content-type/*`, usable in the List and the Filter List tag filters and shown as tag labels) and as the **`content-type` metadata** (free text, shown as the card eyebrow / meta and the Page Header eyebrow, filtered by the Filter List *Content types* field). The two are not connected by code. Keep them aligned: use the taxonomy title (for example `Case Study`) as the `content-type` metadata value and tag the page with the matching `tcs-corp:content-type/…` tag.

7.3.2 Proposed Business Taxonomy

[To be confirmed: business taxonomy (namespaces, trees and tag lists) — owner: digital marketing / content strategy lead]

The following structure is **proposed**. It stays inside the existing `tcs-corp:` namespace, uses lower-case, hyphenated tag names (as the published tags do), and keeps every tree two or three levels deep so that the parent-child matching in 7.2 is useful.

Tree (tag root)	Purpose	Proposed child tags (examples)	Used by
`tcs-corp:industry`	The industries TCS serves	`banking`, `financial-services`, `insurance`, `capital-markets`, `retail`, `consumer-packaged-goods`, `manufacturing`, `life-sciences`, `healthcare`, `communications-media`, `energy-utilities`, `travel-hospitality`, `public-services`	Filter List (Primary filter category, Advanced category "Industry"); List tag source; Teaser / Page Header labels
`tcs-corp:service`	Service lines and offerings	`consulting`, `cloud`, `cybersecurity`, `data-analytics`, `artificial-intelligence`, `enterprise-solutions`, `iot-digital-engineering`, `cognitive-business-operations`	Filter List Advanced category "Service"; List tag source
`tcs-corp:topic`	Editorial themes across industries	`agentic-ai`, `generative-ai`, `sustainability`, `future-of-work`, `customer-experience`; children allowed, e.g. `artificial-intelligence/generative-ai`	Filter List pills; List "related insights" by topic
`tcs-corp:content-type`	The kind of content (exists)	`article`, `blog`, `case-study`, `event`, `press-release`, `research`, `webinar`, `whitepaper`; proposed additions `report`, `podcast`, `video`, `news` (to align with the Filter List Content types options)	Filter List Advanced category "Content type"; kept aligned with the `content-type` metadata
`tcs-corp:region`	Geography of the content (exists)	`americas`, `europe`, `asia-pacific`, `middle-east-africa`; children for countries if needed, e.g. `europe/uk`	Filter List Advanced category "Region"; List by region
`tcs-corp:audience`	Target audience (optional)	`cxo`, `it-leaders`, `investors`, `analysts`, `job-seekers`, `media`	Future personalisation; List / Filter List
`tcs-corp:campaign`	Marketing campaigns (optional, time-bound)	One tag per campaign, e.g. `campaign/agentic-bank-2026`	Campaign landing lists; to be retired after the campaign (see 7.6)

> **Note:** The `region` tag tree and the `region` **metadata** (free text used by the press-release template to filter Media Contacts) are different things. If both are used, keep their values consistent (see 8.2, `region`).

7.3.3 Tags Versus Metadata

Need	Use a tag	Use metadata
Filter or list pages by a classification	Yes (List Tagged pages, Filter List pills and Advanced filter)	Only page type and content type (Filter List Page types / Content types)
Translated label shown to visitors	Yes (taxonomy titles per locale)	No (metadata is shown as authored)
Hierarchical matching (parent matches children)	Yes	No
Single value per page that drives layout or code	No	Yes (`page-type`, `content-type`, `featured`, `priority`, `hide-in-nav`)
Values read by templates (author, region of media contacts)	No	Yes (`author-id`, `region`)

7.4 Tag Governance

Tag governance keeps the taxonomy small, consistent across the 13 locales and safe to change. Nothing below is enforced by the code or the models unless marked **Enforced**.

7.4.1 Governance Rules

No.	Rule	Type	Reason
1	Create tags only in the `tcs-corp:` namespace (no new namespaces without approval).	Recommended	The code and the taxonomy pages are set up for one namespace; the tag picker does not restrict namespaces.
2	Tag names (the last ID segment) are lower case, words separated by hyphens, ASCII only, no spaces.	Recommended	`parseTag` builds fallback labels from the name; Filter List `isTagId` accepts only `[\w-]` in the namespace and `[\w/-]` in the path.
3	Every tag has a Title in English; titles are translated for every locale language before the tag is used on that locale.	Recommended	Without a title, visitors see the ID-derived label.
4	Pick tags with the tag picker; never type IDs into fields.	Recommended	Typed IDs (for example the `tcs:` examples in field descriptions) match nothing.
5	A page carries the most specific tags that apply, not their parents as well.	Recommended	Parents match their children automatically (7.2); duplicates add noise to card labels.
6	At most 3 tags per page should be "display" tags (the first ones in the tag list).	Recommended	List and Cards show up to 3 tags on image and feature cards; the Filter List shows up to 2 (`MAX_CARD_TAGS`). **Enforced** truncation in code.
7	Tag trees stay at most 3 levels below the namespace.	Recommended	Deep trees are hard to curate and to translate; matching works at any depth.
8	Changes to tag IDs (move, rename of the name, merge, delete) go through a change request (7.6).	Recommended	IDs are stored on pages, in block fields and in the query index.
9	After any tag or title change, republish the taxonomy page of every affected locale.	Recommended	The taxonomy JSON only changes when its page is published.
10	The taxonomy page of each locale includes the whole `tcs-corp:` namespace (or every tree in use).	Recommended	A tag missing from the taxonomy page has no title on the site.
11	`content-type` metadata values match the `tcs-corp:content-type` titles.	Recommended	Keeps eyebrows, filters and tag labels consistent (7.3.1).
12	Deprecated tags are not removed until no page, block field or index row uses them.	Recommended	See 7.6.4.

7.4.2 Review Cadence

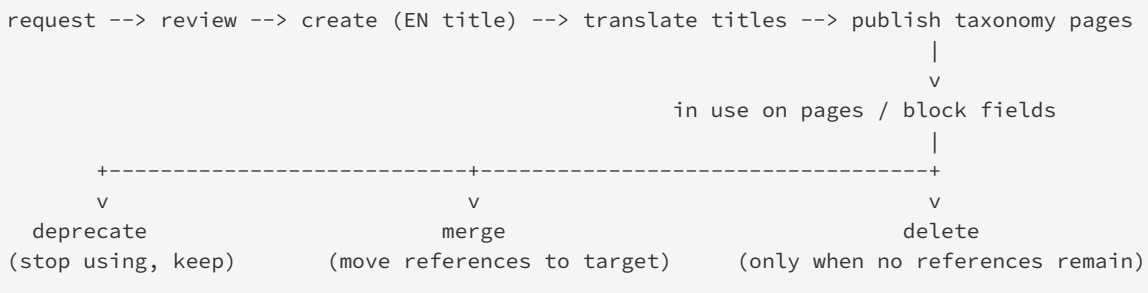
Activity	Frequency	Responsible
Review new tag requests	[To be confirmed: frequency — owner: taxonomy owner]	Taxonomy owner
Check for unused and duplicate tags (AEM Tagging console usage count, query index)	[To be confirmed: frequency — owner: taxonomy owner]	Taxonomy owner with content operations
Translation check of tag titles for 13 locales	Before a tag is used on a locale	Localisation team
Republish all locale taxonomy pages	After every taxonomy change	Content operations

7.5 Tag Ownership

Role	Responsibilities	Named owner
Taxonomy owner	Approves new tags, structure changes, merges and deletions; keeps the business taxonomy (7.3)	[To be confirmed: taxonomy owner — owner: digital marketing lead]
Tree owners (industry, service, topic, content type, region)	Curate the tags of their tree; propose changes	[To be confirmed: tree owners per business unit — owner: taxonomy owner]
Localisation team	Translates tag titles for each locale language in AEM	[To be confirmed: localisation contact — owner: content operations lead]
Content operations	Creates tags in the Tagging console after approval; publishes the 13 taxonomy pages; checks the published JSON	[To be confirmed: content operations contact — owner: content operations lead]
Authors	Tag pages and blocks with approved tags; request new tags	All authors
Development team	Code that reads tags (`utils/taxonomy.js`, `utils/tags.js`, List, Filter List), the query index definition, `paths.json` mappings	Development team
AEM administrators	Permissions on `/content/cq:tags` (who can create, move, delete tags)	[To be confirmed: AEM administrator — owner: platform owner]

> **Tip:** Restrict create / move / delete permissions on `/content/cq:tags/tcs-corp` to the taxonomy owner and content operations through an AEM user group, so authors can only apply tags. [To be confirmed: tag permission groups — owner: AEM administrator]

7.6 Tag Lifecycle



7.6.1 Create

1. The author or tree owner requests the tag (name, English title, parent, reason).
2. The taxonomy owner approves it (checks for duplicates and the naming rules in 7.4.1).
3. Content operations creates the tag in AEM: Tools → General → Tagging → select the parent → Create Tag; enter the Title and the Name (lower case, hyphenated).
4. Republish the taxonomy page of every locale (`/content/tcs-corp/{country}/{language}/taxonomy`) so the title is in `/{locale}/taxonomy.json`.
5. Check the published JSON, for example `https://main--tcs-corp--sradha-tcs.aem.live/en/taxonomy.json`.

Impact: none on existing pages. Until step 4, the tag shows an ID-derived label.

Steps — Managing tags in AEM: The AEM Tagging console (Tools → General → Tagging) in column view with the `TCS Corp` namespace open, showing the Content Type, Industry and Region trees and the toolbar actions Create, Edit, Move, Merge, Delete and Publish.

Step	Where	Field / control	Value / action
1	AEM	Tools › General › Tagging	Open the Tagging console
2	Tagging console	View	Column view
3	Tagging console	Select	TCS Corp (namespace tcs-corp)
4	TCS Corp	Children	Content Type, Industry, Region
5	Tagging console toolbar	Actions	Create, Edit, Move, Merge, Delete, Publish

Steps — Creating a tag: The Create Tag dialog below `TCS Corp > Industry`, with Title "Banking", Name "banking" and an optional Description filled in.

Step	Where	Field / control	Value / action
1	Tagging console	Select	TCS Corp › Industry
2	Tagging console toolbar	Create	Create Tag
3	Create Tag	Title	Banking
4	Create Tag	Name	banking
5	Create Tag	Description	Banks and financial services (optional)
6	Create Tag	Submit	Creates tcs-corp:industry/banking; then republish the taxonomy pages

7.6.2 Translate

1. In the Tagging console select the tag → Edit (or Properties) → Localization: add the title for each language used by the locales (de, fr, es, pt, nl, sv, da, no, zh, ja, ko).
2. Republish the affected locale taxonomy pages.
3. Check a page of that locale: the tag label is translated.

Impact: labels only. Tag IDs, matching, the query index and the data layer (`xdm:tags` holds IDs) are unchanged. See the open point in 7.1.5 about how translated titles are published.

Steps — Translating tag titles: The tag edit dialog of `tcs-corp:region/europe` with the Localization section listing translated titles (German "Europa", French "Europe", Japanese "□□□□□").

Step	Where	Field / control	Value / action
1	Tagging console	Select	TCS Corp › Region › Europe (tcs-corp:region/europe)
2	Tagging console toolbar	Edit	Open the tag
3	Edit › Localization	German	Europa
4	Edit › Localization	French	Europe
5	Edit › Localization	Japanese	□□□□□
6	Edit	Save	Save, then republish the taxonomy pages of the locales

7.6.3 Deprecate

1. Agree a replacement tag (if any) and a removal date.
2. Prefix the English title with a marker for authors, for example "(Deprecated) …", **or** keep the title and announce the deprecation. [To be confirmed: deprecation marker convention — owner: taxonomy owner]
3. Remove the tag from pages and block fields over time (the Tagging console shows where a tag is used through its references; the published `/query-index.json` `tags` column shows published pages that still carry it).

Impact: none until pages change. Note that a title marker would also be visible to visitors (the title is the label), so a separate communication is usually preferable.

7.6.4 Merge

1. In the Tagging console select the tag to remove → Merge → choose the target tag.
2. AEM replaces the references in page content with the target tag on author. [To be confirmed: whether tag references stored in Universal Editor block properties (List Tags, List Item Tags, Card Tags, Teaser Tags, Filter List tag fields) are updated by a merge — owner: development team]
3. Republish every page whose tags changed (page tags drive the query index) and every page whose blocks reference the tag; republish the taxonomy pages.

Impact:

Area	Until pages are republished	After republishing
Page head (`article:tag`), Page Header and Conversation Canvas labels	Old ID; label falls back to the ID-derived label once the taxonomy no longer contains it	New ID and title
Query index `tags` column	Old ID on the published row	New ID
List (Tagged pages) / Filter List filters on the new tag	Pages with the old ID are not found	Found
Filter List pills defined with the old tag	Match only pages not yet republished	Must be re-selected if the block property was not updated
Data layer `xdm:tags`	Old ID	New ID; analytics reports split across both IDs for the transition period

7.6.5 Move or Rename

Moving a tag or changing its **name** changes its ID (for example `tcs-corp:topic/ai` → `tcs-corp:topic/artificial-intelligence`), with the same impact as a merge. Changing only the **title** keeps the ID: republish the taxonomy pages and nothing else is needed.

7.6.6 Delete

1. Make sure no page, block field or query index row uses the tag (see 7.6.3 step 3).
2. Delete the tag in the Tagging console and republish the taxonomy pages.

Impact if references remain: published pages keep the ID; the label becomes ID-derived; List / Filter List filters that use the tag keep working on the remaining pages; the data layer keeps sending the ID.

7.6.7 Lifecycle Impact Summary

Change	Republish taxonomy pages	Republish tagged pages	Update block fields	Query index	Analytics
Create tag	Yes	No	No	No change	No change

Change	Republish taxonomy pages	Republish tagged pages	Update block fields	Query index	Analytics
Change title / translate	Yes	No	No	No change	No change (IDs)
Move / rename name	Yes	Yes	Check and re-select	Rows change on republish	New ID from then on
Merge	Yes	Yes	Check and re-select	Rows change on republish	New ID from then on
Deprecate	Optional	Over time	Over time	Changes as pages are edited	Gradual
Delete	Yes	Before deleting	Before deleting	Must contain no rows with the ID	Old ID stops

7.7 Parent-Child Relationships

7.7.1 How Relationships Are Derived

- A tag's parents are the prefixes of its ID at `/` boundaries: `tcs-corp:industry/banking/retail` → `tcs-corp:industry/banking` → `tcs-corp:industry`.
- The bare namespace (`tcs-corp:`) is not treated as a parent by the matching code (7.2.2).
- No code walks the tree downwards from the AEM tag tree; the Filter List finds children by looking at the tags **used by the listed pages** (`used(root)`): unused child tags never appear as pills or options.

7.7.2 Rules for Authors

Situation	What to do	Result
A page is about retail banking	Tag `tcs-corp:industry/banking/retail` only	Found by filters on …`/banking/retail`, …`/banking` and `tcs-corp:industry`
A List should show all industry pages	List Tags = `tcs-corp:industry`	Every page with any industry tag
A Filter List should offer one pill per industry	Primary filter category = `tcs-corp:industry` (no Primary filter tags)	One pill per industry tag used by the listed pages, sorted by label
A Filter List should offer exactly three pills	Primary filter tags = the three tags, in order	Exactly those pills, in the authored order
A parent tag should be shown as a card label	Add the parent tag to the page as well	The parent label appears (if within the first 2 or 3 tags)

7.7.3 Label Order and Display

Tag labels are shown in the order the tags are stored on the page or in the field (the order of the `article:tag` elements or of the query index array). Parents are not shown automatically, and labels are not sorted except for Filter List pills and options built from a category or taxonomy root (sorted with `localeCompare` on the label).

7.8 Usage Examples

7.8.1 Page Tags

Where they are set: AEM page properties (Basic → Tags) or a `tags` column in the locale's bulk metadata sheet (one row per URL pattern; several tags separated by commas).

What the code reads: `getPageTags()` reads `<meta property="article:tag">` (Edge Delivery publishes one such element per value of a `tags` metadata property), else `<meta name="tags">`.

```
<meta property="article:tag" content="tcs-corp:industry/banking">
<meta property="article:tag" content="tcs-corp:region/europe">
```

Used by: Page Header (tag list), Conversation Canvas (suggestion pills), the data layer page entry (`xdm:tags`) and, through the query index `tags` column, the List and the Filter List.

> **Important:** The aem.live documentation states that AEM publishes the page property Tags (`cq:tags`) as `<meta name="cq-tags">` (a comma-separated list of tag IDs). The code and `helix-query.yaml` do not read `cq-tags`. Verify on a published page with tags which meta elements are present. If only `cq-tags` is present, page tags set in page properties will not reach the Page Header, the query index (List, Filter List) or the data layer; use the bulk metadata `tags` column, or extend `getPageTags()` and `helix-query.yaml` to read `cq-tags`. [To be confirmed: published meta name of page tags set in AEM page properties — owner: development team]

Steps — Tagging a page: AEM Sites console page properties of an insights article, Basic tab, with the Tags field showing "TCS Corp : Industry / Banking" and "TCS Corp : Region / Europe".

Step	Where	Field / control	Value / action
1	AEM Sites console	Select	/content/tcs-corp/us/en/insights/agentic-bank
2	AEM Sites console toolbar	Properties	Open Page Properties
3	Page Properties › Basic	Tags	TCS Corp : Industry / Banking (tcs-corp:industry/banking)
4	Page Properties › Basic	Tags	TCS Corp : Region / Europe (tcs-corp:region/europe)
5	Page Properties	Save & Close	Save, then publish the page

7.8.2 List Block — Tagged Pages

Field	Value	Effect
List source	Tagged pages (`tags`)	Pages from the query index
Search root	`/en/insights` (empty with "Use the current page when empty" on: the current page)	Only pages below the root
Tags	`tcs-corp:industry/banking`, `tcs-corp:region/europe`	The tags to match
Match	Any of the tags / All of the tags	OR / AND (each with child tags)
Include descendant pages / Maximum search depth	On / 0	All levels below the root

Pages with `hide-in-nav = yes` are skipped. In the editor, a Tagged pages list without tags shows the hint `tags-missing` (placeholder `listEditorHint`). Card kickers show the tag labels (see 7.8.6). List Items (Fixed list) can override a page's tags with their own Tags field.

Steps — Tag picker in Universal Editor: Universal Editor properties panel of a List block with List source "Tagged pages"; the Tags field's tag picker dialog is open, browsing TCS Corp > Industry with "Banking" selected.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Select	List
2	List › Source	List source	Tagged pages
3	List › Source	Search root	/en/insights
4	List › Source	Tags	Open the tag picker
5	Tag picker	Browse	TCS Corp › Industry
6	Tag picker	Select	Banking, and confirm (tcs-corp:industry/banking)

7.8.3 Filter List Block — Filters

Field (tab)	Example	Effect
Primary filter category (Filters)	`tcs-corp:industry`	Without Primary filter tags: one pill per industry tag used by the listed pages
Primary filter tags → Tag Id (Filters)	`tcs-corp:industry/banking`, `tcs-corp:industry/insurance`	Exactly these pills, in this order; labels from the taxonomy
Show All filter (Filters)	On (default)	An "All" pill (placeholder `all`)
Allow multi select (Filters)	Off (default)	One pill at a time; on: pages with every selected pill
Enable advanced filter (Filters)	On (default)	The filter button opens the Advanced filter panel
Advanced filter categories (Advanced)	Category label "Region", Taxonomy root `tcs-corp:region`	A fieldset "Region" with one checkbox per region tag used by the pages
Filter logic (Advanced)	AND (default) / OR	Every / any checked option
Tag source (Mapping)	`tags` (default)	The index column whose first 2 tags are shown on cards

Filtering always uses the pages' `tags` index column (whatever the Tag source mapping); the Tag source only changes which column's tags are shown on the cards. Lists made before the Primary filter tags field (legacy "filters" with a Tag title and Tags) are still read.

Steps — Configuring tag filters: Universal Editor properties panel of a Filter List, Filters tab, with Primary filter category `TCS Corp : Industry`, two Primary filter tags, Show All filter on and Allow multi select off.

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Select	Filter List
2	Filter List › Filters	Primary filter category	TCS Corp : Industry (tcs-corp:industry)
3	Filter List › Filters › Primary filter tags	Add	Item 1: Tag Id = tcs-corp:industry/banking

Step	Where	Field / control	Value / action
4	Filter List › Filters › Primary filter tags	Add	Item 2: Tag Id = tcs-corp:industry/insurance
5	Filter List › Filters	Show All filter	On (default)
6	Filter List › Filters	Allow multi select	Off (default)

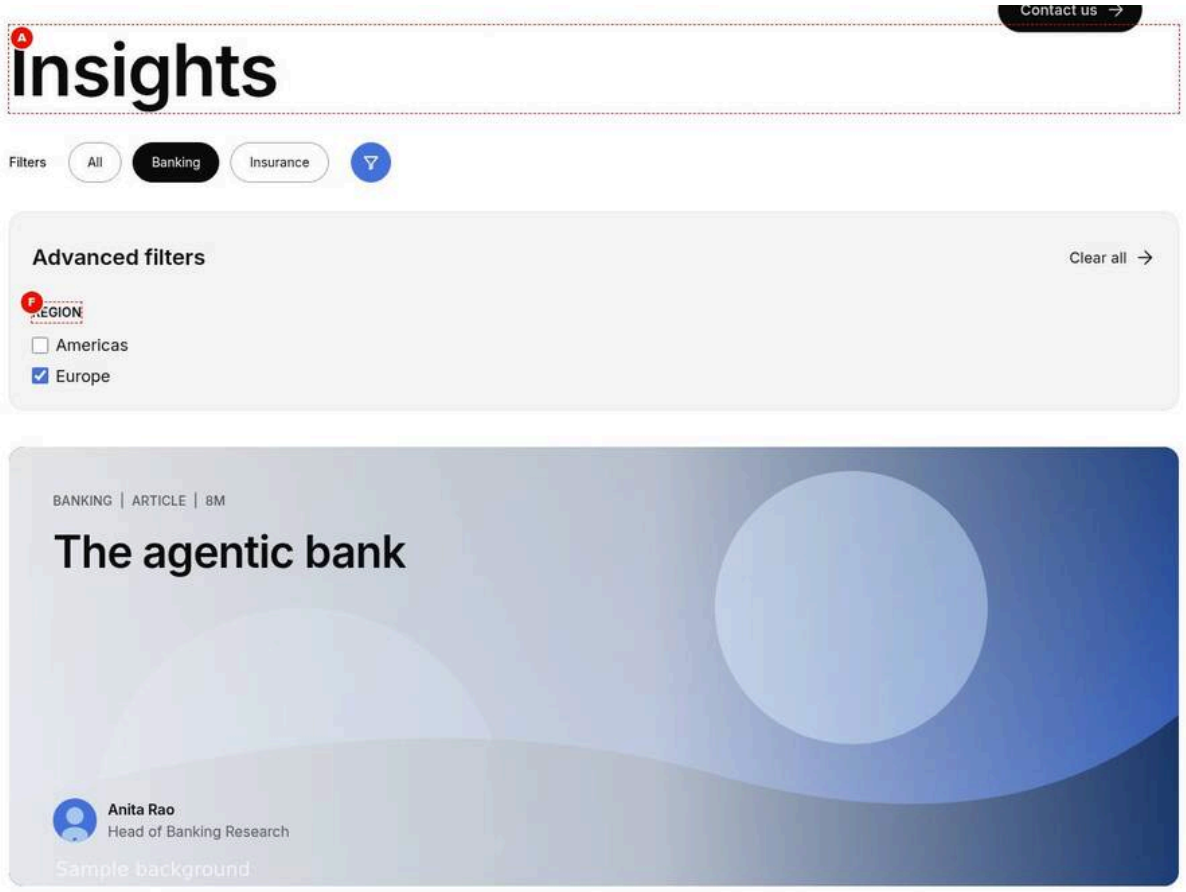


Figure 30: Tag filters on the page — The Insights Filter List at 1440 px: the Filters label with the pills All, Banking and Insurance, Banking pressed; the filter button with the badge 1; the open Advanced filters panel with Clear all and a Region fieldset with Europe checked and Americas; below it the card of the only page tagged both Banking and Europe, The agentic bank. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/filter-list-tag-pills.jpg)

Screenshot Details — Tag filters on the page

Item	Detail
Screenshot Name	`screenshots/filter-list-tag-pills.jpg`
Screenshot Purpose	Tag filters on the page
Screen Description	The Insights Filter List at 1440 px: the Filters label with the pills All, Banking and Insurance, Banking pressed; the filter button with the badge 1; the open Advanced filters panel with Clear all and a Region fieldset with Europe checked and Americas; below it the card of the only page tagged both Banking and Europe, The agentic bank.
Business Context	The Insights hub lets visitors narrow the articles by industry with pills and by region in the advanced panel, using the AEM tags on the article pages.

Item	Detail
Author Objective	Add a Filter List below /en/insights with the industry pills Banking and Insurance and a Region advanced category, and tag four insight pages with a region.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Filter List	Yes	Adds the Filter List to the page	Select the section in the content tree, choose Add (+) and pick Filter List	Only components the section allows (section filter)
A	Title (Filter List › Content)	Insights	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Root path (Filter List › Source)	Select the page or enter /en/insights	No	Root of the tagged pages	The locale or a section	Shown when source = tags
(C)	Primary filter category (Filter List › Filters)	Add the tags tcs-corp:industry	No	Pills from the tags below this tag	Use when the pills should follow the content; ignored when Primary filter tags are set	A tag below a namespace
(D)	Tag Id (Filter List › Filters › Primary filter tags › Item 1)	Add the tags tcs-corp:industry/banking	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
(E)	Tag Id (Filter List › Filters › Primary filter tags › Item 2)	Add the tags tcs-corp:industry/insurance	No	One pill	Pick a tag the listed pages use	Must be a tag ID (namespace:path); other values are ignored
F	Category label (Filter List › Advanced › Advanced filter categories › Item 1)	Region	No	The category heading (legend) in the panel	Short noun, e.g. Industry	Empty: the taxonomy title of the root is used
(G)	Taxonomy root (Filter List › Advanced › Advanced filter categories › Item 1)	Add the tags tcs-corp:region	No	Options are the tags below it	A tag below the namespace	Without a root the item is ignored
(H)	Tags (added) (Page properties of /en/insights/agentic-bank and /en/insights/cloud-at-scale)	tcs-corp:region/europe	No	—	—	None
(I)	Tags (added) (Page properties of /en/insights/insurance-claims and /en/insights/supply-chain-resilience)	tcs-corp:region/americas	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Action (Preview)	Select the Banking pill, select the filter button, check Europe	—	Check on the preview (not stored in the content)	Select the Banking pill, select the filter button, check Europe	—

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The H2 Insights, a Filters label with the pills All, Banking and Insurance with Banking pressed, the filter button with a count badge, and the open Advanced filters panel with a Region fieldset of Americas and Europe checkboxes, Europe checked, above the matching cards.
- **Rendering behaviour:** Pills are buttons with aria-pressed; with Allow multi select off one pill is active at a time. The Region options are the child tags of tcs-corp:region used by the listed pages, labelled from the taxonomy; with Filter logic AND a card must match the pill and every checked option.
- **Publishing behaviour:** Publish the hub page to aem.page or aem.live; the four tagged insight pages must be published too and appear in the Filter List only after the query index is updated. The tags reach the index only through the published page metadata.

Business Rules

- Filtering always uses the pages' tags index column, whatever the Tag source mapping.
- Primary filter tags fix the pills and their order; without them each industry tag used by the pages becomes a pill.
- Show All filter (on by default) adds the All pill (placeholder all).
- Tag IDs use the tcs-corp: namespace; tcs: values match nothing (F-08).
- Page tags may be published as cq-tags, which the index doesn't read [To be confirmed: published meta name of page tags set in AEM page properties] (F-07).

Common Authoring Mistakes

Error	Root Cause	Resolution
The Region panel is empty	None of the listed pages has a tcs-corp:region tag in the index	Tag the pages, publish them and wait for the index update
The Insurance pill shows no results	No page below /en/insights has tcs-corp:industry/insurance	Tag the insurance pages or remove the pill
The Banking pill never shows results	Its Tag Id was typed as tcs-corp:industry/banking, which matches no page (F-08)	Pick the tag so the ID is tcs-corp:industry/banking

Troubleshooting

- **Symptoms:** Selecting Banking shows No resources found. although banking articles exist below /en/insights.
- **Cause:** The pages' tags aren't in the query index: the tags are published as cq-tags only, or the index wasn't updated (F-07, F-10).
- **Resolution:** Check /query-index.json for the pages' tags; if missing, set tags in the metadata sheet tags column, republish and have the site re-indexed.
- **Verification Steps:** /query-index.json lists tcs-corp:industry/banking for the articles and the Banking pill shows them.

7.8.4 Teaser Block — Tag List

Turn on **Display Tags**; the **Tags** field appears (model `condition`). The Teaser renders `<ul class="teaser-tags">` with one `<li data-tag="{ID}">{label}</li>` per tag, labels from the taxonomy, in the authored order (no maximum).

7.8.5 Page Header Block — Tag List

The Page Header has no tag field: it shows the **page tags** (7.8.1) as `<ul class="page-header-tags">`, labels from the taxonomy:

Layout	Where the tags appear
Article (default for most page types)	In the meta row, before the content type
Display	As the eyebrow above the title
Landing / Secondary	As the eyebrow only when the page has no `content-type` metadata

7.8.6 Card Kickers (List and Cards)

The List and the Cards blocks share `decorators/card-list-decorator.js`. With **Show tags** on (default):

Card	Tags shown
Image card	Eyebrow, up to 3 tag labels, then the reading time (`{n}m`, placeholder `minutesShort`)
Feature card (First card as feature)	Up to 3 tag labels and the reading time
Panel card	The eyebrow, else the first tag label
Row (Display as teaser off)	Eyebrow (or content type) and the first tag label
Report and Statistic cards	No tags

In the Cards block each Card has its own Tags field; in the List the tags come from the page's index row or the List Item's Tags override.

7.8.7 Filter List Cards

Standard, compact and featured cards show up to **2** tag labels of the Tag source column plus the reading time; the dark (image-less) card of the Mixed style shows the first tag label only.

7.8.8 Conversation Canvas

The canvas uses the labels of the page tags as its suggestion pills when no other suggestions have been supplied (`setConversationCanvasSuggestions`).

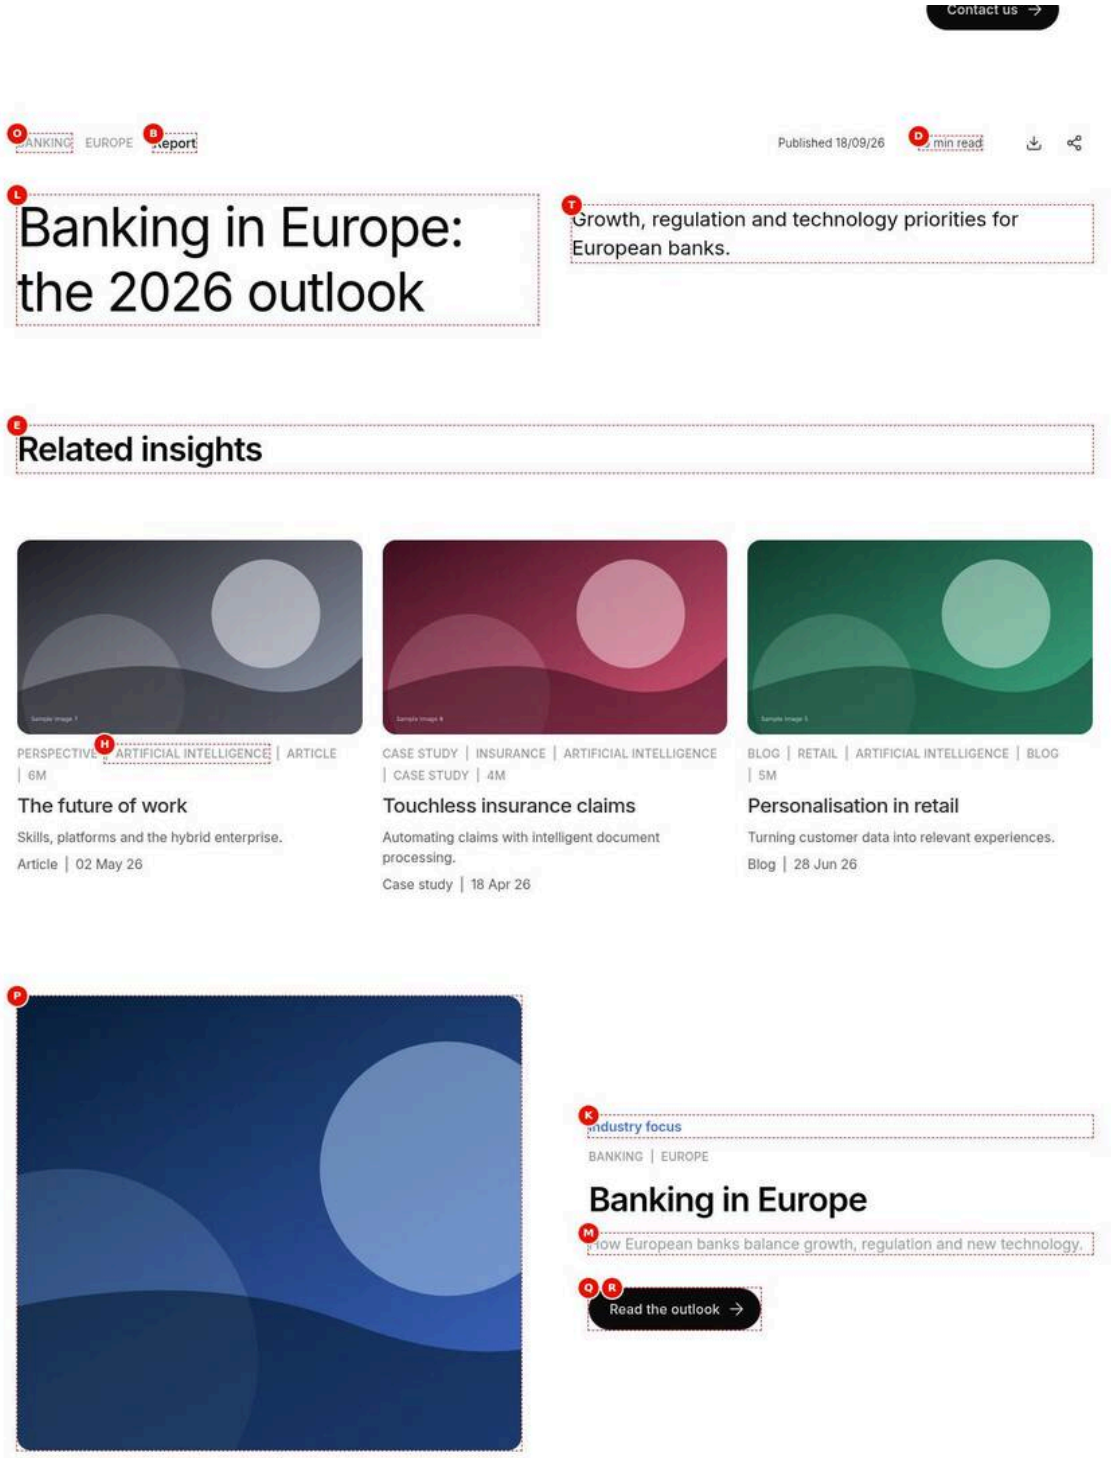

Figure 31: Tag labels on the site — A page at 1440 px: the Article-layout Page Header with Banking, Europe, Report, Published 18/09/26 and 16 min read; Related insights with three image cards of pages tagged Artificial intelligence, each kicker showing eyebrow, tag labels and its own reading time such as 25m (not 16m); and the Teaser Banking in Europe with the tag list Banking and Europe. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/tag-labels-rendered.jpg)

Screenshot Details — Tag labels on the site

Item	Detail
Screenshot Name	`screenshots/tag-labels-rendered.jpg`

Item	Detail
Screenshot Purpose	Tag labels on the site
Screen Description	A page at 1440 px: the Article-layout Page Header with Banking, Europe, Report, Published 18/09/26 and 16 min read; Related insights with three image cards of pages tagged Artificial intelligence, each kicker showing eyebrow, tag labels and its own reading time such as 25m (not 16m); and the Teaser Banking in Europe with the tag list Banking and Europe.
Business Context	Tags set once on a page or a card show as readable labels in several places: the Page Header meta row, List card kickers and the Teaser tag list.
Author Objective	Tag the outlook page through the metadata sheet, then add a Page Header, a Tagged pages List and a Teaser with Display Tags on.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	tags (Metadata sheet (row of this page))	tcs-corp:industry/banking, tcs-corp:region/europe	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
B	content-type (Metadata sheet (row of this page))	Report	No	Eyebrow / collection	One short term	None
(C)	publish-date (Metadata sheet (row of this page))	2026-09-18	No	Published date (Article)	YYYY-MM-DD	Non-ISO text shown as is
D	reading-time (Metadata sheet (row of this page))	16	No	Reading time (Article)	Minutes as a number	Digits → "{n} min read"; other text as is
—	Component (Section › Add (+))	Page Header	Yes	Adds the Page Header to the page	Select the section in the content tree, choose Add (+) and pick Page Header	Only components the section allows (section filter)
—	Component (Section › Add (+))	List	Yes	Adds the List to the page	Select the section in the content tree, choose Add (+) and pick List	Only components the section allows (section filter)
E	Title (List › Content)	Related insights	No	Heading of the list	Short and descriptive; up to 60 characters (Recommended)	None
(F)	List source (List › Source)	Tagged pages	Yes	What is listed	Child pages, Fixed list or Tagged pages	parent, fixed, tags (invalid: fixed)
(G)	Search root (List › Source)	Select the page or enter /en/insights	No	Root of the tagged pages	The locale or a section	Shown when source = tags
H	Tags (List › Source)	Add the tags tcs-corp:topic/ai	No (needed)	Tags to match	1–3 tags	Tag IDs; child tags match; source = tags
(I)	Maximum items (List › Source)	3	No	Limit	e.g. 4, 8	Model 0–200; code: 0, empty, negative or invalid = all
(J)	Desktop columns (List › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Teaser	Yes	Adds the Teaser to the page	Select the section in the content tree, choose Add (+) and pick Teaser	Only components the section allows (section filter)
K	Eyebrow (Teaser › Content)	Industry focus	No	Kicker above the title	Up to 40 characters (Recommended)	None
L	Title (Teaser › Content)	Banking in Europe	No (Recommended)	Heading of the teaser	Up to 70 characters (Recommended)	None
M	Description (Teaser › Content)	How European banks balance growth, regulation and new technology.	No	Main text	Up to 300 characters (Recommended)	None
(N)	Display Tags (Teaser › Content)	On	No	Show the tags	On to show Tags	None
O	Tags (Teaser › Content)	Add the tags tcs-corp:industry/banking, tcs-corp:region/europe	No	Topic tags	1–3 tags (Recommended)	AEM tag picker
P	Image (Teaser › Image)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Image or animation	See Layout for placement	None
Q	Primary CTA Title (Teaser › Links)	Read the outlook	No	Primary CTA text	Verb first	Shown only with Multiple links off
R	Primary CTA Link (Teaser › Links)	Select the page or enter /en/insights/agentic-bank	No	Primary CTA target	Page or URL	Shown only with Multiple links off
(S)	Title (Page properties)	Banking in Europe: the 2026 outlook	No	—	—	None
T	Description (Page properties)	Growth, regulation and technology priorities for European banks.	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** A collage: the Page Header meta row with Banking and Europe, Report, Published 18/09/26 and 16 min read; List image card kickers with eyebrow, tag labels and each listed page's own reading time such as 25m; and the Teaser Banking in Europe with the tag list Banking and Europe.
- **Rendering behaviour:** Labels come from /en/taxonomy.json; tag IDs not in it (the industry and topic tags today) show a label derived from the last segment, for example Banking. List image cards show the eyebrow, up to 3 tag labels and the reading time as {n}m (placeholder minutesShort).
- **Publishing behaviour:** The metadata sheet is a separate publish step and applies only once listed in metadata.source; List cards come from the query index and appear after it is updated; the taxonomy page is published separately per locale.

Business Rules

- The Page Header has no tag field; it shows the page tags in the Article layout meta row before the content type.
- The Teaser shows its own Tags only with Display Tags on, in the authored order.
- List cards take tags from the listed pages' index rows, not from this page.
- A tag ID missing from the taxonomy shows a label derived from its ID.
- Only the English taxonomy is published; other locales show derived labels (F-09).

Common Authoring Mistakes

Error	Root Cause	Resolution
A tag shows as Banking financial instead of its proper title	The tag ID isn't in /en/taxonomy.json, so a label is derived from its last segment	Add the tag to the taxonomy page's tags and republish the taxonomy page
The Teaser shows no tags	Display Tags was left off	Turn Display Tags on, then pick the tags
The Related insights List is empty	No page below /en/insights has tcs-corp:topic/ai in the index	Tag the pages, publish them and wait for the index update

Troubleshooting

- **Symptoms:** The Page Header of the outlook page shows no Banking and Europe labels.
- **Cause:** The tags column of the metadata sheet doesn't apply: the sheet isn't published, its URL pattern doesn't match, or it isn't listed in metadata.source.
- **Resolution:** Fix the row's URL pattern, publish /en/metadata and ask the site administrator to list it in metadata.source.
- **Verification Steps:** The page source has meta property article:tag for both tags and the meta row shows Banking and Europe.

7.9 Tags in the Query Index and Analytics

7.9.1 Query Index

`helix-query.yaml` indexes the page tags as a multi-value column:

```
tags:
  select: head > meta[property="article:tag"]
  values: attribute(el, "content")
```

- The index stores tag **IDs**, never titles; a page's row changes only when the page is republished (and re-indexed).
- `utils/query-index.js getPages()` loads `/query-index.json` once per page view, 500 rows per request, keeps the rows of the current locale (paths below `/{locale}`), and turns `tags` into an array with `listOf` (a JSON array, a JSON string or a comma-separated list).
- Excluded from the index: each locale's `references/`, `error-pages/`, `data/`, `nav`, `footer`, block libraries, `site-global-templates`, `fragments` and `modals` paths and JSON resources.
- The List and the Filter List filter the index in the browser; no repository query runs.

> **Warning:** On 13 October 2026 the published `/query-index.json` listed columns that differ from `helix-query.yaml` in the repository (it contained earlier columns such as `pageCategory`, `storyTags`, `timeToRead`, and lacked `author`, `cardTitle`, `cardDescription`, `cardImage`, `cardImageAlt`, `imageAlt`, `eyebrow`, `category`, `hideInNav`, `featureCard`, `featuredPriority`). The `tags` column was present. Check which index definition is active in the site configuration and re-index after aligning it. [To be confirmed: active query index definition — owner: development team / site administrator]

7.9.2 Data Layer Page Entry

`decorators/data-layer-decorator.js` `trackPage()` pushes the page once per page view (on load, in the eager phase) to `window.adobeDataLayer`:

```
{
  "page": {
    "page-1x2y3z": {
      "@type": "tcs-corp/components/page",
      "dc:title": "The agentic bank",
      "xdm:language": "en-US",
      "xdm:template": "article",
      "xdm:tags": ["tcs-corp:industry/banking", "tcs-corp:region/europe"],
      "repo:path": "/en/insights/agentic-bank"
    }
  }
}
```

`xdm:tags` is `getPageTags()`: the page tag **IDs** (not labels), trimmed and de-duplicated, in page order. IDs are language-independent, so reports aggregate the same tag across all 13 locales; map IDs to labels in the analytics tool (for example a classification based on `/en/taxonomy.json`). [To be confirmed: analytics classification of tag IDs — owner: analytics lead]

7.9.3 Tag Interactions

Interaction	Event	Values
Filter List pill click	`cmp:click`	`interaction: "filter"`, `value`: the pill's tag ID or `all`, `dc:title`: the label
Filter List Advanced filter checkbox	`cmp:change`	`interaction: "filter-option"`, `value`: the tag ID, `checked`: true / false
List / Cards card click	`cmp:click`	The card's component id (`data-cmp-id`), link URL and type; tags are not sent

> **Note:** No tag manager is loaded yet (`scripts/delayed.js` is empty), so these data layer entries are collected in `window.adobeDataLayer` but not sent to Adobe Analytics, Customer Journey Analytics or Adobe Experience Platform. Personalisation by tag (for example Adobe Target audiences) is not implemented (as of this handover).

Part 8 — Metadata Documentation

This part explains where page metadata comes from, how it reaches the published HTML, which code reads each value, and how metadata feeds search (query index, sitemap), analytics (data layer) and future personalisation. Section 8.2 is the field-by-field reference; 8.3 is a one-page cheat sheet.

8.1 How Metadata Works

8.1.1 Sources of Metadata

Source	Where authors set it	Fields	Published as
Universal Editor page properties (model `page-metadata` in `models/_page.json`)	Universal Editor → page properties panel (also the AEM Sites console page properties)	Title (`jcr:title`), Description (`jcr:description`), Keywords (`keywords`, multi), Page Type (`page-type`), Navigation (`nav`), Footer (`footer`), 404 Page (`error-page`)	`<title>` / `og:title` / `twitter:title`, `description` / `og:description` / `twitter:description`, `keywords`, `<meta name="page-type">`, `nav`, `footer`, `error-page`
Standard AEM page properties	AEM Sites console → Properties	Tags (`cq:tags`); other standard properties (for example robots, canonical) as supported by AEM	Per the aem.live documentation: `cq-tags` (comma-separated IDs); see 7.8.1
Values added by AEM / Edge Delivery automatically	—	Last modification and publication times, the page image	`modified-time`, `published-time`, `og:image`, `og:image:secure_url`, `twitter:image`, `twitter:card` (default `summary_large_image`), `og:url`
Bulk metadata sheet of the locale	AEM spreadsheet `/content/tcs-corp/{country}/{language}/metadata`, published as `/{locale}/metadata.json`	One row per URL pattern (`url` column); one column per metadata name (39 columns in AGENTS.md, see 8.2)	`<meta name="{column}">` for every non-empty cell of the matching rows (`tags` as `article:tag`)

Important: The bulk metadata sheets only apply once **all 13** are listed in the site configuration's `metadata.source` (`POST https://admin.hlx.page/config/{org}/sites/{site}/metadata.json` with `{"source": ["/en/metadata.json", "/de-de/metadata.json", …]}`). Until then no bulk metadata applies. Each sheet's URL patterns must start with its locale (for example `/de-de/**`). [To be confirmed: metadata.source configured for the 13 locales — owner: site administrator]

Note: On 13 October 2026 `/en/metadata.json` was published with 29 columns (`url` to `priority`) and no rows; the columns `listen-link`, `author`, `card-title`, `card-description`, `card-image`, `card-image-alt`, `image-alt`, `eyebrow`, `category` and `hide-in-nav` were not yet in the sheet, and `/de-de/metadata.json` returned 404. Add the missing columns to the sheets before using them in bulk. [To be confirmed: column set of the 13 bulk metadata sheets — owner: content operations lead]

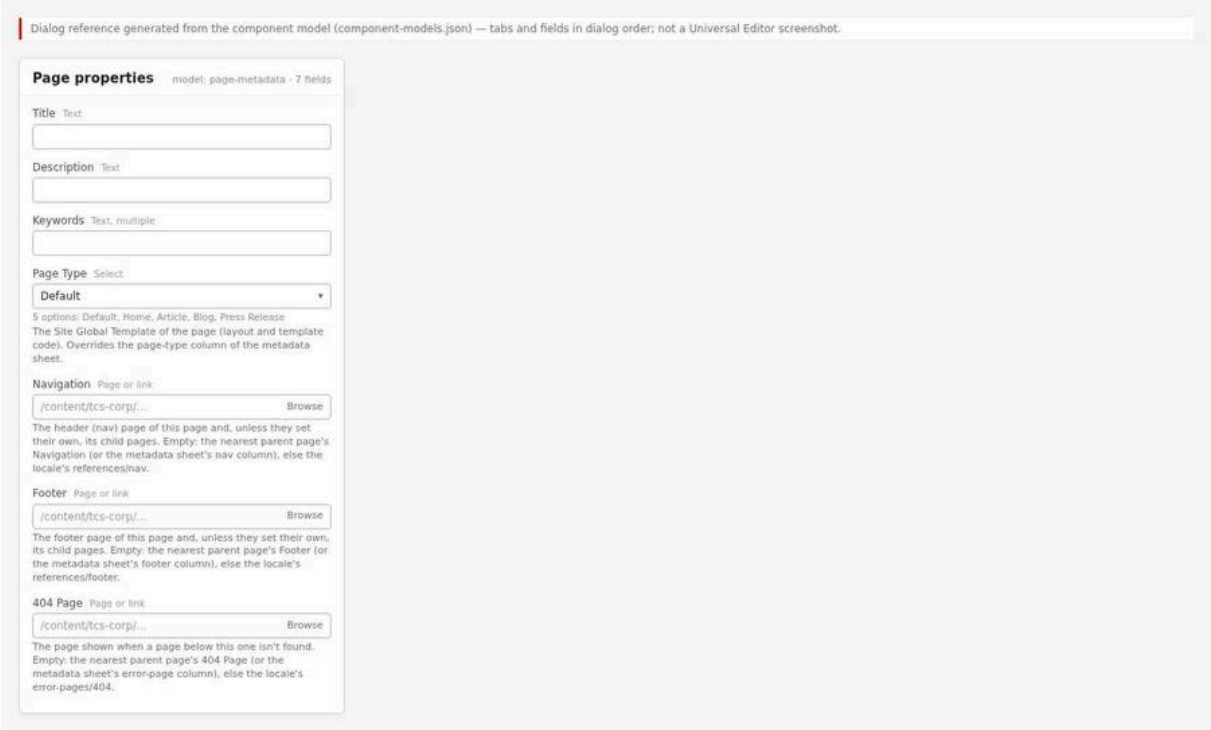

Figure 32: Page properties in Universal Editor — Universal Editor with the page selected and the properties panel showing Title, Description, Keywords, Page Type (select: Default, Home, Article, Blog, Press Release), Navigation, Footer and 404 Page, each with its help text. (Dialog reference generated from the component model, not a Universal Editor screenshot; file screenshots/ue-page-properties-panel.jpg)

Steps — The bulk metadata sheet: The AEM spreadsheet editor for `/content/tcs-corp/us/en/metadata` showing the header row (url, page-type, meta-title, …, hide-in-nav) and example rows `/en/newsroom/**` → `press-release` and `/en/insights/**` → `article`.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Open TCS Corp › us › en
2	AEM Sites console	Select	Select the metadata spreadsheet, then Edit
3	Spreadsheet editor	Header row	url, page-type, meta-title, meta-description, …, hide-in-nav
4	Spreadsheet editor	Row 1	url = /en/newsroom/**, page-type = press-release
5	Spreadsheet editor	Row 2	url = /en/insights/**, page-type = article

8.1.2 Precedence

1. **Page-level values win over bulk metadata.** A page property (for example Page Type) overrides the bulk sheet's column for that page (the Page Type help text states this; page-level metadata taking precedence is standard Edge Delivery behaviour).
2. **Bulk rows are evaluated top to bottom.** Put site-wide rows (`/en/**`) before more specific rows (`/en/insights/**`); a later matching row overrides values of an earlier one.
3. **Code fallbacks** apply on top (see each field in 8.2): for example `og-title` → `meta-title` → Title; `card-title` → Title; `page-type` → `template`; `publish-date` → `publication-date`.

8.1.3 From AEM to the Browser

```
AEM author                  Edge Delivery Services          Browser (code)
----------                  ----------------------          --------------
page properties --publish-> page HTML <head>:               scripts.js loadEager:
(Title, Page Type, nav)     <title>, <meta name="page-type">  - decorateHead() (SEO)
                            + bulk metadata of matching rows  - trackInteractions()
metadata sheet  --publish-> <meta name="{column}">              -> trackPage() (ACDL)
(/{locale}/metadata.json)                                     - decoratePageType()
                            query index (helix-query.yaml)    - loadTemplate()
                            /query-index.json <- the <head> blocks: getPageMetadata(),
                            sitemap.xml <- the query index  getPages() (index)
```

Every metadata value is a `<meta>` element in the head of the published HTML. Code reads it with `getMetadata(name)` from `scripts/aem.js` (meta `name`, or `property` for names with a colon). The query index reads the **server-delivered** head, so changes made by JavaScript (for example the SEO decorator) are **not** in the index.

8.1.4 Inherited Properties: Navigation, Footer and 404 Page

`utils/inherited-metadata.js` `getInheritedMetadata(name)` emulates AEM's inherited page properties for `nav`, `footer` and `error-page` (`INHERITED_METADATA`):

1. The page's own value (page property, or the `nav` / `footer` / `error-page` column of the bulk sheet).
2. Else the nearest parent page's value, up to the locale's Home page (`utils/site.js` `getParentPages`: for `/de-de/insights/blogs/x` → `/de-de/insights/blogs`, `/de-de/insights`, `/de-de/`). The parents' published HTML is fetched **in parallel** and their `nav`, `footer` and `error-page` metas are read. Values are cached in `sessionStorage` (key `tcs-inherited-metadata`) for the browser session: a changed parent value shows in a new session.
3. Else the default: `references/nav`, `references/footer` of the locale (header and footer), and for the 404 page `/{locale}/error-pages/404`, then `/en/error-pages/404`, then built-in content (`scripts.js` `loadErrorPage`).

Values can be AEM paths, published paths or paths relative to the locale root (`references/nav-careers`); `utils/site.js` `resolvePagePath` normalises them. On the published Home page `/en/` (checked 13 October 2026) the head contains `<meta name="nav" content="/en/references/nav">`, `footer` `/en/references/footer` and `error-page` `/en/error-pages/404`.

8.1.5 SEO Decorator Mapping

`decorators/seo-decorator.js` `decorateHead()` runs first in `loadEager` and writes the bulk metadata SEO and social columns to the standard head tags. It only sets a tag when a value exists (otherwise the tag delivered by Edge Delivery stays).

Column(s)	Head element set	Fallback chain
`language` (via `getPageLanguage`)	`<html lang>`	`language` if it is a language code (`^[a-z]{2,3}(-[a-z0-9]{2,8})*$`), else the locale's tag (`en-US`, `de-DE`, …)
`meta-title`	`document.title`	Not set: the Title stays
`meta-description`	`<meta name="description">`	Not set: the Description stays
`meta-keywords`	`<meta name="keywords">`	Not set: the Keywords stay
`og-title`	`<meta property="og:title">`	`og-title` → `meta-title` → (unchanged)

Column(s)	Head element set	Fallback chain
`og-description`	`og:description`	`og-description` → `meta-description` → (unchanged)
`og-image`	`og:image` (made absolute)	(unchanged)
`og-type`	`og:type`	(not set)
`twitter-card`	`<meta name="twitter:card">`	(unchanged: `summary_large_image`)
`twitter-title`	`twitter:title`	`twitter-title` → `og-title` → `meta-title`
`twitter-description`	`twitter:description`	`twitter-description` → `og-description` → `meta-description`
`twitter-image`	`twitter:image` (absolute)	`twitter-image` → `og-image`
`canonical-url`	`<link rel="canonical">` and `og:url` (absolute)	(unchanged)
`robots`	— (standard name, applied by Edge Delivery in the delivered HTML)	—

> **Warning:** The SEO decorator changes the head **in the browser**. Search engines that render JavaScript see the result; social network crawlers and other clients that do not run JavaScript see only the values delivered by Edge Delivery (from Title, Description, Keywords and the page image). `og:image:secure_url` is not updated by the decorator. For values that must be present without JavaScript, prefer the standard names Edge Delivery handles on the server (`title`, `description`, `image`, `canonical`, `robots`).

8.1.6 Page Type and Templates

- `scripts.js` `decoratePageType()` adds the class-name form of `page-type` to `<body>` (for example `press-release`).
- `loadTemplate()` uses `page-type`, else the standard `template` metadata; when the value is one of `TEMPLATES` (`home`, `article`, `blog`, `press-release`), `templates/{name}/{name}.js` and `.css` load before the page is decorated (see templates/README.md).
- The Page Header uses Page Type for its default layout: `landing` for page types `landing` and `listing`, else `article` (an authored Layout wins).
- The data layer page entry sends it as `xdm:template`.

8.1.7 getPageMetadata() Naming

`utils/metadata.js` `getPageMetadata()` returns typed values with camelCase keys:

Key	Read from (first non-empty)	Type / conversion
`title`	`og:title` meta at module load (the authored Title), else `document.title`	string; read before the SEO decorator runs, so it is never `meta-title`
`description`	`description` meta at module load	string; never `meta-description`
`image`	`featured-image`, `og:image`	string (not used by blocks)
`pageType`	`page-type`, `template`	string as authored
`contentType`	`content-type`	string
`category`	`category`	string (not used by blocks)

Key	Read from (first non-empty)	Type / conversion
tags	getPageTags()	string[] of IDs
authorId	author-id	string
author	author	string
publishDate	publish-date, publication-date	string (YYYY-MM-DD expected)
modifiedDate	modified-date	string (not used by blocks)
readingTime	reading-time	string
listenLink	listen-link	string (URL)
thumbnailImage	thumbnail-image	string (not used by blocks)
featuredImage	featured-image	string
region	region	string
country	country, else the locale's country folder (us, de, ...)	string (not used by blocks)
language	getPageLanguage()	string
persona	persona	string (not used by blocks)
campaignId	campaign-id	string (not used by blocks)
featured	featured	boolean: true for yes, true, 1, on, y (case-insensitive)
priority	priority	number (parseFloat), else null

Users of getPageMetadata(): Page Header (blocks/page-header/page-header.js), the article template (authorId), the press-release template (region), the data layer page entry (title, pageType).

8.1.8 Query Index Columns

helix-query.yaml builds /query-index.json from the published heads. The index columns use camelCase names; utils/query-index.js columnOf(page, name) converts metadata names (featured-image) to index names (featuredImage), so block Mapping fields accept either.

Index column	Selector (server head)	Read by
path	(page path)	List, Filter List, Conversation Canvas
lastModified	last-modified response header	List (date and sort fallback), Filter List (sort tie-break)
robots	meta[name="robots"]	Sitemap (noindex pages excluded)
title	meta[property="og:title"]	List, Filter List, Conversation Canvas menu
description	meta[name="description"]	List, Filter List
image	meta[property="og:image"] (path only)	List (card image, 2nd choice; the site's default image is ignored)
tags	meta[property="article:tag"] (multi-value)	List, Filter List
metaTitle, metaDescription	meta-title, meta-description	Not read by code (available to mappings)
pageType	page-type	Filter List (Page types)

Index column	Selector (server head)	Read by
`contentType`	`content-type`	List, Filter List, card kind (report)
`author`, `authorId`	`author`, `author-id`	Filter List (author lookup), List (feature card author)
`publishDate`, `modifiedDate`	`publish-date`, `modified-date`	Filter List (date, Latest sort), List (date, last modified)
`readingTime`	`reading-time`	List, Filter List
`thumbnailImage`, `featuredImage`	`thumbnail-image`, `featured-image`	List (image 3rd / 4th choice), Filter List (image source and fallback)
`region`, `country`, `language`, `persona`, `campaignId`	same names	Not read by code
`featured`, `priority`	`featured`, `priority`	Filter List (featured / hero cards, sorts)
`featureCard`, `featuredPriority`	`feature-card`, `featured-priority`	Filter List fallbacks for `featured` / `priority`
`cardTitle`, `cardDescription`, `cardImage`, `cardImageAlt`, `imageAlt`	`card-title`, `card-description`, `card-image`, `card-image-alt`, `image-alt`	List
`eyebrow`, `category`	`eyebrow`, `category`	List (eyebrow, then category)
`hideInNav`	`hide-in-nav`	List (page skipped when yes)

> **Warning:** See 7.9.1: on 13 October 2026 the published index did not match this definition (no `author`, card, `eyebrow`, `category`, `hideInNav`, `featureCard`, `featuredPriority` columns). Until it does, those values have no effect on the List and the Filter List.

8.1.9 Sitemap

`helix-sitemap.yaml` generates `/sitemap.xml` from `/query-index.json` with `lastmod` (`YYYY-MM-DD`, from `lastModified`), origin `https://main--tcs-corp--sradha-tcs.aem.live` until a production domain is configured. Because the index includes `robots`, pages with `robots: noindex` are left out of the sitemap. Pages excluded from the index (references, error pages, data, block libraries, templates) are not in the sitemap. No other metadata affects the sitemap. [To be confirmed: production domain and CDN]

8.1.10 Data Layer Page Entry

Data layer field	Metadata source
`dc:title`	Title (authored, `getPageMetadata().title`), else `document.title`
`xdm:language`	`language` metadata if a language code, else the locale's tag
`xdm:template`	`page-type`, else `template`; omitted when empty
`xdm:tags`	page tags (IDs)
`repo:path`	the page path (not metadata)

No other metadata (author, content type, region, persona, campaign, dates) is in the data layer today. Adding them is a change to `trackPage()` in `decorators/data-layer-decorator.js`.

8.1.11 Personalisation

No personalisation is implemented (as of this handover): no Adobe Target or Adobe Journey Optimizer is loaded, and `scripts/delayed.js` is empty. Metadata that could feed audiences later (`persona`, `campaign-id`, `region`, `country`, `content-type`, tags) is published in the head, partly indexed, and available through `getPageMetadata()`; only page type, language and tags reach the data layer. The Teaser's **Personalization** toggle only adds a marker class and `data-personalization="true"` for a future script.

8.2 Metadata Field Reference

Each field below lists where it is set, what it does and which code reads it. "Used By" entries were verified by searching the code for the meta name and its camelCase index name.

> **Note:** No metadata field is validated by the models or the code (there are no `required` or `validation` rules in `models/_page.json`, and the bulk sheet is free text). "Mandatory" therefore means **Recommended** unless marked otherwise. Yes / no fields accept `yes`, `true`, `1`, `on`, `y` (case-insensitive) as yes; anything else is no.

Fields 8.2.1 to 8.2.8 are page properties (the Universal Editor page properties model, and Tags from the standard AEM page properties). Fields 8.2.9 to 8.2.46 are the bulk metadata columns in the order of AGENTS.md (page-type is described once, in 8.2.5). Fields 8.2.47 and 8.2.48 are legacy names read as fallbacks.

8.2.1 title — Title

- **Field Name:** Page property **Title** (`jcr:title`, `models/_page.json`); published as `<title>`, `og:title` and `twitter:title`. Can also be set as bulk metadata `title`.
- **Purpose:** The page's name: browser tab title, the Page Header heading (`h1`), the default card title in lists and the title sent to analytics.
- **Mandatory:** Recommended for every page (not enforced). Without it the List derives a title from the last path segment (`agentic-bank` → "agentic bank").
- **Allowed Values:** Plain text.
- **Business Rules:** `meta-title` replaces the browser title in the browser but **not** the Page Header heading, the index `title` or `dc:title` (those keep the authored Title). The List prefers `card-title`. Recommended: unique per locale, up to about 60 characters.
- **Used By Components:** Page Header (`getPageMetadata().title` → `h1.page-header-title`; also the title of the share action); List (index `title`, after `card-title`; Order by Title); Filter List (Title source default `title`; Alphabetical sort); Conversation Canvas (menu labels from the index `title`).
- **Used By Search:** Query index `title` (from `og:title`); search result title for engines (unless `meta-title` is set and the engine renders JavaScript).
- **Used By Personalization:** None (not implemented).
- **Used By Analytics:** `dc:title` of the page entry.
- **Example Values:** `The agentic bank`, `Banking and financial services`.

8.2.2 description — Description

- **Field Name:** Page property **Description** (`jcr:description`); published as `<meta name="description">`, `og:description`, `twitter:description`.
- **Purpose:** Summary of the page for search results, social previews, the Page Header and cards.
- **Mandatory:** Recommended (not enforced).
- **Allowed Values:** Plain text.

- **Business Rules:** `meta-description` replaces the head description in the browser; the Page Header, the index and the cards keep the authored Description. The List prefers `card-description`. Recommended: 120–160 characters.
- **Used By Components:** Page Header (`.page-header-description`); List (index `description`, after `card-description`); Filter List (Description source default `description`; shown on default, featured, report, dark and hero cards).
- **Used By Search:** Query index `description` (from the server `description` meta).
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `Banking is entering a new era of autonomous, AI-driven operations.`

8.2.3 keywords — Keywords

- **Field Name:** Page property **Keywords** (`keywords`, multi value); published as `<meta name="keywords">`.
- **Purpose:** Keyword list in the page head.
- **Mandatory:** No.
- **Allowed Values:** One or more words or phrases.
- **Business Rules:** `meta-keywords` overrides it in the browser. Major search engines ignore the keywords meta; keep it short or empty.
- **Used By Components:** None.
- **Used By Search:** Not indexed (no `keywords` column in `helix-query.yaml`).
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `agentic AI, banking`.

8.2.4 tags — Tags

- **Field Name:** Standard AEM page property **Tags** (`cq:tags`, Sites console → Properties → Basic) or bulk metadata column `tags` (comma-separated). Read from `<meta property="article:tag">`, else `<meta name="tags">`.
- **Purpose:** Classifies the page with taxonomy tags (Part 7).
- **Mandatory:** Recommended for content pages that appear in lists or filters.
- **Allowed Values:** Tag IDs from the `tcs-corp:` namespace, e.g. `tcs-corp:region/europe`. Titles without `:` or `/` are accepted and shown as typed (not recommended).
- **Business Rules:** De-duplicated and trimmed by `getPageTags()`; order kept. Child tags match parent filters (7.2). Up to 3 labels on List / Cards image and feature cards, 2 on Filter List cards. See the open point on `cq-tags` in 7.8.1.
- **Used By Components:** Page Header (tag list), Conversation Canvas (suggestion pills), List and Filter List (index `tags`).
- **Used By Search:** Query index `tags` (multi-value, from `article:tag`).
- **Used By Personalization:** None (not implemented).
- **Used By Analytics:** `xdm:tags` of the page entry (IDs).
- **Example Values:** `tcs-corp:industry/banking`, `tcs-corp:content-type/article`.

8.2.5 page-type — Page Type

- **Field Name:** Page property **Page Type** (`page-type`, select) and bulk column `page-type`. Fallback: the standard `template` metadata.
- **Purpose:** Selects the Site Global Template (layout and template code) and classifies the page.
- **Mandatory:** No (Default = empty: no template).
- **Allowed Values:** Page property select: Default (empty), `home`, `article`, `blog`, `press-release`. Bulk sheet: any value; values with code effects are `home`, `article`, `blog`, `press-release` (templates), `landing` and `listing`

(Page Header Landing layout) and the Filter List Page types options `article`, `blog`, `report`, `case-study`, `news`, `event`.

- **Business Rules:** The page property overrides the sheet. The class-name form is added to `<body>`. Only `home`, `article`, `blog`, `press-release` load template code (`TEMPLATES` in `scripts/scripts.js`); the blog template reuses the article template. The Filter List compares class-name forms (`Case Study` matches `case-study`). Note the mismatch: the Page Type select cannot set `report`, `case-study`, `news`, `event`, `landing` or `listing` (sheet only), and the Filter List Page types field cannot select `press-release` or `home`.
- **Used By Components:** `scripts.js` (`decoratePageType`, `loadTemplate`); templates `home`, `article`, `blog`, `press-release`; Page Header (default layout); Filter List (Page types).
- **Used By Search:** Query index `pageType`.
- **Used By Personalization:** None.
- **Used By Analytics:** `xdm:template` of the page entry.
- **Example Values:** `article`, `press-release`; sheet row `/en/newsroom/**` → `press-release`.

8.2.6 nav — Navigation

- **Field Name:** Page property **Navigation** (`nav`, aem-content) and bulk column `nav`.
- **Purpose:** The header (nav) fragment of the page and, unless they set their own, its child pages.
- **Mandatory:** No. Empty: inherited (8.1.4), else `/{locale}/references/nav`.
- **Allowed Values:** A page path: AEM path, published path or a path relative to the locale root (`references/nav-careers`).
- **Business Rules:** Inherited from the nearest parent up to the locale Home page; parent values cached per browser session.
- **Used By Components:** Header (`blocks/header/header.js` via `getInheritedMetadata('nav')`).
- **Used By Search:** Not indexed; `/*/nav` and `/*/references/**` pages are excluded from the index and sitemap.
- **Used By Personalization:** None (a different nav per section is possible by authoring).
- **Used By Analytics:** None.
- **Example Values:** `/content/tcs-corp/us/en/references/nav`, `references/nav-careers`.

8.2.7 footer — Footer

- **Field Name:** Page property **Footer** (`footer`, aem-content) and bulk column `footer`.
- **Purpose:** The footer fragment of the page and its child pages.
- **Mandatory:** No. Empty: inherited, else `/{locale}/references/footer`.
- **Allowed Values:** As Navigation.
- **Business Rules:** As Navigation.
- **Used By Components:** Footer (`blocks/footer/footer.js` via `getInheritedMetadata('footer')`).
- **Used By Search:** Not indexed; footer pages excluded.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `/content/tcs-corp/de/de-de/references/footer`.

8.2.8 error-page — 404 Page

- **Field Name:** Page property **404 Page** (`error-page`, aem-content) and bulk column `error-page`.
- **Purpose:** The page shown when a page below this one is not found.
- **Mandatory:** No. Empty: inherited, else `/{locale}/error-pages/404`, else `/en/error-pages/404`, else built-in content.
- **Allowed Values:** As Navigation.
- **Business Rules:** For a missing page the lookup starts at its nearest existing parent; a configured page that fails to load falls through to the next option; content from another locale gets that locale's `lang`.

- **Used By Components:** `404.html` → `scripts.js` `loadErrorPage`.
- **Used By Search:** Error pages are excluded from the index and sitemap.
- **Used By Personalization:** None.
- **Used By Analytics:** None specific (the 404 page sends its own page entry).
- **Example Values:** `/content/tcs-corp/us/en/error-pages/404`.

8.2.9 url — URL Pattern (bulk sheet only)

- **Field Name:** Bulk metadata column `url`.
- **Purpose:** The pages a row applies to.
- **Mandatory:** Yes, for every sheet row (a row without a pattern applies to nothing).
- **Allowed Values:** A published path or pattern with `*` / `**` wildcards, starting with the locale: `/en/**`, `/de-de/insights/**`, `/en/newsroom/2026/*`.
- **Business Rules:** Rows are evaluated top to bottom; general rows first, specific rows later. Patterns use published paths (`/de-de/…`), not AEM paths. The `url` value is the row key, not page metadata used by code.
- **Used By Components:** None (the platform applies the rows).
- **Used By Search:** None directly.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `/en/insights/**`.

8.2.10 meta-title — SEO Title

- **Field Name:** Bulk column `meta-title`.
- **Purpose:** A search-optimised browser title different from the Title.
- **Mandatory:** No.
- **Allowed Values:** Plain text; Recommended up to about 60 characters.
- **Business Rules:** Applied in the browser by the SEO decorator (`document.title`); fallback for `og:title` and `twitter:title`. Not used for the Page Header, cards or `dc:title`.
- **Used By Components:** SEO decorator (`decorators/seo-decorator.js`).
- **Used By Search:** Query index `metaTitle` (not read by code); search engines that render JavaScript.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `Agentic AI in Banking – TCS`.

8.2.11 meta-description — SEO Description

- **Field Name:** Bulk column `meta-description`.
- **Purpose:** A search-optimised description.
- **Mandatory:** No.
- **Allowed Values:** Plain text; Recommended 120–160 characters.
- **Business Rules:** Replaces `<meta name="description">` in the browser; fallback for `og:description` and `twitter:description`.
- **Used By Components:** SEO decorator.
- **Used By Search:** Query index `metaDescription` (not read by code).
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `How agentic AI changes operations, risk and customer service in banking.`

8.2.12 meta-keywords — SEO Keywords

- **Field Name:** Bulk column `meta-keywords`.

- **Purpose:** Replaces the keywords meta.
- **Mandatory:** No.
- **Allowed Values:** Comma-separated words.
- **Business Rules:** Applied in the browser; ignored by major search engines.
- **Used By Components:** SEO decorator.
- **Used By Search:** Not indexed.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `agentic AI, banking, automation`.

8.2.13 author-id — Author ID

- **Field Name:** Bulk column `author-id` (or page metadata `author-id`).
- **Purpose:** Links the page to an entry of the locale's Authors sheet (`/{locale}/data/authors.json`: author-id, name, designation, bio, image, linkedin, region).
- **Mandatory:** Recommended for articles and blogs.
- **Allowed Values:** An `author-id` value of the Authors sheet.
- **Business Rules:** The Page Header and article template match the ID case-insensitively (`getAuthor`); the List and Filter List match it exactly. When no Authors row matches, the Page Header shows the `author` metadata as the name (no image or designation) and the article template adds no "About the author".
- **Used By Components:** Page Header (author lockup: name linked to LinkedIn, image, designation and region); article and blog templates ("About the author", placeholder `aboutTheAuthor`); List (feature card author, when First card as feature is on); Filter List (hero and featured spotlight cards, when the Author source column has no match).
- **Used By Search:** Query index `authorId`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `jdoe`, `author-0042`.

8.2.14 publish-date — Publish Date

- **Field Name:** Bulk column `publish-date`; fallback `publication-date`.
- **Purpose:** The publication date shown to visitors and used for "latest" ordering.
- **Mandatory:** Recommended for articles, blogs, press releases and insights.
- **Allowed Values:** `YYYY-MM-DD` (an ISO date-time also works: the first 10 characters are used).
- **Business Rules:** Other formats are shown as typed, without a machine-readable `datetime`, and sort incorrectly in the Filter List (string comparison). Not the AEM `published-time`.
- **Used By Components:** Page Header (article layout: "Published dd/mm/yy", placeholder `published`); Filter List (card meta `dd Mmm yy`; Latest sort, then last modified); List (card date when `modified-date` is empty; Order by last modified uses `modified-date`, else the publication time).
- **Used By Search:** Query index `publishDate`.
- **Used By Personalization:** None.
- **Used By Analytics:** None (List / Cards items send `repo:modifyDate` from the card date).
- **Example Values:** `2026-09-04`.

