Operations and Support Guide

Attribute	Value
Document ID	OPS-000
Audience	AMS / support teams, site administrators
Purpose	Running and supporting the site
Scope	—
Prerequisites	—
Owner	AMS / Support Lead (proposed)
Approver	Product Owner (to be confirmed)
Version	1.0
Status	Draft for review
Last updated	8 November 2026
Last validated	8 November 2026
Source files	—

Related AEM paths	—

1. Service in one table

Item	Value
Live	https://main--tcs-corp--sradha-tcs.aem.live
Preview	https://main--tcs-corp--sradha-tcs.aem.page
Code	GitHub sradha-tcs/tcs-corp, main
Content	AEM Sites author /content/tcs-corp
Roots	/content/tcs-corp/language-masters/en, /content/tcs-corp/language-master/en, /content/tcs-corp/design-block-master/en, 13 locales

2. Responsibilities

The three delivery streams are released independently (handover Part 12): content (AEM author, published by authors), code (GitHub `sradha-tcs/tcs-corp`, synced by AEM Code Sync) and configuration (the Edge Delivery site configuration of org `sradha-tcs`, site `tcs-corp`, changed through the Admin API). The Site Administrator owns the configuration stream.

Responsibility	Owner (handover Part 14, 14.1)	Verified basis
Site configuration: `public.json` paths, `metadata.source`, robots, CDN, access	Site Administrator / AMS (L2)	AGENTS.md notes
Cache purge, re-index, sitemap regeneration, Admin API status and log review	L2	Handover 12.1.9; per-page `preview`, `live`, `index` used for packages 1.0.10–1.0.13 (revisions 2.31, 2.35)
Sheets (placeholders, metadata, taxonomy, redirects, data)	Content team, with L1	AGENTS.md

Responsibility	Owner (handover Part 14, 14.1)	Verified basis
Author onboarding and access requests	L1 with the AEM administrator	Handover 14.8.5 (groups and permission model not recorded)
Code, models, filters, index and sitemap definitions	Development team (L3)	Repository
Platform incidents (Edge Delivery, Universal Editor, AEM as a Cloud Service)	Adobe Support, raised by L2 / L3	Handover 14.1.1

The support levels L1 (author support), L2 (AMS / site administration) and L3 (development) and their RACI are defined in handover Part 14, 14.1. The team names, the named owners (product owner, technical lead, AMS lead, site administrator, analytics owner) and the severity SLAs are not recorded (open items O-01, O-13).

3. Routine operations

Procedure	Summary	Handover
Update placeholders	Edit Text in `{locale}/placeholders`, keep variables, publish, check `/{locale}/placeholders.json`	14.8.3
Change the taxonomy	Tags in AEM Tagging, titles on every locale's taxonomy page, publish, re-tag and republish pages	14.8.4
Onboard an author	Admin Console profile, locale permissions (model not recorded), Sidekick, training	14.8.5
Add a locale	See Localization	14.8.1
Add a block	Block folder with JS, CSS and `_<block>.json` (Additional tab), add to the filters, `build:json`, lint, test, library page, PR	14.8.2
Release activities	R-01 … R-15	Part 17, 17.5; deployment-and-release.md
Governance	Change records, tag, placeholder key, metadata value, locale, third-party script, access, findings, documentation, configuration backup, block libraries (G-01 … G-12)	Part 17, 17.7

The operations calendar of Part 17, 17.8 is a proposed default (time zone and calendar not recorded).

4. Support handoff

- The AMS handover checklist (access, knowledge transfer sessions, documentation, open items) is handover Part 14, 14.10; no item of it is recorded as completed in the repository.
- Documentation to hand over: AGENTS.md, blocks/README.md and the block READMEs, decorators/README.md, utils/README.md, templates/README.md, the handover (TCS-CORP-HANDOVER.md, PDF built as described in docs/handover/README.md), the audits in docs/audit/.
- Blocked: support hours, ticketing tool and queue, contacts and SLAs (open item O-13), a site configuration export (14.10.3 #7).