8.2.15 modified-date — Modified Date

- **Field Name:** Bulk column `modified-date`.
- **Purpose:** An editorial "last updated" date.
- **Mandatory:** No.
- **Allowed Values:** `YYYY-MM-DD`.

- **Business Rules:** In the List it is the **first** choice for the card date (before `publish-date`) and the value of Order by last modified (else the page's last publication). Not shown by the Page Header.
- **Used By Components:** List (`PAGE_MAPPING.date`, `lastModified`).
- **Used By Search:** Query index `modifiedDate`.
- **Used By Personalization:** None.
- **Used By Analytics:** Indirectly: `repo:modifyDate` of List items (the card date).
- **Example Values:** `2026-10-01`.

8.2.16 reading-time — Reading Time

- **Field Name:** Bulk column `reading-time`.
- **Purpose:** Estimated reading time.
- **Mandatory:** No.
- **Allowed Values:** Whole minutes (`16`) or any text (`2 hours`).
- **Business Rules:** A number is formatted: Page Header "16 min read" (placeholder `minRead`), cards "16m" (placeholder `minutesShort`); text is shown as typed.
- **Used By Components:** Page Header (article layout); List and Cards (kicker of image and feature cards, with Show tags on); Filter List (tag row of cards).
- **Used By Search:** Query index `readingTime`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `16`, `6`.

8.2.17 og-title — Social Title

- **Field Name:** Bulk column `og-title`.
- **Purpose:** The title of social link previews.
- **Mandatory:** No.
- **Allowed Values:** Plain text.
- **Business Rules:** Sets `og:title` in the browser; fallback `meta-title`; also the fallback of `twitter:title`. The server-delivered `og:title` (from the Title) is what the query index and non-JavaScript crawlers read.
- **Used By Components:** SEO decorator.
- **Used By Search:** Not indexed under this name (the index `title` reads the server `og:title`).
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `The agentic bank — TCS perspective`.

8.2.18 og-description — Social Description

- **Field Name:** Bulk column `og-description`.
- **Purpose:** The description of social link previews.
- **Mandatory:** No.
- **Allowed Values:** Plain text.
- **Business Rules:** Sets `og:description`; fallback `meta-description`; fallback of `twitter:description`.
- **Used By Components:** SEO decorator.
- **Used By Search:** Not indexed.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `Five shifts every bank leader should plan for.`

8.2.19 og-image — Social Image

- **Field Name:** Bulk column `og-image`.
- **Purpose:** The image of social link previews.
- **Mandatory:** No.
- **Allowed Values:** An image URL or site path (made absolute).
- **Business Rules:** Sets `og:image` in the browser (not `og:image:secure_url`); fallback of `twitter:image`. An invalid URL is ignored. The index `image` column is the server `og:image` (the page image), not this column.
- **Used By Components:** SEO decorator.
- **Used By Search:** Not indexed.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `/en/media/agentic-bank-social.jpg`.

8.2.20 og-type — Open Graph Type

- **Field Name:** Bulk column `og-type`.
- **Purpose:** The Open Graph object type.
- **Mandatory:** No.
- **Allowed Values:** Open Graph types, e.g. `website`, `article`.
- **Business Rules:** Set only when present; no default.
- **Used By Components:** SEO decorator.
- **Used By Search:** Not indexed.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `article`.

8.2.21 twitter-card — Twitter / X Card Type

- **Field Name:** Bulk column `twitter-card`.
- **Purpose:** The card layout on X (Twitter).
- **Mandatory:** No (Edge Delivery delivers `summary_large_image`).
- **Allowed Values:** `summary`, `summary_large_image`, `app`, `player`.
- **Business Rules:** Overrides the delivered value in the browser.
- **Used By Components:** SEO decorator.
- **Used By Search:** Not indexed.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `summary`.

8.2.22 twitter-title — Twitter / X Title

- **Field Name:** Bulk column `twitter-title`.
- **Purpose:** The title on X cards.
- **Mandatory:** No.
- **Allowed Values:** Plain text.
- **Business Rules:** Fallbacks `og-title`, then `meta-title`.
- **Used By Components:** SEO decorator.
- **Used By Search:** Not indexed.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `The agentic bank`.

8.2.23 twitter-description — Twitter / X Description

- **Field Name:** Bulk column `twitter-description`.
- **Purpose:** The description on X cards.
- **Mandatory:** No.
- **Allowed Values:** Plain text.
- **Business Rules:** Fallbacks `og-description`, then `meta-description`.
- **Used By Components:** SEO decorator.
- **Used By Search:** Not indexed.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `Five shifts every bank leader should plan for.`

8.2.24 twitter-image — Twitter / X Image

- **Field Name:** Bulk column `twitter-image`.
- **Purpose:** The image on X cards.
- **Mandatory:** No.
- **Allowed Values:** An image URL or site path (made absolute).
- **Business Rules:** Fallback `og-image`.
- **Used By Components:** SEO decorator.
- **Used By Search:** Not indexed.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `/en/media/agentic-bank-x.jpg`.

8.2.25 canonical-url — Canonical URL

- **Field Name:** Bulk column `canonical-url`.
- **Purpose:** The preferred URL of duplicate or syndicated content.
- **Mandatory:** No.
- **Allowed Values:** An absolute URL or a site path (made absolute).
- **Business Rules:** Sets `<link rel="canonical">` and `og:url` in the browser; an invalid URL is ignored. Edge Delivery also supports the standard `canonical` metadata on the server, which is visible without JavaScript (Recommended for critical cases).
- **Used By Components:** SEO decorator.
- **Used By Search:** Not indexed; affects search engines that render JavaScript.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `https://[To be confirmed: production domain]/en/insights/agentic-bank`.

8.2.26 robots — Robots

- **Field Name:** Bulk column `robots` (standard metadata).
- **Purpose:** Instructs search engines whether to index the page and follow links.
- **Mandatory:** No (no value: indexable).
- **Allowed Values:** `index`, `noindex`, `follow`, `nofollow` and combinations, e.g. `noindex, nofollow`.
- **Business Rules:** Delivered by Edge Delivery in the HTML (no code needed). Pages with `noindex` are left out of the sitemap because the index includes `robots`; they still appear in the List and the Filter List (no code checks `robots`).
- **Used By Components:** None.
- **Used By Search:** Query index `robots`; sitemap exclusion; search engines.

- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `noindex, nofollow` (campaign test pages).

8.2.27 region — Region

- **Field Name:** Bulk column `region`.
- **Purpose:** The region the page belongs to; selects the Media Contacts of press releases.
- **Mandatory:** Recommended for press releases.
- **Allowed Values:** A value of the `region` column of the locale's Media Contacts sheet (`/{locale}/data/media-contacts.json`). [To be confirmed: list of region values — owner: corporate communications]
- **Business Rules:** The press-release template shows the contacts whose region matches (case-insensitive); when none match, or the page has no region, all contacts are shown. Free text, not a tag: keep it consistent with the `tcs-corp:region` titles if both are used.
- **Used By Components:** Press-release template (`templates/press-release/press-release.js`, `inRegion`).
- **Used By Search:** Query index `region` (not read by code).
- **Used By Personalization:** None (candidate for future regional targeting).
- **Used By Analytics:** None.
- **Example Values:** `Europe`, `Americas`.

8.2.28 country — Country

- **Field Name:** Bulk column `country`.
- **Purpose:** The country of the page's content.
- **Mandatory:** No.
- **Allowed Values:** Free text; Recommended ISO 3166-1 alpha-2 codes in lower case (as the locale folders: `us`, `de`, `fr`, …).
- **Business Rules:** `getPageMetadata().country` falls back to the locale's country folder; no block reads it.
- **Used By Components:** None.
- **Used By Search:** Query index `country` (not read by code).
- **Used By Personalization:** None (available for the future).
- **Used By Analytics:** None.
- **Example Values:** `de`, `jp`.

8.2.29 language — Language

- **Field Name:** Bulk column `language`.
- **Purpose:** Overrides the page language (`<html lang>`).
- **Mandatory:** No (default: the locale's language tag, e.g. `de-DE`).
- **Allowed Values:** A BCP 47 language code matching `^[a-z]{2,3}(-[a-z0-9]{2,8})*$` (case-insensitive), e.g. `en`, `en-GB`. Other values are ignored.
- **Business Rules:** Use only for pages whose content differs from the locale language (for example an English page on `/ja-jp/`). It also changes the sort collation of the List and the Filter List (`document.documentElement.lang`).
- **Used By Components:** SEO decorator (`<html lang>`); `getPageLanguage()`; data layer.
- **Used By Search:** Query index `language`; search engines (language detection).
- **Used By Personalization:** None.
- **Used By Analytics:** `xdm:language` of the page entry.
- **Example Values:** `en-GB`.

8.2.30 persona — Persona

- **Field Name:** Bulk column `persona`.
- **Purpose:** The target persona of the page.
- **Mandatory:** No.
- **Allowed Values:** Free text. [To be confirmed: persona list — owner: digital marketing lead]
- **Business Rules:** Published and indexed; no code uses it.
- **Used By Components:** None (`getPageMetadata().persona` exists but is not read).
- **Used By Search:** Query index `persona`.
- **Used By Personalization:** None today; intended for future audiences (Adobe Target / Journey Optimizer, not implemented).
- **Used By Analytics:** None (not in the data layer).
- **Example Values:** `cxo`, `it-leader`.

8.2.31 thumbnail-image — Thumbnail Image

- **Field Name:** Bulk column `thumbnail-image`.
- **Purpose:** A small image for cards.
- **Mandatory:** No.
- **Allowed Values:** An image path or URL (AEM Assets / site media).
- **Business Rules:** List card image order: `card-image`, page image (`og:image`, except the site's default image), `thumbnail-image`, `featured-image`. Filter List: the Fallback image column (default `thumbnail-image`) when the Image source (default `featured-image`) is empty.
- **Used By Components:** List; Filter List.
- **Used By Search:** Query index `thumbnailImage`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `/en/media/agentic-bank-thumb.jpg`.

8.2.32 featured-image — Featured Image

- **Field Name:** Bulk column `featured-image`.
- **Purpose:** The large image of the page: the Page Header Landing image and the default Filter List card image.
- **Mandatory:** Recommended for landing pages and for pages listed by Filter Lists.
- **Allowed Values:** An image path or URL.
- **Business Rules:** Page Header Landing layout loads it eagerly with high fetch priority (the page's LCP candidate), widths 1200 (≥ 900px) / 750. Filter List Image source default; List fourth choice.
- **Used By Components:** Page Header (Landing); Filter List (cards, hero and featured spotlights); List.
- **Used By Search:** Query index `featuredImage`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `/en/media/agentic-bank-hero.jpg`.

8.2.33 campaign-id — Campaign ID

- **Field Name:** Bulk column `campaign-id`.
- **Purpose:** The marketing campaign the page belongs to.
- **Mandatory:** No.
- **Allowed Values:** Campaign codes. [To be confirmed: campaign code format — owner: marketing operations]
- **Business Rules:** Published and indexed; no code uses it.
- **Used By Components:** None (`getPageMetadata().campaignId` is not read).
- **Used By Search:** Query index `campaignId`.

- **Used By Personalization:** None today (future campaign targeting).
- **Used By Analytics:** None today (not in the data layer; would need `trackPage()` changes).
- **Example Values:** `cmp-2026-agentic-bank`.

8.2.34 content-type — Content Type

- **Field Name:** Bulk column `content-type`.
- **Purpose:** The kind of content (Article, Case Study, Report …) shown as a label.
- **Mandatory:** Recommended for every page listed by a List or Filter List.
- **Allowed Values:** Free text; Recommended: the titles of the `tcs-corp:content-type` tags (7.3.1). The Filter List Content types options are `article`, `blog`, `report`, `case-study`, `news`, `event`, `whitepaper`, `podcast`, `video`.
- **Business Rules:** Filter List Content types compares class-name forms (`Case Study` = `case-study`). A value containing "report" makes the card a **report card** in the Mixed card style (List / Cards `kindOf`; Filter List when the eyebrow column contains "report").
- **Used By Components:** Page Header (eyebrow in Landing and Secondary; label in the Article meta row); List (image card meta, report kicker, row eyebrow fallback, card kind); Filter List (Eyebrow source default; Content types filter; report cards).
- **Used By Search:** Query index `contentType`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `Article`, `Case Study`, `Report`.

8.2.35 featured — Featured

- **Field Name:** Bulk column `featured`; fallback `feature-card` (8.2.47).
- **Purpose:** Marks a page for Filter List spotlight cards.
- **Mandatory:** No.
- **Allowed Values:** Yes / no (yes: `yes`, `true`, `1`, `on`, `y`).
- **Business Rules:** Filter List: Featured rule `featured` takes featured pages sorted by priority (if there are none, pages with priority ≤ 3); Hero rule `featured` takes the top featured page (else the latest); Sort by Featured puts featured pages first.
- **Used By Components:** Filter List.
- **Used By Search:** Query index `featured`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `yes`.

8.2.36 priority — Priority

- **Field Name:** Bulk column `priority`; fallback `featured-priority` (8.2.48).
- **Purpose:** Ranks pages in the Filter List.
- **Mandatory:** No.
- **Allowed Values:** A number; lower is more important. Empty = lowest.
- **Business Rules:** Sort by Priority (ascending, ties: latest); Featured rule `priority`: pages with priority ≤ 3 (`FEATURED_PRIORITY`), up to the Featured card count.
- **Used By Components:** Filter List.
- **Used By Search:** Query index `priority`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `1`, `2.5`.

8.2.37 listen-link — Listen Link

- **Field Name:** Bulk column `listen-link`.
- **Purpose:** An audio version of the page.
- **Mandatory:** No.
- **Allowed Values:** A URL of an audio file or player page.
- **Business Rules:** Adds the Listen action to the Page Header (Article layout only); without it only Download and Share are shown.
- **Used By Components:** Page Header.
- **Used By Search:** Not indexed.
- **Used By Personalization:** None.
- **Used By Analytics:** The Listen link click is a `cmp:click` of the Page Header.
- **Example Values:** `/en/media/agentic-bank.mp3`.

8.2.38 author — Author

- **Field Name:** Bulk column `author` (standard Author metadata).
- **Purpose:** The author's name for pages without an Authors sheet entry, and the default Filter List Author source.
- **Mandatory:** No.
- **Allowed Values:** A name, or an author ID of the Authors sheet (Filter List).
- **Business Rules:** Page Header: shown when `author-id` has no Authors entry. Filter List: the Author source value (default column `author`) is looked up in the Authors sheet, else `author-id`, else shown as a name.
- **Used By Components:** Page Header; Filter List (hero and featured cards).
- **Used By Search:** Query index `author`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `Jane Doe`.

8.2.39 card-title — Card Title

- **Field Name:** Bulk column `card-title`.
- **Purpose:** A shorter title for List cards.
- **Mandatory:** No.
- **Allowed Values:** Plain text.
- **Business Rules:** List first choice (then Title); a List Item's Headline overrides it.
- **Used By Components:** List (`PAGE_MAPPING.title`).
- **Used By Search:** Query index `cardTitle`.
- **Used By Personalization:** None.
- **Used By Analytics:** `dc:title` of List items (unless an Analytics label is set).
- **Example Values:** `Cloud, at scale`.

8.2.40 card-description — Card Description

- **Field Name:** Bulk column `card-description`.
- **Purpose:** A shorter description for List cards.
- **Mandatory:** No.
- **Allowed Values:** Plain text.
- **Business Rules:** List first choice (then Description).
- **Used By Components:** List.
- **Used By Search:** Query index `cardDescription`.
- **Used By Personalization:** None.

- **Used By Analytics:** None.
- **Example Values:** `How the cloud scales.`

8.2.41 card-image — Card Image

- **Field Name:** Bulk column `card-image`.
- **Purpose:** A dedicated image for List cards.
- **Mandatory:** No.
- **Allowed Values:** An image path or URL.
- **Business Rules:** List first choice (then the page image, `thumbnail-image`, `featured-image`).
- **Used By Components:** List.
- **Used By Search:** Query index `cardImage`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `/en/media/cloud-card.jpg`.

8.2.42 card-image-alt — Card Image Alt Text

- **Field Name:** Bulk column `card-image-alt`.
- **Purpose:** Alternative text of the List card image.
- **Mandatory:** Recommended when the image conveys information.
- **Allowed Values:** Plain text.
- **Business Rules:** List first choice, then `image-alt`; empty: the image is decorative (`alt=""`, the title is next to it).
- **Used By Components:** List.
- **Used By Search:** Query index `cardImageAlt`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `A data centre`.

8.2.43 image-alt — Image Alt Text

- **Field Name:** Bulk column `image-alt`.
- **Purpose:** Alternative text of the page image used on cards.
- **Mandatory:** No.
- **Allowed Values:** Plain text.
- **Business Rules:** List fallback after `card-image-alt`.
- **Used By Components:** List.
- **Used By Search:** Query index `imageAlt`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `Bank employees reviewing an AI dashboard`.

8.2.44 eyebrow — Eyebrow

- **Field Name:** Bulk column `eyebrow`.
- **Purpose:** The small label above the List card title.
- **Mandatory:** No.
- **Allowed Values:** Plain text.
- **Business Rules:** List first choice, then `category`; shown with Show eyebrow on. The Filter List uses it only if its Eyebrow source is set to `eyebrow`.
- **Used By Components:** List (image card kicker, panel card, rows, statistic); Filter List (optional mapping).

- **Used By Search:** Query index `eyebrow`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `Perspective`.

8.2.45 category — Category

- **Field Name:** Bulk column `category`.
- **Purpose:** A category label, the fallback eyebrow of List cards.
- **Mandatory:** No.
- **Allowed Values:** Plain text.
- **Business Rules:** Used only when `eyebrow` is empty. Not the Filter List "Primary filter category" (a tag field of the block).
- **Used By Components:** List.
- **Used By Search:** Query index `category`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `Banking`.

8.2.46 hide-in-nav — Hide in Navigation

- **Field Name:** Bulk column `hide-in-nav`.
- **Purpose:** Keeps a page out of automatic lists.
- **Mandatory:** No.
- **Allowed Values:** Yes / no.
- **Business Rules:** The List (Child pages and Tagged pages sources) skips the page. It does **not** hide the page from the header navigation (authored), the Filter List, the Conversation Canvas menu, a Fixed list item, the sitemap or search engines.
- **Used By Components:** List (`isListable`).
- **Used By Search:** Query index `hideInNav`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `yes`.

8.2.47 feature-card — Feature Card (legacy)

- **Field Name:** Bulk column `feature-card` (an earlier name of `featured`).
- **Purpose:** Read as a fallback so pages tagged with the earlier name stay featured.
- **Mandatory:** No. Not in the AGENTS.md column list; prefer `featured`.
- **Allowed Values:** Yes / no.
- **Business Rules:** A page is featured when `featured` **or** `feature-card` is yes.
- **Used By Components:** Filter List (through `utils/query-index.js`).
- **Used By Search:** Query index `featureCard`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** `true`.

8.2.48 featured-priority — Featured Priority (legacy)

- **Field Name:** Bulk column `featured-priority` (an earlier name of `priority`).
- **Purpose:** Read as a fallback for `priority`.
- **Mandatory:** No; prefer `priority`.

- **Allowed Values:** A number.
- **Business Rules:** Used only when `priority` is empty or not a number.
- **Used By Components:** Filter List (through `utils/query-index.js`).
- **Used By Search:** Query index `featuredPriority`.
- **Used By Personalization:** None.
- **Used By Analytics:** None.
- **Example Values:** 2.

8.3 Metadata Cheat Sheet

Field	Where to set	Used by	Example
`title`	Page property Title	Page Header h1; List / Filter List titles; index `title`; `dc:title`	`The agentic bank`
`description`	Page property Description	Page Header; List / Filter List; index `description`	`Banking is entering a new era.`
`keywords`	Page property Keywords	Head only	`agentic AI, banking`
`tags`	AEM page properties Tags, or sheet `tags`	Page Header; Conversation Canvas; List / Filter List (index); `xdm:tags`	`tcs-corp:industry/banking`
`page-type`	Page property Page Type, or sheet	Body class; templates; Page Header layout; Filter List Page types; `xdm:template`	`article`
`nav`	Page property Navigation, or sheet	Header (inherited)	`references/nav-careers`
`footer`	Page property Footer, or sheet	Footer (inherited)	`/en/references/footer`
`error-page`	Page property 404 Page, or sheet	404 page (inherited)	`/en/error-pages/404`
`url`	Sheet	Row pattern	`/en/insights/**`
`meta-title`	Sheet	SEO decorator (title, og / twitter fallback)	`Agentic AI in Banking – TCS`
`meta-description`	Sheet	SEO decorator	`How agentic AI changes banking.`
`meta-keywords`	Sheet	SEO decorator	`agentic AI, banking`
`author-id`	Sheet	Page Header author; article / blog "About the author"; List feature card; Filter List spotlights	`jdoe`
`publish-date`	Sheet	Page Header date; Filter List date and Latest sort; List date fallback	`2026-09-04`
`modified-date`	Sheet	List date and Order by last modified	`2026-10-01`
`reading-time`	Sheet	Page Header; List / Cards and Filter List kickers	`16`
`og-title`	Sheet	SEO decorator `og:title`	`The agentic bank — TCS`
`og-description`	Sheet	SEO decorator `og:description`	`Five shifts for bank leaders.`

Field	Where to set	Used by	Example
`og-image`	Sheet	SEO decorator `og:image`	`/en/media/social.jpg`
`og-type`	Sheet	SEO decorator `og:type`	`article`
`twitter-card`	Sheet	SEO decorator `twitter:card`	`summary`
`twitter-title`	Sheet	SEO decorator `twitter:title`	`The agentic bank`
`twitter-description`	Sheet	SEO decorator `twitter:description`	`Five shifts for bank leaders.`
`twitter-image`	Sheet	SEO decorator `twitter:image`	`/en/media/x.jpg`
`canonical-url`	Sheet	SEO decorator canonical link and `og:url`	`https://…/en/insights/agentic-bank`
`robots`	Sheet	Search engines; index `robots`; sitemap exclusion	`noindex, nofollow`
`region`	Sheet	Press-release Media Contacts; index	`Europe`
`country`	Sheet	Index only	`de`
`language`	Sheet	`<html lang>`; `xdm:language`; sort collation	`en-GB`
`persona`	Sheet	Index only (future personalisation)	`cxo`
`thumbnail-image`	Sheet	List image; Filter List fallback image	`/en/media/thumb.jpg`
`featured-image`	Sheet	Page Header Landing image (LCP); Filter List image; List image	`/en/media/hero.jpg`
`campaign-id`	Sheet	Index only	`cmp-2026-agentic-bank`
`content-type`	Sheet	Page Header eyebrow / label; List meta and report cards; Filter List eyebrow and Content types	`Case Study`
`featured`	Sheet	Filter List featured / hero cards, Featured sort	`yes`
`priority`	Sheet	Filter List Priority sort, featured rule (≤ 3)	`1`
`listen-link`	Sheet	Page Header Listen action (Article layout)	`/en/media/page.mp3`
`author`	Sheet	Page Header name fallback; Filter List Author source	`Jane Doe`
`card-title`	Sheet	List card title	`Cloud, at scale`
`card-description`	Sheet	List card description	`How the cloud scales.`
`card-image`	Sheet	List card image	`/en/media/card.jpg`
`card-image-alt`	Sheet	List card image alt	`A data centre`
`image-alt`	Sheet	List image alt fallback	`Bank employees`
`eyebrow`	Sheet	List eyebrow; Filter List (if mapped)	`Perspective`
`category`	Sheet	List eyebrow fallback	`Banking`
`hide-in-nav`	Sheet	List: page not listed (Child pages, Tagged pages)	`yes`
`feature-card`	Sheet (legacy)	Filter List fallback for `featured`	`true`

Field	Where to set	Used by	Example
`featured-priority`	Sheet (legacy)	Filter List fallback for `priority`	2

> **Tip:** Changes to page properties take effect when the page is published; changes to the bulk metadata sheet when the sheet is published (and only once `metadata.source` lists it). Lists and filters reflect metadata only after the affected pages are republished and re-indexed, because they read `/query-index.json`.

8.4 Metadata Field Usage Matrix

This matrix puts every metadata field of the site on one row: the page properties (8.2.1–8.2.8), the bulk metadata columns of AGENTS.md (8.2.9–8.2.46), the legacy names read as fallbacks (8.2.47–8.2.48) and the two standard names the code reads as fallbacks (`template`, `publication-date`, 8.1.2). The detail of each field (who reads it, exact fallbacks) is in 8.2; the short form for authors is 8.3.

How to read the columns:

- **Mandatory:** no field is validated by the models or the code (8.2 note). "Recommended" means the feature that uses the field shows nothing or a fallback without it; "Yes" is used only where the platform needs the value; "No" means optional.
- **Search Usage:** the query index column (`helix-query.yaml` → `/query-index.json`, camelCase name) and the SEO head tags. "Server" tags are delivered by Edge Delivery in the HTML; "browser" tags are set by `decorators/seo-decorator.js` and are seen only by clients that run JavaScript (8.1.5). Columns marked F-10 are defined in `helix-query.yaml` but were not in the live index on 13 October 2026.
- **Analytics Usage:** the Adobe Client Data Layer properties that carry the value today, as pushed by `decorators/data-layer-decorator.js` (page entry: `dc:title`, `xdm:language`, `xdm:template`, `xdm:tags`, `repo:path`) and `decorators/card-list-decorator.js` (List / Cards item state: `dc:title`, `xdm:linkURL`, `xdm:position`, `repo:modifyDate`). Nothing is sent to an analytics server yet (11.1.1).
- **Personalization Usage:** what Adobe Target (through the Web SDK, once Adobe Tags is added, 11.7.7) could use. No personalisation is implemented (as of this handover); every entry is therefore "Not implemented", followed by the candidate use where one exists. Values that are not in the data layer today would first need to be added to `trackPage()` (8.1.10). The Teaser's Personalization toggle only adds the `personalization` class and `data-personalization="true"` as a marker (8.1.11).
- Bulk metadata applies only once all 13 sheets are listed in `metadata.source` (8.1.1; F-11), and page tags may be published as `cq-tags` instead of `article:tag` (F-07).

8.4.1 Page Properties

Field	Purpose	Mandatory	Business Rules	Allowed Values	Search Usage	Analytics Usage	Personalization Usage	Example Value
`title` (Title, `jcr:title`)	Page name: browser tab, Page Header h1, default card title, analytics title	Recommended (not enforced)	`meta-title` replaces only the browser title; the Page Header, index `title` and `dc:title` keep the Title; List prefers `card-title`; without a Title the List derives one from	Plain text	Index `title` (from server `og:title`); server `<title>`, `og:title`, `twitter:title`	Page `dc:title`; List item `dc:title` when there is no `card-title` or analytics label	Not implemented; not a targeting attribute (useful as the page name in activity reports)	The agentic bank

Field	Purpose	Mandatory	Business Rules	Allowed Values	Search Usage	Analytics Usage	Personalization Usage	Example Value
			the path; about 60 characters, unique per locale					
`description` (Description, `jcr:description`)	Summary for search results, social previews, Page Header and cards	Recommended (not enforced)	`meta-description` replaces the head description in the browser only; Page Header, index and cards keep the Description; List prefers `card-description`; 120–160 characters	Plain text	Index `description`; server `description`, `og:description`, `twitter:description`	None	Not implemented; no candidate use	`Banking is entering a new era of autonomous, AI-driven operations.`
`keywords` (Keywords, multi)	Keyword list in the head	No	`meta-keywords` overrides it in the browser; ignored by major search engines	One or more words or phrases	Not indexed; server `<meta name="keywords">`	None	Not implemented; no candidate use	`agentic AI, banking`
`tags` (Tags, `cq:tags` or sheet `tags`)	Taxonomy classification (Part 7)	Recommended for pages in lists and filters	Read from `article:tag`, else the comma-separated `tags` meta; de-duplicated, order kept; child tags match parent filters; up to 3 labels on List / Cards cards, 2 on Filter List cards; labels from `/{locale}/taxonomy.json`	Tag IDs of the `tcs-corp:` namespace (titles without `:` or `/` are shown as typed)	Index `tags` (multi-value, from `article:tag`); server `article:tag`	Page `xdm:tags` (IDs)	Not implemented; candidate: interest audiences (industry, service, topic affinity) from `xdm:tags`	`tcs-corp:industry/banking`
`page-type` (Page Type, or sheet)	Selects the Site Global Template and classifies the page	No (Default: no template)	Page property overrides the sheet; class-name form added to `<body>`; only `home`, `article`, `blog`, `press-release` load template code; `landing` / `listing` give the Page Header Landing layout (sheet only); Filter List compares class-name forms (F-12)	Page property: Default, `home`, `article`, `blog`, `press-release`; sheet: any (code effects for the values above and `report`, `case-study`, `news`, `event`)	Index `pageType`	Page `xdm:template` (omitted when empty)	Not implemented; candidate: activity scope by template (for example all `article` pages)	`press-release`
`nav` (Navigation, or sheet)	Header fragment of the page and its children	No (empty: inherited, else `/{locale}/references/nav`)	Inherited from the nearest parent up to the locale Home page; parent values cached per browser session; AEM, published or locale-relative paths	A page path (`references/nav-careers`)	Not indexed; `/nav` pages excluded from index and sitemap	None (the header is tracked as component `header`)	Not implemented; a different header per site section is possible by authoring only	`/content/tcs-corp/us/en/references/nav`

Field	Purpose	Mandatory	Business Rules	Allowed Values	Search Usage	Analytics Usage	Personalization Usage	Example Value
`footer` (Footer, or sheet)	Footer fragment of the page and its children	No (empty: inherited, else / `{locale}/references/footer`)	As `nav`	A page path	Not indexed; footer pages excluded	None (the footer is tracked as component `footer`)	Not implemented; no candidate use	`/content/tcs-corp/de/de-de/references/footer`
`error-page` (404 Page, or sheet)	Page shown when a page below this one is not found	No (empty: inherited, else / `{locale}/error-pages/404`, `/en/error-pages/404`, built-in)	Lookup starts at the missing page's nearest parent; a page that fails to load falls through; foreign-locale content gets the locale's `lang`	A page path	Not indexed; error pages excluded from index and sitemap	None specific (the 404 view pushes its own page entry; RUM `404` checkpoint)	Not implemented; no candidate use	`/content/tcs-corp/us/en/error-pages/404`

8.4.2 Bulk Metadata Columns

Field	Purpose	Mandatory	Business Rules	Allowed Values	Search Usage	Analytics Usage	Personalization Usage	Example Value
`url`	The pages a sheet row applies to	Yes, for every sheet row	Rows evaluated top to bottom (general first, specific later); published paths starting with the sheet's locale; row key, not page metadata	Path or pattern with `*` / `**`	None	None	Not implemented; no candidate use	`/en/insights/**`
`meta-title`	Search-optimised browser title	No	Set as `document.title` in the browser; fallback of `og:title` / `twitter:title`; not used for Page Header, cards or `dc:title`; about 60 characters	Plain text	Index `metaTitle` (not read by code); browser `<title>`	None	Not implemented; no candidate use	`Agentic AI in Banking – TCS`
`meta-description`	Search-optimised description	No	Replaces `<meta name="description">` in the browser; fallback of `og:description` / `twitter:description`; 120–160 characters	Plain text	Index `metaDescription` (not read by code); browser `description`	None	Not implemented; no candidate use	`How agentic AI changes operations, risk and customer service in banking.`

Field	Purpose	Mandatory	Business Rules	Allowed Values	Search Usage	Analytics Usage	Personalization Usage	Example Value
`meta-keywords`	Replaces the keywords meta	No	Applied in the browser; ignored by major search engines	Comma-separated words	Not indexed; browser `keywords`	None	Not implemented; no candidate use	`agentic AI, banking, automation`
`author-id`	Links the page to the locale's Authors sheet	Recommended for articles and blogs	Page Header and article template match case-insensitively; List and Filter List match exactly (F-30); no match: Page Header shows `author`, no "About the author"	An `author-id` of `/{locale}/data/authors.json`	Index `authorId`	None (not in the data layer)	Not implemented; candidate: author affinity audiences (needs a `trackPage()` change)	`jdoe`
`publish-date`	Visible publication date and "latest" ordering	Recommended for articles, blogs, press releases, insights	First 10 characters used; other formats shown as typed and sorted as text in the Filter List; not the AEM `published-time`	`YYYY-MM-DD` (ISO date-time accepted)	Index `publishDate`	List item `repo:modifyDate` when `modified-date` is empty	Not implemented; candidate: freshness rules (recent content)	`2026-09-04`
`modified-date`	Editorial "last updated" date	No	List: first choice for the card date and the value of Order by last modified (else the last publication); not shown by the Page Header	`YYYY-MM-DD`	Index `modifiedDate`	List item `repo:modifyDate` (the card date)	Not implemented; no candidate use	`2026-10-01`
`reading-time`	Estimated reading time	No	A number is formatted ("16 min read", placeholder `minRead`; "16m", `minutesShort`); text shown as typed	Whole minutes or text	Index `readingTime`	None	Not implemented; candidate: content-length preferences	`16`
`og-title`	Title of social link previews	No	Sets `og:title` in the browser; fallback `meta-title`; fallback of `twitter:title`; crawlers without JavaScript see the server `og:title` (Title)	Plain text	Not indexed under this name; browser `og:title`	None	Not applicable (head tag only)	`The agentic bank — TCS perspective`
`og-description`	Description of social link previews	No	Sets `og:description`; fallback `meta-description`; fallback of `twitter:description`	Plain text	Not indexed; browser `og:description`	None	Not applicable (head tag only)	`Five shifts every bank leader should plan for.`
`og-image`	Image of social link previews	No	Sets `og:image` (made absolute; not `og:image:secure_url`);	Image URL or site path	Not indexed; browser `og:image`	None	Not applicable (head tag only)	`/en/media/agentic-`

Field	Purpose	Mandatory	Business Rules	Allowed Values	Search Usage	Analytics Usage	Personalization Usage	Example Value
			invalid URLs ignored; fallback of `twitter:image`; index `image` is the server page image, not this column					`bank-social.jpg`
`og-type`	Open Graph object type	No	Set only when present; no default	`website`, `article`, other Open Graph types	Not indexed; browser `og:type`	None	Not applicable (head tag only)	`article`
`twitter-card`	X (Twitter) card layout	No (server delivers `summary_large_image`)	Overrides the delivered value in the browser	`summary`, `summary_large_image`, `app`, `player`	Not indexed; browser `twitter:card`	None	Not applicable (head tag only)	`summary`
`twitter-title`	Title on X cards	No	Fallbacks `og-title`, then `meta-title`	Plain text	Not indexed; browser `twitter:title`	None	Not applicable (head tag only)	`The agentic bank`
`twitter-description`	Description on X cards	No	Fallbacks `og-description`, then `meta-description`	Plain text	Not indexed; browser `twitter:description`	None	Not applicable (head tag only)	`Five shifts every bank leader should plan for.`
`twitter-image`	Image on X cards	No	Fallback `og-image`; made absolute	Image URL or site path	Not indexed; browser `twitter:image`	None	Not applicable (head tag only)	`/en/media/agentic-bank-x.jpg`
`canonical-url`	Preferred URL of duplicate or syndicated content	No	Sets `<link rel="canonical">` and `og:url` in the browser; invalid URLs ignored; the standard `canonical` metadata works on the server (preferred for critical cases)	Absolute URL or site path	Not indexed; browser canonical link and `og:url`	None	Not applicable (head tag only)	`https://[To be confirmed: production domain]/en/insights/agentic-bank`
`robots`	Indexing and link-following instructions	No (empty: indexable)	Delivered by Edge Delivery in the HTML; `noindex` pages left out of the sitemap but still in List and Filter List	`index`, `noindex`, `follow`, `nofollow` and combinations	Index `robots`; sitemap exclusion; server `<meta name="robots">`	None	Not applicable	`noindex, nofollow`
`region`	Region of the page; selects press-release Media Contacts	Recommended for press releases	Contacts whose `region` matches (case-insensitive), else all contacts; free text, keep consistent with `tcs-corp:region` titles	A `region` value of `/{locale}/data/media-contacts.json` [To be confirmed: list of region val-	Index `region` (not read by code)	None (not in the data layer)	Not implemented; candidate: regional audiences and offers (needs a `trackPage()` change)	`Europe`

Field	Purpose	Mandatory	Business Rules	Allowed Values	Search Usage	Analytics Usage	Personalization Usage	Example Value
				ues — owner: Corporate Communications]				
country	Country of the content	No	getPageMetadata() reads it; falls back to the locale's country folder; no block reads it	Free text; lower-case ISO 3166-1 alpha-2 recommended	Index country (not read by code)	None (not in the data layer)	Not implemented; candidate: country audiences (needs a trackPage() change)	de
language	Overrides the page language	No (default: the locale's tag, for example de-DE)	Only valid language codes are used; also changes List / Filter List sort collation; use only for content in another language than the locale	BCP 47 code matching ^[a-z]{2,3}(-[a-z0-9]{2,8})*$	Index language; browser <html lang>	Page xdm:language	Not implemented; candidate: language-specific offers	en-GB
persona	Target persona of the page	No	Published and indexed; no code uses it (F-40)	Free text [To be confirmed: persona list — owner: Digital Marketing Lead]	Index persona	None (not in the data layer)	Not implemented; intended for persona audiences in Adobe Target / Journey Optimizer (needs a trackPage() change)	cxo
thumbnail image	Small card image	No	List image order: card-image, page image, thumbnail-image, featured-image; Filter List Fallback image (default)	Image path or URL	Index thumbnailImage	None	Not implemented; candidate: thumbnail of a Target Recommendations entity	/en/media/agentic-bank-thumb.jpg
featured image	Large page image: Page Header Landing image, default Filter List card image	Recommended for landing pages and Filter List pages	Page Header Landing loads it eagerly with high fetch priority (LCP); widths 1200 (≥ 900 px) / 750; not same-origin media is lazy-loaded (F-14)	Image path or URL	Index featuredImage	None	Not implemented; candidate: image of a Target Recommendations entity	/en/media/agentic-bank-hero.jpg
campaign-id	Marketing campaign of the page	No	Published and indexed; no code uses it (F-40)	Campaign codes [To be confirmed: campaign	Index campaignId	None (not in the data layer; needs a	Not implemented; candidate: campaign	cmp-2026-agentic-bank

Field	Purpose	Mandatory	Business Rules	Allowed Values	Search Usage	Analytics Usage	Personalization Usage	Example Value
				code format — owner: Marketing Operations]		`trackPage()` change)	audiences and attribution	
`contentType`	Kind of content shown as a label	Recommended for pages in lists and filters	Filter List Content types compares class-name forms; a value containing "report" makes a report card (Mixed style)	Free text; recommended the `tcs-corp:content-type` titles; Filter List options `article`, `blog`, `report`, `case-study`, `news`, `event`, `whitepaper`, `podcast`, `video`	Index `contentType`	None (not in the data layer)	Not implemented; candidate: content-format affinity audiences	`Case Study`
`featured`	Marks a page for Filter List spotlight cards	No	Featured rule takes featured pages by priority (none: priority ≤ 3); Hero rule takes the top featured page (else the latest); Sort by Featured	Yes / no (`yes`, `true`, `1`, `on`, `y`)	Index `featured`	None	Not implemented; no candidate use (editorial ordering)	`yes`
`priority`	Ranks pages in the Filter List	No	Ascending (lower first, ties: latest); Featured rule `priority` takes pages with priority ≤ 3; empty = lowest	A number	Index `priority`	None	Not implemented; no candidate use (editorial ordering)	`1`
`listen-link`	Audio version of the page	No	Adds Listen to the Page Header (Article layout only)	URL of an audio file or player page	Not indexed	`cmp:click` of the Page Header (`interaction` `listen`, `xdm:linkURL` the link)	Not implemented; no candidate use	`/en/media/agentic-bank.mp3`
`author`	Author name without an Authors entry; default Filter List Author source	No	Page Header shows it when `author-id` has no match; Filter List looks the value up in the Authors sheet, else `author-id`, else shows it as a name	A name, or an author ID (Filter List)	Index `author` (F-10); server `author`	None	Not implemented; no candidate use	`Jane Doe`
`card-title`	Shorter title for List cards	No	List first choice, then Title; a List Item Headline overrides it	Plain text	Index `cardTitle` (F-10)	List item `dc:title` (unless an Analytics label is set)	Not implemented; candidate: name of a Target Recommendations entity	`Cloud, at scale`

Field	Purpose	Mandatory	Business Rules	Allowed Values	Search Usage	Analytics Usage	Personalization Usage	Example Value
`card-description`	Shorter description for List cards	No	List first choice, then Description	Plain text	Index `cardDescription` (F-10)	None	Not implemented; no candidate use	How the cloud scales.
`card-image`	Dedicated List card image	No	List first choice, then page image, `thumbnail-image`, `featured-image`	Image path or URL	Index `cardImage` (F-10)	None	Not implemented; candidate: image of a Target Recommendations entity	`/en/media/cloud-card.jpg`
`card-image-alt`	Alternative text of the List card image	Recommended when the image conveys information	First choice, then `image-alt`; empty: decorative (`alt=""`)	Plain text	Index `cardImageAlt` (F-10)	None	Not applicable	A data centre
`image-alt`	Alternative text of the page image on cards	No	List fallback after `card-image-alt`	Plain text	Index `imageAlt` (F-10)	None	Not applicable	Bank employees reviewing an AI dashboard
`eyebrow`	Small label above the List card title	No	List first choice, then `category`; shown with Show eyebrow on; Filter List only if its Eyebrow source is `eyebrow`	Plain text	Index `eyebrow` (F-10)	None	Not implemented; no candidate use	Perspective
`category`	Category label, fallback eyebrow of List cards	No	Used only when `eyebrow` is empty; not the Filter List "Primary filter category"	Plain text	Index `category` (F-10)	None	Not implemented; candidate: category of a Target Recommendations entity	Banking
`hide-in-nav`	Keeps a page out of automatic lists	No	List (Child pages, Tagged pages) skips the page; not the header, Filter List (F-30), Conversation Canvas menu (F-33), Fixed list, sitemap or search engines	Yes / no	Index `hideInNav` (F-10); no effect on the sitemap	None	Not applicable	`yes`

8.4.3 Legacy and Fallback Names

Field	Purpose	Mandatory	Business Rules	Allowed Values	Search Usage	Analytics Usage	Personalization Usage	Example Value
`featured-card` (legacy)	Earlier name of `featured`, read as a fallback	No; prefer `featured` (not in the AGENTS.md list)	A page is featured when `featured` or `feature-card` is `yes`	Yes / no	Index `featureCard` (F-10)	None	Not implemented; no candidate use	`true`
`featured-priority` (legacy)	Earlier name of `priority`, read as a fallback	No; prefer `priority`	Used only when `priority` is empty or not a number	A number	Index `featuredPriority` (F-10)	None	Not implemented; no candidate use	`2`
`template` (standard)	Fallback of `page-type`	No; prefer Page Type	Used by `loadTemplate()` and `getPageMetadata().pageType` only when `page-type` is empty; added as a body class by `decorateTemplateAndTheme()`	As `page-type`	Not indexed	Page `xdm:template` when `page-type` is empty	Not implemented; as `page-type`	`article`
`publication-date` (standard)	Fallback of `publish-date`	No; prefer `publish-date`	Read by `getPageMetadata()` only when `publish-date` is empty	`YYYY-MM-DD`	Not indexed (the index reads `publish-date` only)	None	Not implemented; no candidate use	`2026-09-04`

8.4.4 Usage Summary

Usage	Fields
In the query index (`helix-query.yaml`)	`title`, `description`, `tags`, `robots`, `page-type`, `meta-title`, `meta-description`, `author`, `author-id`, `publish-date`, `modified-date`, `reading-time`, `thumbnail-image`, `featured-image`, `region`, `country`, `language`, `persona`, `campaign-id`, `featured`, `priority`, `feature-card`, `featured-priority`, `card-title`, `card-description`, `card-image`, `card-image-alt`, `image-alt`, `eyebrow`, `category`, `hide-in-nav` (plus `lastModified` and the page `image`)
Indexed but read by no code	`meta-title`, `meta-description`, `region` (read from the page head by the press-release template, not from the index), `country`, `language`, `persona`, `campaign-id`
SEO head tags set on the server	`title`, `description`, `keywords`, `tags` (`article:tag`), `robots`, `author` and the page image (`og:image`, `twitter:image`)
SEO head tags set in the browser only	`meta-title`, `meta-description`, `meta-keywords`, `og-title`, `og-description`, `og-image`, `og-type`, `twitter-card`, `twitter-title`, `twitter-description`, `twitter-image`, `canonical-url`, `language` (`<html lang>`)
In the data layer page entry	`title` (`dc:title`), `language` (`xdm:language`), `page-type` / `template` (`xdm:template`), `tags` (`xdm:tags`)
In List item state or events	`card-title` / `title` (`dc:title`), `modified-date` / `publish-date` (`repo:modifyDate`), `listen-link` (Page Header `cmp:click`)
Personalisation candidates that need a `trackPage()` change first	`persona`, `region`, `country`, `campaign-id`, `content-type`, `author-id`

Usage	Fields
Not read by any block, template or decorator	`keywords` (head only), `persona`, `campaign-id`, `country` (only the `getPageMetadata()` fallback), `url` (row key)

Part 9 — Data Sheets Documentation

This part documents every spreadsheet (and the taxonomy page) that the TCS Corporate Website reads. All sheets exist **once per locale**: they are authored in AEM as a Cloud Service under the locale folder and published as JSON at the locale's language-only path, mapped in `paths.json`.

Locale (AEM folder)	Published root	Locale (AEM folder)	Published root
us/en	/en	se/sv-se	/sv-se
de/de-de	/de-de	dk/da-dk	/da-dk
fr/fr-fr	/fr-fr	no/no-no	/no-no
ca/fr-ca	/fr-ca	cn/zh-cn	/zh-cn
es/es-es	/es-es	jp/ja-jp	/ja-jp
pt/pt-pt	/pt-pt	kr/ko-kr	/ko-kr
nl/nl-nl	/nl-nl		

Sheet	AEM path (below `/content/tcs-corp/{country}/{language}/`)	Published URL	`paths.json` mapping (example de-de)
Placeholders	placeholders	/{locale}/placeholders.json	/content/tcs-corp/de/de-de/placeholders:/de-de/placeholders
Metadata	metadata	/{locale}/metadata.json	/content/tcs-corp/de/de-de/metadata:/de-de/metadata
Taxonomy	taxonomy (taxonomy page)	/{locale}/taxonomy.json	/content/tcs-corp/de/de-de/taxonomy:/de-de/taxonomy.json
Redirects	redirects	/{locale}/redirects.json	/content/tcs-corp/de/de-de/redirects:/de-de/redirects
Authors	data/authors	/{locale}/data/authors.json	/content/tcs-corp/de/de-de/data/authors:/de-de/data/authors
Locations	data/locations	/{locale}/data/locations.json	.../data/locations:/de-de/data/locations
Partners	data/partners	/{locale}/data/partners.json	.../data/partners:/de-de/data/partners
Social Links	data/social-links	/{locale}/data/social-links.json	.../data/social-links:/de-de/data/social-links
Media Contacts	data/media-contacts	/{locale}/data/media-contacts.json	.../data/media-contacts:/de-de/data/media-contacts

Spreadsheet mappings get `.json` appended by the platform; the taxonomy page mapping carries `.json` explicitly.

Status on 13 October 2026 (preview `main--tcs-corp--sradha-tcs.aem.page`): for `/en/`, all nine are published: the placeholders sheet has one row, the taxonomy 16 tags, and the other sheets have their column headers but no rows. None of the other 12 locales has published sheets yet (404).

Common rules for every sheet (enforced by code):

- The code finds a sheet by its **exact page name and location**; a sheet with another name, or in another folder, is ignored.

- Each sheet is loaded **at most once per page view** (the request is shared by all components; there is no cross-page cache in code). The browser and the Edge Delivery CDN cache the JSON; publishing a sheet updates it.
- A missing, unpublished or invalid sheet never breaks a page: the code continues with an empty list (or empty map) and its fallbacks.
- Multi-sheet JSON (`:type` = `multi-sheet`) is supported by `sheetRows()`: the requested sheet, else `default`, else the first sheet. Only the taxonomy uses a requested sheet (the language); other sheets read `default` / the first sheet.
- Values are read as text and trimmed by `utils/data.js`; column headers must be written exactly as documented (lower case with hyphens, except Placeholders `Key` / `Text` and Redirects `Source` / `Destination`, which accept both cases).

Common authoring procedure (AEM as a Cloud Service with Edge Delivery Services):

1. In AEM, open **Sites** and navigate to the locale folder (for example `TCS Corp > us > en`, or `... > en > data` for a data sheet; create the `data` folder page first, left empty).
2. Select **Create > Page** and choose the spreadsheet template for the sheet (Placeholders, Metadata, Redirects, Taxonomy, or the general Spreadsheet template for the data sheets), as listed in each chapter.
3. Enter the **Name** exactly as documented (lower case, hyphens). The Title is free.
4. Define the columns (headers) exactly as documented, then open the sheet and add the rows.
5. Publish the sheet: to **Preview** first (Manage Publication, destination Preview), check it, then **Publish** (live).
6. Verify the JSON at `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{sheet}.json` (preview) and `https://main--tcs-corp--sradha-tcs.aem.live/{locale}/{sheet}.json` (live): the `columns` array must list the headers and `data` the rows.

> **Note:** The names of the AEM spreadsheet page templates (Placeholders, Metadata, Redirects, Taxonomy, Spreadsheet) are those offered by the site's AEM templates. [To be confirmed: template names as shown in the AEM Create Page wizard of this environment — owner: AEM administrator]

9.1 Placeholders

9.1.1 Purpose

The user-interface text of all components (labels, accessible names, messages, counters) for the locale, so that every visible or announced text can be translated without a code change. See 4.5 for the full list of keys.

9.1.2 Ownership

[To be confirmed: business owner of UI text — owner: Localization / content operations lead]. Each locale's content manager or translator maintains that locale's sheet; the development team adds new keys (with an English fallback in code) and documents them.

9.1.3 Published path (per locale)

`/{locale}/placeholders.json`: `/en/placeholders.json`; `/de-de/placeholders.json`; `/fr-fr/placeholders.json`; `/fr-ca/placeholders.json`; `/es-es/placeholders.json`; `/pt-pt/placeholders.json`; `/nl-nl/placeholders.json`; `/sv-se/placeholders.json`; `/da-dk/placeholders.json`; `/no-no/placeholders.json`; `/zh-cn/placeholders.json`; `/ja-jp/placeholders.json`; `/ko-kr/placeholders.json`. AEM: `/content/tcs-corp/{country}/{language}/placeholders`.

9.1.4 Columns

Column	Type	Mandatory	Description	Example
`Key`	text	Yes (rows without a Key are ignored)	The placeholder key. Matched without case and separators (`read-more` = `readMore` = `Read More`). `key` (lower case header) is accepted.	`nextSlide`
`Text`	text	Recommended (empty Text uses the English fallback)	The translated text. May contain `{variables}` that the code fills; keep them as written. `text` (lower case header) is accepted.	`Nächste Folie`
`Description`	text	No (not read by code)	Where and how the text appears, for translators.	`Accessible name of the carousel's next button`
`Category`	text	No (not read by code)	A grouping for authors (for example CTA, Navigation, Carousel, Forms, Filter List, Editor).	`Carousel`

9.1.5 Relationships

- Keys correspond one-to-one to the `t('key', 'fallback')` calls in the code (4.5.3).
- Each locale's sheet is independent; there is no inheritance from the English sheet.

9.1.6 Dependencies

`utils/placeholders.js` (`loadPlaceholders`, `getPlaceholders`, `fillPlaceholder`), used by: Anchor List, Cards, Conversation Canvas, Embed, Filter List, Footer, Form Variations, Gen Carousel, Header, List, Modal, Page Header, Separator, Table, Table List, Tabs, Teaser, Video, Hero (Lottie toggle), `decorators/animation-decorator.js`, `decorators/article-meta-decorator.js`, `decorators/card-list-decorator.js`, the Article / Blog and Press Release templates.

9.1.7 Examples

Key	Text	Description	Category
`read-more`	Read More	CTA label	CTA
`nextSlide`	Next slide	Accessible name of the carousel's next button	Carousel
`showingCount`	Showing {n} of {total}	Filter List status under the results	Filter List
`followUsOn`	Follow us on {platform}	Accessible name of each footer social icon	Footer
`fieldRequired`	This field is required.	Form validation message	Forms

The first row is the row currently published in `/en/placeholders.json`; the others are illustrative.

9.1.8 Business Rules

1. Missing sheet, missing key or empty Text: the English fallback from the code is shown (enforced).
2. Key matching ignores case and every character other than letters and digits (enforced).
3. Duplicate keys (after normalisation): the last row wins (enforced).
4. `{name}` tokens are replaced only with the values the code passes; unknown tokens stay visible (enforced).
5. Loaded once per page view and shared by all components (enforced).
6. Recommended: the English sheet lists every key of 4.5.3 with Description and Category; other locales copy it and translate the Text column.
7. Recommended: keep translations short enough for the component (button labels, pills); there is no enforced length.

9.1.9 Authoring steps

Step 1 — Create the sheet. In Sites, open the locale folder (for example `/content/tcs-corp/de/de-de`), select **Create** > **Page**, choose the **Placeholders** template, set the Name `placeholders` and create it.

Steps — Creating the placeholders sheet: The AEM Create Page wizard in /content/tcs-corp/de/de-de with the Placeholders template selected and the Name field set to `placeholders`.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › de › de-de
2	AEM Sites console toolbar	Create › Page	Open the Create Page wizard
3	Create Page › Template	Template	Placeholders
4	Create Page › Properties	Name	placeholders
5	Create Page	Create	Create the sheet

Step 2 — Add the rows. Open the sheet, check the headers `Key`, `Text`, `Description`, `Category`, and add one row per key (copy the English sheet and translate the Text column).

Steps — Editing placeholders: The placeholders sheet editor showing the four columns and rows such as `nextSlide` / Nächste Folie / Accessible name of the carousel's next button / Carousel.

Step	Where	Field / control	Value / action
1	Sheet /content/tcs-corp/de/de-de/placeholders	Columns	Key, Text, Description, Category
2	Sheet /content/tcs-corp/de/de-de/placeholders › Row 1	Key / Text / Description / Category	nextSlide / Nächste Folie / Accessible name of the carousel's next button / Carousel
3	Sheet /content/tcs-corp/de/de-de/placeholders › Row 2	Key / Text / Description / Category	read-more / Mehr erfahren / CTA label / CTA
4	Sheet /content/tcs-corp/de/de-de/placeholders › Row 3	Key / Text / Description / Category	showingCount / {n} von {total} werden angezeigt / Filter List status under the results / Filter List
5	Sheet /content/tcs-corp/de/de-de/placeholders › Row 4	Key / Text / Description / Category	followUsOn / Folgen Sie uns auf {platform} / Accessible name of each footer social icon / Footer
6	Sheet /content/tcs-corp/de/de-de/placeholders › Row 5	Key / Text / Description / Category	fieldRequired / Dieses Feld ist erforderlich. / Form validation message / Forms

Step 3 — Publish. Publish to Preview, check, then publish to live.

Steps — Publishing the sheet: The Sites console with the `placeholders` sheet selected and the Manage Publication dialog open with the Preview destination.

Step	Where	Field / control	Value / action
1	AEM Sites console	Select	/content/tcs-corp/de/de-de/placeholders
2	AEM Sites console toolbar	Manage Publication	Open the dialog
3	Manage Publication › Options	Destination	Preview
4	Manage Publication	Publish	Confirm; after checking, repeat with the destination Publish (live)

Step 4 — Verify. Open `https://main--tcs-corp--sradha-tcs.aem.page/de-de/placeholders.json`: the JSON lists `"columns":["Key","Text","Description","Category"]` and the rows in `data`. Then open a German page with a carousel and check the button labels (browser developer tools, accessibility tree).

Steps — Verifying the published JSON: The browser showing /de-de/placeholders.json with the columns array and the translated rows.

Step	Where	Field / control	Value / action
1	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/de-de/placeholders.json
2	JSON	columns	[“Key”, “Text”, “Description”, “Category”]
3	JSON	data	One object per row, e.g. { “Key”: “nextSlide”, “Text”: “Nächste Folie”, … }

9.2 Metadata

9.2.1 Purpose

The **bulk metadata** sheet of a locale: page-level values (page type, SEO and social overrides, author, dates, card overrides, featured flags, region, inherited Navigation / Footer / 404 Page) applied to all pages whose URL matches a row’s pattern. It is the only place for page-level values other than the seven page properties (4.3).

9.2.2 Ownership

[To be confirmed: owner of the metadata sheets — owner: SEO lead with the web content lead]. The site administrator lists the sheets in the site configuration (`metadata.source`).

9.2.3 Published path (per locale)

`/{locale}/metadata.json`: `/en/metadata.json`; `/de-de/metadata.json`; `/fr-fr/metadata.json`; `/fr-ca/metadata.json`; `/es-es/metadata.json`; `/pt-pt/metadata.json`; `/nl-nl/metadata.json`; `/sv-se/metadata.json`; `/da-dk/metadata.json`; `/no-no/metadata.json`; `/zh-cn/metadata.json`; `/ja-jp/metadata.json`; `/ko-kr/metadata.json`. AEM: `/content/tcs-corp/{country}/{language}/metadata`.

> **Important:** The platform applies these sheets only when **all 13** are listed in the site configuration’s `metadata.source` (`POST https://admin.hlx.page/config/sradha-tcs/sites/tcs-corp/metadata.json` with `{"source": ["/en/metadata.json", "/de-de/metadata.json", ...]}`). Until then no bulk metadata applies. There is no root `/metadata.json`. [To be confirmed: metadata.source configured — owner: site administrator]

9.2.4 Columns

Every column is published on the matching pages as `<meta name="{column}" content="...">`. “Read by” names the code that uses the value. Dates are `YYYY-MM-DD`. “yes” values accept yes / true / 1 / on / y (case-insensitive).

Column	Type	Mandatory	Description	Example
`url`	URL pattern	Yes	The pages the row applies to; must start with the locale root; `**` matches any depth.	`/en/newsroom/**`
`page-type`	text (class name)	No	Page Type when the page property is empty: template (`home`, `article`, `blog`, `press-release`), Page Header default layout (`landing`, `listing`), Filter List page type filter; body class; index `pageType`; data layer `xdm:template`.	`press-release`

Column	Type	Mandatory	Description	Example
meta-title	text	No	<title> in the browser (SEO decorator); also og:title / twitter:title fallback; index metaTitle.	Q3 results 2026 – TCS
meta-description	text	No	<meta name="description"> (SEO decorator); og:description / twitter:description fallback; index metaDescription.	Highlights of the third quarter.
meta-keywords	text (comma-separated)	No	<meta name="keywords"> (SEO decorator).	results, finance
author-id	text (ID)	Recommended for article, blog	The Authors sheet entry (9.5): Page Header author, "About the author", List / Filter List author lockups; index authorId.	example-author-1
publish-date	date	Recommended for article, blog, press-release	Page Header "Published" date; Filter List sort (Latest) and card date; List / Cards date (when no modified-date); index publishDate.	2026-09-04
modified-date	date	No	List / Cards card date (preferred over publish-date); index modifiedDate.	2026-09-10
reading-time	number (minutes) or text	No	Page Header "{n} min read"; List / Cards / Filter List "{n} m"; non-numeric text shown as written; index readingTime.	6
og-title	text	No	og:title (SEO decorator); twitter:title fallback.	Q3 results 2026
og-description	text	No	og:description; twitter:description fallback.	Revenue and highlights.
og-image	image URL	No	og:image (made absolute); twitter:image fallback.	/en/newsroom/media_1a2b.jpg
og-type	text	No	og:type.	article
twitter-card	text	No	twitter:card.	summary_large_image
twitter-title	text	No	twitter:title.	Q3 results 2026
twitter-description	text	No	twitter:description.	Revenue and highlights.
twitter-image	image URL	No	twitter:image (made absolute).	/en/newsroom/media_1a2b.jpg
canonical-url	URL	No	<link rel="canonical"> and og:url (made absolute).	https://main--tcs-corp--sradha-tcs.aem.live/en/newsroom/q3
robots	text	No	Standard robots meta, applied server side; index robots.	noindex, nofollow
region	text	No	Press Release media contacts by region; getPageMetadata().region; index region.	Europe
country	text	No	getPageMetadata().country (else the locale's country); index country. No component reads it (as of this handover).	de

Column	Type	Mandatory	Description	Example
language	language code	No	<html lang> when a valid code (else the locale's tag); data layer xdm:language; index language.	en-GB
persona	text	No	getPageMetadata().persona; index persona. No component reads it (as of this handover).	investor
thumbnail-image	image URL	No	List card image fallback; Filter List fallback image; index thumbnailImage.	/en/insights/media_3c4d.jpg
featured-image	image URL	No	Page Header Landing image; Filter List card image (default Image source); List image fallback; index featuredImage.	/en/insights/media_5e6f.jpg
campaign-id	text	No	getPageMetadata().campaignId; index campaignId. No component reads it (as of this handover).	cmp-2026-q4
content-type	text	Recommended for listed pages	The editorial label (4.2): Page Header eyebrow / meta row; List / Cards label and report cards; Filter List Content types filter and eyebrow; index contentType.	Report
featured	yes / no	No	Filter List hero (Featured rule) and featured cards; Sort "Featured First"; index featured.	yes
priority	number	No	Filter List order (lower first); featured cards fallback (priority 3 or lower); index priority.	1
listen-link	URL	No	Page Header Listen action (audio version). Not indexed.	/content/dam/tcs-corp/audio/q3.mp3
author	text	No	Author name when there is no author-id (Page Header); Filter List author source (matched to an Authors ID, else shown as the name); index author.	TCS Newsroom
card-title	text	No	List card title (else the page title); index cardTitle.	Q3 at a glance
card-description	text	No	List card description (else the page description); index cardDescription.	Revenue up, margins stable.
card-image	image URL	No	List card image (first choice); index cardImage.	/en/newsroom/media_7a8b.jpg
card-image-alt	text	No	List card image alt text (first choice); index cardImageAlt.	Chart of quarterly revenue
image-alt	text	No	List card image alt text (fallback); index imageAlt.	Office building
eyebrow	text	No	List card eyebrow (first choice); index eyebrow.	Investor relations
category	text	No	List card eyebrow fallback; getPageMetadata().category; index category.	Financials
hide-in-nav	yes / no	No	yes: the page is left out of List results; index hideInNav.	yes

Additional metadata names read by the code (not in the standard column list; can be added as columns):

Column	Type	Mandatory	Description	Example
nav	page path	No	Navigation (inherited by child pages); AEM path, published path or relative to the locale root.	references/nav-careers
footer	page path	No	Footer (inherited).	references/footer-campaign
error-page	page path	No	404 Page (inherited).	error-pages/404-careers
tags	text (comma-separated)	No	Page tags fallback when the page has no article:tag tags.	tcs-corp:region/europe, tcs-corp:industry
template	text	No	Page Type fallback for template loading (standard metadata).	article
publication-date	date	No	Publish date fallback.	2026-09-04
feature-card	yes / no	No	Earlier name of featured (index fallback featureCard).	yes
featured-priority	number	No	Earlier name of priority (index fallback featuredPriority).	2

Note: The published /en/metadata.json (13 October 2026) has the columns url to priority (29 columns); listen-link, author, card-title, card-description, card-image, card-image-alt, image-alt, eyebrow, category and hide-in-nav still need to be added as columns where they are used. Every field is specified in detail in Part 8.

9.2.5 Relationships

- author-id references author-id in the locale's Authors sheet (9.5).
- region should use the same values as region in the Media Contacts (9.9) and Authors sheets, and the titles of the tcs-corp:region/* tags.
- content-type values should align with the Filter List options and the tcs-corp:content-type/* tags (4.2).
- nav, footer and error-page reference pages under the locale's references/ and error-pages/.
- The query index (helix-query.yaml) reads the published meta tags; listings (List, Filter List) depend on it.

9.2.6 Dependencies

The platform (applies the rows to pages); decorators/seo-decorator.js; utils/metadata.js; utils/inherited-metadata.js; scripts/scripts.js (Page Type, templates); Page Header; templates; List; Filter List (the Cards block is authored manually and reads no page metadata); decorators/data-layer-decorator.js; helix-query.yaml; helix-sitemap.yaml (via the index and robots).

9.2.7 Examples

url	page-type	content-type	author-id	publish-date	reading-time	region	robots
/en/references/**							noindex, nofollow

url	page-type	content-type	author-id	publish-date	reading-time	region	robots
`/en/error-pages/**`							noindex, nofollow
`/en/data/**`							noindex, nofollow
`/en/newsroom/**`	press-release	Press Release					
`/en/insights/cloud-outlook-2026`	article	Report	example-author-1	2026-09-04	6	Europe	

Illustrative values; the `/en/` sheet currently has no rows.

9.2.8 Business Rules

1. The sheets apply only after all 13 are listed in `metadata.source` (platform).
2. A row's pattern must start with the locale's root; a row whose pattern points to another locale's pages has no effect in practice and must be maintained in that locale's sheet instead (platform: only pages whose URL matches the pattern receive values).
3. Page properties win over sheet values (platform).
4. Several rows can match a page; each contributes its non-empty columns (platform behaviour for bulk metadata). [To be confirmed: precedence between overlapping rows in this configuration — owner: development team]
5. SEO / social columns are applied in the browser by the SEO decorator; `robots` works server side (code).
6. Page Type values outside `home`, `article`, `blog`, `press-release` load no template (code).
7. `featured` accepts yes / true / 1 / on / y; `priority` must be a number (else ignored) (code).
8. `hide-in-nav` = yes removes the page from List results (code); it does not hide the page from the header navigation, which is authored.
9. Changes need a republish of the sheet; pages show the new values after the CDN refresh, and listings after the page is re-indexed (republish the affected pages).

9.2.9 Authoring steps

Step 1 — Create the sheet. In the locale folder select **Create** > **Page**, choose the **Metadata** template, Name `metadata`.

Steps — Creating the metadata sheet: The AEM Create Page wizard in /content/tcs-corp/us/en with the Metadata template selected and the Name `metadata`.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › us › en
2	AEM Sites console toolbar	Create › Page	Open the Create Page wizard
3	Create Page › Template	Template	Metadata
4	Create Page › Properties	Name	metadata
5	Create Page	Create	Create the sheet

Step 2 — Add the columns and rows. Add `url` and the needed columns (9.2.4), then one row per URL pattern; start every pattern with the locale root (`/en/`).

Steps — Editing bulk metadata: The metadata sheet editor showing the url, page-type, content-type, author-id, publish-date and robots columns with the example rows of 9.2.7.

Step	Where	Field / control	Value / action
1	Sheet /content/tcs-corp/us/en/metadata	Columns	url, page-type, content-type, author-id, publish-date, reading-time, region, robots
2	Sheet /content/tcs-corp/us/en/metadata › Row 1	url / page-type / content-type / author-id / publish-date / reading-time / region / robots	/en/references/** / (empty) / (empty) / (empty) / (empty) / (empty) / (empty) / noindex, nofollow
3	Sheet /content/tcs-corp/us/en/metadata › Row 2	url / page-type / content-type / author-id / publish-date / reading-time / region / robots	/en/error-pages/** / (empty) / (empty) / (empty) / (empty) / (empty) / (empty) / noindex, nofollow
4	Sheet /content/tcs-corp/us/en/metadata › Row 3	url / page-type / content-type / author-id / publish-date / reading-time / region / robots	/en/data/** / (empty) / (empty) / (empty) / (empty) / (empty) / (empty) / noindex, nofollow
5	Sheet /content/tcs-corp/us/en/metadata › Row 4	url / page-type / content-type / author-id / publish-date / reading-time / region / robots	/en/newsroom/** / press-release / Press Release / (empty) / (empty) / (empty) / (empty) / (empty)
6	Sheet /content/tcs-corp/us/en/metadata › Row 5	url / page-type / content-type / author-id / publish-date / reading-time / region / robots	/en/insights/cloud-outlook-2026 / article / Report / example-author-1 / 2026-09-04 / 6 / Europe / (empty)

Step 3 — Publish. Publish to Preview, check, then publish to live. Ask the site administrator to confirm the sheet is listed in `metadata.source`.

Steps — Publishing the sheet: The Manage Publication dialog for the `metadata` sheet with Preview selected.

Step	Where	Field / control	Value / action
1	AEM Sites console	Select	/content/tcs-corp/us/en/metadata
2	AEM Sites console toolbar	Manage Publication	Open the dialog
3	Manage Publication › Options	Destination	Preview
4	Manage Publication	Publish	Confirm; after checking, repeat with the destination Publish (live)
5	Site administrator	metadata.source	Confirm that /en/metadata.json is listed (with the other 12 sheets)

Step 4 — Verify. Open `/en/metadata.json` on `.aem.page`: the `columns` and `data` arrays show the headers and rows. Then open a matching page, view the page source and check the `<meta name="...">` tags (for example `<meta name="page-type" content="press-release">`).

Steps — Verifying the applied metadata: The page source of /en/newsroom/q3-results with the `page-type`, `content-type` and `robots` meta tags highlighted.

Step	Where	Field / control	Value / action
1	Browser	Address	view-source:https://main–tcs-corp–sradha-tcs.aem.page/en/newsroom/q3-results
2	Page source › head	page-type	

Step	Where	Field / control	Value / action
3	Page source › head	content-type	
4	Page source › head	robots	Only on pages of a row with robots (e.g. /en/references/nav: noindex, nofollow)

9.3 Taxonomy

9.3.1 Purpose

The labels of the AEM tags for the locale: maps each tag ID (`tcs-corp:region/europe`) to its title (Europe), in the locale's language. Components show these labels instead of tag IDs.

9.3.2 Ownership

[To be confirmed: taxonomy owner — owner: Content strategy / taxonomy manager]. Tags are created and translated in the AEM Tagging console; the taxonomy page of each locale is republished after every change.

9.3.3 Published path (per locale)

`/{locale}/taxonomy.json`: `/en/taxonomy.json`; `/de-de/taxonomy.json`; `/fr-fr/taxonomy.json`; `/fr-ca/taxonomy.json`; `/es-es/taxonomy.json`; `/pt-pt/taxonomy.json`; `/nl-nl/taxonomy.json`; `/sv-se/taxonomy.json`; `/da-dk/taxonomy.json`; `/no-no/taxonomy.json`; `/zh-cn/taxonomy.json`; `/ja-jp/taxonomy.json`; `/ko-kr/taxonomy.json`. AEM: `/content/tcs-corp/{country}/{language}/taxonomy` (a taxonomy page, not a spreadsheet).

9.3.4 Columns

Column	Type	Mandatory	Description	Example
`tag`	tag ID	Yes (rows without `tag` are ignored)	The AEM tag ID (`namespace:path`); generated from the tags selected for the taxonomy page.	`tcs-corp:region/europe`
`title`	text	Recommended (an empty title falls back to a label derived from the ID)	The tag title in the sheet's language.	`Europe`

With translated titles the JSON is a multi-sheet: one sheet per language, named by the ISO 639-1 code (`de`, `fr`, `ja`, …), plus `default`. The code reads `{language}`, else `default`, else the first sheet.

9.3.5 Relationships

- Page tags (`<meta property="article:tag">`, index column `tags`), Teaser and List / Cards tag fields and Filter List filter tags all hold tag IDs that are resolved here.
- Filter List: **Primary filter category** and **Advanced filter categories** are tag roots (for example `tcs-corp:industry`); their child tags used by the pages become the filter options, labelled from this sheet.
- `tcs-corp:content-type/*` and `tcs-corp:region/*` tags relate to the `content-type` and `region` metadata values (4.2, 9.2.5), but the code does not link them.

9.3.6 Dependencies

`utils/taxonomy.js` (`loadTaxonomy`, `resolveTags`), `utils/tags.js` (`parseTag`, `readTagValues`), `decorators/tag-decorator.js`; used by Page Header, Teaser, List, Cards, Filter List, Conversation Canvas.

9.3.7 Examples

Rows of the published `/en/taxonomy.json` (13 October 2026, 16 rows in total):

tag	title
`tcs-corp:`	TCS Corp
`tcs-corp:content-type`	Content Type
`tcs-corp:content-type/case-study`	Case Study
`tcs-corp:industry`	Industry
`tcs-corp:region/asia-pacific`	Asia Pacific

The full current list: `tcs-corp:` (TCS Corp); `tcs-corp:content-type` (Content Type) with `article` (Article), `blog` (Blog), `case-study` (Case Study), `event` (Event), `press-release` (Press Release), `research` (Research), `webinar` (Webinar), `whitepaper` (Whitepaper); `tcs-corp:industry` (Industry, no child tags yet); `tcs-corp:region` (Region) with `americas` (Americas), `asia-pacific` (Asia Pacific), `europe` (Europe), `middle-east-africa` (Middle East Africa).

9.3.8 Business Rules

1. Loaded once per page view; a missing taxonomy gives an empty map (code).
2. A tag ID in the taxonomy shows its title; a tag ID not in the taxonomy shows a label derived from its last segment (hyphens and underscores become spaces, first letter upper case: `tcs-corp:industry/banking-financial` gives "Banking financial"); a value without `:` or `/` is shown as written (code).
3. The language sheet is chosen by the locale's ISO 639-1 language; `fr-fr` and `fr-ca` share `fr` (code).
4. Matching is exact on the tag ID (after trimming) (code).
5. Recommended: republish the taxonomy page of every locale after creating, renaming or translating tags.

9.3.9 Authoring steps

Step 1 — Create or update the tags. In AEM **Tools > General > Tagging**, create the tags in the `tcs-corp` namespace and add their translated titles.

Steps — Managing tags: The AEM Tagging console with the TCS Corp namespace open, showing Content Type, Industry and Region and the child tags of Region.

Step	Where	Field / control	Value / action
1	AEM	Tools › General › Tagging	Open the Tagging console
2	Tagging console	Select	TCS Corp
3	TCS Corp	Children	Content Type, Industry, Region
4	TCS Corp › Region	Children	Americas, Asia Pacific, Europe, Middle East Africa

Step 2 — Create the taxonomy page. In the locale folder select **Create** > **Page**, choose the **Taxonomy** template, Name `taxonomy`, and select the `tcs-corp` namespace (or the tags to include).

Steps — Creating the taxonomy page: The Create Page wizard with the Taxonomy template, the Name `taxonomy` and the tag picker with the TCS Corp namespace selected.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › us › en

Step	Where	Field / control	Value / action
2	AEM Sites console toolbar	Create › Page	Open the Create Page wizard
3	Create Page › Template	Template	Taxonomy
4	Create Page › Properties	Name	taxonomy
5	Create Page › Properties	Tags	TCS Corp (tcs-corp:) in the tag picker
6	Create Page	Create	Create the page, then publish it (Preview, then live)

Step 3 — Publish. Publish the taxonomy page (Preview, then live).

Step 4 — Verify. Open `/en/taxonomy.json` on `.aem.page`: `"columns":["tag","title"]` and one row per tag (or one sheet per language). Then check a tagged page: the Page Header shows the titles, not the IDs.

```

Figure 33: Verifying the taxonomy JSON — The JSON of /en/taxonomy.json at its top: “columns”: (“tag”, “title”) and the 21 rows of the screenshot sample taxonomy (industry, topic, service, content-type and region tags, such as tcs-corp:industry/banking Banking), not the 16 rows of the live taxonomy. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/taxonomy-json-verify.jpg)

Screenshot Details — Verifying the taxonomy JSON

Item	Detail
Screenshot Name	`screenshots/taxonomy-json-verify.jpg`
Screenshot Purpose	Verifying the taxonomy JSON
Screen Description	The JSON of /en/taxonomy.json at its top: “columns”: [“tag”, “title”] and the 21 rows of the screenshot sample taxonomy (industry, topic, service, content-type and region tags, such as tcs-corp:industry/banking Banking), not the 16 rows of the live taxonomy.
Business Context	After tags are created or renamed, the locale’s taxonomy page must be published so components can show tag titles instead of IDs; checking the JSON confirms what the site will use.
Author Objective	Quick Publish /content/tcs-corp/us/en/taxonomy and open /en/taxonomy.json on aem.page to check the columns and rows.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Publish (Sites console › /content/tcs-corp/us/en/taxonomy)	Quick Publish (Preview, then live)	No	—	—	None
(B)	Address (Browser)	https://main–tcs-corp–sradha-tcs.aem.page/en/taxonomy.json	No	—	—	None
—	Check (Browser)	“columns”: [“tag”, “title”] and one data row per tag (tag ID and title)	—	Check on the preview (not stored in the content)	“columns”: [“tag”, “title”] and one data row per tag (tag ID and title)	—

All other fields keep their default values. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The browser shows /en/taxonomy.json as raw JSON with “columns”: [“tag”, “title”] and one data row per tag, each with its tag ID and title (the screenshot uses a 21-row sample; the live /en taxonomy has 16 rows).
- **Rendering behaviour:** The JSON is read once per page view by utils/taxonomy.js; with translated titles it becomes a multi-sheet with one sheet per ISO 639-1 language plus default, and the code reads the locale’s language, else default, else the first sheet.
- **Publishing behaviour:** The taxonomy page is published on its own (Preview, then Live); pages don’t need republishing, they load the new labels on the next view.

Business Rules

- Rows without tag are ignored; an empty title falls back to a label derived from the ID.
- Matching is exact on the trimmed tag ID.
- tcs-corp:industry has no child tags yet, so industry labels are derived from the IDs.
- fr-fr and fr-ca share the fr sheet.
- Republish the taxonomy page of every locale after any tag change.

Common Authoring Mistakes

Error	Root Cause	Resolution
taxonomy.json returns 404	The taxonomy page was created but not published	Quick Publish the taxonomy page to Preview and Live
A renamed tag still shows its old title	The taxonomy page wasn't republished after the rename	Republish /content/tcs-corp/us/en/taxonomy
New tags are missing from the JSON	The taxonomy page doesn't include the new tags or namespace	Add the tags in the taxonomy page's properties and republish

Troubleshooting

- **Symptoms:** /en/taxonomy.json on aem.page returns 404 or an empty data array.
- **Cause:** The taxonomy page isn't published to Preview, or no tags or namespace are selected on it.
- **Resolution:** Select the tcs-corp namespace on /content/tcs-corp/us/en/taxonomy and Quick Publish it.
- **Verification Steps:** The JSON shows columns tag and title and one row per tag; a tagged page shows titles.

9.4 Redirects

9.4.1 Purpose

The locale's list of moved pages (source path to destination). In this implementation the sheet is **not applied by the platform**: Edge Delivery applies only a root `/redirects.json`, and there is none. The code uses the sheet in one place: the List block links its cards to the final destination of a redirected page instead of the old URL.

9.4.2 Ownership

[To be confirmed: owner of redirects — owner: SEO lead with the site administrator]. Applying the redirects (CDN rules) is an infrastructure task: [To be confirmed: production domain and CDN].

9.4.3 Published path (per locale)

`/{locale}/redirects.json`: `/en/redirects.json`; `/de-de/redirects.json`; `/fr-fr/redirects.json`; `/fr-ca/redirects.json`; `/es-es/redirects.json`; `/pt-pt/redirects.json`; `/nl-nl/redirects.json`; `/sv-se/redirects.json`; `/da-dk/redirects.json`; `/no-no/redirects.json`; `/zh-cn/redirects.json`; `/ja-jp/redirects.json`; `/ko-kr/redirects.json`. AEM: `/content/tcs-corp/{country}/{language}/redirects`.

9.4.4 Columns

Column	Type	Mandatory	Description	Example
`source` (or `Source`)	path	Yes	The old path, starting with `/` (rows not starting with `/` are ignored). Normalised: query, hash, `.html` and a trailing slash are removed.	`/en/insights/old-report`
`destination` (or `Destination`)	path or URL	Yes (rows without one are ignored)	The new path (internal, `/...`) or an absolute URL.	`/en/insights/cloud-outlook-2026`
`description`	text	No (not read by code)	Why the redirect exists (the published `/en/redirects.json` has this column).	`Report renamed in 2026`

9.4.5 Relationships

- Sources and destinations are published paths of the same locale (`/en/...` in the `/en/` sheet).
- The List block resolves card links (query index pages and fixed items) through this sheet.

9.4.6 Dependencies

`utils/redirects.js` (`loadRedirects`, `resolveRedirect`, `normalizeRedirectPath`), used by `blocks/list/list.js`. A CDN rule set ([To be confirmed: CDN]) would be the consumer that actually redirects visitors.

9.4.7 Examples

source	destination	description
`/en/insights/old-report`	`/en/insights/cloud-outlook-2026`	Report renamed
`/en/about-us`	`/en/about`	Folder restructure
`/en/careers/jobs`	`https://www.example.com/careers`	Moved to the careers site

Illustrative values; the `/en/` sheet currently has no rows. The redirect `/` to `/en/` cannot be expressed in a locale sheet (its source is outside the locale) and must be configured at the CDN.

9.4.8 Business Rules

1. Not applied to visitors by Edge Delivery (platform: only the root `/redirects.json` is applied server side).
2. List block: a link to an internal path follows the redirects up to 5 hops, stops at loops and at an external destination (code, `MAX_HOPS = 5`).
3. Paths are compared after normalisation (no query, hash, `.html` or trailing slash) (code).
4. Rows without a source starting with `/` or without a destination are ignored (code).
5. Loaded once per page view; a missing sheet means no redirects (code).
6. Recommended: when a page is moved or deleted, add a row in the locale's sheet and ask the site administrator to update the CDN rules.

9.4.9 Authoring steps

Step 1 — Create the sheet. In the locale folder select **Create > Page**, choose the **Redirects** template, Name `redirects`.

Steps — Creating the redirects sheet: The Create Page wizard in /content/tcs-corp/us/en with the Redirects template and the Name `redirects`.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › us › en
2	AEM Sites console toolbar	Create › Page	Open the Create Page wizard
3	Create Page › Template	Template	Redirects
4	Create Page › Properties	Name	redirects
5	Create Page	Create	Create the sheet

Step 2 — Add rows. Fill `source`, `destination` and `description`.

Steps — Editing redirects: The redirects sheet editor with the three columns and the example rows of 9.4.7.

Step	Where	Field / control	Value / action
1	Sheet /content/tcs-corp/us/en/redirects	Columns	source, destination, description
2	Sheet /content/tcs-corp/us/en/redirects › Row 1	source / destination / description	/en/insights/old-report / /en/insights/cloud-outlook-2026 / Report renamed

Step	Where	Field / control	Value / action
3	Sheet /content/tcs-corp/us/en/redirects › Row 2	source / destination / description	/en/about-us / /en/about / Folder restructure
4	Sheet /content/tcs-corp/us/en/redirects › Row 3	source / destination / description	/en/careers/jobs / https://www.example.com/careers / Moved to the careers site

Step 3 — Publish and verify. Publish (Preview, then live) and open `/en/redirects.json`; check a List block that links to a redirected page: the card links to the destination.

Steps — Verifying the published JSON: The browser showing /en/redirects.json with the columns source, destination and description and the rows.

Step	Where	Field / control	Value / action
1	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/redirects.json
2	JSON	columns	[“source”, “destination”, “description”]
3	JSON	data	One object per row, e.g. { “source”: “/en/about-us”, “destination”: “/en/about”, … }

> **Warning:** Publishing the sheet alone does not redirect visitors. Until CDN rules apply the sheets, old URLs return 404.

9.5 Authors

9.5.1 Purpose

The author profiles of the locale: name, designation, bio, image, LinkedIn profile and region, referenced from pages by their `author-id` metadata. One profile is maintained once and shown consistently in page headers, author boxes and listing cards.

9.5.2 Ownership

[To be confirmed: owner of author profiles — owner: Editorial / content strategy lead]. Authors’ consent for name, image and LinkedIn URL: [To be confirmed: consent process — owner: Legal / privacy].

9.5.3 Published path (per locale)

`/{locale}/data/authors.json`: `/en/data/authors.json`; `/de-de/data/authors.json`; `/fr-fr/data/authors.json`; `/fr-ca/data/authors.json`; `/es-es/data/authors.json`; `/pt-pt/data/authors.json`; `/nl-nl/data/authors.json`; `/sv-se/data/authors.json`; `/da-dk/data/authors.json`; `/no-no/data/authors.json`; `/zh-cn/data/authors.json`; `/ja-jp/data/authors.json`; `/ko-kr/data/authors.json`. AEM: `/content/tcs-corp/{country}/{language}/data/authors`.

9.5.4 Columns

`getAuthors()` maps each row to `{ id, name, designation, bio, image, linkedin, region }` (trimmed text) and drops rows without `author-id`.

Column	Type	Mandatory	Description	Example
author-id	text (ID)	Yes (rows without it are dropped)	The ID used in the pages' author-id metadata. getAuthor() (Page Header, templates) matches it case-insensitively; List and Filter List match it exactly.	example-author-1
name	text	Yes (the "About the author" box needs it)	The display name. Without it the author box is not shown; the Page Header falls back to the page's author metadata.	Sample Author A
designation	text	No	Job title; shown as "designation, region" in the Page Header and author box; alone on List / Filter List cards.	Head of Cloud Research
bio	text	No	Short biography; shown only in the "About the author" box (Article / Blog).	Writes about cloud strategy.
image	image URL or path	No	Author photo. Same-origin /media_ URLs are optimised (responsive <picture>); other URLs are used as they are (lazy-loaded <img>). Treated as decorative (empty alt).	/en/data/media_9f8e7d.jpg
linkedin	URL	No	LinkedIn profile: the author name becomes a link in the Page Header (new tab, announced); the "View LinkedIn profile" link in the author box.	https://www.linkedin.com/in/example
region	text	No	Appended to the designation in the Page Header and the author box.	Europe

9.5.5 Relationships

- Pages reference authors through the author-id metadata (bulk metadata sheet, 9.2); the query index column authorId carries it to listings.
- Filter List: the **Author source** column (default author) is matched against author-id values first, then the page's authorId.
- region uses the same vocabulary as the region metadata and the Media Contacts sheet (recommended).

9.5.6 Dependencies

utils/data.js (getAuthors, getAuthor); blocks/page-header (author lockup in the Article layout); templates/article and templates/blog (decorators/author-bio-decorator.js); blocks/list (feature card author, only when "first card as feature" is on); blocks/filter-list (hero and featured card author lockups); decorators/article-meta-decorator.js (buildAuthorLockup).

9.5.7 Examples

author-id	name	designation	bio	image	linkedin	region
example-author-1	Sample Author A	Head of Cloud Research	Writes about cloud strategy.	/en/data/media_1a.jpg	https://www.linkedin.com/in/example-a	Europe
example-author-2	Sample Author B	Chief Economist	Covers markets and growth.		https://www.linkedin.com/in/example-b	Americas
example-author-3	Sample Author C	Industry Advisor, Banking		/en/data/media_3c.jpg		Asia Pacific

Illustrative values; the /en/ sheet has the headers and no rows (13 October 2026).

9.5.8 Business Rules

1. Rows without author-id are ignored (code).

2. Page Header and templates: case-insensitive ID match after trimming; List and Filter List: exact match (code). Recommended: lower-case IDs with hyphens everywhere.
3. "About the author" appears only when the page has `author-id`, the ID is found and the entry has a `name`; otherwise its section is removed (code).
4. Page Header author name: the sheet's `name`, else the page's `author` metadata; no name, no author lockup (code).
5. The sheet is loaded once per page view; the List loads it only when its first card is a feature card; a failure gives an empty list (code).
6. Author images are decorative (empty alt); the name is always shown as text next to them (code).
7. Recommended: square images of at least 192 x 192 px (shown at 6rem, 96 px, in the author box; cropped to a circle).

9.5.9 Authoring steps

Step 1 — Create the data folder and the sheet. In the locale folder create the `data` folder page (empty) if needed; inside it select **Create > Page**, choose the **Spreadsheet** template, Name `authors`, columns `author-id`, `name`, `designation`, `bio`, `image`, `linkedin`, `region`.

Steps — Creating the Authors sheet: The Create Page wizard in /content/tcs-corp/us/en/data with the Spreadsheet template, the Name `authors` and the seven column names entered.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › us › en › data
2	AEM Sites console toolbar	Create › Page	Open the Create Page wizard
3	Create Page › Template	Template	Spreadsheet
4	Create Page › Properties	Name	authors
5	Create Page › Properties	Columns	author-id, name, designation, bio, image, linkedin, region
6	Create Page	Create	Create the sheet

Step 2 — Add authors. One row per author; use the same `author-id` in the pages' metadata.

Steps — Editing authors: The authors sheet editor with the seven columns and two example rows.

Step	Where	Field / control	Value / action
1	Sheet /content/tcs-corp/us/en/data/authors	Columns	author-id, name, designation, bio, image, linkedin, region
2	Sheet /content/tcs-corp/us/en/data/authors › Row 1	author-id / name / designation / bio / image / linkedin / region	example-author-1 / Sample Author A / Head of Cloud Research / Writes about cloud strategy. / /en/data/media_1a.jpg / https://www.linkedin.com/in/example-a / Europe
3	Sheet /content/tcs-corp/us/en/data/authors › Row 2	author-id / name / designation / bio / image / linkedin / region	example-author-2 / Sample Author B / Chief Economist / Covers markets and growth. / (empty) / https://www.linkedin.com/in/example-b / Americas

Step 3 — Publish and verify. Publish (Preview, then live), open `/en/data/authors.json` and check that `data` lists the rows; open an article with that `author-id` and check the Page Header author and the "About the author" box.

Steps — Verifying the author on a page: An article page with the Page Header author lockup (image, linked name, designation and region) and the "About the author" box at the end, side by side with /en/data/authors.json in a second browser tab.

Step	Where	Field / control	Value / action
1	Browser tab 1	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/insights/agentic-bank (author-id arao)
2	Page Header	Check	Author image, the linked name Anita Rao, "Head of Banking Research, Europe"
3	End of the page	Check	"About the author" with the bio and View LinkedIn profile
4	Browser tab 2	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/data/authors.json

9.6 Locations

9.6.1 Purpose

The office or delivery-centre locations of the locale with coordinates, prepared for location components (for example a map or a contact page). **No component reads this sheet yet (as of this handover)**; the data is available to code through `getLocations()`.

9.6.2 Ownership

[To be confirmed: owner of the location list — owner: Corporate communications / facilities].

9.6.3 Published path (per locale)

`/{locale}/data/locations.json`: `/en/data/locations.json`; `/de-de/data/locations.json`; `/fr-fr/data/locations.json`; `/fr-ca/data/locations.json`; `/es-es/data/locations.json`; `/pt-pt/data/locations.json`; `/nl-nl/data/locations.json`; `/sv-se/data/locations.json`; `/da-dk/data/locations.json`; `/no-no/data/locations.json`; `/zh-cn/data/locations.json`; `/ja-jp/data/locations.json`; `/ko-kr/data/locations.json`. AEM: `/content/tcs-corp/{country}/{language}/data/locations`.

9.6.4 Columns

`getLocations()` returns `{ id, name, country, region, latitude, longitude }` and drops rows without both `location-id` and `location-name`.

Column	Type	Mandatory	Description	Example
`location-id`	text (ID)	Yes, or `location-name`	Stable ID of the location.	`loc-example-1`
`location-name`	text	Yes, or `location-id`	Display name.	`Example City Office`
`country`	text	No	Country (name or code; no format enforced).	`India`
`region`	text	No	Region; can be filtered with `inRegion()` (case-insensitive).	`Asia Pacific`
`latitude`	number (decimal degrees)	No	Converted to a number; empty or non-numeric becomes null.	`19.0760`
`longitude`	number (decimal degrees)	No	Converted to a number; empty or non-numeric becomes null.	`72.8777`

9.6.5 Relationships

`region` should use the same values as the `region` metadata and the other data sheets. No page metadata references locations.

9.6.6 Dependencies

`utils/data.js` (`getLocations`, `inRegion`). No block, decorator or template uses it (as of this handover).

9.6.7 Examples

location-id	location-name	country	region	latitude	longitude
`loc-example-1`	Example City Office	India	Asia Pacific	19.0760	72.8777
`loc-example-2`	Example Delivery Centre	Germany	Europe	50.1109	8.6821
`loc-example-3`	Example Innovation Hub	United States	Americas	40.7128	–74.0060

Illustrative values (coordinates of public city centres); the `/en/` sheet has the headers and no rows.

9.6.8 Business Rules

1. Rows without both ID and name are dropped (code).
2. Latitude and longitude must be decimal numbers (dot as decimal separator); other values become null (code).
3. Loaded once per page view by a consumer; missing sheet gives an empty list (code).
4. Recommended: keep the sheet up to date now so a future location component can use it without a data migration.

9.6.9 Authoring steps

Step 1 — Create the sheet. In `data/`, **Create > Page**, **Spreadsheet** template, Name `locations`, columns `location-id`, `location-name`, `country`, `region`, `latitude`, `longitude`.

Steps — Creating the Locations sheet: The Create Page wizard in /content/tcs-corp/us/en/data with the Spreadsheet template, the Name `locations` and the six column names.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › us › en › data
2	AEM Sites console toolbar	Create › Page	Open the Create Page wizard
3	Create Page › Template	Template	Spreadsheet
4	Create Page › Properties	Name	locations
5	Create Page › Properties	Columns	location-id, location-name, country, region, latitude, longitude
6	Create Page	Create	Create the sheet

Step 2 — Add rows, publish and verify. Add one row per location, publish (Preview, then live) and open `/en/data/locations.json`.

Steps — Verifying the published JSON: The browser showing /en/data/locations.json with the six columns and the rows.

Step	Where	Field / control	Value / action
1	Sheet /content/tcs-corp/us/en/data/locations	Columns	location-id, location-name, country, region, latitude, longitude
2	Sheet /content/tcs-corp/us/en/data/locations › Row 1	location-id / location-name / country / region / latitude / longitude	loc-example-1 / Example City Office / India / Asia Pacific / 19.0760 / 72.8777
3	Sheet /content/tcs-corp/us/en/data/locations › Row 2	location-id / location-name / country / region / latitude / longitude	loc-example-2 / Example Delivery Centre / Germany / Europe / 50.1109 / 8.6821
4	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/data/locations.json
5	JSON	columns	["location-id", "location-name", "country", "region", "latitude", "longitude"]
6	JSON	data	One object per row

9.7 Partners

9.7.1 Purpose

The technology and alliance partners of the locale (name, logo, website, tier, description), prepared for partner components (for example a partner logo wall). **No component reads this sheet yet (as of this handover)**; the data is available through `getPartners()`.

9.7.2 Ownership

[To be confirmed: owner of the partner list — owner: Alliances / partnerships team]. Logo usage rights: [To be confirmed: brand approval process — owner: Brand / legal].

9.7.3 Published path (per locale)

`/{locale}/data/partners.json`: `/en/data/partners.json`; `/de-de/data/partners.json`; `/fr-fr/data/partners.json`; `/fr-ca/data/partners.json`; `/es-es/data/partners.json`; `/pt-pt/data/partners.json`; `/nl-nl/data/partners.json`; `/sv-se/data/partners.json`; `/da-dk/data/partners.json`; `/no-no/data/partners.json`; `/zh-cn/data/partners.json`; `/ja-jp/data/partners.json`; `/ko-kr/data/partners.json`. AEM: `/content/tcs-corp/{country}/{language}/data/partners`.

9.7.4 Columns

`getPartners()` returns `{ id, name, logo, website, tier, description }` and drops rows without both `partner-id` and `partner-name`.

Column	Type	Mandatory	Description	Example
`partner-id`	text (ID)	Yes, or `partner-name`	Stable ID.	`partner-example-1`
`partner-name`	text	Yes, or `partner-id`	Display name.	`Example Cloud Partner`
`logo`	image URL or path	No	Partner logo.	`/en/data/media_4b.png`
`website`	URL	No	Partner website.	`https://www.example.com`

Column	Type	Mandatory	Description	Example
`tier`	text	No	Partnership level (free text; no values enforced).	`Strategic`
`description`	text	No	Short description.	`Joint cloud migration offerings.`

9.7.5 Relationships
None in code. [To be confirmed: partner tiers vocabulary — owner: Alliances team].

9.7.6 Dependencies
`utils/data.js` (`getPartners`). No block, decorator or template uses it (as of this handover).

9.7.7 Examples

partner-id	partner-name	logo	website	tier	description
`partner-example-1`	Example Cloud Partner	`/en/data/media_4b.png`	`https://www.example.com`	Strategic	Joint cloud migration offerings.
`partner-example-2`	Example Data Partner	`/en/data/media_5c.png`	`https://www.example.org`	Premier	Analytics platforms.
`partner-example-3`	Example Security Partner		`https://www.example.net`	Select	Managed security services.

Illustrative values; the `/en/` sheet has the headers and no rows.

9.7.8 Business Rules
1. Rows without both ID and name are dropped (code).
2. Loaded once per page view by a consumer; missing sheet gives an empty list (code).
3. Recommended: logos as SVG or PNG with a transparent background, uploaded to AEM Assets.

9.7.9 Authoring steps
Step 1 — Create the sheet. In `data/`, **Create > Page**, **Spreadsheet** template, Name `partners`, columns `partner-id`, `partner-name`, `logo`, `website`, `tier`, `description`.

Steps — Creating the Partners sheet: The Create Page wizard in /content/tcs-corp/us/en/data with the Spreadsheet template, the Name `partners` and the six column names.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › us › en › data
2	AEM Sites console toolbar	Create › Page	Open the Create Page wizard
3	Create Page › Template	Template	Spreadsheet
4	Create Page › Properties	Name	partners
5	Create Page › Properties	Columns	partner-id, partner-name, logo, website, tier, description
6	Create Page	Create	Create the sheet

Step 2 — Add rows, publish and verify. Add one row per partner, publish (Preview, then live) and open `/en/data/partners.json`.

Steps — Verifying the published JSON: The browser showing /en/data/partners.json with the six columns and the rows.

Step	Where	Field / control	Value / action
1	Sheet /content/tcs-corp/us/en/data/partners	Columns	partner-id, partner-name, logo, website, tier, description
2	Sheet /content/tcs-corp/us/en/data/partners › Row 1	partner-id / partner-name / logo / website / tier / description	partner-example-1 / Example Cloud Partner / /en/data/media_4b.png / https://www.example.com / Strategic / Joint cloud migration offerings.
3	Sheet /content/tcs-corp/us/en/data/partners › Row 2	partner-id / partner-name / logo / website / tier / description	partner-example-2 / Example Data Partner / /en/data/media_5c.png / https://www.example.org / Premier / Analytics platforms.
4	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/data/partners.json
5	JSON	columns	["partner-id", "partner-name", "logo", "website", "tier", "description"]
6	JSON	data	One object per row

9.8 Social Links

9.8.1 Purpose
The social media profiles of the locale, shown as icon links in the page footer of every page.

9.8.2 Ownership
[To be confirmed: owner of the social profiles — owner: Social media / digital marketing team].

9.8.3 Published path (per locale)
`/{locale}/data/social-links.json`: `/en/data/social-links.json`; `/de-de/data/social-links.json`; `/fr-fr/data/social-links.json`; `/fr-ca/data/social-links.json`; `/es-es/data/social-links.json`; `/pt-pt/data/social-links.json`; `/nl-nl/data/social-links.json`; `/sv-se/data/social-links.json`; `/da-dk/data/social-links.json`; `/no-no/data/social-links.json`; `/zh-cn/data/social-links.json`; `/ja-jp/data/social-links.json`; `/ko-kr/data/social-links.json`. AEM: `/content/tcs-corp/{country}/{language}/data/social-links`.

9.8.4 Columns
`getSocialLinks()` returns `{ platform, url, icon, sortOrder }`, drops rows without `url`, and sorts by `sortorder`.

Column	Type	Mandatory	Description	Example
`platform`	text	Recommended	The platform name: used in the accessible name "Follow us on {platform}" and, without an Icon, as the icon name. `Twitter` uses the `x` icon.	`LinkedIn`
`url`	URL	Yes (rows without it are dropped)	The profile URL. External URLs open in a new tab.	`https://www.linkedin.com/company/example`
`icon`	icon name or	No	An icon of `/icons` (`linkedin`, `x`, `facebook`, `instagram`, `youtube`) or an image URL / path (contains `.` or `/`). Empty: the	`linkedin`

Column	Type	Mandatory	Description	Example
	image URL		platform name is used when `/icons` has it; otherwise the platform name is shown as text.	
`sort-order`	number	No	Display order, ascending; rows without a number come last, in sheet order.	1

9.8.5 Relationships

Displayed by the page footer of every page of the locale, whichever footer page (`references/footer` or an alternative) the page uses.

9.8.6 Dependencies

`utils/data.js` (`getSocialLinks`), `decorators/social-links-decorator.js` (`buildSocialLinks`), `blocks/footer/footer.js` (page footer role, list class `footer-social`), placeholder `followUsOn`, icons in `/icons/`.

9.8.7 Examples

platform	url	icon	sort-order
LinkedIn	`https://www.linkedin.com/company/example`	linkedin	1
X	`https://x.com/example`	x	2
YouTube	`https://www.youtube.com/@example`	youtube	3
Instagram	`https://www.instagram.com/example`	instagram	4
Facebook	`https://www.facebook.com/example`	facebook	5

Illustrative URLs; [To be confirmed: official TCS social profile URLs per locale — owner: Social media team]. The `/en/` sheet has the headers and no rows, so no social icons are shown yet.

9.8.8 Business Rules

1. Rows without `url` are dropped (code).
2. Sort: ascending `sort-order`; rows without a valid number after the numbered ones; ties keep the sheet order (code).
3. Icon resolution: an Icon containing `.` or `/` is an image (decorative); else the Icon name (class-name form) or, when empty, the platform name (with `twitter` mapped to `x`); an empty Icon with a platform that has no icon in `/icons` shows the platform name as text (code).
4. With an icon, the link text "Follow us on {platform}" is visually hidden but read by screen readers (code).
5. Links to another origin open in a new tab (code).
6. No rows, or a missing sheet: no social list in the footer (code).
7. Recommended: one row per platform; use the five icon names available in `/icons` (adding a platform icon is a development task: add `icons/{name}.svg`).

9.8.9 Authoring steps

Step 1 — Create the sheet. In `data/`, **Create > Page**, **Spreadsheet** template, Name `social-links`, columns `platform`, `url`, `icon`, `sort-order`.

Steps — Creating the Social Links sheet: The Create Page wizard in /content/tcs-corp/us/en/data with the Spreadsheet template, the Name `social-links` and the four column names.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › us › en › data
2	AEM Sites console toolbar	Create › Page	Open the Create Page wizard
3	Create Page › Template	Template	Spreadsheet
4	Create Page › Properties	Name	social-links
5	Create Page › Properties	Columns	platform, url, icon, sort-order
6	Create Page	Create	Create the sheet

Step 2 — Add rows. One row per profile, with `sort-order` 1, 2, 3, …

Steps — Editing social links: The social-links sheet editor with five rows (LinkedIn, X, YouTube, Instagram, Facebook) and their sort order.

Step	Where	Field / control	Value / action
1	Sheet /content/tcs-corp/us/en/data/social-links	Columns	platform, url, icon, sort-order
2	Sheet /content/tcs-corp/us/en/data/social-links › Row 1	platform / url / icon / sort-order	LinkedIn / https://www.linkedin.com/company/example / linkedin / 1
3	Sheet /content/tcs-corp/us/en/data/social-links › Row 2	platform / url / icon / sort-order	X / https://x.com/example / x / 2
4	Sheet /content/tcs-corp/us/en/data/social-links › Row 3	platform / url / icon / sort-order	YouTube / https://www.youtube.com/@example / youtube / 3
5	Sheet /content/tcs-corp/us/en/data/social-links › Row 4	platform / url / icon / sort-order	Instagram / https://www.instagram.com/example / instagram / 4
6	Sheet /content/tcs-corp/us/en/data/social-links › Row 5	platform / url / icon / sort-order	Facebook / https://www.facebook.com/example / facebook / 5

Step 3 — Publish and verify. Publish (Preview, then live), open `/en/data/social-links.json`, then any `/en/` page: the footer shows the icons in sort order; inspecting the first link (developer tools or a screen reader) shows "Follow us on LinkedIn".

Steps — Verifying the footer icons: The page footer at desktop width with the five social icons in sort order, and the developer tools showing the hidden "Follow us on LinkedIn" text of the first link.

Step	Where	Field / control	Value / action
1	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/about (any /en/ page)
2	Page footer	Check	LinkedIn, X, YouTube, Instagram, Facebook icons in sort order
3	Browser developer tools › Elements	Inspect	The first link of footer .footer-social
4	Elements	Check	The visually hidden text "Follow us on LinkedIn"

9.9 Media Contacts

9.9.1 Purpose

The press and media relations contacts of the locale, shown at the end of every press release ("Media contacts"), filtered by the release's region.

9.9.2 Ownership

[To be confirmed: owner of the media contacts — owner: Corporate communications]. Contacts' consent to publish name, email and phone: [To be confirmed: consent process — owner: Legal / privacy].

9.9.3 Published path (per locale)

`/{locale}/data/media-contacts.json`: `/en/data/media-contacts.json`; `/de-de/data/media-contacts.json`; `/fr-fr/data/media-contacts.json`; `/fr-ca/data/media-contacts.json`; `/es-es/data/media-contacts.json`; `/pt-pt/data/media-contacts.json`; `/nl-nl/data/media-contacts.json`; `/sv-se/data/media-contacts.json`; `/da-dk/data/media-contacts.json`; `/no-no/data/media-contacts.json`; `/zh-cn/data/media-contacts.json`; `/ja-jp/data/media-contacts.json`; `/ko-kr/data/media-contacts.json`. AEM: `/content/tcs-corp/{country}/{language}/data/media-contacts`.

9.9.4 Columns

`getMediaContacts()` returns `{ id, name, designation, email, phone, region }` and drops rows without both `id` and `name`.

Column	Type	Mandatory	Description	Example
`id`	text (ID)	Yes, or `name`	Stable ID of the contact (not displayed).	`media-europe-1`
`name`	text	Recommended (a row with only an ID shows no name)	Contact name.	`Sample Contact A`
`designation`	text	No	Role; shown as "designation, region".	`Media Relations Manager`
`email`	email address	No	Shown as a `mailto:` link.	`media.europe@example.com`
`phone`	phone number	No	Shown as written; linked as `tel:` with only digits and +.	`+44 20 7946 0000`
`region`	text	No	Matched (case-insensitive) with the press release's `region` metadata; shown after the designation.	`Europe`

9.9.5 Relationships

- Press releases (Page Type `press-release`) select contacts by their `region` metadata (9.2).
- `region` uses the same vocabulary as the metadata `region` and the `tcs-corp:region/*` tag titles (recommended).

9.9.6 Dependencies

`utils/data.js` (`getMediaContacts`, `inRegion`), `templates/press-release/press-release.js`, `decorators/contact-list-decorator.js` (`buildContactList`), `decorators/template-decorator.js` (`appendLoadedSection`), placeholder `mediaContacts`, `templates/press-release/press-release.css`.

9.9.7 Examples

id	name	designation	email	phone	region
media-global-1	Sample Contact A	Global Head of Media Relations	media@example.com	+1 555 0100	
media-europe-1	Sample Contact B	Media Relations Manager	media.europe@example.com	+44 20 7946 0000	Europe
media-americas-1	Sample Contact C	Media Relations Lead	media.americas@example.com	+1 555 0123	Americas
media-apac-1	Sample Contact D	Media Relations Lead	media.apac@example.com	+61 2 5550 0000	Asia Pacific

Illustrative values (reserved example numbers and domains); the /en/ sheet has the headers and no rows.

9.9.8 Business Rules

1. Rows without both id and name are dropped (code).
2. A press release with a region shows the contacts of that region (case-insensitive exact match); if none match, or the page has no region, all contacts are shown (code).
3. Contacts without a region (for example global contacts) are shown only when all contacts are shown (code). Recommended: give global contacts a row per region if they must appear on every release.
4. No contacts: the "Media contacts" section is removed (code).
5. The section is loaded after the page content, without delaying it (code).
6. Order: sheet order (code).
7. Layout: one column on mobile, two from 600 px, three from 900 px (CSS).

9.9.9 Authoring steps

Step 1 — Create the sheet. In data/, **Create > Page**, **Spreadsheet** template, Name media-contacts, columns id, name, designation, email, phone, region.

Steps — Creating the Media Contacts sheet: The Create Page wizard in /content/tcs-corp/us/en/data with the Spreadsheet template, the Name media-contacts and the six column names.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › us › en › data
2	AEM Sites console toolbar	Create › Page	Open the Create Page wizard
3	Create Page › Template	Template	Spreadsheet
4	Create Page › Properties	Name	media-contacts
5	Create Page › Properties	Columns	id, name, designation, email, phone, region
6	Create Page	Create	Create the sheet

Step 2 — Add contacts. One row per contact, with the region values used in the press releases' region metadata.

Steps — Editing media contacts: The media-contacts sheet editor with the six columns and four example rows with different regions.

Step	Where	Field / control	Value / action
1	Sheet /content/tcs-corp/us/en/data/media-contacts	Columns	id, name, designation, email, phone, region

Step	Where	Field / control	Value / action
2	Sheet /content/tcs-corp/us/en/data/media-contacts › Row 1	id / name / designation / email / phone / region	media-global-1 / Sample Contact A / Global Head of Media Relations / media@example.com / +1 555 0100 / (empty)
3	Sheet /content/tcs-corp/us/en/data/media-contacts › Row 2	id / name / designation / email / phone / region	media-europe-1 / Sample Contact B / Media Relations Manager / media.europe@example.com / +44 20 7946 0000 / Europe
4	Sheet /content/tcs-corp/us/en/data/media-contacts › Row 3	id / name / designation / email / phone / region	media-americas-1 / Sample Contact C / Media Relations Lead / media.americas@example.com / +1 555 0123 / Americas
5	Sheet /content/tcs-corp/us/en/data/media-contacts › Row 4	id / name / designation / email / phone / region	media-apac-1 / Sample Contact D / Media Relations Lead / media.apac@example.com / +61 2 5550 0000 / Asia Pacific

Step 3 — Publish and verify. Publish (Preview, then live), open `/en/data/media-contacts.json`, then a press release with `region` = Europe: the “Media contacts” section lists only the Europe contacts; a release without a region lists all.

Steps — Verifying the contacts on a press release: The end of a press release at desktop width with the “Media contacts” heading and the regional contacts in a three-column grid with email and phone links.

Step	Where	Field / control	Value / action
1	Browser	Address	https://main–tcs-corp–sradha-tcs.aem.page/en/newsroom/q3-results (a press release without region)
2	End of the page	Check	“Media contacts” with the contacts in three columns, email and phone as links
3	Metadata sheet (row of the release)	region	Europe: only the Europe contacts are listed

Part 10 — Error Pages

10.1 Overview

Error	HTTP status	Served by	Authorable	Locale-specific	Status
Not Found	404	Edge Delivery Services (`404.html` in the repository)	Yes: `error-pages/404` per locale and the inherited **404 Page** page property	Yes	Implemented
Forbidden	403	Not served by Edge Delivery Services	Authored `error-pages/403` per locale, for a CDN	Yes (by CDN rule)	Content only; CDN not configured
Server Error	500	Not served by Edge Delivery Services	Authored `error-pages/500` per locale, for a CDN	Yes (by CDN rule)	Content only; CDN not configured
Maintenance	503 (recommended)	—	—	—	Not implemented

Error pages live in every locale site at `/content/tcs-corp/{country}/{code}/error-pages/` and are published at `/{code}/error-pages/{404|403|500}`. They are excluded from the query index (`/*/error-pages/**` in `helix-query.yaml`) and therefore from the sitemap and from List / Filter List results.

```
Request /de-de/insights/missing-page
       |
       v
Edge Delivery Services: no such page -> HTTP 404 + 404.html
       |
       v
404.html: window.isErrorPage = true; window.errorCode = '404'; scripts.js
       |
       v
loadEager -> loadErrorPage(main)
  1. 404 Page property of the nearest parent (/de-de/insights, then /de-de/) -> load it
  2. else /de-de/error-pages/404
  3. else /en/error-pages/404   (marked lang="en-US")
  4. else keep the built-in "404 / Page Not Found / Go home"
       |
       v
decorateMain -> first section -> header (inherited nav) -> footer (inherited footer)
       |
       v
lazy phase: "Go back" button (same-origin referrer); RUM checkpoint '404'
```

10.2 404 Not Found

10.2.1 How Edge Delivery Serves the 404

When a requested path has no published page, Edge Delivery Services responds with HTTP status **404** and the repository's `404.html`. The status code stays 404 regardless of the content loaded afterwards, so search engines don't index the missing URL.

`404.html` contains:

Part	Content
CSP	Same policy as `head.html` (`script-src 'nonce-aem' 'strict-dynamic' …; base-uri 'self'; object-src 'none';`, moved to the HTTP header)
Title	`<title>Page not found</title>`, `<meta property="og:title" content="Page not found">` (English, not localised)
Flags	Inline script: `window.isErrorPage = true; window.errorCode = '404';`
Scripts	`/scripts/scripts.js` (which imports `aem.js`; it also adds the "Go back" button); a RUM script `sampleRUM('404', { source: document.referrer })`
Styles	`styles.css`, `lazy-styles.css`, inline styles: `main.error` fills the viewport below the header (`min-height: calc(100vh - var(--nav-height))`, flex column, centred); `.error-number` SVG text in monospace
Built-in content	`<main class="error">` with one section: an SVG "404", `<h2 class="error-message">Page Not Found</h2>`, `<p class="button-container"><a href="/" class="button secondary error-button-home">Go home</a></p>`
Header / footer	Empty `<header>` and `<footer>`, filled by the lazy phase like any page

10.2.2 Loading the Authored 404 (`loadErrorPage` in `scripts/scripts.js`)

1. The built-in **Go home** button is pointed to the locale's Home: `localePagePath('')`, e.g. `/de-de/` for a missing `/de-de/…` URL (`/en/` for paths outside a locale).
2. If `window.errorCode` is set and isn't `404`, nothing else happens (reserved for other codes).
3. `utils/inherited-metadata.js` is imported on demand and `getInheritedMetadata('error-page')` looks up the **404 Page** value:
   - the page's own `error-page` metadata (not present on `404.html`), then
   - the nearest parent page of the missing URL up to the locale Home (`getParentPages`: for `/de-de/insights/blogs/x` → `/de-de/insights/blogs`, `/de-de/insights`, `/de-de/`). The parents' published HTML is fetched in parallel and `<meta name="error-page">` is read. Missing parents (their own 404) give empty values. Values are cached in `sessionStorage` (`tcs-inherited-metadata`) for the session.
   - The value comes from the 404 Page page property or the bulk metadata sheet's `error-page` column of that parent.
4. The candidate list is built and de-duplicated:
   1. the configured 404 Page, resolved with `resolvePagePath(value, 'error-pages/404')` (AEM path, published path or a path relative to the locale root are accepted; an invalid value falls back to the locale's 404);
   2. the locale's `error-pages/404` (`localePagePath('error-pages/404')`);
   3. the default locale's `/en/error-pages/404`.
5. Each candidate is tried in order with `loadPageContent`: `fetch('{path}.plain.html')`; on a 200 response `main.innerHTML` is replaced, and relative media (`./media_…` in `img src` / `source srcset`) is rewritten relative to the error page. Network errors or non-200 responses move to the next candidate.
6. On success `main` gets the class `error-authored` (in addition to `error`). If the loaded page belongs to another locale than the requested URL (e.g. the `/en` fallback for a `/de-de` URL), `main.lang` is set to that locale's language (e.g. `en-US`) so screen readers pronounce it correctly.
7. If no candidate loads, the built-in content stays.
8. `decorateMain(main)` then decorates the content like a normal page (sections, blocks, buttons, Additional tab options), the first section is loaded (LCP), and the lazy phase loads the remaining sections, the header and the footer.

10.2.3 Header, Footer and Language on the 404 Page

- `<html lang>` is the locale of the missing URL (`decorateHead` → `getPageLanguage`; `404.html` has no `language` metadata).
- The header and footer use the **inherited** Navigation and Footer of the missing URL's nearest parent pages, else the locale's `references/nav` / `references/footer` — so a missing Careers page shows the Careers header if the Careers area sets one.
- The data layer receives a page entry for the missing URL (`repo:path` = requested path; `dc:title` "Page not found").

10.2.4 "Go back" Button

When the sections are loaded (lazy phase, `scripts/scripts.js` `addErrorBackButton`), if `document.referrer` is from the same origin, an `<a class="button primary error-button-back" href="{referrer path}">Go back</a>` is added to the first button paragraph of the page: the built-in Go home (`.button-container`) or, on an authored 404 page, the first paragraph of its text decorated as a button (`.default-content-wrapper > .button-wrapper`; buttons inside blocks are not used). On an authored page without a button it is added in its own paragraph below the content. The label is the placeholder `goBack` (English fallback "Go back"), so it is translated in each locale's placeholders sheet.

> **Note:** The built-in texts ("Page Not Found", "Go home", the `<title>`) are English. Localised text comes from the authored 404 pages, so every locale should publish its `error-pages/404`.

10.2.5 Inheritance of the 404 Page Property

Page tree	404 Page set on	Missing URL	Page shown
`/en/` → `/en/careers/` → `/en/careers/jobs/`	`/en/careers/` = `/content/tcs-corp/us/en/error-pages/404-careers`	`/en/careers/jobs/old-role`	`/en/error-pages/404-careers`
same	same	`/en/about/missing`	`/en/error-pages/404` (no parent sets a value)
`/de-de/` (no `error-pages/404` published)	—	`/de-de/missing`	`/en/error-pages/404` with `lang="en-US"` on `main`
—	—	`/unknown-path` (outside any locale)	`/en/error-pages/404`
nothing published	—	any	Built-in 404 content

10.2.6 Authoring the 404 Page per Locale

Step 1 — Open the locale's error pages folder

Action: In AEM Sites, open `TCS Corporate` → the country → the locale (e.g. `de` → `de-de`) → `error-pages`.

Expected Result: The folder lists `404`, `403` and `500`.

Steps — Locating the error pages: AEM Sites console with /content/tcs-corp/de/de-de/error-pages selected, showing the 404, 403 and 500 pages.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › de › de-de

Step	Where	Field / control	Value / action
2	de-de	Select	error-pages
3	error-pages	Pages	404, 403, 500

Step 2 — Open the 404 page in Universal Editor

Action: Select `404` and select **Edit** (opens the Universal Editor).

Expected Result: The 404 page opens on the canvas with its sections.

Steps — Editing the authored 404 page: Universal Editor canvas with the de-de 404 page: a heading, a short explanation, a button to the Home page and a List or Cards block with popular pages.

Step	Where	Field / control	Value / action
1	AEM Sites console › error-pages	Select	404
2	AEM Sites console toolbar	Edit	Open the page in Universal Editor
3	Universal Editor canvas	Content	Title “Seite nicht gefunden” (h1), Text, Button “Zur Startseite”, Cards “Beliebte Seiten”

Step 3 — Write the content in the locale’s language

Action: Add a heading (Title, e.g. Title Type H1), a short Text explaining that the page wasn’t found, and a **Button** linking to the locale Home (e.g. `/content/tcs-corp/de/de-de`). Optionally add a List (child pages of a hub) or Cards with popular destinations, or a Conversation Canvas for search.

Expected Result: The canvas shows the content; the Button paragraph is rendered as a button (the “Go back” button will be added next to it on the site when the visitor came from the site).

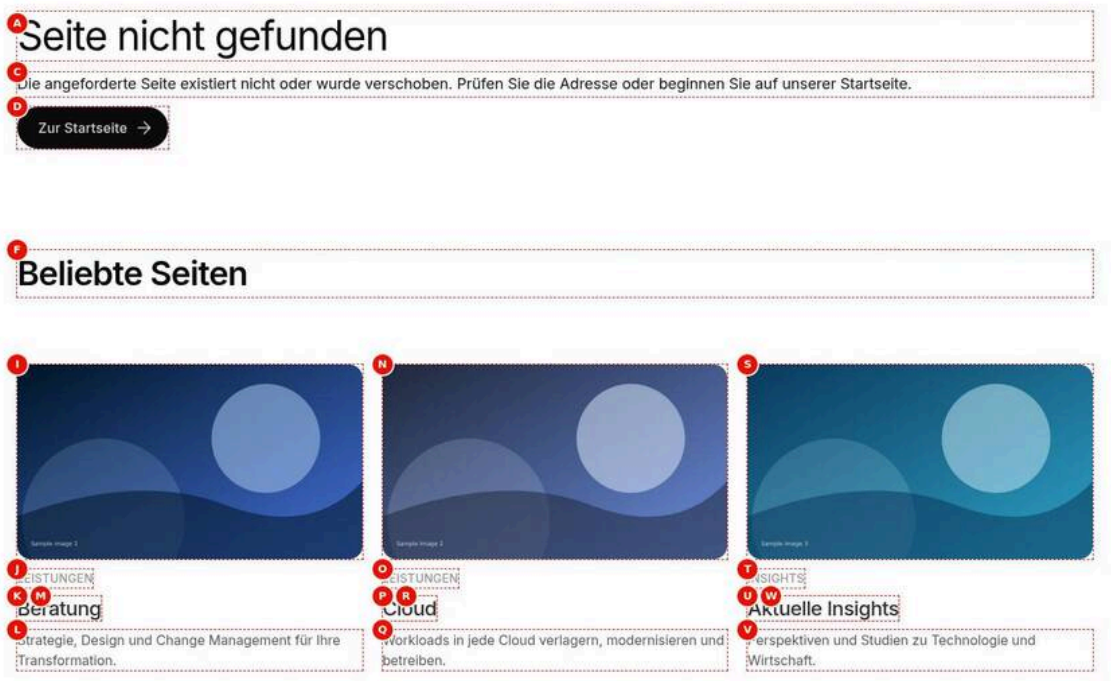

Figure 34: Recommended 404 content — The de-de 404 page in editor mode at 1440 px: the H1 Seite nicht gefunden, the explanation, the Zur Startseite button, then Beliebte Seiten with three image cards without dates: Leistungen Beratung, Leistungen Cloud and Insights Aktuelle Insights. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/error-pages-404-content.jpg)

Screenshot Details — Recommended 404 content

Item	Detail
Screenshot Name	`screenshots/error-pages-404-content.jpg`
Screenshot Purpose	Recommended 404 content
Screen Description	The de-de 404 page in editor mode at 1440 px: the H1 Seite nicht gefunden, the explanation, the Zur Startseite button, then Beliebte Seiten with three image cards without dates: Leistungen Beratung, Leistungen Cloud and Insights Aktuelle Insights.
Business Context	German visitors who reach a missing /de-de URL should get a German explanation and routes back into the site instead of the built-in English page.
Author Objective	Author /content/tcs-corp/de/de-de/error-pages/404 with an H1, an explanation, a Zur Startseite button and three Cards with popular pages.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
—	Component (Section › Add (+))	Title	Yes	Adds the Title to the page	Select the section in the content tree, choose Add (+) and pick Title	Only components the section allows (section filter)
A	Title (Title)	Seite nicht gefunden	Recommended (an empty Title renders an empty heading or nothing)	The heading text	Short, descriptive, sentence case	None in the model
(B)	Title Type (Title)	h1	Recommended	Heading level h1–h6	Follow the page outline	Enforced: h1, h2, h3, h4, h5, h6
—	Component (Section › Add (+))	Text	Yes	Adds the Text to the page	Select the section in the content tree, choose Add (+) and pick Text	Only components the section allows (section filter)
C	Text (Text)	Die angeforderte Seite existiert nicht oder wurde verschoben. Prüfen Sie die Adresse oder beginnen Sie auf unserer Startseite.	No	Card text	1–3 sentences; lists and links allowed	None
—	Component (Section › Add (+))	Button	Yes	Adds the Button to the page	Select the section in the content tree, choose Add (+) and pick Button	Only components the section allows (section filter)
D	Link (Button)	Select the page or enter /de-de/	Yes (Enforced by code: items without a link are skipped)	Destination	AEM page or external URL	Items without a link are dropped

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(E)	Text (Button)	Zur Startseite	Yes (Recommended)	Visible link text	Short, descriptive	None
—	Component (Section › Add (+))	Cards	Yes	Adds the Cards to the page	Select the section in the content tree, choose Add (+) and pick Cards	Only components the section allows (section filter)
F	Title (Cards › Content)	Beliebte Seiten	No	Heading of the block	Short, descriptive; up to 60 characters (Recommended)	None
(G)	Show date (Cards › Cards)	Off	No	Show the date	—	Boolean
(H)	Desktop columns (Cards › Layout)	3	No	Grid columns on desktop	2–4 typical	Enforced 1–6 (model and code, rounded); grid only
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
I	Image (Card 1 › Content)	Select the asset photo-1.svg (/en/media/photo-1.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
J	Eyebrow (Card 1 › Content)	Leistungen	No	Label above the title	1–3 words	None
K	Title (Card 1 › Content)	Beratung	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
L	Description (Card 1 › Content)	Strategie, Design und Change Management für Ihre Transformation.	No	Card text	1–3 sentences; lists and links allowed	None
M	Link (Card 1 › Link)	Select the page or enter /de-de/services/consulting	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
N	Image (Card 2 › Content)	Select the asset photo-2.svg (/en/media/photo-2.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
O	Eyebrow (Card 2 › Content)	Leistungen	No	Label above the title	1–3 words	None
P	Title (Card 2 › Content)	Cloud	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
Q	Description (Card 2 › Content)	Workloads in jede Cloud verlagern,	No	Card text	1–3 sentences; lists and links allowed	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		modernisieren und betreiben.				
R	Link (Card 2 › Link)	Select the page or enter /de-de/services/cloud	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
—	Item (Content tree › Cards › Add (+))	Card	Yes	Adds a Card to the Cards	Select the Cards in the content tree, choose Add (+) and pick Card	Only the item types the Cards allows
S	Image (Card 3 › Content)	Select the asset photo-3.svg (/en/media/photo-3.svg)	No	Card image (also image-background panels and the feature)	From AEM Assets; landscape for 16:9	None
T	Eyebrow (Card 3 › Content)	Insights	No	Label above the title	1–3 words	None
U	Title (Card 3 › Content)	Aktuelle Insights	No	Card heading; statistic number	Up to 60 characters (Recommended); stat: the number	None
V	Description (Card 3 › Content)	Perspektiven und Studien zu Technologie und Wirtschaft.	No	Card text	1–3 sentences; lists and links allowed	None
W	Link (Card 3 › Link)	Select the page or enter /de-de/insights	No	Card destination	A page or `https://…`	Unsafe schemes (`javascript:`, `data:`) drop the card
(X)	Page (Universal Editor)	/content/tcs-corp/de/de-de/error-pages/404	No	—	—	None
(Y)	Title (Page properties)	Seite nicht gefunden	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** The canvas of the German 404 page: the H1 Seite nicht gefunden, the explanation, the Zur Startseite button, then Beliebte Seiten with three image cards Beratung, Cloud and Aktuelle Insights, without dates.
- **Rendering behaviour:** On a missing URL loadErrorPage fetches this page's .plain.html into main, adds error-authored and decorates it like a normal page. The Go back button is added only on the site when the visitor came from the same origin, not in the editor.
- **Publishing behaviour:** Publish the 404 page itself to Preview and Live; missing /de-de URLs then show it. Placeholders (goBack) are a separate publish step; the browser tab title stays the English Page not found from 404.html (F-20).

Business Rules

- Use a single H1 on the error page.
- The Button links to the locale Home /de-de/.

- Leave Navigation, Footer and 404 Page empty on the error page.
- Recommended: robots noindex for /de-de/error-pages/** in the metadata sheet.
- The HTTP status stays 404 whatever content loads.

Common Authoring Mistakes

Error	Root Cause	Resolution
The German 404 shows the English built-in page	The de-de 404 page wasn't published	Publish /content/tcs-corp/de/de-de/error-pages/404
Two H1 headings on the page	Beliebte Seiten was set to h1 as well	Keep h1 only for Seite nicht gefunden
Cards link to English pages	Card links were copied from /en	Point them to /de-de/services/consulting, /de-de/services/cloud and /de-de/insights

Troubleshooting

- **Symptoms:** A missing /de-de URL shows the English /en 404 content with lang en-US.
- **Cause:** /de-de/error-pages/404.plain.html doesn't return 200 because the German page isn't published.
- **Resolution:** Publish the de-de 404 page to Preview and Live.
- **Verification Steps:** Open a missing /de-de URL in a private window: the German content shows and the status is 404.

Step 4 — Set page properties

Action: Open the page properties: set **Title** (e.g. "Seite nicht gefunden") and, in the locale's metadata sheet, `robots` = `noindex` for `/de-de/error-pages/**` (Recommended, so the directly reachable error page URLs aren't indexed).

Expected Result: The properties are saved.

Steps — Error page properties: Page properties dialog of the 404 page with Title filled in and Navigation, Footer and 404 Page left empty.

Step	Where	Field / control	Value / action
1	Universal Editor › Page properties	Page	/content/tcs-corp/de/de-de/error-pages/404
2	Page properties	Title	Seite nicht gefunden
3	Page properties	Navigation / Footer / 404 Page	Leave empty
4	Metadata sheet /content/tcs-corp/de/de-de/metadata	Row url /de-de/error-pages/**	robots = noindex

Step 5 — Preview and test

Action: Preview the page, then open `https://main--tcs-corp--sradha-tcs.aem.page/de-de/error-pages/404` and a missing URL such as `https://main--tcs-corp--sradha-tcs.aem.page/de-de/this-page-does-not-exist`.

Expected Result: The missing URL shows the authored German 404 content with the German header and footer; the browser's developer tools show HTTP status 404.

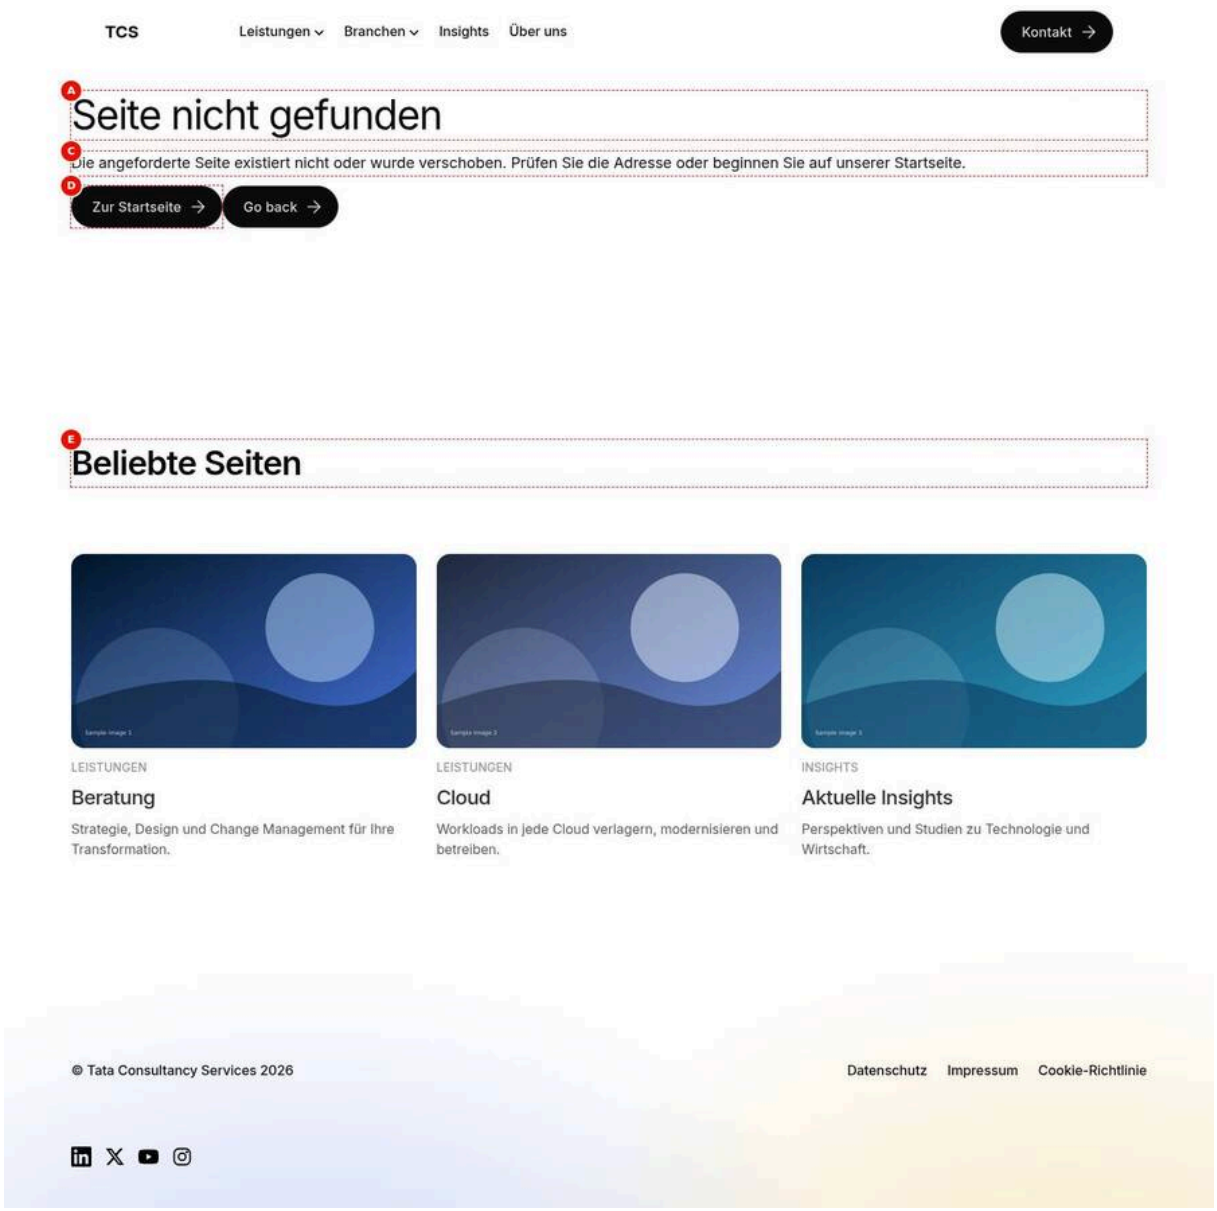

Figure 35: Verifying the authored 404 on preview — A full page at 1440 px after following the removed link from Insights: the German header, the H1 Seite nicht gefunden, the explanation, the primary Zur Startseite button with a primary Go back button next to it, the Beliebte Seiten cards Beratung, Cloud and Aktuelle Insights, and the footer. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/error-pages-404-preview.jpg)

Screenshot Details — Verifying the authored 404 on preview

Item	Detail
Screenshot Name	`screenshots/error-pages-404-preview.jpg`
Screenshot Purpose	Verifying the authored 404 on preview
Screen Description	A full page at 1440 px after following the removed link from Insights: the German header, the H1 Seite nicht gefunden, the explanation, the primary Zur Startseite button with a primary Go back button next to it, the Beliebte Seiten cards Beratung, Cloud and Aktuelle Insights, and the footer.
Business Context	Before go-live the German 404 is checked on a real broken link: a visitor following a removed article link from /de-de/insights must see the German page with a way back.

Item	Detail
Author Objective	Preview the de-de 404 page and follow the link from /de-de/insights to the removed page /de-de/insights/cloud-ausblick-2025.

Field Entry Table — enter these values in Universal Editor, in this order:

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
A	Title (Error page / content/tcs-corp/de/de-de/error-pages/404 › Page properties)	Seite nicht gefunden	No	—	—	None
(B)	Title (Error page / content/tcs-corp/de/de-de/error-pages/404 › Section 1)	Seite nicht gefunden (Title Type h1)	No	—	—	None
C	Text (Error page / content/tcs-corp/de/de-de/error-pages/404 › Section 1)	Die angeforderte Seite existiert nicht oder wurde verschoben. Prüfen Sie die Adresse oder beginnen Sie auf unserer Startseite.	No	—	—	None
D	Button (Error page / content/tcs-corp/de/de-de/error-pages/404 › Section 1)	Text “Zur Startseite”, Link /de-de/, Type Primary	No	—	—	None
E	Cards (Error page / content/tcs-corp/de/de-de/error-pages/404 › Section 2)	Title “Beliebte Seiten”, Card style Image card, Desktop columns 3, Show date off	No	—	—	None
(F)	Image / Eyebrow / Title / Description / Link (Error page / content/tcs-corp/de/de-de/error-pages/404 › Section 2 › Cards › Card 1)	/en/media/photo-1.svg / Leistungen / Beratung / Strategie, Design und Change Management für Ihre Transformation. / / de-de/services/consulting	No	—	—	None
(G)	Image / Eyebrow / Title / Description / Link (Error page / content/tcs-corp/de/de-de/error-pages/404 › Section 2 › Cards › Card 2)	/en/media/photo-2.svg / Leistungen / Cloud / Workloads in jede Cloud verlagern, modernisieren und betreiben. / /de-de/services/cloud	No	—	—	None
(H)	Image / Eyebrow / Title / Description / Link (Error page / content/tcs-corp/de/de-de/error-pages/404 › Section 2 › Cards › Card 3)	/en/media/photo-3.svg / Insights / Aktuelle Insights / Perspektiven und Studien zu Technologie und	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
		Wirtschaft. / /de-de/insights				
(I)	Header / footer (German locale / content/tcs-corp/de/de-de)	references/nav and references/footer of the locale (not set on the pages)	No	—	—	None
(J)	Publish (Universal Editor toolbar)	Preview (the 404 page)	No	—	—	None
(K)	Address (Browser)	https://main–tcs-corp–sradha-tcs.aem.page/de-de/insights, then follow the link to the removed page / de-de/insights/cloud-ausblick-2025	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (B), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** On the missing URL: the German header, the H1 Seite nicht gefunden, the explanation, the primary Zur Startseite button with a primary Go back button next to it, the Beliebte Seiten cards and the German footer.
- **Rendering behaviour:** The status is 404; loadErrorPage loads /de-de/error-pages/404 (no 404 Page is set on the parents) and adds error-authored. addErrorBackButton adds Go back (placeholder goBack) to the first button paragraph, linking to /de-de/insights.
- **Publishing behaviour:** Publish sends the 404 page to Preview (aem.page) first; repeat with Live for aem.live. The de-de nav, footer and placeholders are separate pages and sheets.

Business Rules

- Go back appears only when the referrer is on the same origin.
- Its label is the de-de placeholder goBack; without it the English Go back shows.
- Header and footer are the inherited ones of the missing URL's parents, here the de-de defaults.
- Candidates are tried in order: the 404 Page value, /de-de/error-pages/404, /en/error-pages/404.
- The tab title stays Page not found (F-20).

Common Authoring Mistakes

Error	Root Cause	Resolution
No Go back button	The missing URL was typed into the address bar, so there is no same-origin referrer	Follow a link from /de-de/insights to test it
Go back reads in English	goBack isn't in the de-de placeholders sheet	Add goBack with Zurück and publish the placeholders sheet
Old content shows after an edit	The 404 page was edited but only saved	Publish it to Preview again

Troubleshooting

- **Symptoms:** The missing /de-de URL shows the German content but the English header and footer.

- **Cause:** The de-de references/nav and references/footer aren't published, so the header or footer can't load the locale pages.
- **Resolution:** Publish /content/tcs-corp/de/de-de/references/nav and references/footer.
- **Verification Steps:** Reload the missing URL in a private window; the German header and footer surround the 404 content.

Step 6 — Publish

Action: Publish the 404 page (Universal Editor **Publish**, or Quick Publish in the Sites console).

Expected Result: Missing URLs on the live host (`*.aem.live`) show the authored page.

Steps — Publishing the error page: Universal Editor Publish dialog for the de-de 404 page with Live selected.

Step	Where	Field / control	Value / action
1	Universal Editor toolbar	Publish	Open the Publish dialog
2	Publish dialog	Destination	Live
3	Publish dialog	Items	/content/tcs-corp/de/de-de/error-pages/404
4	Publish dialog	Publish	Confirm

10.2.7 Authoring an Area-Specific 404 Page

Step 1 — Create the page

Action: In the locale's `error-pages` folder, create a page (e.g. `404-careers`) and author it like the 404 page.

Expected Result: The page exists at `/content/tcs-corp/us/en/error-pages/404-careers`.

Steps — Creating an area-specific 404 page: AEM Sites Create Page wizard in /content/tcs-corp/us/en/error-pages with the name 404-careers.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigate	TCS Corp › us › en › error-pages
2	AEM Sites console toolbar	Create › Page	Open the Create Page wizard
3	Create Page › Template	Template	Page
4	Create Page › Properties	Title	Job page not available
5	Create Page › Properties	Name	404-careers
6	Create Page	Create	Create the page, then author it like the 404 page

Step 2 — Set the 404 Page property on the area's top page

Action: Open the page properties of the area's top page (e.g. `/content/tcs-corp/us/en/careers`) and select the new page in **404 Page**.

Expected Result: All missing URLs below `/en/careers/` show `404-careers`, unless a deeper page sets its own 404 Page.

Steps — Setting the inherited 404 Page: Page properties of /content/tcs-corp/us/en/careers with the 404 Page field set to /content/tcs-corp/us/en/error-pages/404-careers.

Step	Where	Field / control	Value / action
1	AEM Sites console	Select	/content/tcs-corp/us/en/careers

Step	Where	Field / control	Value / action
2	AEM Sites console toolbar	Properties	Open Page Properties
3	Page Properties › Basic	404 Page	/content/tcs-corp/us/en/error-pages/404-careers
4	Page Properties	Save & Close	Save, then publish the page

Step 3 — Publish both pages and test

Action: Publish `404-careers` and the careers page; open a missing URL below `/en/careers/` in a **new browser session** (private window).

Expected Result: The careers 404 content is shown.

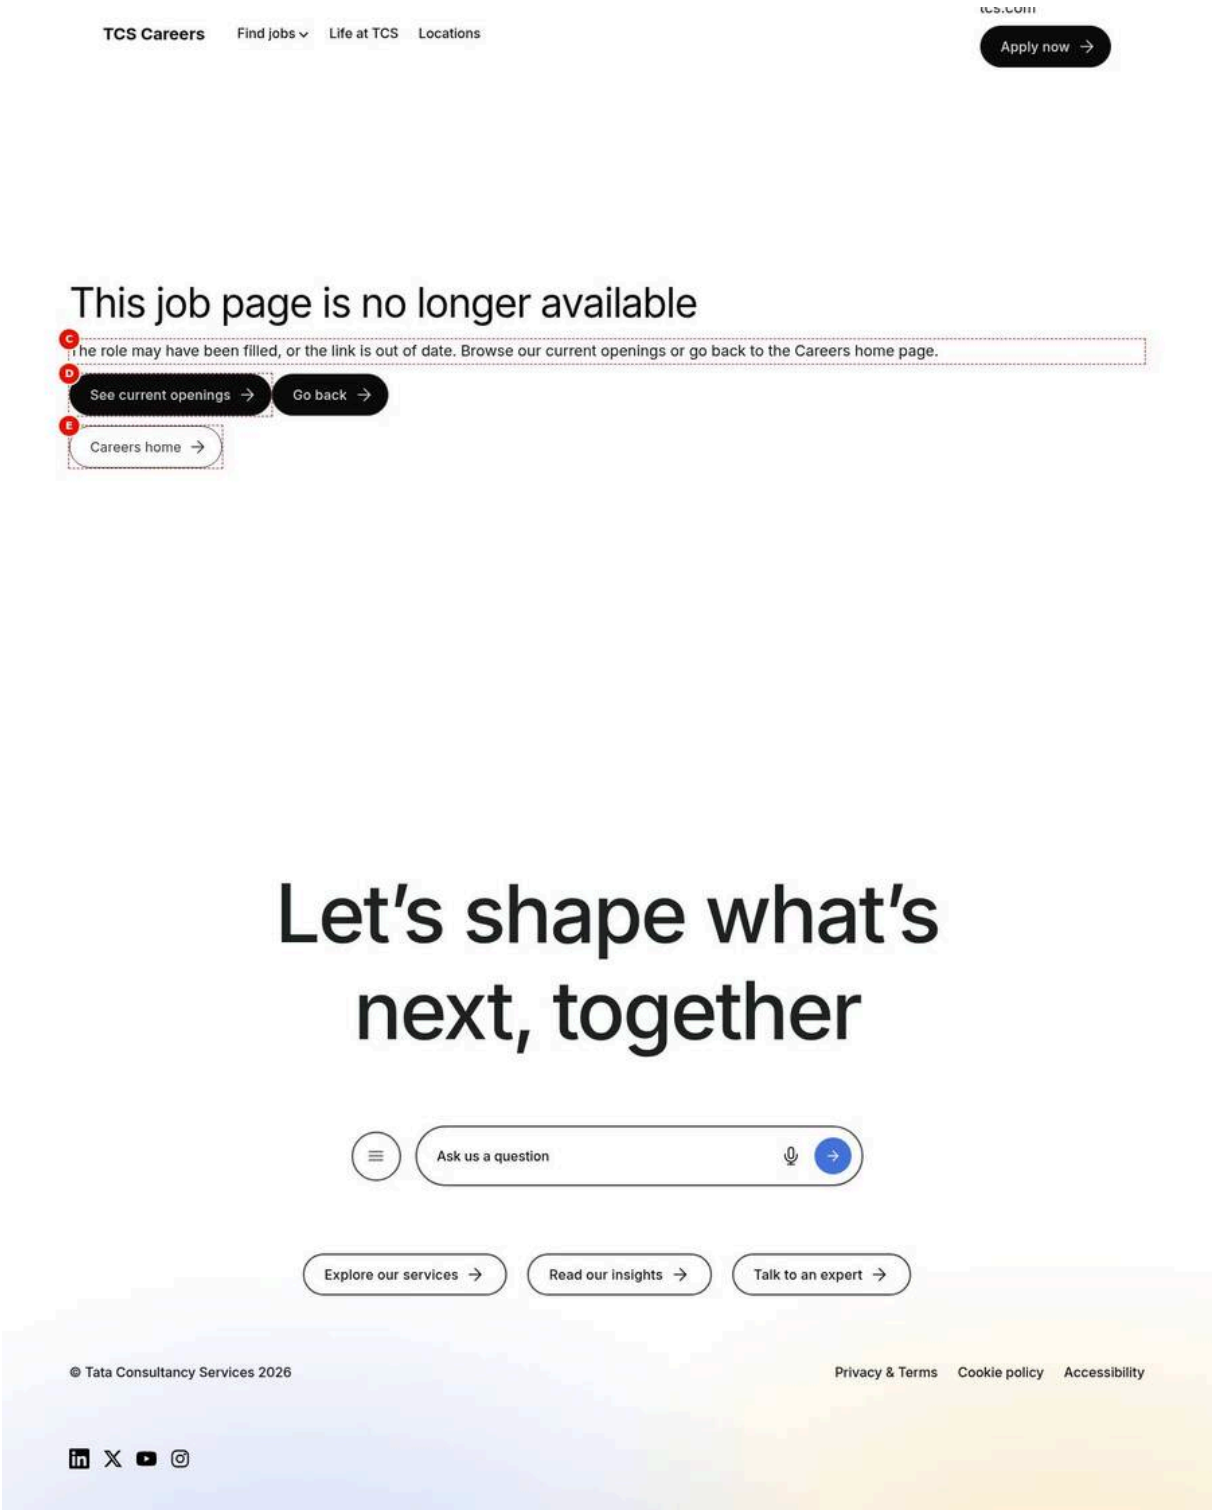

Figure 36: Verifying the area-specific 404 — A full page at 1440 px after following Senior Analyst (2024) from Careers at TCS: the Careers header (TCS Careers, Find jobs, Life at TCS, Locations, tcs.com, Apply now), the H1 This job page is no longer available, the explanation, See current openings, Careers home and Go back, and the footer. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/error-pages-area-404-result.jpg)

Screenshot Details — Verifying the area-specific 404

Item	Detail
Screenshot Name	`screenshots/error-pages-area-404-result.jpg`
Screenshot Purpose	Verifying the area-specific 404
Screen Description	A full page at 1440 px after following Senior Analyst (2024) from Careers at TCS: the Careers header (TCS Careers, Find jobs, Life at TCS, Locations, tcs.com, Apply now), the H1 This job page is no longer available, the explanation, See current openings, Careers home and Go back, and the footer.
Business Context	Closed job adverts are a common source of broken links; the Careers area shows its own 404 that points to the current openings, with the Careers navigation.
Author Objective	Author /en/error-pages/404-careers, set it as 404 Page and nav-careers as Navigation on /en/careers, and follow a closed role link in a new private window.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Title (Error page / content/tcs-corp/us/en/error-pages/404-careers › Page properties)	Job page not available	No	—	—	None
(B)	Title (Error page / content/tcs-corp/us/en/error-pages/404-careers › Section 1)	This job page is no longer available (Title Type h1)	No	—	—	None
C	Text (Error page / content/tcs-corp/us/en/error-pages/404-careers › Section 1)	The role may have been filled, or the link is out of date. Browse our current openings or go back to the Careers home page.	No	—	—	None
D	Button (Error page / content/tcs-corp/us/en/error-pages/404-careers › Section 1)	Text “See current openings”, Link /en/careers/jobs, Type Primary	No	—	—	None
E	Button (Error page / content/tcs-corp/us/en/error-pages/404-careers › Section 1)	Text “Careers home”, Link /en/careers, Type Secondary	No	—	—	None
(F)	404 Page (Careers top page /content/tcs-corp/us/en/careers › Page properties)	/content/tcs-corp/us/en/error-pages/404-careers	No	—	—	None
(G)	Navigation (Careers top page /content/tcs-corp/us/en/careers › Page properties)	/content/tcs-corp/us/en/references/nav-careers	No	—	—	None

Call-out	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(H)	Address (Browser (new private window))	https://main–tcs-corp–sradha-tcs.aem.page/en/careers, then follow the link to the closed role /en/careers/senior-analyst-2024	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** On the missing /en/careers/senior-analyst-2024: the Careers header (TCS Careers, Find jobs, Apply now), the H1 This job page is no longer available, the explanation, See current openings (primary), Careers home (secondary) and Go back, and the footer.
- **Rendering behaviour:** getInheritedMetadata reads error-page and nav from /en/careers, the nearest published parent, and loadErrorPage loads 404-careers. Go back is appended to the first button paragraph and links to /en/careers.
- **Publishing behaviour:** Publish 404-careers and /en/careers (Preview, then Live); the parent's head carries the error-page and nav values. Test in a new private window because inherited values are cached per session.

Business Rules

- The 404 Page value is inherited by all URLs below /en/careers unless a deeper page sets its own.
- Header and footer on the 404 follow the missing URL's parents, here nav-careers.
- If 404-careers can't load, the locale's /en/error-pages/404 is used.
- The metadata sheet error-page column is an equivalent bulk setting.

Common Authoring Mistakes

Error	Root Cause	Resolution
The general /en 404 shows below /en/careers	/en/careers wasn't published after setting 404 Page	Publish /en/careers and test in a private window
The careers 404 shows the global header	Navigation wasn't set on /en/careers	Set Navigation to references/nav-careers and publish
The old 404 still shows after the change	The session cache holds the previous inherited value	Open a new private window

Troubleshooting

- **Symptoms:** A closed role URL below /en/careers shows the general Page not found content.
- **Cause:** The careers top page's published head has no error-page meta, or 404-careers isn't published, so the next candidate loads.
- **Resolution:** Publish /content/tcs-corp/us/en/error-pages/404-careers and /content/tcs-corp/us/en/careers.
- **Verification Steps:** In a new private window the closed role link shows This job page is no longer available.

> **Tip:** Inherited values are cached per browser session; use a new private window to see a changed 404 Page, Navigation or Footer immediately.

The same value can be set in bulk with the metadata sheet's `error-page` column (e.g. URL `/en/careers/**`, `error-page` = `/en/error-pages/404-careers`).

10.2.8 404 Validation Checklist

- ☐ Every locale publishes `error-pages/404` with content in its language.
- ☐ A missing URL in each locale returns HTTP 404 and shows the locale's content, header and footer.
- ☐ The Go home / Home button points to the locale Home.
- ☐ Area-specific 404 pages are selected in the 404 Page property of the area's top page.
- ☐ The error page has a single H1 and meaningful link texts.
- ☐ `robots: noindex` is applied to `/{locale}/error-pages/**` (Recommended).

10.3 403 Forbidden

- Edge Delivery Services doesn't serve a custom 403 page; the public site has no access-restricted pages. If site authentication is enabled for preview / live hosts, the platform returns its own response [To be confirmed: site authentication — owner: Site Administrator].
- Each locale has an authored `error-pages/403` page (`/{code}/error-pages/403`), not used by code. It's intended for the production CDN (e.g. WAF blocks, geo restrictions) [To be confirmed: CDN 403 configuration — owner: CDN Owner].
- **Recommended:** the CDN responds with status 403 and the body of the locale's `/{code}/error-pages/403` (cached copy of the published page, chosen by the first path segment, default `/en/`).
- Authoring: same steps as 10.2.6 on the `403` page (heading, explanation, contact / Home link).

Steps — Editing the 403 page: Universal Editor canvas with the en 403 page: heading "Access denied", explanation and a Home button.

Step	Where	Field / control	Value / action
1	AEM Sites console	Select	/content/tcs-corp/us/en/error-pages/403
2	AEM Sites console toolbar	Edit	Open the page in Universal Editor
3	Section › Add (+)	Title	Access denied (Title Type h1)
4	Section › Add (+)	Text	You don't have permission to view this page. If you think this is a mistake, please contact us.
5	Section › Add (+)	Button	Text "Go to the home page", Link /en/, Type Primary

10.4 500 Server Error

- Edge Delivery Services doesn't serve a custom 5xx page. Origin errors are rare (static delivery, no server-side project code); most "errors" are client-side (block failures, see 10.6), which never produce a 500.
- Each locale has an authored `error-pages/500` page for the production CDN.
- **Recommended:** the CDN stores a static copy of each locale's `/{code}/error-pages/500` (refreshed on publish) and serves it with status 500 / 502 / 503 / 504 when the origin fails — a copy, because fetching it from the failing origin would fail too.
- Authoring: same steps as 10.2.6 on the `500` page; keep it self-contained (no List / Filter List, which depend on the query index; no fragments).

Steps — Editing the 500 page: Universal Editor canvas with the en 500 page: heading "Something went wrong", a short apology and a link to the Home page, without dynamic blocks.

Step	Where	Field / control	Value / action
1	AEM Sites console	Select	/content/tcs-corp/us/en/error-pages/500
2	AEM Sites console toolbar	Edit	Open the page in Universal Editor
3	Section › Add (+)	Title	Something went wrong (Title Type h1)
4	Section › Add (+)	Text	We're sorry, the site has a problem. Please try again in a few minutes.
5	Section › Add (+)	Text	A paragraph with the link "Go to the home page" → /en/ (no List, Filter List or Fragment)

10.5 Maintenance Page

Status: Not implemented (as of this handover).

When it's needed: Code and content deployments on Edge Delivery Services don't need downtime (code is live per branch on merge; content on publish). An AEM author outage doesn't affect the live site. A maintenance page is therefore only needed for business reasons (e.g. legal hold) or a planned CDN / domain change.

Recommended approach:

1. Author a page per locale, e.g. `error-pages/maintenance` (or one global English page), self-contained (no dynamic blocks).
2. Store a static copy at the CDN.
3. Add a CDN rule, switchable without deployment, that returns **503 Service Unavailable** with a `Retry-After` header and the maintenance body for all paths except an allow-list (internal IPs, `/.well-known/`).
4. Add `robots: noindex` to the maintenance page; 503 tells crawlers to retry later.
5. Document the switch in the AMS runbook [To be confirmed: maintenance procedure — owner: CDN Owner].

10.6 Custom Error Handling

10.6.1 Block and Template Load Failures

Failure	Behaviour	Console message
Block JS fails to import or its `decorate` throws	Caught in `loadBlock` (`scripts/aem.js`); the block is marked `data-block-status="loaded"` and stays undecorated (authored rows visible, possibly unstyled); the section is still shown; other blocks continue	`failed to load module for {name}` / `failed to load block {name}`
Block CSS missing	The block renders unstyled	Network 404 in DevTools
Template fails (`templates/{name}`)	Caught in `loadTemplate`; the page renders without the template structure	`failed to load template {name}`
Auto blocking fails	Caught	`Auto Blocking failed`
Lottie animation fails	Caught in the animation decorator	`failed to play the Lottie animation`
Universal Editor change can't be applied	Page reload	—

10.6.2 Fragment Failures (`loadFragment`)

`loadFragment(path)` returns `null` for a path that doesn't start with `/` (or starts with `//`) and for a non-200 response.

Consumer	Behaviour when the fragment is missing
Fragment block	Keeps its authored content (the link / path)
Header (Navigation page)	Header left empty
Footer (footer page)	Only the Social Links sheet (if any) is shown
Footer block (Conversation Canvas Page)	The canvas is omitted; the copyright / links bar still renders
Modal (link to `/modals/...` or Modal block)	Nothing opens (for auto-linked `/modals/` links the navigation is already prevented)
Tabs (Fragment of a Tab item)	The tab's panel stays empty
Authored 404	Next candidate, then built-in content

10.6.3 Site Data Failures

Resource	Fallback
`/{locale}/placeholders.json`	English fallback texts passed by the code
`/{locale}/taxonomy.json`	Labels derived from the tag IDs (`utils/tags.js` `parseTag`) or the authored titles
`/{locale}/data/*.json`	Empty lists: no social links in the footer; Page Header uses the `author` metadata when the Authors sheet has no row; "About the author" (article / blog) and "Media contacts" (press release) sections are removed (`appendLoadedSection`)
`/query-index.json`	Empty page list (List, Filter List, Conversation Canvas menu) — see empty states
`/{locale}/redirects.json`	Links unchanged
Parent page heads (inherited metadata)	Treated as empty: defaults `references/nav`, `references/footer`, `error-pages/404`
Images	`waitForFirstImage` resolves on error, so the page isn't blocked
Data layer	`pushToDataLayer` never throws

10.6.4 Empty States

Block	Condition	Site behaviour	Universal Editor behaviour
List	No cards	**When there are no items** = Hide the list: block and its wrapper hidden; Show a message: the **Empty message** or placeholder `listEmpty` ("There are no items to show."); Show the fallback items: the block's List Items (Child pages / Tagged pages)	Hint `listEditorHint` ("Set up the list in its properties: {problems}.") or `listEditorPages` ("The pages show on the published page (from the query index).")
Cards	No cards	**When there are no cards** = hide or message (same placeholder `listEmpty`)	Hint `cardsEditorHint` ("Add a Card to the block and give it a title, a description or an image.")
Filter List	No results	`noResources` ("No resources found."), `noResourcesHint` ("Try selecting another filter.") and a reset button when filters are selected	`filterListEditor` ("The results show on the published page, from the pages' metadata.")
Tabs	No tabs	—	`tabsEmpty` / `tabsBlockEmpty` hints

Block	Condition	Site behaviour	Universal Editor behaviour
Separator	Hidden on every breakpoint, or a semantic separator without a line	Nothing visible on the page	Note `separatorHidden` ("Separator hidden on all devices") / `separatorInvisible`
Interactive Dashboard	Always	Renders nothing	Labelled placeholder
Conversation Canvas menu	No pages below the Menu root path	Empty menu item (`conversation-canvas-menu-empty`)	Same
Header	No Navigation page	Empty header	Same

10.6.5 Form Validation Errors

Form Variations validates on submit: invalid fields get `aria-invalid="true"` and inline error messages; an error clears when the field becomes valid on input. A valid submit dispatches `form-variations:submit` and shows `formSuccess` ("Thank you, your details were sent."). No network request is made (no back end).

10.7 Redirection Rules

Rule	Where	Status
`/` → `/en/`	CDN rule or root `/redirects.json`	Not implemented
Per-locale redirects (`/{locale}/redirects.json`: Source, Destination)	Authored per locale	Published; not applied by the platform; used by the List block to link to final targets (up to 5 hops, loop-safe)
Root `/redirects.json`	Edge Delivery (the only sheet the platform applies, server side, 301)	Not present
CDN redirects from the locale sheets	Production CDN	Not implemented [To be confirmed: production domain and CDN — owner: Site Administrator]
Error page links	Authored	The built-in Go home link points to the locale Home; Go back to the same-origin referrer

Rules for redirect sheet entries (Recommended):

1. Sources start with `/` and with the sheet's locale (`/de-de/…`); paths without `.html`, without trailing slash.
2. Destinations are final targets (no chains); external URLs allowed.
3. Remove redirects whose source page has been re-created.
4. Don't redirect error pages.

10.8 Recovery Behaviour

Situation	Automatic recovery	Manual recovery
Locale 404 page not published	`/en/error-pages/404` shown (marked `lang`)	Publish `/{locale}/error-pages/404`
`/en/error-pages/404` also missing	Built-in English content	Publish the English 404
404 Page property points to a deleted page	Next candidate (locale 404)	Correct or clear the property; republish the parent page
Changed 404 Page / Navigation / Footer not visible	Takes effect in a new browser session (session cache)	Test in a private window; republish the parent page if the value isn't in its head
Block fails to load	Page continues; block undecorated	Check the console; revert the code change on `main`
Fragment missing	Graceful omission (see 10.6.2)	Publish the fragment / fix the path
Sheets missing	Fallbacks (see 10.6.3)	Publish the sheet (preview and publish the spreadsheet in AEM)
Origin error (5xx)	None today (no CDN error page)	Escalate to Adobe Support; with the recommended CDN, the static 500 page is served
Bad code deployment	—	Revert the commit on `main`; Code Sync deploys within seconds
Wrong content published	—	Restore a previous page version in AEM and republish, or unpublish

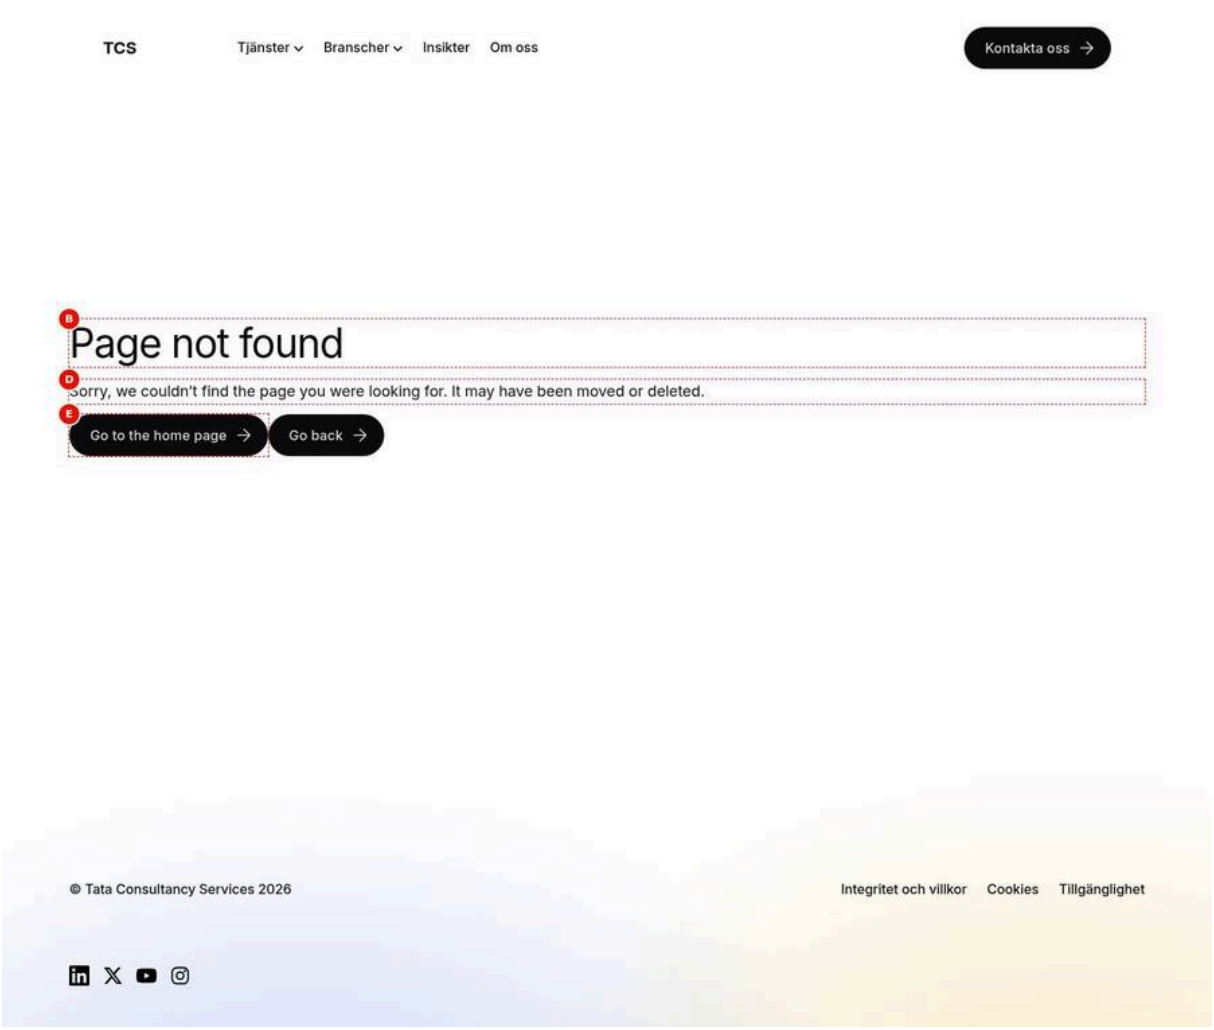

Figure 37: Fallback behaviour — A full page at 1440 px after following Molnrapport 2025 from the Swedish Insikter page: the Swedish header and footer around the English content, the H1 Page not found, the explanation, the Go to the home page button (to /en/) and Go back. (Sample content on the preview; callout letters as in the Field Entry Table; file screenshots/error-pages-404-fallback-en.jpg)

Screenshot Details — Fallback behaviour

Item	Detail
Screenshot Name	`screenshots/error-pages-404-fallback-en.jpg`
Screenshot Purpose	Fallback behaviour
Screen Description	A full page at 1440 px after following Molnrapport 2025 from the Swedish Insikter page: the Swedish header and footer around the English content, the H1 Page not found, the explanation, the Go to the home page button (to /en/) and Go back.
Business Context	A new locale may go live before its own 404 page is published; missing Swedish URLs then still get an authored page instead of the built-in English one.
Author Objective	Leave the sv-se 404 unpublished, keep the /en/error-pages/404 published and follow a missing link from /sv-se/insights.

Field Entry Table — enter these values in Universal Editor, in this order:

Callout	Field Name	Example Value	Mandatory	Business Purpose	What Author Should Enter	Validation Rules
(A)	Publication (/content/tcs-corp/se/sv-se/error-pages/404)	Not published	No	—	—	None
B	Title (Error page / content/tcs-corp/us/en/error-pages/404 › Page properties)	Page not found	No	—	—	None
(C)	Title (Error page / content/tcs-corp/us/en/error-pages/404 › Section 1)	Page not found (Title Type h1)	No	—	—	None
D	Text (Error page / content/tcs-corp/us/en/error-pages/404 › Section 1)	Sorry, we couldn't find the page you were looking for. It may have been moved or deleted.	No	—	—	None
E	Button (Error page / content/tcs-corp/us/en/error-pages/404 › Section 1)	Text "Go to the home page", Link /en/, Type Primary	No	—	—	None
(F)	Header / footer (Swedish locale / content/tcs-corp/se/sv-se)	references/nav and references/footer of the locale	No	—	—	None
(G)	Address (Browser)	https://main–tcs-corp–sradha-tcs.aem.page/sv-se/insights, then follow the link to the missing page /sv-se/insights/molnrapport-2025	No	—	—	None
(H)	main (Result)	The /en/error-pages/404 content, marked lang="en-US"	No	—	—	None

All other fields keep their default values. Each callout letter marks the field's output on the screenshot. Callouts in brackets, such as (A), have no marker: the field has no visible output of its own on this screenshot (alt text, a setting, an analytics or accessibility label, a link target or collapsed content).

Expected Page Output

- **Visual output:** On the missing /sv-se/insights/molnrapport-2025: the Swedish header, the English H1 Page not found, the explanation, the Go to the home page button with Go back, and the Swedish footer.
- **Rendering behaviour:** The sv-se candidate fails (no 200), so /en/error-pages/404 is loaded; because it belongs to another locale main gets lang en-US for screen readers, while html lang stays sv-SE. If the English 404 is also missing, the built-in content stays.
- **Publishing behaviour:** No publish is needed for the fallback; publishing /content/tcs-corp/se/sv-se/error-pages/404 replaces it with Swedish content on the next visit.

Business Rules

- Candidates: the inherited 404 Page, the locale's error-pages/404, then /en/error-pages/404.
- Content from another locale is marked with its lang on main.
- The English button links to /en/, not to the Swedish Home.
- Go back takes its label from the sv-se placeholders (goBack).
- Publish every locale's error-pages/404 before go-live.

Common Authoring Mistakes

Error	Root Cause	Resolution
Swedish visitors see English 404 text	/se/sv-se/error-pages/404 isn't published	Publish the Swedish 404 page
The 404 button takes Swedish visitors to the English Home	The fallback /en page links to /en/	Publish the Swedish 404 with a button to /sv-se/
The built-in 404 shows instead	The /en/error-pages/404 isn't published either	Publish the English 404 page

Troubleshooting

- **Symptoms:** A missing /sv-se URL shows the built-in Page Not Found with the SVG 404 and Go home.
- **Cause:** Neither /sv-se/error-pages/404 nor /en/error-pages/404 returns 200, so no candidate loads.
- **Resolution:** Publish /content/tcs-corp/us/en/error-pages/404, then the Swedish 404 page.
- **Verification Steps:** The missing URL shows the authored content, with main lang en-US until the Swedish page is published.

Part 11 — Analytics & Data Layer

This part describes the analytics foundation of the TCS Corporate Website: the **Adobe Client Data Layer** that every page and block fills, the exact entries and events it contains, how blocks refine it, and how to connect **Adobe Tags** and the **Adobe Experience Platform Web SDK** to it. It is written for analytics engineers, developers and the AMS team; authors only need 11.5 (what the analytics-related fields do) and 11.9 (privacy).

11.1 Overview

11.1.1 What is implemented

The site pushes structured information about the page, its components and visitor interactions to `window.adobeDataLayer`, following the **AEM Core Components data layer** schema (the same structure AEM Sites Core Components produce). Adobe Tags rules and the Web SDK can read it without block-specific code.

Item	Status (as of this handover)	Where
Data layer array `window.adobeDataLayer`	Implemented (created on the first push, `window.adobeDataLayer || []`)	`utils/analytics.js pushToDataLayer`
Page state	Implemented, once per page	`decorators/data-layer-decorator.js trackPage`
Component state for every block	Implemented, once per block	`trackBlocks`
Interaction events `cmp:click`, `cmp:show`, `cmp:hide`, `cmp:media`, `cmp:search`, `cmp:submit`, `cmp:change`	Implemented, document-wide listeners	`trackInteractions`
Block-specific state (List, Cards, Separator) and events (Tabs, Gen Carousel, Modal)	Implemented	the blocks and `decorators/card-list-decorator.js`
Adobe Client Data Layer **library** (`adobe-client-data-layer.min.js`: `getState()`, `addEventListener()`)	**Not loaded** — the array is a plain JavaScript array until a library (for example the Tags ACDL extension) processes it	—
Adobe Tags (Launch) embed	**Not implemented** — `scripts/delayed.js` contains only a comment	`scripts/delayed.js`
Adobe Experience Platform Web SDK, Adobe Analytics, Customer Journey Analytics, Adobe Target, Adobe Journey Optimizer	**Integration-ready, not implemented**	—
Consent management	**Not implemented**	—

> **Important:** Nothing is sent to any analytics server today. The data layer only exists in the visitor's browser until a tag manager is added (11.7).

11.1.2 Code modules

Module	Exports	Role
`utils/analytics.js`	`pushToDataLayer(entry)`, `pushComponents(components)`, `pushComponentEvent(event, id, info)`	Low-level pushes; every push is wrapped in `try/catch` so analytics never breaks rendering or links
`decorators/data-layer-decorator.js`	`trackPage()`, `trackBlocks(container)`, `trackInteractions()`, `componentIdOf(block)`	Page and component state, document-wide event listeners, component ids
`decorators/card-list-decorator.js`	`trackCardList(block, options)`	State of List and Cards and their cards
`blocks/separator/separator.js`, `separator-config.js`	`analyticsEntry(config, id)`	Separator state (opt-in)
`blocks/tabs/tabs.js`, `blocks/gen-carousel/gen-carousel.js`, `blocks/modal/modal.js`	—	`cmp:` show pushes for tab panels, slides and dialogs
`utils/viewport.js`	`currentBreakpoint()`	`breakpoint` of clicks (mobile < 600 px, tablet 600–1199 px, desktop >= 1200 px)
`utils/metadata.js`	`getPageMetadata()`, `getPageLanguage()`, `getPageTags()`	Page state values

11.1.3 Entry shapes