5. Screenshots

No screenshot belongs to this document (it describes code, configuration or process). Evidence screenshots are listed in the screenshot register.

6. Known limitations

- None recorded for this document.

7. Open items

- None.

8. Change history

Version	Date	Author	Change
1.0	8 November 2026	Delivery team (documentation program)	First version of the role-specific documentation (master documentation prompt), generated from the repository and the published reference pages

Escalation Matrix

Attribute	Value
Document ID	OPS-004
Audience	AMS / support teams, site administrators
Purpose	Who to escalate to
Scope	—
Prerequisites	—
Owner	AMS / Support Lead (proposed)
Approver	Product Owner (to be confirmed)
Version	1.0
Status	Draft for review
Last updated	8 November 2026
Last validated	8 November 2026
Source files	—

Related AEM paths	—

Level	Area	Role (proposed)
L1	Content, publishing	Content Lead / authors
L2	Blocks, code, configuration	Technical Lead
L2	AEM author, permissions, Extension Manager	AEM Administrator
L3	Edge Delivery platform, AEM Cloud Service	Adobe support (customer admin opens the case)
Decision	Scope, priorities	Product Owner

1. Escalation

The handover proposes an escalation path (Part 14, 14.5): Author → L1 → L2 → L3 → Adobe Support, with the product owner informed for P1 / P2 and a security contact for suspected security incidents, and the information each step needs (AEM and published path, locale, Admin API status output, console messages, reproduction on `aem.page`). The severity scale P1–P4 is a proposal "to be confirmed in the AMS contract"; the escalation times for P2, the contacts and the security contact are not recorded. Status: Requires validation.

2. Screenshots

No screenshot belongs to this document (it describes code, configuration or process). Evidence screenshots are listed in the screenshot register.

3. Known limitations

- None recorded for this document.

4. Open items

- None.

Related AEM paths	—

1. Process (proposed)

1. Detect (monitoring, user report) and record the time, URL, root and evidence.
2. Classify severity (Critical: a root or locale unavailable; Major: a feature broken; Minor; Trivial).
3. Contain: unpublish the faulty page, revert the code commit, or republish the last good content.
4. Resolve and verify on preview and live; reindex if lists are affected.
5. Review: root cause, decision log entry if a decision changes.

2. Example (8 November 2026)

The /en locale was unpublished and deleted from Edge Delivery at 16:41–16:48 UTC by the AEM publishing technical account (an author-side action): detected from the Admin API log; owner to confirm intent (Content Lead).

3. Screenshots

No screenshot belongs to this document (it describes code, configuration or process). Evidence screenshots are listed in the screenshot register.

4. Known limitations

ID	Severity	Finding	Workaround
DEF-001	Major	185 different requests to /content/tcs-corp/design-block-master/english/... fail with 404 (fragments, modal content, references written with the copied root's former name), e.g. 404 https://main--tcs-corp--sradha-tcs.aem.live/content/tcs-corp/design-block-master/english/block-library/anchor-list.html; 404 https://main--tcs-corp--sradha-tcs.aem.live/content/tcs-corp/design-block-master/english/block-library/columns.html; 404 https://main--tcs-corp--sradha-tcs.aem.live/content/tcs-corp/design-block-master/english/block-library/table.html	—
DEF-002	Major	404 https://main--tcs-corp--sradha-tcs.aem.live/design-block-master/english/references/footer-conversation-canvas.plain.html fails on 193 reference pages (one root cause: content of /design-block-master/en refers to /design-block-master/english/...)	—
DEF-003	Minor	Failures specific to 1 block library page(s): /design-block-master/en/block-library/cards/images-panels-style-options (Failed to load resource: net::ERR_UNKNOWN_URL_SCHEME; Failed to load resource: net::ERR_UNKNOWN_URL_SCHEME)	—
DEF-004	Major	Horizontal overflow: /design-block-master/en/block-library/columns-container/columns-of-blocks at 1024 px	—
DEF-005	Minor	Failures specific to 1 block library page(s): /design-block-master/en/block-library/embed/embed (failed https://partners.example.com/market-explorer; failed https://partners.example.com/market-explorer)	—
DEF-006	Minor	Failures specific to 1 block library page(s): /design-block-master/en/block-library/hero/hero-overview (404 https://main--tcs-corp--sradha-tcs.aem.live/content/dam/tcs-corp/block-library/animations/lottie-sample.json; 404 https://main--tcs-corp--sradha-tcs.aem.live/content/dam/tcs-corp/block-library/animations/lottie-sample.json)	—
DEF-007	Major	Horizontal overflow: /design-block-master/en/block-library/table/table at 375/768/1024/1440 px	—