```
State entries                                Event entries
{ page:      { 'page-{hash}': {...} } }      { event: 'cmp:click',
{ component: { '{id}': {...}, ... } }          eventInfo: { path: 'component.{id}', ... } }
```

- **State** entries describe what is on the page; with the ACDL library they are merged into one computed state (`adobeDataLayer.getState()`).
- **Event** entries describe an interaction; `eventInfo.path` points to the component in the state (`component.{id}`).

11.1.4 When entries are pushed

```
Phase    When                               What is pushed
-------  ---------------------------------
-------------------------------------------------
Eager    loadEager: trackInteractions()     page state (first entry); listeners start
Eager+   while blocks decorate              List, Cards, Separator state (their own
entries)
Lazy     after loadSections(main)           state of all blocks in main: trackBlocks(main)
Delayed  3 s after load: trackBlocks(doc)   header, footer, blocks added later (e.g.
modals)
Delayed  then import('./delayed.js')        nothing today (the Tags embed goes here, 11.7)
Any      on interaction                     cmp:* events
```

> **Note:** The same code runs in the Universal Editor, so entries are also pushed while authors edit. No data leaves the browser today; when a tag manager is added it must not be loaded in the editor (11.7.3).

11.2 Page state

`trackPage()` runs once, at the start of the eager phase, and pushes one page entry. The page id is `page-` followed by a hash of `window.location.pathname` (a djb2-style 32-bit hash written in base 36), so the same path always has the same id.

Field	Value	Source
(key)	`page-{hash}`	Hash of the URL path
`@type`	`tcs-corp/components/page`	Constant
`dc:title`	The authored page title: the `og:title` metadata, else `document.title`, read before the SEO decorator applies `meta-title`	`getPageMetadata().title`
`xdm:language`	The `language` metadata when it is a language code (for example `en`, `en-US`), else the locale's language tag (`en-US`, `de-DE`, `fr-FR`, `fr-CA`, `es-ES`, `pt-PT`, `nl-NL`, `sv-SE`, `da-DK`, `no-NO`, `zh-CN`, `ja-JP`, `ko-KR`)	`getPageLanguage()`
`xdm:template`	The Page Type (`page-type` metadata, else `template`); omitted when empty	`getPageMetadata().pageType`
`xdm:tags`	Array of the page tags: the `article:tag` meta values (tag IDs or titles as authored), else the comma-separated `tags` meta; empty array when none	`getPageTags()`
`repo:path`	`window.location.pathname` (the published path, for example `/de-de/newsroom/q3-results`)	Location

Example:

```
{
  "page": {
    "page-1k9x0qz": {
      "@type": "tcs-corp/components/page",
      "dc:title": "TCS reports Q3 results",
      "xdm:language": "en-US",
      "xdm:template": "press-release",
      "xdm:tags": ["tcs-corp:topic/financial-results", "tcs-corp:region/global"],
      "repo:path": "/en/newsroom/q3-results"
    }
  }
}
```

> **Note:** Region, country, persona, content type, author and campaign ID are available as page metadata (`utils/metadata.js`) but are **not** in the page state today. Add them in `trackPage()` if the measurement plan needs them (11.7.4).

11.3 Component state

11.3.1 Generic component entries (trackBlocks)

`trackBlocks(container)` adds every decorated block (`.block`) once. It runs for `main` after the sections are loaded and for the whole document 3 seconds later (header, footer, modals).

Field	Value
(key)	The component id from `componentIdOf(block)`
`@type`	`tcs-corp/components/{block}` where `{block}` is the block's `data-block-name`, else its first class (for example `teaser`, `hero`, `header`, `footer`)
`parentId`	The id of the nearest enclosing block (for example a Hero inside a Gen Carousel, a block inside a Fragment), else the page id
`dc:title`	The text of the first heading (`h1`–`h6`) inside the block: its `aria-label` or text, whitespace collapsed, up to 100 characters; omitted when there is no heading

Skipped blocks: a block is not added when it was already tracked (`data-cmp-tracked`), or when it or an ancestor has a `data-analytics` attribute (`off` or `custom`; see 11.5). Hidden blocks (Additional tab **Hide block**) are still added.

11.3.2 Component ids (componentIdOf)

1. If the block already has `data-cmp-id`, that value is used.
2. Else the block's `id` (the **Anchor ID** from the Additional tab, or the **Component ID** of List, Cards and Separator, or an id a block sets itself).
3. Else `{block}-{n}`: the block name and a counter per block name, in the order the ids are first requested (normally page order), for example `teaser-1`, `teaser-2`.

The id is stored as `data-cmp-id` on the block.

> **Tip:** `{block}-{n}` ids change when blocks are added, removed or reordered. Give blocks that matter for reporting a stable **Anchor ID** (or Component ID) so reports stay comparable over time.

Example (a Hero inside a Gen Carousel, and a Teaser):

```
{
  "component": {
    "gen-carousel-1": {
      "@type": "tcs-corp/components/gen-carousel",
      "parentId": "page-1k9x0qz"
    },
    "hero-1": {
      "@type": "tcs-corp/components/hero",
      "parentId": "gen-carousel-1",
      "dc:title": "Building on belief"
    },
    "anchor-ai-services": {
      "@type": "tcs-corp/components/teaser",
      "parentId": "page-1k9x0qz",
      "dc:title": "AI services for the enterprise"
    }
  }
}
```

11.3.3 Custom component entries

Blocks marked `data-analytics="custom"` push their own, richer state (11.6): List, Cards (with one entry per card) and Separator (when its Analytics option is on).

11.4 Events

All events share this envelope (`pushComponentEvent`):

```
{ "event": "cmp:{name}", "eventInfo": { "path": "component.{id}", "...": "..." } }
```

Which component an event belongs to (`componentOf`): the nearest element with `data-cmp-id` inside the same block (for example a card or a carousel slide), else the block's id, else the page id (`component.page-{hash}` for links in default content).

> **Note:** For links in default content the path is `component.page-{hash}`, while the page state is stored under `page.page-{hash}`. With the ACDL library, `getState('component.page-…')` therefore returns nothing for these clicks; read the page state with `getState('page')` instead. (`decorators/README.md` describes the path as `page.{id}`; the code produces `component.page-{hash}`.)

The listeners are registered once on `document` in the capture phase, so they see events before block code handles them.

11.4.1 cmp:click

Trigger: a click on a link (`a[href]`), a `button`, an element with `role="tab"` or `role="button"`. Excluded: `summary` elements (accordion items push `cmp:show` / `cmp:hide` instead), elements inside `data-analytics="off"`, and elements outside any block unless they are links inside `main` (so a click on a link in the page's text counts, a click outside `main` and outside header / footer blocks does not).

Field	Value
`path`	`component.{id}` (see above)
`interaction`	The element's `data-cmp-interaction` (for example `card`, `cta`, `next`, `filter`), else `link` for links and `button` for other elements
`dc:title`	The element's `aria-label`, else its text; whitespace collapsed; up to 100 characters (localised: it is the visible or accessible label in the page language)
`xdm:linkURL`	The absolute URL of the link (omitted for buttons)
`xdm:linkType`	`download` when the link has a `download` attribute or its URL ends in `.pdf`, `.doc`, `.docx`, `.xls`, `.xlsx`, `.ppt`, `.pptx`, `.zip`, `.csv`, `.txt`, `.mp3`, `.mp4` (before ?, # or the end); `exit` when the link goes to another origin; otherwise `other` (also for buttons)
`value`	The element's `data-cmp-value` (omitted when absent)
`position`	The element's `data-cmp-position` as a number (omitted when absent)
`breakpoint`	`mobile`, `tablet` or `desktop` at the time of the click

Example (a card in a List):

```
{
  "event": "cmp:click",
```

```
  "eventInfo": {
    "path": "component.insights-list-item-3f9a2k",
    "interaction": "card",
    "dc:title": "How cloud platforms change banking operations",
    "xdm:linkURL": "https://main--tcs-corp--sradha-tcs.aem.live/en/insights/cloud-
banking",
    "xdm:linkType": "other",
    "breakpoint": "desktop"
  }
}
```

Example (a PDF download link in default content):

```
{
  "event": "cmp:click",
  "eventInfo": {
    "path": "component.page-1k9x0qz",
    "interaction": "link",
    "dc:title": "Download the annual report",
    "xdm:linkURL": "https://main--tcs-corp--sradha-tcs.aem.live/en/reports/ar-2026.pdf",
    "xdm:linkType": "download",
    "breakpoint": "mobile"
  }
}
```

11.4.2 cmp:show

Triggers and fields:

Source	When	Path	Extra fields
Accordion item (`<details>` in any block)	The item is opened (`toggle` event, captured)	the item's nearest `data-cmp-id`, else the block	`dc:title`: the item label (`summary` text)
Tabs (block and Tabs Container)	The user selects another tab (not on the initial selection)	`component.{panel id}` (the Tab ID, else `{tabs id}-item-{n}`)	`dc:title`: the tab label
Gen Carousel	The active slide changes (previous / next, dots, keyboard, swipe / scroll, or autoplay), not for the first slide on load	`component.{carousel}-slide-{n}`	`position`: the slide number (1-based)
Modal	The dialog opens	`component.{modal block id}`	`interaction`: `dialog`

Example (accordion item opened):

```
{
  "event": "cmp:show",
  "eventInfo": { "path": "component.accordion-1", "dc:title": "What is TCS Cognix?" }
}
```

Example (tab selected):

```
{
  "event": "cmp:show",
```

```
  "eventInfo": { "path": "component.tabs-1-item-2", "dc:title": "Banking" }
}
```

Example (carousel slide):

```
{
  "event": "cmp:show",
  "eventInfo": { "path": "component.gen-carousel-1-slide-3", "position": 3 }
}
```

Example (modal opened):

```
{
  "event": "cmp:show",
  "eventInfo": { "path": "component.modal-1", "interaction": "dialog" }
}
```

Note: Tab panels and carousel slides are not separate entries in the component state; their ids appear only in event paths. Autoplay slide changes are pushed like user changes; filter them in Tags if only user interactions should count (a preceding `cmp:click` with `interaction` `next` / `previous` identifies user navigation by buttons).

11.4.3 cmp:hide

Source	When	Path	Extra fields
Accordion item (`<details>` in a block)	The item is closed	the item's nearest `data-cmp-id`, else the block	`dc:title`: the item label
Any `<dialog>` (Modal)	The dialog closes (close button, Escape, backdrop click)	the dialog's block	`interaction`: `dialog`

Example:

```
{
  "event": "cmp:hide",
  "eventInfo": { "path": "component.modal-1", "interaction": "dialog" }
}
```

11.4.4 cmp:media

Trigger: `play`, `pause` and `ended` events of an HTML `<video>` or `<audio>` element inside a block (captured). Background videos (no controls, looping and muted) are ignored. Embedded YouTube or Vimeo players (iframes) do not expose these events and are not tracked, except the click on the Embed placeholder's play button (`cmp:click`, `interaction` `play`).

Field	Value
`path`	`component.{id}` of the media's component
`interaction`	`play`, `pause` or `ended`
`xdm:mediaURL`	The media's `currentSrc` (omitted when empty)

Field	Value
`position`	The playback position in whole seconds

Example:

```
{
  "event": "cmp:media",
  "eventInfo": {
    "path": "component.video-1",
    "interaction": "pause",
    "xdm:mediaURL": "https://main--tcs-corp--sradha-tcs.aem.live/media_7e1f.mp4",
    "position": 42
  }
}
```

11.4.5 cmp:search

Trigger: the `submit` event of a form inside a block that has `role="search"` or contains an `input[type="search"]`. Today this is the Conversation Canvas search form (the only search form; its query is also dispatched as the DOM event `conversation-canvas:search` for a future search service).

Field	Value
`path`	`component.{id}` of the block (for example `conversation-canvas-1`)
`xdm:searchTerm`	The value of the search input (`input[type="search"]`, else `input[name="q"]`, else the first text input), trimmed, up to 100 characters

Example:

```
{
  "event": "cmp:search",
  "eventInfo": {
    "path": "component.conversation-canvas-1",
    "xdm:searchTerm": "cloud migration"
  }
}
```

> **Note:** The event is pushed in the capture phase, before the block checks the query, so an empty submit pushes `"xdm:searchTerm": ""`. Exclude empty terms in the Tags rule.

11.4.6 cmp:submit

Trigger: the `submit` event of any other form inside a block (today the Form Variations form).

Field	Value
`path`	`component.{id}` of the block (for example `form-variations-1`)
`dc:title`	The form's `aria-label`, else its `id`, else the block name (the Form Variations form is labelled with `aria-labelledby` and has no id, so the value is `form-variations`)
`fields`	The unique, non-empty `name` attributes of the form's controls — names only, never values

Example:

```
{
  "event": "cmp:submit",
  "eventInfo": {
    "path": "component.form-variations-1",
    "dc:title": "form-variations",
    "fields": ["first-name", "last-name", "email", "country", "message", "consent"]
  }
}
```

Important: `cmp:submit` is pushed for every submit **attempt**, before the form validates itself (Form Variations validates in its own submit handler and blocks invalid submissions). It is not a success signal. A valid submission additionally dispatches the DOM event `form-variations:submit` on the block (with the data in `detail.data`); that event is **not** in the data layer. There is no form back end ([To be confirmed: form back end — owner: product owner]). To measure successful submissions, add a data layer push in the success branch of `blocks/form-variations/form-variations.js` (recommended next step), never including the field values.

11.4.7 cmp:change

Trigger: the `change` event of an `input` or `select` inside a block that carries `data-cmp-interaction` (or whose ancestor inside the control carries it). Form fields without that attribute (all Form Variations fields) are not tracked.

Field	Value
`path`	`component.{id}` of the block
`interaction`	The `data-cmp-interaction` value (today `filter-option`)
`value`	`data-cmp-value`, else the control's value (for Filter List options: the tag ID)
`checked`	`true` / `false` for checkboxes; omitted otherwise

Example (Filter List advanced filter option):

```
{
  "event": "cmp:change",
  "eventInfo": {
    "path": "component.filter-list-1",
    "interaction": "filter-option",
    "value": "tcs-corp:industry/banking",
    "checked": true
  }
}
```

11.5 data-cmp-* attributes and data-analytics

These attributes let blocks refine the generic tracking without their own analytics code. Developers set them in block JavaScript; authors influence them only through the fields listed in the last table.

Attribute	Set on	Read by	Effect
`data-cmp-id`	A block (set by `componentIdOf`) or a	`componentOf`	The component id of events inside it

Attribute	Set on	Read by	Effect
	child component (card `li`, carousel slide)		
`data-cmp-interaction`	Links, buttons, inputs	`cmp:click` (`interaction`), `cmp:change` (trigger and `interaction`)	Names the interaction (`card`, `cta`, `next`, `previous`, `pause`, `filter`, `filter-option`, `load-more`, `play`, `playback`, `listen`, `download`, `share`, `animation`)
`data-cmp-value`	Links, buttons, inputs	`cmp:click` / `cmp:change` (`value`)	A value for the interaction (for example the filter tag ID, `all`, or a tag label)
`data-cmp-position`	The clicked element	`cmp:click` (`position`)	A 1-based position
`data-cmp-tracked`	A block (set by `trackBlocks`)	`trackBlocks`	Prevents duplicate state entries
`data-analytics="off"`	A block	`trackBlocks` (skip), all listeners (`tracked()` is false inside it)	No state and no events for the block and everything inside it
`data-analytics="custom"`	A block	`trackBlocks` (skip)	The block pushes its own state; its clicks and other events are still tracked
`data-analytics-label`	Card links (List, Cards)	Not read by the click listener	Informational; the card's Analytics label is used as `dc:title` of the card's **state** entry

Author-facing fields that affect analytics:

Block	Field	Effect
Every block with the Additional tab	Anchor ID	Becomes the component id (stable ids in reports)
List, Cards (`models/_card-list.json`)	Component ID	The component id of the list and the prefix of its card ids
List, Cards	Analytics (`analyticsEnabled`, default on)	On: `data-analytics="custom"` and the list / card state; Off: `data-analytics="off"` — no state and no click events for the block
List items, Cards items	Analytics label	`dc:title` of the card's state entry (Cards: up to 120 characters, enforced by the model)
Separator	Component ID	The separator's id
Separator	Analytics (default off), Analytics label	On: `data-analytics="custom"` and a state entry (label as `dc:title`); Off: `data-analytics="off"`

11.5.1 Adding tracking to a new block (developer checklist)

1. Do nothing for the basics: state, clicks, accordion toggles, dialogs, media and forms are tracked automatically.
2. Name important controls with `data-cmp-interaction` (and `data-cmp-value` / `data-cmp-position` when useful).
3. Mark child components with `data-cmp-id` (unique on the page) when clicks should be attributed to them.
4. For state richer than `@type` / `parentId` / `dc:title`, set `data-analytics="custom"` and push with `pushComponents()` (see `trackCardList`).
5. For show / hide of custom widgets, call `pushComponentEvent('cmp:show', id, {...})`.
6. Never push form values or other personal data.
7. Document the new interactions in `decorators/README.md`.

11.6 Block-specific tracking

11.6.1 List

Source: `blocks/list/list.js`, `decorators/card-list-decorator.js` (`trackCardList`, `renderCardList`).

Aspect	Detail
Analytics option	`analyticsEnabled` (label "Analytics", default on, description "Card clicks and scrolling in the Adobe Data Layer.")
Component id	Component ID, else the block id (Anchor ID), else `list-{n}`; a Component ID already used by another element gets a suffix
List state	`@type` `tcs-corp/components/list`, `parentId` = page id (always, even when nested), `dc:title` = the list heading text or the list label, `xdm:listSource` = the configured source: `parent` (child pages), `fixed` (List Items) or `tags` (tagged pages), `xdm:variant` = the card style when shown as teasers, else `links`
Card state (one per card)	Key `{list id}-item-{hash}`; `@type` `tcs-corp/components/list/item`, `parentId` = list id, `dc:title` = Analytics label, else title, else the first 100 characters of the description, `xdm:linkURL`, `xdm:position` (1-based in the data), `repo:modifyDate` (the card date, ISO)
Card markup	`li[data-cmp-id="{card id}"][data-cmp-position="{n}"]`; card link `data-cmp-interaction="card"`
Header CTA	`data-cmp-interaction="cta"`
Scroll controls	Previous / next buttons `data-cmp-interaction="previous"` / `"next"`
Events	`cmp:click` with `interaction` `card`, `cta`, `previous`, `next`; path = the card id for card clicks, the list id otherwise
Analytics off	`data-analytics="off"`: no state and no events

> **Note:** `data-cmp-position` is on the card's `li`, but the click listener reads `position` from the clicked link, so card clicks carry no `position` field. Use the card's state entry (`xdm:position`, via `getState(eventInfo.path)`) to get the position, or move the attribute to the link (development backlog item).

Example state:

```
{
  "component": {
    "insights-list": {
      "@type": "tcs-corp/components/list",
      "parentId": "page-1k9x0qz",
      "dc:title": "Latest insights",
      "xdm:listSource": "tags",
      "xdm:variant": "image"
    },
    "insights-list-item-3f9a2k": {
      "@type": "tcs-corp/components/list/item",
      "parentId": "insights-list",
      "dc:title": "How cloud platforms change banking operations",
      "xdm:linkURL": "/en/insights/cloud-banking-operations",
      "xdm:position": 1,
      "repo:modifyDate": "2026-09-30"
    }
```

```
    }
  }
```

11.6.2 Cards

Source: `blocks/cards/cards.js`, `blocks/cards/cards-data.js`, `decorators/card-list-decorator.js`.

Aspect	Detail
Analytics option	`analyticsEnabled` (shared model `models/_card-list.json`, default on)
Component id	Component ID, else Anchor ID, else `cards-{n}`
Block state	`@type` `tcs-corp/components/cards`, `parentId` = page id, `dc:title` = heading text or list label, `xdm:variant` = card style or `links`
Card state	Key `{cards id}-item-{n}` (1-based authoring order); `@type` `tcs-corp/components/cards/item`; `dc:title` = Analytics label (max 120 characters, enforced), else title, else the start of the text; `xdm:linkURL`; `xdm:position`; `repo:modifyDate`
Events	As List: `card`, `cta`, `previous`, `next`
Analytics off	`data-analytics="off"`

11.6.3 Separator

Source: `blocks/separator/separator.js`, `separator-config.js` (`analyticsEntry`).

Aspect	Detail
Analytics option	`analyticsEnabled` (label "Analytics", default **off**, description "Adds the separator to the Adobe Data Layer (no interaction events).")
Component id	Component ID (validated `^[A-Za-z][A-Za-z0-9_-]*$`), else generated `separator-{n}`
State (when on)	`@type` `tcs-corp/components/separator`, `dc:title` = Analytics label (up to 120 characters in code), `xdm:variant`, `xdm:accessibilityMode`, `xdm:theme`, `xdm:lineStyle`, `xdm:visibility` (the breakpoints where it is shown, comma-separated, or `none`); no `parentId`
Events	None (a separator has no interactions)
Off	`data-analytics="off"`

Example:

```
{
  "component": {
    "separator-1": {
      "@type": "tcs-corp/components/separator",
      "dc:title": "Before case studies",
      "xdm:variant": "default",
      "xdm:accessibilityMode": "decorative",
      "xdm:theme": "auto",
      "xdm:lineStyle": "solid",
      "xdm:visibility": "mobile,tablet,desktop"
    }
  }
}
```

The values of `xdm:variant`, `xdm:accessibilityMode`, `xdm:theme` and `xdm:lineStyle` are the Separator's configured options (see the Separator chapter); the example values are illustrative.

11.6.4 Tabs (block and Tabs Container)

Source: `blocks/tabs/tabs.js`.

Aspect	Detail
State	Generic (`tcs-corp/components/tabs`)
`cmp:show`	When the user selects another tab: `path` `component.{panel id}`, `dc:title` the tab label; not pushed for the initial tab
`cmp:click`	Tab buttons (`role="tab"`) also push `cmp:click` with `interaction` `button` and the tab label
DOM event	`tabs:change` on the block (`detail`: `index`, `id`, `title`) for other scripts

11.6.5 Gen Carousel

Source: `blocks/gen-carousel/gen-carousel.js`.

Aspect	Detail
State	Generic for the carousel (`tcs-corp/components/gen-carousel`); its Hero / Teaser slides are blocks with `parentId` = the carousel
Slide ids	`gen-carousel-{n}-slide-{i}` as `data-cmp-id` on each slide
`cmp:show`	Every change of the active slide (not the first slide on load), with `position`
`cmp:click`	Pause / play (`pause`), previous (`previous`), next (`next`); dots push `interaction` `button` with their label ("Show slide 2 of 4")
Clicks in slides	CTAs inside a Hero / Teaser slide are attributed to that Hero / Teaser block

11.6.6 Modal

Source: `blocks/modal/modal.js`, `scripts/scripts.js` (`autolinkModals`: links to `/modals/` pages open a modal).

Aspect	Detail
State	Generic (`tcs-corp/components/modal`), added by the delayed `trackBlocks(document)` or on first use
`cmp:show`	When the dialog opens, `interaction` `dialog`
`cmp:hide`	When the dialog closes (close button, Escape, backdrop), `interaction` `dialog`
`cmp:click`	The link that opened the modal (`interaction` `link`); the close button (`interaction` `button`, `dc:title` "Close" in the page language)

11.6.7 Filter List

Source: `blocks/filter-list/filter-list.js`.

Aspect	Detail
State	Generic (`tcs-corp/components/filter-list`)
Filter pills	`cmp:click` with `interaction` `filter`, `value` the tag ID or `all`
Advanced filter options	`cmp:change` with `interaction` `filter-option`, `value` the tag ID, `checked`
Load more	`cmp:click` with `interaction` `load-more`
Other controls	Advanced filter toggle, Clear all: `cmp:click` with `interaction` `button`

Aspect	Detail
Result cards	`cmp:click` with `interaction` `link` (no per-card component ids)

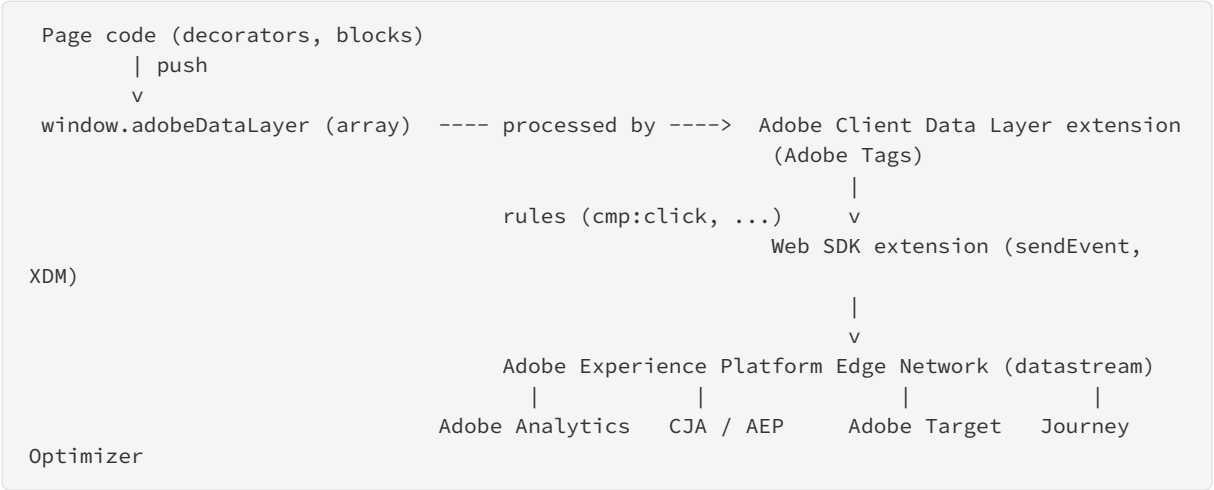
11.6.8 Other interactions

Block / decorator	Element	Event	`interaction` / `value`
Accordion	Item open / close	`cmp:show` / `cmp:hide`	`dc:title` = item label
Conversation Canvas	Tag filters (links or buttons)	`cmp:click`	`filter`, `value` = the tag label
Conversation Canvas	Search form	`cmp:search`	`xdm:searchTerm`
Embed	Placeholder play button	`cmp:click`	`play`
Video	Playback toggle	`cmp:click`	`playback`
Video (file)	Native video play / pause / ended	`cmp:media`	`play` / `pause` / `ended`
Page Header (article meta decorator)	Listen, Download (print), Share	`cmp:click`	`listen`, `download`, `share`
Hero / Teaser (Lottie animation)	Pause / play animation	`cmp:click`	`animation`
Form Variations	Submit attempt	`cmp:submit`	`fields` (names only)
Header, Footer	Navigation and footer links	`cmp:click`	`link` (component `header-1` / `footer-1`)

11.7 Integrating Adobe Tags and the Web SDK (recommended next step)

> **Important:** Everything in this chapter is a **recommendation**. None of it is implemented as of this handover. [To be confirmed: Adobe Tags property, Web SDK datastreams, Adobe Analytics / CJA report suites or data views — owner: analytics lead]

11.7.1 Target architecture



11.7.2 Where the embed goes

The Tags embed belongs in `scripts/delayed.js`, which `scripts/scripts.js` imports 3 seconds after the page has loaded (delayed phase), so analytics never competes with the Largest Contentful Paint. Entries pushed before Tags loads stay in the array and are processed by the ACDL extension when it initialises.

```
// scripts/delayed.js (recommended, not implemented)
const TAGS = {
  // [To be confirmed: Tags library URLs per environment]
  prod: 'https://assets.adobedtm.com/{company}/{property}/launch-{prod-id}.min.js',
  stage: 'https://assets.adobedtm.com/{company}/{property}/launch-{stage-id}-
staging.min.js',
};

const { hostname } = window.location;
// never in the Universal Editor or on the author environment
const inEditor = document.querySelector('[data-aue-resource]')
  || hostname.endsWith('adobeaemcloud.com');
if (!inEditor) {
  const live = hostname.endsWith('.aem.live'); // add the production domain when
configured
  const script = document.createElement('script');
  script.src = live ? TAGS.prod : TAGS.stage;
  script.async = true;
  document.head.append(script);
}
```

Notes on the embed:

- **Content Security Policy:** `head.html` sets `script-src 'nonce-aem' 'strict-dynamic' 'unsafe-inline' http: https:`. With `strict-dynamic`, scripts created by the trusted module scripts (such as `delayed.js`) are allowed, and so are the scripts Tags loads itself. Verify the Tags library, its extensions and any custom code under this policy on the feature preview.
- **Environments:** use the staging library on `.aem.page` and feature previews, the production library on `.aem.live` and the production domain ([To be confirmed: production domain and CDN]).
- **Timing trade-off:** loading in the delayed phase means visits shorter than about 3 seconds send no page view. If the measurement plan requires them, load Tags at the start of the lazy phase instead and re-check Core Web Vitals.
- **Single loader:** do not add the Tags script to `head.html` (it would block rendering and run in the editor).

11.7.3 Tags property set-up

Item	Recommendation
Extensions	Core; Adobe Client Data Layer (data layer name `adobeDataLayer`; it loads the ACDL library and processes the existing array); Adobe Experience Platform Web SDK (one datastream per environment); consent extension of the chosen consent platform
Data elements	`page` — Data Layer Computed State path `page`, with custom code `Object.values(state)[0]` to get the single page object; `eventInfo` — the event's `eventInfo` (ACDL extension event object); `component` — computed state at `event.eventInfo.path`; `breakpoint`, `linkType`, `linkURL`, `interaction` from `eventInfo`
Environments	Development (feature previews), Staging (`main--tcs-corp--sradha-tcs.aem.page`), Production (`.aem.live` and the production domain)
Editor exclusion	Already handled by the loader; optionally add a rule condition "hostname does not end with adobeaemcloud.com"

11.7.4 Mapping the data layer to XDM

Data layer value	XDM field (Web SDK `sendEvent`)	Notes
page `dc:title`	`web.webPageDetails.name`	Authored title
page `repo:path`	`web.webPageDetails.URL` (with origin) or a custom page path field	
page `xdm:language`	Custom field, for example `_{tenant}.page.language`	Or `environment.language` per the schema
page `xdm:template`	Custom field `_{tenant}.page.pageType`; also usable as `web.webPageDetails.siteSection`	
page `xdm:tags`	Custom field `_{tenant}.page.tags` (array)	
page view	`eventType: 'web.webpagedetails.pageViews', web.webPageDetails.pageViews.value: 1`	Send once per page
`cmp:click` `dc:title`	`web.webInteraction.name`	Localised label; prefer `interaction` + component id for language-neutral reports
`cmp:click` `xdm:linkURL`	`web.webInteraction.URL`	
`cmp:click` `xdm:linkType`	`web.webInteraction.type` (`other`, `exit`, `download`)	Values already match the XDM enumeration
`cmp:click`	`eventType: 'web.webinteraction.linkClicks', web.webInteraction.linkClicks.value: 1`	
`eventInfo.path`, `interaction`, `value`, `position`, `breakpoint`	Custom fields `_{tenant}.interaction.*`	
component state `@type`, `dc:title`, `parentId`	Custom fields `_{tenant}.component.*`	Read with `getState(eventInfo.path)`
`cmp:search` `xdm:searchTerm`	Custom field `_{tenant}.search.term` (or the schema's search field group)	Review for personal data (11.9)
`cmp:media`	Custom fields, or the Media Analytics / Media Edge integration	Only native video / audio
`cmp:submit` `fields`	Custom field `_{tenant}.form.fields`	Attempt, not success

11.7.5 Sample Tags rules

Rule	Event	Conditions	Actions
Page view	Core: Library Loaded (Page Top)	Not in the editor	Web SDK Send event: `web.webpagedetails.pageViews`, XDM from the `page` data element
Link click	ACDL: specific event `cmp:click`	`xdm:linkType` = `other`	Send event `web.webinteraction.linkClicks` with name, URL, type, component and interaction fields
Exit link	ACDL: `cmp:click`	`xdm:linkType` = `exit`	Send event (link type `exit`)
Download	ACDL: `cmp:click`	`xdm:linkType` = `download`	Send event (link type `download`)
Card click	ACDL: `cmp:click`	`interaction` = `card`	Send event with the card's state (`getState(eventInfo.path)`: title, position, URL)

Rule	Event	Conditions	Actions
Carousel / tab / accordion view	ACDL: `cmp:show`	—	Send event (custom interaction `show`, component id, position / title)
Dialog closed / item collapsed	ACDL: `cmp:hide`	—	Send event (custom interaction `hide`)
Video	ACDL: `cmp:media`	`interaction` in `play`, `pause`, `ended`	Send event (media milestone)
Internal search	ACDL: `cmp:search`	`xdm:searchTerm` not empty	Send event with the search term
Form submit attempt	ACDL: `cmp:submit`	—	Send event (form name, field names)
Filter used	ACDL: `cmp:change`	`interaction` = `filter-option`	Send event (filter value, checked)

11.7.6 Consent

No consent banner or consent management platform is implemented. Before any data is sent:

1. Choose and implement a consent platform (Adobe-integrated or third party). [To be confirmed: consent management platform — owner: privacy / legal]
2. Configure the Web SDK with `defaultConsent: 'pending'` (or `out` where required) and call `setConsent` from the consent platform's callback; or load Tags only after consent.
3. Apply the rules of each locale's jurisdiction (for example GDPR for the EU and EEA locales `de-de`, `fr-fr`, `es-es`, `pt-pt`, `nl-nl`, `sv-se`, `da-dk`, `no-no`; PIPL for `zh-cn`; PIPA for `ko-kr`; APPI for `ja-jp`; Quebec Law 25 / PIPEDA for `fr-ca`). [To be confirmed: legal requirements per locale — owner: legal]
4. Keep the data layer itself (local, no network) as it is; consent governs sending.
5. Translate the consent banner texts per locale (placeholders or the consent platform's own localisation).

11.7.7 Personalisation (future)

Adobe Target and Adobe Journey Optimizer can use the same Web SDK connection (decision scopes, offers). Nothing is prepared in the blocks beyond the data layer (for example the Teaser's Personalization flag is an authored field; see its chapter). Personalising content above the fold affects LCP and flicker; plan it with the development team. [To be confirmed: personalisation roadmap — owner: product owner]

11.8 Validation

11.8.1 Browser console (works today)

Open the page on the preview or live site (not in the Universal Editor's edit mode, where clicks select components), open the developer tools console and use:

Check	Console command
All entries	`window.adobeDataLayer`
Page entry	`adobeDataLayer.find((e) => e.page)`
All component ids and types	`adobeDataLayer.filter((e) => e.component).flatMap((e) => Object.entries(e.component)).map(([id, c]) => [id, c['@type'], c.parentId])`

Check	Console command
Events only	`adobeDataLayer.filter((e) => e.event)`
Last event	`adobeDataLayer.filter((e) => e.event).at(-1)`
Clicks of a component	`adobeDataLayer.filter((e) => e.event === 'cmp:click' && e.eventInfo.path === 'component.teaser-1')`
Copy for a ticket	`copy(JSON.stringify(adobeDataLayer, null, 2))`

Tip: Clicking a link navigates away and clears the console. Enable **Preserve log** in the console settings, or check with Ctrl / Cmd + click (new tab keeps the current page), or use links to `#` anchors.

Note: `adobeDataLayer.getState()` and `adobeDataLayer.addEventListener()` exist only after the ACDL library is loaded (normally by the Tags ACDL extension). Until then `adobeDataLayer` is a plain array.

11.8.2 Test cases

#	Action	Expected entry
1	Load any page	First entry is `{ page: { 'page-…': { '@type': 'tcs-corp/components/page', … } } }` with the right language and Page Type
2	Wait 3 seconds	Component entries for all blocks, including `header` and `footer`
3	Click a link in a Text	`cmp:click`, path `component.page-…`, `interaction` `link`
4	Click a PDF link	`xdm:linkType` `download`
5	Click an external link	`xdm:linkType` `exit`
6	Click a List / Cards card	`cmp:click`, `interaction` `card`, path = the card id; the card id exists in a component entry
7	Open and close an accordion item	`cmp:show`, then `cmp:hide`, with the item label
8	Select the second tab	`cmp:show`, path `component.{panel id}`
9	Move a carousel to slide 2	`cmp:show` with `position` 2 (and `cmp:click` `next`)
10	Open and close a modal	`cmp:show` and `cmp:hide`, `interaction` `dialog`
11	Play and pause a file video	`cmp:media` `play`, `pause`, with position
12	Search in the Conversation Canvas	`cmp:search` with the term
13	Submit the Form Variations form	`cmp:submit` with field names, **no values**
14	Tick a Filter List advanced option	`cmp:change`, `filter-option`, tag ID, `checked` true
15	Turn List Analytics off and republish	No list or card entries and no clicks from the list
16	Resize to 375 px and click	`breakpoint` `mobile`

11.8.3 Adobe Experience Platform Debugger (after Tags is integrated)

1. Install the Adobe Experience Platform Debugger browser extension.
2. Open the page on preview; open the Debugger; check **Summary** (Tags property and environment, Web SDK version, datastream).

3. **Experience Platform Web SDK:** inspect each `sendEvent` request and its XDM (page view, link clicks).
4. **Tags > Logs** (or `_satellite.setDebug(true)` in the console): see which rules fired for which `cmp:*` event.
5. **Edge Trace / Adobe Experience Platform Assurance:** verify the data reaches Analytics / AEP.
6. Check consent: with consent pending or denied, no `sendEvent` calls should leave the browser.

11.8.4 Regression checks after releases

Run test cases 1, 2, 3, 6 and 13 on the feature preview of every release that changes blocks or decorators. The data layer decorator has no unit tests today (the `test/` folder covers List, Cards and Separator data and configuration); adding them is recommended.

11.9 Privacy

Rule	How the code enforces it
No form values in the data layer	`cmp:submit` sends only the field **names**; Form Variations fields have no `data-cmp-interaction`, so typing or changing them pushes nothing
No personal data in state	Page and component state contain titles, types, paths, tags and ids only
Labels are truncated	`dc:title` values are limited to 100 characters (Cards analytics labels to 120 by the model, Separator labels to 120 by code)
Analytics never breaks the page	All pushes are wrapped in `try/catch`
Opt-out per block	`data-analytics="off"` (List, Cards and Separator Analytics fields) stops state and events for that block
Nothing is sent today	No tag manager or network call exists (11.1.1)

Residual risks and recommendations:

1. **Search terms** (`cmp:search` `xdm:searchTerm`) are free text typed by visitors and can contain personal data (names, e-mail addresses). Before sending them, filter patterns such as e-mail addresses and numbers in the Tags rule, or send only whether a search happened. [To be confirmed: search term policy — owner: privacy / legal]
2. **Analytics labels, Anchor IDs and Component IDs** are authored; authors must not put personal data into them.
3. **Link URLs** of `mailto:` and `tel:` links (for example Media Contacts) are pushed as `xdm:linkURL` and contain e-mail addresses or phone numbers of named contacts; they are classified as `exit` links. Mask or drop them in Tags before sending. [To be confirmed: handling of contact links in analytics — owner: privacy / legal]
4. **URLs with query parameters** (campaign links) are pushed as they are; strip personal parameters in Tags.
5. **Consent** must be in place before data is sent (11.7.6).
6. **Retention and access** of analytics data are governed in the Adobe products, not in this code. [To be confirmed: data retention policy — owner: privacy / legal]

Part 12 — Publishing, Deployment & Release

This part describes how content and code reach the TCS Corporate website, how configuration is changed, how a release is prepared and verified, and how each kind of change is rolled back. It covers the three independent delivery streams of an Edge Delivery Services site:

Stream	Source of truth	Delivered by	Who changes it
Content (pages, fragments, sheets, assets)	AEM as a Cloud Service author `https://author-p220207-e2271469.adobeaemcloud.com` (`/content/tcs-corp`, `/content/dam/tcs-corp`)	AEM publication to Edge Delivery Services (preview and live tiers)	Content authors and publishers
Code (blocks, styles, scripts, models, index and sitemap definitions)	GitHub `sradha-tcs/tcs-corp`, branch `main`	AEM Code Sync (GitHub app) to the Edge Delivery code bus	Development team
Configuration (site configuration service: paths, metadata sources, CDN, robots, access)	Edge Delivery configuration service for org `sradha-tcs`, site `tcs-corp`	Admin API (`admin.hlx.page`)	Site administrator / AMS

> **Important:** The three streams are released independently. A code merge does not publish content, and publishing content does not deploy code. A release that needs both (for example a new block and the pages that use it) must sequence them: code first, then content.

12.1 Content Publishing Lifecycle

12.1.1 Environments and Tiers

Environment	URL	Content shown	Code shown	Typical use
AEM author (Universal Editor)	`https://author-p220207-e2271469.adobeaemcloud.com` (pages under `/content/tcs-corp/...`)	Current, unpublished authoring state	Code of `main` (the fstab mount `bin/franklin.delivery/sradha-tcs/tcs-corp/main`)	Authoring, in-context editing
Local development	`http://localhost:3000` (`aem up`)	The preview tier (content previewed by authors)	Local working copy, including uncommitted code	Development and debugging
Feature preview	`https://{branch}--tcs-corp--sradha-tcs.aem.page/`	Preview tier	The feature branch	Pull request review, PageSpeed check
Preview (main)	`https://main--tcs-corp--sradha-tcs.aem.page/`	Preview tier	`main`	Content review before go-live
Live (main)	`https://main--tcs-corp--sradha-tcs.aem.live/`	Live tier (published content)	`main`	Production origin
Production domain / CDN	[To be confirmed: production domain and CDN — owner: site administrator]	Live tier through the customer CDN	`main`	Public website

Published paths are language-only (`/en/`, `/de-de/`, `/fr-fr/`, `/fr-ca/`, `/es-es/`, `/pt-pt/`, `/nl-nl/`, `/sv-se/`, `/da-dk/`, `/no-no/`, `/zh-cn/`, `/ja-jp/`, `/ko-kr/`), mapped from the AEM paths `/content/tcs-corp/{country}/{language}` by `paths.json` (143 mappings, 14 includes, 28 excludes; see 12.5).

12.1.2 Lifecycle Overview