ID	Severity	Finding	Workaround
DEF-008	Minor	Failures specific to 1 block library page(s): /design-block-master/en/block-library/teaser/layouts (404 https://main--tcs-corp--sradha-tcs.aem.live/content/dam/tcs-corp/block-library/animations/lottie-sample.json; 404 https://main--tcs-corp--sradha-tcs.aem.live/content/dam/tcs-corp/block-library/animations/lottie-sample.json)	—
DEF-009	Major	Horizontal overflow: /design-block-master/en/block-library/testimonial/testimonial-variations at 375/768/1024 px	—
DEF-010	Minor	Failures specific to 1 block library page(s): /design-block-master/en/block-library/video/video (404 https://main--tcs-corp--sradha-tcs.aem.live/content/dam/tcs-corp/block-library/videos/sample-video.mp4; 404 https://main--tcs-corp--sradha-tcs.aem.live/content/dam/tcs-corp/block-library/videos/sample-video.mp4)	—
DEF-011	Major	Two Form Variations motion tests fail ("offers Content animation after Hide block", "offers Background animation only on blocks with an authored background"); known before this program; fix awaits approval	—
DEF-012	Major	Pages link to the testing root /language-master/en (1281 links) and to unmapped /content/tcs-corp/design-block-master/english paths (358 links)	—
DEF-013	Critical	The /en locale content was unpublished and deleted from Edge Delivery on 8 November 2026 16:41–16:48 UTC by the AEM publishing technical account (author-side); /en/ answers 404	—
DEF-014	Minor	On block library pages that start with default content, the header logo overlaps the page title at 1440 px (e.g. accordion/accordion)	—
DEF-015	Minor	"There are no items to show" on 17 reference page(s): /design-block-master/en/block-library/animation/repeated-items, /design-block-master/en/block-library/animation/skeleton-loading, /design-block-master/en/block-library/animation/speed-and-trigger, /design-block-master/en/block-library/foundations/section-colours-with-blocks, /design-block-master/en/block-library/list/card-style-from-pages	—
DEF-016	Minor	Not published after 4 tries: /design-block-master/en/error-pages/404 (the root has no error pages)	—

Related AEM paths	—

1. Monitoring

Area	State	Source
Real Use Monitoring (RUM)	Implemented: `sampleRUM` in scripts/aem.js (sampling weight 100 by default, collector `ot.aem.live`); 404.html sends a 404 checkpoint with the referrer; errors are sent as `error` checkpoints	Code
RUM dashboard and domain key	Not recorded	Handover 14.2
PageSpeed Insights	Manual; the `aem-psi-check` on pull requests (AGENTS.md)	deployment-and-release.md
Uptime monitoring	Not implemented; tool not recorded	Handover 14.2
Analytics	Data layer populated centrally (decorators/data-layer-decorator.js); Adobe Tags and the Web SDK not configured (blocked: measurement plan); no consent mechanism	Code
AEM author health, publication queues, logs	Cloud Manager and the AEM author (Workflow instances); access not recorded	Handover 14.2, 14.3.2
Dependency updates	Renovate (.renovaterc.json)	Repository

The handover (14.2) proposes thresholds of LCP ≤ 2.5 s, CLS ≤ 0.1 and INP ≤ 200 ms at p75; no alerting on them is configured. Console messages emitted by the code and their meaning: handover Part 14, 14.3.1.