```
 AUTHOR (AEM as a Cloud Service)                EDGE DELIVERY SERVICES
 -----------------------------------
-----------------------------------------------
 1. Create / edit page in Universal Editor
 2. Review in Universal Editor (Preview mode)
 3. Publish  ---------- preview tier ---------> main--tcs-corp--sradha-tcs.aem.page/en/...
           (optional review step)                  (content review; Sidekick)
 4. Publish  ---------- live tier ------------> main--tcs-corp--sradha-tcs.aem.live/en/...
                                                   - CDN cache purged for the path
                                                   - query index row updated (/query-
index.json)
                                                   - sitemap regenerated (/sitemap.xml)
                                                   - production CDN [To be confirmed]
 5. Unpublish ---------------------------------> path removed from live, index row removed
```

Content states:

State	Where it is visible	How it is reached
Draft	AEM author / Universal Editor only	Saving edits in Universal Editor (edits save automatically)
Previewed	`*.aem.page` and `localhost:3000`	Publishing to the preview tier (where the Publish dialog offers Preview) or an Admin API preview operation
Published (live)	`*.aem.live` and the production domain	Publish in Universal Editor or the AEM Sites console
Unpublished	Nowhere on Edge Delivery (404 page shown)	Unpublish / Manage Publication → Unpublish
Excluded	Never published	Paths in `paths.json` `excludes`: the 13 `block-library` folders and `site-global-templates`

12.1.3 Publishing from Universal Editor

1. Open the page in Universal Editor (AEM Sites console → select the page → **Edit**).
2. Make and check the changes; switch to **Preview** mode to see the page as visitors will (in Preview mode hidden blocks are hidden, carousels and motion run; see 13.18).
3. Select **Publish** in the Universal Editor header.
4. In the Publish dialog, review the list of items: the page and the references it uses (for example fragments and AEM Assets). Keep referenced items selected if they changed.
5. Choose the destination (Live, or Preview where the dialog offers it) and confirm.

Steps — Universal Editor publishing: The Universal Editor Publish dialog for a `us/en` page, showing the page and its referenced items (a fragment and an image) selected, and the destination choice.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Open TCS Corp › us › en › about
2	AEM Sites console	Select	Select the page (check box of its card or row)
3	AEM Sites console toolbar	Edit	Select Edit: the page opens in the Universal Editor

Step	Where	Field / control	Value / action
4	Universal Editor toolbar	Publish	Select Publish
5	Publish dialog	Items	The page, a fragment and an image are listed; keep them selected
6	Publish dialog	Destination	Live (or Preview where offered)

6. Open the published URL (for example `https://main--tcs-corp--sradha-tcs.aem.live/en/about`) and verify the change. Use a private window or a cache-busting query (`?nocache=1`) to bypass the browser cache.

> **Note:** Pages under `block-library/` and `site-global-templates/` cannot be published: they are in the `excludes` list of `paths.json`. This is intentional (they are author-only).

12.1.4 Publishing from the AEM Sites Console (single, bulk, tree, scheduled)

Task	Steps in the AEM Sites console	Notes
Quick publish one or more pages	Select the pages → **Quick Publish** → confirm	Publishes the selected pages and their changed references
Bulk publish with options	Select pages → **Manage Publication** → Action: Publish → Scheduling: Now or Later → include children if needed → Publish	Use "Include children" to publish a section of the site tree
Scheduled publication	Manage Publication → Scheduling: **Later** → date and time	The publication runs as an AEM workflow at the given time
Publish a whole locale	Select the locale page (for example `/content/tcs-corp/de/de-de`) → Manage Publication → include children	Excluded paths (block library) are skipped by the path mapping
Unpublish	Select pages → **Manage Publication** → Action: Unpublish	The live URL returns the 404 page; the query index row is removed
Publish sheets	Select the spreadsheet (for example `/content/tcs-corp/us/en/placeholders`) → Quick Publish	Sheets are served as JSON (see 12.1.6)
Publish assets	AEM Assets → select assets → Quick Publish	Assets referenced by pages are also offered in the page's Publish dialog; `/content/dam/tcs-corp/` is in `paths.json` `includes`

Steps — Bulk publication in the Sites console: The AEM Sites console Manage Publication wizard for `/content/tcs-corp/us/en`, with Action Publish, Scheduling Now and the "Include children" option visible.

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Open TCS Corp › us
2	AEM Sites console	Select	Select the en page (/content/tcs-corp/us/en)
3	AEM Sites console toolbar	Manage Publication	Select Manage Publication
4	Manage Publication › Options	Action	Publish
5	Manage Publication › Options	Scheduling	Now
6	Manage Publication	Next	Select Next
7	Manage Publication › Scope	Include children	Select Include Children and confirm

> **Tip:** After a bulk publication, check a sample of URLs on `*.aem.live` and the query index (`/query-index.json`) for the new or changed pages. Large publications are processed asynchronously; allow a few minutes before concluding that a page is missing.

12.1.5 AEM Sidekick

AEM Sidekick is the browser extension used on the Edge Delivery URLs. For this AEM-authored (xwalk) site its main uses are:

Sidekick function	Use on this project
Environment switcher	Switch between preview (`.aem.page`) and live (`.aem.live`) for the current path
Edit	Opens the page in the AEM editor. The project configuration `tools/sidekick/config.json` sets `editUrlLabel: "AEM Editor"` and `editUrlPattern: "{{contentSourceUrl}}{{pathname}}?cmd=open"`
Status	Shows when the path was last previewed and published
Preview / Publish (Reload)	Can re-preview or re-publish a path from the content source; the authoring workflow of record remains publishing in AEM

> **Note:** `tools/sidekick/config.json` still carries the boilerplate project name `"AEM XWalk Boilerplate"`. It is a label only; rename it to the TCS project name in a future code change ([To be confirmed: preferred Sidekick project label — owner: product owner]).

12.1.6 Publishing Sheets and Site Data

Every locale has its own sheets. They are AEM spreadsheet pages published as JSON at the locale's published path (mapped one by one in `paths.json`; the system appends `.json` to spreadsheets; the taxonomy page is mapped explicitly to `taxonomy.json`).

Sheet (AEM path below **`/content/tcs-corp/{country}/{language}/`**)	Published URL (example **`/de-de`**)	Read by (code)	Effect of publishing
`placeholders`	`/de-de/placeholders.json`	`utils/placeholders.js` (all blocks with UI text, header, footer)	New UI text on the next page load (loaded once per page)
`metadata`	`/de-de/metadata.json`	Edge Delivery (bulk metadata), applied only when listed in the site configuration's `metadata.source`	Page `<meta>` values change on pages matching the URL patterns
`taxonomy`	`/de-de/taxonomy.json`	`utils/taxonomy.js` (teaser, page-header, filter-list, conversation-canvas, list, cards)	Tag labels change on the next page load
`redirects`	`/de-de/redirects.json`	`utils/redirects.js` (List card links only)	Not applied by the platform (see 13.12)
`data/authors`	`/de-de/data/authors.json`	`utils/data.js` `getAuthor` / `getAuthors` (page-header, filter-list, list feature card, article template)	Author lockups change
`data/locations`	`/de-de/data/locations.json`	`utils/data.js` `getLocations`	Loader exists; no block uses it yet

Sheet (AEM path below `/content/tcs-corp/{country}/{language}/`)	Published URL (example `/de-de`)	Read by (code)	Effect of publishing
`data/partners`	`/de-de/data/partners.json`	`utils/data.js` `getPartners`	Loader exists; no block uses it yet
`data/social-links`	`/de-de/data/social-links.json`	`utils/data.js` `getSocialLinks` (footer)	Footer social icons change
`data/media-contacts`	`/de-de/data/media-contacts.json`	`utils/data.js` `getMediaContacts` (press-release template)	Media contacts change

Important: A sheet change is visible only after the sheet itself is published. Editing the sheet in AEM without publishing it has no effect on preview or live.

12.1.7 Query Index and Sitemap Updates

Query index. `helix-query.yaml` defines one index (`pages`, target `/query-index.json`) over `/**`, excluding `/**.json`, each locale's `references/**`, `error-pages/**`, `data/**`, `nav`, `footer`, `block-library` and `site-global-templates`, and any `fragments/` or `modals/` folder. It indexes `lastModified`, `robots`, `title`, `description`, `image`, `tags` and the metadata columns (metaTitle, metaDescription, pageType, contentType, author, authorId, publishDate, modifiedDate, readingTime, thumbnailImage, featuredImage, region, country, language, persona, campaignId, featured, priority, featureCard, featuredPriority, cardTitle, cardDescription, cardImage, cardImageAlt, imageAlt, eyebrow, category, hideInNav).

- Publishing a page adds or updates its row; unpublishing removes it. This is automatic.
- One index serves all 13 locales. `utils/query-index.js` loads it once per page in pages of 500 rows (`?offset=…&limit=500`) and filters the rows to the current locale's root (for example `/de-de/`).
- Consumers: List (child pages, tagged pages), Filter List, Conversation Canvas.
- After a change to `helix-query.yaml` (new column, changed exclude), existing rows are not rewritten until the pages are published again or a re-index is triggered (Admin API index operation, see 12.1.9).

Sitemap. `helix-sitemap.yaml` defines one sitemap (`default`) built from `/query-index.json` into `/sitemap.xml`, with `lastmod: YYYY-MM-DD` and `origin: https://main--tcs-corp--sradha-tcs.aem.live`. The sitemap is regenerated when the index changes. Change the `origin` to the production domain when it is configured (see 12.5 and 13.25).

12.1.8 Caching

Cache	What it holds	Lifetime / invalidation	Notes
Edge Delivery CDN (`*.aem.page`, `*.aem.live`)	HTML, `.plain.html`, JSON sheets, media, code	Purged automatically for the affected path when content is previewed or published and when code is synced	Manual purge: Admin API cache operation
Production CDN	Live responses	[To be confirmed: production CDN (Adobe-managed or customer CDN) and its purge integration — owner: site administrator]	A customer-managed CDN needs push invalidation configured in the site configuration

Cache	What it holds	Lifetime / invalidation	Notes
Browser HTTP cache	Any response	Short TTLs set by Edge Delivery	Use a private window or `?nocache=…` to verify a change
In-page memory caches (code)	Query index, placeholders, taxonomy, redirects, data sheets	One page view (fetched once per page)	`utils/query-index.js`, `utils/placeholders.js`, `utils/taxonomy.js`, `utils/redirects.js`, `utils/data.js`
Session cache `tcs-inherited-metadata` (`sessionStorage`)	The Navigation, Footer and 404 Page values of parent pages	Browser session	`utils/inherited-metadata.js`: a changed parent property shows in a new session (new tab or window after closing the browser, or after clearing site data)
Session flag `fonts-loaded` (`sessionStorage`)	Whether web fonts were loaded	Browser session	`scripts/scripts.js` (not set on `localhost`)

12.1.9 Admin API Operations (conceptual)

The Edge Delivery Admin API (`https://admin.hlx.page`) performs the operations behind publishing. Calls need an authenticated user or an API key with the right role in the site configuration; no credentials are recorded in this document. Path segments are `{org}` = `sradha-tcs`, `{site}` = `tcs-corp`, `{ref}` = `main` (or a branch), `{path}` = the published path (for example `/de-de/about`).

Operation	Endpoint pattern	Purpose	When AMS uses it
Status	`GET /status/{org}/{site}/{ref}/{path}`	Shows the preview, live and edit (source) state and last-modified times of a path	First diagnostic step for "page not updating"
Preview	`POST /preview/{org}/{site}/{ref}/{path}`	Fetches the path from the content source into the preview tier	Re-preview a path when AEM publication did not reach preview
Live (publish)	`POST /live/{org}/{site}/{ref}/{path}`	Promotes the previewed resource to live	Re-publish a path
Unpublish	`DELETE /live/{org}/{site}/{ref}/{path}`	Removes the path from live	Emergency takedown when AEM unpublication is not possible
Cache	`POST /cache/{org}/{site}/{ref}/{path}`	Purges the CDN cache for the path	Stale content after a confirmed publish
Index	`POST /index/{org}/{site}/{ref}/{path}`	Re-indexes the path in `/query-index.json`	Page missing from the index or stale columns
Sitemap	`POST /sitemap/{org}/{site}/{ref}/{path}`	Regenerates a sitemap (for example `/sitemap.xml`)	Sitemap outdated after configuration changes
Code	`POST /code/{org}/{site}/{ref}/{path}`	Re-syncs code from GitHub	Code Sync did not run after a merge
Log	`GET /log/{org}/{site}/{ref}`	Audit log of preview, publish and code operations	Who published what and when
Configuration	`/config/{org}/sites/{site}.json` and sub-resources (for example `public.json`, `metadata.json`)	Reads and updates the site configuration	Configuration changes (see 12.5)

> **Warning:** Admin API operations act immediately on the public site. Bulk operations (for example `/*` paths) must be agreed with the site owner and logged in the change record.

12.2 Code Deployment

12.2.1 Code Repository and Delivery

Item	Value
Repository	`https://github.com/sradha-tcs/tcs-corp` (based on `adobe-rnd/aem-boilerplate-xwalk`)
Default branch	`main` (production)
Build step	None: vanilla JavaScript (ES modules) and CSS are served as committed
Delivery	AEM Code Sync GitHub app pushes every commit of every branch to the code bus; branch code is served at `https://{branch}--tcs-corp--sradha-tcs.aem.page/`
Node.js	`README.md` states Node.js 20 or newer; the GitHub workflow installs Node 24
Dependencies	Development only (ESLint 8 with Airbnb base and `eslint-plugin-xwalk`, Stylelint, Husky, `merge-json-cli`, `npm-run-all`); nothing is bundled into the site

12.2.2 Developer Workflow

Step	Action	Command / location
1	Update `main` and create a feature branch named `feature/tcs-<topic>`	`git checkout main && git pull && git checkout -b feature/tcs-<topic>`
2	Install dependencies (also installs the Husky pre-commit hook through `prepare`)	`npm install`
3	Run the local server against preview content	`npx -y @adobe/aem-cli up --no-open --forward-browser-logs` (or `aem up`)
4	Implement the change following AGENTS.md (blocks, decorators, utils, rem units, mobile-first breakpoints 600 / 900 / 1200 px)	`blocks/`, `decorators/`, `utils/`, `styles/`
5	If models changed (`_*.json`), rebuild the aggregated component files	`npm run build:json` (the pre-commit hook does it automatically for staged `_*.json` files)
6	If `utils/site.js` LOCALES changed, regenerate `paths.json`	`npm run build:paths`
7	Lint and run unit tests	`npm run lint` and `npm test`
8	Commit and push the branch	`git push -u origin feature/tcs-<topic>`
9	Verify on the feature preview	`https://feature-tcs-<topic>--tcs-corp--sradha-tcs.aem.page/{path}` (slashes in branch names become hyphens in the host name)
10	Run PageSpeed Insights on the feature preview URL; target a score of 100	`https://developers.google.com/speed/pagespeed/insights/?url=<feature URL>`
11	Open a pull request to `main` with the preview link	See 12.2.3
12	Review, approve, merge	GitHub

> **Note:** Branch names must be valid in a host name. Keep them short and lower case: the branch, repository and owner together form the `aem.page` sub-domain.

12.2.3 Pull Request Requirements

- Title: what the change does, prefixed with the area (the history uses `Cards: …`, `List: …`, `Footer: …`, `Styles: …`).
- Description (AGENTS.md "Publishing Process"): a link to `https://{branch}--tcs-corp--sradha-tcs.aem.page/{path}` showing the change. **Without it the PR is rejected.** If no page exists yet, create test content (static HTML in `drafts/`, served with `--html-folder drafts`) and ask an author to create a CMS page to link.
- Use `.github/pull_request_template.md` (GitHub issue reference, Before / After test URLs).

> **Warning:** `.github/pull_request_template.md` still contains the unreplaced boilerplate placeholders `{repo}` and `{owner}`. Replace them manually with `tcs-corp` and `sradha-tcs` in each PR, or fix the template in a code change.

12.2.4 Automated Checks

Check	Where defined	When	What it verifies	On failure
Husky pre-commit	`.husky/pre-commit` → `.husky/pre-commit.mjs`	Every local commit	If staged files include a model partial (`_*.json`), runs `npm run build:json` and stages `component-models.json`, `component-definition.json`, `component-filters.json`	Commit continues; the aggregated files are added
Build (GitHub Actions)	`.github/workflows/main.yaml`	Every push (`on: [push]`), every branch	`npm ci` then `npm run lint` (ESLint for `.json`, `.js`, `.mjs` including the xwalk model rules, and Stylelint for `blocks/**/*.css` and `styles/*.css`)	Red check on the commit / PR; fix and push again
AEM Code Sync	GitHub app installed on the repository	Every push	Syncs the branch to the code bus; reports a check on the commit	Code not visible on `aem.page`; see 13.22
PageSpeed (aem-psi-check)	AEM GitHub app check (not a workflow file in the repository)	Pull requests	PageSpeed Insights on the URLs in the PR description	Fix performance regressions (13.15)
Renovate	`.renovaterc.json`	Scheduled	Dependency update PRs; devDependency updates are labelled `ignore-psi-check` and auto-merged when tests pass; ESLint pinned to `^8.0.0`	Review the PR
Unit tests	`package.json` `test` (`node --test 'test/**/*.test.mjs'`)	**Manual only**	`test/list/list-data.test.mjs`, `test/cards/cards-data.test.mjs`, `test/separator/separator-config.test.mjs`	Not run by CI; run `npm test` before every PR

> **Important:** The GitHub workflow runs lint only. Unit tests are not part of CI as of this handover; reviewers must confirm `npm test` passed. Adding `npm test` to `main.yaml` is a recommended improvement.

`.github/workflows/cleanup-on-create.yaml` is a boilerplate workflow that runs only on repository creation or manual dispatch; it has no role in releases.

12.2.5 Merge and AEM Code Sync

1. A reviewer checks the code, opens the preview link and confirms the checks are green.
2. The PR is merged to `main` (the history uses merge commits: "Merge pull request #NN from sradha-tcs/feature/tcs-…").
3. AEM Code Sync pushes `main` to the code bus within seconds to a few minutes.
4. `https://main--tcs-corp--sradha-tcs.aem.page/` and `.aem.live` serve the new code; the CDN is purged for changed code files automatically.
5. Universal Editor uses the new `component-definition.json`, `component-models.json` and `component-filters.json` after the author reloads the editor.

```
 developer          GitHub                    AEM Code Sync       Edge Delivery
 ---------          ------                    -------------       -------------
 commit (husky) --> push feature/tcs-x ----->  sync branch ------> feature-tcs-x--tcs-
corp--...
                    Build: npm ci + lint                          .aem.page (review URL)
                    PR (preview link)
                    aem-psi-check
                    review + merge ------>    sync main --------> main--tcs-corp--sradha-
tcs
                                                                  .aem.page / .aem.live
                                                                  Universal Editor

(reload)
```

12.3 Branching and Versioning

Topic	Current practice (from the repository history)	Recommendation
Branch model	Trunk-based: short-lived feature branches merged into `main` through PRs (#1–#68 at version 2.0)	Keep; one PR per change
Branch naming	`feature/tcs-<topic>` (for example `feature/tcs-cards-manual-list`, `feature/tcs-separator-block`)	Also use `fix/tcs-<topic>` for defects and `hotfix/tcs-<topic>` for urgent production fixes ([To be confirmed: naming convention for fixes — owner: technical lead])
Protected branch	[To be confirmed: branch protection rules on `main` (required reviews, required checks) — owner: repository administrator]	Require one review and the Build and Code Sync checks
Versions / tags	No Git tags exist; `package.json` keeps the boilerplate version `1.3.0`	Tag each production release (for example `release-2026.10.13`) so rollbacks can target a known state
Changelog	None (no `CHANGELOG.md`)	Use PR titles and GitHub releases as the changelog
Document version	This handover: version 2.0, 14 October 2026	Update when the release process changes
Content versions	AEM page versions (created on publication and on demand)	Create a named version before large content changes

12.4 Release Checklist

12.4.1 Pre-release

#	Check	Owner	Done
1	All PRs of the release are merged to `main`; Build check green on `main`	Development team	[ ]
2	`npm run lint` and `npm test` pass on `main` locally	Development team	[ ]
3	`component-models.json`, `component-definition.json`, `component-filters.json` are rebuilt and committed (no diff after `npm run build:json`)	Development team	[ ]
4	If locales changed: `paths.json` regenerated (`npm run build:paths`) and the site configuration's `public.json` paths updated to match	Development team / site administrator	[ ]
5	Feature preview URLs reviewed by the product owner at 1440, 1024 and 402 px widths	Product owner	[ ]
6	PageSpeed Insights score checked for the changed templates (mobile and desktop)	Development team	[ ]
7	Accessibility spot check (keyboard, focus, screen reader labels) on changed blocks	QA	[ ]
8	New placeholders keys added to all 13 `placeholders` sheets (English fallbacks exist in code)	Content team	[ ]
9	New tags added to the AEM tag namespace and translated in the taxonomy	Content team	[ ]
10	Content dependent on new code is prepared in AEM but not yet published	Content team	[ ]
11	Change record raised with scope, rollback plan and time window	Release manager [To be confirmed: change management process — owner: AMS lead]	[ ]
12	AEM page versions created for pages that will be changed significantly	Content team	[ ]

12.4.2 Release

#	Step	Owner	Done
1	Confirm Code Sync processed the `main` merge (check on the merge commit; new code visible on `main--tcs-corp--sradha-tcs.aem.page`)	Development team	[ ]
2	Apply configuration changes (site configuration, metadata sources, sitemap origin) if part of the release	Site administrator	[ ]
3	Reload Universal Editor and confirm new fields or components appear	Content team	[ ]
4	Publish dependent sheets first (placeholders, taxonomy, data, metadata), then fragments (nav, footer), then pages	Content team	[ ]
5	Publish the pages of the release (Manage Publication, children where needed)	Content team	[ ]
6	Tag the release commit (recommended)	Development team	[ ]

12.4.3 Post-release

#	Check	Owner	Done
1	Changed pages render on `*.aem.live` in all affected locales (no console errors such as `failed to load module for …`)	QA	[ ]

#	Check	Owner	Done
2	Header and footer correct per locale (Navigation / Footer inheritance)	QA	[ ]
3	A missing URL in each changed locale shows that locale's 404 page	QA	[ ]
4	`/query-index.json` contains the new pages with the expected columns	Site administrator	[ ]
5	`/sitemap.xml` lists the new pages with the expected host	Site administrator	[ ]
6	Sheets JSON reachable (`/{locale}/placeholders.json`, `/{locale}/taxonomy.json`, `/{locale}/data/*.json`)	Site administrator	[ ]
7	Data layer: `window.adobeDataLayer` contains the page entry and the blocks; clicks push `cmp:click`	Analytics owner	[ ]
8	PageSpeed Insights on the live URLs; RUM data checked the following day	Development team	[ ]
9	Change record closed with the verification evidence	Release manager	[ ]

12.5 Configuration Changes

Configuration	Location	Applied by	Change procedure	Verification
Locale path mapping	`paths.json` (generated by `npm run build:paths` from `utils/site.js` `LOCALES`; includes `/content/dam/tcs-corp/`)	The site configuration's `public.json` → `paths` (AEM uses it instead of the repository file)	Change `LOCALES`, run `npm run build:paths`, commit both, then update `public.json` paths through the configuration Admin API with the same content	Publish a page of the locale; the published path appears at `/{code}/...`; the Home page resolves at `/{code}/`
Bulk metadata sources	Site configuration `metadata.json`	Admin API (POST `https://admin.hlx.page/config/{org}/sites/{site}/metadata.json` with `{"source": ["/en/metadata.json", "/de-de/metadata.json", …]}`)	List all 13 locale sheets; each sheet's URL patterns must start with its locale (for example `/de-de/**`)	A page matching a pattern shows the column as `<meta name="…">` in its head
Component models, definitions, filters	`blocks/*/_*.json`, `models/_*.json` → `component-models.json`, `component-definition.json`, `component-filters.json`	`npm run build:json` (`merge-json-cli`), then Code Sync	Edit the partials only; never edit the aggregated files by hand; lint with `npm run lint`	Reload Universal Editor; the dialog shows the fields
Query index	`helix-query.yaml`	Code Sync; rows update on publish or re-index	Add the property with `select` and `value`; keep the excludes for references, error pages, data, nav, footer	`/query-index.json` shows the column after pages are re-published or re-indexed
Sitemap	`helix-sitemap.yaml` (`origin`, `source`, `destination`, `lastmod`)	Code Sync; regenerated from the index	Change `origin` to the production domain once configured (or remove it)	`/sitemap.xml` URLs use the right host
Files not served	`.hlxignore` (`.*`, `*.md`, `karma.config.js`, `LICENSE`, `package.json`,	Code Sync	Add patterns for any repository file that must not be public	Requesting the file on `aem.page` returns 404

Configuration	Location	Applied by	Change procedure	Verification
	`package-lock.json`, `test/*`, `_*`, `docs/*`)			
Content Security Policy	`head.html` and `404.html`: `script-src 'nonce-aem' 'strict-dynamic' 'unsafe-inline' http: https:; base-uri 'self'; object-src 'none';` with `move-to-http-header="true"`	Delivered as an HTTP header	Scripts must be added through code (`loadScript` in `delayed.js`) or carry `nonce="aem"`; change the policy in both files together	Browser console has no CSP violation messages
Content source	`fstab.yaml` (mount `/` to the AEM author `bin/franklin.delivery/sradha-tcs/tcs-corp/main`, type `markup`, suffix `.html`)	Code Sync / site configuration	Only when the AEM environment changes	Preview of a page succeeds
Universal Editor features	`xwalk.json` (`multi-field` enabled)	Site configuration	Rarely changed	Composite multifields (CTA List, Links) available in the editor
Sidekick	`tools/sidekick/config.json`	Code Sync	Edit labels or the edit URL pattern	Sidekick Edit opens AEM
robots.txt, CDN, access control, API keys	Site configuration (not in the repository)	Admin API	[To be confirmed: production robots.txt, CDN and access settings — owner: site administrator]	Fetch `/robots.txt` on the live host

Important: `paths.json` in the repository and the site configuration's `public.json` paths must stay identical. Changing only one of them causes pages to be published at unexpected paths or not at all (see 13.4).

12.6 Rollback

12.6.1 Code Rollback

Situation	Procedure	Time to effect
A merged PR causes a defect	In GitHub, open the merged PR → **Revert** → creates a revert PR → checks → merge. Code Sync deploys the previous code	Minutes after merge
Several PRs must be undone	`git revert -m 1 <merge-commit>` for each merge, newest first, on a branch; PR; merge	Minutes
Urgent (outage)	Revert directly with a `hotfix/tcs-…` branch and an expedited review ([To be confirmed: emergency change approval — owner: AMS lead])	Minutes
Model change reverted	Revert restores the partials and the aggregated `component-*.json`; authors reload Universal Editor. Content already saved with new fields keeps the values but they are no longer shown	Minutes

> **Warning:** Never force-push or rewrite `main`. Always revert with a new commit so the history and Code Sync stay consistent.

12.6.2 Content Rollback

1. In the AEM Sites console select the page → **Timeline** (or Versions) → choose the version before the change → **Revert to this Version** (or **Restore** → Restore Version for deleted pages).
2. Check the restored page in Universal Editor.
3. Publish the page again (Quick Publish). The live tier is updated and the CDN purged.
4. For sheets (placeholders, metadata, taxonomy, data) restore the sheet version the same way and publish the sheet.
5. For an unwanted publication with no good version, **Unpublish** the page (Manage Publication) and republish when corrected.
6. For removed assets, restore the asset version in AEM Assets and publish it.

12.6.3 Configuration Rollback

Configuration	Rollback
`public.json` paths	Re-apply the previous `paths.json` content from Git history (`git show <commit>:paths.json`) through the configuration API
Metadata sources	Re-POST the previous `source` list (keep a copy of the JSON before each change)
Repository configuration files (`helix-query.yaml`, `helix-sitemap.yaml`, `head.html`, `.hlxignore`, `fstab.yaml`)	Revert the PR; re-index or regenerate the sitemap if the index or sitemap changed
CDN / robots / access	[To be confirmed: backup of the site configuration before changes — owner: site administrator]

12.6.4 Rollback Decision Table

Symptom after release	Likely stream	First action
Blocks broken on every page	Code	Revert the last merge
One page wrong, others fine	Content	Restore the page version and republish
A whole locale missing or at wrong paths	Configuration (paths)	Re-apply the previous paths configuration
Metadata missing site-wide	Configuration (metadata sources)	Re-POST the previous metadata source list
Index or sitemap wrong	Code (YAML) or index state	Revert the YAML change; re-index

TCS Corporate Website — Project Handover

Volume 13 of 13 — Parts 13–18: troubleshooting, AMS runbook, appendix, findings, operations guide, new joiner training

Date: October 14, 2026

Adobe

Table of Contents

Part 13 — Global Troubleshooting Guide 5
13.1 Triage Approach and Diagnostic Toolkit 5
13.2 Page Not Updating After Publish 6
13.3 Block Not Rendering ("failed to load module") 6
13.4 Pages Published at the Wrong Path or a Locale Missing 7
13.5 Component Dialog Fields Missing or Outdated in Universal Editor 8
13.6 Wrong Header (Navigation) or Footer 9
13.7 404 Page in the Wrong Locale or Built-in English 404 10
13.8 Images Not Optimised or Too Large 10
13.9 Page Missing from the Query Index 11
13.10 List or Filter List Empty in Universal Editor 12
13.11 List or Filter List Empty or Incomplete on the Published Site 12
13.12 Redirects Not Working 13
13.13 Placeholders Showing English Text 14
13.14 Tags Showing IDs or Technical Labels 14
13.15 Lint or PageSpeed (aem-psi-check) Failures in Pull Requests 15
13.16 Layout Shift (CLS) or LCP Regression 16
13.17 Bulk Metadata Sheet Not Applied 16
13.18 Hide Block Confusion 17
13.19 Anchor ID Not Applied or Anchor Links Not Jumping 18
13.20 Data Layer Events Missing 18
13.21 Form Submit Does Nothing (No Data Received) 19
13.22 Code Changes Not Visible After Merge (Code Sync) 20
13.23 Content Security Policy Blocking Scripts 20
13.24 Embedded Content Not Loading (YouTube, Vimeo, X) 21
13.25 Sitemap Uses the Wrong Host 21
13.26 Template (Page Type) Not Applied 22
13.27 Page Header or Article Author Details Missing 22
13.28 Site Root Returns 404 23
13.29 Universal Editor Reloads the Page on Every Edit or Shows Stale Rendering 23

Note: This is volume 13 of 13 of the TCS Corporate Website project handover (version 2.0). Volume 1 holds the document control, the audience guide and the conventions.

Part 13 — Global Troubleshooting Guide

This guide covers problems that affect the whole site or many components. Component-specific issues are in each component chapter (section 6.X.13). Every issue lists the **Symptoms**, the **Root Cause** as implemented in this code base, **Diagnosis Steps**, **Resolution Steps**, **Validation Steps** and **Preventive Measures**.

13.1 Triage Approach and Diagnostic Toolkit

13.1.1 First Questions

Question	Why it matters
Does the problem appear in Universal Editor, on preview (`.aem.page`), on live (`.aem.live`) or on the production domain?	Separates authoring state, publication state and CDN caching
Which locale(s)? (`/en/`, `/de-de/`, ...)	Most site data (nav, footer, placeholders, taxonomy, data sheets, 404) is per locale
One page, one block type, or every page?	One page: content; one block type: code or block content; every page: code, configuration or platform
When did it start, and what was released or published just before?	Links the issue to a merge, a publication or a configuration change (Admin API log)
Which breakpoint? (mobile < 600 px, tablet 600–1199 px, desktop >= 1200 px; header switches at 900 px)	Layout issues are often breakpoint-specific

13.1.2 Diagnostic Toolkit

Tool	How to use it
Browser developer tools, Console	Look for `failed to load module for <block>`, `failed to load block <block>`, `failed to load template <name>`, `failed to play the Lottie animation`, CSP violations, 404s of JSON sheets
Browser developer tools, Network	Check the requests to `/{locale}/placeholders.json`, `/{locale}/taxonomy.json`, `/{locale}/data/*.json`, `/query-index.json?offset=0&limit=500`, `*.plain.html` (fragments, nav, footer, error pages) and block JS / CSS
`curl` the delivered markup	`curl https://main--tcs-corp--sradha-tcs.aem.page/en/page.plain.html` shows the authored rows and cells a block receives; `curl -I` shows the status and cache headers
Debug switches	`?debug=list` logs the List configuration and cards; `?debug=separator` logs the Separator configuration (`console.debug`, enable the Verbose level)
RUM switch	`?rum=on` forces Real Use Monitoring sampling for the view (the console shows `ping:<checkpoint>` debug lines)
Data layer	In the console: `window.adobeDataLayer` (array of page, component and event entries)
Admin API status	`GET https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}` (preview, live and source times)
AEM Sidekick	Status, environment switch, open in editor
Local server	`aem up` against preview content with the local code, to isolate code from content

13.2 Page Not Updating After Publish

Symptoms - The live URL still shows the old text or images after the author published. - Preview (`.aem.page`) shows the change, live (`.aem.live`) does not, or the reverse. - Some visitors see the new version, others the old one.

Root Cause - The page was published to preview only, or the publication is still being processed. - A referenced item (fragment, nav or footer page, asset, sheet) changed but was not published; the page itself is up to date but the referenced content is not. - Browser cache, or a production CDN without purge integration ([To be confirmed: production CDN]). - The Navigation / Footer / 404 Page value of a parent page changed: the inherited values are cached in the browser session (`sessionStorage` key `tcs-inherited-metadata`).

Diagnosis Steps 1. Open the page on `.aem.page` and `.aem.live` in a private window and compare. 2. Call the Admin API status for the path and compare the preview, live and source modification times. 3. Check the AEM Sites console for the publication status of the page and of its references. 4. If the difference is in the header or footer, open the nav or footer page URL directly (for example `/en/references/nav`).

Resolution Steps 1. Publish the page again from Universal Editor or the Sites console, including changed references. 2. Publish the changed fragment, nav, footer, sheet or asset separately. 3. If live is still stale after a confirmed publish, purge the cache for the path (Admin API cache operation) and, for a customer CDN, purge it there. 4. For inherited header or footer changes, ask the user to open a new browser session.

Validation Steps - The live URL in a private window shows the change. - `curl -I` on the live URL shows a fresh `last-modified` header.

Preventive Measures - Use the Publish dialog's reference list; publish sheets and fragments before the pages using them. - Configure push invalidation for the production CDN before go-live.

Escalation Process

1. L1 (author support / content operations): compare the page on .aem.page and .aem.live in a private window, check the Sites console publication status of the page and its references (fragments, nav, footer, assets, sheets) and republish them; for an inherited header / footer change ask the user to open a new browser session.
2. Escalate L1 → L2 (site administrator / AMS) when the page and its references are published but live is still stale after a few minutes (12.1.4) [To be confirmed: wait time before escalation — owner: AMS Lead], or several pages or locales are affected; attach the AEM and published paths, the locale, the publication time (UTC), a private-window screenshot of preview and live, and the `curl -I` headers of the live URL.
3. L2: run `GET https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}` and the `/log` for the path, re-preview / re-publish or purge (`POST /cache/...`), and purge the production CDN once it exists; escalate L2 → L3 (development) only if the stale part is produced by code (for example a session cache or a fragment loaded by a block), with the status output attached.
4. L2 → Adobe Support (through the AEM Platform Administrator) when the Admin API preview / live operations fail or don't take effect for correct content; attach program p220207, environment e2271469, org / site sradha-tcs/tcs-corp, the paths, UTC timestamps and the Admin API responses.
5. Target response (14.5): usually P3 (one page) — L1 → L2 next business day, L2 → L3 as scheduled; P2 for a key page or a whole locale — within [To be confirmed]; P1 when wrong content is live site-wide — immediately at every level, with the Product Owner informed.

13.3 Block Not Rendering ("failed to load module")

Symptoms - A block shows raw rows and cells (unstyled text, images and links in a grid of `div`s) or nothing at all. - The console shows `failed to load module for <block>` or `failed to load block <block>`.

Root Cause - `scripts/aem.js` `loadBlock()` imports `/blocks/{name}/{name}.js` and its CSS. The error is logged when the file is missing (404), has a syntax error, or the block's `decorate()` throws (for example authored content in an unexpected structure). - The block name in content does not match a block folder (for example a block created on a feature branch not yet merged to `main`). - A dependency import failed (a renamed decorator or util).

Diagnosis Steps 1. Open the console and read the error after `failed to load module for …`; it contains the stack. 2. In the Network tab check the block JS and CSS requests (status 200, correct path). 3. `curl` the page's `.plain.html` and inspect the block's rows; compare them with the block model (`blocks/{name}/_{name}.json`). 4. Run the same page on `aem up` with the local `main` to see if the problem is code or content.

Resolution Steps 1. Code error: fix in a branch, PR, merge (or revert the faulty merge, see 12.6.1). 2. Content error: correct the block content in Universal Editor (fill required fields such as the Video's Video field or the List Item's Page or link) and republish. 3. Missing block on `main`: merge the branch that adds it, then reload Universal Editor.

Validation Steps - The console has no load errors and the block element has `data-block-status="loaded"`.

Preventive Measures - `npm run lint` and `npm test` before every PR; check the feature preview with real content. - Blocks are written to tolerate missing fields; keep it so when changing them.

Escalation Process

1. L1 (author support): check the block's content in Universal Editor against its chapter in Part 6 (required fields such as the Video's Video field or a List Item's Page or link), correct it and republish; check whether the block exists on main (a block from an unmerged branch).
2. Escalate L1 → L2 (site administrator / AMS) when correctly authored content still shows raw rows or nothing, or the block fails on several pages; attach the page URL, the block name, a screenshot, the console message `failed to load module for <block>` with its stack, and the `.plain.html` excerpt of the block.
3. Escalate L2 → L3 (development) when the console stack points into block, decorator or util code, the block JS / CSS returns 404 on the code bus, or the failure started with a merge; attach the reproduction on .aem.page, browser, device and breakpoint, the related merge or release, and whether `aem up` with local main reproduces it.
4. L3: fix in a branch and PR, or revert the faulty merge (12.6.1) when the block is broken on many pages; L3 → Adobe Support only if loadBlock fails for platform reasons (code bus not serving synced files).
5. Target response (14.5): P2 for a block on a home page or key page (within [To be confirmed]); P1 if blocks are broken on every page (immediately, revert first); otherwise P3 (L1 → L2 next business day, L2 → L3 as scheduled).

13.4 Pages Published at the Wrong Path or a Locale Missing

Symptoms - A published page is reachable at `/content/tcs-corp/...` or at an unexpected path, or not at all. - A new locale's pages return 404 after publishing. - `/de-de/` (a locale Home page) returns 404 while child pages work.

Root Cause - The site configuration's `public.json` `paths` differ from `paths.json`, or `paths.json` was not regenerated after `utils/site.js` `LOCALES` changed. - The page is under an excluded path (`block-library`, `site-global-templates`). - The locale Home page mapping (`/content/tcs-corp/de/de-de:/de-de/`) is missing; the Home page is published as `/de-de/index` and served at `/de-de/`.

Diagnosis Steps 1. Compare `paths.json` (repository) with the configured paths (configuration Admin API). 2. Run `npm run build:paths` and check whether `paths.json` changes (`git diff`). 3. Check the page's AEM path against `includes` and `excludes`.

Resolution Steps 1. Regenerate `paths.json`, commit it, and apply the same content to `public.json` paths. 2. Republish the affected pages after the mapping is fixed.

Validation Steps - The page loads at `/{code}/...`; the locale Home page loads at `/{code}/`; `/query-index.json` lists the published path.

Preventive Measures - Treat `LOCALES`, `paths.json` and `public.json` as one change (12.5); never edit `paths.json` by hand.

Escalation Process

1. L1 (author support): confirm the page is not under `block-library/` or `site-global-templates/` (excluded by design) and that it was published to live; collect the AEM path and the URL the author expected.
2. Escalate L1 → L2 (site administrator / AMS) immediately when a published page appears at `/content/tcs-corp/...` or an unexpected path, a locale Home page returns 404, or a new locale returns 404 after publishing; attach the AEM path, the expected and actual published URLs, the locale and the publication time (UTC).
3. L2: compare the site configuration `public.json` paths with the repository `paths.json`, re-apply the generated mappings (12.5) or the previous configuration (12.6.3) and republish the affected pages; escalate L2 → L3 (development) when `npm run build:paths` changes `paths.json` (generated file out of date) or `LOCALES` in utils/site.js must change; attach both path lists and the `git diff`.
4. L2 → Adobe Support when the configuration matches `paths.json` but pages are still published at wrong paths; attach program p220207, environment e2271469, org / site sradha-tcs/tcs-corp, the configuration JSON, paths and UTC timestamps.
5. Target response (14.5): P1 when a whole locale is missing or published at wrong paths (immediately at every level, Product Owner informed); P2 for a locale Home page (within [To be confirmed]); P3 for a single page.

13.5 Component Dialog Fields Missing or Outdated in Universal Editor

Symptoms - A new field, tab or option does not appear in the properties panel. - A new block is not offered in the "Add" menu of a section. - The dialog shows fields that were removed.

Root Cause - The partial model (`blocks/{name}/_{name}.json` or `models/_*.json`) was changed but `component-models.json`, `component-definition.json` or `component-filters.json` was not rebuilt (`npm run build:json`), for example when committing with `--no-verify` or without the Husky hook installed. - The change is on a feature branch: Universal Editor on AEM author uses the code of `main`. - The block is not in the section filter (`models/_section.json` filters, aggregated in `component-filters.json`) or in the container's filter (for example `cards` allows `card`). - The editor was not reloaded after Code Sync.

Diagnosis Steps 1. Search `component-models.json` on `main` for the field name. 2. Run `npm run build:json` on `main` locally; a diff means the aggregated files were not rebuilt. 3. Check `component-filters.json` for the block id in `section` (or the container filter).

Resolution Steps 1. Run `npm run build:json`, commit the three aggregated files, PR, merge. 2. Add the block id to the right filter, rebuild, merge. 3. Reload Universal Editor (full browser reload).

Validation Steps - The field appears in the properties panel; the block appears in the Add menu.

Preventive Measures - Always run `npm install` once per clone so the pre-commit hook is active; check the PR diff includes the aggregated files when partials change.

Escalation Process

1. L1 (author support): ask the author to fully reload the Universal Editor and check that the expected field or block is documented for main (Part 6, 15.8); confirm the block is allowed in this container (section or item filter).
2. Escalate L1 → L2 (site administrator / AMS) when the field or block is still missing after a reload; attach the page, the component, a screenshot of the properties panel or the Add menu, and the release or PR in which the change was announced.

3. Escalate L2 → L3 (development): check `component-models.json`, `component-definition.json` and `component-filters.json` on main for the field or block id and whether the Code Sync check of the merge is green; L3 runs `npm run build:json` on main, adds the block to the filter if needed, and merges; attach the search result in the aggregated files and the merge commit.
4. L3 → Adobe Support only when the aggregated files on main are correct and served but the Universal Editor ignores them; attach program p220207, environment e2271469, the code bus URL of the files and UTC timestamps.
5. Target response (14.5): usually P3 (L1 → L2 next business day, L2 → L3 as scheduled); P2 (within [To be confirmed]) when it blocks a planned release or go-live content.

13.6 Wrong Header (Navigation) or Footer

Symptoms - A page shows another locale's navigation or footer, the default navigation instead of a special one (for example a careers navigation), or an empty header.

Root Cause - `blocks/header/header.js` and `blocks/footer/footer.js` resolve the page with `getInheritedMetadata('nav' | 'footer')`: the page's own Navigation / Footer page property (or the metadata sheet's `nav` / `footer` column), else the nearest parent page's value up to the locale Home page, else the locale's `references/nav` / `references/footer`. - A parent page sets a Navigation value that children inherit unintentionally. - The configured value points to another locale (an absolute path such as `/en/references/nav` on a German page). - The nav or footer page of the locale is not published: the header is left empty ("no nav page published (e.g. a new locale)"). - Values are cached per browser session (13.2).

Diagnosis Steps 1. View the page source and look for `<meta name="nav">` / `<meta name="footer">`. 2. Walk the parent pages (the page's path segments up to `/{locale}/`) and check their page properties (or open each parent and look for the meta tags). 3. Open `/{locale}/references/nav.plain.html` and `/{locale}/references/footer.plain.html`.

Resolution Steps 1. Correct or clear the Navigation / Footer property on the page or the parent that sets it; use values relative to the locale (`references/nav-careers`) or the same locale's paths. 2. Publish the locale's `references/nav` and `references/footer` pages. 3. Republish the page (and the parent whose property changed).

Validation Steps - In a new private window the page shows the expected header and footer.

Preventive Measures - Set special Navigation / Footer values on the highest page of the section that needs them, not on the Home page; document special navigation pages in the locale's `references/` folder.

Escalation Process

1. L1 (author support): view the page source for `<meta name="nav">` / `<meta name="footer">`, walk the parent pages up to the locale Home page, correct or clear the Navigation / Footer property on the page or parent that sets it, publish `references/nav` and `references/footer` of the locale and republish; check in a new private window (session cache).
2. Escalate L1 → L2 (site administrator / AMS) when the values are correct but the wrong or an empty header / footer is shown, or a whole locale is affected; attach the page URL, the values found on the page and each parent, the `/{locale}/references/nav.plain.html` and `footer.plain.html` status codes and a screenshot.
3. Escalate L2 → L3 (development) when the nav / footer pages load (HTTP 200) and the inherited values are right but `blocks/header` or `blocks/footer` renders them wrongly (console errors, wrong resolution of a relative path); attach the console output, the resolved path and the browser / breakpoint (the header switches at 900 px).
4. Product Owner informed when the header or footer is missing in a locale (proposed P2 in 14.1.3).

5. Target response (14.5): P2 for a missing header or footer in a locale (within [To be confirmed]); P3 for a wrong special navigation in one section (L1 → L2 next business day).

13.7 404 Page in the Wrong Locale or Built-in English 404

Symptoms - A missing German URL shows the English 404 page, or the built-in "404 Page Not Found" with "Go home" instead of the authored error page. - The "Go back" button is English on a locale whose placeholders sheet has no `goBack` key.

Root Cause - `scripts/scripts.js` `loadErrorPage()` tries, in order: the 404 Page (`error-page`) inherited from the missing page's nearest existing parent, `/{locale}/error-pages/404`, `/en/error-pages/404`; the first that loads is shown (content from another locale is marked with its `lang`); if none loads, the built-in content of `404.html` stays. - The locale's `error-pages/404` page is not published. - The built-in texts are hard-coded in `404.html` ("Page Not Found", "Go home") and are not translated through placeholders; "Go back" is the placeholder `goBack`.

Diagnosis Steps 1. Open `/{locale}/error-pages/404.plain.html`; a 404 response means it isn't published. 2. Check the `error-page` value of the nearest parent page. 3. Inspect `<main>`: class `error-authored` means an authored page loaded; a `lang` attribute different from the page's means a fallback locale was used.

Resolution Steps 1. Create and publish `/content/tcs-corp/{country}/{language}/error-pages/404` for every locale. 2. Fix or clear wrong 404 Page values on parent pages. 3. To translate the "Go back" label, add the key `goBack` to the locale's placeholders sheet and publish it.

Validation Steps - A non-existent URL in each locale (for example `/de-de/does-not-exist`) shows that locale's authored 404 page with HTTP status 404.

Preventive Measures - Include the 404 page in the locale launch checklist (14.8.1); run the monthly 404 check (14.7).

Escalation Process

1. L1 (author support): open `/{locale}/error-pages/404.plain.html` (a 404 means it isn't published), check the 404 Page value of the nearest parent page, publish the locale's error page and add the `goBack` key to the locale's placeholders sheet if the Go back label is English.
2. Escalate L1 → L2 (site administrator / AMS) when the locale's 404 page is published but a missing URL still shows the English or the built-in 404; attach the missing URL, the HTTP status (`curl -I`), whether `main` has the class `error-authored` and its `lang` attribute, and a screenshot.
3. Escalate L2 → L3 (development) when the authored page loads directly but `loadErrorPage` doesn't show it, or the missing URL doesn't return HTTP 404 with `404.html`; attach the console output and the list of candidate paths tried (Network tab).
4. Target response (14.5): P3 (L1 → L2 next business day, L2 → L3 as scheduled); the built-in English texts of `404.html` are a known limitation (F-20, 14.9 #12), tracked in the backlog (P4).

13.8 Images Not Optimised or Too Large

Symptoms - Slow pages, large image downloads, PageSpeed warnings "Properly size images" or "Serve images in next-gen formats".

Root Cause - Images authored from AEM Assets are delivered as `/media_…` resources and optimised (responsive `<picture>` with WebP and width variants) by `createOptimizedPicture` or the platform. - Images from other origins or full URLs typed into text fields (for example image paths in metadata columns or a section background typed as an external URL) are used as they are (`decorators/responsive-image-decorator.js` `buildImage` only optimises same-origin `/media_` URLs). - Images committed to the repository (`icons/`, `fonts/`) are served as committed. - Large Lottie (`.json`) animations are not optimised.

Diagnosis Steps 1. In the Network tab filter by Img; check the URL (`/media_…?width=…&format=webply` vs an external URL) and transfer size. 2. Check where the image comes from (block field, metadata column, external URL).

Resolution Steps 1. Use AEM Assets references in image fields instead of typed URLs. 2. Compress committed SVG / image files before committing. 3. Reduce the size of Lottie files with the design team.

Validation Steps - PageSpeed Insights no longer reports the image; images load as `<picture>` with `width` variants.

Preventive Measures - Author guidance (Part 6 "Image Dimensions"); check new icons in PR review.

Escalation Process

1. L1 (author support): check in the Network tab whether the image is a `/media_…` URL or an external / typed URL, and replace typed URLs in image fields and metadata columns with AEM Assets references; ask the design team to reduce large Lottie files.
2. Escalate L1 → L2 (site administrator / AMS) when AEM Assets images are delivered without width variants or PageSpeed still reports the image after the content fix; attach the page URL, the image URL and transfer size, and the PageSpeed Insights report link.
3. Escalate L2 → L3 (development) when a block or decorator doesn't optimise same-origin media (for example `buildImage` or `createOptimizedPicture` not used, or F-14 on the Page Header) or committed icons / fonts are too large; attach the element markup and the block name.
4. Target response (14.5): P3 (L1 → L2 next business day, L2 → L3 as scheduled); P2 (within [To be confirmed]) when the LCP image of a home or key landing page is affected.

13.9 Page Missing from the Query Index

Symptoms - A published page does not appear in a List (child pages or tagged pages), the Filter List or the Conversation Canvas menu; it is missing in `/query-index.json` and `/sitemap.xml`.

Root Cause - The page is not published to live (only preview, or unpublished). - The page is under an excluded path in `helix-query.yaml`: `/*/references/**`, `/*/error-pages/**`, `/*/data/**`, `/*/nav`, `/*/footer`, block libraries, `site-global-templates`, `/**/fragments/**`, `/**/modals/**`. - The index was not updated after a `helix-query.yaml` change. - The row exists but the consumer filters it: List hides `hide-in-nav = yes`; the Filter List filters by Root path, Page types and Content types; rows are filtered to the current locale root.

Diagnosis Steps 1. Search the path in `https://main--tcs-corp--sradha-tcs.aem.live/query-index.json?limit=500` (use `offset` for further pages). 2. Check the page's publication status and path against the excludes. 3. Check the row's `pageType`, `contentType`, `tags`, `hideInNav` values.

Resolution Steps 1. Publish the page; or re-index it (Admin API index operation). 2. Move the page out of an excluded folder if it should be listed. 3. Correct its metadata (page properties or the metadata sheet) and republish.

Validation Steps - The row appears in `/query-index.json` with the expected columns; the List shows it.

Preventive Measures - Keep content pages outside `references/`, `fragments/` and `modals/` folders.

Escalation Process

1. L1 (author support): check the page is published to live, is not under an excluded folder (`references/`, `error-pages/`, `data/`, `fragments/`, `modals/`) and has the expected Page Type, content type, tags and `hide-in-nav`; republish it.
2. Escalate L1 → L2 (site administrator / AMS) when a published page in an indexable folder is not in `https://main--tcs-corp--sradha-tcs.aem.live/query-index.json` (all `offset` pages checked) after a few minutes (12.1.4) [To be confirmed: wait time before escalation — owner: AMS Lead]; attach the path, the publication time (UTC) and the search result in the index.

3. L2: re-index the path (`POST https://admin.hlx.page/index/sradha-tcs/tcs-corp/main/{path}`) and check the row's columns; escalate L2 → L3 (development) when the row lacks columns defined in helix-query.yaml after re-indexing (F-10) or an exclude in helix-query.yaml is wrong; attach the row JSON and the page head metas.
4. L2 → Adobe Support when the index operation fails or the row never appears for a correctly published page; attach program p220207, org / site sradha-tcs/tcs-corp, path, Admin API responses and UTC timestamps.
5. Target response (14.5): P3 for single pages (L1 → L2 next business day); P2 (within [To be confirmed]) when many pages or a whole locale are missing from the index.

13.10 List or Filter List Empty in Universal Editor

Symptoms - In the editor the List shows "The pages show on the published page (from the query index)." or "Set up the list in its properties: …"; the Filter List shows "The results show on the published page, from the pages' metadata."

Root Cause - Expected behaviour: the query index is not available on the AEM author host, so lists of pages (child pages, tagged pages) and the Filter List cannot load pages in the editor (`blocks/list/README.md` Known limitations). The setup message lists missing settings (no parent / root and "Use the current page when empty" off; tags source without tags; fixed list without items).

Diagnosis Steps 1. Read the message: setup problem or "show on the published page". 2. Open the page on preview or live.

Resolution Steps 1. Complete the settings named in the message. 2. Review the result on preview after publishing the page (and the listed pages).

Validation Steps - The published page shows the cards.

Preventive Measures - Train authors (14.8.5) that page lists render on preview / live, not in the editor; use the Cards block (typed content) when the editor preview matters.

Escalation Process

1. L1 (author support): read the editor message — 'The pages show on the published page (from the query index).' is expected behaviour; 'Set up the list in its properties: …' names the settings to complete; ask the author to check the result on preview after publishing.
2. Escalate L1 → L2 (site administrator / AMS) only when the same List or Filter List is also empty on preview or live (then follow 13.11); attach the page path, the editor message and the preview URL.
3. Escalate L2 → L3 (development) when the editor shows a setup message although the listed settings are complete, or a fixed list (Cards, List Items) is empty in the editor; attach a screenshot of the block properties and the `?debug=list` console output from preview.
4. Target response (14.5): P4 for questions about the expected behaviour (backlog / training, 14.8.5); P3 (L1 → L2 next business day) when a setup message is wrong.

13.11 List or Filter List Empty or Incomplete on the Published Site

Symptoms - The published List shows "There are no items to show." (or is hidden), or the Filter List shows "No resources found."; some expected pages are missing.

Root Cause - The listed pages are not published or not indexed (13.9). - Child pages: the Parent page / Child depth do not include them; Tagged pages: the Search root or the tag match (any / all) excludes them; tags on the pages differ from the List's tags. - Filter List: Page types / Content types do not match the pages' `page-type` / `content-`

`type` values; the Root path excludes them; the Datasource is Manual with no pages. - `hide-in-nav = yes` on the pages (List). - Maximum items limits the result.

Diagnosis Steps 1. Add `?debug=list` to the URL; the console shows the configuration, warnings and cards. 2. Compare the index rows of the expected pages with the List / Filter List settings.

Resolution Steps 1. Publish missing pages; correct the metadata or the block settings; republish the page with the block.

Validation Steps - The expected cards appear; the result count (Filter List with Show result count) matches.

Preventive Measures - Maintain Page Type and Content type consistently (15.6); use the controlled values of the Filter List options.

Escalation Process

1. L1 (author support): add `?debug=list` to the published URL and read the configuration and warnings; check that the expected pages are published, indexed and match the settings (Parent page, Child depth, Search root, tags, Root path, Page types, Content types, Maximum items, `hide-in-nav`); fix the settings or metadata and republish.
2. Escalate L1 → L2 (site administrator / AMS) when the expected pages are published but missing from `/query-index.json` or the index lacks the columns the block needs (F-10); attach the page URL, the block settings (screenshot), the `?debug=list` output and the index rows of two expected pages.
3. Escalate L2 → L3 (development) when the index rows match the settings but the block still omits them (List data rules in `blocks/list/list-data.js`, Filter List candidate rules); attach the index rows, the settings and the expected result.
4. Target response (14.5): P3 for one list (L1 → L2 next business day, L2 → L3 as scheduled, proposed in 14.1.3); P2 (within [To be confirmed]) for a home page or main listing page.

13.12 Redirects Not Working

Symptoms - An old URL listed in `/{locale}/redirects.json` returns 404 instead of redirecting. - The site root `/` returns 404 instead of redirecting to `/en/`.

Root Cause - Edge Delivery applies only a root `/redirects.json`. The per-locale redirect sheets (`/{locale}/redirects.json`) are published but not applied by the platform (by the project's choice). In code they are used only by the List, which links cards to the redirect target (`utils/redirects.js`, up to 5 hops, loops stopped). - No root redirect sheet is mapped in `paths.json`, and `/content/tcs-corp` itself is not published, so `/` has no content.

Diagnosis Steps 1. `curl -I` the old URL on live: a 404 confirms the redirect isn't applied. 2. Confirm the row exists in the locale sheet JSON.

Resolution Steps 1. Implement redirects at the CDN (rules reading the sheets) or introduce a root redirects sheet ([To be confirmed: redirect mechanism for production — owner: site administrator]). 2. Add the `/` → `/en/` redirect in that mechanism.

Validation Steps - `curl -I` returns 301 / 302 with the expected `location`.

Preventive Measures - Decide the redirect mechanism before go-live (14.9 Known limitations).

Escalation Process

1. L1 (author support): confirm the row exists in `/{locale}/redirects.json` and explain that per-locale redirect sheets are not applied by the platform (by design, 14.9 #1); the List already links to the redirect target.
2. Escalate L1 → L2 (site administrator / AMS) for every old URL that must redirect, and for the site root; attach the old and the new URL and the `curl -I` output of the old URL.

3. L2: implement or update the redirect in the chosen mechanism (CDN rules reading the sheets, or a root redirects sheet [To be confirmed: redirect mechanism for production — owner: Site Administrator]); escalate L2 → L3 (development) when a code change is needed (for example a root redirects mapping in `paths.json` / utils/site.js or `utils/redirects.js` behaviour); attach the decision record.
4. Product Owner informed: the redirect mechanism is a go-live decision (14.10.4 #2).
5. Target response (14.5): P2 before go-live and for high-traffic URLs (within [To be confirmed]); P3 for individual URLs (L1 → L2 next business day).

13.13 Placeholders Showing English Text

Symptoms - Buttons, labels and messages (for example "Load more", "Next slide", "Read more") are English on a non-English locale.

Root Cause - `utils/placeholders.js` loads `/{locale}/placeholders.json` once per page and falls back to the English text in code for every missing key. Causes: - The locale's placeholders sheet is not published, or the key is missing or empty. - The columns are not named `Key` and `Text` (lower-case `key` / `text` also work). - The key differs from the code key (comparison ignores case and separators: "Load More", "load-more" and "loadMore" all match `loadMore`). - In Universal Editor, the sheet is requested at its published path (`/de-de/placeholders.json`) on the author host, where it may not be available; check preview before treating it as a defect. - Some texts are not placeholders: the built-in `404.html` texts.

Diagnosis Steps 1. Open `/{locale}/placeholders.json` on live; check status and the `Key` / `Text` values. 2. Find the key in code (`t('loadMore', 'Load more')`); the full list of about 90 keys is in 14.8.3.

Resolution Steps 1. Add or correct the row in the locale's `placeholders` sheet; publish the sheet.

Validation Steps - Reload the page; the translated label appears (new page view; no session cache).

Preventive Measures - When a release adds keys, add them to all 13 sheets (12.4.1 #8).

Escalation Process

1. L1 (author support): open `/{locale}/placeholders.json` on live, check the status, the `Key` / `Text` columns and the key (keys match without case or separators; the list is in 14.8.3 / 4.5), add or correct the row and publish the sheet; check on preview, not in the editor.
2. Escalate L1 → L2 (site administrator / AMS) when the sheet returns 404 although it is published, or a whole locale shows English labels; attach the sheet URL and status, the missing keys and a screenshot.
3. L2: check the `paths.json` / `public.json` mapping of the sheet (…`/placeholders:/{locale}/placeholders`); escalate L2 → L3 (development) when the key is in the sheet but the code uses another key, or a text is hard-coded (for example the built-in `404.html` texts); attach the code location if known (`t('key', 'fallback')`).
4. Target response (14.5): P3 (proposed example in 14.1.3: placeholders English in one locale) — L1 → L2 next business day, L2 → L3 as scheduled.

13.14 Tags Showing IDs or Technical Labels

Symptoms - Tags show as "cloud" or "Topics / Cloud" derived from the ID instead of the translated title, or as `tcs-corp:topic/cloud`.

Root Cause - `utils/taxonomy.js` maps tag IDs to titles from `/{locale}/taxonomy.json`. When the taxonomy is not published, the tag is missing, or the language sheet is missing, the label is derived from the tag ID (`utils/tags.js`). - With translated titles the taxonomy is multi-sheet; the sheet named after the locale's ISO 639-1

language (for example `de`, `fr`, `ja`) is used, else the default sheet. - The `paths.json` mapping …`/taxonomy:/{code}/taxonomy.json` is missing for the locale.

Diagnosis Steps 1. Open `/{locale}/taxonomy.json`; check `:type`, `:names` and that the tag ID appears in the `tag` column with a `title`.

Resolution Steps 1. Publish the locale's taxonomy page after adding or translating tags. 2. Add the missing mapping by regenerating `paths.json` (13.4).

Validation Steps - The tag label matches the taxonomy title on reload.

Preventive Measures - Follow the tag rotation procedure (14.8.4).

Escalation Process

1. L1 (author support): open `/{locale}/taxonomy.json`, check `:type`, `:names` and that the tag ID (namespace `tcs-corp:`) has a `title` on the locale's language sheet; add or translate the tag and publish the taxonomy page (14.8.4).
2. Escalate L1 → L2 (site administrator / AMS) when the taxonomy page is published but `/{locale}/taxonomy.json` returns 404 or a locale has no taxonomy at all (F-09); attach the URL, the HTTP status and the tag IDs concerned.
3. L2: check and regenerate the taxonomy mapping (…`/taxonomy:/{locale}/taxonomy.json`, 13.4); escalate L2 → L3 (development) when the JSON is correct but labels are still derived from IDs (for example a language sheet not selected); attach the JSON excerpt and the page.
4. Target response (14.5): P3 (proposed example in 14.1.3: tags showing ID labels) — L1 → L2 next business day, L2 → L3 as scheduled.

13.15 Lint or PageSpeed (aem-psi-check) Failures in Pull Requests

Symptoms - The Build check fails on a PR; the PageSpeed check fails or reports a low score.

Root Cause - Lint: ESLint (Airbnb base, `.js` extensions in imports, Unix line endings) or the xwalk model rules (`xwalk/max-cells` with the per-model limits in `.eslintrc.js`, `invalid-field-name`, `no-duplicate-fields`, `no-orphan-collapsible-fields`, `no-custom-resource-types`) or Stylelint (`stylelint-config-standard` for `blocks/**/*.css` and `styles/*.css`). - PageSpeed: the PR description lacks a valid preview URL, or the page regressed (render-blocking resources, large LCP image, layout shift, heavy third-party script).

Diagnosis Steps 1. Open the failing check's log; run `npm run lint` locally. 2. Run PageSpeed Insights on the feature preview URL and read the diagnostics.

Resolution Steps 1. `npm run lint:fix` for auto-fixable issues; fix the rest manually; for `max-cells` use field collapsing / element grouping (15.4) instead of raising the limit. 2. Fix the performance regression (13.16) or correct the URL in the PR description.

Validation Steps - Both checks are green on the latest commit.

Preventive Measures - Lint locally before pushing; include a representative page URL in every PR.

Escalation Process

1. L1: not applicable (development process); the developer fixes the PR first (`npm run lint`, `npm run lint:fix`, PageSpeed Insights on the feature preview URL, a valid preview link in the PR description).
2. Escalate developer → L3 technical lead when a lint rule must be changed (for example `xwalk/max-cells` limits in `.eslintrc.js`) or a performance regression can't be resolved; attach the failing check log, the PR link and the PageSpeed report.

3. Escalate L3 → L2 (site administrator / AMS) when aem-psi-check or the Build workflow fails for reasons outside the code (feature preview not reachable, Code Sync missing); L2 → Adobe Support when the aem-psi-check GitHub app itself fails; attach the PR, the check run URL and UTC timestamps.
4. Target response (14.5): P4 (backlog) for PR failures; P2 (within [To be confirmed]) when an urgent hotfix PR is blocked.

13.16 Layout Shift (CLS) or LCP Regression

Symptoms - Content jumps while loading; PageSpeed or RUM shows worse LCP or CLS.

Root Cause - Eager phase: `loadEager()` decorates the page, loads the template, and loads only the first section, waiting for its first image. Heavy first sections (carousels, page lists from the query index, large images) delay LCP. - Lazy images in the first section (List / Cards "Image loading" = lazy) can delay LCP; eager images below the fold waste bandwidth. - Fonts: `fonts.css` loads eagerly only on desktop (>= 900 px) or when the session flag is set; otherwise in the lazy phase (fallback font `inter-fallback` limits shift). - Header and footer load in the lazy phase; the header height is reserved (`--nav-height: 4rem`). - Blocks that build their content from fetched data (List, Filter List, Page Header with Authors sheet) change height after loading. - Third-party scripts added outside `delayed.js`.

Diagnosis Steps 1. PageSpeed Insights: LCP element and layout shift culprits. 2. Performance panel recording; check which block decorates last in the first section.

Resolution Steps 1. Keep the LCP image authored in the first block (Hero or Page Header) and set "Image loading" to eager only for lists in the first section. 2. Move non-essential scripts to `scripts/delayed.js`. 3. Reserve space in block CSS (aspect ratios, min-heights) where content arrives later.

Validation Steps - PageSpeed Insights mobile and desktop back to target (100 per AGENTS.md); RUM CLS < 0.1 and LCP < 2.5 s over the following days.

Preventive Measures - PSI on every PR; avoid page lists as the first block of a page.

Escalation Process

1. L1 (author support): check whether a recent content change put a heavy block (carousel, page list from the query index, large image) in the first section or set list images to lazy in the first section; restore the layout per 13.16 and republish.
2. Escalate L1 → L2 (site administrator / AMS) when PageSpeed Insights on the page or RUM (LCP > 2.5 s, CLS > 0.1, INP > 200 ms at p75) shows a regression without a content change; attach the PageSpeed report links (mobile and desktop), the RUM view and the date the regression started.
3. Escalate L2 → L3 (development) when the regression follows a code release or a template / block is the LCP or layout-shift culprit; attach the Performance panel recording, the release or merge, and the affected templates and locales.
4. Target response (14.5): P3 (L1 → L2 next business day, L2 → L3 as scheduled); P2 (within [To be confirmed]) when home pages or all pages of a template regress.

13.17 Bulk Metadata Sheet Not Applied

Symptoms - Columns of `/{locale}/metadata.json` (for example `page-type`, `og-image`, `content-type`) do not appear as `<meta>` tags; templates and Page Header do not pick them up.

Root Cause - The platform applies bulk metadata only from sheets listed in the site configuration's `metadata.source`. Until all 13 locale sheets are listed, no bulk metadata applies. - The row's `url` pattern does not start with the locale (`/de-de/**`) or does not match. - The sheet is not published. - A page property set on the page overrides the column for that page (for example Page Type).

Diagnosis Steps 1. Read the configuration (`/config/sradha-tcs/sites/tcs-corp/metadata.json` via the Admin API). 2. Open `/{locale}/metadata.json` and check the `url` column patterns. 3. View the page source for `<meta name="{column}">`.

Resolution Steps 1. POST the full source list (12.5); fix patterns; publish the sheet; republish affected pages if their index rows must change.

Validation Steps - The page head shows the column; `/query-index.json` shows the indexed value after republish.

Preventive Measures - Keep the metadata source list in the configuration change log; add new locales to it at launch.

Escalation Process

1. L1 (author support): check that the locale's metadata sheet is published, the `url` patterns start with the locale (`/de-de/**`) and match the page, and that no page property overrides the column; correct and publish the sheet.
2. Escalate L1 → L2 (site administrator / AMS) when the sheet is correct and published but `<meta name="{column}">` is missing in the page head; attach the page URL, the sheet URL, the matching row and the page source excerpt.
3. L2: read `/config/sradha-tcs/sites/tcs-corp/metadata.json` through the Admin API and POST the full list of the 13 sources (12.5) if needed; republish pages whose index rows must change; escalate L2 → L3 (development) only when the meta is present but code ignores it (template, Page Header, index); attach the head and the expected effect.
4. L2 → Adobe Support when the configured sources are correct and bulk metadata still isn't applied; attach org / site sradha-tcs/tcs-corp, the configuration JSON, the paths and UTC timestamps.
5. Target response (14.5): P2 (within [To be confirmed]) when bulk metadata is missing site-wide after configuration (go-live item 14.10.4 #3); P3 for a single row (L1 → L2 next business day).

13.18 Hide Block Confusion

Symptoms - An author cannot see a block in Preview mode or on the site; a block looks faded with a dashed outline in the editor; a hidden block still appears in search engine results.

Root Cause - The Additional tab **Hide block** (`classes_hideblock`) adds the class `hideblock`; `styles/styles.css` hides the block (and its wrapper) when the page is not in Universal Editor edit mode (`html:not(.adobe-ue-edit)`), and in edit mode shows it at 45 % opacity with a dashed outline so it stays selectable. - The block is hidden with CSS only: its content is still in the published HTML.

Diagnosis Steps 1. Select the block in edit mode; check Hide block in the Additional tab.

Resolution Steps 1. Clear Hide block and republish, or delete the block if it should not be on the page.

Validation Steps - The block shows in Preview mode and on the published page.

Preventive Measures - Use Hide block only temporarily; never for confidential content (it is still in the source).

Escalation Process

1. L1 (author support): select the block in edit mode, check Additional tab → Hide block, clear it and republish (or delete the block); explain that hidden blocks are faded with a dashed outline in the editor and still in the published HTML.
2. Escalate L1 → L2 (site administrator / AMS) when Hide block is cleared and published but the block is still hidden, or hidden content is confidential (then also inform the Product Owner and unpublish); attach the page URL and a screenshot of the Additional tab.

3. Escalate L2 → L3 (development) when the `hideblock` class is not on the block although set, or is present without being authored; attach the block markup from the published page.
4. Target response (14.5): P4 for questions (training); P3 for a block that stays hidden (L1 → L2 next business day); confidential content exposed is handled as P1 (immediately; security contact, 14.5).

13.19 Anchor ID Not Applied or Anchor Links Not Jumping

Symptoms - A link `#our-services` does not scroll to the block; the dialog rejects the value; the id ends with `-2`.

Root Cause - The Anchor ID field (`classes_anchor`) is validated by the model: `^anchor-[a-z0-9][a-z0-9-]*$` ("Start with anchor-, then lower-case letters, digits and hyphens."). The class becomes the block's id **including** the `anchor-` prefix (for example `anchor-our-services`), so links must use `#anchor-our-services`. - `decorators/block-options-decorator.js` keeps ids unique on the page: a duplicate gets `-2`, `-3`, …; a block that already has an id (for example its own Component ID) keeps it. - Sections use a different field: the Section's **Anchor name** (any text, normalised to lower-case hyphenated, `#` optional), which is what the Anchor List links to.

Diagnosis Steps 1. Inspect the block element's `id` attribute. 2. Check for duplicates on the page.

Resolution Steps 1. Use a valid unique Anchor ID; link to `#anchor-…`; for Anchor List chapters set the section's Anchor name.

Validation Steps - Opening `page#anchor-our-services` scrolls to the block (on load, `loadLazy()` scrolls to the hash element).

Preventive Measures - Keep a list of anchors on long pages; avoid duplicates.

Escalation Process

1. L1 (author support): inspect the block's `id`, use a valid unique Anchor ID (`^anchor-[a-z0-9][a-z0-9-]*$`), link to `#anchor-…` (the prefix is part of the id), and for Anchor List chapters set the section's Anchor name.
2. Escalate L1 → L2 (site administrator / AMS) when a valid unique Anchor ID doesn't become the block's id or the page doesn't scroll to an existing id on load; attach the page URL with the hash, the element markup and a screenshot of the Additional tab.
3. Escalate L2 → L3 (development) for defects in `decorators/block-options-decorator.js` or the hash scroll in `loadLazy()` (for example on section-based components, F-22); attach the reproduction and the browser.
4. Target response (14.5): P4 for questions; P3 for defects (L1 → L2 next business day, L2 → L3 as scheduled).

13.20 Data Layer Events Missing

Symptoms - Analytics shows no data; `window.adobeDataLayer` lacks components or `cmp:*` events.

Root Cause - No tag manager is loaded (`scripts/delayed.js` is empty): the data layer is filled but nothing sends it to Adobe Analytics / Customer Journey Analytics. This is expected as of this handover. - Blocks are tracked when decorated (main content in the lazy phase; header, footer and late blocks after 3 s in `loadDelayed()`). - A block with `data-analytics="off"` (List, Cards or Separator with Analytics off; Separator defaults to off) has no state and no events; blocks inside `[data-analytics]` are skipped by the generic tracking (List, Cards, Separator push their own state when on). - Clicks on `<summary>` are not pushed as clicks (accordion items push `cmp:show` / `cmp:hide`). - Muted, looping background videos without controls push no `cmp:media`. - Form submit events contain field names only (no values) by design.

Diagnosis Steps 1. In the console run `window.adobeDataLayer.filter((e) => e.event)` after interacting. 2. Check the block element for `data-cmp-id`, `data-analytics`.

Resolution Steps 1. Turn Analytics on in the block's Advanced tab where available. 2. Implement Adobe Tags with the Adobe Experience Platform Web SDK (embed code in `delayed.js`) ([To be confirmed: Adobe Tags property and reporting suite — owner: analytics owner]).

Validation Steps - The expected entries and events appear with `eventInfo.path` `component.{id}`.

Preventive Measures - Include the data layer check in post-release validation (12.4.3 #7).

Escalation Process

1. L1 (author support): not normally involved; for one block, check that the block's Analytics option (List, Cards, Separator) is on, and explain that no analytics data is collected until Adobe Tags is implemented (14.9 #2).
2. Escalate L1 / the analytics owner → L2 (site administrator / AMS) when `window.adobeDataLayer` lacks the page entry, component entries after 3 seconds, or `cmp:click` events on a sample page; attach `copy(JSON.stringify(adobeDataLayer, null, 2))` output, the page URL and the actions performed (11.8.2 test cases).
3. Escalate L2 → L3 (development) when the data layer entries or events are missing or wrong for tracked blocks (for example F-02 to F-05) or Tags integration is required; attach the data layer export, the expected entry from Part 11 and the block markup (`data-cmp-*`, `data-analytics`).
4. L3 → Adobe Support only after Tags / Web SDK exist and data doesn't reach the datastream; attach the AEP Debugger output and the datastream id [To be confirmed: datastream — owner: Analytics Lead].
5. Target response (14.5): P3 (L1 → L2 next business day, L2 → L3 as scheduled); P2 (within [To be confirmed]) after analytics go-live.

13.21 Form Submit Does Nothing (No Data Received)

Symptoms - Visitors submit a Form Variations form and see "Thank you, your details were sent.", but no one receives the data.

Root Cause - There is no submit endpoint. On a valid submit `blocks/form-variations/form-variations.js` dispatches a bubbling `form-variations:submit` DOM event with `{ detail: { data } }`, resets the form and shows the success message (`formSuccess` placeholder). The data is not sent anywhere.

Diagnosis Steps 1. Network tab on submit: no request is made.

Resolution Steps 1. Implement a back end connection (Salesforce, Marketo, an API) listening to the event ([To be confirmed: form back end — owner: product owner]). 2. Until then, do not publish forms that collect leads, or change the success message in the placeholders sheet to avoid promising delivery.

Validation Steps - After the integration, a test submission reaches the target system.

Preventive Measures - Track as a go-live blocker for any form page (14.9).

Escalation Process

1. L1 (author support): confirm in the Network tab that submitting makes no request; explain that there is no form back end (F-01); advise the author not to publish lead forms, or to change the `formSuccess` placeholder so it promises nothing.
2. Escalate L1 → L2 (site administrator / AMS) immediately when a form that collects leads is published; attach the page URLs of the published forms and the date they were published.
3. Escalate L2 → L3 (development) and the Product Owner for the integration (listener on `form-variations:submit`, server-side endpoint) [To be confirmed: form back end — owner: Product Owner]; attach the list of forms, fields and target system.
4. Product Owner decides on unpublishing published lead forms (content takedown, 14.5).
5. Target response (14.5): P2 (proposed example in 14.1.3: forms published with no back end) — within [To be confirmed]; Product Owner informed the same business day.

13.22 Code Changes Not Visible After Merge (Code Sync)

Symptoms - A merged fix doesn't show on `main--tcs-corp--sradha-tcs.aem.page`; the feature preview shows old code.

Root Cause - AEM Code Sync didn't process the push (app not installed or permissions changed, temporary failure). - Browser cache of JS / CSS. - The change is in a file ignored by `.hlxignore` (for example `_*` partials, `docs/*`, `test/*`).

Diagnosis Steps 1. Check the Code Sync check on the merge commit in GitHub. 2. Request the changed file directly on `main--tcs-corp--sradha-tcs.aem.page/blocks/...` and compare. 3. Admin API status / log for the code operation.

Resolution Steps 1. Re-trigger the sync (Admin API code operation, or push an empty commit). 2. Ask the user to hard-reload.

Validation Steps - The file on `aem.page` matches the commit.

Preventive Measures - Monitor the Code Sync check on every merge (14.7).

Escalation Process

1. L1: not applicable (code deployment); the developer or reviewer who merged checks the AEM Code Sync check on the merge commit and requests the changed file on `main--tcs-corp--sradha-tcs.aem.page/…` (hard reload).
2. Escalate developer → L2 (site administrator / AMS) when the Code Sync check is missing or failed on a main commit; attach the commit SHA, the check status, the changed file URL and what it serves.
3. L2: re-trigger the sync (`POST https://admin.hlx.page/code/sradha-tcs/tcs-corp/main/{path}` or an empty commit) and check the Admin API log; escalate to the repository administrator if the GitHub app installation or permissions changed [To be confirmed: GitHub organisation owners — owner: TCS IT].
4. L2 → Adobe Support when Code Sync doesn't process pushes for a correctly installed app; attach org / site sradha-tcs/tcs-corp, the repository, commit SHAs and UTC timestamps.
5. Target response (14.5): P2 (within [To be confirmed]) when a fix for a live incident is blocked; P1 handling applies if the blocked fix is for a P1 incident; otherwise P3.

13.23 Content Security Policy Blocking Scripts

Symptoms - Console: "Refused to load the script … because it violates the Content Security Policy" or "Refused to execute inline script"; a third-party tag does not run.

Root Cause - `head.html` (and `404.html`) set `script-src 'nonce-aem' 'strict-dynamic' 'unsafe-inline' http: https:`. With `strict-dynamic`, only scripts carrying `nonce="aem"` and scripts created by them run; host allow-lists and `'unsafe-inline'` are ignored by modern browsers. Inline scripts or `<script src>` tags added without the nonce are blocked.

Diagnosis Steps 1. Read the CSP violation in the console (blocked URI, directive).

Resolution Steps 1. Load third-party scripts from code (`loadScript()` from `scripts/aem.js` in `scripts/delayed.js`), which `strict-dynamic` allows; or add `nonce="aem"` to a script tag in `head.html`. 2. Change the policy only together in `head.html` and `404.html`, with security review.

Validation Steps - No CSP violations in the console; the script runs.

Preventive Measures - Security review for every new third-party script.

Escalation Process

1. L1 (author support): not normally involved; report any 'Refused to load the script …' or 'Refused to execute inline script' console message seen on a page.
2. Escalate L1 → L2 (site administrator / AMS) with the console message (blocked URI, directive), the page URL and the time; L2 checks whether the script was added outside project code (CDN injection, tag manager, authored HTML) and whether all pages are affected.
3. Escalate L2 → L3 (development) to load the script from code (`loadScript()` in `scripts/delayed.js`) or to change the policy in `head.html` and `404.html` together, with a security review; attach the CSP violation details and the script's owner.
4. Security contact informed when an unexpected script was injected [To be confirmed: security incident contact — owner: TCS IT].
5. Target response (14.5): P1 when the CSP blocks all scripts (proposed example in 14.1.3; immediately at every level); P3 for one third-party script (L1 → L2 next business day).

13.24 Embedded Content Not Loading (YouTube, Vimeo, X)

Symptoms - An Embed block shows only the placeholder image or an empty frame.

Root Cause - The Embed block recognises YouTube, Vimeo and X / Twitter URLs (X loads `https://platform.twitter.com/widgets.js`); other URLs are framed as they are and may refuse to be framed (`X-Frame-Options`). - With a placeholder image, the embed loads after the Play click; otherwise when it comes near the viewport. - Privacy / consent tools or ad blockers block the provider.

Diagnosis Steps 1. Check the URI field value and the console / network errors for the provider.

Resolution Steps 1. Use the provider's public video URL; for unsupported providers, check they allow framing.

Validation Steps - The player loads on preview.

Preventive Measures - Prefer the Video block for YouTube / Vimeo / AEM Assets videos (privacy-enhanced mode by default).

Escalation Process

1. L1 (author support): check the Embed URI (YouTube, Vimeo `vimeo.com/{id}` or X / Twitter URL), use the provider's public video URL, prefer the Video block for YouTube / Vimeo, and test without ad blockers or consent tools blocking the provider.
2. Escalate L1 → L2 (site administrator / AMS) when a supported provider URL still doesn't load on preview; attach the page URL, the URI value, the console and Network errors for the provider and the browser.
3. Escalate L2 → L3 (development) for provider parsing or player defects (for example F-26: `muted=1`, privacy-enhanced domain, Vimeo URL formats) or a new provider; attach the URL and the iframe markup.
4. Target response (14.5): P3 (L1 → L2 next business day, L2 → L3 as scheduled); provider outages are outside the project's control (record and monitor).

13.25 Sitemap Uses the Wrong Host

Symptoms - `/sitemap.xml` lists `https://main--tcs-corp--sradha-tcs.aem.live/...` URLs on the production domain.

Root Cause - `helix-sitemap.yaml` sets `origin: https://main--tcs-corp--sradha-tcs.aem.live` until a production domain (`cdn.prod.host`) is configured. - There is one sitemap for all locales without hreflang alternates.

Diagnosis Steps 1. Open `/sitemap.xml`; check the `<loc>` host.

Resolution Steps 1. When the production domain is configured, change `origin` to it (or remove it so the configured production host is used), merge, and regenerate the sitemap.

Validation Steps - `<loc>` entries use the production host; Search Console accepts the sitemap.

Preventive Measures - Part of the go-live checklist ([To be confirmed: production domain and CDN]).

Escalation Process

1. L1: not applicable (configuration); report sitemap host problems found by SEO or content teams to L2.
2. L2 (site administrator / AMS): open `/sitemap.xml` and check the `<loc>` host; until the production domain is configured the `.aem.live` host is expected (14.9 #13).
3. Escalate L2 → L3 (development) when the production domain is configured: change `origin` in `helix-sitemap.yaml` (or remove it), merge and regenerate the sitemap (`POST https://admin.hlx.page/sitemap/sradha-tcs/tcs-corp/main/sitemap.xml`); attach the production host and the configuration change record.
4. Target response (14.5): go-live checklist item (P2 at go-live, within [To be confirmed]); P4 before go-live.

13.26 Template (Page Type) Not Applied

Symptoms - An article page has no Page Header or "About the author"; a press release has no Media contacts; the console shows `failed to load template <name>`.

Root Cause - `scripts/scripts.js` loads `templates/{name}/{name}.js` and `.css` only for Page Types in `TEMPLATES` (`home`, `article`, `blog`, `press-release`). The Page Type comes from the page property, else the metadata sheet's `page-type` (else the `template` metadata). - The page property is Default (empty) and the metadata sheet isn't applied (13.17). - "About the author" needs `author-id` matching the Authors sheet; Media contacts need the Media Contacts sheet (filtered by the page's `region`, else all).

Diagnosis Steps 1. Check `<meta name="page-type">` and the body class. 2. Check the Authors / Media Contacts sheet JSON.

Resolution Steps 1. Set the Page Type page property or the metadata sheet; publish the data sheets.

Validation Steps - The body has the page-type class and the template content appears.

Preventive Measures - Create pages by copying the Site Global Templates (they carry the right Page Type).

Escalation Process

1. L1 (author support): check `<meta name="page-type">` and the body class, set the Page Type page property (or the metadata sheet's `page-type`), publish the Authors / Media Contacts sheets and republish; recommend creating pages from the Site Global Templates.
2. Escalate L1 → L2 (site administrator / AMS) when the Page Type comes only from the metadata sheet and isn't applied (13.17), or many pages are affected; attach the page URL, the head excerpt and the sheet row.
3. Escalate L2 → L3 (development) when the console shows `failed to load template <name>` or the template code fails for correct metadata; attach the console stack, the page type and the release.
4. Target response (14.5): P3 (L1 → L2 next business day, L2 → L3 as scheduled); P2 (within [To be confirmed]) when all pages of a template are affected after a release.

13.27 Page Header or Article Author Details Missing

Symptoms - The Page Header shows no author name, image or LinkedIn link; no date or reading time.

Root Cause - The Page Header takes everything from metadata: `author-id` resolved through `/{locale}/data/authors.json` (name, designation, region, image, LinkedIn), else the `author` metadata; `publish-date`; `reading-time`; `content-type`; `featured-image` (Landing layout); `listen-link`. Missing columns or a non-matching author ID (case-insensitive) leave the part out.

Diagnosis Steps 1. Check the page head metas; open the Authors sheet JSON and find the `author-id` row.

Resolution Steps 1. Add the author to the locale's Authors sheet and publish it; set the page metadata.

Validation Steps - The lockup shows on reload.

Preventive Measures - Maintain the Authors sheet in every locale where articles are published.

Escalation Process

1. L1 (author support): check the page head (`author-id`, `author`, `publish-date`, `reading-time`, `content-type`, `featured-image`, `listen-link`), find the `author-id` row in `/{locale}/data/authors.json`, add the author to the locale's Authors sheet and publish it.
2. Escalate L1 → L2 (site administrator / AMS) when the metadata is set but missing from the head (bulk metadata not applied, 13.17) or the Authors sheet returns 404; attach the page URL, the head excerpt and the sheet URL and status.
3. Escalate L2 → L3 (development) when the head and the Authors row are correct but the Page Header leaves the part out; attach both and a screenshot.
4. Target response (14.5): P3 (L1 → L2 next business day, L2 → L3 as scheduled).

13.28 Site Root Returns 404

Symptoms - `https://main--tcs-corp--sradha-tcs.aem.live/` returns the 404 page.

Root Cause - Pages outside the locales (including `/content/tcs-corp` itself) are not published; there is no redirect from `/` to `/en/` (13.12).

Diagnosis Steps 1. `curl -I /` returns 404.

Resolution Steps 1. Configure the `/` → `/en/` redirect in the chosen redirect mechanism (CDN rule).

Validation Steps - `/` redirects to `/en/`.

Preventive Measures - Go-live checklist item.

Escalation Process

1. L1 (author support): confirm `curl -I https://main--tcs-corp--sradha-tcs.aem.live/` returns 404 and explain that the site root has no content by design (pages outside the locales are not published, F-36).
2. Escalate L1 → L2 (site administrator / AMS) and inform the Product Owner: the `/` → `/en/` redirect must be configured in the redirect mechanism (CDN rule) before go-live; attach the `curl -I` output.
3. L2 → L3 (development) only if the chosen mechanism needs code (for example a root redirects sheet mapping); L2 → CDN owner for the CDN rule [To be confirmed: production domain and CDN — owner: Site Administrator].
4. Target response (14.5): P1 for go-live (Product Owner informed immediately); before go-live tracked as an open item (14.10.4 #2).

13.29 Universal Editor Reloads the Page on Every Edit or Shows Stale Rendering

Symptoms - After each change in the properties panel the whole page reloads; or a block shows the old rendering until reload.

Root Cause - `scripts/editor-support.js` re-renders only the changed block, section or default content from the editor's update (sanitised with DOMPurify). When it cannot match the update to an element, it reloads the page (`window.location.reload()`). Container sections (Gen Carousel, Tabs Container) and blocks that depend on others re-render as a whole. - Blocks that read the query index or sheets cannot show published data in the editor (13.10).

Diagnosis Steps 1. Check the console for errors during the update.

Resolution Steps 1. Reload the editor; if persistent with one block, report it to development with the block and page path.

Validation Steps - Edits apply without reload for simple blocks.

Preventive Measures - Test new blocks for in-place editing during development.

Escalation Process

1. L1 (author support): ask the author to reload the editor and check whether the problem is limited to one block or container section (Gen Carousel, Tabs Container re-render as a whole; blocks that read the index or sheets can't show published data in the editor).
2. Escalate L1 → L2 (site administrator / AMS) when the editor reloads on every edit for simple blocks or shows stale rendering after a reload; attach the page path, the block, the console output during the update and a screen recording if possible.
3. Escalate L2 → L3 (development) with the block and page path when `scripts/editor-support.js` can't apply the update in place; L3 → Adobe Support when the Universal Editor itself fails (no `aue:content-*` events, save errors); attach program p220207, environment e2271469, the page path and UTC timestamps.
4. Target response (14.5): P3 (L1 → L2 next business day, L2 → L3 as scheduled); P2 (within [To be confirmed]) when editing is impossible for a locale.

13.30 Video or Animation Not Playing Automatically

Symptoms - An autoplay or background video waits for a click; a Lottie animation shows a still frame.

Root Cause - By design, visitors with the operating system setting "reduce motion" get click-to-play videos (`blocks/video/video.js`) and paused animations (`decorators/animation-decorator.js`, WCAG 2.2.2 pause button). - Motion Types (Hero, Table List) don't run in Universal Editor or with reduced motion. - The video asset is not published (assets under `/content/dam/tcs-corp/` are published with the pages that use them; check the Publish dialog references). - The Lottie player (`/scripts/lib/lottie/lottie_light.min.js`) failed: console `failed to play the Lottie animation`.

Diagnosis Steps 1. Check the OS reduced-motion setting; the console; the asset URL status.

Resolution Steps 1. Publish the asset; check the Lottie `.json` URL; accept reduced-motion behaviour.

Validation Steps - With reduced motion off, the video autoplays (muted) and the animation plays.

Preventive Measures - Never rely on motion to convey information.

Escalation Process

1. L1 (author support): check the operating system 'reduce motion' setting (click-to-play and paused animations are by design), that the video asset is published, and the Lottie `.json` URL; publish the asset.
2. Escalate L1 → L2 (site administrator / AMS) when, with reduced motion off, a published video or animation doesn't play; attach the page URL, the asset URL and status, the console message (`failed to play the Lottie animation`) and the browser.
3. Escalate L2 → L3 (development) for player defects in `blocks/video/video.js`, `decorators/animation-decorator.js` or the vendored Lottie player; attach the reproduction.
4. Target response (14.5): P3 (L1 → L2 next business day, L2 → L3 as scheduled).

13.31 Fragment, Modal or Tab Content Not Showing

Symptoms - A Fragment block, a Modal, or a Tab with a Fragment is empty.

Root Cause - `blocks/fragment/fragment.js loadFragment()` fetches `{path}.plain.html`; it shows nothing when the path doesn't start with `/` or the fragment page isn't published (non-200 response). - Links to a path containing `/modals/` open as a modal (`autolinkModals` in `scripts.js`); the modal page must be published.

Diagnosis Steps 1. Network tab: the `.plain.html` request status.

Resolution Steps 1. Publish the fragment / modal page; select it with the content picker (not a typed URL).

Validation Steps - The content appears on reload.

Preventive Measures - Keep fragments in the locale's `references/` (or `fragments/` / `modals/`) folders and publish them before the pages that use them.

Escalation Process

1. L1 (author support): check the `.plain.html` request of the fragment / modal page in the Network tab, publish the fragment or modal page and select it with the content picker (not a typed URL); keep fragments in `references/`, `fragments/` or `modals/`.
2. Escalate L1 → L2 (site administrator / AMS) when the fragment page is published (HTTP 200 for `{path}.plain.html`) but the Fragment, Modal or Tab stays empty; attach the page URL, the fragment path and the request status.
3. Escalate L2 → L3 (development) when `loadFragment` rejects a valid path (for example a full URL, F-15) or a fragment includes itself; attach the authored Reference value and the console output.
4. Target response (14.5): P3 (L1 → L2 next business day, L2 → L3 as scheduled); P2 (within [To be confirmed]) when the fragment is shared by many pages (for example a footer canvas).

13.32 Issue Index

Area	Issues
Publishing and caching	13.2, 13.4, 13.22, 13.28
Rendering and code	13.3, 13.16, 13.23, 13.29, 13.30
Authoring and models	13.5, 13.10, 13.18, 13.19
Locale and site data	13.6, 13.7, 13.13, 13.14, 13.17, 13.26, 13.27, 13.31
Index, lists, search	13.9, 13.11, 13.25
Integrations	13.12, 13.20, 13.21, 13.24
Development process	13.15, 13.22
Images and media	13.8, 13.24, 13.30

Part 14 — Operational Runbook & AMS Handover

This runbook is for the Application Management Services (AMS) team taking over the operation of the TCS Corporate website. It defines ownership, monitoring, logs, errors, escalation, recovery, regular health checks and the standard operational procedures, lists the known limitations of the implementation, and closes with the handover checklist.

14.1 Support Model and Ownership

14.1.1 Support Levels

Level	Team	Scope	Typical actions	Hand-off criterion
L1	Author support / content operations [To be confirmed: team name — owner: AMS lead]	Authoring questions, publishing, sheets, page properties, tags, images	Guide the author with Part 6 and 15.5; check publication status; republish; fix content	Issue reproduces on correctly authored content, or concerns several pages / locales
L2	AMS / site administration [To be confirmed: team name — owner: AMS lead]	Site configuration, path mapping, metadata sources, cache, index, sitemap, Code Sync status, AEM author access	Admin API status / cache / index operations; configuration checks; log review; triage of console errors	Defect in code (JS / CSS / models) or a needed code change
L3	Development team [To be confirmed: vendor / team — owner: technical lead]	Blocks, decorators, utils, templates, models, `helix-query.yaml`, `helix-sitemap.yaml`, `head.html`	Fix, PR, merge, revert; release	Platform defect (Edge Delivery, Universal Editor, AEM as a Cloud Service)
Adobe	Adobe Support (Admin Console support case)	Edge Delivery Services platform, AEM as a Cloud Service, Universal Editor, Cloud Manager	Platform investigation	—

14.1.2 RACI

R = Responsible, A = Accountable, C = Consulted, I = Informed.

Activity	Content team	L1	L2 / AMS	L3 Development	Product owner	Adobe
Authoring and publishing pages	R	C	I	—	A	—
Maintaining sheets (placeholders, metadata, taxonomy, data, redirects)	R	C	C	I	A	—
Author onboarding and access requests	I	R	C	—	A	—
Site configuration (paths, metadata sources, CDN, robots)	I	I	R	C	A	C
Cache purge, re-index, sitemap regeneration	I	C	R	C	I	—
Code changes and releases	I	I	C	R	A	—
Rollback of code	I	I	C	R	A	—
Rollback of content	R	C	C	—	A	—
Monitoring (RUM, PageSpeed, uptime)	I	I	R	C	A	—
Platform incidents	I	I	R	C	I	R (resolution)

Activity	Content team	L1	L2 / AMS	L3 Development	Product owner	Adobe
Accessibility and SEO compliance	C	I	C	R	A	—
Analytics (data layer, future Adobe Tags)	I	I	C	R	A	—

14.1.3 Contacts and Service Levels

Item	Value
Product owner	[To be confirmed: name and contact — owner: TCS digital marketing]
Technical lead	[To be confirmed: name and contact — owner: development vendor]
AMS lead	[To be confirmed: name and contact — owner: AMS provider]
Site administrator	[To be confirmed: name and contact — owner: AMS provider]
Analytics owner	[To be confirmed: name and contact — owner: TCS marketing analytics]
Adobe account / support contact	[To be confirmed: Adobe customer success manager and support entitlement — owner: TCS IT]
Support hours	[To be confirmed: support hours and time zones — owner: AMS lead]
Severity definitions and response / resolution SLAs	[To be confirmed: SLA per severity (P1–P4) — owner: AMS contract]
Ticketing tool and queue	[To be confirmed: tool and queue names — owner: AMS lead]

Proposed severity scale (to be confirmed in the AMS contract):

Severity	Definition	Examples
P1 Critical	The live site or a locale is unavailable or seriously wrong for all visitors	All pages return errors; wrong content published site-wide; CSP blocking all scripts
P2 High	A key function or a key page is broken	Header or footer missing in a locale; a home page block not rendering; forms published with no back end
P3 Medium	A non-critical function is degraded, with a workaround	One List empty; tags showing ID labels; placeholders English in one locale
P4 Low	Cosmetic issues, questions, improvements	Spacing, wording, documentation requests

14.2 Monitoring Requirements

Area	What to monitor	Tool / source (implemented?)	Frequency	Threshold / alert
Real User Monitoring (RUM)	Core Web Vitals (LCP, CLS, INP), page views, 404s, JavaScript errors	Implemented: `scripts/aem.js` `sampleRUM()` runs on every page (sampling weight 100 = about 1 in 100 page views; `?rum=on` forces sampling; collector `https://ot.aem.live`; the RUM enhancer is loaded for selected views); `404.html` sends a `404` checkpoint with the referrer; errors and CSP violations are sent as `error` checkpoints. View the data in the Edge Delivery operational telemetry / RUM explorer ([To be confirmed: RUM do-	Daily review, weekly trend	LCP <= 2.5 s, CLS <= 0.1, INP <= 200 ms at the 75th percentile; spikes in 404 or error checkpoints

Area	What to monitor	Tool / source (implemented?)	Frequency	Threshold / alert
		main key and dashboard access — owner: site administrator])		
PageSpeed / Lighthouse	Lab performance, accessibility, best practices, SEO	PageSpeed Insights (manual); aem-psi-check on PRs	Each PR; monthly on key templates	Target 100 (AGENTS.md); investigate any score below 90
Uptime	Availability of the live host and key URLs per locale	Not implemented in the repository: [To be confirmed: uptime tool (for example synthetic checks) — owner: AMS lead]	Every 1–5 minutes	Non-200 on `/en/` or any locale Home; response time above the agreed limit
Publishing pipeline	Preview / live status of recently published paths	Admin API status and log	On incident; weekly sample	Pages published in AEM but missing on live
Code Sync	Sync of each push	GitHub check of the AEM Code Sync app on commits	Each merge	Missing or failed check on a `main` commit
Query index and sitemap	Row count, new pages present, sitemap host	`/query-index.json`, `/sitemap.xml`	Daily / weekly (14.7)	Unexpected drop in rows; pages missing
Site data	Sheets JSON reachable per locale	`/{locale}/placeholders.json`, `/{locale}/taxonomy.json`, `/{locale}/data/*.json`	Weekly	Non-200 responses
AEM author health	Availability and performance of the author environment, replication / publication queues	Cloud Manager (environment status, logs), AEM author (Sites console, workflow and publication status), Adobe status page	Daily	Author unavailable; publications stuck
Analytics	Data layer populated	Browser console checks (`window.adobeDataLayer`); reporting once Adobe Tags is implemented	Weekly	Missing page entry or `cmp:click` events
Security	CSP violations, dependency updates	Browser console checks (W-09; RUM reports a CSP violation only when it blocks the RUM enhancer, 2.10); Renovate PRs	Weekly	New CSP violations; unreviewed dependency PRs

14.3 Logs

14.3.1 Browser Console Messages Emitted by the Code

Message	Level	Source	Meaning	Action
`failed to load module for <block>`	error	`scripts/aem.js loadBlock()`	The block JS failed to load or its `decorate()` threw	13.3
`failed to load block <block>`	error	`scripts/aem.js loadBlock()`	Loading the block (CSS or JS) failed	13.3
`failed to load template <name>`	error	`scripts/scripts.js loadTemplate()`	The Page Type template JS / CSS failed	13.26
`Auto Blocking failed`	error	`scripts/scripts.js buildAutoBlocks()`	Auto blocking (currently empty) threw	L3

Message	Level	Source	Meaning	Action
`failed to play the Lottie animation`	error	`decorators/animation-decorator.js`	The Lottie player or animation JSON failed	13.30
`Editable parent not found or richtext property …`	warn	`scripts/editor-support-rte.js` (Universal Editor only)	Rich text instrumentation mismatch in the editor	L3 if editing is impaired
`Found orphan elements of a richtext, that were not consecutive siblings of …`	warn	`scripts/editor-support-rte.js` (Universal Editor only)	Rich text markup split unexpectedly	L3 if editing is impaired
`[list] config …`, `[list] cards …`, `[list] component id "…" is used twice`	debug	`blocks/list/list.js`, only with `?debug=list`	List configuration, warnings, resulting cards	Diagnosis aid (13.11)
`[separator] …`, `[separator] component id "…" is used twice`	debug	`blocks/separator/separator.js`, only with `?debug=separator`	Separator configuration and warnings	Diagnosis aid
`ping:<checkpoint>`	debug	`scripts/aem.js` RUM, sampled views	RUM data sent	None
CSP violation messages	error (browser)	Browser	A script was blocked by the policy	13.23
404 responses for `*.json` or `*.plain.html`	network	Browser network	A sheet, fragment, nav, footer or error page isn't published	13.6, 13.7, 13.13, 13.31

> **Tip:** Enable the "Verbose" level in the console to see `console.debug` output.

14.3.2 Other Logs

Log	Where	Access	Use
Edge Delivery Admin API log	`GET https://admin.hlx.page/log/sradha-tcs/tcs-corp/main`	Site administrators (authenticated)	Who previewed, published, unpublished or synced what, and when
Admin API status	`GET https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`	Authenticated	State of one path
AEM author logs	Cloud Manager → environment `e2271469` (program `p220207`) → Download logs (error, request, access logs) or log forwarding	Cloud Manager roles [To be confirmed: log forwarding to a SIEM — owner: TCS IT]	Publication errors, Universal Editor back-end errors
AEM workflow / publication status	AEM author: Tools → Workflow → Instances; Sites console publication status	AEM administrators	Stuck or failed publications
Code Sync and CI	GitHub → commit checks (AEM Code Sync, Build) and Actions logs (`.github/workflows/main.yaml`)	Repository members	Failed lint, failed sync
PageSpeed (aem-psi-check)	PR checks	Repository members	Performance regressions
RUM	Operational telemetry / RUM explorer	Domain key holders	Real-user performance and errors

14.4 Common Errors

#	Error / symptom	Likely cause	First check	Fix	Level
1	Old content on live	Not published, reference not published, cache	Admin API status; private window	Republish; purge cache	L1 / L2
2	`failed to load module for …`	Code error or unexpected content	Console stack; `.plain.html`	Fix content or code; revert	L2 / L3
3	New field missing in the dialog	`component-*.json` not rebuilt or not on `main`	`component-models.json` on `main`	`npm run build:json`, merge, reload editor	L3
4	Wrong header / footer	Inherited Navigation / Footer value	`<meta name="nav">`, parents	Fix property; publish nav / footer	L1
5	English 404 on another locale	Locale 404 page not published	`/{locale}/error-pages/404.plain.html`	Publish the 404 page	L1
6	Page missing from List / Filter List	Not published, excluded or filtered	`/query-index.json`	Publish; fix metadata or settings	L1 / L2
7	List empty in the editor	Index not available on author (expected)	Message text	Check on preview	L1
8	English UI labels	Placeholders key missing / sheet not published	`/{locale}/placeholders.json`	Add key; publish sheet	L1
9	Tag shows ID-like label	Taxonomy missing / not published	`/{locale}/taxonomy.json`	Add tag title; publish	L1
10	Bulk metadata ignored	`metadata.source` not configured / pattern wrong	Config; sheet patterns	Configure; fix patterns	L2
11	Old URL 404	Locale redirect sheets not applied	`curl -I`	CDN redirect mechanism	L2 / L3
12	Form “sent” but no data	No form back end	Network tab	Integration project	L3
13	No analytics data	No Adobe Tags loaded	`window.adobeDataLayer`; `delayed.js`	Implement Adobe Tags	L3
14	Script blocked	CSP `strict-dynamic`	Console CSP message	Load via `delayed.js`	L3
15	Build check red	Lint error	Actions log	`npm run lint:fix`; fix	L3
16	Hidden block confusion	Hide block on	Additional tab	Clear Hide block	L1
17	`#anchor` doesn't jump	Anchor ID without `anchor-` prefix in the link, or duplicate	Element id	Use `#anchor-…`	L1
18	Locale pages 404 after launch	Paths config not updated	`public.json` vs `paths.json`	Apply generated paths	L2

14.5 Escalation Matrix

From	To	When	Information to include
Author	L1	Any authoring or publishing problem the author guide does not solve	Page path (AEM and published), locale, steps, screenshot, time

From	To	When	Information to include
L1	L2	Correct content still renders wrongly; several pages or locales affected; configuration suspected	Above + publication status, Admin API status output, console messages, `.plain.html` excerpt
L2	L3	Code defect (console errors from block code, model problem, CSS defect), a code change is needed, or a configuration file in the repository must change	Above + reproduction on `aem.page`, browser / device, breakpoint, related merge or release
L2 / L3	Adobe Support	Platform behaviour (preview / publish not working for correct content, Admin API errors, Universal Editor failures, AEM author outage, Code Sync outage)	Program `p220207`, environment `e2271469`, org / site `sradha-tcs/tcs-corp`, paths, timestamps (UTC), request ids if shown
Any	Product owner	P1 / P2 incidents; decisions on rollback; content takedown	Impact, workaround, plan
Any	Security contact [To be confirmed: security incident contact — owner: TCS IT]	Suspected security incident (defacement, injected script, data exposure)	Evidence, time, affected URLs

Severity	L1 → L2	L2 → L3	L3 → Adobe	Management notification
P1	Immediately	Immediately	Immediately if platform-related	Immediately
P2	Within [To be confirmed]	Within [To be confirmed]	When platform-related	Same business day
P3	Next business day	As scheduled	As needed	Weekly report
P4	Backlog	Backlog	—	Monthly report

14.6 Recovery Procedures

Scenario	Procedure	Reference
Faulty code release	Revert the merge PR in GitHub; confirm Code Sync; verify key pages per locale	12.6.1
Wrong content published	Restore the page version in AEM; republish; purge cache if needed	12.6.2
Content must be taken down urgently	Unpublish in AEM (Manage Publication); if AEM is unavailable, Admin API unpublish (`DELETE /live/…`) for the path	12.1.9
Locale paths broken	Re-apply the previous `paths.json` to the configuration; republish affected pages	12.6.3
Bulk metadata broken	Re-POST the previous metadata source list; fix and republish the sheet	13.17
Query index wrong or incomplete	Fix `helix-query.yaml` if changed; re-index affected paths (Admin API index)	13.9
Sitemap wrong	Fix `helix-sitemap.yaml`; regenerate the sitemap	13.25
Header / footer missing site-wide	Check and republish `/{locale}/references/nav` and `/footer`; check the Navigation / Footer values on the Home pages	13.6
Placeholders / taxonomy sheet corrupted	Restore the sheet version in AEM and publish it	12.6.2
AEM author unavailable	The live site keeps serving the last published content; raise an Adobe case; freeze publishing	14.5

Scenario	Procedure	Reference
Code Sync unavailable	No code deployment possible; live site unaffected; retry later or raise an Adobe case	13.22
GitHub repository access lost	Restore access through the organisation owner; the code bus keeps serving the last sync	[To be confirmed: GitHub organisation owners — owner: TCS IT]

14.7 Health Checks

Base URL for the checks: `https://main--tcs-corp--sradha-tcs.aem.live` (replace with the production domain once configured).

14.7.1 Daily

#	Check	How	Expected
1	Home page of every locale	Open `/en/`, `/de-de/`, `/fr-fr/`, `/fr-ca/`, `/es-es/`, `/pt-pt/`, `/nl-nl/`, `/sv-se/`, `/da-dk/`, `/no-no/`, `/zh-cn/`, `/ja-jp/`, `/ko-kr/`	HTTP 200, header and footer present, no console errors
2	Uptime alerts	Uptime tool	No open alerts
3	RUM errors / 404 checkpoints	RUM explorer	No unusual spikes
4	Publication queue	AEM author publication / workflow status	No stuck items
5	Code Sync on yesterday's merges	GitHub checks	Green

14.7.2 Weekly

#	Check	How	Expected
1	Query index	`/query-index.json?limit=500` (and further `offset` pages): total row count and a sample of recently published pages	Count consistent with the previous week plus new pages; new pages present with `pageType`, `contentType`, `tags`
2	Sitemap	`/sitemap.xml`	Recently published pages present; `<loc>` host as expected
3	Sheets JSON per locale	`/{locale}/placeholders.json`, `/{locale}/taxonomy.json`, `/{locale}/metadata.json`, `/{locale}/redirects.json`, `/{locale}/data/authors.json`, `locations.json`, `partners.json`, `social-links.json`, `media-contacts.json`	HTTP 200 and valid JSON (`data` array, or `:type` multi-sheet for a translated taxonomy)
4	Data layer	On a sample page run `window.adobeDataLayer` in the console; click a link	A `page` entry, `component` entries for the blocks, a `cmp:click` event with `xdm:linkURL` and `breakpoint`
5	Dependency PRs	GitHub (Renovate)	Reviewed
6	Admin API log review	`/log/...`	Publications by expected users only

14.7.3 Monthly

#	Check	How	Expected
1	404 page per locale	Open `/{locale}/health-check-404` (any non-existent path) for all 13 locales	HTTP 404, the locale's authored 404 page (`main.error-authored`, no foreign `lang` on `main`)
2	PageSpeed	PageSpeed Insights on Home, an article, a press release, a listing page (Filter List) per main locale; mobile and desktop	Target 100; investigate below 90
3	Accessibility spot check	Keyboard-only navigation of header (desktop dropdowns, mobile menu, Escape), carousel, tabs, accordion, modal, forms; a screen reader pass on one page; automated scan (for example axe)	No new WCAG 2.1 AA failures
4	Responsive check	Key pages at 1440, 1024 and 402 px	Layout as designed
5	Placeholder completeness	Compare the keys of `/en/placeholders.json` with each locale	Same key set
6	Taxonomy completeness	Tags used on pages vs `/{locale}/taxonomy.json`	All tags have titles
7	Redirect sheets	Review entries pending a redirect mechanism	Tracked
8	Access review	AEM author users and groups (Admin Console), GitHub collaborators, Admin API roles	Leavers removed
9	Hidden blocks review	Pages with Hide block on (search the editor)	Still intended

14.8 Operational Procedures

14.8.1 Adding a Locale

1. Agree the AEM path (`/content/tcs-corp/{country}/{language}`), the published code (for example `it-it`) and the language tag (`it-IT`).
2. Development: add the entry to `LOCALES` in `utils/site.js` (`{ country: 'it', code: 'it-it', lang: 'it-IT' }`), run `npm run build:paths`, commit `utils/site.js` and `paths.json`, PR, merge.
3. Site administrator: apply the new `paths.json` to the site configuration's `public.json` `paths`; add `/{code}/metadata.json` to the `metadata.source` list.
4. Content team: create the locale page and the standard structure: `references/nav`, `references/footer`, `error-pages/404` (and 403 / 500 if used by the CDN), `block-library/`, sheets `placeholders` (all keys, 14.8.3), `metadata` (URL patterns starting with `/{code}/`), `taxonomy` (with the language sheet if translated), `redirects`, and `data/authors`, `data/locations`, `data/partners`, `data/social-links`, `data/media-contacts`.
5. Publish the sheets, the nav and footer pages and the 404 page, then the Home page and content.
6. Verify: Home at `/{code}/`, header, footer, 404 in the locale, `<html lang>` = the language tag, placeholders translated, `/query-index.json` rows under `/{code}/`.
7. Add the locale to the monitoring and health checks.

> **Note:** If the redirect mechanism (13.12) and the sitemap strategy (one sitemap, no hreflang) are extended later, include the new locale there too.

14.8.2 Adding a Block

1. Development: create `blocks/{name}/{name}.js`, `{name}.css` and `_{name}.json` (definition, model with the Additional tab copied from an existing block, filter for items), following AGENTS.md (shared decorators and utils, rem units, placeholders for UI text, data layer through `data-cmp-*` attributes).
2. Add the block id to the `section` filter in `models/_section.json` (or a container filter).
3. Run `npm run build:json`, `npm run lint`, `npm test`.
4. Add a test page in the `block-library` of `us/en` (and the other locales as needed).
5. PR with the feature preview link; merge; authors reload Universal Editor.
6. Update the documentation (Part 6 chapter, component inventory 15.8).

14.8.3 Updating Placeholders

1. Open `/content/tcs-corp/{country}/{language}/placeholders` in AEM.
2. Edit the `Text` of the key (columns: Key, Text, Description, Category; code reads Key and Text; keys match without case or separators). Keep `{n}`, `{total}`, `{title}`, `{source}`, `{platform}`, `{label}`, `{text}`, `{problems}`, `{value}` variables.
3. Publish the sheet; check `/{locale}/placeholders.json` and the page.

Keys used by the code (English fallbacks in code):

Key	English fallback	Key	English fallback
aboutTheAuthor	About the author	noPagesFound	No pages found
advancedFilters	Advanced filters	noResources	No resources found.
all	All	noResourcesHint	Try selecting another filter.
back	Back	onThisPage	On this page
cards	Cards	open	Open
cardsEditorHint	Add a Card to the block and give it a title, a description or an image.	openNavigation	Open navigation
carousel	Carousel	opensInNewTab	(opens in a new tab)
carouselRole	carousel	pauseAnimation	Pause animation
clearAll	Clear all	pauseSlides	Pause slides
close	Close	pauseVideo	Pause video
closeNavigation	Close navigation	play	Play
contentFrom	Content from {source}	playAnimation	Play animation
dialog	Dialog	playSlides	Play slides
download	Download	playVideo	Play video
downloadThisPage	Download this page	playVideoTitle	Play video: {title}
explore	Explore	previousSlide	Previous slide
exploreItem	Explore {title}	published	Published
fieldEmail	Enter a valid email address.	readMore	Read more
fieldFormat	Enter a valid value.	readTheTranscript	Read the transcript
fieldRequired	This field is required.	requiredNote	* Required fields

Key	English fallback	Key	English fallback
fieldTooLong	This text is too long.	resetFilters	Reset filters
filterListEditor	The results show on the published page, from the pages' metadata.	resultCount	{n} results
filters	Filters	resultCountOne	1 result
followUsOn	Follow us on {platform}	searchByVoice	Search by voice
footerLinks	Footer links	searchPlaceholder	Ask us a question
formSuccess	Thank you, your details were sent.	selectAnOption	Select an option
itemLinkLabel	{text}: {title}	selectedCount	{n} selected
linkCopied	Link copied to clipboard	send	Send
list	List	separatorHidden	Separator hidden on all devices
listEditorHint	Set up the list in its properties: {problems}.	separatorInvisible	Semantic separator without a line: screen readers announce a break nobody sees
listEditorPages	The pages show on the published page (from the query index).	shareThisPage	Share this page
listEmpty	There are no items to show.	showSlide	Show slide {n} of {total}
listNext	Next items	showSubmenu	Show {label} menu
listPrevious	Previous items	showingCount	Showing {n} of {total}
listenToThisPage	Listen to this page	shownWhenValue	Shown when a dropdown value is "{value}"
loadMore	Load more	siteNavigation	Site
mainNavigation	Main navigation	slideOf	{n} of {total}
mediaContacts	Media contacts	slideRole	slide
menu	Menu	stopVideo	Stop video
minRead	{n} min read	submit	Submit
minutesShort	{n}m	suggestions	Suggestions
nextSlide	Next slide	tabNumber	Tab {n}
table	Table	tabs	Tabs
tabsBlockEmpty	Add a Tab, then choose the Fragment it shows in the Tab properties.	tabsEmpty	Add a Tab, then the components of the tab after it.
video	Video	viewAll	View all
viewLinkedinProfile	View LinkedIn profile		

Note: The list was extracted from the `t('key', 'fallback')` calls in `blocks/`, `decorators/`, `templates/` and `scripts/` (92 keys, including `goBack`). Editor-only messages (for example `listEditorHint`, `tabsEmpty`, `separatorHidden`) are shown to authors in Universal Editor.

14.8.4 Rotating or Changing the Tag Taxonomy

1. Create or change the tags in the AEM tag namespace (Tools → Tagging). Tag IDs have the form `namespace:path` (for example `tcs-corp:topic/cloud`).
2. Update the taxonomy page of every locale (`/content/tcs-corp/{country}/{language}/taxonomy`) so each tag ID has a title (and a translated title on the language sheet named after the ISO 639-1 language, for example `de`).
3. Publish the taxonomy pages; verify `/{locale}/taxonomy.json`.
4. Re-tag pages (page properties) and blocks with tag fields (Teaser, Cards, List Items, List, Filter List primary tags and advanced categories) that used retired tags; republish the pages so the index (`tags` column) updates.
5. Check the Filter List pills and advanced filter categories (they read tags below taxonomy roots).
6. Retire old tags only after no published page uses them (search the query index `tags` column).

> **Warning:** Renaming a tag ID changes the IDs stored on pages and in the query index; Lists with tag sources and Filter List filters stop matching until pages are re-tagged and republished.

14.8.5 Onboarding Authors

1. Request access: Adobe Admin Console user with the AEM author product profile for program `p220207` / environment `e2271469` ([To be confirmed: AEM groups for authors, publishers and locale owners — owner: AEM administrator]).
2. Grant locale permissions (which `/content/tcs-corp/{country}/{language}` trees the author may edit and publish) [To be confirmed: permission model].
3. Install AEM Sidekick in the browser (optional, for viewing preview / live and opening the editor).
4. Training sessions: Universal Editor basics; page properties (Title, Description, Keywords, Page Type, Navigation, Footer, 404 Page); Additional tab (Anchor ID, Hide block, spacing); sheets; tags; publishing and verification; the block library of the locale; this guide's Part 6 and cheat sheets (15.5–15.7).
5. Give the author the support route (L1) and the definition of done for a publication (12.4.3).

14.9 Known Limitations

#	Limitation	Impact	Source	Workaround / next step
1	Per-locale redirect sheets (`/{locale}/redirects.json`) are not applied by the platform; only a root `/redirects.json` is	Old URLs return 404; `/` doesn't redirect to `/en/`	AGENTS.md, `utils/redirects.js`	CDN rules or a root redirects sheet [To be confirmed]
2	No tag manager loaded (`scripts/delayed.js` is empty)	Data layer populated but no analytics collected; Adobe Analytics / CJA, Target, Journey Optimizer not implemented	`scripts/delayed.js`	Add the Adobe Tags embed (Web SDK) in `delayed.js`
3	No form back end	Form Variations shows success but the data goes nowhere (`form-variations:submit` event only)	`blocks/form-variations/form-variations.js`	Integration [To be confirmed: form back end]
4	No search service	Conversation Canvas search dispatches `conversation-canvas:search` only; no results page	`blocks/conversation-canvas/conversation-canvas.js`	Search integration [To be confirmed]

#	Limitation	Impact	Source	Workaround / next step
5	Content Fragment lists not supported (by decision)	Lists are built from pages only	`blocks/list/README.md`	Use pages with metadata, or Cards
6	Page lists come from the query index	Unpublished / excluded pages not listed; manual order = path order; no full-text search; empty in Universal Editor	`blocks/list/README.md`	Fixed list order or Cards
7	Legacy Cards blocks are not key-value blocks	Cards created before the new version use default settings; to use block settings, add a new Cards block and move the cards	`blocks/cards/README.md`	Recreate the block
8	Cards: no author lockup on the feature card; internal links not resolved through redirect sheets; text fields edited in the properties panel (description in place)	Minor presentation differences from List	`blocks/cards/README.md`	Use List for pages
9	List: statistic cards' smaller units ("bn") and Figma's two-tone title (Variation 6) are not styled separately	Design deviation	`blocks/list/README.md`	Single-colour titles
10	Separator: site tokens until the Figma designs are applied; no brand-icon decoration (dot, square, diamond only); no free-form classes or colours; Accessible label not read by every screen reader	Design deviation	`blocks/separator/README.md`	Design follow-up
11	Interactive Dashboard is a placeholder	Renders nothing on the site (only a labelled placeholder in the editor); only the Additional tab exists	`blocks/interactive-dashboard/interactive-dashboard.js`	Future development
12	Built-in 404 texts ("Page Not Found", "Go home") are English, not placeholders	Untranslated fallback 404	`404.html`	Author 404 pages per locale; "Go back" is the placeholder `goBack`
13	One sitemap for all locales, no hreflang alternates; origin is the `.aem.live` host	SEO for multilingual pages	`helix-sitemap.yaml`	Configure per-locale sitemaps and production origin
14	Inherited Navigation / Footer / 404 Page values cached per browser session	Changes to a parent's property show in a new session	`utils/inherited-metadata.js`	Communicate; new session
15	Bulk metadata only applies once all locale sheets are listed in `metadata.source`	Metadata sheet columns ignored until configured	AGENTS.md	Configure (12.5)
16	Locations and Partners data sheets have loaders (`getLocations`, `getPartners`) but no block uses them	Sheet content has no effect yet	`utils/data.js`	Future components
17	`persona` and `campaign-id` metadata are indexed and readable but not used by any block	No personalisation by persona	`helix-query.yaml`, `utils/metadata.js`	Future personalisation; Teaser's Personalization flag only adds a marker class / data attribute
18	Sheets and the query index are requested at published paths; in Universal Editor they may not resolve	Editor shows English fallbacks, ID-derived tags, empty page lists	`utils/site.js` `localeSheetPath`, `utils/query-index.js`	Validate on preview

#	Limitation	Impact	Source	Workaround / next step
19	Unit tests are not run in CI	Regressions in List / Cards / Separator logic caught only if run locally	`.github/workflows/main.yaml`	Add `npm test` to the workflow
20	Production domain, CDN, robots.txt not configured	Site only on `*.aem.live`	Project facts	[To be confirmed: production domain and CDN]
21	Boilerplate leftovers: Sidekick project name "AEM XWalk Boilerplate", PR template placeholders `{repo}` / `{owner}`, `README.md` placeholders, `package.json` name / version	Cosmetic, can confuse	Repository	Clean up in a code change
22	403 and 500 error pages are authored for the CDN but not used by code	Need CDN rules to be served	AGENTS.md, `scripts/scripts.js`	CDN configuration

14.10 AMS Handover Checklist

14.10.1 Access

#	Item	Owner	Status
1	Adobe Admin Console: AEM as a Cloud Service author access (program `p220207`, environment `e2271469`) for AMS users	TCS IT	[ ]
2	Cloud Manager access (logs, environment status)	TCS IT	[ ]
3	GitHub `sradha-tcs/tcs-corp`: read / write for L3, read for L2	Repository administrator	[ ]
4	Edge Delivery site configuration / Admin API role (admin or publish) for L2	Site administrator	[ ]
5	RUM / operational telemetry dashboard access (domain key)	Site administrator	[ ]
6	Uptime monitoring tool	AMS lead	[ ]
7	Production CDN console [To be confirmed]	TCS IT	[ ]
8	Ticketing queue and escalation contacts	AMS lead	[ ]

14.10.2 Knowledge Transfer Sessions

#	Session	Audience	Content	Duration	Status
1	Architecture overview	L2, L3	Edge Delivery Services with Universal Editor, three-phase loading, code bus, content bus, configuration service	[To be confirmed]	[ ]
2	Locale model and site data	L1, L2	13 locales, path mapping, references, sheets, inheritance of Navigation / Footer / 404	[To be confirmed]	[ ]
3	Authoring and publishing	L1	Universal Editor, page properties, Additional tab, publishing, verification	[To be confirmed]	[ ]
4	Components walkthrough	L1, L3	Part 6 components and their variations, block library	[To be confirmed]	[ ]
5	Lists, index and metadata	L1, L2	Query index, List, Filter List, metadata sheet, taxonomy	[To be confirmed]	[ ]

#	Session	Audience	Content	Duration	Status
6	Development workflow	L3	Branching, PRs, checks, models and `build:json`, `build:paths`, tests	[To be confirmed]	[ ]
7	Operations	L2	Admin API operations, cache, re-index, sitemap, logs, health checks, recovery	[To be confirmed]	[ ]
8	Analytics and integrations	L3, analytics owner	Data layer schema and events, Adobe Tags readiness, form and search events	[To be confirmed]	[ ]
9	Shadowing period	L1, L2	AMS handles tickets with the development team on call	[To be confirmed]	[ ]

14.10.3 Documentation

#	Document	Location	Status
1	This handover document (version 2.0)	[To be confirmed: document repository]	[ ]
2	Project instructions	`AGENTS.md`	Available
3	Shared code references	`decorators/README.md`, `utils/README.md`, `templates/README.md`	Available
4	Block references	`blocks/list/README.md`, `blocks/cards/README.md`, `blocks/separator/README.md`	Available
5	Earlier guides	`docs/handover/AUTHOR-GUIDE.pdf`, `DEVELOPER-GUIDE.pdf`, `ADMIN-GUIDE.pdf` (11 October 2026; not served, `docs/` is in `.hlxignore`)	Available (superseded by this document where they differ)
6	Screenshots for this document	`docs/handover/screenshots/` (see 15.9)	[ ]
7	Site configuration export (paths, metadata sources, CDN)	[To be confirmed]	[ ]
8	Runbook contacts and SLAs	14.1.3	[ ]

14.10.4 Open Items at Handover

#	Open item	Owner	Target date
1	Production domain, CDN and push invalidation	[To be confirmed]	[To be confirmed]
2	Redirect mechanism for the per-locale sheets and `/` → `/en/`	[To be confirmed]	[To be confirmed]
3	Bulk metadata sources configured for all 13 locales	Site administrator	[To be confirmed]
4	Adobe Tags / Web SDK implementation and analytics reporting	Analytics owner	[To be confirmed]
5	Form back end	Product owner	[To be confirmed]
6	Search service for the Conversation Canvas	Product owner	[To be confirmed]
7	Interactive Dashboard implementation	Product owner	[To be confirmed]
8	Sitemap origin and multilingual sitemap strategy	Site administrator	[To be confirmed]
9	Unit tests in CI; boilerplate clean-up (Sidekick label, PR template, README)	Technical lead	[To be confirmed]
10	Support model, SLAs and contacts (14.1.3)	AMS lead	[To be confirmed]
11	Release tagging convention	Technical lead	[To be confirmed]

#	Open item	Owner	Target date
12	Uptime monitoring set-up	AMS lead	[To be confirmed]

Part 15 — Appendix

15.1 Glossary

Term	Definition (as used on this project)
Additional tab	The last tab of every block dialog except Header and Footer: Anchor ID, Hide block, Padding left / right / top / bottom, Margin left / right / top / bottom (`classes_*` fields applied by `decorators/block-options-decorator.js` and `styles/styles.css`)
Adobe Client Data Layer	The `window.adobeDataLayer` array the site fills with page and component state and `cmp:*` events (AEM Core Components schema) for Adobe Tags and the Web SDK
Admin API	The Edge Delivery Services HTTP API at `admin.hlx.page` for preview, publish, cache, index, sitemap, code, status, log and configuration operations
AEM Code Sync	GitHub app that copies every pushed commit of the repository to the Edge Delivery code bus
AEM Sidekick	Browser extension for Edge Delivery URLs: environment switch, status, open in editor
Anchor ID	Additional tab field; a value `anchor-…` becomes the block's HTML id for # links
Anchor name	Section property; the id of a section, used by the Anchor List
Block	A reusable component of a page (`blocks/{name}/`), decorated by its JavaScript from authored rows and cells
Block library	Author-only pages per locale (`block-library/`) showing every block variation; excluded from publishing
Bulk metadata	Metadata set for many pages at once by URL pattern in the locale's `metadata` sheet
Code bus	Edge Delivery storage of the code of each branch
Collapsed field	A model field whose name ends with Alt, Title, Type, Text or MimeType and is rendered into the same element as its base field (for example `imageAlt` becomes the image's `alt`)
Component definition	Entry in `component-definition.json` that makes a component insertable in Universal Editor
Component filter	Entry in `component-filters.json` listing which components a container (section, block) accepts
Component model	Entry in `component-models.json` defining the dialog fields of a component
Container block	A block with child items (Accordion, Cards, Columns, Conversation Canvas, Form Variations, List, Table, Table List, Tabs block)
Container section	A section-based component that wraps the section content in a synthetic block (Gen Carousel, Tabs Container)
Content bus	Edge Delivery storage of the previewed and published content
Decorator	A shared module in `decorators/` that creates or decorates page elements
Default content	Text, Title, Image and Button authored directly in a section, not in a block
Delayed phase	The third loading phase (3 s after load): data layer tracking of late blocks and `scripts/delayed.js` (empty; the place for Adobe Tags)
Eager phase	The first loading phase: decorate the page, load the template and the first section to reach LCP
Element grouping	Model fields sharing a prefix before _ (for example `content_title`, `content_description`) rendered into one cell
Fragment	A page whose content is included in other pages (Fragment block, nav, footer, modals, tab fragments)

Term	Definition (as used on this project)
Inherited metadata	Navigation, Footer and 404 Page values taken from the nearest parent page up to Home (`utils/inherited-metadata.js`)
Key-value block	A block whose model is rendered as rows of property name and value (template `"key-value": true`)
Lazy phase	The second loading phase: the remaining sections, the header and footer, lazy styles and fonts
Locale	One of the 13 country / language sites (`/content/tcs-corp/{country}/{language}`, published at `/{code}/`)
Lotto / Lottie	The "Lotto" image type plays a Lottie animation (`.json`) with the vendored player `scripts/lib/lottie/lottie_light.min.js`
Page Type	Page property (or `page-type` column) selecting the template: Default, Home, Article, Blog, Press Release
Placeholder	A UI text from the locale's placeholders sheet (`Key`, `Text`), with an English fallback in code
Preview tier	Edge Delivery content state visible on `*.aem.page`
Live tier	Edge Delivery content state visible on `*.aem.live` and the production domain
Query index	`/query-index.json`, the published pages and their metadata columns defined in `helix-query.yaml`
References	The locale folder `references/` holding nav, footer and other fragments
Section	A horizontal part of a page holding default content and blocks; has its own properties (Style, Width Type, Rounded edge, Background Image, Anchor name)
Sheet	An AEM spreadsheet page published as JSON (placeholders, metadata, redirects, data sheets)
Site configuration	The Edge Delivery configuration service entry for `sradha-tcs/tcs-corp` (paths, metadata sources, CDN, access)
Site Global Templates	Author-only template pages (`/content/tcs-corp/site-global-templates/`) that authors copy
Taxonomy	The locale's `taxonomy` page mapping tag IDs to titles (`/{code}/taxonomy.json`)
Template	Code in `templates/{name}/` loaded for a Page Type (home, article, blog, press-release)
Universal Editor	The AEM visual editor used to author the site in context
Util	A shared module in `utils/` that builds no UI
xwalk	The AEM authoring (Universal Editor) flavour of Edge Delivery Services ("crosswalk"), based on `aem-boilerplate-xwalk`

15.2 Acronyms

Acronym	Meaning
ACDL	Adobe Client Data Layer
AEM	Adobe Experience Manager
AMS	Application Management Services
API	Application Programming Interface
CDN	Content Delivery Network
CI	Continuous Integration

Acronym	Meaning
CJA	Customer Journey Analytics
CLS	Cumulative Layout Shift
CMS	Content Management System
CSP	Content Security Policy
CSS	Cascading Style Sheets
CTA	Call to Action
DAM	Digital Asset Management (AEM Assets)
DOM	Document Object Model
EDS	Edge Delivery Services
IMS	Adobe Identity Management System
INP	Interaction to Next Paint
ISO	International Organization for Standardization (language codes ISO 639-1)
JCR	Java Content Repository
JSON	JavaScript Object Notation
L1 / L2 / L3	Support levels 1, 2 and 3
LCP	Largest Contentful Paint
OG	Open Graph (social sharing metadata)
PR	Pull Request
PSI	PageSpeed Insights
RACI	Responsible, Accountable, Consulted, Informed
RTE	Rich Text Editor
RUM	Real Use Monitoring (Edge Delivery operational telemetry)
SEO	Search Engine Optimisation
SLA	Service Level Agreement
UE	Universal Editor
URL	Uniform Resource Locator
WCAG	Web Content Accessibility Guidelines
WebVTT	Web Video Text Tracks (caption file format)
XDM	Experience Data Model (Adobe Experience Platform)

15.3 Reference Documents

15.3.1 Adobe Documentation

Topic	URL
Edge Delivery Services documentation	`https://www.aem.live/docs/`
Developer tutorial	`https://www.aem.live/developer/tutorial`
Universal Editor tutorial (AEM authoring)	`https://www.aem.live/developer/ue-tutorial`
AEM authoring with Edge Delivery Services	`https://www.aem.live/docs/aem-authoring`
Markup, sections and blocks	`https://www.aem.live/developer/markup-sections-blocks`

David's Model (content modelling)	`https://www.aem.live/docs/davidsmodel`
Taxonomy	`https://www.aem.live/docs/authoring-taxonomy`
Block Collection	`https://www.aem.live/developer/block-collection`
Content modeling for AEM authoring (field collapse, element grouping)	`https://experienceleague.adobe.com/en/docs/experience-manager-cloud-service/content/edge-delivery/aem-authoring/content-modeling`
Universal Editor documentation	`https://experienceleague.adobe.com/en/docs/experience-manager-cloud-service/content/implementing/developing/universal-editor/introduction`
xwalk lint rules	`https://github.com/adobe-rnd/eslint-plugin-xwalk`
Boilerplate	`https://github.com/adobe-rnd/aem-boilerplate-xwalk`
Documentation search	`curl -s https://www.aem.live/docpages-index.json` (filter by keyword)

15.3.2 Repository Documents

Document	Content
`AGENTS.md`	Project instructions: structure, code style (rem units, breakpoints), Additional tab, data layer, accessibility, shared code, site structure and data, publishing process
`decorators/README.md`	Decorator modules, exports, users; data layer schema
`utils/README.md`	Util modules, exports, users; site data
`templates/README.md`	Site Global Templates and Page Types; adding a template
`blocks/list/README.md`	List: sources, field matrix, data flow, metadata and index contracts, Figma variations, accessibility, analytics, limitations
`blocks/cards/README.md`	Cards: manual cards, relation to List, item fields, backward compatibility, limitations
`blocks/separator/README.md`	Separator: variants, settings, accessibility, limitations

Document	Content
`docs/handover/*.pdf`	Earlier author, developer and admin guides (11 October 2026), superseded by this document
`docs/proposals/cards-card-refactoring.md`	Cards and Card refactoring proposal: current state, gap analysis, target architecture, migration, decisions needed
`helix-query.yaml`, `helix-sitemap.yaml`, `paths.json`, `fstab.yaml`, `head.html`, `.hlxignore`, `.eslintrc.js`	Index, sitemap, path mapping, content source, head and CSP, served-file exclusions, lint rules

15.4 Content Modeling Standards

15.4.1 Principles

1. The authored structure (rows and cells) is the contract between author and code. Change it only with backward compatibility (several blocks read rows made before their current model: Cards, List, Video, Teaser).
2. Prefer default content (Text, Title, Image, Button) where a block isn't needed.
3. Keep blocks semantic and few-celled: combine fields with **field collapsing** and **element grouping** instead of adding cells.
4. Use **key-value** models for settings-heavy blocks (14 blocks: anchor-list, cards, conversation-canvas, filter-list, list, page-header, quote, separator, tab, table-list, tabs, teaser, testimonial, video).
5. Use **`classes`** fields (select / multiselect, or `classes_*` names) for presentation options: they arrive as block classes and never shift content rows.
6. Never hard-code user-facing strings: use placeholders with an English fallback.
7. Page-level data belongs in page properties or the metadata sheet, not in blocks; page-specific values that aren't metadata (CTAs, overrides) are block fields.

15.4.2 xwalk Rendering Rules Used in the Models

Rule	Naming	Effect	Examples in this project
Block options	Field named `classes` (select or multiselect), or `classes_<name>`	Values become CSS classes on the block	Teaser Layout `classes` (no-image, background, card); Hero `classes_alignment`, `classes_background`, `classes_motion`; every Additional tab field (`classes_anchor`, `classes_hideblock`, `classes_paddingleft`, …)
Field collapse, `Alt`	`<field>Alt`	Image `alt` of `<field>`	`imageAlt`, `authorImageAlt`, `content_iconAlt`, `placeholder_imageAlt`
Field collapse, `Text`	`<field>Text`	Link text of `<field>`	`linkText` (Button, Modal, List Item, Card)
Field collapse, `Title`	`<field>Title`	Link `title` of `<field>`	`linkTitle` (Button)
Field collapse, `Type`	`<field>Type`	Heading level of a title field, or link type (primary / secondary)	`titleType`, `content_titleType`, `listHeadingType`, `linkType`
Field collapse, `MimeType`	`<field>MimeType`	Mime type hint for a reference	Not used in this project

Rule	Naming	Effect	Examples in this project
Element grouping	`<group>_<field>`	All fields of the group rendered in one cell	Hero `content_eyebrow`, `content_title`, `content_titleType`, `content_description`, `content_icon`; Embed `embed_placeholder`, `embed_uri`; Video `placeholder_image`
Composite multifield	`container` with `multi: true` (enabled in `xwalk.json`)	Repeated groups of subfields	Hero and Page Header CTA List, Teaser Links, Testimonial / Teaser Stats, Footer Link List, Anchor List Links, Filter List Primary filter tags and Advanced filter categories
Conditional fields	`condition` (JsonLogic)	Field shown only when the condition holds	List source-specific fields; Cards / List layout fields per mode; Teaser single vs multiple links
Validation	`validation` (`regExp`, `numberMin`, `numberMax`, `maxLength`, `customErrorMsg`), `required`	Enforced in the dialog	Anchor ID regExp; Component ID regExp; Table List Maximum items 1–10; Card Analytics label max 120; required Video, List source, Tab title, form field names and labels
Shared field groups	`"...": "../../models/_card-list.json#/fields/<group>"`	One definition reused by several models (resolved by `build:json`)	`models/_card-list.json` groups `header`, `cards`, `layout`, `scroll`, `advanced`, used by List and Cards

15.4.3 Lint Rules for Models (`npm run lint`)

`.eslintrc.js` extends `plugin:xwalk/recommended`:

Rule	Checks
`xwalk/max-cells`	Number of cells a non-key-value model renders. Limits configured: default `*` = 4; `section` 6; `tabs` 8; `table-list` 10; `table-list-card` 6; `list-item` 13; `card` 16; `table-col-5` 5; `field-text` 6; `field-select` 6; `field-textarea` 6; `field-checkbox` 5; `contact-card` 5
`xwalk/invalid-field-name`	Names start with a letter; letters, digits, `_`, `-`, `:` only; no spaces; at most one `_` and one `:`
`xwalk/no-duplicate-fields`	No duplicate field names in a model
`xwalk/no-orphan-collapsible-fields`	A suffixed field (…`Alt`, …`Text`, …`Title`, …`Type`, …`MimeType`) needs its base field
`xwalk/no-custom-resource-types`	Only the standard `core/franklin/components/...` resource types

The `.eslintrc.js` comment explains the higher limits: section properties render as section-metadata rows; the Table List settings and the form field, table and card items need one cell per value.

15.4.4 Build and Commit Rules

Rule	Detail
Edit partials only	`blocks/{name}/_{name}.json` and `models/_*.json`; never edit `component-models.json`, `component-definition.json`, `component-filters.json` by hand
Rebuild	`npm run build:json` (`merge-json-cli` from `models/_component-models.json`, `models/_component-definition.json`, `models/_component-filters.json`, which include `../blocks/*/_*.json`)
Pre-commit	Husky runs `build:json` automatically when a staged file matches `_*.json` and stages the three aggregated files

Rule	Detail
Filters	Add new blocks to the `section` filter (`models/_section.json`); item components to their container's filter
Additional tab	Copy the Additional tab from an existing block model into every new block model (not Header / Footer)
Served files	Partials start with _ and are not served (`.hlxignore _*`)

15.4.5 Component Groups in the Editor

Group (`component-definition.json`)	Components
Default Content	Text, Title, Image, Button
Sections	Section
Blocks	All block definitions from `blocks/*/_*.json` (including the container sections Gen Carousel and Tabs Container)

Top-level filter `main`: Section, Gen Carousel, Tabs Container. Section filter: text, image, button, title, page-header, hero, teaser, quote, testimonial, anchor-list, accordion, tabs-block, table, table-list, list, separator, embed, video, modal, form-variations, filter-list, interactive-dashboard, conversation-canvas, cards, columns, fragment, footer.

15.5 Authoring Cheat Sheets

15.5.1 Create a Page

Step	Action
1	In the Sites console go to `/content/tcs-corp/site-global-templates/` and copy the template page you need (home, article, blog, press release)
2	Paste it into the target locale folder (for example `/content/tcs-corp/de/de-de/insights/`)
3	Rename the page (the name becomes the URL segment: lower case, hyphens)
4	Open page properties: set Title, Description, Keywords; check Page Type; leave Navigation / Footer / 404 Page empty unless the page needs its own
5	Edit the content in Universal Editor; publish (15.5.3)

15.5.2 Set Page Properties

Property	Use	Inherited by child pages
Title	Page title (`og:title`, card title fallback)	No
Description	Meta description (card description fallback)	No
Keywords	Meta keywords (multi)	No
Page Type	Template: Default, Home, Article, Blog, Press Release (overrides the metadata sheet)	No
Navigation	Header page; empty = inherit, else `references/nav`	Yes
Footer	Footer page; empty = inherit, else `references/footer`	Yes

Property	Use	Inherited by child pages
404 Page	Error page for missing pages below this page; empty = inherit, else `error-pages/404`	Yes

15.5.3 Publish

Task	Action	Verify
One page	Universal Editor → Publish (include changed references)	Live URL in a private window
Several pages / a branch	Sites console → Manage Publication (include children, schedule)	Sample URLs, `/query-index.json`
A sheet	Sites console → select the sheet → Quick Publish	`/{locale}/{sheet}.json`
Take down	Manage Publication → Unpublish	URL shows the 404 page
Undo a change	Timeline → Revert to version → Publish	Live URL

15.5.4 Additional Tab (every block except Header and Footer)

Field	Values	Effect
Anchor ID	`anchor-` + lower-case letters, digits, hyphens (enforced)	Block id for `#anchor-…` links (unique: `-2`, `-3` added)
Hide block	On / off	Hidden on the site and in Preview; faded with a dashed outline in edit mode; still in the HTML
Padding left / right / top / bottom	Empty, 0, 100, 200, 300, 400, 500, 600, 800, 1000, 1200, 1600, 2000, 2400, 3000	`--space-*` token: 0, 0.25, 0.5, 0.75, 1, 1.25, 1.5, 2, 2.5, 3, 4, 5, 6, 7.5 rem
Margin left / right / top / bottom	Same values	Same tokens as margin

15.5.5 Link to Part of a Page

Target	Set on the target	Link to
A section	Section properties → Anchor name (for example “Our services”; normalised to `our-services`)	`#our-services`; or add it to an Anchor List
A block	Additional tab → Anchor ID `anchor-our-services`	`#anchor-our-services`
A tab	Tab → ID	`#<id>` opens that tab (deep link)

15.5.6 Sheets and Data

Task	Sheet (per locale)	Columns
Translate a UI label	`placeholders`	Key, Text (Description, Category for authors)
Set metadata for many pages	`metadata`	`url` pattern (starting with `/{code}/`) and metadata columns (15.6)
Add or translate a tag title	`taxonomy`	`tag`, `title`; a sheet per language for translations
Add an author	`data/authors`	author-id, name, designation, bio, image, linkedin, region

Task	Sheet (per locale)	Columns
Add a social link	`data/social-links`	platform, url, icon, sort-order
Add a media contact	`data/media-contacts`	id, name, designation, email, phone, region
Add a location / partner	`data/locations`, `data/partners`	location-id, location-name, country, region, latitude, longitude / partner-id, partner-name, logo, website, tier, description (not used by any block yet)
Record a redirect	`redirects`	Source, Destination (not applied by the platform; used for List card links)

15.5.7 Lists of Content

Need	Use	Key settings
Cards of child pages	List	Source: Child pages; Parent page (or current page); Direct children only / Child depth
Cards of tagged pages	List	Source: Tagged pages; Search root; Tags; Match any / all
Hand-picked pages	List	Source: Fixed list; add List Items (Page or link, overrides)
Curated cards that aren't pages (statistics, services)	Cards	Card items with typed content; Card style
Filterable resource library	Filter List	Datasource; Root path; Page types; Content types; Primary filter tags; Advanced filter categories
Numbered table of industries / solutions / products	Table List	Variation; Table List Items

15.5.8 Navigation, Footer and Error Pages

Task	Action
Change the main navigation of a locale	Edit and publish `/content/tcs-corp/{country}/{language}/references/nav` (sections: brand, sections, tools)
Special navigation for a section of the site	Create `references/nav-<name>`, set it as Navigation on the section's top page, publish both
Change the footer	Edit and publish `references/footer` (Footer block: Conversation Canvas Page, Copyright Text with `{year}`, Link List); social icons come from `data/social-links`
Locale 404 page	Create and publish `error-pages/404` (its first Button gets the "Go back" button next to it; without one, Go back is added below the content)

15.6 Metadata Cheat Sheet

15.6.1 Page Properties (model `page-metadata`, `models/_page.json`)

Property	Name	Type	Notes
Title	`jcr:title`	text	Published as the page title / `og:title`
Description	`jcr:description`	text	Published as `description`
Keywords	`keywords`	text, multi	Published as `keywords`

Property	Name	Type	Notes
Page Type	`page-type`	select: Default (empty), Home, Article, Blog, Press Release	Overrides the sheet's `page-type`
Navigation	`nav`	content reference	Inherited
Footer	`footer`	content reference	Inherited
404 Page	`error-page`	content reference	Inherited

Page tags (`<meta property="article:tag">`) are read by `utils/metadata.js getPageTags`, with a comma-separated `tags` metadata value as a fallback.

15.6.2 Bulk Metadata Columns (`/{locale}/metadata.json`)

Column	Format / example	Used by
`url`	URL pattern, `/de-de/insights/**`	Row matching (must start with the locale)
`page-type`	`article`, `blog`, `press-release`, `home` (templates); `landing`, `listing` (Page Header default Landing layout); `report`, `case-study`, `news`, `event` (Filter List Page types)	Template, body class, Page Header default layout, data layer `xdm:template`, Filter List, index `pageType`
`meta-title`	text	`<title>` (SEO decorator), index
`meta-description`	text	`description` meta, index
`meta-keywords`	text	`keywords` meta
`author-id`	ID matching the Authors sheet (case-insensitive)	Page Header lockup, article / blog About the author, Filter List and List feature card
`author`	name	Author fallback (Page Header, Filter List Author source)
`publish-date`	`YYYY-MM-DD`	Page Header, Filter List date and Latest sort, List date fallback
`modified-date`	`YYYY-MM-DD`	List date and Last modified sort
`reading-time`	number of minutes (6 → "6 min read" / "6m") or text	Page Header, List, Filter List
`og-title`, `og-description`, `og-image`, `og-type`	text / image URL	Open Graph tags (fallback to meta-*)
`twitter-card`, `twitter-title`, `twitter-description`, `twitter-image`	text / image URL	Twitter tags (fallback to og-, *meta-*)
`canonical-url`	absolute URL	`<link rel="canonical">`, `og:url`
`robots`	`noindex, nofollow`	Standard robots meta (server side); indexed
`region`	text	Press release Media contacts filter; indexed
`country`	text	Page metadata (default: the locale's country); indexed
`language`	language code, `de-DE`	`<html lang>` and data layer `xdm:language` when a valid code (else the locale's tag)

Column	Format / example	Used by
`persona`	text	Indexed; not used by blocks
`campaign-id`	text	Indexed; not used by blocks
`thumbnail-image`	image URL	Filter List fallback image, List card image fallback
`featured-image`	image URL	Page Header (Landing), Filter List image, List fallback
`content-type`	`Article`, `Report`, `Whitepaper`, … (Filter List Content types: article, blog, report, case-study, news, event, whitepaper, podcast, video)	Page Header eyebrow / label, Filter List eyebrow and filter, List content type
`featured`	`yes` / `true`	Filter List hero and featured cards
`priority`	number (featured cards: <= 3 when no page is featured)	Filter List featured and priority sort
`feature-card`, `featured-priority`	as featured / priority	Earlier names, read as fallbacks
`listen-link`	URL of an audio version	Page Header listen action
`card-title`, `card-description`, `card-image`, `card-image-alt`	text / image URL	List card overrides
`image-alt`	text	List card image alt fallback
`eyebrow`, `category`	text	List card eyebrow (category as fallback)
`hide-in-nav`	`yes`	Page left out of Lists
`nav`, `footer`, `error-page`	path (AEM, published or locale-relative)	Inherited Navigation, Footer and 404 Page (same as the page properties)

Note: Every column is published as `<meta name="{column}">`. The sheet applies only after the site configuration lists all locale sheets in `metadata.source` (13.17).

15.7 Taxonomy Cheat Sheet

Topic	Rule
Tag IDs	AEM tags `namespace:path` (for example `tcs-corp:topic/cloud`); stored on pages and in the index `tags` column
Labels	`/{locale}/taxonomy.json`: column `tag` (the ID) and `title`; translated titles on a sheet named after the ISO 639-1 language (`de`, `fr`, `es`, `pt`, `nl`, `sv`, `da`, `no`, `zh`, `ja`, `ko`, `en`), else the default sheet
Fallback	Missing tags show a label derived from the ID (`utils/tags.js`); authored titles show as they are
Hierarchy	Child tags match their parent in List tag matching and the Filter List (`tag` or `tag/…`)
Where tags are authored	Page tags (page properties); Teaser Tags; Card Tags; List Item Tags; List Tags (Tagged pages); Filter List Primary filter category, Primary filter tags, Advanced filter categories (Taxonomy root)
Where labels show	Teaser, Page Header, Cards, List, Filter List pills and advanced filter, Conversation Canvas
Data layer	Page tags in the page entry `xdm:tags`

Topic	Rule
Changing tags	14.8.4; republish pages to update the index
Publishing	Publish the taxonomy page of each locale after every tag change

15.8 Component Inventory

No.	Component	Chapter	Type	Items/models	Main presentation modes	Documented variations (Part 6)	Data sources	Status
1	Header	6.1	Block (page header area, loaded by `aem.js`; no dialog)	None (the nav page: brand, sections, tools)	1: standard header (mobile menu below 900 px, desktop dropdowns from 900 px)	8	Navigation page (inherited `nav`, else `references/nav`); placeholders	Implemented
2	Footer	6.2	Block (page footer, and the authored Footer block on the footer page)	`footer` (Conversation Canvas Page, Copyright Text, Link List multifield)	1: standard footer (Figma desktop / tablet / mobile frames)	7	Footer page (inherited `footer`, else `references/footer`); Social Links sheet; Conversation Canvas page; placeholders	Implemented
3	Fragment	6.3	Block	`fragment` (Reference)	1: included page content	5	Referenced page (`.plain.html`)	Implemented
4	Page Header	6.4	Block	`page-header` (Layout, CTA List multifield)	5: Default (landing for landing and listing page types, else article); Landing; Secondary; Article; Display	13	Page metadata; Authors sheet; taxonomy; placeholders	Implemented
5	Section	6.5	Section	`section` (Section Name, Style, Width Type, Rounded edge, Background Image, Image alt text, Anchor name)	5: Default (full width); Highlight style; Fixed width; Rounded edge; Background image	6	None	Implemented
6	Text	6.6	Default content	Rich text	1: rich text	7	None	Implemented
7	Title	6.7	Default content	`title` (Title, Title Type)	1: heading (levels H1–H6)	6	None	Implemented
8	Image	6.8	Default content	`image` (Image, Alt Text)	1: image	2	AEM Assets	Implemented
9	Button	6.9	Default content	`button` (Link, Text, Title, Views, Type, Icon, Alignment)	5: Primary button; Secondary button; Tertiary button; Icon button (arrow-right, chevron-	7	None	Implemented

No.	Component	Chapter	Type	Items/models	Main presentation modes	Documented variations (Part 6)	Data sources	Status
					right, chevron-down, search); Link			
10	Hero	6.10	Block	`hero` (Image, Content, Links with CTA List, Style tabs)	6: Default (full-bleed image); Media contained; Lotto (Lottie) image type; Background colour (light, dark, dark subtle, black); Motion (fade, slide, zoom); Alignment (vertical, horizontal, text)	29	AEM Assets; Lottie JSON	Implemented
11	Teaser	6.11	Block (key-value)	`teaser` (Content, Image, Style, Links, Stats tabs)	4 layouts: Image & Text (default, image left / right); Text split (no-image); Background image; Card — with BG colour (grey, dark, dark green), Lotto image type, stats, multiple links	66	Taxonomy; placeholders; AEM Assets	Implemented
12	Quote	6.12	Block (key-value)	`quote`	3: Default; Grey background; Image position (desktop right / left, mobile top / bottom)	5	AEM Assets	Implemented
13	Testimonial	6.13	Block (key-value)	`testimonial` (Content, Author, Style, Show / Hide, Stats)	3: Default; Grey background; With stats (author details can be hidden)	9	AEM Assets	Implemented
14	Columns	6.14	Container block	`columns` (Columns, Rows); `column` items (text, image, button, title)	1: n columns (`columns-{n}-cols`; image-only columns styled)	4	None	Implemented
15	Cards	6.15	Container block (key-value)	`cards` (shared `models/_card-list.json` groups); `card` items	6 card presentations: Image; Panel; Report; Statistic; Mixed; rows of links (Display as teaser off) — Figma List variations 1–14; Style options compact statistic title, dividers, header centred	46	Taxonomy; placeholders	Implemented
16	List	6.16	Container block (key-value)	`list` (shared `models/_card-list.json` groups); `list-item` items	3 sources (Child pages, Fixed list, Tagged pages) × the 6 card presentations of Cards — Figma List variations 1–14	69	Query index; redirects sheet; Authors sheet; taxonomy; placeholders	Implemented
17	Filter List	6.17	Block (key-value)	`filter-list` (Content, Source, Filters, Advanced, Cards, Mapping)	7: Layout (masonry, grid, list); Card style (default, compact, featured, mixed); plus hero card and featured cards options	25	Query index (or manual pages); taxonomy; Authors sheet; placeholders	Implemented
18	Table List	6.18	Container block (key-value)	`table-list`; `table-list-card` items (`table-list-header` legacy model)	3: Industries; Solutions; Products	17	Placeholders	Implemented
19	Anchor List	6.19	Block (key-value)	`anchor-list` (Links multifield, Sticky)	2: Default; Sticky	2	Section Anchor names on the page; placeholders	Implemented

No.	Component	Chapter	Type	Items/models	Main presentation modes	Documented variations (Part 6)	Data sources	Status
20	Accordion	6.20	Container block	`accordion`; `accordion-item` (Summary, Text)	1: collapsible items (`<details>`)	1	None	Implemented
21	Tabs	6.21	Container section (Tabs Container) and container block (Tabs)	`tabs` (section: ID, Width Type, Label, Style, Alignment, Orientation); `tabs-block`; `tabs-item` (Title, ID, Active tab, Fragment)	3 styles (underline, boxed, pills) × 3 alignments (left, center, stretch) × 2 orientations (horizontal, vertical); 2 sources (Tabs Container section, Tabs block with fragments)	12	Fragments; placeholders	Implemented
22	Tab	6.22	Item block (in a Tabs Container section)	`tab` (Title, ID, Active tab)	1: tab marker (shows nothing on the page)	3	None	Implemented
23	Modal	6.23	Block	`modal` (Modal Content, Button Text)	2: Modal block (button opener); automatic modal for links to `/modals/` pages	3	Fragment page; placeholders	Implemented
24	Gen Carousel	6.24	Container section	`gen-carousel` (Style, Navigation, Autoplay interval); slides: Hero, Teaser	3: Manual; Auto; Manual and auto	6	Placeholders	Implemented
25	Table	6.25	Container block	`table` (Options, Columns); `table-row`, `table-col-2` … `table-col-5`	5 column counts (1–5); options Striped, Bordered, No Header, First Column Header	12	Placeholders	Implemented
26	Separator	6.26	Block (key-value)	`separator` (General, Appearance, Responsive, Spacing, Advanced)	10 variants: default, subtle, strong, inset, full-width, dotted, dashed, gradient, branded, custom-design; 4 themes (auto, light, dark, brand)	43	Placeholders	Implemented
27	Embed	6.27	Block	`embed` (Placeholder Image, alt, URI)	4: YouTube; Vimeo; X / Twitter; other URL (iframe) — each with or without a placeholder image	5	External providers	Implemented
28	Video	6.28	Block (key-value)	`video` (Video, Playback, Captions, Display, Privacy)	3 playback modes: Click to play; Autoplay; Background — with pop-up option, 5 aspect ratios, 4 sizes, 3 alignments	33	AEM Assets, YouTube, Vimeo; WebVTT captions; placeholders	Implemented
29	Form Variations	6.29	Container block	`form-variations`; items `field-text`, `field-select`, `field-textarea`, `field-checkbox`, `contact-card`, `field-submit`	2 themes: Default; Dark — with conditional fields (Show only if dropdown value equals)	13	Placeholders (no submit endpoint)	Implemented (no back end)
30	Conversation Canvas	6.30	Container block (key-value)	`conversation-canvas` (Menu, Search bar groups); `conversation-canvas-button` items	3: Default; Primary (sticky dock); Secondary — Title size bigger / medium	18	Query index (menu); page metadata; taxonomy; placeholders (no search service)	Implemented (no search service)

No.	Component	Chapter	Type	Items/models	Main presentation modes	Documented variations (Part 6)	Data sources	Status
31	Interactive Dashboard	6.31	Block	`interactive-dashboard` (Additional tab only)	0: placeholder	2	None	Placeholder (renders nothing on the site)

Note: "Main presentation modes" summarises the author-selectable modes; "Documented variations" counts the variation sections of each Part 6 chapter, which document every option that changes the rendering separately and are authoritative.

15.9 Screenshot Register

15.9.1 Conventions

Item	Convention
Folder	`docs/handover/screenshots/` (referenced in the document as `screenshots/<file>`; `docs/` is not served, `.hlxignore` `docs/*`)
File names	Lower case, hyphen-separated, `.png`: `<component-slug>-<purpose>.png`
Component slugs	`header`, `footer`, `fragment`, `page-header`, `section`, `text`, `title`, `image`, `button`, `hero`, `teaser`, `quote`, `testimonial`, `columns`, `cards`, `list`, `filter-list`, `table-list`, `anchor-list`, `accordion`, `tabs`, `tab`, `modal`, `gen-carousel`, `table`, `separator`, `embed`, `video`, `form-variations`, `conversation-canvas`, `interactive-dashboard`
Content	Real locale content from the `us/en` block library or a representative published page; no personal data, no credentials, no unpublished confidential content
Format	PNG, full width of the viewport, cropped to the component plus some context; annotation letters (A, B, C, …) added for authoring views

15.9.2 Standard Screenshots per Component

File name pattern	Purpose	Capture in	Viewport width
`<slug>-desktop-view.png`	Desktop rendering	Preview `https://main--tcs-corp--sradha-tcs.aem.page/en/...`	1440 px
`<slug>-tablet-view.png`	Tablet rendering	Preview	1024 px
`<slug>-mobile-view.png`	Mobile rendering	Preview (device emulation)	402 px

File name pattern	Purpose	Capture in	Viewport width
`<slug>-<variation-slug>.png`	One per variation (6.X.3)	Preview	1440 px (plus 402 px where the variation differs on mobile)
`<slug>-authoring-view.png`	Universal Editor canvas with the block selected; annotation letters per authorable element	Universal Editor (edit mode)	1440 px browser window
`<slug>-properties-panel.png`	Properties panel with the block's tabs	Universal Editor	1440 px
`<slug>-step-NN-<slug>.png`	Authoring guide steps (two-digit step number)	Universal Editor / Sites console	1440 px

15.9.3 Capture Procedure

1. Use a clean browser profile (no extensions except AEM Sidekick), zoom 100 %, light system theme.
2. Preview captures: open the page on `main--tcs-corp--sradha-tcs.aem.page`, open developer tools device toolbar, set the width (1440, 1024 or 402 px) and a height that shows the whole component, wait until the page has fully loaded (header, footer, lazy images), then capture the node or area screenshot.
3. Universal Editor captures: open the page in Universal Editor in a browser window 1440 px wide, select the block, open the properties panel on the right tab, capture.
4. Disable motion where it hides content (operating system "reduce motion" on) for static captures of carousels and animations; capture the motion state separately if needed.
5. Save under `docs/handover/screenshots/` with the exact file name used in the document.
6. Record the capture in the register below (date, page path, who).

15.9.4 Generated Screenshots and Authoring Blocks (version 2.0, 14 October 2026)

Kind	Count	How they were made	In the document
Renderings with callouts	565	One spec per screenshot (component, dialog values, items, section and page properties) rendered into a test page by the xwalk rules (the same markup AEM produces) and captured from the preview at the width of its description; the capture finds the rendered output of each entered field (its text, image, image alt, link or tag label) and draws the field's callout letter on it	Figure + authoring block (Screenshot Details, Field Entry Table, Expected Page Output, Business Rules, Common Authoring Mistakes, Troubleshooting) + walkthrough (section 5)
Annotated previews (`*-authoring-view`)	31	The same, in editor mode (`adobe-ue-edit`), with the letters of each chapter's annotation list	Figure + authoring block
Dialog references (`*-properties-panel`)	32	Drawn from `component-models.json`: every tab and field in dialog order, with defaults, options, descriptions and visibility conditions	Figure
Editor steps, consoles and live media	405	Universal Editor authoring steps, AEM consoles and tools, and renderings that need a playing video, a third-party player (YouTube, Vimeo, X), print preview or an AEM screen	**Steps — …** table

The Field Entry Table of a screenshot is generated from the same spec as the screenshot; its Mandatory, Business Purpose, What Author Should Enter and Validation Rules columns come from the chapter's Authorable Field Specification (section 6), and the texts of the authoring block were written per screenshot from the variation, the block code and the field specification. The specs, the renderer and the capture tooling are kept outside the repository's published code (a local work folder); the screenshots are JPEG files under `docs/handover/screenshots/`. When

real content and Universal Editor access are available, captures of the published site and the editor can replace the figures (procedure 15.9.3); the tables stay valid as long as the values match.

15.9.5 Register

Every figure of the document (628 files). "Callouts on the image" counts the letters drawn on a rendering; the other fields of its Field Entry Table are shown in brackets.

File name	Chapter	Width	Kind	Callouts on the image	Captured	Status

Part 16 — Handover Findings and Open Items Register

16.1 How to Use This Register

While this document was written, every component, model and configuration file was read and checked against the published preview. This part collects what that review found:

- **16.2 Findings** — behaviour in the code or content that differs from expectations, documented as it is today in the relevant chapters, with a recommendation.
- **16.3 Open Items** — facts that weren't available at handover (`[To be confirmed]` in the text).
- **16.4 Not Implemented** — capabilities that are out of the current implementation.

Priorities: **P1** blocks go-live of the affected feature; **P2** should be fixed before or soon after go-live; **P3** improvement. Owners are roles until names are confirmed.

16.2 Findings

ID	Area	Finding	Impact	Recommendation	Priority	Owner	Chapter
F-01	Form Variations	A valid submit shows "Thank you, your details were sent." although there is no submit endpoint (only a `form-variations:submit` DOM event)	Visitors believe their request was sent; leads are lost	Connect a back end (Salesforce, Marketo or an API) before publishing any form, or hide forms	P1	Product Owner, Development	6.29
F-02	Analytics	`cmp:submit` is pushed before the form validates (failed attempts count) and lists all field names, including hidden conditional ones	Over-counted submissions	Push the event after validation; exclude disabled fields	P2	Development	11.4, 6.29
F-03	Analytics	`cmp:search` is pushed for empty search terms	Noise in search reports	Skip empty queries	P3	Development	11.4, 6.30
F-04	Analytics	Card clicks in List and Cards carry no `position` (the attribute is on the list item, the listener reads the link); feature card clicks report under the block id	Position reports empty for cards	Read `data-cmp-position` from the closest list item	P2	Development	6.15, 6.16, 11.6
F-05	Analytics	`mailto:` and `tel:` links are pushed in full as exit links	Contact details in analytics	Mask or classify mailto / tel links	P2	Development, Privacy	11.9
F-06	Analytics	No tag manager is loaded (`scripts/delayed.js` is empty); the Adobe Client Data Layer library isn't loaded, so `adobeDataLayer` is a plain array	No analytics collected yet	Add the Adobe Tags embed (with the Web SDK and the ACDL extension) in `delayed.js`; implement consent	P1 for analytics go-live	Analytics Lead	11.7

ID	Area	Finding	Impact	Recommendation	Priority	Owner	Chapter
F-07	Metadata	AEM may publish page tags as `cq-tags` while the code and the query index read `article:tag`	Page tags may not reach Page Header, List, Filter List and the data layer	Verify on a tagged page; align the code or the publishing	P1 for tag features	Development	7.9, 8.2
F-08	Taxonomy	The published `/en/taxonomy.json` uses the `tcs-corp:` namespace; code examples and field help use `tcs:`	Authors typing `tcs:…` match nothing	Align help texts and examples with `tcs-corp:`	P2	Content Lead, Development	7.1
F-09	Taxonomy	Only the English taxonomy is published; other locales show labels derived from tag IDs; translated titles may need `?sheet=` requests	Untranslated tag labels	Publish the taxonomy for every locale; verify language sheets	P2	Content Lead	7.1, 4.9
F-10	Query index	The live query index doesn't match `helix-query.yaml` (old columns; card, eyebrow, category, hide-in-nav, author and feature columns missing)	Card overrides, hide-in-nav and featured rules have no effect in List / Filter List	Re-index the site after the configuration update	P1 for List / Filter List	Site Administrator	6.16, 6.17, 12.5
F-11	Metadata	`/en/metadata.json` has 29 of the 39 documented columns and no rows; other locales' metadata sheets aren't published; `metadata.source` isn't confirmed	Bulk metadata doesn't apply	Add the missing columns, publish all 13 sheets, configure `metadata.source`	P2	Content Lead, Site Administrator	8.1, 9.2
F-12	Page types	Page Type offers home, article, blog, press-release; Filter List page-type filter offers article, blog, report, case-study, news, event; Page Header Landing layout needs landing / listing (sheet only)	Filters and layouts can't select some pages	Agree one list of page types and content types	P2	Product Owner	4.2, 6.4, 6.17
F-13	Header	A section label that is a direct link (`<li><a>…</a><ul>`) is replaced by a toggle and loses its link; the extra toggle for wrapped links has no visible size (mouse can't open it on desktop); on mobile, sub-lists stay visible while toggles change state	Navigation usability	Fix label detection and toggle sizing; define the mobile sub-menu behaviour	P2	Development	6.1
F-14	Page Header	A featured image that isn't same-origin site media is lazy-loaded (the eager / high priority setting is skipped)	Slower LCP on landing pages	Apply loading attributes to plain `img` too	P3	Development	6.4
F-15	Fragment	No protection against a fragment that includes itself; full URLs in Reference are ignored	A misconfigured fragment never loads	Add a recursion guard; accept same-site URLs	P3	Development	6.3
F-16	Footer	An icon name without a file gives a broken icon; the bar renders when empty; new-tab footer links aren't announced	Visual and accessibility issues	Validate icons; skip empty bars; use `announceNewTab`	P3	Development	6.2
F-17	Hero, Teaser	New-window links don't announce "(opens in a new tab)"; the Hero eyebrow stays brand blue on dark backgrounds	Accessibility (3.2.5 advisory, contrast)	Use `announceNewTab`; adjust the eyebrow colour on dark	P3	Development, Design	6.10, 6.11

ID	Area	Finding	Impact	Recommendation	Priority	Owner	Chapter
F-18	Teaser	Some options have no effect in some layouts (text alignment Center in Text split, top spacing in Background image and Card, image ratio Original for animations)	Author confusion	Hide the options with conditions where they don't apply	P3	Development	6.11
F-19	Dates	Month abbreviations are English in every locale (`utils/dates.js`)	Untranslated dates	Use `Intl.DateTimeFormat` with the page language	P2	Development	4.9
F-20	404 page	`404.html` has its title, "Page Not Found" and "Go home" hard-coded in English ("Go back" is the placeholder `goBack` since version 1.4)	Untranslated fallback 404	Read the texts from placeholders	P3	Development	10.2
F-21	Sections	The Section dialog offers only "Highlight"; the dark, brand and light styles exist in CSS but can't be selected; Separator Theme Auto therefore always uses the light palette	Designs needing dark / brand sections can't be authored	Add the styles to the section model	P2	Development, Design	6.5, 6.26
F-22	Additional tab	Anchor ID, Hide block and spacing apply to blocks only; on section-based components (Tabs container, Gen Carousel) their effect isn't verified	Options may do nothing there	Verify in Universal Editor; remove the tab from section models or support it	P3	Development	5.6, 6.21, 6.24
F-23	Columns	The Columns / Rows dialog fields aren't read by the code (it counts the first row's cells); an empty Columns block logs `failed to load module for columns`; column widths are always equal	Author expectations; console error	Guard empty blocks; document or implement widths	P3	Development	6.14
F-24	Quote	The caption sits inside a `div` within the `figure`	HTML validation warning	Make the caption a direct child of the figure	P3	Development	6.12
F-25	Testimonial	Description shows only when Show Description is exactly `true` (empty hides it); in stats the last paragraph is always the value	Content silently hidden	Default Show Description to on; document stats entry	P3	Development	6.13
F-26	Embed	With a placeholder, YouTube gets `muted=1` (YouTube expects `mute`); no privacy-enhanced domain; Vimeo only accepts `vimeo.com/{id}` URLs	Autoplay may play with sound or be blocked; privacy	Use `mute=1` and `youtube-nocookie.com`; parse Vimeo URLs fully	P2	Development	6.27
F-27	Video	The caption colour (#999 on white, about 2.8:1) is below WCAG AA; End At isn't applied to Vimeo	Accessibility; behaviour	Darken the caption colour; implement Vimeo end	P2	Development, Design	6.28
F-28	Cards, List, Filter List	Secondary text #999 on white (about 2.8:1) and white on brand blue #4673db (about 4.2:1) are below 4.5:1 for small text	Accessibility	Design sign-off or darker tokens	P2	Design	6.15–6.17
F-29	List, Cards	The "(opens in a new tab)" hint is lost on call-to-action buttons (their generated label replaces it); Maximum items has no upper limit in code; an empty Child depth counts as 1 though the dialog shows 2	Accessibility; minor inconsistencies	Append the hint to generated labels; align defaults	P3	Development	6.15, 6.16

ID	Area	Finding	Impact	Recommendation	Priority	Owner	Chapter
F-30	Filter List	Doesn't exclude hide-in-nav pages and doesn't apply redirects (unlike List); Authors lookup is case-sensitive; downloads the whole index; the report card's Download opens the page	Inconsistent results	Align with the List's data rules	P3	Development	6.17
F-31	Table List	An item row with exactly two cells may be read as the legacy header item	An item could disappear	Verify with published content; rely on the item model	P3	Development	6.18
F-32	Form Variations	Desktop: the "* Required fields" note takes a grid column; a checkbox error appears beside the consent text; field width depends on the field name ("name" = half width)	Layout	Span the note across columns; fix the error position; use an explicit width field	P3	Development	6.29
F-33	Conversation Canvas	The footer canvas sample has the search button label "sradha" (tooltip and accessible name); Button Alignment and BG Style have no effect; the menu ignores hide-in-nav	Content and authoring confusion	Correct the label in the footer reference; remove unused options	P2	Content Lead	6.30
F-34	Cards	Cards blocks created before the redesign have no block model (the original template had none) and aren't key-value blocks: their settings can't be edited	Older blocks keep the defaults; authors experience the original capability as lost	Migrate the instances (model, key-value) or recreate the blocks — Phase 0 of the Cards proposal	P2	Content Lead, AMS	6.15
F-35	Inheritance	Inherited Navigation, Footer and 404 Page values are cached per browser session (sessionStorage)	Changes show in a new session only	Document for authors; consider a version key	P3	Development	3.5
F-36	Root URL	`/` returns 404 (no root mapping or redirect to `/en/`)	Visitors to the root see an error	Configure a CDN or root redirect	P1 for go-live	Site Administrator	3.8
F-37	Release	CI runs lint only (`npm test` isn't run); no release tags; `package.json` keeps the boilerplate version; the PR template and Sidekick project name keep boilerplate values	Weaker release control	Run tests in CI; tag releases; update the template and Sidekick config	P3	Development	12.2, 12.3
F-38	Fonts	The Inter font covers Latin scripts only; Chinese, Japanese and Korean use system fonts	Visual consistency in CJK locales	Add CJK font strategy	P3	Design	4.9
F-39	Localisation	No hreflang alternates, no language switcher, no translation automation in the code	SEO across locales; navigation between locales	Add hreflang in the head and a locale switcher	P2	Product Owner, Development	4.9
F-40	Data	Locations and Partners sheets have loaders but no component reads them; `persona`, `country` and `campaign-id` are indexed but unused	Unused content effort	Confirm the roadmap or retire the sheets / columns	P3	Product Owner	9.6, 9.7, 8.2
F-41	Cards	Cards blocks created before the redesign render with the new Figma List design instead of the original bor-	Existing pages changed appearance	Restore the original look as the Classic presentation for those blocks (Cards proposal, Phase 0)	P2	Product Owner, Devel-	6.15

ID	Area	Finding	Impact	Recommendation	Priority	Owner	Chapter
		dered auto-fill grid, without an author action				op-ment	
F-42	Cards	In cards made before the redesign (one rich text cell), the title stays inside Description in the Card dialog (it renders as the title)	Editing confusion	Move titles into the Title field when editing; optional editorial migration (Cards proposal, 7.2)	P3	Content Lead	6.15
F-43	List	`blocks/list/list.js` reads List Item cells in the order link, headline, summary, image, eyebrow, tags, subtitle, ctaLabel, newTab, analyticsLabel, ariaLabel, kind, theme; the model (and so AEM) delivers link, newTab, headline, summary, image, eyebrow, tags, subtitle, ctaLabel, kind, theme, analyticsLabel, ariaLabel	Fixed-list items authored in Universal Editor are misread (title from the new-tab cell, description from the title, …)	**Fixed in 1.4:** `ITEM_FIELDS` (now in `blocks/list/list-data.js`) is the model order; `test/list` checks it against `_list.json` and reads a model-ordered row	Fixed (was P1)	Development	6.16
F-44	Video	The poster fields `placeholder_image` / `placeholder_imageAlt` are an element group, delivered as one `placeholder` cell; `video.js` looks for rows keyed `placeholderimage` / `placeholderimagealt`	The poster and the Play button may not appear on published pages	**Fixed in 1.4:** `video.js` reads the grouped `placeholder` cell (alt text on the image) and still reads separately keyed poster rows	Fixed (was P1)	Development	6.28
F-45	Conversation Canvas	`searchAudioIconAlt` collapses into the audio icon image's alt text (field collapse), but the block reads it from its own row	The voice button's name always falls back to "Search by voice"	**Fixed in 1.4:** the voice button is named by the icon image's alt text (a separate alt row is read too); the icon itself is decorative	Fixed (was P3)	Development	6.30
F-46	Teaser	With Image type Lotto, the Image alt text collapses into the animation link's title, but `teaser.js` reads it from its own row	The animation gets no label and is hidden from screen readers	**Fixed in 1.4:** the animation is named by the link's title, as in the Hero (a separate alt row is read too)	Fixed (was P3)	Development	6.11
F-47	404 page	`404.html` adds "Go back" to `main .button-container`, but the button decorator names the paragraph `button-wrapper`	The Go back button never appears on authored 404 pages	**Fixed in 1.4:** `scripts.js` adds Go back after the sections are loaded, to the first `.button-wrapper` / `.button-container` or below the content; label from the placeholder `goBack`; 2.0: only button paragraphs of the page's text, not buttons inside blocks	Fixed (was P3)	Development	10.2
F-48	Cards, List	On the Dark and Navy card colours, the call to action of statistic and report cards renders as a white button with white text (an empty white pill) on hover and keyboard focus	The call to action is unreadable on dark cards	**Fixed in 1.4:** the white text met the white hover / focus fill of secondary buttons; `styles/card-list.css` gives them the inverse on Dark, Navy and Brand cards (card text colour as the fill, card colour as the text)	Fixed (was P2)	Development, Design	6.15, 6.16
F-49	Teaser	On the Dark and Dark green panels a Primary Button keeps its black fill (`blocks/teaser/teaser.css` adapts only secondary buttons and	The main call to action is barely visible on dark teasers	Give primary buttons on dark panels the inverse style (as F-48 did for cards)	P2	Development, Design	6.11

ID	Area	Finding	Impact	Recommendation	Priority	Owner	Chapter
		text links to dark panels); see `teaser-bg-dark`					
F-50	Teaser	The "Link copied to clipboard" status is anchored to the right edge of the page actions (`.teaser-status`, `right: 0`); with the actions on the left it runs off the left edge	The confirmation is cut off ("ink copied to clipboard")	Anchor the status to the side the actions are on	P3	Development	6.11
F-51	Video	In a modal, the player width rule (`.modal .video-modal-player`, up to 75rem) is wider than the dialog content at 1440 px; see `video-popup`	The pop-up player runs past the dialog's right edge	Limit the player to the dialog content width	P2	Development	6.28, 6.23
F-52	Accessibility	`decorators/author-bio-decorator.js` opens "View LinkedIn profile" in a new tab without saying so (no `announceNewTab`)	Screen reader users are not told a new tab opens (WCAG 3.2.5 practice, project rule in AGENTS.md)	Use `announceNewTab` as the other new-tab links do	P3	Development	6.4
F-53	Section	A section Anchor name that equals the id Edge Delivery gives a heading in it (e.g. Anchor `overview` and the heading "Overview") is not applied: `scripts/scripts.js` sets the section id only when no element has it	Anchor links jump to the heading instead of the section; the section anchor silently does nothing	Document the rule for authors (anchor names different from heading texts) or prefix section ids	P3	Development, Content Lead	6.5, 6.19
F-54	Accordion	An item with an empty Summary still delivers its (empty) cell; `accordion.js` skips only a missing cell [To be confirmed: AEM-delivered markup of an empty field]	An accordion item with only the chevron and no question	Skip items whose summary text is empty	P3	Development	6.20
F-55	Hero	New CTA List items store CTA Arrow "right" (the model default), so the automatic down arrow for `#anchor` links applies only to items without a stored value	Authors expect the arrow to turn down for in-page links	Default the CTA Arrow to empty (automatic) or document "choose Down" (as the walkthroughs do)	P3	Development	6.10
F-56	Video	The pause button's thin brand-blue outline has low contrast on dark posters (`video-background`) [To be confirmed: contrast measurement]	Possible WCAG 1.4.11 (non-text contrast) failure	Give the button a contrasting background or outline	P3	Development, Design	6.28
F-57	Interactive Dashboard	The editor label "Interactive Dashboard (placeholder)" is hard-coded English in `interactive-dashboard.css`	Untranslated editor text (authors only)	Take the label from the placeholders sheet	P3	Development	6.31
F-58	Testimonial	The help texts of Author and Designation & Location (`_testimonial.json`) both suggest typing the name; the block shows Author and Designation separately	The name appears twice when authors follow the help text	Correct the help texts (Author = name only; Designation & Location = role, organisation, city)	P3	Development	6.13
F-59	Universal Editor	Two components are titled "Tab" (`tab`, `tabs-item`) and five "Row" (`table-row`, `table-col-2` … `table-col-5`)	Authors pick the wrong component in the picker	Give each a distinct title (e.g. "Tab (section)", "Tab item", "Row (2 columns)")	P3	Development	5.4, 6.21, 6.22, 6.25

ID	Area	Finding	Impact	Recommendation	Priority	Owner	Chapter
F-60	Captions	Version 2.0 found captions of version 1.4 that did not match their screenshots (values, layouts, widths); the screen descriptions of 2.0 replace them	Readers compared screenshots with wrong descriptions	Keep generating captions from the specs; review captions when a spec changes	Closed (2.0)	Delivery team	15.9

16.3 Open Items (To Be Confirmed)

ID	Item	Owner	Where used
O-01	Stakeholder names, contact matrix, RACI	Product Owner	1.4, 1.11, 14.1
O-02	Business objectives, KPIs and success metrics	Product Owner	1.2, 1.10
O-03	Production domain, CDN vendor and configuration (redirects, 403 / 500 / maintenance pages, `/` → `/en/`)	Site Administrator	2.6, 3.8, 10
O-04	Site configuration: `public.json` paths from `paths.json`, `metadata.source` for the 13 sheets	Site Administrator	3.2, 8.1, 12.5
O-05	Access restrictions of the preview and live hosts; GitHub branch protection	Site Administrator	2.7, 12.2
O-06	AEM user groups, approval workflow, Universal Editor publish destinations	AEM Administrator	5.1, 5.7
O-07	Adobe Tags property, Web SDK datastream, consent platform, XDM schema	Analytics Lead	11.7
O-08	Form back end (Salesforce, Marketo or API) and privacy notices	Product Owner	6.29
O-09	Search service for the Conversation Canvas	Product Owner	6.30
O-10	Business taxonomy (namespaces, owners, translation process)	Content Lead	7.3–7.6
O-11	Master list of page types and content types	Product Owner	4.2
O-12	Translation process (AEM translation, language copies) and per-locale legal requirements	Content Lead	4.9
O-13	SLAs, support hours, escalation contacts, monitoring tools	AMS Lead	14.1–14.5
O-14	Design sign-off for colour contrast (secondary text, white on brand blue, video caption)	Design Lead	16.2 F-27, F-28
O-15	Whether 403 and 500 pages exist in AEM for every locale (only `/en` samples exist locally)	Content Lead	10.3, 10.4
O-16	Maximum video asset size, approved embed domains, consent for third-party players	Product Owner	6.27, 6.28
O-17	Formal browser support matrix	QA Lead	1.7
O-18	Whether AEM omits never-set fields in item rows of positional blocks (Form Variations reads fields by position)	Development	6.29
O-19	Screenshots for every placeholder in this document	Content Lead, QA	15.9
O-20	Whether Universal Editor offers Card in the + of a new (key-value) Cards block in this program, and the Product Owner decisions D-1 to D-6 of the Cards proposal	Product Owner, Content Lead	6.15

16.4 Not Implemented (as of this handover)

Capability	State	Where the extension point is
Adobe Tags, Web SDK, Adobe Analytics, Customer Journey Analytics	Data layer ready; no tag loaded	`scripts/delayed.js` (Part 11.7)
Adobe Target, Adobe Journey Optimizer, personalisation	Not implemented; Teaser has a personalisation marker class only	Data layer, Tags (Part 11)
Form submission back end (Salesforce, Marketo, API)	Event only (`form-variations:submit`)	Form Variations block (6.29)
Site search service	Event only (`conversation-canvas:search`)	Conversation Canvas (6.30)
Locale redirects applied automatically	Sheets exist per locale; the platform applies only a root `/redirects.json`	CDN rules (3.8)
Breadcrumb	No breadcrumb block or decorator exists	A block built from `utils/site.js` `getParentPages()` and the query index titles (6.0.2)
hreflang, language switcher	Not implemented	`head.html`, header (4.9)
Maintenance page	Not implemented	CDN (10.5)
Content Fragment lists in List	Not supported by decision	List (6.16)
Consent management	Not implemented	Tags / CMP (11.7)

Part 17 — Operations Guide

17.1 Purpose and Scope

This part is the complete operational checklist of the TCS Corporate website: every recurring activity of the content team, author support (L1), AMS / site administration (L2) and the development team (L3), with the exact steps, URLs and commands, the evidence each activity leaves and where to escalate. It builds on the health checks (14.7), the operational procedures (14.8), publishing and release (Part 12) and the troubleshooting guide (Part 13), which it references instead of repeating; where Part 17 and 14.7 differ, Part 17 is the checklist of record.

Scope. The 13 locale sites (`/en`, `/de-de`, `/fr-fr`, `/fr-ca`, `/es-es`, `/pt-pt`, `/nl-nl`, `/sv-se`, `/da-dk`, `/no-no`, `/zh-cn`, `/ja-jp`, `/ko-kr`) on Edge Delivery Services (org `sradha-tcs`, site `tcs-corp`), the AEM as a Cloud Service author `https://author-p220207-e2271469.adobeaemcloud.com` (program `p220207`, environment `e2271469`), the GitHub repository `sradha-tcs/tcs-corp` and the site configuration. Out of scope until they exist: the production CDN and domain, Adobe Tags / Web SDK and the analytics products, a form back end and a search service (16.4).

Base URLs and conventions

Item	Value
Live (production origin)	`https://main--tcs-corp--sradha-tcs.aem.live` — replace with the production domain once configured [To be confirmed: production domain and CDN — owner: Site Administrator]
Preview	`https://main--tcs-corp--sradha-tcs.aem.page`
Feature preview	`https://{branch}--tcs-corp--sradha-tcs.aem.page` (slashes in branch names become hyphens)
Admin API	`https://admin.hlx.page/{status,preview,live,index,cache,code,sitemap,log}/sradha-tcs/tcs-corp/main/{path}`; configuration `https://admin.hlx.page/config/sradha-tcs/sites/tcs-corp/…` — authenticated (Sidekick login or API key; no credentials in this document)
AEM author	`https://author-p220207-e2271469.adobeaemcloud.com` (Sites console, Universal Editor, Tools → Workflow → Instances)
Cloud Manager	Program `p220207`, environment `e2271469` (status, logs)
Repository	`https://github.com/sradha-tcs/tcs-corp` (branch `main`)
Activity IDs	`D`– daily, `W`– weekly, `M`– monthly, `R`– release, `V`– validation, `G`– governance
Roles	Content team; L1 (author support / content operations); L2 (AMS / site administrator); L3 (development team, technical lead); Product Owner; Analytics owner; QA; Release manager; AEM Platform Administrator — as in 14.1
Severities	P1–P4 as proposed in 14.1.3; escalation times as in 14.5
Support hours and time zone	[To be confirmed: support hours and time zones — owner: AMS Lead]
Evidence store	[To be confirmed: ticketing tool, queue and evidence location — owner: AMS Lead]; until confirmed, attach evidence to the ticket or change record

Shell set-up for the commands. The commands in this part need `curl`, `jq`, `gh` (GitHub CLI, signed in) and, for the repository checks, a clone of `sradha-tcs/tcs-corp` with `npm install` done. Define these variables first:

```
BASE=https://main--tcs-corp--sradha-tcs.aem.live
PREVIEW=https://main--tcs-corp--sradha-tcs.aem.page
```

```
LOCALES="en de-de fr-fr fr-ca es-es pt-pt nl-nl sv-se da-dk no-no zh-cn ja-jp ko-kr"
SHEETS="placeholders taxonomy metadata redirects data/authors data/locations data/
partners"
SHEETS="$SHEETS data/social-links data/media-contacts"
```

17.2 Daily Activities

ID	Activity	Owner	How (exact steps, URLs, commands)	Evidence / Output	Escalation
D-01	Locale Home pages available	L2	Run script 17.2-A (HTTP status and time of `/{locale}/` for the 13 locales); open `$BASE/en/` and two other locales in a private window: header, footer and first section present, console without `failed to load` … errors	Status list (13 lines, all 200) in the daily log	Non-200 or missing header / footer on a Home page: P1 / P2, 13.4, 13.6, 14.5
D-02	Navigation, footer and 404 fragments of every locale published	L2	Run script 17.2-B (`references/nav`, `references/footer`, `error-pages/404` as `.plain.html` per locale)	Status list (39 lines)	404 for nav / footer: P2 to L1 (publish), 13.6; 404 page: P3, 13.7
D-03	Uptime alerts	L2	Review the uptime tool for `/en/` and every locale Home [To be confirmed: uptime tool — owner: AMS Lead] (14.2)	"No open alerts" or the alert ids	Open alert: P1 / P2 per 14.1.3
D-04	RUM errors and 404s	L2	RUM explorer for the site [To be confirmed: RUM domain key and dashboard access — owner: Site Administrator]: `error` and `404` checkpoints of the last 24 hours, top URLs and referrers; Core Web Vitals p75 per locale	Short note: counts, top 5 404 URLs, any spike	Spike after a release: L3, 13.3; 404 spikes: L1 (links), 13.12 (redirects)
D-05	AEM author and publication queue	L2 / AEM Platform Administrator	Cloud Manager → program `p220207` → environment `e2271469`: status; AEM author → Tools → Workflow → Instances: publication workflows not stuck; Sites console publication status of yesterday's publications	Status note; ids of stuck workflows	Author down or stuck publications: Adobe case, 14.6; freeze publishing
D-06	Code Sync and Build of yesterday's merges	L3 (reviewer on duty)	Run script 17.2-C: `gh run list` for `main` (Build) and the check runs of the head commit of `main` (AEM Code Sync)	Check list (all success)	Missing Code Sync check: 13.22 (Admin API `code`); red Build on `main`: 13.15
D-07	Query index size per locale	L2	Run script 17.2-D (`total` of `/query-index.json`, and the rows per locale); compare with the previous day	Totals in the daily log	Drop of more than expected unpublications: 13.9 (re-index), L3 if `helix-query.yaml` changed
D-08	Ticket queue triage	L1	Review new tickets; assign severity (14.1.3); answer authoring questions with Part 6 and 15.5; check publication status for "page not updating"	Tickets triaged with severity	L1 → L2 per 14.5 and the issue-specific escalation of the Part 13 chapter
D-09	Scheduled publications of the day	Content team / L1	AEM Sites console → Manage Publication (Later) items due today, or Tools → Workflow → Instances; after the time, open the live URLs	List of due items and their live status	Not live after the scheduled time: L2, 13.2

Script 17.2-A — Home pages. Every line should start with `200`.

```
for l in $LOCALES; do
  curl -s -o /dev/null -w "%{http_code} %{time_total}s /$l/\n" "$BASE/$l/"
done
```

Script 17.2-B — Fragments and error pages.

```
for l in $LOCALES; do
  for p in references/nav references/footer error-pages/404; do
    curl -s -o /dev/null -w "%{http_code} /$l/$p.plain.html\n" "$BASE/$l/$p.plain.html"
  done
done
```

Script 17.2-C — Build and Code Sync on `main`.

```
gh run list --repo sradha-tcs/tcs-corp --branch main --limit 10
sha=$(gh api repos/sradha-tcs/tcs-corp/commits/main --jq .sha)
gh api "repos/sradha-tcs/tcs-corp/commits/$sha/check-runs" \
  --jq '.check_runs[] | [.name, .status, .conclusion] | @tsv'
```

Script 17.2-D — Query index rows per locale. It reads the index in pages of 500 rows, as `utils/query-index.js` does.

```
curl -s "$BASE/query-index.json?limit=1" | jq '.total'
offset=0; : > index-rows.jsonl
while :; do
  page=$(curl -s "$BASE/query-index.json?offset=$offset&limit=500")
  echo "$page" | jq -c '.data[]' >> index-rows.jsonl
  [ "$(echo "$page" | jq '.data | length')" -lt 500 ] && break
  offset=$((offset + 500))
done
jq -r '.path | split("/")[1]' index-rows.jsonl | sort | uniq -c
```

Notes:

- D-01 to D-07 replace 14.7.1 #1–#5 and add the fragment, index and scheduled-publication checks. Do them at the start of the support day, before authors' peak publishing time.
- The live index differs from `helix-query.yaml` until the site is re-indexed (F-10); D-07 tracks row counts only; the column check is W-01.
- CSP violations other than those blocking the RUM enhancer are not reported to RUM; D-04 does not detect blocked scripts (W-09 covers them).

17.3 Weekly Activities

ID	Activity	Owner	How (exact steps, URLs, commands)	Evidence / Output	Escalation
W-01	Query index content and columns	L2	`curl -s "$BASE/query-index.json?limit=500" | jq '.columns'`: compare with `path` and the 34 properties of `helix-query.yaml` (8.1.8); in `index-rows.jsonl` (script 17.2-D) find this week's new pages and check `pageType`, `contentType`, `tags`, `publishDate`	Column list; sample of 5 new pages with their values	Missing columns: re-index (F-10, 12.1.9); missing pages: 13.9

ID	Activity	Owner	How (exact steps, URLs, commands)	Evidence / Output	Escalation
W-02	Sitemap	L2	Run script 17.3-A (host count of `<loc>` entries and total); check that this week's new pages are listed	Host and URL count	Wrong host after go-live: 13.25; missing pages: 13.9
W-03	Sheets reachable per locale	L2	Run script 17.3-B (9 sheets × 13 locales, HTTP status and valid JSON)	Table of non-200 sheets (expected gaps recorded, for example metadata sheets not yet published, F-11)	New non-200: L1 to publish the sheet (12.1.6); mapping missing: 13.4
W-04	Data layer on sample pages	Analytics owner (L2 until named)	On one Home, one article and one listing page per week (rotate locales), run 11.8.1 commands and test cases 1, 2, 3, 6 of 11.8.2	Copy of `adobeDataLayer` (`copy(JSON.stringify(adobeDataLayer, null, 2))`) attached	Missing entries or events: 13.20
W-05	Publication pipeline sample	L2	For 5 paths published this week (Sites console or the Admin API log), `GET https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`: preview, live and source times consistent	Status outputs	Live older than source for a published page: 13.2
W-06	Admin API log review	L2	`GET https://admin.hlx.page/log/sradha-tcs/tcs-corp/main` (authenticated): preview, publish, unpublish, cache and code operations of the week by user	List of operations by unexpected users (expected: none)	Unknown user or unexplained unpublish: security contact (14.5)
W-07	Dependency updates	L3	`gh pr list --repo sradha-tcs/tcs-corp --search "author:app/renovate"`: review, merge or close; devDependency PRs labelled `ignore-psi-check` may auto-merge (12.2.4)	PRs reviewed	Breaking update: technical lead
W-08	Weekly performance trend	L2	RUM explorer: LCP, CLS, INP at p75 per locale against 2.5 s, 0.1, 200 ms (14.2); compare with the previous week	Trend note	Regression: 13.16, L3
W-09	Console and CSP check of key templates	L2	Open Home, article, press release, a Filter List page and a page with an Embed on live in a private window with the console open (Verbose level); look for CSP violations, `failed to load …`, 404s of `*.json` / `*.plain.html` (14.3.1)	Note of messages found (expected: none)	CSP: 13.23; block errors: 13.3; sheet 404: 13.13 / 13.14
W-10	Open findings and tickets review	L2 with L3	Review open P2–P4 tickets and the open findings of 16.2 touched this week; update their status	Weekly report (14.5: P3 items in the weekly report)	Overdue items: Product Owner

Script 17.3-A — Sitemap hosts.

```
curl -s "$BASE/sitemap.xml" | grep -o '<loc>[^<]*' | sed 's/<loc>//' > sitemap-urls.txt
wc -l < sitemap-urls.txt
awk -F/ '{print $3}' sitemap-urls.txt | sort | uniq -c
```

Script 17.3-B — Sheets per locale. `OK` means HTTP 200 and parseable JSON.

```
for l in $LOCALES; do
  for s in $SHEETS; do
    code=$(curl -s -o sheet.json -w "%{http_code}" "$BASE/$l/$s.json")
```

```
    if [ "$code" = 200 ] && jq -e . sheet.json > /dev/null; then r=OK; else r=FAIL; fi
    echo "$r $code /$l/$s.json"
  done
done
```

Notes:

- W-01 to W-06 cover 14.7.2 #1–#6; W-07 to W-10 add performance, console and backlog reviews.
- The query index and sitemap are shared by all locales: a problem found in W-01 / W-02 affects every locale.
- A translated taxonomy is a multi-sheet JSON (`:type multi-sheet`, `:names`); script 17.3-B only checks that it parses.

17.4 Monthly Activities

ID	Activity	Owner	How (exact steps, URLs, commands)	Evidence / Output	Escalation
M-01	404 page per locale	QA / L2	Run script 17.4-A (HTTP 404 for `/{locale}/health-check-404`); then open each URL in a browser and in the console run `[document.querySelector('main').className, document.querySelector('main').lang]`: expect `error-authored` and no `lang` (or the locale's own)	13 status lines and 13 console results	Built-in or English 404: 13.7 (P3)
M-02	PageSpeed on key templates	L3 / L2	`https://developers.google.com/speed/pagespeed/insights/?url=<live URL>` for Home, an article, a press release and a listing page (Filter List) of each main locale [To be confirmed: main locales for the monthly check — owner: Product Owner]; mobile and desktop	Scores and report links	Below 90: 13.16 (L3)
M-03	Accessibility spot check	QA	Keyboard-only: header (desktop dropdowns, mobile menu, Escape), Gen Carousel, Tabs, Accordion, Modal, Form Variations; one screen reader pass; an automated scan (for example axe) on the same pages (14.7.3 #3)	Findings list against WCAG 2.1 AA	New failures: L3 ticket (P3, P2 for blocking issues)
M-04	Responsive check	QA	Key pages at 1440, 1024 and 402 px	Screenshots or notes	Layout defects: L3
M-05	Placeholder completeness	L1 / Content team	Run script 17.4-B (keys of `/en/placeholders.json` missing in each locale, compared as the code compares them: lower case, no separators)	Missing keys per locale	Add keys (14.8.3); code key not in any sheet: L3
M-06	Taxonomy completeness	L1 / Taxonomy owner	List the distinct tag IDs of the `tags` column in `index-rows.jsonl` (script 17.2-D) per locale; check that each has a `title` in `/{locale}/taxonomy.json` (language sheet where translated); check the Filter List pills of listing pages	Untranslated or missing tags per locale	Publish the taxonomy (14.8.4, 13.14); F-09
M-07	Bulk metadata sheets and source	L2 / Content Lead	`GET https://admin.hlx.page/config/sradha-tcs/sites/tcs-corp/metadata.json`: 13 sources listed; per locale `curl -s "$BASE/{locale}/metadata.json" | jq '.columns, (.data[].url)'`: 39 columns (8.2), every `url` starting with `/{locale}/`	Source list; column and pattern check per locale	Missing sources: 12.5, 13.17; F-11
M-08	Data sheets accuracy	Content Lead	Review `/{locale}/data/authors.json` (author-id, name, designation, image, linkedin, region) and `media-contacts.json` (name, email, phone, re-	Confirmation by the owners	Changes: content team publishes the sheets; per-

ID	Activity	Owner	How (exact steps, URLs, commands)	Evidence / Output	Escalation
			gion) with their owners; check that Page Headers of recent articles show their authors		sonal data concerns: Privacy / Legal
M-09	Redirect sheets	L2	Review new rows of `/{locale}/redirects.json`; record them for the redirect mechanism (13.12) and check that the List links to their targets	List of pending redirects	Go-live decision outstanding: Product Owner (14.10.4 #2)
M-10	Access review	L2 / AEM Platform Administrator / Repository administrator	Admin Console product profiles and AEM groups for `/content/tcs-corp` and `/content/dam/tcs-corp`; `gh api repos/sradha-tcs/tcs-corp/collaborators --jq '.[].login'`; site configuration admin roles; RUM dashboard users	Leavers removed; review record	Unknown access: security contact (14.5)
M-11	Hidden blocks and drafts	Content Lead	In the Universal Editor, review pages with Hide block on (faded, dashed outline) per locale; confirm they are still intended (14.7.3 #9)	List of hidden blocks and decisions	Confidential content hidden only by CSS: unpublish, P1 (13.18)
M-12	Forms published without a back end	L2 / Product Owner	For the pages of `index-rows.jsonl`, `curl -s "$BASE{path}.plain.html" | grep -c form-variations` (or AEM search for the component); every page with a lead form is approved by the Product Owner until a back end exists (F-01)	List of form pages and approvals	Unapproved lead form: P2, 13.21
M-13	Monitoring and contacts current	AMS Lead	Check that every locale is in the uptime tool, the RUM dashboard and D-01 / M-01; check the contacts of 14.1.3	Updated lists	Gaps: AMS Lead
M-14	Monthly report	L2	Summarise D-, W- and M- results, incidents by severity, P4 backlog (14.5: P4 in the monthly report), open findings (16.2) and open items (16.3)	Monthly operations report to the Product Owner	—

Script 17.4-A — 404 status per locale. Every line should start with `404`.

```
for l in $LOCALES; do
  curl -s -o /dev/null -w "%{http_code} /$l/health-check-404\n" "$BASE/$l/health-check-404"
done
```

Script 17.4-B — Placeholder keys missing per locale.

```
keys() {
  curl -s "$BASE/$1/placeholders.json" | jq -r '.data[]? | (.Key // .key // empty)' \
    | tr 'A-Z' 'a-z' | tr -cd 'a-z0-9\n' | sort -u
}
keys en > en.keys
for l in $LOCALES; do
  [ "$l" = en ] && continue
  echo "== /$l/ missing:"; keys "$l" | comm -23 en.keys -
done
```

Notes:

- M-01 to M-11 cover 14.7.3 #1–#9 and add the metadata, data sheet, form and monitoring reviews.

- The English sheet is the reference for M-05; keys used by the code but missing in `/en/` are checked against the key list of 4.5.3 (92 keys, including `goBack`).
- Pages excluded from the index (references, error pages, data, fragments, modals) are not in `index-rows.jsonl`; M-12 therefore covers content pages only.

17.5 Release Activities

Releases follow 12.4 (checklists) and 12.6 (rollback). The activities below are the operational sequence for a code release; content-only and configuration-only releases use the subsets marked in the notes.

ID	Activity	Owner	How (exact steps, URLs, commands)	Evidence / Output	Escalation
R-01	Plan the release and raise the change record	Release manager	Scope (PRs, content, configuration), rollback plan (12.6.4), time window, owners [To be confirmed: change management process — owner: AMS Lead]	Change record	—
R-02	Code ready on `main`	L3	All PRs merged; Build green on `main` (script 17.2-C); locally on `main`: `npm ci`, `npm run lint`, `npm test`	Command output	Red checks: stop the release (13.15)
R-03	Generated files current	L3	`npm run build:json && git status --porcelain component-models.json component-definition.json component-filters.json` (no output); if LOCALES changed: `npm run build:paths && git diff --exit-code paths.json`	Clean output	Diff: commit via PR before release (13.5, 13.4)
R-04	Feature review and performance	Product Owner / L3 / QA	Feature preview URLs of the PRs at 1440, 1024 and 402 px; PageSpeed on changed templates; accessibility spot check of changed blocks (12.4.1 #5–#7)	Sign-off in the change record	Defects: back to L3
R-05	Content and site data prepared	Content team	New placeholder keys in all 13 sheets; new tags in the namespace and the taxonomy pages; dependent pages prepared but not published; AEM page versions of pages to change (12.4.1 #8–#10, #12)	Checklist	Missing translations: Content Lead decides
R-06	Confirm Code Sync of the release merge	L3	Code Sync check on the merge commit (script 17.2-C); request a changed file on `$PREVIEW/blocks/…` and compare with the commit	Check result	13.22
R-07	Apply configuration	L2	Save the current configuration JSON first (12.6.3); apply `public.json` paths from `paths.json`, `metadata.source`, sitemap or CDN settings through the configuration Admin API (12.5)	Before / after JSON in the change record	Failure: re-apply the saved JSON
R-08	Reload the Universal Editor	Content team	Full browser reload; confirm new fields and components appear (12.4.2 #3)	Confirmation	13.5
R-09	Publish in order	Content team	Sheets (placeholders, taxonomy, data, metadata) → fragments (nav, footer, other references) → pages (Manage Publication, children where needed) (12.4.2 #4–#5)	Publication list	13.2
R-10	Re-index if the index definition changed	L2	After a `helix-query.yaml` change: POST `https://admin.hlx.page/index/sradha-tcs/tcs-corp/main/{path}` for the affected paths (bulk path agreed with the site owner, 12.1.9); then W-01	Index columns present	13.9
R-11	Post-release validation	QA / L2 / Analytics owner	V-02 (code release), plus V-03 / V-04 for configuration, V-05 for the data layer (12.4.3 #1–#8)	Validation record	Failure: rollback decision R-13

ID	Activity	Owner	How (exact steps, URLs, commands)	Evidence / Output	Escalation
R-12	Tag the release	L3	`git tag release-YYYY.MM.DD <merge-sha> && git push origin release-YYYY.MM.DD` (recommended, 12.3) [To be confirmed: release tagging convention — owner: Technical Lead]	Tag in GitHub	—
R-13	Rollback when needed	L3 / Content team / L2	Decide by symptom (12.6.4): revert the merge PR (12.6.1), restore page versions and republish (12.6.2), re-apply the saved configuration (12.6.3); never force-push `main`	Rollback record	Product Owner for P1 / P2 (14.5)
R-14	Close the release	Release manager	Attach R-02 to R-11 evidence; RUM checked the following day (12.4.3 #8); communicate to authors (new fields, components, known limitations)	Closed change record; release note	—
R-15	Hotfix	L3	`hotfix/tcs-<topic>` branch from `main`, expedited review [To be confirmed: emergency change approval — owner: AMS Lead], merge, R-06 and V-02 on the affected pages only	Hotfix PR and validation	P1 rules (14.5)

Notes:

- Code first, then content (Part 12 introduction): a block's pages are published only after R-06.
- Content-only release: R-01, R-05, R-09, V-01, R-14. Configuration-only release: R-01, R-07, V-03 / V-04, R-14.
- Locale launch: the release activities plus 14.8.1 and V-08.
- The PR description must link `https://{branch}--tcs-corp--sradha-tcs.aem.page/{path}`; replace the `{repo}` / `{owner}` placeholders of `.github/pull_request_template.md` by hand (12.2.3).

17.6 Validation Activities

ID	Activity	Owner	How (exact steps, URLs, commands)	Evidence / Output	Escalation
V-01	After a content publication (author definition of done)	Content team / L1	Live URL in a private window: text, images, links, header and footer of the locale; `curl -I "$BASE/{path}"` fresh `last-modified`; page head has the expected `page-type`, `description`, tags; for listed pages, the row in `/query-index.json` after a few minutes; Lists / Filter Lists that should show the page	Checked URL list	13.2, 13.9, 13.11
V-02	After a code release	QA / L3	On live for each affected locale: changed pages and one page per changed block render, console without `failed to load module for …` / `failed to load template …`; changed blocks in the locale's block library in the Universal Editor (author only, excluded from publishing); Home pages (script 17.2-A)	Validation record with URLs and browsers	Revert per 12.6.4
V-03	After a paths configuration change	L2	Publish one page per changed locale; it appears at `/{code}/...`; the Home page at `/{code}/` (script 17.2-A); its sheets (script 17.3-B); `/query-index.json` rows under `/{code}/`	Validation record	Re-apply the previous paths (12.6.3), 13.4
V-04	After a metadata source or bulk sheet change	L2	A page matching a row shows `<meta name="{column}">` in `curl -s "$BASE/{path}"`; templates and Page Header pick the values up; after republication the index row shows them	Head excerpt	13.17
V-05	Data layer validation	Analytics owner / L3	11.8.1 commands and the 16 test cases of 11.8.2 on the feature preview (blocks or decorators changed) and on live after release (cases 1, 2, 3, 6, 13)	Data layer export	13.20

ID	Activity	Owner	How (exact steps, URLs, commands)	Evidence / Output	Escalation
V-06	SEO validation	L2	Page source: `<title>`, `description`, `robots`; in the browser: `og:*`, `twitter:*`, canonical from the SEO decorator (8.1.5); `/sitemap.xml` lists the page (unless `noindex`); `<html lang>` is the locale tag	Head excerpts	13.25; metadata issues 13.17
V-07	Accessibility validation of changed blocks	QA	Keyboard, focus order, Escape for popups, labels from placeholders, pause buttons for motion, new-tab announcements (AGENTS.md accessibility rules)	Findings list	L3 ticket
V-08	Locale launch validation	QA / L2	14.8.1 step 6: Home at `/{code}/`, header, footer, 404 in the locale (script 17.4-A), `<html lang>`, placeholders translated (script 17.4-B), index rows; the locale added to D-01, M-01 and the uptime tool	Launch validation record	13.4, 13.6, 13.7, 13.13
V-09	Cache and redirect validation	L2	`curl -I "$BASE/{path}"` (status, `last-modified`); once a redirect mechanism exists: `curl -I` of old URLs and `/` returns 301 / 302 with the right `location`	`curl` output	13.2, 13.12, 13.28
V-10	Analytics validation after Tags is added	Analytics owner	11.8.3 (Adobe Experience Platform Debugger, consent pending / denied sends nothing) — Not implemented (as of this handover)	Debugger output	13.20

Notes:

- Validate on preview before publishing where possible; the editor cannot show index-based lists or reliably load sheets (13.10, 14.9 #18).
- Use a private window or a cache-busting query (`?nocache=1`) for every visual check (12.1.3).

17.7 Governance Activities

ID	Activity	Owner	How (exact steps, URLs, commands)	Evidence / Output	Escalation
G-01	Change records for configuration and bulk operations (each change)	L2	Every configuration change (12.5) and every Admin API bulk operation (`/*` paths) is agreed with the site owner, logged with the before / after JSON (12.1.9)	Change record	Unrecorded change found in W-06: AMS Lead
G-02	Tag governance (per request; review cadence [To be confirmed: frequency — owner: taxonomy owner])	Taxonomy owner	Apply the 12 rules of 7.4.1 (`tcs-corp:` namespace, naming, English title first, translation before use, change request for ID changes, deprecation only when unused); procedure 14.8.4	Approved tag requests; republished taxonomy pages	Conflicts: Content Lead
G-03	Placeholder key governance (each release)	Content Lead / L3	New keys come with English fallbacks in code and are added to all 13 sheets before the release (12.4.1 #8); keys are never renamed in sheets only	Key list in the release note	Missing translations: Content Lead
G-04	Metadata values governance (quarterly [To be confirmed: frequency — owner: Product Owner])	Product Owner / Content Lead	Maintain one list of page types and content types (O-11, F-12), the region values of Media Contacts, persona and campaign code formats (8.2.27, 8.2.30, 8.2.33); align the Filter List options	Approved value lists	—

ID	Activity	Owner	How (exact steps, URLs, commands)	Evidence / Output	Escalation
G-05	Locale governance (per request)	Product Owner	New locales follow 14.8.1 as one change (code, configuration, content, monitoring)	Locale launch record	—
G-06	Third-party scripts, embeds and privacy (per request)	Product Owner / L3 / Privacy	Security review of every new third-party script (CSP, 13.23), approved embed domains and consent (O-16), privacy review of data layer values before Tags (11.9) and of the data sheets with personal data (2.10.8)	Review record	Security contact (14.5)
G-07	Access governance (monthly, with M-10)	AMS Lead	Least-privilege product profiles and AEM groups per locale [To be confirmed: permission model — owner: AEM Platform Admin]; offboarding within [To be confirmed: offboarding time — owner: TCS IT]; GitHub branch protection [To be confirmed: branch protection rules on `main` — owner: Repository Administrator]	Access review record	—
G-08	Findings and open items (monthly)	Product Owner / Technical Lead	Review Part 16 (16.2 findings by priority, 16.3 open items, 16.4 not implemented); assign owners and dates; record fixes	Updated register	P1 findings blocking go-live: Product Owner
G-09	Documentation upkeep (each change)	L3 / L2	Per AGENTS.md "Contributing": block README, `decorators/README.md` / `utils/README.md`, AGENTS.md, this handover (component chapter, Part 16, revision history), then regenerate the PDF (`docs/handover/README.md`)	Updated documents with version	—
G-10	Dependency and code hygiene (monthly)	Technical Lead	Renovate PRs (W-07), `npm test` in CI (F-37, recommended), boilerplate leftovers (Sidekick label, PR template, `package.json` name / version, 14.9 #21)	Hygiene backlog	—
G-11	Configuration backup (before each change, and monthly)	L2	Save the current site configuration (`public.json` paths, `metadata.json`, CDN, access) [To be confirmed: backup of the site configuration — owner: Site Administrator]; compare paths with `paths.json` of `main`	Dated JSON copies	Difference found: 13.4
G-12	Block libraries and templates (each release)	Content Lead	Keep each locale's `block-library/` and `/content/tcs-corp/site-global-templates/` in step with new components and fields; both stay excluded from publishing	Updated pages	—

Notes:

- Governance decisions that change code (value lists in models, new placeholders, new locales) are implemented through the release activities (17.5).
- Owners named "To be confirmed" in 14.1.3 must be assigned before the AMS handover is signed off (14.10).

17.8 Operations Calendar and RACI

```
 DAY     | start of support day: D-01..D-07, D-08 triage (continuous), D-09 at schedule
times
 WEEK    | Mon: W-01, W-02, W-03, W-05     Tue: W-04, W-09     Wed: W-06, W-07
         | Thu: W-08                       Fri: W-10 weekly report
 MONTH   | week 1: M-01, M-02, M-03, M-04  week 2: M-05, M-06, M-07, M-08, M-09
         | week 3: M-10, M-11, M-12, M-13  week 4: M-14 monthly report, G-08, G-10, G-11
 RELEASE | R-01..R-15 per release window; V-01..V-09 as listed per change type
 ON EVENT | G-01 config / bulk change, G-02 tag request, G-05 locale request, G-06 new
script
```

The weekdays and weeks above are a proposed default [To be confirmed: operations calendar and time zone — owner: AMS Lead].

Frequency	Activities	Primary owner	Report
Daily	D-01 to D-09	L2 (D-06: L3; D-08, D-09: L1 / Content team)	Daily log

Part 18 — New Joiner Training Guide

This part is the training workbook for people joining the TCS Corporate Website team: content authors, content leads, developers, site administrators and AMS / support engineers. It does not repeat the handover: each module gives the essentials for one topic in a few pages, points to the chapters to read, and is followed by hands-on exercises (18.10) on this project's real fields, paths and sample pages, a knowledge validation checklist (18.11) and a completion record (18.12). A trainee who has completed the learning path of their role can work on the site without help for the everyday tasks of that role and knows where to look for the rest.

18.1 How to Use This Guide

18.1.1 Learning Paths per Role

Each role follows the modules, readings and exercises in its row. Durations are the recommended effort for a trainee new to Edge Delivery Services and the Universal Editor (reading plus exercises); a trainer may shorten them for experienced AEM users. [To be confirmed: training owner, trainers and schedule — owner: Content Lead (authoring roles), Development Lead (developer), AMS Lead (site administrator, AMS)]

Role	Goal after training	Modules (Part 18)	Handover reading	Exercises (18.10)	Recommended duration
Content author	Create, edit, preview and publish pages of one locale with every common component; fix own authoring mistakes	18.2, 18.4, 18.5 (overview), 18.6 (tag picker), 18.7, 18.8, 18.9 (author issues)	Part 5; Part 6 sections 1, 4, 5, 6 and 12 of the components used; 15.5 cheat sheets	EX-01 to EX-14, EX-21	3 days (about 9 hours of reading, 12 hours of exercises)
Content lead	Everything a content author does, plus locale resources: navigation, footer, 404, sheets, metadata, taxonomy, authors data, publishing governance	All modules 18.2 to 18.9	Author reading plus Parts 3, 4, 7, 8, 9, 10; 12.1; 16.3	EX-01 to EX-21	4 days (about 12 hours of reading, 18 hours of exercises)
Developer	Change blocks, decorators, utils, templates and models following AGENTS.md; release through pull requests; diagnose rendering issues	18.2, 18.3, 18.5, 18.6, 18.7, 18.8 (code), 18.9	AGENTS.md; Part 2; Part 6 sections 8 to 11 of each component; Parts 11, 12, 13; 15.4; `decorators/README.md`, `utils/README.md`, `templates/README.md`	EX-01, EX-03, EX-12, EX-14, EX-22, EX-24, EX-25, EX-27	5 days (about 20 hours of reading and code walk-through, 12 hours of exercises)
Site administrator	Keep the site configuration, paths, metadata sources, index and sitemap correct; run Admin API operations safely	18.2, 18.3, 18.5, 18.8, 18.9	Parts 3, 9, 10, 12 (12.1.9, 12.5, 12.6.3), 14; 17.1	EX-01, EX-16, EX-17, EX-23, EX-26, EX-27	3 days (about 10 hours of reading, 8 hours of exercises)
AMS / support	Triage tickets, diagnose with the toolkit, run the recurring operations and escalate correctly	18.2, 18.3, 18.8, 18.9	Parts 13, 14, 16, 17; 11.8; sections 13 and 14 of each component used most	EX-01, EX-21, EX-22, EX-23, EX-24, EX-26, EX-27	3 days (about 10 hours of reading, 8 hours of exercises)

Order. Read the modules of your path in order, then do the exercises of your path in their numbered order (later exercises reuse earlier results: EX-02 creates the training article used in EX-17 and EX-20, EX-03 the training landing page used up to EX-14). Answer the questions of 18.11 for your topics and record the result in 18.12.

18.1.2 Before You Start

Prerequisite	How to get it	Needed by	Reference
Adobe IMS account and the AEM author product profile of `author-p220207-e2271469`	Request through the AEM Platform Administrator (Adobe Admin Console)	All roles	5.1.2
Edit (and, for leads, publish) rights on the locale folder, `/content/dam/tcs-corp/` and, for content leads, the locale sheets and `references/`	AEM user groups [To be confirmed: AEM user groups, permissions per locale and publish approval workflow — owner: AEM administrator]	Authors, content leads	5.1.2, O-06
AEM Sidekick browser extension with the project `sradha-tcs/tcs-corp`	Chrome Web Store	All roles	5.1.2, 12.1.5
Tagging console permissions on `/content/cq:tags/tcs-corp`	AEM administrator [To be confirmed: tag permission groups — owner: AEM administrator]	Content leads (EX-19)	7.5
GitHub access to `sradha-tcs/tcs-corp`, Node.js 20 or newer, `npm`, `gh`, `curl`, `jq`	Development Lead	Developers, AMS, site administrators	12.2.1, 17.1
Admin API access (Sidekick login or an API key with a role in the site configuration)	Site Administrator	Site administrators, AMS	12.1.9
A training page	See 18.1.3	Authoring exercises	18.1.3

18.1.3 Training Environment and Rules

- **Training page.** Do the authoring exercises on your own page in the training folder agreed with the Content Lead [To be confirmed: training folder (a folder below a locale, for example `/content/tcs-corp/us/en`, never published to live) — owner: Content Lead]. In the steps, `{training page}` is the AEM path of your own page in that folder (for example `/content/tcs-corp/us/en/{training folder}/{your name}`) and `{training path}` its published path (`/en/{training folder}/{your name}`). The exercises create two pages below it: `article` (EX-02) and `landing` (EX-03).
- **Publish to Preview only.** Exercise pages, references and sheet rows are published to **Preview** (`https://main--tcs-corp--sradha-tcs.aem.page`), never to **Live**, unless the exercise says so and the owner has approved it. Preview URLs are reachable by anyone who has the link; use sample text only and no personal data (5.8).
- **Sample content.** The values in the steps are the sample content used for the handover screenshots (sample pages and media on the preview, for example `/en/insights/agentic-bank`, `/en/services`, `/en/media/photo-1.svg`, `/en/media/wide.svg`). Use them as given so your result can be compared with the figures of Part 6.
- **Block library.** Each locale's `block-library/` folder (author only, never published) shows every block variation in the locale's language; open it to see an option before you use it (5.4.5). Do not edit the block library pages in exercises.
- **Shared resources.** Exercises EX-15 to EX-20 change locale-wide resources (references, sheets, tags). Do them only with the Content Lead's approval, or walk through the steps without the last save / publish step.
- **Clean up.** At the end of the training unpublish (Preview) and delete your training pages, extra references and sheet rows, as in EX-21.

18.1.4 How the Exercises Are Written

Every exercise has an **Objective**, the **Role** it is meant for, the **Prerequisites**, a **Steps** table in the document's format (Step, Where, Field / control, Value / action; dialog tabs are written `Hero › Content`), the **Expected Result**, a **Self-check** question and the **Reference chapter**. Fields not listed keep their defaults. The exercise index is in 18.10.1.

18.2 Solution Overview

The TCS Corporate Website is the multi-locale corporate site of TCS, authored in AEM as a Cloud Service with the Universal Editor and delivered by Edge Delivery Services (xwalk). One code base (vanilla JavaScript and CSS, no build step) serves 13 locale sites. Details: Part 1 and the Executive Summary.

Fact	Value	Reference
Author	`https://author-p220207-e2271469.adobeaemcloud.com` (program p220207, environment e2271469); content in `/content/tcs-corp`, assets in `/content/dam/tcs-corp/`	1.1, 5.1
Preview / live	`https://main--tcs-corp--sradha-tcs.aem.page/en/` / `https://main--tcs-corp--sradha-tcs.aem.live/en/`	5.7.1
Production domain	[To be confirmed: production domain and CDN — owner: Site Administrator]	16.3 O-03
Code	GitHub `sradha-tcs/tcs-corp`, branch `main`; deployed by AEM Code Sync on every push	12.2
Locales	13: `/en`, `/de-de`, `/fr-fr`, `/fr-ca`, `/es-es`, `/pt-pt`, `/nl-nl`, `/sv-se`, `/da-dk`, `/no-no`, `/zh-cn`, `/ja-jp`, `/ko-kr` (AEM `us/en`, `de/de-de`, …)	3.2
Per-locale resources	`references/nav`, `references/footer`, `error-pages/404` (403, 500 for a CDN), `placeholders`, `metadata`, `taxonomy`, `redirects`, `data/authors`, `data/locations`, `data/partners`, `data/social-links`, `data/media-contacts`, `block-library/`	3.1
Components	31 documented components (6.0): 4 page-level, 5 page structure and default content, 22 content blocks; 18 item components	6.0, 15.8
Templates (Page Type)	Home, Article, Blog, Press Release; template pages in `/content/tcs-corp/site-global-templates`	4.1
Dynamic content	List, Filter List and Conversation Canvas read `/query-index.json`; Page Header and templates read page metadata and the Authors / Media Contacts sheets; Footer reads Social Links; tag labels come from the taxonomy	4.3, 4.7
Analytics	Adobe Client Data Layer (`window.adobeDataLayer`) for every page and block; no tag manager loaded	Part 11, F-06
Not implemented (as of this handover)	Adobe Tags / Web SDK / Analytics / Target, form back end, search service, per-locale redirects at the edge, `/` → `/en/`, hreflang, language switcher, breadcrumb, maintenance page, consent management	1.6.2, 16.4, 6.0.2

The five things to remember.

1. Content, code and configuration are released separately: code first, then content (Part 12).
2. Every locale has its own navigation, footer, 404 page, UI text, metadata, taxonomy, redirects and data sheets; nothing is shared between locales (3.6, 4.9).
3. A change to a reference page, sheet or asset is visible only after that item is published (5.7.4).
4. Listings (List, Filter List) read the published query index, not the author repository: they show results on preview and live, not in the editor (13.10).
5. Several capabilities are events only (form submit, search) or not implemented; check 16.4 before promising a feature.

18.3 Architecture Overview