2. Environment checks

Check	How	Expected
Locale Home pages	`/en/`, `/de-de/`, … on the live host (handover Part 17, script 17.2-A)	HTTP 200, header and footer, no `failed to load …` console errors
Fragments and 404 pages	`/{locale}/references/nav.plain.html`, `/references/footer.plain.html`, `/error-pages/404.plain.html` (script 17.2-B)	HTTP 200
Build and Code Sync on `main`	Commit checks of the head of `main` (script 17.2-C)	Green
Query index rows per locale	`/query-index.json` in pages of 500 rows (script 17.2-D)	Count consistent with publications
Sheets per locale	9 sheets × 13 locales (script 17.3-B)	HTTP 200 and valid JSON
Sitemap	`/sitemap.xml` hosts and count (script 17.3-A)	Expected host; new pages present
404 per locale	`/{locale}/health-check-404` (script 17.4-A)	HTTP 404 with the locale's authored 404 page
Placeholder completeness	Keys of `/en/placeholders.json` vs each locale (script 17.4-B)	Same key set
Data layer	`window.adobeDataLayer` on sample pages	A page entry, component entries, `cmp:click` on clicks
Configuration	`GET /config/sradha-tcs/sites/tcs-corp/metadata.json`; `public.json` paths vs paths.json	13 sources; identical paths

The scripts and the full daily, weekly and monthly activity tables (D-01 … D-09, W-01 … W-10, M-01 … M-14) are in handover Part 17 — Operations Guide; where Part 17 and 14.7 differ, Part 17 is the checklist of record. Health check results were not recorded in the repository.

Alerting and SLOs beyond Edge Delivery RUM: To be confirmed.

3. Screenshots

No screenshot belongs to this document (it describes code, configuration or process). Evidence screenshots are listed in the screenshot register.

4. Known limitations

Version	1.0
Status	Draft for review
Last updated	8 November 2026
Last validated	8 November 2026
Source files	—
Related documents	—
Related AEM paths	—

1. Pull requests

The publishing process of AGENTS.md:

1. Push the feature branch; Code Sync makes it available on the feature preview.
2. Run PageSpeed Insights on the feature preview URL and fix issues; target a score of 100.
3. Open a pull request to `main`. The description **must** link `https://{branch}--tcs-corp--sradha-tcs.aem.page/{path}` showing the change, or the PR is rejected. Without a page, create test content in `drafts/` and ask an author to create a CMS page to link.
4. Check the status of code sync, linting and performance tests (`gh pr checks`).
5. A human reviewer reviews the code, opens the URL and merges; Code Sync updates `main`.

.github/pull_request_template.md asks for the GitHub issue (`Fix #<gh-issue-id>`) and Before / After test URLs. It still contains the boilerplate placeholders `{repo}` and `{owner}`: replace them with `tcs-corp` and `sradha-tcs` (the `cleanup-on-create` workflow that would replace them only runs on repository creation or manual dispatch).

Approval rules: the number of required reviews, required checks and branch protection on `main` are not recorded (handover 12.3; open item O-05).

2. Environment promotion

Step	From → to	How	Owner
1	Local → feature preview	Push the branch; Code Sync	Developer
2	Feature preview → `main` (preview and live code)	Reviewed PR merged; Code Sync updates `main--tcs-corp--sradha-tcs.aem.page` and `.aem.live`	Reviewer

Step	From → to	How	Owner
3	Universal Editor	Authors reload the editor to get new definitions, models and filters	Content team
4	Configuration	Apply `public.json` paths, `metadata.source`, sitemap or CDN settings through the configuration Admin API, saving the current JSON first	Site Administrator
5	Content: author → preview → live	Publish sheets, then fragments, then pages	Content team

There is no separate staging environment in the repository: feature previews and the `main` preview tier play that role. The author environment reads the code of `main` (fstab.yaml mount point). The production domain and CDN are not configured (open item O-03).

3. Content packages

The block library, the curated design pages and sample pages are delivered to AEM as content packages built **outside the repository**:

- The build and migration tooling lives in the delivery workspace (`.home-work/bl/`, for example `bl-migrate.mjs`, which maps old fields to new ones when the pages and the package are built); it is not tracked in Git (BLOCK-ECOSYSTEM-AUDIT.md, section 11).
- The packages are distributed on the branch `home-content-package` of the repository (files only, no site code; its README describes each package). For example `block-library/tcs-corp-block-library-content-1.0.13.zip` (current), the curated design pages, Home and Columns Container packages and the matching sheet rows (placeholders, metadata, taxonomy, data CSVs).
- Install with AEM **Package Manager** (Upload Package, Install). Installing replaces each page of the package: changes made in AEM to those pages since the last install are overwritten; pages outside the package are kept.
- Tags `home-content-package_<date>` mark earlier states of that branch ("Downloads branch before the handover PDF ..."); they are not code releases.

What the handover records (revision history):

Package	Change	Publication recorded
1.0.3, 1.0.4	Block library Animation folder	Published with the language master review (2.20)
1.0.7	Library migrated after the block audit	Not recorded (2.27)
1.0.8	Columns → Columns Containers / Column Breaks, buttons → Button blocks	Not recorded (2.28)
1.0.9	Re-audit fixes; language-master Placeholders (109) and Metadata (311 rows) imported	312 / 312 previewed and published; defect R-L-1 found on live (2.30)
1.0.10	Container sections' `container*` fields	312 / 312 previewed, published and reindexed (2.31)
1.0.12	Section Style colours (with the 1.0.11 Teaser and Columns Container options)	313 / 313 published and reindexed (2.35)
1.0.13	List Item display options, dark-background theme	315 / 315 previewed, published and reindexed (2.35)

4. Installation validation

After a code release or a package install, validate on the preview tier first, then on live:

- ☐ Code Sync check green on the merge commit; a changed file on `main--tcs-corp--sradha-tcs.aem.page/blocks/…` matches the commit (Part 17, R-06).
- ☐ The Universal Editor shows the new fields and components after a reload (R-08).
- ☐ After a package install: every package page previewed, published and, where listed, reindexed, with the count recorded (as in 312 / 312 for 1.0.10).
- ☐ Changed pages and one page per changed block render without `failed to load module for …` or `failed to load template …` (V-02).
- ☐ Header, footer and 404 page correct per locale; sheets reachable (V-03, V-08).
- ☐ Non-image DAM assets used by the pages published (Lottie, video, captions).
- ☐ `aem.page` compared with the local preview block by block (docs/audit/tools/compare.mjs): this comparison found R-L-1 and R-L-2 after 1.0.9.

5. Publishing

Content publishing (Universal Editor, Sites console, sheets, references, assets, scheduling) is described in authoring.md; Admin API operations in administration-and-operations.md. In a release, publish in this order: sheets (placeholders, taxonomy, data, metadata) → fragments (nav, footer, other references) → pages (handover 12.4.2, Part 17 R-09). Content that depends on new code is prepared in AEM but published only after Code Sync of the merge.

6. Reindexing

- Publishing updates the page's row in `/query-index.json` automatically.
- After a change to helix-query.yaml, rows are rewritten only when pages are republished or re-indexed: `POST https://admin.hlx.page/index/sradha-tcs/tcs-corp/main/{path}` for the affected paths (bulk paths agreed with the site owner), then check the columns (Part 17, R-10, W-01).
- The packages 1.0.10, 1.0.12 and 1.0.13 were reindexed page by page (Admin API `preview`, `live`, `index` per page); after 1.0.10 the query index listed 307 language-master pages (handover revision 2.31).
- The sitemap (helix-sitemap.yaml) is built from the index.

7. Smoke and regression testing

Test	Command / tool	Scope	Result at 2d06316
Unit tests	`npm test`	`test/` (cards, conversation-canvas, docs, items, list, media, models, modules, motion, privacy, separator, site)	Passed (311 / 311)
Lint	`npm run lint`	JS, JSON, models (xwalk rules), CSS	Passed
Generated files	`npm run build:json` then check that nothing changed (Part 17, R-03)	Aggregated component files	Passed (compared with a fresh merge)
Runtime harness	docs/audit/tools/harness.mjs	Every block library and curated page of the local preview at 1440, 1024, 768, 600 and 390 px: console and page errors, failed requests, block status, overflow, duplicate ids, broken images, data layer, axe (WCAG A / AA) at 1440 and 390, a click test	Not run for this page
Published vs local	docs/audit/tools/compare.mjs	Block-by-block signature of `aem.page` against the local preview	Not run for this page
Inventory	docs/audit/tools/inventory.mjs	Definitions, models, filters, fields, options and their usage in the content package	Not run for this page