```
AEM author + Universal Editor                GitHub sradha-tcs/tcs-corp (main)
/content/tcs-corp, /content/dam/tcs-corp     blocks/ decorators/ utils/ templates/ models/
       | publish (Preview / Live)                       | push / merge
       | xwalk bridge (fstab.yaml)                     | AEM Code Sync
       v                                               v
+-------------------------------------------------------------------------------+
| Edge Delivery Services   org sradha-tcs   site tcs-corp                       |
| content bus (pages, sheets)   media bus (/media_ images)   code bus (GitHub)  |
| configuration: public.json paths (= paths.json), metadata.source, index, sitemap |
| preview *.aem.page                    live *.aem.live  -> CDN / domain [TBC]  |
+-------------------------------------------------------------------------------+
       | HTML with head.html
       v
Browser: scripts/aem.js + scripts/scripts.js
  eager    decorateHead (SEO, lang), template, decorate main, first section (LCP)
  lazy     header, other sections, footer, lazy-styles.css, fonts
  delayed  after 3 s: scripts/delayed.js (empty today; Adobe Tags would go here)
  window.adobeDataLayer: page, components, cmp:* events
```

Layer	What it holds	Rule	Reference
`blocks/{name}/`	`{name}.js` (default export `decorate(block)`), `{name}.css`, `_{name}.json` (definition, model, filter)	CSS scoped to the block; mobile first; rem units; breakpoints 600 / 900 / 1200 px	AGENTS.md, 2.3
`decorators/`	Shared code that builds or decorates UI (buttons, links, headings, images, media, data layer, block options, templates)	Every button goes through the button decorators	`decorators/README.md`
`utils/`	Helpers without UI (site and locales, metadata, placeholders, taxonomy, query index, data sheets, dates, ids)	Utils never import decorators	`utils/README.md`
`templates/{name}/`	Page Type code for home, `article`, `blog`, `press-release`	Listed in `TEMPLATES` in `scripts/scripts.js`	4.1
`scripts/`	`aem.js` (core, never modified), `scripts.js` (page loading), `delayed.js`, `editor-support.js` (Universal Editor live updates)	—	2.3, 3.4
`models/` and `component-*.json`	Page, section, default-content and shared card-list models; aggregated definitions, models and filters	Edit the partials, then `npm run build:json`	12.5, 15.4
Root configuration	`paths.json` (generated by `npm run build:paths`), `helix-query.yaml`, `helix-sitemap.yaml`, `head.html`, `404.html`, `fstab.yaml`, `.hlxignore`	`paths.json` and the site configuration's `public.json` paths must match	12.5

Where a value comes from. UI text: `/{locale}/placeholders.json` (`utils/placeholders.js`, English fallback in code). Tag labels: `/{locale}/taxonomy.json` (`utils/taxonomy.js`). Page values: the page head (`utils/metadata.js`). Lists: `/query-index.json` (`utils/query-index.js`, filtered to the locale). Data: `/{locale}/data/*.json` (`utils/data.js`). Inherited Navigation, Footer and 404 Page: the parents' heads (`utils/inherited-metadata.js`, session cache). Each is loaded once per page view (1.7.1).

18.4 Authoring Basics

Full chapter: Part 5. The essentials:

Task	How	Reference
Open a page	Sites console → TCS Corp › {country} › {locale} › page → select → **Edit**	5.2
Find your way	Toolbar (location, device size, Preview, Publish), canvas, Properties panel, Content tree, component actions Add (+) / Duplicate / Delete	5.2.1
Create a templated page	Copy the page from `site-global-templates` (home, article, blog, press-release), paste in the locale folder, rename	5.3.2
Create another page	Create > Page in the locale folder; set Title, Description, Page Type	5.3.2, 5.3.4
Add a section	Content tree → Main → Add (+) → Section (or Gen Carousel, Tabs Container)	5.4.1
Add a component	Select the section → Add (+) → Default Content or Blocks group	5.4.5
Add items	Select the container block (Cards, List, Accordion, Tabs, Table, Table List, Form Variations, Conversation Canvas) → Add (+)	5.4.3
Use images	Image fields open the Assets picker on `/content/dam/tcs-corp/`; always write the alt text, empty only for decorative images	5.5
Additional tab	Anchor ID (`anchor-…`), Hide block, Padding and Margin (spacing tokens); on every block except Header and Footer, not on items, sections and default content	5.6
Check	Preview mode (hidden blocks gone, links clickable), device sizes mobile < 600 px, tablet 600–1199 px, desktop ≥ 1200 px (header switches at 900 px)	5.2.4, 5.2.5
Validate	The checklist of 5.7.7: Title and Description, one `h1`, alt texts, links to published paths, no unintended hidden block, anchors, three devices, translated labels	5.7.7

What may go where. Main allows Section, Gen Carousel and Tabs Container; a Section allows the 27 components of 5.4.3; a Gen Carousel only Hero and Teaser; a Tabs Container only Tab, Columns, Title, Text, Image and Button. The Add (+) picker only shows what the selected container allows.

Edit mode differs from the site. In edit mode blocks with Hide block are faded with a dashed outline, carousels don't autoplay, List / Cards / Filter List show editor hints and the List shows no query-index pages (5.2.4). Always check the result in Preview mode and on `.aem.page`.

Most common author mistakes (5.8 and the component chapters): a heading level chosen for its size; several links in one paragraph expected to become buttons; links pointing at `/content/tcs-corp/…`; text inside images; Hide block used for confidential content; a changed sheet or fragment not published; Anchor IDs without the `anchor-` prefix; tag IDs typed instead of picked (`tcs:` instead of `tcs-corp:`).

18.5 Metadata Guide

Full chapters: 4.3, Part 8 (8.3 is the one-page cheat sheet), 9.2.

Need	Set it in	Field / column	Notes
Browser and SEO title, description	Page properties	Title, Description	Rendered server side; Page Header, cards and the index use them
A different SEO or social title / image	Bulk metadata sheet	`meta-title`, `meta-description`, `og-*`, `twitter-*`, `canonical-url`	Applied in the browser by `decorators/seo-decorator.js` (crawlers without JavaScript don't see them)
Exclude from search engines	Bulk metadata sheet	`robots` (`noindex`, `nofollow`)	Applied server side; noindex pages leave the sitemap

Need	Set it in	Field / column	Notes
Template	Page properties	Page Type (Default, Home, Article, Blog, Press Release)	Page value wins over the sheet's `page-type`; other values (`landing`, `listing`, `report`, …) only via the sheet
Article header details	Bulk metadata sheet	`author-id`, `publish-date` (YYYY-MM-DD), `reading-time`, `content-type`, `listen-link`, tags	Read by the Page Header and the Article / Blog templates
Card values in a List	Bulk metadata sheet	`card-title`, `card-description`, `card-image`, `card-image-alt`, `eyebrow`, `category`	Read from the query index (republish the pages; F-10)
Hide from List results	Bulk metadata sheet	`hide-in-nav` = `yes`	List only; the Filter List ignores it (F-30)
Featured / hero cards in a Filter List	Bulk metadata sheet	`featured` (yes / true), `priority` (number)	Featured rule `featured=true` or `priority<=3`
Media contacts of a press release	Bulk metadata sheet	`region`	Matched to the Media Contacts sheet `region`, else all contacts
Header, footer and 404 page of an area	Page properties (top page of the area)	Navigation, Footer, 404 Page	The only inherited values (3 levels: own, nearest parent, locale default)
Page language other than the locale	Bulk metadata sheet	`language` (for example `en-GB`)	`<html lang>`, `xdm:language`, sorting

Rules to remember.

1. Page properties are only Title, Description, Keywords, Page Type, Navigation, Footer and 404 Page; page tags are set in the Sites console page properties (Basic → Tags) or a `tags` sheet column (7.8.1, F-07).
2. The bulk metadata sheets apply only when all 13 are listed in the site configuration's `metadata.source`, and each sheet's URL patterns must start with its locale (`/de-de/**`) [To be confirmed: metadata.source configured for the 13 locales — owner: Site Administrator].
3. Rows are evaluated top to bottom; put `/en/**` before `/en/insights/**` (8.1.2).
4. Lists and filters change only after the affected pages are republished and re-indexed (8.3 tip).
5. Verify a value in the delivered head: `curl -s {url} | grep '<meta name="{column}"'`; the query index row at `/query-index.json`.

18.6 Taxonomy Guide

Full chapters: 4.4, Part 7 (7.4 governance, 7.6 lifecycle), 9.3, 15.7.

Topic	What to know	Reference
Namespace	`tcs-corp:` with the trees `tcs-corp:content-type` (8 tags), `tcs-corp:industry` (no child tags yet) and `tcs-corp:region` (4 tags) in the published `/en/taxonomy.json`. Code examples and help texts that use `tcs:` match nothing (F-08)	7.1.2
Picking tags	Always with the tag picker (`aem-tag` fields: Teaser Tags, List Tags, List Item Tags, Card Tags, Filter List Primary filter category / tags, Taxonomy root); never type IDs	7.1.1, 7.4.1
Labels	From the locale's `/{locale}/taxonomy.json` (the language sheet when translated), else derived from the ID (`tcs-corp:region/middle-east-africa` → "Middle east africa"); only `/en` was published at handover (F-09)	7.1.4, 7.1.5

Topic	What to know	Reference
Matching	A filter tag matches the tag and every descendant (`tcs-corp:region` matches `tcs-corp:region/europe`); a parent tag on a page doesn't match a child filter; a bare namespace matches nothing below it	7.2.2
Tags versus metadata	Classification, filtering and translated labels: tags. One value per page that drives layout or code (`page-type`, `content-type`, `featured`, `region`): metadata. The `content-type` metadata and the `tcs-corp:content-type/*` tags aren't connected; keep them aligned	7.3.3, 4.2.2
Display limits	List and Cards show up to 3 tag labels, the Filter List up to 2	7.4.1
Lifecycle	Create (taxonomy owner approves), translate, republish the 13 taxonomy pages; moving or renaming a tag changes its ID (republish tagged pages, re-select in block fields)	7.6

18.7 Component Guide

Which component for which need (inventory and mapping in 6.0; one chapter per component in Part 6). "Avoid" names the component that is often picked wrongly for the need.

Need	Use	Avoid	Chapter
Opening banner of a landing page with image or animation and CTAs	Hero	Teaser Background image (for in-page banners)	6.10
Title area of an article, blog, press release, listing or landing page, from metadata	Page Header (added automatically by the Article, Blog, Press Release templates)	A Hero or a Title typed by hand on templated pages	6.4
Rotating banners	Gen Carousel section with Hero or Teaser slides	Several Heroes stacked	6.24
Image and text side by side, text split, background image band or a content card	Teaser (Layout: Image & Text, Text split, Background image, Card)	Columns (no design-system styling)	6.11
Free layout of default content in columns	Columns	Table for layout	6.14
A set of hand-picked cards (image, panel, report, statistic)	Cards with Card items	List Fixed list when no page metadata is wanted	6.15
Cards built from pages (child pages, fixed list of pages, tagged pages)	List	Cards typed by hand (they don't update)	6.16
Related content on an article	List with Tagged pages (Search root, Tags, Maximum items)	Filter List (too heavy for 3 cards)	6.16
A content hub with filters, featured and hero cards	Filter List	List (no visitor filtering)	6.17
A divided list of industries, solutions or products with arrows or buttons	Table List	Cards	6.18
Chapter navigation of a long page	Anchor List with section Anchor names	Text links to #… without anchors	6.19
Frequently asked questions, collapsible details	Accordion with Accordion Items	Tabs	6.20
Content in tabs	Tabs Container section with Tab markers (content on the page) or the Tabs block (content in fragments)	Accordion	6.21, 6.22

Need	Use	Avoid	Chapter
Content shown in a dialog	Modal block, or any link to a page in a `/modals/` folder	Hidden blocks	6.23
Shared content reused on many pages	Fragment (page under `references/`)	Copy and paste	6.3
A client or leader quote with a portrait	Quote	Testimonial	6.12
A testimonial with author and results (stats)	Testimonial	Quote	6.13
Tabular data	Table (1 to 5 columns, Striped, Bordered, header options)	Columns or images of tables	6.25
A visual or semantic break between content	Separator	Empty paragraphs, spacing hacks	6.26
A YouTube, Vimeo or X post	Embed (with a placeholder image for click-to-load)	Video for X posts	6.27
A video file from AEM Assets, or a YouTube / Vimeo video with playback options and captions	Video	Embed when captions or playback options are needed	6.28
A contact or enquiry form	Form Variations (only after a back end is connected: F-01)	Publishing a form without a back end	6.29
An “ask us a question” search entry point	Conversation Canvas (no search service connected)	—	6.30
Body text, lists, inline links	Text	Title for paragraphs	6.6
A heading on its own	Title with Title Type	Bold Text	6.7
A single image in the flow	Image with Alt Text	Section Background Image for informative images	6.8
A standalone call to action	Button (Views, Type, Icon, Alignment)	A bold link in a paragraph when a specific view is needed	6.9
A band with a background, fixed width or rounded corners	Section properties	Padding hacks in the Additional tab	6.5
A data dashboard	Not available: Interactive Dashboard is a placeholder that renders nothing	Using the placeholder on live pages	6.31
A breadcrumb	Not implemented (as of this handover)	—	6.0.2

18.8 Publishing Guide

Full chapters: 5.7, Part 12.

Content lifecycle. Draft (author only) → Preview (`.aem.page`) → Live (`.aem.live`, CDN purged, query index and sitemap updated) → Unpublished (404 page shown, index row removed). Pages under `block-library/` and `site-global-templates/` can’t be published (`paths.json` excludes).

Step	Action	Who	Reference
1	Check the page in Preview mode at the three device sizes; run the 5.7.7 checklist	Author	5.7.7

Step	Action	Who	Reference
2	Publish the dependent items first: sheets (placeholders, taxonomy, data, metadata), then fragments and references (nav, footer), then assets	Author / content lead	12.4.2
3	Publish the page to Preview (Universal Editor Publish, or Sites console Manage Publication with Destination Preview); open `https://main--tcs-corp--sradha-tcs.aem.page/{locale}/{path}`	Author	5.7.2
4	After approval publish to Live (Publish, Quick Publish or Manage Publication; schedule with Later)	Publisher	5.7.3, 12.1.4
5	Verify on `.aem.live` in a private window (or with `?nocache=1`); new versions normally appear within one to two minutes	Author	5.7.6
6	For Navigation, Footer or 404 Page changes, verify in a new browser session (session cache)	Author	4.3.4

What must be published separately: navigation and footer pages, fragments, modal pages, error pages, the locale sheets and data sheets, and assets (5.7.4). A sheet edited but not published has no effect.

Unpublishing and rollback. Before unpublishing a public URL add a redirect to the locale's `redirects` sheet (not applied by the platform today: 3.8, 13.12); then Manage Publication → Unpublish and check the 404 page. Roll back content with Timeline → Versions → Revert to this Version and republish (5.7.9, 12.6.2).

Code and configuration (developers, site administrators). Code: feature branch `feature/tcs-<topic>`, `npm run lint`, `npm test`, feature preview `https://{branch}--tcs-corp--sradha-tcs.aem.page/`, PageSpeed check, pull request with the preview link, merge, Code Sync (12.2); roll back with a revert PR, never a force-push (12.6.1). Configuration: through the Admin API configuration endpoints, with a copy of the previous value (12.5, 12.6.3). Release checklists: 12.4.

18.9 Troubleshooting Guide

Full chapters: Part 13 (triage and 30 issues), Part 14 (runbook), section 13 of each component chapter.

Triage path (13.1):

```
1. Where?     Universal Editor / .aem.page / .aem.live / production domain
2. Which locale? one locale -> locale resources (nav, footer, sheets, taxonomy, 404)
3. How wide?  one page -> content; one block type -> block code or content;
              every page -> code, configuration or platform
4. When?      what was merged, published or configured just before (Admin API log)
5. Breakpoint? mobile < 600 px, tablet 600-1199 px, desktop >= 1200 px, header 900 px
6. Tools      console errors, Network tab, curl {page}.plain.html, ?debug=list,
              window.adobeDataLayer, Admin API status, Sidekick, aem up
```

Symptom	First check	Likely cause	Chapter
Page not updated after publishing	Admin API status (preview, live, source times); references published?	Published to Preview only; reference not published; cache	13.2
Block shows raw rows or nothing; `failed to load module for …`	Console stack; block JS / CSS requests; `.plain.html` rows	Code error, block not on `main`, content in an unexpected structure	13.3
Pages at `/content/tcs-corp/…` or a locale missing	`paths.json` against `public.json` paths	Configuration out of sync	13.4

Symptom	First check	Likely cause	Chapter
Dialog fields missing in Universal Editor	`component-models.json` on `main`; editor reloaded?	`npm run build:json` not run or Code Sync pending	13.5
Wrong header or footer	Navigation / Footer property of the page and its parents; new session	Inheritance or session cache; reference not published	13.6
English 404 on a German URL	`/de-de/error-pages/404.plain.html`	Locale 404 not published (`/en` fallback, `lang="en-US"`)	13.7
List or Filter List empty in the editor	Editor hint	Expected: the query index isn't read in the editor	13.10
List or Filter List empty on the site	`/query-index.json` rows and columns; tags; Root path	Pages not published or not indexed; index definition (F-10); tag IDs	13.9, 13.11
UI text in English on a locale page	`/{locale}/placeholders.json`	Sheet not published or key missing	13.13
Tags shown as technical labels	`/{locale}/taxonomy.json`	Taxonomy not published for the locale (F-09)	13.14
Bulk metadata not applied	`<meta name="…">` in the delivered head	`metadata.source` not configured; pattern without the locale	13.17
Block missing on the site but visible in the editor	Additional tab Hide block	Hide block on	13.18
Anchor link doesn't jump	Element id on the page (suffix `-2`)	Invalid or duplicate Anchor ID	13.19
No data layer events	`window.adobeDataLayer` in the console	Checked in edit mode; Analytics option off; no tag manager to forward them	13.20
Form "sent" but nothing received	—	No form back end (F-01)	13.21
Code merged but not visible	Code Sync check on the merge commit	Code Sync didn't run	13.22
`/` returns 404	—	No root redirect (F-36)	13.28

Escalation: L1 (author support) → L2 (AMS / site administrator) → L3 (development team) as in 14.5; severities P1 to P4 as in 14.1.3; the recurring operations are in Part 17.

18.10 Hands-on Exercises

18.10.1 Exercise Index

EX	Exercise	Roles	Time (recommended)	Main chapter
EX-01	Find your way in the Universal Editor	All	30 min	5.2
EX-02	Create an article from the Site Global Template	Content author, content lead	45 min	4.1.2, 5.3
EX-03	Create a landing page and add a Hero	Content author, content lead, developer	45 min	6.10

EX	Exercise	Roles	Time (recommended)	Main chapter
EX-04	Sections, Anchor names and an Anchor List	Content author, content lead	45 min	6.5, 6.19
EX-05	The Additional tab: Anchor ID, Hide block, spacing	Content author, content lead	30 min	5.6
EX-06	A Cards block with three Cards	Content author, content lead	45 min	6.15
EX-07	An Accordion of frequently asked questions	Content author, content lead	20 min	6.20
EX-08	A Tabs Container with two tabs	Content author, content lead	45 min	6.21, 6.22
EX-09	A Gen Carousel with two Hero slides	Content author, content lead	30 min	6.24
EX-10	Reuse content with a Fragment and a Modal	Content author, content lead	30 min	6.3, 6.23
EX-11	A Video with a poster image	Content author, content lead	20 min	6.28
EX-12	A List of child pages	Content author, content lead, developer	40 min	6.16
EX-13	Related content with a Tagged pages List	Content author, content lead	30 min	6.16, 7.2
EX-14	An insights hub with a Filter List	Content author, content lead, developer	60 min	6.17
EX-15	An alternative navigation for a site area	Content lead	45 min	3.5.4, 4.6
EX-16	A locale 404 page	Content lead, site administrator	45 min	10.2
EX-17	A bulk metadata row	Content lead, site administrator	45 min	8.1, 9.2
EX-18	A placeholder translation	Content lead	30 min	4.5, 9.1
EX-19	Create, translate and publish a tag	Content lead	30 min	7.6
EX-20	An author in the Authors sheet and the About the author box	Content lead	30 min	4.1.2, 9.5
EX-21	Publish, roll back and unpublish	Content author, content lead, AMS	40 min	5.7, 12.6.2
EX-22	Check the data layer	Developer, AMS	30 min	11.8
EX-23	Diagnose “page not updating” with the Admin API	AMS, site administrator	30 min	13.2, 12.1.9
EX-24	Diagnose a block that doesn’t render	AMS, developer	40 min	13.3
EX-25	Developer set-up and pull request checks	Developer	90 min	12.2

EX	Exercise	Roles	Time (recommended)	Main chapter
EX-26	Locale health check	Site administrator, AMS	30 min	17.2, 3.2
EX-27	Release check	Developer, site administrator, AMS	60 min	12.4

18.10.2 EX-01 — Find Your Way in the Universal Editor

Objective. Open a page in the Universal Editor, name its areas and use the content tree, the component picker, Preview mode and the device sizes without changing content.

Role. All roles.

Prerequisites. AEM author access (18.1.2).

Steps

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Open TCS Corp › us › en › about
2	AEM Sites console	Select	Select the page (check box of its card or row)
3	AEM Sites console toolbar	Edit	The page opens in the Universal Editor
4	Universal Editor	Areas	Point at the toolbar (location, device size, Preview, Publish), the canvas, the Properties panel and the Content tree
5	Universal Editor right rail	Content tree	Open it; expand Main, then a Section
6	Universal Editor › Content tree	Section	Select it, then select Add (+): note the groups Default Content and Blocks; close the picker without adding
7	Universal Editor › Content tree	A block	Select it: its tabs appear in the Properties panel; open the last tab (Additional)
8	Universal Editor toolbar	Device size	Switch to mobile, then tablet, then desktop
9	Universal Editor toolbar	Preview	Switch Preview on, select a link (it is followed), switch Preview off

Expected Result. You can name the five areas of 5.2.1 and find any component of the page in the content tree; nothing on the page changed (the Sites console shows no new modification date).

Self-check. Which three components can Main (the page) contain, and which two components can a Gen Carousel contain? (Section, Gen Carousel, Tabs Container; Hero and Teaser.)

Reference chapter. 5.2, 5.4.3.

18.10.3 EX-02 — Create an Article from the Site Global Template

Objective. Create an article page by copying the template page, set its page properties and see what the Article template adds.

Role. Content author, content lead.

Prerequisites. EX-01; the training page `{training page}` (18.1.3).

Steps

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Open TCS Corp › site-global-templates
2	AEM Sites console	Select	Select the article page
3	AEM Sites console toolbar	Copy	Select Copy
4	AEM Sites console	Navigation	Open `{training page}`
5	AEM Sites console toolbar	Paste	Paste the copy
6	AEM Sites console toolbar	Rename	Name `article`, Title The agentic bank
7	AEM Sites console toolbar	Edit	Open `{training page}/article` in the Universal Editor
8	Page properties	Title	The agentic bank
9	Page properties	Description	How autonomous operations are reshaping retail banking, and what it takes to get there.
10	Page properties	Page Type	Article (already set by the template)
11	Section › Add (+)	Component	Text
12	Text	Text	Retail banks have automated individual tasks for decades. The next step is different: systems that plan, decide and act across a whole customer journey, with people setting the goals and the guardrails.
13	Section › Add (+)	Component	Title
14	Title	Title / Title Type	From automation to autonomy / h2
15	Universal Editor toolbar	Publish	Destination Preview
16	Browser	Address	`https://main--tcs-corp--sradha-tcs.aem.page{training path}/article`

Expected Result. The preview shows a Page Header in the Article layout with the title "The agentic bank" and the description, although you didn't add one (the Article template's `ensurePageHeader`), followed by your text and heading. There is no "About the author" box yet: the page has no `author-id` (EX-17 and EX-20 add it). The body has the class `article`.

Self-check. What does the Article template add, and when is the "About the author" box left out? (A Page Header unless one is authored; the box needs an `author-id` that matches a row with a `name` in the locale's Authors sheet.)

Reference chapter. 4.1.2, 5.3.2, 6.4.

18.10.4 EX-03 — Create a Landing Page and Add a Hero

Objective. Create a Default page and add a Hero with image, eyebrow, H1 title, description and two CTAs.

Role. Content author, content lead, developer.

Prerequisites. EX-01.

Steps

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	Open `{training page}`
2	AEM Sites console toolbar	Create › Page	Name `landing`, Title Training landing page

Step	Where	Field / control	Value / action
3	Page properties	Page Type	Default
4	Section › Add (+)	Component	Hero
5	Hero › Image	Hero Image Path	Select the asset wide.svg (/en/media/wide.svg)
6	Hero › Image	Hero Image alt text	Leave empty (decorative background)
7	Hero › Content	Eyebrow	Enterprise AI
8	Hero › Content	Title	Building on belief
9	Hero › Content	Title heading level	H1
10	Hero › Content	Description	Our AI-led services help enterprises grow with confidence.
11	Hero › Links	CTA List	Item 1: CTA Title = Talk to our experts, CTA Link = /en/contact, CTA view = Primary; Item 2: CTA Title = Explore our services, CTA Link = /en/services, CTA view = Secondary
12	Hero › Style	BG Color	Dark blue
13	Universal Editor toolbar	Device size	Check desktop, tablet and mobile
14	Universal Editor toolbar	Publish	Destination Preview; open `{training path}/landing` on `.aem.page`

Expected Result. A full-width banner with the image under a dark blue overlay, the eyebrow, the H1 “Building on belief”, the description and the buttons “Talk to our experts” (primary) and “Explore our services” (secondary), centred (default alignment); on mobile the CTAs stack. In the first section the image is loaded eagerly (LCP).

Self-check. Which Hero Image type plays a Lottie animation, and which control does the code add for it? (Lotto; a pause / play toggle named from the placeholders `pauseAnimation` / `playAnimation`.)

Reference chapter. 6.10, 4.1.1.

18.10.5 EX-04 — Sections, Anchor Names and an Anchor List

Objective. Structure the landing page into chapters and add a sticky chapter navigation.

Role. Content author, content lead.

Prerequisites. EX-03.

Steps

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Main › Add (+)	Section (three times, after the Hero section)
2	Section 2 properties	Anchor name	overview
3	Section 3 properties	Anchor name / Style	findings / Highlight
4	Section 4 properties	Anchor name	outlook
5	Sections 2 to 4 › Add (+)	Component	Title in each: CH 1: Overview, CH 2: Findings, CH 3: Outlook (Title Type h2), each followed by a Text with two paragraphs of sample text
6	Section 2 › Add (+)	Component	Anchor List (move it above the Title)
7	Anchor List › Content	Links	Item 1: Link Title = CH 1: Overview, Anchor Name = overview; Item 2: Link Title = CH 2: Findings, Anchor Name

Step	Where	Field / control	Value / action
			= findings; Item 3: Link Title = CH 3: Outlook, Anchor Name = outlook
8	Anchor List › Content	Sticky	On
9	Universal Editor toolbar	Preview	Switch Preview on, select CH 3: Outlook, scroll back up

Expected Result. A row of three links under the Hero; selecting a link scrolls to its section, the link of the chapter in view is marked as the current location, and the row stays pinned at the top while you scroll. Section 3 has the light grey Highlight background.

Self-check. What id does the Anchor name "Our Outlook" give the section, and what happens if the id already exists? (`our-outlook`, normalised to lower case with hyphens; a section anchor already in use is skipped, not suffixed.)

Reference chapter. 6.5, 6.19, 5.6.3.

18.10.6 EX-05 — The Additional Tab: Anchor ID, Hide Block, Spacing

Objective. Use the three kinds of Additional tab options and see their validation and their effect in edit mode, Preview mode and the page source.

Role. Content author, content lead.

Prerequisites. EX-04.

Steps

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Hero	Select the Hero
2	Hero › Additional	Anchor ID	Our-Banner (note the message "Start with anchor-, then lower-case letters, digits and hyphens.")
3	Hero › Additional	Anchor ID	anchor-banner
4	Hero › Additional	Margin bottom	2rem (space-800)
5	Section 4 › Add (+)	Component	Text with the link Back to top pointing to `#anchor-banner`
6	Universal Editor › Content tree	Anchor List	Select it
7	Anchor List › Additional	Hide block	On (the block is faded with a dashed outline in edit mode)
8	Universal Editor toolbar	Preview	Switch Preview on: the Anchor List is not displayed; select Back to top
9	Anchor List › Additional	Hide block	Off

Expected Result. The invalid value is rejected; `anchor-banner` becomes the Hero's `id` (link target of Back to top); the gap under the Hero grows by 2rem (class `mb-800`); the hidden Anchor List disappears in Preview mode and on the site but stays in the delivered HTML and in the data layer.

Self-check. Can Hide block be used for an unreleased press release? (No: the content is still in the page source; confidential content must not be published at all.)

Reference chapter. 5.6, 13.18, 13.19.

18.10.7 EX-06 — A Cards Block with Three Cards

Objective. Author manual cards with the shared List presentation.

Role. Content author, content lead.

Prerequisites. EX-03.

Steps

Step	Where	Field / control	Value / action
1	Main › Add (+)	Section	A new Section; Section properties Style = Highlight
2	Section › Add (+)	Component	Cards
3	Cards › Content	Title / Description	Our services / Capabilities that help enterprises grow, transform and compete.
4	Cards › Layout	Desktop columns	3
5	Content tree › Cards › Add (+)	Item	Card
6	Card 1 › Content	Image / Eyebrow / Title / Description	photo-1.svg (/en/media/photo-1.svg) / Consulting / Business and technology consulting / Strategy, design and change management for transformation.
7	Card 1 › Link	Link	/en/services/consulting
8	Content tree › Cards › Add (+)	Item	Card
9	Card 2 › Content	Image / Eyebrow / Title / Description	photo-2.svg / Cloud / Cloud migration and operations / Move, modernise and run workloads on any cloud.
10	Card 2 › Link	Link	/en/services/cloud
11	Content tree › Cards › Add (+)	Item	Card
12	Card 3 › Content	Image / Eyebrow / Title / Description	photo-3.svg / Security / Cyber defence and resilience / Protect identities, data and operations.
13	Card 3 › Link	Link	/en/services/cybersecurity
14	Cards › Layout	Mobile display	Horizontal scroll
15	Universal Editor toolbar	Device size	Check desktop (three columns) and mobile (scroller)

Expected Result. Three image cards (16:9 images, eyebrow, title, description) in three columns on desktop; the whole card is a link (Link items on by default); on mobile a horizontal scroller with a scroll indicator.

Self-check. When should you use a List instead of Cards? (When the cards should come from the pages' metadata through the query index and update by themselves.)

Reference chapter. 6.15, 6.16.

18.10.8 EX-07 — An Accordion of Frequently Asked Questions

Objective. Add collapsible questions and answers.

Role. Content author, content lead.

Prerequisites. EX-03.

Steps

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Accordion

Step	Where	Field / control	Value / action
2	Content tree › Accordion › Add (+)	Item	Accordion Item
3	Accordion Item 1	Summary	How do I apply for a role at TCS?
4	Accordion Item 1	Text	Search the open roles on our careers pages, choose a role and select Apply. You can save your application and complete it later.
5	Content tree › Accordion › Add (+)	Item	Accordion Item
6	Accordion Item 2	Summary	Can I apply for more than one position at the same time?
7	Accordion Item 2	Text	Yes. You can apply for up to three roles at once; each application is reviewed by the team that is hiring for it.
8	Universal Editor toolbar	Preview	Open and close the second item with the mouse, then with the keyboard (Tab, Enter)

Expected Result. Two closed items with their questions; selecting a summary opens its answer (native `<details>` / `<summary>`), keyboard included.

Self-check. Is the text of a closed item available to search engines? (Yes: it stays in the page; only its display changes.)

Reference chapter. 6.20.

18.10.9 EX-08 — A Tabs Container with Two Tabs

Objective. Build tabs whose content is authored on the page.

Role. Content author, content lead.

Prerequisites. EX-03.

Steps

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Main › Add (+)	Section: Tabs Container
2	Tabs Container › Accessibility	Label	Our services
3	Tabs Container › Styles	Style	Pills
4	Tabs Container › Add (+)	Component	Tab; Tab › Content Title = Consulting
5	Tabs Container › Add (+)	Component	Columns (Columns 2, Rows 1): column 1 an Image photo-1.svg with Alt Text Consultants in a strategy workshop; column 2 a Title Business and technology consulting (h3) and a Text
6	Tabs Container › Add (+)	Component	Tab; Tab › Content Title = Cloud, Active tab = On
7	Tabs Container › Add (+)	Component	Columns (Columns 2, Rows 1): column 1 an Image photo-2.svg with Alt Text Cloud operations dashboard; column 2 a Title Cloud migration and operations (h3) and a Text
8	Universal Editor toolbar	Preview	Select the tabs; use the arrow keys on the tab list

Expected Result. A pill-style tab list “Consulting”, “Cloud” with Cloud selected on load; each panel shows the components placed after its Tab marker; in edit mode the markers show as dashed label chips.

Self-check. Can a Tab marker be added to an ordinary Section? (No: only inside a Tabs Container; in an ordinary section use the Tabs block, whose Tab items show fragments.)

Reference chapter. 6.21, 6.22.

18.10.10 EX-09 — A Gen Carousel with Two Hero Slides

Objective. Build an auto-playing carousel and check its controls.

Role. Content author, content lead.

Prerequisites. EX-03.

Steps

Step	Where	Field / control	Value / action
1	Universal Editor › Content tree	Main › Add (+)	Section: Gen Carousel
2	Gen Carousel › Content	Navigation	Manual and Auto
3	Gen Carousel › Content	Autoplay interval (seconds)	7
4	Gen Carousel › Add (+)	Component	Hero: Hero Image Path wide.svg, Eyebrow Enterprise AI, Title Building on belief, Description AI-led services that help enterprises grow with confidence., CTA List Item 1 Explore AI services → /en/services/ai (Primary), BG Color Dark blue
5	Gen Carousel › Add (+)	Component	Hero: Hero Image Path photo-2.svg, Eyebrow Cloud, Title Modernise on any cloud, Title heading level H2
6	Universal Editor toolbar	Preview	Switch Preview on; wait 7 seconds; use the pause button, the dots and the next button

Expected Result. In edit mode the slides don't move. In Preview mode and on `.aem.page` slide 2 appears after 7 seconds; the pause / play button stops and restarts autoplay; dots and previous / next buttons change slides; visitors who prefer reduced motion get no autoplay.

Self-check. Which heading level should the second slide's title use when the first slide has the page's H1? (H2: one `h1` per page.)

Reference chapter. 6.24, 6.10.

18.10.11 EX-10 — Reuse Content with a Fragment and a Modal

Objective. Include a shared reference page and open a modal page in a dialog, with the block and with a plain link.

Role. Content author, content lead.

Prerequisites. EX-03; an existing fragment page under the locale's `references/` (for example `/content/tcs-corp/us/en/references/cta-banner`; the handover sample is `/en/shots/g01b/references/cta-banner`) and a page in a `modals` folder (for example `/content/tcs-corp/us/en/references/modals/contact-us`; the handover sample is `/en/shots/modals/awards`) [To be confirmed: fragment and modal pages available for training — owner: Content Lead].

Steps

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Fragment
2	Fragment › Content	Reference	Open the content picker; select the fragment page under `references/` and confirm

Step	Where	Field / control	Value / action
3	Section › Add (+)	Component	Modal
4	Modal › Content	Modal Content	Select the page in the `modals` folder
5	Modal › Content	Button Text	View our awards
6	Section › Add (+)	Component	Text with a link Contact us to the same modal page, on its own line
7	Universal Editor toolbar	Publish	Destination Preview; open `{training path}/landing` on `.aem.page`
8	Preview page	Action	Select View our awards; close with Escape; select Contact us; close with the close button

Expected Result. The fragment's sections appear in place of the Fragment block, decorated like the rest of the page. The Modal block renders the button "View our awards"; it and the text link open the modal page in a `<dialog>` named by its first heading; Escape, the close button and a click on the backdrop close it, and focus returns.

Self-check. A colleague changes the fragment and publishes it: must your page be republished? (No: including pages show the published fragment without being republished.)

Reference chapter. 6.3, 6.23, 4.6, 4.8.

18.10.12 EX-11 — A Video with a Poster Image

Objective. Add an AEM Assets video that starts with a play button on a poster.

Role. Content author, content lead.

Prerequisites. EX-03; a video asset (the handover sample is `/content/dam/tcs-corp/videos/tcs-brand-film.mp4`).

Steps

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Video
2	Video › Video	Video	/content/dam/tcs-corp/videos/tcs-brand-film.mp4
3	Video › Video	Title	Building on belief: the TCS brand film
4	Video › Video	Caption	How our people and partners use technology to help enterprises grow and transform.
5	Video › Video	Poster Image / Poster Image Alt Text	photo-1.svg (/en/media/photo-1.svg) / Engineers collaborating in a modern office
6	Video › Playback	Playback	Play button (on the poster image)
7	Video › Display	Aspect Ratio / Size	16:9 (widescreen) / Large (900px)
8	Universal Editor toolbar	Publish	Destination Preview; on `.aem.page` select the play button

Expected Result. A centred 16:9 poster with a play button named "Play video: Building on belief: the TCS brand film" (placeholder `playVideoTitle`) and the caption below; selecting it plays the file in a native player with controls.

Self-check. Which playback settings make the code add a pause / stop button, and why? (Autoplay or Background without controls: moving content needs a pause control, WCAG 2.2.2.)

Reference chapter. 6.28.

18.10.13 EX-12 — A List of Child Pages

Objective. List the pages below a parent page as cards from their metadata and inspect the List configuration with the debug switch.

Role. Content author, content lead, developer.

Prerequisites. EX-03; published child pages below `/en/services` (sample content).

Steps

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	List
2	List › Content	Title	Our services
3	List › Source	List source	Child pages
4	List › Source	Parent page	/content/tcs-corp/us/en/services
5	List › Source	Direct children only	On (default)
6	List › Cards	Card style	Image card (default)
7	List › Layout	Desktop columns	3
8	Universal Editor canvas	List	Read the editor hint
9	Universal Editor toolbar	Publish	Destination Preview
10	Browser	Address	`https://main--tcs-corp--sradha-tcs.aem.page{training path}/landing?debug=list`; developer tools console, level Verbose

Expected Result. In the editor the List shows the hint "The pages show on the published page (from the query index)." (placeholder `listEditorPages`). On the preview the List shows one image card per published child page of `/en/services` (title, description and image from the page's metadata), three per row on desktop; pages with `hide-in-nav = yes` are left out. The console shows the List configuration and cards (`console.debug`).

Self-check. A child page was published a minute ago but its card is missing: what do you check? (Its row in `/query-index.json`, its `hide-in-nav` value and the Parent page; 13.9, 13.11.)

Reference chapter. 6.16, 13.10, 13.11.

18.10.14 EX-13 — Related Content with a Tagged Pages List

Objective. Show the three most recent insights that carry a tag, as a related-content row.

Role. Content author, content lead.

Prerequisites. EX-12; insights below `/en/insights` tagged `tcs-corp:region/europe` (the handover sample pages `/en/insights/agentic-bank` and `/en/insights/cloud-at-scale` are).

Steps

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	List
2	List › Content	Title	Related insights
3	List › Source	List source	Tagged pages
4	List › Source	Search root	/content/tcs-corp/us/en/insights

Step	Where	Field / control	Value / action
5	List › Source	Tags	Open the tag picker: TCS Corp › Region › Europe (tcs-corp:region/europe)
6	List › Source	Match	Any of the tags (default)
7	List › Source	Order by / Sort order	Last modified / Descending
8	List › Source	Maximum items	3
9	List › Layout	Desktop columns	3
10	Universal Editor toolbar	Publish	Destination Preview; open the page on `.aem.page`

Expected Result. Up to three cards of insights tagged Europe (or a child of Europe), most recently modified first, with the tag labels from `/en/taxonomy.json` in the card kicker. If the List is empty although tagged pages exist, the page tags may not reach the index (F-07) or the index may lack columns (F-10): follow 13.11.

Self-check. Would a page tagged only `tcs-corp:region` be listed? (No: a parent tag on a page doesn't match a child filter; the reverse matches.)

Reference chapter. 6.16, 7.2, 7.8.2.

18.10.15 EX-14 — An Insights Hub with a Filter List

Objective. Build a filterable content hub with filter pills, an advanced filter, a hero card and a result count.

Role. Content author, content lead, developer.

Prerequisites. EX-12; published insights below `/en/insights` with tags, `content-type` and `publish-date` (sample content).

Steps

Step	Where	Field / control	Value / action
1	Section › Add (+)	Component	Filter List
2	Filter List › Content	Title	Insights
3	Filter List › Content	Show result count	On
4	Filter List › Source	Datasource	Query Index (default)
5	Filter List › Source	Root path	/en/insights
6	Filter List › Source	Sort by	Latest First (default)
7	Filter List › Filters	Primary filter category	TCS Corp : Region (tcs-corp:region)
8	Filter List › Filters	Show All filter / Allow multi select / Enable advanced filter	On / Off / On (defaults)
9	Filter List › Advanced	Advanced filter categories	Item 1: Category label = Content type, Taxonomy root = tcs-corp:content-type
10	Filter List › Advanced	Filter logic	OR
11	Filter List › Cards	Card style / Enable hero card / Hero rule	Mixed (default) / On / Latest
12	Universal Editor toolbar	Publish	Destination Preview; on `.aem.page` select a region pill, open the filter button and tick a content type

Expected Result. The editor shows the hint "The results show on the published page, from the pages' metadata." On the preview: the pills "All" and one pill per region tag used by the listed pages (sorted by label), the latest page as the hero card, the other pages as cards (Mixed style), "{n} results", "Showing {n} of {total}" and Load more when there are more than 9 cards. The advanced panel lists the content-type tags used by the pages; ticking one narrows the results (OR across ticked options).

Self-check. Does the Filter List leave out pages with `hide-in-nav = yes`? (No, unlike the List: F-30.)

Reference chapter. 6.17, 7.8.3.

18.10.16 EX-15 — An Alternative Navigation for a Site Area

Objective. Give a site area its own header through the inherited Navigation property.

Role. Content lead.

Prerequisites. EX-03; the Content Lead's approval to create a reference page.

Steps

Step	Where	Field / control	Value / action
1	AEM Sites console	Navigation	TCS Corp › us › en › references
2	AEM Sites console toolbar	Copy, Paste	Copy nav, paste it in `references`, rename it `nav-training-{your initials}`
3	Universal Editor	Open	`references/nav-training-{your initials}`: keep the three sections (brand, sections, tools); in section 2 change the first link text to Training area
4	Universal Editor toolbar	Publish	Destination Preview
5	Universal Editor › Properties (page)	Navigation	Open `{training page}`; Navigation = references/nav-training-{your initials}
6	Universal Editor › Properties (page)	Footer, 404 Page	Leave empty (inherited)
7	Universal Editor toolbar	Publish	Publish `{training page}` and its `landing` page to Preview
8	Browser (new private window)	Address	`https://main--tcs-corp--sradha-tcs.aem.page{training path}/landing`, then `/en/about`

Expected Result. `{training path}` and `{training path}/landing` (which inherits the value) show the header with "Training area"; `/en/about` keeps the locale's default navigation. In a browser session that had opened the pages before, the old header can stay until a new session (session cache `tcs-inherited-metadata`).

Self-check. List the three steps of the Navigation lookup. (The page's own Navigation or `nav` column; the nearest parent's value up to the locale Home; the locale's `references/nav`.)

Reference chapter. 3.5.1, 3.5.4, 4.6, 13.6.

18.10.17 EX-16 — A Locale 404 Page

Objective. Publish the German 404 page and verify the 404 fallback chain.

Role. Content lead, site administrator.

Prerequisites. EX-01; edit rights on `/content/tcs-corp/de/de-de`; the German locale owner's approval.

Steps

Step	Where	Field / control	Value / action
1	Browser	Address	`https://main--tcs-corp--sradha-tcs.aem.page/de-de/training-missing-page`: note what is shown
2	AEM Sites console	Navigate	TCS Corp › de › de-de › error-pages
3	AEM Sites console toolbar	Create › Page	Only if `404` doesn't exist: Name 404, Title Seite nicht gefunden
4	Universal Editor	Title	Seite nicht gefunden, Title Type h1
5	Universal Editor	Text	Die angeforderte Seite existiert nicht oder wurde verschoben.
6	Universal Editor	Button	Link /content/tcs-corp/de/de-de, Text Zur Startseite
7	Universal Editor toolbar	Publish	Destination Preview
8	Browser	Address	Repeat step 1 in a new private window
9	Terminal	Command	`curl -sI https://main--tcs-corp--sradha-tcs.aem.page/de-de/training-missing-page`

Expected Result. Before publishing (step 1): the English `/en/error-pages/404` content with `lang="en-US"` on `main` (or, if that isn't published either, the built-in "Page Not Found" with "Go home" pointing to `/de-de/`). After publishing: the German page, `main` with the classes `error` and `error-authored` and no `lang` of its own; `<html lang="de-DE">`; the header and footer of `/de-de`. `curl -I` shows HTTP 404 in both cases.

Self-check. Where would a missing `/de-de/careers/x` take its 404 page from if `/de-de/careers` sets a 404 Page property? (From that property; else `/de-de/error-pages/404`, else `/en/error-pages/404`, else the built-in content.)

Reference chapter. 10.2, 13.7, 3.7.

18.10.18 EX-17 — A Bulk Metadata Row

Objective. Give the training article its author, date, reading time and content type through the locale's bulk metadata sheet, and verify whether the sheet is applied.

Role. Content lead, site administrator.

Prerequisites. EX-02; edit rights on `/content/tcs-corp/us/en/metadata`; the Content Lead's approval.

Steps

Step	Where	Field / control	Value / action
1	AEM Sites console	Select	/content/tcs-corp/us/en/metadata, then Edit
2	Spreadsheet editor	Header row	Check the columns url, content-type, author-id, publish-date, reading-time exist (F-11: some documented columns are missing)
3	Spreadsheet editor	New last row	url = `{training path}/article`; content-type = Article; author-id = arao; publish-date = 2026-09-04; reading-time = 8
4	AEM Sites console toolbar	Manage Publication	/content/tcs-corp/us/en/metadata, Destination Preview
5	Universal Editor toolbar	Publish	Republish `{training page}/article` to Preview
6	Browser	Address	`view-source:https://main--tcs-corp--sradha-tcs.aem.page{training path}/`

Step	Where	Field / control	Value / action
			`article`: look for `<meta name="author-id" content="arao">`
7	Site administrator	Admin API	Read the site configuration's `metadata.json` (12.5) and check that `/en/metadata.json` is listed with the other 12 sheets

Expected Result. When `metadata.source` lists the sheets: the head has `<meta name="author-id" content="arao">`, `publish-date`, `reading-time` and `content-type`, and the Page Header shows "Article" in the meta row, "Published 04/09/26" and "8 min read". When it doesn't: no such meta tags and an unchanged Page Header; record the finding against O-04 instead of changing the page.

Self-check. Your row uses `/en/insights/**` and an earlier row `/en/**` sets the same column: which value wins? (Rows are read top to bottom; the later matching row overrides. A page property would win over both.)

Reference chapter. 4.3.2, 8.1.2, 9.2, 13.17.

18.10.19 EX-18 — A Placeholder Translation

Objective. Translate two UI texts for the German locale and verify them.

Role. Content lead.

Prerequisites. EX-01; edit rights on `/content/tcs-corp/de/de-de`; the German locale owner's approval.

Steps

Step	Where	Field / control	Value / action
1	Browser	Address	`https://main--tcs-corp--sradha-tcs.aem.page/de-de/placeholders.json`: note whether it exists (at handover only `/en` was published)
2	AEM Sites console toolbar	Create › Page	Only if the sheet doesn't exist: in TCS Corp › de › de-de, template Placeholders, Name placeholders
3	Sheet /content/tcs-corp/de/de-de/placeholders	Columns	Key, Text, Description, Category
4	Sheet › Row 1	Key / Text / Description / Category	nextSlide / Nächste Folie / Accessible name of the carousel's next button / Carousel
5	Sheet › Row 2	Key / Text / Description / Category	showingCount / {n} von {total} werden angezeigt / Filter List status under the results / Filter List
6	AEM Sites console toolbar	Manage Publication	The sheet, Destination Preview
7	Browser	Address	Repeat step 1: the JSON lists `"columns":["Key","Text","Description","Category"]` and the two rows
8	Browser	German page with a Gen Carousel or Filter List (if one exists)	Developer tools › Accessibility: the next button is named Nächste Folie

Expected Result. The published JSON contains both rows; German pages use the translations on the next page load; every other key keeps the code's English fallback.

Self-check. A key is missing from the German sheet but present in the English sheet: what does a German page show? (The English fallback written in the code, not the English sheet's text.)

Reference chapter. 4.5, 9.1, 13.13.

18.10.20 EX-19 — Create, Translate and Publish a Tag

Objective. Add a tag to the business taxonomy, translate its title and make the label available to the site.

Role. Content lead (with the taxonomy owner).

Prerequisites. Tagging permissions on `/content/cq:tags/tcs-corp`; the taxonomy owner's approval of `tcs-corp:industry/banking` (the Industry tree has no child tags yet; the proposal is in 7.3.2). Without approval, walk through the steps and cancel the dialog in step 6.

Steps

Step	Where	Field / control	Value / action
1	AEM	Tools › General › Tagging	Open the Tagging console, column view
2	Tagging console	Select	TCS Corp › Industry
3	Tagging console toolbar	Create	Create Tag
4	Create Tag	Title / Name	Banking / banking
5	Create Tag	Description	Banks and financial services
6	Create Tag	Submit	Creates `tcs-corp:industry/banking`
7	Tagging console toolbar	Edit › Localization	German = Bankwesen; save
8	AEM Sites console toolbar	Manage Publication	/content/tcs-corp/us/en/taxonomy, Destination Preview (Live and the other locales' taxonomy pages after approval)
9	Browser	Address	`https://main--tcs-corp--sradha-tcs.aem.page/en/taxonomy.json`: find the row `tcs-corp:industry/banking` / Banking

Expected Result. The tag exists and `/en/taxonomy.json` lists it with the title "Banking"; pages and blocks that use it show "Banking" instead of the ID-derived label. The German title appears on `/de-de` pages only once the German taxonomy page is published and its JSON carries the German title (open point in 7.1.5).

Self-check. What changes if the tag's name is later changed from `banking` to `banking-financial`? (Its ID changes: republish the tagged pages, re-select the tag in block fields, republish the taxonomy pages; analytics sees a new ID.)

Reference chapter. 7.6.1, 7.6.2, 7.6.5, 7.4.1.

18.10.21 EX-20 — An Author in the Authors Sheet and the About the Author Box

Objective. Add an author to the locale's Authors sheet and see the author in the Page Header and the "About the author" box of the training article.

Role. Content lead.

Prerequisites. EX-02 and EX-17 (the article's `author-id` = `arao`, applied only when `metadata.source` is configured); edit rights on `/content/tcs-corp/us/en/data/authors`.

Steps

Step	Where	Field / control	Value / action
1	AEM Sites console	Select	/content/tcs-corp/us/en/data/authors, then Edit
2	Sheet › Header row	Columns	author-id, name, designation, bio, image, linkedin, region
3	Sheet › New row	Values	author-id = arao; name = Anita Rao; designation = Head of Banking Research; bio = Anita leads research on financial services.; image = /en/media/person-1.svg; linkedin =

Step	Where	Field / control	Value / action
			https://www.linkedin.com/in/example-anita; region = Europe
4	AEM Sites console toolbar	Manage Publication	The sheet, Destination Preview
5	Browser	Address	`https://main--tcs-corp--sradha-tcs.aem.page/en/data/authors.json`: the row is listed
6	Browser	Address	`https://main--tcs-corp--sradha-tcs.aem.page{training path}/article`

Expected Result. The Page Header shows the author lockup "Anita Rao" (linked to LinkedIn, new tab announced) with "Head of Banking Research, Europe"; at the end of the page a section "About the author" shows the round image, the name, "Head of Banking Research, Europe", the bio and "View LinkedIn profile".

Self-check. The metadata says `author-id` = `ARA0`: does the box still appear, and does the List feature card find the author? (The template matches case-insensitively, so the box appears; List and Filter List match exactly, so they don't.)

Reference chapter. 4.1.2, 9.5, 13.27.

18.10.22 EX-21 — Publish, Roll Back and Unpublish

Objective. Keep a version, restore it after a change, and take a page off the site.

Role. Content author, content lead, AMS.

Prerequisites. EX-03.

Steps

Step	Where	Field / control	Value / action
1	AEM Sites console	Select	`{training page}/landing`
2	AEM Sites console rail	Timeline	Open the Timeline; save a version labelled Before training change (Save as Version)
3	Universal Editor	Hero › Content	Title = Building on belief (changed)
4	Universal Editor toolbar	Publish	Destination Preview; check the changed title on `.aem.page`
5	AEM Sites console rail	Timeline › Versions	Select Before training change › Revert to this Version
6	Universal Editor toolbar	Publish	Destination Preview; check the original title on `.aem.page`
7	AEM Sites console toolbar	Manage Publication	Action Unpublish for `{training page}` and its child pages (Preview)
8	Browser (private window)	Address	`https://main--tcs-corp--sradha-tcs.aem.page{training path}/landing`
9	AEM Sites console toolbar	Delete	Delete the training pages, `references/nav-training-{your initials}` and your sheet rows (EX-17, EX-20) at the end of the training

Expected Result. The restored version is back on the preview after republishing (reverting alone changes only the author page). After unpublishing, the URL shows the locale's 404 page with HTTP status 404.

Self-check. What must be done before unpublishing a page that has been public? (Add a redirect from its URL to a replacement in the locale's `redirects` sheet, knowing that the sheets aren't applied by the platform yet: 3.8.)

Reference chapter. 5.7.8, 5.7.9, 12.6.2.

18.10.23 EX-22 — Check the Data Layer

Objective. Read the Adobe Client Data Layer of a page and confirm the page, component and event entries.

Role. Developer, AMS (also the analytics owner).

Prerequisites. EX-07 and EX-09 published to Preview (or any page with an accordion and a carousel); a desktop browser with developer tools.

Steps

Step	Where	Field / control	Value / action
1	Browser	Address	`https://main--tcs-corp--sradha-tcs.aem.page{training path}/landing` (not in the Universal Editor)
2	Developer tools › Console	Settings	Preserve log on
3	Console	Command	`adobeDataLayer.find((e) => e.page)`
4	Console	Command	After 3 seconds: `adobeDataLayer.filter((e) => e.component).flatMap((e) => Object.entries(e.component)).map(([id, c]) => [id, c['@type'], c.parentId])`
5	Page	Action	Open and close an accordion item; move the carousel to slide 2
6	Console	Command	`adobeDataLayer.filter((e) => e.event)`
7	Console	Command	`copy(JSON.stringify(adobeDataLayer, null, 2))` and paste it into the training record

Expected Result. The first entry is the page (`@type` `tcs-corp/components/page`, `xdm:language` `en-US`, `repo:path` the training path); after 3 seconds there are component entries for every block, including `header` and `footer`; the accordion pushed `cmp:show` and `cmp:hide` with the item label; the carousel pushed `cmp:show` with `position` 2 (and `cmp:click` `next` when the button was used).

Self-check. Why does `adobeDataLayer.getState()` fail? (The ACDL library isn't loaded: no tag manager yet, so `adobeDataLayer` is a plain array; F-06.)

Reference chapter. 11.8, 11.4, 13.20.

18.10.24 EX-23 — Diagnose "Page Not Updating" with the Admin API

Objective. Find out, for a ticket "the live page still shows the old text", whether the page, a reference or a cache is the cause.

Role. AMS, site administrator.

Prerequisites. Admin API access (Sidekick login or API key, 17.1); `curl`; read access to the Sites console. Practise on `/en/about`.

Steps

Step	Where	Field / control	Value / action
1	Browser (private window)	Address	Open `/en/about` on `.aem.page` and on `.aem.live`; compare the text

Step	Where	Field / control	Value / action
2	Terminal	Command	`curl -s https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/en/about` with your Admin API credentials
3	Status JSON	preview, live, edit	Compare the last-modified times of the source (edit), preview and live
4	AEM Sites console	Publication status	Of the page and of its references (fragments, nav, footer, assets)
5	Terminal	Command	`curl -sI https://main--tcs-corp--sradha-tcs.aem.live/en/about` (status and `last-modified`)
6	Ticket	Diagnosis	Live older than preview: ask the author to publish to Live. Header or footer only: publish the nav / footer page; new browser session. Live current but stale in the browser: private window. Stale after a confirmed publish: cache purge (`POST https://admin.hlx.page/cache/sradha-tcs/tcs-corp/main/en/about`) under a change record

Expected Result. A diagnosis with the three timestamps, the publication state of the references and the action taken, recorded in the ticket.

Self-check. The page is new on live but the header is old for one user only: what is the likely cause? (The inherited Navigation value cached in the user's session, or the nav page not published.)

Reference chapter. 13.2, 12.1.9, 12.1.8, 17.2.

18.10.25 EX-24 — Diagnose a Block That Doesn't Render

Objective. Tell a code problem from a content problem when a block shows raw rows or nothing.

Role. AMS, developer.

Prerequisites. A page on the preview (practise on `{training path}/landing`); for developers the local set-up of EX-25.

Steps

Step	Where	Field / control	Value / action
1	Developer tools › Console	Errors	Look for `failed to load module for …` or `failed to load block …` and read the stack
2	Console	Command	`[...document.querySelectorAll('[data-block-status]')].map((b) => [b.dataset.blockName, b.dataset.blockStatus])`
3	Developer tools › Network	Requests	`/blocks/{name}/{name}.js` and `.css`: status 200
4	Terminal	Command	`curl -s https://main--tcs-corp--sradha-tcs.aem.page{training path}/landing.plain.html` and find the block's `div` and its rows
5	Repository	Model	Compare the rows with `blocks/{name}/_{name}.json` (key-value blocks: one row per field name)
6	Developer	Local server	`aem up` with the local `main`, then open `http://localhost:3000{training path}/landing`

Expected Result. Every block reports `loaded`. For a failing block you can state whether the cause is code (error in the stack, missing file, block not on `main`) or content (a required field empty, rows in an unexpected structure) and whom to send it to (author or L3).

Self-check. The block works locally with `aem up` but not on `.aem.page`: what do you check? (Whether the code is merged to `main` and Code Sync ran: 13.22.)

Reference chapter. 13.3, 13.1.2, 13.22.

18.10.26 EX-25 — Developer Set-up and Pull Request Checks

Objective. Run the project locally, run the checks a pull request needs and know the feature preview URL.

Role. Developer.

Prerequisites. GitHub access, Node.js 20 or newer, `gh` signed in (18.1.2).

Steps

Step	Where	Field / control	Value / action
1	Terminal	Command	`git clone https://github.com/sradha-tcs/tcs-corp.git` and `npm install` (installs the Husky pre-commit hook)
2	Terminal	Command	`npx -y @adobe/aem-cli up --no-open --forward-browser-logs`
3	Browser	Address	`http://localhost:3000/en/` and `http://localhost:3000/en/about.plain.html`
4	Terminal	Command	`npm run lint` and `npm test` (List, Cards and Separator unit tests)
5	Terminal	Command	`npm run build:json`, then `git status`: no change to `component-*.json`
6	Repository	Read	AGENTS.md, `decorators/README.md`, `utils/README.md`, `templates/README.md`, `blocks/list/README.md`
7	Terminal	Command	`git checkout -b feature/tcs-training-{your name}` (push only with the Development Lead's agreement)
8	Browser	Address	After a push: `https://feature-tcs-training-{your name}--tcs-corp--sradha-tcs.aem.page/en/`; `gh run list --branch feature/tcs-training-{your name}` shows the Build check
9	Terminal	Command	Delete the branch locally and on GitHub when done

Expected Result. The site runs on `localhost:3000` with preview content; lint and the unit tests pass; `build:json` leaves no diff; you can name every requirement of a pull request (preview link in the description, Build and Code Sync checks, PageSpeed check, review).

Self-check. You changed `blocks/hero/_hero.json`: what else must the commit contain? (The rebuilt `component-models.json`, `component-definition.json` and `component-filters.json`; the pre-commit hook adds them.)

Reference chapter. 12.2, AGENTS.md, 15.4.

18.10.27 EX-26 — Locale Health Check

Objective. Check that every locale has its Home page, references, 404 page and sheets, and compare the result with the known open items.

Role. Site administrator, AMS.

Prerequisites. A terminal with `curl`.

Steps

Step	Where	Field / control	Value / action
1	Terminal	Script	Run the script below
2	Result	Status list	Record the HTTP status of the 91 requests (7 per locale)
3	Result	Comparison	Compare with 4.5.1, 4.7, 7.1.3 and F-09 / F-11 (only `/en` sheets were published at handover)
4	Admin API	Configuration	With your credentials read the site configuration's `public.json` paths and check they match the repository `paths.json` (143 mappings)

```
PREVIEW=https://main--tcs-corp--sradha-tcs.aem.page
LOCALES="en de-de fr-fr fr-ca es-es pt-pt nl-nl sv-se da-dk no-no zh-cn ja-jp ko-kr"
for l in $LOCALES; do
  for p in "/$l/" "/$l/references/nav.plain.html" "/$l/references/footer.plain.html" \
    "/$l/error-pages/404.plain.html" "/$l/placeholders.json" "/$l/taxonomy.json" \
    "/$l/data/social-links.json"; do
    printf '%s %s\n' "$(curl -s -o /dev/null -w '%{http_code}' "$PREVIEW$p")" "$p"
  done
done
```

Expected Result. A status list with 200 for the published resources; every non-200 resource is either a known open item (for example locale sheets not yet published) or a new finding raised with the severity of 17.2 (a missing nav or footer: P2; a missing 404 page: P3).

Self-check. A locale's `references/nav` returns 404: what do visitors of that locale see? (An empty header.)

Reference chapter. 17.2, 3.2, 4.6, 12.5.

18.10.28 EX-27 — Release Check

Objective. Run the post-release checks of a code release and record the evidence.

Role. Developer, site administrator, AMS.

Prerequisites. A recent merge to `main` (or the last merge of the history); EX-22; `gh`, `curl`, `jq`.

Steps

Step	Where	Field / control	Value / action
1	Terminal	Commands	Run the commands below (Build and Code Sync checks of `main`, index columns, sitemap host, 404 status)
2	Browser (private window)	Pages	Open two changed pages in two locales on `.aem.live`: no `failed to load …` errors in the console; header and footer correct
3	Browser	Missing URL	`/de-de/release-check-missing`: the locale's 404 page (or the documented fallback)
4	Browser	Sheets	`/en/placeholders.json`, `/en/taxonomy.json`, `/en/data/authors.json` return JSON
5	Console	Data layer	Test cases 1, 2, 3, 6 and 13 of 11.8.2

Step	Where	Field / control	Value / action
6	PageSpeed Insights	URL	A changed live URL, mobile and desktop
7	Change record	Evidence	The outputs, screenshots and deviations

```
BASE=https://main--tcs-corp--sradha-tcs.aem.live
gh run list --repo sradha-tcs/tcs-corp --branch main --limit 3
gh api repos/sradha-tcs/tcs-corp/commits/main/check-runs \
  --jq '.check_runs[] | [.name, .conclusion] | @tsv'
curl -s "$BASE/query-index.json?limit=1" | jq '.columns'
curl -s "$BASE/sitemap.xml" | grep -o '<loc>[^<]*' | head -3
curl -sI "$BASE/de-de/release-check-missing" | head -1
```

Expected Result. The 12.4.3 checklist completed with evidence. Known deviations are recorded, not raised as new defects: index columns differ from `helix-query.yaml` until re-indexed (F-10); sitemap URLs use the `.aem.live` host until a production domain is configured (13.25); the missing URL returns `HTTP/2 404`.

Self-check. After the release every page shows broken blocks: what is the first action? (Revert the last merge with a revert pull request; never force-push `main`: 12.6.1, 12.6.4.)

Reference chapter. 12.4, 12.6, 11.8.

18.11 Knowledge Validation Checklist

The trainer asks the questions of the trainee's topics (oral or written) and compares the answers with the expected answer; the trainee may look up the chapter afterwards, not during the check. Recommended pass mark: 80 % of the questions of the role's topics, and every question marked **(key)** answered correctly. [To be confirmed: pass mark and assessment format — owner: Content Lead / Development Lead / AMS Lead]

Topic (18.11.x)	Content author	Content lead	Developer	Site administrator	AMS / support
18.11.1 Platform and architecture	Yes	Yes	Yes	Yes	Yes
18.11.2 Site structure and locales	Q7, Q10–Q12	Yes	Yes	Yes	Yes
18.11.3 Authoring	Yes	Yes	Q13–Q16	No	Q13, Q15
18.11.4 Components	Yes	Yes	Yes	No	Q22, Q25, Q26
18.11.5 Metadata	Q31, Q34, Q35	Yes	Yes	Yes	Q30, Q34
18.11.6 Taxonomy	Q37, Q38	Yes	Yes	No	Q38
18.11.7 Publishing and release	Q41–Q43	Yes	Yes	Yes	Yes
18.11.8 Troubleshooting and operations	Q47, Q50	Yes	Yes	Yes	Yes

18.11.1 Platform and Architecture

No.	Question	Expected answer	Chapter
Q1	Where is the content authored and how is it delivered? **(key)**	In AEM as a Cloud Service (author `author-p220207-e2271469`) with the Universal Editor; published to Edge Delivery Services (org `sradha-tcs`, site `tcs-corp`) and served on `*.aem.page` (preview) and `*.aem.live` (live)	2.1
Q2	How does a code change reach the site?	Pull request merged to `main` of `sradha-tcs/tcs-corp`; AEM Code Sync pushes it to the code bus; there is no build step	12.2
Q3	Name the three loading phases and one thing each loads.	Eager: head decoration, template, first section (LCP); lazy: header, other sections, footer, `lazy-styles.css`; delayed (after 3 seconds): `scripts/delayed.js`	1.7.1
Q4	Which file must never be modified?	`scripts/aem.js` (core library)	1.7.8, AGENTS.md
Q5	Which three streams are released independently, and in which order when a release needs code and content? **(key)**	Content, code, configuration; code first, then content	Part 12
Q6	Is analytics data collected today?	No: the data layer is filled, but no tag manager (Adobe Tags, Web SDK) is loaded; `scripts/delayed.js` is empty (F-06)	11.7, 16.4

18.11.2 Site Structure and Locales

No.	Question	Expected answer	Chapter
Q7	What is the published path of `/content/tcs-corp/se/sv-se/about`? **(key)**	`/sv-se/about`	3.2.1
Q8	Where is `paths.json` generated from, and what follows a change?	From `LOCALES` in `utils/site.js` with `npm run build:paths`; commit both files and update the site configuration's `public.json` paths to match	3.2.3, 12.5
Q9	What does the site root `/` return today?	HTTP 404: there is no root redirect to `/en/` (F-36); a CDN rule or a root `/redirects.json` is needed	3.8, 13.28
Q10	Which folders are never published?	Each locale's `block-library/` and `/content/tcs-corp/site-global-templates`	12.1.2
Q11	In which order is the Navigation page of a page found? **(key)**	The page's own Navigation (or `nav` column); else the nearest parent's value up to the locale Home; else `/{locale}/references/nav`	3.5.1
Q12	Why can a changed Navigation property not show at once?	Parent values are cached in `sessionStorage` (`tcs-inherited-metadata`) for the browser session; check in a new private window	4.3.4, F-35

18.11.3 Authoring

No.	Question	Expected answer	Chapter
Q13	Which fields does the Additional tab have, and where is it missing?	Anchor ID, Hide block, Padding left / right / top / bottom, Margin left / right / top / bottom; missing on Header and Footer, items, sections and default content	5.6
Q14	Which Anchor ID values are valid?	Values matching `^anchor-[a-z0-9][a-z0-9-]*$`, for example `anchor-our-services`; a duplicate gets `-2`, `-3`	5.6.3
Q15	Does Hide block protect confidential content? **(key)**	No: the content stays in the delivered HTML and the data layer; confidential content must not be published	5.6.4

No.	Question	Expected answer	Chapter
Q16	Which components can a Gen Carousel and a Tabs Container contain?	Gen Carousel: Hero, Teaser; Tabs Container: Tab, Columns, Title, Text, Image, Button	5.4.3
Q17	How does a link in Text become a button?	A link on its own line becomes a link button, or a button when it is bold and / or italic; use the Button component for explicit control	6.6, 5.8
Q18	What alt text does a decorative image get?	None: leave the alt text field empty and the code sets `alt=""`	5.5.3
Q19	How many `h1` should a page have, and where does it come from?	One: from the Page Header, a Hero with H1 or a Title with h1	5.7.7
Q20	How do you create an article page?	Copy `site-global-templates/article` in the Sites console, paste it in the locale folder and rename it; the Page Type is already Article	5.3.2

18.11.4 Components

No.	Question	Expected answer	Chapter
Q21	What is the difference between Cards and List?	Cards are typed by hand; the List builds cards from page metadata through the query index (Child pages, Fixed list, Tagged pages); both share one presentation and settings	6.15, 6.16
Q22	Why does a List show no pages in the Universal Editor? **(key)**	The query index isn't read in the editor; the editor hint says the pages show on the published page; check the preview	13.10
Q23	Which pages does a List leave out?	Pages with `hide-in-nav = yes` (and pages not in the query index)	6.16, 8.3
Q24	What does the Filter List read, and where is the filtering done?	The current locale's rows of `/query-index.json` (or a manual list) below the Root path; filtering runs in the browser	6.17
Q25	What happens when a visitor submits a Form Variations form? **(key)**	The form validates, dispatches `form-variations:submit` and shows the success message; no data is sent anywhere (F-01)	6.29
Q26	What happens when a visitor searches in the Conversation Canvas?	A `conversation-canvas:search` event and a `cmp:search` data layer entry; no search service is connected	6.30
Q27	What does an author enter in a Page Header?	Only the Layout and the CTA List; everything else comes from metadata and the Authors sheet	6.4
Q28	Which templates exist and what do they add?	Home (layout styles), Article and Blog (Page Header, About the author), Press Release (Page Header, Media contacts)	4.1
Q29	Is a breadcrumb available?	Not implemented (as of this handover); 6.0.2 describes how it could be added	6.0.2

18.11.5 Metadata

No.	Question	Expected answer	Chapter
Q30	When do the bulk metadata sheets apply? **(key)**	Only when all 13 are listed in the site configuration's `metadata.source`; each sheet's URL patterns must start with its locale	4.3.2, 13.17
Q31	Which wins: the Page Type page property or the sheet's `page-type`?	The page property; among sheet rows, a later matching row overrides an earlier one	8.1.2
Q32	Why can social networks show the page Title instead of `og-title`?	The SEO decorator sets the social tags in the browser; crawlers that don't run JavaScript see the server values	8.1.5

No.	Question	Expected answer	Chapter
Q33	Which metadata values are inherited by child pages?	Only Navigation (`nav`), Footer (`footer`) and 404 Page (`error-page`)	4.3.4
Q34	A `card-title` was changed in the sheet but the List card didn't change: why?	The List reads the query index; the page must be republished and re-indexed (and the index must have the column: F-10)	8.3, 13.11
Q35	In which format is `publish-date` entered, and how does the Page Header show it?	`YYYY-MM-DD`; "Published DD/MM/YY"	4.9.7, 8.3

18.11.6 Taxonomy

No.	Question	Expected answer	Chapter
Q36	Which namespace and trees does the published taxonomy have?	`tcs-corp:` with `content-type`, `industry` (no child tags yet) and `region`	7.1.2
Q37	Does a List filter on `tcs-corp:region` find a page tagged `tcs-corp:region/europe`, and does a filter on the bare namespace `tcs-corp:`?	Yes (child tags match); no (a bare namespace matches nothing below it)	7.2.2
Q38	Where do tag labels come from, and what is shown when a tag is missing? **(key)**	The locale's `/{locale}/taxonomy.json` (language sheet when translated); else a label derived from the ID's last segment	7.1.4
Q39	Is "content type" a tag?	Both exist and aren't connected: the `content-type` metadata (eyebrow, Filter List Content types) and the `tcs-corp:content-type/*` tags; keep them aligned	4.2.2, 7.3.1
Q40	What must follow the creation or retitling of a tag?	Republish the taxonomy page of every affected locale (and check the published JSON)	7.6

18.11.7 Publishing and Release

No.	Question	Expected answer	Chapter
Q41	Which items must be published separately from the page? **(key)**	Navigation and footer pages, fragments and modal pages, error pages, the locale sheets and data sheets, assets	5.7.4
Q42	How long does a published change take to appear on `.aem.live`?	Normally one to two minutes (the CDN is purged on publish); a production CDN may add delay [To be confirmed]	5.7.6
Q43	How is a page rolled back?	Sites console Timeline → Versions → Revert to this Version, check, republish	5.7.9
Q44	How is a faulty code merge rolled back?	A revert pull request merged to `main` (Code Sync deploys it); never force-push or rewrite `main`	12.6.1
Q45	What must be done before unpublishing a public page?	Add a redirect in the locale's `redirects` sheet (applied only once a CDN or other mechanism reads the sheets)	5.7.8, 3.8

18.11.8 Troubleshooting and Operations

No.	Question	Expected answer	Chapter
Q46	What are the first triage questions?	Where (editor, preview, live, domain); which locale; one page, one block type or every page; since when and after which change; which breakpoint	13.1.1

No.	Question	Expected answer	Chapter
Q47	What does `failed to load module for <block>` mean? **(key)**	The block's JS or CSS failed to load or its `decorate()` threw: code error, block missing on `main`, or content in an unexpected structure	13.3
Q48	How do you inspect the data layer of a page?	In the console on preview or live (not in edit mode): `window.adobeDataLayer`, `adobeDataLayer.find((e) => e.page)`	11.8.1
Q49	How do you see the preview, live and source times of a path?	`GET https://admin.hlx.page/status/sradha-tcs/tcs-corp/main/{path}`	12.1.9
Q50	A German URL shows an English 404 page: why?	`/de-de/error-pages/404` isn't published, so the `/en/error-pages/404` fallback is shown (with `lang="en-US"`)	13.7

18.12 Training Completion Record

Keep one record per trainee with the training evidence (exercise screenshots or URLs, the data layer copy of EX-22, the status list of EX-26) [To be confirmed: where training records are kept — owner: Content Lead / AMS Lead].

18.12.1 Sign-off per Role

Role	Trainee	Modules completed (18.2–18.9)	Exercises required	Exercises completed	Validation result	Trainer / assessor	Date	Signature
Content author	[Name]	[ ]	EX-01 to EX-14, EX-21	[ ] / 15	[ ] %	[Name]	[Date]	[Pending]
Content lead	[Name]	[ ]	EX-01 to EX-21	[ ] / 21	[ ] %	[Name]	[Date]	[Pending]
Developer	[Name]	[ ]	EX-01, EX-03, EX-12, EX-14, EX-22, EX-24, EX-25, EX-27	[ ] / 8	[ ] %	[Name]	[Date]	[Pending]
Site administrator	[Name]	[ ]	EX-01, EX-16, EX-17, EX-23, EX-26, EX-27	[ ] / 6	[ ] %	[Name]	[Date]	[Pending]
AMS / support	[Name]	[ ]	EX-01, EX-21, EX-22, EX-23, EX-24, EX-26, EX-27	[ ] / 7	[ ] %	[Name]	[Date]	[Pending]

18.12.2 Exercise Log

18.12.3 Trainer Sign-off

Item	Value
Trainee and role	[Name, role]
Learning path completed	[Yes / No, with the exceptions agreed]
Validation result	[Score, key questions all correct: Yes / No]
Access granted after training	[AEM groups, publish rights, GitHub, Admin API — as for the role (18.1.2)]
Follow-up	[Topics to revisit, date]
Trainer	[Name, date, signature]
Line manager	[Name, date, signature]