Test	Command / tool	Scope	Result at 2d06316
Defect register	docs/audit/tools/register.mjs	The audit's defects and outcomes	Not applicable
Manual	Part 17 V-01 … V-09	Content, code, configuration, data layer, SEO, accessibility, locale launch, cache	Not recorded

The audit tools hard-code paths of the delivery workspace (a Playwright install, an axe copy under `(a local workspace path)`, `drafts/en/block-library`, the unpacked content package under `.home-work/`), which are not in Git: re-running them from a clean clone is Blocked until those inputs are provided. Their recorded runs: 940 page loads before and after the first audit, and the re-audit runs (BLOCK-ECOSYSTEM-AUDIT.md, READUIT-2026-10-20.md, data/runtime-before-after.csv). The block libraries in each locale (`block-library/`) are the manual regression pages for every variation.

8. Release evidence

Evidence	Where	State
Change history	Merge commits of the pull requests on `main`; the handover revision history (versions 0.1 to 2.37)	Available
Validation reports	docs/audit/ (audit, re-audit, dialog options; CSV registers and runtime before / after)	Available
Publication records	Handover revisions 2.31 and 2.35 (counts of pages previewed, published, reindexed)	Available
Release tags	None on `main`; `package.json` keeps the boilerplate version `1.3.0`; no `CHANGELOG.md`	Not recorded
Change records	Change management process	Not recorded
Release checklists	Handover 12.4 and Part 17, 17.5 (R-01 … R-15) define what to attach	Defined, no completed record in the repository

9. Screenshots

No screenshot belongs to this document (it describes code, configuration or process). Evidence screenshots are listed in the screenshot register.

10. Known limitations

- None recorded for this document.

11. Open items

- None.

12. Change history

Version	Date	Author	Change
1.0	8 November 2026	Delivery team (documentation program)	First version of the role-specific documentation (master documentation prompt), generated from the repository and the published reference pages

Rollback and Recovery

Attribute	Value
Document ID	OPS-006
Audience	AMS / support teams, site administrators
Purpose	Rolling back code, content and configuration
Scope	—
Prerequisites	—
Owner	AMS / Support Lead (proposed)
Approver	Product Owner (to be confirmed)
Version	1.0
Status	Draft for review
Last updated	8 November 2026
Last validated	8 November 2026

1. Rollback

No rollback has been recorded; the procedures below are the handover's (Part 12, 12.6) and Require validation.

Stream	Procedure
Code	Revert the merged PR in GitHub (a revert PR, checks, merge) or `git revert -m 1 <merge-commit>` on a branch, newest first; Code Sync deploys the previous code. Never force-push or rewrite `main`
Models	The revert restores partials and aggregated files; authors reload the editor; values saved with removed fields stay stored but aren't shown
Content	Sites console **Timeline > Revert to this Version** (or Restore Version), check, publish again; sheets the same way; unpublish when no good version exists
Configuration	Re-apply the saved JSON (`public.json` paths from a previous `paths.json`: `git show <commit>:paths.json`; the previous `metadata.source` list); repository configuration files by reverting the PR, then re-index or regenerate the sitemap
Content package	Reinstall the previous package version from the `home-content-package` branch (installing replaces the package's pages)

Emergency change approval and the hotfix path are not recorded (handover 12.6.1, Part 17 R-15).

2. Configuration

The site configuration's paths can be restored from the copy kept before each change (public.json before / after, migration workspace). Delivery branches are tagged before every push (`<branch>_<date>` tags).

3. Screenshots

No screenshot belongs to this document (it describes code, configuration or process). Evidence screenshots are listed in the screenshot register.

4. Known limitations

- None recorded for this document.

5. Open items

- None.
